FISCAL YEAR 2007
DRAFT WORK PLAN

October 2, 2006
Revised November 6, 2006

Prepared by:
Exxon Valdez Oil Spill Trustee Council

MCKIE CAMPBELL
Commissioner
Alaska Dept. of Fish and Game

KURT FREDRIKSSON
Commissioner
Alaska Dept. of Environmental Conservation

JOE MEADE
Supervisor
Chugach National Forest
US Department of Agriculture

DAVID MÁRQUEZ
Attorney General
Alaska Department of Law

JIM BALSIGER
Director, Alaska Region
National Marine Fisheries Service

DRUE PEARCE
Senior Advisor to the Secretary for
Alaskan Affairs
US Department of the Interior

Notice

The abstract of each proposal submitted in response to the FY07 Invitation for Proposals was written by the authors of the proposals to describe their projects. To the extent that the abstracts express opinions about the status of injured resources they do not represent the views of the Executive Director, the Science Director or other staff of the *Exxon Valdez* Oil Spill Trustee Council, nor do they reflect policies or positions of the Trustee Council.

The Alaska Department of Fish and Game (ADF&G) administers all programs and activities free from discrimination based on race, color, national origin, age, sex, religion, marital status, pregnancy, parenthood, or disability. The department administers all programs and activities in compliance with Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, Title II of the Americans with Disabilities Act of 1990, the Age Discrimination Act of 1975, and Title IX of the Education Amendments of 1972.

If you believe you have been discriminated against in any program, activity, or facility please write:

- ADF&G ADA Coordinator, P.O. Box 115526, Juneau, AK 99811-5526.
- The department's ADA Coordinator can be reached via phone at the following numbers: (VOICE) 907-465-6077, (Statewide Telecommunication Device for the Deaf) 1-800-478-3648, (Juneau TDD) 907-465-3646, or (FAX) 907-465-6078.
- U.S. Fish and Wildlife Service, 4040 N. Fairfax Drive, Suite 300 Webb, Arlington, VA 22203
- Office of Equal Opportunity, U.S. Department of the Interior, Washington DC 20240.

Dear Reviewer,

Each year, the *Exxon Valdez* Oil Spill Trustee Council funds activities to restore the resources and services injured by the 1989 *Exxon Valdez* oil spill. Public input is critical to the Council's decision making process and this draft work plan has been prepared to solicit your comments on which projects to fund in Fiscal Year 2007.

In 2006, the Council recognized that a tremendous amount of work had been accomplished over 15 years of research, monitoring and specific activities directed at addressing the restoration and rehabilitation goals of the 1994 Restoration Plan (www.evostc.state.ak.us/Policies/restplan.htm). However, the Council determined that results of previous efforts needed synthesis in order to better understand the effects of lingering oil and to evaluate the status of injured resources and services. They decided to realign priorities and restorative activities, placing focus on critical work required to reach closure in areas of restoration related to lingering oil and injured resources. The Council's priorities are outlined in the Interim Guidance Document (IGD), www.evostc.state.ak.us/Policies/igd.htm.

Several resources in the Sound continue to be affected by the spill and have been monitored closely by the Council. While the 1994 Restoration Plan establishes a plan for the restoration of all injured resources and services in the Sound, the current critical status of the Pacific herring requires immediate attention. The Council has identified the need for a comprehensive herring restoration program that will help re-establish the declining herring population in Prince William Sound for use by both the commercial fisheries and local subsistence communities.

Herring are an important component of the Sound ecosystem, both ecologically and commercially. Herring were initially impacted by the oil spill, and the Council has continued to classify them as a non-recovering injured resource. Pacific herring are an essential part of the marine food web in the Sound and provide food for birds, marine mammals and invertebrates. Moreover, herring have been fished commercially for food, bait, sac-roe and spawn-on-kelp. The fishery in the Sound collapsed in 1993, four years after the spill, and since then a consistent fishery has not been sustainable. Because herring are a forage fish for many other species, it is speculated that the decline of herring has also had deleterious effects on other animals that depend on them for food. The Council appreciates the dire situation of PWS herring and the ecological and human impact caused by their decline. Therefore, the Council has committed to develop a long-term Herring Recovery Plan and implement enhancement activities with the ultimate goal of assisting herring recovery in the Sound. A restoration planning effort will begin in late 2006. This collaborative planning process will include subsistence-resource users, government agency representatives, non-governmental organizations (NGO), commercial fishermen, scientists and other stakeholders. The Recovery Plan will define critical decision pathways needed to make progress in herring recovery and provide a structure for evaluating and assessing decisions and actions as the recovery effort progresses.

The following draft work plan, entitled "**Draft Work Plan, FY07, Part 1: Pacific Herring**", contains proposal information and funding recommendations for herring-related projects, only. The Trustee Council also received non-herring related proposals in response to the FY07

EVOSTC FY 2007 Draft Work Plan, Part 1: Pacific Herring 10/02/2006

Invitation for Proposals, and these will be evaluated by the Trustee Council in meetings held later this year. The “**Draft Work Plan, FY07, Part 2: Injured Resources and Services**” will be published for public review prior to funding decisions by the Trustee Council. Check our website, (www.evostc.state.ak.us) periodically for updates.

I am interested in your thoughts and ideas in regard to this draft work plan, as well as our restoration plan in general. Comments on this draft work plan need to be received at the Trustee Council office by COB October 31, 2006. Please see the “Please Comment” section prior to the Table of Contents for more information regarding how to submit comments.

Sincerely,

Michael Baffrey
Executive Director

PLEASE COMMENT

You can help the Trustee Council by reviewing this draft work plan and letting us know your priorities for Fiscal Year 2007. To be most useful, your comments should be received by the Council on or before October 31, 2006. You can comment by:

Mail: Exxon Valdez Oil Spill Trustee Council

Acknowledgements

We are pleased to acknowledge Trustee Council staff members Carrie Holba, Michael Schlei, Cherri Womac, Barbara Hannah, Catherine Boerner, and Colleen Keane whose hard work and dedication made this Draft Work Plan possible. Special thanks to the anonymous scientists who peer reviewed the proposals received this year and thanks also to the principal investigators and their collaborators for giving us so many fine proposals from which to choose in building our program. Many thanks to those scientists from Trustee Council agencies that provided help, and in particular we offer special thanks to Dede Bohn, Carol Fries, Pete Hagen, Hans Neidig, Heather Brandon, Jenifer Kohout, Jennifer Thomson, Larry Dietrick, and Steve Zemke. We also owe our thanks for their expert program guidance and peer review efforts to the members of the Science Panel (Steve Braund, Ron O'Dor, Gary Cherr, Tom Dean, Robert Spies, Charles (Pete) Peterson and Leslie Holland-Bartels).

Michael Baffrey, Executive Director

Kimberly A. Trust, Science Director

Overview of the FY07 Work Plan

The Draft Work Plan comprises multi-year projects submitted in previous years which have received continuous funding by the Trustee Council and new proposals received in response to the FY07 Invitation for Proposals. This document allows the Council to review the projects proposed for fiscal year 2007, and the funding requested to implement the proposed work. This year the Draft Work Plan is divided into two sections: **FY07 Draft Work Plan, Part 1: Pacific Herring** and **FY07 Draft Work Plan, Part 2: Injured Resources and Services**. Upon final funding decisions by the Trustee Council, these two sections will be condensed into one final Work Plan for 2007. Each section of the Draft Work Plan contains basic information about an individual proposal and its complete record of funding recommendations during the review process. Recommendations from the Science Panel and preliminary recommendations of the Science Director and Executive Director are included in this draft. The recommendations of the Public Advisory Committee (PAC) will be added prior to the Draft Work Plan's review by the Trustee Council.

Part 1 of the FY07 Draft Work Plan, enclosed here, presents those proposals that focus on the restoration of Pacific Herring. The lack of recovery of the Pacific Herring has been identified as a priority for 2007, primarily because the herring fishery in the Sound has been closed for 11 of the 17 years since the spill. After the 1993 'crash', the population began increasing in 1997 and the fishery was opened briefly in 1997 and 1998. However, the population stalled in 1999, and the fishery has been closed since then, including 2006. No trend suggesting healthy recovery has occurred over the last eight years.

Twenty-seven herring-related proposals were received by the Trustee Council and the proposed work fell roughly into several key areas: habitat, predation/disease, juvenile survival, population modeling and data management. The total requested funding for herring projects in FY07 is \$5,247,300 and the total requested funding for herring projects over the next three years is \$14,141,200. Twenty-five additional proposals were received by the Trustee Council for review and 12 project ideas were submitted for consideration by the Trustee Council for full proposal development. These projects will be presented in Part 2 of the Draft Work Plan which will be released later this year.

The Trustee Council has an open, competitive contracting process that is designed to allow proposals from any source to be considered for funding as an external project. The system works well for this purpose as demonstrated by the fairly even distribution of funding across the home institutions of the principal investigators of external projects.

Projects Currently Funded Through FY07*

PI	Project #	Title	Funding to Date	FY07 Funding
Matkin	050742	Monitoring of Humpback Whales in PWS/Kenai Fjords in 2005-2007	\$42,800	\$23,800
Baird	050743	Linking Shoreline Mapping with Community-Based Monitoring	\$57,800	\$11,900
Hoover/Miller	050749	Harbor Seal Monitoring in Southern Kenai Peninsula Fjords	\$223,000	\$82,300
Short	050763	Long-term Monitoring of Anthropogenic Hydrocarbons	\$117,800	\$58,900
Willette	050765	Improving Preseason Forecasts of Kenai River Sockeye Salmon Runs	\$134,700	\$67,000
Otis	050769	Temporal Stability of Fatty Acids used to Discriminate Pacific Herring	\$157,100	\$25,100

*The Trustee Council has already approved funding for these projects in FY07.

EVOSTC FY 2007 Draft Work Plan, Part 1: Pacific Herring 10/02/2006

^aThe dollar amounts recommended are the amended requests being recommended to the Trustee Council for funding by the Executive Director. The changes occurred based on proposal revisions or recommended reduced funding.

^bPriority Ranking - Herring Projects - In 2006, the Trustee Council emphasized the need to initiate herring recovery projects responding to the FY07 Invitation: It also expressed support for the development of a Herring Recovery Plan, which has been initiated by personnel at the Restoration office. It was noted by all groups reviewing the proposals (e.g., Science Panel, PAC and the Liaisons) that guidance from a Recovery Plan would be helpful in determining which projects to recommend in FY07. However, given that a Plan has not yet been implemented, the Science Panel in collaboration with the Science Director devised a ranking system to provide guidance in determining which projects to recommend: It is a three point system (0, 1, and 2). Projects ranked with a 0 are those projects that are not recommended for funding. Projects which ranked a 1 or a 2 are projects that are recommended for funding by at least one group; however, the projects given a 1 ranking are those projects that will provide information that will benefit any broad-scale restoration effort for herring. These are shaded in the table above. The projects that are ranked with a 2 are those projects that warrant funding (i.e, scientifically valid and applicable to herring) but would benefit from the guidance of a herring steering committee and a focused, developed recovery plan.

^cFund Contingent – Projects with a Fund Contingent are recommended for funding by the Executive Director, but the PI's have an outstanding final report due to the Trustee Council from a past project. Upon receipt of the report, any approved funds will be released.

Proposed Projects

Acronyms:

ADEC – Alaska Department of Environmental Conservation

ADFG – Alaska Department of Fish and Game

DOI – US Department of Interior

EVOS – Exxon Valdez Oil Spill

FWS – US Fish and Wildlife Service

NOAA – National Oceanic and Atmospheric Administration

PWS – Prince William Sound

PWSFRAP- Prince William Sound Fisheries Research Application and Planning

PWSSC – Prince William Sound Science Center

UAF – University of Alaska, Fairbanks

USGS – US Geologic Survey

Project: EVOS Administration
Project Title: Annual Program Development and Implementation
Location: Anchorage, AK
Principal Investigator: EVOS Administration
Funding Requested by Fiscal Year:

FY07: \$2,062,447

Total Funding Requested:

\$2,062,447

Abstract:

The Council adopted a new budget structure in FY 2006 in order to more clearly identify the allocation of funds supporting Trustee Council activities. The presentation of the initial Annual Program Development and Implementation Budget instituted in FY 2006 is being mirrored within the submittal of this funding request for FY 2007. The intent is to continue emphasizing the estimated costs associated with the current activities and directives of the Trustee Council.

This budget has been developed with the focus on completing the Trustee Council's planned activities detailed within the "Interim Guidance Document" implemented in August of 2005 and effective through December 2006, as well as initiating any restoration planning efforts resulting from the determinations regarding the fate and impact of lingering oil in the spill area and the status of injured resources and services identified in the updated list.

In addition, this budget expands upon activities started in FY 2006 toward developing a plan for herring recovery; and includes estimates of the direct and indirect costs of the Trustee Council's agencies and administrative office, in providing services for the Trustee Council's programs and approved projects of FY 07.

The "Program Development and Implementation Budget" includes the following components:

- Administration Management
- Data Management
- Science Management
- Community Involvement
- Public Advisory Committee (PAC)
- Small Parcel Program
- Trustee Council Member Direct Expenses
- Program Support/Project Management by Agencies
- Alaska Resource Library & Information Services (ARLIS)

Various aspects of the italicized components are undertaken by Trustee Council agencies providing program development and administrative support.

Although funding for liaisons, project managers, and other support staff is included in the Program Support and Project Management component, the final budget for this component cannot be accurately determined until the Trustee Council takes action on the FY 07 Work Plan. This component is an initial funding request. Upon adoption of the FY 07 Work Plan, additional project management funds for each agency will be requested in proportion to the number and complexity of funded projects assigned to each agency for management. At that time the budget will be revised to reflect this additional expense.

The Trustee Council Office is administratively located within the Alaska Department of Fish and Game. Allocation of funds by agency is detailed within the Budget Summary.

NOTE: THIS BUDGET HAS ALREADY BEEN APPROVED BY THE TRUSTEE COUNCIL

Project Number: 070812
Project: **Adams-Pacific Herring Restoration**
Project Title: Pacific Herring – From Familiar Inquiry to Uncharted Restoration
A Project to Aid Coordination, Compliance, and Rapid Integration
Location: PWS and Cordova
Principal Investigator: Ken Adams
Affiliation: PWSFRAP
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$252,900 FY08: \$0 FY09: \$0 FY10: \$0

Total Funding Requested:
\$252,900

Abstract:

The year 2006 may well be remembered as the year that restoration of Pacific herring moved from inquiry to intervention. Whether the year will a success technically will depend less on what we know now than on how we use what is know. This project provides three parts of a larger collection that together enable first trial interventions to be conducted in April 2007. This project provides a means for independently prepared proposals to coordinate efforts and improve outcomes. It provides assistance to collaborators who need the models developed over the past 12 years of Restoration to be able to reliably and efficiently carry out interventions and track the outcomes.

Science Panel Comments: The strength of this proposal is the involvement from the residents of Cordova that have been affected by the spill. It is hoped that the PIs will remain active participants in the process of a developing herring restoration program. However, this proposal is poorly written and not well organized. The project fails to demonstrate links to herring restoration because the objectives are not clear and methods are vague. The Panel does not recommend funding this proposal because the ultimate outcome and/or products of this project are unknown. **RECOMMENDATION: DO NOT FUND**

Public Advisory Council Comments: **RECOMMENDATION: DO NOT FUND**

Science Director Comments: Concur with Science Panel. **RECOMMENDATION: DO NOT FUND**

Executive Director Comments: **RECOMMENDATION: DO NOT FUND**

Project Number: 070807
Project: Allee/Norcross-Herring Restoration Workshop
Project Title: Herring Restoration in PWS: Enhancement Workshop
Location: PWS
Principal Investigator: Brian Allee, Brenda Norcross
Affiliation: Sea Grant/UAF
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$126,500 FY08: \$66,600 FY09: \$0 FY10: \$0

Total Funding Requested:

\$193,100

Abstract:

In response to the decline of herring in PWS, the EVOS Council has committed to develop a long-term Herring Restoration Plan, and to implement enhancement activities with the ultimate goal of assisting herring recovery in the Sound. This plan calls for the identification and evaluation of national and international efforts related to herring enhancement. We propose to hold an international workshop on herring enhancement. Leading authorities on enhancement of herring and related species will be invited, and a call for papers will yield additional presentations on research, techniques and existing enhancement programs. Immediately following the workshop the Steering Committee will compose an Executive Summary and compile all of the presentations given at the workshop. In the following fiscal year, Alaska Sea Grant College Program will produce a fully peer-reviewed proceedings of the papers submitted for this workshop.

Science Panel Comments: The proposal is well-written, concise and responds to the Invitation. The PI's are well-qualified. However, costs seem high for a two-day conference. No clear explanation is given of how the products will benefit the herring restoration process. The main deliverables are an executive summary produced immediately after the conference and a peer reviewed workshop Proceedings document. The Proceedings, produced several years after the meeting will not meet the immediate needs of a developing herring restoration program. RECOMMENDATION: DO NOT FUND

Public Advisory Council Comments: RECOMMENDATION: DO NOT FUND

Science Director Comments: Concur with Science Panel. The Alaska SeaGrant program has experience organizing these types of events and would likely do an excellent job in presenting a workshop. However, the costs seem high and input from the international community into a herring recovery program needs to be expedited. Final deliverables from the proposed workshop will not be available for two years. The Trustee Council needs information on enhancement/restoration options for herring more quickly. RECOMMENDATION: DO NOT FUND

Executive Director Comments: The Trustee Council has approved funding for both an international herring restoration workshop and a herring restoration plan/team in the FY07 Administrative Budget. It is hopeful the PI's will participate in the planning and implementation of these activities. **RECOMMENDATION: DO NOT FUND**

Project Number: 070624
Project: **Batten-Continuous Plankton Data Recorder**
Project Title: Acquisition of Continuous Plankton Recorder Data
Location: Cook Inlet
Principal Investigator: Sonia Batten
Affiliation: BAA
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$135,400 FY08: \$0 FY09: \$0 FY10: \$0
Total Funding Requested:
\$135,400

Abstract:

This project will use a Continuous Plankton Recorder to collect plankton samples from the Alaskan shelf and Gulf of Alaska to determine variability in abundance and distribution of herring prey. Understanding variability in their food source is one requirement for understanding variability in Prince William Sound herring populations. Recent CPR data have shown large differences in mesozooplankton biomass on the Alaskan shelf in 2004 and 2005. This project will increase the time series of data collected with previous EVOS TC funding and improve our understanding of how the food chain supporting Alaskan fisheries is regulated.

Science Panel Comments: This project has been funded for several years by the Trustee Council and funds are being requested for an additional year. This project provides the only long term record of plankton abundance and species composition important to understanding the inter-annual variation in herring food from the Gulf of Alaska. This information is necessary to understand herring mortality and long term trends in herring abundance. This project is cost effective because the PI is utilizing ships of opportunity transecting the entire Gulf of Alaska thus funding for a vessel is not required. RECOMMENDATION: FUND

Public Advisory Council Comments: RECOMMENDATION: FUND

Science Director Comments: This project collects important long-term plankton trend data across the Gulf of Alaska and is very cost effective because the instruments are located on ships of opportunity and vessel costs are not needed. It is the only long-term record of plankton abundance and species composition in the Gulf of Alaska ecosystem. However, I have reservations about the continued long-term funding of this project by the Trustee Council. The vessel routes have recently changed and the ships no longer move through Prince William Sound: they go into Cook Inlet. The tie between these data and the restoration of Prince William Sound herring is not clear in the proposal, although the movement of food resources from the GOA into PWS is an important consideration for herring. This project is scientifically solid, and the data are important, but the connection to Trustee Council concerns is not strong. Given the importance of maintaining a long-term data set to measure change in marine environments that affect the spill area, I recommend that this project be funded for one year. However, I encourage

the PIs to seek future funding from sources with a broader oceanographic management umbrella.
RECOMMENDATION: FUND

Executive Director Comments: This proposal does not show the link between the data collected and the restoration of herring in PWS. However, this proposal has received strong support from the science community and funding through FY07 would allow the PI to continue this valuable long-term data series while requesting future funding from sources other than the Trustee Council. RECOMMENDATION: FUND

Project Number: 070813
Project: **Bickford-Herring Restoration**
Project Title: Herring Restoration in PWS: Marking Pacific Herring (*Clupea pallasii*) Otoliths in Prince William Sound
Location: PWS
Principal Investigator: Nate Bickford
Affiliation: UAF
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$67,000 FY08: \$91,300 FY09: \$0 FY10: \$0

Total Funding Requested:
\$158,300

Abstract:

The success of relocating of Pacific herring to more suitable habitats will need to be monitored by mass marking groups of herring. We need to know if it is feasible to use otoliths to mass mark herring using Sr and Ba with low mortality and low cost. Once we know that it is possible to artificially mark herring otoliths in a controlled environment we will mark herring in natural habitats found in PWS. We will then collect the marked herring from PWS. If artificial mass marking of otoliths is successful, then we will have a tool that managers and researchers will be able to use to monitor the success of relocating Pacific herring to more suitable habitats in PWS.

Science Panel Comments: While this proposal is responsive to the Invitation and entails good project management, it did not demonstrate that the planned methods would provide a cost effective mass marking tool for herring. Other methods (e.g. fluorescent dye technologies) are currently being used commercially and have a wider range of application. The proposed method only provides the ability to distinguish between two marked cohorts of fish. Moreover, it is unclear if the PI's considered disease and mortality factors in their field work. Finally, even if the proposed tools could be developed, it is uncertain that a sufficient number of marked fish could be recaptured to provide meaningful estimates of survival. **RECOMMENDATION: DO NOT FUND**

Public Advisory Council Comments: **RECOMMENDATION: DO NOT FUND**

Science Director Comments: Concur with Science Panel. **RECOMMENDATION: DO NOT FUND**

Executive Director Comments: **RECOMMENDATION: DO NOT FUND**

Project Number: 070782
Project: **Bickford/Norcross-Herring Restoration**
Project Title: Herring Restoration in PWS: Identifying Natal and Nursery Habitats
Location: PWS
Principal Investigator: Nate Bickford, Brenda Norcross
Affiliation: UAF
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$125,200 FY08: \$138,300 FY09: \$81,100 FY10: \$0

Total Funding Requested:
\$344,600

Abstract:

More information is required to understand the life history of Pacific herring and thus success of future enhancement experiments designed to improve the survival rate of juveniles into adulthood. Chemical analysis of trace element concentrations in otoliths can be used to identify geographic signatures of natal habitats used by fishes captured either as juveniles or adults. Because survival of the population is dependent on successful spawning, it is imperative to understand if distinct groups of herring are contributing to the success of the population. If most of spawning success comes from a distinct groups of herring we need to know which population survived and why. This will allow us to protect the most important populations and also identify those environmental variables needed to enhance other populations.

Science Panel Comments: This proposal is responsive to the Invitation and the PIs are well-qualified to do the work. The project provides for the development of a potentially important technique that would allow identification of habitat favorable for juvenile herring survival. If successful, the method could be used to identify those areas that yield healthy juveniles which are eventually recruited into the population as adults. The proposal is recommended for funding contingent on a few minor revisions. The methods do not clearly describe how the technique used by the PIs will allow them to identify the location that an individual fish spent it's natal or juvenile period. Additionally, the statistical analyses are not well described and their sample sizes should be justified. The project would greatly benefit from coordination with similar efforts proposed by Meuret-Woody. A combination of these two proposals would allow a comparison of the technique between healthy (Sitka) and depressed (PWS) herring populations.
RECOMMENDATION: FUND

Public Advisory Council Comments: **RECOMMENDATION: FUND**

Science Director Comments: Concur with Science Panel. This project will result in the identification of bays in PWS used as natal habitat by different cohorts of herring. Upon determining where fish are raised, specific characteristics of these bays can be measured. This

will then help decide where enhancement/restoration activities best succeed. Reduce funding by the amount requested for conference travel other than the annual Marine Science Symposium.

RECOMMENDATION: FUND

Executive Director Comments: RECOMMENDATION: FUND

Project Number: 070814
Project: **Bishop/Kuletz-Herring Restoration**
Project Title: Seabird Predation on Juvenile Herring in Prince William Sound
Location: PWS
Principal Investigator: Mary Anne Bishop, Katherine Kuletz
Affiliation: PWSSC
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$197,000 FY08: \$204,300 FY09: \$196,000 FY10: \$11,900

Total Funding Requested:

\$609,200

Abstract:

Based on population trends, the PWS Pacific herring population does not show signs of recovering. Predation pressure on juvenile herring may be an important factor in preventing recovery. We propose a large-scale, three-year study to investigate seabird predation on juvenile herring during winter months (October-March), a season about which relatively little is known. Juvenile herring are heavily preyed upon by multiple species of seabirds including five species injured by *EVOS*, one recovering species, and one recovered species. We will examine the spatial and temporal abundance of seabird predators in and around juvenile herring schools, as well as the physical and biological characteristics of the schools they feed on. Our project relies on seabird surveys being performed onboard vessels associated with three other projects (2 proposed *EVOS* studies, 1 PWSSC study) conducting hydroacoustic surveys for juvenile herring. Our estimates of juvenile herring consumption will aid in planning future restoration efforts as well as in assessing the role of seabird predation on herring recruitment by providing data to both herring and ecosystem modeling efforts.

Science Panel Comments: This proposal fills an important gap in our knowledge of herring predators and their impacts on herring populations. Therefore, the proposal is being recommended for funding with revisions. The authors need to specifically identify how the project will provide an estimate of the number and sizes of herring being eaten by birds in the winter. Also, it is unclear how this data is to be used in a comprehensive life history model of herring and how they will extrapolate their information to all of PWS. The panel suggests the PI's consider aerial surveys to provide a Sound-wide estimate of abundance and distribution of seabirds feeding on herring. **FINAL RECOMMENDATION: FUND**

Public Advisory Council Comments: **RECOMMENDATION: DO NOT FUND**

Science Director Comments: Not Reviewed. The Science Director is on a detail from the FWS and must recuse herself from making recommendations on proposals that involve FWS personnel. The co-PI on this project is an employee of the FWS. **RECOMMENDATION: ABSTAIN**

Executive Director Comments: The Science Panel stated this proposal warrants funding but would benefit from the guidance of a PWS herring restoration steering committee and a focused, developed recovery plan. I recommend not funding this proposal until the herring recovery plan has been implemented for PWS. **RECOMMENDATION: DO NOT FUND**

Project Number: 070803
Project: **Castellini/Norcross-Herring Restoration**
Project Title: Herring Restoration in PWS: Condition Indices
Location: PWS
Principal Investigator: Michael Castellini, Brenda Norcross
Affiliation: UAF
Disbursing Agency: TBD

Funding Requested by Fiscal Year:

FY07: \$165,000 FY08: \$195,700 FY09: \$179,600 FY10: \$0

Total Funding Requested:

\$540,300

Abstract:

UAF is proposing a suite of integrated proposals to better understand PWS herring and address future enhancement experiments to improve the survival rate of juvenile fish. This project collects information on the condition of herring collected at various nurseries by the field components (Bickford/Norcross). We measure herring energy content and use recently enhanced chemical methods for the analysis of feeding history of the fish. These data are used in a multi-factorial herring condition index that is correlated to morphometric values easily measured in the field. This condition index, by itself, is a major product from this work. The herring condition will then be input into the survivorship and distribution models for different herring nurseries in PWS organized by Norcross. The ultimate goal will be to provide the data necessary to evaluate the recovery of PWS herring and the possibility of population enhancement methods.

Science Panel Summary: The PI for this project is well known as an expert in this type of analysis. The proposal responds to the Invitation and is well written. However, the condition index described for the project already exists and the project seems redundant to work completed under the SEA project. It is unclear whether refinement of this technique will provide incrementally significant understanding of the importance of energy reserves on herring survival. Moreover, the index would be most useful if there was a comparison between a healthy herring population and the one in PWS. This is not proposed. **RECOMMENDATION: DO NOT FUND**

Public Advisory Council Comments: **RECOMMENDATION: DO NOT FUND**

Science Director Comments: Concur with Science Panel. **RECOMMENDATION: DO NOT FUND**

Executive Director Comments: **RECOMMENDATION: DO NOT FUND**

Project Number: 070699
Project: Cokelet/Mordy/Pegau-AK Marine Highway Ferries
Project Title: Biophysical Observations Aboard Alaska Marine Highway System
Location: PWS and Alaska Coastal Current
Principal Investigator: Edward Cokelet, Calvin Mordy, Scott Pegau
Affiliation: NOAA
Disbursing Agency: NOAA

Funding Requested by Fiscal Year:

FY07: \$300,300 FY08: \$188,100 FY09: \$198,500 FY10: \$0

Total Funding Requested:

\$686,900

Abstract:

Oceanographic monitoring is essential to deliver real-time ecosystem information for public and advisory use, to provide boundary conditions for numerical models and to put the marine ecosystem into an historical perspective that can reveal long-term developmental, climatic and anthropogenic changes. In PWS it is important to monitor water temperature because it affects the Pacific herring fishery through alterations in spawning timing, metabolic rate and feeding, and wintertime resistance to disease. Salinity affects circulation, therefore herring larval dispersal. Circulation models used to predict herring larval drift require periodic calibration to actual temperature and salinity observations to give realistic results. In September 2004, we installed an EVOS-funded monitoring system aboard the Alaskan ferry M/V *Tustumena* that operated in two oil-spill areas, PWS and the Alaska Coastal Current (ACC). The monitoring system measures water temperature, salinity, and indicators of essential nutrients, phytoplankton biomass, freshwater influence and sediment load. The system operated successfully in PWS until May 2005 when the ferry was reassigned to ACC routes only. We propose to add a similar oceanographic monitoring system in PWS to the Alaskan ferry M/V *Aurora*, a volunteer observing ship that transits the sound daily. These observations will complement the present data set. Furthermore, we propose to continue *Tustumena's* ACC measurements at marginal cost to monitor essential biophysical variables in the coastal Gulf of Alaska.

Science Panel Comments: This project is a continuation of an existing project that collects chemical/physical measurements of the water in Prince William Sound. The PI was responsive to the Invitation and is qualified to continue the research. However, this project is expensive and is conducted from a potentially unreliable ship of opportunity (Alaska Marine Ferry System). Also, the direct link to herring restoration is not made, and it was difficult to determine if the timing and geographic coverage of this project would provide information towards enhancing herring recovery. RECOMMENDATION: DO NOT FUND

Public Advisory Council Comments: RECOMMENDATION: DO NOT FUND

Science Director Comments: Concur with Science Panel. RECOMMENDATION: DO NOT FUND

Executive Director Comments: RECOMMENDATION: DO NOT FUND

Project Number: 070815
Project: Crawford-Pacific Herring Nurseries
Project Title: Characterization of Pacific Herring Nursery Habitat in Prince William Sound
Location: PWS
Principal Investigator: Richard Crawford
Affiliation: BAA
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$271,800 FY08: \$146,700 FY09: \$162,100 FY10: \$0

Total Funding Requested:
\$580,600

Abstract:

A method for identifying the location of Pacific herring nursery grounds in Prince William Sound is needed as a basis for restoration. The SEA study established that juvenile herring prefer bays and fjords but smaller-scale resolution of nursery habitat remains to be elucidated. This study will collect high resolution information on the distribution of juvenile herring and their prey, and concomitant descriptors of extant hydrographic conditions, in three areas known to contain herring spawning and nursery habitat. A statistical model will be developed that delineates nursery habitat within a water body to provide managers with a tool for locating nursery habitat elsewhere in the Sound. Field work involves collecting detailed hydrographic information (undulating profiler operated between surface and up to 50 m; horizontal profiler measuring ~ 1 m surface layer) while hydroacoustic measurements of water column biomass are being made. Trawl nets (fish and plankton) will groundtruth hydroacoustic data sets.

Science Panel Comments: This is one of the few projects that provide important environmental information on physical/chemical characteristics of herring nursery habitat at a fine scale (i.e., nursery bays). The panel suggests that the PI work with Gay to provide these types of data on a greater number of sites in PWS at multiple scales. The project is responsive to the Invitation, Appendix A. It is well-written and technically strong. Preliminary Recommendation: FUND CONTINGENT

Science Panel Summary Based on Addenda: Upon further consideration, the panel recommends that this project not be funded. While it provides for interesting scientific investigations, the small scale of the investigations (within several bays near Cordova), and problems with making broader geographic inferences from these, makes the project of limited use to restoration efforts. FINAL RECOMMENDATION: DO NOT FUND

Public Advisory Council Comments: RECOMMENDATION: DO NOT FUND

Science Director Comments: This project is a continuation of some aspects of the SEA program but at a smaller geographic scale. The proposal is technically strong, however, the limited

geographic scope of the project limits its utility in herring restoration. It is possible that this specific project would be more relevant in the context of a larger herring recovery program.
RECOMMENDATION: DO NOT FUND

Executive Director Comments: RECOMMENDATION: DO NOT FUND

Project Number: 070817
Project: **Gay-Juvenile Herring Nursery Habits**
Project Title: Physical Oceanographic Factors Affecting Productivity in Juvenile Pacific Herring Nursery Habitats
Location: PWS
Principal Investigator: Shelton Gay, III
Affiliation: BAA
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$73,400 FY08: \$58,100 FY09: \$25,500 FY10: \$0

Total Funding Requested:
\$157,000

Abstract:

Past research of juvenile Pacific herring in PWS has shown that recruitment is highly influenced by conditions within nursery sites affecting survival within the first year. Studies of the physical oceanography of nursery fjords has indicated that each site has a unique set of hydrographic conditions that are influenced by both local processes and water exchange between the GOA and PWS. These factors vary significantly depending on geographic location. The proposed study will build upon past research by continuing a hydrographic time series within nursery fjords and collect high resolution data on currents and hydrography to determine the dominant mechanisms of water exchange and circulation within two experimental fjords; one located in a highly productive sub-region (Simpson Bay) and one located in less productive sub-region influenced by tidewater glacial outflow (Whale Bay). Also, this project will provide a physical context for a suite of biological sampling proposed for these sites.

Science Panel Comments: This proposal is responsive to the Invitation and the PI is qualified to complete the work. This project is an expansion of a four bay study initiated under the Sound Ecosystem Assessment (SEA) program to examine hydrographic and circulation patterns in PWS. It will share a platform and information with projects collecting plankton data (Kline) and distribution and abundance measurements of herring (Thorne). Gay should work closely with Crawford to combine similar data collections on multiple geographic scales. The Panel also recommends that at least two addition CTD units be deployed in PWS and additional funding be provided to the PI for these units. **RECOMMENDATION: FUND CONTINGENT**

Science Panel Summary Based on Addenda: The panel recommends funding with the inclusion of two additional CTDs. However, we still have concerns with respect to placement of these. The intent of adding CTDs was to provide basic oceanographic data from as many bays as possible that are to be sampled by Thorne and others. To this end, we recommend redistributing CTD placements. **FINAL RECOMMENDATION: FUND**

Public Advisory Council Comments: **RECOMMENDATION: FUND**

Science Director Comments: While I agree that additional CTD units would provide useful information, I recommend that the PI be given funding in the amount originally requested. If needed, the PI can request two additional CTDs in subsequent funding years. Concur with other Science Panel recommendations. RECOMMENDATION: FUND

Executive Director Comments: Reduce funding by the amount requested for conference travel other than the annual Marine Science Symposium. RECOMMENDATION: FUND

Project Number: 070819
Project: **Hershberger -PWS Herring Disease Program**
Project Title: Prince William Sound Herring Disease Program
Location: PWS
Principal Investigator: Paul Hershberger
Affiliation: DOI/USGS
Disbursing Agency: DOI

Funding Requested by Fiscal Year:

FY07: \$257,500 FY08: \$265,100 FY09: \$272,100 FY10: \$279,900

Total Funding Requested:

\$1,074,600

Abstract:

A leading hypothesis accounting for the decline and failed recovery of the herring population in PWS involves epizootic mortality resulting from infectious and parasitic diseases. Ongoing and past surveillance of herring diseases in PWS, initiated by Dr. Gary Marty and continued by ADF&G through the herring disease index, is extremely valuable and necessary to document changes in disease prevalence, but field surveys are unable to unequivocally demonstrate epidemiological relationships that modulate disease cycles. This proposed multi-year Herring Disease Program (HDP) consists of three components intended to provide predictive metrics that forecast future disease epidemics and offer empirical relationships useful in developing adaptive management policies to mitigate the effects of epizootic and chronic diseases. The first component involves laboratory validation of the ongoing PWS herring disease index. Long-term continuation of the herring disease index, paired with laboratory validation, is necessary to confirm the efficacy of future adaptive disease management strategies. The second component involves empirical studies intended to determine the basic epidemiological relationships between environmental and biological factors influencing infection / disease prevalence. The final component involves development of immunological and molecular tools that will be useful in predicting the potential for future disease epidemics. Combined, this three-tiered approach will provide the basic epidemiological information necessary to develop and validate adaptive management techniques intended to mitigate the effects of future herring disease outbreaks in PWS.

Science Panel Comments: Disease is an important consideration in the development of a comprehensive herring restoration program, and this is the only project that proposes to take an in-depth look at disease factors. The PIs are experts in the field and qualified to conduct the work. The panel recommends removing the immune gene expression objective, which is not well conceived or detailed in the proposal. Also, the PI should expedite the development of lab methods, so they can be used as tools to assess disease status in the field while captive work continues. A field component should also be added in Year 2 with concentration on Sitka (healthy stock) population for field validation. **RECOMMENDATION: FUND CONTINGENT**

Science Panel Summary Based on Addenda: The panel recommends that the project be funded, but that the EVOS Science Director review the budget. It appeared that while immune gene expression work was eliminated as suggested, other work was substituted for this. It is unclear whether this new work is justified or if it materially impacts the budget. FINAL RECOMMENDATION: FUND

Public Advisory Council Comments: RECOMMENDATION: FUND

Science Director Comments: No other disease proposals were submitted to the Trustees, and disease plays an important role in the current state of PWS herring. However, disease is not fully understood in the PWS herring population. Understanding disease is vital to any direct intervention activity, so that the spread and expansion of disease problems can be prevented. The PIs removed the gene expression objective and addressed the recommendations of the Science Panel to expedite the laboratory assays so they could be used in the field more quickly. The budget was adjusted to reflect these changes. RECOMMENDATION: FUND

Executive Director Comments: Agree with the Science Panel's recommendation that the EVOS Science Director review the budget as suggested. RECOMMENDATION: FUND

Project Number: 070810
Project: **Keifer/Brown-Herring Modeling**
Project Title: An Ecosystem Model of Prince William Sound Herring: A Management & Restoration Tool
Location: PWS
Principal Investigator: Dale Keifer, Evelyn Brown
Affiliation: BAA
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$230,100 FY08: \$230,100 FY09: \$230,100 FY10: \$0
Total Funding Requested:
\$690,300

Abstract:

Over a three-year period, we propose to develop a life-stage specific, ecosystem based model of the Prince William Sound (PWS) herring that will aid in the integration ecological data that has been gathered on herring over the last 2 decades, evaluation of proposed restoration activities, and attempt to simulation of the processes that cause the chronic decrease in herring stocks since the 1989 spill. More specifically, it will be used to test the unresolved hypotheses of why the herring have not recovered to pre-spill densities. The model and associated data will be housed in a geographic information system that we have developed specifically for marine applications. The geo-spatial information from field surveys and simulations with the model will available for interactive viewing and downloading of files over the Internet.

The model will provide a mathematical description of the population dynamics of annual herring cohorts as they mature through their life stages. In particular we will focus on arrival of larvae to the Bays of PWS, the maturation and survival of juveniles in these bays, and the survival and reproductive success of adults as they move seasonally from spawning grounds, feeding grounds and wintering grounds. The system of coupled differential equations that describe these processes will be tuned to prove a best fit between model calculations and field and laboratory measurements. In its final form the model will consist of 3 sets of such equations that will simulate the unique conditions found in herring habitats of the eastern, northern and southwestern regions of PWS. Most importantly, the model will be formulated according to the principals of the trophic trap in which 2 metastable states for herring exist, low-density and high-density. We propose that a sequence of events following the spill drove the herring from high-density to low-density and a trophic trap prevents stocks from recovering. Thus, we will tune our model to both high-density and low-density states and then run the tuned models in the forward or backward direction to identify both the most probable causes of the injury and the most promising approaches to restoration. Our team has the scientific and technical experience to succeed, and we will work closely with researchers from the other herring projects, especially those working on larval drift, disease, otolith marking, and intervention. Our web-based system will promote such collaboration particularly with such groups as PWSFRAP and with the PWS Science Center.

Science Panel Comments: This proposal is one of the most original and synthetic of the proposals reviewed. The predictive capability of the proposed model makes it a valuable tool for examining population dynamics of herring. This project could provide a central data gathering point for several of the other, more detailed, modeling proposals. The Panel suggests that the PIs accelerate the model development, such that it would be useable to assess efficacy of various potential restoration methods. The Panel was concerned that the model is inextricably linked with the patented EZ software system and wants to ensure that the model could stand alone as a predictive tool. RECOMMENDATION: FUND

Public Advisory Council Comments: RECOMMENDATION: DO NOT FUND

Science Director Comments: Concur with Science Panel. The PI will need to work directly with the data management staff at the Trustee Council office to create a web-based product that is user-friendly and available to the public. The life-stage model will be useful in understanding how different stressors affect the PWS herring population, which up till now has not been developed. The one-dimensional model can be used as a stand-alone tool, however viewing the three dimensional model with the Easy software will make the product more useful. The PIs have agreed to provide software and training to other herring researchers/managers that may eventually be using the model. RECOMMENDATION: FUND

Executive Director Comments: Agree with the PAC recommendation to not fund this proposal until the co-PI submits the final deliverable for a previous Trustee Council funded project (Project 030584). RECOMMENDATION: DO NOT FUND

Project Number: 070811
Project: **Kline-Herring Forage Contingency**
Project Title: Prince William Sound Herring Forage Contingency
Location: PWS
Principal Investigator: Thomas Kline
Affiliation: BAA
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$282,000 FY08: \$355,400 FY09: \$270,100 FY10: \$0
Total Requested Funding:
\$907,500

Abstract:
Prince William Sound (PWS) herring recruitment is hypothesized to be contingent on young of the year herring attaining from zooplankton sufficient whole body energy content (WBEC) to survive their first winter. PWS recruitment is presently variable, having changed since the Trustee Council funded Sound Ecosystem Assessment (SEA) project ended. Juvenile herring will be sampled and analyzed for WBEC and natural stable isotope abundance (SIA) for comparison with SEA data. The PI has direct familiarity with WBEC and SIA done during SEA enabling duplication. Oceanic subsidies (detected with SIA) are hypothesized to augment zooplankton energy density, which varies in time and locations. High zooplankton energy density is hypothesized to enable herring to acquire high WBEC in certain areas at certain times. To test these hypotheses, herring forage will be assessed in terms species composition and density, SIA, and energy density, which will be related to herring WBEC by location and time.

Science Panel Comments: Strong recruitment of juvenile herring is required for healthy viable herring populations, and it is important for young of the year fish to acquire enough energy to survive their first winter. The relationship between herring food resources (e.g., species, source, abundance etc) and body condition can be used to understand herring survival which will ultimately influence the regulation of population densities. The Panel recommends that this project be funded, however, it is expensive and costs should be re-evaluated. Preliminary RECOMMENDATION: FUND CONTINGENT

Science Panel Summary Based on Addenda: We recognize the importance of the data that will be generated by this project, and especially the data regarding energetic values for juvenile herring prior to over-wintering. However, given the project costs, we are less convinced of the necessity for and utility of other aspects of the project including detailed plankton analysis and isotope ratio analysis. We strongly recommend that a thorough budget justification is provided and funding is substantially reduced from the original budget. FINAL RECOMMENDATION: FUND

Public Advisory Council Comments: RECOMMENDATION: FUND

Science Director Comments: This project will provide useful comparisons between juvenile herring condition and food availability and source. However, the costs are high and should be re-evaluated prior to funding decisions. Preliminary Recommendations: Fund Contingent.

Note: The PI reduced the overall costs of this project by about 15% from the original amount requested without compromising the quality of the data collection. RECOMMENDATION: FUND.

Executive Director Comments: The Science Panel stated this proposal warrants funding but would benefit from the guidance of a PWS herring restoration steering committee and a focused, developed recovery plan. I recommend not funding this proposal until the herring recovery plan has been implemented for PWS. RECOMMENDATION: DO NOT FUND

Project Number: 070805

Project: Lindberg-ShoreZone Mapping
Project Title: ShoreZone Mapping for Prince William Sound
Location: PWS
Principal Investigator: Mandy Lindberg
Affiliation: NOAA
Disbursing Agency: NOAA
Funding Requested by Fiscal Year:
FY07: \$237,900 FY08: \$423,200 FY09: \$0 FY10: \$0

Total Funding Requested:

\$661,100

Abstract:

This proposal will continue *ShoreZone* mapping in Prince William Sound (PWS), Alaska. Approximately 8,400 km of shoreline has been mapped in the central Gulf of Alaska, including 1,600 km of shoreline in western PWS in 2004. The majority of the spill area inside PWS, including Knight island area and all of northern and eastern PWS have not been mapped. To support both future oil remediation efforts as well as restoration activities would be supported by a single mapping protocol that included geomorphology, substrate type, as well as the biological substrate on all beaches. Completing PWS would fill the gap by providing a contiguous data set from across the entire spill area using a standard protocol. Most importantly, this data set will be useful to managers, as it combines photographs of the entire beach area, as well as having a data set that can be sorted by location, substrate type, and other factors. The *ShoreZone* data set is recognized as a significant tool for oil spill response planning, identifying essential fish and wildlife habitat, and for monitoring long-term changes in coastal habitat that may result from development, restoration, or even global climate change.

Science Panel Comments: This proposal provides Sound-wide data on important physical and biological characteristics of the environment that would be applicable to herring restoration, as well as lingering oil issues and injured resource recovery. The Panel did not see the value in the fish sampling effort and suggested its removal, along with a reduction in the amount of ground-truthing proposed. A great deal of information is already known about the PWS, and the field effort should be enough to validate the aerial surveys. However, it is not necessary to cover such a large proportion of the area. The cost seemed high, but with a reduction in the field effort this project should be more cost effective. RECOMMENDATION: FUND CONTINGENT

Science Panel Summary Based on Addenda: Several project tasks were eliminated and costs reduced as suggested. Funding of the revised project is recommended. FINAL RECOMMENDATION: FUND

Public Advisory Council Comments: RECOMMENDATION: FUND

Science Director Comments: Concur with Science Panel. The information derived from this project will be applicable to most injured resources and services, especially those reliant on the nearshore environment. The fish collections should be removed, the number of ground-truthing

events reduced and costs trimmed accordingly. Note: The PI addressed the concerns outlined above and reduced the budget accordingly. RECOMMENDATION: FUND

Executive Director Comments: Until the co-PI submits the final report for a previously Trustee Council funded project (Project 040740), it is recommended to not fund this proposal. RECOMMENDATION: FUND CONTINGENT

Project Number: 070821
Project: **Linley/Betka/Ferren-Herring Restoration**
Project Title: Development of Culture Technology to Support Restoration of Herring in Prince William Sound: Use Of *in vitro* Studies to Validate and Optimize Restoration Actions
Location: PWS
Principal Investigator: Tim Linley, Marlies Betka, Howard Ferren
Affiliation: Sea Life Center/BAA
Disbursing Agency: TBD

Funding Requested by Fiscal Year:

FY07: \$407,600 FY08: \$417,000 FY09: \$517,600 FY10: \$0

Total Funding Requested:

\$1,342,200

Abstract:

Intervention in the form of artificial propagation may be needed to restore Prince William Sound (PWS) herring to levels capable of supporting a healthy ecosystem as well as sustainable fisheries. We propose to test and refine propagation methods through laboratory and field studies over a three year period to evaluate the likely benefits and costs of stock restoration. The overall objective is to obtain biological and economic benchmarks of stock enhancement strategies by integrating established techniques for laboratory rearing of herring with state of the art methods used in the culture of multiple marine species. Our specific efforts will focus on the role of calcium sensing receptor proteins in herring osmoregulation, nutrition and immune function. The results will provide PWS stakeholders and other researchers with improved understanding of the optimal husbandry and nursery conditions for herring stock enhancement, and the potential effects of such restoration on PWS herring.

Science Panel Comments: If direct enhancement or other types of intervention is a likely direction that a herring restoration program will pursue, then captive rearing and propagation of herring will be needed. This proposal is the only project that seeks to develop culture techniques suitable for herring in Alaska. The PIs have a great deal of experience with fish culture (mostly salmon), but it is unclear how much experience they have with herring. Herring culture techniques have been successfully implemented in Japan, and the panel believes that the PIs would benefit from learning how those methods that can be used in Alaska. Therefore, they recommend a reduction in the first year of funding to \$60,000 for the PI's to collaborate with the Japanese on herring culture techniques. In the second year, the PI's should submit a reworked proposal. They should remove the calcium receptor gene objective, because it is unclear how that relates to herring. They should consider a larger range of environmental factors in their culture methods and analyze their effects on growth and survival. The PIs also need to define a source for their captive fish, describe how they will consider the role of disease in their work and resolve permitting issues. **RECOMMENDATION: FUND CONTINGENT**

Science Panel Summary Based on Addenda: The responses to the panel's queries were adequate. The PIs requested \$25,000 in addition to the \$60,000 suggested by the Science Panel, so they can begin feeding pilot studies. We recommend funding in the amount of \$60,000 for FY07 to cover travel expenses and salary for investigators to visit Japan. The Panel suggests that any further funding, including \$25,000 requested to conduct pilot studies, be based on a resubmitted proposal and budget for FY08. FINAL RECOMMENDATION: FUND (One Year)

Public Advisory Council Comments: RECOMMENDATION: DO NOT FUND

Science Director Comments: If direct intervention or enhancement activities are eventually recommended for PWS herring, an understanding of culture techniques and large-scale production will be necessary. The PIs have experience in fish culture, (although their experience with herring is not clear in the proposal), and the Alaska SeaLife Center would provide an excellent facility to establish this program. The Japanese have a great deal of experience with commercial scale herring production, and their experience would benefit any program initiated in Alaska.

The PIs responded to a request to modify their request for FY07 and travel to Japan to confer with experts in the field of commercial herring production. They proposed to work with Japanese experts, but also initiate pilot feeding studies. However, the calcium receptor portion of their proposal was retained. Although they did explain how it would relate to herring, this is a patented process that they Trustee Council would be funding, and it is unclear if full-scale production occurred how the costs of using a patented technique would be incorporated. The larger issue, however, is the need for this project at this time. In light of the proposed herring recovery plan, it may be prudent to wait until a steering committee develops alternatives and recommendations for future herring enhancement work. If culture techniques and captive rearing are needed, then the proposed work should be re-evaluated, and the PIs should be encouraged to work with local aquaculture experts. RECOMMENDATION: DO NOT FUND

Executive Director Comments: The Science Panel stated this proposal warrants funding but would benefit from the guidance of a PWS herring restoration steering committee and a focused, developed recovery plan. I recommend not funding this proposal until the herring recovery plan has been implemented for PWS. RECOMMENDATION: DO NOT FUND

Project Number: 070834
Project: **Meuret-Woody-Essential Habitat for Herring**
Project Title: Identification of Essential Habitat for Pacific Herring in Sitka Sound for Comparison to Prince William Sound i.e. Source vs. Sink Habitat
Location: Sitka Sound
Principal Investigator: Heather Meuret-Woody
Affiliation: BAA
Disbursing Agency: TBD

Funding Requested by Fiscal Year:

FY07: \$159,000 FY08: \$0 FY09: \$0 FY10: \$0

Total Funding Requested:

\$159,000

Abstract:

Once herring hatch and the larvae drift to retention areas, they begin metamorphosis. As juveniles, herring forage in productive waters of the North Pacific. Adult herring then return to natal beaches to spawn. What is unknown is where the herring go and if certain regions contribute more to the spawning population. Once we know which population contributes more to the spawning groups, we can then identify those variables that enhance the life histories of the source population. We can identify these groups and track their movements using otolith chemistry. If most of the survivors come from a distinct population, then we need to know which population survive and why. This will allow managers to protect the most important populations and also identify those environmental variables needed to enhance other populations.

Science Panel Comments: This proposal was submitted by the southeast Alaska Sitka Tribe. It is well-written and in context, responsive to the Invitation. The project would be strengthened if the PI incorporated a comparison, using their proposed methods between herring in Sitka with those in PWS. The Sitka stock is healthy, and it would be a valuable to understand the habitats associated with herring in those areas vs areas inhabited by the depressed herring stocks of PWS. Without this comparison, it is difficult to make a strong connection to the Invitation. Therefore, this project should only be funded if the similar proposal by Bickford and Norcross is also funded. RECOMMENDATION: FUND

Public Advisory Council Comments: RECOMMENDATION: FUND

Science Director Comments: Concur with Science Panel. The project should be funded in conjunction with a similar project being proposed in PWS (BickfordNorcross). Reduce funding by the amount requested for conference travel other than the annual Marine Science Symposium RECOMMENDATION: FUND

Executive Director Comments: Reduce funding by the amount requested for conference travel other than the annual Marine Science Symposium RECOMMENDATION: FUND

Project Number: 070822
Project: **Moffitt-Herring Data and Information Portal**
Project Title: Herring Data and Information Portal
Location: PWS
Principal Investigator: Steve Moffitt
Affiliation: ADFG
Disbursing Agency: ADFG
Funding Requested by Fiscal Year:
FY07: \$132,100 FY08: \$0 FY09: \$0 FY10: \$0

Total Funding Requested:

\$132,100

Abstract:

This project will consolidate, document, and enter data sets, metadata, and other electronic resources into a web portal. The web portal will provide public access to information, data, and GIS visualizations. Scientists and researchers will utilize the web portal as a resource to assist in consolidating, accessing and synthesizing herring data. This project will also develop an ArcPad application for collecting herring aerial survey data directly into a GIS format. The project was conceived during an EVOS sponsored workshop in April 2006 that was tasked to identify Prince William Sound herring data gaps and develop restoration or research projects to help herring recovery. Participants indicated that knowledge of the spatial and temporal aspects of herring related data sets, e.g., herring spawn, was necessary to understand how restoration activities might affect herring abundance trajectories. Several restoration projects would require spatial and temporal knowledge of herring data as input to a model or as a measure of the success of a restoration project. This project would provide easier access and visualization of selected herring data sets and other electronic resources.

Science Panel Comments: This is a strong proposal that is well written and responsive to the Invitation. The web portal could be used by managers, researchers and the public, and it would provide a central location for historical data. The panel recommends that the PI coordinate his efforts with work proposed by Kiefer (if funded), and determine how the database should be populated. As submitted, the proposal only identifies funds for an IT professional and a graphic designer. For this project to be useful the database needs to be populated and managed, however no funds are requested for data gathering or management of the system. The Panel recommends that additional budget items should include funds for populating the database after the structure is created and management of the system. The PI should also explain how this project can be incorporated into the larger EVOS database. Preliminary Recommendation: FUND CONTINGENT

Science Panel Summary Based on Addenda: All questions were adequately addressed in the response to panels' request. We recommend funding as originally requested. Additional funding for populating the database with non-ADF&G data will be considered in a follow on proposal in future years. FINAL RECOMMENDATION: FUND

Public Advisory Council Comments: RECOMMENDATION: FUND

Science Director: The PI must work closely with the EVOS data management staff to ensure a product that is user friendly and available to the public. Additionally, two specific areas should be addressed prior to funding commitments: 1) Population of the data base with historic information and 2) Long-term maintenance of the database (i.e, not the system but the data). This project will only be useful if it data is incorporated into the system, such that it is available to managers, researchers and the public. Also, the data needs to be updated periodically, so it does not become obsolete. This will be a valuable tool as the Trustees move forward with herring recovery, but only if it is maintained with current information. Note: The PIs addressed the Science Panel's concerns, and I agree that the proposal should be funded as originally proposed. RECOMMENDATION: FUND

Executive Director Comments: Concur with Science Panel and Science Director recommendations. RECOMMENDATION: FUND

Project Number: 070823
Project: **Mullins/Patrick-Herring Egg Translocation**
Project Title: Herring Restoration Activity Involving Herring Egg Translocation, Marking and Rearing Larvae to Various Stages & Incorporating Community and Commercial Stakeholders
Location: PWS, Cordova
Principal Investigator: Ross Mullins, Vince Patrick
Affiliation: PWSFWAP
Disbursing Agency: TBD

Funding Requested by Fiscal Year:

FY07: \$705,800 FY08: \$1,088,800 FY09: \$1,207,200 FY10: \$0

Total Funding Requested:

\$3,001,800

Abstract:

Population restoration for herring is generally approached by: 1) protecting the diminished stock from exploitation; 2) restoring near-shore spawning habitats – principally intertidal vegetation; and 3) supplementing the damaged stock through ocean ranching involving hatcheries (Japan). We propose an additional supplementing activity to directly enhance the survival of each year-class during the vulnerable larval/early juvenile stage. Our approach will be to short-term rear larvae emerging from eggs collected in natal areas, for later release in nurseries determined to be optimal for growth and survival. Our understanding of optimal rearing habitat originates from work undertaken on juvenile herring by the Sound Ecosystem Assessment (SEA) program, 1994-99. By protecting a significant fraction of the most vulnerable early stages (post-hatch larvae), and relocating them in optimal rearing areas, our “intervention” will partially by-pass the risky period of larval drift where most believe the bulk of the mortality of a year-class occurs.

Science Panel Comments: Several major concerns caused the Panel to not recommend this proposal for funding. The spill area communities are strongly supportive of an active herring restoration program; however, there are too many uncertainties regarding the success of egg translocation and the proposed larval culture techniques to recommend this project. Issues include evidence that suggests translocating herring eggs causes the death of all harvested eggs; disease implications which are not addressed, and permitting issues. Additionally, it is unclear if the PI’s have experience with herring culture techniques or have examined alternatives to translocation. Finally, the methods are not detailed enough to allow the Panel to understand how the PIs will accomplish their objectives or determine success. **RECOMMENDATION: DO NOT FUND**

Public Advisory Council Comments: **RECOMMENDATION: DO NOT FUND**

Science Director Comments: Concur with Science Panel. The PIs are obviously knowledgeable about the issue and have proposed a project they believe will jump-start herring recovery in PWS. They are understandably concerned about the condition of herring and have

put much thought into direct intervention activities. However, much more preliminary information should be collected prior to actively altering herring habitat or translocating herring within PWS. Disease containment was not discussed in the proposal, and given the devastating effects diseases are currently inflicting upon PWS herring, this issue needs to be thoroughly discussed in the context of translocating herring eggs and releasing young reared in captivity. Moreover, the proposal does not present supporting evidence that these techniques have worked in other places, and the PIs do not address State and/or Federal permit requirements for their project. The proposal should be reworked, such that it includes the topics of concern in these comments and those of the Science Panel. These activities should also be discussed as part of a bigger, long-term herring recovery program. **RECOMMENDATION: DO NOT FUND**

Executive Director Comments: RECOMMENDATION: DO NOT FUND

Project Number: 070769
Project: **Otis/Bickford-Herring Stocks**
Project Title: Using Otolith Chemistry to Discriminate Pacific Herring Stocks in AK
Location: PWS
Principal Investigator: Ted Otis, Nate Bickford
Affiliation: UAF
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$69,200 FY08: \$0 FY09: \$0 FY10: \$0

Total Funding Requested:
\$69,200

Abstract:

This proposal is an extension of EVOS Project 050769, which is currently assessing the temporal stability of stock discrimination criteria derived from fatty acid analysis (FAA) of herring cardiac tissues. In 2006, Otis (050769) collected heads from fish sampled for FAA so chemical analysis of the otoliths could be conducted to evaluate which technique was most effective for determining herring stock structure at fine spatial scales. In this study, Dr. Nate Bickford (EVOS Project 060782) will process those samples using laser ablation-inductively coupled plasma-mass spectrometry (LA-ICP-MS) to determine whether otolith chemistry can be used to corroborate FAA techniques for determining fine scale structuring within and among Alaska’s herring stocks (e.g., Sitka, PWS, Kamishak, Kodiak, Dutch Harbor, Togiak, and Kuskokwim Bay). Results will be published and should allow researchers to better define ecologically significant stock boundaries, likely affecting how commercially exploited herring populations are assessed and managed.

Science Panel Comments: This project proposes to analyze otoliths from fish collected from a previous TC-funded study. Therefore, the samples are already ‘in-hand’ and the project would be very cost-effective. The method provides a corroborating technique (along with fatty acid analysis) that will assist managers in identifying herring stock boundaries, thus the direct management applications are strong. **RECOMMENDATION: FUND**

Public Advisory Council Comments: **RECOMMENDATION: FUND**

Science Director Comments: This project is a follow-up on a Trustee Council funded project. It will provide validation on techniques to stock assessment in herring. **RECOMMENDATION: FUND**

Executive Director Comments: **RECOMMENDATION: FUND.**

Project Number: 070804
Project: Rice/Heintz/Moran-Herring and Humpback Whales
Project Title: Significance of Whale Predation on Natural Mortality Rate of Pacific Herring in PWS
Location: PWS
Principal Investigator: Stanley Rice, Ron Heintz, John Moran
Affiliation: NOAA
Disbursing Agency: NOAA
Funding Requested by Fiscal Year:
FY07: \$197,700 FY08: \$315,900 FY09: \$0 FY10: \$0

Total Funding Requested:
\$513,600

Abstract:

Pacific herring (*Clupea pallasii*) in Prince William Sound (PWS) have been classified as “not-recovered” by the Exxon Valdez Oil Spill Trustee Council. Predation by marine mammals has been cited as a factor in the failure of this population to rebound. We will assess the significance of humpback whale predation on herring in PWS, particularly in winter. Specifically we will estimate the number of whales foraging in winter, determine when and if there is a prey switch to herring, and how long whales focus on herring as prey. Year one, is stand alone, small in scale with an intense monitoring strategy; year 2 would expand the scale up in area significantly. These data will be combined in a bioenergetic model to determine numbers of herring consumed (and energy content consumed). Lastly, the estimated numbers of herring consumed would be included in an age-structured model so that the significance of whale predation on herring recovery can be evaluated.

Science Panel Comments: This proposal is responsive to the Invitation and the PIs are well qualified. Predator impacts on herring, especially in winter, are poorly understood and need to be quantified. The number of whales over-wintering in PWS is growing each year, and it is important to understand their contribution to the population dynamics of herring as part of a successful restoration program. This proposal also incorporates comparisons in whale predation among multiple sites (southeast vs PWS) with both depressed and healthy populations of herring. RECOMMENDATION: FUND

Public Advisory Council Comments: RECOMMENDATION: DO NOT FUND

Science Director Comments: Concur with Science Panel. RECOMMENDATION: FUND

Executive Director Comments: Agree with the PAC recommendation to not fund this proposal until the co-PI submits the final deliverable for a previous Trustee Council funded project (040740). RECOMMENDATION: DO NOT FUND

Project Number: 070830
Project: **Thorne-Herring Distribution in PWS**
Project Title: Trends in Adult and Juvenile Herring Distribution and Abundance in Prince William Sound
Location: PWS
Principal Investigator: Richard Thorne
Affiliation: PWSSC
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$103,400 FY08: \$103,400 FY09: \$226,800 FY10: \$0

Total Funding Requested:
\$433,600

Abstract:

Information on abundance, distribution and condition of key herring life stages is needed as a basis for restoration. Critical barometers of the PWS herring population are the adult abundance and condition, as monitored in March, and the juvenile abundance and condition going into and coming out of the long winter period (October to March). Some of this information is currently provided through a program at PWSSC that focuses on herring as a critical food source for Steller sea lions. We propose to fill data gaps in this program with juvenile herring surveys in March of 2007 and 2008 and three additional surveys in FY 2009. These surveys can be conducted in a very cost efficient manner because of the much larger concurrent program that will conduct two surveys each year in FY 2007 and 2008. In addition, the direct capture effort associated with all surveys will be expanded, and biological samples will be available for other uses including disease, marking and stable isotope research. Several collaborations have been established in this regard with investigators at the University of Alaska, Fairbanks, Auke Bay and PWSSC.

Science Panel Comments: This proposal describes the “backbone” project for many of the other herring proposals submitted to the TC this year. It is a core field project for gaining information about abundance and distribution of herring in PWS, and other management and restoration activities will rely on this data. The project design yields a broader coverage of PWS, and because of matching funds the costs are reasonable. The PI is qualified and has many years of experience. This proposal received strong support from the Science Panel.
RECOMMENDATION: FUND

Public Advisory Council Comments: RECOMMENDATION: FUND

Science Director: Concur with Science Panel. This is a keystone project that will provide status and trend data on herring (juvenile and adult) abundance and distribution throughout PWS across multiple seasons. RECOMMENDATION: FUND

Executive Director Comments: RECOMMENDATION: FUND

Project Number: 070831
Project: **Thorne/Crawford-Herring Workshop**
Project Title: The Prince William Sound Herring Ecosystem: Reconciling Divergent Interpretations for Effective Restoration and Management Applications – An International Scientific Workshop
Location: PWS
Principal Investigator: Richard Thorne, Richard Crawford
Affiliation: PWSSC
Disbursing Agency: TBD

Funding Requested by Fiscal Year:

FY07: \$19,900 FY08: \$48,200 FY09: \$0 FY10: \$0

Total Funding Requested:

\$68,100

Abstract:

Prince William Sound’s (PWS) Pacific herring population is classified by the EVOS Trustee Council as “non-recovered”. The population prior to the Exxon Valdez Oil Spill was above 100,000 mt; the current population is estimated at 20,000-25,000 mt. This proposal’s purpose is to follow on the intentions of the April 2006 PWS herring workshop sponsored by EVOS TC. In that workshop, local herring experts began scoping PWS herring research needs (EVOS FY 07 Invitation, Appendix A) but did not resolve competing hypotheses for the lack of recovery. We propose to assemble a PWS Herring Science Workshop in November 2007. This will include the broadest possible array of scientific expertise on herring to 1) review and synthesize available information on PWS herring, 2) incorporate outside expertise from regional and international clupeid experts, and 3) recommend future PWS herring research and management. Funds will be used for planning and implementing the workshop.

Science Panel Comments: The proposal was well-organized and the PIs qualified to initiate the project. However, it is unclear how the workshop suggested in this proposal would advance herring restoration. Available herring information has been synthesized in recently funded TC projects, and the April 2006 TC funded workshop brought together experts and community members to exchange information on the current state of herring in the Sound. It is unlikely that another workshop of this type will result in consensus regarding the original cause of the herring collapse, nor does the Panel believe it is necessary to come to such a resolution before implementing a recovery program. **RECOMMENDATION: DO NOT FUND**

Public Advisory Council Comments: **RECOMMENDATION: DO NOT FUND**

Science Director: Concur with Science Panel. **RECOMMENDATION: DO NOT FUND**

Executive Director Comments: **RECOMMENDATION: DO NOT FUND**

Project Number: 070832
Project: **Thorne/Frid-Sea Lions and Herring**
Project Title: Modeling Ecological Interactions Between Steller Sea Lions and Pacific Herring
Location: PWS
Principal Investigator: Richard Thorne, Alejandro Frid
Affiliation: PWSSC
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$76,100 FY08: \$73,100 FY09: \$0 FY10: \$0

Total Funding Requested:
\$149,200

Abstract:

The herring population of Prince William Sound is suppressed by predation from Steller sea lions (SSLs) and other predators, including humpback whales and harbor seals. Simultaneously, the abundance and distribution of Pacific herring appear to strongly influence energy gain by SSLs, which are listed as threatened under the Endangered Species Act. Thus, efforts towards restoring herring and SSL populations should consider ecological games in which both species simultaneously respond to the behavior of each other. Previously we used Dynamic State Variable Modeling to investigate interactions between harbor seals and herring in PWS. We are currently using this technique to seek insight into how the abundance and distribution of herring affect the behavior and fitness of SSLs. Our proposed work would complement that research by 1) developing a comparable model of herring decisions on use of space (e.g. aggregate in bays vs. disperse in main basin) in response to resource distributions and predation pressure from SSLs, and 2) using game theoretic equations to link the SSL and herring models. The second objective will be used to predict the simultaneous response of SSLs and herring to each other's behavior under different conditions, and the ensuing consequences to the survival and reproduction of individuals.

Science Panel Comments: Predation is a concern for PWS herring and the PIs are qualified to conduct this project. Although the budget is reasonable for the type of work proposed, it is unclear whether or not this project is redundant with work ongoing at the Prince William Sound Science Center. This project would be useful as part of an integrated herring restoration program, but is not an immediate need for herring recovery. **RECOMMENDATION: DO NOT FUND**

Public Advisory Council Comments: **RECOMMENDATION: DO NOT FUND**

Science Director: Concur with Science Panel. **RECOMMENDATION: DO NOT FUND**

Executive Director Comments: **RECOMMENDATION: DO NOT FUND**

Project Number: 070806
Project: Vollenweider/Heintz-Herring Energetics
Project Title: Are Herring (*Clupea pallasii*) Energetics in PWS a Limiting Factor in Successful Recruitment of Juveniles and Reproduction Investment of Adults?
Location: PWS
Principal Investigator: Johanna Vollenweider, Ron Heintz
Affiliation: NOAA
Disbursing Agency: NOAA
Funding Requested by Fiscal Year:

FY07: \$140,500 FY08: \$0 FY09: \$0 FY10: \$0

Total Funding Requested:

\$140,500

Abstract:

The causes underlying the depressed recruitment rates among PWS herring are unknown, but are likely to include reduced survival of offspring to maturity. Potential agents for depressed recruitment include chronic exposure to pathogens and increased numbers of predators. While identification of the causative agents remains elusive, it is likely that their combined effects are reflected in herring energy dynamics. Previous work in PWS demonstrated the need for juvenile herring to acquire and store energy prior to winter to ensure survival when prey resources were scarce. Juveniles facing increased predation risk or immune response may have less surplus energy available to allocate to storage at the onset winter. In addition, continuing disease and predation stress may increase the rate at which individuals lose energy during winter. Thus decreased offspring survival may result from increased energetic demand over winter. Similarly, adults facing increased energy demand as a result of environmental stress are likely to have decreased energy available for reproduction with consequent effects on offspring survival rates. Therefore, we propose to examine the energy dynamics of herring in PWS and other locations to test the hypothesis that PWS herring stocks have higher energy consumption rates than healthier stocks in other parts of Alaska.

Science Panel Comments: Whole body energy content is measured in herring from three areas in Alaska, and energy consumption rates are compared among healthy (southeast) and depressed (PWS) populations. The strength of this project is the comparison of the depressed PWS population with other, healthy populations. Understanding how the environments differ between areas with healthy fish and those with a stressed population of herring will enhance our knowledge of factors potentially contributing to the continued decline of herring in PWS.
RECOMMENDATION: FUND

Public Advisory Council Comments: RECOMMENDATION: FUND

Science Director: Concur with Science Panel. Understanding the state of herring in PWS can only be enhanced by comparing similar attributes (e.g., habitat characteristics, body condition,

age and size distribution and abundance, etc) between areas with depressed population and areas with healthy populations. This proposal is one of the few that suggests making these comparisons. RECOMMENDATION: FUND

Executive Director: RECOMMENDATION: FUND

Project Number: 070833
Project: **Wang/Norcross-Herring Restoration Modeling**
Project Title: Herring Restoration in PWS-Modeling Circulation and Larval Transport
Location: PWS
Principal Investigator: Jia Wang, Brenda Norcross
Affiliation: UAF
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$97,900 FY08: \$106,200 FY09: \$107,400 FY10: \$0

Total Funding Requested:
\$311,500

Abstract:

We propose to investigate the effects of 3-D ocean circulation and zooplankton on the successful transport of larval herring from spawning to nursery grounds. We will combine a 3-D coupled Physical-Ecosystem Model (PhEcoM) and a 1-D Larval Herring Growth (LHG) model to investigate the effect of circulation on transport of larval Pacific herring in PWS. This 100m resolution, coupled 3-D PhEcoM is forced by tides, freshwater discharge, heat flux, and wind stress derived from NCEP, station data or high-resolution wind products by a regional model. The LHG model is affected by the amount of food and the vertical distribution of the food and the larvae. Larval herring drift will be simulated by combining the PhEcoM-LHG model and the historical hydrographical conditions and herring spawning locations in PWS to investigate the effect of (1) spawning location and (2) ocean circulation on the potential for a successful year class of juveniles.

Science Panel Comments: The design and approach of this proposal were well described, and the PI is very well qualified to complete this work. The project is relevant to herring enhancement activities: It predicts how water circulates within the Sound, which is important to understanding how certain life stages (e.g., larvae) get distributed and the location of their deposition. Similar work was initiated under the SEA program, but additional information will be added to refine and ‘ground truth’ the model. **RECOMMENDATION: FUND**

Public Advisory Council Comments: **RECOMMENDATION: DO NOT FUND**

Science Director Comments: Not Reviewed

Executive Director Comments: Do not fund due to the uncertainty of need for interacting models and applicability to herring restoration. **RECOMMENDATION: DO NOT FUND**

Project Number: 070340
Project: **Weingartner-Oceanographic Monitoring of the Alaska Coastal Current**
Project Title: Long-Term Oceanographic Monitoring of the Alaska Coastal Current
Location: Hydrographic Station GAK 1, Entrance to Resurrection Bay
Principal Investigator: Thomas Weingartner
Affiliation: UAF
Disbursing Agency: TBD
Funding Requested by Fiscal Year:
FY07: \$128,200 FY08: \$131,300 FY09: \$129,500 FY10: \$0

Total Funding Requested:
\$389,000

Abstract:

This program continues a 36-year time series of temperature and salinity measurements at hydrographic station GAK 1. The data set, which began in 1970, now consists of monthly CTDs and a mooring with 6 temperature/conductivity recorders throughout the water column, a fluorometer and nitrate sensor at 20 m depth and a nitrate sensor at 150 m depth. The project monitors five important Alaska Coastal Current ecosystem parameters and to quantify and understand interannual and longer period variability in:

1. Temperature and salinity throughout the 250 m deep water column,
2. Near surface stratification,
3. Near and subsurface nitrate supply on the inner shelf,
4. Fluorescence as an index of phytoplankton biomass, and
5. Atmosphere-ocean heat fluxes.

In aggregate these variables are basic descriptors of the Alaska Coastal Current, an important habitat and migratory corridor for organisms inhabiting the northern Gulf of Alaska, including Prince William Sound.

Science Panel Comments: This proposal, which is an extension of an existing TC funded project, is well-written and clear in its design. The project measures physical/chemical data from one point in the Alaska Coastal Current that has been measured continuously for over 36 years. The ACC flushes PWS with water, thereby bringing nutrients and food into the system from the Gulf of Alaska. The project would provide basic, environmental measurements of constituents that affect all organisms inhabiting PWS including herring. **RECOMMENDATION: FUND**

Public Advisory Council Comments: **RECOMMENDATION: FUND**

Science Director: Given the importance of maintaining a long-term data set to measure change in marine environments that affect the spill area, I recommend that this project be funded for one

year. However, I encourage the PIs to seek future funding from sources with a broader oceanographic management umbrella. RECOMMENDATION: FUND

Executive Director: RECOMMENDATION: FUND

Project: **Wright/Heintz-Salmon Sharks and Herring**
Project Title: Salmon Sharks Preying on Aggregated Herring and Salmon in Prince William Sound

Location: PWS
Principal Investigator: Bruce Wright, Ron Heintz
Affiliation: BAA
Disbursing Agency: TBD

Funding Requested by Fiscal Year:

FY07: \$287,900 FY08: \$75,900 FY09: \$75,900 FY10: \$0

Total Funding Requested:

\$439,700

Abstract:

Pacific herring populations found in Prince William Sound (PWS) have experienced an extended period of depressed numbers. During this same period the salmon shark (*Lamna ditropis*) population has increased in PWS. Salmon sharks have been observed at PWS spring herring spawning events. Our work on salmon sharks at salmon spawning locations reveals the sharks consuming large numbers of salmon. This project will investigate if salmon sharks are also taking large numbers of Pacific herring in PWS. We propose to investigate the diets of salmon sharks to determine if they feed on herring, track salmon sharks as they move from herring spawning to salmon spawning events and examine stomach contents to identify the primary energy sources consumed by sharks and confirm these conclusions through fatty acid analysis of shark triacylglycerols.

Science Panel Comments: This panel recognizes that sharks may be important predators of herring. However, the proposal as designed provides little of the information necessary to make needed quantitative evaluations of these effects. The project does not provide data on the number of sharks or on the number of herring eaten by a shark. Given this, the panel does not feel that information gained will substantively help in evaluation of herring restoration and recovery. While the project would provide meaningful data with respect to shark feeding and energetics, these are not data critical to herring restoration. **RECOMMENDATION: DO NOT FUND**

Public Advisory Council Comments: **RECOMMENDATION: DO NOT FUND**

Science Director Comments: The Science Panel comments have been revised to address concerns of the PI. I agree with their assessment. **RECOMMENDATION: DO NOT FUND**

Executive Director: **RECOMMENDATION: DO NOT FUND**
