Submission Text:

We already know how the Red Devil mine has contributed to the mercury levels in our river, and now we are already told to limit our white fish intake! Fish is supposed to be healthy for us and not poison us! How can our children understand when we tell them that they are not allowed to eat what we eat! Also, I have heard how the local people don't hear about the fish limitations recommendation or if they do, then they don't obey them. They believe that our river and our fish are supposed to be healthy for us! Will the Donlin mine claim that the mercury levels are not from their mining activities! Gold and mercury are right next to each other, we all know that. It already has been proven that large level mining releases mercury into the water! If it doesn't show now, it will certainly show in years down the line.
