Most map units are divided by age, which in prehistoric deposits is determined largely from radiocarbon dates. Radiocarbon dates in titles and on correlation chart, as in main text and the tables, are in calendar years before present (C yr B.P.).

Radiocarbon dates in the tables are in the format yr B.P. (before present), e.g., 7,050 yr B.P. The maps are grouped into units that are divided by age, which in prehistoric deposits is determined largely from radiocarbon dates. Radiocarbon dates in titles and on correlation chart, as in main text and the tables, are in calendar years before present (C yr B.P.).
