ABSTRACT

Fisheries managers have implemented numerous marine managed areas (MMAs) in state and federal waters off Alaska. MMAs in Alaska have been established to protect ecological structure and function, establish control sites for scientific research studies, conserve benthic habitat, protect vulnerable stocks, and protect cultural resources. The purpose of this document is to provide a comprehensive catalog of maps and geospatial boundaries, classification, purpose, and restricted activities for marine waters of the State of Alaska closed to commercial groundfish and shellfish fishing as defined in the Alaska Administrative Code (AAC) in the *Alaska Fish and Game Laws and Regulations Annotated, 2014-2015 Edition*. All MMA maps in this document were created with ESRI ArcMAP ArcGIS Desktop software. Ninety AAC MMA maps were digitized from geospatial coordinates in the regulations. The inventory of closed waters described in this document conform to the broad definition of marine managed areas: Any area of the marine environment that has been reserved by federal, state, territorial, tribal, or local laws or regulations to provide lasting protection for part or all of the natural or cultural resources therein (Executive Order 13158).

Key words: Alaska, commercial fishing, marine managed areas, marine protected areas, closed waters

INTRODUCTION

Fisheries managers have implemented numerous marine managed areas (MMAs) in state and federal waters off Alaska to protect ecological structure and function, establish control sites for scientific research studies, conserve benthic habitat, protect vulnerable stocks, and protect cultural resources (Woodby et al. 2002). For this report, we consider areas within or including waters of the state of Alaska (within 3 nautical miles of the coast) in which commercial groundfish and/or shellfish fisheries are restricted or prohibited by law. Many MMAs achieve multiple objectives. All of the MMAs include measures to prohibit a particular fishery or gear type (particularly bottom trawls) on a seasonal or year-round basis, and several MMAs prohibit virtually all commercial fishing. Although the effectiveness of existing MMAs is difficult to evaluate on an individual basis, as a group they are an important component of the management program for sustainable fisheries and conserving marine biodiversity off Alaska.

Although the primary focus for areas set aside for subsistence opportunities is generally allocation rather than conservation, we included them in this catalog because they do have conservation benefits related to preventing depletion of marine resources in local areas. Additionally, they provide access to and sustainable use of cultural resources.

The purpose of this publication is to compile an inventory of the geospatial boundary information (in map format) and attributes of MMAs including governance, classification, purpose, restricted activities, and species affected for State of Alaska waters closed to commercial fishing. The map figures in this publication are intended to provide an intuitive geospatial context that is missing in the regulations. This version of this MMA inventory contains geospatial boundaries for identified marine managed areas and is considered a complete record of the 2011–2012 Edition of the Alaska Fish and Game Laws and Regulations Annotated, including updates to the Alaska Administrative Code through Register 199 (October 2011 quarterly update; Figure 1).

These data are in the public domain. The data are not to be used for navigation.

DEFINITIONS

The following definitions apply throughout this document.

- **State Waters:** *Waters of Alaska* means the internal waters of the state, including rivers, streams, lakes and ponds, the tidal zone of the state from mean higher high water to mean lower low water, and those waters extending three miles seaward of a line (the baseline) between the following points outlined in 5 AAC 39.975. Definitions (13)(A–F).
- **Area:** Approximate area of the marine component of the MMA in square nautical miles (nmi). This value is unofficial, calculated by clipping the polygon to the Alaska Department of Natural Resources Alaska coastline polygon (1998); 1:63,360 resolution; and the Geographic coordinate system, North American Datum 1983 Albers.
- **Marine Managed Area:** Any area of the marine environment that has been reserved by federal, state, territorial, tribal, or local laws or regulations to provide lasting protection for part or all of the natural or cultural resources therein (NRC 2001).

- **Marine Fishery Reserve:** A geographically defined area where extraction of specified fishery resources is prohibited (Woodby et al. 2002).
- **Marine Reserve:** A geographically defined area where extraction of living resources and disturbance or destruction of habitats is prohibited, i.e., “no-take” areas (NRC 2001).

A small set of the closures in Alaska qualify as marine reserves (closed to all fishing year-round). These are the no-transit areas around numerous Steller sea lion rookeries and state waters closures of the Walrus Islands State Game Sanctuary (Woodby et al. 2002).

METHODS

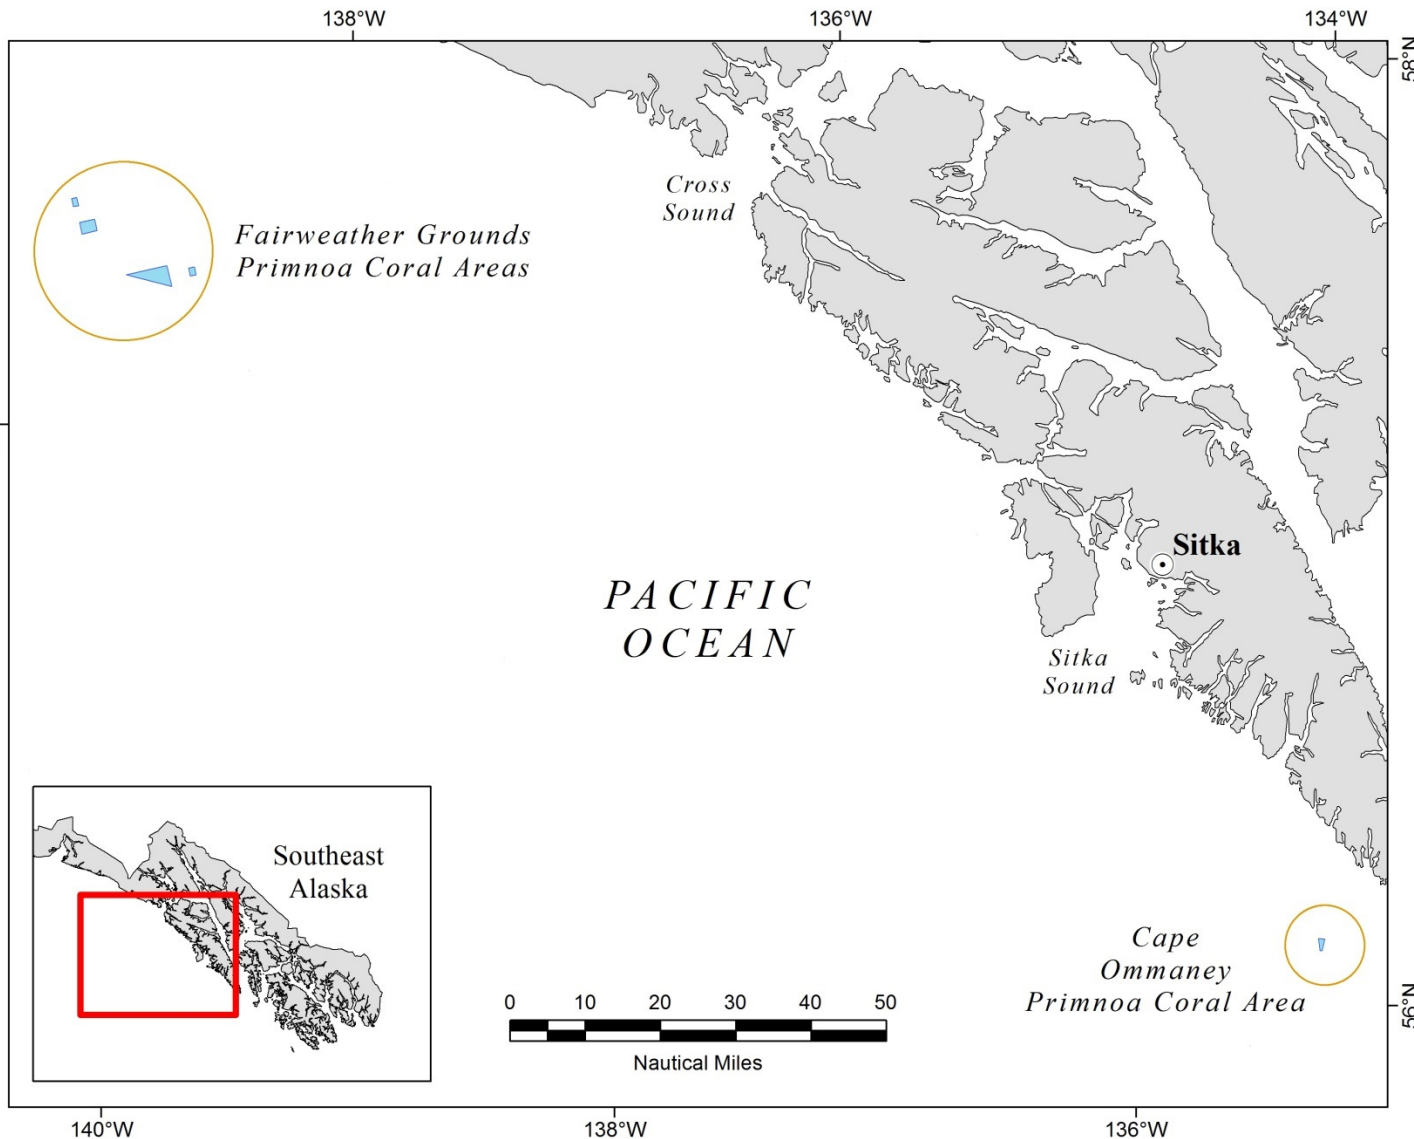

All areas closed to commercial groundfish and shellfish fishing defined in the Alaska Administrative Code and *Alaska Fish and Game Laws and Regulations Annotated, 2011-2012 Edition*, were digitized from geospatial boundaries defined in the text and mapped for this publication using ESRI ArcMAP ArcGIS Desktop software (Release 10.0, Redlands, CA).

RESULTS

This catalog of Alaska’s Marine Managed Areas includes 90 maps of commercial fishery closed areas digitized from geospatial boundaries in the text of the Alaska Administrative Code. Full texts of the MMAs in the regulations are detailed in the appendices.
