JUNEAU, ALASKA 99811-2500

## About the Cover

# Susitna River

## Denali Highway

The Susitna River Bridge (number 0687) is a 1,039 ft long structure built in 1956. This bridge is constructed of a 90 ft long steel stringer approach span at the west end, a 165 ft long steel deck truss, fifteen steel stringer spans at the east and a laminated timber deck throughout.

Alaska's Denali Highway is a seasonal, mostly gravel corridor that connects the George Parks Highway (west at Cantwell) with the Richardson Highway (east at Paxson). When it opened in 1957, the highway provided the original access into the Denali National Park.

Michael C. Higgs, Bridge Engineer with the Alaska Department of Transportation's Bridge Section, masterfully created this overlaid pen and ink rendering. Mr. Higgs' hand drawings have graced many previous Bridge Inventory covers.

## **INTRODUCTION**

**This bridge inventory report is a periodic publication by the Alaska Department of Transportation and Public Facilities, Bridge Section. Summarized within are structural, dimensional, and location data of bridges and culverts that are biennially inspected by the Bridge Section. Other bridge structures are included for reference and informational purposes. Dimensions, clearances and postings are applicable at the time of publication, only.**

**An electronic copy is available online at [www.dot.alaska.gov/bridge-inventory](http://www.dot.alaska.gov/bridge-inventory).**

## DESCRIPTION OF TERMS, CODES, AND SYMBOLS

**ROUTE NUMBERS AND NAMES** are given in the route listing section. If available, the coordinated data system (CDS) numbers are also listed.

**BRIDGE NUMBERS AND NAMES** are used by the Bridge Section to identify individual structures. The structures with a 4000 series bridge number designate large culverts that meet the definition of a bridge, having center line of roadway length greater than twenty (20) feet.

**CDS ROUTE AND MILE POINT** is the Coordinated Data System (CDS) highway route number and mileage location of each structure as recorded in the State of Alaska, Department of Transportation and Public Facilities' Road Log Database. A CDS route number adjacent to the bridge name signifies that CDS route that is carried on the structure (the structure may be listed by the route that passes under the bridge).

For example:

CDS Mile Pt.	Bridge Number	Bridge Name	Structure Type
		Glenn Highway – CDS #135000	
0.7	2209	Bragaw Overcrossing (CDS 133950)	PCBT/A

Glenn Highway passes under the Bragaw Overcrossing. The Bragaw Overcrossing bridge carries Bragaw Street over the Glenn Highway.

**HISTORIC MILEPOST** is the mileage from each actual or theoretical milepost.

**LENGTH** of each bridge is to the nearest foot, measured from back to back of the backwalls of the abutments.

**WIDTH** is measured to the nearest tenth of a foot and is the roadway width of the structure, or the distance between the curbs or rails.

**VERTICAL CLEARANCE** is recorded to the nearest hundredth of a foot. It is the distance from the bridge deck to the lowest obstruction over any part of the roadway width. Measurements indicated in this book are the reported clearances at the time of publication, only.

**VERTICAL UNDERCLEARANCE** is recorded to the nearest hundredth of a foot. It is the most restrictive distance from the roadway below the bridge to the lowest part of the structure. Measurements indicated in this book are the reported clearances at the time of publication, only.

**LOAD POSTED** signifies bridges that are load restricted at the time of publication, only. Contact DOT&PF's Commercial Vehicle Customer Service Center, 1-800-478-7636, for specific bridge related load posting details or restrictions.

**YEAR BUILT** is the year of original construction or reconstruction of a structure.

**COMMENTS** are remarks used internally by the Bridge Section to note special bridge conditions and observations.

**DESCRIPTION OF TERMS, CODES, AND SYMBOLS (continued)**

**STRUCTURE TYPE** are standard abbreviations used by the Bridge Section to identify the main material and configuration of the superstructure.

**DECK TYPE** are standard abbreviations used to identify the main material of the deck.

**WEARING SURFACE** identifies the actual running surface on the structure's roadway.

**STRUCTURE TYPE**

**CODE SYMBOL**

Cable Stayed Box Girder .....	CSBG
Concrete Arch .....	CA
Concrete Girder .....	CG
Concrete Slab .....	CS
Corrugated Metal Pipe, Multiplate, or Arch .....	CMP
Glued Laminated Timber Stringer .....	GTS
Orthotropic Steel Box Girder .....	OSBG
Post-tensioned Concrete Box Girder .....	PTCBG
Post-tensioned Concrete Bulb Tee .....	PTCBT
Prestressed Concrete Box Girder .....	PCBG
Prestressed Concrete Bulb Tee .....	PCBT
Prestressed Concrete Channel Girder .....	PCCG
Prestressed Concrete Double Tee .....	PCDT
Prestressed Concrete Girder .....	PCG
Prestressed Concrete Slab .....	PCS
Prestressed Concrete Triple Tee .....	PCTT

Treated Timber Deck Truss .....	TTDT
Treated Timber Pony Truss .....	TTPT
Treated Timber Stringer .....	TTS
Treated Timber Through Truss .....	TTTT

Listed below are additional suffixes that may be used to further describe structure types:

Continuous Bridge .....	C
Moveable Bridge .....	M

**DECK TYPE CODE SYMBOL**

Filled Steel Grid .....	FSG
Laminated Timber .....	LT
Precast Reinforced Concrete .....	PRC
Reinforced Concrete .....	RC
Steel Grid .....	SG
Steel Plate .....	SP
Timber (detail not known) .....	T
Timber Plank .....	TP
Timber Stress Laminate .....	TSL
Treated Timber Plank .....	TTP

(continued on next page)

Listed below are additional suffixes that may be used to further describe deck types:

Asphalt .....	A
Running plank .....	R
Treated (preservative treated) .....	T

Additional code symbols, such as LOG, SLAB, DOCK, or BULKHEAD are used and are self-explanatory. The term PIONEER denotes a primitive type of construction, usually a combination of logs and timber beams. BAILEY and ACROW denote a military or modular type of steel pony truss.

EXAMPLES:

SS/RC is a steel stringer bridge with a reinforced concrete deck.

TTS/TTPR is a treated timber stringer bridge with a treated timber planked deck with running plank.
