EXXON VALDEZ OIL SPILL
TRUSTEE COUNCIL
ADMINISTRATIVE RECORD

Exxon Valdez Oil Spill Trustee Council

Restoration Office

645 G Street, Suite 402, Anchorage, Alaska 99501

Phone: (907) 278-8012 Fax: (907) 276-7178

Mission Statement of the Exxon Valdez Oil Spill Trustee Council

The mission of the Trustee Council and all participants in council efforts is to efficiently restore the environment injured by the Exxon Valdez oil spill to a healthy, productive world renowned ecosystem, while taking into account the importance of quality of life and the need for viable opportunities to establish and sustain a reasonable standard of living.

The restoration will be accomplished through the development and implementation of a comprehensive interdisciplinary recovery and rehabilitation program that includes:

- Natural Recovery
- Monitoring and Research
- Resource and Service Restoration
- Habitat Acquisition and Protection
- Resource and Service Enhancement
- Replacement
- Meaningful Public Participation
- Project Evaluation
- Fiscal Accountability
- Efficient Administration

Adopted by the Trustee Council at their November 30, 1993 meeting.

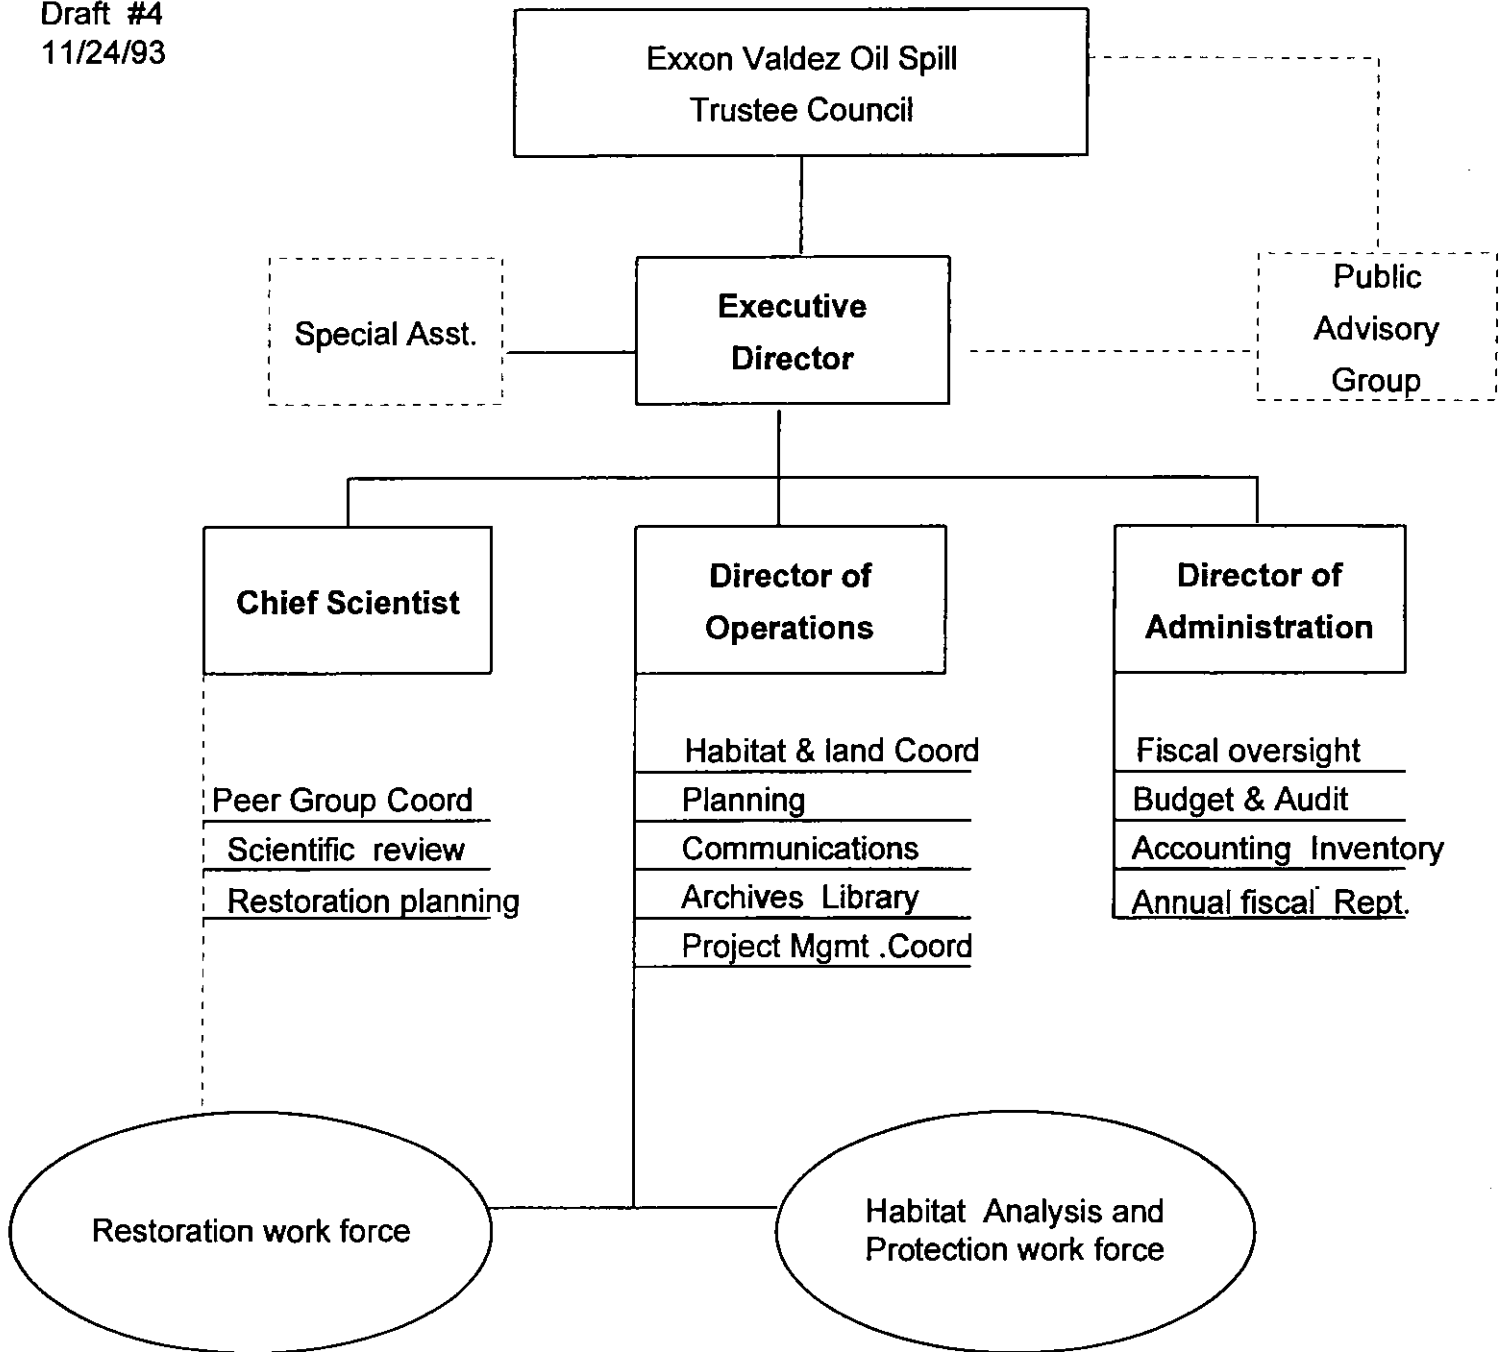

Trustee Agencies

State of Alaska: Departments of Fish & Game, Law, and Environmental Conservation

United States: National Oceanic and Atmospheric Administration, Departments of Agriculture and Interior

Exxon Valdez Oil Spill Trustee Council Organization Chart

Draft #4
11/24/93

- Notes:
1. This structure provides efficient management of the Council business at reduced costs.
 2. Secretarial and administrative staff will be developed as needed within the budget .
 3. There will be a transition period as we implement a formal management and tracking system.
 4. Items listed below directors are functions except Corrdinators and fiscal.

**MEMORANDUM****TO:** Restoration Work Force**FROM:** Molly McCammon
Director of Operations**DATE:** Dec. 27, 1993**RE:** Follow-up to December 20 meeting

Present: Jim Ayers, Executive Director
Molly McCammon, Director of Operations
Veronica Gilbert, ADNR
Mark Broderson, ADEC
Jerome Montague, ADF&G
Byron Morris, NMFS
Sandy Rabinowitch, DOI
Dave Gibbons, USFS

1. 1992-93 Project Status Report

Veronica Gilbert distributed copies of her status report format. The format was accepted with these changes/clarifications:

- * VG will add a column indicating species or service injured.
- * Results section will be 2-3 sentences in length, and include references to any available reports.
- * Agencies will in most cases limit related projects to those directly related.
- * Status should indicate whether ongoing or completed project, and status of report.
- * The amount spent should be filled in where possible, pending the finance committee report.
- * The final report will be categorized by project and by resource.

ACTION: Agencies will fill in project status forms by hand and return to VG by Dec. 31. Veronica and CACI staff will input data; distribute draft report to Bob Spies for review by Jan. 4-5, and have final draft by Jan. 7.

Trustee Agencies

State of Alaska: Departments of Fish & Game, Law, and Environmental Conservation
United States: National Oceanic & Atmospheric Administration, Departments of Agriculture and Interior

Related follow-up: Molly and Veronica will work with Carrie Holba and Bob Spies on disposition of final reports.

2. 1994 Work Plan

Veronica Gilbert will develop a new spreadsheet which includes the project description, the amount requested, and

PAG recommendation	(Jan. 11-12)
Public comment	(Jan. 17)
Chief scientist recommendation	(Jan. 18-19)
Exec. Dir. recommendation	(Jan. 23)
Final report to trustees	(Jan. 26)

Followup: A form for individual project backup is being drafted. Additional information will be provided at a later date.

3. Financial Issues

a. Inventory reports should include purchase of all items since the damage assessment days. Walt Sheridan has also requested this information for a finance committee report. Due to the Director of Operations by Jan. 7.

b. **94 Admin budget.** Mar 1 - Sept. 30 budget should reflect 7/12 of \$200.0 and 2fte for Restoration Work Force personnel. We have allowed a transition time until March 1, with the understanding that agencies are to be lapsing funds and making every effort possible to meet the new budget guidelines before Mar. 1. Travel should reflect 10 meetings in Anchorage and 3 in Juneau. Office space will be shown separately.

4. Ecosystem Approach

A group made up of the chief scientist, several peer reviewers, and agency representatives will meet in early January to begin development of a management structure with goals and objectives for an overall ecosystem approach to be used for implementation of the draft restoration plan. The management structure will be used in developing the FY95 work plan.

Follow-up: Meeting scheduled with Executive Director, scientists, and work force in early January.

5. EIS for Restoration Plan

An EIS for the restoration plan will most likely be done and included in the work plan as a separate project. There is a separate issue of whether the trustees can fund a project if NEPA compliance does not occur first. Jim will make his recommendations on a case by case basis.

6. Habitat Acquisition

Negotiations will occur in 3 phases with reports to the trustees at each stage:

- a. Discussion and preliminary negotiations
- b. Detailed negotiations, including appraisals, other assessments, specific terms & conditions;
- c. Actual procurement authorization.

A letter detailing this process has been sent to all agencies involved in negotiations, all trustees, and restoration workforce. Byron Morris brought up the question of a long-range monitoring plan and how it would be incorporated into the ecosystem implementation strategy. Jim answered that it would be rolled into the ecosystem goals & objectives.

7. Miscellaneous Housekeeping

a. **Correspondence.** Rebecca Williams will be establishing a correspondence tracking system. As a general rule, responses to letters to the trustees will be coordinated from the central office.

b. **Equipment** - a policy for purchasing new equipment is now being developed pending receipt of the inventory lists. All equipment purchases must be coordinated through the executive director's office.

MEMORANDUM

To: Agency Liaisons
From: Jim Ayers
Date: December 17, 1993
Subj: Meeting

There will be an agency Liaison meeting with Jim Ayers and Molly McCammon on Monday, December 20, 1993, from 1:00 p.m. to 4:00 p.m. The meeting will be held at the Juneau Federal Building, in Room 541 A.

Tentative Agenda:

- 1) 1992- 1993 project status report
- 2) 1994 Work Plan and budgets
- 3) Ecosystem approach
- 4) EIS for draft Restoration Plan
- 5) Habitat acquisition
- 6) Endowment options
- 7) 1995 Work Plan
- 8) Other

Liaison mtg on Monday. Now that this memo has been distributed, I remember J. Ayers passing me a note during the last TC mtg that stated "Agenda items that have related documents should be noted as such..." Did any of the agenda items for this mtg have related documents? Perhaps I should have forwarded a copy of that note to you long ago. Sorry! Rebecca

1 analysis of this forest to see if they could find spruce bark
2 beetle, and if they find a beetle or a bug, they say, spruce bark
3 beetle, guys, you know, got to be careful. And so, all I'm saying
4 is, I just urge this habitat protection group to take a balanced
5 approach as we look at the health of the forest, the flora, the
6 fauna, you know, the biology of these areas, and not be spooked by
7 this term, spruce bark beetle. Thanks.

8 MR. ROSIER: Yes, Mr. Frampton, I believe, had a
9 compromise. A lead-in, sir.

10 MR. FRAMPTON: A mere suggestion.

11 MR. ROSIER: A mere suggestion.

12 MR. FRAMPTON: Well understood.

13 MR. ROSIER: Okay. Further comments? Yes, Mr. Sandor?
14 No? Okay. As I understand it from the working group on this,
15 basically, you're looking for some direction from us on -- kind of
16 on two fronts here on this -- one of two options, anyway, at this
17 point, and should we immediately proceed with pursuing the
18 protection of high value on this, or should we be sending this
19 volume one out to the public for their comments, and then making
20 the priorities following that public review on that?

21 UNIDENTIFIED VOICE: Correct.

22 MS. RUTHERFORD: That's correct.

23 MR. ROSIER: All right.

24 UNIDENTIFIED VOICE: Or some combination.

25 MR. ROSIER: Or some combination thereof on this, but
26 would the Trustees care to speak to the options that we have here?

1 Yes, Mr. Pennoyer?

2 MR. PENNOYER: Mr. Chairman, for one thing, I move that
3 we do send this out to public review and take the other part as a
4 separate motion.

5 MR. ROSIER: Is there a second to that?

6 MR. BARTON: I second the motion.

7 MR. ROSIER: Thank you, Mr. Barton. Discussion?
8 Mr. Cole?

9 MR. COLE: I have some reservations about that, you
10 know. I think we've gone out to the public with the habitat
11 acquisition so many times, they're inundated with material from the
12 Trustee Council seeking their recommendations. I thought, in
13 response to our so-called newspaper thing, we had a good sense of
14 the public response, and if we send this out for public review, you
15 know, we will be setting this back another two or three months,
16 which may or may not be worthwhile, but I'm going to -- I just have
17 some reservations for that reason.

18 MR. ROSIER: Mr. Pennoyer?

19 MR. PENNOYER: Mr. Chairman, I broke it into two pieces
20 because it was not my intent that we necessarily wait to do
21 anything until we got some response. As we deal with, perhaps, the
22 '94 work plan, or even now, we can discuss whether -- and I know we
23 are proceeding with negotiations in certain areas anyhow in high
24 ranking parcels. This, however, I think, is the first time we've
25 had this all assembled with a ranking given to these -- a
26 comprehensive ranking given to all these parcels, and I'm not --

1 the idea was that this goes out to public information, comment if
2 you wish, but not necessarily that we're going to wait to do
3 anything until we grind through the whole process. So, it was kind
4 of a two-parter motion, and I did not intend that we send this out
5 for the three-month deadline, and everything was on hold for that
6 period of time. We may wish to proceed in the meantime in certain
7 areas, but this is the first time I think we've actually ranked all
8 of these parcels, to my understanding.

9 MR. COLE: How were you going to send it out?

10 MR. PENNOYER: I think we'd probably send out volume one
11 and perhaps hold volume two in libraries or other places for
12 viewing upon request.

13 MR. ROSIER: Yes, Dave?

14 DR. GIBBONS: Mr. Chair, yeah, our recommendation was to
15 send out volume one to the public, put volume two in the various
16 libraries and the little offset (ph) over here, and also have a
17 copy available at Timeframe here in Anchorage, if somebody wants to
18 make a colored copy, they could do that. They're quite expensive
19 to make.

20 MR. ROSIER: Mr. Frampton?

21 MR. FRAMPTON: I have a question. I mean, this has been
22 peer reviewed, right? I mean, this was a scientific, analytical
23 process. I wonder if what we could do would be to send out the
24 rankings of the large parcel evaluation, just a few page ranking,
25 with maps that identify where these are, with the FY94 work plan as
26 an appendix to that, which would be an efficient way to get this

1 into the hands of -- we wouldn't have to make notebooks for
2 thousands of people, but we'd put the six or eight pages with the
3 maps and the rankings, and that would be an efficient way to get
4 this information into the hands of the public in a way that, you
5 know, for any reaction that they may want to have. Is that a
6 possibility?

7 MR. ROSIER: I think we're about to hear from another
8 messenger over here.

9 MR. FRAMPTON: Okay.

10 MR. ROSIER: Marty?

11 MS. RUTHERFORD: Mr. Chair, we can share the information
12 any way that you'd like. I just want to clarify a couple of things
13 that the -- the peer review was of the approach and the process,
14 not of the data, and I think that's important. We -- and, again,
15 the scientific process was -- is accurate to the degree that
16 information was available and that we could access information. I
17 mean, we actively sought it out at every opportunity, but there --
18 there well might be that as it goes out to the people who live in
19 the region, who have, you know, additional expertise, we may find
20 clarifications or even errors, we hope we can try to keep those to
21 a minimum, but the peer review was not on the analysis itself. It
22 was on the approach and the process. So -- and I might add, in
23 that peer review of the process and of the approach, they did
24 recommend that it do -- be sent out to public comment.

25 MR. ROSIER: Mr. Cole, and then Mr. Sandor.

26 MR. COLE: Well, here's what continues to trouble me.

1 I mean, we had, in response to our questionnaires, maybe some two
2 thousand, you know, comments, which we received, and to whom would
3 we send this material? I mean, all two thousand, or just selected
4 people out of that group, and would we send them the full notebook?
5 I mean, I just think that we need to discuss what we would send out
6 a little bit more before we decide to wholesale send it out.

7 MS. RUTHERFORD: Yeah, actually, yeah, my recommendation
8 is slightly different than the one that Dave indicated, and I would
9 actually send out a letter advising them of what these documents
10 are and where they can access them. For instance, put them in a
11 repository in each community, maybe a couple of repositories in
12 each community, and advise them of the availability, if they wanted
13 to purchase their own copies from -- from such a location as
14 Timeframe. But that's sort of how I would approach it, and then
15 the letter would indicate that if they had additional information,
16 or comments they wanted to provide, they could do so by a time
17 specific. That's sort of what I would recommend. I think that's
18 more cost-effective.

19 MR. ROSIER: Yes, Mr. Sandor.

20 MR. SANDOR: Well, I agree with Mr. Cole's reservations
21 about sending this out, and I think, really, this ought to be
22 regarded as just a step in the process that's evolving. We've
23 certainly got to deal with these questions that have been raised,
24 and this perhaps ought to be stamped "draft," or at least --
25 whatever it is at this point in time, and -- because it's going to
26 be consuming -- confusing. I think all these documents should be

1 accessible to the public, and I have no problem with these being
2 distributed, except in a wholesale way, or a suggestion that this
3 is, in fact, a final report, and I don't know, the chief scientist
4 has some aspect of this, and whether or not he has had the
5 opportunity to look at this, but I would not approve of -- I'd
6 favor the motion as stated.

7 MR. ROSIER: Marty?

8 MS. RUTHERFORD: I just -- a couple of different things.
9 As I had indicated earlier, I think this was -- you know, this was
10 as quantitative of an analysis as we could possibly provide, given
11 the level of information available. If you send it out for public
12 comment, that would be qualitative type information, and I would
13 not factor it in to the evaluations, per se, unless there were
14 errors identified. So, I think that that would be just additional
15 information layered on. So, I would not call these particularly
16 drafts. The other thing I might say is you might just want to put
17 them out, instead of for public comment, just for public
18 information as -- at the repositories.

19 MR. ROSIER: Yes, Mr. Pennoyer.

20 MR. PENNOYER: Mr. Chairman, I think that's more or less
21 what I was implying, was just for information, comment if people
22 think it's warranted, and, Marty, I guess I disagree with just
23 sending a letter. I think it should at least include the ranking
24 table and the maps, which would be, what, six or eight pages or
25 something like that, to show -- because I think it gives an
26 implication of what the Trustee Council is intending to do. It

1 kind of indicates that our first shot at this, this is what the
2 high ranking are, and people who have interest in parcels elsewhere
3 may want to comment on that. So, it seems to me that this is an
4 informational thing, we're requesting comment as appropriate, we
5 can either attach it to the work plan or as a separate letter, but
6 it is the first time we've done this. This is the first time we've
7 seen this whole package together outside the imminent threat, and
8 I think it's a worthwhile thing for the public to be aware of where
9 we are on it.

10 MR. ROSIER: Yes, Mr. Sandor.

11 MR. SANDOR: I think, you know, these high valued
12 parcels, these owners of these high valued parcels should be
13 contacted and, you know, preliminary steps made to determine to
14 what degree, if any, they have any interest in exchanges and
15 acquisition and conveyance by fee or by easement, have that process
16 underway and, you know, give them what this is, but this cannot be
17 regarded as a -- you know, the final information. So, I think the
18 Secretary's prime suggestion of simply getting this thing out, but
19 -- and the process underway, but we've got to integrate this with
20 exchange, we've got to have the most recent reports to the extent
21 of infestation, and as this goes forward, and as negotiations on
22 individual parcels are examined, these can be looked at by
23 entomologists and whatnot, and factored into the part of the
24 process, and I think, Jim, that's exactly the process that you had
25 in mind.

26 MR. ROSIER: Mr. Cole.

1 MR. COLE: Mr. Chairman, I move we commit this
2 subject of the dissemination of these materials to the sound
3 judgment of the executive director.

4 MR. ROSIER: We have a motion on the floor at the
5 present time.

6 MR. COLE: Well, I move to amend the motion.
7 (Laughter) Let him figure it out. That's what he gets paid for.

8 MR. ROSIER: Mr. Gibbons, did you have something more
9 to add to this discussion?

10 DR. GIBBONS: Yeah. I wanted to add a couple of points.
11 One thing that -- the evaluations all represent landowners that
12 identified themselves as willing sellers, so that step's been out of
13 the way. They all indicated to us that, yes, we're willing to
14 discuss with you various habitat protection options. And the
15 second point I wanted to make is, we're fully aware -- this is a
16 dynamic document. I mean, only about one-third of the owners
17 contacted said, yes. We fully expect when this gets out, those
18 other ones are going to come in and say, yeah, we're interested
19 also, so it's a living, breathing type of a document that's going
20 to go on. It's not a static kind of document.

21 MR. ROSIER: Yeah. It seems to me that one of the
22 things that's also involved here, and I think this goes along with
23 what Mr. Sandor was saying, is that nowhere do we deal with the
24 issue of small parcels. It's simply confusing to the public out
25 there, in my estimation, we've talked about large parcels, the
26 small parcels. But anyway, yes, Mr. Ayers?

1 MR. AYERS: Mr. Chairman, I understand, at least at
2 this point, clearly what the intention of the Trustees is, which is
3 to share the information that we have regarding habitat, at least
4 to this point. I want to share Dave's observations, that it's a
5 dynamic document that's going to continue to build. However, I
6 want to say that what I don't think you intend is to send the
7 habitat group back to do more additional work on the document per
8 se, but rather to have it disseminated to the general public, as
9 Dave mentioned, and Marty mentioned. In addition to that, to
10 pursue some of the protection analysis information with the
11 respective agency or trustee, gathering more information, for
12 example, the beetle bark infestation issue is something that we
13 need to -- Marty and I were just talking about that. If there's
14 information that they have, we need to see how recent it is, was it
15 on-ground surveys, are we comfortable with that information, is the
16 seller -- does the seller have additional information. We worked
17 it out with respect to the agencies, the bidding on -- when you get
18 into that, how you want to handle that, the contact with the
19 seller, and spend some time in the preliminary discussions and
20 negotiations, as you call it, looking at the matrix, or the
21 integrated -- what did you call it, the integrated strategy, I
22 think were Commissioner Sandor's words. Now, that's my
23 understanding of what your intention is. Is that correct?

24 MR. ROSIER: Mr. Pennoyer, would you be interested in
25 withdrawing your motion?

26 (Laughter)

1 MR. PENNOYER: I thought that's what my motion was. It
2 was amended by Mr. Cole to leave it up to the eminently good
3 judgment of the executive director to implement it.

4 MR. ROSIER: Okay. Is that what the second understood?
5 All right. Any discussion? Yes, all right. Those in favor
6 signify by saying "aye."

7 ALL TRUSTEES: Aye.

8 MR. ROSIER: Opposed?

9 (No audible response)

10 MR. ROSIER: The motion passes. Let's adjourn for
11 lunch at the present time. Let's be back here at ten minutes after
12 1:00.

13 (Off record at 12:10 p.m.)

14 (On record at 1:25 p.m.)

15 MR. ROSIER: Let's come back to order. Let the record
16 show that all of the Trustees are present. Dave, I think the next
17 item here on this was some action that's required on the small
18 parcels. Do you want to proceed with the presentation on that?

19 DR. GIBBONS: Yes, Mr. Chair, yeah, we were asking the
20 Trustee Council if they'd like us to proceed with the analysis of
21 small parcels, and that would include, first, developing an
22 analysis procedure for small parcels, which we would bring back to
23 you at your next meeting, and then analyze small parcels through
24 the oil spill affected area. We have the public who have expressed
25 interest in parcels between one hundred and sixty acres and a
26 thousand acres presently identified. There are also many other

1 MR. FRAMPTON: To clarify my motion would simply --
2 recognizing the different negotiations might be done in different
3 ways, with different teams, and different lead agencies that we
4 empower the executive director to come back to us with a
5 recommendation on how to do each one, that he makes sure that those
6 are consistently done, and I certainly didn't mean to suggest that
7 we should approve any six hundred thousand dollar budget. But the
8 question of setting up a separate team when we didn't have a
9 permanent staff, a permanent executive director, was a wholly --
10 and the problem addressed by the budget here, was a wholly
11 different situation. We're past that now, and I didn't mean to
12 suggest any budget figures at all.

13 MR. ROSIER: Are you looking at -- I'm -- just to
14 clarify in my own mind, are you looking at drawing on agency people
15 in on this as far as the negotiating teams are concerned on this,
16 or are you looking at some combination of the options that have
17 been put forth here in terms of contractors or outside nonprofits
18 associated with this? I -- yes.

19 MR. AYERS: Mr. Chairman --

20 MR. ROSIER: Mr. Ayers.

21 MR. AYERS: -- and Trustee members, it appears to me
22 that -- and let me talk about it in a practical sense since I do
23 better in a kind of a hayseed approach on this thing. We earlier
24 talked about the habitat analysis. We know now what some of the
25 priority critical habitat lands are. It's also my understanding
26 that you wanted us to proceed with talking to the respective agency

1 on those and make some initial contact, some preliminary
2 negotiations to find out is the seller interested, are there
3 integrated strategy approaches that might be included, and in
4 addition to that, is there a question with regard to the resources
5 they have, the value of those resources, like the bark beetle
6 infestation issue, and that would then come back to you to make a
7 decision about shall we go forward with the next level of that
8 negotiation, which is, how much is this really going to cost and
9 what's that valued at? In this particular case, I think what we're
10 talking about is that we would come back at you in, say, January,
11 and talk to you about specific appraisals, how much are those going
12 to cost, some additional -- the hazardous waste evaluation, a title
13 search. In some cases, title searches are going to be very
14 expensive. My understanding is, you spent kind of in the
15 neighborhood -- we spent in the neighborhood of seventy-five to
16 eighty-thousand dollars putting the package together on Seal Bay.
17 It's also my understanding that what we want to do is, we want to
18 compile a record, a factual information portfolio on the value of
19 these lands and how we proceeded and what the title search
20 revealed, so that there is housed within this Council the
21 background and the history and the information, the portfolio, if
22 you will, of why we purchased the land, and I think that's all
23 going to cost some money. There's project which is 126 -- 94126,
24 which Mark has efficiently and quickly looked up, and there's
25 approximately one million dollars in there for negotiation-related
26 activities. And my view is that all of these items should come

1 back to you as we proceed, and there will be a project that will
2 identify the costs, and those costs will relate to a specific
3 parcel that will include all the things that have been mentioned.
4 Therefore, you're not approving a specific cost. You are, at this
5 time, approving a process, and I'll come back to you in January, or
6 whenever our next meeting is, and report back to you on the
7 direction of the team approach, and my understanding is that I am
8 to work with the Trustees in developing a consistent process for
9 negotiation, in assisting in the formation of a team, that the team
10 would include a leader and that leader, unless otherwise specified
11 by the Trustees, would be the appropriate agency, management
12 agency, and that the team would include both state and federal
13 participants.

14 MR. ROSIER: Mr. Cole.

15 MR. COLE: Your hayseed approach just didn't quite
16 sell me. I'm really getting a little worried that this is getting
17 too expensive and too stereotyped, and I am comfortable with the
18 fashion in this -- that Assistant Secretary Frampton proposed, that
19 we commit this process to the executive director. He certainly
20 recognizes that four hundred or six hundred thousand, or a million
21 dollars is a scary thought for this rather straightforward process.
22 You don't have to hire a bunch of negotiators and make this a big
23 deal. It's essentially an art form that we're dealing with, and
24 not something that -- how much we can make of it. We have all the
25 data that we really essentially need for making a decision as to
26 what's a habitat priority. Like I said earlier, you call these

1 people up and ask if they want to sell, and they start talking
2 about it. Sure, there's expenses of the title search, and maybe a
3 survey, but that's not in the neighborhood of six hundred million.
4 And another thing that troubles me is, he's going to do this and
5 then come back to us in January or February, and then, you know, we
6 will, you know, limp along and it will be another three months
7 before much gets done, and I think that we must move the process
8 along more rapidly than that. That's what essentially troubles me.

9 MR. ROSIER: Yes, Mr. Sandor?

10 MR. SANDOR: Yes, Mr. Chairman. Options A to C, four
11 hundred to six hundred thousand -- Option B -- by Nature
12 Conservancy or some private non-profit entity with minimal costs,
13 it seems like the usual thing would be to try to -- try to minimize
14 administrative costs. I'm going to vote against the motion at this
15 time because of inadequate information and understanding of the
16 paper as presented.

17 MR. ROSIER: Mr. Ayers.

18 MR. AYERS: Mr. Chairman. Commissioner Sandor, it
19 is my understanding that earlier we proceeded with the acceptance
20 of the comprehensive habitat protection analysis process, and that
21 we've identified, certainly, after laborious analysis the high
22 value habitat that are relative to restoration, and that I was not
23 only to ensure that that information is disseminated, but also to
24 make some initial contacts with the respective or appropriate
25 agencies and proceed with the sellers -- of the owners of that
26 land. Now, as I understand the current motion as it relates to

1 that is, and I think we've got two things on the floor here, I
2 think one is a concern about how much this thing costs and I
3 haven't had a chance to look at that, I -- I just now got that
4 number. I don't think that we need to spend that much money to get
5 this done, but I do think that once we engage in preliminary
6 negotiations and we find out what the seller's interest is in,
7 including the integrated strategies you talked about, it's going to
8 come back to you and it's going to cost some amount, and it's my
9 understanding that that's what I'm to do. I'm not going to do as
10 the Attorney General suggests is implied. I don't think that we're
11 talking about, you know, stringing this thing out. I'm going to
12 come back to you in January having made some initial contacts and
13 with the respective agencies, and proceed with a recommendation
14 about negotiations or purchase, with all that information. And, I
15 think at that time it's going to cost some money to do appraisals
16 and some of those other things.

17 MR. ROSIER: Yes, Mr. Sandor.

18 MR. SANDOR: Well, that's reassuring. It doesn't seem
19 like this should be that complicated. I'll be pleased to know what
20 you come back with -- what you come back with in January.

21 MR. ROSIER: Yes, Mr. Pennoyer.

22 MR. PENNOYER: Mr. Chair. In essence we're going with
23 sort of Option A with the Executive Director coordinating it, an
24 appropriate state added to federal -- federal, I believe, or
25 federal added to state. That's -- we're not going to form a
26 separate ongoing team, as Option B implies. We're going to have,

1 based on the circumstance and leave it up to the Executive Director
2 to contact the agencies and set it up appropriately. Is that where
3 we are? Is this separate from the evaluation process?

4 MR. ROSIER: Yes, go ahead.

5 MR. FRAMPTON: If my motion confused things, I'll
6 withdraw it and we can proceed based on the understanding that
7 people seem to be comfortable with what we had before. I -- I was
8 just trying to indicate that I think that the A, B and C things are
9 not things we need based on our current approach that I think we're
10 going to do, and that we have now an executive director. So, I
11 withdraw the motion.

12 MR. ROSIER: Mr. Sandor.

13 MR. SANDOR: Yeah, I -- you just saw this for the first
14 time -- I just say this for the first time. It would be more
15 reassuring, quite frankly, if you revised this discussion paper
16 and, you know, injected your philosophy into it and -- and ...

17 MR. ROSIER: Dave.

18 DR. GIBBONS: Mr. Chair. I need to make a statement
19 here. You -- you've seen this paper in -- in the September 6 --
20 16th and 17th Trustee Council meeting that was in the package, and
21 it was a request by the Trustee Council to put it that. So, I'm
22 just trying to say where it came from, and so it's been around
23 awhile.

24 MR. ROSIER: Okay. Mr. Ayers.

25 MR. AYERS: Mr. Chairman, members, I have seen this
26 document. I've looked at this document. It was my understanding

1 that this was at your request and I didn't want to get in the way
2 of this at -- at your request. I guess if I had been able to focus
3 it -- at -- a little clearer at noon, when we moved through some
4 other items, I think that you made a decision earlier that obviates
5 the necessity for this discussion, and I'll be glad to write out
6 what we're going -- how we're -- how I'm going to proceed and come
7 back to you, but I intend to proceed immediately after this meeting
8 with what we talked about earlier.

9 MR. SANDOR: Great.

10 MR. ROSIER: Okay.

11 MR. COLE: It's so moved.

12 (Indiscernible -- Laughter)

13 MR. COLE: Well, I think we should reflect -- reflect
14 that the Council approves this prospective action as outlined by
15 the Executive Director. Otherwise, we're left with sort of a blank
16 record.

17 MR. ROSIER: We have the motion before us then. Those
18 in favor signify by saying aye.

19 ALL TRUSTEES: Aye.

20 MR. ROSIER: Opposed? (No response) Passes. Draft
21 final restoration plan. Loeffler and Rabinowitch.

22 (Indiscernible - out of range of microphone.)

23 MR. ROSIER: You want to start on the draft work plan?

24 (Laughter)

25 MR. AYERS: Mr. Chairman.

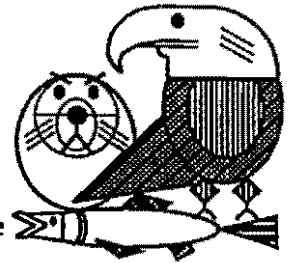

26 MR. ROSIER: Shall we take a break?

State of Alaska Department of Environmental Conservation	MR. JOHN SANDOR Commissioner
United States Department of the Interior	MR. GEORGE FRAMPTON, JR. Assistant Secretary
State Department of Fish and Game	MR. CARL ROSIER Commissioner
United States Department of Agriculture - Forest Service	MR. MIKE BARTON Regional Forester
United States Department of Commerce - NOAA	MR. STEVE PENNOYER Director, Alaska Region

RESTORATION TEAM in attendance

JIM AYERS	Executive Director, Trustees Council
DAVE GIBBONS	Interim Administrative Director, Trustees Council
PAMELA BERGMANN	Regional Environmental Assistant, United States Department of the Interior
MARK BRODERSEN	Restoration Chief, Alaska Department of Environmental Conservation
JEROME MONTAGUE	Director, Oil Spill Impact Assessment & Restoration Division, Alaska Department of Fish and Game
BYRON MORRIS	Chief, Office of Oil Spill Damage Assessment and Restoration, United States Department of Commerce - NOAA

1 the species that we are surveying through these boat surveys have
2 been in a long term decline. And, it also is actually timely when
3 you consider an ecosystem approach to the Sound is -- many of the
4 species we're talking about that we survey, using the boat surveys,
5 are apex predators on a number of the fish species that would be
6 tied into the ecosystem studies. So, it -- it also is appropriate
7 from that perspective. But, irrespective of the ecosystem study,
8 we -- we feel strongly that this study be approved for this year
9 because again, it give us a lot more statistical power to detect
10 trends and to monitor restoration.

11 MS. BERGMANN: Mr. Chairman.

12 MR. ROSIER: Yes.

13 MS. BERGMANN: The reason that we need funding early is
14 because the first surveys would be done in March and we need to
15 have the contract in place, and if we wait until the Trustee
16 Council meeting in late January, there simply wouldn't be time to
17 get the appropriate contracts in place and we would lose the
18 opportunity to get the data in March of '94.

19 MR. ROSIER: Yes, Mr. Cole. Don't run away Tony.

20 MR. DEGANGE: I won't.

21 MR. COLE: One thing that has concerned me in the
22 past is that we haven't -- do not see, or for some reason, I have
23 not seen the results of previous projects on the same subject. For
24 example, here I see that both surveys of marine bird and sea otter
25 populations were conducted in '91 and '93, and, yet, we're being
26 asked to approve a study in '94, and we do not have the results, as

11/30/93

1 time.

2 MR. ROSIER: Yes, Mr. Cole.

3 MR. COLE: Will this study as envisioned by you and
4 your group include components of the ecosystem other than those
5 injured by the spill, or thought or believed to be injured by the
6 spill?

7 DR. SPIES: The approach taken is to take the
8 fisheries that are having problems now and to work backward to the
9 ecosystem, both from my so-called top down and bottom up approach.
10 For instance, the -- with the pink salmon, the zooplankton, the
11 zooplankton depend on the phytoplankton, the production on the
12 phytoplankton depends on nutrients and oceanic conditions and
13 climate. And, this sort of -- and that their competitors with the
14 salmon for food and so forth, and there's -- of course, they have
15 their predators. And, it's reaching out in both directions, if you
16 will, from the injured species to understand what controls their
17 production.

18 MR. COLE: Mr. Chairman.

19 MR. ROSIER: Yes, Mr. Cole.

20 MR. COLE: Because ...

21 DR. SPIES: And I'd just like to clarify that this
22 really isn't mine. I've -- I've played a relatively minor role in
23 trying to put this together, but this -- the people in Cordova have
24 done the -- the -- lot of work on this (indiscernible).

25 MR. COLE: Well, you know, one of my ideas when we
26 were discussing this, your proposing is that the study would

1 include the elements of the Sound ecosystem other than those simply
2 injured by the spill or related to injuries of the spill -- from
3 the spill. And, I -- I would have some apprehension that this
4 study may be of somewhat narrower than was conceived by the
5 Trustees because I think, as it was being initially discussed by
6 the Trustees -- that thought was made and it was raised by some of
7 the scientists and scholars at the University of Alaska in
8 Fairbanks that not enough attention was being paid to the
9 relationship of the injured resources and the restoration
10 activities taken in connection with those resources to parts of the
11 ecosystem which were not injured by the spill.

12 DR. SPIES: I think you could fairly say at this point
13 that the emphasis has shifted from the studying species that were
14 specifically injured, or could be determined to be specifically
15 injured, to more of an ecosystem approach where the inter-
16 dependencies among the species in the Sound that are experiencing
17 problems are being studied in a more comprehensive fashion.

18 MR. COLE: Let me just say, and I'll put an end to my
19 comments, it was just that, it should, in my view, but certainly
20 leave it to the folks who far more about this subject than I, it
21 should be to the inter-dependency of components of the ecosystem,
22 other than those injured by the spill.

23 DR. SPIES: I think you could safely say that those
24 are being included to a much larger extent now than they have been
25 in the past.

26 MR. COLE: Okay, I want to be sure about that.

1 MR. ROSIER: Mr. Frampton.

2 MR. FRAMPTON: Well, I just want to say I think this is
3 a very interesting and ambitious looking agenda. But, I would also
4 hope that the group that's involved takes the broadest possible
5 approach because I think that while obviously pink salmon and
6 herring are, at this point, a major piece of the concern here in
7 Prince William Sound, that what I had in mind and what I think --
8 think we all had in mind was trying to encourage this process and
9 trying to put as at least a benchmark, not a limit, but a benchmark
10 of five million dollars for ecosystem monitoring and study program
11 was something that was not simply targeted on fisheries, but on the
12 whole ecosystem. And, what we're looking for is a really
13 comprehensive approach, and if too much is simply looking at, even
14 if it's top down and bottom up in the spectrum of pink salmon and
15 herring, you're not going to get the kind of a broad approach that
16 I certainly looking for ...

17 DR. SPIES: You have to look at the agenda, there's --
18 there's great emphasis on that because there's been a lot of
19 planning. This document has got a lot in it, relating to
20 fisheries, and I think what we have to do is develop similar
21 approaches for some of the other injured resources.

22 MR. ROSIER: Mr. Pennoyer.

23 MR. PENNOYER: NOAA tried to take a lead in setting this
24 up, as the Trustee Council asked us to, and there are two points
25 there. First of all the work down by the group in Cordova didn't
26 focus only on studying pink salmon and herring. They focused on

11/30/93

1 those as the indicator and on a pathway approach from those other
2 resources. We obviously are taking a very strong look at that in
3 this workshop of peer review process and having various experts
4 from other disciplines come in, but we are also looking at
5 alternatives, additions, other branches that might be added to the
6 tree. So, I think it's -- it is a broad look. I would also say
7 that I don't -- I don't think some people's feelings at the start,
8 that our five million dollar limit, or five million dollar number
9 was somehow a limit and, therefore, if you spend two million
10 dollars on the pink salmon, you kind of cut everything else out.
11 The five million was for ecosystem approach and we still may be
12 doing species specific studies in addition to that. They've been
13 told, in other words, not to -- obviously have to be realistic, but
14 not limit their thinking by specifics doing for all research
15 projects. I think the concept of looking at all the relationships
16 is clear. The other thing I'd point out is this is a workshop.
17 It's not going to answer our question entirely of what our total
18 research plan is going to be. Mr. Ayers is working in combination
19 with many of the people coming out of this workshop, is going to
20 have to help put together a total research plan, how long a
21 discussion we've had on the Seward Center, and it's going to have
22 to include a monitoring plan for monitoring things like the annual
23 or bi-annual or whatever, boat surveys, it's going to have to
24 include all those other aspects, so this is a start. This is not
25 intended to be the final piece.

26 MR. ROSIER: Yes, Mr. Cole.

11/30/93

1 MR. COLE: I still am not comfortable with what has
2 been said here, and I hark back to what Dr. French said this
3 morning, and I picked up on that. But, we -- we said five million
4 dollars for an eco -- study of the ecosystem in Prince William
5 Sound. I mean, that was the study for the ecosystem, and as I
6 recall quite well, we wanted to discuss the inter-relationship of
7 all of the components of the ecosystem in Prince William Sound, and
8 particularly those related to the studies we were doing and the
9 effect that they may have on -- in any other resource in the Sound,
10 injured or uninjured, et cetera (indiscernible - coughing). And,
11 also we wanted baseline data for all of these components or
12 elements of the ecosystem in Prince William Sound for five million
13 dollars. And, there was another talk about another five million
14 dollars next year. And then we said that we -- and we have in the
15 work plan that we were prepared to spend additional funds on the
16 pink salmon and herring and all these specific resources. But, it
17 was five million dollars for an ecosystem study, and, you know, I
18 just want to make sure that -- that the staff, if you will, and the
19 Executive Director understands that this was an ecosystem study,
20 and it was not pink salmon or herring or things like that. Maybe
21 I'm being, you know, somewhat constrained about, but I just remain
22 a little unsettled that, you know, where we really -- what we
23 committed that five million dollars for.

24 MR. ROSIER: Mr. Pennoyer.

25 MR. PENNOYER: I appreciate that, Mr. Cole, and I
26 appreciate the clarification. These are discussions that have

**EXXON VALDEZ OIL SPILL SETTLEMENT
TRUSTEE COUNCIL**

RESTORATION OFFICE
Simpson Building
645 G Street
Anchorage, Alaska

August 23, 1993
8:30 a.m.

JEROME MONTAGUE	Director, Oil Spill Impact Assessment & Restoration Division, Alaska Department of Fish and Game

8/23/93

1 costs during that time. And now, we have costs associated with the
2 preparing of reports, of the people who will be in the field 'til
3 September, and (inaudible -- electronic interference) fiscal year.
4 So those costs were not included in the 1993 work plan, but we're
5 asking for costs to complete that. A note here, reading the
6 articles that you're reading, the 1992 damage and restoration
7 reports, there are 92 which are being -- which were developed, and
8 those are either in the final stage right now or out for peer
9 review, so that process is proceeding, and I have copies of
10 abstracts which I'll have available for you on September 16 of
11 those reports. So, (inaudible -- electronic interference) there's
12 a minimum of 26 projects from 1993 that will appear in a
13 comprehensive report, and the date of receipt by the Trustee
14 Council is April 15, 1994, we'll make that date. There's
15 administrative costs in the interim budget which includes the
16 executive director's position, the restoration team. Several of
17 the work groups, the habitat protection work group, the 1994 work
18 plan, and the restoration planning group that concerns the
19 restoration plan. In addition to that, there's the cost of the
20 finance committee and the public advisory groups. There are some
21 -- some agencies feel that there are some projects that need to
22 begin before January 31st if there's going to be a successful
23 completion in the federal fiscal year '94, and there's eight of
24 those right now. We'll bring those up to the agencies and we'll be
25 able to respond individually to that, to why the interim funding is
26 needed, and those projects. At the June, I believe the June

8/23/93

1 Trustee Council meeting, a financial report was given to you by the
2 financial committee. It was dated -- excuse me, it was dated
3 July 19th, which covered the period, the first period of funding,
4 which was March 1, 1992 to February 28, 1993, and it gives you a
5 financial audit of what funds were expended, what funds are
6 remaining, and I will say that there is six and a half million
7 dollars of unexpended funds here of the nineteen million dollar
8 fund, and that splits -- about a million and a half dollars in
9 administrative costs were not spent and will be returned to the
10 fund, and about five million dollars in project costs were not
11 spent and will be returned to the fund. So, the idea of not
12 managing the fund is -- I think is proven to be wrong here. We're
13 managing the dollars and we're trying to save dollars wherever
14 possible. So, that report was done by the independent finance
15 committee. The recommendation I have to the Trustee Council here
16 today is to not fund the four-month interim budget, but is to fund
17 a one-month interim budget, using funds previously approved to
18 proceed from this report, the six and a half million dollars.
19 You'll find that one month, that will give you enough time to
20 review (inaudible -- electronic interference) 1994 projects and
21 also the predefined project descriptions, which are complete for
22 your September 16 meeting, which will give you adequate information
23 to make a good judgment on projects that are being conducted or a
24 judicious budget to be conducted in 1994. So, that's my
25 recommendation (inaudible -- electronic interference).

26 MR. ROSIER: Any discussion from the Trustees?

1 Mr. Pennoyer?

2 MR. PENNOYER: We're talking about two different things
3 though. This (inaudible -- electronic interference)

4 MR. GIBBONS: That's correct.

5 MR. PENNOYER: (Inaudible -- electronic interference)

6 MR. SANDOR: (Inaudible -- electronic interference)

7 MR. GIBBONS: (Inaudible -- electronic interference)

8 MR. COLE: Mr. Chairman, I would like to propose here
9 today that we include in the '94 work plan project five million
10 dollars to initiate a study of the entire biological composition of
11 Prince William Sound and the other spill affected areas. You will
12 recall that I proposed this, somewhat out of the blue, two or three
13 months ago, and I think I've since reflected on it more, and I am
14 convinced that, as Secretary Babbitt said today, of the wisdom of
15 that type of study. And I say that for two reasons. One is, we've
16 had difficulty establishing, as the report that the symposium
17 noted, the damages caused by the spill because of the absence of
18 baseline data preceding the Exxon Valdez spill in 1989. And I
19 think it would -- it's a wise use of these resources which we now
20 have available to take an inventory of the natural resources in
21 this area. Secondly, I think that a comprehensive study of the
22 resources there will enable us to better formulate the '94 work
23 plan projects as well as those in the future, '95, '96, '97. And
24 I have in mind that we should commit plus or minus five million
25 dollars to that study in '94 and a like amount in '95, essentially,
26 whatever it takes to complete this study. So, I would ask that the

1 Council give directions, if that is appropriate at this time, to
2 the Restoration Team to begin preparations for that project.

3 MR. ROSIER: Mr. Cole, a point of clarification. I
4 quite concur, I think, with the need for a further research program
5 in Prince William Sound. Certainly what we've seen this year,
6 again, is the Sound is sick at the present time. We've got major
7 resource problems in Prince William Sound at the present time.
8 What the cause is is not determined at the present time, but I
9 don't think anything can be ruled out in terms of what the problem
10 is in Prince William Sound. But I know this, that the people that
11 are living in Prince William Sound are certainly suffering as a
12 result of major resource problems there, salmon-wise, shellfish-
13 wise, other finfish-wise. There's major problems in that Sound at
14 the present time, and certainly within the -- my review of the '94
15 work plan, there are a number of studies that have been there, that
16 we've been funding previously, that would, in fact, be part of
17 this, or are you talking about five million on top of the programs
18 that are already in the '94 preliminary '94 work plan at the
19 present time?

20 MR. COLE: Yes, I'm talking about five million
21 dollars for an overall, over-arching study to catalog the resources
22 in Prince William Sound and the other spill-affected areas. So,
23 heaven forbid, if we have another spill, we will at least know
24 what's out there, have baseline data, and also data, as I say, to
25 enable us to coordinate all these plans. You will recall that some
26 of the scientists at the University of Alaska said that they

1 thought that we really needed a sort of a coordinated overall
2 approach to our various projects, and I thought that was a good
3 suggestion, and in part it lies at the heart of my current
4 proposal.

5 MR. ROSIER: Yes, Mr. Frampton.

6 MR. FRAMPTON: Mr. Chairman, we're very supportive of
7 this concept of, at least an initial investment of five million,
8 and then contemplated a second five million in '95, and Secretary
9 Babbitt's highest priority within the Department of the Interior is
10 to establish a national biological survey which would not only
11 consolidate research within the Interior Department but begin the
12 process at a national level of having a -- basically a survey of
13 biological resources and the status of trend monitoring, and this
14 is -- the Attorney General's concept here in some sense is an
15 ecosystem-based version of the same, as we understand it, and has
16 a number of benefits. One is that the Public Advisory Group's
17 desire to see an endowment created for somewhat similar functions
18 may run into some serious legal problems, and this is perhaps a
19 more -- even a more efficient and certainly a viable way, a clearly
20 viable to get a firm objective. Second, it offers the possibility,
21 particularly if we investigate the alternative of putting together
22 an independent entity, which is something that perhaps we ought to
23 think about with state and federal and private trustees, or at
24 least an advisory committee and independent scientists, of having
25 a way to actually evaluate and coordinate some of those other
26 studies. So, it seems to us that this concept might be on top of

**EXXON VALDEZ OIL SPILL SETTLEMENT
TRUSTEE COUNCIL**

RESTORATION OFFICE
Simpson Building
645 G Street
Anchorage, Alaska

May 13, 1993
8:30 a.m.

TRUSTEE COUNCIL MEMBERS in attendance:

State of Alaska	MR. CHARLES COLE Attorney General
State of Alaska Department of Environmental Conservation	MR. JOHN SANDOR Commissioner
United States Department of the Interior	MR. WALTER STIEGLITZ (Alternate) Regional Environmental Officer
State Department of Fish and Game	MR. CARL ROSIER Commissioner
United States Department of Agriculture - Forest Service	MR. MIKE BARTON Regional Forester
United States Department of Commerce - NOAA	MR. STEVE PENNOYER Director, Alaska Region

RESTORATION TEAM in attendance

DAVE GIBBONS	Interim Administrative Director, Trustees Council
PAMELA BERGMANN	Regional Environmental Assistant, United States Department of the Interior
MARK BRODERSEN	Restoration Chief, Alaska Department of Environmental Conservation
DR. JEROME MONTAGUE	Director, Oil Spill Impact Assessment & Restoration Division, Alaska Department of Fish and Game
KEN RICE	Deputy Natural Resource Manager, United States Department of Agriculture - Forest Service

1 problematic. The line, again on the five hundred foot contour,
2 although it protects the drainage base, it creates a very large
3 edge effect, because you have a two to three-tenth mile-wide strip
4 along a very long boundary. And, the experts, Cathy Culitz, and
5 some of folks in Oregon had told us, that a large edge effect is
6 very detrimental to successful nesting of the marbled murrelets.
7 There's very high nest predation from crows, eagles, hawks, if you
8 have a very narrow strip of land with a long edge effect. And, I
9 think that's one of the problems that we have in ranking that
10 particular parcel -- hard for marbled murrelets -- the geometry of
11 the parcel.

12 MR. COLE: Let me...

13 MR. ROSIER: Yes...

14 MR. COLE: Before we get...

15 MR. ROSIER: Mr. Cole.

16 MR. COLE: (inaudible - simultaneous talking) Are we
17 going to have a presentation so we get a record of how the
18 acquisition of these parcels, or the expected acquisition,
19 satisfies the requirements of the consent decree dealing with
20 restoration, enhancement or replacement ...

21 MR. SANDOR: That's exactly. (Inaudible - simultaneous
22 talking).

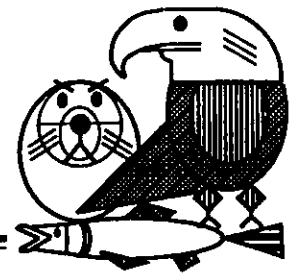

23 MR. COLE: In toto, I'm a little concerned about, you
24 know, how we get off on one species and then we get a record that's
25 not nice and compact and direct. Are we going to have a whole
26 presentation of that?

December 15, 1993

Walt Stieglitz
Regional Director
U.S. Fish and Wildlife Service
1011 East Tudor Road Room 201
Anchorage AK 99503

Dear Mr. Stieglitz:

Habitat Protection/Acquisition is an essential strategy for restoration of the injured resources, therefore it is imperative that we complete this task professionally and efficiently. As I discussed with you during our opening discussion focusing on negotiations for high ranked parcels identified in the Comprehensive Habitat Protection Process; Large Parcel Analysis, it is my full intention to present a status report regarding these discussions and preliminary negotiations at the January 31, 1994, Trustee Council meeting.

I am contemplating a three phase process: 1) Discussion and preliminary negotiations, 2) Detailed negotiations including appraisals, other assessments as well as terms and conditions, and 3) Authorization procurement agreement. Further, it is my intention to have the Trustees informed at each step and approve the progression. It is my plan to convey a review to the Trustees on January 31, 1994, regarding Habitat Protection/Acquisition that includes two parts:

1. Preliminary Report

- a. General proceedings.
- b. Seller's interest (land ownership, general boundaries, fee simple question, etc.).
- c. Lead agency comments/integrated strategies (e.g., multiple funding, value consideration).

2. Request for Authorization

- a. Progress to detailed negotiations.
- b. Appraisal and other assessment costs.

To compile a preliminary report, we would appreciate your cooperation in completing the following questionnaire. Please return this questionnaire to the restoration offices prior to January 15, 1994. We will have a brief teleconference to organize our presentation before the January 31, 1994, Trustee Council meeting.

Mike Barton
Regional Forester
U.S. Department of Agriculture
709 West 9th Street Room 249
Juneau AK 99802

Dear Mr. Barton:

Habitat Protection/Acquisition is an essential strategy for restoration of the injured resources, therefore it is imperative that we complete this task professionally and efficiently. As I discussed with you during our opening discussion focusing on negotiations for high ranked parcels identified in the Comprehensive Habitat Protection Process; Large Parcel Analysis, it is my full intention to present a status report regarding these discussions and preliminary negotiations at the January 31, 1994, Trustee Council meeting.

I am contemplating a three phase process: 1) Discussion and preliminary negotiations, 2) Detailed negotiations including appraisals, other assessments as well as terms and conditions, and 3) Authorization procurement agreement. Further, it is my intention to have the Trustees informed at each step and approve the progression. It is my plan to convey a review to the Trustees on January 31, 1994, regarding Habitat Protection/Acquisition that includes two parts:

1. Preliminary Report

- a. General proceedings.
- b. Seller's interest (land ownership, general boundaries, fee simple question, etc.).
- c. Lead agency comments/integrated strategies (e.g., multiple funding, value consideration).

2. Request for Authorization

- a. Progress to detailed negotiations.
- b. Appraisal and other assessment costs.

To compile a preliminary report, we would appreciate your cooperation in completing the following questionnaire. Please return this questionnaire to the restoration offices prior to January 15, 1994. We will have a brief teleconference to organize our presentation before the January 31, 1994, Trustee Council meeting.

Dear Editor:

The most recent and comprehensive field survey of western Prince William Sound took place this summer. A draft report on the findings was released Nov. 30 at a meeting of the *Exxon Valdez* Trustee Council in Anchorage, Alaska. While I read with interest Agis Salpukas' reporting of Dr. Keith Kvenvolden's study of asphalts found on some shorelines (New York Times, Dec. 1), I would caution readers against using the article to form generalizations about conditions in the area affected by the 1989 *Exxon Valdez* oil spill. Let me be clear—based on our staff's studies, I strongly disagree with Kvenvolden's principal conclusion that oiling residue from other sources is more common than *Exxon Valdez* oil.

Kvenvolden's findings only apply to a single type of oil residue: hardened, weathered tar and asphalt. Even on the surface, the oiling types and consistencies we still find vary, from Kvenvolden's asphalts to greasy brown "syrup," less viscous emulsions, and even sheening. Fortunately, cleanup efforts and natural forces have combined to remove most of the oil from the surface, but there are about a dozen sites around the area that are still seriously and obviously oiled, and show a variety of oiling conditions beyond hard asphalt. Some of the sites show continuous oiling for several hundred meters along the shoreline. These conditions are a great improvement from the spring of 1989, to be sure, but public land managers and biologists are still concerned about localized effects from that oiling. This is true especially in light of Kvenvolden's work, which suggests that surface oiling can stabilize and remain visible for many years after an event.

A greater concern to the Trustee Council is subsurface oiling, which is probably more prevalent now than surface oil residue in the spill area. Subsurface oiling patches are scattered around the area and range in size from a few square meters to several thousand square meters. We are encouraged to find that subsurface oiling has decreased area-wide by about 45 percent since a 1991 survey, but the same point about environmental concerns applies here.

Trustee Agencies

State of Alaska: Departments of Fish & Game, Law, and Environmental Conservation

United States: National Oceanic and Atmospheric Administration, Departments of Agriculture and Interior

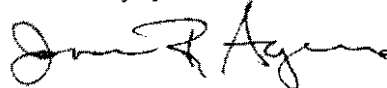

Did all this oil come from some other source from long ago? Not likely.

State and federal researchers visited 59 study sites in western Prince William Sound this summer, traveling from the northern islands to the southwest entrance where the Sound meets the Gulf of Alaska. Oil was present, in some amount, at every site. More importantly, study of these sites began in 1989, after the spill, when some of the same government researchers documented heavy, viscous oil coming ashore. They were sampled and "fingerprinted" chemically as Exxon's Alaska North Slope crude in 1989, then tracked yearly right through the summer of 1993. Scientists at the National Oceanic and Atmospheric Administration have analyzed several thousand samples collected in the spill path over the last four years; Kvenvolden reports his results based on analysis of only twenty-one samples from the oiled region. Kvenvolden's work gives us useful information about tar and asphalt splatters in the area, but it does not apply to the large areas of less weathered oiling our researchers encountered on the surface and below it this summer.

A large oil spill does not just go away. In Alaska, we are very encouraged at some of the positive visual and biological changes observed since 1989; some of them are truly dramatic. However, some continuing and perplexing negative changes trouble us. High oil concentrations in sediments and mussels continue to be found in the western part of the Sound. The effects of these residues on wildlife and fishery resources continue to be assessed.

As scientists and public resource managers, we feel it is important that the owners of these resources—America's citizens—understand the complexity of the situation and have the opportunity to guide our efforts. They need complete information to do that. Thank you for the opportunity to comment on this subject.

Sincerely yours,

James R. Ayers
Executive Director

DRAFT

November 29, 1993

Administrative Funding Resolution

Background - The Trustee Council has authorized funding for administrative/management of Council business and responsibilities, through December 31, 1993, for the Executive Director's Office, Restoration Team support (which includes the work groups), the Finance Committee, and the Public Advisory Group. Funding for the remaining nine months will be developed as soon as a new management structure is adopted by the Trustee Council. In the interim, a budget for administrative/management duties is needed for inclusion in the 1994 Draft Work Plan. Trustee Council authority is needed beginning January 1, 1994, to continue the administrative projects beyond that date.

Resolution - Because of time constraints on developing a new administrative budget, I recommend that the Council use the existing 12 month detailed budget for the Executive Director's Office, Restoration Team support, the Finance Committee, and the Public Advisory Group for inclusion in the draft Work Plan as the administrative/management budget. Appropriate explanation will be included with the budget to explain that the final amount authorized will be less than is shown in the draft Work Plan and reflect the new organization structure. Therefore, I request that the Council adopt the existing 12 month administration budgets (named above) with the understanding that a minimum 15% reduction will be made in the remaining nine month period, as we implement the new

structure and make the appropriate transfer of functions and costs.

Agencies should note that:

- 1) Agency Administrative FY94 budgets will be developed with the Executive Director immediately.
- 2) There should be no further administrative financial commitments for FY94 beyond February 1, 1994, without the expressed approval of the Executive Director, and vacancies will not be filled unless approved by the Executive Director.
- 3) A revised final detailed FY94 Administrative budget will be developed within the parameters set out by the new structure and the draft FY94 budget less at least 15%.
- 5) Previously established work groups will be dissolved or melded into the new management structure.
- 6) Each agency should designate a liaison/restoration work force person to work with the Executive Director in developing the FY94 Administrative budget respectively.

Initiate and develop an on-going scientific research institute, that will enhance and provide facilities and personnel, necessary for scientific monitoring, restoration, rehabilitation, and research that enables and promotes long-term recovery and health of the marine resources, injured by the *Exxon Valdez* oil spill.
