^a Applies to corridor, not off-right-of-way use areas. Where no ending milepost is given, the wetland lies within the 300-foot-wide corridor, but is not crossed by the pipeline trench. The milepost shown represents the closest point to the pipeline centerline.

^b The numbers in this table have been rounded for presentation purposes.

^c National Wetland Inventory wetland classifications based on Cowardin, L.M, V. Carter, F.C. Golet, and E.T. LaRoe. 1979. Classification of Wetlands and Deepwater Habitats of the United States. Department of the Interior. U.S. Fish and Wildlife Service. Washington, D.C.

^d Hydrogeomorphic classifications based on Brinson, R.G. 1993. A Hydrogeomorphic Classification for Wetlands. Tech. Rpt. WRP-DE-4. Biology Dept. East Carolina University. Greenville, NC

^e The numbers in this table have been rounded for presentation purposes. The construction corridor includes additional temporary workspaces for both the Point Thomson Gas Transmission Pipeline (PT Pipeline) and the Alaska Mainline pipeline. The construction corridor widths for PT Pipeline and Alaska mainline pipeline are generally 145 feet wide and 200 feet wide, respectively. Where acreages are not provided, this represents multiple crossings of the same wetland. In these cases, the acreages are provided for the first record of the wetland crossing. The actual amount of wetland acreage affected by construction may vary with wetland type and proposed construction method (e.g., winter or summer construction) as discussed in Section 2.4.3 of Resource Report 2.

[NOTE: Wetland acreages affected by operations to be determined and will be included in the final report]
