EXXON VALDEZ OIL SPILL TRUSTEE COUNCIL ADMINISTRATIVE RECORD Phil Janik, USFS

Trustee Council Members Present:

● Deborah Williams, USDOI Steve Pennover, NMFS

Frank Rue, ADF&G Michele Brown, ADEC

•*Craig Tillery, ADOL

- * Chair
- Alternates:

Michele Brown served as an alternate for Gene Burden for the entire meeting. Deborah Williams served as an alternate for George T. Frampton, Jr., for the entire meetina.

Ron McCoy served as an alternate for Deborah Williams from 11:24 a.m. Craig Tillery served as an alternate for Bruce Botelho for the entire meeting.

1. University of Alaska Direct Rate

APPROVED MOTION: Approve the policy of a 25 percent indirect rate for the University of Alaska projects, as described in the draft agreement presented to the Council, and authorize the Executive Director to formalize this policy with the university in the appropriate manner. It is the belief of the Council that this policy is in accord with the financial operating procedures. To the extent that it is not, the financial operating procedures are amended to conform with this policy. Motion by Williams second by Brown.

2. Executive Session

APPROVED MOTION: To adjourn into Executive Session to discuss land acquisition and particularly the Eyak negotiations. Motion by Pennoyer, second by Janik.

Off record at 11:24 a.m. On record at 11:50 a.m.

Meeting adjourned.

- Alternates:

Jim Wolfe served as an alternate for Phil Janik for the entire meeting. Deborah Williams served as an alternate for George T. Frampton, Jr. for the entire meeting.

Michele Brown served as an alternate for Gene Burden for the entire meeting. Craig Tillery served as an alternate for Bruce Botelho for the entire meeting.

1. Approval of the Agenda

APPROVED MOTION: Approved the Agenda. (Attachment A) Motion by Pennoyer,

second by ? (unidentified voice).

APPROVED MOTION: Approved March 31, 1995 Trustee Council meeting notes.

(Attachment B) Motion by Rue, second by Pennoyer.

2. Small Parcel

APPROVED MOTION: Proceed with the preliminary work and negotiations on the six

additional parcels that rated 18, as "Parcels Meriting Special Consideration." The staff should reexamine the threshold criteria for moderate and low categories for future evaluations.

Motion by Wolfe, second by Pennoyer.

APPROVED MOTION: To elevate Horseshoe Bay into the category of "Parcel

Meriting Special Consideration." Motion by Tillery, second by

Brown.

3. Fleming Spit, Project 95080

DRAFT

APPROVED MOTION: Move forward with the recreational fisheries improvements component of Project 95080, Fleming Spit, (Attachment C) which includes the ponds and net pens. This funding is contingent upon final review and approval by the U.S. Department of Justice. The State of Alaska, using criminal settlement funds, will proceed with the boardwalk component, assuming the land is acquired. The proposed land purchase will be considered through the Small Parcel Program as a "Parcel Meriting Special Consideration." Motion by Pennoyer, second by Brown.

4. Technical Amendments to FY95 Budgets

APPROVED MOTION: Approve the technical amendments to the fiscal year 1995 budget as contained in the information package. (Attachment

5. Executive Session

APPROVED MOTION: Adjourn into Executive Session for discussions on the Eyak Negotiations. Motion by Pennoyer, second by Tillery.

Off record at 5:10 p.m. On Record at 5:30 p.m.

APPROVED MOTION: The Trustee Council accepts Eyak and Sherstone's offer to

engage in mediation for the severability clause in the proposed timber exchange. Motion by Wolfe, second by

Pennoyer.

Meeting adjourned.

Total Cost:

\$644,900

Duration:

2 years

Geographic Area:

Prince William Sound

Injured Resource/Service: Recreation (sport fishing) and pink salmon

INTRODUCTION

Fleming Spit, located 1.5 miles north of Cordova's city center, is the site of a strong terminal coho sport fishery and a fledgling king salmon fishery. The Prince William Sound Aquaculture Corporation transports 200,000 king and coho salmon smolts from the Noerenberg Hatchery to Fleming Spit each year. The smolts are held in net pens in a pond behind the Spit for the purpose of imprinting the fish to return to the release site. The coho fishery was established before the *Exxon Valdez* oil spill; the king salmon fishery was established in 1989.

After the spill, residents of Cordova increasingly turned to the terminal fisheries at Fleming Spit to replace sport fishing opportunities lost or reduced because of the spill. This project will improve fish habitat and the terminal fisheries through the following actions:

- 1. Land Acquisition (\$150,000). Acquire a 5.39 acre parcel of land adjacent to the smolt release pond to accommodate existing and projected use of Fleming Spit for sport fishing and to maintain intertidal habitat for spawning and rearing of wild pink salmon.
- 2. Fisheries Improvements (\$170,000). Enlarge and deepen existing smolt release ponds so net pens float at all tide stages, thereby decreasing mortality among young salmon. Also construct permanent net pens to replace two mobile net pens.
- 3. Fishing Boardwalk (\$300,000). Construct a boardwalk to provide safe access to the fishing area for a diverse mix of people, including children, the elderly, and the disabled.

5-11-95

Project Number: 95080

The City of Cordova supports these proposed improvements (Letter of 12/20/94 from Scott Janke, City Manager, City of Cordova).

Community Contributions. The City of Cordova and The Cordova Sporting Club have already constructed off-street parking at Fleming Spit and removed derelict barges from adjacent tidelands (joint project with the U.S. Coast Guard). If necessary, the City will also survey the parcel of land proposed for acquisition. These community contributions are valued at \$60,000.

State Restitution Funds. The State has agreed to participate in this project by constructing recreation facilities at Fleming Spit. Facilities for which State restitution funds are being considered include fish-cleaning stations, public restrooms, and additional improvements to the parking area (e.g., signs and curbs).

NEED FOR THE PROJECT

The proposed project will replace sport fishing opportunities lost or reduced because of the oil spill and protect intertidal habitat for wild pink salmon at Fleming Spit.

Land Acquisition. The primary purpose of acquiring USS 252 is to accommodate existing and projected use of Fleming Spit for sport fishing. It will also maintain intertidal habitat for spawning and rearing of wild pink salmon.

Although this parcel was not formally nominated through the Small Parcel Process, the Habitat Work Group evaluated the parcel at DNR's request. The parcel contains key habitats that are linked to the recovery or replacement of injured resources and services. The parcel is a high-use recreation area; pink salmon spawn in the upper intertidal zone adjacent to the parcel. These habitats are at risk from development and therefore will benefit from added protection. Furthermore, the parcel has potential for enhancement of its recreation values.

In addition to being linked to the recovery of injured resources and services, the parcel appears to meet other threshold criteria for acquisition. Specifically, the present owner, Sealaska Corporation, has had the parcel appraised and is willing to sell it at or below fair market value. The parcel, which is within city limits, will be managed by the City of Cordova.

Public recreation facilities, including fish-cleaning stations, public restrooms, and parking areas, will occupy approximately four acres of the parcel of land proposed for acquisition.

Fisheries Improvements. The primary purpose of the proposed fisheries improvements — enlarging and deepening the smolt release pond and constructing permanent net pens — is to decrease mortality among young salmon. Improved survival at an early life stage should increase the number of fish available for sport fishing at Fleming Spit. Without the proposed improvements, the terminal fisheries at Fleming Spit will deteriorate and their value in replacing lost or reduced sport fishing opportunities will diminish.

5-11-95

Project Number: 95080

An added benefit of a healthy sport fishery at Fleming Spit is that it serves as an alternative to sport fishing on wild coho salmon on the Copper River Delta. Although the wild coho salmon stocks in the Copper River Delta were not directly injured by the Exxon Valdez oil spill, the area is within the spill-affected area and the species is under increased sport fishing pressure.

The existing smolt release pond at Fleming spit is shallow, exposing smolts to bird predation and causing net pens to ground. Net pens should be kept floating to maintain proper circulation. A dredge and fill project is proposed to enlarge and deepen smolt release ponds. By reducing bird predation and allowing net pens to float at all tide stages, this improvement will decrease mortality among young salmon.

The terminal fisheries now operate with two mobile net pens temporarily on loan from the Prince William Sound Aquaculture Corporation. Continuation of the terminal fisheries requires replacement of the mobile net pens with more durable net pens, which will be owned by the city and dedicated to the Fleming Spit terminal fisheries.

Fishing Boardwalk. The purpose of the fishing boardwalk is to provide safe pedestrian access to the fishing area for a diverse mix of people, including children, the elderly, and the disabled. The fishing area is presently accessed via the steep, rocky slope of the roadbed. The main part of the proposed boardwalk will extend 20 to 30 feet offshore. Platforms will also extend into the smolt release pond (on the landward side of the road). The entire boardwalk will comply with the Americans with Disabilities Act and therefore be accessible to the elderly and the handicapped.

PROJECT DESIGN

A. Objectives

- 1. Replace lost or reduced sport fishing opportunities by improving terminal fisheries at Fleming Spit.
- 2. Protect riparian and intertidal habitat for wild pink salmon.

B. Methods

All of the following steps will be the responsibility of the City of Cordova.

- 1. Acquire a 5.39 acre parcel of land (USS 252) at or below appraised fair market value.
- 2. Before undertaking fisheries improvements or constructing the fishing boardwalk, secure the following commitments and authorizations:
 - a. A long-term agreement with the Prince William Sound Aquaculture Corporation to obtain smolt for the terminal fisheries.
 - b. Authorization from the Department of Natural Resources and, if necessary, the

Project Number: 95080

Department of Transportation and Public Facilities, for long-term use the tidelands and road right-of-way for the fishing boardwalk (may require concurrence from the leaseholder of ATS 957).

- c. Authorization from the Department of Natural Resources to use the tidelands occupied by the smolt release pond.
- d. A long-term community commitment to operate the fisheries and maintain the fishing boardwalk.
- 3. Enlarge and deepen the smolt release pond.
 - a. Design the dredge and fill project to minimize salmon mortality.
 - b. Obtain a Sec. 401 permit from the Corps of Engineers and other permits as needed.
 - c. Through a competitive procurement process, enter into a contract with a qualified contractor to dredge and fill the smolt release pond.
- 4. Construct permanent net pens.
 - a. Through a competitive procurement process, acquire net pens.
 - b. Install anchors for securing the net pens.
 - c. Deploy net pens in the smolt rearing pond.
- 5. Construct a fishing boardwalk.
 - a. Design the fishing boardwalk in compliance with the Americans with Disabilities Act.
 - b. Obtain necessary permits.
 - c. Through a competitive procurement process, enter into a contract with a qualified contractor to construct the fishing boardwalk.

C. Schedule

Acquire land	Feb - June	1995
Enter into operating agreements	Feb - Aug	1995
Deepen smolt release ponds	1 1	
- Obtain Sec. 401 permit	Feb - Aug	1995
- Issue RFP	Feb	1995
- Dredge and fill	Sept - Oct	1995
Construct permanent net pens	Apr - May	1995
- Acquire net pens	Feb - Aug	1995
- Install anchors	Sept - Oct	1995
- Deploy net pens	May - Aug	1996
Construct fishing boardwalk	Jan - May	1996

D. Technical Support

None.

Project Number: 95080

E. Location

Fleming Spit is located within the city limits of Cordova, 1.5 miles northwest of the city center. It is on Orca Inlet between the State ferry dock to the south and the Eyak Village Corporation's log transfer facility to the north.

PROJECT IMPLEMENTATION

The proposed project will be implemented through a contract with the City of Cordova. The city will negotiate acquisition of land interests, hold title to the acquired land, obtain required permits, comply with the requirements of the National Environmental Policy Act (NEPA), and construct and maintain the permanent net pens and the fishing boardwalk.

MEMORANDUM

TO:

Molly McCammon

FROM:

Traci Cramer

Administrative Officer

DATE: May 23, 1995

RE:

FFY 1995 Budget Amendments

Based on communication from the Alaska Department of Fish and Game, the following amendments to the Federal Fiscal Year 1995 budget require consideration by the Trustee Council.

Transfers Between Trustee Projects

No. Title <u>Amount</u> 95139A1 Salmon Instream Habitat and Stock \$37,000 Restoration - Port Dick Spawning Channel

Comments - Funding is requested in FFY 1995 to continue data collection efforts and prepare the Environmental Assessment for the Port Dick Spawning Channel. The agency has requested \$223,100 to construction the spawning channel in FFY 1996. Trustee Council action on the FFY 1996 request will be sought in August. After Trustee Council action, the FFY 1995 Authorization will be \$37,000.

No. <u>Amount</u> 95139C2 Salmon Instream Habitat and Stock (\$37,000) Restoration - Lowe River

Comments - The Draft Environmental Assessment has been produced and comments in response revealed that some original planning assumptions may be flawed. Additional data collection will be required before this project or a similar project in the Lowe River drainage can proceed. Since construction of the spawning channel cannot proceed as originally intended, funding is available for transfer to the Port Dick Spawning Channel. This is the second amendment affecting the Lowe River project, after Trustee Council action, the FFY 1995 Revised Authorization will be \$108,100.

No. <u>Title</u> <u>Amount</u> 95320E Pink Salmon and Herring Predators (\$40,000)

Comments - The proposed request would transfer vessel charter needs associated with the SEA program and required for implementation of the Prince William Sound Science Center portions. After Trustee Council action, the FFY 1995 Revised Authorization will be \$903,100.

No. Title Amount 95320M Physical Oceanography \$40,000

Comments - The transfer represents the consolidation of vessel charter needs associated with the SEA program and required for implementation of the Prince William Sound Science Center portions. After Trustee Council action, the FFY 1995 Revised Authorization will be \$617,800.

Comments:

This budget includes funding for the Oil Spill Information Office. In the prior year, the project number was 95089A.

In FFY 1995 funding was split between the Alaska Departments of Environmental Conservation and Fish & Game. During FFY 1996 the funding is consolidated in the Department of Fish & Game. The Authorized FFY 1995 is a summation of total funding.

Comments:

This budget includes funding for operation of both the Anchorage and Juneau offices.

In FFY 1995 funding was split between the Alaska Departments of Environmental Conservation and Fish & Game. During FFY 1996 the funding is consolidated in the Department of Fish & Game. Additionally, in FFY 1995 different sub-projects where presented for the Executive Director's Office and Operations. During FFY 1996 the sub-projects have been consolidated. The Authorized FFY 1995 is a summation of total funding.

Comments:

In FFY 1995 funding for Federal Trustee Agency coordination was located in the Restoration Workforce. Refer to that budget for the FFY 1995 Authorized.

This budget includes funding for ongoing budget, financial and analytical support and coordination to the Federal Trustee Agencies.

Comments:

This budget includes funding for support of the Public Advisory Group.

In FFY 1995 funding was split between the Alaska Departments of Environmental Conservation and Fish & Game. During FFY 1996 the funding is consolidated in the Department of Fish & Game. The Authorized FFY 1995 is a summation of total funding.

MEMORANDUM

TO:

PAG Members

FROM:

Molly McCannon

Executive Director

RE:

Tentative Schedule of PAG Meetings -- FY 96 ADMINISTRATIVE RECORD

DATE:

July 19, 1995

EXXON VALDEZ OIL SPILL TRUSTEE COUNCIL

At the last PAG meeting, it was requested that the dates for PAG meetings in FY 96 be selected as soon as possible. Following is a tentative schedule, designed around key steps in the development of the FY 97 work plan. The PAG charter calls for "at least four" meetings a year.

1. Late November/early December 1995

During development of Executive Director's recommendation on balance of FY 96 Work Plan.

After post-field season review of projects, but before Trustees' December meeting at which they will approve balance of FY 96 Work Plan.

2. February 1996

> During development of Invitation to submit FY 97 proposals. (Assumes deadline to submit project proposals will be April 15, and that Invitation will be on the street the first week of March.)

3. Late May/Early June 1996

During development of Draft Work Plan.

After Chief Scientist/staff review of project proposals and Executive Director's meeting with Restoration Work Force and Coordinating Committee, but before Executive Director's preliminary recommendation is formulated for publication in the Draft Work Plan. (Assumes publication date of July 1, 1996.)

4. July 1996

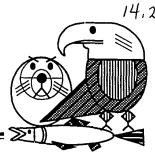

> During development of Executive Director's final recommendation to Trustees on FY 96 Work Plan.

During public comment period on Draft Work Plan (assume comment period closes August 1), but before Trustees' late-August meeting at which they will approve FY 96 Work Plan.

ADMINIS"

1995 Killer Whale Projects in Prince William Sound

EXXON VALUEZ OIL SPILL TRUSTEE COUNCIL ADMINISTRATIVE RECORD

During the Public Advisory Group meeting in June there were concerns raised about Project No. 95012 on Killer Whales in Prince William Sound in the 1995 field season. In response, I provided you information in a memo dated June 19 (copy enclosed), and the purpose of this memo is to now provide an update.

The issue is whether Craig Matkin from the North Gulf Oceanic Society (NGOS) and Marilyn Dahlheim from the National Marine Mammal Laboratory (NMML) will both collect biopsies from live Killer Whales in Prince William Sound this summer.

As of this date, there is no approved Detailed Project Description for the NMML component of Project No. 95012, and the NMML team is not in the field in Prince William Sound. Dr. Spies, however, wrote the National Oceanic and Atmospheric Administration on June 23 and suggested that any biopsies of Killer Whales in 1995 be collected by Craig Matkin of NGOS. The samples would then be shared between the two research teams for purposes of genetics, stable isotope, and other analyses. This approach would reduce the possibility of the same individual whales being sampled more than once and reduce the number of samples to be taken.

This approach is acceptable to Craig Matkin of NGOS, but Dr. Spies has not received word from the NMML investigators. I want to assure you, however, that neither the Chief Scientist nor I will approve duplicative and unnecessary biopsies on Killer Whales in Prince William Sound. I will keep you informed as the summer field season progresses.

Proposed Collection of Harlequin Ducks for Project No. 95025

The Trustee Council's Chief Scientist, Dr. Robert Spies, has recommended that I deny a request by Dan Esler, one of the principal investigators on the Nearshore Vertebrate Predator project (95025), to collect 25 Harlequin Ducks in eastern Prince William Sound. However, Dr. Spies has instead recommended approval of the collection of 25 harlequins at an alternative location, such as Kodiak Island, outside of Prince William Sound. I concur with both recommendations, and in accordance with the Trustee Council's draft Collections Review Policy, the purpose of this memo is to notify you of my recommendation prior to giving final authorization for the proposed collection.

I have enclosed copies of Dr. Spies' recommendation, Dan Esler's request, and a related memorandum from Tom Rothe of the Alaska Department of Fish and Game. If you have any questions or comments, please raise them at the Public Advisory Group meeting on July 27-28.

Enclosures: Mr. Dan Esler's request, 04/10/95

MEMORANDUM

July 18, 1995

TO: Molly McCammon

Executive Director

FR: Robert Spies

Chief Scientist

RE: Proposed Collection of Harlequin Ducks for Project No. 95025

On April 10, Dr. Leslie Holland-Bartels, the National Biological Service's project leader for the Nearshore Vertebrate Predator Project, forwarded to you a request from Dan Esler, the principal investigator for the Harlequin Duck component of 95025, to collect 25 harlequins in eastern Prince William Sound. A copy of Esler's request is attached. Esler proposes to collect the 25 harlequins in eastern Prince William Sound (P WS) between August 15 and September 15, 1995 for the purpose of developing a "condition index," which includes a statistical model for predicting the amount of body fat and protein in individual ducks. Fat and protein levels are good indicators of the health of a bird. By collecting a series of specimens and precisely determining their fat and protein levels in relation to body weight, measurements, and total body electrical conductivity (TOBEC), Esler can build a statistical model that will enable him to estimate or predict the condition of captured harlequin ducks in the future without sacrificing more birds.

My recommendation is that the original request to collect 25 Harlequin Ducks in eastern PWS be denied, but that you approve the collection of harlequins at an alternative location, such as Kodiak Island, outside of PWS, provided that the collections at that site are approved by the relevant federal and state authorities (e.g., Kodiak or Alaska Maritime national wildlife refuges).

My analysis follows with reference to the draft policy on collections in your memorandum to the Trustee Council dated March 30, 1995:

1. How many individuals are proposed to be collected and the approximate times and locations? How do these numbers compare with the total population in the general collecting area?

The request is to take 25 Harlequin Ducks (Histrionicus histrionicus) in eastern Prince William Sound during the period August 15-September 15, 1995. There are some data on numbers of harlequins in Prince William Sound and other parts of the oil spill region. The most recent EVOS-funded boat survey of marine bird populations in Prince William Sound (Agler et al. 1994) resulted in population estimates of 18, 600 in March and 8,300 in July of

1993. The idea is to collect the harlequins during their post-breeding molt, which occurs during a time when the number of harlequins in PWS is increasing as migrant and wintering birds move into the area.

Surveys outside of PWS are not comparable to those conducted within PWS, but estimates range as high as 4,369 in a May 1994 survey on shorelines adjacent to the Shelikof Straits within Kodiak National Wildlife Refuge (Zwiefelhofer 1994 in Detailed Project Description for Project No. 96161). Overall numbers in the oil spill region appear to be on the order of at least a few 10s of thousands of Harlequin Ducks.

2. How is the general health of the population? Is the population increasing, decreasing or holding steady in the proposed sampling area? Is reproduction and young survival normal?

The Harlequin Duck is considered to be a non recovering species injured by the oil spill (Restoration Plan 1994). Although the last boat surveys in PWS (March and July 1994) do not show statistically significant population trends in comparison to earlier surveys (Agler et al. 1994), EVOSfunded studies in PWS by the Alaska Department of Fish and Game continue to show what are believed to be low numbers of breeding birds, minimal reproductive activity in the western part of PWS, and an apparent decline in post-breeding molting birds (Patten 1994 [draft final report on Bird Study No. 11]). Since pre-spill baseline data are poor, it is difficult to draw firm conclusions about the status of the Harlequin Duck in PWS. However, there are enough indications of continuing injury to be concerned about further losses of harlequins in PWS. Indeed, the Alaska Department of Fish and Game continues to delay opening of the sport harvest of harlequins in PWS and to reduce bag limits to protect the breeding and post-breeding molting population. There is no comparable trend information for harlequins outside PWS.

3. Is the proposed take likely to affect any population trends?

Taking 25 Harlequin Ducks out of a regional population in the 10s of thousands will not affect any population trends, regardless of whether the birds are taken within or outside of PWS. Harlequin Ducks in eastern PWS, however, may be the source for the ducks needed for recovery of the harlequins breeding in western PWS. In view of this possibility, plus the facts that the Trustee Council considers the harlequin to be a non recovering species and the Alaska Department of Fish and Game continues to restrict sport harvest of harlequins within PWS, a conservative approach is indicated. This is the basis for my opinion that it would be inappropriate to collect harlequin specimens within PWS at this time.

4. Is the proposed method of take humane? Are there any effective, alternative means to obtain the data?

The harlequins to be collected will be captured live during "drives" of molting birds. All of these birds will be weighed, measured, and passed through the TOBEC machine (a harmless procedure). The sacrificed birds will be killed quickly by lethal injection. There are no alternative methods to obtain the necessary data, which requires analysis of the entire carcass to precisely determine fat and protein levels. A question was raised by one of the Trustee Council members about whether the needed specimens could be obtained with the cooperation of sport hunters. This approach will not work because the birds must be alive when they are run through the TOBEC machine.

- 5. What will be lost if there is no take allowed? and,
- 6. What can we realistically hope to learn that will justify this collection?

Once the condition index based on the sample of harlequin specimens is developed, no further collections will be needed to obtain information on the condition of harlequins in the spill zone. Without calibrating the TOBEC machine in the way proposed, there will be no reliable way to assess the condition of Harlequin Ducks. Being able to assess their condition is fundamental to monitoring and achieving recovery for this species and is also a key factor in more broadly assessing the health of the nearshore ecosystem.

7. Have federal and/or state permits been secured? If not, why not?

The principal investigator has obtained both federal and state collecting permits.

8. Will the entire carcass be used for scientific purposes?

This question was added to your draft collecting policy at the request of the Public Advisory Group. In this case the answer is that the entire carcass will indeed be used in the laboratory analysis of body composition.

In summary, my recommendation is that the request to collect 25 Harlequin Ducks be approved contingent on identification of an alternative location outside of PWS, such as on Kodiak or Afognak islands, provided that the collections at such site are approved by the relevant authorities (e.g., Kodiak or Alaska Maritime national wildlife refuges). Collections at an additional field site will likely result in some additional cost, but from a biological standpoint the data obtained will still enable development of a condition index for Harlequin Ducks.

Subject:

95025 Proposed FY95 Collections

Attached please find responses to the seven questions outlined in your memo of April 4, 1995. As discussed at the Trustees' meeting on March 31, the only take to occur within 95025 for FY95 will be for Harlequin ducks. I have asked Dan Essler, PI for that portion of NVP, to provide details and justification and he should be contacted directly for technical issues. However, if I can assist in this process, please let me know.

nula Bartalt

FY95 PROPOSED COLLECTION OF HARLEQUIN DUCKS AS PART OF PROJECT 95025 - NEARSHORE VERTEBRATE PREDATORS

What will be learned from the collections?

Proposed collections are necessary to derive a condition index for molting harlequin ducks. A condition index is simply a statistical model that predicts the amount of fat and protein of an individual, using measures of body weight, body measurements, and, in this case, total body electrical conductivity (TOBEC).

Collection of a sample of birds is necessary to create a condition index. Collected birds are processed in the laboratory to precisely determine their fat and protein; condition indices are created statistically by relating known fat and protein levels to body weight, morphology, and TOBEC for the collected sample.

The condition index can then be applied to <u>all</u> captured birds, predicting body condition (fat and protein) nonlethally.

Estimating body condition for molting harlequin ducks will be extremely useful for determining health and recovery of harlequin ducks in Prince William Sound. Body condition through molt will be compared between oiled and unoiled sites. Also, effects of body condition on survival will be tested. In other waterfowl studies, body condition has been shown to be a good indicator of population health and to influence survival, breeding effort, clutch size, and nesting dates.

In past studies, body weight has been shown to be a poor predictor of body condition. Use of a condition index using morphology greatly improves estimates and adding TOBEC has resulted in excellent estimates.

What population level effects will these collections have?

The most recent winter bird survey estimated 18,619 harlequin ducks in Prince William Sound; the proposed collection total of 25 represents 0.13%. This should not affect harlequin duck populations.

Collections are proposed to be conducted in eastern Prince William Sound, to avoid taking birds from the western Sound where populations were thought to be damaged. If necessary, collections could occur outside the Sound, although logistic costs would increase. There is no evidence of injury to harlequin ducks in eastern Prince William Sound.

Are there any other ways to get this information?

No condition indices exist for harlequin ducks. There is no other way to accurately and nonlethally determine body composition. Using body weights would be a very poor substitute, as body weight does not accurately reflect body composition.

How useful will the condition index be in the future?

Once derived, condition indices will be extremely valuable for the length of this project. Accurate estimates of harlequin duck body composition will allow comparisons across oiling treatments as a measure of population health. Body condition effects on overwinter survival of females will help clarify factors constraining recovery.

Any other projects on harlequin ducks also can benefit from the condition indices derived in this study. For example, proposed harlequin duck studies of Goatcher et al. can use condition indices to compare body composition within and among their study units.

How will collections be conducted?

Proposed collections will be conducted during molting drives from 15 August - 15 September 1995. Collected birds will be treated exactly as other birds captured during molting drives, i.e., they will be weighed, measured, and passed through the TOBEC machine. They will then be sacrificed, quickly and humanely, by injection of euthanasia solution, frozen, and ultimately sent to a lab for body composition analysis.

Can these be taken as part of a sport or subsistence harvest?

Unfortunately, the harlequin ducks can not be collected as part of a harvest. The TOBEC machine is very sensitive to temperature, thus, the birds need to be alive when they are measured to insure that the resulting condition index applies to live birds. Also, fluid loss (bleeding) could influence results. Finally, the entire carcass is necessary for the lab work, i.e., they would not be available as food after collections.

What is the status of State and Federal permits?

The permit process has been initiated through submission to U.S. Fish and Wildlife Service, Law Enforcement. Once the federal permit is obtained, the application will be

forwarded to the state. Permit decisions will be made long before proposed collections will begin.

What will be effects on the project if collections are denied?

Understanding body composition of molting harlequin ducks and body condition effects on survival are two pieces of the larger picture that we hope to address to gain insight into the health of the nearshore system. We will still be able to address the larger question without collections, but our perspective will be that much narrower.

ADVANCE BY FAX

Dear Molly:

This letter is to provide comments on proposed collection of harlequin ducks for EVOS project 95025, and Dr. Spies' preliminary advice. I also want to clarify the basis and direction of our harvest management approach on harlequins for everyone's benefit and to address questions that have come up at the Trustee level.

Harlequin Duck Status -- In the review of research and management programs it is important to recognize the seasonal dynamics of harlequin ducks in the oil spill region, and to exercise care in forming "population" assumptions. Very little is known about harlequin duck population structure (genetic or geographic) at local or broad meta-population levels, but for practical purposes we may view them as three seasonal composites: (1) during May-June harlequin numbers are lowest in PWS, composed of the local breeders and subadults and non-breeders that may not be affiliated with them, all remaining in PWS to molt; (2) from late June through July, male harlequins and some non-breeding females from a more extensive area of southcentral Alaska return to PWS to molt; they are joined in August and early September by post-breeding females with young of the year; and (3) during October-April PWS hosts a aggregation of wintering harlequins, probably from southcentral and interior Alaska; migrants from Gulf Coast and southeastern wintering areas may be added in spring.

There is little quantified historical information on harlequin duck abundance in the PWS spill region, but the most recent seasonal estimates are: (1) 4-5,000 breeding season birds from May-June boat surveys; (2) 8-9,000 postbreeding/molt pirds from July boat indices; and (3) 18,000 wintering birds from March boat indices (at or above pre-spill estimates). Based on results of EVOS projects since 1989, the primary concerns about harlequin ducks are focused on observed low breeding bird densities, lack of nesting stream activity, and very low brood production in western PWS, all related to the local spring-summer population component. There is also some indication of decline in post-breeding birds during mid-summer in western PWS. Given that eastern PWS harlequins may mix with western birds and would be the most likely source of breeders for western habitats, care is warranted for all PWS harlequins.

Harlequin collection—Dan Rosenberg and I have been in contact with Dan Esler about plans for his project, and we have reviewed his proposed methods and rationale for harlequin duck collection. We conclude, along with Dr. Spies, that the work on harlequin duck body condition is important to understanding energetics and winter survival, the total body electrical conductivity method is a valuable tool that should be used, and that collection of 25 harlequins in early fall will not have a population effect at local or regional levels. This sample would be drawn from a substantial regional aggregation of birds and would not involve critical western PWS breeders.

We concur with the recommendation that initial "calibration" collections be done outside Prince William Sound, not because significant local impact would occur, but because it would be more judicious, given concerns over birds breeding throughout PWS. This task does not require birds from the specific study area and logistic efforts to collect near Kodiak or other areas may not be significantly greater than in remote PWS locations. Also, it is probably understood that collections would be authorized only through area-specific permits issued by USFWS-Law Enforcement and ADFG-Wildlife Conservation; Refuge Special Use Permits may be required for Kodiak if the manager declares an interest.

<u>Harvest Management</u>--Concern over impacts of the oil spill on harlequins in PWS has precipitated examination of both the effects of hunting and potential benefits to restoration from restricting or eliminating hunting. Although our data indicate that hunting is not likely consequential to harlequin ducks in PWS, precautionary restrictions were implemented in 1991 and 1992.

Our evaluation is based on several considerations: (1) historically there have been 10-15,000 harlequin ducks in PWS from October through December; (2) wintering harlequins are an aggregation of birds from an extensive southcentral region and probably beyond; (3) state and federal harvest data indicate that harlequins comprise less than 15% of the 4-5,000 sea ducks harvested annually in the state, and the entire Gulf Coast accounts for less than 10% of the sea duck harvest; harlequin harvest in PWS is likely below 200 birds; and (4) household surveys of communities indicate very low subsistence harvest in PWS, with more use in south Kodiak.

Migratory bird hunting is controlled under federal framework regulations, issued by the Secretary of the Interior through U.S. Fish and Wildlife Service, within which states adopt specific seasons and bag limits. Traditionally, Alaska has been granted long seasons (107 days) and liberal sea duck bag limits (15 daily) in recognition of hunting opportunity foreshortened by early freeze-up and departure of most other birds. This has been particulary valued by hunters in the far north and areas like the Gulf Coast where subsistence harvest is more prevalent in winter. Essentially, weather and bird distribution render much of this opportunity "empty", and low sea duck harvests indicate that most of it is not realized with low levels of hunter participation.

As a result of concern for PWS harlequin ducks, the department reviewed all available data with USFWS and states of the Pacific Flyway Council in 1991. The department chose to adopt more restrictive regulations than allowed under federal frameworks. Emergency regulations set back the opening of harlequin duck hunting in PWS from September 1 to October 1, reducing the risk to resident breeders by waiting for the full influx of wintering birds. In 1992, the Board of Game further restricted harlequin hunting in PWS by removing them from general sea duck limits of 15 per day and allowing only 2 harlequins daily, 6 in possession. These restrictions will remain in place, subject to annual review of PWS harlequin monitoring data and assessment of effects from hunting activity.

I hope this has provided some help in evaluating the issues surrounding harlequin duck collection for project 95025 and future proposals. I also hope I have answered questions about the effects of hunting in relation to harlequins in PWS. I believe the department has been responsive to biological concerns about waterfowl in the spill region. We consider our commitment to harlequin duck monitoring as vital for both evaluating recovery from the oil spill and relating population dynamics to sound harvest management. Please let me know if we can provide further information or advice for your office and the Trustees.

Sincerely,

Thomas C. Rothe

G. SUMMARY:

The session began at 1:30 p.m. Eric Myers noted that the subgroup's aim was to work with the EVOS staff to analyze information management directions. A draft Communications Plan (Handout #1.a) was developed to provide focus for these discussions and for long-term planning. Chris Beck said that the meeting today was mainly to listen to what was happening and proposed, and that a follow-up meeting should be held for discussion and recommendations.

Molly McCammon reviewed the draft Communications Plan. She suggested that, with limited funding, perhaps the need was to focus on a few key elements and do them well, rather than try to accomplish everything. Public interest has lessened over time, she reported. She noted the role of public information in the settlement and Trustee Council mission statement, and that information needs are still evolving.

L.J. Evans went over the matrix portion of the draft Communications Plan. Molly stated that she met with editorial boards of Anchorage newspapers and that local radio and

newspapers were kept informed of Trustee Council activities on a regular basis. Carrie <u>Holba</u> discussed the activities of the Oil Spill Public Information Center (OSPIC). OSPIC averages 70 reference requests per week. Since 1990 they have handled 8,500 visitors, 12,500 requests for information, 1,600 interlibrary loan requests, 1,200 on-line search requests; and have distributed 27,400 documents.

Carol <u>Fries</u> outlined project 95089, which is to develop an EVOS database and use of a geographic information system to provide a far-reaching, user friendly way to access data and information.

Maureen <u>Simms</u> discussed the information management aspects of the Alaska SeaLife Center: research, public education, and a database. Molly said that OSPIC would eventually phase out and that the SeaLife Center was an option for continuing EVOS information management. She also said that a remaining need was to examine how information was presented to communities in the spill area—the PAG had previously suggested ways to present public information, such as interpretive displays.

Information management projects proposed for FY 1996 include: 96100, 96155, 96052, and 96210.

Some questions raised:

--How is the market for EVOS information responding to current efforts? Does the form and content of information serve both restoration goals and also provide useful information, e.g., for ongoing agency land/resource management, for schools teaching about the spill area ecosystem?

--Is the information management system expected to be long lasting? What would be the best system for disseminating EVOS-generated information into the future?

- a. physical system: what facilities in what locations--particularly as we look beyond 2001--should carry on the function of holding and disseminating information?
- b. format: what information format, from displays, posters, newsletters, and radio broadcasts, to computer-based systems, best serve the diverse "market" for information?

--What kinds of information (content) are most useful? In particular, how can detailed scientific data be synthesized to tell a broad, accessible story of the spill and its impacts, and also to explain what is being learned about the spill-area ecosystem?

- -- Is there a way to quantify accomplishments?
- -- Can we include contingency planning information that will assist during the next spill?

The session ended at 3:30 p.m.

H. FOLLOW-UP:

- 1. Subgroup members review the Communications Plan and project proposals before the next meeting
- I. NEXT MEETING: Tentatively Wednesday, August 16, 1:30 p.m. at EVOS

J. HANDOUTS:

SUBJECT: Peer Review of Restoration Proposals.

May 5 PAGE 2 5 1995

EXXON VALDEZ OIL SPILL TRUSTEE COUNCIL ADMINISTRATIVE RECORD

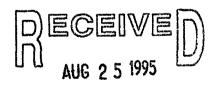

Attached, in two volumes, are the Detailed Project Descriptions for 128 proposals for FY 96 totalling almost \$39 million. On Monday or Tuesday you will be receiving a letter from Dr. Bob Spies giving more detailed instructions and listing the proposals on which you should focus. In general, however, there are three tasks being asked of you:

- 1. Evaluate individual proposals. To that end, please use the evaluation forms that are included. The form was developed by Dr. Spies and Stan Senner.
- 2. Evaluate individual "clusters" of the restoration program (for example, pink salmon, herring, sockeye, etc.). That is, once individual projects are evaluated, it is important that the projects which address, say, pink salmon restoration work together as a program. To that end, for each of the programs, you might consider:
 - What part of the program is critical to achieving the restoration objective for that resource? (Put another way, given the mission of the Trustee Council, what would be irresponsible for the Council to *not* address?)
 - Will some parts of the program leave a long-term legacy or meet an important community need? (Put another way, 10 years from now, will people care that the program was accomplished?)
 - Are some parts of the program less critical than others? Can anything be delayed to a future year without hurting restoration.
- 3. Evaluate the restoration program as a whole. That is, once you have reviewed all of the components of the restoration program, it is useful to step back and take a look at the entire restoration effort. To that end, you might consider the following:
 - Does the work program investigate the correct problems? Are some important issues missing? Are others unrelated to restoration? Does the program as a whole implement restoration appropriate to the injured ecosystem?
 - Does the work program reasonably allocate resources? That is, are the funding priorities reasonable or do some problems receive too much or too little attention?
 - Is the proposed work program financially sustainable? Are there enough funds to sustain the proposed program until it's finished?

Summary by Cluster (Table 4, p 10)

Nearshore Ecosystem

NVP & Related

\$1,769.5

Project 025, recommendation is defer because of late reports. Project investigates mechanis of impact/potential recovery for sea otter, river otter, harlequin duck, and pigeon guillemot. Related project is 104: Avian Predation on Mussels.

Monitor Recovery of Intertidal

\$1,124.7

- recovery of intertidal plants (037)
- closeout previous work (fucus, mussels, & subtidal eelgrass) — 086, 090, & 106.

Fate and Persistence of Oil

\$10.0

- closeout Kodiak Assessment (027)
- Workshop on oil issues in fall

Additional Monitoring

\$455.9

 harlequin duck (161 & 427); hydrocarbon database (which supports many other projects, 290)

Total: 3,387.1

DRAFT

Seabird/Forage Fish

Seabird/Forate Fish (APEX) \$1,982.6

Decision on project 163 is deferred pending results of FY 95

Other

\$831.1

- Murrelets
 - Productive Index to Monitor Reproductive Success (closeout, defer new work of 031)
 - Mapping nesting habitat (122)
 - Status and Ecology of Kittlitz's Murrelet (142)
- Marine Bird Survey (159)
- Common Murre: Population Monitoring (144);
 Seasonal Movement & Pelagic Habitat Use (021)
- Publication for Seabird Restorat'n Workshop (038)

Total: \$2,813.7

Subsistence

Restore Injured Resources. This is the most important objective. Most projects in the work plan are designed to do this. Also Survey of Octopuses, 009D, is not otherwise catalogued: \$134.0

Enhance/Replace Subsistence Resources \$768.5

- Replacement salmon runs, including fund & defer: (127, 220, 222, 225, and 227).
- Clam restoration (131)
- PSP Shellfish testing (212)

Participat'n & Communicat'n \$414.5

- Cmty Involvement/Traditional Knowledge (052)
- Harbor Seal Coop Assistance combined with elements of Community-based Sampling, and Alaska Native Harbor Seal Commission (211, 213, & 244);
- Documentary, Subsistence Seal Hunting (214).

Food Safety Testing

\$0

 communication of food safety info will continue under participation/communication (project 052).

Totals:

Fund & Fund Contingent:

\$603.6

Defer:

\$713.4

\$1,317.0

[No Lower Priority projects]

Archaeologic Resources

Monitoring Index Site Monitoring (007A)	\$146.5
Complete Artifact Curation Site Specific Archaeological Restoration	<i>\$78.4</i> (007B)
Site-stewardship Program Project 149	\$74.4
Planning for Repositories Project 154	\$125.0

Totals:

Fund & Fund Contingent: \$424.3

[No Lower Priority or Defer projects.]

Reducing Marine Pollution

Sound Waste Management Plan

\$29.6

Development of a plan to identify and remove major sources of marine pollution and solid waste in PWS. Further Trustee Council funding, if any, is unknown.

DRAFT

Habitat Improvements

- Landowner Assistance Program (058)
- Afognak Is. Park Habitat Survey (141)
- Restorat'n of Wetlands, Montague Is. (176)
- Kenai Habitat Restoration and Recreation Enhancement (180)

Total: \$992.9

EXXON VALDEZ OIL SPILL TRUSTEE COUNCIL ADMINISTRATIVE RECORD

Public Meeting July 20, 1995 on Draft 1996 Work Plan

On line via teleconference: Cordova and Homer Legislative Information Offices

Molly McCammon and Bob Loeffler gave brief overviews of the restoration program and the 1996 Draft Work plan. Two individuals made comments, which are summarized below.

Paul Swartzbart (Cordova) - I want to know more about the Eyak negotiations. The people in Cordova are very much hoping that you can conclude or achieve some kind of comprehensive deal that will be good for Eyak shareholders as well as tourist operators and fishermen in Cordova. We haven't given up and we hope you haven't either.

Henry Makarka (Cordova): I am a shareholder in Eyak Corporation, but I am speaking to you today as an individual. My concern is about the on-going process you've been conducting with Eyak. I've had thoughts of my own about your obligations and objectives and I've thought very seriously about what is your objective, especially in that you have a responsibility of restoration of the oiled areas. You mentioned about ongoing negotiations with Eyak and it seems to me there is a stalemate situation or a gridlock. I think because of the precedent set with Seward and Kachemak and Kodiak, I feel that the Trustees are probably negligent regarding habitat protection in Prince William Sound.

The meeting adjourned at 7:35 PM.

Fax:(907)276-7178

Dear EVOS Trustees,

I am writing you regarding EVOS 96104, Avian Predation on Blue Mussels in Prince William Sound. This project is very important for EVOS restoration objectives, and especially the information that it will provide the Nearshore Vertebrate Predator Project EVOS 96025.

As the Director of the Pacific Flyway Project at Pt. Reyes Bird Observatory, I deem this project very important because it will provide information on 3 species of shorebirds: black oystercatchers, surfbirds, and black turnstones. The northern Montague Island study site is the most important spring staging area known for surfbirds and black turnstones. Both of these species estimated populations are relatively small (<100,000), and yet one-day counts have estimated over 50,000 surfbirds and 25,000 black turnstones at Montage Island in spring. We still have very little information on how these shorebirds are using northern Montague because it was only in 1989 that scientists first documented their use of Montague.

I would urge the Trustees to fully fund the Avian Predation on Blue Mussels Project for FY96. This research will have many benefits for both oil spill restoration objectives and shorebird conservation.

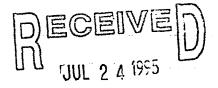

Thank you very much.

DECEIVED

Exxon Valdez Oil Spill Trustee Council 645 G Street, Suite 401 Anchorage, Alaska 99501 EXXON VALDEZ OIL SPILL TRUSTEE, COUNCIL

Dear Trustee Council Members:

Following an extensive review of the Draft Fiscal Year 1996 Work Plan, Chenega Corporation would like to express its support of the following projects and ask that they be given priority consideration for funding:

96090	Mussel Bed Restoration and Monitoring
96052A	Community Involvement and Use of Traditional Knowledge
96131	Chugach Native Region Clam Restoration
96222	Chenega Bay Salmon Restoration
96272	Chenega Chinook Release Program
96154	Chugach OSIR Community Repositories, Cultural Centers, Subsistence
	Restoration Facilities, Comprehensive Services, Development Planning
	Project
96115	Sound Waste Management Plan
96058	Landowner Assistance Project

Thank you for this opportunity to participate in the restoration process.

Sincerely,

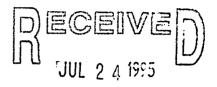

Charles W. Totemoff

President & CEO

EXXON VALDEZ OIL SPILL TRUSTEE COUNCIL

RE: PUBLIC MEETING ON TRUSTEE'S DRAFT 1996 WORK PLAN

Dear Sirs:

Please accept my written comments on <u>Project 96160</u> Assessement of Recovery from Surface Oiling, Subsurface Oiling, and Subsurface Invertebrate Contamination by Oil on Gulf of Alaska Shorelines and <u>Project 96094</u> Improving Recovery Rates on Shorelines in PWS Using Enhanced Bioremediation.

PROJECT 96160 AND 96094

Historically, residents of Chenega Bay and Chenega Corporation consistently maintained that shorelines that were impacted by the Exxon Valdez Oil Spill be clean of all oil contamination. We felt it was very important to emphasize the value of restoration in all areas that was habitat to marine mammals, bird and terrestrial life. 6 years and 4 months have elapsed and oil is still bleeding into the environment. There is mousse under rocks and boulders, or just pooled, tarmat anywhere you look and heavy oil stain on the base of rock and boulders from the mid-intertidal to the upper-intertidal in many areas critical to wildlife habitat.

The mini-survey conducted by the State earlier this spring clearly documented that oil is persisting in the beaches of PWS. It's been an ill-fated practice of the State to wait on reports before deciding what approach to take.

Page 2 EVOSTC

In the case of the shoreline and mussel-bed survey performed by the State and NOAA, in 1995, no action will be noted until 1996, if at all. A delaying tactic that is resulting in "more harm than good." As the EVOS TRUSTEE COUNCIL is quick to repeat in all its publications for uses of the settlement monies;

"Restoration funds must be used....":
for the purpose of restoring, replacing, enhancing or
acquiring the equivalent of natural resources injured
as a result of the EVOS or the reduced of lost services
provided by such resources.

Rather than beat on a dead horse... the States' policy of "zero tolerance", a compromise must be identified. Do something not nothing. Studies and workshops have been ongoing since 1991.

The "draft recommendation" as made by the Chief Scientist that "The main problem is that oil residue is offensive to local residents, who want something done about it". Is offensive and reckless. Dr. Bob Spies does not live in PWS, live off the waters or lands of PWS. All Prince William Sound is a free laboratory at the State's expense. He further comments that this study is expensive and time consuming, and may not satisfy local concerns. Dr. Spies has heard of concerns. We want the oil out. Expensive? No more than its costing the Spawning Channel Construction Project, Port Dick Creek in Lower Cook Inlet or the SEA Trophodynamic Modeling and validation through remote sensing studies, and the list goes on.

The EVOS Trustee Council has allocated \$24 million to the Restoration Reserve. With that I believe oil removal can be done. It is reasonable to believe that any degree of oil removal will enhance the natural recovery of the remaining oil after a treatment.

The Hazardous Substance Spill Technology Review Council effectively and correctly reported that in 1994 the *PES-51 Project* on Latouche/Sleepy Bay was an innovative restoration technique and effective in removing weathered oil from subsurface sediments. Furthermore that this modified air knife

Page 3 EVOSTC

injection system followed by injection of a biosurfactant to displace the weathered oil from the surface and sea water flush was accomplished without any evidence of dissolved hydrocarbons or increased microbial activity in the sea water and for approximately 30 days after treatment there was a period of enhanced bioremediation of residual hydrocarbons. Removing 60-80% of the trapped oil and leaving 20-40% for natural degradation is an acceptable process well worth approving a plan for.

The EVOS Trustee Council is making the effort to meet with the PWS oil impacted communities. For that I am thankful. But, there is available technology that is useful and successful and it must be used.

One final comment, the HSSTRC left me pondering over the fact that another spill of the magnitude, or worse, than the Exxon Valdez is very probable because, "It is likely that more crude oil and product will be carried through Alaskan waters in the next twenty years than has been since oil was discovered in Cook Inlet. With an aging plant and aging ships, the risk can be greater in the future than in the past."

Thank you.

Sincerely yours, CHENEGA CORPORATION
