FISHERY MANAGEMENT REPORT NO. 05-12

NORTH ALASKA PENINSULA COMMERCIAL SALMON ANNUAL MANAGEMENT REPORT, 2004

By

Robert L. Murphy, Philip Tschersich, and Arnold R. Shaul Division of Commercial Fisheries, Kodiak

Alaska Department of Fish and Game Division of Sport Fish, Research and Technical Services 333 Raspberry Road, Anchorage, Alaska, 99518-1599

March 2005

The Division of Sport Fish Fishery Management Reports series was established in 1989 for the publication of an overview of Division of Sport Fish management activities and goals in a specific geographic area. Since 2004, the Division of Commercial Fisheries has also used the Fishery Management Report series. Fishery Management Reports are intended for fishery and other technical professionals, as well as lay persons. Fishery Management Reports are available through the Alaska State Library and on the Internet: http://www.sf.adfg.state.ak.us/statewide/divreports/html/intersearch.cfm. This publication has undergone regional peer review.

ABSTRACT

This report summarizes the 2004 season and historical information concerning management of the commercial salmon fisheries of the Northwestern and Northern Districts of Area M. Most commercial salmon fishery effort in the North Alaska Peninsula targeted sockeye salmon *Oncorhynchus nerka* runs in 2004. The commercial salmon harvest on the North Peninsula included 10,402 Chinook *O. tshawytscha*, 2,433,778 sockeye, 33,920 coho *O. kisutch*, 15,828 pink *O. gorbuscha* and 14,958 chum *O. keta* salmon. This compares to a preseason harvest projection of 5,000 Chinook, 1,750,000 sockeye, 50,000 coho, 30,000 pink, and 75,000 chum salmon. Sockeye salmon harvests were larger than expected in all directed sockeye salmon fisheries and the sockeye salmon return to the Nelson River system was the largest on record. Sockeye and coho salmon runs in the Cinder River drainage were lightly exploited. Chinook salmon returns in all North Peninsula streams were strong but there was no effort directly targeting these runs. Most of the chum salmon harvest that occurred was incidental to sockeye salmon fisheries in the Northwestern District and in the Port Moller area. A total of 143 Area M and 1 Area T permit holder participated during the 2004 season in North Peninsula commercial salmon fisheries, making 4,264 deliveries.

All major North Peninsula sockeye salmon producing systems except for the Sandy River achieved their escapement goals in 2004. Total sockeye salmon escapement for North Peninsula streams during 2004 was 1,433,827 fish including; 91,830 in Urilia Bay, 515,397 in Nelson River (including David and Caribou Rivers), 435,000 in Bear River, 32,000 in Sandy River, 82,000 in Ilnik River, 58,050 in the Cinder River, and 103,700 in river systems draining into Port Heiden Bay (of which 82,200 were in the Meshik River).

Key words: North Alaska Peninsula, Area M, Northern District, Northwestern District, commercial fisheries, salmon harvest, salmon escapement.

INTRODUCTION

The Alaska Peninsula Salmon Management Area includes the South Peninsula from Kupreanof Point west to Scotch Cap, and the North Peninsula from Cape Sarichef east to Cape Menshikof (Figure 1). This report summarizes the 2004 season and historical information concerning the commercial salmon fisheries that occur on the North Alaska Peninsula. The North Peninsula contains two districts; the Northwestern District, including all waters between Cape Sarichef and Moffet Point, and the Northern District, including all waters between Moffet Point and Cape Menshikof (Figure 1). The Nelson Lagoon to Strogonof Point reach is the primary sockeye salmon harvest area on the North Peninsula, and includes most of the Northern District (Figure 2). Within the Nelson Lagoon to Strogonof Point reach are the Nelson Lagoon, Herendeen-Moller Bay, Port Moller Bight, Bear River, Three Hills, and Ilnik Sections. Smaller directed commercial salmon fisheries occur in other areas of the North Peninsula.

Legal gear types in the Northwestern District are purse seine, hand purse seine, and drift and set gillnet (5AAC 09.330). By regulation, Northern District commercial salmon fishing is permitted with purse seine, and drift and set gillnet gear; however, within-section gear restrictions exist. The Nelson Lagoon Section is open to drift and set gillnet gear only; the Herendeen-Moller Bay and Port Moller Bight Sections are open to seine, and drift and set gillnet gear; and the Bear River Section is open to seine and drift gillnet gear. The Three Hills Section is open to drift gillnet gear only. The Ilnik, Inner Port Heiden, and Cinder River Sections are open to set and drift gillnet gear.

The commercial salmon season opens by regulation in most of the Northwestern District on June 1 and in most of the Northern District on May 1 (Figure 2; 5AAC 09.310). The Nelson Lagoon and Bear River Sections may open to commercial salmon fishing on May 1. The Three Hills Section may open on June 25.

In February 2004, the Alaska Board of Fisheries (BOF) adopted new regulations for commercial salmon fishing in the Ilnik Section (5AAC 09.369). Fishing is allowed beginning June 25 in that portion of the Ilnik Section southwest of Unangashak Bluffs if sockeye salmon *Oncorhynchus nerka* escapement meets or exceeds interim escapement objectives in the Ilnik River. In that portion of the Ilnik Section between Unangashak Bluffs and Strogonof Point, fishing is permitted beginning on June 25 if escapement in the Meshik and Ilnik Rivers meets or exceeds interim escapement objectives. Management action may also be taken in the Ilnik Section for conservation of Ugashik River sockeye salmon if that portion of the Egegik District specified in 5 AAC 06.359c is closed in the Bristol Bay Management Area.

While the earliest opening dates are established by regulation, actual fishing time in North Peninsula fisheries is based on inseason evaluation of local stock abundance and escapement objectives. Sockeye salmon are the primary species targeted for harvest in these waters, and Nelson and Bear Rivers are the dominant systems. During June 1 through September 15, within the Nelson Lagoon to Strogonof Point area, management emphasis is on four sockeye systems: Nelson, Bear, Sandy, and Ilnik Rivers (Murphy and Shaul 2004). The Alaska Department of Fish and Game (ADF&G) operates weir camps at Nelson, Bear, Sandy, and Ilnik Rivers that provide daily escapement counts used to manage commercial fisheries.

Local sockeye salmon stocks are abundant from Nelson Lagoon to Strogonof Point from June through September. The Nelson River sockeye salmon run begins in early June, peaks in early July, and is over by mid-August (Duesterloh *in press*). Bear River supports two genetically distinct runs: an early run that begins in early June, peaks in early July, and ends in late July; and a late run that starts in late July, peaks in mid-August, and ends in September (Ramstad 1998). The Sandy River run commences in mid-June, peaks in late June or early July, and ends in late July, while the Ilnik River run timing closely parallels the Bear River early run.

HARVEST BY SPECIES

CHINOOK SALMON

The 2004 North Peninsula commercial Chinook salmon *O. tshawytscha* harvest of 10,402 fish was above the recent 10-year (1994-2003) average of 6,887 fish (Table 1). The highest weekly harvest on the North Peninsula occurred between June 14 and June 20 when 4,067 Chinook salmon were caught (Table 2). The Bear River Section Chinook salmon catch of 5,429 fish was the largest of any section in the North Peninsula Area during 2004 (Table 3).

SOCKEYE SALMON

The 2004 North Peninsula sockeye salmon harvest of 2,433,778 fish was above the 1994-2003 average harvest of 1,899,857 fish and the 1984-2003 average harvest of 2,128,367 fish (Table 1; Figure 3). The harvest was 52 percent above the preseason projected harvest of 1,600,000 sockeye salmon (Murphy and Shaul 2004). Most of the 2004 North Peninsula sockeye salmon harvest occurred in the Nelson Lagoon to Strogonof Point reach which includes the Nelson Lagoon, Bear River, Three Hills, and Ilnik Sections (Table 4).

In 2004 the sockeye salmon catch in Urilia Bay Section was 71,305 fish (Table 4), which was the largest harvest in the Northwestern District. A total of six permit holders participated in the Urilia Bay Section fishery with the first delivery occurring on June 15 and the last on July 29 (Table 5).

The 2004 sockeye salmon harvest in the Northwestern District of 98,419 fish was well above the 1994-2003 average harvest of 65,072 sockeye salmon (Table 6).

In 2004, 43 permit holders participated in the Nelson Lagoon fishery with the largest daily harvest of 28,679 sockeye salmon occurring on July 5 (Table 7). The 2004 Nelson Lagoon sockeye salmon harvest was 527,637 fish (Table 4), which was 72 percent above the 1994-2003 average harvest of 307,315 fish (Figure 4). The largest weekly harvest in Nelson Lagoon occurred between July 5 and July 11 with a catch of 154,509 fish (Table 2; Figure 5).

The sockeye salmon harvest in the Port Moller to Cape Seniavin reach, which includes the Port Moller Bight and Bear River Sections, was 611,147 fish (Table 2), which was below the 1994-2003 average harvest of 672,920 fish, but above the 1999-2003 average harvest of 529,491 fish (Figure 6). The largest weekly harvest of 181,168 sockeye salmon occurred between June 21 and June 27 (Table 2). The largest daily harvest in the Bear River Section was on June 23 with a catch of 45,274 fish (Table 8).

In the Cape Seniavin to Strogonof Point reach, which includes the Three Hills and Ilnik Sections, 1,178,971 sockeye salmon were harvested during 2004, of which 63,935 fish were taken in the Three Hills Section and 1,115,036 fish were taken in the Ilnik Section (Table 9; Figure 6). The largest weekly harvest in the Cape Seniavin to Strogonof Point reach occurred between July 5 and July 11 with 449,090 sockeye salmon harvested (Table 2; Figure 7). The peak daily catch in the Three Hills Section occurred on June 25 (7,740 sockeye salmon; Table 10) and in the Ilnik Section on June 30 (94,516 sockeye salmon; Table 11).

In the Port Moller to Strogonof Point reach, which includes the Port Moller Bight, Bear River, Three Hills, and Ilnik Sections, the total catch was 1,790,118 sockeye salmon (Table 2). The highest weekly harvest of 561,281 sockeye salmon occurred during the period July 5 to July 11 (Table 2). The largest daily harvest of 111,526 sockeye salmon occurred June 25 (Table 12).

The total sockeye salmon harvest for the entire North Peninsula was 2,433,778 fish. The highest weekly harvest was 727,520 fish between July 5 and July 11 (Table 2) and the peak daily harvest was 139,199 on June 30 (Table 13).

From 1994-2003, the sockeye salmon harvest in the Port Moller to Strogonof Point reach has been about evenly split between the areas of Port Moller to Cape Seniavin and Cape Seniavin to Strogonof Point (Figure 6). In 2004, roughly one-third of the harvest occurred between Port Moller and Cape Seniavin while the remaining two-thirds was taken northeast of Cape Seniavin in the Three Hills and Ilnik Sections (Figure 6).

COHO SALMON

The 2004 North Peninsula coho salmon *O. kisutch* harvest was 33,920 fish, which was about onethird of the 1994-2003 average harvest of 100,598 fish (Tables 1 and 14). The largest coho salmon harvest occurred in the Nelson Lagoon fishery (Table 4). Coho salmon catches increased to more than 1,000 fish per day for the first time all season in the North Peninsula fishery on August 16 (Table 13) and the largest daily harvest occurred on August 30 with 7,169 coho salmon caught. Due to low processor interest and depressed market conditions, little effort targeting coho salmon occurred in 2004.

PINK SALMON

The 2004 North Peninsula pink salmon *O. gorbuscha* harvest was 15,828 fish, which was about one-third of the 1994-2003 average of 46,913 fish (Table 1). The pink salmon harvest in the Northwestern District in 2004 was 11,434 salmon, less than half the 1994-2003 average harvest of 24,166 fish (Table 15). In the Northern District, pink salmon are usually caught incidentally during sockeye salmon fisheries.

CHUM SALMON

The 2004 North Peninsula chum salmon *O. keta* harvest was 14,958 fish, which was less than onefifth the 1994-2003 average harvest of 82,618 fish (Table 1). In the Northern District, the chum salmon harvest of 8,480 fish was well below the 1994-2003 average of 48,311 fish (Table 16). The Herendeen-Moller Bay Section and Port Moller Bight Section saw no chum salmon harvested, compared to the recent 10-year average of 2,246 fish (Table 16). In the Northwestern District, the chum salmon catch of 6,478 fish in 2004 was less than one-fifth of the recent 10-year average of 34,307 fish (Table 17). In 2004, most of the chum salmon harvest in the Northern District was taken incidentally during sockeye salmon fisheries.

ESCAPEMENT BY SPECIES

CHINOOK SALMON

The 2004 North Peninsula indexed total Chinook salmon escapement was 30,874 fish, which was above the 1994-2003 average of 18,678 fish (Table 1). Chinook salmon escapement was estimated at Nelson River using both weir and aerial survey counts. The 2004 Nelson River weir Chinook salmon escapement was 6,282 fish (Table 18), while the entire Nelson River drainage Chinook escapement was an estimated 7,759 fish. Nelson River is the only river on the North Peninsula with a Chinook salmon escapement goal (2,400 to 4,400 fish). The combined King Salmon, Bear, and Sandy Rivers (Bear River Section) indexed Chinook salmon escapement was 7,400 fish, which was well above the 1994-2003 average of 2,860 fish (Table 3). Bear and Sandy River weir counts (Tables 19 and 20) did not accurately reflect the total escapement of Chinook salmon because most of the fish spawn below the weir sites or in other downstream tributaries. Only 16 Chinook salmon passed the Ilnik River weir in 2004 (Table 21).

SOCKEYE SALMON

The 2004 North Peninsula indexed total sockeye salmon escapement of 1,433,827 fish, which included weir and aerial survey counts (Figure 8), was above the 1994-2003 average indexed escapement of 979,611 fish (Table 1). The North Peninsula escapement goal range is 523,400-933,800 sockeye salmon total for those streams that have established goals (Nelson et al. *in prep*). The sockeye salmon escapement goals for major North Peninsula systems are: 97,000-249,000 fish in Nelson River; 265,000-455,000 fish in Bear River (combined early and late runs); 40,000-60,000 fish in Sandy River; and 40,000-60,000 fish in Ilnik River (Murphy and Shaul 2004). The 2004 sockeye salmon escapement, including postweir estimates, were: 480,097 fish in Nelson River, 435,000 fish in Bear River, 32,000 fish in Sandy River, and 82,000 fish in Ilnik River (Tables 22-25). In 2004, all major sockeye systems met or exceeded their respective escapement goals and were above the previous 10-year average except Sandy River (Table 26). The peak daily escapement occurred at the Nelson River weir on July 10 (43,244 fish; Table 22) and on July 8 at Bear River (54,867 fish; Table 23). The Sandy River peak daily escapement

occurred on July 18 (1,295 fish; Table 24). The peak daily escapement at Ilnik River occurred on June 16 (5,050 fish; Table 25).

COHO SALMON

The North Peninsula coho salmon run in 2004 was strong. The bulk of the run escaped due to low exvessel prices and lack of processor interest in purchasing coho salmon. Only the Nelson River system on the North Peninsula has a coho salmon peak escapement goal, which is 18,000 fish (Nelson et al. *in prep*). This goal was exceeded in 2004 with a peak escapement estimate of 52,500 fish (Appendix A). The peak escapements of other systems surveyed for coho salmon that do not have escapement goals were: Meshik River 135,000 fish, Mud Creek 21,500 fish, Cinder River 27,500 fish, the Ilnik Lagoon system 40,000 fish, Whaleback Mountain Creek 30,000 fish, and the Joshua Green River 122,000 fish (Appendix A). In total, approximately 520,400 coho salmon were counted in 35 North Peninsula streams during 2004. This escapement figure is lower than the indexed total escapement because some streams were not surveyed, and no effort was made to estimate total fish entering the streams at times other than during peak abundance.

PINK SALMON

The 2004 North Peninsula indexed total pink salmon escapement was 122,000 fish (Table 1). The North Peninsula pink salmon escapement goal is based solely on the escapement in the Bechevin Bay Section. The even-year goal of 33,200 to 66,400 fish (Nelson et al. *in prep*) was exceeded with 84,300 pink salmon escaping in the Bechevin Bay Section in 2004 (Table 15). Even-year pink salmon escapements are typically considerably larger than odd-year escapements. For even-numbered years between 1994 through 2002, the entire North Peninsula escapement averaged 185,320 pink salmon, and escapements ranged from 24,900 fish in 2002 to 382,600 fish in 1996 (Table 1).

CHUM SALMON

The 2004 North Peninsula indexed total chum salmon escapement was 434,950 fish (Table 1), which falls in the middle of the escapement goal range of 343,200 to 686,400 fish (Nelson et al. *in prep*). Northern District chum salmon escapement goal (119,600 to 239,200 fish; Nelson et al. *in prep*) was met with 139,350 fish, the majority of that escapement occurring in the Herendeen-Moller Bay Section (72,850 fish; Table 16). The Northwestern District system chum salmon escapement goal (100,000 to 215,000 fish; Nelson et al. *in prep*) was exceeded with 295,600 fish, the majority of that escapement occurring in the Izembek-Moffet Bay streams (252,200 fish; Table 17).

ALASKA PENINSULA AND BRISTOL BAY SALMON OVERLAP AREA

The Alaska Peninsula (Area M) and Bristol Bay (Area T) overlap area consists of the Cinder River Section, Inner Port Heiden Section, and Ilnik Lagoon (Figure 9; 5 AAC 39.120). The overlap area was created shortly after statehood to allow Area T permit holders the opportunity to fish within their traditional harvest locations of Area M. Historically, when not participating in the Bristol Bay sockeye salmon fisheries, Port Heiden Area T permit holders fished for Chinook and coho salmon in the Inner Port Heiden Section, and Pilot Point Area T permit holders fished inside the Cinder River Section for Chinook and coho salmon (and occasionally small numbers of sockeye salmon).

Since 1985, most effort in the Cinder River Section has been from Area T permit holders. Except during July, Area T permit holders are allowed to fish the open season in the Inner Port Heiden and Cinder River Sections. Area T permit holders are also allowed to fish in Ilnik Lagoon during August and September. In 1986, Area T fishermen started fishing in the Ilnik and Outer Port Heiden Sections. In 1990, the BOF excluded Area T permit holders from the Ilnik Section (except inside Ilnik Lagoon during August and September) and closed the Outer Port Heiden Section to all commercial salmon fishing by both Area M and Area T permit holders because of concern over potential interception of coho salmon bound for Inner Port Heiden (Meshik River). In 2004, no commercial fishing effort occurred in the Inner Port Heiden Section because of poor market conditions for Chinook and coho salmon. In the Cinder River Section, one Area T permit holder made limited deliveries during 2004.

COMMERCIAL SALMON FISHERY SUMMARY, 2004

The majority of the North Peninsula commercial fishing effort on sockeye salmon occurred in the Nelson Lagoon, Bear River, Three Hills, and Ilnik Sections. The season in the Port Moller to Strogonof Point reach resulted in above average harvests during June and July, but very poor fishing in August and September. The Nelson Lagoon sockeye salmon run was the largest on record. The late Bear River sockeye salmon run was the worst on record. The total North Peninsula harvest of 2,433,778 sockeye salmon as well as the recent 10-year average (2,136,873; Table 1).

NELSON LAGOON SECTION

In 2004, the first sockeye salmon harvest in the Nelson Lagoon Section occurred on June 7 (Table 7), although tender service was not available until June 14. In response to development of a strong run and relatively low harvest effort, almost continuous fishing (46 out of 48 days) was allowed from June 14 until July 31. The peak daily catch was on July 5 when 28,679 sockeye salmon were harvested (Table 7). Despite the Nelson River interim escapement objectives being exceeded throughout the run, it was necessary to have closed periods (on June 20 and June 27) to allow sufficient female sockeye salmon to escape. The Nelson Lagoon set gillnet fishery has a strong tendency to catch a high percentage of female salmon. The total sockeye salmon escapement on record. The estimated postweir escapement included an additional 13,923 sockeye salmon, for a total escapement of 480,097 sockeye salmon (Table 22) which exceeded the 97,000-249,000 (Nelson et al. *in prep*) fish season goal. The sockeye salmon harvest in Nelson Lagoon during 2004 was 527,637 fish (Table 7), the second largest on record. The processing capacity being exceeded.

From late July into August, management of the Nelson Lagoon Section was based on late sockeye salmon stocks believed to be mostly destined to the Southwest Lakes and other lakes draining into the David's River. Late season sockeye salmon runs were small but extensions in fishing time were allowed due to decreased fishing effort. The 2004 David's River sockeye salmon escapement (including Southwest Lakes) was estimated to be at least 5,300 fish, based on a peak aerial survey estimate of 3,300 fish (Appendix A).

After August 15, the Nelson Lagoon Section was managed based on coho salmon run strength. The Nelson Lagoon coho salmon harvest was 29,879 fish (Table 7), which was the largest harvest in any North Peninsula section during 2004. In recent years, the lack of coho salmon markets has reduced the coho salmon harvest in many areas of the North Peninsula, including the Nelson Lagoon Section.

BEAR RIVER AND THREE HILLS SECTIONS

In 2004, the first delivery occurred in the Bear River Section on June 1 (Table 8). Catches and effort from early to mid-June were low because most of the drift gillnet fleet was participating in the South Unimak Fishery. Weekly fishing periods from 6:00 AM Monday to 6:00 PM Wednesday were in effect prior to June 13. During the period of June 14-20, 26 permit holders participated in the Bear River Section fishery. From June 20 until further notice, that portion of the Bear River Section, located from the Bear River church to the Sandy River Bluffs at 160° 19.636' W. long., was closed to commercial salmon fishing over concern for sockeye salmon bound for Sandy River. On June 20, the Sandy River cumulative escapement was 2,149 sockeye salmon and daily escapement rates were slow, but increasing slightly (Table 24). The June 20 interim escapement objective at Sandy River (2,000-3,000 sockeye salmon) was met, yet there was concern that the run would be weak, as it has been over the last several years.

On June 21, 17,513 sockeye salmon passed the Bear River weir (Table 23), causing the June 25 interim escapement objective of 30,000-55,000 sockeye salmon to be exceeded by over 13,000 fish. The Three Hills Section opened to commercial salmon fishing by regulation for the first time on June 25. Based on the strong escapement counts at Bear River and the inability to achieve escapement objectives after June 20 at Sandy River, a large portion of the Bear River Section was closed for the duration of the Sandy River sockeye salmon run. That portion of the Bear River Section located northeast of the Sandy River Bluffs to Cape Seniavin was closed to commercial salmon fishing from June 27 until the end of the Sandy River sockeye salmon run. The Three Hills Section was also closed due to concern for Sandy River sockeye salmon escapement on July 4 and reopened on July 20. Through July 15, the sockeye salmon escapement at Bear River was 292,961 fish (Table 23), exceeding the interim goal of 130,000-230,000 sockeye salmon. Due to processing limitations and strong catches, effective on July 5 through July 14, the fleet in the Bear River, Three Hills, and Ilnik Sections did not harvest as many salmon as it was capable of. Limits were 7,000 pounds for refrigerated-sea-water (RSW) vessels and 5,000 pounds for non-RSW vessels. Although limits were in effect until July 14, after July 10 catches started to decrease and limits were not needed.

The Bear River and Three Hills Sections were closed from July 31 to August 25 to achieve the late-run escapement objective from August 1 to August 25 of 85,000-165,000 sockeye salmon. Escapement rates were slow through this period and test fishing (Appendix B.1-B.12), which occurred on six days, showed little sign of any significant build-up of sockeye salmon. No fishery was permitted until August 25. The August 1 to August 25 sockeye salmon escapement at Bear River was 76,144 fish, slightly below the escapement objective for this period. The Bear River and Three Hills Sections were opened to commercial salmon fishing on August 25 with a large closed water area, extending from the southern 1,000 yard regulatory marker at Bear River to the 2,000 yard northern regulatory marker at Sandy River, to provide some protection for the later portion of the Bear River run. Catches during this time were extremely small and, within a few days, effort decreased from 22 vessels to fewer than six. The late Bear River run was

forecasted to produce a harvest of 531,000 sockeye salmon (Plotnick and Eggers 2004). The actual harvest of less than 10,000 sockeye salmon was the worst run on record.

The Bear River weir was removed as scheduled on August 25. The cumulative Bear River sockeye salmon escapement through the weir was 430,699 fish, meeting the in-season (June 1 to August 25) escapement goal of 265,000-455,000 fish (Table 23; Murphy and Shaul 2004). The final Bear River escapement, which includes a postweir estimate, was 435,000 sockeye salmon, meeting the total escapement goal of 292,000-487,000 fish (Nelson et al. *in prep*). The Sandy River weir washed out on July 20, about 5 days before it was scheduled to be removed for the season. The total escapement through Sandy River on July 20 was 14,459 sockeye salmon (Table 24). Spawning ground aerial surveys estimated 32,000 sockeye salmon within the Sandy River drainage (Appendix A). The escapement goal at Sandy River of 40,00-60,000 sockeye salmon was not met even with substantial closures in effect from June 20 to July 20.

ILNIK SECTION

Regulations adopted by the BOF in 2004 allow the Ilnik Section to open to commercial salmon fishing on June 25 based on escapement levels at Meshik and Ilnik Rivers (5 AAC 09.369). In the Ilnik Section from July 5 through July 20, time and area closures may be implemented if there are concerns for Ugashik River sockeye salmon stocks (5 AAC 09.369 (j)(2)(A)). During the 2004 season, management of that portion of the Ilnik Section northeast of Unangashak Bluffs was based on the Ilnik River weir escapement, and Meshik River sockeye salmon escapement was determined from aerial surveys. In that portion of the Ilnik Section southwest of Unangashak Bluffs, management actions were based on Ilnik River sockeye salmon escapement levels.

That portion of the Ilnik Section northeast of Unangashak Bluffs to Strogonof Point opened to commercial salmon fishing on Monday, June 28 for 2 ½ days. During each subsequent week, the fishery was open for 2 ½ days per week because it was unknown what impact this fishery would have on the Meshik River sockeye salmon escapement. By June 25, a total of 55,504 sockeye salmon had passed the Ilnik weir, exceeding the June 25 interim escapement goal of 15,000-25,000 fish, and actually meeting the season ending escapement goal of 40,000-60,000 (Table 25). That portion of the Ilnik Section southwest of Unangashak Bluffs opened to commercial salmon fishing on June 25 due to this strong early run. The Ilnik Section sockeye salmon harvest for 2004 was 1,115,036 fish (Table 4). Within the Ilnik Section, 446,146 sockeye salmon were harvested northeast of Unangashak Bluffs, while 668,890 sockeye were harvested southwest of Unangashak Bluffs. The largest daily harvest in the Ilnik Section occurred on June 30 when 94,516 sockeye salmon were caught (Table 11).

Openings and closures in the Ilnik Sections after July 15 through mid August were based on Bear River sockeye salmon stocks, and coincided with openings in the Bear River and Three Hills Sections.

After mid-August, the Ilnik Section is normally managed on the basis of Ilnik Lagoon coho salmon stocks (Murphy and Shaul 2004). However, the late sockeye salmon escapement at Bear River was very poor, even with the Bear River and Three Hills Sections closed between August 1 and August 25. Consequently, the Ilnik Section remained closed from August 1 to August 25 for the conservation of Bear River bound fish. When the Bear River, Three Hills, and Ilnik Section reopened to commercial salmon fishing on August 25, little effort occurred in the Ilnik Section. As a result, 2004 coho salmon harvests in the Ilnik Section were the lowest seen in

recent years. No directed coho salmon fishery occurred this year in Ilnik Lagoon. The last reported landing in the Ilnik Section was on July 31 (Table 11).

EMERGENCY ORDERS

In 2004 the first emergency order for the North Peninsula was issued on June 9 and the last on September 1. In 2004, there were a total of 50 emergency orders issued concerning North Peninsula salmon fisheries (Table 27).

^a Statistical area 311-58 was moved from the Bechevin Bay Section, to the Izembek-Moffet Bay Section in 2001.

^b In 1983 only the Northwest District catch includes a small harvest from the Dublin Bay Section.

^c Escapements are indexed totals.

^d Figures are extrapolated estimates.

^a Outer Port Heiden Section catches occurred only between 1986 and 1989. This section has been closed since 1989.

^b Escapement includes all sockeye systems, mainly Bear and Sandy Rivers combined with post weir estimates.

^c Escapements are indexed totals except for Bear, Sandy, Ilnik, and Nelson Rivers where weir and tower counts are used.

^d These figures are extrapolated estimates.

^e Ilnik Section and Three Hills Section combined.

^a Statistical area 311-58 was moved from the Bechevin Bay Section, to the Izembek-Moffet Bay Section in 2001.

^b In 1983 only the Northwestern District catch includes a small harvest from the Dublin Bay Section.

^c Escapements are rounded indexed totals.

^a Statistical area 311-58 was moved from the Bechevin Bay Section, to the Izembek-Moffet Bay Secton in 2001.
^b In 1983 only the Northwestern District catch includes a small harvest from the Dublin Bay Section.

^c Escapements are rounded indexed totals.

^d These figures are extrapolated estimates.

 Table 26.-Historical North Peninsula sockeye salmon escapements of weired salmon systems, 1986-2004.

^a During all years, Ocean River flowed into Ilnik Lagoon.

^b Does not include David or Caribou Rivers.

^c Estimates are based on weir counts added to post weir escapement estimates. Only those years when weirs were present are included in the table.

144

^a Fished from the mouth of Bear River north.

^b Fished from the mouth of Bear River south.

^c Defined as the interval between when the entire net was in the water to when the entire net was out of the water.

^d At the start of each day of fishing, each boat performed 4 sets of standardized duration in standardized locations. Subsequent sets were made at the discretion of the ADF&G personnel on board the test boat.
