## **EXXON VALDEZ OIL SPILL** TRUSTEE COUNCIL

Public Meeting Monday, November 10, 2003 10:00 o'clock a.m.

EVOS Office 441 West 5th Avenue, Suite 500 Anchorage, Alaska

## TRUSTEE COUNCIL MEMBERS PRESENT:

ļ		•
8	STATE OF ALASKA - DEPARTMENT OF LAW:	MR. GREGG RENKES Attorney General
9	(Chairman)	State of Alaska
10	U.S. DEPARTMENT OF COMMERCE, National Marine Fisheries Svc:	
11		
1	STATE OF ALASKA - DEPARTMENT	MR. KEVIN DUFFY
12	OF FISH AND GAME:	Commissioner
13	U.S. DEPARTMENT OF AGRICULTURE,	MR. JOE MEADE
	U.S. FOREST SERVICE	Forest Supervisor
14		Forest Service AK Region
15	U.S. DEPARTMENT OF INTERIOR:	MS. DRUE PEARCE Senior Advisor to the
16	•	Secretary for Alaskan
		Affairs,
17		U.S. Department of Interior
18	STATE OF ALASKA - DEPARTMENT	MS. ERNESTA BALLARD
	OF ENVIRONMENTAL CONSERVATION:	
19		

Proceedings electronically recorded, then transcribed by: Computer Matrix Court Reporters, LLC, 3522 West 27th, Anchorage, AK 99517 - 243-0668

## <u>PROCEEDINGS</u>

(On record - 10:02 a.m.)

CHAIRMAN RENKES: Okay. If everybody is ready, this is Greg Renkes, and I've been informed that it's the State's turn to chair the meeting under the rules, which require the Chair to alternate between the Federal and State Trustees. And the record shows that the Federal Trustees chaired the last meeting, so I've been informed that I'm going to chair this meeting. So, we'll start. Could all the people on-line at this time identify themselves?

MR. DORMAN: Craig Dorman from Fairbanks.

MS. STUDEBAKER: Stacy Studebaker from

Kodiak.

MR. GERSTER: This is John Gerster in Anchorage.

MS. SALASKY: Carol Salasky from Chugach School District in Anchorage and Talkeetna.

MR. DEVONS: John Devons from the RCAC.

MR. ROYER: Tom Royer, from Old Dominion

University.

MR. ADAMS: This is Ken Adams in Cordova, and Russ Hollins is also with me here in Cordova.

CHAIRMAN RENKES: Okay. Anyone else online that can identify themselves? (No audible response)

CHAIRMAN RENKES: If not, then I'm going to move to the approval of the agenda for the previous meeting. Are there any comments on approving the agenda from any of the Trustees?

MR. DUFFY: Excuse me, Mr. Chairman. This is Kevin Duffy from Fish and Game. Did you mean amendments to the agenda for this meeting?

CHAIRMAN RENKES: Well, on the first issue, is -- yeah, approval of the minutes from the -- oh, the agenda for this meeting, yeah. I thought we were on the notes for the previous meeting. Sorry. You're right. Are there any comments about today's agenda?

MR. DUFFY: Mr. Chairman, I'm interested in a little discussion, and then deciding where to place it in the agenda. As a number of people know, the State has somewhat of a different perspective than the proposed Work Plan in front of the Trustee Council for consideration, and I'm trying to figure out where we would fit that discussion into this agenda. It could come under the -- in relation to the introduction of the proposed FY 04 Work Plan from Dr. Phil Mundy. We could incorporate it into that discussion there. It might be the appropriate place to do it, but I'd like to hear from other Council members how they think we ought to proceed.

CHAIRMAN RENKES: That seems like an appropriate place to me or, number 5, discussion and approval of the FY 2004 Work Plan, where I would assume Trustees would have an opportunity to submit additions or amendments or substitutions to the Work Plan. Any other comments?

1.4

MR. MEADE: My only comments, Mr. Chair, is I've not had adequate opportunity to review any proposal and so if, in the discourse, there could be a pretty thorough expression of that done, with the lack of any prereading information. I attended a staff forum here about a month ago to be fully briefed on the contents within what has been put forward as the Executive Director's recommendations, and if this is a subset of that if we can just help articulate that as we go through in discussion that would be most helpful for me.

CHAIRMAN RENKES: I think we can identify those item by item at the time. I don't think we need to change the agenda. I think that the items four and five we'll just anticipate receiving modifications to the staff Work Plan at that time.

MR. DUFFY: Mr. Chairman....

CHAIRMAN RENKES: Uh-huh.

MR. DUFFY: .....I would move to approve the agenda, subject to the discussion we just had.

CHAIRMAN RENKES: All in favor, say aye. I don't think we need a recorded vote on this.

IN UNISON: Aye.

CHAIRMAN RENKES: Okay. The agenda is approved. Now, we can move to the approval of the previous meeting's notes, which is where I started out, and any comments on the notes from the previous meeting?

MS. BALLARD If they need to be approved, I move approval.

MR. DUFFY: Second.

CHAIRMAN RENKES: Any objection?

(No audible response)

CHAIRMAN RENKES: No objection being heard, the meeting notes from the September 3rd, 2003, meeting are approved. And now, we'll move on to the second agenda item, which is public comment. We're going to keep public comments to five minutes and we're going to strictly enforce that because we've got a lot to do today and we're hopeful that we can complete our work by 4:00 this afternoon and we've even included a working lunch. So recognizing the commitment of time ahead of us, we'll keep the public comments limited. Is there anyone on-line, first, that would like to make a public comment?

MR. DORMAN: Yes.

CHAIRMAN RENKES: Please identify yourself.

MR. DORMAN: I'm Craig Dorman, vicepresident for research for the University of Alaska's statewide system.

CHAIRMAN RENKES: Okay. Please proceed.

MR. DORMAN: Last Thursday, I visited your Executive and Science Directors to discuss the impact on UA researchers of the delay in implementation of the Fiscal I also sent you a letter as Chair of Year '04 Work Plan. the Government's Committee of the Alaska Ocean Observing System, which is our State's component of the national Integrated Ocean Observing System initiative. I won't reiterate today either of these communications, but I do urge you to address the concerns expressed in them in your deliberations, and I would appreciate a response. another important issue, and that's the responsibilities associated with the sponsorship of research. I speak as a public citizen. That is, one with decades of experience managing and overseeing many hundreds of millions of dollars in Federal research, as well as the institutions and their scientists that support such programs.

The first point is that your Fiscal Year '04 Work Plan, while it is still draft, was completed and the results have been promulgated in such a way as to require commitment to you by the performers you have selected -- any of them that were in the second year of

their performance. By virtue of their commitment to you, they've lost the opportunity to offer their services to other worthy sponsors. Significant changes at this point deprive not only those performers of the funds needed to support themselves, their staff, their students and their institutions but, also, the State and the nation of their services in other programs to which they could have That's why your Fiscal Year 04 commitments may not be legal. You do have an obligation to consider the impact of change on others. If you do decide to change your plans, I urge you to make a public statement about your policy on your obligations as a sponsor. One reason for doing this, for your own sake, is that if you are perceived as arbitrary or dealing in bad faith you risk losing the willingness of the best researchers -- those with opportunities elsewhere -- to undertake your tasks. The best researchers work only for credible, trustworthy It's a two-way street. You can always find someone to do your work; but, in the vernacular, you'll be bottomfeeders.

19

20

21

22

23

24

25

Second, your Work Plan has been carefully developed over several years with external peer review and national academy guidance. Since your research has such fundamental important legal, financial, and ecological implications, any significant change to that plan as you

apparently have intent to discuss -- no matter how worthy you personally believe it to be -- should be subjected to an equally rigorous external peer review. Neither individually nor as a group does your Council have adequate breadth and depth of scientific expertise to be able to afford the luxury of less than the best possible advice from the practicing scientific community. And since you work by consensus, it states in any Work Plan which you do approve of the scientific credibility and integrity not only of yourselves but the organizations you represent, including the Departments of Interior, Commerce and Agriculture. You may, of course, choose to take a totally different course of action than previously planned for purely political, financial or litigatory [sic] reasons. But then, I'd urge you to be clear on your rationale for that decision since it will have ramifications for precisely those same purposes. However, if you propose to base a change on scientific or regulatory arguments then I would urge you to obtain, before approval of any work, external review that is at least on a par with that which has led to the current plan.

Finally, if you accept any of my arguments as valid, then I would urge you to seriously consider implementing the Fiscal Year 04 Work Plan with the performers alerted to a strict limitation of your

obligation to this year while you discuss and then validate any major changes. And if you missed any of this, I would be happy to fax you a copy.

1.4

CHAIRMAN RENKES: Thank you very much, and you stayed right within the five minutes, so I appreciate that. Anyone else on-line that would like to make a public comment?

MR. GERSTER: Yes. This is John Gerster.

CHAIRMAN RENKES: Okay, John, go ahead.

MR. GERSTER: I'm on the Public Advisory
Committee, and I'd just like to state that I know Brett
Huber will be giving our official Public Advisory Committee
report later. But I wanted to state as an individual I was
very impressed with how the Public Advisory Committee
worked together and worked over the GEM project and the
Fiscal 2004 Work Plan and I'd like to state that it was my
sense that the Public Advisory Committee was very, very
supportive of the Fiscal '04 Work Plan and I would hope
that you would not alter this and that you would continue
to support the GEM program. Thank you very much.

CHAIRMAN RENKES: Thank you. Anyone else on-line that would like to make.....

MS. STUDEBAKER: Yes. This is Stacy Studebaker from Kodiak....

CHAIRMAN RENKES: Okay.

MS. STUDEBAKER: .....and thank you for the opportunity to speak today. I'll be speaking primarily about habitat protection since other members of the Public Advisory Committee and Brett will be addressing other issues today through correspondence and, hopefully, here in person. I've been a member of the Exxon Valdez Oil Spill Trustee Council Public Advisory Group for the last eight years representing recreational users. It has been a honor and a privilege to serve my community of Kodiak and the interests of my constituency.

When the public was surveyed in the early 90's following the settlement by far the majority favored spending the money on three things, in the following order of priority: restoration of the affected area and species; permanent habitat protection of some lands affected by the oil spill to permanently protect their natural resources; and scientific research to study the effects of the oil on the injured species and ecosystem in the spill area. That was the clear mandate of the public and one which I sincerely hope you will honor as we move into the future. But I noticed in the EVOS Work Plan for 2004 that zero funds have been allocated for the habitat protection program, and at a Trustee Council meeting this summer there was a vote to abolish the program that, fortunately, failed. Both of these decisions were made without any

prior notice to the general public or debate among the members of the Public Advisory Committee.

20

21

22

23

24

25

It seems to me that if you anticipate this great of a change in the established policy of the allocation of EVOS funds that the public or, at least, the Public Advisory Committee should be notified and have time to discuss it and decide if that change is in the best interests of the public and the resources we are charged to be stewards of. The habitat protection program was implemented to acquire through purchase private lands affected by the oil spill. Many of these choice parcels are now public lands and managed for habitat protection of natural resources for the use and enjoyment of all Alaskans, tourists, and future generations. This has been an enormously popular program, especially the small parcel acquisition program, which uses funds each year to buy parcels of land less than a thousand acres in the oil spill area that are of particular recreational and ecological importance to coastal communities, thereby benefiting hundreds of local Alaskans.

Two small parcels on Kodiak Island that were affected by the oil spill and nominated for the small parcel acquisition program in 1995 have high recreational and resource value to the people of Kodiak because they are accessible from our limited road system. These two parcels

are Termination Point and Long Island. The former Trustees and EVOS staff evaluated these lands, ranked them at the top of the list and promised Kodiak that they would purchase them. Unfortunately, the owner of both parcels, Lesnoi Native Corporation, has been involved in an ongoing litigation with rancher, Omar Stratman, and the title hasn't been clear to make a purchase. Someday, I hope, the title will be clear for Termination Point and Long Island, and I hope you will honor the wish of the former Trustees and the people of Kodiak to purchase these recreational lands that are so important to our community.

1.1.

As you know, the former Trustees have purchased many important lands in the Kodiak archipelago over the last 10 years that are crucial for the permanent protection of old growth Sitka spruce habitat that is home to brown bear, elk, salmon and many bird species affected by the oil spill. Through years of coordinated negotiations with local government, resource agencies, native corporations, local, state, and national conservation groups, the EVOS Trustee Council has been working to protect prime habitat on North Afognak Island. We thank the former Trustees deeply for the work that they have done and encourage the new Trustees to honor their predecessors by convincing the Governor to reverse his decision to block the sale of the North Afognak land. His

unanticipated decision was a terrible blow to our community, who backed the sale a hundred percent. It was the farsighted decision of the various Kodiak native corporations who own the land to sell it and develop it in this way, thereby protecting the resources for future generations of hunters, fishermen, subsistence users, tourists, bears, elk, eagles, and marbled murrelets. Thanks again, and I urge you to openly discuss with the Public Advisory Committee and inform the general public of any plans you may have for changing the allocation of EVOS funds.

CHAIRMAN RENKES: Thank you. Is there anyone else on-line that would like to make a public comment?

DR. ROYER: Yes. This is Tom Royer.

CHAIRMAN RENKES: Okay, Tom, qo ahead.

DR. ROYER: Yeah, I'd like to present some comments on a longtime series and how EVOS sponsored GEM science programs will fit in with other science plans in the North Pacific. I'm Professor Emeritus at the University of Alaska in Fairbanks and, presently, a professor of oceanography at Old Dominion University. I'm continuing to carry out oceanographic fieldwork in the Gulf of Alaska and presently supported under US GLOBEC.

Historically, in December 1970 I began

sampling near Seward that has developed into the Gulf of Alaska Station One Hydrographic Time Series, now known as GAK1. I also served on the National Research Council committee that reviewed the GEM Science Plan. I presently serve on the EVOS Science and Technical Advisory Committee, the Science and Technical Committee of the Oil Spill Recovery Institute and the science panel of the North Pacific Research Board. In addition, I'm the Chairman of the new National Research Council committee on the review of the western Alaska salmon and the restoration plan for that salmon.

1.1

matter much how money is offered yesterday's data cannot be bought unless those observations were made. They remain forever lost. We cannot separate human induced effects from natural variability without making observations prior to, during, and after an oil spill or similar event. Data gathered as the pipeline was completed and since then is priceless, yet those data are not all that expensive to obtain in a systematic manner. The GAK1 time series has allowed us to identify seasonal changes in the ocean conditions in the northern Gulf of Alaska and responses to the insofar seen and long-term changes in the marine environment over the last 33 years.

It appears that the Gulf of Alaska is

warming, with the upper layers becoming fresher and the lower layers becoming saltier. The average temperature gain in the upper 250 meters, or 800 feet, is about one and three-quarters degrees. Measurements and linkages with biology and fisheries need to be investigated. I want to emphasize that ocean observations are rare. There are only two long-term water column hydrographic time series in the northeast Pacific. That's Ocean Station P and the GAK1 Station.

It is necessary and cost effective to use platforms such as volunteer observing ships, ferries, research vessels and moorings to make such measurements. An oceanographic observation network such as that enjoyed by the meteorological community does not exist. several programs that support oceanographic research programs in the EVOS GEM region. OSRI is focusing on the Prince William Sound atmospheric and oceanographic observations and modeling. That program does not have a longtime series and depends on the GAK1 data to place their observations in proper context. The NTRB is still developing their science plan in concert with the National Research Council, but I assume that they will focus on those portions of the ocean that are not in the GEM region and design a program that complements the GEM Science Plan. The AYK Salmon Science Plan will focus on the Bering Sea,

but it could depend on the upstream GEM coastal observations for its analyses. The U.S. GLOBEC Northeast Pacific Program sponsored by the National Science Foundation and NOAA enters its last field year and will enter into the analysis phase in 2005. Finally, the U.S. component of the Global Ocean Observing System, of which Alaska Ocean Observing System is a part, will promote coastal observations. What I want to emphasize is the coordination between all of these programs is essential, and the GEM program serves as a leader in these efforts.

21.

In summary, the GEM science program has been carefully developed with input from the National Academy of Sciences and the National Research Council. GEM is in a position of leadership with its support of long-term observations that are vital to all the upcoming science studies. A coordinated interdependence of these programs with the GEM program is critical to the success of them all. Thank you.

CHAIRMAN RENKES: Thank you, Dr. Royer. I just want to remind all the folks on-line that if they speak or speak in the background that they can be heard at the meeting. Anyone else on-line that would like to make a public comment?

MR. DEVONS: Yes. This is John Devons. CHAIRMAN RENKES: Okay, John, go ahead.

MR. DEVONS: Yeah. I'll keep it short.

I'm John Devons, the Executive Director of the Prince

William Sound Regional Citizens Advisory Council and a

member of the EVOS Public Advisory Committee. I want to

thank EVOS and the GEM program for their past funding of

our long-term environmental monitoring project. Although

we didn't get funded this year, I want to state that it is

very important that we use these funds to (indiscernible 
phone beep) funds, and I think GEM has done a good job in

this regard.

1.2

I only recently learned of the possibility that the plan could be changed, and it is very difficult to comment on a plan or a change that one knows nothing about, other than by rumor. It is worrisome, though, if the plan, which has been done along scientific guidelines, is changed without having the public input. You have a Public Advisory Committee that has worked on and made recommendations, and I think it would be a grievous mistake to alter the plan without allowing your policy advisory committee an opportunity to respond to this, and I appreciate you giving me an opportunity speak. And, of course, being the Regional Citizens Advisory Committee, we're very interested in seeing that the public has input into the expenditure of funds.

CHAIRMAN RENKES: Okay. Thank you. Anyone

else on-line that would like to make a comment?

MR. ADAMS: Yes. This is Ken Adams in Cordova. I'd like to offer some comments this morning.

CHAIRMAN RENKES: Okay. Go ahead.

MR. ADAMS: Ken Adams. I'm a fisherman in Prince William Sound -- longtime fisherman. I have a background in marine science, and I and my partner are coordinators of an EVOS supported project entitled Fisheries Management Application. I would like to offer a few comments, first, from a regional perspective, and then I'd like to conclude with a general statement and I hope that some of these comments might be helpful, especially to some of the new EVOS Trustee Council members.

There can be no doubt that Prince William Sound was the most thoroughly and hardest impacted by the EVOS event in 1989. In took several years, but in '92 and '93 we had wholesale pink salmon return failures. Also, in '93 we had a herring resource population failure, and that herring resource has not yet recovered. As a consequence of these return failures, beginning in the fall of '93 there was a major planning effort to produce an ecosystem investigation. That program was entitled the Sound Ecosystem Assessment or SEA, or S-E-A, call it as you will. That program was funded by the Trustee Council from '94 to '99. It was deemed the flagship of the Trustee Council

research effort and had been intensively peer reviewed and given a thumbs up. The National Research Council was one of those bodies that intensively -- pardon me, I'm getting a little bit off the track here.

14

15

16

17

18

19

20

21

22

23

24

25

In any case, we in the resource dependent community are appreciative of some of the results of the One was to help with a fundamental understanding of the Prince William Sound ecosystem, especially a determination of the factors that were involved in or influenced the survival of juvenile pink salmon and herring. However, there were additional goals of the SEA program which were not achieved, and outstanding among these is the goal dealing with utilization of this new information to more accurately predict the fisheries' production in Prince William Sound. This was not achieved, nor was the goal to establish an ecosystem database for the Sound for improved management, enhancement and restoration activities. Our EVOS supported project -- Fisheries and Management Application -- revisits the SEA and seeks to correct this lack of achievement for these additional goals which have been overlooked.

There can be no doubt that in this state -probably for the last 10 years, anyway -- that salmon
fisheries are in a major turmoil. Granted, there has been
great impacts from farmed salmon production, but abundance

of wild fish still remains problematic. There can be variation by area or within an area the same species over time. What I'm alluding to is accurately forecasting salmon returns. It's a very difficult process, and it is one that verges on being on a melding between an art form and witchcraft.

We in Prince William Sound, I think, are in a pretty enviable position. We have insights in how the ecosystem functions. We also have the need for utilization of these insights to aid improved forecasting. A good case in point, this past summer we experienced in Prince William Sound an amazing strength of pink salmon return. It came in approximately twice what the preseason midpoint forecast number was. We see that the developing GEM program is a means for helping us in the resource dependent communities to resolve some of our ecosystem related problems, and we specifically request your support for application of scientific research results for the resource dependent communities, particularly improving salmon return accuracy. We see that GEM is the vehicle that we can do this. Thank you very much.

CHAIRMAN RENKES: Thank you. Anyone else on-line that wants to make a public comment?

(No audible response)

CHAIRMAN RENKES: Okay. Well, with that,

we've concluded the comments of those who have joined us over the phone line. Is there anyone here present at the meeting that would like to make a public comment? Please come on up to the microphone so that we can record your comment. Please introduce yourself.

MS. BROWN-SCHWALENBERG: Oh, thanks. Hi, my name is Patty Brown-Schwalenberg. I'm the Executive Director of the Chugach Regional Resources Commission, the natural resource intertribal organization that works with the seven tribes in Prince William Sound and lower Cook Inlet on natural resource and environmental issues. With me today, I have Gary Kompkoff, the Chief of Tatitlek; Patrick Norman, the Village Chief of Port Graham and, also, the Chairman of our Board; Robert Heinreichs, the President of the Native Village of Eyak; John Boon, from the Valdez Native Tribe; Larry Evanoff, the Village Chief of Chenega; and they will be addressing various issues regarding the FY O4 Work Plan, which I will explain later.

What I would like to discuss with the Trustee Council at this time is the review process under the Work Plan, as well as some specific issues. The community involvement program, which -- it started out as a community involvement, which is now the tribal natural resource stewardship and tribal involvement in the GEM program -- started out in 1995, and it was an effort to try

to get the communities more involved in the restoration program which was currently being conducted by the Trustee Council. That continued on for a number of years. When the restoration program began winding down in '99 and 2000, GEM was gearing up, and so the funding was significantly reduced to the communities to be involved in the process. But we started focusing more on capacity building at the community level so that they could be involved in the GEM program, and so the program took a little bit of a shift into tribal natural resource capacity building.

1.3

The project that we submitted for funding, we were listed in the solicitation as a continuing project. So we were a little surprised that we were recommended for do not fund for FY 04. In addition, we received a call from the Department of Administration saying that they're holding back \$60,000 of the FY 03 funding until they get a final report. We've never received a letter saying this is the final year of the project and that they needed a final report. We're a small organization and we really can't afford to extend that kind of money out there and so I've sent an e-mail to Phil Mundy but haven't gotten a response. So I don't know what to do about that, but those kinds of issues are something that really needs to be resolved. I mean, if we're not a continuing project, we should get a letter stating such; and, if this is the final year of our

project, we should get a letter stating that and that a final report is due a certain time. The guy at the Department of Administration told me the report was due September 15th. Well, we didn't even know anything about it, so we're still -- you know, we feel that this should be a continuing effort, irregardless of the community involvement plan that we're working with the Center for Alaskan Coastal Studies on. I don't think that community involvement should stop while that report is being reviewed and put together, but there are some valid points in the report that I think need to be addressed once the report does get finalized.

In regards to the review process, looking over the STAC comments of all of the projects, it doesn't seem that they are consistent with each other. Some projects were praised for things in one proposal and not recognized in another proposal, or projects were recommended for funding whose PIs have not submitted annual reports for a number of years. I think that the review process should include people that are knowledgeable in traditional knowledge on the STAC Committee, and I think that the review process should be fair and equitable. And, one final comment, that the combination of -- I think the GEM program should be a combination of research and monitoring as well as restoration so that there's some

proposals that are funded that can do some on-the-ground work and provide some immediate information to the communities and to the State and Federal management agencies now. I think there needs to be a combination of more global and on-the-ground work.

1

In regards to community involvement, I think we need to establish a criteria for community involvement. Some of the proposals just merely state, well, we have community involvement in our proposal and we're going to go to these communities and we're going to do this, but there's no proof that that's been done. we know that some of the PIs have just merely placed a call to the communities and said will you support this proposal and they said, well, send me something about it and they've never heard anything back and then they put it in their proposal that, okay, we've contacted these communities and they're supporting -- you know, they're going to be involved in this project. That's not what community involvement means, and merely stating isn't enough. think something needs to be put in place to hold their feet to the fire that, if they're going to tout community involvement in their project, then they need to do just that.

And we need to design a structure that evaluates community involvement on its own merits and not

according to a system designed for scientific projects -the whole issue of qualitative versus quantitative
analysis. I mean, how do you rate if someone was involved
or not or if a community felt involved versus, you know,
how many reports did they submit? You know, it's kind of a
difficult situation, but I don't think it's fair to hold
community involvement to the same standard as a scientific
project when you really can't measure them in the same way.
There's got to be some kind of a way developed to measure
them on an equal basis, but that they have separate
standards, I guess, and that's about the gist of my
comments.

I'm hoping you got copies of the letters that I sent to the Trustee Council on September 3rd and October 16th or 17th, and that really outlines the majority of my comments that I really don't want to get into right now. But I hope that you've read those letters and will take them to heart when deciding on the Work Plan, because I think it's really important that we continue to be involved in the GEM program.

Gary Kompkoff is going to be talking about the tribal natural resource plans. Larry Evanoff will be talking about the Wisdom Keeper workshops and the proposed work that we are proposing to do in FY 04. John Boon Will focus on traditional knowledge and the value of

incorporating that into the science programs. Pat Norman will be discussing the WisdomKeeper workshop that was held in Port Graham as well as the review process and the tribal involvement in the GEM program project, and Bob will be talking about the importance of involving communities in the GEM program and the research that is conducted in and around the traditional use areas of the communities. So if you have any questions of anyone after that you can feel free to ask.

CHAIRMAN RENKES: Okay.

MS. BROWN-SCHWALENBERG: Thank you.

CHAIRMAN RENKES: Thank you. Hello.

Introduce yourself -- and just ask you to keep your comments to five minutes.

MR. KOMPKOFF: Don't worry about going over five minutes. I'm Gary Kompkoff. I'm the Chief of Tatitlek. It's a position that I've held for almost 30 years now, so I've been around long enough to see development before the oil spill and watch the history of the Trustee Council and the people that have been involved with it.

I guess I find it disturbing that after all these years I'm sitting here -- or the tribes of the Chugach region are sitting here once again defending community involvement and the importance of community

involvement. I would have hoped by now that we've been able to communicate the importance of traditional ecological knowledge and the way that it could work with western science to benefit everyone that's working on the effects of the oil spill. Everyone is aware of how much traditional knowledge exists in the Native communities, and I don't understand how you can expect that you can take advantage and benefit from that traditional knowledge without community involvement. I don't understand why there's a do not fund recommendation on the proposal for community involvement. I think we've made it clear over the years, and we've proven that traditional ecological knowledge is just as important as western science in many cases in a lot of these projects and programs that are going on, especially related to the GEM program.

The Village of Tatitlek is very early in developing its tribal natural resource management program. We just finished the Native Village of Tatitlek Tribal and Natural Resource Management Plan and it's a document that was written with only the tribe in mind and we did that intentionally. We didn't want to write a plan worrying about what everyone was going to think of the plan. We wrote it based on what our traditions are. We didn't involved State and Federal agencies, the Trustee Council or anyone else in developing this plan. We involved our

elders, we involved our subsistence hunters and fishers, and we used their knowledge and the generations of experience that we have in managing natural resources.

That's what we used to develop this plan.

I think it is unfair for the Trustee Council to think that this plan is going to be complete only when it has the Trustee Council's approval. tribal natural resource management plan. It can be used as a resource by the Trustee Council and its investigators when devising or developing programs under the GEM program. It was just really disturbing to read comments that say, you know, that it's not complete until it's approved. tribal natural resource plan that we've developed and the plan that we have finally printed is probably never going to be complete. Every five years, every three years, it will be revised, and situations change. So it's a document that's going to be evolving, and we do hope that the Trustee Council and the scientists and researchers will use it as a guide, and we hope that as a region we can be involved in the GEM program. I think it would be beneficial to everyone. Not just the tribes or not just the Trustee Council, but everyone that uses the Gulf of Alaska, and those are my comments. Thank you.

CHAIRMAN RENKES: Thank you. Do we have another presentation following?

MR. BANK: Hello. My name is David Bank, and I'm the Executive Director of the Nature Conservancy. A couple of years ago, the Nature Conservancy and the Conservation Fund entered into an agreement with the Trustee Council to acquire small parcels in the areas affected by the spill. Since that time, we have acquired three parcels totaling approximately \$200,000, primarily in the Anchor River area. These parcels are very important to the local community for hunting and fishing access, and they contribute to the local economy there. All of these parcels were identified by Fish and Game and DNR as important to the local community and to the resources affected by the spill.

We brought these parcels to the Trustee Council in December of 2002. I believe we've been on the agenda at least three other times, and I noticed today that we're no longer on the agenda. We're not offended by this, but at the same time we have significant costs associated with these properties. So far, we've accrued about \$7,000 in interest expenses on the three parcels that we have acquired. I would urge the Council to quickly review these parcels to extend the grant for three years to allow us to continue to acquire small parcels under the terms of the agreement. All of these parcels will come before the Trustee Council and can be decided on as individual units.

So we believe we are working in cooperation with the Council and urge you to continue with this agreement. Thank you.

CHAIRMAN RENKES: Thank you, David.

MR. EVANOFF: Hello. My name is Larry Evanoff. I'm from Chenega Bay. One of the main objectives of a Chuqach regional resources project is the continuation of the WisdomKeeper workshop series. We have learned through the past two workshops that there is interest in conducting research and monitoring in the Chenega Bay area. This workshop would provide an opportunity for our community to be more involved in the GEM program, and by not supporting this project this workshop will not happen. The Chenega Council has an operating environmental program and has two staff personnel in that project. We have staff available that can work and will work with the GEM I'm afraid that, you know, not supporting researchers. this program that the communities will look at the Trustees as not supportive of community involvement. Thank you.

CHAIRMAN RENKES: Thank you.

MR. HEINREICHS: Hi, I'm Bob Heinreichs.

I'm President of the Native Village of Eyak. We're located in Cordova. We have 500 tribal members.

I'm a little concerned that this community involvement program is recommended not to be funded again

and one of the comments I had heard earlier that no proposals were coming out of it. Yet, our tribe turned in many, many proposals over the years and the only one we ever got funded, I believe, was the Elders/Youth Subsistence Conference and we asked for technical assistance and the only technical assistance we ever got was from, I think, Don Calloway from National Park Service. And we would turn them in every year, and people would say how come you keep turning those in? You know you're not going to get funded. And we kept turning them in, and then one day we said that's it. We've wasted enough time turning proposals in because we never get technical assistance and we never get funded.

Unfortunately, what those proposals did was it ended up meeting with other outfits, and we were funded to do research on the Copper River on chinook research and lower river test fishery and we've run those projects for three years and they have been fabulously successful.

We've run them cheaper and better than any government agency could do because that's our homeland. That's our country. We know how to get things done there. I've been on the Board of Directors of Chugach, Alaska, for 11 years, and I was drafted by my friends and relatives because the company had filed bankruptcy. We have turned it around, paid off our bankruptcy debt and we're on track to hit 500

million in revenues this year from government contracting and I've learned a lot and the whole thing is you have to be able to do it better and cheaper and, if you can do that, you can get more contracts.

Well, our tribe has taken that same attitude. We had a guy that was funded from somewhere that came up from Texas, flew into Cordova, and he was doing sea otter research there. He never talked to us one time. We never knew anything about it. We have our own sea otter plan in our tribe, and some years there is 10 or 15 thousand sea otters in the bay there. But I was amazed that somebody from Texas would come up to do research on them and not even come and talk to us.

We really need to have the communities involved. Our tribe and the other tribes in the Sound and our region are the indigenous people of this area. Our traditional homeland that we've used for the past 10,000 years is Prince William Sound, the Gulf of Alaska and the Copper River Delta. To not have us involved in these research projects that affect our lives is disrespect to us, and I'll leave you with one final comment. I was very pleased to see Governor Murkowski dig his heels in and say no more money for buying private lands and locking them up. Unfortunately, while I was really proud of him for saying that and doing it, it was like closing the barn door after

the horses were gone because there was hundreds of millions spent locking up private land. So that's all I got. You got any questions?

CHAIRMAN RENKES: Any questions?
(No audible response)

CHAIRMAN RENKES: No. Thank you very much.

Appreciate the comments.

MR. BOON: Good morning. My name is John I'm the Vice-President of Valdez Native Tribe. make a living off of subsistence living, which is seals and sea otters is what I specialize in. I've seen funding come and go with, like, the Harbor Seal Commission -- funding came and gone on that. Same with the Sea Otter Commission. And I still make a living off of seals and sea otters in the Sound and it's sort of disturbing to see when I'm running around most of the spring, winter and fall areas and I come across research groups that we don't even know that they are in the areas doing research and we don't have any local people on any of them. But, we're supposed to move aside for these people to go ahead and do their research, but at the same time our own traditional ecological knowledge is sitting on the beach having our funding cut all of the time and we're supposed to sit around and be grateful for this and it's really hard to sit here and face the Board who is supposed to be representing

the impacted areas. And, at the same time, we keep bringing in these projects that none of our communities even know about, and it is confusing to some. Like, myself, I'm the Vice President of our organization.

They'll come to me and say, well, John, how come you don't know anything about this? You're part of the Subsistence Division. And we don't even catch wind about it until afterwards or we see them running around out there in the Sound.

1.5

I would like to see a lot more involvement from the communities. It's a tough one to face when I have to face the 450 people that I live with, and they ask me, well, how come we're not doing anything on this? And I'm here to ask you. That's all I have. Thank you.

CHAIRMAN RENKES: Thank you.

MR. NORMAN: Hi, my name is Pat Norman. I'm from the Village of Port Graham. As Patty said, I serve as Chief for the village council there and, also, Chairman for the Chugach Regional Resources Commission which assists all the seven villages within the Chugach area in issues regarding natural resources.

One project that was funded by the Trustee Council was the WisdomKeeper workshop series in the region, which started out in Tatitlek, and the information and response we got from how that workshop there was

participated in by the science and the Trustee Council, along with the children in the schools from there was that it sparked high interest in my village for having the same thing where we gather our elders' knowledge along with questions that the young people have. And then, those my age that kind of have some information on how the elders -what they know about the past and what we know about current management of resources down there. But then, in talking with the elders and requesting that a workshop be held in Port Graham, we brought the elders together and asked them to tell us what resources in our bay were they interested in learning more about. And, over time, and then during the workshop, they told us directly they were interested in why some of our resources had gone downhill, let's say, from 1964 going forward and us waiting for them to come back wasn't working. And what they want to know now is to learn more about why those resources may not be coming back, in terms of a question, and wondering within the Port Graham Bay itself what may be happening in Port Graham that is inhibiting the return of species like clams and cockles and crab and what may be affecting some of the salmon and halibut resources that we subsist on.

1

2

3

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So the topic of the workshop was reviving traditional management practices within our area and how our elders in the past managed the resources so you didn't

overharvest them, and one of the things that came up from the discussion was that our traditional knowledge is based on a whole lot of observation. It's watching and, as you're harvesting, your time is spent observing how much is left -- if young ones are coming back. And one of the main points of how our management of the resources was done was that they didn't harvest things in the summertime, and they specifically told us that the thought was that that was when the species were spawning and going through the cycle of putting larvae and stuff out into the ocean. from traditional knowledge to where you jump into science -- is, from our point, it was we know they need to spawn so during that time we'll not bother them. But we really didn't know what happened, other than we waited till October or November to start harvesting again.

1

2

3

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So what we think -- or, what now, through the GEM program, is that this larval stage where the species spawn and they go up into the water column and then come back down to recruit down in the bays is an important part that we can't observe through just our watching it. It needs to be something that's studied by science, where you can pull these larvae out or see if they're recruiting onto beaches and how they flow in the bay. What it means then, overall, is that we need to know what is the water flow in Port Graham in terms of its relationship to

flushing out into Kachemak and what Kachemak Bay and Cook

Inlet does to what is happening directly in Port Graham in

terms of the water moving?

1

2

3

4

5

12

13

14

15

16

17

18

19

20

21

22

23

24

25

In the beaches in Port Graham, our concern is that the species that we harvest aren't coming back. we need to be able to study the whole beach structure from intertidal down into the low tide area where we dig clams and see what the recruitment actually is coming back, and there are studies in Kachemak Bay going on that can apply There's studies where they're studying the whole to us. beach structure, and that can happen in Port Graham. They're studying what's happening in the water column. We can use that in Port Graham in determining this larval recruitment. We're also wondering about if contaminants are hurting this stage, this larval stage. looking at our own issues with our sewer outfalls in the But there's also the idea of using these cards and also seeing how the Port Graham Bay's currents work.

The GEM program can help Port Graham elders and young people learn what's going on, and then end result is that we want to be able to tell -- or go to the State or the Federal government and say this is what's happening in Port Graham. We want the species to come back, and here is some options on how to do that. This comes through the studies that can happen through community involvement and

the GEM program.

14

15

16

17

18

19

20

21

22

23

24

25

In working towards that direction, there was two proposals that were submitted and didn't get a to fund note. One was a community science dialogues proposal from Rick Foster at ADF&G, and I think this was through the Kachemak Bay Research Reserve. What we were trying to do with this program -- and we were supportive. They did ask us about this proposal, but it kind of fits with the topics that were discussed above in the GEM program on getting our elders and young ones talking with the scientists and learning from each other. The other one was through the Kachemak Bay Research Reserve also, and this was to study metals coming out of our watersheds in -- well, they were going to do it in Kachemak Bay. It also involved Port Graham and Windy Bay and Rocky Bay in terms of studying what was coming out of the watersheds up above, which adds to what we're trying to find out about Port Graham Bay and what effects those may be having to the environment so that we can at least understand, you know, what may be happening there.

From the workshop we had in Port Graham, we came up with 11 potential projects, and this was just with the scientists that were there and all of it around the discussion about the questions our elders had and, also, the four current ongoing projects, which was a Bidarki

study that was funded by the Trustee Council and there was a couple of others. But we ask you to consider that the questions that we have in terms of the environment may not necessarily fall under the request for proposals things that you send out, but they are questions that we want answered within our environment that we're dealing within and, from there, it will eventually tie in with the larger picture that I think GEM is trying to establish. urge you to reconsider those areas for funding again. Thanks. CHAIRMAN RENKES:

MS. SALASKY: Okay. This will be very My name is Cheryl Salasky, and I've been the Youth Area Watch coordinator for the Chugach School District. This will be just a brief heartfelt plea, and that is that nine schools throughout Prince William Sound, Cook Inlet, and Resurrection Bay have participated in this Youth Area Watch Program for the past eight years. It's been an educational program in the schools of oil spill affected areas, and it's been well received by students, parents, teachers, scientists and community members alike. last year we had 90 applicants for our 30 positions in the It's been a terrific opportunity for students to work directly on meaningful research with scientists investigating real life questions. Students then take the skills learned from those interactions and apply them to restoration projects that may come up within their own local communities. Basically, I just urge you to reconsider funding for this, and I did want to say that even if you're not able to fund it at the full level requested that we would be more than happy to rewrite the grant at a reduced level. So as long as we can continue pairing students with community members, scientists and their schools in conducting research for their very own

communities. That's it. Thanks.

21

22

23

24

25

CHAIRMAN RENKES: Okay. Thank you. Go ahead.

MR. LAVIN: Thanks. I'm Pat Lavin. T'm an attorney and Prince William Sound Project Manager for the National Wildlife Federation here in Anchorage and also a member of the Trustee Council Public Advisory Committee and I wanted to talk briefly about three things and I think the theme that runs through all three is a notion of an open dialogue and process more than anything else. there's a good tradition with the Council when dealing with the issues of relatively higher public importance -- you know, kind of the big things -- that there's a good established record of public discussion that, particularly, from my standpoint as a Public Advisory Committee member, of vetting of issues through the PAC and with the public, but at least the PAC when you approach the relatively larger, direction setting decisions. And so I think that's the theme that runs through all of this, but the first one I want to mention is the Work Plan -- kind of the big issue for today -- and it's kind of news to me that there's something of an alternate -- sounds like maybe an alternate Work Plan. I don't know. I don't think anyone has really seen that, and maybe it's just a discussion and more of a tinkering of what's been proposed. I don't know. But, to

the extent you were to consider any significant sort of sweeping change in the FY 04 Work Plan, I would urge against that. Some of the previous speakers have given some pretty good reasons why.

There's a lot of time and effort put into setting GEM up and getting this far, and this is kind of the first year of implementation of that. Scientists have committed themselves in some ways, et cetera, and I think if -- it's fine to entertain changing direction and such, but I think at this stage of the game probably not for FY 04 and, perhaps, a thing to do there might be to launch a discussion in over a greater length of time than just today, which could undo years and years of work in a couple of hours right here today. So I urge you not to do that. I don't know if that's on the table, but just in case it is I needed to say that.

One other thing about the Work Plan. If we do hear from our PAC Chairman about the PAC sense of the Work Plan you may not hear anything about the lapsed or deferred funds from FY 03. I don't remember that coming up in our August meeting when we went through this Work Plan. That's probably because that wasn't calculated yet; but, now, there's a number. We know there's some deferred funds left over from FY 03, and I would urge you to take a look at some of the deferred projects then that we didn't know

we had an availability to go with and fund and that the STAC and the Science Director and maybe the Executive Director -- I can't remember -- had every intention of funding, if we had the money. Now there's a little bit more money to work with. So that's something I hope you do have a chance to look at today and fit in some of those that could be funded a little sooner than later. that I'd mention is the killer whale research project --Craig Matkin -- which is an inexpensive ticket item. \$19,000 or so. It allows him to keep up what is one of the few real longtime series whale observation data sets dating back to the late 70's. We don't have that kind of time series in very many cases. This is inexpensive and fairly easily done and not a whole lot of money. So I urge you to consider that and, especially in light of the timing of the NOAA fisheries' recent decision to list the AT1 stock of transient killer whales in Prince William Sound as depleted, that will benefit that depleted stock of whales having Craig or somebody with his group over in Prince William Sound doing whale observations, and I think that's something that GEM should be aware of as a monitoring need as we go forward as well. So please take a look at that one.

25

Other speakers have also spoken about the Small Parcel Program. We heard briefly from Mr. Bank about

that. The main thing I want to emphasize with that is along the same lines -- is a departure from the whole Small Parcel Program, if that's under consideration, would be a relatively big decision that I hope you would vet before the PAC before making, and we have not been presented with anything to that effect. So I hope that that can happen, and that's also a low cost or no cost thing for the Council to just keep in place and no obligation to enter into any particular purchase. But, when a good one arises with a willing seller and a willing buyer and a happy public, it's nice to have the option to do that, and I don't think it costs anything to keep that option available to you.

along the lines of an open dialogue, is in connection with the reopener clause of the settlement with Exxon that I know you're aware of. It's sort of shrouded in mystery. It would be nice to perhaps at the symposium coming up -- or take advantage of some opportunity to discuss what the Council thinks or what the scientists have found as damages that might pertain to that clause and give the public some sense that it is being looked at. I think there's a sense that it is, but nobody knows where or how or what. So that's the plea for that, and I thank you for your time.

CHAIRMAN RENKES: Thank you. Anyone else

here today?

CHAIRMAN RENKES: Well, with that, I think we've con -- oh, not yet. Hello.

MR. PARKER: Walter Parker, the North

Pacific Research Board, Oil Spill Recovery Institute Board

and the Prince William Sound Science Center Board. I'm

speaking for myself.

I think Tom Royer and Craig Dorman clearly laid out the scientific elements of what we're trying to achieve. The three Boards, working with GEM, have made a really massive effort to integrate the science program. The great advantage that OSRI and the NPRB share with EVOS is that they have small foundations producing a small amount of money each year, but if it's coordinated and used in the right spots it can provide continuity, as was pointed out many times. The critical thing is continuity on these data sets. Otherwise, we're still going to be where we've been. I've been at this now for about 52 years, since the Wildlife Research Center was established at the University of Alaska. During that time, in '71 to '74 I headed up the Law of the Sea Project where we had to go back into the 30's and try and pull together the information for the United States to take into the third Law of the Sea conference and, at the same time, we were trying to pull together the information for the first

Magnuson Act, and I was on the Board of Fish and Game then. So these data sets have a criticality to me.

More recently, on the Arctic Research

Commission, as we pulled together the Arctic Climate Impact

Assessment we're starting to pull together some good data

streams, which it's my goal to integrate what the National

Science Foundation and others are funding in the study of

environmental change in the Arctic with what we're all

doing in fisheries here. So I hope that you can make a

maximum effort at keeping GEM as a major player as we go

forward in this, and thank you.

CHAIRMAN RENKES: Thank you. Anyone else on-line or here that would like to be heard in public comment?

## (No audible response)

CHAIRMAN RENKES: Well, with that, I'll close the public comment session. I think the comments have been very good and given us some things to follow up on, I think, at this meeting and a future meeting. I'll have to ask those on-line now that the public comment period has ended to withhold their conversation, if they're listening.

## (Off record comments)

CHAIRMAN RENKES: We'll ask all the folks on-line that can mute their phones to do so, so that their

conversations don't disturb the meeting, and we'll move now to the Executive Director's comments. Gail Phillips, you want to give us your report?

MS. PHILLIPS: Thank you. First of all,

I'd like to thank the Trustees for rescheduling this

meeting so quickly after the October cancellation. I

appreciate that very much. Our first topic to bring you up

to date on is the investment training seminar and an

investment update, and I've asked Paula Banks to come and

make a brief report on that.

MS. BANKS: Good afternoon. My name is Paula Banks. That's B-A-N-K-S, for the record. I'll keep this brief, as we have a great deal to cover in a very short time period.

On the 26th of September, Michael O'Leary, the Executive Director and Vice-President from Callan Associates gave a training presentation to the staff and the investment working group members, and it was also open and available for the Trustee Council members to attend. His presentation was designed to give us, as custodians, a better understanding of investment strategies. He touched on capital market theory, asset allocation concepts, historical perspectives, endowment and foundation spending policies, market projections and alternative asset allocation policies. To sum it up, basically buy low and

sell high.

All jokes aside, serving as custodians for the EVOS fund is a very serious responsibility, and even though we have money managers to manage the fund, it is very important that we, as staff, and the Trustee Council have a firm understanding of investment strategies and have a responsibility to continue our education and to keep up with the current market trends. I also recently attended an asset summit allocation seminar in San Francisco, and the message again was echoed -- understand what your money managers are doing and keep up with the current market trends, and that's all I have for today.

CHAIRMAN RENKES: Thank you.

MS. PHILLIPS: Any questions for Paula? (No audible response)

MS. PHILLIPS: Thanks very much, Paula. As you are all aware, coming up in March this year will be our 15th year anniversary. We will be doing some plans for acknowledging that anniversary, and I've asked Cherri to give us an update on that.

MS. WOMAC: We actually went out for proposals in assistance in putting together something for the 15th anniversary and we're going to use Alaska Design as the person that will help us design a CD that will be available for the public and a PowerPoint presentation that

Gail and Phil can take to communities to talk about the 15th anniversary. And some of the things that we want to cover on the CD that -- there were some questions at the end of the video for the 10th anniversary and we want to answer those but start off with, like, where are we today, a recap of all of the financial transactions and of the land purchases, how the recovery has progressed, how the focus has changed from restoration to the research and monitoring, what we've learned and been able to pass on and use elsewhere, how the economy of the spill area has rebounded, what research we're doing now to affect the economics of the spill area, and some other points that may arise. And I know that Ernesta wants the DEC Office to work with us in putting together this information, so I will contact you or a representative from your offic Ballard not see what your input is.

MS. PHILLIPS: Greg, what I had asked and what seems appropriate isn't so much that we would have any particular oversight or direct participation, but that the Oil Spill Contingency Planning Program that was put in under State law be included in the 15th anniversary presentation, because I think it's important for people to know what has changed from the regulative community and preparedness point of view. It's a fairly significant change from the regime 15 years ago. That was what I

1	asked, that we have that piece clearly articulated.
2	MS. WOMAC: Any questions?  Ballard  Phill  MS. PHILLIPS: Any questions of Cherry
3	MS. PHILLIPS: Any questions of Cherri:
4	(No audible response)
5	MS. PHILLIPS: Thanks very much, Cherri.
6	CHAIRMAN RENKES: When do the presentations
7	begin?
8	MS. WOMAC: We're hoping it will be around
9	March.
10	CHAIRMAN RENKES: March.
11	MS. WOMAC: About the anniversary.
12	CHAIRMAN RENKES: So you hope to have the
13	products completed when?
14	MS. WOMAC: In early February.
15	CHAIRMAN RENKES: Okay.
16	MS. WOMAC: I can't remember the deadlines.
17	We'll have a couple of revision dates with the person that
18	we're working with
19	CHAIRMAN RENKES: Okay.
20	MS. WOMAC:so that we can review it
21	before it goes
22	CHAIRMAN RENKES: And the Trustees have an
23	opportunity to review that before it goes final?
24	MS. WOMAC: Yes.
25	CHAIRMAN RENKES: Okay, good. Thanks.

Ballard not phillips

MS. PHILLIPS: Greg, if it's simple to do 1 2 -- Cherri, could you tell us what the questions are at the 3 end of the 10th year film that you are seeking answers to? Erneston Hallips I mean.... MS. WOMAC: 5 I am.... 6 MS. PHILLIPS: ....were there two or three 7 of them written down? MS. WOMAC: Well, I wrote them, yeah. 8 9 MS. PHILLIPS: Would you -- if everyone pallard not else was interested? 10 11 CHAIRMAN RENKES: Sure. 12 MS. WOMAC: Well, I think it's like how has 13 the recovery progressed. I haven't looked at the video recently. That's mainly the only one, and see where we are 14 Ballard not phillips 15 now. MS. PHILLIPS: Maybe if you refre 16 17 memory you could just send us the -- or even send us the video. 18 19 MS. WOMAC: Okay. I can provide that for 20 you, yeah. MS. PHILLIPS: That would be good. Then we 21 can see for ourselves. Thank you. The video is a very 22 interesting video that everybody should look at every once 23 in a while. And, as Cherri stated, as we go through with 24 putting the documents together for the 15th anniversary 25

we'll send out the drafts to the Trustees so you'll all have the input, and if you have any other ideas what we can do to acknowledge the 15th anniversary please let us know.

A couple of meetings ago, I think it was Drew had asked about information on the ARLIS contributions and the contribution percentages. We sent that out to everybody. I thought it was in your packets today. I'm not sure that it is, but that was an information piece. If you don't have it or still need it, please let me know.

Also, the report on overdue projects is enclosed for your information, and those are the projects that the final reports were due on those projects by now. We do not have them. We are withholding funding for any further payment on continuing projects until we do get the project reports in that are anticipated and expected to be in.

At this time, too, I would like to introduce -- we do have a new employee. He's our new data analyst, Michael Schlie (pronunciation)....

MR. SCHLIE: Schlie.

MS. PHILLIPS: .....Schlie is our new data analyst and we're very happy to have him on and, boy, he's got his hands full already and has just already gotten to the point where the workload is over his head. So we're real happy to have him on board.

MR. SCHLIE: Thank you. I'm very happy to be here.

MS. PHILLIPS: Thank you. Brett Huber had intended to be here today to give the PAC report.

Unfortunately, his travel schedule didn't allow him to be here. He has submitted a PAC report that each of you have in your packets. He does want this to be part of the record, and I think it's just -- probably the most important thing is, I'd just like to reiterate, that he says I think it is important to reiterate the Public Advisory Committee's unanimous and strong support for the proposed draft Work Plan before you begin adoption today. And, if you have a moment, I would appreciate everybody going through his remarks.

Also, enclosed in your information today is documents for the lease paragraph for the FY 05 invitation. That's just an information piece. And we did have a Scientific Committee meeting in Seattle on Friday. We don't have the report ready on that meeting yet, but will have it to you in your packets or for the next meeting. And then, the last item that I had to bring up today again was the Trustee Council chair rotation, and I think, Ernesta, would you do a discussion on that?

MS. BALLARD Maybe I'm just a convening junkie. I think that groups do better if they have some

consistency in leadership, and I understand from the assembled lawyers that we have written policies which do this rotation every time and it seems to me disruptive and that a person who is Chairman is more than just Chairman Pro Tem, as Greg found out this morning when he walked in and sat down and had to assume the Chairmanship -- that there's the opportunity to work with Gail to be sure that the agenda is well drawn and that communications are timely and appropriate. And, I mean, the reason organizations have a Chair is because that is a function which needs to be fulfilled on behalf of the Council.

It would make far more sense to me that we rotate annually than by meeting, and I don't know whether the others assembled are even interested in that. I've talked to some of you separately about it. I don't know what we would have to do legally by way of changing our procedures, but I would feel far more comfortable with some continuity in the leadership of the Council.

CHAIRMAN RENKES: Well, since the question has been asked, Gail, do you have an answer on what we would have to do to change the procedures?

MS. PHILLIPS: No, but I could sure call on Craig Tillery and ask him what that would be.

CHAIRMAN RENKES: Craig, do you want to give us some.....

MR. TILLERY: You would just have to vote and change the procedures, basically.

CHAIRMAN RENKES: Any discussion? Drew.

MS. PEARCE: I think that the continuity aspect is admirable and probably a good idea. wondering if we would be better off to nominate a State and Federal co-chairs, and whichever one got to the meeting first could chair the meeting. That's probably the lesser impact by having Gail have a single point of contact for the State side and the Federal side, since our agencies' and our responsibilities and our Trustee responsibilities on our side differ somewhat from the State's responsibilities in terms of our agencies. I wonder if that might give Gail, then, a specific person amongst the Federal people and a specific amongst the State people. Ιt could be her immediate contact, and it would be that person's responsibility to convene the other two Trustees if we have a question that needs to be spread just beyond I don't know, Gail, if that would make you that person. feel like you had better input.

MS. PHILLIPS: That would be great. That would work fine with me. I think Joe has some....

CHAIRMAN RENKES: Joe.

MR. MEADE: I also think that Ernesta's suggestion is very important for that consistency and

continuum. I do also like Drew's suggestion. That was actually one I was going to bring before us and suggest the co-chair approach. That way, Gail will have consistently a contact with both the State and the Federal Trustees and really encourage that we have collaboration and communication ongoing as we come into these meetings in an official way. So, to me, it's not as important, perhaps, how and who chairs. We see that you're doing a great job thoroughly prepared as you came in for this morning. But what's most important is that we have that conduit for good, effective communication before the meetings and as we come to the discussions.

CHAIRMAN RENKES: Yeah. I'd like to agree with that myself. In the other Boards that I sit on, the role played by the Chair -- particularly, preparing for the meetings -- and a co-chair, I think, is a good idea also. And then, of course, the co-chairs would have to work out, I think, between themselves prior to the meeting who would Chair and I'd rather have that determined prior to the meetings than at the meetings and so that would be the suggestion I'd make. And then, I think, as points of contact for the Executive Director I think it makes a lot of sense. Kevin.

MR. DUFFY: So the concept that Drew Pearce put out there is one of co-chairs but not necessarily one

or the other being assigned the chairmanship of the actual meetings for a year. I just want to be clear what we're setting up.

chairs....

MR. BALSIGER: We take turns.

MS. PEARCE: I thought that the two co-

MR. DUFFY: So we would continue to rotate?

MS. PEARCE: .....could work that out
amongst themselves.

MR. DUFFY: Okay. So the two co-chairs -- all right, I just wanted to be clear on what we're doing here.

CHAIRMAN RENKES: Yeah. We're formulating our motion here. I'd like to make the suggestion that we move away from the idea that we would have to rotate and that the co-chairs would simply work that out prior to the meeting so that you could have -- you know, just because of travel schedules or, you know, something might come up. We don't want to be stuck with that requirement. I'd like to see us get rid of the requirement to rotate.

MS. PEARCE: I think it's important to always have somebody who's present chair the meeting, because it's so difficult to try to chair something from a distance, be it 500 miles or 4,000 miles. That might, at some time, mean neither of these actual co-chairs are here

to do so. They might both be available by phone. So we need to leave ourselves the ability to have one of the other members -- one of the other Trustees just chair the meeting, if necessary.

CHAIRMAN RENKES: Ernesta.

MS. BALLARD This discussion is consistent with my view of the Chairmanship role, which is far greater than simply presiding in the chair. So I think we're reaching an agreement -- a consensus, in fact -- that we would have co-chairs and that the chairmanship of the meeting would be left up to them, but that they would jointly assure a smooth flow of communication and a smooth communication with Gail.

CHAIRMAN RENKES: Well, would someone like to make a motion? Kevin.

MR. DUFFY: Mr. Chair, I would like to move as stated by Ernesta Ballard, that we modify the procedures to reflect co-chairs on the State and Federal side. The two co-chairs will work directly with the Executive Director on agendas and other action items for the Council, and the two co-chairs will decide prior to the meeting who is going to chair the meeting. As a fallback -- well, let me see if I have a second.

MR. BALSIGER: I'll second.

MR. DUFFY: Just as a clarification --

thank you, Jim -- in the situation as described by Ms.

Pearce where neither person might be available, then one of the other Trustee Council members could, with the concurrence of those two, also chair the meeting in their absence. So.....

MS. BALLARD Great.

CHAIRMAN RENKES: Any discussion?

MR. DUFFY: Thank you, Mr. Chairman. is a small group. So when we rotated back and forth and more or less took turns the nominal role of a Chair as sort of being outside the discussion and just facilitating the discussion didn't fall on one particular person. we're going to identify someone now who is a Chair in the long run and if there is no rotation necessarily between the co-chairs I think we should have the understanding that the Chair is more than a facilitator and is actually an equal part of the deliberations and the discussions. don't think that needs to be a part of the motion, but just to say that. So, for example, if you're the Chair and chair the next 10 meetings you should be part of the discussion as much as anyone else and not just to call on people.

CHAIRMAN RENKES: Yeah, I'd agree with that. Any other discussion? Well, if we can change the rules by taking action, I suggest we take the action. So

T	there's no further discussion. All those in favor of the
2	do we need to restate the motion, or should we have the
3	motion read back to us?
4	REPORTER: I can play it back, but I can't
5	read it back.
6	CHAIRMAN RENKES: Okay.
7	MS. BALLARD I think we have the sense of
8	it.
9	CHAIRMAN RENKES: Does everyone understand
LO	what okay.
L1	MR. MEADE: I think it's clear.
L2	CHAIRMAN RENKES: Okay. Then, if everyone
L3	is clear on the motion, all those in favor?
L4	IN UNISON: Aye.
L5	CHAIRMAN RENKES: Anybody opposed?
L6	(No audible response)
L7	CHAIRMAN RENKES: No one opposed, we've
18	changed the way we chair the meetings and, hopefully,
L9	provided some increased input and continuity for the
20	planning of meetings for the Executive Director.
21	MS. PHILLIPS: Do you want to name those
22	two people at this time?
23	CHAIRMAN RENKES: Well, we aren't prepared
24	to do that today. Why don't we

MS. BALLARD I think that each of the

1	governments could rigure that out themselves and forward
2	their name.
3	MS. PHILLIPS: Okay.
4	CHAIRMAN RENKES: Yeah. Why don't we
5	figure that out and forward our names, or we could even
6	have a discussion of this in executive session. I think it
7	would be an appropriate item.
8	MS. PHILLIPS: Okay.
9	CHAIRMAN RENKES: Okay. With that, it's
10	quarter of 12:00, and have we moved through the
11	MS. PHILLIPS: We have moved through
12	the
13	CHAIRMAN RENKES:year report?
14	MS. PHILLIPS: Yes, and I believe that
15	lunch is probably ready. We are prepared to have a working
16	lunch, if you want to take a short break so people could
17	get lunch now before we start the Work Plan.
18	CHAIRMAN RENKES: Yeah. Let's take a short
19	break, and then we'll reconvene in 10 minutes.
20	MS. PHILLIPS: Or maybe 20 minutes, just so
21	everybody could get their lunch 15 minutes.
22	CHAIRMAN RENKES: Yeah. Reconvene at noon?
23	MS. PHILLIPS: Yes.
24	CHAIRMAN RENKES: Okay. We'll reconvene at

noon.

(Off record - 11:45 A.M.)

(On record - 12:08 P.M.)

CHAIRMAN RENKES: Okay. Well, the next thing on the agenda is to have Dr. Mundy introduce the FY 2004 Work Plan.

MS. PHILLIPS: Mr. Chairman, before we do that....

CHAIRMAN RENKES: Uh-huh.

MS. PHILLIPS: .....I've been requested to read the PAC's response to us and.....

CHAIRMAN RENKES: Oh, okay.

MS. PHILLIPS: .....to put it on the public record, if that's all right with the Trustee Council.

CHAIRMAN RENKES: That's fine.

MS. PHILLIPS: Since Brett Huber couldn't be here, they would like to have it read. And this is from Brett Huber, the Chairman of the PAC Committee. I think it is important to reiterate the Public Advisory Committee's unanimous and strong support for the proposed draft Work Plan for your adoption today. It is our feeling that the slate of projects represented in the Work Plan are both responsive to the invitation for proposals the Council approved last April, and well in line with the overall GEM Science Plan. I was involved in both the STAC and PAC review and found that both groups had very similar vision,

priorities and comments on the package of projects. think this can probably be credited to great extent to the exhaustive preparatory work on the GEM program that has advanced us to this point, the clearly enunciated direction of the GEM Science Plan and the well articulated roles and missions of the two groups. The former PEG, and now the PAC, has participated in this GEM process from the beginning through numerous workshops with broad involvement of the scientific, academic and management communities, many drafts and revisions to the document, and full review by the NRC, and while we understand that it is not possible for the EVOS Gem program to be all things to all interests, we believe that we are well on our way to launching a cutting edge research and monitoring program that will provide a great deal of benefit. This benefit will be in the form of information that will be enjoyed both in the short and long-term and important to policy makers, managers, users and the resource itself. As I have testified to the Council in the past, I think it is important to balance the long-term monitoring program with the information and management needs of today. shares this perspective, and we believe that the draft Work Plan represents such a mix of projects as proposed. Adopting the Work Plan is the next necessary step in advancing the GEM program, and the PAC urges the Council to

1

17

18

19

20

21

22

23

24

25

do so today. The PAC continues to appreciate the role of this process and values our opportunity for input into the Council. We look forward to your continued mutual effort on behalf of the resources and communities of Prince William Sound and the Gulf of Alaska, and we wish the Trustees the best in their deliberations today. Thank you for passing this message along.

1.2

And now, I'd like to introduce Dr. Phil Mundy. I'm pleased to recommend to the Trustee Council that it take action to fund the programs, the projects that Dr. Mundy will reiterate today. In addition, I recommend that the Trustee Council defer action on the 14 projects that total 2.8 million in FY 2004 to 2006. Deferred projects may be brought before the Trustee Council for action later during FY 2004, based on availability of funding and other considerations. In addition, I advise you to reject funding for the 14 projects listed below. Dr. Mundy, our Science Director, will now provide a detailed briefing on the recommended projects.

DR. MUNDY: Mr. Chairman, members of the Trustee Council, my name is Phil Mundy. I'm the Science Director for the program. Can everyone on the telephone hear me, if there is anyone on the telephone? Okay.

MS. PEARCE: There is someone on the telephone, and we can hear you.

MS. SALASKY: Yeah, we're here.

DR. MUNDY: Okay. So you can hear me okay?

MS. SALASKY: You bet.

MS. STUDEBAKER: Very well.

MR. ADAMS: Yes. Cordova can hear.

DR. MUNDY: Okay. Thank you. Mr.

Chairman, I'm pleased to have this opportunity to review and explain the projects recommended for funding and deferral in 2004, and 2005 and 2006 for the out year projects. I want to make the point from the outset that all of the projects before you for funding, fund contingent and deferral are worthy of funding in FY 2004, as determined by the review process. However, application of priorities explained in the Science Plan in view of a \$5 million limit on annual expenditures have caused us to move less time sensitive projects to the deferred category.

Now, in order to leave the lights on for as long as possible and, also, I know that the sound of the fan and the projector can be distracting to the people on the telephone, I'm going to reverse the order. That is, move the watershed proposals up so that I can show you an example that I need a PowerPoint slide for, and then I'm going to move away from the PowerPoint presentation and turn the lights on and work from the draft Work Plan itself. So I believe everybody has been given a paper copy

of the draft Work Plan today so that you can follow along, and I'll tell you what page I'm going to be working from.

1

22

23

24

25

If you'll take a look at the screen here, to your right we have an example of how the peer review process helped us compare the proposals and see which ones were linked and exactly what kinds of information they were I have here a representation of a spreadsheet comparison of FY 04 watershed proposals. In the columns, I have identified the proposals. This is the Finney/Honnold complex. This is Knudsen, Walker, Mazumder, Heintz and So we have those columns. I did not include the proposals in this category that were not recommended for funding. Over here, we have the different kinds of habitats within watersheds that the various proposals were offering to address, and you'll notice this helps us get a quick, at a glance kind of look at the coverage we're getting here, because one of the things we wanted and we asked for in the invitation was a good contrast in the different kinds of habitats within watersheds.

Here, you can see that of all these proposals we only have two proposals that area really taking a good look at the lake habitat, and that's the Finney/Honnold proposal and the Mazumder proposal. The others are working with various parts of the streams, wetlands and the nearshore environment. But these two

proposals are taking on a habitat that's relatively rare in terms of these proposals.

16

17

18

19

20

21

22

23

24

25

Also, in the next set of rows down here we have stable isotopes, and we asked the people in the invitation to basically tell us how they would measure marine related effects in watersheds. That is, we're looking for the effects of changes in the environment on watersheds and the feedback of that to the productivity in the marine environment. Here, everybody, as you can see all the way across the board, is looking at various kinds of stable isotopes. But only a few of them are actually looking at -- at that would be, again, the Finney/Honnold and the Walker proposal -- are looking at these stable isotopes in terms of water quality parameters, and that was an important point here. This is ammonium, and this is These are common water quality parameters that nitrate. are collected by water quality programs independent of marine derived nutrients, and this was one of the requirements here. We wanted to integrate, if possible, or look at marine derived nutrients in the watersheds with existing water quality programs. If we can make this link, that would be very helpful to us because it would certainly reduce the costs of looking at marine linkages to watersheds in the GEM program.

Now, I don't want to belabor this too much,

but I do want to give you an idea of the number of variables that were involved in this comparison. I'll skip over their -- most people are looking at salmon. They have in the rows here lots of different kinds of animals, just to give you a -- resident fish, halibut, dippers and so forth. Down in the chemical physical category, this is where it gets -- again, I have in my presentation here, I have in the rows chemical physical labels, and then I have various measures of different kinds of chemical constituents of water such as NO3, ammonia; ammonium, NH4; nitrate, total nitrate; silica; total Kjeldahl nitrogen. There's a whole long list of these various kinds of water quality parameters, and you can see that there's a lot of Again, at a glance, looking across the columns variation. here there's quite a bit of variation in what each proposal is proposing to look at -- different strategies in terms of their way of evaluating this.

1

2

3

4

5

6

7

19

20

21

22

23

24

25

So, the reason I started with this is that this is an example of how the proposals in the suite are interrelated and how they have been compared and contrasted and the level of detail that's necessary in the peer review process to make these comparisons. We've done our best to see that in the watershed arena and in other arenas that we have enough geographic contrast, that we have enough different looks at the problem so that we don't wind up two

or three years down the road with not enough information to answer the questions that we're asking in the GEM program.

Okay. With that, unless there are any questions from the Council members on this spreadsheet or this approach, I'll ask for the lights and.....

MR. BALSIGER: Mr. Chairman, we don't have that spreadsheet here, do we?

DR. MUNDY: No. Sorry, Mr. Chairman, if I may?

CHAIRMAN RENKES: Uh-huh.

DR. MUNDY: Dr. Balsiger, this is a document that was used during the peer review process, but it's not -- we generally don't release that information, unless it's requested. All right. If you'll take the paper copies of your draft Work Plan and refer to the table of recommendations for the watersheds on page 34, I want to walk you through exactly what it was we asked for -- a very brief summary of that -- and then talk about the projects that have been recommended.

So the watershed proposals were supposed to show how and where to measure the best indicators of marine related biological production in watersheds, including within an existing water quality monitoring program. Three areas were emphasized in the invitation. Number 1, detection of marine related indicators such as stable

isotopes of nitrogen, carbon and sulfur. Community based sampling strategies for sampling marine related indicators. We are concerned that we have community based sampling programs because we think that this is one of the most cost effective ways to get the job done. And, number 3, including marine related variables in an existing water quality monitoring program. So, again, our strategy is if we can make the connection to water quality parameters that are commonly measured we can generally kill two birds with one stone and save a lot of money. We can answer water quality questions that are important to other people and not to GEM, per se, and also look at the marine related linkages that have been specifically identified as of interest to the GEM program.

The five watershed proposals recommended for funding represented a well coordinated and an integrated package of research to be conducted throughout the spill affected areas that will lead to the implementation of a basic GEM watershed monitoring program in FY 2007. So, we're looking at the Finney, Heintz, Honnold, Knudsen and Walter proposals in the watershed package and also looking at Cooper, which was submitted under community involvement but which is basically a water quality monitoring project, as part of the watershed package. Geographic coverage has provided for a broad

variety of coastal watersheds adjacent to Prince William Sound, Cook Inlet and Kodiak. All recommended projects except Heintz offer to study stable isotopes as indicators of terrestrial marine linkages. However, the studies offer complementary coverage of different types of watersheds such as I pointed out in my illustration -- headwaters, mid-reaches, mouth, delta and even nearshore marine environment, and a broad variety of species and chemical observations as well.

So, the Prince William Sound proposal on watersheds is Knudsen's; the Cook Inlet is the Walker/Heintz proposal; and the Kodiak area is covered by the Finney and Honnold proposal, to get all of the areas and locations in the spill affected area. So four of the five proposals recommended responded to the request for community based sampling strategies for sampling marine related indicators -- that was one of our three areas that were emphasized in the invitation -- and they also responded to including marine related variables in an existing water quality monitoring program. Finney, Honnold, Walker and Heintz were directly responsive to two of our three criteria. The Heintz project alone offers an immediate management application through measures of the allocation of marine derived resources among growth and bodily structures of fish that can be used to

understand survival and survival species is basic information for fishery managers and we believe that this can be translated directly into regulations. Taken together, the five recommended projects would provide enough information in three years -- that's FY 2004 through 2006 -- to design sampling for terrestrial marine linkages that would lead to a call for proposals for a GEM watershed monitoring program in FY 2007.

We've pointed out in the Science Plan that these areas that we're looking at -- the watersheds, the Alaska Coastal Current, the nearshore -- aren't all at the same level of development in terms of our understanding of the science; and, therefore, we're going to get there at different times in these projects. We think the watersheds can start in 2007. It may be possible in the nearshore area, where knowledge is better developed, for example, for us to start even earlier than that to recommend the monitoring program. So we are moving in a very deliberate fashion, a very careful fashion to set this up.

Now, I also point out that modeling is going to be an important feature not only in the watershed area but, also, in all of the other areas for understanding exactly how the impacts of oiling on individual species relate to the environment parameters that we're measuring. And this is something that has never been done in a

systematic fashion in this area before, and we believe that this will have a lot of spin-off. This will help us understand the difference between human impact and oil impacts, but it will also have a lot of spin-off benefits, we think, for natural resource management, particularly for birds, fish and mammals and for agencies that deal with birds, fish, and mammals on a regular basis.

We all know the stories of declines in sea lions and looking at what the fisheries might have to do with it and those effects are confounded by environmental problems and these are classic problems that we deal with. We had the same problems in the oil spill in trying to prove damages looking at declines. Even though we had lots of carcasses to start off with, trying to explain why these things didn't recover required a lot of environmental information that just wasn't available.

Okay, now, again, I'll give you a wrap-up about the deferred projects because we are -- as I said, we do have some deferred projects that could be funded and would be good parts of the program, but for one reason or another were not ready to go. And this deferred project in the watershed area is Mazumder, and we believe it would make an excellent addition to the package of watershed proposals. However, the budget submitted in the revised proposal commingled matching and EVOS TC funds so that it

was unclear what objectives could be accomplished in the absence of the matching funds. So we weren't advising you to take a risk that the people who were putting up the matching funds would or would not show up with the funds, we wanted to be able to evaluate what the Trustee Council would be buying in the absence of the matching funds, and that wasn't possible in this particular proposal. I believe that Dr. Mazumder had -- and this is a cooperative project with Alaska Department of Fish and Game and the Kenai River Sportfishing Association. I believe they have submitted a revised budget in this case.

Okay, Mr. Chairman, if it's your pleasure,

Okay, Mr. Chairman, if it's your pleasure, I can stop at the end of each section and see if there are questions, or I can push forward.

CHAIRMAN RENKES: Why don't you just push forward, and then we'll interrupt you as you go?

DR. MUNDY: Okay. Thank you.

CHAIRMAN RENKES: And other Trustees feel free, if you have a question about a particular comment or a statement. I just think it's better than.....

MS. BALLARD So you just want us to jump in? I want to just jump in....

CHAIRMAN RENKES: Okay.

MS. BALLARD .....on Mazumder. I was curious who the matching partner would be, if the match

came through?

DR. MUNDY: Yes. Mr. Chairman, in response to the question, I believe that these matching funds were designated to come from the Kenai River Sportfishing Association. They have an environmental fund that's based on the fund-raising event, The Kenai Classic.

MS. BALLARD And do you know how much they asked for, Phil?

DR. MUNDY: I think they're looking for approximately \$100,000.

MS. BALLARD From the Kenai?

DR. MUNDY: From the Kenai River Sportfishing Association.

MS. BALLARD Okay. Thanks.

DR. MUNDY: All right. Now, if now in your draft Work Plan you would turn to page 21 and refer to the table of proposals on page 21. I'm going to return to the alphabetical order that we've used to describe the different parts of our program here, and I'm going to be looking at the Alaska Coastal Current. And, of course, the Alaska Coastal Current is that area close to the shore -- and, in fact, it runs rights up to the shore -- that contains a lot of the glacial runoff and is so important biologically in so many different ways. So the top priority for GEM in the Alaska Coastal Current starting in

FY 04 is to initiate the process that leads to collecting basic physical observations in, particularly, temperature and salinity, and biological observations using optical measures that are cheap, such as fluorescence, from a vessel of the Alaska Marine Highway System or other ships of opportunity operating in the waters of Prince William Sound, the outer Kenai Peninsula, lower Cook Inlet and Kodiak. Observations on these basic variables will be of use to a range of scientists, resource managers and members of the public for multiple purposes, and they are fundamental to the future GEM modeling program that I just mentioned earlier. As part of this objective, continued development of the vessel of opportunity projects deploying the continuous plankton recorder and thermosalinograph into long-term projects is desirable. Another priority for FY 04 is to begin applying monitoring results to management of development activities in the Alaska Coastal Current.

Seven projects in the Alaska Coastal

Current area of the invitation are recommended for funding,
and these are the ones in your table here. Six of the
seven proposals recommended for commitment of funding in
the Alaska Coastal Current respond directly to the top
priority of the Science Plan, which is to use ships of
opportunity to acquire basic physical and biological
observations. These proposals are those of Batten,

Bechtol, Cokelet, Okkonen, Stabeno and Willette. The seventh proposal -- that's Weingartner's proposal -- is acquiring basic physical and biological observations from a mooring, which is affectionately known as GAK1, and this is the one that Dr. Royer talked to you about by telephone this morning. GAK1, as Dr. Royer mentioned, is the second oldest continuous set of oceanographic observations in the North Pacific. Taken as a whole, the seven ACC projects recommended for funding provide the starting point for the backbone of long-term biological and physical observations to drive the GEM biophysical modeling effort.

1.6

As I mentioned, we have never had the opportunity to put together all these observations in a biophysical model before, and biophysical models are useful in a number of contexts, one of which is running them in sort of simulation mode so that you can see if you really need all of the observations that are coming in. You can run them in a simulation mode, remove observations, and see if it makes any difference in your ability to draw conclusions. So the idea of having a biophysical model like this will be of use not only to our program -- to the GEM program -- but to other agencies as well, because we'll be able to take a look at the distribution of the environmental monitoring and the biological monitoring and ask questions that directly affect cost -- you know, that

dramatically affect cost in these areas.

Now, talking about the deferred projects, of the four projects recommended to be deferred, two are directed at one of the top priorities in the Science Plan, understanding the exchange of water, nutrients and carbon between the Alaska Coastal Current and Prince William This is the Vaughan project and the Kline project. Voluntary observing ships would be developed inside Prince William Sound by the third deferred proposal -- this is the Bird proposal -- and Prince William Sound is a geographic area not yet addressed by the other vessel of opportunity proposals now recommended for funding. The fourth deferred project, which was also mentioned in testimony this morning, would continue a longtime series on killer whales. This is the Matkin proposal. Although the Matkin project was not found appropriate to the purposes of lingering oil investigations, it is desirable to have this time series continued under the ACC and, also, it's a relatively minor cost overall. So we believe that the addition of the deferred ACC projects would complete the basic geographic coverage for the voluntary observing ship program for the spill affected area and provide the start on a data set that is essential to understanding changes in salmon and herring resources in Prince William Sound, as well as fluctuations of bird and mammal populations in the northern

Gulf. Continuation of the killer whale time series at the proposed price is a bargain.

Okay, that concludes my presentation on the Alaska Coastal Current.

MR. MEADE: Dr. Mundy?

DR. MUNDY: Yes.

MR. MEADE: Don't I recollect that the vessel of opportunity that associates with State Marine Highway vessels -- isn't there a pretty critical -- a pretty sensitive time frame there, as far as the dry-dock and the ability to get those ships or those vessels outfitted to do the research?

DR. MUNDY: Mr. Chairman, if I may?
CHAIRMAN RENKES: Yeah, please.

DR. MUNDY: Yes, there is a -- we are up against a hard time constraint on the Cokelet -- the proposal I believe that you're talking about is the Cokelet proposal and the ferry involved is the Tustamena and the Tustamena has a course that takes it down the outer Kenai Peninsula, which is one of the most critically important areas for production of birds, fish and mammals in the northern Gulf of Alaska. Although the instruments we are proposing to put on the Tustamena are relatively simple, we have to have those vetted by a marine architect because this is a passenger vessel. So we can't maintain the

passenger classification of that vessel unless these instruments are certified by a marine architect. So we've never had this problem with the other ships that we work with because they don't carry passengers. So in order to do that and to have these instruments at the dock by February when the vessels goes into dry-dock, we need to get started as soon as possible. Time is very short.

MR. BALSIGER: Mr. Chairman.

CHAIRMAN RENKES: Yes, please.

MR. BALSIGER: Dr. Mundy, did the invitation specifically identify, I guess, as a requirement that you use ships of opportunity or Alaska ferries, or how was that worded in the invitation? Do you recall?

DR. MUNDY: Mr. Chair.

CHAIRMAN RENKES: Please, yeah.

DR. MUNDY: Yes. We gave a number of examples. We started off with a general paragraph that said just ships of opportunity. We want you to show us how to cost effectively collect data from ships of opportunity in the oil spill affected area. Then, we gave several examples, one of which cited the Alaska Marine Highway System, and then another one which cited non-passengers vessels which, as I've just mentioned, are easier to work with. So while we didn't explicitly said it had to be -- I mean, there was no exclusion implied in the invitation. We

didn't say it had to be the Alaska Marine Highway System or any particular kind of vessel.

MR. BALSIGER: Thank you, Mr. Chairman.

CHAIRMAN RENKES: Thank you. Dr. Mundy, what's the ship of opportunity for the Matkin killer whale project?

DR. MUNDY: Matkin is -- the cost of his vessel -- this is the same vessel that he's used to survey whales for quite a few years, and it's the one that's owned by his oceanic society out of Homer. This is a ship of opportunity in the sense that we're not bearing any of the costs of chartering that vessel. This is paid for out of, I believe, stellar sea lion money. So we're just adding a little money for additional observations here.

CHAIRMAN RENKES: Okay. Thanks. Go ahead.

DR. MUNDY: Okay. Thank you, Mr. Chairman.

If you'll look in your Work Plan booklet on page 23, I'll move to the community involvement section.

Now, I want to emphasize that community involvement is changing. We have a report that was prepared by a group of experts that's now in the hands of the Executive Director and we're working through that and we're hoping once that report has been accepted in its final format that the Trustee Council will be able to look at that with the Executive Director and we can set a new

course for community involvement. During our National Research Council review, we had a lot of comments that were not all necessarily positive about our community involvement process and we took those to heart and we are now working to see that we get a full variety of communities involved in our activities. Also, as I mentioned, if this is done properly this can save a lot of money. So we're hoping that we can get all kinds of communities in addition to the tribes -- commercial fishing communities, other community groups -- that are interested in the environment and collecting that kind of data. So we....

CHAIRMAN RENKES: Excuse me, Dr. Mundy.

MS. PEARCE: On that topic, would the new process -- I'm not sure what to call it, but the new scheme, if you will, cross all of these categories, or are we just changing the way we do the community involvement category of proposals? Because I think, personally -- I'm not speaking for DOI, but that local knowledge is compelling and would be of use to our scientific forays into the field, and I would like to see some opportunity to have the locals more involved in the science.

CHAIRMAN RENKES: Please.

DR. MUNDY: Mr. Chairman. Yes, on both counts. Just to restate the question, are we going to be

changing not only the mix of communities that we're looking at but, also, the process for getting communities involved and, specifically, for bring TEK, traditional ecological knowledge, into our program? And the answer is, yes, on both counts.

I believe you heard testimony on the Patty Brown-Schwalenberg proposal, the CRRC proposal that was not recommended for funding. This, again, was not due to any lack of commitment on our part to community involvement; but, rather, looking for more effective ways to do this. As I said, in the past we've acknowledged the fact that we have some shortcomings in community involvement, and now we're addressing those. In the interim, the things that we had in the past that didn't work need to be discontinued, and that's where we are on that.

CHAIRMAN RENKES: Dr. Mundy, I detected in some of the testimony this morning a fair amount of frustration from some of the communities with the lack of involvement from their perspective and the lack of funding for their proposals. So how do you respond to those concerns, or what do you think is at the root of the concerns that are expressed?

DR. MUNDY: Okay. Yes, Mr. Chairman, there are two parts to that. That is, proposals in the past that were not funded and, now, we face a situation where we just

don't have proposals of any kind that we can fund, okay? That's the problem. The testimony, I believe, that you heard from Mr. Heinreichs this morning from Eyak and his frustration that -- he was talking about a relatively long time period there. He was talking about a time period that spanned at least half of the 1990's and, as a peer reviewer in that process, I'm well aware of his frustration and he was absolutely correct because when he sent that proposal he took the proposal out of the Trustee Council reference frame, where it was not deemed appropriate to restoration activities under the terms of the court settlement, and he did put it into another venue and it was immediately funded because it was a good project. So when you have good projects in the wrong place that does cause some frustration.

24

25

The other thing is that, right now, we are looking for ways to engage the community so that we can develop programs that are of interest to them and that address questions that are relevant to the restoration of injured resources that come from the communities, and this is something that was recommended by the NRC and something that we fully intend to do, but the question of how we get that done and how we accomplish that is not clear. In the past, it's been basically on the efforts of individual members of the community, such as you heard from Pat Norman

this morning, who brought a number of proposal during the 1990's from his community to the Trustee Council that were funded, or individual researchers who do it correctly, who do it properly. Right now, we're funding a continuing project by Jennifer Ruesink, and this was referred to in the testimony this morning as the Bidarki project. And this is a resource, a segmented -- it's sort of like an abalone with joints in it and it's on the rocks and it's a very tasty item and -- but it's an organism that's very highly rated among subsistence users on the Kenai Peninsula, but it's not an organism that Alaska Department of Fish and Game or any other agency has much data on. the researcher recognized this, worked with the community, and we have a project now that will help us integrate that aspect of harvest of the Bidarki into our nearshore monitoring program as we move forward. So we view that as the ideal of what we're trying to do here -- trying to move forward. That's a question that came from the community that was clearly relevant to the issues that we're raising in the nearshore and which put the traditional ecological knowledge of the community together with the scientists, and I think it's a win-win situation.

CHAIRMAN RENKES: Okay. Thank you.

MR. MEADE: Mr. Chairman.

CHAIRMAN RENKES: Go ahead.

MR. MEADE: I'd just like to make a comment for my fellow Trustees, as well as in respect for the folks that have come in from our outlying communities that I really do hope that in the GEM process now and into the future we can find ways and really, truly invest in ways to actively engage communities and villages that have been most impacted in the spill area. I think it's essential. And equal to that, or, second to that, engaging youth in ways that help youth gain connections to the science being gained, as we heard a schoolteacher reference this morning. I think that's another critical opportunity as we look forward at how we can, in the research and monitoring phase of the post oil spill, be able to provide maximum benefit. I think being able to touch youth with the science and being able to engage and involve affected communities and villages is critically important. And I realize from what -- I've been briefed here a month ago as well as again today that perhaps some of the proposals weren't as focused as to what the needs may be, but I'd really urge us to be able to actively work and mine opportunities with villages, if you will, to seek their active engagement.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Mr. Chairman. Yes, I just want to point out that we did hear the testimony that you're referring to as from the Chugach School District this

morning, and we did put the Youth Area Watch Program -it's the DeLorenzo proposal. We did move the DeLorenzo
proposal to the deferred category so that we have the
opportunity to work with the school district on that,
should the Trustee Council decide that it wishes to
allocate the money for that work.

CHAIRMAN RENKES: Commissioner Ballard.

MS. BALLARD This isn't really just for Phil. It's as much for Gail, I guess, but one of the things I think would be helpful to us as we go on is to get a good summary of the capacity building and other direct grants from all funding sources that go into the communities that we're speaking of -- and some of them testified today -- so that we can be sure that we're either supplementing appropriately or not in competition with other funding. I know that the IGAP Program has put in a good deal of capacity building money. DOI, Drew, has a number of grant programs that are going to tribes and to Alaska rural residents, and we ought to have a better view of that entire picture as we go forward because a lot of what was said today was about workshopping, education, capacity building, which are specifically also the objectives of some of these other programs.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Mr. Chairman, I'd just respond

that certainly is something we aspire to. We require, for example, everyone who submits any proposal to tell us where other money in the area is being spent that's related to what they're doing. They don't always know. We have another way of finding these things out, and that is we're working on a metadatabase. We have a proposal that I'll get to later on under the modeling and -- I mean, under the database management that attempts to track money that's going into anything that's in an area that we are funding -- that we're working in -- and that was one of the first things we did in the GEM program was to sit down and to attempt to find that money and to identify those projects.

CHAIRMAN RENKES: Thank you.

MR. BALSIGER: Mr. Chairman.

CHAIRMAN RENKES: Yes, Dr. Balsiger.

MR. BALSIGER: Dr. Mundy, it's slightly different on the funding community proposals in this RFP -- this package -- but, the watershed proposals, one of the requirements was to work with communities to help sample. So I guess I would hope that if those are funded and go through that we make certain that they are genuinely -- the PIs genuinely work with the communities instead of one phone call, as we heard this morning. But there's an opportunity there to involve the communities, I believe.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Yes, Dr. Balsiger, we will do that.

19

20

21

22

23

24

25

CHAIRMAN RENKES: Okay. Please proceed.

Okay. Mr. Chairman, if I may DR. MUNDY: continue, I'll talk about the community involvement proposals that were recommended for funding. recommending four community involvement proposals. We believe that these contribute directly to the Trustee Council objectives of involving communities in the oil spill affected area in decisions on the questions addressed That would be the Adams and the projects implemented. fisheries management project; number two, converting data into products useful to communities and governments -- that would be the Baird project; and, three, involving members of the community in collecting long-term data sets relevant to the Science Plan -- that's Cooper and Schneider, and I would point out that Schneider's proposal is the Youth Area Watch proposal from Kodiak. So we have not abandoned Youth Area Watch but simply are trying to get Youth Area Watch more in line with developing long-term data sets within the community that are relevant to GEM. Taken as a whole, the four community involvement proposals meet the criteria in the FY 04 invitation for targeting workshops, information products, and community science meetings that provide services to communities and stakeholders in the GEM region

that are related to marine ecosystem health and sustainability. Three of the four projects' principal investigators have excellent records of contributing to the development of the GEM program -- that would be Adams, Cooper, and Schneider -- and all four projects show substantial future utility for implementing the GEM program. In addition, the four projects are expected to complement and support the efforts of the Executive Director to thoroughly examine the role of community involvement in the GEM program during FY 2004.

Now, I'll address the deferred projects.

Addition of the two deferred projects would provide options for the Executive Director in working with the Chugach School District in developing a Youth Area Watch proposal that is compatible with the GEM Program -- that's DeLorenzo -- and in working with the Chugach Regional Resources Commission on items of mutual interest in regard to the commemoration of the fifteenth anniversary of the oil spill, and that's the second Patty Brown-Schwalenberg proposal. Mr. Chairman, that completes community involvement. Okay, I'll now turn to.....

CHAIRMAN RENKES: Mr. Duffy.

DR. MUNDY: Oh....

MR. DUFFY: Dr. Mundy, real quickly.....

DR. MUNDY: ....sorry.

MR. DUFFY: .....no problem, Phil. in reading all these proposals as part of the Work Plan, I'm trying to get my hands around the Ken Adams project. Could you kind of briefly summarize what the expected results are for that, because it talks about a predicted variation in biological production, and I understand that concept well. Our agency is very interested in fluctuating returns of Prince William Sound for a whole host of reasons. And then, in looking through how we're going to get to that issue, is it really -- is that perhaps a bit of the misnomer, and it's just more actively engaging the communities in the commercial fishing industry in the greater Cordova area in kind of our decision-making What is that about? If you could help me a process? little, I think that would help.

1

2

3

4

5

6

19

20

21

22

23

24

25

CHAIRMAN RENKES: Please, Dr. Mundy.

DR. MUNDY: Yes, Mr. Chair. Those are really good questions, and they help illustrate what we're trying to do with the community involvement program. The Adams project comes from a group of people who were instrumental in getting the Sound Ecosystem Assessment study going back in 1994. So the Cordova fishing community -- particularly, the commercial fishing community -- has a really long track record of being actively involved and wanting to be actively involved in the decisions about the

kinds of science that are done in their area. They recognize that the science directly affects the fishing regulations and the way in which the resource might be apportioned to them, and so they really do take an active role here.

1

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

The fishing community focused that SEA project, which was basically an oceanographic project, on the production of and explaining production of pink salmon and herring. So this was one of the first times I've ever heard of a large-scale sort of environmental oceanographic study being focused on explaining changes in production of pink salmon and herring. So the Adams proposal -- at the end of the SEA project, we basically had a lot of tools in We had data and we had models, but they weren't being applied to fisheries management. So part of the promise of the SEA program is that these products would be applied -- would be applicable to herring and salmon, which were injured species in the oil spill and communities in this area that depend on the herring and the pink salmon certainly were affected by the oil spill. So Adams put together early on -- although I don't think that we fully realized that it was a quote/unquote community involvement project at the time -- sort of a series of workshops to engage the members of the public in Cordova, the commercial fishing industry, the aquaculture industry, the lodge

owners, and others in a discussion about what kinds of applications from the restoration studies that were a part of SEA would be appropriate in the view of the community. So where Adams is talking about understanding the variability in the resource and working with that, we also have had the area management biologist from Cordova and his assistant area management biologist involved in these discussions. And it's the view of the community that understanding variation in the pink salmon, particularly, is -- I'm sure the Commissioner of Fish and Game is, you know, better familiar with it than I am.

with the pink salmon resource and with overproduction at some of the hatcheries and so forth that caused a great deal of difficulties. And, the pink salmon, in the SEA program we had a model that effectively predicted for one year class using oceanographic data and data on survival of more juveniles the recruitment to the areas from which we had the more juveniles. So, basically, we found -- we've demonstrated, okay, so that was once, and so as people who have been involved in forecasting we should quit while we're ahead. But the community is very committed to the idea that we can take these things that we've learned in the past and move them forward, you know, in the form of fisheries management applications, and so that was the

purpose of this group.

1.7

MR. DUFFY: Thank you, Phil. That was good
-- or Dr. Mundy. I also see that there was a
recommendation for a reduced funding level from the STAC
Committee based on what was being proposed. So that's
something that we need to wrestle with here, or have those
issues been addressed? Just enlighten me on that, would
you please, Dr. Mundy?

DR. MUNDY: Right. We have a -- sorry, Mr. Chairman. We have a revised proposal from Adams that addresses the concerns of the STAC. I'm not sure that the dollar amount came out to be very much different, but we did work with him and we did work with members of the STAC to resolve this issue.

MR. DUFFY: Okay. Thank you, Dr. Mundy. Thank you, Mr. Chairman.

CHAIRMAN RENKES: Thank you. Okay.

DR. MUNDY: Okay. Mr. Chairman, I'll now move to page 25 in your draft Work Plan, table of recommendations on data management.

Now, the data management area is an area that we have been frequently advised back during the restoration program and then, certainly, after we started the GEM program it's critical to get control of the information. One of the problems that the Ken Adams group

that I just talked about in Cordova was formed to address was the fact that they felt that the models and the data from the SEA program were not made available to the community at that time and that we needed stronger policies on how we handle our data and getting that information out to the public and to scientists who are advising the public. So we invited at this time proposals to construct a database of metadata, and metadata is just a data management jargon for data about data -- that is, the specifications. You know, you get a big stack of numbers. If you open up the computer file, you'll see a big stack of numbers, and this tells you what is in each column and how they were collected and what the limitations on the data are and that kind of thing, and they also tell you who's responsible for them. They give you some contact information. So metadata is getting to be -- is the buzzword, and for good reason. We really need it. So we invited someone to construct a database of metadata describing marine related databases from the northern Gulf of Alaska relevant to GEM. Working from past and present efforts of GEM; PICES -- which is the North Pacific Science Organization, it's an international treaty organization; the North Pacific Research Board, I'm sure you know; and the University of Alaska at Fairbanks Institute of Marine Science; and then, the Pacific Marine Environmental Lab,

25

Now, the GEM objective is to create a comprehensive, web accessible, geo-referenced database of the marine related physical and biological databases of the northern Gulf of Alaska. We're going to build on standards and systems already in place, such as the State of Alaska's Cooperatively Implemented Information Management System -that's CIIMMS -- and the STORET database, which is a database that's developed by EPA. The successful proposals were expected to describe an approach that assigns priorities for inclusion of databases based on a combination of factors such as length of time series, use in existing physical or biological models and, of course, a relevance to GEM. The PIs on this proposal are expected to work with the GEM staff -- particularly, our data systems manager -- to create a list of predefined criteria which assigns a quantitative value summarizing the importance of the data set to specific GEM efforts. And this is, of course, intended to promote cost efficiencies through cooperation and coordination and integration with other efforts in our area, as we talked about earlier today. So we view the metadatabase solicitation as very important.

Now, in addition to the metadatabase solicitation, the invitation also asked for a pilot project to apply an existing database system which is being widely used throughout the United States to allow the public access to data that's held by agencies on oceanography and biology. It's called the Ocean Biological Information These OBIS proposals were expected to show System, OBIS. how to set up a regional OBIS node by pulling an instance of the OBIS database structure. You can tell I didn't write this. In addition, the proposal would create a plan to facilitate the absorption into the regional OBIS node of past, present and future marine taxonomic data collection So, just to summarize, OBIS provides advantages because OBIS already has the nomenclature and the software and the procedures set up.

22

23

24

25

We were looking for somebody to come into our area, take a data set that would be relevant and show us how to set it up and use it. Once we get it working for one data set, we can make it work for any data set in our area and, particularly, for the GEM data stream when it begins flowing. So these are the types of proposals in the data management area that we were looking for, and we actually got three projects and recommended them for funding. Two of the three data management proposals recommended for funding directly further GEM objectives by

building the database of metadata describing marine related databases from the northern Gulf of Alaska -- this is Macklin's proposal -- and by implementing a pilot project to apply OBIS within the GEM region, and that's Kiefer's proposal. Both the metadatabase and OBIS projects are designed to make GEM data and the data of other sources needed by the GEM model readily and cheaply accessible.

The third data management proposal brings together and makes accessible much of the shoreline mapping data sets that have been gathered by GEM, the Cook Inlet Regional Citizens Advisory Council, and others. This is Saupe's proposal. Developing coordination among shoreline mapping efforts and making information about all the data accessible in one place on the web was recommended by a GEM sponsored workshop earlier this year.

And, Mr. Chairman, I don't have any deferred projects to discuss in this category. I'll move on to the lingering oil effects.

CHAIRMAN RENKES: Well, yes.

DR. MUNDY: We're on page 27 for the table of recommendations on the lingering....

MS. BALLARD Phil, can I point out?

CHAIRMAN RENKES: Sure, Commissioner

MS. BALLARD Some of us are reading off of

Ballard.

the materials sent earlier, and the pagination is different. I don't know if anyone else is having trouble following, but....

DR. MUNDY: Okay. Well, we're moving in alphabetical order through the Work Plan, and there's a table of recommendations for each of the....

MS. BALLARD Yeah, I'm okay. I just didn't know if anyone else was confused....

DR. MUNDY: Yeah.

MS. BALLARD .....or if anybody on the phone was confused, if they had an earlier version. The earlier versions distributed were paginated slightly differently than the one you're reading off of. As far as I can tell, the text is identical.

DR. MUNDY: Is anyone on the phone having trouble with the pagination with the tables that I'm....

(No audible response)

DR. MUNDY: Okay.

MS. BALLARD Okay.

DR. MUNDY: All right. The lingering oil effects, because of the amount of data we've got and the amount of history -- we've got 15 years of history, natural resources damage assessment studies, and restoration studies. We have singled out the lingering oil effects area and made it its own area within the GEM program. Over

a period of three years, we've now had three workshops to try to figure out exactly what was the best way to focus specific studies on understanding the fate and effects of Exxon Valdez oil in western Prince William Sound.

We invited proposals to address the effects of oil on populations of sea otters and harlequin ducks specifically because we have evidence of population level damage in sea otters and harlequin ducks, and we've been able to put together the evidence of exposure of sea otters and harlequin ducks to oiling and with the presence of oil from our earlier survey studies. So we're focusing our investigations in this area through the invitation on the Knight Island area. We're focusing it on sea otters.

We're focusing it on harlequin ducks. And some of the Trustee Council members had the advantage of being in Seattle this past Friday for a meeting with the PIs where we heard the results of the 2003 field season.

So we want to point out that a couple of the key studies here -- particularly, that of Rice and Bodkin -- there are two Bodkin proposals. One is for a follow-up. It's a relatively small dollar proposal. It's recommendations on nearshore monitoring and how to integrate certain aspects of what we've learned in the past with the current proposal. But the Bodkin and Rice proposal were recommended for deferral on the advice of the

Scientific and Technical Advisory Committee because of questions that were outstanding at the time of the review.

1.8

Of those that we recommended, four of the five recommendations for funding relate directly to the Trustee Council's basic responsibilities to monitor the long-term effects of the oil spill and the status of injured species, and I'm referring here to the Fall, Irons, Rosenberg and Nelson proposals. The fifth, by Jeff Short, offers to address the tasks necessary to integrate long-term monitoring of lingering oil effects into GEM projects. Taken together, the five proposals address the most pressing needs of the Trustee Council for linking the investigations of the restoration program on injured species to the GEM program, and to meeting basic legal requirements for maintenance of physical data.

Now, as I mentioned, we have three deferred projects, which are most certainly relevant and would be useful. That is, to look at the fate of the Exxon Valdez oil outside of Prince William Sound on boulder armored beaches where we know that it occurs, but we haven't done this systematically. That's Irvine's proposal. And then, the Bodkin lingering oil proposal and the Rice proposal. These last two proposals may also provide information on damages that could not have been foreseen at the time of the settlement of the governments' civil claims against

what was then Exxon Corporation.

2.1

CHAIRMAN RENKES: So, that's Irvine and Bodkin?

DR. MUNDY: Right. Irvine is the fate and effects of oil outside Prince William Sound. Rice is fate and effects of oil inside Prince William Sound, and Bodkin is the biology. It's otters and ducks. So outstanding questions related to the deferral are basically what did we learn in the 2003 field season, and what could be learned in the 2004 field season that is essential to the interests of the Trustee Council? As the Executive Director pointed out earlier in the meeting we have had that meeting, and we are working on a report to the Trustee Council on the outcome of the meeting.

Mr. Chairman, I'm ready to move on to the modeling section.

CHAIRMAN RENKES: Okay.

DR. MUNDY: Okay. Now, we were advised by the National Research Council Review Committee and by most of our advisors in this process to start trying to use the data that we've been collecting in an interdisciplinary biophysical model of the northern Gulf of Alaska. This is a very ambitious undertaking, but when you step back and you look at it you realize that many agencies already have physical models of the northern Gulf of Alaska. They

already have oceanographic models. And, in addition, quite a few Federal agencies already have biological models of the northern Gulf of Alaska. The challenge here is to put the models that exist for our area together and to start using these to answer questions about the oil spill and about the environmental effects of the oil spill. So that's the thrust of this modeling section.

1

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Where we are now is that we have a fairly rich pool of modelers who sit at State and Federal agencies and they, for one reason or another, are not talking to each other and certainly not talking to each other about solving problems that are relevant to the Trustee Council. So we put out a proposal. We asked for a team of modelers to basically set up a community for us that would help pull in existing models and modelers and focus them on the questions that are of interest to the Trustee Council that are defined in the Science Plan, and we actually did get two proposals. They are related. Again, this is similar to the Finney/Honnold situation where we have two researchers at different institutions, and administratively it's just easier to run two different proposals rather than putting them in the same proposal. So the McNutt and Schumacher proposals are basically describing complementary activities designed to assemble the team necessary to produce the GEM biophysical model, and to conduct the

workshops necessary to begin the consensus building process in the scientific and other types of communities for these models. We expect that the community assembled by McNutt and Schumacher will be able to provide guidance to the EVOS, STAC and staff on how to craft future invitations for proposals in support of the modeling effort and in support of all of our other efforts and to contribute for development of invitation for proposals for monitoring in the four habitat types.

We have no deferred proposals in this category, Mr. Chairman. I'm now ready to move on to the nearshore.

CHAIRMAN RENKES: Dr. Balsiger.

MR. BALSIGER: Thank you, Mr. Chairman. I just can't quite resist the need that I have to argue that these various modelers do talk to each other and the fact that they haven't developed a universal model that works for the universe isn't because they don't talk to each other and I'll argue that more over a beer or something some other time, because I think there is coordination. But my specific question would be if this is an infrastructure model or a system developed coordination or cooperation between the various models that may have been developed exactly correctly independently because of a whole bunch of reasons, how does this relate to

Schumacher's proposal to the North Pacific Research Board to develop an infrastructure model relating models from the different agencies? You know, I know I'm on that Board, so I should know the answer, but I've got to have help.

MS. BALLARD But the rest of us don't, so thank you for asking.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Mr. Chairman. Thank you, Dr. Balsiger. The universal model, I think, will remain illusory for some time now. We're hoping that we can get them to take all of these wonderful sort of hypothetical models that everybody has got rolling around out there and forge them into something that will work for us, you know, in our area and in our specific questions. So they do talk to each other, but they talk to each other much better when they're being paid to do so. So the communication is much more effective.

MS. BALLARD There you have it.

DR. MUNDY: Then, I believe that Dr.

Schumacher's -- Two Crow's model for the North Pacific

Research Board is basically the same thing he's doing for us, except that the geographic scope of the North Pacific Research Board effort is, of course, much broader, and we're hoping that some economies and some efficiencies of scale have been provided to the North Pacific Research

	Board as a result of our effort.
2	MR. BALSIGER: Thank you, Mr. Chairman.
3	MS. BALLARD A couple of questions. Is
4	this Two Crow?
5	DR. MUNDY: Yes.
6	MS. BALLARD Is Schumacher Two Crow?
7	DR. MUNDY: Mr. Chairman.
8	CHAIRMAN RENKES: Yes, please.
9	MS. BALLARD Well, there's two parts to the
10	question. One is the private enterprise with whom he's
11	associated, and what is the Alaska university with whom
12	Lynn McNutt is associated?
13	DR. MUNDY: Okay. Mr. Chairman.
14	CHAIRMAN RENKES: Please, uh-huh.
15	DR. MUNDY: Two Crow is a former NOAA
16	employer, a physical oceanographer who was known as Dr.
17	James Schumacher, who is one of the most respected physical
18	oceanographers in the North Pacific. After his retirement
19	from NOAA, he adopted the name Two Crow, and that's the
20	name he prefers to be known by now. And, as I say, he's a
21	private consultant. So Two Crow Enterprises is his he's
22	a
23	MS. BALLARD So the private enterprise is
24	just him?

DR. MUNDY: It's a sole proprietor, as far

as I know. The university that Lynn McNutt is associated with is the University of Alaska Fairbanks Geophysical Institute.

23

24

25

MS. BALLARD Okay. Thanks.

CHAIRMAN RENKES: Please proceed.

DR. MUNDY: Okay, Mr. Chairman. move to the nearshore area. As I mentioned, the nearshore area scientifically is one of the most advanced areas where we have the clearest picture of what it is we're trying to do. That's by no means clear totally at this point, and we were able to start quite a few of these projects during the second half of FY 03 under what we call GEM Phase II. we invited proposals to analyze the information needed to support resource and environmental management decisions for human activities in the nearshore. The proposals were asked to build on the GEM program document and analyze information needed to support resource and environmental management decisions for a range of human activities, such as oil and gas development, seafood processing, tourism and recreation.

Now, we also asked people to work in close cooperation with State and Federal agencies that are actively engaged in resource and environmental management activities and, reviewing the current scientific literature, the analysis was expected to identify gaps by

comparing information needed by managers to that actually available. So we expected primarily to add some new dimensions to our nearshore program. We felt that the basic biological information on invertebrates and fish and mammals in the nearshore was fairly well developed, but we had some areas such as seafood waste discharge where those parameters are not in the monitoring program and we wanted to incorporate those. But we also certainly wanted to continue the projects that were started during FY 03.

So we have five nearshore proposals recommended for funding, and most of you will find those on page 30 for the table. But, in any event, they follow right on the modeling that I just talked about. We expect these to lead to designs for nearshore monitoring stations and strengthened community involvement in nearshore investigations -- these are Bishop, Konar and Ruesink -and we expect these to continue and provide results to us so that we can set up monitoring stations in FY 2005 or 2006. One of these projects' -- that's the Bodkin -nearshore proposal is a conclusion of an effort to build a geographically referenced database of past nearshore investigations to guide site selection and design of nearshore monitoring stations. So, again, we're fairly well advanced in the nearshore program, and we're looking at trying to figure out where we're going to put these

monitoring stations. The fifth project recommended for funding -- this is by Thorne -- adds the dimension of seafood waste discharge monitoring to research into the design of nearshore monitoring stations not present in any of the other nearshore projects. So this is a human impact that's certainly of concern to coastal communities, and we didn't have the parameters that would normally be monitored there in our other nearshore studies and are interested to know how to incorporate those. So, taken together, the five nearshore proposals recommended for funding provide a strong start to implementing the nearshore monitoring program, making it likely that the nearshore will be the first of the habitat types to enter the monitoring phase envisioned in the Science Plan.

The presence of a nearshore synthesis effort in FY 2004 -- and that's Eckert, in the synthesis section we'll be discussing shortly -- combined with earlier planning efforts that were funded by the Trustee Council led by Carl Schoch, Ginney Eckert, Tom Dean and Jim Bodkin, makes the nearshore habitat the most advanced. As a result of these five projects, the synthesis project, and their precursors, the call for nearshore monitoring implementation proposals could be part of the FY 2006 invitation for proposals.

Now, we have two deferred projects that

I'll address, and we feel that these could well be added to the program and make it stronger. Addition of one of these two deferred projects would initiate the much needed formal coordination of nearshore mapping efforts, and this is the Couvillion proposal. This was recommended by a workshop that we held earlier looking for suggestions on how to put things together. It was successful, for example, in getting the Alyeska data from shoreline mapping that we've never had before made available to everyone. unfortunately, this was not part of the Science Plan, and to get under the \$5 million cap, we moved to defer anything that wasn't explicitly mentioned in the Science Plan. feel very positive about the Couvillion project, and if money is made available to fund some deferred projects we would put that very high on the list. And this kind of support goes well beyond that provided, but would be complementary to this low cost website that Susan Saupe is going to put up that I talked about earlier under data management.

20

21

22

23

24

25

The other deferred project is looking more and more time sensitive now that we've had our lingering oil spill meeting in Seattle, and that is the Devons' project that was deferred. We've been exploring a partnership with the RCAC. We funded them last year on their LTEMP project to get some ownership in the data, and

we think that there's quite a bit that can be done with the LTEMP project based on what we learned in Seattle just this past Friday to help us understand what's going on with the areas that are still heavily oiled down on Knight Island and some of the biological results that we're seeing down there. So we have a fairly clear idea now of how the LTEMP project might be augmented and modified to serve the purposes of the Trustee Council, and that's what we were looking for. So those are the two deferred projects, Mr. Chairman.

24

25

CHAIRMAN RENKES: Okay.

DR. MUNDY: I'll now move into the synthesis area. The synthesis area is one that we view as being highly important because this takes off where the GEM program document scientific background left off. an effort during the early stages of the GEM program to pull together all of the relevant scientific information to find out what projects were being funded, what agencies were doing what, and to bring all this information together and focus it on developing the gaps that we've identified and used to prioritize our activities in the Science Plan. Now, we would like to make sure that we are incorporating the most up-to-date information from the broad scientific literature into our activities; but, also, making good use of the information being produced. We're going to be

producing information from the GEM program, and we want to make sure that we have a mechanism in place to bring that information to bear on designing our program and holding down our costs and making sure that we're measuring exactly what we should be measuring. So the synthesis was invited to -- envisioned sort of having a senior researcher at a government agency or faculty member assisted by a junior assistant or a graduate student who would work with us and develop a synthesis document and come to the annual meeting and present the latest results in these areas to the annual meeting and then, every two to three years, publish a paper that we could point to in the scientific literature that would show people what we were doing. We think this is probably a very good way to proceed and keep things relevant, because the cost of these projects are typically quite reasonable. Unfortunately, we only got a very limited response in the synthesis area. I don't what the problem is here, but we're not connecting.

21

22

23

24

25

We did recommend two proposals for funding, and we see these as essential to guiding the development of the Science Plan. But one of these is an ongoing project -- one that was started earlier -- and it's by Dr. Bob Spies for synthesis of restoration information. We got a brand new proposal that was very timely, fortunately, from Eckert to do the nearshore. And, as I say, we're very far

ahead in the nearshore efforts, and the fact that she stepped forward and agreed to do the synthesis effort at this time works out very well for us. One of the reasons that Bob Spies' document is expected to be very useful to us is that in preparing the GEM program document we relied mostly on published literature -- from the scientific literature, and at that time -- the time we were doing that synthesis, which was concluded in FY 2001 -- the results from our major restoration ecological studies -- the Sound Ecosystem Assessment, the APEX Predators and the Nearshore Vertebrate Predators were really not available to us in published form. So we're hoping that the Spies synthesis effort will help us take advantage of that restoration information, particularly.

1.

Now, we had a watershed synthesis proposal, which also would have been timely. It would have been very useful to us, if not this year then certainly shortly, and that is the Merritt proposal for watershed synthesis. But there were enough questions about the methods and the approach that we felt that funding at this time -- recommending a direct fund was not appropriate, and we asked for a deferral to -- perhaps we can work out an arrangement. There is a deferred project in this area. It's labeled synthesis, one more, and it's the Mann project, and the Mann project is a kind of synthesis. It's

a long-term synthesis project looking at geologic information from lake cores and so forth. It's a very good project, but it wasn't exactly something that we felt was time sensitive. It's very good data. These are excellent researchers. They've published in places like Nature and Science, and the Public Advisory Committee strongly urged us to reconsider our do not fund on this. We added this to the deferred project list, in the event that -- because it's something we definitely could use. It's a longtime time series on salmon and would definitely be relevant to salmon management, but fiscal constraints really precluded a direct fund recommendation.

With that, Mr. Chairman, my presentation on the FY 2004 Work Plan is concluded.

CHAIRMAN RENKES: Dr. Balsiger.

MR. BALSIGER: Mr. Chairman, if I could.

Dr. Mundy, on that last section, the Spies proposal -- the part that we have in the Work Plan -- and, if you read through the STAC recommendation, it kind of -- perhaps you could help me a little bit with this. It says that this proposal falls under the list of proposals submitted last year for multiple years but still needed to submit a proposal this year. So it's the same proposal as last year. We funded it last year. And I understand it's not done, but can you give us a little bit of the funding

history? I seem to have a recollection we funded this the previous two years, and there's no indication of progress, and I'm wondering total -- I can't tell what the total funding is, based on this request for \$201,000.

2.1

DR. MUNDY: Mr. Chairman.

CHAIRMAN RENKES: Yes, please.

DR. MUNDY: Yeah, you're correct. We have funded this in the past, and one of the questions that we did have was what kind of progress was being made. We wanted to make sure that if we invested an additional year that we were going to get a product. We have, of course, had a long working relationship with Dr. Spies, so we're not too concerned in that regard. But if you'll note the Executive Director's recommendation down at the bottom of -- I hope it's page 107 of the draft Work Plan....

CHAIRMAN RENKES: Okay.

DR. MUNDY: ....and we've asked and received that the proposal revise to incorporate milestones, timeline, detailed budgets and a current outline of the manuscript. And the requirement was met in a number of ways, but one of the ways was all of the products -- the work products, the chapters for this book -- are now on a website. It's password protected because the authors are fairly sensitive about this, but the Executive Director and I have both been able to visit this

1 website, look at the contents of these chapters and satisfy ourselves that serious progress is being made. 2 There are quite a few what I would describe 3 as top academicians involved in this writing effort, and so 4 5 the schedule is not exactly as crisp and tight as we would like it to be. But we believe we are making progress, and 6 7 we also have the controls in place to make sure that we get a product at the end of it. 8 9 CHAIRMAN RENKES: Dr. Balsiger. MR. BALSIGER: Just to follow up then, at 10 11 the end of it would be at the end of this \$207,000 funded project, and we wouldn't expect to see this again next year 12 13 -- looking for money -- even if it's not completed? 14 DR. MUNDY: Mr. Chairman. 15 CHAIRMAN RENKES: Yes, please. DR. MUNDY: It should be com -- absolutely 16 17 not, but it will be completed. 18 MR. BALSIGER: Thank you. 19 CHAIRMAN RENKES: 20 21 royalties from it? 22

23

24

25

Commissioner Ballard. MS. BALLARD I'm confused about this book. Who owns the rights to this book, and who will receive the DR. MUNDY: Mr. Chairman. CHAIRMAN RENKES: Yeah, please. DR. MUNDY: Commissioner Ballard, normally 118 in a scientific publication the -- you know, such as

Springer Verlag or something like that, the scientists

contribute the copyright to the publisher. So I'm not -- I

believe that the American Fisheries Society has been

approached. For example, the American Fisheries Society

may be the publisher of this book. If they are the

publisher of this book, they would keep the copyright.

They are a non-profit professional organization,

professional society. They are not a for profit

organization. That's the way scientific publishing goes.

But, in response to your question, I don't think that's

part of the contract. I don't think that's an issue that

we've addressed in the current contract, and perhaps it

should be.

MS. BALLARD I realize I'm coming in many years late on it, but it seems very bizarre to me that we're paying for research in response to proposals to provide information to the Trustee Council which is then going to aggrandize somebody else in its publication. It just seems very odd to me. I don't get it.

DR. MUNDY: Mr. Chairman, may I respond?

CHAIRMAN RENKES: Yeah, please.

DR. MUNDY: Yes. I can see that point of view, Commissioner Ballard. However, what we get out of it is we have all of these results that are now in a lot of

different final reports and a lot of different scientific journals. We have that in one place. It's published and it's made available to libraries and people can call us and we can tell them where to purchase a copy. And, as I said, typically the -- I can tell you as an author of scientific publications myself the fame and glory aspect of it is really heavily overrated. I mean, it's true that the copyright does reside with the publisher. But, again, the authors don't get any royalties out of this and, in general, I doubt that scientific publishers actually make very much money out of these things. And certainly, if it's a publisher like the American Fisheries Society, it is a non-profit, a private non-profit, and they're not allowed to make money out of it.

1.7

CHAIRMAN RENKES: Dr. Mundy. I'm sorry, do you have another question?

MS. BALLARD I guess I'll just conclude my conversation with Phil on this subject by saying that I think as EVOS has evolved away from fulfilling the specifications of a natural resources damages program and into a research program we've taken on characteristics that are foreign and strange -- at least to me, as the State Trustee -- and I'll just need to learn and understand that better. In a typical restoration program, you wouldn't be in this situation, I don't think. So I suppose there's a

good deal of learning and understanding I still need to do.

It doesn't make me feel anymore comfortable.

CHAIRMAN RENKES: Dr. Mundy, I was just wondering. Following up on that question, it made me think. The synthesis is a product that's being produced for the EVOS Trustee Council. We're paying for it, and they're providing it to us, right?

DR. MUNDY: Are you speaking of the Spies synthesis?

CHAIRMAN RENKES: Yes, the Spies synthesis.
DR. MUNDY: Yes, that's correct.

CHAIRMAN RENKES: And so the responsibility to negotiate whatever our arrangement is to select the publisher and negotiate the arrangement for the publisher that would fall to the Trustee Council, since it's going to be our -- we'll own, essentially, the product?

DR. MUNDY: Mr. Chairman, that's not the current arrangement. In the case of the other book that we have out there -- the book that describes the restoration program, Mission Without a Map, that was the case.

CHAIRMAN RENKES: Uh-huh.

DR. MUNDY: In this case, it being a scientific publication -- and Dr. Spies is the editor of a number of different scientific journals, so he has a lot of experience in this area. And so we had not thought about

doing that ourselves, because that requires quite a bit of legwork and, also, quite a few contacts because, as I say, this is not generally viewed by publishers as a moneymaking venture. So it would be more or less trying to find somebody who would take it, rather than getting people to bid on it. So that could be the arrangement, if that was the Trustee Council's wish. However, that is not the current arrangement.

CHAIRMAN RENKES: Any other questions about the summary of the Work Plan.

MS. PEARCE: I have one related to the lingering oil meeting and report on Friday. Did I understand that you are now working on a report to the Council from that report -- from the Friday meeting?

MS. PHILLIPS: That we will prepare.....

MS. PEARCE: That you are?

MS. PHILLIPS: Uh-huh. (Affirmative)

MS. PEARCE: Will that include recommendations of some of the projects that were on that deferred until that meeting happened last -- to move over to the fund list?

DR. MUNDY: Mr. Chairman.

CHAIRMAN RENKES: Yes.

DR. MUNDY: Yeah, you used the pronoun you, and that's -- I'm not working on that report. That will be

Dr. Spies' responsibility to come up with that as Chair of the Lingering Oil Subcommittee.

MS. PEARCE: But not recommendations for it?

DR. MUNDY: Well, we will -- I believe that, in principle, that as a result of the meeting that we are -- and I'm just giving you my opinion as the Science I believe that the recommendation on funding the Rice and the Bodkin proposal will be positive. However, we don't know what they will be doing at this point in time. In other words, the specifics of their sampling protocols for the 2004 season are still up in the air, and I discussed that with the PIs late Friday afternoon, and we agree that that is the case. The PIs themselves are not exactly based -- they haven't sifted through all the information that we got, you know, as a part of the discussion themselves. So that's one of the reasons for a deferred recommendation. We can't put a contract together because we don't know exactly what the deliverables are....

MS. PEARCE: Okay.

DR. MUNDY: ....at this time. But I'm certain that there will be a positive recommendation on the funding at some point. It's just that we haven't been able to work out the details of the contract yet.

CHAIRMAN RENKES: Dr. Mundy, I'm a little bit lost coming in in the middle of a process as we have, and there was a comment made in the public comment section of the meeting about FY 03 funds, FY 03 funds maybe left over, relooking at deferred projects from FY 03, and then the possibility of funding those projects. Could you explain that to me? I'm not sure I understand.

24

-25

DR. MUNDY: Okay. Yes, Mr. Chairman. First of all, we don't have deferred projects from FY 03 that are on the table today. We have projects that were started relatively late in FY 03 that are proposed as continuing projects, and all of those, I believe, do have fund recommendations on them. The Trustee Council has before it the issue -- in putting together our Work Plan, we worked under the assumption of a \$5 million annual cap on spending. We also have brought to the Trustee Council's attention that due to differences in our operations in FY 03 that were due to the transition to a new Executive Director and a new Trustee Council that we were unable to spend a very large portion of our budget. Nonetheless, we believe that if we were given the opportunity to -- and that money was authorized by the Trustee Council under the cap for that year, we felt that if -- we were understaffed and we had some delays, and we felt that if we were given the opportunity to spend that money that was lapsed

basically under the \$5 million cap in FY 03 in FY 04, we could get back up to speed. That is, we could regain the ground that was lost in FY 03, which is the reason that we didn't spend the money. There were things that we needed to do that we weren't doing. So we proposed the idea for the Trustee Council's consideration of the expenditure of the funds. We have an estimate of that. And, also, at the time of the original proposal, we didn't know exactly what it was -- we could do some back-of-the-envelope calculations -- but we do have a relatively precise estimate of that amount of money now.

CHAIRMAN RENKES: Okay. Thank you.

MS. PHILLIPS: Greg -- Mr. Chairman, you'll see that that's for discussion in item number 6.

CHAIRMAN RENKES: All right.

MR. DUFFY: Mr. Chairman.

CHAIRMAN RENKES: Yes, Commissioner Duffy.

MR. DUFFY: Thank you. Dr. Mundy, step back to our previous conversation about the scientific information we heard Friday in Seattle. If I as a Trustee Council member were inclined to support one of those projects that was deferred, whatever the category was, but yet we don't know what the Work Plan is, how would you suggest that the Trustee Council deal with that timing issue?

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Mr. Chairman.

CHAIRMAN RENKES: Yeah.

DR. MUNDY: Yes, Commissioner. In the past, the way that we've dealt with it is the staff will work with the PIs and we will bring that to you as soon as it's ready and it could be handled as part of a set of deferred proposals that you're now considering for funding. For example, as part of a telephone conference call or something like that. In other words, it would be something that's been approved in principle, something that's been approved in concept, but yet is not at the level where we can write a contract and specify the deliverables. When we get to that point, we would send that around to the Trustees, make you aware of that, and then you would need to -- as I say, this is what has happened in the past -- and then you would need to schedule a vote on that.

MR. DUFFY: So we could signal our support at this meeting, if we were so inclined, if there was consensus reached on that among the Trustee Council members. At some point after the terms of the contract and the deliverables were negotiated you would come back to us, and we would give the thumbs up or thumbs down?

DR. MUNDY: (Nods affirmatively)

MR. DUFFY: Okay. Thank you.

CHAIRMAN RENKES: Okay. Commissioner Ballard.

24

25

MS. BALLARD Yeah. I'm glad we went back a little bit, because I want to go back to the two topics of the lingering oil and the synthesis work. One of the things that's uncomfortable for me is the concept of addressing important issues which fall right to our Trustee responsibilities, as outlined clearly in the legal documents and in the underlying law -- to mesh that with this we don't know what the PIs are going to do. We have to wait and see. These are very difficult paradigms for me to put together. I'm a regulator. I'm accustomed to figuring out what I've got to do and directing contractors to accomplish it. This has evolved into a research program in which we ask a question and wait for proposed answers and hope to find in those answers the tools we need to fulfill our responsibilities, and we had two fairly stern lectures this morning about our responsibilities as they pertain to being sponsors of research. And while I understand the frustration of the research community at the, perhaps, awkward behavior of the Trustee Council as sponsors of research, I find myself in an awkward situation as a Trustee and as a person responsible for some very clear direction under court order dealing with a situation where we don't know what we're going to hear, that we don't

know what tasks are going to be undertaken, and we don't 1 know what work is going to be proposed, and I'm just sort 2 of sharing with the rest of you. I suspect that the other 3 new Trustees are having a bit of the same paradigm clash 4 here as we work our way into it. In these two areas, 5 particularly, the synthesis and the lingering oil, I really 6 7 feel the responsibility to drive, not to follow. And I'm 8 not sure how we're going to work that out, but here we are 9 today trying to do that. That wasn't a question, Phil. You don't have to answer it. 10 11

DR. MUNDY: I was hoping you would say that.

MS. BALLARD Dr. Mundy, excuse me.

CHAIRMAN RENKES: Any further questions for

Dr. Mundy?

(No audible response)

CHAIRMAN RENKES: If not, that was a good presentation. Thank you.

DR. MUNDY: Thank you.

CHAIRMAN RENKES: And it might be helpful,

I think, since we're going to have some discussion of this

-- of the proposal and some Trustee discussions of

consideration of individual studies as we go on for you to

remain at the table, since we....

DR. MUNDY: Okay.

19

20

21

22

23

24

25

MR. DUFFY: Thank you, Mr. Chairman. to reiterate, the State of Alaska Trustees have reviewed all of the projects proposed for the FY 04 Work Plan. determining a set of recommendations for projects to be supported the State Trustees have carefully considered the terms of the civil settlement and Alaska law. In reviewing the proposed Work Plan, the State Trustees will use three criteria in coming to a perspective relative to the Work Those criteria were the project is directed towards the identification and quantification of any unknown or recently discovered impacts; number 2, the project is directed toward the long-term monitoring of ongoing direct impacts from the Exxon Valdez oil spill; and, number 3, the project directly supports State resource management decisions through applied research. Just a quick comment I've heard a lot of comment about just saying that it was State resource management decisions through applied research. Keep in mind that was just the State's That particular provision could generally be perspective. resource management decisions through applied research for all agencies, not just State of Alaska.

The State really, at this point, as a Trustee we think we need to concentrate on an important part of what we're proposing, a synthesis of all the data.

We want to be sure the protocols and funding are in place for appropriate long-term monitoring for the presence and possible consequences of lingering oil. We are interested in the projects that enhance our ability to manage these resources in Prince William Sound. We tried to focus on completing multi-year work that is already well underway. We also want to maintain the sampling schedules for longterm projects, the repeat sampling on a cycle such as three or five years. The net result of our analysis of the proposed Work Plan is a proposed funding plan that meets our objectives. It is different and less expensive than the proposed Work Plan in front of us. However, every component of our proposal was peer reviewed and PAC reviewed through the well established EVOS process.

1

23

24

25

With that in mind, I would move to adopt the State's proposed list of projects, including the Adams community involvement project and the Finney watershed project. This proposal is a subset of the proposed Work Plan for consideration. I'm doing that in the form of a motion.

MS. PEARCE: Mr. Chairman, I would object....

CHAIRMAN RENKES: Is there a....

MS. BALLARD I'll second it so we can have the discussion.

CHAIRMAN RENKES: Okay. Any discussion?

MS. PEARCE: I'd like to ask Dr. Mundy.....

CHAIRMAN RENKES: Sure.

MS. PEARCE: ....just to comment on the State's proposal.

MS. BALLARD Drew, I don't think anybody can hear you.

MS. PEARCE: Okay. I'm sorry. I'd like to ask Dr. Mundy to comment on the State's proposal. What do you see as -- if there are any losses?

CHAIRMAN RENKES: Yeah, Dr. Mundy, please go ahead. Go ahead.

DR. MUNDY: Yeah. Thank you, Mr. Chairman. I have only had since Wednesday to look at this. However, as Commissioner Duffy said, every project that's on the State list has been through the peer review process. So the State is recommending a subset of what we recommended. My main concerns with doing only what was recommended in the State proposals is that I don't think that it's nearly enough, and I'm concerned that we would get down to a decision point, for example, later on under the court settlement and perhaps not have access to all of the information that we need to make a complete case. So I have, as I said, not sat down and looked specifically at each and every case. But, in general, what I did notice is

that we have a number of complementary areas that would indeed -- and the additional projects would support the State's criteria, as I understand them. And I think that in some cases, having had the benefit of the PAC, access to the PAC, the STAC and over 100 independent peer reviews of the individual projects, that we may have additional information available to us in our review processes, as I showed the spreadsheet this morning as an example -- we don't make that available to the public, we have that out there -- that might make it easier for the State Trustees to see how these three criteria have been applied in all of the projects that we're recommending to a greater or a lesser extent. I don't claim that every criteria applies to every project, but I think that there are quite a few projects that could be added to the State's list and that would be fully consistent with the criteria as applied by the State.

19

20

21

22

23

24

25

CHAIRMAN RENKES: This is just a question about one statement that you made. You said that we might get to a decision point in the court process where we would not be able to make a complete case, and I just wonder what you were referring to there. What decision point?

DR. MUNDY: Yes, Mr. Renkes. For example, we may be in the position of sending specific proposals -- we may decide at the discretion, as I understand it, of the

Department of Law and the Department of Justice to send proposals to Exxon requesting that they pay for certain actions to remedy situations that were not foreseen at the time of the 1991.....

CHAIRMAN RENKES: So the reopener provision you're speaking of?

DR. MUNDY: Yes.

CHAIRMAN RENKES: Which is the responsibility of the Federal and State governments separately and individually, but not really the responsibility of the Trustee Council?

DR. MUNDY: That's my understanding.

CHAIRMAN RENKES: Just if I can, as the

Chair, have an opportunity to comment also on the State's

-- to me, how I characterize what we've come forward with

here in my mind is a way of getting through the work here

today in approving these projects. So we've done a careful

review. We've tried to come together on some principles

for projects that we believe that consensus can be achieved

in funding and put a substantial list together. And maybe

Commissioner Duffy and Commissioner Ballard can speak to

sort of the subject matter organization of those

categories, because I think the projects that are on the

list kind of fit into four or so of the eight or so

categories that you had while, outside those four

categories, there aren't. And so I think it's a -- you know, if you view this -- and I would encourage the other Trustees to view it as a step forward so we could take a group in a block, you know, and achieve consensus on them and then move to discuss some of the other items that are being put forward by the Executive Director for funding or deferral and take those up. And, as you say, maybe they meet the test or maybe they don't or maybe they require further discussion, but certainly it gets us toward our qoal of getting through the Work Plan by identifying, you know, those things that in block we can achieve easy consensus on and then moving into the things that are harder to achieve consensus on where we maybe need further So, really, I believe that's the spirit of the State proposal, and it shouldn't be interpreted as something other than that. It's just a way of trying to get through our work here as a consensus decision body, which is a difficult thing to manage, and so we've tried to do as much homework ahead of time to reach that step. Balsiger.

21

22

23

24

25

MR. BALSIGER: Thank you, Mr. Chairman. Well, there's been a lot of homework done on this, of course, starting with the RFP -- well, starting before that. The GEM model was a child of a great deal of homework -- scientific input from the National Research

Council, from all of EVOS' public advisory groups and its statistical advisory group. Half of the academicians in Alaska worked on this, as well as many outside of Alaska, to start with the GEM program, which was reviewed two or three times by the Trustees and adopted and even reviewed by this particular group of Trustees at some depth, at least -- to some extent at least. Following that adoption of the GEM program, we put out the RFP, which also had a lot of homework behind it. It identified a whole series of criteria and requirements that we wanted to have under each little section of the plan. It identified what our top priorities were, and the public in good faith submitted its proposals expecting that this was a genuine RFP that we were hoping to accomplish the work under that we had laid out in the RFP. Once again, all of those projects that were submitted were subjected to a lot of homework. were some 100 scientists that participated in the peer review of those projects. There were some deliberation by the PAG and by the STAC, a lot of work by Dr. Mundy as the Science Director and also by our Executive Director, which has arrived at a package of recommended projects that further what the Trustees said they wanted to do all the way through the GEM program, the RFP, et cetera. think that changing criteria now and identifying only three criteria by which we might approve projects has changed the

I think it's a tough role to adopt as a starting point these 20 or so projects the State has recommended and then add to it. I'm prepared to offer an alternate motion which would be to adopt the Work Plan as put forward by the Science Director and the Executive Director and, starting with that, amend that by removing projects that don't seem to fit the plan because these projects have been put together with quite a bit of I reviewed those from the time that we had the last version of the Work Plan, and it makes some sense to And I'm not saying the State's proposal is nonsensical, but we've just had that over the weekend, and I think it's a better place to start. So I'm sorry if I've messed up the procedure here, but I wanted to offer an alternate motion and I'm afraid I've already spoken to it. So if I'm out of order, you can tell me so.

CHAIRMAN RENKES: Well, you are a little out of order because there is a motion and it's been seconded and we're discussing that motion. You can move to amend the motion, and we could vote on it by consensus.

But, absent that, then we need to stick on the motion we're on.

MR. BALSIGER: Well, I would think that Roberts Rules of Order would allow me to offer an alternate

motion at this time. But, again, you're chairing it, and I....

CHAIRMAN RENKES: Well, I don't know. We can ask for a -- my understanding is that we have -- that once a motion is on the table, we have to move to table it. Otherwise, once it's been seconded it's on the table and we have to move to table it in order to consider an alternate motion. Now, you can move to, you know, amend the motion to.....

MR. BALSIGER: I don't think that.....

CHAIRMAN RENKES: .....to change the procedure, but -- or a substitute, but....

MR. BALSIGER: I'm sorry. I probably had the wrong terms, so I'm taking your advice. I would move to amend the motion to consider the Executive Director's Work Plan as opposed to the State's Work Plan. That would be my motion to amend Mr. Duffy's motion.

CHAIRMAN RENKES: Okay. Well, I think we have to dispose -- we could take that up after we've disposed of the motion that's on the table.

MR. BALSIGER: I don't see how that would work, Mr. Chairman.

MS. BALLARD We've got a room full of lawyers. What do they think? No Roberts Rules lawyers out there?

MS. PHILLIPS: Once you have.....

16

17

18

19

20

21

22

23

24

25

CHAIRMAN RENKES: Well, I don't know that it does. You know, just in the discussion of your motion and the discussion of the underlying motion I don't know if it really does us any good to tie ourselves up into some sort of procedural knot or game. You know, I would just voice my opinion, is it doesn't really make a difference. You know, I think that the goal is here as a consensus body to reach consensus on funding these research projects that the Trustees have in front of it. And while a lot of work has been done, the staff has not recommended funding all of the projects that were submitted pursuant to the RFP, and certainly there's a role for the Trustees in evaluating the recommendations of the staff. And that's really what this meeting is about, I think, is to evaluate the recommendations of the staff. And if, you know, Trustees are going to express themselves about the criteria they're individually or even collectively applying in evaluating the recommendations of the staff, I don't think it changes the rules of the game midstream. I don't think that it violates the public process that's occurred before, and I don't think really that there was a new plan to evaluate. And so the matter -- you know, the amount of notice or time that there's been to evaluate a plan is sort of, I think, irrelevant to the process because no new projects have been submitted. I mean, we've come in with a position to say let's clear the decks of, you know, almost all of the projects in four categories of the Work Plan and then let's talk about the other four categories and try to come to some agreement in those areas. So that's how I see what we're trying to do here. Maybe we can come to some sort of consensus about the process we should use to achieve it. We could go section by section of the Work Plan. But I think to move all of the Work Plan and then work our way back item by item is going to be a very difficult consensus building process. I think if we can begin to agree on the things that we can agree on section by section, or in multiple sections, we'll have a much better success as a group funding projects today. Those are my thoughts.

1.2

CHAIRMAN RENKES: Commissioner Duffy.

MR. DUFFY: Go ahead. Joe first, please.

CHAIRMAN RENKES: Joe.

MR. MEADE: Thank you. My concern to move forward with a subset for me is probably more procedural. I have spent a couple of days being a new commissioner or a new Trustee to get myself knowledgeable of what the Executive Director has been recommending that we move forward, and here today, without having digital access to any information, this morning was the first that I learned that there was potentially a subset of information and a

different set of criteria. So I'm not at all prepared to be able to do any decision making today from a process that would introduce a subset of criteria or focus on just approving a subset of projects. What I would need to be able to do that would be to be able to ask the Executive Director and the Science Director the trade-offs. know, if we looked at these subsets, how would these affect these other projects? As I have been led to understand it, this package has been brought forward to us through science It's been strongly supported by our PAC, by peer review. our STAC and that, through that process, they've weeded out, if you will, the projects that were not as pertinent and they've collected together those that have the most relevancy and some of them are interdependent upon others. And so the piece that I would struggle with being able to discern if we take out projects would be to be able to have some trade-off analysis to know what we are gaining or losing with the holistic or the larger outcome of the overall GEM. For me, without that analysis or without having the ability to read through a new proposal I kind of feel like I'm sitting in the dark.

20

21

22

23

24

25

CHAIRMAN RENKES: Let me ask Dr. Mundy just to follow up, Joe, on our comment. What would be lost if we discussed the projects in the categories that you discussed them in your introduction? For example, if we

took Alaska Coastal Current as one subject and discussed the research in that area and either approved it or didn't approve it and then went to community involvement, data management, lingering oil effects. I mean, your Work Plan is divided that way. Is the nearshore research and the lingering oil effect research interdependent with each other, or are these distinct categories that we could evaluate by themselves?

DR. MUNDY: Mr. Chairman, I'm afraid I'm going to have to give you the kind of answer that a scientist gives that policy people just hate. Yes, these are distinct categories and they hang together and they have their own interdependencies within the group. There are certain interdependencies among these major categories. As you point out, the nearshore area is related to the lingering oil investigations. But, also, there are certain aspects of the ACC that are also important to the lingering oil investigations, which are more or less a focal point for our plan at this point in time. So that's my answer.

CHAIRMAN RENKES: Commissioner Ballard, you haven't had a chance.

MS. BALLARD Well, I think Kevin was next, but....

CHAIRMAN RENKES: Well, we had a tie, so I was.....

MS. BALLARD A tie? Oh.

CHAIRMAN RENKES: ....going to you.

MR. DUFFY: And I lose.

MS. BALLARD You lose. All right. discussion we're having is part science, and it's part governance, and it's one of the challenges I guess we're going to have in our effort to gain consensus. come to every meeting prepared to hear one another, regardless of whether we had advance notice of what each of us were to say. We cannot be simply a rubber stamp, or we should dissolve, and the research effort should be separately organized and funded and have a life of its own. If we are going to fulfill our responsibilities -- or, at least, I feel as a State Trustee I must be able to sit here and use my judgment informed by my responsibilities at DEC and on behalf of the State without warning. I mean, we must be prepared to hear one another's discomfort and new suggestions. So I urge each of us to have that attitude. We did try to give some advance warning of our concerns, and I would re-emphasize that they are more about wishing to adhere closely to the job set to us by the settlement documents than about looking to the future, regardless of how promising future work and new knowledge may be. participation as a State Trustee in forming the conclusion that we came to that we were not prepared to endorse all

the projects in Gail's proposal had nothing to do with the worthiness of the research and everything to do with my review of the situation we find ourselves in with a settlement that derived from some legal responsibilities that had specific requirements for injuries that were calculated, damages that were paid. The damages were intended to be used for restoration, and I had a responsibility to assure as one of the Trustees that that had been accomplished. I have tried -- and on the agenda later today is my request to Gail that we be given a presentation of the entire scope of the research community in the Alaskan -- not just in Alaska, but research that is funded in this area. We are not the only funding source. We are not the only science program. We are not the only actor in the let's gain important useful information for future decision making. We are the sole and only actor in the Exxon Valdez oil spill restoration project, and it's that that I want to focus our attention on. I am not prepared -- it's very clear from the three or four meetings we've had I'm not prepared to move forward until I feel better founded in finishing the job that I think we've been given.

CHAIRMAN RENKES: Sure.

MR. MEADE: I want to say I wholly respect

144

and concur with your interest to keep focused the research work ahead of us, and I think in a bureaucracy it's easy to see scope creep. It's easy to see -- well, it's easy to see scope creep. I think that says it pretty well. What I would like to figure is a way that, in my uninformed position -- I don't have the background with EVOS, nor are a lot of the -- you know, many of these issues aren't as pertinent to my natural resource land management background. What I'd like to be able to gain awareness of as we make recommendations to defund certain proposals, I'd like to understand the trade-offs, and that would be the interaction I'd like to have. Rather than adopting a certain subset, if we had some ability with an objective staff being able to give us insights, I'd like to be able to understand those insights to what our trade-offs are so that I'm not making or helping to frame a decision that I wouldn't be able to offer an informed judgment from. I'm in concurrence with the ideal of keeping it focused. I'd just like to have a process established where we could collaborate and gain objective input from a knowledgeable staff to quide our awareness of what our trade-offs are as we make those decisions so that we don't -- I don't want to make a foolish decision, not that any of the State's are I just want to make an informed recommendation or decision on any specific item.

22

23

24

25

CHAIRMAN RENKES: Well, Dr. Mundy, are we able to do that today, to have that kind of insight as we look at each research project and the merits of funding it or not funding it?

DR. MUNDY: Mr. Chairman, I'm prepared to do my best. I can't, of course, promise to answer every question that's going to be put to us. But, as I say, I believe the FY 2004 Work Plan as proposed is fully consistent with the three criteria that have been put out by the State Trustees, and I'm prepared to discuss the merits of each proposal based on those three criteria if that is the wish of the Council.

CHAIRMAN RENKES: Drew.

MS. PEARCE: Actually, I think.....

CHAIRMAN RENKES: Oh.

MR. DUFFY: Thanks, Mr. Chairman.

CHAIRMAN RENKES: Oh. Commissioner Duffy.

MR. MEADE: It was a tie.

CHAIRMAN RENKES: Sorry.

MR. DUFFY: I should be in a position of suggesting a solution to move forward on this, and just in taking some notes thinking about what the State Trustees had come up with, it appears to me in terms of the categories for the RFP process -- on the watershed, on the synthesis, the nearshore and the lingering oil, just my

preliminary look at it there seems to be general concurrence. Maybe a little bit of disagreement around the edge. Where there seems to be nonconcurrence between what the State is looking at and what the Work Plan was that came forward to us is in the modeling arena, community involvement, data management and the Alaska Coastal Current. Now, I think as a Trustee Council if we went back through a process similar to Phil's presentation earlier today -- Dr. Mundy, excuse me -- where we started with each category and the proposed projects for funding, compared that to the ones that the State is recommending for funding, have some dialogue, we can reach consensus in that category and move to the next one. At the end, collectively, if it makes sense, we have concurrence and the Trustee Council moves forward. I think we can accomplish that, and I'm willing to move forward in that fashion.

CHAIRMAN RENKES: Any discussion about -I'm just trying to -- since we can't vote between motions,
since we can only move by consensus, I'm just trying to
think maybe we could come to a consensus on the process to
follow. That's what I'm trying to achieve. Trustee
Pearce.

MS. PEARCE: Well, I'm not sure I'm going to help that, but I'm still -- it seems like before we jump

to the list we need to talk a little bit about the new criteria, or the criteria that the State has applied as they went through the larger Work Plan and came up with a discrete list that they want to move forward with at this And I'm not sure -- I listened to Commissioner Ballard talk about the consent decree and the legal requirements in the monitoring and restoration -- or the restoration -- and I look at criteria one, and it seems to me more directed toward a future -- perhaps the reopener, but identification and quantification of unknown or recently discovered impacts. And if that has to apply to each and every one, I don't see that as covering our ongoing responsibility for the original settlement. Indeed, there is a reopener out there, and that's a whole kind of another question and whether or not we can identify in order to reach that. But the original settlement was not just directed toward identification of unknown or recently discovered impacts. And so I haven't gotten myself to being comfortable with the criteria that the State has applied in the first place. And, also, as has been pointed out, certainly my agencies -- and rightly so -- pointed out that there is definitely Federal resource management decisions that are made through research. also would say that while I've spent a lot of time talking about science for the sake of science versus science for

1

16

17

18

19

20

21

22

23

24

25

the sake of being able to have informed decision making processes, I'm not sure that the original settlement also directed us to use the funds to help us make our -- talking DOI, alone -- make our management decisions. That wasn't really the scope, as I understand it, of the original settlement. So I'm still having trouble with the criteria. Kevin's idea sounds like it might get us somewhere, but I'll leave it at one other question. And that is, Kevin, when you -- I'm sorry, Commissioner Duffy, when you made your motion you talked about the fact that this is cheaper, and what is the intent of that? I agree it spends less money, but to what end?

MR. DUFFY: Yes, through the Chair. If I used the word cheaper, I mean less expensive or the total amount.....

MS. PEARCE: You may have said less expensive. I wrote down cheaper.

MR. DUFFY: The total amount of expenditures under the State's proposal is roughly about \$3.1 as opposed to the proposal that was in front of us of about six point something -- 6.3. So that's the difference. I think that reduced expenditure is the net result of the more narrow focus we've taken on a set of categories. Nothing more, nothing less. Of course, we in the State system are in a position of significant scrutiny

of all of our expenditures; but that, for me, didn't play much into this decision. This decision was more of a narrow focus as I described among the categories and a net result of a reduced funding package.

21

22

23

24

25

MR. BALSIGER: Mr. Chairman.

CHAIRMAN RENKES: Trustee Balsiger.

MR. BALSIGER: You know, we have a restoration plan that goes beyond, perhaps, the original idea of looking at where the oil was and which resources were affected by the oil, but that restoration plan was developed with a lot of legal guidance. So I don't have any ability and I don't have any belief that -- well, let me put it the other way. I believe that our GEM model is completely consistent with the requirements that we have, and I don't have a phrase in mind but I could probably find it here -- completely consistent with the terms of the civil settlement and Alaska law, because the GEM model and the restoration plan wasn't developed absent people who should have been able to advise us on that. So I don't have a problem if the Trustee Council wants to change the restoration plan, wants to narrow the scope of the work that it's doing to do, wants to identify new criteria. then, if we're going to do that, we should do it that way. We should change the restoration plan. We should say we're changing our focus, not because what we're trying to do now

is illegal or outside the bounds of the settlement, but because it's something different we want to do. should put out a different RFP with different criteria, explain to the people what we're trying to do instead of, at this point, after having gone through several years of this culminating in this first Work Plan under the GEM model to suddenly change in our mind in a manner that, to me, is not consistent with the restoration plan or the GEM model or the work that we've done over the past three or four years describing to the public what we're trying to do and why this whole program makes sense. It seems to be a non sequitur to abandon such a large part of this program at this point in time. And, Mr. Chairman, I don't have a problem if you want to make progress by looking at this section by section, if you judge that's the way to get through this easier, presuming to do that we would have both of these motions off the floor, my attempted motion that never came into status and Mr. Duffy's.

21

22

23

24

25

CHAIRMAN RENKES: Yeah. We'll hear from Trustee Meade, and then I'll speak to that.

MR. MEADE: Just, I guess, to kind of pause in our discussion, a question of perhaps some legal advice. A person with a public affairs background that I am, I would suggest maybe add some public affairs wisdom to it. But more, it's a question, since we don't necessarily have

a relationship issue here, you know, from a governmental standpoint, maybe it's more just making sure we're legally okay. But the question that I just beat around the bush to get to is if we have built up public expectation, we've concluded an RFP, we've sought a research agenda, we've engaged a variety of individuals to submit proposals, as we heard this morning from at least our first caller, and there's been individuals that have put their expectations towards our requests and have, perhaps, turned away other work, are we going to legally and/or from a public affairs standpoint substantially damage ourselves if we change course at this point in the process? And I ask that more with the question if narrowing the scope or keeping ourselves more focused is appropriate, wouldn't this RFP process that I currently think we're just completing or starting through for the next cycle be the place to really influence that so that we don't damage our relationship with potential -- vendors is a wrong term, but potential researchers, potential RFP responders, and we also don't open up a legal question to settlement, if there even would be one there? That, I don't know, from a contractual or a purchasing standpoint. But I would think it would behoove us to have some sense on both the legal side, which we probably have the legal right to not hire -- I guess that was always retained. But we have put out a lot of public

expectation over the last couple of years shaping into an agenda here, an RFP. Certainly, businesses have put themselves on hold. I sure wouldn't want to be one of those businesses that put myself on hold with expectations that I was going to have the ability to provide a service simply to see a change in focus from what was originally expressed through our RFP. I would think that focus should be adjusted as we put a new RFP together and move it forward, to do it in a forthright way.

17

18

19

20

21

22

23

24

25

CHAIRMAN RENKES: I'd just comment on one thing I heard Commissioner Duffy say in his preamble -- was that one of the criteria that was applied in trying to find the projects that we could achieve consensus on quickly were those projects that were -- where work had been done where there was a reliance on continuing funding. So I think that that's an excellent point, and I think that meeting that reliance that people have on continuing funding is important. Where there's new research, of course there's less of an expectation or a reliance on And then, the other question, I suppose, is did the RFP make any guarantees that all research submitted would be funded, and I know that that's not the case and that, you know, all of the proposals are subject to review obviously by the Trustees and approval of funding. So I think, you know, there are probably some expectations that

there would be some research done in all of the categories that were presented. Let's ask Dr. Mundy, since I haven't seen the RFP. Is the RFP organized in the same way as the Work Plan?

1

2

3

4

5

1.3

1.4

15

16

17

18

19

20

21

22

23

24

25

DR. MUNDY: Yeah, Mr. Chairman. There are three documents here that are internally consistent in terms of their organization and their The Science Plan, which is a document that's been content. through public review, basically lays out the questions that we're asking and the big picture in terms of what we want to do and, also, directs itself towards priorities in terms of what needs to be done first in terms of getting the information that we've identified. After the Science Plan comes the RFP or the invitation for proposals, as we call it, and that is a direct translation of the priorities expressed in the Science Plan, and if you were to go to the Science Plan you would see that much of the text in each of these sections matches the text in the Science Plan. And the Work Plan itself, again, draws text directly from the RFP and from the Science Plan in explaining how the projects actually match what was invited. So the whole thing is logically consistent so that if we were, for example, in getting ready for the FY -- shortly, we would expect our normal cycle to be getting ready for the FY 05 invitation. That would be built from the Science Plan

after public comment. In other words, the Science Plan is out, so the place to change in the system that we've used heretofore -- the place to change objectives and to change criteria for selection of projects is at the level of the Science Plan, and then it's directly taken right through into the request for proposals and the Work Plan. So it maps one to one.

1

2

3

4

5

6

7

8

9

13

14

15

16

17

18

19

20

21

22

23

24

25

CHAIRMAN RENKES: Uh-huh. Well, I would make a proposal -- a motion, I suppose, that -- since we have two motions pending, but just a proposal to sort of summarize the -- I think there's probably more agreement on the specifics, my own perception, than there is on the general. And so, I would propose to the other Trustees that we do take this in the way that it was presented to us in the Work Plan and discuss each section and the research that's being proposed to be either funded or deferred and make some decisions about what to fund as a way of trying to -- and then, you know, if you want to subject that at the end of the process to, you know, a final vote to report out the package of things that we have accepted or not accepted, I mean I think that would be reasonable since we have to act by consensus. But at least that way we could, you know, see how far we could get in developing a consensus about all the elements here that have been presented to us in the Work Plan. Dr. Balsiger.

1 MR. BALSIGER: Mr. Chairman, I'll withdraw 2 my non-seconded and illegal motion, if that starts the 3 process. 4 MS. PHILLIPS: Did you withdraw yours too, Kevin? 5 6 MR. DUFFY: No. 7 MS. PHILLIPS: Okay. 8 MS. PEARCE: He can't, because there's an 9 objection on the table. I'll withdraw my objection. 10 CHAIRMAN RENKES: Do you want to withdraw 11 your motion, Kevin, or restate a new motion? 12 MR. DUFFY: With the objection being 13 withdrawn, I'll withdraw my motion. 14 MS. BALLARD I'll withdraw my second. 15 CHAIRMAN RENKES: Okay. 1.6 MS. BALLARD Good job, Greq. 17 CHAIRMAN RENKES: Then we'll make a new motion that we begin to discuss and vote on the research in 18 19 each section of the FY 2004 Work Plan and, you know, do that in the order that it's presented and work through the 20 Work Plan. And then, at the close of that effort, we will 21 then take a final head count on whether we can achieve 22 23 consensus today in funding the work that we've agreed upon

MS. PEARCE: I think we've just moved from

24

25

as a package. Any objection?

2 CHAIRMAN RENKES: Well, this is a non-body anyway. 3 4 MS. PHILLIPS: I would make one comment. 5 As you see -- just for your own edification, as you're 6 dealing with the deferred projects, et cetera, we do have a 7 considerable amount of money in elapsed funds that you will 8 be asked to address at a later time, and that considerable 9 amount is about \$600,000. 10 MS. BALLARD Greg, one..... 11 CHAIRMAN RENKES: Trustee Pearce.... 12 MS. PEARCE: Can I ask a..... 13 CHAIRMAN RENKES: ....first. Yeah. 14 MS. PEARCE: ....a question about that? And will we address that in terms of a specific 15 16 recommendation for specific projects or just to vote into 17 a.... 18 MS. PHILLIPS: We have a generalized motion prepared for you to deal with, but you can do whatever you 19 20 want. 21 CHAIRMAN RENKES: Commissioner Ballard. 22 MS. BALLARD I noted that Phil began with the watershed recommendations and then went back and went 23

through alphabetically. Was that right? Could we proceed

1

24

25

in that same manner?

Roberts to Masons.

1	CHAIRMAN RENKES: Sure.
2	MS. BALLARD Just follow the same order
3	that he did?
4	CHAIRMAN RENKES: Any objections?
5	(No audible response)
6	MS. BALLARD It makes sense to me to start
7	there.
8	CHAIRMAN RENKES: Okay. So we'll start
9	with the discussion of the watershed section, which appears
10	on what page is the chart for that
11	DR. MUNDY: Thirty-four, Mr. Chairman.
12	CHAIRMAN RENKES: Thirty-four. Would it be
13	the any discussion from the Trustee Council? Going
14	through each section, would you like to look at each
15	section and make a motion with respect to the section and
16	then discuss it, or would you like to make a motion with
17	respect to each research project as they're listed?
18	MS. BALLARD Well, as a general statement
19	I'll say that at least in reviewing this among the State
20	agencies, this entire section was a very attractive
21	section, and most of what we proposed for recommendation
22	was also included in here and
23	CHAIRMAN RENKES: Would you like to make a
24	motion related to the section itself?

MS. BALLARD I'd like to ask a couple of

questions....

CHAIRMAN RENKES: Okay.

MS. BALLARD .....about Knudsen, which is the very large project which the State Trustees -- are you wanting to say something? I probably ought to wait while you.....

MR. DUFFY: Go ahead.

MS. BALLARD If we could, at least, for my purposes in trying to move forward on this section if Phil could tell us a little bit about -- my impression was that Knudsen could start any particular time. I did not have the impression that this was a continuing project. Is that correct?

DR. MUNDY: Mr. Chairman.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Yes. In fact, I don't think we have -- let me just quickly check what I'm saying here.

Other than Mazumder, we don't have any continuing proposals in this section. This is a new initiative. We developed the nearshore last time, and it was our intention to develop the watershed as fully as possible this time. So all of these proposals, with the exception of Mazumder -- and, in essence, Mazumder was doing a project for us last year, but the content of this is quite different from what he was doing for us last year. So, in essence, all of

1	these projects are new projects.
2	CHAIRMAN RENKES: Commissioner Duffy.
3	MR. DUFFY: Just if this helps the
4	discussion, and under the State's perspective, we have
5	supported the Finney project, the Honnold project and the
6	Walker project and did not suggest funding the Knudsen
7	project.
8	MR. MEADE: Which project on there, if I
9	might ask and if we could just have conversation
10	CHAIRMAN RENKES: Sure.
11	MR. MEADE:rather than motions going
12	through these, I think that might help us dialogue better
13	than if we
14	CHAIRMAN RENKES: Right.
15	MR. MEADE:have motions and then have
16	to figure out the right Roberts rules for the right motion
17	as we decide if we can talk.
18	MS. BALLARD I agree, yeah.
19	CHAIRMAN RENKES: Since we can only vote by
20	consensus anyway.
21	MR. MEADE: Yeah. Which one is the Kenai
22	one? I think it was on the deferred. I don't have
23	the
24	DR. MUNDY: That's Mazumder.

MR. MEADE: Mazumder. Now, which is the

one that you had mentioned the State was.....

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

CHAIRMAN RENKES: Knudsen.

MR. MEADE: Knudsen, okay. I had interest in the Kenai one. So.....

CHAIRMAN RENKES: Do you want to -- Dr.

Mundy, could you just give us another very quick synopsis
of Knudsen?

I'll refer to page 80 of DR. MUNDY: Sure. the draft Work Plan, and this proposal, in my mind, was the clearest -- offered the clearest strategy. One of the things that we asked the people to do secondarily in the watershed area was tell us A, B, C, D. Tell us the steps that you're going to take in order to get us to a marine derived nutrient monitoring program that means something in the watershed that you're addressing. So the proposal offers a strategy for developing a monitoring program for watersheds that would form the basis for a comprehensive understanding of water quality and biological production in relation to natural and human induced variability. Sampling strategy effectively leverages existing funding from the Oil Spill Recovery Institute and North Pacific Research Board to minimize costs. Data derived on isotopic signatures of carbon, nitrogen and sulfur will be invaluable in designing monitoring throughout the GEM area. Important new information would be produced on effects of

watersheds on productivity of nearshore environments, the feasibility of using sulfur as an indicator of marine related effects, and the relation of marine derived nutrients to freshwater residence time in juvenile salmon.

1

2

3

4

5

6

7

8

9

1.0

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So the Knudsen proposal has a number of aspects to it that are not reproduced in other proposals in the watershed area. One of these is its emphasis on nearshore environments -- that is, looking down in the lower river and on the estuary. It's based in eastern Prince William Sound near the Copper River Delta, and so it has the ability to look at certain aspects that are not proposed in the other proposals. I believe it is also looking a number of species, including juvenile halibut, which is relatively unique as part of their sampling design. One of the issues that we face in trying to figure out how to measure marine derived nutrients in animals in watersheds is how long does an animal have to hang around before it's going to get a marine derived nutrient signal? Chum salmon and pink salmon are very important to Prince William Sound, but they're also notoriously short-lived in terms of their freshwater residence. They're in, and they're out. But, on the other hand, it could be that they're feeding on -- that they do feed. We know that some of the chum salmon do feed. So they're going to be looking at the relation of MDN to freshwater residence time, which

was also something of interest. I believe that in addition to the OSRI and NPRB that they brought in, I think that also the USGS is throwing in some additional funding on top of this.

MR. MEADE: If I might, a follow-up? On a policy maker's scale of one to 10, 10 being quite important, how integral is this component to the goals of the GEM program?

DR. MUNDY: To getting GEM to where it's ultimately supposed to be, I mean this one is an eight or a nine. It's right in there. It's right what we asked them to do, and they stepped up to the plate and brought significant money to the table in addition to giving us a plan that tells us how they're going to proceed and what we're supposed to have at every step along the way to get us to a marine derived nutrient monitoring program.

CHAIRMAN RENKES: I think Trustee Balsiger was next.

MR. BALSIGER: Thank you, Mr. Chairman.

I'm not quite sure I understood how we're dealing with the deferred funding. For example, the State's proposal wouldn't include Heintz, I don't believe, but maybe we're not worried because we're going to have \$600,000 of deferred funding that might cover that later on? I'm having trouble figuring how we put those pieces together.

_ +	Ms. PHILLIPS: There is approximately
2	\$600,000 of unspent, lapsed funds from 2003 that could be
3	used for deferred projects, if that's what the wish of the
4	Trustee Council is.
5	DR. MUNDY: Mr. Chairman.
6	CHAIRMAN RENKES: Yes, Dr. Mundy.
7	DR. MUNDY: Mr. Chairman, just a minor
8	correction. I just want to point out that the Heintz
9	project is a fund contingent and, therefore, in that
10	category. It's been included under the \$5 million cap. So
11	it's not part of the deferred
12	MS. PHILLIPS: The lapsed.
13	DR. MUNDY: Yeah, the lapsed.
14	CHAIRMAN RENKES: What is the funding
15	contingent on?
16	DR. MUNDY: Mr. Chairman, the funding is
17	contingent on Mr. Heintz providing the
18	CHAIRMAN RENKES: Oh, that's right.
19	DR. MUNDY:reports that he owes the
20	Trustee Council.
21	CHAIRMAN RENKES: Right. Trustee Pearce.
22	MS. PEARCE: Back to the Knudsen if I'm
23	pronouncing that correctly.
24	CHAIRMAN RENKES: Uh-huh, Knudsen, uh-huh.
25	MS. PEARCE:project, you said that it

will leverage funds that are coming from OSRI and the North Pacific Research Board and, you think, additional USGS funding. Do you remember -- are we talking tens of thousands, hundreds of thousands from those other agencies to match the 150?

DR. MUNDY: I think you're talking tens of thousands of dollars. Now, the USGS contribution is a one-time contribution related to escapement counting, which is part of the salmon escapement counting, but the OSRI and the North Pacific Research Board components, I think, are in the tens of thousands of dollars. I'd have to check the matching, but you're talking about substantial cash. This isn't just in kind contributions.

CHAIRMAN RENKES: Dr. Balsiger.

MR. BALSIGER: Mr. Chairman. Relative to my earlier question, the Heintz proposal is, I believe, sort of related and integral with the Walker proposal, but I know the Heintz is fund contingent based on producing some other reports. And so I'm not quite sure whether that 48,000 for the Heintz would be available under the lapsed funding or whatever, but I have an interest in the Heintz one, whenever we get to that level.

CHAIRMAN RENKES: And you're saying that you believe if you fund Walker it would be helpful to fund Heintz? Is that what you're saying?

MR. BALSIGER: That's my belief, but perhaps Dr. Mundy could tell me if that's sensible.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Thank you, Mr. Chairman. Heintz was recommended because it is a marine derived nutrient application. It is a relatively unusual marine derived nutrient application that, except for the management application, would probably not have been successful. So, again, putting these things together -that is, by going in and taking Walker's samples and working with Walker's samples to use a technique that will give us information on marine derived nutrients and the allocation of those to growth and production structures in fish, but also give us some handle on survival, since growth is closely related to survival in these species, that brought up the possibility of a management application. Now, the management applications in the GEM program are not the top priority. It is the evaluation of the ongoing injuries to injured species and understanding those in an environmental context. Those are the top priority. On the other hand, we've had very strong signals from the community and from the agencies that they want these management applications. So as long as we can get them as we move along, without impairing the other parts of the mission, we do. So Heintz is a stand-alone project,

probably would not have been recommended for now, although it's something interesting that we probably would like to do eventually. But the fact that it does have a management application and it is building on the Walker project -- it is integral to the sampling portion of the Walker program -- we felt that putting these together as a package was a good chance to get a management application out of it.

CHAIRMAN RENKES: Trustee Pearce.

MS. PEARCE: Commissioner Duffy, what was the reasoning behind not funding Knudsen? I'm just trying to.....

I'm just thinking back MR. DUFFY: Yeah. on our discussions. We were struggling with the applicability of this to the perspective we brought to the table -- the criteria we were talking about. It just didn't seem directly relevant. I have talked with Dr. Mundy about this project, and he sees some real value from it from a GEM perspective in going forward on this project. From my more narrow perspective, being from a management agency, I just didn't see the -- I couldn't connect the dots that the value of this research even short-term and maybe long-term -- I'm not sure -- to how managed species would be, you know, improved through this. So that's why I didn't support it. I recommended to the State Trustees not supporting it, and they basically agreed.

1	CHAIRMAN RENKES: Is there further
2	discussion about the research in this section? Do you want
3	to make a proposal for shall we go through project by
4	project take Finney first?
5	MR. MEADE: Well, did I just hear from Mr.
6	Duffy that the State is in support of all but the one? Is
7	that where your recommendation is, at this point, Kevin?
8	CHAIRMAN RENKES: Of the four funding
9	proposals
10	MR. MEADE: Yeah, of the four.
11	CHAIRMAN RENKES: Of the four, yeah. All
12	of the three Finney, Honnold and Walker but there's
13	concern about Knudsen.
14	MR. MEADE: Right.
15	CHAIRMAN RENKES: So three of the four.
16	And then there's the fund contingent, Heintz, that is a
17	question mark, I think.
18	MR. MEADE: And isn't there also
19	contingents on the Kenai one that's associated there,
20	securing
21	CHAIRMAN RENKES: That's rated defer.
22	MR. MEADE: Deferred, okay. Thank you.
23	CHAIRMAN RENKES: Uh-huh.
24	MR. DUFFY: Based on Dr. Mundy's comments

on the Heintz and its applicability to management I would,

you know, as a State Trustee would support that and put that on the list. So our list at this point under watershed would be for Finney, Honnold, Walker and Heintz.

MR. MEADE: I would look to, you know, the insights from both my Federal partners. I can support the State's perspective. I don't have any specific knowledge that would cause me to have a concern one way or the other with the items, other than just hearing the insight from Dr. Mundy that it is right up there as a number eight in hitting the GEM agenda. But I realize if we're wanting to narrow the scope here to the extent we can, Jim and Drew I would look to you to give any additional insight from an agency perspective, although that is right up the Copper River Delta. I can see where it could have potentially some implications and interest, but not anything so direct that I could offer any wisdom.

CHAIRMAN RENKES: Trustee Pearce.

MS. PEARCE: Well, I guess my perspective would be it meets -- according to Dr. Mundy, it meets the GEM criteria to a tee or right on the mark or whatever the proper term is for that, and I'm still struggling with my lack of understanding of why our criteria should be whether or not it's going to be able to help us manage in the short-term the resource, if it will provide us with information that may end up being very useful in the

management, particularly of salmon, particularly on the Copper River, and it meets the criteria of the GEM program. It would seem to me we that it should be included.

2.0

CHAIRMAN RENKES: Commissioner Duffy.

MS. PEARCE: It's a huge fishery.

MR. DUFFY: Just in response to that, in terms of the management applicability you'll hear from me a lot, and that will kind of be a broken record. That's not the only thing I'm looking at; but, on the other hand, in terms of the Copper River Delta and the current salmon species that are managed in the delta I'm not sure that we need a whole lot more data to manage more effectively. That fishery currently is constructed. But I understand the importance, perhaps, from the GEM perspective, but maybe this is one that we can put an asterisk by and come back to, based on any decisions we make on carryover of additional FY 03 funding and move on to the next category.

MR. MEADE: I was actually going to see if that might be a way to move forward if we have found broad agreement -- if we held this one to the side. At least if we did nothing else by the end of today, we could reach some critical decisions on the vast majority and maybe need to do additional research and validation on just but a handful.

CHAIRMAN RENKES: It seems to me that the

1 criteria give us some options, because we can move from --2 you know, we have fund, fund contingent, defer. So, if we want to, we could move Knudsen from fund to defer and then 3 4 address it on that basis. Dr. Balsiger. 5 MR. BALSIGER: I was hoping you would allow 6 me to have like a five-minute break so I could talk to some 7 people about some thoughts that I have. 8 CHAIRMAN RENKES: Your entitled. 9 have a break. 10 MR. BALSIGER: I'll really make it five 11 minutes. 12 CHAIRMAN RENKES: Take a break. Sure. 13 MS. PHILLIPS: One thing that we're going to need, too, as you're going through all of this is we 14 15 need to know whether or not to put the defer -- whether or 16 not you guys want to hold the deferred projects on a 17 separate list so that we can come back to the deferred projects, or if you just want to not deal with them. 18 19 even though it's on defer on this list..... 20 CHAIRMAN RENKES: What do you want to do? 21 MS. PHILLIPS: ....I'd like to put them on 22 a separate list..... 23 CHAIRMAN RENKES: Yeah, then come back to

MS. PHILLIPS: ....and then come back to

24

25

them.

1 them. 2 CHAIRMAN RENKES: Yeah. That makes sense. MS. PHILLIPS: Okay. 3 (Off record - 2:58 P.M.) 5 (On record - 3:06 P.M.) CHAIRMAN RENKES: Okay, I'd like to get 6 7 going again. If we can get Dr. Mundy back. 8 MR. BALSIGER: Mr. Chairman, pursuant to 9 the break for which I asked..... 10 CHAIRMAN RENKES: 11 MR. BALSIGER: ....and which you granted me, for the record, if you would allow me, I would like to 12 13 ask Craig O'Conner, who is general counsel for NOAA --14 because of some statements that I may have sort of 15 inadvertently muddied the record with -- I'd like to ask Mr. O'Conner if he believes that the projects that have 16 17 been submitted and proposed by the various researchers, whether or not they're on the State's list -- recommended 18 19 list, are consistent with the terms of the settlement act 20 -- the civil settlement? 21 MR. O'CONNER: The.... 22 REPORTER: Mr. O'Conner, if I can get you 23 to come up where Mr. -- Dr. Mundy..... 24 MS. PHILLIPS: Or just move your chair up.

MR. O'CONNER: But I don't want to be looked at for that long. My concern that I rai -- Mr. Chairman, if you don't mind.

CHAIRMAN RENKES: Uh-huh, yes please.

MR. O'CONNER: My concern that I raised with Jim had -- in large measure had to do with the state of the record based upon Commissioner Duffy's comments and then Jim's response. I guess by way of answering your questions, Jim, I would have to ask the State, at this point, is it the conclusion of the State that the projects that they have -- they're opposed to funding or they have not recommended funding for, in their opinion, inconsistent with the terms of the settlement agreement particularly? have my own independent opinion after having looked at the projects and I would disagree with that conclusion. the record as it sits at this point would seem to indicate that the State has done a legal review of the projects as well as a programmatic review and come to the conclusion that those they didn't recommend funding for were inconsistent particularly with the terms of the settlement agreement. Or perhaps even the restoration plan and some elusion to State law, although I would assume that's your own oil pollution act or similar legislation.

CHAIRMAN RENKES: Well, I can answer that

the State has not done a legal review on a project by project basis. And I think that the comment -- you know, I'll let Kevin Duffy speak to the comments that he made that were presented not in the way of establishing new criteria for evaluating the projects as much as they were just an opportunity to express the logic behind which the State Trustees individually and collectively evaluated and prioritized the funding requests that were put forward in the Work Plan. Kevin, do you want to speak to that?

1.3

MR. DUFFY: Yeah, just if I could. I'm a bit surprised by this interpretation. I didn't mean to, if it was implied, that I was saying that the projects for discussion, that we're moving through, but the original State list of projects was not meant to imply anything relative to the validity or inconsistency of the other projects relative to the settlement agreement.

CHAIRMAN RENKES: Good. Thank you.

MR. BALSIGER: Thank you, Mr. Chairman.

MR. DUFFY: If I could, I'd like to followup just a bit, not on a legal perspective but just this
idea that the State is applying new criteria, I think
that's really a misnomer. We just had a perspective that
we wanted to bring to the table. As part of initiating the
dialogue, I wanted to share that perspective with my
Federal Trustees. You need to have a perspective in the

things that you looked at in order to lay a set of proposed projects on the table. That was all I was trying to do, I was not trying to violate the RFP process or do anything inconsistent with the process. It is -- RFP process. It is still my belief that once we work through these eight categories and achieve consensus on the list of project, we will have operated in good faith and consistent with the terms of the RFP and the process we've gone through as a Trustee council. Thank you.

CHAIRMAN RENKES: Okay, well we were addressing the -- I'm sorry, I looked down. Did you have your hand raised, Ms. Ballard?

MS. BALLARD: I....

CHAIRMAN RENKES: I couldn't tell, I looked down but....

MS. BALLARD: I did and you were going on.

CHAIRMAN RENKES: ....it's like.....

MS. BALLARD: I will simply add to this discussion we just had that it's clear from the history of both EVOS and all the other NRDA actions in the country that there's a great deal of room for definition of restoration. And the State was not judging the adequacy of some proposals but rather favoring for our view the immediacy of others.

CHAIRMAN RENKES: Okay, thank you. So we

were discussing the watershed proposals when we broke and we were reaching, I think, relative agreement on Finney, 2 Honnold, Walker and I think Heintz. 3 MS. PHILLIPS: Heintz. 4 CHAIRMAN RENKES: Although I only heard 5 Commissioner Duffy and Dr. Balsiger speak to Heintz. But 6 7 they're the two most knowledgeable of the..... MS. BALLARD: I'm okay with Heintz. 8 9 CHAIRMAN RENKES: .....all the Trustees in 10 that area, so..... 11 MS. BALLARD: Well, I thought Phil -- Dr. 12 Mundy gave an excellent explanation of the status of Heintz 13 and why it was in the fund contingent category, so..... 14 CHAIRMAN RENKES: So I would -- from that 15 conversation I gather that the Trustees are moving toward consensus on moving Heintz from fund contingent to fund? 16 17 MR. MEADE: And based on your suggestion, deferring decision or deferring funding on the..... 18 19 CHAIRMAN RENKES: On Knudsen. 20 MR. MEADE: On Knudsen. And that way we 21 can move to another category, respectful of the clock.

1

22

23

24

25

CHAIRMAN RENKES: If we could do that, if we could move Heintz from fund contingent to fund and move Knudsen from fund to defer. And then during the break, the Executive Director and I had a conversation about the defer

1	category and now we treat that. And we thought that the
2	defer would be a separate list that we would keep that we
3	could come back to, to consider funding. Is that right?
4	MS. PHILLIPS: Mr. Chairman, just going
5	back to Heintz, Heintz is fund contingent, not having
6	anything related to do with the project or anything but
7	simply the fact that we're waiting for a report, for him to
8	come in. So we would classify that as a fund project
9	CHAIRMAN RENKES: Okay.
10	MS. PHILLIPS:as soon as that report
11	is in, that will become a fund.
12	CHAIRMAN RENKES: Just trying to get the
13	work completed.
14	MS. PHILLIPS: Right.
15	CHAIRMAN RENKES: Okay.
16	MS. PHILLIPS: And then I will
17	CHAIRMAN RENKES: Well, that's fair.
18	MS. PHILLIPS:maintain
19	CHAIRMAN RENKES: We don't want to get in
20	the way of that.
21	MS. PHILLIPS:a list of the deferred
22	for us to go back to it later.
23	CHAIRMAN RENKES: Okay, I think that would
24	be good. So on that basis and then Mazumder would also
25	be on the defer category?

MS. PHILLIPS: Mazumder is on the deferred list and hold to go back to list is Knudsen. So two separate lists but both meaning the same thing.

CHAIRMAN RENKES: Okay, with that

1.4

CHAIRMAN RENKES: Okay, with that discussion of watershed proposals, is there any objection to approving the watershed proposal category on that basis?

No objection here.

MR. DUFFY:

MR. MEADE: What if we just continue to move through the list, knowing what we've made, and that way we can look back -- reflect back on where we, you know, collectively come out at.

CHAIRMAN RENKES: Right. Good. So now do we go back to do it alphabetically, is that the idea?

DR. MUNDY: Mr. Chairman, it's my understanding of Commissioner Ballard's request that we now move to the Alaska coastal current. For most of you, that's on page 21 of the draft Work Plan, is where you'll find that table.

MS. BALLARD: I just wanted to go in the same order you had gone in.

DR. MUNDY: That's....

MS. BALLARD: Because it seemed you had a logic so I thought it was good enough for me to follow your logic.

CHAIRMAN RENKES: Okay, so page 21 in our

new draft, Alaska coastal current proposals recommended for funding and deferral. Who wants to start discussion of these projects?

MR. MEADE: Just to get me on home page, if I could, if I could ask Dr. Mundy, if I recollect, when were here about a month ago you talked about the relevancy of these projects here associated to currents and effects on -- I think you even used some examples of the salmon fisheries and effects by new knowledge as to aspects of this potential research that was affecting certainly our runs here but even making shifts towards -- like the Columbia basin and the Pacific northwest. Am I in the right thinking? Is that this group of research projects?

DR. MUNDY: Mr. Chairman.

CHAIRMAN RENKES: Yes please, Dr. Mundy.

DR. MUNDY: Yes, that is in part the intent of the -- of this section. I also would point out that in relation to the State's criteria that number 2, the project is directed toward the long term monitoring of ongoing direct impacts from the Exxon Valdez oil spill. Now I understand from discussions with Commissioner Duffy that the term direct may have a different meaning however we have long held that we had to have auxiliary information, we had to have environmental information to place the ongoing direct impacts of the oil spill in context. And

we've given some examples of that earlier today. It's very, very hard to evaluate individual tends in animals such as sea otters and Harlequin ducks without background environmental information. Because the -- we've often had the claim that there were no oil impacts but simply environmental or climate impacts on the animals. And that the changes we were seeing were not respon -- you know, the oil was not responsible for that.

1.0

1.3

So -- and also I would point out that in this category we have endeavored to build in at least one highly relevant resource management application in applied research. So this has the context of looking at environmental change. We can share this information with people all up and down the West Coast and they'll find it relevant. But it also has immediate application to evaluating lingering oil effects and also has built in fisheries management applications. And I would be happy to go through and point out specific examples of those at the request of the counsel.

MR. MEADE: If I could.....

CHAIRMAN RENKES: Go ahead.

MR. MEADE: .....further -- if I could ask you to guide my eyes to the project that had, for me, a good deal of relevancy for a land based management agency like ours, and that was the one that did effect -- it was,

as I recollect, you highlighted some relevant findings and research that would further our knowledge about, I think, it was factors that are affecting certain food sources that then did affect substantial spikes or shifts in salmon runs. For example, in the Sound say down to the Columbia basin. Which project would that be?

1

14

15

16

17

18

19

20

21

22

23

24

25

DR. MUNDY: Right, that would be the Batten project. And this is the only -- at the present time, this is the only monitoring project in the Gulf of Alaska that's in a position to detect what the oceanographers have called a regime shift. And the regime -- the change in the climate, I think today's weather is probably a pretty good example -- the change in the climate has had a fair impact on salmon runs but also we believe on Stellar sea lions and other bird and mammal populations of interest. And really the CPR was originally developed as a fish finding technology back in the 1920's, dragging an instrument through the water to look for plankton so that they could spot -- because they knew if they could find the plankton, they could find the fish. But it's since that time been applied to look at changes in climate and, as I say, is the only project presently by any organization that's got the ability to give us this background signal.

So, for example, if somebody came up and said, okay look, this change that you're seeing in the

Harlequin ducks is due to -- simply due to the effects of the regime shift that started in 1977, we have the grounds now to say, sorry but that one is over. 1998, 1999, we have evidence that that's gone back in the other direction so you'll have to find another rationale, another excuse.

MR. MEADE: Thank you. Thank you for indulging. I -- since I don't have the data in front.....

DR. MUNDY: Not at all, I think that's.....

MR. MEADE: ....in the same fashion. But that study particularly was of great interest to me. And I don't know if there are others that affiliate or associate to that potential component being successful but I did -- and I don't know where it fits in the State's recommendations but....

CHAIRMAN RENKES: Commissioner Duffy, do you want to speak to -- or, I'm sorry, Dr. Balsiger, do you have something you want to say?

MR. BALSIGER: Well, Mr. Chairman, I thought -- my notes would indicate that the State hadn't proposed any of these projects so I -- but I'm still pre -- if you'd rather him present it, that's fine. But I was going to propose that we fund Batten, which is the proposal that we just discussed that Mr. Meade was interested; Cokelet, which is the system that Dr. Mundy talked about where we're putting the instrumentation on the Alaska State

Ferry; O'Connen [sic], the monitoring program; Stabenow, this is the second year of -- in the final year of a program of a program that we funding last year; Weingartner, who we heard about that on public testimony and the information points out that this is a time series that's gone on for 33 years and Willette, monitoring the dynamics. This is the second year of a program. As you can see from the list, it is not the last year but it's phasing down. And that would be my proposed list on this page.

CHAIRMAN RENKES: Mr. Duffy.

MR. DUFFY: I have question, I think -- a few questions I think for Dr. Mundy. The Willette project, that was one that I really struggled with and in the end, in talking to the State Trustees, I did not include it, hoping to have this kind of dialog. The -- if we commit to the -- continue to commit to the Willette project, is that one that will have some finality at some point after FY-06, based on the declining numbers I have in front of me or is this one of these projects, once you commit to it, it would continue theoretically forever?

DR. MUNDY: Mr. Chairman.

CHAIRMAN RENKES: Dr. Mundy, go ahead.

DR. MUNDY: This is in the happy category of one of those projects that will continue forever but the

financial obligations will be very small. The -- this is set up -- this project, the Willette project is based on a transect that's fished by a fishing vessel at Anchor Point and due west of Anchor Point in Cook Inlet and has been fished there since 1979. We have noted that that area is subject to very heavy tidal influence. The oceanography is quite, quite complex. Quite -- most people who have worked in Cook Inlet know the rips, which are tidal fronts which define very, very discreet oceanographic regions within Cook Inlet that have a lot to do with the movement of the fish.

The test fishing program was originally set up there to advise the managers, particularly with respect to the Kenai River sockeye salmon, which was an injured species under the oil spill. But the variability from the program is quite high and the managers use this with a grain of salt or maybe more than a grain of salt but nonetheless, they feel that it's still valuable information. But they really would like to know why it's so reliable in some years and in other years it's not very reliable at all. So -- and the principle purpose of it is to allow them, for the purposes of fishing regulations, to know when the sockeye salmon are going to make beach-full, coming in from over a thousand square miles of water out there where the fishing fleet operates. Because at that

point in time, the ability of the managers to control the sockeye salmon escape by using the drift gill net fleet is practically gone.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So the -- for the purposes of the GEM program, we saw the ability to define the extent of the intrusion of the Alaska coastal current into lower Cook Inlet as a very important piece of information which relates to the recruitment of shrimp and crab populations, among other important pieces of information. But the variability in the ACC, Alaska coastal current as a whole, we believe is a major factor in controlling bird, fish and mammal populations in the area. So by putting oceanographic instrumentation on the Anchor Point test fishing vessel and the -- most of what you see here in 2004/2005 are capitalization costs. But there are also some additional costs associated with the fact that we now are operating oceanographic instruments such as a acoustic doppler current profiler from the vessel. So the charter costs have increased. So there are some increased charter costs here.

We felt that this was a very good opportunity to put together a physical oceanographer with a fish group and to optimistically put some physical oceanography into salmon fishing regulations. As a -- you know, as a side benefit. So as I say, we work hard to try

to get management applications, short term management applications, and build those onto the project whenever we can. So again, this is a project that helps us define the extent of the incursion of the Alaska coastal current into lower Cook Inlet. It helps us with -- by defining the data that were being -- that are used in the sockeye salmon regulations or the reliability of those data and hopefully they'll improve.

And it's something that's going to be relatively low cost once we have these instruments installed. They should be there for quite some time. And once the people start using this data, the environmental data, we think that other people will step forward and help with the funding. So that's where I am on that.

CHAIRMAN RENKES: Thank you, Dr. Mundy.

MR. DUFFY: Thank you, Dr. Mundy, that was very helpful. Is there any chance that that would help me and us collectively in our allocation discussions in Cook Inlet?

DR. MUNDY: Mr. Chairman, there no help for Commissioner Duffy on -- in that regard.

CHAIRMAN RENKES: I told him that too.

MR. DUFFY: I've got another one on -- just real briefly, the Cokelet project and the discussions that

have been going on with the Department of Transportation, Marine Highways. The -- and we heard today in either your discussion or in testimony, I forgot which, that this one is time critical. That we need to pull the trigger on this one if we want to move forward on this analysis. The question I have is, the project, I would assume, would have initial start up costs that would be very expensive. But through time those operating expenses would remain steady but capital expenses would go down. And so I was questioning this one from just the dollar amount associated with the three fiscal years in front of us. Can you shed any light on that for me, Phil -- Dr. Mundy? Thank you.

1.0

DR. MUNDY: Mr. Chairman. Yes, the -- this project is very experimental with respect to the gear that's going to be put in. They're using standard methods to measure solidity and temperature however we expect to be able to be able to install a real time instrument that will measure nitrate on the vessel. Now this doesn't sound too exciting but we've never had the ability to measure nitrate other than by chemical means. If you're going to measure nitrate in sea water, what you're going to do is take sample and you're going to put some reagents in it and you're going to make some tests. But people have to handle it. We're now coming to the stage where we believe we have an ultraviolet color metric test that does -- that

goes real time. This will really revolutionize the way we look at the changes in the transport of nutrients up onto the shelf which we believe are involved in controlling the abundances of birds, fish and mammals in the northern Gulf of Alaska.

1.3

So the -- and I would also point out that the branch of NOAA that mis -- Dr. Cokelet belongs to is putting quite a bit of its own gear into this operation as well. So what you see here is really only part of the cost because the whole North Pacific has its eyes on this project. There are lots of people who are very, very interested in making sure that this works. So I'm sure that if any -- if there are contingencies and so forth that a lot of people will be stepping forward.

So the reason that this is kind of waffling around as far as the cost and not declining just in the way that the Willette project is declining as we do the cost of capitalizations because we will be trying new things during the course of this -- of the three years of this project. Because this is a learning exercise. People have been talking about doing this for 25 years. It seems like such a straightforward thing to do and such a cost effective thing to do, you wonder that people wouldn't have done it in the past. But it's not as easy as it looks. There are -- as I mentioned, just the fact that it's a passenger

vessel and if you put something on a passenger vessel that hasn't been certified, you lose your classification as a passenger vessel.

And so, we are very pleased with the fact that we do have the MOA, which is on the table here, which is an action item, ready for signature. This took quite a bit of work with the engineering people at the Alaska Marine Highway system before they would agree to let us come onto their boat and start messing with the plumbing. So we're -- I'll stop there.

CHAIRMAN RENKES: Okay, thank you Dr. Mundy MR. DUFFY: Thank you, Dr. Mundy.

CHAIRMAN RENKES: Commissioner Ballard, do you want to make a comment?

MS. BALLARD: Yeah, Dr. Mundy, I wonder if you could tell me, if I looked at a GPS plot of where they had gone, what the scope, in terms of covering of the ocean, of the Okkonen versus the Cokelet one is?

DR. MUNDY: Okay, Mr. Chairman.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Yes, the Cokelet project is -operates along the line that goes from Seward down the
outer Kenai Peninsula up into Homer, back down to the east
side of Kodiak and then over to Chignik. So you're
covering the -- basically the waters in the northern Gulf

of Alaska that are most biologically active. Okkonen's project has been on the tanker vessel from which the CPR project was working. And so Cokelet's project goes from Valdez out into the Gulf of Alaska and then down the coast to Long Beach. We're not, of course, paying for collecting data off the coast of California but on the other hand, that's the beauty of these things. It doesn't cost anymore, once it's installed, it's up and it's operating to give the people down in California the data.

So we're -- so the Okkonen project operates out in the Gulf of Alaska. It's one of the few windows that we have on the central Gulf of Alaska. And the Cokelet project operates in coastal waters in the northern Gulf of Alaska.

CHAIRMAN RENKES: Any more questions, discussion? Trustee Pearce.

MS. PEARCE: Dr. Balsiger, could you go back through your list please?

CHAIRMAN RENKES: Here, I've got it right here.

MS. PEARCE: Oh do you? Okay.

MR. BALSIGER: The top half of page 21 on the proposal, on the funded ones, I suggested funding all of them save Bechtol.

MR. MEADE: Save Bechtol?

MR. BALSIGER: Except for Bechtol. 1 2 MR MEADE: Oh, is Bechtol the one that.... MS. PHILLIPS: No, that was Batten. 3 4 MR. MEADE: Oh, Batten. Excuse me, thank I concur. 5 you. 6 MS. BALLARD: I'm not ready for that big of 7 list yet. I'm a little nervous about the Cokelet one. 8 This whole section, of course, is one that I'm the most concerned about. I'm the most concern that we're stepping 9 10 beyond where I want my focus of attention to be in wishing to seek a compromise. I'm just not quite with you yet, 11 12 Jim. MR. BALSIGER: Mr. Chairman. I didn't see 13 you come back in so I thought I was waving at an empty 14 chair. 15 CHAIRMAN RENKES: No, I'm here. 16 MR. BALSIGER: Of those six projects, two 17 of them are new, the Cokelet one and the Okkonen or Oc --18 oh, I'm sorry, the Cokelet and the..... 19 20 MS. BALLARD: Yeah, Okkonen is ongoing. MR. BALSIGER: I quess they're all ongoing, 21 save the Cokelet one. Some of them decline in price has 22

been discussed and some of them continuing. I don't -- I

guess we could consider whether these ongoing ones that are

monitoring ones if we're going to reject the GEM -- part of

23

24

25

the GEM model that suggests monitoring as an appropriate use of these then perhaps we need to give that signal. But some of these people that expected that we would be looking at these probably may not have put a lot of effort into applying to the North Pacific Research Board or some place like that. Because it seems that these -- to them that these monitoring projects were appropriate for this council.

1.7

without giving an opportunity to pick up these time series other places, if that's what the Trustee Council is going to eventually do, is to change the restoration plan, change the thoughts that we have for the GEM model. I'm not proposing we do that because I'm still a supporter of both the restoration plan, the way it is in the GEM model. But if the will of the Trustee Council no longer lies there, I think we change that and then indicate that in a future RFP rather than not allowing these kinds of projects to go through at this time.

CHAIRMAN RENKES: Is there another proposal for this section?

MS. BALLARD: I guess my response to Jim is this is the dilemma of the government structure that we're stuck with. That we either exercise no judgment as new players at the table or delay that. I mean, I understand

what you just said, I also understand how I feel about it. And I'm not wishing to pass judgment on the GEM project, I'm wishing to focus my energies on, as I've said, on the more immediate issues that I feel all of the resource agencies are confronted with. I believe that an aspect of restoration is an element of public assurance, an element of public credibility since a significant aspect of the injury and therefore the funding of the damages had to do with the public's belief about the condition in Prince William Sound.

1.7

So I really am struggling with this. I don't have -- at this moment I'm stuck on this category because this category is the most difficult for me to square with my own belief that we have still a very heavy responsibility right now, ongoing, to be sure that the uses and the conditions that, to the degree they have been restored, are restored, are protected, preserved and managed in the way that they were lost to the American people whose consideration through the contingent funding is really the source of the money to begin with. I'm just having a real problem with it.

CHAIRMAN RENKES: Yes, Trustee Meade.

MR. MEADE: I just wanted to share that I completely -- I feel I'm in concurrence with where Ms.

Ballard is at on this. I just wonder if the right time to

emphasize or to focus that would be at the next RFP rather than at a point where individuals that are carrying out those monitoring activities, you know, have foregone other options to be able to find funding sources for them to continue that anticipated work. So I wonder again if the RFP, as we move forward, is a place where we can really put our signature on how we shape this in some of these areas anyhow.

MS. BALLARD: If I can just add my one comment. These are all projects which, if we start, we're really committed. You know, I understand the comprising nature of Joe's comments but, you know, if we take the Bartlett and -- inner hull out and put the equipment on board, that's a long term commitment. That's not a one year commitment.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Yes, if -- Mr. Chairman, if I might respond to Dr. Balsiger's comments and perhaps I can offer Commissioner Ballard some perspective. This was the hardest part of the GEM program to put together. This was, from the beginning, we had a lot of controversy about this. And so we have a very long record of discussion of these particular projects. So I don't -- it's not surprising to me that you are having the problem that you're having with these projects.

And there was a substantial amount of debate in the scientific community. We came down to these conclusions and are recommending these projects as -- probably as integral to the GEM program. I would simply say that these are what sets GEM apart from any other agency program to manage fish and wildlife resources. And the rationale here is that we have, in addition to our sea otters and our harlequin ducks where we're putting a lot of our lingering oil research money, we also have other injured species. We have several species of commorants that are listed as not recovered. We have species such as dolly varden and cutthroat trout which are listed as status unknown.

So we have a lot of unfinished business from the restoration program in terms of injured species. And the consensus that we arrived at in the scientific community is that we can't sort these things out without some long term environmental signals. Without some long term environmental information. Also, the Trustee Council, in setting out the GEM program, in authorizing the GEM program, explicitly told us to go and shoot the gaps. They told us to take the holes in the agency mission. And what is it that natural resource management agencies like Alaska Department of Fish and Game and Fish and Wildlife Service do not have? And that is, long term environmental

background information. What was it that we didn't have that we needed at the beginning of the oil spill? We had counts of fish, we had some counts of birds and mammals -we didn't have any long term environmental background data. As Dr. Royer pointed out to you this morning, in fact there are only two long term oceanographic stations in the entire North Pacific. I feel fortunate that we've got one of them but that's just not enough. We -- in order to -- if we're going to sort out the difference between natural causes and human effects -- human effects such as fishing and the oil spill and other things like that, shoreline development -we're going to need long term environmental signals. think that in the long term, policy makers -- and spend most of my career providing science to policy makers -policy makers are going to use this money to sa -- use this data to save the taxpayers money. Because we keep getting into these environmental train wrecks, like the stellar sea lion debacle and we -- chances are that if we'd had some better information going into that, particularly long term baseline data, we could have avoided some of that conflict and we could avoided a lot of the expense that accrued to the industry as a result. So that's the thing.

24

25

The other thing about these ACC proposals that I would point out is that Weingartner -- you know, this Weingartner project, that is the -- that's the GAK-1.

That's the long term environmental monitoring program. The longest -- one of the oldest monitoring programs in the North Pacific.

The Batten project, the CPR, again, this is the only thing that anybody has that's out there to look at regime change. This is the only data that we've got that comes out of this part of the Gulf of Alaska. So the -- these projects have been carefully chosen. These have been projects such as Batten's project and Cokelet's project, have vetted not only by our own peer reviewers but there are scientists all over the Pacific who are interested and excited in these programs. These are also the same people that we call on for volunteer services when we do our peer reviews so I'm glad that they're excited. At least they know who we are, so.....

CHAIRMAN RENKES: Is there -- do you want to put all of these projects onto our list to come back to and move on to the next section or do you want to continue to discuss this section? Or what would be the will of the collective Trustees? Or do you want to have a different proposal other than the one Dr. Balsiger has proposed?

MS. BALLARD: I can go with Willette and Batten for the reasons that Phil just said. I mean, I can at least go that far. I'm not -- at this moment I'm not comfortable going beyond that but I can put those two on

If we can get six agreements on those two. 1. the table. CHAIRMAN RENKES: Was it Willette or 2 3 Weingartner that was the long term..... MS. BALLARD: Oh, I'm sorry. I meant -- I 4 5 went -- the 33 years. I've got my arrow wrong. I thought you meant that. 6 CHAIRMAN RENKES: 7 MS. BALLARD: Yeah, you're right, I'm 8 The trifocals didn't help me out there. CHAIRMAN RENKES: So Batten and 9 10 Weingartner? Yeah, sorry. 11 MS. BALLARD: 12 CHAIRMAN RENKES: Are there other -- Dr. Mundy, are the -- what are the -- I was trying to 13 14 understand between your presentation and Dr. Balsiger said 15 about the long term -- I mean, you know, the ongoing nature 16 of these projects. And are these projects that were pre -if there are projects here that have an ongoing monitoring 17 nature, were they previously funded by EVOS? 18 19 DR. MUNDY: Mr. Chairman, the Batten 20

project was tried in concept by the NPMR funding source which is said to be the North Pacific Research Board. I believe that that was an independent appropriation but nonetheless there is a route from Seattle to Hokido, across -- a trans-Pacific route of Batten that was funded by the North Pacific Research Board. As far as I know, since its

21

22

23

24

25

inception, the transect that runs through Alaskan waters, the Batten transect, the CPR transect, has been funded by us.

## CHAIRMAN RENKES: Okay.

DR. MUNDY: The Weingartner -- the -- we are the only group that's funded the mooring at GAK-1.

These ocean stations are latitude and longitude, they are locations on a map. And in general, the reason that we have such a nice long transect there -- time series for GAK-1 is that it's been a tradition to stop and take the station oceanographically on the way out of Seward. So that's where you had a lot of data. By putting the mooring in, we were able to get long time series data at depth, which is the problem. We can get surface data often from satellites if there aren't clouds but we can't get that data at depth. We were able to get a long -- a nice time series of data at depth so that was our addition here.

I'd also point out on the Cokelet project here, after all the stuff we went through with the engineers at the Alaska Marine Highway system to get them to agree to let us on board their vessel and the work that we've done with the master of this vessel and the crew to bump them up about the prospects we're doing this, I don't think I would want to be back next year saying, hey, we didn't do it last year but we're going to ask you do it

I don't think that's a -- I wouldn't advise that as a course of action. 2 3 CHAIRMAN RENKES: Dr. Balsiger. MR. BALSIGER: Thank you, Mr. Chairman. 4 5 I'm not sure if -- I probably misunderstood your question to Dr. Mundy. 6 7 CHAIRMAN RENKES: I'm just trying 8 understand the amount of reliance, I guess..... 9 MR. BALSIGER: Right but I think that the 10 Stabenow project here is the second year, which was the 11 first year, which was funded by the Trustee Council last 12 year. 13 CHAIRMAN RENKES: Right. 14 MR. BALSIGER: And I think that the Okkonen 15 project.... 16 CHAIRMAN RENKES: Okkonen. 17 MR. BALSIGER: ....it was a pilot project 18 put in place by the EVOS Trustees last year. 19 CHAIRMAN RENKES: Right. 20 MR. BALSIGER: So if your question was, are 21 these continuing, they are. I don't know if that means 22 they're totally reliant on this. And if I may, while I

have the floor, I know that Commissioner Ballard -- and I

these and not be a rubber stamp for some process that was

agree with you -- that we have responsibility to review

1

23

24

25

aqain.

put in motion. But a part of responsibility of the old Trustee council was the adoption of the GEM model.

So it isn't as if these projects came out of whole cloth just showed up here. They showed up here because we said these are the things we want to do, show us the best way to get these particular things done. And so, I don't feel like I'm abrogating the public trust by failing to reduce these by 70 percent or 40 percent or whatever goal there might be. I think that these are already reduced from the proposals that came in on target and are the best ones, all recommended by the best scientists we could get our hands on, including Dr. Mundy.

So I don't think that we're -- that by -if we, for example, chose 95 percent of these, it's not a
rubber stamp. It's a process that was started a long time
ago. It was a fine sieve that we put together that they
had to go through to get here already. So, well, thank
you.

CHAIRMAN RENKES: Do we want to agree to those that we can agree to and then put these -- the others on a list to come back to and move to the next category? Then maybe at the end we can come back to the list, does that make sense?

MS. BALLARD: I guess, for now.

CHAIRMAN RENKES: So it sounded to me like we could agree on Batten and Weingartner. Is there any more discussion on the -- after the information that Dr. Mundy provided on Cokelet, the Alaska Marine Highway project?

1

20

21

22

23

24

25

MR. MEADE: That appealed to me but I can only say from a partnership standpoint it appealed to me. Here we have the State and the State's marine highway department fostering a partnership and data collection that's going to be of high quality to the State, to EVOS and other needs. So in that the relationships have been forged, the MOU sits on the desk, it just is a good partnership relationship project to continue to move forward on. At least that's -- when I heard of this project about a month back, it sure appealed to me and it -- I've done partnerships where you have to go through this long mating dance to get approvals to do these unique approaches and all that ground has been forged. goodness, I think it's a natural for a win-win outcome. Where we've got some committed interests with marine highway and I think it's going to yard up some benefits as well as the partnership relationship. So for me, I quess I would ask why not? It's going to get us some good and important focus data. We've got the partnership established and expectations built. As long as we can get

a commitment to get the equipment tooled in time for the dry dock, it makes good sense.

CHAIRMAN RENKES: Mr. Duffy.

MR. DUFFY: Thank you, Mr. Chairman.

Speaking for myself as a Trustee and listening to Phil's explanation of this project and thinking long and hard about it, I as a State Trustee, given where we're at in terms of our coordination with the Marine Highway system and I do see some value in this project in the long term.

Kind of information that it's going to provide, I would -- I as a State Trustee would support the Cokelet project. I would recommend putting that on the approved list.

MS. BALLARD: I won't stand in the way of that.

CHAIRMAN RENKES: Okay, we got consensus on another one. So that's good, so we now have Batten, Cokelet and Weingartner that we would put in the fund category. And Bechtol, Okkonen, Stabenow and Willette that we put on the -- our deferral list to come back to. And I got a feeling that's -- we should maybe move on to the next section and come back. Is that -- is there a consensus to move on to the next section?

(No audible response)

CHAIRMAN RENKES: Okay.

MR. BALSIGER: Okay.

CHAIRMAN RENKES: The next section is community involvement. Any discussion here?

MR. MEADE: I might offer some here.....

CHAIRMAN RENKES: Trustee Meade.

MR. MEADE: .....because I did speak up earlier. I want to suggest or State on behalf of my role as a Trustee, our agency's involvement around the Prince William Sound and on down to the Kenai, our connection with our villages and communities is vitally important. I don't know if I was very satisfied with what I read in the proposals as submitted but I would feel it would be a large injustice to take the very, most impacted segment of Alaskans, and that's our Native villages in and around areas affected by the oil spill, and not have them as an important ingredient in what the research needs ahead are to be.

Again, I can't necessarily say, Dr. Mundy, that I saw anything packaged in the community component here that I would necessarily stand so firm and defend but I would certainly advocate that we -- make sure we've got an active village and impacted community component to this. I offer that, not being able to give any specificity. Perhaps could ask Ken Holbrook to assist me if he saw some in there that were essential from our agency's perspective. But I don't want to see us not have some strong component

of connection in there with those that have been most impacted by the oil spill.

16

1.7

18

19

20

21

22

23

24

25

I just might add, if I CHAIRMAN RENKES: can. I also have a strong feeling about this area and I feel we do have a responsibility to involve these communities and people, particularly the traditional ecological knowledge that they have and their subsistence culture and need needs to be part of the equation, I think, going forward. And what makes me uncomfortable about the proposal here -- and this could be my own fault for not digging deep enough, so I admit that up front -- but from what I've been able to have the time to read here is that I'm uncomfortable about what I don't know about the proposals that have been rejected and why. As opposed to just having what I see, which to me seems to be inadequate given the public testimony that we got this morning. At least we haven't communicated to those communities and those people who have other proposals. It doesn't sound like to me -- why they're not part of this group and other people are. So I was left with a very uncomfortable feeling about this section and I don't even know if it's possible, given the process. But what would make me more comfortable would be to take this community involvement piece of this plan and to go back and rethink it in terms of -- or take a -- have the Trustees get more information

about the proposals that have been rejected and take -- and have a broader maybe discussion than we could have today, just about this section. And maybe do it in the near future.

So I don't know what I'm really proposing with where we are here and I think that I'd like to have more information about how we're engaging these communities and valuing the impact of the research and the relationship of the research to the subsistence need that exists there. That's my thought.

Trustee Pearce.

MS. PEARCE: I agree with what you've said. In some ways it appears that in deferring funding for subsistence and stewardship or for the youth area watch we are aligning ourselves more with kind of the scientific research side of GEM and forgetting about the people who are most affected, the indigenous people. And I think the traditional ecological knowledge is very important. But I attended the Tatitlek WisdomKeepers' meeting and they were very useful, I think, both for the scientists who attended, certainly for the Trustees that were there, staff who was there and I would hope for the people of Tatitlek, and I think they were. It brought a community together, the elders and the children, and allowed some interaction that, right, wrong or indifferent, hasn't necessarily been

happening in those areas.

14

15

16

17

18

19

20

21

22

23

24

25

And they made suggestions of specific research that they would like to see the Trustee Council but it's kind of real time, what is happening to the kelp. Specific things that they see because they're there. Questions that they have that we aren't answering the broader GEM program. And I'm wondering if -- well, I -your idea is to kind of set these aside and get more information. And I certainly don't have a problem with getting more information but I'm wondering if there's a community piece of our entire responsibility that we should just kind of reach into GEM and pick up and move over here, outside of that more scientific discussion. I don't know that I need -- frankly, I don't know that it's very relevant to what I see as the positive outcome of a WisdomKeepers' meeting to have the STAC decide whether or not they think a fit in a scientific in a GEM model.

I think we have a responsibility to spend more time and frankly more money in working with the local communities. That during the entire time that I've been a Trustee, I've thought we weren't doing enough in that respect. I understand that there -- well we've commissioned some sort of a project that going to give us ideas. We're not sure -- I should know the answer and I don't. I don't know who's doing it. It said it was

1	supposed to be with us the end of September. Is that
2	something we have?
3	MS. BALLARD: It has been turned in so it's
4	something that we're working on right now.
5	CHAIRMAN RENKES: What's I'm sorry, I'm
6	not aware of it. What's that?
7	MS. PHILLIPS: It's a recommendation for
8	the community involvement program for the Trustees. It was
9	an actual project.
10	MS. PEARCE: Trying to fit community
11	involvement into the GEM
12	MR. BALSIGER: It's already funded.
13	MS. PEARCE:matrix as opposed to
14	anything separate.
15	MS. PHILLIPS: Right.
16	MS. PEARCE: Okay. Well, having not seen
17	that, so I
18	MS. PHILLIPS: No.
19	MS. PEARCE:obviously speak to it
20	but
21	CHAIRMAN RENKES: Shouldn't we take
22	these
23	MS. PEARCE:I still feel like there's
24	a piece of what that we're missing from community
25	involvement, particularly with the local tribal entities

which we of course have a trust relationship with that probably is that round -- square peg trying to fit into a round hole or vice-versa in GEM but that is very important to what I see as a long-term responsibility that perhaps we're not getting to but I'd like to get to. And if that means pulling these -- you know, the youth area watch seems like an excellent program to get the young people involved. Okay, it doesn't fit in GEM but maybe we could figure out how to make it fit somehow.

CHAIRMAN RENKES: Let me ask Gail, how do you -- how does the study that you just completed, you're just discussing, how does that fit with moving forward on the projects that are proposed here?

MS. PHILLIPS: Well, we just very recently received the document. So Phil and I are in the process of going through that right now. That would be certainly something -- I don't know, Phil, if there was any -- one of these programs that we wouldn't be able to wait and address both the results of that project and these at the same time a little later, if you wanted to do that.

CHAIRMAN RENKES: Commissioner Ballard.

MS. BALLARD: I don't understand the relationship between that project and the community involvement component of the fiscal '04 plan. I'm sorry, I don't see how that works.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Mr. Chairman, the question is, is what is the relationship between the report that was done by Marilyn Sigmund, it's the Sigmund report. included other people, including Patty Brown-Schwalenberg, who testified before you this morning, was one of the people on that report. The relation of that is that we were -- we had the NRC review of the program, okay. they made recommendations on how to move forward with what -- you know, with what we're calling GEM. And one of the things that they criticized the Trustee Council and the restoration program for was the nature of its relationship in terms of funding projects with the tribes, which they characterized, I think, probably the word's tokenism. what we have, even though the expenditures in the past in that program were substantial, there was a lot of money spent in that regard. So we have tried to -- I mean, I fully recognize the problem that, you know, Council member Pearce is addressing here, and that is, how do you get TEK, how do you get Traditional Ecological Knowledge into the How do you serve the interests as identified by the Council and mesh those with the interests of the people who were heavily impacted the oil spill area.

Now one of the issues here is how you define communities because is community a synonym for

tribal. Or is -- or are you going to deal with the -- I spend a very large part of my career working with tribal governments and writing fishing regulations and other things for tribes. So the question is, is how are you -- are you going to deal with the tribes in their own right or are you going to treat them as other communities. I certainly know that in working in Puget Sound, the Columbia River basin, the tribes there do not view themselves as simply another user group or simply another user community. They see that they have a different relationship with the organization.

So there are all kinds of policy issues here that I -- that as a science director I can't begin to cut through, although I can listen for you and identify them for you. We have a problem with quote, unquote, community involvement in terms of the definition of what community means and in terms of how we're going to do it. The idea of having this broad based report that had a lot of different contractors involved and certainly did have a tribal perspective in it was that the Executive Director could then take this, use it as a starting point and work with the Trustee Council to develop a coherent community involvement package that would recognize the needs of the tribes as well as other communities in the oil spill affected area.

So that's the relationship, Commissioner Ballard, of this report to the FY-04 strategy.

CHAIRMAN RENKES: But I personally just very much support that process for addressing a community involvement piece. It sounds like a good process that's It's had some stakeholder involvement in been underway. the report that you have. And I'd look forward to the interaction with you and with Gail Phillips on, you know, that report and how as Trustees we can address the community involvement. But concerns me is that, you know, Trustee Pearce's, you know, recommendation about the value of say the WisdomKeeper workshops but then seeing the funding for that is not continued in the program. sends a message that is inconsistent, I think, you know, you -- so but that's something that we could discuss within the context of the overall community involvement effort. So I'd like to see if we couldn't reach a consensus on moving this piece into that process and addressing it in the near future.

MS. PEARCE: In a separate.....

CHAIRMAN RENKES: Trustee Meade first and then Dr. Balsiger.

MR. MEADE: I'm right where you're at, Mr. Chairman. I would just want to be sure we sent a bold statement of support in this action so that it could not be

misread by our villages and communities in the oil spill influenced and impacted areas. To me, our notion here in tabling this would be to recognize its heightened importance and that we're not getting at the very fundamental components that we'd like to see us getting at. And so we're going to give it more energy, more rigor, and look to how we can better position ourselves to be more responsive to those individuals in communities and villages. If that's the notion, I can completely support what you're suggesting.

CHAIRMAN RENKES: That would be my notion.

Dr. Balsiger.

MR. BALSIGER: Thank you, Mr. Chairman. I guess my own -- I like the idea but my one consideration would be whether a good program such as this youth area watch in Kodiak suffers because we won't be able to get back together again until March. And what that does to the wrong -- I just made that date up. Whenever we -- we probably can't get back together right away and I'm wondering what damage is done to their program if there's a lapse in funding and that that would be my consideration. And I don't know if we have that information.

MR. MEADE: There were two that appealed to me, the one in Kodiak as well as the support to the schools here in.....

CHAIRMAN RENKES: Chugach.

MR. MEADE: .....Chugach. So maybe those could be a couple if we could find a couple that are relevant within the school year and time frames and then try to be expeditious in getting the other in the broader context perhaps.

CHAIRMAN RENKES: Mr. Duffy.

MR. DUFFY: I concur with a number of the number of the comments that have been stated here but I want to ask Dr. Mundy, because we do have at least one project that is a continuing project, that's the Adams fishery management project. It had one year of funding, this is a request for a second year of funding. And what impacts might that have if we chose to go this route relative to that project where he would be basically in limbo for a month or two period, when -- probably two months realistically. Because I certainly wouldn't want to send that signal based on our discussions about the project today.

DR. MUNDY: Mr. Chairman.

CHAIRMAN RENKES: Yeah, Dr. Mundy.

DR. MUNDY: Yes, he would be in limbo, as are the other continuing projects. I mean, they don't have funding at this time. Also, Mr. Chairman, if I may, I'd like to point out that the Cooper here is -- perhaps this

was not the right to put it but it was submitted under community involvement. This is part of the watershed package. This is the one that brought the -- we called for in our watershed RFP community involvement in using community based sampling to achieve our purposes. So this one is in addition to the -- this one is unlike the others in here. This one is actually using people in the community to go out and collect data. And this is the community based sampling project.

CHAIRMAN RENKES: Trustee Pearce.

MS. PEARCE: I have a question about the State's recommendation. Obviously there's something about the community involvement that -- because none of them were on your list for funding for the two youth watch, the Schneider and DeLorenzo -- set those aside and set aside at the moment the -- Patty's project. For Adams, Baird and Cooper, what's the, I guess in looking at which ones to fund and which ones not to fund, what was the reasoning behind not having those?

MS. BALLARD: I can speak a little bit about some of them, not all of them, particularly Cooper. If I understand Cooper correctly, a citizen monitoring -- we don't have any objection to citizen monitoring, it's a question really of wanting a structure that assures that that monitoring is fed properly into -- it started with

some sort of baseline but it fits -- it's -- the data that's collected fits into a broader plan. We've had a number of similar challenges with State funds where we had excellent projects that were isolated from one another. They didn't hang together in a way, the targeted -- the resources that perhaps most needed monitoring, nor did they hang together with an overall monitoring strategy so that information you got here and information you got here tied together in a way that would make it predictive of situations which were similar someplace else. So that's the -- that would be why I wasn't in favor of Cooper.

2.4

Adams, I confess, is an oversight. I think that the comments that both he made and then that Dr. Mundy made, I would feel very much in favor of the Adams project.

CHAIRMAN RENKES: Go ahead.

MS. PEARCE: I'd like to just throw out a suggestion that we take the two youth watch projects, the Schneider project and the DeLorenzo project and go ahead and move those forward. And take the Brown-Schwalenberg and set it aside just until we have an opportunity to go through the new proposal or model report, whatever, and then see if we don't come up with something that fits that project better. And doesn't necessarily need to be even -- in my mind, I still don't mind if it doesn't fit the exact matrix of GEM. And also, it might even be more expensive

once we've read what the report says.

MS. BALLARD: Drue, point of clarification, do you mean this Brown-Schwalenberg project or the other one? I think you all are looking at the WisdomKeeper and isn't the WisdomKeeper in the one that isn't even on this list?

CHAIRMAN RENKES: Right, that's correct.

MS. BALLARD: Yeah.

MS. PEARCE: Oh, I'm sorry.

MS. BALLARD: I wonder if that isn't the one you two mean?

CHAIRMAN RENKES: Yeah....

MS. PEARCE: Probably.

CHAIRMAN RENKES: ....and what I was thinking is, is that if we enter into -- if we look at the report and then have a broader discussion about community involvement then we might be able to include a discussion of the WisdomKeeper program and other things that didn't make it onto this list that we haven't been able to see.

MS. BALLARD: I would be more comfortable with a community involvement focus that didn't have to meet the rigors of the -- didn't have to meet the rigors that have been applied through the GEM proposal but address the more conventional involvement that allowed the standards for involvement to be locally set and traditionally

oriented and not peer reviewable. I'd feel a lot more comfortable under those circumstances. But I still think we ought to look at Adams. I think that that's.....

CHAIRMAN RENKES: So how about a proposal that we change the DeLorenzo, which is the Chugach area project, from defer to fund and we fund the Schneider Kodiak youth area watch program. And we fund Adams and then we put Baird and Cooper and Brown-Schwalenberger [sic] on the -- well, Baird and Cooper on a deferred list, the set aside list that we're creating for the end and then -- and the Schwalenberger [sic] project already is on a defer status.

So that we'd agree now and then move on to the next section, that we want to do -- we want to fund Schneider, the Kodiak youth area watch, the DeLorenzo youth area watch and Adams. And then put the rest of the proposals to the defer list with a commitment that Trustee Meade had articulated so well. That we feel like we're in -- we may be inadequate in this area, it may be the rigor of the GEM process has helped create that situation. We want to look at community involvement within the context of the report that's just been submitted and we want to do that in the near term.

MS. PHILLIPS: And hold the defer -- those deferred projects until we can get together and meet

on....

CHAIRMAN RENKES: That's right.

MS. PHILLIPS: .....as a whole.

CHAIRMAN RENKES: That's right.

MS. PHILLIPS: All right.

CHAIRMAN RENKES: Except at the end, we may want to -- taking Trustee Ballard's comments into account and Dr. Mundy's, the Cooper project, maybe we -- should be viewed in light of the watershed area on the deferred list.

MR. MEADE: And it would be, I think, helpful, if I may, Gail, if we could perhaps, you know, not wait until we next meet but actually begin to do some homework that maybe we could ask the -- your staff here to help us.....

MS. PHILLIPS: Sure.

MR. MEADE: .....explore so we could begin to take a look at what are the options that may be with more of a ethnographic or a social science -- social ecology slant that we might have gone at, you know, to be able to gain more in that context of traditional ecological knowledge versus in having it so driven by perhaps the structure GEM put it into. And that way when we do meet again, perhaps we will have had a pre-reading package that we could look through. Perhaps even if it's not inappropriate we could engage some elders and tribal or

1	village input or participation in shaping that.
2	MS. PHILLIPS: We have the annual work
. 3	meeting will be in January and many of the members would be
4	coming to that, maybe we could
5	MR. MEADE: Have a concurrent session or
6	a
7	MS. PHILLIPS:arrange the meeting
8	during that time.
, 9	MR. MEADE: That would be wonderful. That
10	could really help drive us somewhere with us rather than
11	leaving it languishing.
12	MS. PHILLIPS: Right.
13	MS. BALLARD: May I clarify with Gail the
14	I want to be sure I understand what this the other
15	project is. We the draft plan was circulated, was it
16	not, in the late summer?
17	MS. PHILLIPS: The draft was, I believe.
18	It went out
19	DR. MUNDY: The draft Work Plan?
20	MS. PHILLIPS: Not the Work Plan, the
21	community involvement one.
22	MS. BALLARD: Was it not circulated in the
23	late summer?
24	MS. PHILLIPS: Right.
25	MS. BALLARD: Was there not why do I

feel a sense of familiarity with this?

MS. PHILLIPS: I think that it was, before I came on board.

DR. MUNDY: I'm sorry, Mr. Chairman. I -Commissioner Ballard, I'm sorry, I don't know -- I do not
believe it was. I mean, we -- oh, let me think. We had
some -- we had a meeting of the public advisory committee
with the contractors, okay, to -- and the staff here at the
Trustee Council in August to talk about finishing up the
report and what was -- you know, what they were going to
cover in the report specifically and so forth. But there
was not draft circulated. In fact, the draft that we have
on hand now has not been circulated except the peer
reviewers. So that draft has not been out of this shop,
I'm certain of that.

MS. BALLARD: I'm sorry, I'm just trying to understand exactly what this product is. And I guess we'll wait and we'll something distributed to us.

DR. MUNDY: Well, you -- I'm sorry, Mr. Chair.

CHAIRMAN RENKES: Go ahead.

DR. MUNDY: If I may. Commissioner

Ballard, you may get a sense of what it is because we can

give you the contract. We can give you the funded -- what

was funded -- the project description that was funded so

1 that you can see what they're supposed to produce. 2 MS. BALLARD: That would be helpful. 3 that would be helpful. CHAIRMAN RENKES: Dr. Balsiger. 5 MR. BALSIGER: Thank you, Mr. Chairman. 6 Just to clarify, Ms. Phillips, did you suggest that we 7 would have Trustee meeting concurrent with the January symposium at which we'd make decisions on these? 8 9 MS. PHILLIPS: Well, you could -- we could 10 do that or you could have a workshop during the -- during the annual meeting, we could have a workshop with the 11 12 elders and the people involved if you want. Or we could do 13 it by teleconference. I mean there's a lot of different 14 options. 15 MR. BALSIGER: But specifically relative to deciding which ones to fund, if we're deferring them, that 16 17 would be the time frame we'd make that decision, you're 18 suggesting? 19 MS. PHILLIPS: Right. Right. 20 MR. BALSIGER: Thank you. 21 MS. PHILLIPS: But I'll send you all the 22 material ahead of time. 23 CHAIRMAN RENKES: And I'd prefer to have a 24 workshop where there was some information gathering and

some dialogue and then digest it and then....

25

1	MS. PHILLIPS: And then
2	CHAIRMAN RENKES:maybe quickly come
3	back at a teleconference or something and make a decision.
4	MS. PHILLIPS:okay and to make the
5	decision, sure.
6	MR. MEADE: I think that workshop idea
7	where we could have opportunity to interface with elders
8	and interests from the community level would be invaluable.
9	MS. PHILLIPS: And the workshop dates are
10	the 14th through the 12th through the 16th.
11	MS. PEARCE: Of January?
12	MS. PHILLIPS: January.
13	MS. PEARCE: Is that a time frame that we
14	can bring some elders in?
15	MR. KOMPKOFF: Russian Christmas in the
16	villages is on January 7th, 8th and 9th and New Year's is
17	about a week after that.
18	MS. PEARCE: Uh-huh.
19	MR. KOMPKOFF: If we are to bring elders
20	in, then I think about the 14th.
21	MS. PEARCE: Okay.
22	MS. PHILLIPS: What did you have during the
23	7th, 8th and 9th?
24	MR. KOMPKOFF: That's Russian Orthodox
25	Russian Christmas.

Oh, yeah. 1 MS. PHILLIPS: 2 MR. KOMPKOFF: (Indiscernible - away from microphone and communications on phone system) 3 4 MS. PHILLIPS: Right. 5 MS. PEARCE: New Year's and what? I'm sorry, I can't hear you. 6 7 MR. KOMPKOFF: New Year's is the 14th, I 8 think. And then generally from..... 9 MS. PHILLIPS: Well, we can schedule it -we can work with you guys to schedule it when it work out. 10 11 MS. BROWN-SCHWALENBERG: (Indiscernible -12 away from microphone) middle of December a round of regional meetings, maybe that would make for 13 14 (indiscernible) MS. PHILLIPS: Patty, if you could get me 15 16 those dates, please. Thanks. 17 MR. MEADE: And if I could coordinate with you, Gail, I would really like to -- I've got some 18 19 conflicts scattered through January, I'd really like to find a date where I could actively participate. 20 21 MS. PHILLIPS: Sure, sure. Great. 22 CHAIRMAN RENKES: Okay, shall we move on to 23 the lingering oil? Should I restate where I think we were on community involvement. We were at Adams, Schneider and 24

25

DeLorenzo. And then....

1	MS. PHILLIPS: Hold the rest for the
2	CHAIRMAN RENKES: Hold the rest, okay.
3	MS. PHILLIPS: Uh-huh.
4	CHAIRMAN RENKES: Lingering oil.
5	DR. MUNDY: Mr. Chairman, data management.
6	MS. PEARCE: You skipped one.
7	CHAIRMAN RENKES: Oh, I'm sorry.
8	MS. BALLARD: We've gotten we're at
9	lingering oil. I think I can make this easy. I propose we
10	fund all of these.
11	MR. BALSIGER: Yeah, we skipped one because
12	of a mis there's a typo there.
13	CHAIRMAN RENKES: Is there something in
14	between?
15	MS. BALLARD: I know that but I had already
16	turned
17	CHAIRMAN RENKES: Oh, I'm sorry.
18	MS. BALLARD:my page so I was just
19	going to dispose of lingering oil before I went back to
20	data management otherwise identified as community
21	involvement round two.
22	CHAIRMAN RENKES: Okay
23	MS. PHILLIPS: Misidentified.
24	MS. BALLARD: Yeah.
25	CHAIRMAN RENKES: Well, let's just since

1	Commissioner Ballard has made a proposal, lingering oil.
2	We accept the Work Plan recommendation.
3	MS. BALLARD: Yeah. That was where we
4	were.
5	CHAIRMAN RENKES: Any discussion?
6	MS. PEARCE: Well, what does that do to the
7	sea otters and the
8	MS. BALLARD: I can't hear you, Drue, I'm
9	sorry.
10	MS. PEARCE: I'm sorry, would you restate
11	what you were
12	CHAIRMAN RENKES: Well, on page 27 is
13	MS. PEARCE: Right.
14	CHAIRMAN RENKES:the Work Plan
15	recommendation and
16	MS. PEARCE: Right.
17	CHAIRMAN RENKES:we'd accept it as it
18	is.
19	MS. PEARCE: With the deferrals?
20	CHAIRMAN RENKES: Yeah. The I'm sorry.
21	MS. BALLARD: No, no, I'm sorry. I don't
22	know I don't have an opinion about the deferrals, I was
23	just going through the fund contingents and then we talk
24	about the deferrals.
25	CHAIRMAN RENKES: Fund and fund contingent.

Dr. Balsiger, you had a comment.

I believe that the -- we're sort of confused a little bit because last Friday we had a meeting in Seattle where we went over some of the background on the fund contingent and the deferred ones following -- hearing that we were going to decide whether they should be included in the fund part. But I think Dr. Mundy told us this morning that we're slightly ahead of that but we can't delay making those decisions. So I'd suggest that we include both fund contingents and the Bodkin sea otter one as well. But I'm not sure if that's what Commissioner Ballard was indicating.

MS. BALLARD: I just hadn't cast my eye down on the deferreds, Jim, so if I understand you then, it would be Fall, Irons, Nelson, Rosenberg, Short and Bodkin? Is that what you just said?

MR. BALSIGER: Well, I -- Mr. Chairman, Ms. Ballard, I'm actually just trying to capture what I thought was -- without interjecting my own attitude here, I thought that because of the meeting we had on Friday that we would agree to fund Short and Weise, which are fund contingent and defer Bodkin, which is defer.

CHAIRMAN RENKES: Yes.

MR. BALSIGER: But I may have missed

something. I can't recall what the Irvine issue was now.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Yeah, Mr. Chair, I would suggest that you consider moving the -- changing the deferred projects to fund contingent. When I earlier spoke to you about how we handled deferred projects in the past, I was speaking of a method that worked when we approve the Work Plan on August the 3rd, which is when we would normally approve. And we're now three months past that. So basically we need to give the signal to these folks that they're -- we're working on getting them their money and that they can expect to get it.

So I would just simply recommend -- the Irvine project is a -- the only project that we have that's outside Prince William Sound. We did have some presentation, even though Dr. Irvine was not there, we did have some presentation on oil outside of Prince William Sound. And it was indicated that yes, there is still -- there is oil outside of Prince William Sound and it's most likely to be under these boulder armored beaches. So I would recommend that if you change these three defers to fund contingent and accepted the package that we could take of the Trustee Council's wishes on that.

CHAIRMAN RENKES: Any comments about that?

MS. BALLARD: I'm happy where Jim was,

which did not include Irvine.

CHAIRMAN RENKES: Any further discussion of

3 | Irvine?

MR. BALSIGER: Mr. Chairman, I didn't intentionally delete that, I was just trying to bring us up to date.....

CHAIRMAN RENKES: Right.

MR. BALSIGER: .....with the discussions we had. And I do recall now that even though Irvine wasn't in Seattle, that there was the information on outside of Prince William Sound on the boulder and armored beaches which is part of the problem. So I think I would recommend we include that as well. That would be the whole package then.

MS. BALLARD: I'm getting people nodding at me. While.....

MR. DUFFY: Mr. Chairman.

CHAIRMAN RENKES: Commissioner Duffy.

MS. BALLARD: I yield.

MR. DUFFY: I was hung up on exactly the same issue that the proposer wasn't at the meeting on Friday. I anticipated that then, we still had some discussion relative to the issues. And from my perspective I at this point would support including Irvine under the fund contingent.

CHAIRMAN RENKES: Okay, so then the proposal is for lingering oil to fund the three funded projects and to leave in the fund contingent category Rosenberg and Short. And then to change Rice, Irvine and Bodkin to fund contingent from defer. Commissioner Duffy.

MR. DUFFY: Well summarized, Mr. Chairman.

Just a quick question to Phil. You have this list of

projects that have been funded in the past and people are

late on their reports. Are there any issues here related

to that list that need to be resolved?

DR. MUNDY: Mr. Chairman, we are working with the authors here. The reason that -- I believe that Rosenberg is fund contingent problem has been resolved.

I'm not aware that Dr. Short's fund contingent issue has been resolved but we're working on it. We -- and there is -- part of the issue with Dr. Irvine's boulder armored beaches was a problem with a needed publication. There's a missing publication here. So I guess that's really all I can respond with.

CHAIRMAN RENKES: Yeah, I think understanding on the fund contingent is they're funded contingent on you being satisfied that whatever condition needs to be met, gets met.

MR. DUFFY: Is that your understanding. Great, thank you. Thank you for that clarification.

CHAIRMAN RENKES: Okay, good. So we've -
I think we've got a -- we've got consensus on the lingering
oil section and let's back track. Inadvertently skipped
over data management. And I'm just going to recognize that
we're a half hour over our estimated time of departure. Do
we want to continue? Do we -- for another half an hour and
see if we can't get through all the categories more
quickly?

2.0

MS. PHILLIPS: Mr. Chairman.

CHAIRMAN RENKES: Yes.

MS. PHILLIPS: If I could just interject, you're here, if we can get as much done today as possible, that's better for everybody. So, you know, what -- the old adage of a bird in the hand. We could go -- continue with -- through with this, that would be great.

CHAIRMAN RENKES: Dr. Balsiger.

MR. BALSIGER: I was going to suggest that we work as hard as we can to get through the Work Plan at least.

CHAIRMAN RENKES: Yeah.

MR. MEADE: I was going to suggest if we can't get to the rest of the business slated for the day, perhaps Gail can give us a sense if any of those items can hold but I think we should get through the Work Plan.

MS. PHILLIPS: And we could do it by

ㅗ	teleconference if necessary.
2	CHAIRMAN RENKES: Okay, well, it's okay
3	with you, Commissioner Duffy?
4	MR. DUFFY: Absolutely, I think we should
5	keep going.
6	CHAIRMAN RENKES: Okay, well, I don't want
7	to make a long conversation about this. Oh, I'm sorry,
8	Trustee Pearce.
9	MS. PEARCE: I came all this way from
LO	Washington, I'm going to stay until we're done.
11	CHAIRMAN RENKES: Okay, good. Let's go.
.2	MR. MEADE: And I got to go to Washington
.3	in the morning and I got to have a suit to go with.
L <b>4</b>	MS. BALLARD: Did you just make a decision
L5	about how long we're going to sit here?
L6	MR. MEADE: 8:30.
L7	CHAIRMAN RENKES: Yes.
.8	MR. MEADE: We're going to be done by 8:30.
L9	MS. BALLARD: No, no, we got to catch a
20	plane.
21	MR. DUFFY: Not all of us.
22	MS. BALLARD: Some of us.
23	MR. DUFFY: Press through the agenda, let's
24	keep going.

CHAIRMAN RENKES: Now we just said that

we're going to try to finish this in the next half hour.

MS. BALLARD: Oh, well we'll catch the

3 plane then.

CHAIRMAN RENKES: So you'll catch your plane. Data management. We skipped data management by accident and we're back to it. Is there a discussion about data management? Commissioner Ballard?

MS. BALLARD: I have a question for Dr.

Mundy. This is an area in which I struggle to understand
what is available already. But we at DEC participate in a
project called CIIMMS, which I believe was funded by -- in
part by EVOS at one time in the past. And DNR participates
in also. And Ron behind you can tell you what it stands
for if anybody wants to know. But is there a reason that
I'm missing why we don't simply work through that project,
which is a meta-data project, as I understand CIIMMS.

DR. MUNDY: Mr. Chair.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Yes, Commissioner Ballard, we are working through CIIMMS as the scope of CIIMMS is not sufficient, as I understand it, for our purposes. We do indicate in the narrative here of the document that we are working with CIIMMS to the extent that it's possible. The other thing is, is that CIIMMS was initiated and put together prior to the time that we were thinking about GEM

in its current context. And the concepts of data management that have come to us in terms of using distributed information systems, web-based systems and so forth, are a good bit different than the investment we made in CIIMMS. And yes, the Trustee Council did put in, I believe it was about -- and Carol Fries is here, she can help me -- but I believe it was about two million dollars into the up front developmental cost. So we spent a lot of money on CIIMMS and it is a useful system insofar as it goes. We're looking for a -- for systems here that are a little more broader in scope and a little more flexible in terms of web-based distributed systems.

1.3

MS. BALLARD: If I could follow on that.

It seems to me unfortunate to them, introduce yet another system to be running parallel rather than to fix SIM -- let me finish. The State agencies at least and any other participants in CIIMMS will continue to collect information. And some of that information if entered and if the data quality objectives met the parameters for whatever database design we had, we would be adding to it, not otherwise. I mean, it just seems to me a shame to pursue a whole new system when we have this one in place. And not to dedicate our efforts to fixing CIIMMS so it satisfies the GEM objectives.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Mr. Chair, the -- I am not an information technology professional. Okay, let me make that clear. Long ago and far away I might have been but I'm not now today. The advice that I have is that we -this is not a parallel system to CIIMMS. This is not a duplication of effort. This is an effort -- both of these efforts here do things that CIIMMS cannot do, that CIIMMS was not designed to do. And we are fully cognizant of CIIMMS and -- but limiting our ability to handle data and particularly data visualization, for example, the OBIS project here has an implementation of the only 4D visualization tool that's available outside of the military. And by 4D, I mean it has all the dimensions of location and depth and time. So bringing OBIS along, you would have a 4D visualization capability on your data. CIIMMS, to my understanding, has no visualization capability at all. That is, the ability to plot your data out there on a map and get an idea of what the distribution of the data is and what the density is.

So CIIMMS was -- CIIMMS is a part of our strategy and CIIMMS is something that we're using but I don't see that this is parallel or duplicative in any way with regard to CIIMMS.

CHAIRMAN RENKES: Trustee Meade.

MR. MEADE: I just wanted to -- I think one

know, the data I entered once and utilized for multiple purposes is an excellent principle. With that though I don't want -- again, I probably am where I was in the discussion with the communities and villages for totally different reasons. There's no passion behind data like there is for our communities of context. But what I will say, coming from an agency who essentially just a few years ago, if we were in the form of a bankruptcy, would have been bankrupt. We are getting our data systems and data sets together and it has been a struggle and it's taken a monumental investment.

And as we take a look at the work of EVOS and the work that we're chartering here with GEM, I think it's important that we do give it good digital leadership or good leadership for our daily needs. For me, data is important to access. For the work I've listened to that the science group has done, much of that has been accomplished through web interface and through digital objectives. So we -- I'm gaining a sense in the short time I've been interacting and listening to Gail's staff that there's a pretty important access to highly effective data systems. Now I too, with a much stronger confession than Dr. Mundy, I'm not a data expert but I do know that they're critical to our ability to perform the work we do. If some

of that can be accomplished through CIIMMS or SAM or SUE, it should. I have no knowledge there to say but I will say we should have a very robust data system so that we can continue the collaboration that I understand it's able to be enabled through an effective use of data in technology.

So I certainly wouldn't want to see us back off of the importance of having quality data but I also would agree with Ms. Ballard in the context that we ought to be not reinventing, we ought to be enhancing so that whatever the objective is, if other systems in the state rely on this, that it's all enhanced. That's it, you know, brought along, so....

CHAIRMAN RENKES: Dr. Mundy, do you have a comment about that?

DR. MUNDY: No.

CHAIRMAN RENKES: Any other comments?

MS. BALLARD: No, I'm -- I mean, I guess
we're all frustrated.

CHAIRMAN RENKES: Well, it's difficult because we're not convinced -- well, I'm not convinced but then again, I don't know. So I suppose.....

MS. BALLARD: Well, we have struggled to get this CIIMMS tool with, I think, considerable funding from EVOS and we've got two large Federal or State agencies

that are collecting data and imputing it and it just -- I'm just very frustrated that we would then not have that data be useful to the degree it could be in some longer term data collection effort. I've said what I had to say.

CHAIRMAN RENKES: Compatibility issues maybe or....

DR. MUNDY: Mr. Chairman, again, I would say that it, you know, here -- the GEM objective was to create a comprehensive web accessible geo-reference database of the marine related physical and biological databases of the Northern Gulf of Alaska. Building on standards and systems already in place, such as the State of Alaska's Cooperatively Implemented Management System and the STORET database. There is no duplication of effort There will be utilization of CIIMMS data. -- that is part of our -- chapter nine in the GEM program I mean we -- I don't know how I can say it document. plainer than that. We're moving -- you know, we're moving forward here. We're going to work with existing systems. And look at the level of expenditures. I pointed out, I believe, that we -- EVOS invested two million dollars in the CIIMMS system. However the CIIMMS system is specific to a location and a particular set of uses and utilities. We're asking you here to invest -- in this case there are no out year costs. It's less than \$200,000 because I don't

include the habitat website in this effort. And out of it, we'll get a tremendous capability to not only find information but also to visualize it. So I think that the -- that there are newer technol -- I do know for a fact that there are newer technologies available now than when we put CIIMMS together. We put an awful lot of money in the programming -- in CIIMMS. And I think that those efforts are easier now because of the types of software that are available for web-based distributed systems.

Again, I'm not criticizing CIIMMS, I'm just saying that CIIMMS was built on the technology that was available at the time it was built. And as we move forward, we have to take advantage of the good that we can find in the systems that now exist and put together the best system that we can possibly find. So the cost that --given the history also -- given the checkered history of the Trustee Council's data management type activities, I think that this is a very modest request for some very large returns in data management, which is fully consistent with existing efforts such as CIIMMS.

CHAIRMAN RENKES: Dr. Balsiger.

MR. BALSIGER: So effort would -- is really just a -- for example, you'd be able to apply GIS tools to the data that's already in the CIIMMS database. GIS algorythyms and all that stuff being practically brand new

on the web. So it's just a way of accessing what might be in CIIMMS or what might be in Race Base or what might be in the Observer data system should we ever make that -- get over the confidentiality items. So it's just a top layer or something like that.

CHAIRMAN RENKES: Yes.

MR. BALSIGER: Thank you. Mr. Chairman, I propose we support all of them.

CHAIRMAN RENKES: Commissioner Ballard.

MS. BALLARD: Can I ask Phil why he was excluding in his summary the Saupe work or Soupe [sic], however she pronounces it?

DR. MUNDY: Mr. Chairman.

CHAIRMAN RENKES: Yes, please go ahead.

DR. MUNDY: It's not that Saupe's project is not a worthy project, it was just in the context of CIIMMS and STORET and other existing databases that I was speaking. The Saupe's project is a -- is specifically oriented towards setting up a habitat website that will help us coordinate observations on particular types of shoreline management data. It came out of -- we have a lot of different groups that are using this -- using these data and this seemed like a very cost effective approach to allowing everybody to play on a level playing field in terms of getting their hands on the data -- the shoreline

data and that sort of thing. So this is not a -- this is 2 not a database project per say but rather a website coordination type project. 3 CHAIRMAN RENKES: Commissioner Duffy. 4 5 MR. DUFFY: Just a quick question on that, Dr. Mundy. In the end, where will this be accessible at? 6 7 This website? I'm assuming the agencies would all have access to this habitat web-based stuff. I've looked at 8 some that's quite intriguing but I'm just wondering where 9 10 is it accessible at, is my question, in the end? And -yeah. 11 12 DR. MUNDY: On the website that's maintained by the Cook Inlet Regional Citizen's Advisory 13 14 Council. 15 MR. DUFFY: Thank you. 16 MS. PEARCE: That's for which project? 17 CHAIRMAN RENKES: The Saupe habitat website. 18 19 MR. DUFFY: Saupe. Saupe. 2.0 CHAIRMAN RENKES: Trustee Pearce.

1

21

22

23

24

25

MS. PEARCE: For the Kiefer and Macklin projects, who are the end users there? Who would we expect to want to use this information. Not me, because I can't even turn a computer on.

DR. MUNDY: Mr. Chair.

CHAIRMAN RENKES: Yes, please.

DR. MUNDY: The end users in the Macklin, for example, would be the staff here. Would be contractors who are looking for data to use and applications for projects. They could be any agency or university group of public based group that is looking to start a research project and they want to know what's going on out there and they want to find where the data are. In the case of Kiefer's project, I think he would have all of those same people, such as Trustee council staff and researchers and that.

Plus I think you'd have a substantial component from the public and also what I would call line professionals at natural resource management agencies.

Because if the Kiefer project works out as planned, we'll be able to hook up just about any database that you can think of to this visualization software. And what -- which databases we actually hook up to it through the OBIS system and the easy software that's provided by Kiefer will depend on what the demand for this is. I'm quite anxious to get a hold of this because this is the software that I've seen used to make some great maps of data distribution of plants and animals in relation to currents and so forth. So it's a -- it's going to be a very visually attractive kind of package. So I would expect that once the general public

	became aware of this type of thing that you would find
2	people would be more and more members of the public
3	would be looking to this.
4	MS. PEARCE: If I can continue.
5	CHAIRMAN RENKES: Yes, please.
6	MS. PEARCE: So does this get us closer to
7	integrating what all the different groups are doing? Like
8	Mr. Parker was talking about earlier today when North
9	Pacific Research Board and we within GEM and the Arctic
10	Research Commission all have access and easier, more
11	coordinated access to stuff?
12	DR. MUNDY: Mr. Chairman.
13	CHAIRMAN RENKES: Yes.
14	DR. MUNDY: The shortest answer I've been
15	able to give so far, yes.
16	CHAIRMAN RENKES: Okay, well Dr. Balsiger
17	has proposed that we accept Kiefer and Macklin or was it
18	all three, I can't remember.
19	MR. BALSIGER: I said all three, Mr.
20	Chairman
21	CHAIRMAN RENKES: All three.
22	MR. BALSIGER:because I thought Saupe
23	was relatively inexpensive for the description.
24	CHAIRMAN RENKES: Any discussions on that

proposal? Can we reach consensus on that or....

MR. MEADE: I sure agree. Again, I don't feel we can under invest in having a robust ability to deal with data and technology. I think it will only service us as we move into the 21st century as we move ahead. So I think these are going to be very reasoned investments in being able to continue what I already am pretty -- very impressed by the use of technology here at EVOS. I'll say I've come to see the things that they've done with their science group and others through web-based initiatives.

I'm very impressed and I think we should continue to try to keep in front of the power curve rather than slip behind. And it sounds to me as though Dr. Mundy has highlighted that we will fully be incorporating existing systems and bringing them with and enhancing as we go. So.....

CHAIRMAN RENKES: And it's my understanding, Dr. Mundy, that this -- all the data that's been generated through all the research that EVOS has funded over time, that obviously this -- we got the synthesis effort going on, you know, the book and -- but all the data would be included in this system. Is that correct?

DR. MUNDY: Mr. Chairman, no. Part of the problem that we're addressing here is -- I mean, for example, the Sound ecosystem assessment program, a 25

million dollar ecosystem assessment program ended in 1999 and I as science director still can't get access to most of that data. And, as I said, that's because we were not proactive in the data management area in those days. We hadn't set up rules and -- for our contractors, we hadn't set up the rules of the game. So we will be getting a hold of our past data, our older data, as we can. But there's -- because of the way that the contracts were set up, there's substantial issues about ownership of that data.

But we are -- we're taking steps now when we let contracts, to make it clear we have a data management plan for each one of those and the -- we make it clear that the ownership of the data is here and we control it. That's one of the changes we've made but no, past data is something that we will be incorporating as we have time and money.

CHAIRMAN RENKES: Commissioner Ballard.

MS. BALLARD: I want to be sure I understood -- stand something you just said, Phil. That there are some collections of data that we paid for that we don't have rights to use in a database?

DR. MUNDY: Mr. Chairman, I can't -- I try not to practice law without a -- you know, without being admitted to the bar. I don't know about rights,

Commissioner Ballard, but there are -- well, there's on 25

million dollar data set that I can't get my hands on.

MS. BALLARD: A 25 million dollar data set?

DR. MUNDY: Yes.

MS. BALLARD: Wow.

DR. MUNDY: And I don't intend, on my watch, to see that -- I don't intend to see something like that happen on my watch.

CHAIRMAN RENKES: So whether it's inside or outside GEM or the GEM model or whether we, in future RFP's, you know, limit the scope or guard against scope creeping, we -- this data piece really relates to the way EVOS is doing its business and all the data that we collect, whatever we're doing. And to the extent that we can have available past data sets will be included in this. It will be coordinated with CIIMMS and the data that we collect in the future will be part of this new technology that -- is that correct?

DR. MUNDY: Yes, that's correct. I don't want to give you the impression that these two projects are the whole picture because we have our data manage -- data systems managers working on a lot of different fronts to see that this happens with other sources of funds, such as those that have already been approved on September the 3rd.

CHAIRMAN RENKES: Uh-huh, okay.

MR. DUFFY: Mr. Chairman, if I could.

CHAIRMAN RENKES: Mr. Duffy.

MR. DUFFY: I'm guessing that the Trustee Council members have consensus on this set of projects. I have listened to a couple of Trustee Council members and there's at least a couple that know a whole lot more about this arena than I do. I'll be the first to admit that. But Phil has described the importance of this information to the Trustee Council process, we move forward. So I think we're ready to sign off on this one and move forward unless I hear differently. Just a suggestion.

CHAIRMAN RENKES: Okay, I'll take consensus. Any objections?

MS. BALLARD: I'm on modeling.

CHAIRMAN RENKES: Somebody must think I'm finished. My phone keeps -- okay. We're on modeling. So for the record, we accepted all three data management proposals as recommended by the Work Plan. Modeling and mod -- document is on page 28, the chart. We've got two recommendations to fund, McNutt and Schumacher. Any discussion of these two? Yes?

MS. BALLARD: Is this not the instance in which, Dr. Mundy, you said these folks would coordinate with each other better if we paid them?

DR. MUNDY: Mr. Chairman, may I respond?

CHAIRMAN RENKES: Yes, Dr. Mundy.

DR. MUNDY: The comment that I made was is that I've noted that communication among modelers is much more efficient and effective when we are paying them.

1.0

MS. BALLARD: In all seriousness, since this seems to be a NOAA centered effort, Jim, is this happening anyhow?

MR. BALSIGER: Mr. Chairman, I think it's happening at a low level but I think if you identify a project specifically designed to bring them together, it's likely to speed it up a great deal.

CHAIRMAN RENKES: Can I ask, Dr. Mundy, why it is that the funding is constant over the three year period? Is there any tailing off of the investment here?

Is this a ongoing payment to keep the modelers happy?

DR. MUNDY: Mr. Chairman, this is just simply -- this is pretty much funding for McNutt and Schumacher (Two Crow) and some staff, some -- we're providing some of the money for the workshops; they're providing some of the money for the workshops. But basically this is a process to build a community that will put together our model for us. I mean, I do agree with Dr. Balsiger that this communication is occurring on a lower level but if I go to -- if I walk into the NOAA shop or Pacific Marine Environmental laboratory and I try to grab one of their programmers and I say, hey, I need to you to

fix this up so that it works for me in the Northern Gulf of Alaska, that's not going to work. Somebody like Eddie Bernard is going to throw me out for coming in and messing with their people.

2.4

So what we're trying to do here is put together -- is have them -- put together a group that will focus existing models on our needs. Okay, so that's the key difference here, is that the -- and we're hoping that by the end of 2000 -- by the end of this effort in 2006, we will have identified a modeling specific to particular applications in the nearshore, in the watersheds and so forth and this thing will go under its own power and we won't need to do something like this. So this is sort of a project to get the modeling going and two very capable people.

CHAIRMAN RENKES: Okay, so are what we getting here is we're really getting two people? We're getting a percentage of their time?

DR. MUNDY: Yes.

CHAIRMAN RENKES: So for \$80,000 a year, how much of McNutt's time are we getting?

DR. MUNDY: Well, the whole \$80,000 is not devoted to McNutt's time. I don't have the....

CHAIRMAN RENKES: So some of this is paying
-- like you said, paying for meetings or other expenses?

1	DR. MUNDY: Meetings and
2	CHAIRMAN RENKES: Just time and expenses.
3	DR. MUNDY:also assistance, I mean,
4	in such as research assistance or some people like that
5	CHAIRMAN RENKES: And is it a fixed fee or
6	is this an estimate of time and materials?
7	DR. MUNDY: This is fixed fee. They
8	provide deliverables for a price.
9	CHAIRMAN RENKES: Okay. I'm sorry, Dr.
LO	Balsiger.
L1	MR. BALSIGER: Yes, to Commissioner
.2	Ballard, these aren't really NOAA projects. I often don't
L3	understand how the lead gets assigned. I see that McNutt
L <b>4</b>	says it's ADF&G lead and Schumacher NOAA lead but they're
L5	neither of them are NOAA people or ADF&G people.
L6	MS. BALLARD: I accept that. These don't
L7	appeal to me. I'm sorry.
18	MR. DUFFY: Real quickly.
L9	CHAIRMAN RENKES: Trustee Duffy.
20	MR. DUFFY: Dr. Mundy, could you explain
21	that to us. The thing that Dr. Balsiger just described.
22	It has us marked as a lead agency for the from for
23	the on the McNutt GEM infrastructure product and then it
24	has NOAA identified as the other lead agency but T don't

think that we're the lead agencies. Or how does that work?

DR. MUNDY: These were just simply designations of how the money is disbursed. As you know, the Trustee Council does not disburse its own funds, these are disburse through government agencies, not necessarily Trustee Council agencies but through government agencies. And we assign University of Alaska contracts to ADF&G. We assign other categories to NOAA and that's by tradition, by arrangement and by convenience.

MR. DUFFY: Thank you.

MS. PEARCE: I was just asked to continue in his absence. Do we have a proposal? I didn't hear one.

MR. DUFFY: Well the State -- at least the State's ideas coming into the meeting were not to fund either of these I believe.

MR. BALSIGER: Madame Chairman.

MS. PEARCE: Dr. Balsiger. Dr. Balsiger.

MR. BALSIGER: On the next set of proposals, I intend to add \$350,000 to what the State supported. So I prefer to do those before I had to decide what to do on this one. In other words, I don't want to use all of the bullets that I may or may not have any of right now.

MS. BALLARD: Do you want to go to nearshore and come back to this?

MR. BALSIGER: Yes.

MS. BALLARD: I'll do that. 1 2 MR. BALSIGER: Okav. MS. PEARCE: We're moving on to nearshore 3 without making a decision. 4 Sounds like a card game. 5 MR. BALSIGER: CHAIRMAN RENKES: Geez, I leave for one 6 7 minute and we.... MS. PEARCE: When you come back you're 8 9 hearing about bullets. CHAIRMAN RENKES: We've lost a..... 10 11 MS. BALLARD: He's got my ear now, I want to hear what he has to say. 12 13 CHAIRMAN RENKES: ....section. we're moving on to nearshore and we're putting all of data 14 15 management on the return list. 16 MS. PEARCE: No, modeling. 17 CHAIRMAN RENKES: Modeling, I'm sorry. I'm still -- okay, nearshore. 18 19 MR. BALSIGER: Mr. Chairman, if I may, on 20 the nearshore, I believe that the State has proposed that 21 we fund Bishop and Thorne. I note that Bodkin is only \$10,000. It's for a closeout year of a project that we've 22 23 been funding. So I clearly think that ought to added inn. Konar is the natural geography in the shore areas. This is 24

the second year of the project. It ties into the census of

25

marine life which ties into a whole series of other ongoing projects. And I think that we ought to fund that.

Ruesink is the second year of a project that the Trustees have funded. It involves a community sampling, I believe, and that would be my very brief introduction and probably Dr. Mundy would have more details on all of them. Or I could dig out more notes if it was useful to you either way.

CHAIRMAN RENKES: Ruesink was second year,
Bodkin is a closeout and, I'm sorry, what did you say about
Konar?

MR. BALSIGER: Konar is also a second year and I believe part of it is working on the census of marine life which is a project that's tied into international census of marine life things funded by a whole variety of places. And I might be making that last part up, I'd have to ask Dr. Mundy to confirm.

CHAIRMAN RENKES: Dr. Mundy, do you want to add anything on Konar?

DR. MUNDY: Yeah, Konar -- in the case of Konar, we have adopted a census of marine life sampling protocol that allows us to compare Konar's data to other projects all around the Pacific Rim. So for example, if you want to see an ENSO signal, if you want to see if you can -- how far you can see an ENSO signal or whether you

can see it in the -- which is a weather signal in the nearshore, you can use these data sets. The idea is you can use these data sets to look at them. That was simply a bonus that was made possible because we noticed that they had this protocol. It really isn't costing us anything, in fact it saved us money because we were able to adopt the sampling protocol and didn't have to develop it. So -- but it is a continuing project.

1.0

Ballard.

Konar has a very substantial community involvement part and they, for example, Katherine Icon was involved in the WisdomKeeper meeting in Port Graham just recently. And so there -- we have projects such as Konar's that have substantial community involvement components. Where as I've said, the PI's themselves have done an admirable job of reaching out to the communities and working with the communities. So everything that Dr. Balsiger said about this was correct.

MS. BALLARD: Greq.

CHAIRMAN RENKES: Yes, Commissioner

MS. BALLARD: Dr. Mundy, what non-Alaskan university Ruesink affiliated with?

DR. MUNDY: Mr. Chairman, Jennifer Ruesink is at the University of Washington.

MS. BALLARD: Pure curiosity.

1	CHAIRMAN RENKES: So as a proposal we've
2	got Bishop and Thorne, Bodkin, Konar and Ruesink to fund.
3	Any discussion, any objection?
4	MS. BALLARD: It's okay with me.
5	CHAIRMAN RENKES: Let's take that as a
6	consensus and move on to
7	MR. BALSIGER: Mr. Chairman, would you say
8	that I think I heard what you said but just to be
9	certain that I made
LO	CHAIRMAN RENKES: Bishop and Thorne, Konar,
L1	Ruesink and Bodkin.
L2	MR. BALSIGER: Thank you very much.
L3	MS. BALLARD: It's the whole fund list,
L4	read in a different order just to see if you're still
L5	awake.
L6	MR. BALSIGER: Well, apparently I wasn't
17	quite.
L8	CHAIRMAN RENKES: That was the way you said
L9	that was the order you presented it in. Because you
20	said we had agreed to Bishop and Thorne and then
21	MR. BALSIGER: Yes, no you're exactly
22	right. Thank you very much.
23	CHAIRMAN RENKES: Synthesis proposals.
24	Spies is fund contingent for the reasons that you stated in

your introductory remarks.

DR. MUNDY: Mr. Chairman, I believe that Dr. Spies has satisfied his contingencies at this point in time however our decision was to simply present the plan as originally submitted to the Trustee Council. Because these are the same financial decisions. I mean, fund and fund contingent are the same.....

CHAIRMAN RENKES: Right.

DR. MUNDY: .....fiscally for the Trustee Council. Well, I believe that Dr. Spies has removed his contingencies at this time.

CHAIRMAN RENKES: Okay, Commissioner Ballard.

MS. BALLARD: Without regard to this proposal, which I believe we must go ahead with, I'd like to see whatever we have in writing with him about this book so that I can understand better the terms under which the book is being published.

MS. PHILLIPS: I'll get that to you.

CHAIRMAN RENKES: Yeah, because I have a feeling about this, that the -- I'd like to see the book, for example, if it could be published, published in Alaska as opposed to outside Alaska. And I'm just expressing my own view here. And I'd like to see it published clearly under the auspices of the EVOS Trustee Council as opposed to under the auspices of something else that doesn't change

the author. So those are just some feelings that I have about something that the EVOS Trustee Council has paid for. But I don't know what the flexibility is in the relationship is to accomplish that.

1.5

MS. BALLARD: We've heard a lot in the year that at least I've been involved in this about the pride that you, Phil, and I assume the others associated with developing these annual plans take in the unique tailored, EVOS oriented integrity of them. And it just seems to me that a synthesis of the results of that that isn't clearly identified in an ownership -- and I don't mean legal ownership -- but clearly identified with that, it just doesn't work for me.

CHAIRMAN RENKES: Okay, well that's a little discussion. Trustee Meade.

MR. MEADE: Well I'll just echo, I think, the expressions of -- both you and Ms. Ballard have already stated, I don't know the facts. I guess what I would like to do is get some more facts. I'm concerned to see us obligated into another year. I don't know what the total is, if it's reflective of this year's costs. It's three quarter's of a million dollars towards a synthesis project that it seems like we'll have no ownership of.

So I -- without any fact, I feel exactly as you summarized, that EVOS ought to have an ability to have

a role in how it's published, where it's published and to what focus it is done for. Unless we can get other relevant facts that help us be more aware of, you know, any other factual content to this. But the other piece that I think is important is to have some sense that this is going to draw to closure, that it won't be coming back again next year for another stipend, for another extended period of time.

And I think I heard Dr. Mundy suggest that that indeed is the case this year. But I would hope that that would be an expectation if it is funded this year. I'm concerned about funding it I guess. I won't obstruct that, I mean, perhaps we have no other choice but it sure seems like we're kind of in a -- I guess in a sense extortion -- well, maybe I shouldn't say that.

CHAIRMAN RENKES: Yes, Dr. Mundy.

DR. MUNDY: Mr. Chairman, may I respond?
CHAIRMAN RENKES: Sure.

MR. MEADE: And he's probably a very credible guy, I apologize.

DR. MUNDY: My -- you know, actually you can, if these are your concerns and you so wish, you can keep the fund contingent and tell us to make it so. I mean, that's -- so it's not a matter of.....

CHAIRMAN RENKES: Yeah, maybe we should --

I would make a recommendation that we keep the contingency on the funding and we ana -- we look at the contract with respect to the publication rights and that we satisfy ourselves, not with another meeting but in, you know, in communicating with the Trustees that we've got sufficient control over the process after it's completed.

DR. MUNDY: Also, Mr. Chairman, if I may. CHAIRMAN RENKES: Uh-huh.

DR. MUNDY: My colleague from the Forrest Service, Ken Holbrook, has provided me with a prop here, and I'm holding up a copy of the proceedings of the Exxon Valdez Oil Spill symposium. American Fisheries Society symposium number 18. Okay, so this is copyrighted material and the copyright is owned by the American Fisheries Society. But this was one of the landmark publications from the oil spill where we made a big effort to get the things that had been done and the damage assessment, in the NRDA phase particularly, brought together in a coherent fashion and published. The control that the Trustee Council had over this was, for example, the editorial board on here, I believe, was Bob Spies and Jeep Rice, Doug Wolfe and Bruce Wright, all people who worked closely with the Trustee Council or with contractors of the Trustee Council. And then of course the peer review process itself. So this is an example of a document that somewhat akin to what Bob

Spies is trying to put together. He has anot -- this has a whole bunch of different authors in here. Sometimes multiple authors on the same paper. And, as Bob Spies says, as right now.

Also I'm sure that -- for the Trustees, we can get you access to the website where the -- anytime that you want to look at the document, we have a password on the website that you can look at if you want.

CHAIRMAN RENKES: Trustee Meade.

MR. MEADE: If I may too, I apologize for my disrespectful remark. I don't actually know the doctor. And just a business principle suggests to me that we should be prudent in being sure that we're getting an investment that the American taxpayer is owed here and that we want to monitor it and we want to be sure that it's not an ongoing commitment unless we are briefed to the extent that we feel we should recommit to an ongoing commitment here.

I think that yarding up the data and knowledge and getting it published is all very good. The last thing I'd want to do is have any remark on the record of any disrespect towards any professional that's been working on compiling the product. My interest is just to be sure we keep our eye on the ball, that we don't allow scope creeping, that we keep the outcome focused so that we don't have an ongoing expense.

CHAIRMAN RENKES: Mr. Duffy.

MR. DUFFY: Mr. Chairman, I can support the Eckert project and the Spies project fund contingent, subject to what we talked about.

CHAIRMAN RENKES: Okay, Eckert and Spies.

Is there any objection to moving forward with Eckert and Spies as they're listed in the synthesis proposals recommended for funding. Dr. Balsiger, Eckert and Spies as they're listed in the synthesis proposals recommended for funding?

MR. BALSIGER: Yes.

CHAIRMAN RENKES: Okay, without objection we'll accept that with our comments about -- in wanting to be satisfied that we have sufficient control over an input into the publication of what's going to be, you know, more so maybe even than the symposium that you have there, I think a very, very important document. And then we've already completed the watershed proposals. So we've actually worked our way through the document.

MR. MEADE: Should we go back to modeling though. It seemed like we.....

MS. BALLARD: Modeling. We have to go back to modeling.

MR. MEADE: ....didn't give any decisions there.

1	CHAIRMAN RENKES: Back to modeling. Oh,
2	okay, I forgot that you had all decided to skip.
3	MR. MEADE: Well, somebody wanted to shoot
4	his bullet before we
5	MR. BALSIGER: Well, I shot it and everyone
6	landed so I feel like it probably won't fire again.
7	CHAIRMAN RENKES: Okay, back to modeling.
8	MS. BALLARD: So now your gun is empty,
9	Jim.
10	CHAIRMAN RENKES: On page 28 of the new
11	Work Plan, McNutt and Schumacher Two Crow, I mean.
12	MR. MEADE: And did I gain from the
13	discussion or may I?
14	CHAIRMAN RENKES: Yes.
15	MR. MEADE: Did I gain from the discussion
16	earlier, perhaps between Jim and Dr. Mundy that these funds
17	would simply enhance modeling work perhaps that would
18	otherwise be under way but not at near the accomplishment
19	rate?
20	CHAIRMAN RENKES: Yes, Dr. Balsiger.
21	MR. BALSIGER: Mr. Chairman, Mr. Meade, my
22	take would be that there's lots of projects through the
23	years that have led to modeling various thing but these
24	modelers have never all got together to see how my model in

Kodiak works with somebody else's model in Cook Inlet.

25

To

how it ties together with the model in Prince William Sound and make sure that they're all modeling the same parameters. So if some -- at some point all the models could talk to each other, something like that. I don't think that that last stage where all the models are made to work together has been accomplished.

And I think if we funded something to the tune of \$100,000, it's likely, if that was the project, to make the models talk together, to make the -- put together the infrastructure for those models, it's much more likely to happen than it is that the person who is modeling Kodiak takes it on him self to make his model work with everybody else's. I kind of struggled with that explanation but I think there are models being developed, they are useful models, but I don't think that the overall model or the framework to tie them all together exists or is likely to be advanced very quickly in the absence of a project like this.

MR. MEADE: And how important is that advancement?

MR. BALSIGER: Perhaps Dr. Mundy could talk to it.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Okay, Mr. Chairman, if I may, let me back up a little bit and talk about how we came to

this proposal. We have in the GEM program document a chapter on modeling. And in that chapter we lay out the role of modeling in the GEM program. We need a GEM model in order to warehouse our results and to look at the relationship among our results. And we articulate fairly carefully in chapter eight of the GEM program document exactly how this is supposed to work.

We were also advised by the National Research Council that one of the best things we could do for the purpose of making all this stuff fit together and coordinating across habitat types and making sure that we didn't just get lost in a regional focus or a geographic focus and miss the big picture, that we have what they called a coupled biophysical fisheries model, or something like that. We decided that fisheries was probably too narrow and that there were people who were interested in birds and mammals that weren't considered part of fisheries. Although it's hard to imagine anything nowadays that doesn't get wrapped up in a fisheries decision.

So the idea is -- okay, so now you're confronted as a science director with the prospect, okay, how do I get one of these. How do I get one of these coupled biophysical models that are going to help us direct the program. Because, you know, somewhere along the line we're going to have to pull stuff together and show how

things work together. I mentioned earlier that we expect modeling to also provide some advice to managers and particularly to fisheries regulators.

So in looking over the field out there, there are a couple of possibilities. We could reach out and point to some group of modelers and say, okay, you're our modeling people and away we go. However, what we wanted to do was to coordinate and integrate and get costs down as much as possible. We want to assure ourselves that we were doing this in the most cost effective fashion.

Plus we felt that the -- there are lots of modeling communities that never get together. You can -- it's likely that the physical modelers who work off of Kodiak are going to talk to the fisheries modelers who work off of Kodiak. But it's practically zero that the modelers who work in the Kenai River watershed with hydrology and fish are ever going to talk to the fisheries modelers off of Kodiak, even though they probably have a great deal to say to each other when you bring them together.

So the -- so our idea, again, as part of our strategy that's explained in chapter one of the GEM program document of leveraging our money and bringing people together, we decided that the best thing that we could do was to craft the invitation so that we ask people to show us how to build this community of modelers so that

we could get the most bang for our buck and come out the other end with a GEM biophysical model. And that's what we -- that's what this is crafted to do.

So it's -- this is not a modeling exercise by any stretch of the imagination. In fact, we got a number of modeling proposals that were supposedly responsive to this that were rejected out of hand because we said we're not ready to spend our money on a model. But we -- what we are trying to spend our money on here is building a community. Building a modeling community that's going to help us move the GEM program forward and help us get some applications out the other end in the process that will benefit natural resource management agencies.

So that's my speech.

CHAIRMAN RENKES: Well, I've got to say, if I can have a comment in between, that the -- this strikes me -- the only adjective that comes to mind is soft. I mean it seems to me like a pretty soft and an expense that is difficult to measure. I mean, I read the paragraph, the workshops necessary to begin the consensus building process. I mean, that's -- you know, that could be just about anything. And in the scientific and other types of communities. Now I don't know what the other types of community -- we have the scientific community. I assume the modeling community is part of the scientific community.

So I don't know what other types of communities but I'd be concerned, you know, about -- and I'm sure there are more -- obviously more detailed description of what these workshops actually would be once you respond to other types of communities.

But then to provide guidance to the staff on how to craft future invitations for proposals in support of the modeling efforts. So, you know, like you say, it's a very preliminary thing but we're paying people to do what the staff ought to be able to do in some way. I mean, you know, they -- these people maybe know the people in the modeling community better than the staff know the people in the modeling community. But what -- if we're bringing people together to talk about issues and collaborate and the staff is going to get educated about how to write future invitations for proposals, I mean, it seems like what -- you know, we're buying meeting facilitators here and, you know, and expensive education for the staff. But I don't mean to sound as cynical as I do but it just seemed to me to be somewhat soft when I looked at it.

Dr. Mundy, do you want to respond to my cynicism?

DR. MUNDY: Yes, Mr. Chairman. Well, we added other communities in response to concerns from the group that's doing the community involvement process. For

\_

example, tribes, fishing communities, others may have significant questions that the modeling communi -- that the GEM model per say specifically should address.

As far as the staffing issue goes, again, these people are, you know, modelers. I mean, they're mathematicians, they're people who write computer code, they're physical scientists. They're not like the capabilities that we have on the staff. You have.....

CHAIRMAN RENKES: McNutt and Two Crow.....

DR. MUNDY: Right.

CHAIRMAN RENKES: ....are modelers. What makes them good at running a workshop?

DR. MUNDY: Well, Lynn McNutt, I think a lot of people know Lynn from our January meeting. She's just -- what makes her good at doing this is just being Lynn McNutt. She's a great -- she's a great person. She's very personable, she's very good at organizing. She's very good at speaking. Everybody has seen her in action here at the.....

CHAIRMAN RENKES: Okay.

DR. MUNDY: ....meeting. Two Crow, in addition to being a physical oceanographer, is knowledgeable in Native Americans and is -- and I would expect him to definitely work hard with the community involvement aspects of, you know, of this. For example, he

was part of the WisdomKeeper meeting that we had at

Tatitlek and we had hoped that he would work on some

proposals out of that. We haven't seen any so far. But

in any event, the -- these people are here to provide a

service. And as I've said, it's not modeling but it's

definitely not a service that can be provided by the staff.

CHAIRMAN RENKES: Okay. Good explanation.

Trustee Pearce.

1.2

MS. PEARCE: I guess -- well, I don't guess, it's still sounds soft to me in that I still don't understand what the outcome is expected to be. Are we asking people to tell us how to design a model or are we asking them to tell us how to get all the models that already exist in the spill area to talk to each other. Or are we asking people to tell us how to, once we have a model, how to get the community input to ask us what questions we'd like to run through the model and tell them what's happening with the kelp off Tatitlek Point.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Yes, Mr. Chairman, I'm reading from page 104 from the abstract of Schumacher which should be pretty close to McNutt's. And it says our goals is to provide consensus recommendation on one, creation of an integrated ecosystem model for the Northern GOA -- okay so, basically what they owe us is a deliverable -- is how do we

create and integrated ecosystem model for the Northern GOA?

17

18

19

20

21

1

One possible out come of this is they may say, you can't do that right now. It's too expensive, it's beyond your capabilities and we can't find you any partners out there who are willing to fit the bill so you can That's one possible outcome on number one. Number two is understanding spatial and temporal scales for implementing an ecosystem monitoring program. And this is one that Dr. Balsiger has already spoken to. When you have the perspective of the physicist, which is a really big picture in the perspective of the biological modelers, which is usually a much smaller time frame. I'm trying to get the spatial and temporal scales to match up so you can just integrate them all and compare them as a tough job. So trying to get people aware of what other people are doing in getting the move in. But specifically having spatial and temporal scales that we can put in our data management plans for projects that we're putting out there when people are collecting plans and in our RFP's. are specific specifications, criteria that we would put in RFP's.

22

23

24

25

Number 3, implementing the GEM infrastructure and recruiting -- and they mean you're the modeling infrastructure, including identification of

strategies for cooperation, coordination, integration, cost efficiency. For example, we don't need to set up our own standards on geo-spatial data because there is a Federal committee on qeo-spatial data that spends lots of money every year having meetings and setting up standards. we incorporate AFGCD criteria. They are a part of our infrastructure but they're definitely not on our payroll. But being aware of them and having the ability to them is very important. What else do we need to know? There are other standards, there are other things that we need to know about in order to put -- implement our modeling program, we need to know what these are. they're not necessarily things that we're going to pay for but we have to identify what these are. We have to put our finger on them and say what they are.

1

23

24

25

So these were three, in my mind, I don't see this as soft at all. I see this is providing us with three deliverables that we need to move the GEM program forward and to live up to what we said we were going to do in the GEM program document and to follow the advice of the National Research Council.

CHAIRMAN RENKES: Commissioner Duffy.

MR. DUFFY: Mr. Chairman. Thank you, Dr. Mundy, for that explanation. That was thorough but I am not convinced, I think I'm siding with a couple of other at

least Trustee Council members. That \$300,000 doll over three fiscal years. Could this kind of a morphis project. I'm not convinced we should go forward with these -- at this time.

1.2

CHAIRMAN RENKES: Dr. Mundy, if we didn't go forward with this, what would the alternative from the other agencies that are engaged in this kind of modeling. What kind of encouragement could we give them to, you know, one of the discussions we have had is the legal requirement that we not supplant, you know, the work of other agencies and sometimes agencies get involved in this collaborative exercise and pull things together, sometimes they don't.

But it seems to me something like this would be something that NOAA would be very, very interested in doing. I mean having an ecosystem model for the Gulf of Alaska is just very important in all, you know, data points that you'd need and the modeling expertise you'd need probably resides largely within NOAA. I mean, you know, with some collaboration with the State and other Federal agencies, they could probably easily spearhead this kind of thing as opposed to the Trustee Council. Is that possible?

DR. MUNDY: Indeed Mr. Chairman, what would my fall back strategy here. I guess as long as we're going to do a GEM program, we're going to have a model of --

MR. BALSIGER:

Could we have the \$300,000?

we're going to have a GEM model. Can't see going forward with the GEM program without a GEM model. I take the Trustee Council's advice to heart and you're telling me this is not it. Okay, so we would find an alternative strategy.

11.

Probably the first thing we would do is have a -- is get a workshop together so that we could get criteria together for whatever it is we're going to ask for in the FY-05 invitation for a model. Okay, so I understand your advice to be that this is -- building a community is not what you want to do but what you want to -- I hope I'm hearing that you would support a model. So if -- so then basically what we would do is issue a call for a model.

And I approach that with some trepidation but -- because I had planned on having a lot of advice and a lot of time before I had to issue that RFP. And I don't think I'm going to have -- I'm going to know everything that I'm going to need to know to put that RFP out there. But on the other hand what that means is that we'll find some group of people who know how to do this and we'll have to trust them to, you know, to deal with these issues.

The other thing that wouldn't do is we're not going to have -- it's not going to be -- we can do it but it's not going to be as easy to get the public involved

and to get the different communities involved in this effort as it would be with these two particular people. These people are particularly good at networking with people and with working with people and putting science into, you know, layman's language.

So we'll try to locate it, who knows, maybe one of these people would be interested in bidding on the FY-05. Also, we're -- at this point in time, we're one year behind. So.....

CHAIRMAN RENKES: Is there a way for the Trustee Council staff and the Trustee Council members to serve as a focal point for, you know, bringing these types of modelers together to get the kind of advice you need to go forward?

DR. MUNDY: Mr. Chairman, as I've said, we could probably put a workshop together but we're -- our staff is very small right now and we have lots of other things to do. We're -- we have to turn around immediately and try to get the FY-05 invitation together based on the outcome of this meeting. We have a -- before that can happen, we have a science plan that needs to go out for review. So by the time -- so I guess my short answer on that is no. I mean, we just don't have the staff.

CHAIRMAN RENKES: Because I see a model -- there is a different -- in my own views, I see a model in a

different category than the synthesis project or data management. I mean, those are things that, you know, we're paying for data, we're creating this. responsibility to organize it and make it accessible to the public. But when you get into a predictive model that can be used for other applications in the future, applications that are going to be, you know, more relevant to the resource management agencies involved in using that model, I don't know, to me it's in a slightly different category.

10

11

12

13

14

15

16

17

18

19

20

1

2

3

4

5

6

7

8

9

It's my own view and maybe more the responsibility of pulling that together would lie with the agencies. And, you know, I wasn't really -- you know, having worked for NOAA -- you'd be surprised at one stage in my career and the -- you know, knowing all of the modeling that does get done, you know, both climate and oceans inside NOAA, it would seem to be something that they might even naturally take on when the priorities allowed -funding priorities allow them to get to this stage of the -to this part of the world to solve some of these problems.

We have a

21

22

23

24

25

I don't know, Dr. Balsiger, maybe you -you obviously -- it's your responsibility, here you'd know -- is there a way to get this done in an intelligent way and a timely way that it doesn't have to be supported by

the Trustee Council so that we can be out doing more of the data collection and restoration activities with the fund?

MR. BALSIGER: Well, Mr. Chairman, I have several responses which I probably shouldn't give. One is, often times when NOAA makes a modeling, we don't involve the stake holders and everyone else. But the model doesn't go over real well. So we'd have to -- and we'd have to incorporate some broad outreach if we did it ourselves. And frankly, if we had money, we'd probably hire someone like Schumacher and Lynn McNutt to see it -- to help us with it.

right now but we're suffering funding decreases as well, different mandates to -- a lot of our research money goes outside now instead of being done in-house. So we're -- I wouldn't want to say that NOAA wouldn't have the people that would be capable of doing this. I don't know that they're likely to be brought to bear on this topic in the near future. But I've have to explore that through the other NOAA people -- agencies before I could say for sure because I haven't specifically asked that question of NOS and OAR and the other groups we have.

But I don't think that there's consensus
here to go forward with these now. So I guess I'd propose
that we regroup on this and either as Trustees have a

discussion amongst ourselves at some point as to whether 1 we'd want to go forward with this kind of thing so that we 2 could shape up the RFP to get specifically what we want or 3 find a different way, such as Phil has suggested, to go 4 5 forward in the future. But I don't see much point in 6 belaboring any more today. 7 MS. BALLARD: I agree. 8 CHAIRMAN RENKES: Commissioner Ballard, do 9 you have a comment? 10 MS. BALLARD: I was just going to propose that the scope be tightened for the next go round if we 11 12 don't have concurrence to that. 13 CHAIRMAN RENKES: Okay, so shall we review 14 the bidding? 15 MS. PHILLIPS: We should and we -- Mr. Chairman, we do have to go back to the list. We have to go 1.6 17 back to watershed and make a decision on Knudsen and Alaska 18 coastal comm -- and make a decision on four there. 19 we could go back to watershed first. 20 CHAIRMAN RENKES: In watershed, we decided 21 to fund Finney, Honnold, Walker and Heintz? 22 MS. PHILLIPS: And the one in question here was Knudsen. 23

MS. PEARCE:

24

25

Are we ready to take a vote?

MS. PHILLIPS: No, that was to go back and

discuss.

MS. PEARCE: Okay.

CHAIRMAN RENKES: Well, the -- just in terms of what we've done, it seems that -- I don't know how is our discussion going to -- we should -- I'm open to discussing it if the Trustees want to discuss it. I don't know how to lead the discussion. I don't know how that it's going to be different than we -- the discussion we've already had but go ahead, Commissioner Ballard.

MS. BALLARD: While the Trustees try to figure out how to proceed, let me ask a question about the numbers. And it may be again because I'm using the old Work Plan, I see numbers that seem to be \$20,000 difference. Which is the correct number?

DR. MUNDY: Mr. Chairman.

CHAIRMAN RENKES: Yes.

DR. MUNDY: The \$20,000 higher.

MS. BALLARD: So the 173,000 in the first year is the correct number?

DR. MUNDY: Correct.

MS. BALLARD: Okay.

MR. BALSIGER: And 157 in the second year.

DR. MUNDY: Correct.

MS. BALLARD: And as to how to proceed, I guess we proceed sort of the way we have. If somebody has

a proposal to make, we'll see if we can all agree to it.
CHAIRMAN RENKES: Looks to me like we
funded every research in every category except modeling.
And which we were going to defer for maybe a different
collaborative and less expensive approach. And we've
Gail, do you know how many projects we've deferred that
otherwise were proposed for funding?
MS. PHILLIPS: I believe there were 14.
Let's see
CHAIRMAN RENKES: That were
MR. BALSIGER: Not that we deferred right
here today.
MS. PHILLIPS: Fourteen oh, you mean
from the list
CHAIRMAN RENKES: That were recommended for
funding but that we put on the hold list.
MS. PHILLIPS: No, I can figure it out.
Six or seven. Yeah, I could figure it out, it's about six
or seven.
MS. PEARCE: At least seven. Plus a few
more that I haven't been keeping at least nine because
we just deferred those two.
CHAIRMAN RENKES: And in the coastal
current area, we funded Batten, Cokelet and Weingartner.

MS. BALLARD: I show we had four in that

1	category and this one as ones we were revisiting.
2	MS. PHILLIPS: That's correct.
3	MS. BALLARD: If I kept score correctly.
4	MS. PHILLIPS: That is correct.
5	CHAIRMAN RENKES: And what was the other
6	one we funded in ACC?
7	MS. PHILLIPS: In ACC you funded Batten,
8	Cokelet and Weingartner.
9	CHAIRMAN RENKES: Okay, correct.
LO	MS. PHILLIPS: The other four are up for
.1	discussion as is Knudsen and watersheds.
.2	CHAIRMAN RENKES: So there's four there.
L3	Community involvement we funded
	MS. PHILLIPS: That's okay, we have a plan.
L <b>4</b>	ine. Integrity, we have a plant
L4 L5	CHAIRMAN RENKES: We funded three and we
L5	CHAIRMAN RENKES: We funded three and we
L5 L6	CHAIRMAN RENKES: We funded three and we have a plan.
L5 L6 L7	CHAIRMAN RENKES: We funded three and we have a plan.  MS. PHILLIPS: Uh-huh.
L5 L6 L7 L8	CHAIRMAN RENKES: We funded three and we have a plan.  MS. PHILLIPS: Uh-huh.  CHAIRMAN RENKES: Data management we
L5 L7 L8	CHAIRMAN RENKES: We funded three and we have a plan.  MS. PHILLIPS: Uh-huh.  CHAIRMAN RENKES: Data management we decided to fund all three.
L5 L6 L7 L8	CHAIRMAN RENKES: We funded three and we have a plan.  MS. PHILLIPS: Uh-huh.  CHAIRMAN RENKES: Data management we decided to fund all three.  MS. BALLARD: Correct.
L5 L6 L7 L8 L9	CHAIRMAN RENKES: We funded three and we have a plan.  MS. PHILLIPS: Uh-huh.  CHAIRMAN RENKES: Data management we decided to fund all three.  MS. BALLARD: Correct.  CHAIRMAN RENKES: So nothing was deferred

MS. BALLARD: Correct.

1	CHAIRMAN RENKES:and funded them. Do
2	you want to jump in here? Do you want to go
3	MS. PEARCE: I was going to just talk about
4	Knudsen for a minute.
5	CHAIRMAN RENKES: Okay, let's just get an
6	overview of the numbers. So in nearshore we funded Bishop,
7	Thorne, Konar, Ruesink and Bodkin.
8	MS. BALLARD: Correct.
9	CHAIRMAN RENKES: So which is all of the
10	we took all the funding proposals. In synthesis we did
11	Eckert and Spies.
12	MS. BALLARD: Correct.
13	CHAIRMAN RENKES: So we took all
14	MS. PEARCE: Did you do Bodkin in
15	nearshore? You did Bodkin in lingering oil. Did you do
16	both of them?
17	CHAIRMAN RENKES: Yeah, in lingering oil we
18	did Bodkin, Rice and Irvine.
19	MS. PEARCE: Bodkin
20	CHAIRMAN RENKES: Bodkin, Rice and Irvine.
21	We've got three deferred.
22	MS. PEARCE: I didn't hear Bodkin
23	initially.
24	MS. PHILLIPS: On nearshore it's in.
25	CHAIRMAN RENKES: Yeah.

MS. PHILLIPS: Bodkin is in.

MS. PEARCE: Thank you.

CHAIRMAN RENKES: And then watershed, we did Finney, Honnold, Walker and Heintz. So we deferred five projects out of the entire list and we added three that were deferred to five. So I think the total impact of all the research that was to be funded here, leaving the modeling aside and community involvement, which we funded some but we haven't planned for, is that it looks like we're -- we pushed two research projects off. I'm just doing this for my own sense. So that gives us some background and why don't we talk about Knudsen.

MS. PEARCE: It's my understanding from staff, who are no longer here, that this project, while it shows DOI as the lead and USGS, that the money primarily passes through to OSRI. But as....

MS. BALLARD: To what? I'm sorry, Drue.

MS. PEARCE: To OSRI. To the Oil Spill Recovery Institute. It passes to Kline.

DR. MUNDY: In the form of Kline's salary, yes.

MS. PEARCE: Yeah. And Dr. Mundy talked about it being an eight on the scale of 10 in terms of meaning the RFP and the scope that we put out for the project. If we want to do this research and begin the

basis for future years and possibly for opportunities for -even though it's Prince William Sound, even Copper River
Basin focused at the moment, they're trying to develop a
tool that can be used in other areas, not just in that
area.

But the bigger thing is that the sample that is being done and the samples that would be used for the project have been actually collected this year, as I understood what they were telling me. And that it -- we won't be able to do the project, at least not have that sampling if we defer it. We would not longer have a project. Is that your understanding?

DR. MUNDY: Mr. Chairman.

CHAIRMAN RENKES: Yeah, Dr. Mundy.

DR. MUNDY: Is there someone else here,
Drue, who could speak to this? Because you've kind of lost
me.

MR. HAGEN: Excuse me, Pete Hagen here with NOAA. Yeah, that proposal -- I'm speaking for DOI because they left. But that proposal does tie into with NPRB proposal that's taking place on the nearshore of Copper River. And it's also -- it's obtaining samples from other projects that are funded by other entities, the NPRB and Fish and Game.....

DR. MUNDY: OSRI.

MR. HAGEN: OSRI, I guess as well. So it's -- and those projects are funded, they're underway, so that's why it can't be deferred another year, I guess, so.....

CHAIRMAN RENKES: Commissioner Ballard.

MS. BALLARD: Do we know what percentage this funding would be of the total funding for -- is this a big percentage or a small percentage?

MR. HAGEN: Well, what it's doing is taking advantage of the sampling opportunity that's ongoing with these other projects. These other projects are looking at the stable isotope. And this is allowing them to collect the samples so it's not paying for the sampling costs, is my understanding. It's paying for the analytic work that's involved with doing the stable isotope. So I don't know off hand how much funding that saves but.....

CHAIRMAN RENKES: Thank you.

DR. MUNDY: Mr. Chairman, if I may? CHAIRMAN RENKES: Yes, please.

DR. MUNDY: What I would say is that Dr. Kline is one of the top experts anywhere on stable isotopes. And my understanding is that he's donating facilities and some of his time on this and we're also getting samples that we would otherwise have to pay for. Now I don't know what the exact proportion or the exact

percentage breakdown is but, you know, clearly collecting samples is one of the most expensive parts of an project.

1.

1.7

The other observation I would offer is that the more geographic contrast we have, the more complete we are in terms of covering the nearshore areas and the down river areas and the up river areas, the more likely we are to have -- not to come up with any significant questions about how to launch a watershed monitoring program at the end of the day. So again, I thought this was a fairly attractive project based on the leveraging of the funds and the involvement of Dr. Kline in particular. So I -- you know, I see this as a valuable part of the watershed package that was put forward.

CHAIRMAN RENKES: Dr. Balsiger.

MR. BALSIGER: Dr. Mundy, Dr. Kline, is that -- what is he, in Cordova? Where is he -- and the facilities are at the Prince William Sound Science Center? Thank you.

MR. DUFFY: Maybe I missed it, Mr.

Chairman, Dr. Mundy. So what are we buying for these

150,000 for a three year period? Just -- is it salary

we're paying or is it sample collection or what? It's

unclear to me. Maybe because it's 5:30 at night, I don't

know.

MR. MEADE: Pete's got the budget right

there.

2.4

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Mr. Chair, I was going to say, that's a -- I could put my spreadsheet back up again. What will you pay me not to put my spreadsheet back up again?

MR. DUFFY: 140,000.

DR. MUNDY: My wife, maybe. I know that this project, for example, has an escapement counting component to it and it's being coordinated with ADF&G and USGS and it's fairly complicated. I think a lot of the cost of any of these projects is the stable isotope analysis itself and that's why they're interested in collaborating with us, is that they have these materials but they can't afford to do the stable isotope analysis. So I think that the lab costs are a substantial part of this.

CHAIRMAN RENKES: Commissioner Ballard.

MS. BALLARD: I wonder if we could take advantage of the category that the staff recommendation called fund contingent, move this into fund contingent, try to deal with some of the issues that are raised in the STAC recommendations about the weaknesses. Because it may be that some of the weaknesses are what are making it difficult for us to understand it.

CHAIRMAN RENKES: Dr. Mundy.

DR. MUNDY: Mr. Chairman, I believe we could resolve those fairly quickly because the -- they did submit a rewritten -- a completely rewritten proposal in response to the STAC criticisms. So we could -- fund contingent is certainly an option and I would be happy to work with the Council on this if that was their choice.

MS. BALLARD: If we can't understand it, we can't come to consensus and we don't have a consensus right now. So we either have to drop it entirely or give it -- give Phil a chance to bring it back to us in a more comprehensive fashion.

MR. MEADE: I think your suggestion is a good approach. We seem to have come back to it and not be willing to get rid of it so moving it into fund contingent and refining it seems to be a reasoned approach at 5:30 in the evening.

CHAIRMAN RENKES: Sounds good? Sound good to everybody?

(No audible responses)

CHAIRMAN RENKES: Okay.

MR. BALSIGER: Well, our normal fund contingent means that once the contingencies are gone, Phil writes them the check. Now I have a feeling that....

MS. BALLARD: That's not what I mean.

MR. BALSIGER: Well, I have a feeling we

	have a different thing here.
2	CHAIRMAN RENKES: What's defer mean?
3	Tell
4	MS. PEARCE: Take it off.
5	CHAIRMAN RENKES: Forever, well
6	MS. PHILLIPS: Fund contingent is and
7	you can make that contingent upon getting the response to
8	the STAC recommendations back to you for your approval.
9	MS. PEARCE: The same as the Dr. Spies
10	MR. MEADE: Let's make it fund contingent
11	to bringing it back to us.
12	MS. PEARCE:project, it has to come
13	back to us.
14	MS. BALLARD: I'd like to be able to see it
15	again so that I can understand it.
16	MS. PHILLIPS: Sure.
17	MS. BALLARD: I mean, I put considerable
18	effort into understanding all of these projects and since
19	this one didn't make sense to me, I didn't have it on my
20	list.
21	DR. MUNDY: Mr. Chairman, these fund
22	contingent and deferred can work the same way. It's
23	really, in this case, a matter of where we think the
24	project is in its development. If the contingency is, and

it will be part of the record here, if the contingency is,

-	is chac it doesn't move forward until there's consensus					
2	from the Council on moving it forward then so be it. I					
3	mean, that's it will not move until that happens so					
4	CHAIRMAN RENKES: And it sounds like you					
5	can get more information about it pretty quickly out					
6	so					
7	DR. MUNDY: I have the revised proposal, I					
8	have not had a chance to go through it.					
9	MS. BALLARD: And so we'll see it again.					
10	MR. DUFFY: So we would see that again at					
11	our next meeting then?					
12	MS. BALLARD: Or in some other fashion.					
13	MS. PHILLIPS: We can send it to you and					
14	then take it up at on a teleconference meeting. We hit					
15	we'll send you the details ahead of time.					
16	MR. DUFFY: Okay.					
17	MS. PHILLIPS: We have the three on ACC.					
18	MS. BALLARD: Four.					
19	MS. PHILLIPS: The four on ACC.					
20	CHAIRMAN RENKES: Okay, so now we've added					
21	three and we've deferred three. We've changed the					
22	categories. I'd like to call it even.					
23	MS. PHILLIPS: We get my consensus on that					
24	but					
25	MS. PEARCE: Which ones are the ones that					

we're....

MS. PHILLIPS: The ones that have not been determined are Bechtol, Okkonen, Stabenow and Willette.

CHAIRMAN RENKES: Well, in fairness, the ACC area was an area that I think that a couple of the State Trustees were having the most trouble with.

MS. BALLARD: Right.

CHAIRMAN RENKES: Is that fair?

MR. DUFFY: Yes.

MS. BALLARD: Absolutely.

CHAIRMAN RENKES: And maybe now that we've moved Knudsen back in and we've funded three, I think, you know, we had the -- what I heard in the discussion of the ACC proposals was that we were looking for the projects where there was Batten and Weingartner where they were, you know, long term continuing projects. And then the Alaska Marine Highway project where we felt that a significant amount of effort had been put into working out the arrangement with the State agency and that we wanted to show good faith there. And also the project has a lot of value. So we had a rational basis for I think dividing up the seven projects that are recommended for funding and choosing three.

DR. MUNDY: Mr. Chairman, could I make a comment, please?

CHAIRMAN RENKES: Yeah, sure.

DR. MUNDY: The one project that I would point out here that has a significant continuing component and is relatively low in cost is Okkonen. And I point that out because they've got a substantial investment in learning how to work with this particular shipping company. They have a thermosalinograph down in the engine room on an oil tanker. And they've done a proof of concept for us. They've got data on the website that we can look at, that anybody can look at and they've done a good job for us.

If we drop the funding now -- again, this is one of those situations where they've devoted a lot of time to get to know the shipping company people and that and get good relationships with the crews on these vessels -- I would say that that's a relatively modest cost. It's an ongoing long term monitoring program. It's low cost data and it's relatively useful. I would ask that -- I don't particularly at this hour of the day, I'm not ready to really say that the others have to go forward at this time but I wish you would reconsider on the Okkonen project for the reasons that I've just given.

MS. BALLARD: I can go with that.

CHAIRMAN RENKES: Okay, we can go with

MS. BALLARD: Okay.

MS. BAL

that.

1	CHAIRMAN RENKES: So we'll add Okkonen.						
2	What I'd like to do now if you're ready yes.						
3	MS. PHILLIPS: Mr. Chairman, before you get						
4	to that point, I just need to verify, we have nine projects						
5	that were on the defer list and I'm keeping those on the						
6	defer list						
7	CHAIRMAN RENKES: Yeah, they were						
8	MS. PHILLIPS:unless I get						
9	direct						
10	CHAIRMAN RENKES: In the Work Plan they						
11	were on the defer list.						
12	MS. PHILLIPS: On the defer list.						
13	CHAIRMAN RENKES: And we kept we've move						
14	three off						
15	MS. PHILLIPS: Right.						
16	CHAIRMAN RENKES:defer to fund and						
17	we've kept nine						
18	MS. PHILLIPS: Right.						
19	CHAIRMAN RENKES:that were						
20	recommended for defer, in the defer category, okay.						
21	MS. PHILLIPS: And I'm keeping those on the						
22	defer list. Do you want would you						
23	MR. BALSIGER: Well, I'm not Mr.						
24	Chairman, I'm not sure how we're going to deal with the						
25	defer list but if we're not going to deal with it right						

1 now, I would propose adding Stabenow's project -- which is 2 a closeout year, a second year we funded -- to the defer list and make that decision later on if we're not making 3 those decisions now. And I guess I'd do that. 5 MS. PHILLIPS: Change Stabenow.... CHAIRMAN RENKES: Change Stabenow.... 6 7 MS. PHILLIPS: ....to defer. CHAIRMAN RENKES: .... from fund to defer, 8 9 uh-huh. 10 MS. PHILLIPS: Okay. 11 MS. PEARCE: I have a question. DR. MUNDY: 12 Yes. 13 MR. HAGEN: No. 14 MS. PEARCE: No. 15 MR. HAGEN: Change Stabenow from fund. Stabenow is a closeout project and it -- this is the last 16 year of it coming up. It committed funds last year so 17 it's.... 18 Well, obviously I'd rather 19 MR. BALSIGER: 20 fund it but I didn't see the sympathy here for it. So if 21 we can put it into the defer thing where we have money left over from the lapsed projects last year..... 22 23 MR. HAGEN: Yeah, if their field season is 24 next summer -- so there's a window there to work, I guess.

MR. BALSIGER: That's what I was thinking.

1	CHAIRMAN RENKES: Trustee Pearce.						
2	MS. PEARCE: So you've got a deferred list						
3	but those were the ones that you had						
4	MS. PHILLIPS: On the deferred list.						
5	MS. PEARCE:that you all had already						
6	had said deferred. So setting Stabenow beside, where does						
7	the Willette and the						
8	MS. PHILLIPS: Bechtol.						
9	MS. PEARCE:Bechtol and the Cooper						
10	projects go?						
11	MS. PHILLIPS: They just go away.						
12	MS. PEARCE: Well						
13	CHAIRMAN RENKES: My						
14	MS. PHILLIPS: Unless you want to put them						
15	on the deferred list.						
16	MS. PEARCE: I we had things that were						
17	recommended for funding that we're suddenly just getting						
18	rid of and things that were recommended as being deferred						
19	that we're keeping. That seems						
20	CHAIRMAN RENKES: I think they go to						
21	the						
22	MS. PEARCE:backwards.						
23	CHAIRMAN RENKES:defer list.						
24	MS. PEARCE: Okay, that's what I was just						
25	trying to clarify.						

1	MS. PHILLIPS: Okay, that makes more sense
2	to me.
3	CHAIRMAN RENKES: That's what I thought we
4	were
5	MS. PEARCE: It makes more sense to me.
6	CHAIRMAN RENKES:doing.
7	MS. PEARCE: But that's not what I was
8	hearing.
9	CHAIRMAN RENKES: I thought we were
10	flipping things between fund and defer here as we went
11	along.
12	MS. PHILLIPS: Okay, Bechtol, Stabenow and
13	Willette all go to defer.
14	MS. PEARCE: Well, and Baird and Cooper.
15	Even those are community involvement.
16	MS. PHILLIPS: Right, right.
17	MR. BALSIGER: Oh, yeah, yeah.
18	CHAIRMAN RENKES: Yeah, and we put those
19	in
20	MS. PHILLIPS: Then we have one other
21	project that did not fall in those categories and it's a
22	management an EVOS management category and that's our
23	project management cost. It's 140,000 that needs to be
24	done. So we just need to have that one approved. And that

was approved by the -- it was on the State's list.

CHAIRMAN RENKES: Okay. Any objection?
Any discussion? Nothing, okay.

MS. BALLARD: May I add a general sort of good of the order. It seems to me that since two of the major agencies are represented at the table here who are still surprised at the method of assigning projects to agencies for supervision. It seems that as a matter of principle we should move towards having EVOS manage its own projects. I don't understand why we do that through these -- I mean, it's really too late in the day to bring that up but when both Jim and Kevin sort of roll their eyes and say we don't know how it gets assigned to us, I wonder what the logic of it is.

MS. PHILLIPS: It is something that we have been talking about and looking at and we have a proposal for you.

MS. BALLARD: Good.

CHAIRMAN RENKES: Oh, yes.

MS. BANKS: Mr. Chairman, if I may. The projects that were recommended for defer by the EVOS Executive Director, were you intending to keep those on the deferred list or were you intending to just eliminate those completely. Because I know you went through some of the other projects that were -- like for an example, Alaska coastal currents, you've got projects that were recommended

to be funded by the Executive Director such as like Bechtol. And your decision was to defer. But if you go down to Matkin -- I'm not sure how to pronounce it -- Vaugin [sic].

CHAIRMAN RENKES: Vaughan.

MS. BANKS: Vaughan, Kline and Baird, all those projects were recommended by the Executive Director to defer, are you wanting to.....

CHAIRMAN RENKES: Yeah, just keep those on the defer list.

MS. BANKS: ....continue -- keep those on the deferred list.

CHAIRMAN RENKES: Uh-huh.

MS. BANKS: Okay, so then that would be the case then for the remainder of the Work Plan, is that correct.

MR. DUFFY: Mr. Chairman, I know it's getting late but that's not my understanding of what we're doing here. My understanding is that of those we -- for the ACC proposals we funded a suite of projects. We put three on the deferred list but under what I thought we were doing, those would in fact go away.

CHAIRMAN RENKES: The deferred -- as a practical matter, things that are on the deferred list are not funded -- that's my understanding.....

1 MS. PHILLIPS: Right. CHAIRMAN RENKES: ....I'm trying it out --2 are not funded unless we come back and say we have some 3 money from.... 4 5 MS. PHILLIPS: And what would you..... 6 CHAIRMAN RENKES: ....the '03 funds.... MS. PHILLIPS: ....be interested in.... 7 CHAIRMAN RENKES: And what off that list do 8 9 we want to fund. 10 MS. PHILLIPS: And we will -- you know, once we know -- once we have put the figures together of 11 12 what we have funded and we have the dollar figure that --13 for the amount that we have left, so we'll have to come back to the Council. 14 15 CHAIRMAN RENKES: Right. I guess for the record, I 16 MS. BALLARD: 17 want it clear that I don't feel compelled to spend every dime that we have. 18 19 CHAIRMAN RENKES: No. 20 MS. BALLARD: I think it's important to put 21 together a proposal for funding that we're all comfortable 22 with. So if deferred truly means deferred and we 23 understand and those people understand that that doesn't

mean that they automatically get some status relative to

24

25

lapse funding.

1 MR. DUFFY: A quick question, if I could, 2 to Dr. Mundy. The Matkin killer whale observation project, what time of year does that take place? Because I heard 3 4 public testimony to that and it caught my attention. 5 a \$20,000 project. If it enhances our knowledge base relative to killer whales and a 6 one pod which is 7 apparently being listed and..... DR. MUNDY: I don't, strictly speaking, 8 9 know the answer to that. I know that Craiq is out just about anytime that you can operate in a small boat. Okay, 10 so he's not out in the dead of winter but he's..... 11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

MR. DUFFY: Right, so.....

DR. MUNDY: ....out a lot of other times.

MR. DUFFY: Thank you. So if we -- so then if we as a Trustee council decide that that's a good expenditure of \$20,000 to do that work and we approve it sometime in February, whenever our meeting is, it could occur this summer, without any hitch?

DR. MUNDY: Yes. Yes, I believe that's correct.

CHAIRMAN RENKES: How large is his boat?

DR. MUNDY: It's not -- I mean it's like -it's about a 30 footer. Because I mean it's not a huge
boat.

MS. PEARCE: We should all go. We love

	going across the Sound in Smaller boats.						
2	MR. BALSIGER: I propose then that we don't						
3	lose this defer. This defer goes into our doesn't go						
4	away. It stays on our defer list. That is supposed						
5	MS. PEARCE: Which defer are you talking						
6	about? All of them or a specific						
7	MR. BALSIGER: The Matkin one in						
8	specifically.						
9	MS. PEARCE: Is the Matkin one would						
10	evaporate.						
11	CHAIRMAN RENKES: So we could come back and						
12	fund that if we want to come back and fund any of the						
13	projects on our deferred list. But we're not						
14	Commissioner Ballard is saying that we'll do that by						
15	consensus and folks on the deferred list projects on the						
16	deferred list shouldn't feel that they've got some special						
17	status. In other words, if the fund						
18	MS. BALLARD: Right. They're not just						
19	waiting for money.						
20	CHAIRMAN RENKES: That's right. That's the						
21	way to put it.						
22	MS. BALLARD: Like fund contingent.						
23	MS. PEARCE: Don't go buy gear.						
24	MS. BALLARD: Yes, don't go don't go buy						
25	what?						

1	MS. PEARCE: Gear.
2	MS. BALLARD: Yeah, gear.
3	MR. MEADE: If I may, to come back and
4	address the killer whale that Mr. Duffy described. I read
5	two letters sent to me I think through EVOS and I did hear
6	it on the public testimony. I certainly am not opposed and
7	I'm very supportive of that low cost to maintaining that
8	long term data benefit. So if there's no opposition there,
9	why subject it to deferment if there's a consensus
10	potentially for at least that specific project? For all
11	the reasons I heard Commissioner Duffy mentioned.
12	MR. BALSIGER: I would support it.
13	MR. MEADE: To me it's just one more
14	opportunity to show that we've listened to public comment
15	and we're making our decisions responsive to that, in
16	accordance with the direction we want to go.
17	MS. BALLARD: It's all right with me.
18	MR. DUFFY: I concur with that observation.
19	CHAIRMAN RENKES: Deferring to the folks
20	with fisheries responsibility.
21	MS. PHILLIPS: Okay on Matkin?
22	MR. DUFFY: Yes.
23	MS. BALLARD: But not in a dangerous set of
24	seas.

CHAIRMAN RENKES: It was a 14 foot skiff, I

1 was going to say he had a -- he's got a good deal. 2 MS. PHILLIPS: Okay, that's all I have as 3 far as the Work Plan, Mr. Chairman. 4 CHAIRMAN RENKES: Okay, so now..... 5 MS. PHILLIPS: You do need to take -- I 6 have some other action items. 7 CHAIRMAN RENKES: So now after we've gone 8 through this process, can we agree as a group to make this our action on the Work Plan? 9 10 MS. BALLARD: Yes. 11 MR. DUFFY: Yes. 12 MR. BALSIGER: Yes. 13 MS. PEARCE: Yes. 14 MR. MEADE: Yes. CHAIRMAN RENKES: Good, we've got 15 16 consensus. 17 MS. PHILLIPS: Great. There's two other 18 items that we need to take up. I will hold the lapsed one 19 for an -- issue for our next meeting and that way we'll 20 have an idea of the exact dollar figures. I do need you to 21 give me authority to sign the memorandum of agreement 22 between the Alaska Marine Highway system and DOT now that 23 you have pursued that. 24 MS. BALLARD: So moved.

MR. DUFFY: Second.

1	CHAIRMAN RENKES: Seconded. Approved						
2	without objection.						
3	MS. PHILLIPS: Great. And I need you						
4	to						
5	MS. PEARCE: You sign it?						
6	MS. PHILLIPS: Yes. I also ask you to						
7	authorize my doing a report on various related						
8	organizations in the state who are sponsored by where they						
9	get their funding and what their scientific work entails.						
10	MS. BALLARD: I asked for this, Mr.						
11	Chairman. I asked that we get a map that show us where the						
12	money is.						
13	CHAIRMAN RENKES: I'm sorry, a map of						
14	MS. BALLARD: Of all the funding for all						
15	the science in this area so we can understand how this all						
16	fits together a little bit better.						
17	CHAIRMAN RENKES: Right. I agree to that						
18	also. Thanks.						
19	MS. BALLARD: I want to be on a level						
20	playing field with Jim and I'm so far behind him.						
21	MR. BALSIGER: Are you including private						
22	foundations and that kind of stuff?						
23	MS. PHILLIPS: Everything.						
24	MS. BALLARD: The best she can do.						
25	MS. PHILLIPS: Yeah.						

1	MS. BALLARD: I mean, the best she can do.							
2	It will be fascinating.							
3	CHAIRMAN RENKES: Can I make a request							
4	MS. BALLARD: Sure.							
5	CHAIRMAN RENKES:for information.							
6	I'd like to have available to all the Trustees a list of							
7	all the money that has been spent since the inception of							
8	the Trustee Council and							
9	MS. PHILLIPS: You I did send it out.							
10	CHAIRMAN RENKES: Do we have that?							
11	MS. PHILLIPS: Yeah, we do.							
12	MR. DUFFY: That we have.							
13	MS. PHILLIPS: A couple a month or so							
14	ago.							
15	CHAIRMAN RENKES: But wasn't that just by							
16	category as opposed to specific.							
17	MS. PHILLIPS: You want the detail?							
18	CHAIRMAN RENKES: Yeah.							
19	MS. PHILLIPS: Okay.							
20	CHAIRMAN RENKES: If you have the detail, I							
21	think that would be helpful. Because that was by like							
22	habitat, acquisition, right?							
23	MS. PHILLIPS: Right.							
24	CHAIRMAN RENKES: Yeah, it was broad							
25	categories as opposed to the specific projects.							

1 DR. MUNDY: We have the Work Plan. 2 MS. PHILLIPS: Yeah. 3 DR. MUNDY: The past Work Plans. 4 send you a collection of those that tells you every project 5 that's ever been funded. 6 CHAIRMAN RENKES: Okav. 7 MS. PHILLIPS: One other thing, Mr. 8 Chairman, before everybody leaves, they must walk right by Cherri and sign the resolution tonight for approving and 9 10 spending the money for the Work Plan. We have to have your 11 signatures on resolution that then will go to the courts so 12 the courts will know to release the funds and such. 13 CHAIRMAN RENKES: Okay. MS. PHILLIPS: That's all I have for 14 tonight, Mr. Chairman. I appreciate very, very much you --15 everybody staying and getting through this. 16 17 MS. BALLARD: Move we adjourn. 18 CHAIRMAN RENKES: Trustee Pearce. 19 MS. PEARCE: Thank you. You had talked about an executive session. Do we need to not adjourn so 20 that if you need to do a phone executive session we could 21 do so? 22 23 MS. PHILLIPS: I could do the executive 24 session in just a very few minutes if you wanted to stay or

else I could do it by phone, it doesn't .....

1 2

it.

MS. PEARCE: But the point is, we shouldn't adjourn if we're going to do it by phone. That's my point.

MS. PHILLIPS: No, because we could set it up with other business beside the executive session on the phone.

CHAIRMAN RENKES: If it's a matter of just a few minutes, why don't we deal with it while we're here.

MS. BALLARD: Why don't we just deal with

MS. PHILLIPS: Okay, it will just take a few minutes so.

MR. BALSIGER: Would you like to convene us into executive session?

MS. PEARCE: We have to know what the topic is before we can.

MS. PHILLIPS: It's legal issues and if I could have Craig stay and Ron and Phil, please.

CHAIRMAN RENKES: Commissioner Duffy.

MR. DUFFY: Mr. Chairman, I'm going to make this short and hopefully I'll speak for most of the Trustee Council members. I would like to thank the staff, the science director, Gail Phillips, the STAC, the PAC and everyone else who put all the effort as well as members of the public who participating in the development of the FY-04 Work Plan. This is the first time that I've really gone

1	through this in detail and come to a consensus in the						
2	Trustee Council process. For those out in the audience,						
3	I'm sure it was somewhat laborious. But I think by this						
4	level of scrutiny, this level of dialogue, the members of						
5	the public sitting here, I think it just enhances the						
6	credibility of this organization. So with that in mind,						
7	I'm ready to adjourn. Thank you.						
8	MR. BALSIGER: No, we're ready to move into						
9	executive session.						
10	MR. DUFFY: Executive session.						
11	CHAIRMAN RENKES: We'll move into executive						
12	session. So we'll need to cut off the telephone.						
13	MR. DUFFY: And you'll need a motion, Mr.						
14	Chairman						
15	MR. BALSIGER: Mr. Chairman, I move we move						
16	into executive session for the purpose of discussing some						
17	legal issues.						
18	MR. DUFFY: Second.						
19	CHAIRMAN RENKES: Without any objection, so						
20	moved.						
21	(Off record - 6:03 p.m.)						
22	(On record - 6:09 p.m.)						
23	MS. BALLARD: Okay, Greg, I move we						
24	adjourn.						
25	MR. DUFFY: Second.						

1		CHAIRMAN	RENKES:	Without	objection,	we're
2	adjourned.
