

15.2.7 Vol III (2 of 2)

US, Outside Alaska# 1524

Your Oil spill settlement monies offer a rare opportunity to save timber lands for future use and enjoyment by buying land and timber rights from willing sellers without using taxpayer dollars, while giving oil-impacted ecosystems a chance at restoration. Buying habitat is the very best way to invest oil spill settlement dollars. The majority of remaining settlement funds should be spent to protect wildlife habitat from further devastation. Large areas, including entire watersheds should be bought and protected (as with the recent 42,000-acre purchase at Seal Bay on Afognak). The Trustees should buy and protect at least the following areas: Port Gravina/Orca Bay; Port Fidalgo; Knight Island Passage; Kenai Fjords National Park; Port Chatham Shuyak Straits; and the Kodiak National Wildlife Refuge. With the funds available and the need clear, this is your chance to make a difference that can be an important part of your legacy to mankind. Please take it.

US, Outside Alaska# 1523

Your oil spill settlement monies offer a rare opportunity to save timber lands for future use and enjoyment by buying land and timber rights from willing sellers without using taxpayer dollars, while giving oil-impacted ecosystems a chance at restoration. Buying habitat is the very best way to invest oil spill settlement dollars. The majority of the remaining settlement funds should be spent to protect wildlife habitat from further devastation. With the funds available and the need clear, this is your chance to make a difference that can be an important part of your legacy to mankind. Please take it.

US, Outside Alaska# 1522

I am writing this letter to urge you to spend the settlement monies to purchase wildlife habitat. It is urgent that large areas be bought and protected from clearcutting. Please include at least the following areas in your purchase: Port Gravina/Orca Bay; Port Fidalgo; Knight Island Passage; Kenai Fjords National Park; Port Chatham; Shuyak Straits; Kodiak National Wildlife Refuge. If funds allow use the extra for more habitats of equal value to future generations, as these are not replaceable. Your consideration on this issue, is appreciated. (P.S., A former resident of Alaska).

US, Outside Alaska# 1521

Your oil spill settlement monies offer a rare opportunity to save timber lands for future use and enjoyment by buying land and timber rights from willing sellers without using taxpayer dollars, while giving oil-impacted ecosystem a chance at restoration. Buying habitat is the very best way to invest oil spill settlement dollars. The majority of remaining settlement funds should be spent to protect wildlife habitat from further devastation. Large areas, including entire watersheds should be bought and protected (as with the recent 42,000-acre purchase at Seal Bay on Afognak). With the funds available and the need clear, this is your chance to make a difference that can be an important part of your legacy to mankind. Please take it.

US, Outside Alaska# 1514

Please allocate most of the Exxon settlement funds to protect wildlife habitat. I'm hoping that with these monies you can protect large areas of critical habitat like you did with the 42,000 acre Seal Bay area on Afognak. In particular, please try to purchase lands which are threatened in the following areas: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords, Port Chatham, Shugak Straits, and Kodiak National Wildlife Refuge. Thanks for considering the future of Alaska's wildlife.

US, Outside Alaska# 1505

I am writing this because there are several areas, including some within National Wildlife Refuge and National Park that are threatened with logging and other development on private property inholdings. There is now a unique opportunity to purchase, with oil spill settlement money, such areas in order to conserve them as wildlife refuges and scenic areas in parks. Buying habitat is the very best way to invest oil spill settlement money. The vast majority of remaining settlement funds should be spent to protect wildlife habitat from devastation. Large areas including entire watersheds, should be bought and protected (as with the recent 42,000 acre purchase at Seal Bay on Afognak Island). The trustees should buy and protect at least the seven areas: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, inholdings within Kenai Fjords National Park, Port Chatham, Shuyak Straits and inholdings in Kodiak National Wildlife Refuge. I will appreciate your concern about these areas and efforts made to prevent logging and development in them. Please let me know about what actions you take and how it will be decided as to what to do with the oil spill settlement money.

US, Outside Alaska# 1492

Use the majority of the money to protect habitat. Protect large areas, such as watersheds. Buy and protect the 7 areas listed in the "citizen's vision" list.

US, Outside Alaska# 1491

We commend you for using Settlement Funds to purchase Kachemak Bay and Seal Bay. We urge you now to continue to protect wildlife from further devastation by purchasing timber rights and habitat in the following locations: Port Gravina/Orca Bay old growth forests, Port Fidalgo forested areas near Valdez and Tatitlek, Knight Island Passage, Kenai Fjords National Park private lands threatened by logging and development, Port Chatham forest habitat along the tip of the outer Kenai Peninsula coast, Shuyak Straits aquatic highway for marine life, and Kodiak National Wildlife Refuge to prevent development in prime brown bear habitat. Using Settlement funds in this way would seem to us to be the best way to restore the areas damaged by the spill. Because we learned of the comment period too

US, Outside Alaska# 1491

We commend you for using Settlement Funds to purchase Kachemak Bay and Seal Bay. We urge you now to continue to protect wildlife from further devastation by purchasing timber rights and habitat in the following locations: Port Gravina/Orca Bay old growth forests, Port Fidalgo forested areas near Valdez and Tatitlek, Knight Island Passage, Kenai Fjords National Park private lands threatened by logging and development, Port Chatham forest habitat along the tip of the outer Kenai Peninsula coast, Shuyak Straits aquatic highway for marine life, and Kodiak National Wildlife Refuge to prevent development in prime brown bear habitat. Using Settlement funds in this way would seem to us to be the best way to restore the areas damaged by the spill. Because we learned of the comment period too

late to reach you by August 6th with individual letters, the undersigned are collaborating on this FAX. Thank you for your attention to our requests. We shall be looking forward to the results of your decision. NOTE: Seventeen signatures accompanied this letter.

US, Outside Alaska# 1487

I suggest you use a large part of remaining oil spill settlement funds to acquire more wildlife habitat by purchasing land and timber rights from willing sellers. Large areas could be bought and protected as at Seal Bay, Afognak. At a minimum the following areas should be acquired and preserved: Port Graham/Orca Bay, Kodiak National Wildlife Refuge, Shuyak Straits, Knight Island Passage, Port Fidalgo, Port Chatham, and Kenai Fjords National Park. Many scientists now agree that management for biodiversity on a regional scale is necessary to stem the tide of disappearing plant and animal species. This means protecting entire watersheds rather than parcels of so many acres here and there. The terrible disaster of the Valdez spill has led to the opportunity to make such purchases to preserve land and habitat without spending taxpayer dollars. It is an opportunity that should not be dismissed. Please take action to ensure that species suffering from the spill will have habitat in which to recover and to preserve these wild and beautiful areas with settlement funds.

US, Outside Alaska# 1484

Your Oil Spill Settlement monies offer a rare opportunity to save timber lands for future use and enjoyment by buying land and timber rights from willing sellers without using taxpayer dollars, while giving oil-impacted ecosystems a chance at restoration. US, Outside Alaska# 1478

Please accept the following comments concerning your Restoration Plan for Prince William Sound. Although my home is far from this devastated area, the media has made this tragedy a reality for me, and I share the concern of Alaskans that the funds recovered from Exxon Oil be used for the best possible result. I would urge the Trustees to invest the Oil Spill Settlement Funds in the purchase of wildlife habitat. This is the very best way to insure the restoration of this fragile ecosystem. The vast majority of the remaining settlement funds should be spent to protect wildlife habitat from further devastation. Large areas, including entire watersheds, should be bought and protected. These purchases should include at a minimum the following seven areas: Port Gravina/Orca Bay; Port Fidalgo, Knight Island Passage, Kenai Fjords National Park; Port Chatham; Shuyak Straits, and the Kodiak National Wildlife Refuge. Thank you in advance for your consideration of these comments, and for your work on behalf of Alaskan wildlife.

US, Outside Alaska# 1477

Your Oil Spill Settlement monies offer a rare opportunity to save timber lands for future use and enjoyment by buying land and timber rights from willing sellers without using taxpayer dollars, while giving oil-impacted ecosystems a chance at restoration. US, Outside Alaska# 1476

I strongly urge you to invest the remaining settlement funds to restore the fish and wildlife species

hurt by the unfortunate oil spill. Specifically, I support the "citizen's vision" for restoration. Large areas, including entire watersheds should be bought and protected. The seven critical areas are: #1 - Port Gravina/Orca Bay, #2 - Port Fidalgo, #3 - Knight Island Passage, #4 - Kenai Fjords National Park, #5 - Port Chatham, #6 - Shuyak Straits, #7 - Kodiak Island. At least 80% of the remaining funds should be spent to buy this land and timber rights. Offering permanent protection to these vast areas of pristine wilderness land will go a long ways towards mitigating the damages caused by that terrible accident.

US, Outside Alaska# 1474

I am writing to support use of settlement funds for habitat purchases. Using the settlement funds to protect wildlife habitat is the very best way to restore the areas damaged by the Exxon spill. The vast majority of the remaining settlement funds should be spent to protect wildlife habitat from further devastation. Large areas including entire watersheds should be bought and protected. Priority habitat acquisitions in the Western Gulf of Alaska should include: Port Gravina/Orca Bay; Port Fidalgo; Knight Island Passage; Kenai Fjords National Park; Port Chatham; Shuyak Straits; and Kodiak National Wildlife Refuge.

US, Outside Alaska# 1473

Your Oil Spill Settlement monies offer a rare opportunity to save timber lands for future use and enjoyment by buying land and timber rights from willing sellers without using taxpayer dollars, while giving oil-impacted ecosystems a chance at restoration. US, Outside Alaska# 1466

I support the purchase of habitat from willing private landowners as the ideal way to invest Oil Spill Settlement dollars. Habitat Acquisition will allow oil impacted ecosystems time to recover without further stresses. If the sellers are willing, large areas, including entire watersheds, should be bought and protected to ensure that effects can be controlled, rather than leaving parts that can effect the whole in other ownership. The vast majority of remaining funds should be spent to protect wildlife habitat from further devastation. I encourage you to buy and protect at least the following seven areas: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, and Kodiak National Wildlife Refuge.

US, Outside Alaska# 1465

I would like to urge you to invest the Oil Spill Settlement funds in the purchase of wildlife habitat. Large areas should be bought and protected, i.e., Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, and the Kodiak National Wildlife Refuge. The media has made this tragedy a reality to me and it is my hope that funds be used for the best possible result.

US, Outside Alaska# 1463 Northwest Cancer Center

Although I have never been to Alaska, I certainly plan to go there some day. The only reason that I would visit the state is to see its immense area of natural beauty, ranging from the tideland fjords to the mountains and tundra. The best way to continue to attract me and other tourists to the state of Alaska for its long-term economic welfare would be to secure large amounts of wilderness purchased by funds from the *Exxon Valdez* settlement. Purchasing land, especially around Prince William Sound, on the Kenai Peninsula, and Kodiak Island, would be most appropriate.

US, Outside Alaska# 1462

As a frequent visitor to Alaska and a temporarily absent ex-resident, I encourage you to use the Exxon Valdez Settlement funds exclusively for the purchase of coastal habitat. Although much effort has been and will be made to prevent future oil spills, Murphy's Law makes plain that more oil will spill. The most effective way to repair the damage from the *Exxon Valdez* and to limit damage during future spills is to preserve the environment's ability to restore itself. This requires preservation of an untouched coastal habitat. In particular, I encourage you to use your funds to preserve large blocks of coastal forest. Here in Washington we are slowly realizing how closely the health of the forest is tied to the health of the ocean. Alaska, with (so far) less coastal logging, has not seen this link yet. But it is there nonetheless, and once broken cannot be restored. For example, the great salmon runs of Puget Sound are a thing of the past, largely due to loss of forest habitat. Please add my voice to those who seek to preserve large blocks of coastal habitat in the following areas: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park (private lands within and adjacent to the park), Port Chatham, Shuyak Straits, and also the Kodiak

National Wildlife Refuge.

US, Outside Alaska# 1460

Your Oil Spill Settlement monies offer a rare opportunity to save timber lands for future use and enjoyment by buying land and timber rights from willing sellers without using taxpayer dollars, while giving oil-impacted ecosystems a chance at restoration. US, Outside Alaska# 1443

Considering that the oil spill damaged the ecosystem and the wildlife, it seems to me that all monies from the fines should be used ONLY to support wildlife and wilderness areas. Please use the funds from the settlement to purchase habitat and to protect wildlife from further devastation. The Trustees should also use the money to purchase at least the seven areas identified as part of the "citizens' vision". You should also purchase large areas including entire watersheds, such as the 42,000 acre purchase at Seal Bay on Afognak. Enough of the clearcutting. This nation has been ripped-off by the lumber companies for years. Add to this the devastation that they have caused to the ecology and wildlife. Please use the funds only for the above uses.

US, Outside Alaska# 1442

I support the purchase of habitat from willing private landowners as the ideal way to invest Oil Spill Settlement dollars. Habitat acquisition will allow oil impacted ecosystems time to recover without further stresses. If sellers are willing, large areas, including entire watersheds, should be bought and protected to ensure that effects can be controlled, rather than leaving parts that can effect the whole in other ownership. The vast majority of remaining Settlement funds should be spent to protect wildlife habitat from further devastation. I encourage you to buy and protect at least the following seven areas: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, Kodiak National Wildlife Refuge.

US, Outside Alaska# 1441

We would like you to support the use of Settlement funds for habitat purchases. We feel it is the best way to invest Oil Spill Settlement dollars. Large areas, including entire watersheds, should be bought and protected. We feel you, as Trustees, should buy and protect at least the seven areas identified as part of the "citizens vision." If possible, the Kenai Fjords National Park inholdings should be a priority.

US, Outside Alaska# 1440

Your Oil Spill Settlement monies offer a rare opportunity to save timber lands for future use and enjoyment by buying land and timber rights from willing sellers without using taxpayer dollars, while giving oil-impacted ecosystems a chance at restoration. Buying habitat is the very best way to invest Oil Spill Settlement dollars. The majority of remaining Settlement funds should be spent to protect wildlife habitat from further devastation. Large areas, including entire watersheds should be bought and protected (as with the recent 42,000-acre purchase at Seal Bay on Afognak). The Trustees should buy and protect at least the following areas: Port Gravina/Orca Bay; Port Fidalgo; Knight Island Passage; Kenai Fjords National Park; Port Chatham; Shuyak Straits; and the Kodiak National Wildlife Refuge. With the funds available and the need clear, this is your chance to make a difference that can be an important part of your legacy to mankind. Please take it.

US, Outside Alaska# 1422

Your Oil Spill Settlement monies offer a rare opportunity to save timber lands for future use and enjoyment by buying land and timber rights from willing sellers without using taxpayer dollars, while giving oil-impacted ecosystems a chance at restoration. Refuge. With the funds available and the need clear, this is your chance to make a difference that can be an important part of your legacy to mankind. Please take it.

US, Outside Alaska# 1392

I am writing to urge you to invest the remaining *Exxon Valdez* Oil Spill Settlement monies in purchasing wildlife habitats. Protecting these habitats is the most important step toward preserving the ecosystem. I particular seven areas need to be protected: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Island, and Kodiak National Wildlife Refuge.

US, Outside Alaska# 1348

I am writing you, the Trustees of the *Exxon Valdez* oil spill Council, to ask you to support use of the Settlement funds for habitat purchases. I believe you have made a wonderful start by using funds to protect Seal Bay on Afognak Island and Kachemak Bay on the Kenai. At this point, to continue in the same vein, I think funds would be best used to buy land and timber rights and protect habitat. Large areas, including entire watersheds, should be bought and protected--as with the recent 42,000 acre purchase at Seal Bay on Afognak. The vast majority of the remaining Settlement Funds should be spent to protect wildlife habitat from further devastation. For I believe that purchasing habitat is the very best way to invest oil spill settlement dollars. At least the following seven areas, identified as part of the "Citizen's Vision", should be bought and protected: 1) Kenai Fjords National Park--Private lands within the park must not be logged or developed. Otherwise the spectacular coastline will be disrupted. 2) Port Chatham--This is the only strip of intact forest habitat along the tip of the outer Kenai Peninsula coast. 3) Port Gavina/Orca Bay--The old growth forests of Prince William Sound near Cordova provide exceptional habitat for spill-injured species. Tourism and wilderness recreation will also be negatively impacted if this area is left unprotected. 4) Port Fidalgo--The densely forested habitat along sheltered bays near Valdez and Tatitlek is being destroyed by current logging activities. 5) Kodiak National Wildlife Refuge--Development activities jeopardize prime brown bear habitat and other wildlife values. 6) Knight Island Passage--This habitat provides for spill impacted species such as harbor seals, bald eagles, orcas, and salmon. Rugged mountain islands with intimate bays support growing wilderness recreation and tourism. 7) Shuyak Straits--This is a highly productive aquatic environment--an essential travel corridor for marine life. The Sitka spruce forest on northern Afognak is home to salmon, brown bear, marbled murrelets, elk and deer. These are the priority habitat acquisitions in the Western Gulf. If we are to make recovery from the spill a reality settlement funds must be used to buy these areas. Please inform me as to your position on these habitat acquisitions. I await your reply.

US, Outside Alaska# 1343

As a frequent visitor to Alaska and a witness to the devastation of the *Exxon Valdez* spill I want to send a message of support for buying wildlife habitat. We have proven over and over again that humans are unable to respect wildlife. Unless it is kept safe from those who don't care it will disappear and we will all suffer in the long run. It is up to you to safe guard our future. I believe that you should buy the seven areas identified as part of the "Citizen's Vision". I would like to see large areas purchased so that entire watersheds can be protected. This will also encourage recovery of spill area and save areas that haven't already been damaged. There isn't much hope for these areas unless they are protected. Please keep me and my children in mind when you make your decision.

US, Outside Alaska# 1339

I am writing you, the Trustees of the *Exxon Valdez* oil spill Council, to ask you to support use of the Settlement funds for habitat purchases. I believe you have made a wonderful start by using funds to protect Seal Bay on Afognak Island and Kachemak Bay on the Kenai. At this point, to continue in the same vein, I think funds would be best used to buy land and timber rights and protect habitat. Large areas, including entire watersheds, should be bought and protected--as with the recent 42,000 acre purchase at Seal Bay on Afognak. The vast majority of the remaining Settlement Funds should be spent to protect wildlife habitat from further devastation. For I believe that purchasing habitat is the very best way to invest oil spill settlement dollars. At least the following seven areas, identified as part of the "Citizen's Vision", should be bought and protected: 1) Kenai Fjords National Park--Private lands within the park must not be logged or developed. Otherwise the spectacular coastline will be disrupted. 2) Port Chatham--This is the only strip of intact forest habitat along the tip of the outer Kenai Peninsula coast. 3) Port Gavina/Orca Bay--The old growth forests of Prince William Sound near Cordova provide exceptional habitat for spill-injured species. Tourism and wilderness recreation will also be negatively impacted if this area is left unprotected. 4) Port Fidalgo--The densely forested habitat along sheltered bays near Valdez and Tatitlek is being destroyed by current logging activities. 5) Kodiak National Wildlife Refuge--Development activities jeopardize prime brown bear habitat and other wildlife values. 6) Knight Island Passage--This habitat provides for spill impacted species such as harbor seals, bald eagles, orcas, and salmon. Rugged mountain islands with intimate bays support growing wilderness recreation and tourism. 7) Shuyak Straits--This is a highly productive aquatic environment--an essential travel corridor for marine life. The Sitka spruce forest on northern Afognak is home to salmon, brown bear, marbled murrelets, elk and deer. These are the priority habitat acquisitions in the Western Gulf. If we are to make recovery from the spill a reality settlement funds must be used to buy these areas. Please inform me as to your position on these habitat acquisitions. I await your reply.

US, Outside Alaska# 1338

Regarding the restoration plan involving the use of oil spill settlement dollars, I believe the best use of a substantial amount of the funds is to purchase land to protect and preserve valuable ecological areas and wildlife. The land purchases would be made from willing private landowners. In my opinion, the best way to protect natural areas is to purchase large contiguous areas of land, and protection should be made for at least the following areas: Port Gravina/Orca Bay, Kodiak National Wildlife Refuge, Port Fidalgo, Shuyak Straits, Knight Island Passage, Port Chatham, Kenai Fjords National Park. Thank you for your consideration of my concern.

US, Outside Alaska# 1330 Sierra Club, North Star Chapter (Minnesota)

I would like to respectfully submit comments on the Restoration Plan for Prince William Sound on behalf of the North Star Chapter of the Sierra Club. Our main concern is regarding the use of the funds from the *Exxon Valdez* Oil Spill settlement. It is our position that these monies could best be used to purchase habitat from private landowners. The preservation of these habitat areas, which are at risk of clearcutting, would provide "safe havens" for wildlife as oil impacted ecosystem recover. Also, preventing clearcutting on these lands would prevent further stresses such as sediment runoff in the already taxed ecosystems within the Sound. We recommend that the majority of the remaining settlement funds be spent to protect wildlife habitat from further devastation. To accomplish this and to provide ample habitat for larger wildlife, larger areas, including entire watersheds, should be bought and protected. At a minimum, as much land as possible in the following areas should be

purchased and protected: 1) Kodiak National Wildlife Refuge 2) Kenai Fjords National Park, 3) Port Chatham 4) Port Fidalgo 5) Knight Island Passage 6) Shuyak Straits 7) Port Gravina/Orca Bay. After the terrible damage done to habitat and wildlife populations as a result of the *Exxon Valdez* spill, what could be more appropriate than to use the settlement funds to make amends. The harm of the spill cannot be undone, but we can protect undamaged portions of the ecosystem to aid in the environmental recovery. We strongly urge you to consider this option.

US, Outside Alaska# 1327

With this in mind (that purchase of entire watersheds is the most effective restoration technique), I would like to express my complete support for the seven priority habitat acquisitions presently identified by the Citizen's Vision. These include Kenai Fjords National Park, Port Fidalgo, Port Chatham, Port Gravina/Orca Bay, Kodiak National Wildlife Refuge, Shuyak Straits, and Knight Island Passage. Having personally spent two summers near Olga Bay within Kodiak National Wildlife Refuge and one at Port Graham at the mouth of Kachemak Bay, I am very well aware of what is at stake in the region. I am particularly thankful for the already accomplished rescues of Seal Bay on Afognak Island and important lands adjacent to Kachemak Bay which, in my opinion, represent excellent examples of what can be accomplished through the intelligent application of Settlement funds. In summary, through thoughtful application of the *Exxon Valdez* Oil Spill Settlement funds, we now have an opportunity to make decisions which will benefit in perpetuity the wildlife of Southcentral Alaska. As the process moves forward, I hope you will keep the points I've addressed in mind and employ them as the Restoration Plan is developed and habitat purchase and protection decisions are made.

US, Outside Alaska# 1319

I am writing to you regarding your "Restoration Plan" which will guide the use of the Oil Spill Settlement money. I support the idea of allowing private landowners to purchase the habitat. Buying the habitat, especially large areas with watersheds, is the best way to invest Oil Spill Settlement dollars. I think that the Trustees should buy and protect at least Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, and Kodiak National Wildlife Refuge. The remaining funds can be used to protect the wildlife habitat from further ruin. I thank you for your time, I hope you take my thoughts into consideration.

US, Outside Alaska# 1316

I am writing to urge the council to invest all of the settlement fund into the purchase of land and timber rights to allow the ecosystem time to fully recover from the Valdez. Large intact watersheds would be the best areas to buy. Some specific places to consider are Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Strait, Kodiak National Wildlife Refuge.

US, Outside Alaska# 1313

The purpose of this letter is to strongly urge you to invest the remaining settlement funds in buying habitat to protect wildlife from further devastation. Large areas, including entire watersheds, should be bought and protected. These should include at least the following seven areas which have been identified as part of the "citizen's vision": Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, and Kodiak National Wildlife Refuge. I have visited your state the past two summers, but have recently canceled by

vacation plans for a third visit later this summer in protest of Governor Hickel's despicable decision to allow the destruction of wolves. I hope that your decision regarding the use of the remaining settlement money indicates your firm commitment to wildlife preservation that makes Alaska the unique place it is.

US, Outside Alaska# 1300

We understand that you constitute the Trustee Council appointed by President Clinton and Governor Hickel of Alaska to develop a Restoration Plan to guide the use of the *Exxon Valdez* Oil Spill Settlement monies. It is urgently requested that you buy land and timber rights because it is apparent that wildlife habitat should be saved from further devastation. It would be wise to buy and protect seven (7) areas under consideration, namely: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, and Kodiak National Wildlife Refuge.

US, Outside Alaska# 1290

You control those remaining \$600 millions in settlement money, and with them you control the fate of the forests that are threatened by the outrage of clear-cut logging -- and the important wildlife habitats the forests support. The forests and the wildlife cry out for protection, and I cry to you with them. In your Restoration Plan, I beg you to buy the land and timber rights; buy the habitats, buy the watersheds, buy those 7 areas identified as part of the Citizens Vision, buy all those private holdings in the Sound, in Kenai NP, in Afognak, and in the Kodiak Refuge. No restoration can be complete and worthy of us unless the area is in its natural, pristine state once again. Please let our cries come unto you.

US, Outside Alaska# 1281

Please use the settlement funds from the Exxon oil spill to buy large areas for wildlife habitat, especially the following: Port Gavina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, and Kodiak National Wildlife Refuge.

US, Outside Alaska# 1254

The environmental destruction caused by the *Exxon Valdez* Oil Spill will probably never be fully measured. However, with the settlement monies, we now have an excellent opportunity to rectify some of the devastation which was caused by this disaster. The purchase of land and timber rights is certainly the best and most judicious possible use of this money. Vast, critical areas, including entire watersheds, should be purchased in order to guard wildlife habitat from further ruin. Please give careful consideration to the following areas: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits and Kodiak National Wildlife Refuge. Please take this important opportunity to aid in the recovery and future protection of this diverse ecosystem at no cost to the American taxpayer. I thank you for your consideration of these requests.

US, Outside Alaska# 1227

The *Exxon Valdez* oil spill was a tragic and devastating chapter in the history of this country. The environmental havoc will probably never be fully comprehended, however, the settlement monies provide an excellent opportunity for the restoration and future protection of wildlife habitat. This is certainly the best and most appropriate use of the money. Land and timber rights, vital areas,

including entire watersheds should be purchased in order to guard wildlife habitat from further devastation. Please give careful consideration to the following areas: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, and Kodiak National Wildlife Refuge. This is a rare opportunity to facilitate the recovery of and further protect a critical ecosystem at no cost to the American taxpayer. I thank you for your consideration of these requests.

US, Outside Alaska# 1226

Your council is charged with investing the Exxon impact money in the way which would return the greatest good for the natural heritage of the watersheds feeding the Valdez bay. It is clear the best investment is land acquisition and easements on the priceless assets of the area. No other approach can protect those assets from destruction by industry. Your council would invest well in Port Fidalgo, Knight Island Passage, the Shuyak Straits, and the other intact watershed ecosystems surrounding the port of Valdez. You should resist the political temptation to dissipate the funds in useless "visitor centers" and other pork barrel developments. Please enter this letter in the official record of your proceedings. Thank you.

US, Outside Alaska# 1216 Federation of Fly Fishers

...[T]he Federation of Fly Fishers supports Alternative '2' as identified in the draft *Exxon Valdez* Oil Spill Restoration Plan. As stated in this alternative, 91% of the remaining \$600 million in the settlement fund would be focused upon habitat acquisition in the spill region. The Federation urges this Council to prioritize lands adjacent to anadromous streams and rivers with an emphasis on acquisition for inclusion in state and federal conservation units such as parks and refuges. Of particular importance is the acquisition of native inholdings within Kodiak National Wildlife Refuge, Kenai Fjords national Monument, and the expansions of Kodiak National Wildlife Refuge 'Red Peaks' unit on Afognak Island. Such an acquisition would provide public access to dozens of rivers and streams which are now closed. Additionally, acquisition would solidify state and federal management of this critical habitats.

US, Outside Alaska# 1208

The *Exxon Valdez* Oil Spill Settlement monies offer a rare opportunity to purchase land and timber rights from willing sellers without using taxpayer dollars. Habitat acquisition will allow oil impacted ecosystems time to recover without further stresses. Buying habitat is the very best way to invest Oil Spill Settlement dollars. The vast majority of remaining Settlement funds should be spent to protect wildlife habitat from further devastation. Large areas, including entire watersheds, should be bought and protected (as with the recent 42,000 acre purchase at Seal Bay on Afognak). The Trustees should buy and protect at least the following seven areas: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, Kodiak National Wildlife Refuge. Thanks for attention to this matter.

US, Outside Alaska# 1165

I am writing to urge you to allocate the remaining settlement funds to purchase wildlife habitats in large enough chunks so as to protect entire watersheds. This will result in a permanent legacy of environmental benefit. Among areas that ought to be purchased and permanently protected are: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Port Chatham, and Shuyak Straits. In addition, purchasing land which abuts existing protected land makes sense when this will preserve the entire

ecosystem. Therefore, I recommend that land adjacent to the Kodiak National Wildlife Refuge be acquired, and lands near Kenai Fjords National Park.

US, Outside Alaska# 1161

You find yourselves in an excellent position to make the best of the aftermath of tragedy. Please spend the oil spill settlement dollars wisely. I urge you to use the money to purchase and protect land in Alaska. Please purchase in large chunks, trying to respect habitat ranges and watersheds. In particular, please consider purchases in the following areas: Port Gravina, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, Kodiak National Wildlife Refuge.

US, Outside Alaska# 1100

It has come to my attention that you want comments on the use of how the settlement monies should be spent. As a former member of the Board of ACF and a frequent visitor to Alaska I would hope that you would spend the money on acquisition of habitat and areas of important wilderness: recreation and tourism. I support the citizen's Vision for Habitat Acquisition. We can't clean up the oil spill any more, sadly. Nature will now have to do it's thing. But if we can help to protect the ecosystem from further damage by acquiring land threatened by logging or other development it would be the best use of the money.

US, Outside Alaska# 1094

Please accept the following comments concerning your Restoration Plan for Prince William Sound. Although my home is far from this devastated area, the media has made this tragedy a reality for me, and I share the concern of Alaskans that the funds recovered from Exxon Oil be used for the best possible result. I would urge the Trustees to invest the Oil Spill Settlement funds in the purchase of wildlife habitat. This is the very best way to insure the restoration of this fragile ecosystem. The vast majority of the remaining settlement funds should be spent to protect wildlife habitat from further devastation. Large areas, including entire watersheds, should be bought and protected. The purchases should include, at a minimum, the following seven areas: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, and the Kodiak National Wildlife Refuge. Thank you in advance for your consideration of these comments and for your work on behalf of Alaskan wildlife.

US, Outside Alaska# 1088

My friends who are employed by the Alaska Center for the Environment have informed me of the work being done to determine how to spend the remainder of the Exxon Settlement money. Most conservationists agree that the best way to permit the recovery of the areas affected by the oil spill is to purchase threatened wildlife habitat. Reversing the damage done by oil spills is more difficult and expensive than preventing the damage that might be done by logging and excessive development. Habitat purchases can fully compensate private land owners while also protecting the interests of the local fishing and tourist industries, which depend on healthy wildlife. Prime areas to purchase include habitats around Ports Gravina, Fidalgo, and Chatham; the Knight Island Passage; the Shuyak Straits; and private lands within the Kenai Fjords National Park and the Kodiak National Wildlife Refuge. I have never been to Alaska, but I hope that when I do visit, the land will have retained its unique splendor.

US, Outside Alaska# 1079

As a frequent visitor to Alaska I am very concerned about the protection of Alaska's forests and wildlife. I feel that purchasing habitat is the best use of the oil spill settlement dollars as it will protect these areas from further devastation and should/could protect whole watersheds. I would like to encourage you to buy and protect at least the following seven areas: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, Kodiak National Wildlife Refuge. Thank you for giving consideration to my concerns.

US, Outside Alaska# 1064

I am writing regarding the use of the settlement funds. I am in favor of buying habitat as a means of investing the oil spill settlement dollars. The vast majority of the remaining funds should be spent to protect wildlife habitat from further devastation. I would like the Trustees to buy/protect specifically the following areas: 1) Port Gravina/Orca Bay, 2) Knight Island Passage, 3) Port Fidalgo, 4) Kenai Fjords National Park, 5) Port Chatham, 6) Shuyak Straits, and 7) Kodiak National Wildlife Refuge. Please support the buying of land and timber rights to protect habitat when considering how to spend the oil spill funds.

US, Outside Alaska# 1051

Please accept the following comments concerning your Restoration Plan for Prince William Sound. I would urge the Trustees to invest the Oil Spill Settlement Funds in the purchase of wildlife habitat. This is the very best way to insure the restoration of this fragile ecosystem. The vast majority of the remainder of the funds should be spent to protect wildlife habitat from further devastation. Large areas, including watersheds, should be bought and protected. These purchases should include, at a minimum, the following: Port Gravina/Orca Bay, Port Fidalgo, Port Chatham, Shuyak Straits, Port Chatham, Knight Island Passage, Kenai Fjords National Park, and the Kodiak National Wildlife Refuge. Thank you in advance for your consideration of these comments and for your work on behalf of Alaskan wildlife.

US, Outside Alaska# 1045

I wholeheartedly support the use of settlement funds from the Exxon oil spill to purchase habitat which will allow Alaskan ecosystems time to recover without further stresses. The vast majority of the remaining funds should protect wildlife habitat from more devastation. Entire watersheds should be bought and permanently protected - at least, but not limited to: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, and Kodiak National Wildlife Refuge. Thank you for your attention to this matter.

US, Outside Alaska# 1043

I am writing to ask that you use the oil spill settlement dollars to buy habitat. This would help us protect wildlife habitat from further destruction. We need to protect large areas including entire watersheds. Please buy and protect as much as possible including the following: Port Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits, and Kodiak National Wildlife Refuge. Thank you for this consideration.

US, Outside Alaska# 1038

As your Trustee Council considers how to spend settlement monies, I urge you to use these funds to acquire threatened habitat. The Alaska Center for the Environment has identified 7 areas (Port

Gravina/Orca Bay, Port Fidalgo, Knight Island Passage, Kenai Fjords National Park, Port Chatham, Shuyak Straits and the Kodiak National Wildlife Refuge) that should be purchased and protected. Although I live thousands of miles away from these areas, as an inhabitant of the world and a lover of wilderness and wildlife, you must do what you can to purchase these areas and put good use to the money from the disastrous oil spill. Please keep me informed of your decision.

US, Outside Alaska# 626

Use the monies for habitat restoration and acquisition in and near the Kodiak National Wildlife Refuge, Kenai Fjords National Park, Afognak Island and the Chugach National Forest. Extensive Native corporations and other private lands within these areas are under constant threat from clearcut logging and resort or subdivision development. It is of utmost importance to use these monies to acquire land or timber rights from willing sellers to protect these diverse areas rich in fish and wildlife from further damage.

REGION: Prince William Sound

Cordova # 1406

The best use of the Settlement funds is to acquire threatened habitat. Protecting wildlife habitat is the most effective way to ensure recovery of the spill-impacted area. Habitat should be purchased over broad areas, including entire watersheds, as with the recent 42,000 acre purchase at Seal Bay on Afognak. The council members should act quickly to purchase the seven areas identified as part of the "citizens' vision". It's in your hands to help keep our northern Rain Forest alive and standing for its abundant wildlife and long-term economy of fishing and tourism.

Valdez # 1488

Wanted 80 to 90% of funds for habitat acquisition with the Coalition's group list as priority (Port Gravina, Port Fidalgo, Shuyak, etc.). The remainder of the money used for monitoring and research.

Valdez # 1074

We prefer that 70% of the remaining restoration funds be spent on habitat acquisition and protection of scenic viewsheds. Our priorities for habitat are: 1) Eshamy to Jackpot Bay area, 2) Round Mountain (east side of Columbia Bay), 3) Knight Island (south end), 4) Head of Port Fidalgo and Gravina, and 5) Valdez Duck Flats.

REGION: Unknown

Unknown # 1515

Please buy private land and timber rights in Kodiak National Refuge, Shuyak Straits, the outer Kenai Peninsula Coast, Kenai Fjords, the islands around Knight Island Passage, the forests near Valdez and Tatitlek, and the areas eastern Prince William Sound. I don't want these areas cut, and I don't care if they are studied--I want them protected and I think Exxon money should be used.

ISSUE: 2.1 AFG ; Afognak

REGION: Alaska, Outside the Spill

Mat-Su Borough # 1665

I worked on the northern end of Afognak Island for four summers as a fisheries technician. I can attest to the abundance of birdlife and wildlife in the Shuyak Straits, which was a short distance from where I worked, at Waterfall. During those four summers, I saw clearcut logging chew up an ever-increasing amount of Afognak Island rain forest. The only part of the island which is pristine is the northern part, now. Please do what you can to purchase large tracts of northern Afognak. The Seal Bay purchase was an important beginning. This area, with its salmon streams and brown bear habitat, ancient spruce and offshore islands, needs protection. Two-thirds of the island is carved up. The remaining third should be saved.

Other Alaska # 232

(Purchase) Afognak Island - before the entire island is logged.

REGION: Anchorage

Anchorage # 372 Koniag, Inc.

Some of the Afognak J.V. lands in the Shuyak Strait area adjacent to the USFWS Red Peaks unit would make a more logical acquisition for habitat than the Seal Bay unit with its now excessive timber values. AJV also has the Panamarof area to the south of the Red Peak unit which is excellent wildlife habitat, and is scenic as well. In both cases, AJV would be a willing seller at a fair market value price.

Anchorage # 183

The approximately \$600 million would buy all KNWR inholdings, substantial acreage in the Shuyak Straits/Blue Fox/Red Fox Bay areas of Afognak, and significant protections of land in the Kenai Fjord area. Let's get on with it!

REGION: Kodiak

Akhiok # 8

I think the Trustee Council should acquire the seal bay area. To restore any lands that were heavily impact by the oil spill to where it (was before the oil spill) might take more money to restore the oiled area than to acquire different lands for recreation.

Kodiak # 5559

These people are entitled to their money and nobody denies that. These people would like to see more forest land, and nobody denies that. I'm sure nobody is going to want all of Afognak Island. Nobody is going to mind getting a few cents less if it buys lots of good will in the community.

Opportunity costs means to me if there's a chance to make a killing on a sale as opposed to fair market share, you have a responsibility to do that. What really needs to be done here is some people need to come together on some prices and see if it's all worth it. First you have got to see if these guys are willing to sell. If you sell that timber on the world market tomorrow the spotted owl may be in it and they're not going to allow logging and the prices will fall. Today you can get top cash for them, and anyone will tell you that cash is in the hand. I don't think all that land should be locked up. It's your land, you should be able to sell it.

Kodiak # 5543

I represent the Kodiak Audubon Society. I'm just curious, the projects you have on this page, have they come in from people in the spill area? We would like to see 80% of the money spent to buy habitat, specifically on Afognak. The idea is not to buy trees, but to protect habitat. If the trees all get cut down the marbled murrelet will have an even harder time. The areas we would like to see protected are Seal Bay and other areas listed in my written testimony [attached].

Kodiak # 1249 Kodiak Audubon Society

The Shuyak Straits/Northern Afognak lands are also of special interest to our members. Not only are these lands and coastal habitat home to many species that suffered substantial injury to the spill, this wilderness also offers magnificent scenic and recreation values. Acquisition of these ecosystems would insure recovery and protect many resources and services from future degradation.

Kodiak # 207

Land on Afognak Island which is rapidly being destroyed by logging. The areas I wish to see protected are: 1) 1/4-1/2 mile border along Seal Bay (since logging on the outer area near Seal Bay has already begun), and the Pauls and Laura lakes chain near Seal Bay. 2) Land on Afognak bordering on the Shuyak straight. This land could be incorporate into either the Kodiak Nat'l Wildlife Refuge or Shuyak State Park. 3) Long Lagoon is good marbled murrelet habitat and a good fishery system. (silver salmon) 4) Native inholdings within Kodiak Nat'l Wildlife Refuge.

Kodiak # 22

Acquire Native land holdings in the Kodiak Bear Wildlife Refuge and on Afognak Island.

Kodiak # 21

(Priorities for habitat protection): #1 Seal Bay lands. #2 Pauls & Laura lake Chain. #3 Shuyak Straight conservation unit. #4 Long Lagoon area.

ISSUE: 2.1 HOM ; Homer

REGION: Alaska, Outside the Spill

Other Alaska # 455

I would like the Trustee Council to acquire and protect the significant habitat and scenic viewing area known as the Overlook which is below the crest of the hill as one enters Homer. The area is immensely significant to all residents and visitors to the region. Whales, tidepools, salmon, eagles, swans, bears, otters (both species), seals, moose and coyotes etc.. frequent this 250 acres comes wilderness viewable from the wayside. With binoculars one can see into an active eagle's nest. The mentality that is aware of and concerned by resources damage is nurtured by the presence of park like settings.

ISSUE: 2.1 KAK ; Kachemak Bay

REGION: Alaska, Outside the Spill

Juneau # 5477

Can you explain some of the values associated with purchase of Kachemak? Were these large populations? Is that why it was selected? Are there any big game species? Is there a visual rating given for Kachemak Bay?

Other Alaska # 232

(Purchase) lands adjacent to Kachemak Bay State Park.

REGION: Kenai

Homer # 577

Please purchase Gull Island in Kachemak Bay. This island is the most easily accessible sea bird colony in Alaska and should be protected.

Homer # 253

Purchase Gull Island from the Seldovia Native Association and deed it to the Alaska Maritime Nat'l Wildlife Refuge system. (Kachemak Bay)

Other Kenai Borough# 219

It is very difficult for me to realize that by the end of this year you will "piss" away over \$300 million dollars, without anything more to show for it than the soon to be ravaged timber the Seldovia Native conned you into buying. It would be interesting to know what political person is involved with the timber Co involved with the "CON". No one in his right mind would have purchased this piece that presently stands in the path of spreading Spruce Bark Beetles.

Seldovia # 214

The word acquisition keeps popping up! I don't believe that any of the settlement money should be used to by land, especially in Kachemak State Park. You can't show me a tree that was destroyed by the spill or any tree that is endangered by another spill! The Seldovia Native Association has sold the trees to timber trading co. If you have to get your fingers into the settlement money buy the trees only back from Timber Trading Co.. Or take the 24,000 acres inholding that the SNA owns out of the park and let Timber Trading Co. cut the trees. Then the SNA land will be worth about 2 cents and acre just about what the U.S. paid Russia (per acre) for Alaska. When the settlement money is all gone, I suppose you will want to get your hooks into the Permanent Fund. If this land buy back goes through it will open the gate, for others to demand that the State buy their land. When the settlement money is all gone you guys will be out of work.

REGION: Prince William Sound

Whittier # 6083

Kachemak Bay set a precedent. If the precedent has been set with the Kachemak Bay program and the

relative factors are habitat protection and if the criteria is a human-use resource, it appears that the only thing which takes away from some of the areas in the Sound is whether someone can get to them. There is great potential for people to get to them. I can understand how Kachemak Bay would be rated high.

ISSUE: 2.1 KAM ; Kamishak

REGION: Alaska, Outside the Spill

Other Alaska # 232
(Purchase) Kamishak Bay Area

ISSUE: 2.1 KEN ; Kenai Fjords National Park

REGION: Alaska, Outside the Spill

Mat-Su Borough # 1665

Kenai Fjords National Park is where I first became acquainted with Alaska's coastline and its wildlife. I will never forget the kayak trip we took there. Development of private lands within the Park would certainly compromise the wilderness quality of this beautiful area, accessible for recreation. Protect the public interest there as well.

Other Alaska # 1033

This letter is being written to urge you to use the *Exxon Valdez* Oil Spill settlement money to purchase wildlife habitat. It was habitat, marine and otherwise, that was spoiled by the spill, and the best way for Exxon to make up for that is to use the money to protect as much area as possible from logging or other development. Inholdings in Kenai Fjords National Park seem particularly important to me, as they can threaten the integrity of the park by their need for access, and by development. Any area imminently threatened by logging should also be high on the list. (I was very glad to read that an area threatened with logging on Afognak Island has recently been purchased for protection.)

REGION: Anchorage

Anchorage # 1602

We urge the Council to use Exxon Settlement funds for wildlife habitat acquisition. With the spill and cleanup now history we feel it behooves us to protect the impacted areas from further environmental damage. Many areas in Prince William Sound and along the Kenai coast are threatened by self-interest groups that appear to have no consideration for the protection of these lands for future generations. Purchasing these critical areas will help insure that our children and generations of American to come can enjoy these lands and their delicate ecosystems as we have.

Anchorage # 1071

Please utilize the spill settlement funds for wildlife habitat purchases in the area affected by the

spill, particularly in the Kenai Fjords National Park inholdings and between Cordova and Valdez. It's high time to protect these areas from decimation by loggers and oil companies.

Anchorage # 746

I would like the council to acquire private inholdings (esp along the coastline) of Kenai Fjords National Park and Kodiak National Wildlife Refuge. These would be my priority habitat acquisition areas.

Anchorage # 700

Acquire Native-selected lands along the coast of Kenai Fjords National Park. We have willing sellers and a nationally recognized scenic shoreline with high-quality habitat for spill-affected species.

Anchorage # 183

The approximately \$600 million would buy all KNWR inholdings, substantial acreage in the Shuyak Straits/Blue Fox/Red Fox Bay areas of Afognak, and significant protections of land in the Kenai Fjord area. Let's get on with it!

REGION: Kenai

Other Kenai Borough# 71

Buy back private lands in Kenai Fjords National Park.

Other Kenai Borough# 63

If we can't actually restore the damaged environment because we don't know how, then at least we can purchase equivalent resources to protect them from further degradation. I support a by-back of corporate lands within the boundaries of Kenai Fjords National Park.

Seward # 6110

I support Alternative 2 and habitat protection and acquisition. The Kenai Fiords would be a great choice.

Seward # 5957

Everyone has alluded to Kenai Fiords National Park. What were Port Graham's comments?

Seward # 5946

I ask that you not overemphasize just changing ownership on land because I don't think that is going to solve the problem. I don't see a direct tie in to just acquiring the land and helping everything out. You could spend a lot of money doing that, and I think there are some holdings in the Kenai National Park that would be good to include in the park to make that a contiguous unit. I hope you don't overemphasize habitat protection. It is part of on-going research and keeping a proper balance.

Seward # 5938

It sounds like all this money is going to be spent on buying timber rights. If that is so, in the Kenai Fiords Parks there is a lot of Native land-claim land that should be part of the park. The Natives are willing to sell the land even though it might not be the most desirable timber. What emphasis will be placed on buying that land?

Seward # 5919

Why are the lands in Kenai National Park not considered imminently threatened?

Seward # 5903

Should this say Kenai National Park? Is that a misprint?

Seward # 318

I support habitat acquisition. I support buy back of corporate lands within the boundaries of Kenai Fjords National Park.

Seward # 276

I support habitat protection and land acquisition in Kenai Fjords National Park Inholdings.

Seward # 242

Acquire all the lands within Kenai Fjords National Park that are subject to selection by the native villages of Port Graham and English Bay (Nanwalek).

Seward # 226

I would like to see oil spill money used to purchase native land. English Bay or Port Graham is willing to sell back to Kenai Fjords National Park. The coastal parcels in question are vital components of the park ecosystem for resource protection and visitor use.

REGION: Outside Alaska

US, Outside Alaska# 1733

I especially would like to see added protection for the Kenai Fjords National Park.

ISSUE: 2.1 KDR ; Kodiak National Wildlife Refuge

REGION: Alaska, Outside the Spill

Mat-Su Borough # 1665

I am also concerned about development on Kodiak Island. I worked on Karluk and Spiridon Lakes there. Development which is insensitive to the density of brown bears in certain areas could have quite an impact on them. Critical brown bear habitat on Kodiak Island should be purchased from private landholders whenever possible.

REGION: Anchorage

Anchorage # 1083 National Audubon Society

Our members have a special concern for and interest in the Kodiak National Wildlife Refuge. This magnificent island ecosystem is renowned the world over for its Kodiak brown bears, bald eagles, salmon runs and associated wildlife in an absolutely spectacular wild setting. Unfortunately, the very viability of the refuge is threatened by over 800,000 acres of private inholdings on which activities incompatible with refuge purposes can occur. Fortunately, a broad coalition of public

interest groups that include sports people, commercial fisher people, guides, air taxi operators, tourism businesses, environmentalists, everyday citizens and many of the Native landowners themselves favor acquisition of key inholdings on a willing seller basis. Thus we have an historic opportunity to join forces in an acquisition program that will leave a legacy of truly meaningful and lasting response to the tragic *Exxon Valdez* oil spill. That is without question a truly win-win opportunity of unprecedented proportions. Not only will acquisition of refuge inholdings restore the integrity of this world class wildlife refuge, but it will benefit island residents and all the American people socially, economically and environmentally for generations to come. Therefore, it without question is the most meaningful and lasting restoration measure the Trustees could ever hope to come up with. Restoring the integrity of the Kodiak National Wildlife Refuge will serve as a living testimony to your courage, foresight and sense of public responsibility. Your consideration of these recommendations is greatly appreciated. Audubon wishes you well in your important work and are confident you will do what is right.

Anchorage # 746

I would like the council to acquire private inholdings (esp along the coastline) of Kenai Fjords National Park and Kodiak National Wildlife Refuge. These would be my priority habitat acquisition areas.

Anchorage # 372 Koniag, Inc.

The accompanying questionnaire represents my views as well as those of my corporation Koniag Inc., pretty much, and the Afognak J. Ventures of which Koniag has a 45% share. Koniag has long maintained that its Karluk and Sturgeon River former wildlife refuge lands on the west side of Kodiak must be reacquired to have a bear refuge worthy of the name.

Anchorage # 184

Kodiak N.W.R.-- Karluk RV and Lake, Afognak Is (north end). Stop spending (wasting) \$ on more studies. Get the Natives to cooperate and buy some of their lands.

Anchorage # 183

The approximately \$600 million would buy all KNWR inholdings, substantial acreage in the Shuyak Straits/Blue Fox/Red Fox Bay areas of Afognak, and significant protections of land in the Kenai Fjord area. Let's get on with it!

REGION: Kenai

Other Kenai Borough# 1142

As a lifetime Alaskan (45 years) businessman and big game guide with strong interests in and ties to the environment I strongly urge the Trustees of the EVOS monies to use this money to protect threatened wildlife habitat that was impacted by the *Exxon Valdez* oil spill. Areas of particular concern to me are prime brown bear habitat on Kodiak Island within the Kodiak National Wildlife Refuge that are threatened by development.

REGION: Kodiak

Akhiok # 1022 AKI Corporation

Thank you for coming to Akhiok, we know you've got a big job and we are appreciative of the opportunity to play a part of the restoration process from the *Exxon Valdez* Oil Spill. As you know, AKI is a willing seller of lands that were once part of the Kodiak National Wildlife Refuge. And the habitat working group of the Trustee Council has identified all of our refuge inholdings as potential "lost opportunity" lands which would qualify for; A. Replacement of equivalent resources and B. damaged services, such as recreation. We have reviewed your preliminary parcel score of AKI lands and have responded with some proposed amendments, that would increase our score primarily on three factors: A) AKI's archaeology score should move from moderate to high, B) our wilderness score should move from low to moderate, and C) our seabird, (such as Harlequin Duck) and River Otter scores should go from unknown to moderate. We understand our score was preliminary and that detailed field inspections and appraisals will be required as part of the normal process and we want to take this opportunity to invite you and to host your visit. Finally, as we have discussed with you previously, we are hopeful that the *Exxon Valdez* Settlement Fund can play a partial role in a comprehensive solution to the refuge inholding dilemma. We have sought to involve several funding sources in an overall settlement which would include: A) exchange legislation, B) private philanthropy, C) land and water conservation fund, as well as *Exxon Valdez*. I am pleased to report that the Department of Interior has earmarked \$2.2 million from the land and water conservation fund suggesting that a comprehensive plan for the refuge may indeed be feasible.

Akhiok # 9

To whom it may concern I would like to see the lands on the south end of Kodiak Island bought to protect the land for the bears and animals. Seems every year there is getting more and more building going up around here. We would like the lands to remain the same. If sold to the wrong hands it could be strongly developed.

Kodiak # 1249 Kodiak Audubon Society

The Kodiak Wildlife Refuge is a special concern to our members. The purpose of the refuge is to protect the habitat of brown bear and wildlife. The use and enjoyment of the refuge by people must be compatible with wildlife. Unfortunately, the very essence of the refuge is threatened by large tracts of private inholdings on which enterprises incompatible with the delicate balance of the refuge can occur. Many of these private landowners endorse acquisition of these inholdings on a willing seller basis. Acquisition of refuge inholdings will restore the wholeness of this world class wildlife refuge for present and future generations.

Kodiak # 207

Land on Afognak Island which is rapidly being destroyed by logging. The areas I wish to see protected are: 1) 1/4-1/2 mile border along Seal Bay (since logging on the outer area near Seal Bay has already begun), and the Pauls and Laura lakes chain near Seal Bay. 2) Land on Afognak bordering on the Shuyak straight. This land could be incorporate into either the Kodiak Nat'l Wildlife Refuge or Shuyak State Park. 3) Long Lagoon is good marbled murrelet habitat and a good fishery system. (silver salmon) 4) Native inholdings within Kodiak Nat'l Wildlife Refuge.

Kodiak # 178

Most of the best habitat used by resident and anadromous fish, brown bear and eagles is not owned by Native corporations and other private owners. Sale and/or development of these lands will devastate these populations. The time is right for protection/acquisition, but little time remains. Many parcels are on the market. Many developments of cabins, lodges and homes are planned. One of the crown jewels of the national refuge system is up for grabs. In many cases the phrase "now or never" is wholly appropriate. The service's land protection plan for Kodiak refuge needs help--NOW!!!

Kodiak # 22

Acquire Native land holdings in the Kodiak Bear Wildlife Refuge and on Afognak Island.

Old Harbor # 1618 Akhiok-Kaguyak; Koniag; Old Harbor Native Corps

On behalf of Akhiok-Kaguyak, Inc., Koniag, Inc., and Old Harbor Native Corporation, we are transmitting to the *Exxon Valdez* Oil Spill Trustee Council additional comments on the Draft Exxon Valdez Oil Spill Restoration Plan. These comments include a proposed parcel score and a link to injury explanation for the inholdings owned by the three Native corporations we represent based on the criteria established by the EVOS Trustee Council. In addition, as discussed with the Trustee Council staff, we intend to subsequently provide an attachment (which is currently in the process of being printed) to these comments. The attachment is a Background Document containing a compilation of informational materials which address issues related to the Acquisition of Inholdings Project in the Kodiak National Wildlife Refuge. Thank you for your opportunity to provide comments to the Draft Restoration Plan. (Attachment giving individual attribute ratings according to the Habitat Acquisition and Protection system given in the Supplement was given to the Habitat Protection Working Group. The attachment rated the Kodiak National Wildlife Refuge inholdings, and totaled to a score of 111.)

Old Harbor # 1012 Old Harbor Native Corporation

By qualifying for *Exxon Valdez* habitat and acquisition funding, we believe that the opportunity to general economic activity which will benefit directly or indirectly Natives and non-Natives alike and at the same time conserve premier fish and wildlife habitat is one that should not be lost. As the enclosed letter to the Trustee Council from the President and Chief Executive Officer of Akhiok-Kaguyak, Inc. and Koniag, Inc. respectively and myself indicates, our three Native corporations are very interested in working with the Trustee Council regarding acquisition of a portion of our lands. We believe that with the commitment of funds from the civil and criminal penalty funds combined with private and federal funding, a comprehensive habitat conservation and acquisition project can be achieved on Kodiak and Sitkalidak Islands. With the inclusion of the AKI lands of the Alitak Parcel in your first cut at a list of "lost opportunity" lands, the Council has taken the first step in this process. We will aid you in reviewing our lands in any way that you may find helpful.

Old Harbor # 1012 Old Harbor Native Corporation

Old Harbor's inholdings in the Refuge also support many other species of wildlife, including Sitka black-tail deer, river otter, beaver, fox, seals, mountain goat, and sea lions. The Refuge is also home to short-tailed weasel, little brown bat, tundra vole, Roosevelt elk and snowshoe hare. The nearshore areas also support marine mammals such as whales, dolphins, porpoises, sea otters and orcas. More than 250 species of fish, birds and mammals have been documented on the Archipelago.

That abundance of fish and wildlife on the Kodiak Archipelago has made the area one of the hardest hit by the oil spill. For example, according to the United States Fish and Wildlife Service's final bird mortality count from the *Exxon Valdez* oil spill, the Kodiak Region sustained higher bird mortality than Prince William Sound. The attached exhibit to my statement provides a breakdown of the mortality for ten species and the spill total for all species. For the 10 listed species, the Kodiak percentage ranged from a low of 47% of fatalities (bald eagle) to a high of 96% of fatalities (short-tailed shearwater). The Kodiak region bore 64% of all bird fatalities for the oil spill. Clearly, the Kodiak Region's bird populations have been hard hit by the *Exxon Valdez* oil spill. If those populations of birds most damaged by the oil spill are to recovery, and if the Kodiak National Wildlife Refuge is to remain a primary habitat for seabirds, waterfowl, and bald eagles, protection of habitat is essential. This statement is reinforced by the Draft Land Protection Plan prepared for the Kodiak National Wildlife Refuge in October 1992 by the Fish and Wildlife Service. The Draft Land Protection Plan states at Page 1 that "...mixed ownership areas have been difficult to manage and limit the effectiveness of certain refuge objectives, e.g., preserving natural integrity." As a result, the U.S. Fish and Wildlife Service's Alaska Regional Office has rated Kodiak Native inholdings as their "number one federal acquisition priority in Alaska." Old Harbor's lands are also rich in historic and archaeological resources. Midway and Barling Bays are the sites of at least four ancient villages. There are also at least three ancient Native villages sites on Sitkalidak Island. The earthquake of 1964 uncovered masses of artifacts are in these areas. These many archaeological sites and the many artifacts buried within them reflect the culture of the Alutiiq Native population that originally occupied and still occupies the Kodiak Archipelago. One of the most significant sites to be uncovered in recent years was at "Refuge Rock" on Sitkalidak Island. The tragic story this historic site tells us holds great importance for our people, their culture, and the history of the Kodiak Region. Kodiak has been referred to as the Egypt of Alaska. Its archaeological treasures have only recently begun to be discovered and have yet to be fully understood. They represent an untapped source of history and culture of great importance to our people. We appreciate the Trustee Council's decision to help fund the Kodiak area Native association museum which will do much to ensure that culture is preserved. The highest and best use for most of these lands is to conserve them as fish and wildlife habitat forever into the future. As you know, as a Native corporation, we have solemn responsibilities to our shareholders and to others in our village which sometimes places us in a dilemma. While our culture and instincts would have us protect the land and its natural resources, our 20th Century fiduciary obligations call for us to create some sort or economic benefit to our people from the only tangible asset we have...our lands.

Old Harbor # 1012 Old Harbor Native Corporation

The purposes of "The Kodiak Project" and the general goals of the *Exxon Valdez* Restoration Plan Habitat Protection and Acquisition effort are support of one another, we believe. To us, this project offers a unique opportunity to make wise use of public funds to help overcome the adverse impacts of the oil spill on animals, plants, and people and at the same time conserve natural resources and using those resources more effectively to help stimulate economic growth in the Region. In the enclosed letter to the Trustee Council, we provide our response to the Council's recent letter in March to landowners willing to make lands available for habitat protection. Using the Council's "Habitat Protection Parcel Analysis," "Criteria for Rating Benefit of Parcel to Injured Resources/Services," "Interim Threshold Criteria," and "Interim Evaluation/Ranking Criteria," we believe that our lands warrant a high score. Those of us who live, hike, recreate, work, and hunt on our Native land, and fish in its waters have always known that our wildlife resources are abundant

and sustain life. That is the principal reason our ancestors settled in this area. The majority of the Kodiak Archipelago is optimum brown bear habitat. Old Harbor's inholdings have significant denning and foraging areas for the bears. One of the most unique events in the known migration patterns of brown bear occurs each year in the Sitkalidak Strait. Bears swim the Strait to Sitkalidak Island where they live until they return to Kodiak Island in the Spring (bears live there year round too). In addition to the Kodiak brown bears, the Kodiak Archipelago is home to millions of birds, both pelagic and migratory. The pelagic or seabirds consists of many species, including glaucous winged and mew gulls, murres, kittiwakes, auklets, cormorants, guillemots, murrelets, fulmars, and puffins. The harlequin duck, black oystercatcher and bald eagle are many other species of birds which inhabit this area. The Kodiak Archipelago provides nesting habitat for 96 species of birds and is home to an estimated 1.5 million seabirds and an estimated 150,000 waterfowl during the winter months. It serves as both nesting and feeding habitat to approximately 2 million birds. The Maritime Refuge has expressed strong interest in acquiring the small islands selected by Old Harbor because of their significance as major bird habitats. The 1978 report entitled "The Breeding Biology and Feeding Ecology of Marine Birds in the Sitkalidak Strait Area, Kodiak Island, 1977 and 1979" by Patricia Baird and Allen Moe estimated that 17,000 birds nest on Cathedral Island every year. In the Sitkalidak Straits, the largest puffin colony in the Kodiak Archipelago can be found on nearby Cathedral Island. There are minor colonies in Kiliuda Bay and on Amee Island, all part of the Old Harbor inholdings. Over 13,000 puffins nest in the Sitkalidak Straits every year. The puffins are a rare bird whose population the Maritime Refuge is anxious to encourage. Obviously, 17,000 birds on the tiny island of Cathedral do not draw their sustenance from that island. Instead, they feed on Sitkalidak, in the Straits or on Old Harbor lands on Kodiak. John Island in Three Saints Bay is also a nesting area for puffins, murrelets, auklets, gulls kittiwakes, and guillemots. These migratory bird habitats have worldwide significance. Kodiak Island has all five species of Pacific salmon present and Old Harbor's inholdings support four of those species: sockeye, coho, pink and chum, plus steelhead and Dolly Varden. The salmon are, of course, a primary source of food for the brown bears as well as the 200 nesting pairs of bald eagles on the Kodiak National Wildlife Refuge.

Old Harbor # 1012 Old Harbor Native Corporation

By qualifying for *Exxon Valdez* habitat and acquisition funding, we believe that the opportunity to generate economic activity which will benefit directly or indirectly Natives and non-Natives alike and at the same time conserve premier fish and wildlife habitat is one that should not be lost. As the enclosed letter to the Trustee Council from the President and Chief Executive Officer of Akhiok-Kaguyak, Inc. and Koniag, Inc. respectively and myself indicates, our three Native corporations are very interested in working with the Trustee Council regarding acquisition of a portion of our lands. We believe that with the commitment of funds from the civil and criminal penalty funds combined with private and federal funding, a comprehensive habitat conservation and acquisition project can be achieved on Kodiak and Sitkalidak Islands. With the inclusion of the AKI lands of the Alitak Parcel in your first cut at a list of "lost opportunity" lands, the Council has taken the first step in this process. We will aid you in reviewing our lands in any way that you may find helpful.

Old Harbor # 1012 Old Harbor Native Corporation

The Kodiak Archipelago, including the Old Harbor Native Corporation lands and its natural resources were injured by the *Exxon Valdez* oil spill.

Old Harbor # 1012 Old Harbor Native Corporation

Our lands appear to qualify for a high score using the rating system that your Habitat Protection Working Group has developed for evaluating lands in the oil spill zone; and our strong belief is that, because of the substantial interest throughout our Nation in protecting wildlife habitat on the Kodiak National Wildlife Refuge, a comprehensive wildlife habitat conservation and acquisition project can become a reality if there is a strong commitment of funding a portion of the project from the *Exxon Valdez* settlement funds. Thank you for this chance to present our views to the Council. We look forward to working with you in the days ahead.

REGION: Outside Alaska

US, Outside Alaska# 1930

Alternative 2 dedicates 91% of the remaining \$600 million in the fund to habitat acquisition. In addition, my highest priority for lands to be acquired are Native inholdings and other private parcels from willing sellers within the Kodiak National Wildlife Refuge.

US, Outside Alaska# 1929

Alternative 2 dedicates 91% of the remaining \$600 million in the fund to habitat acquisition. In addition, my highest priority for lands to be acquired are Native inholdings and other private parcels from willing sellers within the Kodiak National Wildlife Refuge.

US, Outside Alaska# 1784

I am writing to register my vote for the purchase of Kodiak NWR lands with the settlement funds. I believe Alternative 2 is the best use of the dollars for the long-term benefit of wildlife in Alaska. The Kodiak Native lands are in prime need of protection as they contain the densest populations of salmon and bears. Last summer I had an opportunity to fly over the Karluk Lake area and I camped on the shore of Thumb Lake, a tributary drainage of Karluk. If this land were to be developed with camps, docks, and many aircraft landings then the richest area for brown bears and the potential to observe them would be seriously impacted. These are key corridors for the maintenance of all kinds of wildlife populations and need to be returned to federal management. I have recently completed a five-year study of bear responses to camps and visitors in Katmai National Park, Alaska. From this work it is clear that the protection of salmon streams on Kodiak is essential to the maintenance of the dense bear populations. It is for these reasons that acquisition of Native inholdings and other private land from willing sellers within the Kodiak NWR is my highest priority. Thank you for your consideration.

US, Outside Alaska# 1735 International Wild Waterfowl Association, Inc

The International Wild Waterfowl Association works toward protection, conservation, and reproduction of many species of wild waterfowl considered in danger of eventual extinction. Habitat preservation is a critical part of the effort to protect many of these species. In recognition of the Trustee Council's identification of the harlequin duck as one of the key bird species injured by the Exxon Valdez oil spill, the IWWA would like to go on record in support of Alternative 2, which would dedicate 91% of the remaining \$600 million in the fund to habitat acquisition within the spill region. IWWA urges the Trustee Council to prioritize coastal sea duck habitat in the Kodiak National Wildlife Refuge whose bays and nearshore waters provide wintering habitat for an estimated 150,000 sea ducks, including harlequin, Barrow's goldeneye, king eider, and greater squap. An important

population of breeding tundra swan also utilize the southern end of the Kodiak Refuge and would benefit from acquisition and preservation of their habitat. It is the IWWA view that nature will do most important job in cleaning up the oil spill and since the spill was an environmental problem, the solution of habitat acquisition and preservation is the best use of the oil spill settlement fund from an environmental standpoint. Thank you for the opportunity to be part of the public comment process.

US, Outside Alaska# 1728

Please register my vote for ALTERNATIVE 2 among the restoration plans you are considering. As someone interested in the best form of environmental recovery from the Exxon oil spill, I wish to see the greatest amount of threatened wildlife habitat in the spill zone. ALTERNATIVE 2 dedicates 91% of the remaining \$600 million in the fund to habitat acquisition. In addition, my highest priority for lands to be acquired are Native inholdings and other private parcels from willing sellers within the Kodiak National Wildlife Refuge. Thank You.

US, Outside Alaska# 1727

US, Outside Alaska# 1596 Boone and Crockett Club

The Boone and Crockett Club, founded in 1887 by Theodore Roosevelt, is one of the nation's first conservation organizations. Early members - such men as naturalist George Bird Grinnell, artist Albert Bierstadt, forester Gifford Pinchot and ecologist Aldo Leopold - shaped the course of conservation in America. The Club's earliest achievements - protection of Yellowstone National Park, establishment of the Forest Reserves which became the National Forests, support of the wildlife refuge systems and framing of wildlife protection laws - are monuments to that legacy. The Club maintains records of North America's big game, participates in major wildlife symposia and workshops and supports wildlife research and management. It is with this dedication to preservation and careful management of outstanding wildlife resources in mind that the Boone & Crockett Club adds its voice to the support of acquisition of critical wildlife habitat with most of the remaining *Exxon Valdez* settlement fund. In particular, Boone & Crockett urges the *Exxon Valdez* Trustee Council to prioritize acquisition of private lands from willing sellers within the Kodiak National Wildlife Refuge. As you are aware, the Department of Interior has long sought to reacquire Kodiak Native Corporation inholdings along the salt water edge and the salmon rivers within the bear refuge. These are some of the most biologically productive habitats within the oil spill zone, and they are under imminent threat of commercial development even though their highest and best use is clearly intrinsic wilderness. The Boone & Crockett Club's "vision of the Future" mirrors our past dedication:-- We envision a future in which wildlife and wildlife habitat, in all their natural diversity, are maintained and enhanced; -- A future in which hunting continues to be enjoyed under the rules of Fair Chase and ethical respect for nature; -- A future in which all users of natural resources respect the rights of others in the spirit of sharing; -- A future in which all people are committed to the principle that their use of resources must be sustainable both for themselves and future generations. Acquisition of Kodiak Refuge inholdings is consistent with this vision since it will provide public access to outstanding habitat now closed to such access. It will also resolve growing management conflicts that will only worsen if commercial development along salmon streams is increased. Thank you for considering our views.

US, Outside Alaska# 1448 International Association for Bear Resc. & Mgmt

The International Association for Bear Research and Management (IBA) is the professional organization for wildlife scientists involved in research and management of the world's bear species. I am writing you at the request of our President, Dr. Mike Pelton (Univ. of Tennessee, Knoxville) who is in Russia. The IBA supports proposals designed to acquire lands owned by Native Corporations within the Kodiak National Wildlife Refuge. Much of the Native-owned land is lowland, riparian habitat that is of critical importance to the brown bear population. We urge the Trustee Council to commit funds from the *Exxon Valdez* Oil spill Settlement to purchasing lands of the highest value for brown bear habitat. We suggest you consult with the Staff of the Kodiak National Wildlife Refuge and the Alaska Department of Fish and Game for assistance in determining the land with the highest priority for acquisition. You should be aware that the draft Land Protection Plan for the Kodiak National Wildlife Refuge does not reflect the results of recent brown bear research, and the priority ratings

assigned in that document do not accurately portray the relative importance of various parcels as brown bear habitat. The importance of maintaining large, undeveloped expanses of wilderness habitat for protecting the Kodiak brown bear population cannot be overstated. Brown/grizzly bear populations in Europe and much of North America have either been extirpated or are seriously threatened by a long history of incompatible human developments. In contrast, the Kodiak brown bear population is at or near historical levels, with the bear density approaching 1 bear/square mile. The current viability of the brown bear population owes much to the foresight of President Franklin D. Roosevelt who established the 1.8 million-acre Kodiak National Wildlife Refuge to protect brown bears with a 1941 Executive Order. Only 45% of the estimated 3 million acres of brown bear habitat in the Kodiak Archipelago currently has protected status within the boundaries of the Kodiak National Wildlife Refuge. Approximately 1.7 million acres are now owned by private individuals, Native corporations, the State of Alaska and the Kodiak Island Borough. Nearly all these lands are subject to increased developmental pressures which are incompatible with perpetuating the brown bear population. Several commercial developments, including fishing lodges and hunting cabins, have been constructed within the past 2 years in prime brown bear feeding habitat, including the famous Karluk Lake drainage. We urge the Trustee Council to give the utmost consideration to securing the future of the Kodiak brown bear in deliberating the disposition of the Exxon Funds. The additional protection gained for critical brown bear habitat will secure many future benefits to the local economy through enhanced tourism, hunting and scientific and educational opportunities. More incentive will be provided to private landowners to manage their lands or activities compatible with maintaining a viable brown bear population. We wish you well in your deliberations and offer our assistance at any time.

US, Outside Alaska# 1365 National Wildlife Refuge Association

The National Wildlife Refuge Association (NWRA) is a national, non-profit, conservation organization dedicated to the protection and perpetuation of the National Wildlife Refuge System. The NWRA was founded in 1975 by wildlife refuge professionals concerned about the future of the Refuge System and the natural resources it is intended to conserve. The organization represents wildlife professionals and concerned citizens working together to benefit refuges in Alaska and nationwide. The NWRA appreciates this opportunity to express its view to the Trustee Council concerning the development of the *Exxon Valdez* Oil Spill Restoration Plan, and supports alternative number two "Habitat Protection". Primary emphasis upon the acquisition and protection of strategic habitats, especially on Kodiak Island, are critical in NWRA's view. The NWRA strongly supports the acquisition (from

willing sellers) of native corporation lands on Kodiak Island in order to consolidate the Kodiak National Wildlife Refuge and protect essential habitat for the Kodiak bear, bald eagle, anadromous fish, seabirds, and marine mammals. Kodiak acquisitions may be particularly beneficial to black oystercatcher, harlequin duck, marbled murrelet and pigeon guillemot that were seriously affected by the spill and vulnerable to impacts from any future spills. Utilization of civil settlement monies is especially important to ensure the continued viability of the Kodiak bear. While bear's important denning habitats are federally owned, the critical feeding habitats are among those lands selected and owned by the Native corporations. The sale of these areas to private parties and subsequent development as industrial and commercial facilities would be devastating to the bear and to the refuge. Such development, including construction of fishing and hunting lodges, has occurred in the last couple of years in prime bear feeding habitat. Escalation of this scenario can be avoided with timely acquisitions of priority tracts from native owners seeking economic self-sufficiency. The NWRA urges the Trustee Council to act to consolidate the Refuge and ensure a more secure future for the Kodiak bear as well as other valuable natural resources of the spill area.

US, Outside Alaska# 1345 Game Conservation International

GAME COIN adds our voice to the support of Alternative #2 which would dedicate 91% of the remaining *Exxon Valdez* restoration fund to habitat acquisition. In particular, we support acquisition of Kodiak native inholdings within the Kodiak National Wildlife Refuge as a priority in your future restoration plans. The likelihood of privatization and commercial development of Kodiak bear refuge land is very high. This development would deprive the public and hunting community from free access to some of the finest brown bear, wildfowl and deer hunting areas in the state of Alaska, a result which GAME COIN wishes to avoid. Thank you for your consideration and good luck in your important deliberations.

US, Outside Alaska# 1332 Great Bear Foundation

Please register the Great Bear Foundation's vote for Alternative 2 among the restoration plans you are considering. Alternative 2 dedicates 91% of the remaining 600 million dollars to habitat acquisition. Highest priority for lands to be acquired are native inholdings and other private parcels within the Kodiak National Wildlife Refuge. Without habitat protection, all wildlife, including Brown Bears, will not have the land necessary to insure survival.

US, Outside Alaska# 1309

I understand that your council is in a position to affect the distribution of some of the funds from the *Exxon Valdez* Restoration Fund, and that one alternative (Alternative 2) is for you to acquire Alaska Native Holdings in the Kodiak Refuge. This alternative is one I would very strongly support, because it would enhance very significantly the Kodiak brown bear refuge. Though the brown bear is the state symbol of California, it is extinct here; thus we have a natural tragedy displayed on every California flag and seal. Since Alaska has time to prevent such an extinction, it seems that you have a great opportunity to act in favor of these great animals. It is also fitting that you could use money from the natural tragedy at Valdez to secure the habitat of the brown bear and other Alaska wildlife. Please adopt Alternative 2. Thank you.

US, Outside Alaska# 1301

Alternative 2 would be a major step in the restoration of wildlife habitat in the spill zone. Private land from willing sellers within Kodiak National Wildlife Refuge would and should be top

priority.

US, Outside Alaska# 1275

Please register my vote for ALTERNATIVE 2 among the restoration plans you are considering. As someone interested in the best form of environmental recovery from the Exxon oil spill, I wish to see the greatest amount of threatened wildlife habitat in the spill zone acquired. ALTERNATIVE 2 dedicates 91% of the remaining \$600 million in the fund to habitat acquisition. In addition, my highest priority for lands to be acquired are Native inholdings and other private parcels from willing sellers within the Kodiak National Wildlife Refuge. Thank you.

US, Outside Alaska# 1274

US, Outside Alaska# 1058 National Rifle Association

We, the undersigned representatives of U.S. sport hunting and fishing groups, commend the Exxon Valdez Council in seeking a meaningful oil spill restoration plan. We recognize you face enormous challenges in balancing restoration of species and resources injured by the oil spill, as well as competing interests within the spill zone. Our comments are confined to the restoration tool of habitat acquisition, as it relates to the Kodiak National Wildlife Refuge. Specifically, we support acquisition of critical brown bear, bald eagle, anadromous fish, marine mammal and seabird habitat on Native corporation inholdings in the Kodiak National Wildlife Refuge and adjacent lands. Such acquisitions would meet four restoration objectives which we endorse: provide greater public access to lands now closed to such access for both consumptive and non-consumptive uses; consolidate the management of the bear refuge and salmon streams by the U.S. Fish and Wildlife Service and the Alaska Department of Fish and Game; conserve in perpetuity Kodiak brown bear and other wildlife habitats; stimulate economic growth, including hunting related tourism, in areas where such growth should take place for the benefit of Natives and non-Natives alike. Just as sportsmen led the effort to persuade

President Franklin D. Roosevelt to create the Refuge in 1941, we support your efforts to make it whole. Thank you and good luck in your important restoration efforts. [Letter signed by representatives of the National Rifle Association, Wildlife Legislative Fund of America, and Safari Club International.]

ISSUE: 2.1 ORC ; Orca Narrows and nearby areas

REGION: Alaska, Outside the Spill

Mat-Su Borough # 1757

I urge you to use the settlement monies now for to acquire timber rights and land of the Eyak native corporation near Cordova. The public wants this. It will protect the coastal forest and in general the marine ecosystem. This is the type of action that fulfills the mandate of the settlement - restoration and ensures long-term sustainability economically.

Mat-Su Borough # 1502

Trustees, buy Eyak land before it is logged.

Mat-Su Borough # 682

I would urge the Trustee Council to support negotiations with Eyak Corporation to acquire and protect lands on Power Creek and Eyak Lake. Tourism and the fishing industry will be lost if we continue to log. Why should Eyak continue to log at a loss? Why should they be allowed to sell their losses to other corporations? Also, the concept of being a "renewable" resource is invalid. Perhaps in 200-300 years, the ecosystem could recover from clearcutting, perhaps!

Mat-Su Borough # 681

I urge the Trustee Council to support negotiations with the Eyak Corporation leading to the purchase and protection of lands at Power Creek and Eyak Lake. I also urge that lease options be exercised for other Eyak lands that may be for sale.

REGION: Anchorage

Anchorage # 1758

I strongly recommend that the Trustee Council supports the agreement with Eyak Corporation to purchase and protect lands for sale at Power Creek and Eyak Lake. I also ask the Trustee Council to negotiate a lease option for other lands the Eyak are willing to sell. Lands that are important to protect include Orca Inlet, Rude River and Nelson Bay.

Anchorage # 705

Owns property on Hawkins Island. Strongly urges the TC to support lease option with Eyak to protect Orca Inlet, Sheep Bay, Simpson Bay and Hawkins Island. Supports the Power Creek/Eyak Lake buybacks.

REGION: Outside Alaska

US, Outside Alaska# 1558

I support the Council's negotiations with Eyak Corporation to acquire lands on Power Creek and Eyak lake. I also support a moratorium on logging on other Eyak Corp. lands, and ask the Council to consider a lease/option for all potentially threatened lands, even the newly conveyed lands along the Rude River.

US, Outside Alaska# 1499

1. I urge the Trustee Council to support continuing negotiations with Eyak Corporation to acquire/protect lands on Power Creek/ Eyak Lake. 2. I also urge the Trustee council to develop a lease/option on other Eyak lands to stop logging.

US, Outside Alaska# 1498

1. I urge the Trustee Council to support continuing negotiations with Eyak Corporation to acquire/protect lands on Power Creek/ Eyak Lake. 2. I also urge the Trustee council to develop a lease/option on other Eyak lands to stop logging.

REGION: Prince William Sound

Cordova # 1628

Supports negotiations with Eyak Corporation for acquisition of lands at Power Creek and Eyak Lake. Even if negotiations for purchase of fee simple title to these lands fail, would support purchase of conservation easements in order to stop logging. I also would want the Trustee Council to consider lease/options to buy land outright (fee simple) or conservation easements on all other lands available from Eyak Corp. These negotiations should move ahead immediately. I also want to note that the Cordova City Council may have readied their revised position on this issue illegally. They refused to allow me to enter into the discussion and vote because of alleged conflict of interest. I work for Prince William Science Center which was considered a conflict because of a proposal before the Trustee Council. Yet Bob Anderson who chaired the meeting works for the logging company involved in logging for Eyak Corp. He is also married to Eyak's chief negotiator. I am a council member as well but was not allowed to participate in the meeting. The City Council's position was revised at their recent meeting (Wednesday, August 4).

Cordova # 1624

I ask the Trustee Council to continue negotiations with Eyak Corporation for the purchase of lands along Power Creek, Eyak Lake and Eyak River. I also ask the Council to immediately negotiate a lease option for lands on Orca Narrows. Logging has been destructive; it has been divisive to the community. Historically fishing has provided the economic base to Cordova. Logging provides relatively few jobs in the area (approximately 60); fishing provides more than 600 jobs. We must stop clearcutting. There are better ways to harvest timber that result in less impact to the ecosystem, especially salmon producing streams.

Cordova # 1567

I urge the Trustee Council to purchase from Eyak Corporation Lands at Power Creek, Eyak Lake and at Nelson Bay. These lands should be protected from future logging.

Cordova # 1566

Supports the Trustee Councils' negotiation for Eyak Lands on Power Creek and Eyak Lake, plus a lease option on all other Eyak lands, such as Rude River, Nelson Bay and land just conveyed to Eyak by USFS. Logging will only provide short-term benefits to community (Cordova) plus it results in long-term damage to fisheries and tourism.

Cordova # 1564

Cut a deal quickly with the Eyak Corporation to acquire lands from Port Gravina to Cordova, particularly lands on Power Creek and Eyak Lake. I also support the Trustee Council's negotiations for a moratorium on logging or establishing a lease option on other lands owned by Eyak Corporation stop logging, buy time in order to make more sensible decisions on which lands to acquire/protect.

Cordova # 1500

1. I advocate the acquisition of lands along the Eyak River, Eyak Lake and along Power Creek. Negotiations also should include lands recently conveyed to Eyak Corporation pursuant to ANILCA. 2. I also advocate development of a lease option to buy all other lands Eyak Corporation wants to sell. 3. I strongly advocate a moratorium on all logging scheduled by Eyak Corporation in the Sound.

Cordova # 1497

I would ask the Trustee Council support negotiations with Eyak Corporation to acquire and protect Power Creek and Eyak Lake. I also would ask the Trustee Council to act now to negotiate a lease option on other Eyak lands such as Nelson Bay, Simpson Bay and Sheep Creek.

Cordova # 1489

I urge the Trustee Council to support continuing negotiations with the Eyak Corporation to acquire and protect lands at Power Creek and Eyak Lake. I also urge the Trustee Council to develop a lease option on all other lands Eyak Corporation is willing to sell.

Cordova # 1437

Support the Trustee Council buying timber rights for Power Creek, Eyak Lake, and other areas in Prince William Sound. Most important thing to protect is the highly visible areas along main PWS traffic routes so tourists won't get bad impressions. It's also important to protect salmon streams since they are important to commercial fishing. Research and rehabilitation for commercial fisheries should be funded. The only people in Cordova against buying Eyak lands are the loggers, who would profit by not having the land bought. The loggers are a minority in the town and most people, maybe 90%, want the land protected.

Cordova # 1435

Urges the Trustee Council to protect Power Creek and Eyak Lake. Negotiate lease options on other Eyak lands. This will protect the tourist industry and drinking water.

Cordova # 1434

Supports negotiating with Eyak to protect Power Creek and Eyak Lake.

Cordova # 1433

Negotiate any type of agreement with Eyak to protect Power Creek and Eyak Lake, plus lease options on other Eyak lands.

Cordova # 1432

I urge the Trustee Council to support the agreement now being negotiated with the Eyak Corporation to acquire and protect Power Creek and Eyak Lake and Nelson Bay lands. I am disgruntled about the clearcutting and the effects this has on wildlife habitat.

Cordova # 1431

I urge the Trustee Council to support the agreement now being negotiated with the Eyak Corporation to acquire and protect Power Creek and Eyak Lake lands. I also urge the Trustee Council to support lease options to acquire and protect other Eyak lands. I am also disturbed at the atrocious logging practices implemented in our area. I am disturbed because of the apparent effects that clear-cutting has on wildlife habitat as well as on visual aspects.

Cordova # 1430

I urge the Trustee Council to support the agreement now being negotiated with the Eyak Corporation to acquire and protect Power Creek and Eyak Lake lands. I also urge the Trustee Council to support lease options to acquire and protect other Eyak lands.

Cordova # 1395 Reclaimers of Alaska

Timber is a renewable resource that offers a sound economic base for our community. The millions of dollars proposed for this large acquisition will place a moratorium on timber for 3 years ONLY. At the end of that time, logging will resume and commercial fishing will be a thing of the past. We do, however, support the purchase of critical habitat areas including Eyak Lake, Power Creek and spawning beds. These areas must be protected for the regrowth of our fisheries. We urge you to make the wisest use of the settlement funds, and not use this as a tool to destroy two fundamental economic bases in Cordova.

Cordova # 1394 Petition from 69 people.

We the residents of Cordova, Alaska are against any purchases of timber other than Eyak River, Eyak Lake and Power Creek areas. By including Orca Narrows in the timber buy out it would eliminate all logging in the Cordova area. (Petition signed by 69 people)

Cordova # 1393

My name is Christine Steele and I am writing in regards to your upcoming Trustee Council meeting. It is my understanding that habitat acquisition is to be discussed. This is a very serious matter in regards to me and my families future in Cordova and I hope that you will consider us in your decision making process. I have been a Cordova resident for 14 years and my husband, who is thirty, has lived here all his life. We have 2 children who are two and one half and seven months old. As a result of being raised in a fishing town, my husband chose fishing as his career. He began fishing in 1975. He has been involved with many fisheries within Prince William Sound. He has seined for salmon and herring, long lined for halibut and cod, and fished for crab and shrimp. Consequently in 1990 he had to find another career. Indirectly the 1989 oil spill ruined his job. After the drop in fish prices he could no longer support our family. Fortunately he got a full-time job with the local logging company, Whitestone. Whitestone gave him the opportunity to support his family as well as valuable training in diesel mechanics. With a few more years of this on-the-job training my husband will have the chance to work in other places as well. A timber buy-out would eliminate this opportunity for our family. The logging industry has been an asset to the whole community of Cordova. It has brought in

revenue to our town at a time when it needed it most. Cordova still experiences financial difficulty and the logging industry is adding much needed stimulation to our economy. Sound Development employs up to 70 people and their payroll alone last year was \$3 million. Logging has provided local Cordovan families such as ours the opportunity to support their families when jobs were scarce and fishing was insufficient. Most of all it has allowed lifelong Cordova residents, such as us, to remain in our town that we love. Sending allocated funds to buy back timber in PWS is senseless. The Exxon oil spill ruined fish prices and then as a result ended my husband's fishing career. Should the same money used to help restore what damage was done to our community destroy my families livelihood once more. It seems rather ironic that the oil spill would be affecting us again four years later. This money that has been given to our stat as compensation should be used to benefit our community, not jeopardize it again. If this money is used to buy back timber my family will be forced to move, jobs in Cordova are limited. We are not alone there are many others who will face this tragedy if the buy-out occurs. It is critical at this point in time that the lands of the Orca Narrows be made available to log. It is the only are this side of PWS left to log. I am not against the buying of the lands near Eyak Lake and Power Creek in order to protect Cordova's fishing streams, but the Orca Narrows do not pose any threat to the fisheries. Please consider us and families like us before thinking of using this money to take away our jobs. Seriously stop and look at what you will be doing to our community. At this point in time our town, which is experiencing financial difficulty need this industry and the revenues that it brings. There are many other alternatives to this timber buy-out that would serve our town better. It would make more sense to put this money into immediate fishery studies. Does it not make more sense to spend this money on the reason it was awarded in the first place or at least on something that might profit our community. something that would create jobs rather than eliminate them.

Cordova # 1393

The logging industry has truly blessed our family and benefited our community. Please do not buy this timber, we will be losing our jobs, and our own will be due for more hard times. This money should not be used for more hardships for the people of Cordova. The Exxon Oil Spill caused an economic slump. It is only right that the monies gained from it should be used to promote economic growth. To conclude, I would like to urge you as a trustee council member to consider conducting an economic impact study on the community of Cordova before purchasing any timber.

Cordova # 740

In general I believe the best use for the restoration money is to protect the biologically meaningful habitat. That is, purchase Native and other private lands in danger of being developed: 1) Important habitat and timber on Eyak lands from Port Gravina to Cordova including Eyak Lake and Eyak River. 2) Valuable habitat and timber on Chenega Corporation lands in the S.W. Sound.

Cordova # 739

I Would urge the Trustee Council to acquire/protect lands on Power Creek and Eyak Lake. I also ask the Trustee Council to negotiate immediately for a lease option on other Eyak lands. We need to stop clearcutting. It is destructive to fishery and other resources. I am not against logging but there has to be a better way to harvest timber.

Cordova # 738

I would urge that the Trustee Council support the agreement with Eyak Corporation to acquire/protect .

lands at Power Creek and Eyak Lake. I also ask the Trustee Council to immediately negotiate with Eyak Corporation for a lease option for all other lands that may be for sale.

Cordova # 735

I urge the Trustees to purchase Power Creek, Eyak Lake and River lands from the Eyak Corporation. I also urge them to purchase either the timber rights or fee simple Eyak lands in Prince William Sound.

Cordova # 734

Purchase Eyak Lake and River lands, and Power Creek from Eyak Corporation. Purchase Eyak lands in E. Prince William Sound. These are important to injured species and species not identified as injured but important to these areas.

Cordova # 710

I recommend that the TC support the proposal to protect Power Creek and Eyak Lake from clearcutting. I recommend that the TC negotiate a lease to protect Eyak lands around PWS. Unless these lands are protected I will lose my charter business.

Cordova # 709

I am interested in protecting habitat in the area also, but only in those lands immediately around Eyak Lake and along Power Creek. I don't want to see the logging industry without work in the area. They also contribute to our economic base.

Cordova # 699

I feel habitat acquisition of lands owned by the Eyak Corp. in Prince William Sound would be the most effective way to aid the Sound in its recovery. As you know these sectors are scheduled to be clearcut, resulting in a loss of habitat that will have negative ramifications throughout the Sound. Buy these lands and you will aid the Sound in wildlife recovery as well as maintaining an environment where humans can enjoy a sustained rather than temporary usage.

Cordova # 689

It would not benefit the Council to fund public use cabins if all there was to look at was the tree stumps and no fish or wildlife. I urge the Council to work towards an agreement with the Eyak Corporation on sensitive land areas in PWS and Orca Inlet and the Cordova area.

Cordova # 679

I would ask that the Trustee Council support negotiations with Eyak Corporation to acquire/protect Eyak lands on Power Creek and Eyak Lake. I furthermore ask the Trustee Council to negotiate a lease option on all other lands that Eyak Corporation is willing to sell.

Cordova # 678

I urge the Trustee Council to support continuing negotiations with Eyak on acquiring lands for sale on Eyak Lake as well as Power Creek. I would also support a lease option to buy other Eyak lands offered for sale. I also favor stopping clearcutting. It is detrimental to the ecosystem. The logging companies also should not build so many logging roads. Construction impacts are severe and last longer than first believed.

Cordova # 667

I urge the Trustee Council to support the agreement with Eyak Corporation to acquire and protect the Power Creek and Eyak Lake lands. I also urge the Trustee Council to develop/exercise lease/options for other Eyak lands.

Cordova # 665

I urge the Trustee Council to support the agreement now being negotiated with the Eyak Corporation to acquire and protect Power Creek and Eyak Lake lands. I also urge the Trustee Council to support lease options to acquire and protect other Eyak lands. I am disturbed at the atrocious logging practices implemented in our area. I am disturbed because of the apparent effects that clear cutting has on wildlife habitat as well as visual aspects. It is ironic that we allow clear cutting to continue--we don't restore the damage, yet we are moving ahead with restoration of the oil spill.

Cordova # 664

Urge TC to support Eyak proposal on Power Creek and Eyak Lake and to negotiate lease options for the rest of their land. Must protect habitat and forests. This will benefit commercial fishing. Current logging practices will destroy both fishing and logging industries.

Valdez # 1576

Supports Eyak land acquisition including Power Creek, Eyak Lake, and lease options on other lands.

Valdez # 1488

Urges immediate action to acquire Power Creek and Eyak Lake land from the Eyak Corporation. Also wants to urge the Trustees to arrange lease agreements to protect other Eyak land.

Valdez # 788

Power Creek, Eyak Lake - negotiate a lease option on all other Eyak lands - including Orca Narrows, Nelson Bay, Simpson Bay, Sheep Bay, Olsen Bay, Dangerous Passage, Eshamy Bay and other Chenega lands in oil spill area.

Whittier # 1436

Supports negotiations to protect Eyak Corporation lands. The Trustee Council should negotiate to protect habitat.

ISSUE: 2.1 PWS ; Prince William Sound
--

REGION: Alaska, Outside the Spill

Fairbanks # 574

I think immediate purchase or protection of lands in the PWS area should be a priority. Clearcut logging is occurring at a rapid pace in Port Fidalgo, and is destroying or altering habitats of eagles, other birds, seals, otters, and fishes. It is also affecting the general environment of the Sound.

Juneau # 248

Acquire Olsen Bay watershed from native corporation--now pristine, has long record of research as intertidal and fires hunter habitat for Pink and Chum salmon (by NMFS); good candidate for F.S. research natural area; not affected by spill, would be good reference to compare with affected areas. Also prime Mountain Goat and Black Bear habitat.

Mat-Su Borough # 682

I also urge the Trustee Council to consider purchase and protection of lands on Montague Island.

Mat-Su Borough # 681

We should also look at Montague Island (for habitat acquisition); logging has started there. Logging should be stopped. It ruins both the fishery and tourism industries. I have seen the water quality of the Copper River change as a result of logging upriver.

Mat-Su Borough # 419 The National Outdoor Leadership

We are concerned that the area in the Southwest part of Prince William Sound not be overlooked when making acquisitions. The area was the hardest hit of all the impact area, and has tremendous value for wilderness based tourism and damaged resources. We would specifically encourage the Trustees to acquire either title and surface/subsurface rights, or surface/subsurface rights with stipulations protection from further development, of private lands in the following areas: Dangerous Passage, east side and south end of Knight Island, Chenega Island and Bainbridge/Evans/Latouche Islands. We see a paradox with this area when looking at "restoration." By concentrating their acquisition efforts to "imminently threatened" areas, the Trustees did not take into account areas which are threatened by the spill itself. The paradox: protect areas which are threatened in the near future, or areas which were most heavily hit during the spill. Though we support acquiring areas which are imminently threatened and have restoration value, we would like to see some acquisitions based on past damage. By acquiring the above mentioned lands the Trustees would not only be preserving and area synonymous with the worst spill, they would be allowing the resources and services damaged by the spill in that area the best chance of recovery.

REGION: Anchorage

Anchorage # 1758

The Trustee Council should first spend money to acquire/protect lands in Prince William Sound and then elsewhere.

Anchorage # 1626

I am writing not only to voice an opinion but to plead for the place I have grown to love, Prince William Sound. Please use the money from the last disaster to limit the extent of damage cause by the next--logging. Please, use the money for habitat acquisition in the rain forests of Prince William Sound. I am a builder that understands the need for timber but I would rather pay triple than see the Sound stripped of trees. There are other places that can be harvested that would not cut the throat of every Alaskan who depends on tourism as well as the ecosystem of the Sound and its inhabitants. I have been drawn to Prince William Sound since 1977 when I first moved to Alaska. Through my experience of hiking and kayaking in the Sound prior to the *Exxon Valdez* Oil Spill, I was awed by its isolation, undisturbed beauty and its abundance in wildlife that made it a priceless

place, like no other on earth. But we did put a price on a severed piece of the Sound I once knew and it is up to you to spend it. The way I see it there are two ways the settlement money could influence the future of the Sound, it could help to restore and protect what is left in the Sound or it could open it up to further misuse. Studies are great but if the decisions are made due to political winds then what good are all those expensive studies. We the "Joe Public" do not have the time to study and interpret all the information that scientists have come up with. Please do not squander the settlement money away, **ACQUIRE LAND TO ALLOW FOR NATURAL RESTORATION AND FOR THE PROTECTION OF THE SOUND'S ECOSYSTEMS.**

Anchorage # 1606 Rep. David Finkelstein

Within Prince William Sound, the Knight Island Passage and Jackpot Bay area is particularly critical. This region provides a wealth of natural beauty and wildlife habitat that should be preserved for future generations. The lands owned by Chenega Corporation include many tracts that need to be in public ownership. All of the Native corporation lands in Prince William Sound are worth considering in you acquisition plans, but the Knight Island area is especially important. If public lands can be acquired in the area, it will provide a continuous public coastline from Whittier to Seward. I have boated this coastline and am convinced it is a top priority.

Anchorage # 1602

We urge the Council to use Exxon Settlement funds for wildlife habitat acquisition. With the spill and cleanup now history we feel it behooves us to protect the impacted areas from further environmental damage. Many areas in Prince William Sound and along the Kenai coast are threatened by self-interest groups that appear to have no consideration for the protection of these lands for future generations. Purchasing these critical areas will help insure that our children and generations of American to come can enjoy these lands and their delicate ecosystems as we have.

Anchorage # 1585

I feel clear cutting in Prince William Sound would devastate the area. I spend time out there and I know it would just make me sick if the trees were gone. Please buy the rights and stop this unnatural disaster from occurring.

Anchorage # 1322

I am writing you today to ask that you help avert a second environmental disaster in Prince William sound and dedicate all remaining oil spill settlement monies to purchasing habitat that is scheduled for logging. You have shown vision and leadership by agreeing to purchase timber land in Kachemak Bay and at Seal Bay on Afognak Island. I support your current efforts to purchase timber rights from Eyak Corporation. The Sound has suffered enough, please don't let the best timber habitats be cut down...especially when we have the financial means to protect these areas forever.

Anchorage # 1071

Please utilize the spill settlement funds for wildlife habitat purchases in the area affected by the spill, particularly in the Kenai Fjords National Park inholdings and between Cordova and Valdez. It's high time to protect these areas from decimation by loggers and oil companies.

REGION: Kenai

Homer # 1760

3. Although not imminently threatened, Eshamy Bay and Lagoon is very worthy of acquisition. It is an incredible area rich in wildlife and supporting salmon runs of all five species, as well as cutthroat trout and Dolly Varden. Having spent the summer of 1957 there helping run the salmon weir, I had the privilege of spending 3 months in this beautiful area. I urge you to work with the land and timber rights owners to save Eshamy as a scenic gem and top fishing destination for all Alaskans.

Homer # 1027

I am strongly in support of the use if a majority of the settlement funds for resource acquisition. I am very concerned about areas in Prince William Sound including Port Gravina and Orca Bay, Port Fidalgo and particularly Knight Island Passage in the heart of the spill impact area. Extensive logging and habitat destruction in areas already impacted by the spill is unthinkable.

REGION: Outside Alaska

Foreign-Outside U# 1149

Some specific areas that I most would like to see acquired for protection are: East & South sides of Knight Island; Bainbridge/Evans/LaTouche Islands in the Southwestern Sound; Chenega Is., Icy Bay and Dangerous Passage Area. Thank you for considering my input. {For your information, my background includes extensive outdoor recreation & work as an outdoor educator, a degree in Anthropology and a scholarship to Law School which I will be beginning in the Fall of 1993.}

US, Outside Alaska# 1589

It is important that disposition of the remaining funds from the fines paid by Exxon go towards protecting habitat. By protecting habitat in the Prince William Sound it will help restore and maintain the wildlife, both land and sea, that was affected by the spill. Having lived in Alaska for several years, I believed the area around Knight Island to be of great importance.

REGION: Prince William Sound

Cordova # 1567

Prioritize acquiring land now in Prince William Sound and then elsewhere. Buy land now, then consider other types of restoration projects.

Cordova # 1564

I urge the Trustee council to acquire habitat as a means to restore Prince William Sound. Buy the most biologically meaningful land within the spill area, particularly those lands that are now threatened. Also consider acquisition / protection of lands in southwest Prince William sound, such as those lands owned by Chenega. Focus on threatened lands that may be available.

Cordova # 1489

I would like to see if it is possible to initiate negotiations with Tatitlek regarding purchase of lands that are being logged at Two Moon Bay, Knowles Head, Red Head, and Port Fidalgo. Similarly, the Trustee Council should look into the possibility of negotiating with Chugach Corporation for purchase

of lands on Knight Island and LaTouche Island.

Cordova # 1434

Support buying land to protect habitat from logging, but not enough attention paid to Prince William Sound. Need to protect watersheds and ecologically important areas.

Cordova # 1433

If possible, negotiate protection options on Forest Service lands on Hinchinbrook and Hawkins Islands. Forest Service sold timber rights to these areas.

Cordova # 1397

I am writing to urge you to quickly finalize the buy-back of timber rights on Native lands in Prince William Sound. What better way to restore the beauty & health of Prince William Sound? Of course we can never un-do the oil spill, but by wise acquisition of important ocean-front forest lands we can maintain the integrity of the Prince William Sound ecosystem. By saving this forest from being clearcut we will be preserving more than trees; we will also preserve nesting sites for birds, the soil and thus the salmon, and numerous other interconnected species. The clearcuts here in the Cordova vicinity are horrendously executed in an archaic fashion, using none of the modern, state-of-the-art forestry practices. Replanting is not done. There is so much waste! Why squander the future of Alaska on these needless tree harvests? You have an opportunity to preserve the integrity of Prince William Sound. Please negotiate this timber buy-back!

Cordova # 1329

An urgent request!!! Please expedite the negotiations to purchase back the timber rights on Native lands in Prince William Sound. As a forester it is obvious that we need more time to decide on intelligent harvest methods for these forests if it is sensible to harvest at all. fishing seems to be the most sustainable industry in the Sound. We should not jeopardize salmon streams and old growth timber in such short sighted haste. Thank you for listening. This is an important environmental and human issue. Lets get the buy-back underway. P.S. Stop being secretive, I hope the visit to Cordova today was positive!!

Cordova # 740

In general I believe the best use for the restoration money is to protect the biologically meaningful habitat. That is, purchase Native and other private lands in danger of being developed: 1) Important habitat and timber on Eyak lands from Port Gravina to Cordova including Eyak Lake and Eyak River. 2) Valuable habitat and timber on Chenega Corporation lands in the S.W. Sound.

Cordova # 704

Eshamy Bay

Cordova # 701

Bear Trap Bay in Port Gravina

Cordova # 698

I feel the best use of funds is in land acquisition within Prince William Sound. Land acquisition here would save a larger amount of habitat than would restorative programs. Acquiring lands that

will soon be clearcut will help the Sound, in its entirety, to recover from the spill. This would do the most for the long term human use and for the entire ecosystem.

Cordova # 693

Acquire forest habitat in eastern Prince William Sound immediately!

Cordova # 692

Buy forest lands in Prince William Sound now!

Cordova # 686

PWS for once.

Cordova # 669

Timber buyback is needed for PWS, otherwise the end effect of ANILCA will be to destroy fisheries habitat to the greed of the existing Native Corps. to convert trees to short-term profits. An already weakened fishery resource from the oil spill damage will be dealt a second and possibly fatal blow and recovery will never occur.

Cordova # 666

I urge the Trustee Council to use funds to purchase wildlife habitat in eastern PWS. This area is currently being devastated by out-of-date logging practices that do not adhere to the provisions of the Forest Practices Act. The logging companies cut down to salt water, do not leave appropriate buffers, and clear cut beyond maximums. The commercial fishing industry and tourism industry cannot sustain themselves with this level of clear cutting. Salmon streams are impacted from uncontrolled erosion. The oil spill injured many species: eagles, sea ducks, murrelets, all species that depend on old growth. Old growth will not grow back as the logging companies say. Even-aged stands that have to be thinned do not support the natural ecosystem. We must maintain old growth, leave corridors, patches, buffers to maintain ecosystem diversity. We must do all that is presently being done in lower 48, but ignored in Alaska.

Cordova # 663

Habitat acquisition should be the number one priority for this money. Efforts should be focused on insuring some measure of public control for major portions of PWS. Habitat acquisition must not lag behind clear cutting in PWS.

Cordova # 649

I cannot stress the importance of acquiring/protecting habitat! Time and time again we have watched species decline because of loss of habitat. Given adequate habitat, nature does know best how to restore itself. I believe habitat should be purchased that proves important to wildlife in Prince William Sound. Also acquire habitat that is threatened by human abuses! (Example: Orca Narrows is an area which is across from Channel Island between Orca Bay and Orca Inlet.) That area is a planned clearcut. However, the acquisition of habitat should not be a "reaction" to human threat but proactive - get the best ecologists to design a plan to acquire habitat important to an intact ecosystem - considering all links and interconnections.

Cordova # 569

Bear Trap Bay in Port Gravina--this is a geologically fascinating area with high, rocky cliffs surrounding the bay. The river draining into the bay supports a large chum run and there are a variety of recreational opportunities.

Cordova # 306

Good job on Seal Bay and Kachemak bay -- Now concentrate efforts in PWS. Lots of areas are slated for logging that are linked with injured species and provide aesthetic views for people in the area -- too many to mention -- Nelson Bay, Simpson Bay, Sheep Bay, Eyak River, Eyak Lake, the ever expanding 2--Moon Bay clearcut Montague Island -- Patton Bay. In addition to aesthetic values, these areas provide ecosystem services, plus are linked with injured murrelets, river otters, guillemots, harlequin ducks and several salmon and trout species. GOOD LUCK!

Valdez # 1018 Alaska Wilderness Recreation and Tourism Assoc.

3. State lands on Naked Island: These lands provide habitat for species whose populations declined, receive considerable on-shore use from recreation and tourism, and considerable off-shore scenic-use by cruise ships, tour boats and the State ferry. The lands should receive some type of special use classification that protects their habitat and both on-and off-shore scenic viewsheds.

Valdez # 1018 Alaska Wilderness Recreation and Tourism Assoc.

1. Timber and viewshed resources on Chugach Alaska Corporation lands at the south end of Knight Island. Chugach Alaska Corporation plans to begin timber operations on these lands as soon as it completes its Montague Island projects. The south end of Knight Island receives considerable on-shore use from backcountry recreation and tourism as well as scenic-use from cruise ship and ferry boat traffic.

Valdez # 797

No place I know of in PWS provides a greater combination of fish, wildlife and scenic resources than Port Fidalgo. Clearcutting at Two Moon and Fish Bays is progressing quickly down the bay. The head of Fidalgo is USFS lands. Of most concern are the private timberlands to the west of and adjacent to the USFS lands. Especially valuable are the estuaries, lagoons, islets and large mud flats occupying the northernmost portion of Port Fidalgo, as sketched. Maximum effort should be placed on protecting all of Port Fidalgo north and east of Whalen Bay, especially its scenic value.

Valdez # 788

Power Creek, Eyak Lake - negotiate a lease option on all other Eyak lands - including Orca Narrows, Nelson Bay, Simpson Bay, Sheep Bay, Olsen Bay, Dangerous Passage, Eshamy Bay and other Chenega lands in oil spill area.

Valdez # 241

Land acquisition and stream enhancement in P.W.S. are at the top of my list.

Valdez # 66

PWS 04 Fish Bay - Port Fidalgo. PWS 01 Orca Narrows-Nelson Bay. PWS 07 Chenega-Eshamy-Jackpot. PWS 06 Patton Bay-Montague Is.

Whittier # 6046

What about the logging that's going on in PWS?

ISSUE: 2.1 VDF ; Valdez Duck Flats

REGION: Prince William Sound

Valdez # 6036

The Valdez duck flats are used by a number of the species and resources on your chart. Every one of the resources in the population decline column and five of the eight in the injured column are represented in the duck flats. It is a high quality wetlands but it is surrounded by a private lands, presently under an 'area meriting special attention' study as part of the coastal zone management plan. If that property were to be developed it could have an adverse impact on these resources which have already seen population declines or injury due to the spill. You might want to look at the question of habitat acquisition and consider whether the Trustees should look at the possibility to purchasing the private land adjacent to the duck flats to be used for habitat restoration and providing services to tourism in Valdez and commercial fisheries. About 19% of the Valdez fisheries come from streams in the duck flats. It also would be interesting to see if artificial habitat could be introduced out there for harbor seal haulouts in the duck flat area. Other things that could be done in the duck flats could include a boardwalk like Potter Marsh in Anchorage with a turnout for parking. I think would help tourism in Valdez.

Valdez # 1018 Alaska Wilderness Recreation and Tourism Assoc.

2. Private in-holdings in the Valdez Duck Flats and DNR Port Valdez Crucial Habitat Area:
Justification: The Valdez Duck Flats contains prime wetlands and adjacent area used by the ten species whose populations declined as a result of the spill, by five of the injured species. They provide wildlife, aesthetic, and other services to recreation and tourism. Development of wetlands and immediately adjacent areas could cause additional injury to these species, recreational users including sport fishermen, tourists and tourism businesses. The University of Alaska is the largest landowner; several small lots are privately owned.

ISSUE: 2.1 YAK ; Yakataga

REGION: Alaska, Outside the Spill

Fairbanks # 176

Please accept my brief letter re: the Yakataga forest issue. My reading has led me to the conclusion that the area, if logged as planned, would not be in the best long-term interest for all Alaskans. If this area could be set aside and timber rights purchases (ie: HB10 or other similar legislation) then I feel this would be the correct move. I do not know your individual or collective feelings on this issue, but am at least hopeful you are receptive to public input. If it is at all possible, please work for protection of the Yakataga Coastal Forests. Thanks for your time.

Juneau # 248

Acquire Yakataga Forelands (or resource protection rights) to protect unique productive fish and wildlife habitat in perpetuity. Has superb productive habitat for Colm salmon, Moose, Brown Bear, wolves, and many bird species.

ISSUE: 2.2 XX ; General Restoration: GENERAL COMMENTS
--

REGION: Alaska Peninsula

Chignik Lagoon # 5197

Do you plan to spend any of this money to help us economically? To help get the fish price up?

REGION: Alaska, Outside the Spill

Juneau # 5492

I realize you are talking in the future. I think we have a philosophical difference. I don't think you will make a difference by putting people in the field. Everything that happens will happen naturally, and you will not affect the ability of species to recover. Putting Forest Service and DEC people out in the water to affect recovery of species is not going to happen. I don't want you mucking up the streams. It is an improper allocation of resources. I don't think that you have gone out and done anything. You have no track record in saying that a species has recovered. It has nothing to do with sending Trustee Council employees out in the field. No one is out there doing anything of a restoration nature.

Juneau # 1097

I have been appalled at various proposals I've heard about, to build highways, a fish hatchery on an Anchorage area military base, even a visitor's center about marine mammals.

REGION: Anchorage

Anchorage # 5023

So today, there are no commercial utilization management policies that this restoration committee is willing to pay for?

Anchorage # 1634 Sierra Club

Ecosystem protection: Trustees should give priority to projects which restore and protect whole ecosystems, rather than only one resource or service. Harmlessness: Trustees should not fund projects which harm a damaged resource or service. For example, a hatchery project which increases the numbers of a certain species but reduces genetic diversity by damaging wild stocks should not be funded. Projects which increase human use at the expense of damaged resources must not be funded.

Anchorage # 604

Use all available restoration money to develop an overland transportation system to lower 48 refineries so no tanker traffic enters PWS or travels down the coast of Alaska. Close the Valdez terminal and remove all oil storage facilities or convert to PWS's recreational headquarters or for

shipping natural resources which don't have potential to destroy portions of PWS if spilled.

Anchorage # 369

I would like all the areas and animals affected by the oil spill to be tended to.

Anchorage # 220

Too often management by state and federal agencies goes awry (ie: the 1991 "Pink Salmon spill" of PWS, courtesy ADF&G). A minimal amount of resource management seems best.

Anchorage # 220

One pet peeve: find a way to keep the PWS/Seward tour boat operators away from seabird colonies, marine mammal haulouts and eagle nests. They account for a lot of continuing disturbance to these resources.

Anchorage # 183

At this point in time the concept of "restoration activity" is ludicrous. It is time to stop spending more monies in these useless and futile efforts and let nature do its job.

REGION: Kenai

Homer # 5433

I don't think there is all that much you can do for direct restoration. I don't think anyone sent the scientist out to get the projects that can be done for direct restoration.

Homer # 5431

The thing I am disappointed about is that there have been no priorities. I have never heard anyone say that is on the top of our list to achieve some parity. Let's not do any capitol projects.

Homer # 5429

You were asking if money should address populations which experienced a decline and those which did not. It seems that there is not enough money to do both and only those which were severely affected should be funded. Do we get more bang for our buck by funding projects for overall restoration or just those which were severely impacted?

Homer # 5419

I can't understand the difference between helping the pink salmon and helping commercial fishing. If you help the resource, the service will have plenty to do with it. If you help the resource, you help the fishermen. I am in tourism. I think you have destroyed the service. By building me anything new, will not help my tourism. If you restore the land, that would help it but the services part of it I have a problem with. We have already given a lot to recreation and hunting. You don't need the services column on the table. You plan to help the resource by destroying another resource.

Homer # 5408

What is general restoration?

Homer # 796

Some restoration may still be called for but will no longer be wise use of funds within a year or so.

Homer # 314

I would like to see emphasis placed on wildlife and fish species that were impacted by the oil spill, either directly (primary emphasis) or indirectly (secondary emphasis). This should also include accomplishing work in areas outside the oil spill area, but are areas that are used by wildlife species that were impacted by the oil spill, i.e. murre. If research or management can be accomplished somewhere along the migration route of the species, we will be more able to understand that species, which could assist that species in its survival.

Homer # 297

NO ROAD TO WHITTIER!

Port Graham # 5778

I speak on behalf of Chugach Regional Resources Commission, which has been providing technical assistance for fisheries and development projects. We are interested in focusing on the loss of economic opportunities that occurred as a result of the spill. Some of these projects have been started because we can't wait for funding. For example, the cannery shut down. Port Graham has started a hatchery. They also own the cannery and are renovating it. They are marketing it on their own. This provides subsistence, jobs, and fish for commercial fisherman. They have already started things to go beyond subsistence because they can't wait. They have tried to pick up with other funding. It would be nice if the Council could have some type of matching project.

Port Graham # 5771

It would be nice to see some funding for the hatcheries.

Port Graham # 1024 Native Village of Port Graham

We would like to urge the Oil Spill Trustees to include the following projects in their 1994 Restoration Work Plan: The Port Graham hatchery project, the Chugach Village mariculture project, the shellfish hatchery, the Nanwalek Sockeye enhancement project, Clam restoration at Dogfish Bay/Passage Island, the Pacific Rim village coalition.

Port Graham # 301

All monies need to go to restoration.

Seldovia # 5856

We have a good biology station out here that could be increased. That is money well spent as compared to buying large chunks of land.

Seldovia # 5852

I understand the discussion and the attention here, but has a time been decided on what restoration is? For instance, what if you restore murre and find out you haven't done the other things to keep things in balance?

Seward # 5972

Why aren't more projects being done with the university? I would like to see our universities do as much of the project work as possible.

REGION: Kodiak

Karluk # 5517

We have been trying to get money to establish a sanitary landfill. The main problem of the current landfill is (that it attracts) bears.

Port Lions # 5826

Would the landfill qualify if includes recycling?

Port Lions # 5806

Will they create a salmon run, would a fish ladder be considered restoration? Would it be beneficial for our city council to come up with this plan? Is it really a very sharply defined difference between back country facilities and the idea of protecting or improving the landfill? So with a boat harbor that has a lot of recreational boating, disposing of waste oil is more likely to fly? We need a place right here for recreation to improve the quality of life here so that people will stay. A lot of people from Port Lions have moved away since the spill.

REGION: Outside Alaska

Canada # 1006

4. Set up a surveillance and control group to control the use of the Sound by visitors to ensure adherence to proper and safe travel and camping techniques.

US, Outside Alaska# 1244

I would like to add a few thoughts on "General Restoration" I think that each individual project which falls into this category should be more closely examined. I am strongly in favor of spending the money in this way, given that the individual projects are guaranteed not to have adverse effects on the environment. For instance, "cleaning out" the mussel beds for the animals which feed there. Doesn't that essentially mean tearing up the essential form of intertidal life?

US, Outside Alaska# 1244

Also do not favor money going to the replacement or restoration of archaeological sites and materials--my understanding is that sites were discovered as a result of the clean-up efforts, and the replacement of artifacts into museums and such would occur regardless of the spill--to me this is an example of a restoration project too, indirectly linked to the 1989 *Exxon Valdez* oil spill. This is my take on the situation, and I am both an informed and in interested citizen. I would appreciate any further information.

REGION: Prince William Sound

Chenega Bay # 243

Development of laboratory for food testing.

Cordova # 5294

There seems to be such a big question about the pink salmon. We're not sure if the hatcheries are declining or what. This seems to be totally the question on whether we've been impacted or not, and

yet there seems to be no enthusiasm on the part of the Trustees for finding the answer. Why is the coded wire study holding up the whole process and yet there's no enthusiasm for funding the studies?

Tatitlek # 5997

Why didn't U.S. Fish and Wildlife Service bring some of the caribou (reindeer) down here instead of killing them all off on that island up there? Are they exempt from wanton waste?

Tatitlek # 5996

What if we come up with other ideas about employment and jobs? Would that be something that you should put on your survey? The main thing we need here is more employment.

Tatitlek # 5992

Also there's an oyster farm here. That has really offset salmon seining being on the decline. But for some reason the Trustees didn't see fit to fund the oyster spat hatchery. That would have been so good for this village. It would make it so much easier for us to get spat. There's a lot of other things through the oyster farm that could be expanded on. Different marketing and processing of the oysters. We could expand the processing to help employ people in the village to help offset income loss from seining.

Valdez # 6034

We are working to put together a Valdez science center, a multi-agency, educational resource, to look at science studies from the sound. That idea was actually looked at very early on in the oil spill. We've been working to put this together to make a project to enhance the sound and enhance public information on the sound. One of the things they've based this on is that the vessel was named the *Exxon Valdez*, not the Exxon Whittier. I think it's going to be history here for many long years.

Valdez # 6022

There are many of us here that would like to see this money restore what happened. We're not quick to jump up and say build a building. I think we've waited to restore the damage and I'm not sure we're ever going to get on the building bandwagon, though we may yet do that.

Valdez # 296

My plan would be to focus on wildlife, species by species and work until recovery begins, then let them grow on their own. Meantime, monitor and research to provide a body of knowledge that may mitigate the next disaster.

ISSUE: 2.2 CON ; Oppose general restoration
--

REGION: Alaska, Outside the Spill

Fairbanks # 431

So many of the items have a "no baseline population" statement that monitoring and research should be a top (and continuing) priority. In addition, restoration activities may actually be detrimental to a second population if there is not adequate observation and research.

Mat-Su Borough # 1146 Alaska Survival

We do not support hardly any of the projects listed for proposed use. Any capital construction project will be used by the Hickel administration to benefit financially big corporations who would build stuff like Sea World. Restoration funds should not be used to stimulate the economy by creating capital construction jobs.

REGION: Anchorage

Anchorage # 1619 The Wilderness Society, Alaska Region

We also oppose funding for projects, such as roads, ports, "Sealife Centers," trails, cabins, visitor centers, mariculture, or other infrastructure development as these are regular agency programs or are inappropriate under the restoration goals of the civil or criminal settlement. As well, we believe that wetland restoration projects such as have been proposed in the past for Montague Island or hazardous waste cleanups, are regular agency programs that, even if they have merit should not receive any settlement funds. Furthermore, we do not believe it is appropriate for the Minerals Management Service to seek any funds from the criminal or civil settlement in order to conduct research or its environmental study, assessments, or other pre-lease work for Outer Continental Shelf sales in the spill region or elsewhere in Alaska.

Anchorage # 1619 The Wilderness Society, Alaska Region

We oppose virtually all enhancement and manipulation forms of restoration because there is little evidence that they would be effective, and these kinds of restoration generally address only one single species. We find the term "general restoration" misleading, and prefer use of the terms enhancement and manipulation as they are more descriptive as to what is really involved. For all alternatives, manipulation of resources should emphasize management that protects wild fish stocks and natural wildlife diversity and should avoid focusing on only single species. Enhancements should not compromise wilderness and recreational values.

REGION: Kenai

Seward # 326

Let plants and animals restore themselves...naturally.

Seward # 316

In general, let mother nature handle re-populating the critters. She has provided the niche, and they will come. Besides, another big spill (and we seem to be planning that there will be one) might very likely wipe out the restoration efforts.

REGION: Prince William Sound

Valdez # 697

Do not build roads with restoration money!

ISSUE: 2.2 FR ; Fort Richardson pipeline

REGION: Kenai**Port Graham # 5748**

Restoration is more important than the Fort Richardson project. Restoring stuff back is important. We lost a lot of ducks that come here in the winter. The year after the oil we didn't get that many back. We didn't get that much bottom fish after that. A lot of that oil sunk to the bottom and did some damage to all the fish. This year I haven't watched the ocean much, but I think they are starting to come back now. It is a slow process. I don't know why the money was put into the Fort Richardson project and should be left to those areas to be used for the food people get.

Port Graham # 5747

The oil spill has not affected some of the proposed projects, such as the Fort Richardson project. Why include all those if oil has not affected them?

Seldovia # 5867

I would caution the Council to be very aware of dealing with proposals coming from agencies and municipalities outside the spill area. That big pot of money must be very tempting for agency budgets. My eyes fell out of my head when I saw the proposal for the Fort Richardson Pipeline. I would not like to give carte blanche to proposals. If there is nothing that can be done in the spill-affected area, only then should you look at proposals outside the spill-affected area. The scientists should be able to sort out the flim-flam from the real projects.

REGION: Prince William Sound**Tatitlek # 5979**

It's been proposed several times that the trustees provide funds for villagers to hunt elsewhere until the injured species recover. Those requests have gone unheard, so it is real frustrating to find that they've funded a pipe to Ft. Richardson.

Valdez # 6017

Would the Fort Richardson hatchery pipeline proposal for Anchorage, does that fall outside the spill area by this definition?

ISSUE: 2.2 KOD ; Kodiak Laboratory

REGION: Kodiak**Kodiak # 6124**

You may be one of the vehicles helping to make us strong. If you want to help us recover, if you want to help the environment to recover, we've asked for a laboratory since the beginning of the spill. For a whole year we were sending specimens out to be analyzed and it was taking weeks and months to get the results. Is it so hard to allow us to participate in that? We can maybe help

finance it here because we live here and we want to know the laboratory results so we can know if our food is safe. We care and it take someone that cares and that lives here and wants to find the answers. We've got future generations to think of. I have no answers for my children. I was one of those with a bucket and shovel in my hand. I saw elders fall and faint from the fumes. I saw it happen here in Kodiak and it still hurts. We need the tools to participate. If we had a laboratory here it would really help. This concern has fallen on deaf ears for a long time. I am baffled and I know the villages want their balance and their hope back and to know that they can participate. Each of these other places are so unique and the impact on them, their recovery is also important, so to prioritize any one area is difficult to do because they all respond differently.

Kodiak # 6122

We want the Fisheries Technology Center to have \$7.5 million to buy equipment so we can get a handle on being able to study these resources. To me kind of the ultimate insult of the whole *Exxon Valdez* oil spill, after this community absorbed much of the damages, is to watch the money being used to build laboratories in the lower 48. Here we have the opportunity to build Alaska at the same time.

Kodiak # 5551

I want to support the laboratory and the Fisheries Technology Center. When we talk about the entire ecosystem it is something I agree with. Oil is continuing to be pumped and with the new finds in Cook Inlet that makes me worry even more. I want to know a lot about the Cook Inlet spill recovery plan. I don't want us to just leave it with this. I like the idea of using the settlement for an endowment but I also support habitat protection. I like a lot of the points they made in the Kodiak Borough plan. I would like to see the restoration group fund the Kodiak area plan

Ouzinkie # 5721

The officials sat here in this village and told us that some guy in North Carolina is the only one that knows anything, that they have to do all the testing and research with people from outside. Why can't you spend the money to put a research center here?

ISSUE: 2.2 PC ; Predator control

REGION: Alaska, Outside the Spill

Juneau # 5509

I believe the settlement was inappropriately conducted by Mr. Cole and Mr. Thornburg. It gave the state the position of receiving a dole which is being squandered by the Trustee Council. The \$270 million spent should have produced more than 400 plans and proposals. Prince William Sound doesn't need to go through this exercise. I am strongly in support of Alternative 2, and I think the \$660 million should be directed by the Trustee Council to be put solely into habitat acquisition with one exception. The only thing we can do as a community of scientists to replace the bird species which have been lost is to exterminate the rats and the foxes throughout the Aleutian chain.

Juneau # 5483

Is there any possibility of predator reductions on the islands in the 1994 Work Plan?

REGION: Anchorage

Anchorage # 1619 The Wilderness Society, Alaska Region

The Draft Plan has exaggerated the effectiveness of "general restoration" listed in the table for alternatives 3,4, and 5. The only "general restoration" we believe is justified at this time is removal of non-native predators (i.e. alien foxes) on islands that previously supported murre colonies and protection of archeological resources. Except for testing of subsistence foods for contamination, we oppose all options shown for services, especially development of new recreational/tourism facilities and development of new commercial fish runs, hatcheries, other such enhancements. We believe that an option should be added under "Designated Wilderness Area": priority for habitat acquisition in the Nellie-Juan/College Fjords and other Wilderness Study areas.

Anchorage # 47

The seabirds suffered - please put work into helping their declining numbers by working on "alien" predation on islands all over AK- especially western- rats and foxes must be eliminated because they are destroying the island nesting sites. Please help the seabirds recover.

REGION: Kenai

Homer # 5442

I would support eradication of predators. It makes sense.

Homer # 320

Also-- as far as general restoration goes, removing predators (primarily foxes and rats) from islands is the most valuable thing that can be done. It is proven effective it actually works. And it benefits not only injured species, but others as well.

Seldovia # 5866

It might be very efficacious to remove predators. That sort of action has been very valuable in the Aleutians.

REGION: Outside Alaska

US, Outside Alaska# 1616 Pacific Seabird Group

PSG is disappointed that the Trustees have not begun to restore the natural biodiversity of the seabird colonies in the Alaska Maritime National Wildlife Refuge and elsewhere by promoting a program to eliminate exotic rats, foxes and other creatures that have caused the local extinction of seabird colonies. (FWS had budgeted \$50,000 in 1992 to remove introduced foxes from islands in the Alaska Maritime National Wildlife Refuge. We understand that the Director's office in Washington DC reprogrammed those funds elsewhere over the objections of the Alaska Regional Director and the PSG.) Foxes that farmers released on seabird islands and later abandoned depress the breeding population of seabirds on the Alaskan Maritime National Wildlife Refuge by several million each year. FWS should humanely end the suffering of the foxes that were deserted in this hostile environment and barely survive by depredating seabird colonies. The Canadian Wildlife Service is using funds from the Nestucca oil spill to restore seabird habitat in the Queen Charlotte Archipelago, British Columbia, by removing introduced rats and raccoons. This means of restoration is financially feasible and

highly effective. Predator removal has the highest yield of any action that the Trustees might take to restore the actual or equivalent populations of the twenty or so seabird species that the oil spill killed. It would help the entire seabird community to recover, including island-nesting sea ducks, dabbling ducks, oystercatchers, wintering waterfowl, puffins, murrelets, gulls and terns. For example, after farmers stocked Kaligagan Island with foxes in 1921, its seabird population plunged so low that the renowned Alaska naturalist Olaus Murie recommended that it continue as a fox farm. In the 1980s, after foxes had died out, Kaligagan supported 125,000 burrowing seabirds. There is simply no scientific question that introduced predators such as rats and foxes devastate seabird colonies or that removing such creatures can enable the restoration of the natural biodiversity to the breeding islands. PSG remains cautiously optimistic that the restoration can be a success. We believe that the Trustees have developed procedures to ensure that the trust funds will be spent wisely. We encourage the Trustees to use the very best science in making their decisions. Finally, we strongly encourage the Trustees to include in the draft Restoration Plan our suggestions to acquire appropriate seabird habitat and to restore the natural biodiversity of seabird breeding islands. Non-native predators on breeding islands kill as many seabirds each year as several *Exxon Valdez* oil spills. Thank you for this opportunity to lend our expertise and views on these important issues.

US, Outside Alaska# 1616 Pacific Seabird Group

This letter contains the Pacific Seabird Group's (PSG) comments on a document entitled "draft restoration plan" dated April 1993. PSG expected to receive a draft environmental impact statement (DEIS) that would contain the details of the Trustee Council's proposed restoration plan. By letter dated June 21, 1993, we learned that the DEIS is not yet available. PSG's primary interest at this time is to comment on a DEIS, but we reiterate here our ideas concerning the draft restoration plan that we have submitted to the EVOS Trustee Council during the past two years. PSG recognizes the enormity of the Trustee Council's task in formulating a restoration plan, but urge it to make some hard decisions soon. PSG believes that there is ample scientific evidence and public consensus to proceed with some programs, including predator removal. PSG will object if the 1994 field season is funded in the absence of a final restoration plan. PSG is an international organization that was founded in 1972 to promote knowledge, study and conservation of Pacific seabirds. PSG draws its members from the entire Pacific Basin, and includes biologists who have research interests in Pacific seabirds, state and federal officials who manage seabird refuges and individuals with interests in marine conservation. PSG has hosted symposia on the biology and management of virtually every seabird species affected by the *Exxon Valdez* oil spill, and has sponsored symposia on the effects of the spill on seabirds. Issues relating to damages from the spill and restoration of seabird populations have been discussed by our members for years. Consensus on many issues was reached long ago. For example, we have previously observed that the best means to restore Alaska's seabird populations would be to remove rats, foxes and other alien creatures from colonies and former colonies. We stand by this opinion. We hope that, as we requested by letter dated November 20, 1992, the U.S. Fish & Wildlife Service will soon submit to PSG for comment a multi-year plan that outlines a comprehensive approach to removing all exotic predators for seabird islands in Alaska within five years.

US, Outside Alaska# 1065

I do not feel that we should be out in the spill areas helping animal and plants recover, even by removing some predators.

ISSUE: 2.2 SLC ; Sea Life Center

REGION: Anchorage

Anchorage # 705
Against Sea Life Center

REGION: Kenai

Other Kenai Borough# 71
Don't waste money on an aquarium in Seward.

Other Kenai Borough# 63
If the Trustees spend money on a blatantly pro-development, tourist attraction such as the aquarium in Seward, then they will have violated the public trust to spend money for restoration. People who support the so-called "Sea Life Center" don't care about research or restoration. The clear intent of the whole scam revolves around developing Seward by luring yet more tourists to town.

Seward # 5973
You are talking about cost-sharing projects. It kind of ties in to the Sea Life Center. Scientist will bring in new dollars to the state. I would hate that we would have spent \$900 million, and I won't have anything for my kid or grandkids to see. Animals and fish will not be back to normal and that is what the center is for. For those who have worked on the center for years, this is really great. When can we talk to a scientist?

Seward # 5967
There seems to be so many unanswered questions that we would have been better able to answer if we had a sea life center in place prior to the spill. Seems like we would have been better prepared to handle it. This is an opportunity to protect and educate the people on what to do in the future.

Seward # 5953
Nobody has said the Sea Life Center has to be in Seward, but Seward has a great water and food source, and we already have great zoologist. The food source is an important reason why the sea lions and harbor seals are declining. If we don't figure out a way to get a research station that can support this, we will second guess this for years to come. Those 100 years might turn into 500. We have an opportunity to figure out what is going on.

Seward # 5945
The issue was brought up whether or not the Sea Life Center is a matter of importance to Seward. On Easter Sunday we staffed a booth at the sportsman's show in Anchorage and were asked about the Sea Life Center and what was the status. We started a petition and got over 500 people from all over the area indicating support for the concept of educating the public and having some means of doing research on Alaska area sea life and mammal issues right here in the state. The state would benefit. I do believe it is far more important. This was sent out to the governor's office.

Seward # 5943

Regarding the Sea Life Center, I know a lot of local people would benefit. This meeting is not reflective of the town's opinion of the Sea Life Center. A lot of people who perhaps have a close interest are the big supporters. Whereas if you get a little bit farther removed from the actual activities of the Sea Life Center and possible employment, there might be less enthusiasm for it.

Seward # 5941

I think it has been mentioned that the Sea Life Center will provide research and rehabilitation, but it will also provide education for the public. If we don't keep the public involved in our environment, then we won't build for the future. This also will help our children to prevent the problems we should have prevented by looking at Exxon and saying where is the double hull and things like that. This center will keep the public eye there as a watch dog for our kids and for outsiders who come to see it. They will realize that Alaskans are truly involved in our environment. Right now all they do is spend their money and take our fish, but they need to realize we want to preserve our environment for our future as well.

Seward # 5940

I have something to add to that. The public paying the fees will be paying for long-term research and long-term habitat. Once the facility is built, the admission fees and the gift shop will pay for everything else. It is another way of having some long-term baseline information.

Seward # 5930

I would like to speak to the rehabilitation portion as someone who has been involved for many years with the harbor seals and sea lions. The rehab facilities were set up under less than desirable conditions. Although volunteers were absolutely wonderful, they were people literally off the street with no professional training. We know that the harbor seals and the sea lions were in decline before the spill. A lot of decline could be attributed to other man-made disasters. We have an opportunity to collect some valid data to try to answer some questions. Although I support habitat protection 100%, you can do all the habitat protection you want but if we don't figure out the decline in these animals and help the species get back on their feet and put them in a professional facility with professional scientists, habitat protection won't give you anything. We don't have a place to put them in a professional facility where there are professional rehabilitators and professional scientists that can get this information so we know better how to preserve our resources. If we had had that during the spill, we wouldn't have the herpes and parvo problem. We need to be better prepared. We need something like the Sea Life Center. It is important to address this to your biologists and have them think long term. The rehabilitation centers already out there are very successful. We have a chance to put together a better facility than anything in the world right now. (Note: The above comment is a professional opinion by Dr. Joyce Murphy.)

Seward # 5928

The Sea Life Center's direct birth came out of rehabilitation. The facility is not a recreation facility. It is a three-fold marine research facility for mammal, sea matter and also fish. I wonder about your classifications and how that fits. It covers more than just the facility. There is more to this. It is also an enhancement of some of the information. The experts that put this together made it a multiple of the three areas.

Seward # 476

The Alaska Sea Life Center should be funded. It will provide facilities to study marine mammals and sea birds that are in desperate straights. The center will not require further funding from the state as it will support itself

Seward # 463

I think you should fund the Alaska Sealife Center in Seward so there is a place to study live seabirds and marine mammals. And learn why they are dying off.

Seward # 453

Believe that the Alaska Sealife Center proposed to be located in Seward is a particularly appropriate use of these funds. It focus on education, research and rehabilitation will provide long-term benefits as well as short-term.

Seward # 318

I particularly oppose use of settlement monies to build so called "Sealife Center" in Seward or anywhere else. Tourist attraction, capital improvement projects should have to compete against similar projects for tax dollars not settlement funds,

Seward # 316

So, put the \$ into something big, lasting, self supporting, and available to large numbers, for example, the Seward Sealife Center.

Seward # 298

I believe the Seward Sealife Center needs to be built for research and a monitoring facility especially for the sea mammals and sea birds that where and still are being adversely affected by the spill. The center would also serve the need for rehabilitation of animals if another spill were to occur. This is an opportune time to use these criminal funds from one disaster to prepare ourselves for future ones while exploring man's adverse affects on nature.

Seward # 281

The Trustee Council should be stricter in its acceptance of projects proposedly to restore the Sound and/or the "resource". I am most familiar with the push for a Seward Sealife Center. Projects such as this which will end up more as a zoo and gift shop are not appropriate use of money supposedly to correct a major human blunder. This, and other projects may be fine for private individuals to pursue with private money, but not for this settlement.

Seward # 276

I support restoration funds to be used to build the Seward Sealife Center. With the emphasis on marine life rehabilitation and research.

Seward # 264

I believe the Sealife Center proposed for Seward would serve many categories targeted by this questionnaire. It would increase public awareness immensely as well as serve as a research center and a much needed rehabilitation site, centrally-located with spill effected area. It would expose much of the public to the effects of human encroachment on the environment, who would not have known .

otherwise.

Seward # 212

Provide funding for the Alaska Sealife Center. It will protect marine mammal and seabird populations by providing for rehabilitation research and public education.

Seward # 211

I feel you should provide funds for the Alaska Sealife Center. What better use of funds than making possible research to protect sealife. The center would also work in rehabilitation along with education for all of us.

Seward # 201

Alaska is in dire need of a centralized research facility in order to bring together the data, ideas and minds of scientific community. The temporary rehabilitation center set up in Seward during the spill was a noble cause, but what happened to those sick and injured marine life today? Alaska, I am told, has 33% of the U.S. coastline, yet what does the states population know about modern science of it all? The Alaska Sealife Center located in Seward, so close to PWS and Cook Inlet, Alaska peninsula etc. would benefit, research, rehabilitation, and educate. I sincerely hope that the Trustee Council will support this Center. Research ideals start in the mind, moves to the field, and end in a lab. Without a first class facility to formulate the conclusions, the data is of no use. Please support the Alaska Sealife Center for the future of the Environmental Sciences, Alaska, and our children.

ISSUE: 2.2 TH ; Tatitlek Harbor
--

REGION: Prince William Sound

Tatitlek # 5990

With the dock facility I think it would compensate for all the mental trauma that happened to us, with the boom stored and ready to employ any time. With tourism becoming such a big deal in the state, this could help us with tourism a lot. If that's the new way to make the dollar, besides having subsistence to have food, this is a way to connect the village to the money economy. Nobody can say how long the subsistence resources are going to be here, or even with restoration when it will come back. But putting in the dock would help make it possible for us to have a stable economy.

Tatitlek # 5984

Part of the possibility is to have a fuel dock, that would be a business opportunity, too. I can't see us moving away from a subsistence life style altogether, though.

Tatitlek # 5983

This harbor project could be one of the most important things anyone could do for this community because we're in an in-between situation here, between how it used to be and what it's going to be, whether we want it to change or not.

Tatitlek # 5981

The harbor project includes a two state ferry slip with a drive on and a small boat harbor, on top of a big breakwater for future development. It would be a multi-use facility.

Tatitlek # 5977

If it doesn't get vetoed the project would go past the Trustee Council. What would our chances of having the harbor project funded through the Trustee Council? The legislature and the administration have different versions of the bill and the governor said if the legislature one goes through he will veto it. We've been working on that facility as a project for 30 years now and this is as close as we've ever gotten. What's really important to us is getting the facility.

Tatitlek # 5976

What about the harbor project? If we get a better harbor in here maybe that would make things a little safer. (they are working on this through the Alyeska settlement)

ISSUE: 2.2 UNV ; University chairs or scholarship
--

REGION: Alaska, Outside the Spill

Fairbanks # 792 Institute of Arctic Biology, University of Alaska, Fairbanks

If approximately 40% of the settlement was placed in an endowment, income earned could be used to establish several professional chairs in oceanography and biology within the University of Alaska system. The individual recipients and their graduate students could then devote their principal research activities to impact, restoration and long term effects of the *Exxon Valdez* oil spill. This research legacy will be vital to managing PWS and will be a road map for the treatment of spills and pollution of other cold dominated ecosystems.

Fairbanks # 791

Continued research on Prince William Sound will be best effected through endowed chairs at the University of Alaska and by setting up competitive, peer-reviewed grants program.

Fairbanks # 470

I like the idea of using part of the money to endow chairs on faculty in university system. The faculty thus funded would have a responsibility to conduct research on subjects related to the oil spill. Could also include specific teaching assignments in responsibilities. Areas could be diverse: fish and invertebrate biology, physical oceanography, resource economics, chemistry. The occupants of these chairs would add to the effort expended on monitoring and research

Fairbanks # 426

I favor the proposal by Jim King, Public Advisory Group member, to establish long-term research programs, through creating endowed chairs at the University of Alaska. This to me, is a responsible and wise use of the oil spill restoration fund.

Fairbanks # 221

Allocate funding to instructional researchers so that they may work with students, graduates and

undergrads, to have the opportunity to work on this environmental clean up both present and future. The endowed chairs idea is a good idea -- just make sure they are full of fire with great research skills in order that they might guide those who work on field projects to really learn and accomplish something. In other words "get men and women of action". Not someone who just looks good on paper.

Juneau # 5503

A vertebrate chair for taxonomy would fit.

Juneau # 5502

As a side comment, late this afternoon I received a survey of organisms that had been involved in a rather small part of Newport, Oregon, in a very rapid survey that went in and assessed what had changed and collected over 400 species of marine vertebrates. That was a little area that would fit into Port Valdez. That is the type of problem we are looking at in taxonomy and systematics. This would support one of the chairs mentioned. This would bring information to biologists.

Juneau # 5501

A chair means hiring a professor. They suspect the oil has damaged chromosomes. It would be nice for the university to get a jump start. I think this would be a great idea to support the university. I think it would be up to the university to decide where the chairs would be located. We will submit this information regarding chairs to the Trustee Council.

Juneau # 5500

Following up on education, I am representing the American Institute of Fishery Research Biologists. We would like to submit a letter promoting the idea of endowing chairs at the university. It comes to about \$2 million. The \$2 million would only use the interest to fund the cost of the chair. It would go on in perpetuity, and it would help education in a great many ways. Jim King sort of sparked this idea. We have talked about doing this for bird and fish. It was a great idea, and I started calling people, and I haven't heard any negative comments about this. We are talking about some of the types of chairs such as 15 chairs at \$2 million. There could be more. I have come up with a list that gives an idea of what kind of chairs we are talking about. The following chairs are proposed: productivity in wild salmonid stocks; productivity of marine fisheries; intertidal ecology of invertebrates; early life history of fishes; aquatic behavior; physiology; population genetics; molecular genetics; toxicological genetics; systematic taxonomy; diseases and parasites in fishes; age and growth of fishes; stock identification; quantitative biology.

Juneau # 5499

I am also a student at the university, and I would like to see some portion of these funds considered for educational purposes. That is going to help people most in the future who have a concern for the resource.

Juneau # 5498

I am a student out at UAF. I think you should put more money into education. You could make more people aware and teach them how to work on research. If you hired one person to teach a pollution or environmental class, they could also do research in the summer in Prince William Sound and that would benefit a lot of people.

Juneau # 5478

Which university are you speaking of for the chairs?

Juneau # 481

Most species and marine ecosystems are poorly understood--long-term funding (through university) would provide support that is now lacking and hard to come by in competition with other current demands.

Juneau # 479

University of Alaska endowments a plus

Juneau # 423 U.S. Shooting Team

Consider using endowment to fund research and educational chairs at University of Alaska.

Juneau # 289

I strongly urge the Trustee Council to give serious consideration to the long term benefits of endowing research and teaching chairs related to ecology, conservation and biology at the UA campuses throughout Alaska. Every dollar that is used in that will provide a return investment that is beyond measure for many years to come.

Juneau # 285

I strongly support an endowment for the research in the areas of conservation biology and the specific area of ornithology. Since the southeast region of Alaska has a large raptor population it would be a good sight for such research in these areas. I support an endowment of twelve to fifteen chairs, for the development of research and college programs.

Juneau # 284

I support Jim King's idea of endowing chairs to University of Alaska Southeast. I think the money would be spent wisely by the addition to the University. This person could also teach classes not previously offered, like environmental conservation. This would ultimately benefit everyone.

Juneau # 248

Endowed chairs at U of AK, sea birds, fish (herring, pink salmon); taxonomy of marine species would serve a unique function, of lasting value.

Juneau # 60

I would like to see money used to support education and research. Setting up a program in Southeast Alaska at the University would contribute toward education. Jim King has suggested endowing chairs to ensure an ongoing program. UAS could use a biology conservation program. With increasing development in Alaska, conservation programs are essential. Raptors and other birds of Alaska are vulnerable to development and disasters like the *Exxon Valdez*. Research and education within the state are a must!

Juneau # 59

I am in favor of Jim King's proposal for endowing is chairs into the University system.

Juneau # 56

I strongly favor the ideas of endowing some research chairs at the University of Alaska. Chairs that

are endowed will not be cut in the future when oil income drops. Chairs in marine biology and ornithology should be established. A likely cost would be about \$2 million each. This would provide full professor salary, benefits, and a modest research allowance annually. The benefits would be enormous and would be in perpetuity.

REGION: Anchorage

Anchorage # 1016 Alaska Chapter of the Wildlife Society

A RESOLUTION URGING THE *Exxon Valdez* OIL SPILL COUNCIL TO WORK WITH THE UNIVERSITY OF ALASKA ON A PLAN TO ENDOW UP TO 20 ACADEMIC CHAIRS IN BIOLOGY TO FULFILL THE LONG-TERM GOALS OF THE SETTLEMENT. WHEREAS, the biological resources of the northern Gulf of Alaska were terribly devastated by the *Exxon Valdez* oil spill, and WHEREAS, baseline scientific data was completely inadequate to positively assess the damage and is completely inadequate to realistically restore the environment, and WHEREAS, future shipwrecks and oil spills in the area are a realistic probability, and WHEREAS, the accumulation of scientific knowledge and advancement of scientific technology make enormous advances each year and will continue to do so on into the centuries ahead, and WHEREAS, endowed academic chairs will provide continuing top quality scientific investigation, top quality scientific publications, top quality training for the scientists that will be needed by the agencies and companies responsible for resource management and development, in perpetuity, and WHEREAS, the *Exxon Valdez* Oil Spill Trustee Council is charged under the legal settlement with the Exxon Company with restoring, rehabilitating, replacing, enhancing or acquiring equivalent resources and services in the oil spill region and presently lacks most of the scientific resources to accomplish these things, and WHEREAS, with the inevitable scientific advancement in the decades or centuries ahead eventually enhancement of many of the biological resources will be possible, and WHEREAS, concentrating a major center for advancement of biological science at the University of Alaska is in the best interests of all Alaskans injured by the Exxon Oil Spill, and WHEREAS, the University of Alaska already has an appropriate foundation for managing endowed chairs; NOW THEREFORE BE IT RESOLVED BY THE MEMBERSHIP OF THE ALASKA CHAPTER OF THE WILDLIFE SOCIETY: 1. To urge the *Exxon Valdez* Oil Spill Trustee Council to instruct their Restoration Team to contact and cooperate with the University of Alaska in developing a plan for establishing up to 20 endowed chairs in biology that will fulfill the intent of the settlement. 2. That such a plan be included in the Restoration Plan and EIS being prepared this year by the Restoration Team. Adopted this 20th day of April 1993.

Anchorage # 268

5% for scholarships or for a science endowed chair for native and the environment at an Alaskan University, possibly a visiting distinguished scholar in the natural sciences.

REGION: Kenai

Homer # 297

Endowment for University chairs in Marine Biology to be shared at colleges in spill area -- Homer, Valdez, Seward, Kodiak is a good idea.

Homer # 253

Use part of the endowment to establish "chairs" at U.A.A. and U.A.F. to assure long term research

attention to injured resources.

Kenai # 1014

There has been some interest in using a portion of the funds remaining in the Oil Spill Settlement Account to endow chairs in various marine sciences at University of Alaska campuses. I highly endorse this concept. What better way is there to stimulate meaningful long-term studies of our fragile coastal ecosystems than to establish full professorships, fully funded in perpetuity, and thus not subject to the usual whims of short-term funding politics?

REGION: Outside Alaska

US, Outside Alaska# 1616 Pacific Seabird Group

As stated in our letter to the Trustee Council dated April 14, 1993, PSG supports the endowment of chairs in marine ornithology at the University of Alaska as an appropriate use of some of the Exxon Valdez settlement funds. This use is justified under the enhancement provisions in the settlement documents. Endowed chairs can provide independent (nongovernment) research, expertise for contract studies, public education and a source of well-trained scientists to advise or be employed by the responsible agencies.

ISSUE: 2.2 VVC ; Valdez Visitors Center
--

REGION: Outside Alaska

US, Outside Alaska# 1764 Valdez Native Association

I have only recently become a member of the Valdez community. Living here has generated within me an awe and wonder of both the many cultural histories and natural histories that belong to this area. The horror of the 1989 oil spill reached even my far off country of Australia, where concern for the peoples and the environment of Prince William Sound ran deep. The recovery of the Sound and the efforts to prevent another oil spill tragedy is still being followed with great interest. Since that time I believe a tremendous amount of effort in both time and money has been invested not only in the clean up but also in the formulation of better preventive practices. This unique and wondrous region can only hold its own, when the industries that work from it are active with its care and protection. While working as a Community Health Representative, I have come to know and understand the many problems faced by the Alaska Native population as a direct result of the 1989 oil spill. Their lives have been drastically changed and their confidence in the future shaken by the oil spill disaster and consequent changes in their environment. The monies that have been set aside (by this Trustee Council), to aid in the healing of the areas most affected by the spill, I feel will be most appropriately used to fund a combined cultural/archaeological center. It should be remembered that it is here in Prince William Sound, that the impact of the 1989 oil spill was and still is being felt. I feel the proposal to build a cultural center replete with its own artifact repository base for collecting and maintaining the heritage of this region is a brilliant one. Alaska Natives of Prince William Sound and the many tourists that visit this area will have a professional center in which the many cultures of this region will be represented. A center where understanding and learning will be encouraged not only about living cultures and their pasts but also how the oil industry has become apart of their life and times. The combination of a cultural center and an

archaeological center will enable this unique population to maintain and understand their heritage in two ways. Firstly by the interactive nature of a cultural center. In this center people will be actively involved with their cultural heritages through dance, art, story telling, music and craft. The archaeological center will reinforce and support the different cultures in this region by providing an artifact repository in which artifacts will be treated and studied by professionals. I strongly urge you to consider this proposal and the many aspects of the life and times of this region it will bring together. This with the support and help from the villages of Chenega, Eyak (Cordova), Tatitlek and Valdez will be a contribution that will live as long as the people in this uniquely beautiful land.

REGION: Prince William Sound

Valdez # 1778

It has come to my attention that the Valdez Native Association has proposed that a Valdez Cultural Center and Artifact Repository be built in the city of Valdez to promote and house archaeological studies and findings for the Prince William Sound area. The archaeological significance of this area has not been tapped into nearly as much as it should be. A center such as that proposed would encourage more in-depth studies of our native cultures in the Sound area. Since Valdez has become a focal point for the Prince William Sound natives, it is understandable that such a center should be built here. The mass numbers of visitors and tourists who come through here would definitely support such a venture. Please support this proposal. The area and its peoples would benefit from it considerably.

Valdez # 1711 Natchik Charters

I am writing for your support on the proposed Culture Archaeological Center. A center like this would make sense since it would be showing how peoples lives were affected during the oil spill. As well as what safeguards have been set up to prevent a tragedy from ever happening again. Prince William Sound has been the focus of migration for different races and ethnic groups for centuries, many who make it their home today. With a community college in place already in Valdez that services the surrounding areas, this center could actively play a role in giving the world a clearer picture of what Prince William Sound is, both historically and as part of the contemporary world. Looking forward to working further with you on this project.

Valdez # 1710

I support oil spill restoration funds being used for the construction of a Valdez Visitors and Cultural Center and urge you lend your energies to its becoming an actuality. Of all the proposals for these monies, this makes the most sense and will provide the most beneficial long-term effect for the community of Prince William Sound. This proposed center would address many of the growing needs and concerns in our area for some type of structure to house educational reference materials relating to the spill and an Alaska Native Cultural exhibition along with affording Valdez a much needed updated visitor center.

Valdez # 1709

My letter is in support of restoration funds used to assist Valdez in the construction of a multi-purpose building, i.e., Visitor, Archaeological and Cultural Center. Not only is Valdez in great need of a larger Visitor's Center and upgrade of existing Visitor facilities, there is no

facility in Prince William Sound for exhibition and collection of Alaska Native cultural and historical artifacts, nor any central location housing oil spill documentation and studies. The oil was spilled in Prince William Sound, it stands to reason that a Center as the one described above is not only greatly needed, but would be a wise expenditure of oil restoration funds especially when compared to some proposals in as far as actually benefiting the peoples affected by the spill. This is a very important proposal for the communities of Prince William Sound and has the support of its people.

Valdez # 1708

The construction of a Center in Valdez incorporating a Visitor Center, Native Culture Center, and Oil Spill Center is a most worthwhile proposal for oil spill restoration revenues. This project will create new human resource opportunities for those hurt by the 1989 spill, provide a cultural center in cooperation with the Valdez Native Association create a artifact viewing and oil spill restoration display, along with a much needed new Visitor Center. Some have questioned the proposed spending of oil spill restoration revenues on different projects from land acquisition to study after study after study; your charge is not an easy one, but it would seem a Center containing a variety of the educational and historical composition as stated above along with housing oil spill studies and accommodating visitors to the Prince William Sound would be more in keeping with your goal for allocation of these monies. Please give this proposal your sanction.

Valdez # 1707

As a concerned citizen and bed and breakfast owner in Valdez, I am writing in support of the Valdez Visitors and Cultural Center. During the summer I am asked almost daily about the *Exxon Valdez* oil spill and the effects it had on Valdez and the other areas it touched. We cannot overlook the stress and emotional toil Prince William Sound and Valdez experienced due to this major disaster. By educating the public on efforts for recovery and prevention and including information on other important issues and areas in our history, such as our Native culture and economic growth, we can help make our future here more positive. Our visitor center accommodates more people every year, it makes good sense to build on its success while informing the public as to oil spill clean up, long-term effects, etc., let's not hide behind it anymore. I appreciate your genuine interest regarding this issue.

Valdez # 1706

I am writing this letter in support for the proposed Valdez Visitors and Culture Center. Such a center would help preserve our history of our area, and show exhibits on the impact the 1989 oil spill had on the Prince William Sound then and today. Tourism continues to expand in this region, and the need of such a complex, with a variety of exhibits and programs, would be one more attraction for our visitors. Given its strategic location, its road access, and its community college, Valdez would be the ideal location for a cultural center and archaeological repository that could coordinate activities with the smaller communities of Prince William Sound. This project would be a three year plan beginning with 1994, and would be self sufficient due to several non-profits that would be paying rental office space upstairs.

Valdez # 1705

I am writing to you for your support on the proposed Valdez Culture Archaeological Center. A center would help preserve our history of the Prince William Sound area. We would be able to show displays,

on how people lives were affected by the spill and what we can learn from it. A lot of the funds have gone for studies and land acquisition which is fine. A project like this one could focus on the people, which I feel has been overlooked in the past. Valdez, seems like the natural location for this center, since it has road, airline and marine highway accessibility. I would appreciate your support on this project for the Prince William Sound area.

Valdez # 1704 Edkath Enterprises and EdKath Charters

I am writing to you in support of restoration funds being used for a Cultural/Archaeological/Visitor Center for Valdez, Alaska. This center would address many of the growing needs and concerns in our area for some type of structure to house educational, reference materials relating to the oil spill; along with housing Alaska Native artifacts and cultural displays. So much of the oil spill restoration funds have gone for various projects which, in many minds, have been questionable as to their relevancy in helping the people effected by the spill. The Cultural/Archaeological Center would clearly deal directly with the educational aspect of this issue, along with serving many of the Alaskans most hurt by the spill. I strongly urge you to give this Cultural/Archaeological/Visitor Center for Valdez, Alaska your utmost consideration.

Valdez # 1703

This letter is in support of the proposed Valdez Visitors and Cultural Center. Prince William Sound plays an important part of the Valdez community as a place of beauty, recreation and livelihood to many residents and visitors. It is important that we provide all entities a place that depicts the cultural and historical aspects of the area, so that everyone will fully understand the importance of our impact on the rest of the state of Alaska. The cultural center would be an ideal facility to allow visitors and residents alike to relive the history of our community and surrounding area. It would also be an educational aspect for use by Prince William Sound Community College and the Valdez School District. It is important that students understand the development of this area. The facility would also house offices that help enrich the lives of all people who live here. We hope you will take a serious look at placing these available funds towards this effort.

Valdez # 1702

My letter is in support of restoration funds used to assist Valdez in the construction of a multi-purpose building, i.e, Visitor, Archaeological and Cultural Center. Not only is Valdez in great need of a larger Visitor's Center and upgrade of existing Visitor facilities, there is no facility in Prince William Sound for exhibition and collection of Alaska Native cultural and historical artifacts, nor any central location housing oil spill documentation and studies. The oil was spilled in Prince William Sound, it stands to reason that a Center as the one described above is not only greatly needed, but would be a wise expenditure of oil restoration funds especially when compared to some proposals in as far as actually benefiting the peoples effected by the spill. This is a very important proposal for the communities of Prince William Sound and has the support of its people.

Valdez # 1701

This letter is in support of the proposed Visitor/Culture/Archaeological Center. It has been four years since the 1989 oil spill and we are still spending a tremendous amount of time and effort in educating people as to the real effects of this tragedy. It is amazing how many people I meet through out the United States that continue to think that there is oil still on our beaches. Our

local Convention and Visitors Bureau spends a great deal of time on the road instate as well as lower 48 trying to get people excited about coming up to Alaska and especially visiting the Prince William Sound area. In order to promote the work of both salvaging damaged artifact sites and to better inform the world about the Sound and its recovery what better way than to have this culture/archaeological/visitor center in Valdez. Thank you for your time, and please consider this proposal.

Valdez # 1700

I am writing to request your support in the proposed Valdez Visitors and Cultural Center to be located in Valdez. The Center would be to house Alaska Native artifacts and displays of the severe effects of the oil spill. Thousands of visitors come to Valdez each year, all with questions about the spill, and will for many years to come. It is important that accurate information be provided for their use and study.

Valdez # 1699

I would like to solicit your support for the Prince William Sound Archaeological Culture Visitor Center. A center like this would be wonderful for the area. We could focus on educating the public with exhibits and displays. There is such a misconception of the effects of the oil spill in 1989. We really need this center for also preserving our Alaska archaeological and artifacts. A critical part of our history needs to be preserved. Please consider this proposed center for the Archaeological Culture Visitor Center. I appreciate the strict requirements placed upon the restoration funds, and would hope that a project like this that focuses on people should not be overlooked.

Valdez # 1698 Valdez Convention and Visitors Bureau

This letter is written in excited support of the proposed Valdez Visitors & Cultural Center. As an employee of the Valdez Convention & Visitors Bureau, I am constantly reminded of the importance the Prince William Sound plays in enriching the Valdez community, as a place of beauty and enjoyment to the visitors and a source of livelihood to many residents who rely on tourism, oil, and fishing. A center that incorporated information on Native history, Prince William Sound education, and showed the effects the *Exxon Valdez* oil spill had on the city and people of Valdez as well as the other communities that were impacted, would enhance the mystique of Prince William Sound while informing the public as to the realities of the oil spill and our recovery restoration process. Valdez needs a place that the importance of the past can be combined with education in the future. Together with Prince William Community College efforts, offices for the VCVB, Valdez Chamber of Commerce, Valdez Native Association, and other, this Center brings together opportunities for studies and preservation of Prince William Sound, and information so that the public can appreciate and understand an important part of our history. Please recognize all these points of interest as we look towards the future of Valdez and Alaska. Thank you for your time and consideration.

Valdez # 1696 Cruise Line Agencies of Alaska

I am writing this letter in enthusiastic support of dedicating oil spill restoration funds to establish a Visitors and Cultural Center in Valdez. I believe it is a vital need for the inhabitants of Prince William Sound to see a physical structure that would represent those of us who survived the spill and are now healing ourselves with the prospect of recovery and restoration. With the focus on education and preservation, this center in Valdez would serve not only tourists but the members of .

our community whose everyday lives are centered around the oil, fishing, and tourism industries. I believe allocation of monies to this end from the restoration revenues would be proper and only fitting. As the Valdez Port Manager for Cruise Line Agencies, I can certainly attest the value of such a center to the cruise industry. It would be an attraction for those cruise companies considering Valdez as a future port of call and help to further diversify the economy of Valdez. I would ask that you sanction the above proposal for the current well being and future survival of Valdez as a place where industry and environment co-exist in a mutually beneficial manner.

ISSUE: 2.2 MM ; General restoration for marine mammals in general
--

REGION: Alaska Peninsula

Chignik Lagoon # 5207

What more can we realistically do with marine mammals to get them going? What can you do to help them? You made them endangered species already so we can't touch them. Maybe you could feed them,

but what else could you do? We already can't fish within 12 miles of sea otters, and that helps them. Otherwise what could you do?

REGION: Prince William Sound

Cordova # 1497

I ask the Trustee Council to also act on fisheries research and marine mammal restoration projects.

ISSUE: 2.2 HS ; General restoration for harbor seal
--

REGION: Anchorage

Anchorage # 167

I am unclear on why harbor seal options include measures to get voluntary reduction in commercial fishing takes, but not the much more significant option of trying to secure a (voluntary?) moratorium on subsistence harvest.

REGION: Kenai

Nanwalek # 5618

I think the sea lion and harbor seal should be rechecked. Since 1989 our harbor seals are disappearing.

Seward # 276

I support continued research and restoration actions concerning the common murre, sea lions, and harbor seals.

ISSUE: 2.2 SL ; General restoration for sea lion

REGION: Kenai

Nanwalek # 5618

I think the sea lion and harbor seal should be rechecked. Since 1989 our harbor seals are disappearing.

Seward # 276

I support continued research and restoration actions concerning the common murre, sea lions, and harbor seals.

REGION: Prince William Sound

Chenega Bay # 5167

You might want to be careful that if you develop something for sea lion recovery and the regulatory agencies develop something also, you might get total overkill.

Chenega Bay # 5166

I notice since the spill, they want a five-mile buffer zone. You can't just stop a whole area. The problem is the draggers are killing the sea lions, at least nine per day. We have to stop them. Don't stop everyone else from using the area, but stop the ones that are killing the animals. That is cutting out subsistence, commercial, sport and every day usage.

ISSUE: 2.2 SO ; General restoration for sea otter

REGION: Kodiak

Port Lions # 5805

They might try taking some sea otters from Kodiak to Prince William Sound. That would be a lot better than opening them up to hunting, because we have too many otters here.

ISSUE: 2.2 BRD ; General restoration for birds in general

REGION: Alaska, Outside the Spill

Juneau # 6116

Disruption to colonies is increasing egg mortalities. Control on survival of species could be brought on from people. You can't control a frightened bird which knocks its egg off a cliff. Minimizing disturbance is going to increase the loss of human service. It is an aspect of the damage which shows up and is being transferred to the human element of the ecosystem.

REGION: Kodiak

Kodiak # 21

Of particular importance to the marbled murrelet is "Old Growth" spruce forest, where it builds its nests on the thick moss beds that grown on old growth spruce trees.

Ouzinkie # 5726

How many condors are there in the world? Don't they guard every egg like the queen's own jewels? Just in the last ten years we had some teachers here that wanted to emulate the local people and go get some duck eggs. I took them over to my cabin on the island. They collected eggs but they weren't fresh. They hatched ducklings. The teachers took care of them and when they grew up they flew away. I think you should fund us to go out and get some eggs and guard them so we can grow more ducks.

Ouzinkie # 5719

What effect did the oil have on sea birds off Puale Bay? Could we transplant sea birds from the Puale Bay area over to the barrens?

Ouzinkie # 5706

Can you start up a fish hatchery with this money? Could you start a duck rearing place? That could be a source of local employment, too. In Minnesota we used to raise pheasants and release them into the wild. Why couldn't you do that to ducks?

Ouzinkie # 5702

What if you have a question on a particular resource but you don't have any idea how to go about restoring it? For example, we used to have ducks out back here, sometimes if the visibility was a little low there was so many you'd look like you were looking at a bed of kelp. Last year the only place we had ducks like they used to have close to Ouzinkie was over there in Raspberry between Afognak and Whale Island in that little pass there. What do you do about trying to that. We know the duck hunting is down. The duck population in town used to be a pretty popular subsistence activity. How do you go about restoring the ducks? Somebody could do a census count and find out right here in our immediate area the duck population is real down. Over on Afognak they're only in little pockets.

REGION: Prince William Sound

Tatitlek # 5975

Are they going to stop the logging over here to keep the eagles alive?

ISSUE: 2.2 HAR ; General restoration for harlequin duck
--

REGION: Kenai

Homer # 5426

The harlequin duck were just about decimated and all Fish and Game did was take a month out of the season. When do you deal with the State and Federal government to try to stop some of the problems?

going on today? It is very frustrating. Go to a Game Board Meeting and then come back and talk with us.

Nanwalek # 5603

Do the studies for harlequin ducks include Windy Bay?

REGION: Prince William Sound

Valdez # 6016

If you were going to spend money to bring back the harlequin duck, just exactly what would you do?

ISSUE: 2.2 MUR ; General restoration for murre

REGION: Kenai

Homer # 6097

I am dismayed by funds for public information because it doesn't get much beyond groups who attend these meetings. I object to dollars building tourism centers. We are trying to preserve wilderness areas and not increase pressure on wildlife by building roads. It does not embody the spirit the funds were set up for. It violates the ideals people had when allocating the funds. I agree on the issue on allocating any funds that would put any increased pressure on resources or damage them any further. I can see doing something to mitigate and lessen damage. This money is for restoration or an area and helping the damaged wildlife population. I think there should be some real consideration of not doing projects which are extremely intrusive, such as the one for common murre. The murre are nesting on steep cliffs and you would have to hire mountain climbers. I would strike the \$50,000 for this project.

Seward # 276

I support continued research and restoration actions concerning the common murre, sea lions, and harbor seals.

ISSUE: 2.2 FSH ; General restoration for fish in general

REGION: Alaska Peninsula

Chignik Lagoon # 5216

Alternatives 2 and 3 don't even affect us here, but maybe some of the things to fix overescapement stuff could be used here.

REGION: Alaska, Outside the Spill

Juneau # 248

Don't waste money on fish hatcheries!

Other Alaska # 294

Fund PWSAC salmon research in the Sound.

REGION: Anchorage

Anchorage # 5022

What commercial seasons are you going to close? What types of property will be exempt from logging?

Anchorage # 1633 Forest Service Chugach National Forest

Overall Response to Proposed Alternative. Although difficult to choose, we prefer Alternative 3 (Limited Restoration) for its overall guiding policies. We generally favor spending oil spill funds within the designated spill area. We favor a program of recreation enhancement within the Sound consistent with the current direction in the Chugach Forest Plan. Included would be trail construction, new cabins and hardened camp sites; and funds over the long term to maintain facilities. The EVOS funded recreation working group could appropriately synthesize the details of recreation development with respect to public views and current management direction. Within alternative 3 however, we do not favor the creation of new (that is, any facilities in addition to those currently existing or proposed for expansion) hatchery based fish runs in the Sound. The present concerns regarding wild vs. hatchery stocks are of sufficient concern so as to not further promote additional hatchery runs.

Anchorage # 370

I think the Russian River should be supplied with more salmon--fish.

Anchorage # 353

I think that Kenai River should be helped and so should other salmon rivers, in order to raise salmon population.

Anchorage # 167

I would steer clear of all options which involves hatcheries, spawning channels, "creating" new salmon runs, shellfish hatcheries, and the like. These are seldom solutions, rather they bring with them additional problems.

REGION: Kenai

Homer # 435

Studies should be funded separate from the fish and game who have prejudiced their studies for political purposes. Hatchery rehabilitation of Rocky River, Windy Bay, and Scurvy Creek. Fish and Game FRED to over see permit process when and if permit issued funding as part of annuity type of use of funds.

Homer # 188

Scurvy Creek Fishery Enhancement, Inc., a private nonprofit application for enhancement of salmon specie at scurvy creek between Windy Bay and Rocky River subdivision. State of Alaska feasibility management analysis would help to rebuild commercial and subsistence fisheries. After at capacity, sport fishery could be enhancement possibility.

Nanwalek # 5644

We are already doing a salmon enhancement program, and we have been getting funds from elsewhere. Can we get some help from you?

Port Graham # 5772

The studies should include protecting streams for wild stock.

REGION: Kodiak

Old Harbor # 304

The lagoon located between residential areas once maintained a healthy run of chum and coho salmon. Funding is required to maintain/restore the existing run. Using ADF&G expertise, restoration \$ and local resources including but not limited to the Old Harbor Tribal Council, Old Harbor School students, Old Harbor City Council and Old Harbor Native Corporation, create a small hatchery to restore the run of coho salmon in the lagoon feeder system. Old Harbor school personnel and students will maintain the hatchery in conjunction with ADF&G and local agencies. Students and other residents will develop appreciation for ecosystem.

REGION: Prince William Sound

Cordova # 6135

From the CDFU point of view the feeling has been that habitat protection has got lots of public pressure and support. What we see happening outside of Cordova is that there seems to be overwhelming support for habitat protection and acquisition. We support it but not to the exclusion of fishery projects. We don't feel that fisheries projects are getting a fair shake. I recall several meetings ago when options were presented and there was so much support for habitat acquisition and nothing for marine studies.

Cordova # 5295

The aquaculture association, state of Alaska and the Valdez Fisheries Association have all contributed money for the coded wire program. Carl Rosier is going back to the Trustee Council to ask for some matching funding. If the Trustee Council can't do that, there's something really wrong.

Cordova # 1774 City of Cordova

At the August 4, 1993 regular City Council meeting, the City Council of Cordova rescinded Resolution 91-92 requesting that habitat acquisition be given highest priority and substituted for the position of the City of Cordova the following motion: "Motion by Novak, seconded by Fisher to rescind Resolution 91-92 and direct Administration to communicate to the Trustees Council and to the Eyak Board of Directors support for the fisheries research and rehabilitation and the possibility of an endowment fund and debt retirement for hatcheries; and any habitat buy-back be limited to the Power Creek, Eyak River and Eyak Lake watershed areas. Voice vote-motion carried. (Council members Andersen and Bird not voting due to conflict of interest.)"

Cordova # 757

As a fisherman, I favor 45% of money going for restoration of fisheries resources.

Cordova # 756

Work on fisheries restoration. Give assistance to regional aquaculture associations to help restore fish runs and correct problems at the hatcheries from the effects of the spill.

Cordova # 750

The oil has obviously damaged the future fisheries resources of PWS, therefore, making it difficult for PWSAC to fulfill its financial commitment. So I feel that part of this fund should be used to pay off the PWSAC indebtedness.

Cordova # 671

I would like to see monitoring and research for salmon and herring stocks in the spill-affected areas.

Cordova # 669

The Trustees should assure that adequate funding is made available to regional aquaculture programs that have been severely impaired by the Exxon spill effect. The management strategies imposed on PWS commercial fisheries due to the weakened stocks and general degradation of food chain resource has decimated the traditional management and impacted the aquaculture corps in a very adverse way. Let's open our eyes and get something done here.

Cordova # 310 Prince William Sound Aquaculture Corporation

The Prince William Sound Aquaculture Corporation has borrowed about \$24 million from the State's aquaculture revolving loan fund. Debt service per year is \$2.0 million, and will peak at \$3.0 million. PWSAC funds and operates three state hatcheries in addition to two facilities it built. This financial obligation is increased by the state's insistence that PWSAC fully evaluate hatchery stock/wild stock interactions in the fisheries and that PWSAC pay for mandated evaluation projects which the ADF&G cannot afford. If the Trustee Council paid off PWSAC's debt, PWSAC would be able to continue to deliver 70% of its hatchery production to the common property fisheries and would be able to fund evaluation studies with funds that would otherwise be used to service its debt. These studies would be largely carried out by the ADF&G. Since the oil spill, PWSAC had exhausted its financial reserves in a program which has become more expensive and more restrictive. ADF&G fisheries policies regulating enhancement activities reflect the environmental attitude developed by fisheries managers as a result of the spill.

Cordova # 307

The Prince William Sound Aquaculture Corporation board of directors passed a resolution requesting the Trustee Council pay off PWSAC's \$24 million debt to the state. This would free PWSAC from a debt service of between \$2-3 million per year. These funds could be used for wild stock/hatchery stocks evaluation projects which are essential to continued hatchery operations and the salmon fisheries in Prince William Sound are very dependent on the hatchery program. We have the facilities which can be used for salmon restoration and enhancement projects. What we need is funding for the supporting evaluation program which is mandated by the ADF&G.

Cordova # 306

No cabins or fish passes!! To many fish passes already--they are screwing up the ecology of the area too!! Let the land managers pay for and build cabins as they see fit-- this is not restoring the area.

Cordova # 279

We need more info on rockfish, river otters, orcas so more funding should be devoted to this column, especially herring and pink salmon.

Cordova # 258

Let us not try and make the Sound into some thing it wasn't. Let us get back what we had before the spill. A simple life and plenty of subsistence food that is healthy enough to eat. Most things in the Sound revolve around salmon and herring so why not start at the bottom of the food chain?

Valdez # 1576

30-35% of \$ to be spent for fisheries studies.

Valdez # 241

Land acquisition and stream enhancement in P.W.S. are at the top of my list.

ISSUE: 2.2 CT ; General restoration for cutthroat trout
--

REGION: Alaska Peninsula

Chignik Lake # 5263

It doesn't make sense to restore cutthroat and Dolly Varden because they eat the salmon spawn. They're just for sport fishing.

ISSUE: 2.2 HER ; General restoration for herring

REGION: Alaska, Outside the Spill

Other Alaska # 294

Fund a Herring research program for PWS. After the 1993 herring returns failure this is very important.

REGION: Prince William Sound

Cordova # 5342

It may be too late for the herring but it's not too late for the coded wire tagging. We may need to get together to advocate for that program.

Cordova # 5328

Another problem I had was with the alternatives, each of 3, 4 and 5. The public never really got to look at all of the different proposals that you guys received. A big judgment has already happened, like all the herring studies got excluded. The herring never made it to the Trustees except because of CDFU squawking, a lot of studies get cut before they even get there. What really is happening is a very small group, less than six, are probably making decisions on what the Trustees even get to see. So the public sees 47 alternatives and maybe none of them address any of the things the public

is interested in, but the three that were rejected do. It doesn't matter that we never get a chance to have any input.

Cordova # 5292

I think that Cordova District Fishermen United (CDFU) has crystallized the feelings of the fishing community. We've worked hard with that union the last four years. We've petitioned for studies on salmon and herring and nothing's being heard. If you were going to do anything we would think you'd take what CDFU says and they haven't been heard.

Cordova # 5287

As fishermen, timing is critical, as Evelyn pointed out for herring this year that opportunity is lost. But there's other things going on, we are in a survival thing with Prince William Sound Aquaculture Corporation (PWSAC). We are being asked to fund the coded wire studies because the state can't fund it. We've got to wait a year before anything can be funded, is that what I've heard here?

Cordova # 433

Should have funded coded-wire tag studies for pinks and herring study.

ISSUE: 2.2 PS ; General restoration for pink salmon
--

REGION: Kodiak

Kodiak # 179

Conduct no pink salmon studies or pink salmon habitat work outside of PWS. Kodiak does not need more or improved pink salmon spawning habitat!

REGION: Prince William Sound

Cordova # 567

I feel salmon stream enhancement inside Prince William Sound needs to be undertaken. It's already proven that genetic damage has been done to wild salmon stocks within PWS. Nothing has been done in the wild salmon stream enhancement since the EVOS in 1989. It is time to stop with the studies and spend money to restore salmon runs inside PWS.

Cordova # 433

Should have funded coded-wire tag studies for pinks and herring study.

ISSUE: 2.2 SS ; General restoration for sockeye salmon

REGION: Alaska Peninsula

Chignik Lagoon # 5234

By next year we'll know what the impact was on the salmon. If nothing else we can divert some of

this money to help with the FRI Chignik region.

Chignik Lagoon # 5208

For sockeye salmon you can enhance the habitat.

Chignik Lake # 5267

Will you help us with this beaver dam thing then?

Chignik Lake # 5252

Those FRI people are really good, you should support them. They need money for new equipment and buildings, everything is all broken down.

Chignik Lake # 5246

Our village also has an enhancement study team who are studying fisheries enhancement here. The first part we did aerial photographs of our area. We received an ANA grant, and next month we will put in for another grant.

Chignik Lake # 5245

Greg Rigaroli is the FRI person who comes here. When they came in the winter they have to rent snow machines and their money only lasts so long. They're trying their best but they just can't do much.

Chignik Lake # 5244

We have a Chignik Basin Aquaculture Association. Can the Trustees give them any support?

Chignik Lake # 5243

We have problems with beaver dams blocking the salmon streams. Can you help us do anything about the beavers? There's a lot of them around here.

REGION: Kodiak

Akhiok # 6144

We used to fish for red salmon, now they're kind of depleted. But then they start letting these salmon farms come in to upgrade these things again, I think we should have these farms in some of the lakes. If we don't have these things the salmon won't recover as fast.

Old Harbor # 5684

Probably one of the most important things you could spend money on is something directly related to improve the commercial fishing and provide recreation opportunities for the village. Something that would take the ones that are having the problems and give them something more positive they can be doing like using recreation centers. And help out commercial fishing in each community.

ISSUE: 2.2 SF ; General restoration for shellfish

REGION: Kenai

Seldovia # 5888

I heard a proposal for restoration of the Pacific oyster.

Seward # 5958

In part of the restoration program, I noticed one of the projects is the shellfish hatchery around Tatitlek and Chenega. The oyster farm sounds like a good deal as an alternate. I know the villagers are working hard to get it in. As an alternate for an income industry, I would think that would be an excellent project.

ISSUE: 2.2 SHR ; General restoration for shrimp

REGION: Anchorage

Anchorage # 299

The DF&G can not explain why the population of spot shrimp is diminishing in the PWS since 1989. I think some study and restoration should be done to bring spot shrimp resource back to levels before 1989.

REGION: Prince William Sound

Whittier # 217

I am particularly interested in research for the PWS pot shrimp fishing industry which has been closed since 1989, (except for 3 wk. period in fall of '91). As far as I can tell no actual research has been conducted just "best guess" statistics. Why are stocks down (if in fact they are)? What can we do to enhance the fishery?

ISSUE: 2.2 TID ; General restoration for intertidal or subtidal in general

REGION: Anchorage

Anchorage # 167

RE: subtidal impacts. Poss. alternatives could include funding for dry-transfer facilities for logging: eliminating in-water transfer or storage of logs.

ISSUE: 2.2 CLM ; General restoration for clams or mussels

REGION: Kenai

Nanwalek # 5604

How long do you have to wait to study mussels for hydrocarbons?

REGION: Kodiak

Old Harbor # 5680

You said one thing you could do is reseed clams. I disagree with that. I think that's messing around with Mother Nature and I think it's risky, I hope we don't die from messing with Mother Nature. Don't do it, leave it alone.

Old Harbor # 5672

I wouldn't want to see you guys go and reseed some clam beaches. You might do more damage to Mother Nature than you help it. I don't like the idea of an endowment. What are we going to do with that, it's probably going to be used by administration, they will get most of it and we don't get any benefit from it.

ISSUE: 2.2 ECO ; General restoration for ecosystems

REGION: Anchorage

Anchorage # 1634 Sierra Club

Ecosystem protection: Trustees should give priority to projects which restore and protect whole ecosystems, rather than only one resource or service. Harmlessness: Trustees should not fund projects which harm a damaged resource or service. For example, a hatchery project which increases the numbers of a certain species but reduces genetic diversity by damaging wild stocks should not be funded. Projects which increase human use at the expense of damaged resources must not be funded.

REGION: Kenai

Seldovia # 5870

Restoration needs to be in balance. What if you get the population back to 600,000 and then find there is no food for them.

ISSUE: 2.2 ARC ; General restoration for archaeology

REGION: Alaska, Outside the Spill

Fairbanks # 399

Increase emphasis on archaeological site stewardship and monitoring using local residents.

Mat-Su Borough # 404

Increase emphasis on archaeological site stewardship and monitoring using local residents.

REGION: Anchorage

Anchorage # 417

Increase emphasis on archaeological site stewardship and monitoring using local residents.

Anchorage # 416

Increase emphasis on archaeological site stewardship and monitoring using local residents.

Anchorage # 405

Increase emphasis on archaeological site stewardship and monitoring using local residents.

Anchorage # 341

Increase emphasis on archaeological site stewardship and monitoring using local residents.

Anchorage # 323

Increase emphasis on archaeological site stewardship and monitoring using local residents.

Anchorage # 302

Increase emphasis on archaeological site stewardship and monitoring using local residents.

Anchorage # 43

Increase emphasis on archaeological site stewardship and monitoring using local residents.

Anchorage # 42

Increase emphasis on archaeological site stewardship and monitoring using local residents.

Anchorage # 41

Increase emphasis on archaeological site stewardship and monitoring using local residents.

Anchorage # 40

Increase emphasis on archaeological site stewardship and monitoring using local residents.

REGION: Kenai

Port Graham # 301

What about Native grave sites or old artifact and camp sites.

REGION: Kodiak

Kodiak # 177

Archaeological restoration beyond funding for KANA museum is critical. Some new sites, as well as existing sites should be able to tap into restoration monies if such support will enhance efforts to fund, record and collect archaeological materials throughout this region.

Larsen Bay # 5592

A mini museum could be many things. The declines that you're talking about here, if we had a museum we could save that history for the young ones coming up. If subsistence never comes back they could know at least what it used to be. They could have information about the artifacts, the history, the subsistence, and all that.

Larsen Bay # 5591

What about a mini museum? The people that are out on the beaches have uncovered artifacts. Some artifacts have been stolen. What about setting up mini museums in the villages and hiring some archaeologists to go out and do those digs and bring that stuff back? In the village we cannot have a big museum, we don't have the expertise to have a museum. There are certain artifacts we can't keep because we are not set up, with things like temperature control and humidity control. Kodiak would be the center for the Kodiak area, but mini museums would be good in the village where you wouldn't have some of the artifacts that need special care, just educational things. It would help the village, too. We could have fishermen and tourists come in and learn about our village.

Old Harbor # 5693

I like the idea of the KANA museum, but how does that fit under the settlement?

REGION: Outside Alaska

US, Outside Alaska# 1649 National Trust for Historic Preservation

The National Trust has particular interest in restoration and site stewardship programs for impacted archeological sites, as well as potential acquisition within the Kodiak Archipelago and Prince William Sound; both areas have unique historic and cultural value. For example, the acquisition of the Three Saints Bay on Kodiak Island would preserve the Russian fur trader Gregory Shelikof's 1784 settlement, the permanent European settlement in Alaska. Further, the acquisition of Russian Harbor on the Aluilik Peninsula on Kodiak Island would preserve the four "barabara" house pits where Russian fur-trader Stephen Glotov wintered in 1763. The sites, and others within the spill region, are world class historic sites and have only recently come to the attention of archaeological and cultural preservationists. Thank you for the opportunity to participate in the public comment process and good luck in developing a meaningful use of the *Exxon Valdez* settlement.

US, Outside Alaska# 790

The most important protection for archaeological resources is improved information on the resource base. Existing sites need to be studied to evaluate alternate means of protecting them. ITZ deposits need to be studied (tested) to determine the extent of possible contamination from oil in the ITZ. The most urgent need is for additional survey (within and outside the spill area). More frequent visitation by managers for monitoring and data recovery would improve understanding of

vandalism and erosion. While public education and police action may seem attractive, they are far less important than better information obtained from survey, site testing and stabilization. Spend the money on a program to gather data on site contents and conditions.

US, Outside Alaska# 680

I support continued support of archaeological studies, particularly at the Kodiak Museum.

US, Outside Alaska# 427

Valdez # 1699

I would like to solicit your support for the Prince William Sound Archaeological Culture Visitor Center. A center like this would be wonderful for the area. We could focus on educating the public with exhibits and displays. There is such a misconception of the effects of the oil spill in 1989. We really need this center for also preserving our Alaska archaeological and artifacts. A critical part of our history needs to be preserved. Please consider this proposed center for the Archaeological Culture Visitor Center. I appreciate the strict requirements placed upon the restoration funds, and would hope that a project like this that focuses on people should not be overlooked.

ISSUE: 2.2 SVC ; General restoration for services in general

REGION: Anchorage

Anchorage # 1102

My comments on the draft Restoration Plan are as follows: 1> The best use of the settlement funds is to protect habitat, recreation, and tourism areas.

REGION: Kenai

Homer # 6096

It is not necessarily true (that parks are for humans first). It depends on the parks.

REGION: Outside Alaska

US, Outside Alaska# 1499

Ecotourism and fishing will provide more jobs to Cordova and vicinity over the long-term than logging will.

US, Outside Alaska# 1498

Ecotourism and fishing will provide more jobs to Cordova and vicinity over the long-term than logging will.

REGION: Prince William Sound

Chenega Bay # 5160

We are very concerned about higher human use, and we are proposing co-management.

Chenega Bay # 5158

It is my opinion that we should try to increase the use of the areas in the Sound; especially human use. Subsistence use has decreased dramatically. Sport fishing and commercial fishing should also be increased. We need to develop an alternative resource or service to offset.

Chenega Bay # 175

Protect (1) Subsistence, (2) Tourism, (3) Recreational, (4) Commercial and (5) Scenic

Valdez # 235

Spend the money to let more people enjoy the Sound. Build more boat harbors! Create new fish runs! Build more cabins! Use the Sound don't lock it up!

ISSUE: 2.2 CF ; General restoration for commercial fishing

REGION: Alaska Peninsula

Chignik Lagoon # 5213

Here we have the Chignik Regional Aquaculture Association.

Chignik Lagoon # 5210

I do think salmon enhancement like a farm or a hatchery would be a good idea. Then let the fish go. We have an aquaculture association started but it hasn't raised enough money to do a heck of a lot.

Chignik Lagoon # 5178

I could see a potential use for some of these funds in our regional aquaculture association. It definitely does go back to the injury. We're trying to build up the fish runs.

REGION: Anchorage

Anchorage # 5065

If you shut down the hatchery, you will allow the wild stock to utilize the zooplankton that the hatchery fish get to first. You've got a hatchery expert here.

Anchorage # 5063

The oil is what added insult to injury and destroyed the spawning grounds and the intertidal zones. When you talk about impact to restore the wild stock, are you considering management policies that

are within the domain of the state boards and National Marine Fisheries? We are trying to say will you get these agencies to minimize or eliminate the effects that are further declining the weakened ecosystem that cannot support the same level that was there before. We don't want replacement with hatchery fish or commercially-bred mussels. We need restoration of the land that is still oiled. I can give the specific toxic chemicals that are still in the oil.

Anchorage # 1511

EVOS Trustee Council-- would appreciate your getting serious about your charter and quit screwing around playing politics/personal gain. No more fancy boats, superfluous studies, etc. Buy land as described by Sierra Club, help restore fisheries etc. You should be oil enough, experienced enough, devoted enough to know what's needed. If not, get off the trolley and let someone on who does/will.

Anchorage # 694

Absolutely no spill funding for hatchery production - it's complicating and may even be adding to the problem of maintaining wild salmon stocks in the region.

REGION: Kenai

Homer # 5404

Is the proposal for stock separation the same thing that is normally done by Fish and Game?

Homer # 5403

Can you give me an example of restoration of commercial fishing?

Nanwālek # 5637

We are looking into a hatchery.

Port Graham # 5795

The existing harbor is getting old.

Port Graham # 5782

With the deal in 1989 with the boom, our even years have been bad. Even though we might not have that much oil out here, we were still hurt by the boom. That is why we need the hatchery.

Seldovia # 5885

All nations should use more selective fishing gear in all fisheries. We have made this suggestion to the NMFS.

REGION: Kodiak

Akhiok # 5010

One of the things I'm interested in seeing is Kodiak Island being back into the top ten in the fishing industry by restoring the fish runs.

Old Harbor # 5685

What you could do with the money is work to raise the price of fish.

Old Harbor # 5684

Probably one of the most important things you could spend money on is something directly related to improve the commercial fishing and provide recreation opportunities for the village. Something that would take the ones that are having the problems and give them something more positive they can be doing like using recreation centers. And help out commercial fishing in each community.

REGION: Outside Alaska

US, Outside Alaska# 1005

The fishing industry must balance its impact on the food chain in the Sound. Access to the Sound must not be improved. People traveling in the Sound must be educated, on how to impact.

REGION: Prince William Sound

Cordova # 706

To date, research and restoration funding of common property resources which are also commercially important has been totally inadequate. In particular the herring and salmon resources in Prince William Sound continue to decline yet research on these species has come to a virtual standstill.

Cordova # 689

I also urge funding of essential monitoring programs for herring, pink and other salmon species as well as crabs and other shellfish.

Valdez # 1019 Valdez Fisheries Development Association, Inc.

Valdez Fisheries Development Association, Inc., would like to request monies from the *Exxon Valdez* Restoration Plan for the following purpose: "Retirement of all hatchery debit for those hatcheries located in Prince William Sound, on Kodiak Island and in Lower Cook Inlet." The hatcheries are all located in the *Exxon Valdez* Oil Spill Impact Area of South Central Alaska and have been greatly affected by this catastrophic spill. The following list includes some of the impacts suffered by the hatcheries, however not all of the impacts are listed because they have not been fully evaluated: 1. Outmigrating hatchery salmon fry were directly exposed to the oil. 2. Both phytoplankton and zooplankton that the outmigration fry feed on were exposed. 3. Dislocation of human resources within the hatchery infrastructure. 4. Perception of the hatchery program in the State of Alaska. The monies allocated for the retirement of the hatchery debit should be disbursed in the following manner. 1. Monies would be split with part going back to the revolving loan fund where it originated and part going to an Endowment for Fisheries and Wildlife. 2. By reducing the hatchery debit, the budgets for the hatcheries will also be reduced. This would provide approximately 30-35% more fish to the fishermen through the common property fishery. While this is not a direct disbursement of monies, it is nevertheless a cause and effect response. The fine points of this proposal still must be worked out with all the involved parties and a consensus must be achieved.

Valdez # 1018 Alaska Wilderness Recreation and Tourism Assoc.

Immediate aid to fisheries: City of Cordova's Resolution 93-25. The Alaska Wilderness Recreation and Tourism Association supports the City of Cordova's Resolution and asks the Trustee Council to take immediate action on it. Thank you for the opportunity to comment. We appreciate all the thought and work that you have put into the Restoration Planning Process.

Valdez # 1017 Prince William Sound Conservation Alliance

2. We strongly support City of Cordova's Resolution 93-25, which requests the *Exxon Valdez* Trustee Council to IMMEDIATELY provide emergency funds for three studies of Prince William Sound fisheries resources. Information provided by these studies will empower local fisherman to better manage their business and our collective fisheries resources.

Valdez # 697
Retire the hatchery debt!

Whittier # 6080
I think they should shut down the hatcheries, and the fish will come back.

Whittier # 6079
I think they should pay the fishermen so much a year until the fish come back.

Whittier # 6078
To cover human services, you should help subsidize hatcheries in the Sound since fisherman aren't making any money.

REGION: Unknown

Unknown # 118
I would like the emphasis and nest money to be for habitat acquisition. I would also like to warn the T.C. to beware of all the fish stocking projects. In the NW hardly ever has it worked to RESTORE populations. Habitat will assist in restoration of fish pops and fishing regs (commercial) will assist too. But lets not lose the wild stock to follow the hype of commercial catchers. Fish pops do naturally fluctuate (especially multi. year runs) and so long as trend does not maintain downward spiral, then not much oil spill damage has occurred - plus (the damage is) hard to decipher from fishing activities. Recommend reading: Preserving the genetic diversity of salmon stocks: A call for federal regulation of hatchery programs. By Richard L. Geedman, Environmental Law Vol 20: 83 Pg 111-166. DO NOT support State hatcheries that are ready to close with oil spill money. Some projects seem to be to keep facilities open as much as to enhance fisheries.

ISSUE: 2.2 REC ; General restoration for recreation and tourism
--

REGION: Anchorage

Anchorage # 1633 Forest Service Chugach National Forest

Overall Response to Proposed Alternative. Although difficult to choose, we prefer Alternative 3 (Limited Restoration) for its overall guiding policies. We generally favor spending oil spill funds within the designated spill area. We favor a program of recreation enhancement within the Sound consistent with the current direction in the Chugach Forest Plan. Included would be trail construction, new cabins and hardened camp sites; and funds over the long term to maintain facilities. The EVOS funded recreation working group could appropriately synthesize the details of recreation development with respect to public views and current management direction. Within

Alternative 3 however, we do not favor the creation of new (that is, any facilities in addition to those currently existing or proposed for expansion) hatchery based fish runs in the Sound. The present concerns regarding wild vs. hatchery stocks are of sufficient concern so as to not further promote additional hatchery runs.

Anchorage # 1467 Western Conference of Public Service Commissioners

As the President of the Western Conference of Public Service Commissioners I hosted a conference in June of this year here in Anchorage. We had over 250 attendees. I was particularly pleased by the substantial number of conferees who have expressed their great pleasure at having had the opportunity to come visit our vast and beautiful state. A number have already begun to make plans to return next year to further their travels. One theme is clear - They were attracted and will return because we have substantial areas of unspoiled wilderness. It seems clear that for us to continue to attract significant conventions and visitors we must continue to offer what makes us a great destination - wilderness and wildlife.

Anchorage # 1015 P.W.S. Land Managers Recreation Planning Group

The Prince William Sound Land Managers' Recreation Planning Group (PWSLMRPG) would like to bring the following issue to your attention in the restoration planning process. Residual oil in the substrate appears to have a continuing effect on some recreation activities. We suggest that if restoration activities are undertaken to assess or mitigate substrate oil effects, that impacts to recreation uses be included in such projects. We have been working with the recently established Recreation Restoration Working Group in identifying 1994 restoration projects for recreation and cultural resources. We will continue to communicate the consensus views of the PWSLMRPG with respect to recreation and cultural resource restoration needs through the Working Group. The PWSLMRPG will not be commenting as a group on the Restoration Plan, but members may choose to do so individually. Thank you for your attention.

Anchorage # 684 Alaska State Parks

We have several specific locations of potential recreation projects which we can provide to the Trustee Council. Some of the projects within Prince William Sound will be forwarded to the Prince William Sound Recreation Project Work Group. This Division (Parks and Outdoor Recreation) has a system in place for evaluating and distributing community grants for recreation. This could be modified to incorporate the linkage to injured recreation resources and services. The Trustees could use the grant program for administering funds for community recreation projects. We are currently addressing recreation restoration with the State criminal settlement at the same time the Trustee Council addresses recreation restoration. These two processes should be concurrent with a synchronization of ideas. The end result should be a cohesive restoration of injured recreation resources. Cooperation and information sharing would be beneficial to both parties. Please feel free to contact me for more information.

Anchorage # 352

I think Alaska should have more cabins/resorts for tourists or residents to stay at.

Anchorage # 302

While the Trustees are considering mussel bed decontamination, they should also plan to restore gravel beaches which periodically release oil in subsistence and recreation areas. By removing the

contamination.

Anchorage # 203

Developing facilities for any back country activities would seem to be a stupid at first thought and completely stupid on second thought. It approaches commercial tourism as the most bizarre expenditure of spill money.

REGION: Kenai

Homer # 5425

A lodge is not restoration.

Homer # 5422

Parks are for human consumption. The first priority in a park is for humans.

Homer # 5421

We will see when they put in hot dog stands and four-wheeler trails.

Seward # 318

I particularly oppose use of settlement monies to build so called "Sealife Center" in Seward or anywhere else. Tourist attraction, capital improvement projects should have to compete against similar projects for tax dollars not settlement funds.

REGION: Kodiak

Kodiak # 179

Purchase recreational access sites but build NO cabins; boat launch areas are Okay.

Old Harbor # 5689

I see a lot up there about commercial tourism and recreation. In my opinion the more people you have going into an area means they're going to damage the area. You have to limit the people and how they enjoy the area.

Old Harbor # 5675

A swimming pool would be a good thing for recreation. One thing that has been damaged out of this is the people. Put in something for recreation that most of these communities can't afford.

Port Lions # 5825

It doesn't make sense to say that one thing fits if it creates more problems than another one that doesn't fit, such as to encourage tourism which will then cause more trash for an already overloaded landfill. Port Lions is in an optimal position to benefit from the tourist trade, but before we create an atmosphere for tourists, we need to take care of our infrastructure.

Port Lions # 5824

There's an ordinance here that there are to be no campers here. Could we establish a park with trails, toilets, something like that?

Port Lions # 5807

We're planning on moving into the tourism business. If you put in a bunch of land use cabins what kind of effect will that on our businesses here in town? To me it would have a bad effect because those cabins would be available.

REGION: Outside Alaska

US, Outside Alaska# 1463

Although I have never been to Alaska, I certainly plan to go there some day. The only reason that I would visit the state is to see its immense area of natural beauty, ranging from the tideland fjords to the mountains and tundra. The best way to continue to attract me and other tourists to the state of Alaska for its long-term economic welfare would be to secure large amounts of wilderness purchased by funds from the *Exxon Valdez* settlement. Purchasing land, especially around Prince William Sound, on the Kenai Peninsula, and Kodiak Island, would be most appropriate.

REGION: Prince William Sound

Chenega Bay # 5159

The State has come in and developed picnic tables and wiped out a homestead doing the same thing.

Cordova # 691

I do not understand at all what recreation facilities, outhouses, trails and visitor centers have to do with restoration of an oil-injured area. In fact, I don't understand what this question has to do with restoration. What bearing does increased human use have on the damage that has, is, and will be done to the marine organisms and wildlife that abounded in PWS before this foreseen but unfortunate accident?

Tatitlek # 5991

I don't think people here are ready for tourism yet. But it is an option that is there, it is something to consider.

Valdez # 1018 Alaska Wilderness Recreation and Tourism Assoc.

8. General Restoration funds could be appropriately used in urban/village communities to restore lost tourism and recreational opportunities. Justification: According to the Division of Tourism statistics program, 20% to 24% of all Alaska visitors include Valdez in their travel itinerary. Between 1985 and 1989 the annual growth rate of Alaska tourism overall was 3.3%. Because of the oil spill, the Alaskan annual growth rate was 2.2% in 1989-1990 (Draft Valdez Comprehensive Plan, p. 216 and Division of Tourism). According to Patterns, Opinions, and Planning: Summer 1989 "The Exxon Valdez Oil Spill of March 24, 1989 affected the Alaska trip planning of one in six visitors. Half of these avoided the spill area." (Alaska Visitor Statistics Program II, p. 20.) This represents a 12% decline in visitors to the spill area in 1989. No information is available for subsequent years. A survey of backcountry business in SE Alaska which were comparable to those operating in the spill impacted area showed that while SE Alaska businesses experienced a 23 to 27% annual increase in business (up to 50% for some businesses). Appropriate projects would include education centers, heritage interpretive centers or museums, nature trails and picnic areas. Locating these facilities in communities will 1) reduce stress on injured resources in backcountry areas, 2) provide economic

compensation to communities for losses sustained as a result of a spill, and 3) restore urban (community) area recreation and tourism opportunities lost as a result of the spill. AWRTA will be submitting a more detailed list of these facilities after members in the spill impacted communities have had an opportunity to work with local groups to develop lists.

Whittier # 6085

I see great potential for awareness by making access to the Sound. They should broaden their view of this thing.

Whittier # 6077

On page 10 of the 1994 proposals, you have increase access to PWS (item 220). I assume that is recreation oriented? If you increase access and you don't upgrade sewage treatment facilities, that is pointless.

Nanwalek # 5623

It is important to have a study on the hydrocarbon effects to subsistence users.

Nanwalek # 5621

The testing should be done right away because people are going out harvesting thinking things are okay. I don't think it is.

Nanwalek # 5610

If a person chooses not to subsist, is there any way jobs can be provided for them to buy food?

Other Kenai Borough# 249

The Native people of English Bay and Port Graham were devastated by oil impaction. Place special emphasis on restoring and enhancing areas where subsistence and livelihoods were greatly impacted. Save your money on your "RA-RA" meetings saying how wonderful everything is. Show me action no words.

Port Graham # 6101

I feel strongly about the impact on Native people and restoration of the subsistence way of life.

Port Graham # 332

I hope to see our subsistence foods restored and protected from future spills. I feel the villages always get left out and cities get all the dollars that should go to villages whose lifestyle and food was affected.

REGION: Kodiak

Ouzinkie # 5712

I don't think too many people have too much trouble with eating a clam or eating a duck. What we're seeing now is that there's not the quantity that there used to be. People want to eat clams, shoot deer, eat whatever kind of fish. But for example, here a couple of weeks ago a bunch of us went out digging on a beach over on Lacross. We went home with very little, where normally we'd go home with a couple of buckets of clams in half the time. I'd like to see specific projects to return those populations back to what they were. What do you do if you have a question on how to restore something but you don't know how to go about it? There should be efforts to restore clam and duck populations, and the local people should be involved and also have a chance to be employed.

Ouzinkie # 5708

I go out to collect clams every clam tide that there is and so do several other people here. I've had the agency subsistence people come down and go to places where we used to get coastal clams and butter clams. I can show you the beds. You can find the clams but they're dying in the shell. I can show you places in Campbell Rock when the tide is about so much [hand gesture indicating a couple of feet] off the reef there and it all oily. Where all these guys here used to get their clams you can't get a clam over there anymore because nothing will survive. All of us are going to the same beach now and we're cleaning out those clams. [What I'd like to see is some of these funds used to restore those clams. There's many people still scared to eat clams.] Is it still going to be my children after me, afraid to eat the foods? I can remember when the head guy from Exxon was sitting in this room with the head guy from the state. The state guy said eat them, they're clean. I told them I'll make you a deal. You eat our foods for 30 days and then we'll have YOU analyzed. There's many people in our community still afraid to eat subsistence foods. My uncle found a tar ball just the other day. That stuff is still around and it affects our kelp beds, clam beds, and our mussels.

Ouzinkie # 240

Make special preference to rural area affected by the spill with emphasis on subsistence.

ISSUE: 2.2 OIL ; General restoration for continued oiling
--

REGION: Alaska, Outside the Spill**Fairbanks # 399**

While the Trustees are considering mussel bed decontamination, they should also plan to restore gravel beaches which periodically release oil in subsistence and recreation areas, by removing the contamination.

Mat-Su Borough # 404

While the Trustees are considering mussel bed decontamination, they should also plan to restore gravel beaches which periodically release oil in subsistence and recreation areas, by removing the contamination.

REGION: Anchorage**Anchorage # 1528 Pacific Rim Villages Coalition, Ltd**

We have proposed, and our constituents have agreed, that the restoration plan should involve a mix of restoration objectives. Oil ought to be removed because persistence constitutes a major threat to the environment, and attention should be given to a model which seeks to restore. We supported a mix of moderate restoration/comprehensive restoration. The Trustees do not indicate whether those models are even still under consideration. What is apparent is that the Trustees have expended over 25% of the settlement. There is not clear direction. For instance, the public comments addressed injured resources and reduced or lost services. The supplement expressly notes that "injuries persist most strongly in the upper intertidal zones" p. B-15. The report also states that "natural recovery...will occur in stages as the different species in the community respond to improved environmental conditions" see B-15. The report concludes that "full recovery will take more than a decade..." see B-16. The report ties such damages to oil persistence: "Subsurface oil persists in many heavily oiled beaches, and in mussel beds, which were avoided during the cleanup" see B-15. Yet, not a drop of subsurface oil nor a single mussel bed has been remediated! The restoration plan supplement does not even address the earlier concepts of "moderate" and "comprehensive" restoration. Section D of the draft discusses "General Restoration", an experiment. For instance, the draft proposes subsistence harvests of seals and sea otters may be "voluntarily reduced" if it was mutually agreed a subsistence resource was being over-harvested. See D-3. The problem, however, is that harvesting may not be as great a threat as continued oiling. See e.g., p. B-5, which notes a trend of high concentrations of hydrocarbons in bile of seals as well as damage to nerve cells in the thalamus of seal brains, "which is consistent with relatively high concentrations of...hydrocarbons" see B-4. The risks posed by oil persisting in the intertidal communities, and continuing threat to ducks and otters is also noted see B-15. Moreover, the funding for general restoration appears inverse of subsistence concerns. The Council has set out six examples of general restoration. See Section D. Commercial fish resources might be restored by improving spawning and rearing habitats at a cost of \$150,000 - 1.9 mm 1 year see D-4 through 5, while subsistence restoration involves voluntary harvest restrictions. Yet, removing harmful quantities of unweathered oil continues to be experimental. See D-7. And that only pertains to "eliminating oil from mussel beds" see D-7. We believe that restoration requires removing the unweathered oil and cleaning the mussel beds.

"Recovery monitoring and research" is presently in the developmental stage. This component would involve, however, "the causes of poor or slowed development and design, develop, and implement new technologies and approaches to restore injured resources and reduced or lost services" see E-3. Those resources include seals, salmon, and archaeological resources. We urge you to promptly implement recovery. Services include subsistence, as one of four services to be monitored. We have recommended immediate implementation of appropriate technology to remove oil, which we assert needs no further study as the cause of continued "poor or slow development".

ISSUE: 2.2 CLN ; General restoration for cleanup

REGION: Alaska, Outside the Spill

Mat-Su Borough # 1146 Alaska Survival

These are comments on the Draft Restoration Plan. First we thank you for approving the purchase of 42,000 acres near Seal Bay on Afognak Island. There is no more need to try and clean up the spilled oil from 1989.

REGION: Anchorage

Anchorage # 1587

3) Spend no more on "cleanup" of the spill. Nature will take care of that from here on. Protecting injured species of animals and their wild ecosystems from logging and other "development" activities is the best way to get recovery to happen. Be effective and the plants, animals, waters and people who love the Sound will sing your praises for generation.

REGION: Outside Alaska

US, Outside Alaska# 1066

I have recently spent a considerable amount of time sea kayaking throughout Prince William Sound. I travelled roughly 200 miles of shoreline from areas drastically affected by the spill, like Perry Island, to areas that were basically untouched, like College Fjord. From what I have seen first hand and what I have learned from various publications, the human intervention in the clean-up process and mild restoration projects has produced many negative results in its attempt to reverse the damage. Continued intervention may rid the environment of the signs of injured resources, but human impact on the area will only cause further deprivation of the pristine environment. I place a great amount of value in preserving the natural state of this area, whether or not I ever return. Just knowing there is a vast area of land considered the "last frontier" in the United States that is only traveled and experienced by a few brave souls is invaluable.

ISSUE: 2.3 XX ; Monitoring and Research: GENERAL COMMENTS
--

REGION: Alaska, Outside the Spill

Fairbanks # 5370

I found the monitoring workshop useful. It might have been better if there had been more PI's there. . ,

If they had a more PI-oriented meeting, it might be helpful.

Fairbanks # 5368

Will this monitoring be done within the frame of CERCLA and damage assessment? That was something that Michael Fry mentioned.

Fairbanks # 5352

Is Parametrix going to do Phase II of the monitoring plan?

Fairbanks # 5351

Would the monitoring plan go into the 8%?

Fairbanks # 5350

How does this relate to the conceptual monitoring thing being developed by Parametrix? Are they running on parallel tracks?

Fairbanks # 5349

How about studies that were either stopped or put on hold?

Juneau # 5504

I would like to amend my comment on allocations. The only sectors I would like to see some kind of certainty is for the monitoring and research and public information. I would hope to see those somehow limited to not exceed 10% of total expenditure.

Juneau # 5472

Is there any reason why there is only 10% or less for monitoring and research? Why is that so small?

REGION: Anchorage

Anchorage # 1619 The Wilderness Society, Alaska Region

We believe that the four Proposed Program Components for the monitoring and research program do not clearly distinguish the kinds of information that would be collected and how it would be integrated together. "Recovery monitoring" with the goal of producing a conclusive finding that 'recovery has occurred' for individual species has little relevance if this information is not connected with data about trends in other aspects of the ecosystem, and should not be a primary goal of monitoring. Furthermore, if a definition of "recovery" is used that considers only population-level effects to be significant, this could rule out collecting important data (such as sublethal effects) which may give clearer indications of lasting effects throughout the environment. Also, due to lack of baseline information and high natural variability, there may be lasting effects--even populations--that are not evident from monitoring. We also believe that it will be virtually impossible to measure the effectiveness rate of most individual restoration projects due to paucity of baseline data and high natural variability; therefore "restoration monitoring" must be done from a broader ecosystem perspective if it is to be useful. There is little, if any, "Restoration Research" that should be conducted; this should occur only in cases of severe, on-going population declines. We oppose any research into oil spill containment, or oil recovery (such as special cold-water dispersant technology along the lines of the Alaska Clean Seas proposal) under the guise of

Restoration research. "Ecosystem monitoring" should be the framework that all research and monitoring is conducted within. However, this should be done with the goal of understanding the long-term effects of the oil-spill, and better knowledge of the relationships of all parts of the ecosystem. However, the Trustee agencies have the individual responsibilities to assure that there is adequate information in the event of an oil spill or other development. We are specifically opposed to *Exxon Valdez* settlement funds being used to undertake baseline studies that are needed prior to federal OCS and state offshore oil leasing in areas such as Cook Inlet and Shelikof Strait. While necessary, it is the responsibility of the MMS to assure such studies are done as part of its on-going OCS program. Employment of local residents should be a priority. The Federal government should make full use of local-hire provisions. Monitoring and long-term research programs, site stewardship and archeological and other cultural resources, and restoration projects should hire rural residents. In conclusion, a comprehensive program makes the most sense and the Trustee Council needs to develop a new proposal. The "conceptual design" and "conceptual model" for the monitoring program does not appear to provide for adequate participation and decision-making by those with expert traditional indigenous knowledge. This must be an explicit part of the concept of the program. Also, there must be adequate field work, and means of incorporating expert opinion and knowledge from the public.

REGION: Kenai

Homer # 1027

Although research and monitoring of some species in the spill area is warranted, a mechanism should be developed to allow private groups to bid on projects. As it stands all monies are funneled through agencies with no chance for private groups to directly bid on the work. Low level monitoring of many species could be handled through local centers such as the Prince William Sound Science Center.

Nanwalek # 5622

This thing is going to take a long time for recovery. It will take a lot of study.

Port Graham # 5785

I favor more monitoring than restoring because monitoring will help us stop worrying about the danger. We should try to bring back what we lost.

Port Graham # 5774

Streams should be tested every year to see the results.

Port Graham # 5755

One of the other things not mentioned is who will monitor the long-term effects of the hydrocarbons on human beings. The animals are being monitored.

Port Graham # 5744

Why would there be such a long period between monitoring?

Port Graham # 5743

How many times a year would you monitor?

Seldovia # 6146

I think it is a very delicate balance to achieve both of the above arguments (not to become a deep pocket for research, but enough to understand ecosystems).

Seldovia # 5865

Nothing like this has ever been done. No one has ever tried to spend \$1 billion. Understanding ecosystems is rather primitive. Most of this is going to be research. An awful lot of attention should be put into monitoring. A lot can be learned from monitoring. You learn some about response if you perturb a system.

Seward # 5939

An ongoing research program is needed. More emphasis should be put on a facility and associate it with an on-going program.

Seward # 5921

The research projects you are doing, are they under public bid?

Seward # 5906

What is the price for a monitoring company to develop a conceptual plan?

Seward # 5905

Where is the monitoring company from?

Seward # 5904

Regarding research and monitoring, is there a plan? Will it be an integrated disciplinary process?

REGION: Outside Alaska

US, Outside Alaska# 1013 DOI, Bureau of Reclamation

7. Control Areas: Are control areas for identification and measurement of success of the restoration program being set up? This is imperative to identify if your efforts are being successful. I am sure that many of the points that I have made here are already underway in your efforts to restore the ecosystem. However, they are not well articulated in the document that I received. I am confident that with the right scientific input that a solid and logical restoration program can be developed. I would like to remain involved in your efforts and request that you retain me on your mailing list. Thanks and good luck.

REGION: Prince William Sound

Cordova # 5283

How many years have the scientists been studying these different resources?

Tatitlek # 5993

Some of these alternative plans in here call for monitoring and research. I guess there has been monitoring and research going on all along. But it has mostly been done by people from outside the region. In conjunction with doing this would it be possible to do some of this monitoring from

within the village? We could take samples and observe things here as part of a larger monitoring program.

Whittier # 6055

Do you handle research piece by piece, or is it continually happening as data is obtained?

ISSUE: 2.3 PRO ; SUPPORTS monitoring and research
--

REGION: Alaska, Outside the Spill

Fairbanks # 5358

The university tried to study the effects before the spill. Nobody wanted to pay for it. The only studies which were done were right in Port Valdez. There you had the greatest control over a potential spill. An awful lot of the citizens didn't know where down stream was. It strikes me that one of the most important things is to solve the original problem. Here is a source of funding to look at things like that. The account would probably be adequate with a little inflation proofing. I have studied a lot of these sites. We are losing track of our sites. The marine coastal communities have changed through natural cycles. Studies would be one way to find out information. Some mussels and barnacles were killed by cold. There may have been other things happening. There are so many unanswered questions. If we had the information before the spill, we would have been on top of things. Money could have been saved on studies. I support this endowment notion, and it will take some things beyond the spill. If we can't keep this thing alive, nobody is going to watch it for us. The endowment would solve a lot of problems. We would be in better shape if there is any perturbation in the future.

Fairbanks # 5356

The general public doesn't seem very well educated about different effects. We had no baseline data to fall back on so we ended up spending money to get that data. We would have a better understanding of the natural variations if we spent the money now for the data.

Fairbanks # 1136 School of Fisheries and Ocean Sciences, UAF

In this correspondence I advocate future Trustee Council sponsorship of a comprehensive monitoring and research program to define the recovery of damaged resources and to place the functioning of these resources within the framework of the ecosystem that supports them. We (the scientific community) were caught badly off guard by the EVOS in the spring of 1989. Had there been a general understanding of the form and function of the coastal ecosystem of Prince William Sound, lower Cook Inlet, Kodiak and waters to the west, a much more informed and efficient program of damage assessment and mitigation could have been organized.

Fairbanks # 767

Establishing endowed chairs at the University of Alaska in, for example, marine sciences and ecology/biology would ensure that continued research and monitoring of PWS would take place. These positions would require effort in those areas specific to PWS, and thereby guarantee that needed research would be done.

Fairbanks # 573

We do need to better understand and measure this environment and this is possible with the funds made available from this spill.

Fairbanks # 452 U of A Fairbanks, Dept of Chemistry

Long-term research in animal health in the area is needed. 1) To establish new baselines, 2) monitor future changes due to "hopefully" increased human activity.

Fairbanks # 431

So many of the items have a "no baseline population" statement that monitoring and research should be a top (and continuing) priority. In addition, restoration activities may actually be detrimental to a second population if there is not adequate observation and research.

Juneau # 5493

I consider research and monitoring as one of the more important things we can do. We don't necessarily know enough to fix things, but we could watch the progress of the ecosystem. My understanding of the trade off of the goal of habitat protection and acquisition and one of the policy issues regarding human uses is I see those two as being mutually exclusive. I hope this is recognized in the deliberation process. What is going to be most efficacious is going to involve purchasing or limiting human uses in some areas.

Juneau # 481

Support of long-term monitoring and research

Juneau # 273

Endowment funds to be used for education, monitoring and research on PWS habitats and ecosystem would

be the wisest use of the funds that I can think of. With our shrinking state budget, fewer activities of this nature will be available from state agencies or the university. Endowment funds earmarked for specific positions or activities would provide wise stewardship and future response capability.

Juneau # 256

What we all need is the research to devise the strategy for the inevitable next spill.

Juneau # 248

Do include monitoring activities for at least 10 years, to evaluate recovery measures and natural recovery.

Juneau # 60

I would like to see money used to support education and research. Setting up a program in Southeast Alaska at the University would contribute toward education. Jim King has suggested endowing chairs to ensure an ongoing program. UAS could use a biology conservation program. With increasing development in Alaska, conservation programs are essential. Raptors and other birds of Alaska are vulnerable to development and disasters like the *Exxon Valdez*. Research and education within the state are a must!

Juneau # 59

I would like to see a larger percent of this trust for research. If we have knowledge of the environment the restoration actions will be more effective. Eliminating one species to see a rise in another defeats the purpose. Education more people about the environment conservation will: 1) Create more researchers, 2) hiring a professor to lead research projects, and 3) create jobs for students and Alaskan residents.

Juneau # 58

I think it would be beneficial to put restoration money into the University of Alaska to provide for research programs. This would allow students to learn at the same time that valuable data is being obtained.

Juneau # 56

Please use 30% of the money for research within Alaska.

REGION: Anchorage

Anchorage # 6106

I would like to commend you folk for hard work. I would support at least a 50% endowment and about 25% for monitoring and research.

Anchorage # 5073

I submitted a proposal urging the creation of a long-term research endowment. I would hope the paper 12/22/92 could be made a part of the record. I have attended a lot of TC meetings and have intensified my support for an endowment approach. It was at the end of one meeting that it was pointed out that a study should be carried on for ten years for a total of a million dollars. We need to take a long view. The monitoring and research activities for PWS, Kenai Peninsula, Lower Cook Inlet, Kodiak Archipelago and Alaska Peninsula have to be coordinated. We talk a lot about improving things and injury. We have never had baseline, so what is the goal we are trying to reach. We should put a minimum of \$100 million in, but it should be ongoing. I don't think we can put an artificial time limit of eight or ten years and expect to do the job. There was a major piece of legislation by Senator George Mitchell a few years ago that set the entire coastline of the United States; Alaska being one of nine regions. The Sea Grant program is working on that. This whole area of the spill is going to be a part of that component. This is a wonderful opportunity to get information for rehabilitation of the area and get the real coordination we need. We make a big mistake by looking at things year by year and not coordinating over the long term. The percentage is too little on the research and monitoring and should be 12 or 13%. I liked the idea of considering a larger endowment so that as you learn, you will have some dollars to make some of the rehabilitation. I will continue to push for that. We don't know the answer of what is possible but I do feel the Trustee Council will come and go, and we don't have the consistency we would get under setting up an endowment.

Anchorage # 1623 Alaska Center for the Environment

Continuing Monitoring and Research A Priority: In addition to use of the Settlement for habitat acquisition and protection, continued support for scientific monitoring and research is essential, particularly fisheries research. Continued monitoring and research is especially important to ensure

proper understanding of ecosystem impacts. Monitoring and research should not be focused narrowly on single species or populations but include degradation of habitats, chronic and sub-lethal effects, including changes in physiological or biochemical changes in productivity.

Anchorage # 745

Research should include baseline data collection such as cataloging anadromous fish streams. This will be valuable to assess not only recovery but impacts from future accidents, natural changes, and human use changes. Research should also include documentation of the effects of human activities on marine mammals, and research on species that may be in decline, including herring, both hatchery and wild sockeye and pink salmon, and effected species of waterfowl.

Anchorage # 744

Set up endowment to provide research and monitoring funding that will lead to better management of the spill area's natural resources.

Anchorage # 742

What Alaska needs is a marine studies center which focuses on the marine environment surrounding Alaska. Not only would this center be very important to the ongoing recovery of the spill zone-- other studies such as north Pacific fisheries management, marine mammals and other important studies which are crucial to the proper management of marine resources around Alaska. Funding of operations could be covered by setting up an endowment so scarce state revenues would not be needed.

Anchorage # 705

In favor of research at PWS Research Center.

Anchorage # 694

Appropriate \$2-3 million/year for monitoring, research and restoration from an endowment of \$30-50 million - don't let it get eaten up by high administration costs.

Anchorage # 465

The use of oil spill money for the enhancement of public facilities or subsistence users or creation of wilderness area or acquisition of lands, timbered or otherwise is inappropriate. The money was originally acquired as a penalty, the penalty funds should not be used to set up a "bureau" for preservationists. There may be a scientific question whether beach cleaning is in fact a practical matter. It appears that a scientific study of the effects -- long-term -- of the oil spill is practical and should be funded so that methodology and effects will be available in the event of another catastrophe.

Anchorage # 230

Serious thought should be devoted to monitoring and research efforts that will provide good baseline information in Prince William Sound and the Gulf of Alaska in the event of future oil spills. Only long-term research and monitoring studies will provide the kind of information need to assess future spills. Most studies that only last a few years do not provide very useful information because of natural variability!

REGION: Kenai

Homer # 1190 North Gulf Oceanic Society

We would like to place our support behind the formation of the *Exxon Valdez* Marine Research Endowment as proposed by Arliss Sturgelewski and others. Monitoring and research would occur under the endowment. Long-term research is vital but should not be the exclusive realm of state and federal agencies. It is important that proposals (and ideas) be accepted from all sources and receive independent peer review. The endowment should establish a permanent research program fund out of which earnings would support a long-term program. A proposed amount of \$30 million would be placed yearly into the fund of which \$7 million a year would be used for research and the other saved in the permanent endowment fund which would total 184 million after 8 years. I hope you will seriously consider this proposal.

Homer # 568

To try and perform restoration on a moving target is wasteful, because of its ambiguity. Conserve the resource of funds. Monitor the damage and natural restoration process.

Homer # 320

"Monitoring and Research" and "Habitat Protection and Acquisition" are the two most important categories the money should be used for, and the endowment (40%) should be set up to ensure these categories receive support and funding for some time to come. Habitat protection/acquisition is currently very popular and it is important and should be emphasized, but not at the expense of losing the opportunity to learn more about the resources before another spill happens. (and it will!) Little or no support for research monitoring would be a classic case of short-sightedness (but in keeping with some of the ridiculous proposals floating around out there to spend the \$). Conducting research on many of the resources that will actually answer questions about them is expensive because of the environment and difficulty of working on them. This is an opportunity to actually do work that can answer long-standing questions!

Other Kenai Borough# 460

Bring this circus sideshow act to an "END" NOW! NO more lawyers. No more whining, let us get on with our lives. Research is the only valid activity left to do. I and many folks that I know are tired of hearing about this and are disgusted by the leaches making a career out of this disaster. It is over, so end it.

Other Kenai Borough# 432

Some research and monitoring. But most should be spent now on acquisitions.

Seldovia # 5878

I am in favor of Alternative 5 with a slight modification. I think the research and monitoring portion should be doubled to 20%. We don't know enough about Mother Nature and how the ecosystem works.

Seward # 5955

We have research on the genetic effects on the liver and kidneys, and we know that will be a problem for future offspring.

Seward # 5954

In terms of research, we have had an oil spill. Letting the opportunity go by for research would be a big mistake. If it isn't done now, it can't be done in twenty years.

Seward # 5951

We are talking about habitat protection and restoration. For a species to continue, it needs food and I don't see any protection for its food source. Are we going to be able to protect this? You can have the rate of recovery, but if there is no food for them to eat, how are they going to recover. Maybe that is where research can come in. You know the food chain had to be affected.

Seward # 5947

In looking at the map and the amount of private ownership, I wonder why they need one acre more for any kind of habitat protection. They already have an overwhelming amount already owned by the National Forest, Bureau of Land Management and the state. Why not put this into research and prevention? We have millions of acres already protected. I don't see how they need more to protect. Buying more is not going to do it.

Seward # 464

REGION: Kodiak

Kodiak # 5542

I also would like to see research on crab impacts. When he said that crab were not mentioned it reminded me of when the spill hit Shelikof side of Shuyak in the area of Nikita bay. It wasn't that large as part of the spill but nevertheless it covered the beaches there, I think 30 to 40% of the beach. Afterwards there was a thousand, maybe more, dollar sized dungeness crabs dead on the beach in that area. I don't know for sure if they were related to the spill at the time but it was in the summer of 1989. It would be good for the spill money to be directed to something like that because it might generate dollar value. Dungeness crab are money in the fishermen's pocket. There has been a lot in the papers about spending money to buy trees, and I don't think that is as important as monitoring and looking for a way to recover species that have been damaged by the spill.

Kodiak # 477

I have watched the legal and assessment process for several years now, and I feel the underlying problem is no (little) baseline data was available to truly judge the impact of the spill. I feel continuing monitoring should be done within the spill area and studies to gather baseline data should be performed. What happens if another spill occurs off Montague Island, or further in Valdez Arm? An encompassing study package for areas that might be affected should be conducted. This would have multiple positive effects: 1) stimulate jobs and research in Alaska, 2) positive PR, which the state could use, 3) link with other countries who may have spills, 4) last and most important, the ecosystem will be understood in the event of another disaster

REGION: Outside Alaska

US, Outside Alaska# 1616 Pacific Seabird Group

In general, we believe that the damage assessment projects for seabirds have been worthwhile. PSG

believes that understanding the magnitude of harm is important to decide the types and extent of restoration activities that may be necessary. PSG also believes that the studies on marbled murrelet and harlequin duck habitat requirements should prove to be very useful in assessing potential land acquisitions for these species. These studies also should assist federal and state forestry agencies in establishing the width of forested buffer strips that are necessary to protect the breeding sites of harlequin ducks.

US, Outside Alaska# 1452

At least 80-90% of the available funds should be spent on protection and restoration. The balance on research and education on prevention of future problems.

US, Outside Alaska# 1011

Please excuse my stationery, but I wanted to write to you before I left Prince William Sound and send you some of my thoughts on how I would like to see the restoration money spent. My first visit to PWS occurred in 1985 and I still have vivid memories of the abundant wildlife and magnificent scenery. Eight years later, I have just finished spending three weeks kayaking south from Whittier to Knight Island and Icy Bay. Traces of oil in the mud of Knight's quiet bays and black bathtub rings of oil on the rocks reminded me that things have changed and PWS has experienced a deep and lasting wound since I was here last. But my impressions are superficial--it seemed as if there were fewer otters, But were there? Is there still hydrocarbons in the food chain contaminating animals and birds? I would like to see money devoted to continued research into the impacts of the spill on the inhabitants-- both human and non-human--of the Sound.

US, Outside Alaska# 1010

After learning about the estimated 900 million dollars that was allotted to the State of Alaska, I feel that maybe my input to the situation could help in the decision about how to properly spend the money. Speaking from my point of view, I feel that a majority of the money should be spent on restoration and the rest on science and public awareness. This way the almost pristine country I paddled through can remain that way for others to see without paving trails. I'm keeping this letter short on the account that I understand that you must get large quantity, but if at all possible, please respond to my letter, so that I know that it has been received. Thank you (response sent)

US, Outside Alaska# 1003

A minimal amount should be spent testing more animals. however the majority, I believe would be most useful in preventing further logging or development. This is a very special place and these-- as a registered voter and college student have stated my recommendation.

US, Outside Alaska# 1002

I feel the money should be used partly to support the natives (Chenega Island), some should be used for continued research and the rest put into an account for future use.

US, Outside Alaska# 680

Monitoring is necessary to assess recovery. It is important to take an ecosystem approach. One should monitor the less important species, e.g., prey species of targeted injured species. This is useful in evaluating the overall health of the ecosystem.

REGION: Prince William Sound

Cordova # 1774 City of Cordova

At the August 4, 1993 regular City Council meeting, the City Council of Cordova rescinded Resolution 91-92 requesting that habitat acquisition be given highest priority and substituted for the position of the City of Cordova the following motion: "Motion by Novak, seconded by Fisher to rescind Resolution 91-92 and direct Administration to communicate to the Trustees Council and to the Eyak Board of Directors support for the fisheries research and rehabilitation and the possibility of an endowment fund and debt retirement for hatcheries; and any habitat buy-back be limited to the Power Creek, Eyak River and Eyak Lake watershed areas. Voice vote-motion carried. (Council members Andersen and Bird not voting due to conflict of interest.)"

Cordova # 1566

Money should be spent to research the effects of the spill and to provide baseline data to prepare for the next time.

Cordova # 1564

I am in favor of monitoring and research but only a few percent of the available funds should support this need.

Cordova # 1497

I ask the Trustee Council to also act on fisheries research and marine mammal restoration projects.

Cordova # 1485 Cordova Aquatic Marketing Association, Inc.

Cordova Aquatic Marketing Association, (CAMA) is a long-standing, Cordova-based fishermen's organization. Although CAMA does not oppose habitat acquisition, we feel there should be an equal sum of money set aside for research and restoration of the marine environment in Prince William Sound.

Cordova # 798 Prince William Sound Conservation Alliance

There may be instances when species not listed as having been damaged by the EVOS merit study because of newly recognized links to species and services injured by the spill. If strong evidence points to these links, the Trustee Council should provide funding for carefully planned research to understand how the linked species may impinge on the restoration of the injured species and services.

Cordova # 749

The fishermen and communities at PWS favor at least 40-45% of remaining EVOS monies to be put into a fund or endowment to be used for research, evaluation, restoration and replacement of fisheries resources in the Sound.

Cordova # 706

I support the idea of a marine research endowment as proposed by commercial fishing organizations, the University of Alaska-Fairbanks, Arliss Sturgelewski, and others.

Cordova # 702

I would like to see more marine habitat research and restoration in PWS. Marine life is the one that got hurt, not the trees or some scenic viewpoints.

Cordova # 677

Ensure Fish and Game has a 10-20 year budget to operate and do research or your fisheries will be lost in PWS.

Cordova # 676

More marine research and restoration.

Cordova # 671

I would like to see monitoring and research for salmon and herring stocks in the spill-affected areas.

Cordova # 433

Don't waste money on just any type of monitoring - use it to find answers to important problems.

Cordova # 20

Research is NOT a dirty word. Studies have value to the resources that were ignored. Studies on salmon and herring will provide tools to those responsible for restoring, managing, protecting, and enhancing the resource. If Trustees continue to use the word "studies" like George Bush et al says the word "liberal," then I will have no faith in their vision of the future of Prince William Sound and those other areas impacted by EVOS.

Valdez # 1488

Wanted 80 to 90% of funds for habitat acquisition with the Coalition's group list as priority (Port Gravina, Port Fidalgo, Shuyak, etc.). The remainder of the money used for monitoring and research.

Valdez # 1074

Alaska Wilderness Sailing Safaris opposes use of restoration funds for studies of species not injured by the spill, including killer whale research. We support continued funding of studies for species injured by the spill. We support testimony previously submitted by Alaska Wilderness Recreation and Tourism Association.

Valdez # 1018 Alaska Wilderness Recreation and Tourism Assoc.

2. An endowment should be established to fund research and monitoring of the ecosystem. If subsequent research confirms the decline of a population, then restoration projects for those species may be funded from this endowment or by subsequent settlement with Exxon. Populations of some species may still decline as a result of infertility and disease resulting from the spill. Funding should be made available to continue monitoring these populations and to restore them, if necessary. Restoration team members have indicated that it would take about \$100-\$150 million to create an inflation proofed endowment.

Valdez # 296

My plan would be to focus on wildlife, species by species and work until recovery begins, then let them grow on their own. Meantime, monitor and research to provide a body of knowledge that may mitigate the next disaster.

Valdez # 274

The focus should be to restore damaged area and resources. Because good, reliable monitoring takes .,

years, (fish cycles are 4-6 yrs) the benefits from an endowment will allow those type time frames which don't fit as well in the 8 years remaining of the current funds. There's a strong lack of good baseline data on most species and it's a guess to figure impacts without good baselines. An endowment will help establish those baselines.

ISSUE: 2.3 CON ; OPPOSE monitoring and research
--

REGION: Alaska, Outside the Spill

Fairbanks # 5367

Everyone said no more money on studies.

Fairbanks # 5357

It seems like a lot of people are saying quit spending more money on science studies.

REGION: Anchorage

Anchorage # 1598

The projects mentioned under Monitoring and Research Program are not necessary and will do nothing to enhance recovery.

Anchorage # 651

The oil spill is over and so should the studying of it. Don't let the oil spill onto any more of our resources by losing sight of the efficient investment of the settlement money. No more studies.

Anchorage # 620

"NO" to more research & monitoring let other sources fund these activities.

Anchorage # 184

Kodiak N.W.R.-- Karluk RV and Lake, Afognak Is (north end). Stop spending (wasting) \$ on more studies. Get the natives to cooperate and buy some of their lands.

Anchorage # 183

Secondly, it is time to stop spending money on endless and useless studies and monitoring programs. These do nothing but absorbing \$ to pump up the bureaucracy of the agencies involved.

REGION: Kenai

Seward # 170

There's been research, but RESEARCH DOESN'T RESTORE ANYTHING, you can study it to death. Now is the time to be doing something to restore the populations and the habitat (actually 2 or 3 years ago would have been the right time). Yes it would be nice to have more information to make better decisions but the spill happened and you MUST make the best decisions based on the best info you have now.

REGION: Outside Alaska

US, Outside Alaska# 1060

Monitoring and research should be limited to what is needed to steer habitat protection and acquisition.

REGION: Prince William Sound

Chenega Bay # 6092

I agree with that (not further research recovering resources).

Chenega Bay # 5146

It is my opinion that we don't want to encourage further research dollars funneled toward resources which are recovering.

Whittier # 6073

I am not for spending all the money on finding out if it has been hurt. I am for spending money for what can be fixed.

ISSUE: 2.3 ECO ; Supports ECOLOGICAL MONITORING
--

REGION: Alaska, Outside the Spill

Fairbanks # 572

If life hands you lemons--make lemonade! The *Exxon Valdez* oil spill was a tragedy. We have an opportunity to visit to learn something about the Prince William Sound ecosystem--That would have been a positive by-product of the spill! However, there was no comprehensive positive approach to the spill studies. Our overall knowledge of the PWS ecosystem is little improved compared to 1988. That is the second tragedy. A comprehensive study could be designed & funded under the restoration plan to support long term monitoring in a comprehensive manner from an ecosystem approach. Putting funds into an endowment would fund this. PWS cannot be restored, but it can be understood. Understanding the ecosystem of PWS would contribute knowledge to be applied to the rest of the state of Alaska marine ecosystem, especially in the Gulf of Alaska. This would be a positive contribution.

Juneau # 500

I strongly favor establishment of a substantial endowment that would only be used to support ecological monitoring research indefinitely. These activities have almost no other source of support.

Juneau # 479

Money should be expended increasing our knowledge of the interaction of various ecosystem components. The Trustees have a real opportunity to not only be responsive to increased knowledge and understanding of natural resources interactions in the spill area but much of this knowledge and understanding will be applicable to many other areas.

REGION: Anchorage

Anchorage # 1619 The Wilderness Society, Alaska Region

Long-term recovery monitoring should comprehensively approach the entire ecosystem. Long-term monitoring of the ecological effects of the oil spill is crucial and we support an integrated-ecosystem approach. The goal of this program should be to understand the long-term effects of the oil spill, to evaluate recovery, and to understand the relationships of various components of the spill-affected ecosystem. The Trustee's monitoring program must be better integrated with regular agency monitoring, research, and management so that we best further our understanding of what's going on in the spill affected ecosystem, and also maximize the "bang for the buck". This program needs to depart significantly from the approach taken for the damage assessment phase dictated by litigation needs which focused investigation on individual species most expected to show dramatic damages. There has also been ample research to document linkages of upland habitats with species injured by the spill and so, continued emphasis on this kind of monitoring is unnecessary.

Anchorage # 1619 The Wilderness Society, Alaska Region

The Wilderness Society is pleased to provide comments on the proposed Restoration Plan for the Exxon Valdez oil spill. National interests are truly at stake. Most oiled shorelines were within the boundaries of conservation units designated by the Alaska National Interest Lands Act. Designated Wilderness shorelines of Katmai National Park and Becharoff National Wildlife Refuge, proposed Wilderness in Chugach National Forest and Kenai Fjords National Park, and the spectacular defacto wilderness coasts of other national parks and wildlife refuges were harmed by the oil spill. As well, the federal Trustees must represent the public trust of all Americans in their decisions concerning wilderness, wildlife, and other natural resources and services that were damaged by the oil spill. The cornerstone of the Restoration Plan should be an ecosystem approach that provides restoration by preventing further damage to injured resources by protecting threatened fish and wildlife habitat within coastal forests, rivers, and shorelines by acquiring land, development or timber rights, or conservation easements on a willing seller basis. The Trustee Council needs to move beyond the approach of conducting negotiations by individual agencies for relatively small parcels to a more comprehensive approach supported by a team of top-notch negotiators. We also believe that the Trustees must be dedicated to a well designed long-term ecological monitoring program using a small portion of the funds. Investigation of ongoing damage to fisheries and wildlife resources is necessary and should be done in the context of a comprehensive and well integrated program that addresses not only individual species, but also the relationships between various components of the marine and terrestrial ecosystems.

Anchorage # 694

Identify important marine habitat and set some appropriate limits to fishing for purposes of research and long term monitoring and management (focus on rockfish/crab/coral habitat).

REGION: Kenai

Kenai # 1014

The *Exxon Valdez* oil spill helped point out how little is known about the marine resources in northern coastal waters. One of the greatest problems in evaluating the damage was the shortage of

baseline data for before-and-after comparison. Indeed there is a great need for baseline marine studies in waters throughout the Alaskan coastline, and especially in those areas designated for oil leasing and/or transportation. There has been some interest in using a portion of the funds remaining in the Oil Spill Settlement Account to endow chairs in various marine sciences at University of Alaska campuses. I highly endorse this concept. What better way is there to stimulate meaningful long-term studies of our fragile coastal ecosystems than to establish full professorships, fully funded in perpetuity, and thus not subject to the usual whims of short-term funding politics? Not only would this enhance our understanding of northern coastal environments, but would boost the prestige and attractiveness of the University, making it a world leader in this important field. Such a plan makes more sense than throwing all the money away on short-term expensive make-work restoration projects, and twenty or thirty endowed chairs at two million dollars apiece leaves the bulk of the remaining funds for restoration and habitat acquisition projects. Thank you for considering this suggestion.

Seward # 1091

Extensive research is needed to evaluate and monitor the overall health of this ecosystem. This fund provides the opportunity to examine this microcosm in finite detail and learn how humans can live in harmony with this particular marine ecosystem.

REGION: Kodiak

Kodiak # 5541

[Area K Seiners Assoc. continues]: It also seems like there is a tremendous bias against taking an ecosystem approach when you're looking at in-the-water things. Right now we're looking at habitat protection and acquisition. When you're talking about the water there's nothing to buy. As far as buying land that alternative is completely lacking when you're talking about the whole of Alaska marine ecosystem. As far as general restoration there doesn't seem to be much that can be done when you're talking about the open water. Monitoring and restoration is the highest priority that can be dedicated to that money. It looks like right away in the monitoring and research end you're getting the short end of it, because you can't buy the land. I think that's why our Area K Seiners are advocating an endowment specifically for monitoring and research, that can be designated specifically for that category and not be used for habitat acquisition or restoration. Long term monitoring would also be important and right now that isn't emphasized enough.

Kodiak # 5530

Are we looking at monitoring to look at recovery or are we looking to find out what's really there? When you've got rockfish species that are injured you have to ask more questions. When you disperse oil into the water column what is it really doing? To date we don't have a real clear idea of what's happening in the water column.

Old Harbor # 1012 Old Harbor Native Corporation

We support some degree of ecological monitoring and restoration research. People should continue to learn from this spill so that we will have a better idea of what can be done if this type of disaster hits our's or somebody else's lands in the future.

REGION: Outside Alaska

US, Outside Alaska# 1013 DOI, Bureau of Reclamation

5. Ecosystem Linkages and Thresholds: Little discussion has been made regarding an understanding of the linkages and thresholds that define the ecosystem responses in the Prince William Sound ecosystem. Has this been or is it being done? A suggestion would be to include dollars for development of a technical paper and brochure for the public on the ecosystem dynamism.

US, Outside Alaska# 1013 DOI, Bureau of Reclamation

1. Short-term and Long-term effects: The majority of the alternatives presented appear to focus on the short-term elements of ecosystem recovery. Equally important is to understand the long-term impacts to population community structure and responses to the chronic effects of the spill. While many of the immediate responses to the spill were documented, the long-term dynamic variability of the ecosystem components is not well addressed. The greatest concern that we are dealing with in the Grand Canyon is that many of the publics are wanting an ecosystem that is unchanging and stable. The problem with this concept is that ecosystems by nature are dynamic and respond to fluctuations within normal boundaries and thresholds. The identified discussions in your brochure do not well describe the dynamic issues and the need to understand that dynamism through a form of adaptive management and long-term monitoring and research. 2. Ecological Design of Restoration and Monitoring: The ecological design of the restoration efforts and long-term monitoring programs should include not only the "name" and easily visible species but also those species that make up the food chain and ecosystem variability. In addition, ecosystem restoration should include not only biological elements but also the processes, elements and habitats that support the main "critical" habitats of the name species. This may mean that ecosystems originally not directly impacted by the oil spill may now be more important in maintaining ecosystem health. Their importance may decrease as the main ecosystem is restored but until then extra care should be taken to maintain their integrity. 3. Adaptive Management and Long-term Monitoring: It is quite likely that even after a set of initial alternatives are agreed upon and a Record of Decision issued that additional changes, based on an evolving system, will be required. In spite of what bureaucrats and administrators may want, the restoration of the aquatic and terrestrial ecosystems around Prince William Sound are going to require extensive and continual monitoring to ensure that the agreed upon actions are indeed satisfying the required endpoints. One means to accomplish this is by integrating an "Adaptive Management" concept into the monitoring program. Very simply Adaptive Management is defined as continually using the monitoring information as research input to evaluate ecosystem response to action. Monitoring must be looked upon as research in itself and as a continual measure of the effect of restoration. I have enclosed a paper on the concept of Adaptive Management that was prepared for the issues of ecosystem maintenance in the Grand Canyon.

US, Outside Alaska# 795

Three (3) major categories should be assigned for these funds and the bulk of the money assigned should be prioritized as follows: 1) Land Acquisition in Alaska - first in the affected area and then elsewhere within Alaska. 2) Well-defined research and monitoring to understand changes in ecosystems of the affected areas over time. Overhead money for research should be kept to a minimum. 3) Strategic Educational Materials that use results of #2 should be developed for the express purpose of informing the general public on a routine basis, so as to establish improved risk-management perceptions for the general public. This act will invest knowledge and possibly minimize the money . .

volume of claims in future spills because of minimizing degrees of uncertainty regarding resource sensitivity and status. Finally, using spill money to support all but the most central Administration activities for the spill should cease. Overhead steals from intended use and project results if not carefully monitored.

US, Outside Alaska# 438

The restoration plan should focus on two key goals: 1) Critical habitat acquisition and protection. 2) Basic research and data collection to gain a baseline understanding of the present ecosystem, its health and how it is changing. The only way to protect wild systems is to protect large solid undeveloped and unfragmented blocks of critical habitat. Therefore, such blocks should be put together now. Buy land to "round out" management areas and keep that land undeveloped and natural. Research will need to be completed to locate the most critical habitat lands which, in the end, should be purchased with an eye on putting together blocks that are large enough to help the ecosystem remain healthy. The best management is with a "light hand" research will need to be sustained to monitor and design any management plans. Critical lands: purchase native or other private lands on Montague Island and other islands in Prince William Sound. Alas buy Native lands in Kenai Fjords National Park.

REGION: Prince William Sound

Cordova # 5320

I agree there probably would be another level of bureaucracy and it could be a problem. However there may be some benefits to an endowment that outweigh the difficulties. One of them is the potential for long range funding. There are probably several endowment proposals. Arliss's concept was to support a marine ecosystem research capability. In her writing the University of Alaska really comes through. It may be an institution kind of concept. In defense of an endowment, it all depends on how you structure it and who administers it. They may not be all categorically bad. We've talked about the acute need here for herring research and we agree they are just one part of an ecosystem on which we have faulty information. In that case perhaps a long term endowment to support research seems to me very defensible. It all depends on how you craft the thing. I mentioned that during the course of the winter and early spring, representatives from different fisheries organizations met and we talked about how to get control, especially since the trustees were being unresponsive to fisheries issues. It needs to be broadened to an ecosystem that includes fisheries. There could be a Kodiak research capability, one in Cook Inlet and one in Prince William Sound, and there would be regional coordination. For example already we've got expertise here, in the science center, in PWSAC and in Fish and Game. There is expertise within all of these regions. If we got an endowment to support marine research, regional experts could make decisions.

Cordova # 1434

Supports studying herring and other ecologically important food fish that were injured as larvae in 1989.

Cordova # 1020

The objectives of the monitoring plan would be expanded to include the acquisition of baseline data allowing us to better understand processes that drive the ecosystem. Surveys needed, such as plankton and larval fishes/shellfishes, micro-oceanography, forage fish, and long-term climatic

trends, would be intensive at first then taper off once some baseline is established. After several years of intensive study, key species could be selected for continued monitoring and the effects of disturbances like oil spills could be tracked. Key species would include birds, mammals, some fishes and shellfish, index plankton tows and basic weather and ocean condition data. Many projects proposed in the 1994 work plan could be integrated with an included under this monitoring plan. This plan would require a fair amount of interagency and outside integration and coordination. Researchers involved would track data and provide interim reports to regulatory agencies, law-making entities, and the public through regularly scheduled meetings. After the first few years of intensive efforts, monitoring could continue at a reduced level and be funded by proceeds from the endowment. Excess funds could be reallocated to other special research projects, parks, or desired programs. Part of the endowment proceeds or monitoring plan allocation should go to the development of an inter-agency response or HAZ-MAT plan built using the baseline data. This response plan would coordinate the agency response and damage assessment resulting from the next toxic spill. The planned response would be much cost-effective than the response after the *Exxon Valdez*. Results obtained would more clearly define damages for the injured parties. This would make the lawyers' jobs easier, albeit they would be a bit poorer. The data from many projects covered under a monitoring plan have multiple uses and should be funded by multiple sources. Funds for projects should come from realistic sources. For example, data from monitoring adult salmon returning to streams could be used in an ecosystem model for the monitoring plan, by commercial fishery managers, and by a researcher monitoring eagle feeding patterns. Therefore, funds could come partly from the Trustees, partly from the fishery management agency, partly from the wildlife management agency, partly from industry grants, and maybe a small amount from a source like RCAC (the regional entity overseeing oil shipping). Similarly, a salmon tagging project that benefits monitoring exercises, hatchery managers and fishery managers could be shared with the Trustees by those entities. Organisms, such as forage fish, that have no commercial use and that are a crucial link in the food chain, would have to be more fully funded by the settlement since there are few entities with which to share costs. Private corporations involved with oil and hazardous material shipping should provide funds for research and monitoring. This is called creative financing and would be more palatable to restoration planners and to the public. It also makes our settlement dollars go much farther. However, creative financing requires a serious commitment from resource agencies, state and federal governments, private corporations, and user groups. Perhaps the Trustee Council can facilitate this type of "matching-funds" approach.

Cordova # 751

Research and monitoring in the spill areas has not been addressed yet and I feel it is extremely important. The PWS marine ecosystem is not well understood. There have been major fisheries disruptions in the last 4 years but due to lack of data, it is hard to determine the causes. Baseline data must be gathered before intelligent decisions can be made about oil spill damages and how best to address them. And this data needs to be gathered so that in the event of a future spill, the existing ecosystem is more quantified than it was in 1989. PWS was the most severely damaged area but the disbursement of funds to date definitely does not reflect that. Fisheries issues need to be more directly addressed than by habitat acquisition. Habitat acquisition is important when coupled with monitoring and research.

Cordova # 269

I feel that there should be a team of ecosystem researchers to research existing data on the marine

ecosystem from PWS to Kodiak. Pull it together into a framework that shows our gaps in knowledge and where the injured resources fit in. Then develop restoration plans.

ISSUE: 2.3 RES ; Supports restoration RESEARCH

REGION: Kodiak

Ouzinkie # 5736

We have to rebuild what we lost. Right now we don't know the extent of the damages today because we're still finding out about the effects, like clams, birds and deer. That's why we want more research.

Ouzinkie # 5722

The only impact to our lands over on Afognak has been through the ducks and the seafood. I don't care where you go they'll tell you the same thing. More research is needed to understand effects on the food chain.

REGION: Outside Alaska

US, Outside Alaska# 1247

While I also believe in research, I think efforts there should be minimal. This is a time to be practical. Help the habitat!

REGION: Prince William Sound

Cordova # 1435

Fund research on herring and pink salmon to see why returns are low and why herring had lesions.

Cordova # 1412 Cordova Aquatic Marketing Association, Inc.

Cordova Aquatic Marketing Association, (CAMA) is a long-standing, Cordova based fishermen's organization. Although CAMA does not oppose habitat acquisition, we feel there should be an equal sum of money set aside for research and restoration of the marine environment in Prince William Sound.

Cordova # 1020

I know that members of the public are opposed to spending more settlement funds on research. This is not at all surprising considering how the results from the NRDA process were kept under litigation, were poorly distributed, and were not explained well to the public. In addition, the oil spill research completed to date was not conducted under a comprehensive, integrated and coordinated plan. We can do better and knowledge is power. If we remain at this level of ignorance concerning the natural environment and our ecosystem, the next spill will cause the same flurry of data collection. The result will create some of the same unnecessary, uncoordinated, and difficult to interpret data sets that we have now. The public will be just as frustrated, will feel just as powerless, and money will be wasted. I hope this will not happen. Lets begin thinking more holistically, lets try to understand the "big picture" situation, and lets try to conduct some sound planning for the future. Thank you for your time.

Cordova # 689

I also urge funding of essential monitoring programs for herring, pink and other salmon species as well as crabs and other shellfish.

ISSUE: 2.4 XX ; Administration and public information: GENERAL COMMENTS
--

REGION: Kenai

Homer # 5401

What is the budget for the Restoration Team?

ISSUE: 2.4 ADM ; Administration
--

REGION: Alaska, Outside the Spill

Juneau # 5479

For actual projects dealing with restoration, is the administration cost to come out, or is there a separate administrative overhead?

Other Alaska # 294

Buy land - protect habitat! Put \$ in the field. Too much is being spent in the office.

REGION: Anchorage

Anchorage # 5086

I don't want an endowment because it gives too small an amount of money to be spent every year, and it also gives more years that administrative cost can be piled onto. I feel strongly that so much of the clean-up money is going to be spent by administrators.

Anchorage # 5074

I am not so sure what the best approach is. My real concern is that the state got much less than it should have from Exxon in the first place. An incredible amount will be eaten up in administrative cost. That is my real underlying concern of the whole process. Too much money will never be spent on things it needs to be spent on and will go for administrative cost.

Anchorage # 263

My #1 concern is that bureaucratic and administrative costs will eat up the fund. DO NOT LET THIS HAPPEN!!

Anchorage # 51

Since I work for the department in the accounting for these funds, I would recommend that the administration and allocation of these funds be streamlined. At the present time the process is cumbersome. (It) causes unnecessary paperwork and more funds are spent than should be required on getting the accounting paperwork done. If a plan is approved to start April 1st, then the funds

should be to the agency starting the project by April 1st, not a year later. This is perhaps an internal problem with the department, but the funds spent for staff time fixing problems caused by the delays in receiving funds could and should be spent on the resource. Perhaps management would say this should not happen but in the real world it does. Administration (the correct/proper) of funds is essential to getting the job done on time.

REGION: Kenai

Homer # 5448

I am very concerned about administrative costs. Are we creating with this Restoration Plan a whole new bureaucracy or are we going to utilize the services of some of the agencies we are already paying for?

Homer # 169

It is upsetting that money has been spent feathering the nests of the agencies that are to dispense this fund for restoration. The greed of these departments and the high salaries of the trustees administration is sucking this fund dry before a dime is spent on habitat acquisition the public should be in an outcry. Trim the fat from the administration costs.

Other Kenai Borough# 1142

It is aggravating to watch the settlement moneys being "administrated" away without concrete returns. Let's do the right thing.

Seldovia # 5883

I would hope that a lot of money doesn't go to pay management staff.

Seward # 170

I have been greatly distressed by the incredible cost of lawyers' fees and overhead (perhaps relatively low %, but amazingly high) and hardly anything done on the ground.

REGION: Kodiak

Kodiak # 5562

The administrative fee of 6% has to be the most distasteful part of the process to me.

REGION: Outside Alaska

US, Outside Alaska# 766

Maximum amount of settlement possible should be used to acquire habitat for natural resources. Minimize supporting bureaucratic structure.

US, Outside Alaska# 759

Maximum amount possible of money should be used to protect/acquire habitat. 100% of remaining funds. No or minimal amounts for bureaucratic structure or research or "restoration". Quality of many studies to date is questionable. Cut losses and allocate remaining funds to acquisition of habitat.

ISSUE: 2.4 INF ; Public information or education

REGION: Alaska, Outside the Spill**Juneau # 5504**

I would like to amend my comment on allocations. The only sectors I would like to see some kind of certainty is for the monitoring and research and public information. I would hope to see those somehow limited to not exceed 10% of total expenditure.

Juneau # 57

I think emphasis should be applied to general restorations; for example by educating the people. We as a people would benefit, for we would all comprehend how our environment works and in return would be able to apply our knowledge to restore our damaged lands and resources.

REGION: Anchorage**Anchorage # 651**

I feel the University of Alaska Resources Library should manage the Oil Spill Library. It really appears to be extravagant to pay for a unique Oil Spill Library. Start acquiring land or investing in ensuring that you can catalog the resources of Alaska. If you can't place the study area into the scheme of things, it's unforgivable. Invest in a multilevel information network for Alaska. Put restoration money into a computer system that can be accessed from the State or University library system. How ridiculous - this is the computer age and you invested in an old-fashioned library? What about Alaska and building an information network so monitoring is most efficient.

Anchorage # 370

I also think that there should be tours along Prince William Sound that are educational and inform tourists about what exactly happened and why. I think that the restoration plan is a very good idea and I hope it works!

REGION: Kenai**Homer # 6097**

I am dismayed by funds for public information because it doesn't get much beyond groups who attend these meetings. I object to dollars building tourism centers. We are trying to preserve wilderness areas and not increase pressure on wildlife by building roads. It does not embody the spirit the funds were set up for. It violates the ideals people had when allocating the funds. I agree on the issue on allocating any funds that would put any increased pressure on resources or damage them any further. I can see doing something to mitigate and lessen damage. This money is for restoration or an area and helping the damaged wildlife population. I think there should be some real consideration of not doing projects which are extremely intrusive, such as the one for common murre. The murre are nesting on steep cliffs and you would have to hire mountain climbers. I would strike the \$50,000 for this project.

REGION: Kodiak

Old Harbor # 5678

I want to get back to the education part. Why not put something aside for education in our community? Mother nature's going to have to do the restoration. Why not educate our kids so they can come in here and tell us what to do so we don't have to have somebody from outside like you come in here and tell us what to do.

Old Harbor # 5673

One thing I'd like to see done is to put funding into education for people in our community, because in handling the different problems we need to deal with having an education would be helpful. When these things arise we need people here with the education to deal with the situation. Perhaps they might even go further and something good come out of the spill in the end.

Ouzinkie # 5714

We want to know more about what happened in other spills. If you have a copy of reports on the effects of the Amoco Cadiz oil spill on people and resources please send it. [request given to OSPIC]

REGION: Outside Alaska

Canada # 1006

Educate, Educate, Educate. I think it is of the utmost importance to educate the users and visitors of Prince William Sound. Briefing sessions to everyone embarking on a trip should be given with particular stress on: minimum impact canoeing techniques, the Sound flora and fauna, interactions between human and wild animals and safety about sea, glaciers, wildlife etc.

US, Outside Alaska# 1065

I do feel that people should be kept abreast of where the funds went. Also the results on the natural recovery. These issues should be incorporated. Please inform me of the changes and results with the 610 million dollars.

US, Outside Alaska# 1011

I really believe money would be better spent preserving habitat and on education visitors to minimize their impact. At present I see plan number two as the one I favor.

US, Outside Alaska# 1010

After learning about the estimated 900 million dollars that was allotted to the State of Alaska, I feel that maybe my input to the situation could help in the decision about how to properly spend the money. Speaking from my point of view, I feel that a majority of the money should be spent on restoration and the rest on science and public awareness. This way the almost pristine country I paddled through can remain that way for others to see without paving trails. I'm keeping this letter short on the account that I understand that you must get large quantity, but if at all possible, please respond to my letter, so that I know that it has been received. Thank you (response sent)

US, Outside Alaska# 1002

I would like the Sound to remain as pristine as possible--maybe some of the money could be used for .

education--some kind of set up where people could be briefed on minimum impact techniques before getting on the water. This is only as idea--all people would need to be a part of the plan (Kayak rental shops) overall, I would like to be able to visit the Sound again and have the same feelings I do now. Cabins, visitor centers, etc., would take away the feeling of solitude. This is essentially what makes the Sound so inviting.

US, Outside Alaska# 795

Three (3) major categories should be assigned for these funds and the bulk of the money assigned should be prioritized as follows: 1) Land Acquisition in Alaska - first in the affected area and then elsewhere within Alaska. 2) Well-defined research and monitoring to understand changes in ecosystems of the affected areas over time. Overhead money for research should be kept to a minimum. 3) Strategic Educational Materials that use results of #2 should be developed for the express purpose of informing the general public on a routine basis, so as to establish improved risk-management perceptions for the general public. This act will invest knowledge and possibly minimize the money volume of claims in future spills because of minimizing degrees of uncertainty regarding resource sensitivity and status. Finally, using spill money to support all but the most central Administration activities for the spill should cease. Overhead steals from intended use and project results if not carefully monitored.

REGION: Prince William Sound

Chenega Bay # 243

Development of a curriculum for schools on oil spills and environment.

Tatitlek # 5999

Would it fund projects like education programs for the school to teach about the environment and the spill?

Valdez # 6031

There's an interesting specter going around here that maybe we need to broaden our view. I urge you to sit and listen to what is going on. Some in this community are upset and think something needs to go on now. We are a sport and commercial fishing community and a visitor community. I'm afraid we're going to see years of scientists sitting in boats watching ducks breed while the damage continues. The Trustees need to remember it was our name that was on that boat, it was the Exxon Valdez. People in the lower 48 think about coming up here, and the question they ask first is 'how's the oil?' I realize some of the money in the legislature was not tied to this money, but the citizens of this town are frustrated when they see millions spent on a whale jail in Seward. There's no doubt that Valdez and Prince William Sound are well-known words. But we must reach out and educate the public about the effects of oil spills. We have a wonderful mandate from the spill to share the lessons we've learned. A lot of the folks here are saying we need something to address things early. Exxon is announcing today in Atlanta the finds of their studies, and this puts Valdez back in the press again. I can't speak for the whole community, but in conversations with friends in recent weeks I hear them say we think the Trustees should address Valdez's needs. The Trustees need to recognize that our name was on that boat, and do it by education and do it soon. We need to see concrete suggestions soon. So our message to the Trustees is cut those purse strings loose and get something done now.

Valdez # 1025

This project is to build a center for PWS to provide the public with accurate information on the impact of the spill, restoration efforts, existing conditions in PWS, access and administration of the resource library and archives and ongoing education on the environment and natural resources and recreational opportunities in PWS. The location of the center would be Valdez. As the only community on PWS that is accessible by road, it provides the greatest amount of access to the most people. A center located in Valdez would be enhanced by the oil spill prevention and response capabilities, the most comprehensive in any one location in the world and the U.S. Coast Guard Vessel Traffic Service which is state of the art. The existing facilities such as PWS Community College and the Valdez Civic Center, which has large meeting capability and an auditorium, would afford a natural enhancement. This combination would provide an opportunity for hosting conferences, symposiums, seminars and other events to provide the latest information on the effects of the spill, restoration efforts and ongoing education on the environment and natural resource of the Sound.

Valdez # 1025

The result of this continuing attention is the reinforcement of the perception that oil is still present and the Sound is no longer pristine, is not desirable as a visitor/tourist destination nor a quality place to live. There is an important need to have a capability to initially provide accurate information on the impact of the spill and restoration efforts and then focus on providing education on the myriad of natural resources present in PWS. This will benefit Valdez, PWS, the State of Alaska and many others. There has been and will continue to be a great deal of information and data generated related to the spill in the form of studies, monitoring and reports. A resource library must be established and maintained along with archives for the extensive amount of spill-related data. The public must be assured access to this information. The administration required will be very important for many years to come.

ISSUE: 2.5 XX ; Spill prevention and preparedness: GENERAL COMMENTS
--

REGION: Alaska, Outside the Spill

Fairbanks # 5353

Do you know what the PWS RCAC has proposed for funding?

REGION: Anchorage

Anchorage # 6103

Will this (existing prevention activities) come out of the restoration funds?

Anchorage # 5042

What about double hulls to prevent this problem?

REGION: Kenai

Homer # 5450

How about prevention? It has not been addressed.

Homer # 5390

Is the issue of double hulling outside the Trustee Council's purview?

Homer # 5386

Who will make the decision about prevention?

Homer # 5385

How does funding for prevention fit in?

Port Graham # 5791

We had five boats involved in spill prevention in Seldovia.

Seldovia # 5846

Can any of these funds address spill prevention?

Seward # 5900

Is there any other avenue if this pot of money is not used for prevention?

REGION: Prince William Sound

Tatitlek # 5995

Isn't spill response and prevention the responsibility of the companies who ship the oil? I know we had fishermen here who talked against it when they first talked about putting the pipeline in here. They said there was no way a big spill could happen and if it did happen they could take care of it. We lobbied hard and even tried to stop the pipeline from the fear of what could happen. That was

right in the very beginning, they said they would provide all of the spill prevention and response capability, and there would be no problem.

Whittier # 6115

We have to address why we were not prepared for the oil spill. It is because the public was out of sight and out of mind.

Whittier # 6088

I would like to see when the decision will be made on future spill preparedness.

Whittier # 6076

The sewage treatment plants' funding was cut. We need to start cleaning up the water from every source. We need to clean up the Sound's water.

Whittier # 6054

Is the decision regarding preparedness political?

Whittier # 6048

What about future oil spill preparedness and the ability to respond?

ISSUE: 2.5 PRO ; Supports spill prevention and preparedness
--

REGION: Alaska Peninsula

Chignik Lagoon # 5225

We just suffer it, it's happened, it's over with and we just keep going. We just have to make sure it doesn't happen again.

Chignik Lake # 5257

Could this money be used to buy oil boom in case there was ever another spill? We built our own boom during the spill but it didn't work particularly well, and it would be better to have good boom ready.

REGION: Alaska, Outside the Spill

Fairbanks # 176

The state has let down its guard re: legislation which addresses preparedness for future spills.

REGION: Anchorage

Anchorage # 1089

I have followed events stemming from the *Exxon Valdez* oil spill with the greatest interest. This is due to education and experience in newspaper reporting, public affairs; public information officer, EPA funded water quality agency; paralegal training and experience; outdoor recreation enthusiast, certified instructor-disabled skiers. There are, I believe, two major areas in which the settlement money should be spent. One is spill prevention.

Anchorage # 444

Use your heads - figure out what happened as a result of the spill and prepare for another spill. Anything else is not acceptable.

Anchorage # 434 Chugachmiut

While I think we have to be prepared in the event of another spill. I don't think enough emphasis is being placed on Spill Prevention. I think regulations regarding the handling and transportation of oil should be as stringent as those dealing with radioactive materials. We need to mandate double hull tankers, use of tractor, tugs, etc. If we allow another spill to occur in PWS all of this is a big waste of time and money and won't matter that much!

Anchorage # 260

Chronic low-level oil pollution from fishing boats and tour boats should be addressed by, eg, creating better bilge-water dumping options and/or education and training.

REGION: Kenai

Homer # 5399

The Cook Inlet RCAC and different environmental groups might be where energy could be focused in trying to accomplish tugs in the inlet and double-hull tankers.

Homer # 5398

We have a bureaucratic mess and the bottom line is still going back to prevention. If we can't get tugs out there to get people and their tankers through dangerous areas, we are losing out at the start. If we don't have every single ocean-going oil tanker doubled hulled, we might as well kiss the whole program goodbye. We have to do that. If we don't do that, then they shouldn't be out there sailing around. I'd love to have Kachemak Bay be pretty, but it is a little bit empty if we don't stop the damage from the start. Get those tankers off the ocean if they aren't safe. We have proven they aren't safe. I want them double hulled. I want tugs every place they have to go, whether it is Cook Inlet or Shelikof Straits.

Port Graham # 5792

I asked what kind of boom material we had left and we don't have any to protect streams.

Port Graham # 5790

I would like to see the money spent in the future for oil spill prevention.

Port Graham # 5758

I made a request for testing the clams. Out here near the clam bed was a cleaning station and I don't know if the stuff at the cleaning station contaminated the clams or if it was a combination. The cleaning station is where the boats came in.

Port Graham # 5756

I submitted some projects. We need to know how we will be prepared if there is another accident or spill. How will we protect ourselves?

Port Graham # 1024 Native Village of Port Graham

In addition, the Village of Port Graham would like to request that the Trustee consider funding the following project: Local Response Team to protect the Hatchery and subsistence resources.

Port Graham # 332

I hope to see our subsistence foods restored and protected from future spills. I feel the villages always get left out and cities get all the dollars that should go to villages whose lifestyle and food was affected.

Seldovia # 5889

I would like to vote strongly for spill prevention.

Seldovia # 5854

Spill prevention should take a piece of this pie.

Seward # 6111

Prevention is really very important and is the key to the whole thing.

Seward # 5944

I would like to second Carol's comment about prevention. If we don't work on prevention all this is useless. Regarding Alternative 5, if we haven't worked on prevention, increased human use will make it more likely we will have problems like these. It may be smaller but we will still have more damage to the habitat.

Seward # 5936

I am not up to speed on this, but it seems no matter how much habitat we acquire, if we don't do some prevention it is all for naught.

Seward # 327

While I recognize wildlife and the areas of habitat have been affected, it observes that natural recovery is possible and will take time, but it is happening and will continue to do so. Protection of habitat area, prevention of further spills, that is where our focus should be. We cannot humanly correct what the Valdez oil spill did. It unfortunately made a lot of greedy people a lot of money. But we can prevent this from happening again. Money should be used to fight the oil companies and any other agency a politician that trust block safer and more strict laws regarding the process involved in piping and moving the oil.

Seward # 281

Another problem I have with projects labeled as wildlife rehabilitation is their value in the grander scheme. It is a waste of money, time, personnel and resources to attempt to rehabilitate individuals. The success rate, especially compared with the cost, is appalling. Protecting populations, wildlife communities, ecosystems and habitat along with prevention are the only cost effective ways to deal with this problem.

REGION: Kodiak

Kodiak # 5554

Is there going to be a closed door if you define the categories that the civil money will be spent on? When is it going to be appropriate to ask for prevention equipment and planning? Here is the opportunity to prepare for future spills from the sound or from Cook Inlet. Is it going to be a closed door? How are we going to be able to put that into the proposals?

Kodiak # 5553

I will support a certain portion for spill prevention. I want to look at the future also, and prevention and preparedness is the key. That's why we ended up with the mess we ended up with is because we weren't prepared.

Kodiak # 5552

Seems like everything I've read in the papers and heard from government officials is let's buy more land. I don't see anything going into prevention. I suggest the trustees spend at least one third of the settlement money to have equipment ready to prevent another oil spill. I think habitat acquisition and land buying is a waste of money.

Kodiak # 177

Continue to demand oil companies pay whatever fees, taxes, etc. Means any to fully fund any/all future mishaps. If that increase is passed on to consumers (of course!) then that's the price of the luxury.

Old Harbor # 5674

If there is oil development there's going to be more oil spills in the future. Start getting ready for the next one. Maybe we should just build a big swimming pool so we can wash the animals off if we have another oil spill. Have something ready for them in case the oil comes.

Ouzinkie # 5716

I know we're going to have another oil spill. Eventually we may have a bigger disaster than this one. The only reason the response was as good as it was is the weather was good. It could have been totally disastrous. More money needs to be spent on preparedness and prevention. We need a building just for that material, a cache of spill response equipment. If they can spend money on trees, they can spend money to be ready for the next spill.

Port Lions # 5829

I think we need more specific guidelines on what you should do with the money. Being prepared for another spill with materials and containers to deal with the oil on hand is important. I think the resources are there to take care of an oil spill over a longer time. What you really need is something to deal with it in the first few days.

Port Lions # 5820

One thing that happened was we took down a whole bunch of big trees to make booms, but they didn't work all that well. If we asked for a cache of on-site boom and cleanup materials, would that fall within this? Even the silliest gambler in Las Vegas knows that you have to hedge your bets.

Port Lions # 5803

That's why we should spend some energy on prevention and preparedness, to take some of the pressure off.

Port Lions # 5802

Why on all these proposals is there nothing set aside for preventing or responding to a future oil spill event. All these communities should have equipment set aside so if something happens they can deal with it and not have to wait until there's oil on the beach or in front of their hatchery. If there was a spill in Cook Inlet it would be in Shelikof strait really fast. You can already see what to expect on the basis of what happened on the *Exxon Valdez* spill, with inaction basically by the federal government.

Port Lions # 5799

Would something such as our landfill that is causing a certain amount of pollution, would improving that thereby improving the water quality thereby partially making up for the damage by the oil be an acceptable thing for this funding? It is eliminating another stress on the environment, that is something that you are able to do, a lot of the other things like the otters and birds, there isn't anything that you can do. We've also got a real problem here with 30 drums of oil that are sitting down by the harbor. It's considered a hazardous substance but our budget won't allow us to take care of that. I can see where one way to take care of that oil would be through a waste oil recovery facility. For instance if we took the furnace out of here [the community hall] and put a waste oil burner furnace in instead. Is that possible for consideration under the settlement?

REGION: Outside Alaska

US, Outside Alaska# 1789

As an environmentally concerned student, I am writing you to do everything possible to get Prince William Sound back to its normal condition. In 1989, I watched the gruesome pictures on the news as the oil took its toll on wildlife, the environment and the people. At that time I was in high school and did not feel I could do anything about the situation. Since then I have taken many courses that have taught me that I can do something about it. Every effort should be made to prevent future disasters such as this one. Crews and equipment should be better prepared for accidents when they do occur. Everything possible should be done to restore the sound to its original state. Wildlife habitat should be protected from future disasters. I hope that when I graduate I will be able to find a position where I can benefit wildlife and prevent future disasters such as the *Exxon Valdez* oil spill. If you could please keep me informed of future progress and events I would really appreciate it. Thank you.

US, Outside Alaska# 1745

With the monies left over (after taking out 80% for habitat protection) perhaps Exxon could continue retrofitting their oil tankers with double hulls. Acting responsible can only help. Please take some action to help the devastated wildlife in Alaska.

US, Outside Alaska# 1739

You have a responsibility to clean up the remaining damage, if that is possible, and to prevent such spills in future, whether the government requires this or not.

US, Outside Alaska# 1677

In my opinion, I would not even allow barges or boats to carry oil over and through the environment because there would always be a chance that it could not work out. And if it doesn't, look what happens, a whole ecosystem is totally ruined or dramatically scarred forever. Think of ways to totally prevent this from happening again, fly it or something. Even if it may cost a little more, in the long run, it would save a whole lot more money. All of the innocent animals have to die for one stupid man's decision on how to get oil to places. How would you like to go for a swim in crude oil? Or go fishing and eat it? I don't think that you or anybody would like it. Even though it shouldn't happen again, think of ways to clean it up much more efficiently. Getting 10% of 3 million barrels of toxic cargo every year isn't anything? How would you like your water purified only 10% out of a river? How would you like your kids to drink it? The company that does make the spill should have to close down and give all the money that it takes to clean the water and help the animals recover. They should also pay full expenses for people from anywhere to come to help clean up. A lot of ordinary people would like to help, but they can't fly to Alaska.

US, Outside Alaska# 1582

We implore you to use the money in accordance with sound conservation practices, to restore and protect the Prince William Sound habitat, and improve your safety procedures.

US, Outside Alaska# 1459

It is my opinion that the \$600 million of uncommitted funds be utilized so that 50% would be for habitat restoration and 50% for research and development. Although habitat restoration has a great deal of priority, I believe that an equal amount should be spent toward eliminating the very problem contributing to the spill, as well as preserving and protecting to the greatest of our ability so that these problems will not recur in the future. Thus, a very significant proportion should be applied to preventive medicine and not simply band-aid work on the present situation.

US, Outside Alaska# 1452

At least 80-90% of the available funds should be spent on protection and restoration. The balance on research and education on prevention of future problems.

US, Outside Alaska# 1230

I am writing concerning the Valdez Oil Spill and the concern for habitat protection if another spill occurs again in the future. Although as public memory of the spill fades, the oil industry is weakening many of the Oil Pollution Act's strong provisions through the regulatory process. Because of this I recommend that at least 80% of the remaining funds be used for habitat protection before another Valdez nightmare happens again.

US, Outside Alaska# 1209

I hope this huge oil spill has proven that we must prevent anymore from happening. I wouldn't want it to happen on our beautiful Lake Superior.

US, Outside Alaska# 1139

However, the Valdez Oil Spill Trustees CAN do a great deal of good by wise expenditure of the funds remaining from the settlement reached with Exxon. For our part, we favor a "recovery" alternative which commits at least 80% of the remaining funds for habitat protection and acquisition - a prudent

approach indeed. The balance of the funds can well be used for research and development activities germane to prevention of further disasters such as the *Exxon Valdez* oil spill. But the bulk of the funds must, we believe, be applied to habitat protection.

US, Outside Alaska# 1069

In the future I would like to see more effort in preventing further spills through tanker design and shipping practices reformation. Should this ever happen again I feel we have an obligation to respond quicker to prevent such extensive damage.

US, Outside Alaska# 1066

In addition to purchasing land, I would like to see money allocated to research oil tankers to reduce the possibility of future spills.

US, Outside Alaska# 1061

I hope the committee considers opportunities to pressure the shipping industry to upgrade practices to prevent future spills and increase capacity to react should a spill occur. I recognize the difficulty of your task and the many interests expressing their particular desires. I trust you will seek to do what is best for the land and all of us who use it and live on it.

US, Outside Alaska# 1007

I believe that the Exxon money should first off be spent to make sure something like this is much less possible to wreak as much damage as it did. Accident will happen but we must be prepared for them and take all precautions necessary to insure safety not just of profit margins or our employees, but importantly at our environment which gives us these wonders we choose to call resources and exploit. I would suggest stronger regulations on the oil industry here in Alaska. This means mandatory double hull tankers, ample and effective emergency support crews, better radar/sonar systems to insure accurate and safe navigation of tankers, and lastly some sort of certification or continually recertification process of the individuals who pilot these vessels. The money could be used to set up organizations to strictly monitor these safety practices, enforcing regulations, funding or lobby to make safety a Law.

US, Outside Alaska# 456

I have indicated that 10% of an endowment would include monitoring and research. This would include lobbying efforts to require the use of double hull ships, pilot boats and any other technology that would prevent oil spills in the future.

US, Outside Alaska# 189

Our first and number one priority is the environment. The plants and animals we killed; it is their home we destroyed and we the humans are the outsiders (aliens) and should have more respect towards their land. So all our efforts and resources should be towards the environment and to prevent a similar disaster from happening again.

REGION: Prince William Sound

Chenega Bay # 243

Establish a grant program for rural communities to participate in oil spill conferences or attend

"oil spill" schools.

Cordova # 1566

Money should be spent to research the effects of the spill and to provide baseline data to prepare for the next time.

Cordova # 1020

After the first few years of intensive efforts, monitoring could continue at a reduced level and be funded by proceeds from the endowment. Excess funds could be reallocated to other special research projects, parks, or desired programs. Part of the endowment proceeds or monitoring plan allocation should go to the development of an inter-agency response or HAZ-MAT plan built using the baseline data. This response plan would coordinate the agency response and damage assessment resulting from the next toxic spill. The planned response would be much more cost-effective than the response after the *Exxon Valdez*. Results obtained would more clearly define damages for the injured parties. This would make the lawyers' jobs easier, albeit they would be a bit poorer.

Valdez # 697

Support improved port facilities to handle: waste oil, bilge water oil/water separator, oily absorbents and boom, solid waste for dumps, sewage pump facility. These will support cleaner waters in PWS.

Valdez # 209

I would like to see some funds allocated to prevention, prevention research and development of clean up techniques.

Whittier # 6114

We were not prepared on a state level for a spill. There was no focus on that particular activity (preparedness) going on. In Washington they have a model response program. In the Sound we had a handful of fishermen and recreation people out there. You are opening up the environment so that the average citizen will know what is going on. This will put some focus on the oil. Nobody can tell you there is not going to be another oil spill. There is some logic to opening this area up so people can experience it. What are you going to do? Shut down all the logging. Depending on the degree you are prepared, you can not handle an oil spill. We were very lucky in the last spill due to the weather. I don't see what we are protecting if we are still going to haul oil through the place. If the people see it, you have a check and balance there.

ISSUE: 2.5 CON ; Opposes spill prevention and preparedness

REGION: Anchorage

Anchorage # 1619 The Wilderness Society, Alaska Region

We strongly oppose any use of the criminal or civil funds for spill contingency planning and response efforts or research, as we believe there are many other programs where such activities--albeit important--are already mandated and these types of activities do not fall within the parameters of the settlement. This would include any future proposals for "in situ" oil burns by Alaska Clean

Seas/U.S. Coast Guard or cold water dispersant development.

Anchorage # 1163

Although it is tempting to spend some of the money on scientific studies and research into oil spill remediation techniques, the bureaucratic and administrative costs involved in following up such efforts simply reduce the effectiveness of the settlement too much. What we really need to know about oil spills, namely how to prevent them, is already known to a great extent - but not acted upon. Meanwhile the threat to wildlife, subsistence resources and scenic splendor continues on land as well as at sea, and the money can help on land.

REGION: Kenai

Homer # 5454

I would like to see them be cautious on spending money on prevention. I would hate to see all this money get sucked up in lawsuits.

Homer # 5453

OPA 90 will spend money on prevention.

Homer # 5452

I think it is up to the oil companies to spend money on prevention.

REGION: Kodiak

Kodiak # 6126

However, I think the oil companies should be forced now to pay for prevention stuff. To say that you're going to take your own settlement and use that money to pay for an advantage to the person that just hurt you is nuts. They should learn from this experience so they're prepared before the next experience. That is why the government lawyers tried to turn that money away from prevention. If it was done that way we'd be having our own money going out the window to be doing what they should have been doing in the first place.

ISSUE: 2.5 LOC ; Local prevention facilities

REGION: Kenai

Homer # 5396

It sure would be nice to use some of this money to have prevention capabilities in Cook Inlet, maybe some money to buy a tractor tug. I guess it will be up to the attorneys.

Port Graham # 5794

With fishermen on the oil response, some have their boats on the waves over the winter, so it would be nice to see a boat harbor.

Seldovia # 5853

Regarding habitat protection, I watched the local people become very involved, and some people had such negative experiences. What are the guarantees for funding in the future for SOS organizations? My son-in-law spent hours on volunteer work. They have the right to any funds which come along. Will some of this money help to fund their activities? Is there some encouragement for local participation? Many of the local people did an outstanding effort of being prepared. During the spill, they were ordered as a group to return to Seldovia, and they refused. There needs to be a change in the manner in which the people in this area were treated by the Exxon officials.

REGION: Kodiak

Old Harbor # 5669

Why hasn't there been anything said in the brochure about having an oil response capability in each community? One possibility is training the fishermen, training the people in the community, having something ready. Remember it almost happened again last year. I think having oil response capability in the communities would probably be one of the wisest moves that has ever been done. Almost every one of us is dependent on the fisheries and boats in one way or another, and when something like the oil spill comes along it just shuts everything down. Kodiak does have a spill response working but why is it only in one spot on the island and not getting around to the villages? I'm pretty sure the oil company is paying for that, but it is something that should be researched because it is something people are concerned about.

Ouzinkie # 5715

Spend money on an oil spill response team for each community.

REGION: Prince William Sound

Whittier # 6075

We are in hard need of a dock to respond to an oil spill. We didn't have a dock capable of handling getting supplies to Valdez. I see this as a legitimate use of restoration funds in being able to respond to future spills. It concerns us partly because of our geographic location. Without a dock facility, we are back to hauling it and trucking it from Anchorage to Valdez.

ISSUE: 3.0 XX ; General comments about spending
--

REGION: Anchorage

Anchorage # 5076

I assumed the money was going to be used to repair damage.

Anchorage # 5046

The deal has been struck and the dollars are there.

Anchorage # 5037

What is the total proposed expenditure?

Anchorage # 1634 Sierra Club

Effective Schedule: Trustees should not tie the schedule of expenditures directly to the schedule of Exxon's payments. Projects which would be most effective if implemented soon should be implemented, with a schedule of payments over time, if necessary. It is far more sensible to negotiate for large areas of habitat acquisition, and pay for them over time, than to make small purchases each year in order to keep within the scheduled payments from Exxon. On the other hand, a plan for monitoring and study should extend beyond the last payment from Exxon in 2001. Some funds should be set aside for this purpose. However, endowments are not an effective use of settlement funds. Far too little money would be available now, when it is most needed. Also, it would become increasingly difficult to ensure that funds would be used as intended, to restore damage from the *Exxon Valdez* oil spill.

REGION: Kenai

Homer # 5444

You need to sketch out how much you are going to spend. You need to establish some ratio between what you are trying to do and what you are going to spend. Is the sky the limit on some of these things because they were damaged? We should come up with some realistic dollar amount.

Homer # 5416

If you add up all the numbers, obviously they are way in excess of what funds are available.

Homer # 5388

In traveling around the state, have you gotten a feel for how people would like to see money spent?

Homer # 5381

Are we headed for a final plan which will outline how funds will be spent?

Nanwalek # 5632

The money should be spent to study people instead of getting off the wall data. The people will be the most benefit.

Seldovia # 5875

I have a problem understanding how for an overall endeavor, you can make a determination on how the funds would be divided. It is clear in some cases habitat protection might be the most important in some endeavors and not in others. You need to prioritize the resources and decide if there is enough money to go around.

REGION: Kodiak

Port Lions # 5809

When you look at all the ideas there isn't enough money to go around to all of the things that people want to use it for.

REGION: Outside Alaska

US, Outside Alaska# 1192

In am a NOLS student who has been observing the Prince William Sound, and talking to the locals here for the past month. I would like to express my concern as to the expenditure of the settlement received from the *Exxon Valdez* incident. The money should be used to help return the effected area to its state as was before the spill. I'm sure most people would agree that the reason money was received from Exxon was because of damaged done to the Prince William Sound, so returning it to its original state is priority one. After that, the remaining sum could be used to help out the local fishermen, Indians, and others who base their lives around the Sound.

REGION: Prince William Sound

Cordova # 5319

Earlier you said there is between \$610 million and \$630 million left. Should we be thinking of deducting the 1994 work plan from that?

Whittier # 6040

You say this money is split up to be spent over a span of ten years? Is it the same amount of money to be spent each year or will it all be spent in the very beginning?

ISSUE: 3.1 XX ; General comments about endowments
--

REGION: Alaska, Outside the Spill

Fairbanks # 5347

Will the money be invested if we needed money in the future?

REGION: Anchorage

Anchorage # 5083

I'd like some kind of release of information about how the nearly \$300 million dollars was spent and how much went to administration, and monitoring and research. Especially the money that was spent for the settlement, I would like to see how much went to attorneys' fees and the other ways that it was spent. I think an endowment is very appealing, but what is disturbing is how little pay off there is. I am not very enthusiastic about a big endowment.

Anchorage # 5024

On your endowment, will there be more money coming?

REGION: Kenai

Homer # 5462

If an endowment did turn out to be a good deal, you could use the same percentages for the return.

Homer # 5455

Regarding the endowment, I am not sure how I feel about it because we don't have accountants to give us numbers. From what I understand, a well-managed endowment should be able to make 3-4% in excess of inflation. Administration cost could be as low as 1-2%. Monitoring programs could benefit from an endowment. I wouldn't want to put money into an endowment if it cost more to manage it.

Homer # 5407

What would be the return on the dollar for an endowment fund?

Seldovia # 5851

How much did they contemplate putting into the endowment?

Seldovia # 5843

Regarding endowments, was there any analysis of current interest rates and inflation?

Seldovia # 5841

Because someone would have to manage the money, would an endowment mean that the Trustee Council would be an entity that went on in perpetuity?

Seward # 5935

So what you are saying is the management of an endowment is unformed? It is important to have some understanding of how it will be formed before you can ask the public for input on an endowment. It might be more practical to people if they understood who controls it.

Seward # 5934

On your endowment, who would own it? Would it be subject to political change all the time? All of us who have been involved in research know there are highs and lows in dollars. How is this to be handled?

REGION: Kodiak

Larsen Bay # 5593

If there is an endowment would we have any input in how the money was spent? Would there be a chance that a change could be made as far as that funding would be, to help us out here?

Larsen Bay # 5586

I think there's a lot of people that would like to put some money in an endowment but it depends on who's going to spend it and how. If we put the money into an endowment how are we going to have anything to do with the decisions? All these percentages does that all just pertain to the oil spill area.

Ouzinkie # 5732

Who would be doing the studies from an endowment?

REGION: Prince William Sound

Cordova # 5313

What's the latest information on endowments? Is this another wish that's not going to come true or is there any prospect that an endowment will be legal?

Tatitlek # 5998

How many people can withdraw money if we put it in an endowment?

Valdez # 6134

One type or restoration project we've mentioned is an endowment program to pick up trash in the sound. This would be an enhancement project that would be good for habitat protection and for tourism.

Valdez # 6012

Since you don't know how to restore some of these species, wouldn't that come back to some kind of endowment to provide the framework and resources to do the studies necessary to understand the injuries?

ISSUE: 3.1 PRO ; Supports endowments

REGION: Alaska Peninsula

Chignik Lake # 5251

If you're going to restore something maybe you should put some of the money aside, maybe people will be too likely to spend it all too fast.

REGION: Alaska, Outside the Spill

Fairbanks # 1136 School of Fisheries and Ocean Sciences, UAF

Toward this end (a comprehensive monitoring and research program), I urge you to establish the Marine Research Endowment crafted by Ken Adams, Ron Dearborn, Bill Hall, Theo Matthews, Jerome Komisar and Arliss Sturgulewski. I realize that the plan need more work, but the gist of the notion is there. This proposal has the broad support of the organized fishing communities in the spill-effected areas, the regional Aquaculture Corporations, the University of Alaska and (unofficially) state and federal agency scientists. An endowment of this magnitude could successfully fund the kind of long-term research needed to understand how the coastal ocean community (including birds, marine mammals, and commercial fish and shellfish populations) functions normally in the extremely dynamic oceanographic and meteorological environment that characterizes the northern Gulf of Alaska. This is the kind of information that was missing at the time of the EVOS. This is information that could potentially save hundreds of millions of dollars over the long haul of spill prevention, informed mitigation, damage assessment and future restoration. Without this kind of ecosystem understanding, changes in populations and commercial resources can be attributed to just about anything, and in fact have been. Only rarely is there a financial opportunity to undertake the kind of focused marine studies needed to describe ecosystem form and function. It is unfortunate that funding for this opportunity was

created by a disaster. However, this horrendous event initiated an unprecedented (in U.S. waters) experiment in coastal Alaska. It would be tragic if the over-all ramifications of a cold-water spill of this magnitude were not fully described, and even worse if Alaskans were scientifically unprepared for another event (in Prince William Sound or elsewhere). Providing funding in the form of an Endowment to undertake long-term careful studies of the region will (in my view) pay huge future dividends. Many will say that enough science has already been done. They must be reminded not to confuse science with the damage assessment activity that was crafted for litigative purposes. While it is true that many of the findings stimulated by the need to assess injury can be used for other purposes, the surface has only been scratched by objective science in the affected region. The means is available now to undertake this task. It must not be lost in squabbles over turf or wranglings over definitions about what constitutes appropriate expenditures. Be bold and secure the future.

Fairbanks # 767

Establishing endowed chairs at the University of Alaska in, for example, marines sciences and ecology/biology would ensure that continued research and monitoring of PWS would take place. These positions would require effort in those areas specific to PWS, and thereby guarantee that needed research would be done.

Fairbanks # 572

A comprehensive study could be designed & funded under the restoration plan to support long term monitoring in a comprehensive manner from an ecosystem approach. Putting funds into an endowment would fund this.

Fairbanks # 431

University research endowments would also provide for continued research and monitoring well after Exxon has completed payments. It would also allow a significant number of multi-year projects to be continued without the researcher wondering if funding would continue long enough to have an adequate database.

Juneau # 5490

I am not so sure I would reject an endowment. I think it has some interesting possibilities to prolong the benefits of the funds. I think getting hung up on the percent is technical and inappropriate to be worried about now.

Juneau # 1016 Alaska Chapter of the Wildlife Society

A RESOLUTION URGING THE *Exxon Valdez* OIL SPILL COUNCIL TO WORK WITH THE UNIVERSITY OF ALASKA ON A PLAN TO ENDOW UP TO 20 ACADEMIC CHAIRS IN BIOLOGY TO FULFILL THE LONG TERM GOALS OF THE SETTLEMENT.

Juneau # 603 Klukwan Forest Products, Inc.

On another subject, I support the creation of an endowment for future funding of restoration activities. This has the most meaningful benefit because it will have a longer term of benefit.

Juneau # 500

I strongly favor establishment of a substantial endowment that would only be used to support ecological monitoring research indefinitely. These activities have almost no other source of support.

Juneau # 273

Endowment funds to be used for education, monitoring and research on PWS habitats and ecosystem would be the wisest use of the funds that I can think of. With our shrinking state budget, fewer activities of this nature will be available from state agencies or the university. Endowment funds earmarked for specific positions or activities would provide wise stewardship and future response capability.

Other Alaska # 764

When all resources have recovered, endowment funding could be shifted more to habitat acquisition and protection. In the long run, it seems that an endowment would provide more total habitat acquisition than if there were no endowments. I believe that the resources, habitat and human use will benefit more from long-term endowment funding than from spending all the money as it is received.

Southeast Alaska # 570

I'm in favor of returning things to what they were before the spill. Any monies not needed now for that purpose should be set into a fund (interest bearing) to cover problems unforeseen at this time. It's not easy to look ahead 40-50 years--so don't blow the whole wad on today's people. Tomorrow will need all the help we can give it.

REGION: Anchorage

Anchorage # 6106

I would like to commend you folk for hard work. I would support at least a 50% endowment and about 25% for monitoring and research.

Anchorage # 6104

Ninety-one percent of the money that we recover in the settlement should be put into an endowment. There are thousands of scientists and consultants, and the money will go down the toilet. As far as DEC's involvement, it is my opinion that the DEC, including Commissioner Sandor, should be reworded the Department of Environmental Corruption. You have to start listening to us because we have seen the destruction.

Anchorage # 5098

We have seen zero returns in our silvers. There are a lot of components. An endowment has to be part of this because the more we find out, the less we know.

Anchorage # 5095

I support an endowment and research because as oil moved along, it entered the food chain and will affect stocks all over the state. We won't see the end of this for quite a long time.

Anchorage # 5082

I am a strong supporter of an endowment and preferably a very large one. Very quickly another \$200 million could vaporize. An endowment is a forever thing. It may not give us \$100 million to blast away. Nature will take care of many injuries in time. There is a tendency to piss away money in this state. I have a problem even with an endowment and putting so much toward habitat acquisition. I agree with Ms. Sturgulewski regarding the monitoring and research maybe to a tune of half the

remaining dollars.

Anchorage # 5081

Regarding the endowment, I think we should pursue it. The basis for that is that the average recovery in years for the injured resources exceeds ten years, so if we were to pursue any type of treatment, it would have to extend beyond ten years.

Anchorage # 5073

I submitted a proposal urging the creation of a long-term research endowment. I would hope the paper 12/22/92 could be made a part of the record. I have attended a lot of TC meetings and have intensified my support for an endowment approach. It was at the end of one meeting that it was pointed out that a study should be carried on for ten years for a total of a million dollars. We need to take a long view. The monitoring and research activities for PWS, Kenai Peninsula, Lower Cook Inlet, Kodiak Archipelago and Alaska Peninsula have to be coordinated. We talk a lot about improving things and injury. We have never had baseline, so what is the goal we are trying to reach. We should put a minimum of \$100 million in, but it should be ongoing. I don't think we can put an artificial time limit of eight or ten years and expect to do the job. There was a major piece of legislation by Senator George Mitchell a few years ago that set the entire coastline of the United States; Alaska being one of nine regions. The Sea Grant program is working on that. This whole area of the spill is going to be a part of that component. This is a wonderful opportunity to get information for rehabilitation of the area and get the real coordination we need. We make a big mistake by looking at things year by year and not coordinating over the long term. The percentage is too little on the research and monitoring and should be 12 or 13%. I liked the idea of considering a larger endowment so that as you learn, you will have some dollars to make some of the rehabilitation. I will continue to push for that. We don't know the answer of what is possible but I do feel the Trustee Council will come and go, and we don't have the consistency we would get under setting up an endowment.

Anchorage # 5072

I support Alternative 2, and I looked at a combination of this with an endowment fund to finding a long-term solution.

Anchorage # 1633 Forest Service Chugach National Forest

Funding for an Endowment. We would favor creation of an endowment for long term funding of future projects and activities. A possible organization for the management of the endowment could utilize something similar to the Alaska Permanent Fund. In addition, such an endowment could provide funds for long-term maintenance and operation of any projects and facilities from oil spill funds. We suggest an amount equal to at least 20 percent of the remaining settlement funds may be appropriate. We favor funding of both monitoring and research, as well as habitat protection and acquisition as appropriate.

Anchorage # 745

I support committing between 33-50% of the settlement to an endowment. The endowment must be VERY CAREFULLY restricted so that future earnings are spent only on natural resource protection and research in spill-affected areas. The endowment's principal, and money for inflation-proofing, must have iron-clad safeguards against raids by money-starved politicians and bureaucrats in the lean years .

ahead. I would allocate future earnings of the endowment as stated above in this letter. Thank you for this opportunity to comment on the restoration plan for Prince William Sound.

Anchorage # 744

Set up endowment to provide research and monitoring funding that will lead to better management of the spill area's natural resources.

Anchorage # 742

What Alaska needs is a marine studies center which focuses on the marine environment surrounding Alaska. Not only would this center be very important to the ongoing recovery of the spill zone-- other studies such as north Pacific fisheries management, marine mammals and other important studies which are crucial to the proper management of marine resources around Alaska. Funding of operations could be covered by setting up an endowment so scarce state revenues would not be needed.

Anchorage # 694

Appropriate \$2-3 million/year for monitoring, research and restoration from an endowment of \$30-50 million - don't let it get eaten up by high administration costs.

Anchorage # 605

While there is plenty of talk here about acquiring land there is nothing about funding for management of these lands once they are acquired from private sources or even who will manage them. If funding goes into acquiring land, then funding need to go to manage them. 20% of funds left to spend should be set aside for management. Additional funds for an endowment is also a good plan.

Anchorage # 397

Establishment of an endowment would provide the area with the following opportunities: 1) Long term monitoring and research. Establishment of ecological research projects which need to have a life of ten to twenty years. 2) Adoptive management opportunities which require available funding over the long term. 3) Funding for future habitat protection due to growth of commercial enterprise which impact the quality of the Sound experience. We have example all over the State where no one paid any attention to this problem until it was too late. 4) Restoration activities over time will move towards protection of environment by creating opportunities for regulating human use. It would be nice to know we would have the funding for action and monitoring of the results. 5) Future activities within the Sound may cause problems and impact the health of the environment. Having funds to proceed with projects involved with abatement and restoration would insure continuation of the Sounds amenities. 6) The environment of the Sound and its human residents will be ever changing into the future. Perceptions, economics, and lifestyles will put demands on the Sound's resources, we haven't visualized. Funding to address these demands will be difficult to acquire, so without an endowment opportunities will be lost. Don't be pulled away from your mission to restoration in the Sound. On going activities within the Sound, especially those which utilize renewable resources should be encouraged. Restrictions should be minimal and only if necessary to provide for sustained yield of these renewable resources. I don't believe its the charge of the Trustee Council to provide the Sound with the protection afforded a park but to see to its recovery from an oil spill and assist in preserving the amenities of the Sound as it functions today. Your legacy should/could be the endowment of working capital for future Trustees.

Anchorage # 230

Placing 50% in an endowment fund will make sure long-term research and monitoring can be done, as well as some continued purchasing of lands that deserve protection.

REGION: Kenai

Homer # 1557

In this state especially, where so little land is in private hands, protection of habitat and wilderness is critical. The very best use of the Settlement monies is to purchase habitat or to otherwise protect valuable lands with conservation easements. In the case of conservation easements, the Settlement monies would be used to monitor and protect lands in perpetuity through a stewardship endowment fund.

Homer # 1190 North Gulf Oceanic Society

We would like to place our support behind the formation of the *Exxon Valdez* Marine Research Endowment as proposed by Arliss Sturgelewski and others. Monitoring and research would occur under the endowment. Long-term research is vital but should not be the exclusive realm of state and federal agencies. It is important that proposals (and ideas) be accepted from all sources and receive independent peer review. The endowment should establish a permanent research program fund out of which earnings would support a long-term program. A proposed amount of \$30 million would be placed yearly into the fund of which \$7 million a year would be used for research and the other saved in the permanent endowment fund which would total 184 million after 8 years. I hope you will seriously consider this proposal.

Homer # 683

For some time I have been suggesting to the Trustee Council that a small endowment be established to help cover the costs of establishing conservation easements. Perhaps \$2 million would do the job. This would be used primarily for help in offsetting costs associated with donating such an easement, and with the expense of monitoring once it is established. Grants could be made available to organizations such as the Nature Conservancy and the Kachemak Heritage Land Trust from the endowment's interest. If such expenses were covered for people, more easements would be donated. Having granted such an easement on 120 acres of my own land, I speak from experience. In order to donate the easement, I had to front about \$3,000 in costs. The only way to do it was to go into debt.

Homer # 568

Keep this money for the future. We don't know what the whole ecological picture was before the spill. As a commercial fisherman, I can say we do know for sure it is constantly changing.

Homer # 320

"Monitoring and Research" and "Habitat Protection and Acquisition" are the two most important categories the money should be used for, and the endowment (40%) should be set up to ensure these categories receive support and funding for some time to come. Habitat protection/acquisition is currently very popular and it is important and should be emphasized, but not at the expense of losing the opportunity to learn more about the resources before another spill happens. (and it will!) Little or no support for research monitoring would be a classic case of short-sightedness (but in keeping with some of the ridiculous proposals floating around out there to spend the \$). Conducting

research on many of the resources that will actually answer questions about them is expensive because of the environment and difficulty of working on them. This is an opportunity to actually do work that can answer long-standing questions!

Other Kenai Borough# 432

He likes the idea of a 20-30% endowment to be used mostly for future acquisitions.

Seldovia # 6147

Regarding endowment, I would be in favor of that, but I would feel strongly an independent body should manage it. The beauty of the Trustee Council is the relative objectivity they have. If such an endowment was set up, there should be more public involvement such as citizens groups, fisheries groups or recreation groups. I am disappointed that none of those groups are represented on the present Trustee Council. If you had an endowment, we want to push for habitat protection and acquisition.

Seldovia # 5890

The effects of the oil spill will last several decades. We should not spend up all the money right quick. If you have a big pile of money, you will attract all kinds of people. That was a phenomenon during the oil spill. People did as much damage as good during the oil spill because of the money. The damage from the oil spill will last throughout my children and grandchildren's life times, and funds should be available because they might have more wisdom on what to do. You can't replace the environment instantly but as you learn more, you should have money available to make things back right. I feel strongly that a large part of the money should be tucked away. There will be every carpetbagger in the world trying to get a piece of the action. If you take the avarice out of it, you will get a better quality product.

Seldovia # 5880

I am in favor of an endowment because it is just smart to put money aside.

Seward # 1091

Third (my third goal for the settlement funds is), I would like to see a permanent endowment or trust fund created which would have a mission to protect and preserve Alaska's pristine environment from oil or mineral exploration and development. A fund that is large enough to advocate for the environment and help balance the financial clout of corporations and governments. A truly fitting legacy for the destruction heaped upon our land and seas by the *Exxon Valdez*.

Seward # 476

I strongly urge setting up an endowment. The effects of the *Exxon Valdez* spill will outlast the money unless some portion is set aside

REGION: Kodiak

Akhiok # 6

My comment on this. Would prefer (you) save some for recovered (resources). Spend in percentages.

Karluk # 5520

Anything to do with understanding the resources, people agree with (like endowment).

Kodiak # 5541

[Area K Seiners Assoc. continues]: It also seems like there is a tremendous bias against taking an ecosystem approach when you're looking at in-the-water things. Right now we're looking at habitat protection and acquisition. When you're talking about the water there's nothing to buy. As far as buying land that alternative is completely lacking when you're talking about the whole of Alaska marine ecosystem. As far as general restoration there doesn't seem to be much that can be done when you're talking about the open water. Monitoring and restoration is the highest priority that can be dedicated to that money. It looks like right away in the monitoring and research end you're getting the short end of it, because you can't buy the land. I think that's why our Area K Seiners are advocating an endowment specifically for monitoring and research, that can be designated specifically for that category and not be used for habitat acquisition or restoration. Long term monitoring would also be important and right now that isn't emphasized enough.

Old Harbor # 1012 Old Harbor Native Corporation

We support putting a percentage of the civil fund in an endowment which could be left to grow over the next seven years until all payments to the Settlement Fund are made. We would also support the use of the income from an endowment for monitoring and research, general restoration, as well as habitat protection and acquisition.

Port Lions # 5827

I think an endowment is a good idea, and 20% sounds all right. You have got to plan for the future, a lot of these things will become apparent later, and at this point the scientists are undoubtedly scientifically guessing.

Port Lions # 5819

Even if they were to spend that money over the period of five or ten years, at the very least I recommend to take some of the money and put it aside. And then I think you should look at both the spirit of the settlement and what's impacted. The spirit of the settlement is to prevent pollution and things like taking care of the waste oil and the landfill would be within the settlement.

Port Lions # 5808

Do they already have a plan? If the Trustees are having a hard time deciding on what to spend it on, an endowment would be a good thing.

REGION: Outside Alaska

Canada # 1006

Enough money should be put into an endowment fund to fund the annual cost of such an education program.

US, Outside Alaska # 1117 Arctic Research Commission

On July 15, 1993, the Public Advisory Group (P.A.G.) met and discussed a proposal by Arliss Sturgulewski of Anchorage, and Jerome Komisar, President of the University of Alaska. Their

proposal presents a case and an approach to the establishment of a Marine Research Endowment. The Arctic Research Commission is a federal agency to which the President appoints seven Members, as mandated by the Arctic Research and Policy Act of 1984, to develop and recommend an integrated national research policy and assist the federal government in implementing it. To accomplish this goal, the Commission, assisted by a small staff and an Advisory Group of technical experts, identifies problems and needs and makes recommendations on basic and applied research as well as logistic support and international collaboration on arctic research. The commission has previously endorsed the concept of a Marine Research Endowment and I enclose our October, 1992, letter to the *Exxon Valdez* Trustees explaining our position. The formulation presented to the P.A.G. is entirely consistent with our endorsement, and we therefore urge you to give this investment in Alaska's future high priority.

US, Outside Alaska# 1002

I feel the money should be used partly to support the natives (Chenega Island), some should be used for continued research and the rest put into an account for future use.

US, Outside Alaska# 680

I advocate the establishment of an endowment using at least 40% of remaining funds. I would use this endowment to fund such activities as monitoring and also archaeological activities, e.g., museum maintenance costs at the Kodiak Museum and elsewhere.

REGION: Prince William Sound

Cordova # 6136

You mentioned Arliss Sturgulewski and her endowment proposal. A number of fishermen met with Arliss

back in January to discuss the prospect of an ecosystem approach. At that time, her approach was not specifically fishing oriented but was a broader ecosystem approach. She was talking about black cod which is continental shelf, and there was nothing about pink salmon. We've had input with her a couple of times since and she's used it. What spawned here is there has been a getting together of representatives from the spill affected area, from Kodiak, Prince William Sound and Cook Inlet. We formed a fisheries coalition. Now we've got another problem, and that is this darn seasonal aspect of our jobs. You folks are on your own time schedule, but we have to pull back from this issue now, we need to make a living. This idea of uniting with different fishing groups, that has been done. And we do indeed intend to make our plea to the Trustee Council in a very strong way to get even an endowment fund to support fisheries research. If not let's go for an outright grant to support fisheries research, maybe in three specific areas: Kodiak, Cook Inlet and here. I am in favor of habitat acquisition but we have to be a little more precise.

Cordova # 5320

I agree there probably would be another level of bureaucracy and it could be a problem. However there may be some benefits to an endowment that outweigh the difficulties. One of them is the potential for long range funding. There are probably several endowment proposals. Arliss's concept was to support a marine ecosystem research capability. In her writing the University of Alaska really comes through. It may be an institution kind of concept. In defense of an endowment, it all depends on how you structure it and who administers it. They may not be all categorically bad.

We've talked about the acute need here for herring research and we agree they are just one part of an ecosystem on which we have faulty information. In that case perhaps a long term endowment to support research seems to me very defensible. It all depends on how you craft the thing. I mentioned that during the course of the winter and early spring, representatives from different fisheries organizations met and we talked about how to get control, especially since the trustees were being unresponsive to fisheries issues. It needs to be broadened to an ecosystem that includes fisheries. There could be a Kodiak research capability, one in Cook Inlet and one in Prince William Sound, and there would be regional coordination. For example already we've got expertise here, in the science center, in PWSAC and in Fish and Game. There is expertise within all of these regions. If we got an endowment to support marine research, regional experts could make decisions.

Cordova # 1497

I advocate the concept of an endowment.

Cordova # 1020

After the first few years of intensive efforts, monitoring could continue at a reduced level and be funded by proceeds from the endowment. Excess funds could be reallocated to other special research projects, parks, or desired programs. Part of the endowment proceeds or monitoring plan allocation should go to the development of an inter-agency response or HAZ-MAT plan built using the baseline data. This response plan would coordinate the agency response and damage assessment resulting from the next toxic spill. The planned response would be much more cost-effective than the response after the *Exxon Valdez*. Results obtained would more clearly define damages for the injured parties. This would make the lawyers' jobs easier. albeit they would be a bit poorer.

Cordova # 749

The fishermen and communities at PWS favor at least 40-45% of remaining EVOS monies to be put into a fund or endowment to be used for research, evaluation, restoration and replacement of fisheries resources in the Sound.

Cordova # 706

I support the idea of a marine research endowment as proposed by commercial fishing organizations, the University of Alaska Fairbanks, Arliss Sturgelewski, and others.

Cordova # 674

Also, please note the endowment supported below would be directed toward the marine environment and provide long-term funding for monitoring and research as well as general restoration activities especially for oil damaged fisheries.

Cordova # 673

Also please note the endowment support below would be directed toward the marine environment and provide long-term funding for monitoring and research as well as general restoration activities especially for oil damaged fisheries resources.

Cordova # 288

Two types of endowments are being advocated by marine scientists. They are-- 1) The University approach, which is to build data bases for individual resources. 2) Applied fisheries evaluation to

determine health of utilized stocks and interactions between stocks in fisheries. Both approaches are important, and should be specified for funding.

Valdez # 1018 Alaska Wilderness Recreation and Tourism Assoc.

AWRTA supports the establishment of two endowments: 1. An endowment for continuing research on the ecosystem and species injured by the spill. Sources of funding: 1) AWRTA supports the use of restoration funds to payback hatchery debts in the spill impacted area. These payback funds should be appropriated by the State of Alaska to this endowment fund. 2) Additional Restoration Funds in perhaps a ratio of 2:1 (restoration:state) could be appropriate to this fund to bring it to a functioning level. 2. An endowment for garbage cleanup and trail maintenance: Justification: Oil still remains on beaches in the spill afflicted area that poses a scenic eyesore. Removal of garbage from oil spill impacted area beaches is one way to improve their appearance. AWTRA supports an endowment that would provide funding to community youth corps and non-profit volunteer groups for trash cleanup projects of beaches and trails.

Valdez # 1018 Alaska Wilderness Recreation and Tourism Assoc.

2. An endowment should be established to fund research and monitoring of the ecosystem. If subsequent research confirms the decline of a population, then restoration projects for those species may be funded from this endowment or by subsequent settlement with Exxon. Populations of some species may still decline as a result of infertility and disease resulting from the spill. Funding should be made available to continue monitoring these populations and to restore them, if necessary. Restoration team members have indicated that it would take about \$100-\$150 million to create an inflation proofed endowment.

Valdez # 274

The focus should be to restore damaged area and resources. Because good, reliable monitoring takes years, (fish cycles are 4-6 yrs) the benefits from an endowment will allow those type time frames which don't fit as well in the 8 years remaining of the current funds. There's a strong lack of good baseline data on most species and it's a guess to figure impacts without good baselines. An endowment will help establish those baselines.

ISSUE: 3.1 CON ; Oppose endowments

REGION: Alaska, Outside the Spill**Juneau # 5489**

You are saying they are considering a proposal to put \$100 million into an endowment and getting \$2 or 3 million back. That doesn't seem like a good deal to me. I think it is a horrible idea. I think when the settlement was made and Exxon was made to give us \$100 million, they should have to pay us the interest from an endowment. What you have is an interest-paying proposal which makes no sense. I would object to that concept. We lost that opportunity when we didn't let Exxon make the endowment for us. To say that the \$100 million a year is a good deal is ridiculous. It is ludicrous to put this into an endowment. I don't get this, and I would say it is not a good idea.

REGION: Anchorage**Anchorage # 5086**

I don't want an endowment because it gives too small an amount of money to be spent every year, and it also gives more years that administrative cost can be piled onto. I feel strongly that so much of the clean-up money is going to be spent by administrators.

Anchorage # 5077

I wanted to speak up for Alternative 2. The best use would be habitat acquisition and would be the best thing to prevent further damage and give the species a chance to recover. I am very much against an endowment. You ought to be able to make a ten year plan. The fund should be ten times greater for an endowment.

Anchorage # 1634 Sierra Club

Effective Schedule: Trustees should not tie the schedule of expenditures directly to the schedule of Exxon's payments. Projects which would be most effective if implemented soon should be implemented, with a schedule of payments over time, if necessary. It is far more sensible to negotiate for large areas of habitat acquisition, and pay for them over time, than to make small purchases each year in order to keep within the scheduled payments from Exxon. On the other hand, a plan for monitoring and study should extend beyond the last payment from Exxon in 2001. Some funds should be set aside for this purpose. However, endowments are not an effective use of settlement funds. Far too little money would be available now, when it is most needed. Also, it would become increasingly difficult to ensure that funds would be used as intended, to restore damage from the *Exxon Valdez* oil spill.

Anchorage # 1623 Alaska Center for the Environment

Issues and Policy Questions: The following comments are in direct response to specific policy issues and questions are raised in the Draft Restoration Plan. "Special Interest" Endowments Neither Necessary Nor Justified: There is no need, nor justification, to establish a special interest endowment as a funding source apart from the existing Settlement. The existing Settlement already has the functional attributes of an endowment. Funds, including interest earnings, will continue to accrue to the Settlement. The Trustee Council can choose to extend expenditures from the Settlement over any time frame it deems appropriate. The "special interest endowment" proposals being advocated,

with special interest groups in charge of spending decisions are characterized by gross conflicts of interest. While it is not surprising that special interest groups want their own special "dedicated fund" - which special interest group wouldn't? - such a proposal is neither necessary nor justified. A "special interest endowment" would undermine the broad public interest in restoration already defined under the terms of the Settlement.

Anchorage # 1619 The Wilderness Society, Alaska Region

We oppose endowments due to the imminent need for maximum leeway in negotiations for habitat that must occur as soon as possible. We also believe that endowments for research are not needed to ensure that the Trustees make a commitment to a targeted, long-term ecological program.

Anchorage # 1598

Finally, under no circumstances should the Trustee Council create an endowment. If the settlement had been received as a lump sum, it might have been possible. But with the money coming in over a 10 year period, and with so much of it already spent, there's not enough left for a meaningful endowment. Thank you for the opportunity to comment your critically important work.

Anchorage # 1322

I know you have a tough job and have a lot of folks trying to feed at the oil spill trough. However, only one expenditure will protect the wildlife and fisheries of Prince William Sound and the rest of the spill effected region and that is protecting the upland habitat. Endowing university research will NOT save wildlife and fish. Please spend the vast majority of the remaining funds on habitat.

REGION: Kenai

Homer # 5447

If you are talking about a return from an endowment, it could take a long time and in the meantime only support administration. Endowments aren't all like the permanent fund.

REGION: Kodiak

Old Harbor # 5698

Somewhere sometime is going to try to change the rules if you set up an endowment. Those protections could be built in, but if the Trustees decide to change the way it's managed, it could be changed.

Old Harbor # 5697

If the public wanted 40% of \$900 million put into an endowment, how would that effect the scheduling of a project? The only trouble with an endowment is that the legislature, someone somewhere, is going to try to tap into it. So what we could have done with it now if we had spent it now, that opportunity will get lost.

Old Harbor # 5672

I wouldn't want to see you guys go and reseed some clam beaches. You might do more damage to Mother Nature than you help it. I don't like the idea of an endowment. What are we going to do with that, .

it's probably going to be used by administration, they will get most of it and we don't get any benefit from it.

Ouzinkie # 6130

I'd rather see the money spent now to do the research so we know what the effects are (than on an endowment).

Ouzinkie # 5733

Suppose you're coming down airport drive and somebody cracks into your car. The insurance company wants to give you \$4,000 to fix your car. Do you want to hold back 20% in case they're going to hit you again? No, you want to fix your car now. I think the money should be spent to restore things now. If they spill the oil again they have to pay again.

Port Lions # 5828

One of the problems in Alaska when you've got three or four agencies trying to do something, is getting somebody to say yes and then getting it done. I don't have much faith that an endowment is going to work.

REGION: Prince William Sound

Cordova # 5318

The good old boy, our governor, introduced this endowment three years ago. That's his pride and joy and that stopped this thing from happening. The settlement was done so quickly so the money could be made available immediately. In going into year 5 I guess immediacy is not what I understand those words to mean. If endowment is another means of saving it for another agency down the line I'm opposed to it.

Cordova # 5317

Regarding an endowment: there's going to be administrative costs maybe as much as 15%. I am most afraid of adding another layer of bureaucracy. We're going to have another form of Trustee Council dealing with this endowment that is more or less going to be a permanent board. After a period of time there's going to be a little collective and a clique and there's going to be a lot of trouble getting anything out of the endowment.

Cordova # 5314

If I were the oil company who paid almost a billion dollars to clean up an oil spill and you put it into an endowment, it would seem to me that portion put into the endowment is something that I shouldn't even have to pay. After about ten years, what is to stop the Trustee Council from saying well the resources are fixed but we've got this endowment, let's spend it on docks and cabins or ferries or highways or aquariums?

Cordova # 1564

Spend the money now; I don't think money should be tied-up in an endowment.

ISSUE: 3.2 XX ; Comments about previous spending

REGION: Anchorage**Anchorage # 5083**

I'd like some kind of release of information about how the nearly \$300 million dollars was spent and how much went to administration, and monitoring and research. Especially the money that was spent for the settlement, I would like to see how much went to attorneys' fees and the other ways that it was spent. I think an endowment is very appealing, but what is disturbing is how little pay off there is. I am not very enthusiastic about a big endowment.

Anchorage # 5039

Of the \$33 million, how much was proposed by state and federal agencies? Who is going to watch them?

Anchorage # 5038

How much was spent for 1993?

Anchorage # 5032

So you guys paid them out of this fund? Was that let under bid under state or federal laws? The people who sign the checks granted them the right to let sole source contracts with monies that were obtained by the state in the civil lawsuit? Are the monies you are going to spend for restoration let out through bids or are you just handing them out to Exxon under a sole source contract? Is there a bid procedure which you are required to follow?

REGION: Kenai**Homer # 6094**

There is a fear that a lot of money will go for things like reimbursement, and there won't be anything to show for it. I have heard that at meetings that I have gone to. Maybe we will have something concrete like acquisition of habitat.

Homer # 5417

Regarding the opportunities for human use, only 4% has gone for habitat acquisition. It strikes me that by adding up these figures \$270-290 million has been allocated. Whatever comes from Exxon has already been committed to putting more money into reimbursing the government. I would like to know the difference between feeding the bureaucracy. The human use in the agencies seems to be pretty lively.

Homer # 5394

I just tuned in and I heard a couple of references to there being \$900 million to spend. I would like to hear what happened to the 1/3 of the money that has already been spent to reimburse the State and Federal governments and Exxon. What in real dollars do we have left to spend in the pot? Is there interest associated with that or does the pot of money get smaller because of inflation? It would be useful to address the differences between the terms for spending the criminal settlement money that is being discussed in the legislature right now and the civil settlement.

Homer # 5392

You say that \$50 million was allocated to Exxon for cost incurred for cleanup, etc. They spent \$39.9 million. What happened to the other \$10 million?

Homer # 5380

How has the balance been so far from your pot of money for restoration and habitat acquisition as opposed to concrete projects or construction?

Other Kenai Borough# 432

The past projects have not seemed very beneficial.

Other Kenai Borough# 219

It is very difficult for me to realize that by the end of this year you will "pissed" away over \$300 million dollars, without anything more to show for it than the soon to be ravaged timber the Seldovia Native conned you into buying. It would be interesting to know what political person is involved with the timber Co involved with the "CON". No one in his right mind would have purchased this piece that presently stands in the path of spreading Spruce Bark Beetles.

Seldovia # 5890

The effects of the oil spill will last several decades. We should not spend up all the money right quick. If you have a big pile of money, you will attract all kinds of people. That was a phenomenon during the oil spill. People did as much damage as good during the oil spill because of the money. The damage from the oil spill will last throughout my children and grandchildren's life times, and funds should be available because they might have more wisdom on what to do. You can't replace the environment instantly but as you learn more, you should have money available to make things back right. I feel strongly that a large part of the money should be tucked away. There will be every carpetbagger in the world trying to get a piece of the action. If you take the avarice out of it, you will get a better quality product.

Seward # 5932

I am amazed at how little you allotted for restoration. This is the right place and time. You allotted darn near as much for administration. You ought to take a look at this.

REGION: Kodiak

Kodiak # 5563

Of the money that's been spent can you tell us has research been done, has anything concrete been done? [answer dealt with damage assessment studies, symposium, reimbursement for cleanup work, restoration work.] Then that's good, we've got something for the money.

REGION: Prince William Sound

Cordova # 5343

A lot of the objection to the research money is to the \$190 million that's already been reimbursed for research.

Cordova # 5325

The big expenses are the reimbursements. Research has not received the biggest dollars. I heard Harley Oldberg say that he was planning a meeting May 25 in Valdez where he wanted to get five representatives from Cordova with Valdez to put together an attack forum for the Trustee Council.

Cordova # 5290

How exactly has the Trustee Council heard from the public on the research projects and whatever? What's the filtration process been and is there any chance to change any of that? Also, why is \$150 to 200 million been paid back to the state and federal governments? That's more than has been spent on research totally. I don't know if there's any opportunity to get any of that back. Also a year or so ago the Restoration Framework came out. I thought the Restoration Framework was to be the basis of the plan. There was a lot of feedback given to them that they should not take those reimbursements, that they should make that money last longer.

Cordova # 671

Of the \$350 million that has been spent, none or very little has been spent in direct restoration or habitat acquisition in Prince William Sound--this is criminal. The political game that the Trustees appear to be playing is very frustrating and disheartening. Nothing has been done for affected fisheries and marine resources.

Whittier # 6041

Am I wrong that \$300 million is already spent in reimbursing state agencies for studies they budgeted for during the spill years?

ISSUE: 3.3 XX ; Matching funds

REGION: Kenai

Port Graham # 5778

I speak on behalf of Chugach Regional Resources Commission, which has been providing technical assistance for fisheries and development projects. We are interested in focusing on the loss of economic opportunities that occurred as a result of the spill. Some of these projects have been started because we can't wait for funding. For example, the cannery shut down. Port Graham has started a hatchery. They also own the cannery and are renovating it. They are marketing it on their own. This provides subsistence, jobs, and fish for commercial fisherman. They have already started things to go beyond subsistence because they can't wait. They have tried to pick up with other funding. It would be nice if the Council could have some type of matching project.

Seward # 5973

You are talking about cost-sharing projects. It kind of ties in to the Sea Life Center. Scientist will bring in new dollars to the state. I would hate that we would have spent \$900 million, and I won't have anything for my kid or grandkids to see. Animals and fish will not be back to normal and that is what the center is for. For those who have worked on the center for years, this is really great. When can we talk to a scientist?

REGION: Prince William Sound

Cordova # 5295

The aquaculture association, State of Alaska and the Valdez Fisheries Association have all contributed money for the coded wire program. Carl Rosier is going back to the Trustee Council to ask for some matching funding. If the Trustee Council can't do that there's something really wrong.

Tatitlek # 6001

How many years will it take before they've spent all the money? Have they asked any other big corporations for contributions to make the money last longer? I think the idea of matching money is a really good idea. If somebody had a good idea and they had \$10,000 but they needed \$75,000 to get started, could they apply to this fund for that help? I would encourage the Trustees to do something like that. Each individual person could help the economy of the community by doing their own economic development project. It could be a loan or a grant program but it really would help the little communities. Capital and jobs are the biggest problems here.

Whittier # 6044

Are there any other matched funds?

ISSUE: 4.0 XX ; General comments about alternatives
--

REGION: Alaska, Outside the Spill

Fairbanks # 5365

I was curious about how the pie charts got bigger and bigger.

Fairbanks # 5362

One thing that is going to be real important to address in the EIS is to make sure that it is not an either/or issue. There are diametrically opposed issues. Commercial fisherman want to get rid of sea otters. You have to make people aware that there are trade offs. You should at least highlight that. There are some serious problems to be addressed there.

Fairbanks # 5359

I think it is a good idea to spend money on habitat protection. I didn't see the pie diagram I wanted. I would give a large part to habitat protection and some amount to studies until the endowment is built up enough. I would reduce some of the general restoration.

Fairbanks # 5354

Were the pie charts derived from information or was it what people from your office thought would be best?

Juneau # 5474

Which alternative was selected?

REGION: Anchorage

Anchorage # 1623 Alaska Center for the Environment

Allocation of Remaining Funds Among Uses: In terms of the relative allocation of funds from the Settlement, it is difficult to justify the assignment of specific percentage amounts to expenditures at this time. However, in general terms, some combination of Alternatives 2 and 3, as described in the Draft Restoration Plan generally represents an appropriate allocation of funds among various categories of uses.

REGION: Kenai

Homer # 5382

What are the different alternatives you are looking at for the plan?

Nanwalek # 5614

Would the alternative descriptions apply to each individual village or is it the whole state? If the city of Homer's plan is better than ours, would this be a factor?

Port Graham # 5746

So, we here in the village need to let you know which alternative we favor to help the Trustee Council decide which one to go with? So, it is real important that all of us let you know which one we favor?

Seldovia # 5840

Can we get any kind of idea in Alternatives 3, 4, and 5 for general restoration what the components are?

REGION: Kodiak

Port Lions # 5801

Do those attorney fees show in that 7% for administration?

REGION: Outside Alaska

Canada # 1006

I believe that the civil settlement should be used for the following priorities: 1. Take all appropriate steps to absolutely ensure that no environmental catastrophe won't repeat in the future in Prince William Sound. 2. Spend money on the area directly affected by the oil to allow the fauna and flora to regain its natural course. The restoration actions should be undertaken with coordination to what nature already does by itself, without any assistance.

US, Outside Alaska # 1649 National Trust for Historic Preservation

The National Trust for Historic Preservation is a private, non-profit membership organization chartered by Congress to foster an appreciation of the diverse character and meaning of our American cultural heritage and to preserve and revitalize the liability of our communities by leading the nation in saving America's historic environment. The National Trust wishes to go on record urging

the *Exxon Valdez* Trustee Council to adopt a restoration plan that would provide a reasonable balance between general restoration activities and property acquisition for impacted cultural sites. An alternative that combines these two objectives will provide the most well-rounded and complete recovery from the impact of the oil spill.

US, Outside Alaska# 1561

I am writing to express my dissatisfaction with the five alternative suggested for use of the remaining funds for the spill recovery.

US, Outside Alaska# 1101

I just hope that the alternative which is finally chosen is the best, and I hope it keeps the Sound just as beautiful and even more beautiful than how it was when I paddled through it these past four weeks. I would appreciate being informed as to which alternative is chosen and what is going on with the Restoration Plan. Since I am from Pennsylvania, after the original incident, I no longer heard about what was (and is) going on with the Sound. But, now with the Sound being part of me, I really am interested in the results of the *Exxon Valdez* Oil Restoration Plan. Please keep me up to date. Thank You.

ISSUE: 4.1 XX ; General comments about alternative 1

REGION: Kenai

Homer # 6093

What would you do under a "no action" alternative?

REGION: Prince William Sound

Whittier # 6042

What happens to the \$660 million under Alternative 1?

ISSUE: 4.1 PRO ; Support Alternative 1

REGION: Kenai

Seward # 5942

Why is Alternative 1 not posted? I noticed that recovery would not be monitored for this alternative. Natural recovery could certainly be monitored and should at least be considered. The rest just means groveling over a bigger slice of money.

Seward # 5907

Why isn't Alternative 1 taken seriously?

Seward # 316

In general, let mother nature handle re-populating the critters. She has provided the niche, and

they will come. Besides, another big spill (and we seem to be planning that there will be one) might very likely wipe out the restoration efforts.

ISSUE: 4.1 CON ; Oppose Alternative 1

REGION: Kenai

Homer # 5432

I am glad that you did not bring Alternative 1, which is to do nothing.

ISSUE: 4.2 PRO ; Supports Alternative 2

REGION: Alaska, Outside the Spill

Juneau # 5509

I believe the settlement was inappropriately conducted by Mr. Cole and Mr. Thornburg. It gave the state the position of receiving a dole which is being squandered by the Trustee Council. The \$270 million spent should have produced more than 400 plans and proposals. Prince William Sound doesn't need to go through this exercise. I am strongly in support of Alternative 2, and I think the \$660 million should be directed by the Trustee Council to be put solely into habitat acquisition with one exception. The only thing we can do as a community of scientists to replace the bird species which have been lost is to exterminate the rats and the foxes throughout the Aleutian chain.

Mat-Su Borough # 1546

In response to your solicitation for public comment on how to spend the civil *Exxon Valdez* oil spill settlement funds, I would like to express my STRONG SUPPORT FOR USING FUNDS FROM THE SETTLEMENT FOR THE PURPOSE OF HABITAT PROTECTION. While fee simple purchase of land would be preferred as a means to ensure enduring protection for the lands acquired, I recognize that less than fee simple acquisitions may also be effective in achieving the objective of protecting injured wildlife populations and other resources values. In general, I would like to express my particular support for efforts to protect large, contiguous areas of the spill zone (for example entire watersheds as opposed to narrow buffer strips). Of the alternative scenarios described in the Draft Restoration Plan brochure, Alternative 2 appears to offer the most appropriate allocation of funds among various categories of uses. I appreciate this opportunity to comment.

Mat-Su Borough # 1425

In response to your solicitation for public comment on how to spend the civil *Exxon Valdez* oil spill settlement funds, I would like to express my strong support for using funds from the settlement for the purpose of habitat protection. While fee simple purchase of land would be preferred as a means to ensure enduring protection for the lands acquired, I recognize that less than fee simple acquisitions may also be effective in achieving the objective of protecting injured wildlife populations and to protect large, contiguous areas of the spill zone (for example entire watersheds as opposed to narrow buffer strips). Of the alternative scenarios described in the Draft Restoration Plan brochure, Alternative 2 appears to offer the most appropriate allocation of funds among various categories of

uses.

REGION: Anchorage

Anchorage # 5077

I wanted to speak up for Alternative 2. The best use would be habitat acquisition and would be the best thing to prevent further damage and give the species a chance to recover. I am very much against an endowment. You ought to be able to make a ten year plan. The fund should be ten times greater for an endowment.

Anchorage # 5072

I support Alternative 2, and I looked at a combination of this with an endowment fund to finding a long-term solution.

Anchorage # 5071

I would like to express preference for allocation scenario 2.

Anchorage # 1619 The Wilderness Society, Alaska Region

Alternatives Presented. We are concerned that the alternatives may be perceived as numerical targets for funding while the rationale for long-term effectiveness for various restoration measures gets lost among the perception of competing interests. Alternative #2 comes the closest to meeting restoration goals since it gives the highest priority to habitat protection and acquisition as our highest priority for restoration but a better concept of a long-term ecosystem monitoring program needs to be included in it. However, the policy questions need to be answered differently (see Table 1 and discussion below). We oppose alternatives 1,3,4, and 5 because we do not believe they contain adequate priority to habitat protection and acquisition. We believe that the parameters for identifying what kinds of project are not eligible for *Exxon Valdez* funds must be clearly laid out so that the Trustee Council does not spend lots time evaluating proposals that are not suitable.

Anchorage # 1464 Knik Canoers and Kayakers, Inc.

Knik Canoers and Kayakers is an Anchorage based organization of canoeists, rafters, and kayakers interested in enjoying and conserving Alaska's free-flowing rivers, lakes and coastal waters. Together we represent some 150 boating households. We would like to urge you to support habitat acquisition as the key component for using the remainder of the oil spill funds. We give primary support to Alternative 2 - Habitat Protection and secondary support to Alternative 3 - Limited Restoration.

REGION: Kenai

Seward # 6110

I support Alternative 2 and habitat protection and acquisition. The Kenai Fiords would be a great choice.

REGION: Kodiak

Akhiok # 5009

AKI's position is that we would definitely be in favor of alternative two in your allocations, which would provide for the greatest habitat protection and acquisition. I appreciate your review on why the Trustee Council seems to be moving slow, but I hope they will speed up. The tourist industry is discovering the South end of Kodiak Island. There are people that are starting to pick up on it. There are people who are moving their land from conservation status to development status so they can start capitalizing on that. We're moving too slow and we're starting to lose part of our market share. We need to get some of that tourist dollar. That means we need to move into more popular tourist areas. On behalf of the Ikue Corporation, they have a small parcel at the mouth of the Ikuik River, which is the entrance of the red salmon up to red lake. I'm delivering to you their letter of interest and the legal description.

Akhiok # 2 Akhiok-Kaguyak, Inc.
AKHIOK-KAGUYAK, INC. favors alternative #2 for allocation.

REGION: Outside Alaska

Foreign (Outside U# 1149

I have had the privilege of traveling through Prince William Sound in my sea kayak for many summers. While the Sound remains an awe-inspiring natural wonder (ever since the Valdez spill), I am concerned about how much human interference the Sound can continue to withstand and still remain the wilderness coastline jewel that it is today. While timber and other industry is unnecessary and important economically, in my home province of B.C. there has been such intensive clearcutting that many areas of coastline are greatly denuded of wildlife and virtually unusable for outdoor recreation of any significant value. Also, the few protected areas have become more and more crowded as outdoor recreation (especially sea kayaking) grows in popularity. These factors in British Columbia and other places make an area such as Prince William Sound even more special and precious, and greatly in need of protection. Therefore, I strongly support Alternative #2 of the Restoration Plan, which heavily focusses upon Habitat Protection and Acquisition. Only through Alt.#2 can the Sound's vast & outstanding natural treasures be best protected.

US, Outside Alaska# 1931

Please register my vote for Alternative 2 among the restoration plans you are considering. As someone interested in the best form of environmental recovery from the Exxon oil spill, I wish to see the greatest amount of threatened wildlife habitat in the spill zone acquired.

US, Outside Alaska# 1929

Please register my vote for Alternative 2 among the restoration plans you are considering. As someone interested in the best form of environmental recovery from the Exxon oil spill, I wish to see the greatest amount of threatened wildlife habitat in the spill zone acquired.

US, Outside Alaska# 1784

I am writing to register my vote for the purchase of Kodiak NWR lands with the settlement funds. I believe Alternative 2 is the best use of the dollars for the long-term benefit of wildlife in Alaska.

The Kodiak Native lands are in prime need of protection as they contain the densest populations of salmon and bears. Last summer I had an opportunity to fly over the Karluk Lake area and I camped on the shore of Thumb Lake, a tributary drainage of Karluk. If this land were to be developed with camps, docks, and many aircraft landings then the richest area for brown bears and the potential to observe them would be seriously impacted. These are key corridors for the maintenance of all kinds of wildlife populations and need to be returned to federal management. I have recently completed a five-year study of bear responses to camps and visitors in Katmai National Park, Alaska. From this work it is clear that the protection of salmon streams on Kodiak is essential to the maintenance of the dense bear populations. It is for these reasons that acquisition of Native inholdings and other private land from willing sellers within the Kodiak NWR is my highest priority. Thank you for your consideration.

US, Outside Alaska# 1749

I would like to assert my support of Option #2 for the distribution of funds for the restoration of Prince William Sound. I spent four weeks kayaking on the Sound with friends this past July, and plan on returning during summers in the near future. While the beauty of Prince William Sound is unrivalled, it was evident to my friends and I that signs of the oil spill still abounded.

Sterilized beaches and rocks and gravel covered with oil and tar - four years later - provided a glimpse of the disastrous effects of the spill which still linger on. We must ensure that, to the best of our abilities, nothing like this is allowed to happen again. The allure of the wilderness is linked to its remoteness and inaccessibility, as is its beauty and purity. Option #2 presents the wisest program of distributing funds because it allows for the preservation of the PWS wilderness in buying up surrounding lands. Studies and species-focused programs are important, but our first priority must be on securing the wilderness, safe from further human intervention, so that the wilderness can be safe to restore itself. Option #2 is a best assurance that the Sound will be able to return to its pre-spill state. The wilderness is what was first destroyed, the wilderness must be what is first renewed. Neglecting the legal preservation of the wilderness and the growing development interest which seeks to prey on it is the worst mistake we can make. In allowing floating gas stations and in welcoming dramatically increased motorized usage of the Sound, we are asking for another disaster. Will Prince William Sound become another Buzzard's Bay or Chesapeake Bay? No. Option #2 for a restored Sound.

US, Outside Alaska# 1735 International Wild Waterfowl Association, Inc

The International Wild Waterfowl Association works toward protection, conservation, and reproduction of many species of wild waterfowl considered in danger of eventual extinction. Habitat preservation is a critical part of the effort to protect many of these species. In recognition of the Trustee Council's identification of the harlequin duck as one of the key bird species injured by the Exxon Valdez oil spill, the IWWA would like to go on record in support of Alternative 2, which would dedicate 91% of the remaining \$600 million in the fund to habitat acquisition within the spill region. IWWA urges the Trustee Council to prioritize coastal sea duck habitat in the Kodiak National Wildlife Refuge whose bays and nearshore waters provide wintering habitat for an estimated 150,000 sea ducks, including harlequin, Barrow's goldeneye, king eider, and greater squaw. An important population of breeding tundra swan also utilize the southern end of the Kodiak Refuge and would benefit from acquisition and preservation of their habitat. It is the IWWA view that nature will do most important job in cleaning up the oil spill and since the spill was an environmental problem, the solution of habitat acquisition and preservation is the best use of the oil spill settlement fund

from an environmental standpoint. Thank you for the opportunity to be part of the public comment process.

US, Outside Alaska# 1728

Please register my vote for ALTERNATIVE 2 among the restoration plans you are considering. As someone interested in the best form of environmental recovery from the Exxon oil spill, I wish to see the greatest amount of threatened wildlife habitat in the spill zone. ALTERNATIVE 2 dedicates 91% of the remaining \$600 million in the fund to habitat acquisition. In addition, my highest priority for lands to be acquired are Native inholdings and other private parcels from willing sellers within the Kodiak National Wildlife Refuge. Thank You.

Of the alternatives proposed by the *Exxon Valdez* Oil Spill Trustees, I favor Alternative 2. However I wish to urge the Trustees to adopt an alternative proposed by a coalition of conservation groups: using 80% of the funds for the protection of habitat. I believe this would protect some areas near Prince William Sound from clear cutting, an activity that would only increase the devastation of this region.

US, Outside Alaska# 1449 Izaak Walton League of America

The Izaak Walton League of America, Inc., promotes means and opportunities for educating the public to conserve, maintain, protect and restore the soil, forest, water, air, and other natural resources of the US and promotes the enjoyment and wholesome utilization of those resources. The Izaak Walton League of America would like to take this opportunity to endorse the *Exxon Valdez* Trustee Council's decision to consider habitat acquisition of critical wildlife resources as an important restoration tool. In addition, the Izaak Walton League of America hereby registers its recommendation that the Trustee Council adopt Alternative '2' of the Draft *Exxon Valdez* Oil Spill Restoration Plan.

Alternative '2' mandates that 91% of the remaining funds be used for habitat acquisition of key wildlife resources within the oil spill region. The Izaak Walton League believes that acquisition of critical wildlife habitat - such as Native inholdings in the Kodiak National Wildlife Refuge - and the expansion of public access rights to the same lands within existing or expanded conservation units in the oil spill region would be a meaningful and lasting use of the oil spill settlement fund.

Thank you and good luck in your restoration efforts.

US, Outside Alaska# 1365 National Wildlife Refuge Association

The National Wildlife Refuge Association (NWRA) is a national, non-profit, conservation organization dedicated to the protection and perpetuation of the National Wildlife Refuge System. The NWRA was founded in 1975 by wildlife refuge professionals concerned about the future of the Refuge System and the natural resources it is intended to conserve. The organization represents wildlife professionals and concerned citizens working together to benefit refuges in Alaska and nationwide. The NWRA appreciates this opportunity to express its view to the Trustee Council concerning the development of the *Exxon Valdez* Oil Spill Restoration Plan, and supports alternative number two "Habitat Protection". Primary emphasis upon the acquisition and protection of strategic habitats, especially on Kodiak Island, are critical in NWRA's view. The NWRA strongly supports the acquisition (from willing sellers) of native corporation lands on Kodiak Island in order to consolidate the Kodiak National Wildlife Refuge and protect essential habitat for the Kodiak bear, bald eagle, anadromous fish, seabirds, and marine mammals. Kodiak acquisitions may be particularly beneficial to black oystercatcher, harlequin duck, marbled murrelet and pigeon guillemot that were seriously affected by the spill and vulnerable to impacts from any future spills. Utilization of few civil settlement monies is especially important to ensure the continued viability of the Kodiak bear. While bear's important denning habitats are federally owned, the critical feeding habitats are among those lands selected and owned by the Native corporations. The sale of these areas to private parties and subsequent development as industrial and commercial facilities would be devastating to the bear and to the refuge. Such development, including construction of fishing and hunting lodges, has occurred in the last couple of years in prime bear feeding habitat. Escalation of this scenario can be avoided with timely acquisitions of priority tracts from native owners seeking economic self-sufficiency. The NWRA urges the Trustee Council to act to consolidate the Refuge and ensure a more secure future for the Kodiak bear as well as other valuable natural resources of the spill area.

US, Outside Alaska# 1363

My name is Celina Montofano, and I am from Long Island, New York. I am writing to express my interest in the *Exxon Valdez* oil spill restoration plan. I have just spent the past month sea

kayaking and camping in the Prince William Sound, and this experience has heightened my awareness of the need for and importance of restoration efforts. My expedition began in Whittier, and places I have visited include Crafton Island, Chenega Island, and Bainbridge Island. I have been entranced by the beauty of the land and water and am amazed at how abundant the wildlife is. I have also viewed oil-stained rock, however, and realized that this defacement is only a superficial remnant of the tragedy of the spill. The wildlife and land still suffer greatly from the devastating effects of the disaster. Although much of the damage is irreparable, additional resources can and should be allocated toward restoring them as closely as possible to their pristine pre-spill existence. I believe that restoration efforts should be accomplished primarily through habitat protection and acquisition to allow land and wildlife recovery to occur at its natural rate. This alternative (alternative #2) will minimize over development and human encroachment and provide the best means of protecting the pristine wilderness of the Sound. Thank you for considering my opinion on this matter. I am hopeful that any and all restoration efforts will be successful and am certain that they will be undertaken in a timely and efficient manner.

US, Outside Alaska# 1345 Game Conservation International

Game Conservation International is a non-profit organization of hunter conservationists founded in 1967, with a membership of 1,000. GAME COIN participates in wildlife conservation projects relating to protection of habitat, outdoor education, anti-poaching programs and translocation of game animals. We support the *Exxon Valdez* Trustee Council's decision to utilize habitat acquisition within the oil spill region as an important restoration tool, your initiatives to acquire and protect 60,000 acres of outstanding wildlife areas. GAME COIN adds our voice to the support of alternative #2 which would dedicate 91% of the remaining *Exxon Valdez* restoration fund to habitat acquisition. In particular, we support acquisition of Kodiak native inholdings within the Kodiak National Wildlife Refuge as a priority in your future restoration plans.

US, Outside Alaska# 1332 Great Bear Foundation

Please register the Great Bear Foundation's vote for Alternative 2 among the restoration plans you are considering. Alternative 2 dedicates 91% of the remaining 600 million dollars to habitat acquisition. Highest priority for lands to be acquired are native inholdings and other private parcels within the Kodiak National Wildlife Refuge. Without habitat protection, all wildlife, including Brown Bears, will not have the land necessary to insure survival.

US, Outside Alaska# 1318

I am from Atlanta, Georgia, and I am writing in response to the *Exxon Valdez* Oil Spill Restoration Bill. During June and July of this year, I spent one month traveling through the pristine Prince William Sound by sea kayak. My expedition led me from Whittier through Culross and Bainbridge passages to the Gulf of Alaska and back again. I was struck by the beauty and serenity of the Sound. Although I only spent one month in Alaska, I feel apart of her environment, and I experienced a sharp pain within me every time I viewed remains from the oil spill. Seeing construction hats and booms left on the beaches from the clean up and oil stained on rocks from the splashing of waves crushed my heart. In my opinion Alternative 2, habitat protection, is the best option for restoration of the Sound. Wildlife and their habitat have received enough damage from the oil spill, and therefore, need protection from disturbances that may occur by other alternatives. I also believe that restoration should be limited to the spill area. There is no reason any of this money should be spent to build roads and marinas etc. because they were not affected by the spill. The

beauty of the Prince William Sound relies on her mammal population and preservation of the surrounding land. Therefore, I strongly recommend Alternative 2 as the plan to restore the natural appearance of the Prince William Sound.

US, Outside Alaska# 1309

I understand that your council is in a position to affect the distribution of some of the funds from the *Exxon Valdez* Restoration Fund, and that one alternative (Alternative 2) is for you to acquire Alaska Native Holdings in the Kodiak Refuge. This alternative is one I would very strongly support, because it would enhance very significantly the Kodiak brown bear refuge. Though the brown bear is the state symbol of California, it is extinct here; thus we have a natural tragedy displayed on every California flag and seal. Since Alaska has time to prevent such an extinction, it seems that you have a great opportunity to act in favor of these great animals. It is also fitting that you could use money from the natural tragedy at Valdez to secure the habitat of the brown bear and other Alaska wildlife. Please adopt Alternative 2. Thank you.

US, Outside Alaska# 1303

This is in regards to how the remaining 630 million dollars of the oil spill civil settlement money should be spent. I'm a sea kayaker who has had the opportunity to paddle in the sound on several occasions with some extended and lengthy trips. I believe the best way to spend the money would be your option 2, the acquisition of land to protect it from logging and mining and other consumptive uses. I don't want to see the attempted manipulation of the ecosystems to "enhance" recovery. Lets just acquire more land and let it all recover as nature will allow. I spend a lot of money getting to, and in Alaska in order to kayak there, and will continue to in the future if there is someplace like PWS to go to. I believe with all the other similar users the money we bring in to the state economy in the long run will outweigh that generated by timber and mining. Our money is spread farther and more evenly than just to those of special interest of logging and mining.

US, Outside Alaska# 1301

Alternative 2 would be a major step in the restoration of wildlife habitat in the spill zone. Private land from willing sellers within Kodiak National Wildlife Refuge would and should be top priority.

US, Outside Alaska# 1275

Please register my vote for ALTERNATIVE 2 among the restoration plans you are considering. As someone interested in the best form of environmental recovery from the Exxon oil spill, I wish to see the greatest amount of threatened wildlife habitat in the spill zone acquired. US, Outside Alaska# 1216 Federation of Fly Fishers

The Federation of Fly Fishers (FFF) is an international non-profit organization which promotes "Conserving, Restoring and Education Through Fly Fishing." The Federation sponsors local stream and fishery restoration projects, provides conservation grants, promotes public education and seeks to preserve all species of fish in all classes of waters. It is this interest that we provide public comment regarding utilization of the *Exxon Valdez* settlement fund. Inherent to the settlement fund and restoration process is the opportunity to make a significant contribution toward the preservation of recreational fishing resources within the spill region. I am sure you are aware that recreational fishing is an important and growing industry vital to the socioeconomic well being of Alaska. Needless to say, the future of this industry depends on the preservation of abundant fish populations and fisher habitat. In this regard, the Federation of Fly Fishers supports Alternative '2' as identified in the draft *Exxon Valdez* Oil Spill Restoration Plan. As stated in this alternative, 91% of the remaining \$600 million in the settlement fund would be focused upon habitat acquisition in the spill region. The Federation urges this Council to prioritize lands adjacent to anadromous streams and rivers with an emphasis on acquisition for inclusion in state and federal conservation units such as parks and refuges. Of particular importance is the acquisition of native inholdings within Kodiak National Wildlife Refuge, Kenai Fjords national Monument, and the expansions of Kodiak National Wildlife Refuge 'Red Peaks' unit on Afognak Island. Such an acquisition would provide public access to dozens of rivers and streams which are now closed. Additionally, acquisition would solidify state and federal management of these critical habitats. The Federation commends the Trustee Council's priority emphasis on anadromous fish resource as outlined in your draft restoration plan. We encourage you to adopt Alternative '2' in utilizing the *Exxon Valdez* settlement to provide a lasting and positive legacy from this tragic oil spill. Thank you for your time and consideration.

US, Outside Alaska# 1184

Recently I made my first trip to Alaska and the Prince William Sound area. I spent over a month kayaking and camping with a few friends and had a wonderful time experiencing the beauty and solitude. While in Anchorage, I became aware of the money Exxon has allotted to the areas affected by oil spill in 1989. I grew up near the Great Smokey National Park, and I fear that Prince William Sound area will someday become this commercialized. After reading over the draft, I am in favor of

Alternative 2 because I feel as much land should be protected as possible. Hopefully this alternative in the future will not allow for ANY future development because we all need a place as natural as possible without roads, floating fuel stations, cruise lines, etc. disturbing our views. Please consider this letter and consider the impact of increasing tourism will have on the sound. Thank you for your time.

US, Outside Alaska# 1148

Alternative #2 or something close to it makes sense to me. May the Creator assist you.

US, Outside Alaska# 1101

I realize that these areas have come a long way in the restoration process, but I feel as though self restoration with limited monitoring is the best way to go for the land and the sea in the Sound. Therefore it is plain to see that I support alternative 2 for the *Exxon Valdez* Oil Spill Restoration Plan. I, personally, feel this to be the best choice which I have come to since I spent four weeks intimately within Prince William Sound- paddling from Whittier to the Gulf of Alaska and back. On the way we saw debris left on beaches possibly left from the cleanup, smelled the crude oil in certain protected areas, and saw many cruise ships go by which did not make the view nice and did not sound at all natural. These are some of the reasons why I do not think the other alternatives are the best choice.

US, Outside Alaska# 1098

I have heard about the debate (and upcoming decision) on how to spend the \$660 million settlement that Exxon is paying to the State of Alaska over the oil spill in Prince William Sound and I wish to voice my opinion. I recently visited Prince William Sound for two weeks for a sea kayaking trip organized by the National Outdoor Leadership School. I saw for myself what a pristine location it is. I saw numerous forms of wildlife, from bald eagles to killer whales. I was informed of the 5 options for spending the settlement. I believe option #2 is best. This option says that 91% of the money should be spent purchasing approximately 14% of the private land in the Sound to ensure continued habitat for the wildlife. Man can best aid nature by allowing it to flourish rather than by trying to engineer change. All the other options provide funds for meddling in the affairs of the creatures of the sound. I think this would be a serious mistake. I urge you to vote for option #2 and spend as much money as possible buying private lands in the Sound. By the way, this is my second kayaking trip to Alaska in as many years (1992 trip to Icy Bay, north of Yakutat) and I plan to return in the future.

US, Outside Alaska# 1070

I have just been paddling on Prince William Sound and studying for myself the effects and answers to the tragic Valdez spill. After reading your possible solutions, I would like to say that plan two-habitat protection would be the best plan. I feel this way because nature is strong and can help itself. Wasting money on trying to restore things won't help. By buying land and protecting it we can help the beauty of the Sound. I hope that you can see that the money should go only towards protecting the land that was hurt so badly.

US, Outside Alaska# 1069

I'm writing you this letter sitting on Day Care Cove on Perry Island, having travelled here by kayak. I have spent extensive time on extended kayak trips on Prince William Sound both before and after

the *Exxon Valdez* oil spill. The silence and lack of activity in these areas affected by the oil spill was horrifying. However, nature has begun recovery on its own. I feel that the money after the settlement with Exxon would best be spent in plan #2. Nature is better at fixing itself than we can so I feel that the money would be best spent in protecting the natural beauty of the Sound. For the future, let nature take its own course and fix the problem.

US, Outside Alaska# 1067

I am a sophomore in college from Providence, Rhode Island. I am just finishing kayaking in Prince William Sound for about three weeks and am now going to spend the summer travelling in Alaska. My experiences first hand living on the Sound amongst its wildlife and beautiful scenery were possibly the most memorable in my life. Prince William Sound is a magical place. But while I was there I also was awakened to the reality today of the impact of the 1989 oil spill. I was saddened to see the differences between the numbers of wildlife in the Southern areas I visited (Perry Island, Naked Island) and the areas further north which were not hit by the spill (Port Wells, College Fjord, Unakwik Inlet). One day I paddled from College Fjord, where the waters were bristling with seals, otters, sea birds, to Perry Island, where I saw not one marine mammal and my boat was slicked by oil. When I returned to Whittier, I met some researchers from EPA, NOAA, and other organizations and I had a chance to learn from them what they had seen and learned about the alternatives you have proposed for public comment. I strongly agree with the plan proposed under Alternative 2. I believe that the most effective way to protect this magical place is to acquire habitat so that the imminence healing power of the earth can be allowed to progress without further impact. The recovery will take time, but I believe without further human intervention, the recovery will be full. Prince William Sound is the first place I have ever been to where I said to myself, "I want to take my grandchildren here." I want them to see it the way it used to be. Please protect it.

US, Outside Alaska# 1066

Alternative 2 will protect land from future development and enable resources to recover naturally.

US, Outside Alaska# 1065

I was writing about the 610 million dollars that is to be allocated to the Restoration Project. I'm in support of the #2 Habitat Protection. I believe that nature in due time can take care of herself.

US, Outside Alaska# 1062

I am 26 years old and am sitting on the Lawrence Glacier in Blackstone Bay, Prince William Sound, Alaska. I have sea kayaked to this natural phenomena and have spent the last nine days on the Sound. Today I was fortunate to see 2 bald eagles, 4 harbor seals, and a small bear yearling. However, I am told that the entire Sound is not as pristine as Blackstone Bay. I live in Boston, MA and caught my first fish in the Sound, a big salmon while trolling on my kayak. The serenity of the Sound is unparalleled - I am saddened when thinking about the destruction the Valdez Oil Spill caused in 89. I am to support Alternative 2 (91% of the \$900 million to go to purchasing lands affected by the oil spill). Keep the Sound the pristine environment it is. Leave the genetic makeup of the Alaska species to restore themselves. The chance to explore the Alaska wildlife in the Sound as those who travelled it hundreds of years ago is too precious to give up.

US, Outside Alaska# 1060

I strongly support Alternative #2, habitat protection. Thank you for your ear.

US, Outside Alaska# 1054

I am writing you now because I understand that your office is accepting public input concerning the use of the monies received from the Exxon Corporation as settlement for their negligence in the March 1989 oil spill. Currently I am sitting on a rock less than 50 feet from the Lawrence Glacier next to a river that any sane person would never swim. Over the course of the last two weeks I have paddled via sea kayak through approximately 100 miles of Prince William Sound and as a user of the resource as well as a supporter of the economy of Alaska feel that I am entitled to make my opinion known. I understand that you have 5 alternatives and that your ultimate decision will be guided at least partially by one of these alternatives. I support the alternative that directs the money towards land acquisition and steers away from any kind of active interference in the balance of nature. Such interference is cumulative and not beneficial even with the best intentions. The environment is quick to cure its ills; (although not by our clock) as I have seen in my youth in New England. Land acquisition whether it be outright or by resource rights acquisition will prevent the slow but steady degradation of the coastline allowing nature to rebuild itself. Other alternatives as I understand will only alter the current balance and will interfere with the work of nature. Again let me say that I favor alternative that provide acquisition and preservation of the private lands along the Sound.

US, Outside Alaska# 1032

I strongly believe that the best option would be plan II, Habitat Protection. I feel that the best way for the environment to recover is to let nature heal itself with limited human intervention. Some restoration actions should be taken to help those organisms hit hard by the spill, while those that were not directly affected by the accident should be left alone. Funds should be used for actions in spill area only unless it is discovered that being active in other areas has a direct link to the recovery of a species located and affected by the Sound.

US, Outside Alaska# 1031

I do not believe that roads, logging and manners will help "restore" this magical place which so many people enjoy. Habitat protection would focus efforts on acquiring land to be preserved naturally over time. The Sound's recent trauma now deserves to be left alone as nature intended it to be in the first place. For this and other reasons I convictedly support your alternative 2. Due to a lot of factors, I must keep this relatively brief. I did much research on the spill while on the Sound, and coordinated a "cleanup symposium" of our group at which we gave presentations on Alaska's oil subsistence, types of oil, the damage done to wildlife and human resources, the settlement, and the alternatives of how to direct the civil settlement monies. I invested the time to understand the "greater picture" and desire to see the money spent in the best possible way for the Sound. Thank you for your time and commitment to the public.

US, Outside Alaska# 1030

My name is Ruth Burday, and I currently live in New Hampshire. I am writing in relation to the Exxon Valdez Restoration Plan. I encourage you to choose alternative #2.

US, Outside Alaska# 1029

My name is Nick Weiss, and I am from Brooklyn, New York. I write concerning the expenditures to be made under the *Exxon Valdez* Restoration Plan, and I feel that these monies should be used for alternative number two (2).

US, Outside Alaska# 1021

I have just finished a 2 week sea kayak course with NOLS. The Prince William Sound is great the way it is. Please don't log it. I support the land acquisition plan #2. Thank you for your consideration.

US, Outside Alaska# 1011

I really believe money would be better spent preserving habitat and on education visitors to minimize their impact. At present I see plan number two as the one I favor.

US, Outside Alaska# 1008

I am writing this letter in regards to the *Exxon Valdez* oil spill restoration. In allocating the funds for such a large sum of money, I am sure there will be many groups of people that will want their share for their cause. Having read the restoration draft newspaper I personally would choose alternative #2. I think that the main thing to be considered should be Prince William Sound itself. The Sound was injured by the spill in so many ways, from salmon runs to harbor seals. Right now I have just completed a 3 week sea-kayaking course with the National Outdoor Leadership School. We traveled from Whittier to Nellie Juan Glacier to Knight Island, down to Pt. Helen, to Icy Bay, through Dangerous Passage to Perry Island and we are now back on our way to Whittier. In these 3 weeks we covered close to 200 miles. I am from Alabama and this is my 2nd time back to the Sound. I will return in years to come and would love to see the Sound thriving once again like it always has in the past. Please choose wisely in the decision of what to do with the settlement money from Exxon. Remember, the Sound is the important part of so many plants, animals, and people. Thank you for your time to read this letter.

US, Outside Alaska# 1004

My name is Rebecca Rumiers, and I am sea kayaking for three weeks on the Prince William Sound with the National Outdoor Leadership School. I'm not from Alaska, but am nevertheless concerned with the impact the *Exxon Valdez* oil spill on this fragile ecosystem. Having studied the summary of alternatives for the restoration plan, I wish to voice my opinion. I feel that alternative 2 is the most responsible and effective recovery plan. The monies awarded to Alaska should be used as much as possible to restore the health and well-being of the Sound, rather than for further development. Please take this into consideration when making your decision.

US, Outside Alaska# 793

If one must choose from the five "alternatives" then Alternative 2 appears to be the preferable

US, Outside Alaska# 446

I am a student of the National Outdoor Leadership School, and am completing a three week kayaking expedition on Prince William Sound. We paddled nearly two hundred miles in the Sound, including some areas which were substantially affected by the 1989 spill. Having benefited from the beauty and wilderness of such areas as Knight Island and the surrounding coastline, I feel obligated to write you concerning the disposal of the Exxon settlement. I would like to strongly urge you to support Alternative 2. Because I feel that it accomplishes most completely the objectives of the suit; to restore the Sound ecosystem to its pre-spill state. Tempting though it may be to support efforts to construct infrastructure to encourage human use of the Sound, it is not in the spirit of the suit to do so.

REGION: Prince William Sound

Cordova # 769
Alternative #2.

REGION: Unknown

Unknown # 1691

I am writing to you because I SUPPORT ALTERNATIVE 2. I recently spent 2 weeks on Prince William Sound with the National Leadership School (NOLS). Living as I do in the Lower 48 it means a lot to me that some part of this country should be left as unspoiled as possible. Alaska by virtue of it's remoteness and climate seems to me to be our best last chance. I urge you to leverage the money that is left from Exxon's settlement to the maximum to ensure that as much habitat is protected for future generations to enjoy as I have this summer.

ISSUE: 4.2 CON ; Oppose Alternative 2
--

REGION: Alaska Peninsula

Chignik Lagoon # 5216

Alternatives 2 and 3 don't even affect us here, but maybe some of the things to fix overescapement stuff could be used here.

REGION: Kodiak

Old Harbor # 5671

How are you going to protect anything? Are you going to let everything just go to hell? I don't think like alternative number 3. Even after all the information maybe we'll never see anything come out of it. If you set research to 3%, are you going to spend it all in Prince William Sound or are you going to spend some of it in Kodiak? I'd like to see some research done here.

ISSUE: 4.3 XX ; General comments about Alternative 3

REGION: Kenai

Homer # 6098

I generally agree with what she said (like Alternative 3).

Homer # 5461

Alternative 3 is pretty reasonable. I am in favor of habitat protection. It would be good to unload this money. Fat processes like this are natural targets. You have to guide the money within the agencies.

Homer # 5460

I like Alternative 3, but I am not sure I like the policies. I am not sure the restoration action

should cease. I am not sure it should be limited to the spill area. It should be considered on a case-by-case basis. I basically like that approach.

ISSUE: 4.3 PRO ; Supports Alternative 3
--

REGION: Alaska, Outside the Spill

Fairbanks # 176

I favor allocation #3 (limited restoration) which uses 75% on habitat protection/acquisition. Please protect Cape Yakataga.

REGION: Anchorage

Anchorage # 1633 Forest Service Chugach National Forest

Overall Response to Proposed Alternative. Although difficult to choose, we prefer Alternative 3 (Limited Restoration) for its overall guiding policies. We generally favor spending oil spill funds within the designated spill area. We favor a program of recreation enhancement within the Sound consistent with the current direction in the Chugach Forest Plan. Included would be trail construction, new cabins and hardened camp sites; and funds over the long term to maintain facilities. The EVOS-funded recreation working group could appropriately synthesize the details of recreation development with respect to public views and current management direction. Within alternative 3 however, we do not favor the creation of new (that is, any facilities in addition to those currently existing or proposed for expansion) hatchery based fish runs in the Sound. The present-concerns regarding wild vs. hatchery stocks are of sufficient concern so as to not further promote additional hatchery runs.

REGION: Kenai

Seward # 265

I prefer Option 3 or may own outlined below.

REGION: Outside Alaska

US, Outside Alaska# 1132

This letter is in response to your request for public comments concerning the *Exxon Valdez* oil spill recovery alternatives. I understand that \$600 million is as yet uncommitted, and five alternatives concerning the spending of that money have been proposed. I think alternative 3 is the best choice. The importance of acquiring and protecting habitat cannot be understated. Perhaps the prime reason for spending 75% of the funds on habitat is that without it, hundreds of thousands of acres of private forests will probably be clearcut in the near future. Should that happen, it will make the full recovery is spent on fisheries studies and management programs. As we have learned in Oregon, clearcutting near mountain streams often has a devastating effect on the health of those streams and their suitability for salmon and trout. Perhaps even better than Alternative 3 would be a proposal put forth by several conservation groups calling for 80% of the funds to be used for habitat protection and the balance for research and development. I understand that certain aspects of

Alternative 3 make it less desirable than this new sixth alternative. regardless, though, I still think Alternative 3 is the best of the five that have been presented. A 75-25 split will help to ensure protection of a habitat that is so very important to both the animals that live there and the people who fish and hunt there. Thank you for the work you are doing on this important project.

US, Outside Alaska# 1061

Having just completed a three week kayaking tour in the northern sections of Prince William Sound I find myself compelled to write you regarding the oil spill restoration plan. My observations of cleaned beaches and uncleared but affected beaches and as well as slightly and unimpacted areas deepened my concern for the health of this unique land and priceless resource. Of the 5 alternatives listed in the public draft of the restoration plans, I most support Alternative 3. I am concerned about the potential in other plans few increasing human use too greatly.

ISSUE: 4.3 CON ; Oppose Alternative 3

REGION: Alaska Peninsula

Chignik Lagoon # 5216

Alternatives 2 and 3 don't even affect us here, but maybe some of the things to fix overescapement stuff could be used here.

ISSUE: 4.4 PRO ; Supports Alternative 4

REGION: Kenai

Seldovia # 6158

Alternative 4 seems the better of the alternatives with a few changes.

Seldovia # 6148

Alternative 4 would seem to be the most balanced in terms of our interest.

REGION: Outside Alaska

US, Outside Alaska# 1181

Howdy, I'm writing to express my views and opinion on the Exxon Oil Spill Recovery Proposals. I believe Alternative #4 of 50% to be spent on habitat protection and acquisition. I'm an NWF (National Wildlife Federation) member. Their proposal is 80%. Although I'm a conservationist, I believe people primarily in the fisheries industries should be compensated as well as the habitat.

US, Outside Alaska# 799

I urge you to select Alternative FOUR from among the five being considered by the Trustee council as a blueprint for the restoration few resources and services injured by the 1989 oil spill. Of the plans described in the Draft *Exxon Valdez* Oil Spill Restoration Plan pamphlet, the "moderate restoration" plan appears to be the most balanced and farsighted maximizing the effectiveness of oil

settlement funds. It provides adequate funding for habitat protection and acquisition while casting a wider net over recovery activities to those resources and services outside the designated spill area -- recognizing that ecosystems do not conform to man-made boundaries. It also provides for more responsible management of "human use" of the sound. We cannot ignore the impact our actions will have on habitat, so best we manage our actions as wisely as possible. Finally, it provides funding for the all-important monitoring/research and administration/public information functions associated with restoration, without which we would squander the opportunity to apply newly gained knowledge about the effectiveness of various restoration activities to the Valdez oil spill area and to other oil spill recovery efforts. I recently had the distinct privilege and pleasure of camping and kayaking in Prince William Sound -- thus my heightened interest in the council's activities. I was deeply moved by the sound's beauty and strength, but also felt cheated that I and others could not enjoy the rich biodiversity it had been known for in the years preceding March 1989. Everyone I spoke with who had experienced the sound prior to the spill acknowledged that it was considerably more "silent" now. The United States has a responsibility not only to protect and manage our priceless natural resources wisely, but to set an example through our actions for the rest of the world. This includes having the discipline to adopt intelligent environmental restoration practices in the wake of environmental disasters. I commend the council, the State of Alaska and the federal government for the actions thus far. The adoption of alternative four will help ensure that we achieve these goals. I wish the council vision and courage as it proceeds with its important mission.

US, Outside Alaska# 451

I have just spent the last three weeks sea kayaking Prince William Sound. There I have enjoyed the natural resources that it has to offer. Although I am not an Alaskan resident, I would like to see this beautiful, life-inspiring resource to be preserved indefinitely. For all U.S. citizens, Prince William Sound offers a host of natural wonders that need protection. The Valdez oil spill of 1989 jeopardized this valuable area. Many wildlife gave their life up for human error. This must not happen again! The price to be paid is much too high. Can you imagine the last sea lion or marbled murrelet that can't breed because their populations are so low? By protecting habitat, this need not be a reality for Prince William Sound! I believe that plan 4 offers the best protection and restoration for Prince William Sound.

REGION: Prince William Sound

Chenega Bay # 5165

Regarding the alternatives, what we have heard today will lead me to believe that opinion is gravitating towards Alternative 4 or 5.

ISSUE: 4.4 CON ; Oppose Alternative 4
--

REGION: Outside Alaska

US, Outside Alaska# 747

With alternatives 4 and 5, I can foresee the feeding trough and frenzy for local, state and federal agencies and for consultants. Under these alternatives, agency self-interest would control, rather than the best interests of the environment. I can just see ADF&G (Alaska Department of Fish and Game),

as well as other groups and agencies, viewing this fund as a means of funding budgets, and justifying and expanding staffing. If these agencies were not buffeted by politicians and funding, I would be more confident of their neutrality and stewardship of the resources. Unfortunately, the public cannot count on such neutrality and stewardship. Alternatives 4 and 5 present opportunities for real and significant abuse, as well as the delay of beneficial activities. Alternatives 4 and 5 seem to be the "Christmas Tree" decorations by the agencies, particularly the Forest Service to fund activities and programs not supported by the public or its funding. I do not support Alternative 4 and 5 because I see chaos in deciding where to draw the line (budget and geographic) in which resources and habitat to include. It would be a black hole for money, time, and agencies.

ISSUE: 4.5 PRO ; Supports Alternative 5
--

REGION: Kenai

Seldovia # 5878

I am in favor of Alternative 5 with a slight modification. I think the research and monitoring portion should be doubled to 20%. We don't know enough about Mother Nature and how the ecosystem works.

REGION: Kodiak

Kodiak # 5528

I don't know why anyone would go for anything other than alternative number five. Why would we want anything other than total restoration? We know we've got a pink salmon problem, and that during the spill our clams and mussels in some of the villages were impacted. Again I come back to the lab problem. It took us until November to get results. We had samples in labs in Colorado, Texas and Washington and it took them six months to be able to tell these people whether they could eat the clams next week on the beaches. It was absolutely worthless to tell the people whether salmon were safe to eat that much after the fact. It would be much better if we had the capability to do those analyses here. I don't see enough emphasis here on pink salmon, intertidal species, or clams, and I see nothing on bottom fish impact. We know 17 of the publicly owned archaeological artifact sites were impacted. We do appreciate the Trustee Council funding the museum, but there's a lot there that needs to be covered under the comprehensiveness of the plan when it comes out.

ISSUE: 4.5 CON ; Oppose Alternative 5
--

REGION: Kenai

Seward # 5944

I would like to second Carol's comment about prevention. If we don't work on prevention all this is useless. Regarding Alternative 5, if we haven't worked on prevention, increased human use will make it more likely we will have problems like these. It may be smaller but we will still have more damage to the habitat.

REGION: Outside Alaska

US, Outside Alaska# 747

With Alternatives 4 and 5, I can foresee the feeding trough and frenzy for local, state and federal agencies and for consultants. Under these alternatives, agency self-interest would control, rather than the best interests of the environment. I can just see ADF&G (Alaska Department of Fish and Game) as well as other groups and agencies, viewing this fund as a means of funding budgets, and justifying and expanding staffing. If these agencies were not buffeted by politicians and funding, I would be more confident of their neutrality and stewardship of the resources. Unfortunately, the public cannot count on such neutrality and stewardship. Alternatives 4 and 5 present opportunities for real and significant abuse, as well as the delay of beneficial activities. Alternatives 4 and 5 seem to be the "Christmas Tree" decorations by the agencies, particularly the Forest Service to fund activities and programs not supported by the public or its funding. I do not support Alternative 4 and 5 because I see chaos in deciding where to draw the line (budget and geographic) in which resources and habitat to include. It would be a black hole for money, time, and agencies.

ISSUE: 4.6 XX ; Supports 80/20 Alternative ("Alt 6")

REGION: Outside Alaska

US, Outside Alaska# 1773

I would like to express my support for a large portion of the remaining settlement monies - at least 80% - be used to acquire and protect habitat. This is a great opportunity to use the funds for direct on the ground habitat protection. Some of the money should be used for fisheries studies and management programs, but the real direct benefits will come from habitat protection. There have been many studies which indicate that habitat protection is necessary, so let's do it rather than wasting money on further studies which will give us the same conclusions. Thank you for taking my thoughts and concerns into consideration.

US, Outside Alaska# 1767

Please use 80% of the remaining money for habitat protection and 20% of the settlement for fisheries studies and management programs. You must prevent the clearcutting of private forest lands - this can be the one important result that comes out of the tragedy of the oil spill. Thank you.

US, Outside Alaska# 1762

I understand that you are receiving comments which will be used to prepare a final restoration plan to be presented, this fall. It is my request that you use 80 percent of the remaining funds for habitat protection and 20 percent for fisheries studies and management programs. If habitat protection is not given top priority, it is my concern that such occurrences as hundreds of thousands of private forest land being clearcut will add to the already devastating consequences of the spill. Thank you for considering my comments and concerns.

US, Outside Alaska# 1729

I understand that you are seeking public comments on the spending of the remaining funds from the settlement of oil spill in Prince William Sound. I support the alternative recommended by the National Wildlife Federation of using 80% for habitat protection and 20 percent for fisheries studies and management programs. Thank you.

US, Outside Alaska# 1721

I agree with the National Wildlife Federation that the bulk (>80%) of the remaining funds be used for habitat protection. I urge you to decide upon Alternative 6 that seeks to protect hundreds of thousands of acres from being clearcut. Thank you,

US, Outside Alaska# 1717

I support adopting a sixth alternative that 80% of the remaining the remaining uncommitted \$600 million dollars for habitat protection. The remaining 20% should be used for fisheries studies and management programs. Without habitat protection hundreds of thousands of acres of private forest land will clearcut adding to the already devastating consequences of the spill. Because habitat protection is critical to Alaskan wildlife recovery, use 80% of remaining funds for this purpose. Thank you.

US, Outside Alaska# 1683

I add my voice to a coalition of conservation groups who are recommending the adoption of a sixth oil spill recovery alternative that uses 80 percent of the remaining funds for habitat protection. If settlement monies aren't used for such protection, hundreds of thousands of acres of private forest land will be clearcut. This, in turn, will only add to the devastating consequences for the spill. Some of these consequences are that there is a new silence in places once populated with seals, otters or birds. Some beaches still have patches of asphalt-like oil that will probably take decades to degrade in the cold. Sometimes the oil still sheens into the water. Many creatures have not rebounded such as sea otters, harlequin ducks, murres, and oystercatchers. Murre populations are not expected to recover completely for up to 75 years. In inter-tidal zones, mussel mats retain oil trapped four years ago which, in turn, poisons the animals that eat them. State and federal scientists have found the effects of the oil in organisms from salmon and other fish to whales--in such forms as brain damage, reproductive failure, genetic damage, structural deformities such as curved spines, lethargy, lowered growth rates and body weights, changed feeding habits, reduced egg volume, eye tumors, increased number of parasites, liver damage and behavioral abnormalities. I do not want to see any more devastation of this area and I want the best chances of recovery possible. That is why I recommend that at least 80 percent of the remaining funds be used for habitat protection which would leave 20 percent of the settlement funds for fisheries and management programs. I want my posterity to be able to see Prince William Sound and the surrounding areas as

they once were in their pristine state.

US, Outside Alaska# 1682

I understand you are accepting public comment concerning the Exxon settlement and how to use the remaining \$600 million. I have read the five alternatives and while Alternative 2 and 3 would allocate most of the funds for habitat protection, they have certain drawbacks. I must side with the conservation groups who recommend using 80% of the funds for habitat protection and the other 20% for fisheries studies and management programs. There is no doubt that long term damage was done to Prince William Sound and Alternative 1 (doing nothing) is totally unacceptable. The area is a fragile ecosystem due to the damage done by the *Exxon Valdez* spill. It is imperative to fund habitat protection to prevent any further damage being done. The studies are needed to assess damage and determine what specific areas need the most help. The management programs are needed to ensure that the balance of nature is restored and maintained. Please adopt the conservationists coalition's alternative (80%/20%).

US, Outside Alaska# 1673

I would like to urge the *Exxon Valdez* Oil Spill Trustees to use at least 80% of the remaining funds for habitat protection and 20% for fisheries and management funds. This would prevent the erosion of hundreds of thousands of acres of woodlands adjoining the sound. This erosion would further devastate the wildlife as well as the general health of Prince William Sound. Please put 80% of the funds in protection and 20% on research and study. Thank you for your time and effort.

US, Outside Alaska# 1672

In regards to the spending of funds for restoration, I strongly urge you to spend at least 80% of the funds on habitat protection and the remaining 20% on management

US, Outside Alaska# 1654

Last June, I travelled to Alaska for the first time. I was awed by the majestic mountains and the abundance of wildlife. These qualities attract many thousands of tourists and provide a unique asset that Alaskan communities can market to enhance their local economies. As Trustees of the Exxon Valdez Oil Spill funds, I urge you to invest at least 80% of the remaining funds for habitat protection and the remaining 20% for fisheries studies and management programs. Alaskan communities cannot wait until injured wildlife and habitat recover naturally. The balance must be sought between selecting what is good for communities as well as wildlife. I appreciate your interest and hope that you will pursue my recommendations. The land and water resources of Alaska are too valuable for us to make another mistake in their mismanagement.

US, Outside Alaska# 1597

I am writing to you in regards to the 1989 *Exxon Valdez* oil spill. I was very disturbed by the fact that you are considering not spending any of the civil settlement money toward helping to protect habitats. Don't you think it's our responsibility to protect the Animals that survived the oil spill, since we can't bring back the thousands that died from it? I think you should spend at least 80% of the remaining settlement funds toward animal habitat protection. This would leave about 20% of the settlement money for fisheries studies and management programs. Thank you for your time and please consider this alternative.

US, Outside Alaska# 1590

I am writing to indicate my preference for spending the uncommitted funds from the Exxon oil spill. I recommend an alternative that uses 80% of the remaining funds for habitat protection and 20% for fisheries studies and management programs.

US, Outside Alaska# 1579

I wish to offer my views on spending the remaining restoration money. An alternative between 2 and 3 seems justifiable. About 80% of the funds should be used for habitat protection (not necessarily acquisition) and 20% for fisheries study and management programs.

US, Outside Alaska# 1578

I agree with the National Wildlife Foundation regarding the preparation of a final restoration plan for Prince William Sound. I recommend that at least 80% of the remaining funds be used for habitat protection, leaving 20% of the settlement funds for fisheries studies and management programs.

US, Outside Alaska# 1562

I am writing to express my comments regarding the five proposed alternative spending options suggested. I strongly agree that habitat and wildlife protection be given priority. Monies should be spent to protect the present land and to avoid clear cutting forests on private and public lands. I also believe that monies need to be used for research and development in order that we learn from this experience and be prepared for another such disaster. Following the readings on this subject, I recommend that at least 80% of the remaining funds be used for habitat protection with the rest used for research.

US, Outside Alaska# 1533

I returned yesterday from a vacation in Alaska. I saw many types of animals that were directly affected by the 1989 *Exxon Valdez* Oil Spill. I have read over your various recovery alternatives that would use a certain percent of the available money from Exxon as protection for these animals. I think a sixth alternative should be considered. I believe 85 % of the available funds should be used for habitat protection and the remaining 15% for fisheries studies and management programs. Thank you for your time.

US, Outside Alaska# 1507

I am writing to recommend that you use 80% of the remaining spill funds to protect the habitat of the Prince William Sound area. Anything less will result in further devastation of the fragile ecosystem. The remaining 20% should be earmarked for fishery studies and management programs.

US, Outside Alaska# 1504

I am really concerned about how the funding for habitat protection will be allocated. I strongly support the idea that 80% of the remaining funds be used for habitat protection and 20% be allocated for fisheries studies and management programs. It is almost impossible to fix a broken ecosystem so we must protect the habitat as much as possible so that the habitat will be protected.

US, Outside Alaska# 1459

It is my opinion that the \$600 million of uncommitted funds be utilized so that 50% would be for habitat restoration and 50% for research and development. Although habitat restoration has a great

deal of priority, I believe that an equal amount should be spent toward eliminating the very problem contributing to the spill, as well as preserving and protecting to the greatest of our ability so that these problems will not recur in the future. Thus, a very significant proportion should be applied to preventive medicine and not simply band-aid work on the present situation.

US, Outside Alaska# 1453

Please put all that settlement money to good use-at least 80% to protect the natural habitat and environment so essential now and for the future of this state, this country and this planet! No more clearcutting - it's disastrous! The remaining 20% should go to research for fisheries and management studies.

US, Outside Alaska# 1416

I am writing to you today to express my opinion on the *Exxon Valdez* spill recovery proposals. I am concerned that Exxon is going to get away with harming thousands of species of animals, some of them endangered. I believe that at least 80% of the remaining funds be used for habitat protection. If this does not happen forests around the Sound will be clearcut, putting more stress upon an already overstressed ecosystem. The remaining 20% of the settlement funds should be used to fisheries studies and management programs. Please support this alternative.

US, Outside Alaska# 1405

The remaining monies from the settlement reached with Exxon after the 1989 oil spill must be spent to protect existing habitat from further destruction! Please ensure that at least 80% of the remaining uncommitted \$600 million be spent on habitat protection and acquisition. Logging and development must be strictly forbidden on protected land. The remaining 20% of the settlement monies should be dedicated to fisheries studies and management programs. Please help protect and preserve one of the last remaining wilderness areas in the world.

US, Outside Alaska# 1403

This is to suggest your consideration of a sixth alternative to the proposals for cleaning up the Prince William oil spill. This alternative would use 80% of the remaining fund for habitat protection which would ensure that many thousands of acres of private forest land would be unavailable for clear-cutting and other damaging commercial forestry practices use by profiteers. The alternative would leave 20% for fisheries studies and management programs which will be needed for many years in the process of recovery and restoration of Prince William Sound. Thank you for making it possible for people to express their personal and unvoiced opinions.

US, Outside Alaska# 1362

Please consider a 6th alternative to the 5 you are think about. I recommend that at least 80% of the remaining funds be used for habitat protection. The rest of the settlement fund could be used for fisheries studies and management programs. I am concerned that not enough money will be spent on protecting habitats.

US, Outside Alaska# 1357

We are writing to comment on the proposed alternatives for spending the monies received from Exxon for the restoration of Prince William Sound. While we are not residents of the area, we feel we have a vested interest in the way these monies are spent, not just because of our desire to know that

Prince William Sound is now protected, but also because this case sets precedents for future oil spill recovery plans throughout the nation. Because we feel that habitat protection is the most crucial action anyone can take for the health of natural communities, we believe that the majority of the money should be spent on such protection. We support the suggestion of a variety of conservation groups to create a sixth alternative, one that would spend 80% of the remaining funds on habitat protection, with the final 20% going to fisheries studies and management programs. If you are not moved to include an Alternative 6, we would then support Alternative 2 or Alternative 3, spending 90% or 75% of the remaining funds, respectively, on habitat protection. Please let us know your final decision on the dispensation of this fund. Thank you.

US, Outside Alaska# 1355

I understand that the *Exxon Valdez* Oil Spill Trustees are seeking public comments on various recovery alternative to be used to prepare a final restoration plan that will be presented this fall. I support the adoption of a sixth alternative that uses at least 80 percent of the remaining funds for habitat protection. If settlement monies aren't used for such protection, hundreds of thousands of acres of private forest will be clearcut; adding to the already devastating consequences for the spill. The remaining 20 percent of the settlement funds would be used for fisheries studies and management programs. Thanks.

US, Outside Alaska# 1352

I am writing to ask you to please give consideration for adding at least one more alternative to those you've thus far proposed. I ask that you designate 80-90% of the available funds for habitat protection with the remaining funds being used for fisheries studies and management programs.

US, Outside Alaska# 1351

We hope you seriously consider the value of every letter that is sent to you. We have seriously considered the value of Exxon's clean-up and cannot justify the inability to commit a cleaning up of the 1989 Prince William Sound disaster. From 1989 to date, we have refused to consider your oil company as a stopping place to receive any assistance. Prior to the spill, Exxon was the only gas station we used. We hope this letter reaches you before the August 8th deadline. Hopefully along with many other concerned people, we urge you to adopt the sixth alternative: one that uses 80 percent of the remaining funds on habitat protection and 20 percent on fisheries studies and management programs. And, if there is any alternative we can beg you not to consider, please do not choose alternative one which promotes no action at all. With an endangered species as a symbol of Exxon, surely you realize the critical need to carefully consider what is best for the environment. The money amount has already been settled. We only ask that you choose the best alternative for all: number six.

US, Outside Alaska# 1350

I am writing to express my position on the proposed distribution of the remaining \$600 million from the settlement of the *Exxon Valdez* Oil Spill. If used properly this money could do a world of good for the Alaskan environment. While none of the proposed alternatives is perfect, the one that I think will do the most to mitigate the harm done by the *Exxon Valdez* disaster is "alternative 2." The \$540 million that it would provide for habitat acquisition will safeguard the Ancient Forest areas around Prince William Sound. If they are not protected sooner or later they will be clearcut. This would be an environmental tragedy almost as great as the *Exxon Valdez* Oil Spill itself. The one

flaw in "Alternative 2" is that it leaves only 10% of the money to support basic ecological research and habitat management programs. It might be better if the split was more like 80% for habitat protection and 20% for research and management. I hope you apportion the funds as I have outlined above. To miss the opportunity to save so much of Alaska's natural heritage would be a crime against our children and grandchildren. This once in a lifetime opportunity must not be missed.

US, Outside Alaska# 1346

I am writing this letter in regards to the question of what to use the remaining 900 million in funds that are left as part of the out of court settlement agreement. This letter is to let you know that I strongly recommend the adoption of a sixth alternative that uses 80% of the remaining funds for habitat protection and 20% of the funds for fisheries studies and management programs. Habitat protection is of utmost importance in this unique and special place, but it will never be successful if there is no management plan to implement this protection. And you need annual studies of both the habitat and the wildlife to make the management plan viable. This all costs a great deal of money to make sure it is well done. Certainly a large portion of funds should go into habitat protection. There is no question in my mind in regards to this aspect of your decision. But please take into account the cost of fisheries studies (the fish industry needs these studies for survival) and the need for a management plan to ensure proper protection--that way you will definitely get something to show in more ways than one, for your money. Thank you for your time and attention.

US, Outside Alaska# 1333

This fall, a final restoration plan for Prince William Sound will be prepared. Five alternative plans are being proposed. Unfortunately, each of these alternatives pose a further threat to the health of Prince William Sound. Therefore, I am asking the adoption of a sixth alternative. This sixth alternative would use 80% of the \$600 million remaining in the *Exxon Valdez* Oil Spill settlement funds for habitat protection. Failure to use these funds for protection could lead to the clearcutting of private forests. This clearcutting will in turn add to the destruction of the spill.

The remaining 20% of settlement funds would be allocated for fisheries study and management. This sixth alternative has the support of a coalition of conservation groups, including the National Wildlife Federation. I ask for your added support. Thank you for your time. Your comments are appreciated and requested.

US, Outside Alaska# 1326

I wanted to add my comments on the spill recovery proposals. As I understand there are currently 5 options with the environmental groups offering a 6th. I've reviewed the 6th one and find it to my liking. As for options 1, 4 and 5 - I can't support any of these. Options 2 and 3 were too sketchy in my readings. On the surface they seem acceptable, but I would like further information on the habitat protection proposals. My overall support is for option 6.

US, Outside Alaska# 1325

In regard to proposals for a final restoration plan in Prince William Sound, I would encourage you to consider: * An Alternative plan that would use 80% of remaining funds for habitat protection. This would help to protect forest lands as well. This would leave 20% or so of the funds for studies and management programs. If an alternative plan will not be considered, my support would be in line with Alternative 3.

US, Outside Alaska# 1324

I am writing to express my opinion on the various recovery alternatives proposed for the *Exxon Valdez* oil spill. I believe that at least 80% of the remaining funds should be used for habitat protection. If such protection is not provided, hundreds of thousands of acres may be clearcut, which would greatly add to the already devastating consequences of the spill. This alternative would leave 20% of the funds for fisheries studies and management programs. The proposed alternatives 1-5 do not meet these requirements.

US, Outside Alaska# 1323

I am writing to provide comments on the *Exxon Valdez* recovery alternatives. I am recommending a "Sixth alternative" that uses 80% of the remaining settlement funds for habitat protection, and the remaining 20% for fisheries studies and management programs. Thank you for your immediate attention to this critical issue.

US, Outside Alaska# 1321

Please accept this letter as my opinion that at least 80% of the remaining funds of the Prince William Sound oil spill settlement should be used for habitat protection. If this isn't done, the horror of hundreds of thousands of acres of private forests being clearcut will be realized. This will only add to the already devastating results of the spill. Allocating these funds in this way will leave 20% of the funds for fisheries studies and management programs. I am very much in favor of utilizing as much of these funds as possible to protect current and future habitats. Spending anything less than 80% of these allotted funds will be ludicrous and totally unacceptable. If it weren't for the carelessness of Exxon and other giant oil corporations these type problems wouldn't occur which threaten natural habitats around the world! Thus, I feel an all out effort should be made to spend whatever it takes to make sure they are protected from disasters like these at this time and in the future. We must start protecting our precious wildlife now...so many people do not realize that "extinct is forever".

US, Outside Alaska# 1317

It has become clear to me that the reason little money has been spent on substantive restoration in Prince William Sound is that there really is no such thing as oil spill restoration. That fact should not prevent us from trying. The development of a plan to begin "restoration" should, in my view, use 80% of settlement funds for habitat protection. The remaining 20% should be for fisheries studies and management programs. If we don't protect habitat around the Sound from such things as clear-cutting, we'll simply be adding to the disaster.

US, Outside Alaska# 1307

When the *Exxon Valdez* accident occurred and ever since, I have been avidly following events and praying the devastation could be alleviated. I recommend: ALTERNATIVE 6 using 80% of remaining funds for habitat protection, 20% for fisheries studies and management programs. Lets protect the ecosystem Let's be Environmentally correct. You are 4 years late!

US, Outside Alaska# 1298

We wish to convey our concerns regarding the *Exxon Valdez* oil spill in Prince William Sound and how the \$600 million settlement should be spent on its recovery. Once an oil spill of this magnitude has occurred, we must do all we can to regain this priceless ecosystem that was destroyed. It will never

be completely recovered due to the extreme damage - but we wish to recommend that 80 percent of the remaining funds be used for habitat protection. If not - hundreds of thousands of acres of private forest land will be clear cut and will only add to the devastating consequences for the spill. This alternative will also leave 20 percent of the settlement funds for fisheries studies and management programs.

US, Outside Alaska# 1295

I am writing to express my opinion on the uncommitted money from Exxon on the Valdez oil spill. I would appreciate your concern toward an alternative of 80% of the money used for habitat protection and 20% for fishery and management programs. Thank you for your consideration in this matter.

US, Outside Alaska# 1291

Re: Spill recovery proposals. Greatly prefer using 80 percent of the remaining funds for habitat protection including the rescue of hundreds of thousands of acres of private forest land which otherwise could be clearcut. The remaining 20 percent of the settlement funds could be used for fisheries studies and management programs.

US, Outside Alaska# 1287

We are writing to express our concerns on the recovery of Prince William Sound. We favor the alternative leaving 20% of the uncommitted settlement funds for fisheries studies and management programs and using 80% for habitat protection. (This is the 6th alternative recommended by a coalition of conservation groups). Thank you.

US, Outside Alaska# 1284

I prefer the conservationist's alternative - 80% of remaining funds for habitat protection - 20% for fisheries studies and management programs. This plan offers the best for both wildlife and forests.

US, Outside Alaska# 1283

After reading several articles regarding the *Exxon Valdez* oil spill, my recommendation is to allot at least 80% of the remaining funds for habitat protection, the rest to be used for studies and management programs. Thank you for your consideration in this matter.

US, Outside Alaska# 1276

After reviewing the five recovery alternatives relating to the uncommitted settlement monies from the *Exxon Valdez* oil spill, I find none of them acceptable. I, therefore, recommend a sixth alternative which would allocate at least 80% of the remaining funds to be used for habitat protection and 20% for fisheries studies and management programs.

US, Outside Alaska# 1265

Please use 80% of the \$900 million charged against Exxon for habitat protection and the remaining 20% for improving the fish populations in the area. Please write to me and let me know what the outcome of your decision process is.

US, Outside Alaska# 1264

I am informed that you are accepting public comment on how to spend the 600 million in remaining funds for restoration and recovery from the 1989 *Exxon Valdez* oil spill. I understand that five

different plans have been prepared, but that a coalition of conservation groups have recommended instead the adoption of a sixth alternative which uses 80% of the money to acquire and protect habitat and uses the other 20% for fisheries and management program studies. It is my belief that habitat protection should be given the highest priority, since without adequate protection, hundreds of thousands of acres of private forests are in danger of being clearcut, which would only further magnify the damaging consequences of the spill. I strongly urge you to adopt the new sixth alternative advocated by the National Wildlife Federation and other conservation groups, or some variant of it, which uses at least 80% of the funds for habitat acquisition and protection.

US, Outside Alaska# 1262

I have reviewed your alternatives for the final restoration plan for Prince William Sound. I agree with a 6th Alternative that would use 80 percent of the remaining funds for habitat protection. Without this protection more acres will be clearcut, adding to the enormous problems. This would leave 20 percent few the settlement funds for fisheries studies and management programs.

US, Outside Alaska# 1255

I ask that, of the remaining uncommitted \$600 million, you please allocate a minimum of 80 percent for habitat protection and 20 percent for fisheries studies and management programs. It is vital that at least 80 percent be spent for habitat protection, as otherwise an already precarious habitat situation can only worsen.

US, Outside Alaska# 1245

This letter concerns the final restoration plan for use of the \$600 million left in the settlement of the oil spill in 1989. I urge you to adopt an alternative that would use 80% of the remaining funds for habitat protection. That would leave 20% for fisheries studies and management programs.

US, Outside Alaska# 1242

I would prefer to see your committee adopt a sixth alternative, rather than any of the five you are considering. This alternative would use 80% of the remaining funds for habitat protection and 20% for fisheries studies and management programs. Please consider this additional alternative as you prepare your final restoration plan.

US, Outside Alaska# 1231

I am writing to you to express my concerns on how the remaining \$600 million of the *Exxon Valdez* spill settlement should be spent. I have reviewed your five alternative actions and also a sixth alternative that has been proposed by a coalition of environmental groups. The two that I most strongly support are the proposal offered by the environmental groups (first choice) and Alternative 2 (second choice). The environmental group's proposal would allocate 80% of the funds for habitat protection. Either one of these alternatives would provide much of the necessary protection to wildlife habitat and acquisition.

US, Outside Alaska# 1229

As a photographer and avid outdoorsman, I have visited Alaska and hope to continue to do so. I consider the *Exxon Valdez* oil spill one of the worst disasters in American history. It was devastating environmentally, economically, and emotionally. I understand you are trying to determine the best way to spend the \$600 million that remains of the settlement. The spill destroyed HABITAT.

Productive pristine, unique HABITAT. The priceless resource that was Prince William Sound was due to its qualities as a habitat. Fisheries, salmon, food chains, wildlife, and recreation all depended on a viable, intact, productive ecosystem that functioned as habitat. Therefore, I URGE you to spend the bulk of the settlement - at least 80% - on the procurement, protection, and preservation of habitat!!!! If clear cutting is allowed to devastate the private forest lands around the Sound, it will only ADD to the devastation of the spill. Protect the habitat. 20% of the funds should properly be spent on fishery studies and management programs. I thank you for your time and your favorable consideration.

US, Outside Alaska# 1223

This letter is in regards to the allocation of the remaining restoration funds for the *Exxon Valdez* disaster in 1989. I understand that there are five alternative that are being considered, and that the public has been invited to comment on their preferences. Although a few of the alternatives are aimed in the right direction, I would like it noted that I support the adoption of a slightly modified alternative. I support using 80% of the remaining funds for habitat protection, and 20% for fisheries studies and management programs. Regardless of whether such an alternative is considered, I do feel that it is of vital importance that the large majority of the money be spent to restore damaged habitat. Thank you for your time and the opportunity to comment on this important issue.

US, Outside Alaska# 1222

Recommending: 1) Use 80 percent of the remaining funds for habitat protection. a) to prevent thousands of acres of private forest land from being clearcut. 2) Use 20 percent of the settlement funds for fisheries studies and management programs. My main expression for a public comment is that at least 80 percent of the remaining funds be used for habitat protection.

US, Outside Alaska# 1221

Our heartbreak and concern about the *Exxon Valdez* Oil Spill remain as strong today as they were four years ago. Our feelings of helplessness are a great source of our pain. Therefore, we are hoping that we can do one small service to this damaged ecosystem by writing to urge you to adopt the conservation groups' "sixth" alternative for a final restoration plan: 80% of the remaining funds to be used for habitat protection, and 20% for fisheries studies and management programs. Thank you for your consideration of this input.

US, Outside Alaska# 1219

As an environmentalist, I am recommending a sixth recovery alternative -- that is to utilize 80 percent of the remaining funds for habitat protection. I believe that if settlement monies aren't used for such protection, hundreds of thousands of acres of private forest land will be clearcut. This will only add to the already devastating consequences for the spill.

US, Outside Alaska# 1218

I am writing to urge you to adopt a sixth alternative for a final restoration plan concerning the \$600 million left uncommitted from the Exxon settlement. This alternative, recommended by a coalition of conservative groups, would use 80% of the remaining funds for habitat protection. If the settlement monies are not used for such protection, hundreds of thousands of acres of private forest land will be clearcut. This, in turn, will only add to the already devastating consequences for the spill. The remaining 20% of the settlement funds would provide for fisheries studies and

management programs.

US, Outside Alaska# 1215

I understand that a board of trustees has formed 5 alternatives to spend the remaining 600 million dollars of the 900 million dollar settlement. I would like the trustees to consider a 6th alternative which would set aside at least 80% of the 600 million for habitat protection. (The remaining 20% would go for fisheries studies and management programs.) If the settlement money is not used for such protection, many acres of private forest lands would be clear cut. This devastation would only add to all that has already been destroyed by the disastrous spill in the waters of Prince William Sound.

US, Outside Alaska# 1210

I would highly recommend that at least 80 percent of the remaining funds be used for habitat protection. This would leave 20 percent of the funds for fisheries studies and management programs. This type of approach is crucial for the future of habitat protection in Alaska, and must be the preferred alternative. Thank you for your consideration of my views.

US, Outside Alaska# 1206

I am writing to let you know that I am concerned about the final restoration plans of the damage done by the Exxon oil spill. I believe that 80% of the remaining funds should be used for habitat protection and 20% for fisheries studies and management programs. There is no sense in providing money for studies and management if there are no natural habitats left to study or manage.

US, Outside Alaska# 1203

I am writing concerning the spill recovery proposals which you are considering for a final restoration plan to be issued this fall. I am a member of the National Wildlife Federation and I agree with their recommendation of adopting a sixth alternative that uses 80% of the remaining funds for habitat protection. If settlement monies aren't used for such protection, forest land will be clearcut. This will only add to the already devastating consequences for the spill. This alternative would leave 20% of the settlement funds for fisheries studies and management programs.

US, Outside Alaska# 1201

I am writing to express my concern over which alternative will be amended concerning the remaining funds from the *Exxon Valdez* Oil Spill settlement. I would like to recommend that you strongly consider a sixth alternative in this matter. One that would leave 20% of the settlement funds for fisheries studies and management programs, and the remaining 80% for habitat protection. The damage done by this tragedy should not be compounded by our negligence in our restoration efforts. Please give careful consideration to this new alternative before you make a decision.

US, Outside Alaska# 1193

Please choose the alternative proposed by the coalition of conservation groups on the disposition of the uncommitted clean-up funds. 80% of the remaining funds should go to habitat protection. Keep in mind, we humans are in a unique position to improve the health and life of our global being.

US, Outside Alaska# 1183

First, I would like to say that I was delighted to read in the papers about the large chunk of land

on Kodiak Island that was protected recently. It seems fitting, somehow, that because so much land and so many creatures were destroyed from the unfortunate accident with the Valdez; that now so much land and so many creatures will be forever protected. Thank you. I have read briefly about the 5 alternatives you are considering regarding the uncommitted 600 million dollars. I should like to side with the environmentalists that are calling for a different alternative: at least 80% of the remaining funds to be used for habitat protection, and 20% for fisheries studies and management programs. The damages caused by the *Exxon Valdez* can never be repaired. However, hundreds of thousands of acres of private forest land can be saved and preserved for the future. If the bulk of the monies are not spent to protect this land, then I am sure the money will be wasted. This will only add to the devastation. Please, at least 80% for habitat protection.

US, Outside Alaska# 1180

I'm writing you this brief letter in order to advocate the adoption of a sixth alternative for use of the remaining funds. As a member of the National Wildlife Federation, I urge you to please adopt a sixth alternative that would use 80% of the remaining funds for habitat protection. Please try to stop the clearcutting of private forest land that would only add to the environmental destruction caused by the spill.

US, Outside Alaska# 1178

I am writing to express my concerns about the expenditure of the \$900 million settlement money. I believe that 20% of the funds need to be used for fisheries studies and management programs, and 80% be used for habitat protection. Thank you.

US, Outside Alaska# 1169

I read about your six spill recovery proposals in the National Wildlife Enviro Action magazine the July/August 1993 issue and would like to express my opinion. I live in the great lakes region and often worry and wonder what would happen to people and wildlife should a man made disaster occur here. With the funds left uncommitted from the Exxon settlement I would like to see at least 80% of funds for habitat protection and wildlife services and the remaining 20% for research and management. I thank you for the opportunity to express my opinion since your decision may become the future template for any future disasters.

US, Outside Alaska# 1167

I am writing with regard to the alternative plans for recovery following the alternative plans for recovery following the 1989 Prince William Sound oil spill. Along with the National Wildlife Federation and a coalition of other conservation groups, I recommend that 80% of the remaining settlement funds be used for habitat protection, leaving 20% for fisheries studies & management programs.

US, Outside Alaska# 1166

The *Exxon Valdez* oil spill was a terrible environmental disaster which will have as adverse impact on the Alaskan environment for years to come. I have seen a review of the 5 recovery alternatives. I urge you to adopt a 6th alternative, the recovery alternative recommended by the National Wildlife Federation and other conservation groups. I urge you to use 80% of the remaining funds for habitat protection and 20% for fisheries studies and management programs.

US, Outside Alaska# 1159

It's hard to believe that four years have passed since the *Exxon Valdez* oil spill. And as the memory of the atrocity begins to fade from our minds, we must learn from our mistakes-if not for ourselves then for our future generations. This is why I am writing, to urge you to consider a sixth alternative; to use 80% of the remaining funds for habitat protection. Together we can save the pristine beauty of places like Prince William Sound for all generations to come!

US, Outside Alaska# 1157

We are writing this letter to ask you to support a 6th alternative (proposed by the coalition of conservation groups) to fund the Prince William Sound restoration plan. In this plan at least 80% of the remaining \$600 million of Exxon settlement money will be spent on habitat protection. Alternative 6 would be similar to the proposed Alternative 2 but Alternative 6 would avoid Alternative 2's undesirable drawbacks. Hundreds of thousands of acres of private forest and slated to be clearcut on the areas adjacent to the Sound. The already devastated environment of the Sound cannot possibly withstand an additional assault such as this. At this in time the Sound needs aggressive habitat protection more than anything else. Please adopt Alternative 6 for the final recovery plan.

US, Outside Alaska# 1156

I have been asked to write to you expressing my concerns and recommendations for the nearly \$600 million that is left (uncommitted) from the \$900 million settlement reached with Exxon and the Prince William Sound Spill. This is a hard subject for me to talk and write about. My emotions overwhelm me every time someone mentions it and my stomach knots up. I was reading an article about the Valdez Spill the other day and the person wrote it stated, "...although as public memory of the spill fades..." well, not me, it was such a great loss, setback for the wildlife in that area (as well as mankind and the entire ecosystem) that it doesn't deserve the terms accident/mistake. For me, I will always remember when JFK was shot and when the Prince William Sound was changed forever. I understand the Spill trustees overseeing the spending of \$600 million have come up with 5 alternatives on just how it should be spent. I am recommending adding a 6th one which calls for using 80% for Habitat Protection and 20% to go towards fisheries studies and management programs.

US, Outside Alaska# 1154

The *Exxon Valdez* disaster had a profound effect on me, and is largely responsible for turning this once passive citizen into an active supporter of environmental causes. It was with great interest that I learned that the Trustees are seeking public comments on various recovery alternatives which have been proposed in light of the roughly \$600 million left uncommitted from the \$900 million settlement reached with Exxon in 1989. I am aware of the five alternatives offered by the Trustees. I have also been informed of a 6th proposal, offered by a coalition of conservation groups. This alternative would use 80% of the remaining funds for habitat protection, leaving 20% of the settlement funds for fisheries studies and management programs. I wholeheartedly support this 6th alternative. If settlement monies are not used for such protection, hundreds of thousands of acres of private forest land will be clearcut, thereby adding to the already devastating consequences of the spill. On an individual level, I have already adjusted my lifestyle to ensure a better environment in a major way. Please consider my views as you make your decision on this subject.

US, Outside Alaska# 1153

The *Exxon Valdez* Oil Spill Trustees are seeking comments for the spending of the roughly \$600 million left uncommitted from the \$900 million settlement reached with Exxon for its 1989 oil spill in Prince .

William Sound. These Trustees, which is comprised of six state and federal representatives, will prepare a final restoration plan to be presented this fall. At this time, the trustees have developed five alternatives that range from spending thirty-five percent of the funds on habitat protection and the balance on research and developments to using ninety percent of the funds for habitat protection. As an extremely concerned citizen and environmentalist, I would like to recommend a sixth alternative. This proposal would use eighty percent of the remaining funds for habitat protection and leave twenty percent for fisheries studies and management programs. If settlement monies are not used for such protection, land will be clearcut. This would only add to the already devastating consequences of the spill. Therefore, I am urgently requesting your support of a sixth alternative in which at least eighty percent of the remaining funds be used for habitat protection. If anything has become clear, it is that there is really no such thing as oil-spill restoration. We simply cannot fix a broken ecosystem like we can a broken machine. Your valuable time and consideration in this extremely vital environmental and human issue is greatly appreciated.

US, Outside Alaska# 1150

We propose that the remaining funds available for the final restoration plan, which is to be presented to the public this fall, be spent in the following manner: 80 percent for habitat protection, and 20 percent for fisheries studies and management programs. If the settlement monies are not used for such protection, hundreds of thousands of acres of private forest land will be clearcut. This, in turn, will only add to the already devastating consequences of the spill.

US, Outside Alaska# 1147

I am writing in regard to the spill recovery proposals. I would like to see a sixth alternative to the proposal. I would like to see 80 percent of the remaining settlement funds used for habitat protection and 20 percent of the funds for fisheries studies and management programs.

US, Outside Alaska# 1140

I have been made aware that \$600 million of the Valdez settlement has not been allocated and that the Trustees are faced with certain alternatives regarding the expenditure of the money. Preferring to err on the side of Nature, I would support a proposal that would allocate 80% of the remaining \$600 million to protect public and private habitat, and that the 20% residue of settlement funds be used for fisheries studies and management programs. Failing the adoption of this plan, I certainly support that no less than 90% of settlement funds be used for habitat protection, even though this alternative has some conservation drawbacks. Thank you for your consideration. I am certain you are as much concerned as I in providing the best protection to this damaged and irreplaceable environment.

US, Outside Alaska# 1137

It has come to my attention through the National Wildlife Federation, that uncommitted funds from the settlement reached with Exxon for its 1989 oil spill in Prince William Sound, is open for public comments. I understand that there are five alternatives open for discussion, but I would like to express my support for a sixth alternative that a coalition of conservation groups, including the National Wildlife Federation, is recommending. The recommendation is for 80% of the remaining funds to be used for habitat protection, and the other 20 % would go to fisheries studies and management programs. I thank you for listening and considering such an alternative.

US, Outside Alaska# 1135

I am writing in response to the Article "Exxon Oil Spill Four Years Later", published by the National Wildlife Federation in the July/August 1993 issue of *Enviro Action*. The remaining portion of the 900 million dollar settlement should, for the most part, be spent on habitat protection. The National Wildlife Federation has listed the five proposed alternatives concerning the division of the remaining funds. Out of these five proposals, Alternative 2 is the most desirable. This plan calls for 90% or 540 million dollars, to be used to protect public and private land. However, the Federation warns that Alternative 2 isn't the most desirable. The Federation proposes, and I agree with them, the creation of a sixth alternative which calls for 80% of the 600 million dollars be committed to habitat protection, with the remaining monies allotted for fisheries studies and management programs. I support at least 80% of the 600 million dollars being utilized for Habitat protection. I appreciate the opportunity to voice my concerns.

US, Outside Alaska# 1134

We are deeply concerned over the future protection and restoration of Prince William Sound and the wildlife habitat in and around the Sound. We urge that at least 80% of the remaining funds from the spill settlement be spent on habitat protection. If settlement funds are not used for such protection under this "sixth" alternative, then the thousands of acres of private forest land left unprotected will be clearcut. This, in turn, would only add to the devastating consequences of the spill itself. Again, we urge adoption of this "sixth" alternative. There is no BETTER way, in this decade of land exploitation and overdevelopment, to save the Sound and its wildlife than to buy the land and protect it as public land. Please spend at least 80% of the remaining funds on habitat protection. Buy the land now. Don't let it be despoiled for short-term profit.

US, Outside Alaska# 1131

As I understand it, you are accepting public comments until August 6 regarding recovery alternatives using about \$600 million from the settlement reached with Exxon over the oil spill in 1989. I understand that you are considering 5 alternatives and that you will be making a decision on a final restoration plan to be presented this fall. I would like to put in my bid for an alternative that insures at least 80% of the remaining funds be used for habitat protection and the remaining 20% for fisheries studies and management programs. I trust you will take action that will enhance and protect this very fragile ecosystem. Thank you for taking my concerns into your debate.

US, Outside Alaska# 1127

The Exxon oil spill from the Valdez was a horrible accident. Please consider a 6th alternative that uses 80% of the remaining funds for habitat protection. Thank you for your consideration.

US, Outside Alaska# 1123

My name is Robert Worden and I'm writing to express my concern of the final restoration plan from the *Exxon Valdez* oil spill. I think a wise alternative would be for 80% of the remaining funds be used for habitat protection and 20% of the settlement funds be used for fisheries studies and management programs.

US, Outside Alaska# 1120

The wisest possible use of restoration funds has been proposed by a coalition of conservationist groups. This Alternative 6 would allot 80% of remaining funds for habitat protection and 20% for

fisheries studies and programs. To ensure future habitat conservation clearcutting of private forests must be curtailed. I recommend those cautions as a concerned member of National Wildlife Federation.

US, Outside Alaska# 1119

We would recommend that you spend at least 80% of the \$600 million left uncommitted from the Exxon settlement for habitat protection. If such monies are not used for such protection, we feel that hundred of thousands of acres of private land will be clearcut. The Japanese don't need any more chopsticks! Save those trees!

US, Outside Alaska# 1118

It is imperative that habitat be protected in the very near future. I recommend alternative #6 to the final restoration plan--the use of at least 80% of the funds for habitat protection!

US, Outside Alaska# 1116

I agree with the National Wildlife Federation and other conservation groups that recommend adoption of a sixth alternative that uses 80% of the remaining funds from the Exxon settlement for habitat protection. If this isn't done the results could be devastating.

US, Outside Alaska# 1114

Reg. Recovery Alternatives; I agree with the coalition conservation groups that 80% of the remaining money should be used for habitat protection. The balance of 20% to be used for fisheries studies and management studies.

US, Outside Alaska# 1112

Oil Spill Recovery Proposals: Responding to oil spill trustees' request for public comment: How to spend the approx. \$600 million uncommitted funds: I favor a sixth alternative that uses 80% of the remaining funds for habitat protection (which is the recommendation few National Wildlife Federation). I agree with the conservation groups who argue that if settlement monies aren't used for such protection, hundreds of thousands of acres of private land will be clearcut. This would only add to the already devastation consequences of the spill.

US, Outside Alaska# 1111

I'm a member of the National Wildlife Federation. I want to recommend the adoption of a sixth alternative that uses 80% of the remaining funds for habitat protection. If monies aren't used for such protection, many acres of private forest land will be clearcut. This will only add to the already devastating consequences for the spill.

US, Outside Alaska# 1109

We support Alternative 6 (the conservationists' plan) of the spill recovery proposals which allots 80% of monies to habitat protection and 20% to fisheries management. We lived in Alaska from 1989-1993. We also have degrees in ecology. No other place on earth is like Alaska. We want it to maintain its natural development state. It is crucial to so many birds and animals species.

US, Outside Alaska# 1105

Having just returned from an exhilarating and enlightening Alaskan Trip, we would like to add our

words to others to urge your adoption of the sixth alternative for distribution of the Valdez settlement. Habitat protection must be of prime concern to all who are truly interested in preserving the remaining wildlife--in the last remaining area of our country where it is still possible to make a major difference for the future. Please use this meaningful opportunity to reverse some of the devastation from the Valdez and make a positive decision in the direction of preserving our planet for all living things--most certainly, for human inhabitation inclusive-- a decision which must become a way of life for all of us. Thank you. Preferred alternative #6 at least 80% of remaining funds for protection an acquisition of habitat.

US, Outside Alaska# 1104

I am writing you concerning the 5 alternatives for allocating the remainder of the Exxon settlement funds. Alternatives 4/5 are unacceptable. Too little would be spent on habitat protection. At least 80% of the funds should be spent on habitat protection, as a new alternative 6 option. Alternative 2/3 are less desirable than the new alternative 6.

US, Outside Alaska# 1095

I am concerned about the spending of roughly \$600 million left uncommitted from the \$900 million settlement reached with Exxon for the final restoration plan to be presented this fall. I agree with a coalition of conservation groups that recommend the adoption of a sixth alternative that uses 80% of the remaining funds for habitat protection to prevent hundreds of thousands of acres of private forest land from being clearcut. Actually, I now feel very close to this problem because I very recently visited Valdez, Anchorage, Denali Park and the Inside Passage. I took many pictures of ugly clearcutting on the Inside Passage and am totally opposed to unsustainable clearing of forests. I saw a variety of wonderful wildlife and magnificent scenery in Alaska and I plan to return.

US, Outside Alaska# 1092

I understand there is 800 million dollars left from the settlement reached with Exxon. I recommend that 80 percent of this amount be used for habitat protection. Fisheries studies and management programs should be instituted so no more damage is done to the environment.

US, Outside Alaska# 1080

Conservationists' preferred alternatives would leave 20 percent of the settlement funds for fisheries studies and management programs. Aspects of the other alternatives include: 1) No action - This would allow injured wildlife and services to recover naturally and none of the civil settlement money would be spent. 2) The majority of the available money - about 90 percent - would be used to protect public and private land. Although this option would provide roughly \$540 million for habitat it has certain drawbacks that make it less desirable than conservationists preferred choice. 3) About 75 percent of the funds would be used to acquire and protect habitat. As with Alternative 2, certain aspects of this proposals make it less desirable than the conservationists' alternative. 4) Fifty percent of the funds would be spent on habitat protection and acquisition under this scenario. 5) Only 35 percent of the funding would go toward protecting and acquiring habitat under this alternative. We recommend that at least 80 percent of remaining funds be used for habitat protection! Thank you. Please write and let me know of your decisions.

US, Outside Alaska# 1050

We are writing to urge you to support a plan which would use 80% of the remaining funds for habitat ,

protection; that would leave 20% of the settlement funds for fisheries studies and management programs. If the settlement monies aren't used for such protection, hundreds of thousands of acres of private forest land will be clearcut. This, in turn, will only add to the already devastating consequences for the spill. Please help this habitat, entire ecosystems are depending on it. Thank you for your time.

US, Outside Alaska# 1049

I am urging you to select a 6th alternative with the money from Exxon for the recovery of the environment around Prince William Sound. I would tell you to select Alternative 2, but apparently this does not cover thousands of acres of forests that would be clearcut on private lands around Prince William Sound thereby increasing the runoff. A 6th alternative would use 80% of the funds for habitat protection. The other 20% would go for fisheries studies and management programs. If you cannot agree on a 6th alternative, I hope that all of you will vote for Alternative 2. Thank you.

US, Outside Alaska# 1047

I am writing with regard to the Spill Recovery proposals. I urge you to adopt a sixth alternative that uses 80 percent of the remaining funds for habitat protection. If the settlement money is not used for such protection, hundreds of thousands of acres of private forest land will be clearcut. This, in turn, will only add to the already devastating consequences of the spill, many of which are irreversible for several lifetimes, if at all. We in Oregon are painfully aware of the effects of clearcutting on the disappearance of the salmon and other wildlife. The alternative mentioned above would leave 20 percent of the settlement funds for fisheries' studies and management programs.

US, Outside Alaska# 1044

I am writing to urge you to support a plan which would use 80% of the remaining funds for habitat protection: that would leave 20% of the settlement funds for fisheries studies and management programs. If the settlement monies aren't used for such protection, hundreds of thousands of acres of private forest lands will be clearcut. This, in turn, will only add to the already devastating consequences for the spill. Please help this habitat. Entire ecosystems are depending on it.

REGION: Prince William Sound

Valdez # 1488

Wanted 80 to 90% of funds for habitat acquisition with the Coalition's group list as priority (Port Gravina, Port Fidalgo, Shuyak, etc.). The remainder of the money used for monitoring and research.

ISSUE: 4.7 XX ; Proposes a new alternative

REGION: Alaska, Outside the Spill

Fairbanks # 431

Percentages of commitment of fund should be flexible over several years eg (Percentages listed in the following order: Admin; Research & Monitoring; General Restoration; Habitat; Endowment): Year 1: 10%, 50%, 10%, 15%, 15%; Year 2: 10%, 40%, 15%, 15%, 20%; Year 3: 10%, 40%, 15%, 15%, 20%; Year

4: 10%,
30%, 20%, 20%, 20%; Year 5: 10%, 30%, 20%, 15%, 25%.

REGION: Anchorage

Anchorage # 745

I advocate a strong habitat acquisition program coupled with monitoring and research. My preference is to spend 80% on habitat protection and acquisition, 10 to 15% on monitoring and research, no more than 5% on general restoration and no more than 5% on administration and public information.

Anchorage # 733 AK Sportfishing Assn and AK State Council of Trout Unlimited

It seems that there is very little that can be done to cost-effectively restore injured resources and services other than through land and habitat acquisition, but without the necessary social science it is hard to make good determinations as to cost-effectiveness of projects such as stock separation studies. We favor a combination of Alternatives 2,4,and 5. We favor the 91% for land and habitat acquisition in Alternative 2, the high standard for cost-effectiveness in Alternative 4, and the flexibility and cost-effectiveness that includes acquisitions outside the spill area in Alternative 5. We realize there is political difficulty in looking outside the spill area. However, the law contains no requirement that acquisitions be geographically limited to the spill area, and the whole notion of acquiring replacement resources implies acquiring uninjured resources away for the locale of the oil.

REGION: Kodiak

Old Harbor # 1012 Old Harbor Native Corporation

The allocations of spending from the civil fund which we support are these:

Administration and Public Information	2%
Monitoring and Research	3%
General Restoration	5%
Habitat Protection and Acquisition	85%
Endowment	5%

REGION: Outside Alaska

US, Outside Alaska# 1756

As a concerned wildlife biologist and environmental consultant, I would like to express my opinion in regard to the five alternatives now under consideration for the restoration of Prince William Sound. I urge you towards Alternatives 2 and 3 which would provide at least 75% of the remaining funds to be used for habitat protection. The other 15-25% would be best used for fisheries and other marine life research and management. These natural resources are too important to be lost to short-term greed and its accompanying lack of environmental responsibility. We must take all measures possible so that disasters such as this do not happen again. Alaskans and all Americans need a healthy Alaskan environment which provides us so much bounty. I thank you for your time and attention, hoping you will seriously consider my words.

US, Outside Alaska# 1452

At least 80-90% of the available funds should be spent on protection and restoration. The balance on research and education on prevention of future problems.

US, Outside Alaska# 1139

However, the Valdez Oil Spill Trustees CAN do a great deal of good by wise expenditure of the funds remaining from the settlement reached with Exxon. For our part, we favor a "recovery" alternative which commits at least 80% of the remaining funds for habitat protection and acquisition - a prudent approach indeed. The balance of the funds can well be used for research and development activities germane to prevention of further disasters such as the *Exxon Valdez* oil spill. But the bulk of the funds must, we believe, be applied to habitat protection.

REGION: Prince William Sound

Cordova # 1774 City of Cordova

Also on August 4, 1993 the Cordova City Council prepared and passed the following proposed restoration alternative: "Motion by Allison, Seconded by Novak to direct Administration to include the following allocations with the letter to the Trustees Council: Administration & Public Information 4%, Fisheries Monitoring & Research 55%, General Restoration 6%, and Habitat Acquisition 35%. Voice vote-motion carried. (Council members Andersen and Bird not voting due to conflict of interest.)

Cordova # 1020

Considering all of the above, what can we do with the settlement funds? My recommendations are that we adopt alternative two with some modifications. Alternative two allocates 4% to administration, 5% to monitoring and research, and 91% to habitat acquisition or protection (see attached figure). I believe that the 4% administrative cost is a necessity with the amount of communications, coordination, and organization that a venture this size requires. In addition, considering the uncertainties of direct restoration and enhancement, we should simply try protecting what is left from further perturbation. Habitat protection covers a wide range of damaged or endangered species and can be done equitable throughout the effected area. Therefore, I agree that the majority should be spent acquiring or protecting habitat, but at the rate of 61% not 91%. What about the other 35%? I believe that we should continue monitoring natural resources in the Sound and other effected areas, but that the initial allocation should be increased from 5% to 25% for a comprehensive monitoring plan. I think we should squirrel away the other 10% to an endowment fund for future research or habitat acquisition needs (see attached figure).

ISSUE: 5.0 XX ; General comments about restoration

REGION: Alaska Peninsula

Chignik Lagoon # 5232

Are you guys going to personally get a lot of that information from Fish and Game?

Chignik Lagoon # 5212

We understand they're going to wait and see what was damaged before they decide what to do. That ,

doesn't seem right to wait and see, it takes too long.

REGION: Alaska, Outside the Spill

Juneau # 5491

I think it resembles the Forest Service TLUMP plan. I don't think it has any relationship to the ability of resources to recover. You guys don't even know what restoration is.

REGION: Anchorage

Anchorage # 5048

You mentioned that the Trustees wanted to know what we think, and it will be directed to the Council. Will you give the briefing behind the projects and then will the feedback go to the Council?

Anchorage # 5045

Do subcontracts go out? Do you keep track? Are there training sessions coming up for coast projects?

Anchorage # 1511

EVOS Trustee Council-- would appreciate your getting serious about your charter and quit screwing around playing politics/personal gain. No more fancy boats, superfluous studies, etc. Buy land as described by Sierra Club, help restore fisheries etc. You should be oil enough, experienced enough, devoted enough to know what's needed. If not, get off the trolley and let someone on who does/will.

Anchorage # 684 Alaska State Parks

We have several specific locations of potential recreation projects which we can provide to the Trustee Council. Some of the projects within Prince William Sound will be forwarded to the Prince William Sound Recreation Project Work Group. This Division (Parks and Outdoor Recreation) has a system in place for evaluating and distributing community grants for recreation. This could be modified to incorporate the linkage to injured recreation resources and services. The Trustees could use the grant program for administering funds for community recreation projects. We are currently addressing recreation restoration with the State criminal settlement at the same time the Trustee Council addresses recreation restoration. These two processes should be concurrent with a synchronization of ideas. The end result should be a cohesive restoration of injured recreation resources. Cooperation and information sharing would be beneficial to both parties. Please feel free to contact me for more information.

REGION: Kenai

Homer # 5445

I am wondering what inter-agency dialogue you will have as to deciding what to restore. It is pretty hard to distinguish what the oil spill did.

Homer # 5409

When will we find out where you are headed?

Homer # 5402

How do we know that our comments are being listened to?

Homer # 5395

The plan for public input sounds real good. That's the only way to go. Well not the only way but one good way. You mentioned something I found quite interesting. How and where did the idea of criminal money come into the picture? On the dollar bill it says in God we trust. So how do you compromise this ying-yang principle in your analysis? In other words the name was chosen because of the type of results it was related to. Well it's good. You should have called it positive money in my view.

Homer # 5379

Does Exxon have any input into your process? If so, how much?

Nanwalek # 5645

It is hard to get different agencies to work together in a common goal. Everyone wants to regulate their own stuff. They are not trying to work with anyone outside their agency.

Nanwalek # 5597

Where did you get all the information?

Nanwalek # 5596

Will the draft plan be sent to the villages?

Port Graham # 5788

I would be interested in seeing what the children's responses are to the spill.

Seward # 5917

I was wondering how many people decide where the money is going?

REGION: Kodiak

Akhiok # 6159

Who is it that you are calling "our" scientists?

Kodiak # 5556

Am speaking for Afognak Joint Venture. I thought the brochure you put out was excellent and helpful. Out of the \$610 million remaining we need to attempt to equate that to a net present value. It is something less than \$610 million of the 900 million nominal dollars, \$290 million are gone and one could question whether we've really received \$290 millions worth of value from that. Of the \$610 million remaining, depending on the discount factor you use because of either inflation or opportunity, that \$610 million is arguably something that more closely approximates \$400 million. If you were to divide it among the three geographic regions Prince William Sound, Kenai and Kodiak, then arguably we are looking at something like \$133 million. The next step is we have to take a look at the alternatives and take a good approach.

Larsen Bay # 5575

These agencies have been doing studies since the oil spill so they have a whole compilation of the information, is that correct?

Larsen Bay # 5574

What is your purpose here? Is it simply to get feedback on the various alternatives on how to spend these funds? Who will be making these decisions on how to spend the funds? I expect that various state or federal agencies will be carrying it out depending on their jurisdiction. How will you be making these allocations?

Old Harbor # 5699

How long are you guys going to be doing this study while you try to figure out what people want to do with the money? The Kachemak Bay thing, did you actually give them the money? What is the money the Governor is spending right now, where did it come from?

Old Harbor # 5667

Are these studies done independent of the agencies like National Marine Fisheries Service and Fish and Game, or is the money funneled into other things? Those are the agencies are the ones that have been here for years and years.

Old Harbor # 5656

Is each community or each area going to come up with their own plan for restoration or just how is that going to work? Who's going to do the planning?

Ouzinkie # 5725

One of the things I brought up to Greg Mischler of the subsistence group back in 1989, and I suggested it to Exxon and VECO, too, that they contract with us [the village corporation] directly. We'll hire the experienced people. Let us do it, let us involve our people in the research. I did a deposition for Exxon, Zap did one, a bunch of us did. We've had people come down here from Washington D.C. to talk to us but it's the same old stuff. Why can't they take just one deposition?

Ouzinkie # 5700

Who's going to actually make the decisions about how to spend the money?

REGION: Prince William Sound

Whittier # 6082

My main concern is special interest at each other's throats.

Whittier # 6052

Do they take depositions over the phone?

ISSUE: 5.1 XX ; Comments about the Civil Settlement
--

REGION: Alaska Peninsula

Chignik Lagoon # 5224

I feel like he just said, the settlement wasn't much money, but I also know what you're saying about money in the hand.

Chignik Lagoon # 5222

Why the heck did we accept that \$1 billion? The Governor should have asked the people that were injured how much it was worth, how much they should settle for.

Chignik Lagoon # 5200

I want to know why did we settle for only \$900 million? Why hasn't Exxon done their own cleanup? They tell us that year we couldn't go fishing, and now we're talking about the fishing being messed up for many years.

Chignik Lake # 5266

Exxon is a pretty slick operator, to get money back from the settlement for cleanup.

Chignik Lake # 5265

What's this \$30.0 million credited to Exxon for cleanup? That's baloney.

Chignik Lake # 5250

Does this money affect Fish and Game?

Chignik Lake # 5249

How long will the state be getting the money?

REGION: Kenai

Homer # 5387

Are the lawyers getting paid out of what is left of the \$900 million?

Homer # 5372

Was the Trustee Council mandated by the court decision on how much to spend and what it is to be spent on?

Homer # 5371

Where does the \$900 million come from?

Port Graham # 5777

Prioritizing is very important so that the money is used appropriately.

REGION: Kodiak

Port Lions # 5800

Who has jurisdiction over the expenditure of this money? Obviously when you say state and federal attorneys are involved, they are going to decide whether a project fits the definition of what is acceptable.

REGION: Outside Alaska

US, Outside Alaska# 1210

I would like to contribute my feelings and comments on the recovery alternatives being considered. I was personally very disappointed with the settlement that was reached with Exxon Corp. over the Exxon Valdez spill. Considering that Exxon is a multi-billion dollar corporation, and considering the severity of the negligence involved, it was unfairly low. Also, it has been four years since the spill occurred, and no substantive restoration has been undertaken with settlement funds. This is truly sad, but I guess that is oil under the bridge.

US, Outside Alaska# 1070

I also feel that when the time comes that more money should be given by Exxon towards this plan.

US, Outside Alaska# 246

Some of the damage sustained as the result of the spill is irrevocable and Exxon should not be allowed to escape their responsibility to continue payment beyond the extremely minor payment of \$900,000,000. The actual damage will run into many billions of dollars that we and future taxpayers will be burdened with, for many decades ahead. Both the State of Alaska and the Federal Government have been overgenerous in giving away our property and our rights to a proper settlement for present and ongoing damages that will extend into the distant future.

REGION: Prince William Sound

Cordova # 5301

What about this whole settlement? What about the Hickel administration going for this whole settlement? We should have received perhaps several billions of dollars. Maybe the deal was we just would appreciate it if you don't do fisheries resource studies.

Whittier # 6047

Is there a possibility that after ten years and a natural phenomena occurred, could the money be used to help any species within the habitat?

ISSUE: 5.2 XX ; Comments about the Criminal Settlement

REGION: Alaska, Outside the Spill

Fairbanks # 176

I feel strongly that the state has accepted a settlement which does not penalize Exxon.

Juneau # 6118

I think you should be brought to task for what you have done. There has been double dipping. I think all the agencies that have personnel dedicated to the spill have in effect double dipped. The scientists have been used as pawns to deprive the citizens. Mr. Cole left between \$3 and \$4 billion dollars on the table. Our governor is a nut, and to have our Attorney General negotiate for \$1 billion is a travesty. Exxon did a lot of damage, and they net \$5 billion.

REGION: Anchorage

Anchorage # 5074

I am not so sure what the best approach is. My real concern is that the state got much less than it should have from Exxon in the first place. An incredible amount will be eaten up in administrative cost. That is my real underlying concern of the whole process. Too much money will never be spent on things it needs to be spent on and will go for administrative cost.

Anchorage # 5034

Didn't Judge Holland use to be a judge for ARCO?

Anchorage # 5033

Does the agreement say if all the agencies don't vote yes, a project is killed?

Anchorage # 5027

Could you elaborate on the reopener clause?

Anchorage # 5016

Does the settlement provide any guidance in terms of priority for expenses to the Trustees?

REGION: Kenai

Homer # 5451

You are saying the criminal money is for protection. Of all the things the governor decided on, none of that has to do with protection. What do you need to do to resolve this issue? If they decide to spend a certain amount on prevention, would someone file suit and settle this in court?

Seldovia # 5868

I am appalled by some of the proposals put to the criminal settlement.

REGION: Prince William Sound

Cordova # 5332

We had absolutely no say on the spending of the criminal fine. that was something the legislature passed, I don't know if you're familiar with the reapportionment picture, but we have nothing in Juneau. The Trustees are political appointees, I don't believe they're not counting beans, that the number of responses they get on any one issue doesn't count. Look where the money from the criminal fine went. This money is going to go the same way.

Valdez # 6021

Some of the frustration you're hearing here has nothing or very little to do with the trustees. When we see the criminal settlement restoration money to the tune of \$12 million spent to fund a visitors center in Seward or a road in Whittier, we get upset. Who made those decisions? When I say economics those decisions effect economics, too. I supported some concrete and steel projects in Tatitlek and Chenega that I thought were part of the spill area. But how could something like that go in Valdez when we did not sue anyone, we worked with everyone, and you cannot point to anything that came to Valdez nor to the salmon fishermen in the area. And that is true even though their pocket books were affected more than anyone else.

ISSUE: 5.3 XX ; Comments about the Trustee Council

REGION: Alaska Peninsula

Chignik Lagoon # 5211

You said the trustees represent six state and federal agencies. Who appoints the person out of those agencies?

REGION: Alaska, Outside the Spill

Fairbanks # 5369

It should be based on someone other than the Trustees making a decision about the studies.

Fairbanks # 1136 School of Fisheries and Ocean Sciences, UAF

In addition to mailing in a "newspaper ballot", I take this opportunity to respond to your request for input from the public concerning the fate of settlement funds designated to restore and enhance resources and services damaged by the EVOS of 1989. As a practicing marine scientist and concerned member of the public, I appreciate the kinds of problems that face the council in deciding how to spend the remainder of the settlement funds. Doing this the "first" time is not unlike sailing uncharted waters. As we have all seen, the process of defining damage (beyond the obvious losses of birds, mammals and some fishes) was difficult enough. Attempting to decide how to restore and enhance injured resources appears to be a problem of similar or even greater magnitude. While I may not agree completely about how restoration funding has been allocated in the past, I nevertheless compliment the council for attempting to do something.

Juneau # 5511

I would like to express my appreciation to the Trustee Council for undertaking this task. It probably has its own set of challenges. I appreciate you taking your time.

Mat-Su Borough # 682

I think that the Trustee Council has squandered away the money.

REGION: Anchorage

Anchorage # 6105

Hickel and Bush pushed three guys into a ring and Rus Holland tapped them on the head with a wand.
(How the Trustee Council was appointed)

Anchorage # 5036

Who appointed this council? Were they done by the Governor?

Anchorage # 5018

What is going to happen to the decisions that are made today when a couple of years we will be looking at a change in the composition of the Trustee Council? How will that affect the outcome?

Anchorage # 372 Koniag, Inc.

I believe that the public is keenly aware that each of the trustees has a strong conflict of interest regarding the use of the E-V settlement monies. While the acquisition alternative would not necessarily alleviate that conflict, it would at least relieve somewhat the public perception that the funds will be dribbled away in endless studies and bureaucratic red tape.

REGION: Kenai

Homer # 5459

We better get to know the Trustees pretty good if they are making the decisions.

Homer # 5418

Folks have been around to these communities. The Trustee Council did the opposite of what the communities requested. You are not even taking names and addresses if people wanted direct responses. The last response was absolutely negative. The PAG was set up just the opposite of what the public suggested.

Homer # 5413

In terms of a timetable for making decisions for what to spend money on, what is the timetable?

Homer # 5412

Has President Clinton appointed the three new Trustees for the group? Is there a timetable?

Homer # 5383

Is there a question of not enough oversight when you are basically reimbursing agencies that the Council represents?

Homer # 5376

How long is the life of the Trustee Council?

Homer # 5375

Do decisions have to be unanimously agreed on? If so, has that proven to be a problem?

Homer # 5374
Does the Trustee Council have license to spend the money?

Homer # 5373
Who makes up the Trustee Council?

Nanwalek # 5615
Should all our concerns be addressed to the Trustee Council? Then is it presented to the legislature?

Nanwalek # 5606
How does the Trustee Council look at the subsistence user?

Port Graham # 5738
What happens if the Trustees don't agree on anything?

Seldovia # 5848
When the State does land management plans, the plan is law and the State has to abide by the plan to make management decisions. When you adopt the plan, is it law for the Trustee Council? Who do they answer to the public or the courts?

Seldovia # 5830
Are activities determined by the Trustee Council?

Seward # 5962
The Trustee Council relies a lot on you.

REGION: Kodiak

Kodiak # 5547
What I'm requesting is that the Trustees reach out to see if this comprehensive picture makes sense, that we not wait until the plan is complete to find out if we're talking to each other.

Larsen Bay # 6143
I've seen the (Trustee Council) meetings advertised in the Kodiak paper, though.

Larsen Bay # 5594
We were never notified of these teleconferences [Trustee Council meetings], we didn't have the opportunity to participate in those.

Larsen Bay # 5567
There are no Natives on that council at all. You guys are going to go back and report to somebody else on what we need. We should ask those people to come down and do this.

Larsen Bay # 5564
Are these six council members, are they Native people or do they live on the lands that were affected where the Native people live?

Port Lions # 5804

I want to thank the Trustee Council and the people involved for making the museum in Kodiak happen. That is going to be an asset to benefit everybody on the island.

REGION: Prince William Sound

Cordova # 5341

Last week I was talking to Charlie Cole and he was discussing the possibility of the two other state trustees coming to Cordova so people could talk about what they really want from the Trustees. We need to focus all this fishery input into something we can take to the Trustees.

Cordova # 5324

We are all extremely frustrated. Over the four years we've tried to get these groups together to speak for us but it hasn't been effective so far. Even now if we try both routes simultaneously, that is, as special interest groups and as individuals, I am still not convinced the Trustee Council is going to act on our wishes. I don't have anything against anybody outside Alaska commenting but I think it comes back to the same point: I am a lifer here. I'd like to continue on but it's all become so unmanageable. Everything is out of our control. The money just keeps getting sucked up by outside agencies and studies. If there's nobody left here to fish is there really a resource failure?

Cordova # 5311

I want to understand about the Trustee Council organizational structure so we can evaluate how well we are putting our point across to the Trustees. Please explain how the organization is all put together.

Cordova # 5308

On the plan you keep referring to, what if the Secretary of the Interior takes some action that might benefit our community? Will that change the plan? When is the final plan going to be out and adopted? I see the Restoration Team that is doing all the work hiring all these consultants, a lot of high tech people, not all of them Alaska residents. I see a lot of this injury money going outside the state and this bothers me. I see the Trustees funding the Public Advisory Group. I had the misfortune to sit through PAG meeting where the restoration work team groups made presentations. I sat through the meeting where the coded wire issue came up and the herring study came up, we knew how the State of Alaska were going to vote on these. But Charlie Cole told me if you think anything is going to happen today you're out of luck because we just got a message from Babbitt that the Department of the Interior are not to vote on anything that takes money. As far as the PAG, they're there to advise the trustees what they heard. I want to know who the hell they listened to. Are they having meetings where your neighbor calls and says we want this thing? I know at the last public PAG meeting I became totally frustrated. I watched them, frustrated themselves, and try to explain in plain English to the Trustee Council what they wanted. There's too much paper and there's no reality check. They have to have a chance to look at it. It's all happened as such a mishmash. Kodiak came through the door and they had the nicest proposal. I brought it to the Cordova City Council as a good model. I see the Trustees all trying to fund their agencies. We're not even turning over rocks. We're planing the 1994 work season and 1992 has not been finished yet. What good is it funding a PAG that does not go out in public? I don't remember hearing about them meeting in Cordova and listening to our concerns. Five advisory group members were directed to

approach the Trustees at the meeting in May. I've been over there talking about timber acquisition and while we were all talking about it and talking about it we've been cutting our forests. I can't remember anytime we've had more people united, given public testimony and still they have done nothing. Why are we wasting our time? Is this another smoke screen? It's only been in the last two weeks we've been able to start the ball rolling, I don't know where it's rolling to, though. Maybe we didn't do the right studies when it came to research. It was hard to go to those meetings and watch those things get kiboshed because the President says he doesn't want anything to happen.

Cordova # 5302

I count 21 places you're going in this meeting cycle. Why aren't any of those six big guys here? You divide it by six guys you get four days. Why aren't any of them here?

Cordova # 5298

I'm a member of the Trustees' Public Advisory Group. I think you understand the level of frustration that was in the room the last time the PAG adjourned and then walked away with the feeling that the Trustee Council has not been really attuned to what the PAG has been telling them. We advanced some of the fishery projects and we figure they're cooked. The Trustees didn't figure we had studied the projects enough. But we reviewed those projects through regional meetings and teleconference meetings -- we spent a lot of time on it. The Trustee Council is now opening their ears to the public comments. I've been told that this response is very important. It is important to put in writing your feelings about the projects you think should be included, what damaged resources should be in there, even if a population decline hasn't been proved. Particularly in our case the pink salmon and the herring, which has caused us to go back into our budget to try to come forward with a program that the Department of Fish and Game believes it needs dealing with all the fish that go into our nets. You've said its important to write and to get together. Do the people have to come together with specific projects like herring genetic studies or salmon generic strategies, or is generic terms OK? For example, should we say we want these kinds of studies on the species that are impacted.

Cordova # 5290

How exactly has the Trustee Council heard from the public on the research projects and whatever? What's the filtration process been and is there any chance to change any of that? Also, why is \$150 to 200 million been paid back to the state and federal governments? That's more than has been spent on research totally. I don't know if there's any opportunity to get any of that back. Also a year or so ago the Restoration Framework came out. I thought the Restoration Framework was to be the basis of the plan. There was a lot of feedback given to them that they should not take those reimbursements, that they should make that money last longer.

Cordova # 5289

The resource itself is screaming at us and at the council. You've just heard from our Fish and Game people, why do you have to hear it from the public, too?

Cordova # 5288

What have we done wrong? It seems like we have gone to the Trustees and asked them for these things and it hasn't happened. Please tell us what we have done wrong?

Cordova # 5285

I have heard you say that the Trustees are going to want public input. We've already had public input on behalf of fisheries. We've stressed this coding wire tagging business several times. The point still stands that the trustees receive public input but they never do anything with it. There is more here than just the trustees being conservative. I think there is a split in opinion because there has to be consensus. I think the Department of the Interior in particular has been a real impediment for funding fisheries studies. Do you see any opportunity for public input to get better in this process?

Tatitlek # 5985

How much does the Trustee Council listen to us on these things? It seems like they still have a lot of questions but they want answers that we have already given. Should we beg them, is that what will work? What should we do to make sure they hear us? These Trustee Council members, they have other jobs, too. Where do they find time to pay attention to the important things in this process that they should?

Whittier # 6112

We are not reviewing the consensus approach (to Trustee decision making).

Whittier # 6072

An extension of that question on the consensus process (Trustees) is for example, in a group of folks, you might find out you have a bad egg among you and nothing goes forward. Is there anyway to remove such a person? Who is looking over them? Are they their own watch dogs?

Whittier # 6071

Back to the consensus process, when deciding which animals are affected, is the consensus process used for each species? Charlie Cole's background is military. I don't see him as being an environmental person. Is this process etched in stone?

Whittier # 6051

Will the Trustee Council go over what we have said here?

ISSUE: 5.4 XX ; Comments about the restoration process

REGION: Alaska, Outside the Spill

Fairbanks # 5355

How broad has the peer review been beyond the agencies which the Trustees represent?

Fairbanks # 5348

Will you go directly from public comments to decide what projects to do?

Fairbanks # 736

Angry about money paid back to Exxon for cleanup. Concerned about how and who does work. And would like report published that shows how decisions are made regarding people involved in process.

Juneau # 5510

I want to direct my comment at what we have and what we can do with it. It is rather arrogant of us to think we can go in and fix what is going on now with the birds. I hear talk about the commercial species, and it is centered around charismatic vertebrates. I can see people's fear about top-heavy administration. Throwing a bunch of money at fixing things will not be advantageous. If there is something we can do remediation wise, then great. We can't bring things back by killing things off.

Juneau # 5473

Are you asking people to comment now on the brochure and the comments will show up in the plan when it comes out in June? Then will people have another chance to comment?

Southeast Alaska # 741

I think the settlement money should be used to counter the effects of the spill. I do not think it should be diluted so that everybody who can think of any way to claim a link to an injured resource can get some of it, to the detriment of the resources that actually need restoration. I also don't think the money should be used to pursue an agenda unrelated to spill-caused environmental damage. State purchase of land to stop logging on it has nothing to do with either the spill or restoration of its damaged resources. In other words, if the oil hadn't spilled and Exxon hadn't had to pay the \$900 million, would these actions have been taken? If so, the state should fund them outside the settlement. If not, they shouldn't be taken now. In still other words, let's not squander the money or spend it just because it's there. \$900 million ain't what it used to be. Spend it to make the spill area what it would have been if the *Exxon Valdez* had missed the reef.

REGION: Anchorage

Anchorage # 5097

What about quality assurance teams and insuring that goals will be met? There has to be a certain amount of quality assurance.

Anchorage # 5070

On acceleration of restoration, I notice you have three columns that are concerned with removal of oil. What is rapid restoration? Is that like the berm relocation plan? You are willing to spend three quarters of a million on a project, and you don't know what it is. All of this is coming out of the fund for these three projects, and Exxon is liable and Alyeska is liable to pay for this stuff. If it is necessary for recovery shouldn't the state and federal governments mandate that Exxon pay for cleanup and not take it out of the settlement fund? Should I get a decision from DOJ if this is an abbergation of the people's right to pay for oil recovery. You are trying to do it out of our money that was settled on when they are liable to do it. My name is Tom Lakosh, P.O. Box 100648, Anchorage, Alaska, 99510 and my number is 258-5767

Anchorage # 1634 Sierra Club

No pork: Trustees must not use settlement funds to supplement normal agency functions or to subsidize private industry.

Anchorage # 1634 Sierra Club

3) Administration - The Trustees should reorganize their administration to improve efficiency and :

reduce conflict of interest. We recommend a strong executive director, with staff chosen for their expertise in the necessary fields. Trustees should abandon the model of requiring at least one staff member from each agency on each committee. For example, a habitat protection committee should be made up of experts in land acquisition. It does not need staff from agencies which do not manage land. Habitat acquisition should be centralized, rather than divided among different agencies with different procedures, different levels of expertise, and different levels of motivation. projects should not be proposed and recommended by the agencies that stand to benefit from their funding; this is a conflict of interest which leads to "pork barrel" projects and diversion of funds to supplement normal agency functions. Thank you for your attention.

Anchorage # 1623 Alaska Center for the Environment

Rigorous Screening of "Restoration" Projects/Proposals Essential: If the trust obligation to the spill-impacted resources is to be effectively implemented, great care must be exercised to ensure that the Settlement is not squandered as "the fund of first resort." The Settlement has attracted enormous attention and thousands of ideas have been advanced ranging from the critically necessary to the patently opportunistic and absurd. Projects and proposals advanced in the name of "restoration" must be rigorously scrutinized. Great care must be taken to ensure that proposed projects and proposals are: 1) truly needed and beneficial to injured resources; 2) not speculative or experimental; 3) not being proposed on an opportunistic basis when other funding sources are available, appropriate or would otherwise normally be sought; and 4) not excessively expensive in relation to the likelihood of successfully advancing restoration objectives.

Anchorage # 733 AK Sportfishing Assn and AK State Council of Trout Unlimited

To promote the goal of effectiveness, the Trustee would be wise to expeditiously request expressions of interest from all private land owners who own lands having resources worth conserving that face some risk of disposal or adverse development. Some range of cost for various amounts and methods of conservation (e.g. conservation easement versus fee simple acquisition versus amount of land that might be conserved) should be requested. Owners should be made aware that if they wish to be candidates, the Trustees are most interested in lands that have high wildlife value and that are cost-effective or less costly than other candidates. The Trustees and the staff and the public have frequently expressed this, commendably, as getting the most conservation "bang for the buck." In our view, the requirements of cost-effectiveness, that are essentially preclusive of arbitrary guesswork about economic value, would require such information up front for comparative purposes. Unfortunately such information, while available for Seal Bay and Kachemak Bay acquisitions, has been lacking for comparative purposes to other potential acquisitions. The cost-effectiveness requirement is defeated without such information.

Anchorage # 203

The spill restoration money should be used to monitor, restore and rehabilitate. The politicians response has been to want to spend it on things that have nothing to do with the spill, visitor centers and aquariums are not a part of the spill. If Alaska needs those then let the parks department or private enterprise build them. There are some communities that deserve special attention and others that deserve nothing. The Board will have some very tough decisions to make and pressure to beat. Stand up to the pressure and make some long range, wise choices.

Anchorage # 116

I have been an observer at probably half of the Trustee meetings which have been conducted to date. From observing those meetings and from the structure and flavor of this brochure and questionnaire, I am led to the belief that the Trustees and Council staff are biased toward restoration actions and long term studies/monitoring, all of which would tend toward perpetuating their own federal/state agency self interest. Or to put it another way toward milking the settlement monies for many future years of studies and monitoring to perpetuate their own respective bureaucratic organizations.

REGION: Kenai

Homer # 5439

There is no such thing as the right thing to do. Somebody has to make the decisions. Unless you have a better decision-making process to work full time on this, we will run out of money before we do much restoration. The principle we use in the construction business is to do something even it is wrong because you will run out of money.

Homer # 5418

Folks have been around to these communities. The Trustee Council did the opposite of what the communities requested. You are not even taking names and addresses if people wanted direct responses. The last response was absolutely negative. The PAG was set up just the opposite of what the public suggested.

Homer # 5415

There was one injury, the chum salmon, which was never addressed because it was never studied and was a huge component. We were expecting to see what the four-year old component would be and it was 0. It has never appeared on the list. We are very frustrated with the approach on the outer coast because it is unstudied. We are so far along with this, and it seems we are seeing a lot of the projects over and over again. The chances of introducing something now are slim.

Homer # 5410

Besides the public, who else has the input on what the final decision will be?

Homer # 568

Those questions were leading and your survey will end up supporting some sort of restoration and acquisition that the public does not need. The acquisitions will be on who yells the loudest.

Homer # 435

Studies should be funded separate from the fish and game who have prejudged their studies for political purposes. Hatchery rehabilitation of Rocky River, Windy Bay, and Scurvy Creek. Fish and Game FRED to over see permit process when and if permit issued funding as part of annuity type of use of funds.

Homer # 320

And please--try and sort things up so that politics is kept to a minimum so the \$ are not "farted" away and the work influenced by poor judgment and greed! GOOD LUCK! A Long Time Alaskan

Homer # 196

I do not want to see increased involvement at a federal or state bureaucratic level. I do want to see equal consideration and representation of the non-vocal, non-organized "average" resident's voices instead of control given to any formally organized groups whether they be developmental or environmental. I would like to see the emphasis off the tourism potential and placed on the value of the land, sea and wildlife simply because they exist and are part of this planet.

Kenai # 436

No matter what is done it will never be enough to suit "special" interest group which include the politicians, ecologists, commercial fishermen, the Natives--land the do-gooders that have 50 acres here-- or 150 acres there, that just can not be used for anything! Except-- John Q. Public to destroy. My family commercial fished on the late '60's when that resource had been so abused and there were no fish to fish for. So I consider most of the crying being done as a lot of "noise" for nothing.

Other Kenai Borough# 460

Bring this circus sideshow act to an "END" NOW! NO more lawyers. No more whining, let us get on with our lives. Research is the only valid activity left to do. I and many folks that I know are tired of hearing about this and are disgusted by the leaches making a career out of this disaster. It is over, so end it.

Other Kenai Borough# 432

Should prioritize land acquisitions by overall value of the land and its risk level.

Port Graham # 5779

I have been to Trustee Council meetings, but there are public here who can't go to meetings. In the 1993 Work Plan only a couple hundred responses were received. You have to convince all six Trustee Council members a project is a good one. People get discouraged and think what is the point. It would be nice to have a way of weighting what people here say so their voice is heard.

Port Graham # 708

Too much money has been spent to date without an objective, scientific approach used to decide how to distribute funds. The Trustees and Restoration Team do not even follow their own operating procedures - how can you expect them to make good decisions?

Port Graham # 332

Please be fair in your distribution of the funds. I feel that even though we have filled out these forms - the Trustee Council has already made the decisions concerning the funds and our input does not count. That is very discouraging.

Seldovia # 5875

I have a problem understanding how for an overall endeavor, you can make a determination on how the funds would be divided. It is clear in some cases habitat protection might be the most important in some endeavors and not in others. You need to prioritize the resources and decide if there is enough money to go around.

Seldovia # 5857

Studies should be independent of the University of Alaska.

Seldovia # 5842

How will the public determine what alternatives will be selected? Will we vote on it?

Seldovia # 168

If this (using funds to enhance public use or purchase areas not directly affected by the spill) is allowed, it would seem to open the gates to many outside interests which have no relevance to restoration. We might then see these funds squandered on the latest whim of special political or economic interest groups. Let's use the money for what was intended for; RESTORATION.

Seward # 5918

In the \$620 million being debated, does that include money set aside for future planning? Is it completely different?

Seward # 5912

When can we expect to see some information on this? I have signed sheets and never gotten literature?

Seward # 281

I also question the sincerity, knowledge and devotion to rigorous research that many of these project supporters vaguely display. I believe much of the intent is just to bring in money and tourists to communities without concern for restoring health lost the environment. Please do the job entrusted to you and judge critically the many proposals you receive. Also, please do not lose sight of the goal of attempting to recover the natural habitat damaged for future generations. Thank You.

Seward # 276

Please thank the Trustees Council and employees for their efforts.

Seward # 265

Despite this excellent publication, your commendable efforts toward gathering public comment and the theoretical democratic process of the Trustee Council, I fear that politics, bad science, undisclosed pressures will guide the Council's decisions. I fear that public comments won't be considered seriously or given substantial weight.

Seward # 170

I also strongly disagree with your supposedly unbiased ranking of projects. Its no big surprise that a research scientist listed research projects as highest. And also, I find it quite appalling that your board is treating this plan as a power grab, each attempting to grab the most \$ for their agency. The land must come first. Who cares whose jurisdiction?

REGION: Kodiak

Kodiak # 5546

I am part of the Regional Citizen's Advisory Council. Our RCAC has taken the position of not making comment on any particular project. Getting into this whole discussion as chair of the scientific

advisory committee, I'd like to point out that we have just finished the first field science season for our environmental field monitoring. We were required to do this as part of the Oil Pollution Act of 1990. In the process of identifying the purpose of the citizen advisory group we have to ask how do we make all this monitoring make sense. Looking at it from outside the trustees it seems there are more regions that have some vested interest in doing monitoring. Is there money available to take a comprehensive look at all the agencies that need to work together so that when you figure out what programs are going to be used for general restoration that all these different pieces of the puzzles fit together? How do we put our responsibility under federal law into this whole system of what the *Exxon Valdez* oil spill trustees are going to be doing and everything from the University and the National Marine Fisheries Service? How do we make this make sense to the people in the Kodiak area? I'm looking for somewhere where we can all meet.

Kodiak # 5535

I recall some of the research that was done on ground fish in Prince William Sound. If you look at the overall map of Kodiak we're a big rock in the middle of a stream. We have a lot of current coming up the Kenai and circulating around the Gulf, and that is why we have such a rich fishery. To assay damage in the Sound and then to transpose it onto Kodiak in my view isn't really accurate. A significant portion of the oil spill response was dedicated to deflecting oil from Prince William Sound and subsequently it ended up in Kodiak.

Kodiak # 207

I was disappointed at the theoretical nature of this draft. If the council has already received hundreds of proposals, why weren't they compiled and given to the public to review and choose from? Or at least some of them used as examples to illustrate aspects of the policy questions and the 5 alternatives? Please consider this when you come out with yet another document in June!

Old Harbor # 5696

When you want to get public comments you need to do it when everybody is here, not now when everybody's herring fishing. You should have come in February.

Old Harbor # 5695

We're speaking here but what you guys believe is that 'hell, these guys, they didn't get oiled.' We're trying to say something different. Is this questionnaire junk that we're filling out? Is it going to be thrown into the garbage?

Old Harbor # 5694

I've been an observer of this whole process for four years, I came to Old Harbor in 1989 as a congressional staffer. You have to remember that 89% of the bird deaths occurred outside Prince William Sound, and that more miles of shoreline were oiled outside Prince William Sound. The governor has spent \$100 million of the Alyeska settlement. Of that only \$3 million was spent in Kodiak. Does the governor have a prejudice against Kodiak? Does the state have a prejudice against Kodiak? One of the reasons that people think most of the damage was in Prince William Sound is the media sent out pictures of the thick oil on the beaches in the sound. The media only has so much money to send camera crews out and they couldn't afford to come to Kodiak. That film is in the files of the networks and whenever they want spill footage they go into the files and pull out footage of

Prince William Sound. There is a perception problem built into every American's and every Alaskan's view. You guys know that the perception is wrong. I think sound public policy is to counteract that perception. Small villages cannot defeat those kinds of massive perception problems. I would hope that you will convey that on up the stream to the Trustees.

Old Harbor # 5683

So the people die while you're trying to fix the natural resources. In Anchorage you might have maybe a thousand people comment and they won't have a village type of life. How will what we have to say mean anything against those numbers? Our way of subsistence is like Akhiok, it's really important to our way of life. That's why we didn't stop eating clams even if we are going to be poisoned.

Old Harbor # 5670

If this process includes both the state and the federal governments, how are you going to get them to agree on anything? With subsistence we've been fighting with them for years now. The state comes and says one thing and the next month the feds come and say something else.

REGION: Outside Alaska

Canada # 1006

As a conclusion, it is my belief that care should be taken not to change the course of the development of Prince William Sound in any manner that would affect the nature and the wildlife because of the money available from the civil settlement.

US, Outside Alaska# 1622

First I would like to thank you for this opportunity to comment on the restoration Plan for the use of the remaining \$600 million of Exxon Settlement funds. Thorough public comment is the only way to avoid problems later and I appreciate the forum.

US, Outside Alaska# 1616 Pacific Seabird Group

PSG recognizes that establishing an infrastructure to plan and implement wisely a \$1 billion restoration program is difficult and demanding. While PSG had some initial problems with opportunities to comment on the Trustees' work plans in a timely manner, we believe that the Trustees have resolved their organizational problems and intend to provide meaningful public involvement in the restoration process. We are especially encouraged that the Trustees have selected a Public Advisory Group and expect that the Trustees will give the opinions of the advisory group much weight. Despite improvements in the Trustees' procedures, PSG is concerned about some restoration policies. The Trustees seem to be applying an agency pork barrel approach to funding decisions and spend too much money on overhead and projects that do not directly restore natural resources. The Trustees will spend \$38 million on restoration during 1993 that will have little tangible benefit to seabirds. PSG also believes that federal and state agencies should use their existing authorities to protect species damaged by the spill. For example, logging on government and private lands (e.g., inholdings in Kachemak Bay State Park and Afognak Island) that are prime habitat for marbled murrelets and harlequin ducks should be curtailed. The National Marine Fisheries Service should enforce the Migratory Bird Treaty Act to protect marbled murrelets in Prince William Sound that drown in gillnets. PSG believes that the Trustees should ensure that they use the very best available science in making restoration decisions. Restoration requires a multi-disciplinary approach that uses a wide

variety of expertise. It is especially important that the Trustees obtain a broad range of peer reviews from biologists who have international reputations in seabird restoration ecology. Many of the most qualified scientists live in Canada or the United Kingdom and, to the best of our knowledge, are not consulted during the reviews of project proposals. PSG would like an opportunity to submit names of additional peer reviewers to the Trustees. We also suggest that the Trustees establish a procedure to ensure that their peer reviewers reveal any conflicts of interest that might influence their assessment and/or sponsorship of various restoration projects. On occasion, we believe that the Trustees have proposed studies that cannot be justified scientifically.

US, Outside Alaska# 1438

Unfortunately you have done a bad job. The overwhelming majority of the American people want at least 80% of the remaining funds to be used to increase land acquisition and habitat protection. Although I read your 5 alternative proposals, they are all incompetently unacceptable. Please take into consideration a more liberal, American view on the environment. Work for sound, trustworthy relationships with environmentalists, who have so far saved America from being the environmental nightmare Eastern Europe is.

US, Outside Alaska# 1096

Please use your good judgement in allocating money to protecting our animals and the shores and water they live in. We've all hurt these creatures enough! Please use the resources available to protect them and their home.

US, Outside Alaska# 1068

The areas to be purchased should be thoroughly analyzed for native vegetation, including rare plants, and habitat value for wildlife. Unique and pristine components of Alaska's NATURAL history should be preserved. These components should comprise the basis of the Restoration plan. There is no other way to ensure the protection of these areas from a similar (God forbid) disaster but by purchasing them.

US, Outside Alaska# 1013 DOI Bureau of Reclamation

6. Decisions and Actions: Who will be responsible for deciding what is accomplished and funded through the restoration program? This should be more fully discussed in the restoration program plan. Will definitive measures of success be developed?

US, Outside Alaska# 747

In response to the undated tabloid summary and the June 1993 Supplement to the Draft Restoration Plan, I have the following comments. The materials were furnished me because I responded to a small article in the Homer News. I lived in Alaska for 16 yrs. until 1990. My husband owns recreational property near Homer. I worked in public involvement as a community member and as a professional (for the Alaska Power Authority on the Healy-Willow Intertie and the proposed Susitna hydro- electric project, and for the Chugach National Forest). With that background, I commend you for distilling very complex and controversial ideas into mostly comprehensible information. I know how difficult it is to develop such materials, especially with management made up of competing interests. I also understand Murphy's Law of Printing, as it applies to the return address on the tabloid (been there!). I recognize that the documents I have read have been prepared by committee and result from long discussions with antagonistic parties and competing interests. I can't imagine how the parties would

reach consensus on implementation, should any alternative be adopted.

US, Outside Alaska# 747

In response to the undated tabloid summary and the June 1993 Supplement to the Draft Restoration Plan, I have the following comments. The materials were furnished me because I responded to a small article in the Homer News. I lived in Alaska for 16 yrs. until 1990. My husband owns recreational property near Homer. I worked in public involvement as a community member and as a professional (for the Alaska Power Authority on the Healy-Willow Intertie and the proposed Susitna hydro- electric project, and for the Chugach National Forest). With that background, I commend you for distilling very complex and controversial ideas into mostly comprehensible information. I know how difficult it is to develop such materials, especially with management made up of competing interests. I also understand Murphy's Law of Printing, as it applies to the return address on the tabloid (been there!). I recognize that the documents I have read have been prepared by committee and result from long discussions with antagonistic parties and competing interests. I can't imagine how the parties would reach consensus on implementation, should any alternative be adopted. I own no stock in Exxon, I am no fan of Exxon, I am not a member of any environmental group, and am not pro- or anti-development. I speak as a person who has enjoyed both the economic and recreational resources of Alaska. I have hiked and kayaked in parts of the Prince William Sound. I was employed in public information by the Chugach National Forest from July 1988 to June 1989.

US, Outside Alaska# 474 University of Nevada, Reno

I believe it is essential that the issue of what "Restoration" entails be addressed. To my mind restoration means "to bring back to former place or condition or use" (Pocket Oxford Dictionary) in other words to return conditions to those that existed pre-spill. Such a definition is not compatible with the placement of fish runs within the spill area, or other such activities. These behaviors are management (aka gardening). This is not necessarily bad (my personal preference is to avoid such activities) but the use of appropriate terminology is in my opinion essential. This issue is routinely ignored by restoration ecologists and the recognition of it in such a high-profile case would be extremely valuable. Furthermore, I feel that it is important that the actions that are taken be accurately represented to the public.

REGION: Prince William Sound

Chenega Bay # 5107

How do we get the agencies to work with us on some of the projects we have submitted?

Chenega Bay # 703

Too many agencies getting funds for their projects. Too much spent on administration. Who's in charge of keeping you guys in line, anyway? You don't seem to be following your own rules.

Chenega Bay # 375

Keep all the spill lands and water, fish and game, clean forever. We would like to have what we had in 1988 so look a moment and you will see what it was like.

Cordova # 6138

Regarding the schedule please note that you've scheduled meetings at fishermen's busiest time of

year. You are asking us to put the brakes on everything and sit down and do this, and then the project draft and the EIS will come out in June, when we can't attend to it. Give us a break!

Cordova # 5345

Both Kachemak Bay and the museum in Kodiak were political. Neither one of them had anything to do with the injury.

Cordova # 5328

Another problem I had was with the alternatives, each of 3, 4 and 5. The public never really got to look at all of the different proposals that you guys received. A big judgment has already happened, like all the herring studies got excluded. The herring never made it to the Trustees except because of CDFU squawking, a lot of studies get cut before they even get there. What really is happening is a very small group, less than six, are probably making decisions on what the Trustees even get to see. So the public sees 47 alternatives and maybe none of them address any of the things the public is interested in, but the three that were rejected do. It doesn't matter that we never get a chance to have any input.

Cordova # 5300

I think this whole thing is just a smoke screen. It's all Exxon dollars. We're suing them for untold billions. If we can get out there and study these fish they will have to pay us. Why are they going to give us ammunition that might help us sue them? When you're talking \$900 million dollars, I'm not saying you guys are bought off but there's a few things they'd like you to do for them.

Cordova # 5299

I hear you saying a couple things that sound like you are speaking in circles. You're telling us to come together as a group and then to come together as individuals. Why is it that you say have individual input and at the same time why is there so much emphasis on coming together as a group? To me it seems like if you got everybody's input and put it together in categories you'd have a reflection of what everybody wants.

Cordova # 5298

I'm a member of the Trustees' Public Advisory Group. I think you understand the level of frustration that was in the room the last time the PAG adjourned and then walked away with the feeling that the Trustee Council has not been really attuned to what the PAG has been telling them. We advanced some of the fishery projects and we figure they're cooked. The Trustees didn't figure we had studied the projects enough. But we reviewed those projects through regional meetings and teleconference meetings -- we spent a lot of time on it. The Trustee Council is now opening their ears to the public comments. I've been told that this response is very important. It is important to put in writing your feelings about the projects you think should be included, what damaged resources should be in there, even if a population decline hasn't been proved. Particularly in our case the pink salmon and the herring, which has caused us to go back into our budget to try to come forward with a program that the Department of Fish and Game believes it needs dealing with all the fish that go into our nets. You've said its important to write and to get together. Do the people have to come together with specific projects like herring genetic studies or salmon generic strategies, or is generic terms OK? For example, should we say we want these kinds of studies on the species that are

impacted.

Cordova # 5293

We felt a lot of dissatisfaction from the Trustee Council process both from the lack of input from public and from the PAG. The PAG supported various fisheries projects that got axed by the Trustee Council anyway. Though you say that is one avenue, at least on paper that doesn't work.

Cordova # 5286

Since there's questions about which is going to be studied up there, if the studies are not designed well enough to receive the funding, then they're not going to get funded. It is sufficient for the public to say damage has occurred from our standpoint as users. But until the trustee council has 100% backing from the scientific communities they won't fund it. I would certainly like to see how the studies that have been done are funded and I'd like to see how they fit in there.

Cordova # 1489

I would like to thank the Trustee Council for their efforts to involve the public in this process.

Cordova # 798 Prince William Sound Conservation Alliance

To minimize expenditures, human and physical resources should be pooled between compatible projects. In addition, projects should be put out to competitive bid whenever possible. Federal and State agencies should be carefully scrutinized in order that EVOS settlement monies are not spent on projects that should come under the agencies' legislatively appropriated operating budgets.

Cordova # 706

Remove Bob Spies and change the decision making structure so that Trustee decisions do not rely on the review of a single scientist.

Cordova # 670

I find the task before the Trustee Council very large and important. I appreciate the efforts of the members towards aiding in the restoration process. I would like to point out that PWS is the primary affected area and to see timber land acquired first in Kachemak Bay and an oil spill museum funded in Kodiak way off base when critical funding for rehab-related studies are lacking and in fact the critical '93 PWS herring deposition studies discontinued in lieu of political distraction from the main issue--habitat restoration, resource restoration. So please stick close to the issue: #1 PWS, #2 PWS, #3 west to Cook Inlet, #4 Kodiak. 45% restoration monies for marine restoration processes.

Cordova # 664

Don't use the money to fund bureaucracies.

Cordova # 280

Dear Trustees: As a resident of PWS I would like to see PWS get its fair share of restoration projects. I feel that since PWS took the major hit on the oil, we should see a proportionate amount of funds applied to the area. Unfortunately we do not have a large population base in the Sound to make our voices heard loudly, nor do we have a lot of political influence. I am in hope that this will not be held against us, and the fact that we have suffered the brunt of the damage will be reflected in your funding decisions. Thank you, Jack Barber.

Cordova # 269

Please LISTEN, LISTEN, LISTEN damn it.

Cordova # 64

All the public comment to date has fallen on deaf ears to date. The make up of the PAG and their rules of operation doom the PAG to failure. Without having the public in on the planning process instead of you agencies sitting behind closed doors and deciding how to split the golden feed bag called the settlement up between you. We that live in the spill affected area have come to the conclusion that we are truly screwed by you the Trustee's Council and have virtually no hope of seeing any meaningful restoration before you piss all the settlement away. How can you decide what goes where when you idiots don't even know the extent of the damages? This is the epitome of bureaucratic bullshit. Figure out what is broke and how to fix it before you allocate the cash!

Cordova # 20

My view of this process is that the Trustees have created a gridlock that they themselves cannot see their way through and will opt for the most expedient way out that will make their lives easier. What I mean by "easier" is buying off on the least disagreeable option that the Trustees can unanimously agree upon. My solution is that the State & Feds split the \$ 50/50 or get rid of the unanimous agreement concern for spending money for restoration projects & get on with it.

Tatitlek # 6000

In your honest opinion does anybody without paid lobbyists have any chance of getting any help from this settlement money? You have to realize that's a pretty substantial sum of money and with all the carpetbaggers out there, there's lots of other people want to get their hands on it.

Tatitlek # 707

Listen to what the people who live out here have to say! We can't get into Anchorage every time you meet so you have to act on our behalf, which you are not doing very well.

Valdez # 6133

It's getting access to the process that is pretty frustrating. I think everything is economics, I don't think you can take anything out that isn't economics. Even with recreation, anything you touch comes back to economics.

Valdez # 6033

I am a little worried about what I am hearing. Were we to be in Chenega we'd be hearing the same thing, in Kodiak we'd hear how badly they were hit. I'm concerned as we go through this process that we don't pit each other against ourselves. We need to have a healing process going on to make sure this process works successfully for all of us. I am concerned about the special projects in Seward and the road in Whittier. I don't know how Alyeska was able to turn their fine around so they got \$50 million back when they should have supplied the SERVUS vessel in the first place. I think it is unbelievable that could happen. If we're going to be repairing the damage we have to look at what is damaged by doing research and then restoration work. I think that's where most of the effort and money should go. There are a lot of nice projects out there but I think that's where we should put our resources. We should try not to pit these special projects for each city and area against each other. The Trustees need to put the money into programs where it will help all of the areas affected ;

by the spill.

Valdez # 6028

I'd like to caution the Trustees to carefully deliberate about the effects of giving something to one area and that might have an impact on another. For example the Whittier road, which would have a positive effect on Whittier but a negative effect on tourism in Valdez.

Valdez # 6024

Is there anywhere we will be able to appeal if we realize, maybe four years down the road, a certain thing was supposed to be done and it has not?

Valdez # 6009

There's quite a lot of talk going on about what the money can be used for. From what I see in the paper a lot of the projects proposed don't have anything to do with the spill. Frankly I think that's malfeasance, to think about spending the money on anything but those projects directly related to injuries from the oil spill.

Valdez # 6008

I'm confused about who are the final decision makers. Who actually will use the plan? Who are we talking to here? After the Trustee Council, who actually decides how the money is to be spent?

Valdez # 1018 Alaska Wilderness Recreation and Tourism Assoc.

AWRTA is concerned about the failure of the Draft Restoration Plan flier to discuss the administrative process. We are concerned about a lack of definition of the decision-making process. For example, how do the Trustees plan to dovetail the Restoration Plan with the Chugach National Forest Land Management Plan, Fish and Wildlife Service Plans, and National Park Plans? We are concerned that habitat acquisition and other restoration activities fit into an orderly process with adequate public notice and public comment periods on specific projects. It appears to us that considerable confusion exists about the role of the Trustees and the Restoration Planning Team. Who makes policy? Trustees? Both? Who implements policy? the Restoration Planning Team? We suggest that

the Restoration Plan contain a section discussing its implementation and provide alternatives for public comment. One Alternative could be the existing where the Restoration Team, whose members' first priority is their own agencies, continue to administer the implementation of the restoration plan. A second alternative could examine the pros and cons of the Trustees hiring staff which are not associated with any agency to implement the Restoration Plan. For example, the Platte River Dam has three trustees (State, Federal and Power Company) who hire a staff to do the jobs. They do not fund the agencies. A third Alternative could turn over the administration to a non-profit organization, such as The Nature Conservancy. We would also like to see the Draft Restoration Plan contain a section discussing the most efficient way to administer agreed upon restoration strategies.

Is the best way to continue giving the money to agencies? What would be the advantages and disadvantages of giving it directly to the private sector through a public bidding process?

Valdez # 296

I agree with the idea of an area-wide approach rather than buying off each city with its pet project. It is much easier to build a building than it is to clean a thousand mussel beds, but that is where

physical damage was and that is what needs to be restored, stream by stream from Bligh Reef to Katmai.
Valdez # 274

Every project should be evaluated towards providing the greatest number of people/areas. The effects of good lobbying and "politicking" shouldn't be the cause for approval. If you allow special interests and area to compete for projects then you will cause a further split between and within communities. Those ties should be rebuilt with the efforts from restoration.

Valdez # 31

Use the money to help those affected- not those who ask the loudest. (Don't grease a wheel just because it squeaks!)

Whittier # 6059

If we decide to restore a certain bird, will the Trustee Council have the ability to protect the bird beyond existing laws?

Whittier # 571

This is very much over done--a bureaucratic graft upon public consumer costs.

ISSUE: 5.4 BRO ; Comments about the brochure

REGION: Alaska Peninsula

Chignik Lagoon # 5219

What you guys are doing, this is better than Exxon, it's a lot better. You guys are coming out and letting everybody know what you're doing. I think this pamphlet is the best thing you've done so far.

REGION: Alaska, Outside the Spill

Fairbanks # 176

Wording of the questionnaire items was obscure and too muddled. I think the average person will find it hard to wade through your verbiage.

Juneau # 5488

I think the range of alternatives that you have are specifically oriented to keeping the Trustee Council alive and operating and has nothing to do with the ability of resources to recover or replace them. This is an ability to manage a plan by some obscure jargon and has nothing to do with the actual ability to recover or replace. This is a typical Forest Service response to any problem. It has nothing to do with the actual reality of the situation.

Juneau # 50

Nice Job on the brochure and questionnaire - Keep up the good work!

REGION: Anchorage

Anchorage # 5088

It might be useful if people knew how the brochures were distributed. I would like to compliment the staff on distribution. I might have done it a little differently. It needs a wide distribution. People have until August to comment.

Anchorage # 5080

I think the Trustee Council and the staff has done a great job of coming up with these alternatives. We really need the habitat acquisition.

Anchorage # 745

Your questionnaire clouds the issue of an endowment by presenting an endowment as an alternative to spending for habitat, research, etc. The table on Potential Allocations should not include the endowment. An endowment addresses the timing of expenditures, not the purposes.

Anchorage # 620

I am finding it difficult to fill out this form-- the options do not really reflect my ideas.

Anchorage # 329

WOW! This is a great questionnaire!

Anchorage # 73

Thank you for the opportunity to comment. I think this approach is excellent. Get a feel for what the general public really thinks. Your general outline provides a lot of good generic and specific and objective information. That is extremely important.

Anchorage # 67

The pamphlet would have been easier to follow if you had printed in tabular form.

Anchorage # 44

This flyer was written on a worst case scenario by people who are over zealous in the field of ecology. Given a choice PEOPLE and INDUSTRY would be completely eliminated from Prince William Sound.

REGION: Kenai

Homer # 5456

I was confused on page 9 where there are x's. How does that help us understand what we are doing? For example, is river otter only under Alternative 5?

Homer # 5414

What was the printing cost of the brochure?

Homer # 5384

Can the brochure be picked up at the library?

Homer # 796

Good information! Meaningful questions in the survey. Thank you!

Port Graham # 5789

I don't think the majority of us realize the importance of answering the brochure questions.

Port Graham # 5745

What do the x's represent on page 9 of the brochure?

Seldovia # 5876

I don't understand the connection between the policy questions and the percentages.

Seward # 5959

You mentioned that this brochure had been mailed out to 28,000 people. I never got one.

Seward # 5950

I would like to compliment this. It is a great start and shows how important restoration is. It is something we can work on. I am glad to see the legislature is not making those decisions for us.

Seward # 5897

Is this something we can fill out and send to someone?

REGION: Kodiak

Kodiak # 5549

I represent the local aquaculture association. I think this brochure is a fine document and actually it is unfortunate something like this wasn't available over a year ago. Mayor Selbys' document is extremely good and the Trustee Council's planning team should look at that carefully and weigh it carefully. It addresses a lot of the concerns you are weighing tonight. As we march through the time period for this fund I believe we feel generally there should be more questions asked. In Alternative 5 could you elaborate on the linkage with areas outside the spill area? Referring to the draft document in June could you elaborate on the timeline after that comes out?

Kodiak # 5531

I thought the point of the meeting was to have public comment, I wasn't expecting to come and have it all explained. I would rather move on into the subject matter. I also think it's really difficult to have these theoretical questions and have these choices we're going to make without concrete choices of projects to review. I know you've already been given over 200 proposals. I think it would be a lot easier in the decision making process if we had some concrete examples. There's also some confusion about what amount of money is left. I appreciate all the work and energy that's gone into this, I don't mean to be overly critical.

Kodiak # 21

Also your pie graphs are totally incorrect-please base them on the entire 900 million dollar settlement, not the 660 left!

Old Harbor # 1012 Old Harbor Native Corporation

To summarize our views, I would like to make the following points: The Trustee Council and its staff did a good job of identifying the issues for consideration in preparation for a Final Restoration

Plan.

REGION: Outside Alaska

Canada # 1006

I also read the Draft *Exxon Valdez* Oil Spill Restoration Plan and the alternatives presented into it.

I am afraid that a number of conflicting interest were presented to the Trustee Council to benefit from the *Exxon Valdez* Oil Spill Restoration Plan and take this opportunity to modify the development of the Prince William Sound to their advantage. I believe some of the alternatives presented to the Trustee Council prove significant threat to Prince William Sound as a pristine land with a very fragile ecosystem.

US, Outside Alaska# 1013 DOI, Bureau of Reclamation

I have received and reviewed your recent brochure on the draft *Exxon Valdez* Oil Spill Restoration Plan. The brochure was very well done and reflects well on the many of the basic elements of concern on the alternatives for restoration. There are several items though that you may wish to consider as you prepare to develop the final alternatives for action:

US, Outside Alaska# 786 California Coastal Commission

I've been working on (and around) EIR/Ss for the last 15 years and I think this brochure/questionnaire is the best example of public involvement I've see. Congratulations.

REGION: Prince William Sound

Chenega Bay # 5170

I was pleased with the brochure. Although it was long, it was clear if you took the time to study it.

Cordova # 5335

How do you authenticate these forms? It doesn't matter how many they fill out? I guess somebody could go on a campaign and solicit lots of answers.

Cordova # 5334

This format is maybe user friendly to a certain percentage of Prince William Sound population, but I am sure a lot of other people aren't particularly comfortable with a questionnaire like this. I hope that you being here and hearing our oral comments carries just as much weight as what we end up doing with this or anything else.

Cordova # 5309

I want to know why you didn't mail these brochures to every single person in Cordova. I think you've added a lot to what has been said here already that Hickel hates Cordova.

Cordova # 649

Thanks - this brochure and questionnaire are well put together - good job!

Whittier # 6053

Is the 800 number in the brochure?

ISSUE: 5.4 LOC ; Local control or influence on the process

REGION: Alaska Peninsula

Chignik Lagoon # 5233

We appreciate you people coming down here, but we know with the amount of folks we have here, we're not going to get any help out of this money at all. I see it time and time again.

Chignik Lagoon # 5231

I was wondering what they're saying in other places, what other people are thinking about.

Chignik Lagoon # 5227

I know we aren't going to get anything so we're wasting time to do this.

Chignik Lagoon # 5218

Perryville and Ivanoff should also be polled; they fish here; they move up here in the summer. When you say Chignik salmon it affects all them, too.

Chignik Lagoon # 5217

Rick Skonberg is the president of the traditional council in Chignik Bay, you should have talked to him about going to Chignik Bay, not just to the mayor. They're going to be pretty upset that you aren't going there, too.

Chignik Lagoon # 5173

Is Chignik going to be included in this long term spending plan?

Chignik Lagoon # 5172

Where does Chignik Lagoon fit into this? What will we get out of it, besides headaches?

Chignik Lake # 5274

Everybody else is getting money out of the settlement but not us.

REGION: Anchorage

Anchorage # 5085

One of the more honest statements I heard from a Coast Guard person was that the shorelines would not be cleaned during our lifetime. I think we are looking at long term, so an endowment seems appropriate. If you don't want to address the human-use factor, the habitat will be folly. You must include the local villages and towns and empower them to understand the research and involve them in the activities. They will feel cheated if you don't. I hope they will be involved throughout the ten years and beyond.

REGION: Kenai

Nanwalek # 5649

I think someone from down here should do the monitoring. You save money on transportation cost.

Nanwalek # 5648

In the past, we have had the people from Anchorage telling us what has happened instead of us telling them.

Nanwalek # 5631

It would be a good idea for a group of people to come into a community to see which resources are important.

Nanwalek # 5620

Locals should be used if there is more testing.

Nanwalek # 5607

When Exxon settled with the governments and after the money was received, how was this all put together? Were the people in the impacted areas considered? Were they represented?

Port Graham # 708

Public participation is being met on paper but in reality rural residents (especially) Native residents of the spill area, those most likely to depend on subsistence resources, are the least likely to be listened to in this whole process. Basically, I would agree with everyone else out there, the process is flawed and a lot of money is being wasted.

Port Graham # 332

I hope to see our subsistence foods restored and protected from future spills. I feel the villages always get left out and cities get all the dollars that should go to villages whose lifestyle and food was affected.

Seward # 326

Those inside affected area should only be allowed to indicate how the funds are spent...either individually or by the communities ie, Seward, Homer, Valdez, Chenega, Seldovia, etc.

REGION: Kodiak

Kodiak # 5560

Let the shareholders decide whether they want to move that land or log it, they're the owners of it. If they say they want to do it, they want to sell that land, then you guys sit down and try to work out a reasonable deal.

Kodiak # 5548

One of the biggest impressions that keeps coming back to me was the loss of empowerment that happened. It wasn't important how much money Exxon spent, we wanted to be in power to do it for ourselves. Even here in Kodiak we're far enough away from the center of action of the Trustee Council.

to have a hard time, but we can still respond; we have empowerment, we have a Legislative Information Office [where the Trustee Council meetings are teleconferenced]. But I'm a little concerned that some of the villages need to be empowered. They need to be accessed. Maybe they can teleconference some of these meetings to the villages. I also wanted to share just a touch of resentment that every thing seems to go out of Anchorage. I understand you can't put the Trustee Council in Cordova or Homer, it costs too much, but it still is frustrating. I really appreciate meetings like this but I think there should be just a little more effort to empower. I feel like we've been empowered through this meeting, and this brochure and the advertising for this meeting has really helped.

Kodiak # 5545

[Mayor of Kodiak Borough, Jerome Selby]: I think that the issues are only difficult if you approach it from a philosophical point of view. I want to enter into the record the Kodiak Borough plan. There's some specific projects and there's general acquisition and restoration projects. These are restoration items that we think will get this part of the country back on our feet. This plan came from the people who were on the beach during the oil spill and represents all of the agencies, such as Fish and Wildlife, Park Service, DEC and ADF&G. We built this plan from the bottom up rather than the top down. It is interesting to me how much these documents have in common [holds up the brochure and the borough plan]. I see a lot of these projects that are perfectly in line with what you guys are coming up with even though you are coming from the top down, which is a totally different strategy from our plan. I see human use in recreation sites, and brown bear, and some monitoring sites. We've got those collection lagoons in this plan. The museum is in the plan, and there's some endowment money in here, too, and in some of the other categories we've talked about. We've been ready for over a year to get on with it. I'm pleased that you folks are here, and it looks to me like we're going to have a pretty good match.

Kodiak # 5534

There's been a dearth of efforts and money expended outside of Prince William Sound. It's true there was a tremendous amount of oil in the Sound, but there's no mention of the 800 miles of coastline within the Kodiak Island Borough that were injured and oiled. As far as acknowledging the true breadth and depth of the impact, four years later it still has not come out. It's the same frustration we felt two weeks after the spill and we still do, we don't get acknowledgement of the real losses that we've experienced here.

Larsen Bay # 6142

I'm having a hard time figuring this out because every area is different, and a lot of these here could help someplace else but they won't help us here. How are these clams going to help my yard. I don't understand it, you're talking about moderate restoration there. If you had an oil spill in Africa you could take all the elephants and say we'll just put them in California. This doesn't make sense because it doesn't help my area.

Larsen Bay # 5595

When they evaluate this to determine what projects are going to fly, do they go by volume? We can't compete, we are not enough people, we won't have a chance that our projects go forward.

Larsen Bay # 5590

Couldn't it start off by accepting it as a comment, that Kodiak is Kodiak and Larsen Bay is Larsen

Bay and they are two different places. When these plans are made up they should reflect that. This village was affected differently from Karluk. And if you include us in the borough we won't see any benefit from this money.

Larsen Bay # 5589

If it comes to the point where the money is going to this area, don't distribute it to the borough, because they'll keep it all. We've been having problems with them for a long time. The borough gets a bunch of money and it stops at the end of the road system. It's really a hassle for the villages to get our portion of what's been appropriated for our area. Once they get their hands on it we see very little of it.

Larsen Bay # 5588

I've seen this happen before at meetings I've gone to. Everybody refers to Kodiak Island as Kodiak. We're on Kodiak Island, not in Kodiak. The villages are not included in a lot of these budgets that are put out. It goes to the city of Kodiak, not to us. Referring to Kodiak Island as Kodiak is a real big mistake. The villages get left out of a lot of stuff because of that.

Larsen Bay # 5587

Have you checked into splitting the money for each area? You should come up with a formula so we get a minimum percentage for Kodiak and so the villages are not left out.

Larsen Bay # 5570

My concern would be with the studies you're doing up there, how are you going to relate that to what you're doing here in Kodiak?

Old Harbor # 6145

From your answer I conclude that in other words the people here won't have a hell of a lot to do with the decisions. See this has been done in the past, I come here to hear people like you all the time. I come here and they ask 'what do you want? what do you want?' Then they get on the plane and stick their notes under the seat and forget it. What we want is for you to say "You got x amount of dollars, this is your land, now you fix it. We want the native corporation to sit down and say this part is hurt and this part is hurt. These guys here know what was hurt, let them be your guides. That oil spill put a lot of people out of business, it's a way of creating a few jobs (if you let them control the money). They'll never see, that's something different. Ever since the tidal wave we've been studied to death and nothing ever seems to be done about anything.

Old Harbor # 5676

How many miles of beach were oiled in Kodiak? I think you will find that were more in Kodiak. [Emil Christiansen wants to know how many miles out of the official oiled shoreline mileage were on Kodiak.].

Old Harbor # 5666

Like you said, they spent \$100 million in research in Prince William Sound. How many miles of beaches were damaged in Prince William Sound and how many miles were damaged on Kodiak? It seems to me the most of the damage was done here. Here the oil busted into little pieces and everything ate it. I don't think there was any species of bird or animal that didn't eat it. Some of them got

away, but every beach on Kodiak Island has been damaged and the ocean bottom was damaged, and yet you say they didn't do any research here?

Ouzinkie # 6127

We've listened to what the state and other agencies have said in the past but people in the bush know more than the agencies. We know more than the people in Juneau or even Fish and Game in Kodiak about the migrating birds. There was a study done since 1989, I think in Southeast Alaska or Prince William Sound, that they feel that may explain the decline. The oil spill may have affected the plankton and the birds are eating this stuff. Next month our population on Nelson's Island is about 50% what it was in 1988. If we were to believe the reports done by the agency. We have three islands called the triplets near here. According to Fish and Wildlife there are just rabbits living out there [implication here was that is wrong] Because we live up here we know more than anyone else knows about how we were affected, and what's being affected, especially those of us that depend on subsistence.

Ouzinkie # 5735

Like John Sturgeon, who is on the PAG, he can't make any promises. All they can do and all we want you to do is listen to our concerns and pass them on. That's all we ask.

Ouzinkie # 5731

Up in Nenana they were going to build a railroad across the river. The state engineers went up there and met with the tribal entity and they showed the tribal president where they were going to build the bridge. The chief didn't speak good English, but he told them, no don't build it there, it will be gone next spring. But they were experts and they built the bridge where the engineers said to build it. And next spring it was washed away. Next time they asked the chief exactly where to build it. You need to ask the local people, they know more about this area. For example Exxon was only hiring people with six-pack licenses. Most of the local people didn't have six-pack licenses. They hired outsiders, but they don't know where the rocks are, they'd never been in our area. The local people know more about our resource than any agency or people in Juneau or in Washington D.C. We have to depend on those resources. I could tell you more about the deer on this island because I live there. I don't have to depend on Fish and Game to tell me that, I know because I live here. These are the people that should be hired to do this research stuff. There's where some of this money should be spent.

Ouzinkie # 5730

If they want an evaluation then send in someone with lots of money. I'd place a heck of a lot more credence on asking Martin Squartsoff how many seals are out on the bay than some scientist. Martin lives on the water, he was born on the water. The bottom line is going to be whether you ask a so-called expert or a local person. You're going to get the same answer: there's been an impact and you can see it.

Ouzinkie # 5729

The emphasis should be placed on rural Alaska. Look at the museum in Kodiak. What benefit does it do anybody? Not anybody here. It didn't do anything to help us. What does a museum have to do with the oil spill? Maybe they want to keep the museum alive to see how we used to live.

Ouzinkie # 5728

I feel that we get passed over many times on all these surveys. We spend our time answering questions for individuals like you that are coming around here. What it all boils down to in the end is it is generally a place like Kodiak with a bigger population that gets the funding, and the people who actually live on these resources are forgotten. Those people don't really depend on the resources for a living like we do. I think they should make a special effort regarding the native villages to specially prioritize what the villagers feel. Maybe segregate villager comments and not compare them with the urban areas. You should have a special test for the rural areas. With a bigger population like in urban Kodiak their numbers will snow us under.

Ouzinkie # 5712

I don't think too many people have too much trouble with eating a clam or eating a duck. What we're seeing now is that there's not the quantity that there used to be. People want to eat clams, shoot deer, eat whatever kind of fish. But for example, here a couple of weeks ago a bunch of us went out digging on a beach over on Lacross. We went home with very little, where normally we'd go home with a couple of buckets of clams in half the time. I'd like to see specific projects to return those populations back to what they were. What do you do if you have a question on how to restore something but you don't know how to go about it? There should be efforts to restore clam and duck populations, and the local people should be involved and also have a chance to be employed.

Ouzinkie # 5711

One of the problems is that when the agencies say they're trying to involve the local people to help, they mean leasing a boat. When I say involve I mean we want to know what the results are. They spend millions and millions of dollars on research and we don't see the results.

Ouzinkie # 5710

I agree with Andy that research is a valuable thing, but specifically I'd like to see results in our areas. I'd like to see actual projects that people around here could see results from or actually see stuff going on. I'd rather see a project going on than get a newspaper like this in the mail.

Port Lions # 5815

This community was affected and there were a lot of things outside the community that were affected, too. It would seem right that we get some benefit from some of this money here in Port Lions.

Port Lions # 5814

Is there going to be some attempt to see that each area impacted is reflected in this plan somewhere?

REGION: Outside Alaska

US, Outside Alaska# 616

Communities that were injured by spill should be assisted in recovering. No emphasis has been placed here yet.

US, Outside Alaska# 427

Increase emphasis on archaeological site stewardship and monitoring using Alaskan Native, people who.

are at least 50% Alaskan native.

REGION: Prince William Sound

Chenega Bay # 5169

In December or January there was a resolution by the Trustee Council to use local hire wherever possible.

Chenega Bay # 5164

We have tried to develop project proposals on our own, but we get behind the agency power curves every year.

Chenega Bay # 5144

It would also be important to use local people and knowledge (to do the work) because you won't get a good picture unless you consult with us.

Chenega Bay # 5136

In the Kenai Fiords you can't even pick up a piece of ice on the beach. That is bad when someone in Washington can tell me what I can eat.

Chenega Bay # 5130

I would really like to see all these scientists and biologists use some of the local knowledge. They have only read about the area in books. Local knowledge in enhancement programs should be utilized.

Cordova # 5340

We are starting to look at things being spent in other places, trying to understand why people aren't doing anything in Prince William Sound and why the Trustees let the herring studies go, and now Exxon is coming out with their comments in Atlanta to even confuse things more. I was involved in Valdez with the air health studies and then there's the peer review. It's going to run this way with all this stuff. No matter how good the science is you can always find someone to rebut it. The state doesn't want to find damage because they want to open ANWR. The feds don't want to find damages because they want support for going to war over this. It is defeat on your way to victory. However, I still urge everyone to complete this brochure questionnaire and send it in.

Cordova # 5333

I suggest that you should weight the number of comments from communities into the total population.

Cordova # 5331

Why can't they hold the Trustee Council meetings here so you don't have to carry our message to them?

Cordova # 5330

The level of frustration here is just getting worse. I feel like the Trustee Council is from Mars. The herring studies are integral to what was going to happen. Without it we have nothing. Are they that ignorant? Why are we wasting our time trying anything? We think we've been ignored, and meanwhile they're building whale jails down in Seward and buying trees and maybe they'll put something on Mt. McKinley. The very basics of the ocean that had toxic stuff dumped on it is being

ignored.

Cordova # 5327

Please pass on to the Trustees that someone whose life has been turned on end should have more say than someone from Anchorage. Our lifestyle and our economy have all been severally impacted.

Cordova # 5326

When the oil spill happened they wouldn't listen to us here, they listened to Valdez. I see the restoration plan coming out of Anchorage and they don't listen to us. I live here and I work here. I have a lot more trouble making a living since the oil spill. I see us formulating a policy where more outside people are going to get the work. Out of the restoration work done in 1992 and 1993 how much of the contracts were let in our area?

Cordova # 5325

The big expenses are the reimbursements. Research has not received the biggest dollars. I heard Harley Oldberg say that he was planning a meeting May 25 in Valdez where he wanted to get five representatives from Cordova with Valdez to put together an attack forum for the Trustee Council.

Cordova # 5324

We are all extremely frustrated. Over the four years we've tried to get these groups together to speak for us but it hasn't been effective so far. Even now if we try both routes simultaneously, that is, as special interest groups and as individuals, I am still not convinced the Trustee Council is going to act on our wishes. I don't have anything against anybody outside Alaska commenting but I think it comes back to the same point: I am a lifer here. I'd like to continue on but it's all become so unmanageable. Everything is out of our control. The money just keeps getting sucked up by outside agencies and studies. If there's nobody left here to fish is there really a resource failure?

Cordova # 5323

We've been left out of the whole damn picture. I keep going to these meetings and hoping something is going to come out of it. I heard them say they could get together by teleconference if it was important enough. What do we need to do, throw some names of groups like Eyak Corporation, Tatitlek, PWSAC, CDFU at them that we support this idea? How do we do this?

Cordova # 5322

It seems that our voice in Prince William Sound, in Cordova, Chenega, Tatitlek, Whittier and Valdez, we're nothing compared to Anchorage. There's a huge and powerful sports fishing group up in Anchorage that speaks as one. You're telling us to get organized but I don't see how we can compete.

Cordova # 5316

This is a lot of homework here. You're asking us to do a lot of homework, and Cordova is known for its grass roots politics. When Cordovans put their minds to it we can get a big response. But we've done this so many times and we've got a lot of other issues to deal with. How do we know if we put in time on this that it's going to be of more value than so many other times? How do we know that this is the one? We can get the input but it's not fair to ask a burnt out community one more time to do a lot of home work. Is this really it?

Cordova # 5310

You were talking about getting together the communities to have a stronger voice. In 1971 we were having a disaster in Prince William Sound with our fisheries. Our wild stocks were not enough to provide an equitable living. We developed a Prince William Sound Aquaculture Corporation, which included Seward, Whittier and Valdez, even people from the interior, as well as the subsistence users and sports fisheries. The mandate of the PWSAC is to ethically produce fish for the whole community that uses Prince William Sound. All of these communities have bound themselves together for a common

goal, so if you want to listen to a group that has the most voices you need to listen to PWSAC. We work hand in hand with Fish and Game to genetically protect the wild stock and they give us direction to help protect the wild stocks.

Cordova # 5307

Somebody suggested that they should measure the residual oil in the beaches and he who has the most residual oil gets the most funding.

Cordova # 5306

I don't want us to start arguing among regions.

Cordova # 5305

They didn't get near the oil we got but they got the whole sport fishing lobby behind them. We can't get it together because we're such a tiny population and because the Hickel administration hates our guts.

Cordova # 5304

Kodiak Borough got themselves together and it got attention. PWSAC and CDFU did this and they haven't gotten any attention. I don't understand what it is we aren't doing? What is the right heading? Kachemak Bay got a big chunk of money, I don't know how much oil they got, but they got a big chunk of money. What is it that they did that was right?

Cordova # 5303

If the sound and the regions can get together and agree on the things we agree are priorities and back it up with hundreds individuals, would that be good?

Cordova # 5293

We felt a lot of dissatisfaction from the Trustee Council process both from the lack of input from public and from the PAG. The PAG supported various fisheries projects that got axed by the Trustee Council anyway. Though you say that is one avenue, at least on paper that doesn't work.

Cordova # 5292

I think that Cordova District Fishermen United (CDFU) has crystallized the feelings of the fishing community. We've worked hard with that union the last four years. We've petitioned for studies on salmon and herring and nothing's being heard. If you were going to do anything we would think you'd take what CDFU says and they haven't been heard.

Cordova # 5291

I think the Trustee Council, both on the state and federal level need to start each day with a litany that 75% of the oil was in Prince William Sound, 90% of the hardest hit beaches were in Prince William Sound. The major damages outside the common murre and the sea birds occurred in Prince William Sound. You say you want to hear the public, so listen to the people in Prince William Sound. I bet you get a larger amount of opinion out of Cordova than anywhere else. We cannot compete with the pressure put on the Trustee Council by the other state agencies and the federal agencies. The trustees need to get rid of the unanimous vote. I think you need to pay undue and special attention to any voice coming out of Prince William Sound. I think some people are upset because we just got the scientific information released last February 2. Of course people are going to be calling for research. There is a difference between herring studies which are truly time critical and damages to archaeological sites. I just came back from a herring fishery that disappointed everyone. I think this community has more people going to meetings than are going fishing these days. We've been screaming for a long time and not being heard and something's got to change.

Tatitlek # 6003

Naturally ideas are going to agencies and they have their own agendas. The environmental groups have their own people getting in other peoples' faces. It seems like we need someone else taking the ball for us. Has there been any effort to get any of these people together so they have more clout?

Tatitlek # 5989

Can we invite the Trustees to come to the villages? They really should have a meeting either in Valdez or Cordova or somewhere where the ordinary people could attend.

Tatitlek # 5988

Is there any way to make the Trustees aware we don't have the resources of the environmental groups or whatever, but we do have strong concerns about these issues and we need to be heard, too.

Tatitlek # 5987

How can the villages have more say on this? It's discouraging and frustrating. Some times we feel when we fill out these surveys that it's not doing any good. What else could we be doing?

Tatitlek # 5986

In the scheme of things in terms of people lobbying, how do the villages fare? Are we there with the big guys pitching for particular projects? Do you see the villages in there lobbying effectively for particular projects?

Valdez # 6026

Could you tell us how it might be effective to lobby for a restoration project that is directly related to the sound? How would you present something that is not so glamorous? Say a spotted shrimp study for example?

Valdez # 6020

If we go back and review the 1992 and 1993 work plan we'll find that Prince William Sound is not significantly represented in work projects. We hear about problems with shrimp, pink salmon and crab, but we're laymen, not scientists. The oil was at its most toxic here, but it was here for such

a short duration I don't think the scientists figured out just how toxic it was. On down stream where the oil was less toxic, where it just dirtied and didn't harm anything, you can substantiate those effects because scientists had more time to study it and record their findings. Here in Prince William Sound it was the hottest and most toxic, but they didn't get that kind of contamination in the other regions. We're not getting the right amount of attention. This brochure is going everywhere, and I don't see how you're going to get the right information from all those other places. I would also like to point out that \$900 million also has the potential to disrupt the socio-economic balance of Prince William Sound.

Whittier # 6086

It would help the communities to have a cohesive voice. We need to come to some generalities.

Whittier # 6068

You would think you would take your priorities and do research where the spill occurred and then work your way out. You would start in the Sound where it first occurred. The little guy gets last. We are watching it with the state and federal money. It has not been spent on the nucleus of Prince William Sound. You should start in the middle of the Sound. This data will help you do the next one and then the next one. When you think population wise, you hear more people in the larger city give rebuttal. We are quiet people, and I get the feeling we are sort of walked over for this reason.

ISSUE: 5.4 MTG ; Comments about the public meetings
--

REGION: Alaska, Outside the Spill

Fairbanks # 5366

I think the public is better informed since the symposium. That has probably been a very helpful thing.

REGION: Kenai

Port Graham # 1024 Native Village of Port Graham

The village of Port Graham would like to thank the Restoration Team for this opportunity to provide public testimony on what kinds of restoration projects should be funded. We hope that you will fulfill your duty and act upon the concerns that you hear from the people who actually live in the oil spill region.

Seward # 5931

Are you taping this? How do you identify who is speaking? Are you simply taking public opinion. I don't have any scientific background. Some of the scientific people should be identified when they comment.

Seward # 5899

What is the consensus of the opinions?

Seward # 5898

How many towns have you been to so far?

Seward # 5896

Is this going through some process where comments are recorded?

Seward # 5895

What is the purpose of the meeting? How do you gauge what we might do or favor? Do we fill out a form?

REGION: Kodiak

Akhiok # 5

No comments at this time, just to say thank you for presenting what you have available to us and thanks for being here.

Kodiak # 6123

Why do we have to pick and choose and combine? I don't quite understand, it is such a confusing process.

Kodiak # 5561

I think it's really healthy that you are getting out in the community. All we hear is the newspapers talking about how much land the Trustees have or have not agreed to buy to prevent logging. When they were logging Portage nobody said a word. If the stockholders want to sell it, then sit down and negotiate it.

Ouzinkie # 5701

I have a feeling that in all the towns you're going to hear the same things. It's going to take quite a while for all the feelings about the spill to sort out. They're not all going to agree with each other.

Port Lions # 5823

On the timing for public meetings: this was great coming in April, but the herring fishermen went fishing April 15. For future reference you might try to get here before April 15 so they are here.

REGION: Prince William Sound

Valdez # 6025

Who is conducting the meeting in Anchorage if you guys are here, and why are you conducting a meeting in Fairbanks?

Whittier # 6089

A lot of times we get forgotten. We appreciate your coming up.

ISSUE: 5.4 RP ; Comments about the Restoration Plan
--

REGION: Alaska, Outside the Spill

Juneau # 5494

I am not inclined to sticking with rigid allocation formats. Take a look at the resources and find the most cost-effective method. Let the pie charts work themselves out. The division between habitation protection and acquisition and restoration I would not like to see prescribed rigidly.

REGION: Anchorage

Anchorage # 5015

Is this plan flexible over the years?

Anchorage # 1634 Sierra Club

Thank you for this opportunity to comment. We have not necessarily responded to each of the questions in the "brochure". Instead, we discuss the issues we consider most important, while suggesting a different approach that we believe the restoration plan should take. 1) The Restoration Plan Format... The Sierra Club believes that the Restoration Plan should not attempt to name precise percentages or amounts of money to be spent on different categories of activities. We recommend a simple plan that describes rules and policies for Trustee Council decisions. We recommend the following principles: Legality: Trustees should clarify what is legal and what is not legal under the oil spill settlement. The settlement is not a "slush fund" for worthy projects. Only projects which advance restoration may be funded. Education and research are worthy goals, but are not legal unless they advance restoration of resources and services damaged in the *Exxon Valdez* oil spill.

Anchorage # 1633 Forest Service Chugach National Forest

We also believe that a process based on the long term Restoration Plan needs to be established to allocate such funds on an annual basis. This process could utilize existing agency organizations to administer and implement projects within areas of jurisdiction. Thank you for the opportunity to comment, if you have any questions please call me.

Anchorage # 1528 Pacific Rim Villages Coalition, Ltd

I am providing comments to the draft restoration plan and supplement on behalf of the shareholders of the Pacific Rim Villages Coalition, Ltd., Chenega Corporation, Port Graham Corporation, English Bay Corporation, Chugach Alaska Corporation and Tatitlek Corporation. Shareholders of the Pacific Rim Villages Coalition include Tatitlek Corporation, Chenega Corporation, Port Graham Corporation, Chugach Alaska Corporation and English Bay Corporation. Our shareholders own virtually all of the private land holdings in Prince William Sound, the Kenai Fjords and Lower Kenai Peninsula. Our shareholders are each owned by Alaska Native residents who are subsistence users of resources in the oil-impacted area. Our shareholders and their ancestors have occupied those shores for over 11,000 years. We have read your draft plan and we have commented. Residents of our villages have commented, and have seen their comments discounted from 22 individual letters to a single letter, from 35 names on a petition to a single entry. We do not believe the system intended to restore the EVOS area is working, nor do we believe you can ignore our concerns. I will discuss below why we .

believe your draft plan and your supplemental material are not acceptable.

Anchorage # 1528 Pacific Rim Villages Coalition, Ltd

The draft supplement appears to be a fundamental reworking of the draft restoration plan and there is inadequate time to comment on a new model. The draft and the supplement leave too many matters unanswered which would appear to us crucial to a restoration plan. There is precious little concern for the human environment. The supplement discounts public comment, over-emphasizes habitat acquisition, and understates the benefits of moderate to comprehensive restoration. As a result, recovery of resources and services necessary to the existence of our communities is being shelved for decades. Indeed, comments from the impacted communities appear to have received no attention. The supplement also leaves too much unexplained to provide meaningful public comment. There is an inadequate explanation of the apparent decision not to proceed with a more comprehensive restoration model. The land acquisition/protection section raises fundamental questions without any clear objective statements. The general restoration section appears unfounded and inconsistent with the recognized injuries to resources and services addressed at Section B. We fail to understand why restoration of Kenai Lake is acceptable, under your view, while restoration of Sleepy Bay mussel beds which bubbles and buries fresh unweathered North Slope crude must be studied. More emphasis is required on moderate to comprehensive restoration, including the continuing damage caused by concentrated quantities of unweathered oil in upper and middle intertidal areas and mussel beds, on archaeological sites and to our constituents' existence, economy, and way of life.

REGION: Prince William Sound

Cordova # 5321

My suggestion is to be sure to make the plan very simple, clear, and black and white.

Cordova # 5312

This restoration plan we're working on here, we should have been formulating this and been working on the day the spill happened. It's a political process and there's been no plan in place. The Trustees have been going through thousands of proposals. They should have been identifying a plan and telling us what the guidelines were. As Mark says, we have a lot more ideas than we have money available. We need to see what is going to make the most difference in the future, we have to be selective about what is going to be done with this money. No matter what we do it's never going to please everybody.

ISSUE: 5.4 WP ; Comments about the work plan

REGION: Alaska, Outside the Spill

Juneau # 5480

Will the financing for annual work plan come from general monitoring and research funds?

Juneau # 481

Should not squander funds on state/federal agency projects that will be funded from other sources anyway.

REGION: Anchorage

Anchorage # 5100

If I put these numbers down in the column, will you send me the proposals? So somewhere in this building, there has to be the proposal information.

Anchorage # 5099

How will these numbers come back regarding the accelerated rate? Can you send me some of these proposed projects that are listed here? If these are designed to clean specific beaches, I would like to see who proposed cleaning what proposed beaches.

Anchorage # 5055

To clarify my thinking, it is my understanding that there are 207 potential projects, and our task is to voice support or opposition to these project, and we also have until May 27th to submit additional projects.

Anchorage # 5035

Can anymore projects be suggested this year? So we write it down and send it back to you?

Anchorage # 5031

Where did these proposals come from?

Anchorage # 372 Koniag, Inc.

As I stated in the questionnaire, there is an overwhelming public perception that the E.V. trustees have, to date, and will in the future, manage to dribble away the settlement monies mainly to maintain their respective bureaucracies and produce great quantities of esoteric studies gathering dust, rather than do anything of lasting benefit for the public.

REGION: Kenai

Homer # 5424

I read the list of possible projects. It is beyond me where these ideas come from and seem to enhance bureaucracy. I am amazed at the ass backwards things going on. It does not inspire faith when projects like this get written down.

Homer # 5378

What else will be done in the 1993 Work Plan?

Homer # 5377

Was Kachemak Bay part of the 1992 Work Plan?

Homer # 482 Kachemak Bay Conservation Society (KBCS)

Minimize the waste of money through projects padded with more money than necessary.

Nanwalek # 5616

Have FY '94 projects been approved yet?

Nanwalek # 5608

Is there somewhere you can write for specific proposals for a specific idea?

Port Graham # 5758

I made a request for testing the clams. Out here near the clam bed was a cleaning station and I don't know if the stuff at the cleaning station contaminated the clams or if it was a combination. The cleaning station is where the boats came in.

Port Graham # 5757

I am concerned about how useful is what we submitted and if it will be taken into consideration. If we were to write up a proposal on mariculture, where would we go to?

Seldovia # 5886

Regarding the 1994 Work Plan, I feel awkward voting on something based on just a title. Having looked at the 1993 Work Plan, some titles sounded crazy but when you reviewed it, you got a better understanding.

Seldovia # 5847

If it was decided to help murre by eradicating the foxes or the rats, would you put that out to bid?

Seldovia # 5845

Do all the projects have to go through an agency? If a committee approached the Trustee Council with a proposal, could the funds be directed through our SOS, city government or chamber of commerce?

Seldovia # 5844

Do we have any idea what projects anticipate continued funding?

Seldovia # 5836

Where did the proposals come from? Can anyone suggest proposals?

Seward # 5964

I wanted to draw attention to page 6 and item #115. If you are not opposed to habitat protection, why is the Kenai Fiords only funded at \$20,000? If you compare that to some of the others, you are talking about a small percentage. If you support habitat acquisition, be sure and write it on the comment form.

REGION: Prince William Sound

Chenega Bay # 5106

What is the procedure for submitting proposals?

Cordova # 6135

From the CDFU point of view the feeling has been that habitat protection has got lots of public pressure and support. What we see happening outside of Cordova is that there seems to be overwhelming support for habitat protection and acquisition. We support it but not to the exclusion of fishery projects. We don't feel that fisheries projects are getting a fair shake. I recall several meetings ago when options were presented and there was so much support for habitat

acquisition and nothing for marine studies.

Whittier # 6084

Kachemak is one example. Are the only other things we have to compare Fort Richardson and Seward? People are concentrating on other areas and not the Sound.

Whittier # 6058

When the Trustee Council gives a yea or nay on the 1994 projects, will we have an opportunity to give input?

ISSUE: 6.0 XX ; INJURIES

REGION: Alaska Peninsula

Chignik Lagoon # 5223

We still don't know what the injuries are with some species, the effects haven't shown up yet.

Chignik Lagoon # 5196

There are injuries that could take a really long time to show up. Same thing like halibut or sea otters or seining. The injuries could actually be from the oil spill.

REGION: Alaska, Outside the Spill

Fairbanks # 5363

In a number of instances we don't know enough about the populations involved. The range of one species could be restricted to PWS and another could extend over a large area.

Fairbanks # 573

I believe that we are no wiser in 1993 than we were in March 1989 with regard to the impacts of a major oil spill in coastal Alaska and how do deal with it. We still do not know if the variability caused by the spill was "significant" in spite of much yellow journalism dealing with the subject. Why are some populations greater than they were in 1989 while others are less? What is the role of natural variability?

Juneau # 5464

Are you sure it is necessary to go through all the information in the brochure on injury?

REGION: Anchorage

Anchorage # 5061

I am surprised by the lack of other sea life on your list of injured species and only one species of salmon. I am wondering if this is being treated as gospel.

Anchorage # 5028

I would like to know more about long-term effects. What has been done to address these aspects?

Anchorage # 5019

Are damage assessment studies continuing?

Anchorage # 5017

On your list on page three, whose list is that?

REGION: Kenai

Homer # 5446

Is anyone doing correlation with the habitats and what exists now? A habitat may still be affected by hydrocarbons.

Homer # 5391

Recently in the news there have been disputes by Exxon about the veracity of the scientific studies that have been conducted by a few agencies. They boycotted a recent scientific symposium about Exxon Valdez damages held in Anchorage. When you decide what projects to fund or how to spend the money, whose figures are you looking at? There is a lot of distance between Exxon's assessment that damages are not long lasting and everyone else's.

Nanwalek # 5599

Are these Exxon scientists?

Nanwalek # 5598

Do the scientists do the studies in a lab or do they go out?

Seward # 5894

Who did the sampling?

Seward # 5893

How many tons of samples were taken? Did they get a variety of fish? Is there any chance that a biomass was taken and a year was missed?

REGION: Outside Alaska

US, Outside Alaska# 1556

I am a member of the National Wildlife Federation (NWF). I am writing to you to express my concern for the wildlife and wilderness hurt by the Exxon Spill in 1989. When I think of all the millions of animals and acres of forests that were devastated by the spill, my heart aches. But the thing that saddens me most is that it is taking this long to start doing something about it.

US, Outside Alaska# 1031

For months following the March 1989 T/V E-V Prudhoe crude oil spill, I remember vividly watching the nightly news reports as the slick spread and jumbled cleanup efforts from Exxon and local fisherman began. My heart sank along w/ many Americans and people worldwide, but all I knew were the TV and magazine images. I have spent much time in the outdoors, but up to that time had yet to venture out

of the lower 48. News reports eventually faded and I continued my life in the city w/ occasional jaunts to local mountains. All of this has changed in my recent past. I was fortunate enough to participate in a sea kayaking expedition for 25 days in the Northwest, part of Prince William Sound which recently ended. I had expected barren beaches and remnant blackened rocks. What I found instead were some of the most breathtaking stretches of beach and rocky coastline I have ever witnessed. This was merely the "surface facade" of a still unhealthy area of water and coastline, however, and that message became lucid quite fast. Where were the multitudes of harlequin ducks? Packs of oyster catchers? At Day Care Cove on the SE side of Perry island, where were the congregations of sea otters and their pups during this season? The relative silence of the affected spill area through which I traveled was reinforced by reminiscing tales of life before the spill by old veterans in the expedition. Our route took me from Whittier out to Olsen Island and back, spending time in Unakwick, Eagle Bay, Esther Passage and up into College and Harriman Fjords. Here, where oil made much less of a direct impact, the wildlife I has missed was present in limited numbers. This provided a good balance for me between experiencing affected and unaffected areas. Perry Island's Day Care Cove was next to the high wave energy bench upon which we camped and where, even after cleanup, I found asphalt above our high tide line and a smear of oil on my kayak as I was loading. This indicates to me that the impact is hardly over. I commend nature for so thoroughly helping the cleanup process by elemental breakdown and wave energy. We, as humans, have done all in our capacity to 'play God' and manually cleanse and cleanup the land directly. Nature will heal itself if we allow it the chance.

US, Outside Alaska# 1007

I have just spent the last twenty-three days in Prince William Sound in a sea kayak. I have journeyed from as far north as Whittier and Culross Island to as far south as Pt. Helen. The Sound is beautiful in the summer as you may know, teeming with life, a dynamic example of Natural processes. One of the key interests in traveling to the Sound and exploring it, is observing the after effects of the event that has made it infamous. The rupture and subsequent spillage of millions of barrels of crude oil from the Exxon Corporation oil tanker, Valdez. In the small group I traveled with we discussed the spill, its effects and the current situation. Let me rephrase that last bit, we viewed the current situation. Having never seen the Sound before the spill, I can't make any comparisons- the Sound seems alive dare I say recovered. Alas I know this is untrue. From articles I have read, group discussions I have had and conversations I have partaken in, I believe the spill has taken a marked toll on the Sound. Mythic herds of seals weren't seen, other marine mammals were scarce and definitely not up to the numbers which had been foretold. As a geologist and someone with an interest in hydrology, I am aware of the damage contaminants can do to the coastal environments but more importantly those parts of the environment which aren't really visible. The water table and the soil are two strong holds at contaminants which are dangerous in their own way, the soil as a reservoir and "foot locker" by contaminants and the water table as a distributor of contaminants to far more fragile systems. What I am trying to say and what I am sure you are all aware of, is that the Exxon oil spill has done an incredible amount of damage, both to present and post ecosystems and future (?) victims. I have learned of the settlement that is at your disposal and therefore the power you have to try and make something positive come out of this disaster. I am also aware that you have many special interests groups (one of which I am sure I belong to) are vying for an appropriation of these funds in a manner which best suits their purpose. Knowing all this and

flying in the face of all objectivity, I must suggest an appropriation which coincides with my convictions, my beliefs and further more, my dreams.

REGION: Prince William Sound

Chenega Bay # 5111

We already know there is an injury to the animals and people.

Chenega Bay # 5109

Out of all the resources, the ones with asterisks should be the ones most studied in the past (Injured by the Oil Spill Table). The other species have not had any real study prespill.

Chenega Bay # 5102

Is this list all inclusive of the resources we know of?

Valdez # 6006

With Exxon presenting their information this week in Atlanta, is there going to be a joint meeting between the Exxon scientists and the government scientists to review data and interpretations so they come up with a compromise on damage? You hear on the news that Exxon says the damage has been overrated, is really minimal compared to what the government scientists said.

Whittier # 6113

It is as if your hands are tied. Today I think the species is okay and hope the spill had no effect on it, but then three years later you might discover a link and might not be able to do anything about it. Is this list of injured species forever or is it updated? So do you have to do a study for it to appear on the injured list?

ISSUE: 6.1 XX ; Injuries in general
--

REGION: Alaska, Outside the Spill

Juneau # 5467

Was the group that said there was a population decline from one Trustee group?

Juneau # 5466

Have you had any controversy among the Trustee scientists over the 1989 data and whether there was any population decline?

REGION: Kenai

Nanwalek # 5602

Do you know if any of the fish or ducks with hydrocarbons are able to live? Are there any deformities?

Seward # 5924

Where did you get the baseline data? There were a lot of populations that weren't studied at all.

Seward # 5915

So that parcel of land and the animals was affected by the spill? In reality, weren't most of the animals affected on Kodiak Island? Did they have the greatest number of animals impacted?

REGION: Kodiak

Akhiok # 6160

There's no birds or fish around here. Where did all the fish go? Where did all the birds go? There's not as many around here now.

Old Harbor # 1012 Old Harbor Native Corporation

Our people and the wildlife in our area were injured by the oil spill.

REGION: Prince William Sound

Chenega Bay # 5122

I don't understand why the population has stabilized for the harbor seals and it is taking longer for the murrelets to stabilize.

Chenega Bay # 5110

I don't understand why they don't come and walk around our beaches and study for a week. All they want to study are the sea otters and the birds that the tourists see. I could care less about the sea otters because we can't eat them. We need to go somewhere that is 17 miles away that shows how things were before the spill.

Chenega Bay # 5103

Under other resources, why is sediment listed following air/water? Are you talking about land damage? Why wouldn't you address anadromous streams?

Cordova # 5345

Both Kachemak Bay and the museum in Kodiak were political. Neither one of them had anything to do with the injury.

Whittier # 6065

I am not for spending great amounts of money on studies. I see damage assessment occurring through studies. Then you have to say what we can do about it. I hate to see this turn into a whole lot of studies.

Whittier # 6039

Were all these species on the chart affected by the oil?

Whittier # 6038

Are these state scientists that are doing the studies?

Whittier # 6037

When you pick those species, did Fish and Game help decide which ones to study?

ISSUE: 6.1 MM ; Injuries to marine mammals in general
--

REGION: Kenai

Homer # 5428

There is no definition of "depleted". The working definition is pretty vague.

Homer # 5427

Some of the marine mammals were hit very hard such as sea otters, especially in PWS. There is now increased hunting on some of these species. Is there any movement through your council to try to get the Marine Mammal Protection Act to develop some regulations because of the decline?

Port Graham # 5783

The animals up in the woods, such as bears and goats, were affected by oil. They also eat kelp to get salt in their body.

REGION: Prince William Sound

Chenega Bay # 5120

It was sad the number of seals, land otters and mink which I have seen this winter. I have seen only four mink tracks on this island. Years before I would catch 30 or 40 with no problem. They are just not here.

Chenega Bay # 5118

The Dall porpoises have disappeared. On the 25th of March I went to Valdez and in an 11 hour run, I saw only 6 porpoises.

ISSUE: 6.1 HS ; Injuries to harbor seal
--

REGION: Anchorage

Anchorage # 5068

What happened to all the seals in Blackstone Bay? They're not there anymore. Last summer there were zero.

REGION: Kenai

Port Graham # 5781

Harbor seals follow the food.

Port Graham # 5780

The harbor seals are coming back very slowly.

Port Graham # 5759

The bottomfish disappeared. We use to have a lot of harbor seals come here, but after the spill we did not have that many.

REGION: Kodiak

Akhiok # 5006

After the spill they told us not to eat certain parts of the seals, for example their livers. It seems like seals have definitely declined.

Old Harbor # 5655

Seals are definitely in decline, you used to see them in the narrows all the time and you just don't see them any more. It is hard to pinpoint exactly what the cause is.

Old Harbor # 5654

We were scared to eat seal meat, too. I don't eat it any more. I used to watch the seals down by the lighthouse. I'd go down with my dogs in the summertime and watch them. I don't see them around any more.

REGION: Prince William Sound

Chenega Bay # 5121

Harbor seals have not stabilized. I think they are still in decline.

ISSUE: 6.1 SL ; Injuries to sea lion

REGION: Kenai

Seldovia # 5859

I feel that it is not time to close the book on the sea lions because it will affect the local fishermen.

Seldovia # 5832

Why is the stellar sea lion not included and how can it be determined that there was no injury?

Seward # 5923

Cathy Frost of Fish and Game took a look at harbor seals and found brain lesions caused by inhalation of hydrocarbons. Has anyone taken a look at the stellar sea lions?

Seward # 5922

I don't see the stellar sea lion on the list of injured resources. Why isn't it on the list? I know of a sea lion which died that we buried. It is hard to believe there wouldn't have been some impact.

REGION: Kodiak

Akhiok # 5012

AKI owns part of Two Headed Island, and of course that's a big sea lion haulout, it's over by old Kaguyak. That's a big sea lion rookery. The sea lions are declining pretty badly.

REGION: Prince William Sound

Chenega Bay # 5119

There were thousands of herring. The majority of sea lions which came in to feed on them were young and females. Where are the others?

Chenega Bay # 5117

I have been watching the sea lions. Their haulout wasn't hit; they were hit when they were having pups. The oil was six inches thick when it came through the passages. There are 200 animals where there should be 700. There is a significant change since 1989.

Chenega Bay # 5114

Sea lions should have been studied.

Chenega Bay # 5113

Sea lions were not included as injured.

ISSUE: 6.1 SO ; Injuries to sea otter
--

REGION: Anchorage

Anchorage # 366

I also think that the sea otters should be emphasized.

REGION: Prince William Sound

Chenega Bay # 5155

The oil spill killed thousands of sea otters, and I still see some out there.

ISSUE: 6.1 LM ; Injuries to land mammals

REGION: Kenai

Nanwalek # 5634

The bears were also affected. Their hair comes off. We have seen a couple of them.

REGION: Kodiak

Akhiok # 5003

But we didn't see too many dead deer right after the spill.

Akhiok # 5002

About two years ago there was dead deer all along this whole area. These last two winters we have had cold snaps but not too much. In this one little island one guy counted 80 dead deer. There were dead deer everywhere, I never saw so many dead deer. It was about two years ago.

Akhiok # 5001

We used to see the deer all along the beach and not any more. I can usually go on a skiff ride and see them all over, but you're lucky now if you see any on a cruise of the whole of Olga Bay.

Karluk # 5519

Ask USF&WS whether the deer population is down.

Old Harbor # 5660

We've seen deer dying from eating tainted kelp.

Ouzinkie # 5713

The Trustee Council just approved all this money for land acquisitions. Where's the money for restoration? I didn't work for Exxon or VECO in 1989. We watched deer going down there, eating oil and then going back inland and dying. Same thing with the eagles. The bears and others were eating them and we don't even know what was really damaged from that. The Fish and Game and the Coast Guard

would not report foxes, beavers and deer that were dying.

REGION: Prince William Sound

Chenega Bay # 5141

We went on hunts last year and would see only one deer all day long. The deer we did see were really spooky, and they didn't have fawn. If you don't see any fawn tracks, that means there are none there. We should have seen seven or eight does to one buck. When I went to Montague, it was like Chenega Bay in 1986-87. There were deer everywhere. I would like to see an extensive program to see what the deer are eating.

Chenega Bay # 5140

Fish and Game needs to do studies on the deer. Deer take was lowered for one year.

Chenega Bay # 5139

Bear are easy to photograph and are for the tourist. They don't care about what we want to eat.

Chenega Bay # 5138

I have seen no mention of bear.

ISSUE: 6.1 BRD ; Injuries to birds in general
--

REGION: Alaska Peninsula**Chignik Lagoon # 5203**

I think the food chain has been screwed up. All along these birds keep drifting up ashore, dead. They're just dying all over the place. The food chain has been affected somehow, they're still eating the stuff they've been eating and it's killing them off.

Chignik Lake # 5278

The eiders really have declined a lot.

Chignik Lake # 5261

Nowhere near as many eider ducks come through since the spill. There used to be thousands come through for a good week or so. We haven't had near as many since. You're lucky if you see 40 or 50 where there used to be big flocks come through. They would buzz the houses.

Chignik Lake # 5256

About three weeks ago we found lots of ducks dead way higher than usual. They were deep ocean species of birds you usually never find on land.

REGION: Anchorage**Anchorage # 366**

I believe that the Trustee Council should especially try to monitor and restore the birds that died in the oil spill.

Anchorage # 5020

For quantification of decline, how much of the local percentage of a population has to decline before being included? How do you consider the national symbol being just injured when there were hundreds upon hundreds, if not thousands, of eagles killed? You are saying that 15% were destroyed, and you are saying it was just injured?

REGION: Kodiak**Karluk # 5521**

I have seen fewer eagles and swans. This year only have seen 12 swans. Haven't seen any Brandts yet this year. Eiders also down.

Kodiak # 5526

It seems that a lot of the birds coming by Kodiak come up the shoreline of the Gulf of Alaska, and they also spread out through the interior. They also come by Kodiak, a lot of them go to a point where the hills aren't so high on the Peninsula and then go off into the tundra area and Bristol Bay and beyond. These birds are a big food source in areas where you don't have a supermarket. I have a cabin on Shuyak Island and I've observed a lot of birds going by. One of them is the tundra swan that goes along this route and it can fly long distances. One of the spots that it lands is right by

my cabin on Shuyak and the western inlet. I've observed them going by Kaguyak bay, too. Same with the Canada geese and Brant. The point is that all these birds migrate every summer and a lot of them, especially the smaller ones, don't have the strength of the big birds. They were pretty vulnerable to the spill that came out of Prince William Sound and landed on the shores of the Kenai Peninsula. I think that the effects of this also go a long way along Kodiak Island and then on to Bristol Bay and beyond, and affect the food source of those people that live and depend on that bird population. I believe that money could be spent to find out what species go along that route and what can be done to upgrade the species or help the situation.

Old Harbor # 5681

Some of the message you should get across is that some of the population decline we see isn't showing up on the brochure. There's a lot of species that aren't on there. Like the sea ducks. Last winter certain ducks didn't come back, Steller's eider and king eider for example. There are plenty of harlequin ducks in certain places but some of the other ducks are missing.

Ouzinkie # 5727

I think there's too much emphasis on bald eagles. I've never seen so many eagles, they sure as heck aren't endangered around here. They've reproduced around here. The emphasis is always placed on these things because of a national interest.

Ouzinkie # 5720

There's dead birds out there still floating around now. What are they dying from? Normally they would not be in the bays, these birds are usually out far out in the water.

Ouzinkie # 5707

I think that maybe the duck's food source might have been fouled up.

Ouzinkie # 5705

In our case most the ducks come down from the north.

Ouzinkie # 5703

I have to disagree with what you just said (about needing to find out duck population). Since 1989, if you talk to most of the older people, there's been a big decline in ducks since 1989.

REGION: Outside Alaska

US, Outside Alaska# 1616 Pacific Seabird Group

Finally, according to federal estimates published in 56 Federal Register 14687 (April 11, 1991), the government processed the following numbers of oiled birds: common murre (10,428 plus some of the 8,851 unidentified murre), harlequin ducks (213), marbled murrelets (612 plus some of the 413 unidentified murrelets), pigeon guillemots (614) and black oystercatchers (9). PSG is concerned that the Trustee Council seems to limit restoration to species that account for about 21,000 of the 35,000 birds that were processed. Restoration should include the species that account for the other 14,000 dead birds (the actual number of dead birds being an unknown multiple of 14,000). As a reference point for this magnitude of injury to seabirds, the federal government is currently pursuing a major law suit in central California concerning a spill that it alleges oiled or damaged about 4,200

seabirds. The Trustee Council should include in its restoration plan the damaged species it now seems to ignore, including yellow-billed loons, tufted puffins, grebes, shearwaters, cormorants, oldsquaw, scoters, black-legged kittiwakes and ancient murrelets. In conclusion, PSG urges the Trustees to (1) fund the removal of predators from seabird colonies; (2) purchase seabird habitat; (3) endow university chairs; (4) expand restoration for migratory birds to include the entire state of Alaska; and (5) include all damaged species of seabirds in its restoration efforts.

US, Outside Alaska# 1616 Pacific Seabird Group

Seabirds are particularly vulnerable to oil spills and were perhaps the single resource most damaged by the *Exxon Valdez* spill. The Trustees estimate that the spill killed as many as 645,000 seabirds, including murres, loons, cormorants, pigeon guillemots, grebes, sea ducks, marbled murrelets, Kittlitz' murrelets, black oystercatchers, Bonaparte's gulls, arctic terns, black-legged kittiwakes and tufted puffins. PSG is particularly concerned about marbled murrelets because last September the U.S. Fish & Wildlife Service (FWS) listed the population of this species from Washington to California as threatened under the Endangered Species Act.

ISSUE: 6.1 HAR ; Injuries to harlequin duck
--

REGION: Kenai

Nanwalek # 6119

What caused the deformities in the birds (harlequins)?

REGION: Prince William Sound

Chenega Bay # 5131

The harlequin duck were a food source for us. We did not use them as a sport. The State should find a way for us to farm them and try to get them to nest in this area. They are a shoreline bird. They were really impacted.

ISSUE: 6.1 MUR ; Injuries to murres
--

REGION: Alaska Peninsula

Chignik Lagoon # 5198

I don't think it's right you should say that the murres that dying now are not dying because of the spill. These birds feed on the little fish, if you kill that feed off it could affect the birds, all the little things that grow up in the ocean. Those whales that you see in the False Pass, they sit there and they're feeding on little fish going through the Pass, fish from miles and miles away.

Chignik Lagoon # 5195

Right now there's dead murres washing up all over. The food chain's been killed. Fish and Game says they appear to be starving to death.

REGION: Kenai

Seward # 5925

As a community that was invaded by the common murre this spring, I have never seen anything like this before, and I've been here a few years. What caused it and can it be traced back to the spill?

REGION: Prince William Sound

Tatitlek # 5980

I see lots of common murre dead here lately. We also shot a couple of birds recently and they were oiled. I've been traveling around and seeing a lot of these birds dead, just during the last couple of months.

ISSUE: 6.1 FSH ; Injuries to fish in general

REGION: Alaska, Outside the Spill

Juneau # 479

Protection of wild stocks of anadromous fishes - highly favor

REGION: Alaska Peninsula

Chignik Lagoon # 5236

I'm on the advisory committee here for the fishery, and I can tell you that the Fish and Game people in Kodiak are very tight. You have to go beat them up for information.

Chignik Lagoon # 5235

The year of the spill, did Fish and Game submit any reports? Did they do any research, and is that information available?

Chignik Lagoon # 5184

It's difficult to tell from one time or one system to another what is going on [concerning salmon].

Chignik Lake # 5242

Our Fisheries Resource Institute (FRI) people come around with a fixed budget, they can't do much here. They were studying the river flow in Black Lake.

REGION: Anchorage

Anchorage # 366

I especially hope that the salmon are closely monitored because of their economic importance to Alaska.

Anchorage # 5098

We have seen zero returns in our silvers. There are a lot of components. An endowment has to be part of this because the more we find out, the less we know.

Anchorage # 5040

Do you think Bristol Bay Fishery was affected?

Anchorage # 5021

What hatcheries are you talking about are releasing more fish than they have in the past?

REGION: Kenai

Port Graham # 5766

Salmon should be number one because it is used for commercial fishing as well as subsistence.

Nanwalek # 5630

You have a big list of things that were studied. Tom cods should be studied because they relate more to people, and people are what you want to protect.

Nanwalek # 5629

I don't how much they check the lagoon. There is no tom cod. Seems like we don't find them down on the beach.

Nanwalek # 5625

Someone told me there are fish with sores on them.

Port Graham # 5770

The silver run in this village has never been a commercial run. Many years ago it may have been, but it has always been a subsistence use product.

Port Graham # 5769

I have been watching fish, and I have noticed the dog salmon have gone down too. There weren't that many silvers either.

Port Graham # 5767

I noticed on the list you left out bottomfish. Also the silvers and kings were left out. We don't have a way of testing them, so we don't know if there was injury. I know those fish go through the whole Cook Inlet. You only have the reds and the pinks.

Port Graham # 5763

The seaweed affected by oil is partly dead and turning whitish green. You can tell it has been hit with oil.

Port Graham # 5760

When we were working at Windy Bay, I noticed how the oil affected the bottomfish.

Port Graham # 5759

The bottomfish disappeared. We use to have a lot of harbor seals come here, but after the spill we did not have that many.

Port Graham # 5753

Windy Bay was also affected. English Bay complained about the killing of small fry of reds. The current was too strong for them to fight.

Port Graham # 5751

We had a boom across the bay and that killed off a lot of fry. They didn't have the curtain down. After we took it up, we had a whole bunch of salmon fry caught (millions).

Port Graham # 5749

This is a year to catch fish and see if they are affected. This might be the year we find out things.

REGION: Kodiak

Kodiak # 5532

One thing Jerome Selby and the lady in back mentioned about the spill and the aftermath was the tar balls forming and then sinking. I have been thinking about the area off of the Kenai Peninsula where a lot of the spill was located and subsequent breaking up of the oil and possible sinking of these balls in that area. I'm thinking about that area in the Gulf where there's a 200 fathoms deep spot that is a major spawning area for halibut. Has any data been brought out about what percentage of the oil formed balls and sank and could it possibly get down to that spawning area of the halibut? Because of the value of the halibut fishery wouldn't it be good to check that?

REGION: Prince William Sound

Chenega Bay # 5126

Day after day I would set 2,400 hooks for a total of 100 fish. That is a significant change.

Chenega Bay # 5125

I should have kept a record on the crippled cod I caught. I have seen a big change in the fish species.

Cordova # 5281

We found some evidence of chronic injuries in pacific salmon that were not in the 1989 year class. The public has not heard that. We do have some evidence of long term problems with genetics of pacific salmon. We did a pilot study last year and urged the trustees to fund a second study, but it wasn't funded. We need to sort out whether there are long term effects. There might be, we're not sure, we haven't done a good job of measuring.

Valdez # 6007

The Trustees' head scientist made the determination on pink and sockeye salmon. Sockeye being a four year fish, how can he determine what the decline is at this time? We are specifically talking about the wild stock pink salmon, correct? [Marty and Veronica say yes].

ISSUE: 6.1 HER ; Injuries to herring

REGION: Alaska, Outside the Spill

Juneau # 5486

I find it astounding when 50 or 60 fish studies have been done and that we wouldn't have any kind of herring program going.

Juneau # 5470

Do you end testing at the two-year age group? If they found injury to the eggs in 1989, why weren't studies continued until this year?

Juneau # 5469

Has there been Trustee money put into herring studies?

Juneau # 5468

Was there any Trustee money put into the sampling of the recent run of herring?

Juneau # 5465

Is there any reason why herring is listed in the injured but no population decline column?

REGION: Anchorage

Anchorage # 5091

The Pacific herring should have a star on it and is clearly diseased.

REGION: Kenai

Port Graham # 6100

The five-year olds (Herrings) were smaller and diseased.

Port Graham # 5773

I have a newspaper clipping regarding disease in PWS herring. You have to find the answer to that. If herring were affected, salmon probably were too.

Port Graham # 5752

Not only were the pink fry caught but also the herring.

Port Graham # 5742

Will herring be tested here and not just in the Sound?

Port Graham # 5739

Did they say anything about the herring down in the Sound and why they are not returning?

Seldovia # 5874

When you get to something like herring fisheries, there seems to be a gap.

Seward # 5913

In your unknown for the herring, how much will be known after the second disaster in PWS?

Seward # 5892

Could this year's poor herring process be backtracked?

REGION: Outside Alaska

US, Outside Alaska# 1334

I recently read the update about the proposed oil spill recovery plan in the July/August 1993 National Wildlife Enviro Action Newsletter. I cannot stress enough my support of making Exxon and the Trustees use as much as possible of their remaining funds in support of the habitat protection plan. Therefore, I wholeheartedly support the conservationists' preferred alternative which would leave 20% of the settlement funds for fisheries studies and management programs. The more money, the better. This is not the case of a fractured ecosystem, but a destroyed one, one that may never return to "normal", but this does not mean that 100% effort should not go forth in order to help or restore as much as possible. Maybe with a little luck, some of God's good help and, most important, the funds, the Prince William Sound area can one day be partially restored and enjoyed by all of its residents again (both man and animal life!). I hope that my letter helps in getting this approved. If there is anything else I can do as a concerned U.S. citizen and nature lover, please contact me at the above address.

US, Outside Alaska# 1216 Federation of Fly Fishers

The Federation commends the Trustee Council's priority emphasis on anadromous fish resource as outlined in your draft restoration plan. We encourage you to adopt Alternative '2' in utilizing the *Exxon Valdez* settlement to provide a lasting and positive legacy from this tragic oil spill. Thank you for your time and consideration.

REGION: Prince William Sound

Chenega Bay # 5124

Three of my friends are making the test sets, and they said Fish and Game are concerned about the number of herring with open sores.

Chenega Bay # 5123

The herring season is going on, and it was predicted by Fish and Game that there would be a record herring season, but there weren't enough fish to open the damn fishery. The herring seiners were scheduled to go to work, but there hasn't been an opening.

Cordova # 433

Study why herring have disease problems. Maybe there is a problem in the food chain.

Cordova # 6135

From the CDFU point of view the feeling has been that habitat protection has got lots of public pressure and support. What we see happening outside of Cordova is that there seems to be overwhelming support for habitat protection and acquisition. We support it but not to the exclusion of fishery projects. We don't feel that fisheries projects are getting a fair shake. I recall several meetings ago when options were presented and there was so much support for habitat

acquisition and nothing for marine studies.

Cordova # 677

Put the money in the sensitive damaged areas and fisheries, and initial and future habitat and wildlife actually damaged.

Cordova # 675

What about the marine resources? As a commercial fisherman, I continue to feel the effects of the spill, yet hardly any mention is made about studies or marine restoration. I feel cheated. I don't think the commercial fishermen or the city of Cordova is getting a fair shake.

Cordova # 5284

It seems irresponsible to me. The pacific herring are the bottom of the food chain. A lot of the birds and other species in the sound rely on herring for food. We were funded for three years, and everyone knew that 1993 would be the important year. This seems like a total sellout. We were sold out by Exxon, we were sold out by the lawyers, and now it seems like the state is jerking the rug out from under us, too. Herring are the basic building blocks for life in the marine environment. At a key time for herring deposition, we are missing this data for the 1989 year class altogether. This year 2/3 of the herring didn't show up, and the 1/3 that did has some mystery disease. It just seems totally off to say 'OK, let's go study bald eagles.'

Tatitlek # 5974

If the herring are declining over the population, won't that mean other species would have to move into the population decline column too because they depend so heavily on the herring as a food source?

Tatitlek # 311

The Pacific herring are a food service to most of the other resources a complete study of the herring and the effects that herring may have on other resources that are used for subsistence.

Tatitlek # 30

Very little attention has been given to Pacific Herring, a resource that is of utmost importance to the survival of all the other resources that prey on herring for subsistence. More in-depth studies of this resource must be undertaken. I think the impact of oil on herring is much greater than what has been realized by the council and that the impact on herring has had a detrimental effect on the recovery of all other resources.

Valdez # 697

Research impacts from the first few weeks of spill - salmon, shrimp, crab, ?? This could have been overlooked in 1989.

ISSUE: 6.1 PS ; Injuries to pink salmon
--

REGION: Kodiak**Kodiak # 5540**

I am speaking for Area K Seiners Association. I see this area was designated as not having any pink salmon population decline. I have to question that because it seems that designation was made based on the fact that Prince William Sound had a record run and had substantial runs after that time until very recently, while in Kodiak the population level wasn't as good. Two years after the spill it seemed like there was a substantial loss of pink salmon and the return didn't come in as fast as expected. I think in our area the pinks were affected more than in Prince William Sound.

Kodiak # 5527

On Kodiak we're concerned about pink salmon, and we disagree with the scientists [that there was no injury to pink salmon] because our pink return last year was so far below the expected return. During the summer of 1989 we know some were impacted by hydrocarbons. I also don't see any reference here to ground fish, as far as I know no one's done any analysis on what may have occurred with halibut or any ground feeders. We do know we don't have any capacity in the state to do any analysis of these fish. We have the same problem with subsistence that is mentioned in the brochure.

Larsen Bay # 6140

You only have sockeye salmon on the population decline list. I've fished here all my life, and since 1989 my catch on pinks has gone down 80 to 90%. And you're saying there's no population decline?

Larsen Bay # 5569

In 1991 and 1992 the pink return was really bad. Reds have been down quite a bit, too. They been doing that feeding in the lake and there was over time a big increase in reds. But since 1989 they've been way down.

Larsen Bay # 5568

In 1989 because of overescapement we had pink salmon going up rain troughs. And the damage in the returns is because of that.

Old Harbor # 5663

They predicted a huge pink run in Prince William Sound last year but it never came. You don't know what's going to happen, the problem might be the life cycle of the species. If something is going to happen and you don't know what it is that makes you worried. I see up here you got intertidal and subtidal organisms. Does that include crab? Is there some crab research being done?

Old Harbor # 5662

Pinks are declining, they have been declining since the spill. They're predicting a bigger run this year, we'll see.

Port Lions # 5797

My husband tenders for fishing and there were some concerns about the size of the pink salmon by the

people he tended for the last two years. They were smaller. Do you know if it was because of the oil spill? If you could fix it, that would be wonderful.

REGION: Prince William Sound

Cordova # 5294

There seems to be such a big question about the pink salmon. We're not sure if the hatcheries are declining or what. This seems to be totally the question on whether we've been impacted or not, and yet there seems to be no enthusiasm on the part of the Trustees for finding the answer. Why is the coded wire study holding up the whole process and yet there's no enthusiasm for funding the studies?

Cordova # 5280

The evidence we have to date on pink salmon is that the damages appear to be chronic and they appear to be consistent even though the oiling is declining. As a result of exposure to oiling in 1989 the pink salmon have obtained a chronic and persistent genetic damage and we have no idea how long that will last. One addition, on pink salmon what you said is a little misleading. You said there are two reasons why we can't measure population decline: because the change is so small or because the species compensate for the oiling effect. This is not the case as those populations undergo large natural fluctuations. The difficulty comes from sorting out natural perturbations from oil effect. When you try to take into account natural variability, you may still have substantial damage but have difficulty measuring it.

Cordova # 5279

Regarding pink salmon, the brochure doesn't show the population declining but it says in the other chart that it won't recover for many years. Why is there a discrepancy?

Cordova # 567

It's already proven that genetic damage has been done to wild salmon stocks within PWS.

Valdez # 6005

If the Trustee's scientists can't agree on injuries to pink salmon, when are we going to have some concrete data to go by?

ISSUE: 6.1 SS ; Injuries to sockeye (red) salmon

REGION: Alaska Peninsula

Chignik Lagoon # 5202

That's what we need, we don't need anything else: restore the reds.

Chignik Lagoon # 5201

Our red salmon for one were definitely damaged. As far as restoration, concentrate on our reds, enhance our future runs, to get it back up like it was.

Chignik Lagoon # 5188

The reason we're real concerned is this is all we've got. We basically survive on summer salmon. It's the same in Perryville, the three Chigniks, and Ivanoff Bay.

Chignik Lagoon # 5229

The Fish and Game office in Kodiak doesn't like to volunteer information.

Chignik Lagoon # 5228

Is there any paperwork that says there was overescapement in the Chignik regions?

Chignik Lagoon # 5187

All their fry had to swim through the oil to the ocean that spring [1989].

Chignik Lagoon # 5186

They were real sick-looking fish. I haven't ever seen any of those before or since. From the first run they travel up alongside Kodiak and then hit the main line and then come down this way. I've never seen anything like that since then. They must have been feeding on something on their way up here.

Chignik Lagoon # 5185

The thing I was most concerned about was when we were fishing that year, I kept seeing yellow fish. I've never seen red salmon that were completely yellow. I've never seen fish that way before. I was catching one or two of those a week. We gave them to Fish and Game. They probably threw them away but somebody said that the color was liver damage. I kick myself for not freezing one of those, but I didn't. If those fish are diseased because of that oil we'll be seeing all kinds of damages.

Chignik Lagoon # 5183

I've been told if you have two years back to back of overescapement you have real problems, three is very bad news.

Chignik Lagoon # 5182

The '89 season overescapement was doubled, they had us close down a couple times. They shut the whole lagoon down for a whole week, and there were fish all over, lots of fish got through.

Chignik Lagoon # 5181

We had two years of overescapement here in the last six or seven years. Those two years were back to back. One of them was the Exxon year, the other one was 1990. We didn't fish in 1990 because of the strike.

Chignik Lagoon # 5180

I think Fish and Game's been keeping a lot of stuff quiet. There's no way of documenting Aniakchak overescapement because ADF&G didn't keep surveys. They're way bigger (Kenai) than our runs here.

Chignik Lagoon # 5179

There's two major systems, Black Lake and the Chignik system, and off that system there's several major streams. They don't only spawn in just Chignik or Red Lake.

Chignik Lagoon # 5177

Our red salmon are three to five year fish. Fish and Game uses the ones that come back earlier to predict next year's run.

Chignik Lagoon # 5176

According to the Fisheries Research Institute the majority of the fish that spawned in 1989 went out into the oil and will be coming back next year.

Chignik Lagoon # 5175

We had overescapement here in Chignik, too. We had a big seine net over the river but the fish kept busting the net out.

Chignik Lagoon # 5174

I'd like to address the sockeye salmon issue. Did the scientists figure out the effects of the oil on the smolts in the open ocean?

Chignik Lagoon # 1023 Chignik Lagoon Village Council

I am a commercial fisherman at Chignik Lagoon and wanted to make sure that you were aware of our damages from the oil spill. We had a large escapement problem on our sockeye salmon in 1989 over 300,000. Our whole salmon season was totally screwed up because of all the closures due to the emergency order closures by the Fish and Game and Veco. I believe that we should get some kind of compensation to enhance our salmon runs out of this restoration plan. I think it should be all species such as crabs, halibut, etc. The boundaries you have outlined I think it should include all villages (Chignik Bay, Chignik Lagoon, Chignik Lakes, Perryville and Ivanof.) We all depend on this fishery not just the Lagoon and Lakes. Obviously we were affected by the oil spill or we would not have had all these problems not to mention all the mental stress. The 2 people you can contact that would know more about the exact figures on this over escapement etc. Greg Ruggerone FRI (206-486-6523) and Chuck MacCallum, Chignik Seiners Association (209-671-2062).

Chignik Lake # 5277

There was no fish up here all summer last year.

Chignik Lake # 5276

I talked to Chuck McCollom (of Fish and Game?) in Chignik Lagoon last year about the fish crash.

Chignik Lake # 5275

Usually there's no problem getting red fish but this year there were none. We got 20 or 30 fish altogether. The bears were even coming into the village looking for fish.

Chignik Lake # 5271

FRI was here in February and they couldn't get any fish at all in Black Lake.

Chignik Lake # 5270

There are red streams all along the way going south towards Perryville and Ivanoff. They were all overstocked.

Chignik Lake # 5269

I'm sure there was overescapement in all of the streams around here, because nobody was fishing.

Chignik Lake # 5262

There's been a lot of fish with those black spots. Fish with bands on them and rings. Lots of them with little funny spots that were real terrible looking.

Chignik Lake # 5260

We had two years of overescapement. One year was because of the spill, they wouldn't let us fish at night. Another reason was the strike.

Chignik Lake # 5259

They closed us off in the middle of the season and too many fish dumped into the streams.

Chignik Lake # 5258

The fishery problems you have listed here only include Kenai and Red Lake. How come not here? The same thing should be done here. Our (Chignik Lake) fishery to hell, too.

Chignik Lake # 5247

East of here there are big cities of beaver dam houses. They spoil the runs. Those used to be spawning streams.

Chignik Lake # 5239

Towards fall the adult sockeye were coming up with a black spot about a the size of a dime. You could scrape it off, it was on their scales. I've been fishing all my life and I've never seen anything like that before. It's happened the last two years. We won't take those fish, the [cannery] companies get uptight. They don't want that meat.

Chignik Lake # 5238

Hardly any sockeye salmon came up into the lake last year.

REGION: Kodiak

Akhiok # 6167

When we couldn't fish Olga Bay in 1989 the whole side of the bay was just boiling with fish. Since 1989 there's no pickup of any reds.

Akhiok # 6165

The reds near Akhiok are not very healthy, and there's not very many of them. There used to be a lot of fish in Portage Bay and Sulua Bay, but the last two years it's been pretty much closed because there's nothing in there. There was some oil in the area but not so much in there. In the last few years we have always had pretty good returns in there, mostly chum salmon. When they had the area closed because of the spill I went in there with my boat and it was just like October month, there was nothing in there. And then down here last year in August it was the first time in all the years they had it closed during the whole month of August, but they had this whole area closed. In past years that was when we made our season. There was just no commercial fish, so they were trying to

make an escapement. There's Frazier and Olga Lakes, there's big runs up there.

Akhiok # 5000

Lot of them like Dolly Varden were just getting gilled in our seines. We usually have a good run of reds coming through.

Karluk # 5518

The time of the spill was when the (Karluk River red salmon) fingerlings went out.

Karluk # 5514

We have some beaver problems in the Karluk river drainage. (This problem is relative to decreasing spawning habitat in the Karluk drainage for the red salmon run.)

Karluk # 5512

The Karluk red salmon run was down after the oil spill, including 1992. For 15 years, ADF&G built up the run from a previous low, and then after the 1989 season it went down again.

Larsen Bay # 5569

In 1991 and 1992 the pink return was really bad. Reds have been down quite a bit, too. They been doing that feeding in the lake and there was over time a big increase in reds. But since 1989 they've been way down.

REGION: Prince William Sound

Valdez # 697

Research impacts from the first few weeks of spill - salmon, shrimp, crab, ?? This could have been overlooked in 1989.

ISSUE: 6.1 CS ; Injuries to chum salmon
--

REGION: Alaska, Outside the Spill

Juneau # 5485

I don't see chum salmon on the injury table. If pinks are there, chums should be. In PWS on even years, 75% are intertidal spawners and on odd years half are intertidal spawners. I would think whatever is happening with pinks would happen with chum as well.

REGION: Kenai

Homer # 5415

There was one injury, the chum salmon, which was never addressed because it was never studied and was a huge component. We were expecting to see what the four-year old component would be and it was 0. It has never appeared on the list. We are very frustrated with the approach on the outer coast because it is unstudied. We are so far along with this, and it seems we are seeing a lot of the

projects over and over again. The chances of introducing something now are slim.

ISSUE: 6.1 SF ; Injures to shellfish in general
--

REGION: Alaska Peninsula

Chignik Lake # 5248

A lot of us usually go for clams and other shellfish. When the oil spill happened we couldn't go get those. We were told not to. We go back to certain places now, in fact just about everywhere.

REGION: Anchorage

Anchorage # 5044

Regarding fish dumping which killed scallop, is any of that taken into consideration?

REGION: Kenai

Nanwalek # 5633

Would the restoration funds be used for the coast? We lost all our sea urchin. They are real hard to find and so are the barnacles. You can see bald spots where there is no eelgrass.

Seldovia # 5887

I never understood how oysters were harmed by the spill.

Seldovia # 5831

Are shellfish and crabs included in the category of intertidal organisms?

REGION: Prince William Sound

Chenega Bay # 5142

I would like to see shellfish added to the list.

Chenega Bay # 5129

Inside these passages, I have not caught one king crab. I have run 4,000 hooks and haven't caught anything.

Chenega Bay # 5127

I don't see deer, shrimp or crab on the list of injured resources.

Chenega Bay # 5104

Are shrimp and crab immune to oil?

Cordova # 5339

Has anyone gone into finger printing the bacteria that grows in that sludge down there? And the oyster dredging that's coming up, has anyone been sampling some of that stuff so that it would be documented?

ISSUE: 6.1 CRB ; Injuries to crab
--

REGION: Alaska Peninsula**Chignik Lagoon # 5194**

Did you guys study the injuries to crabs? It takes 7 to 8 years for the crabs to come to maturity, so we still haven't even been able to study effects of the spill on crab. The year of the spill there was all these little guys dead. Now I'm fishing dungeness and there's less and less every year. That was in Hook Bay and in Ivanoff.

Chignik Lagoon # 5171

Were there any crab mortalities noted in Hook Bay? [Participant wanted to know why they weren't mentioned as injured in the brochure.]

Chignik Lake # 5272

We found dead dungeness crab down on Sand Beach in 1989.

REGION: Kodiak**Kodiak # 5542**

I also would like to see research on crab impacts. When he said that crab were not mentioned it reminded me of when the spill hit Shelikof side of Shuyak in the area of Nikita bay. It wasn't that large as part of the spill but nevertheless it covered the beaches there, I think 30 to 40% of the beach. Afterwards there was a thousand, maybe more, dollar sized dungeness crabs dead on the beach in that area. I don't know for sure if they were related to the spill at the time but it was in the summer of 1989. It would be good for the spill money to be directed to something like that because it might generate dollar value. Dungeness crab are money in the fishermen's pocket. There has been a lot in the papers about spending money to buy trees, and I don't think that is as important as monitoring and looking for a way to recover species that have been damaged by the spill.

Old Harbor # 5665

The crabs live on the tidelands or tide flats, the oil could have bothered them.

Old Harbor # 5664

But they didn't have much of a crab fishery in Prince William Sound before the oil spill anyway. They should do that research here. In 1989 we found some crabs and we opened them up and they were filled with black oil in the gills. Now there's no crabs out there now. We didn't say anything then because we were afraid Fish and Game would close all the fisheries.

Old Harbor # 5663

They predicted a huge pink run in Prince William Sound last year but it never came. You don't know what's going to happen, the problem might be the life cycle of the species. If something is going to happen and you don't know what it is that makes you worried. I see up here you got intertidal and subtidal organisms. Does that include crab? Is there some crab research being done?

Port Lions # 5818

Did they ever look into our dungeness crab, there was a bunch of them died.

REGION: Prince William Sound

Valdez # 6011

We also had a tanner crab winter fishery in 1988 and we haven't had one since. Also, around four or six vessels used to fish brown king crab in Prince William Sound. The fellows who geared up for it last year, among the whole fleet they caught maybe 30 or 40 crabs.

ISSUE: 6.1 SHR ; Injuries to shrimp
--

REGION: Prince William Sound

Chenega Bay # 6091

We have put in pots for shrimp and have only gotten two or three. The oil that came through here was toxic.

Chenega Bay # 5128

The market for shrimp has leveled out since the spill.

Valdez # 6010

I noticed you don't have spot shrimp on your list. Aside from one small opener, fishing for spot shrimp has been closed since the spill. A lot of fishermen think the decline in spot shrimp is from the spill.

Whittier # 480

I am interested in bringing back commercial spot shrimping. Since the oil spill, it has been closed. I believe the hatcheries are at fault. They are letting loose so many small fry that they are eating all the shrimp and crab larva.

Whittier # 6064

Why weren't the spotted shrimp studies continued? (seven people nodded in agreement.) Our community was spot shrimping commercially. It was very important to us. I think there were about 80 registered fisherman who were spot fishing.

ISSUE: 6.1 TID ; Injuries to intertidal or subtidal in general

REGION: Anchorage

Anchorage # 5013

Could you expand on intertidal and subtidal organisms? If you expand those subtidal organisms and intertidal organisms in the uppertidal zone, aren't you saying the entire ecosystem needs a break? Aren't you attacking these individual species as entities in themselves when it should be obvious when you expand those other subtidals, that the entire ecosystem has been damaged and needs

restoration?

REGION: Kenai

Homer # 5400

Protect those eelgrass plants.

Nanwalek # 5619

When they were testing the beaches for subtidal organisms after the spill, they only checked one spot to see if they were damaged. The whole beach was not tested. They might take the organism from the clean spot for testing. How they were taking their evidence did not give the whole picture. I saw the people taking the samples, and they did not check everywhere that there were organisms. It needs a more detailed inspection and not such a random sampling. It is a little late to correct this. A more detailed inspection needed to be made at that time. What you do now is not going to be relevant. You should look at your data from that type of situation because it may not be real involved.

Port Graham # 5763

The seaweed affected by oil is partly dead and turning whitish green. You can tell it has been hit with oil.

Port Graham # 5761

The blue mussels were very thick in our bay before the spill. They are coming back now, but they are smaller (2-inches). I don't know what causes the slow growth.

Port Graham # 5754

We as Native people have not had the privilege of being involved in something like this, and we thank you for this opportunity now. What we have to say is very important and should be taken into consideration. Those of us who live along the coastline have been seriously affected. This was the time of year when entire families would walk the beach digging clams, and it was a yearly, seasonal thing. Since the spill, those clam beds were contaminated. These beds have not been tested, and so we have not used them. Every time they have gone to gather seaweed, they have come up with oil. Someone found those tar balls. Subsistence means us taking our children and being able to have fellowship on the beach. Once you have collected those things, sharing them plays a very important role with us as Native people. Sharing is very important. We have always taught our people that the first thing you catch, you give it away. We were impacted culturally. Because of the fear of losing another part of our culture, there is a need to do things. Last year they built a kayak to revive some of the tradition.

Port Graham # 5740

Has any plankton testing been done in the oil-spill area?

Port Graham # 1024 Native Village of Port Graham

Port Graham residents continue to have serious concerns about many local species and therefore ask you to fund subsistence studies and restoration projects on the following resources:

Bidarkis/Chitons, snails, clams, Blue Mussels, Sea Urchins, Tomcod, herring, ducks of all species,

Puffins and seal. There has been a serious decline in the populations of all of these species and we must travel quite far to find equivalent resources. This document is not meant to be inclusive of all of our concerns and is meant only to supplement verbal testimony that you receive.

Seward # 5891

Where in the classification did the candle fish or pink fish that birds feed on that thought that the chocolate mousse out there was great food fall in your category?

REGION: Kodiak

Akhiok # 6162

Butter clams haven't been very abundant here. Since I was a kid we had a lot of these cockle clams, but they're declining now. But they've been declining since before 1989. And we have sea urchins but it seems like the spill didn't do that much damage. Razor clams have slowed down some. So all these resources we had before, I don't know if its nature or if they've been abused or whatever. The way I've seen it in my time they're kind of declining. It will take time for restoration. We had a lot of crab and they're down now but we know where they went.

Old Harbor # 5653

Subsistence is returning to normal but everybody is afraid of it. Everything we eat around here is damaged. We would go with our children to the beaches where we used to have picnics and the children would get all oily. We are eating the clams, we've been doing it for hundreds of years. Even though the fear is there, we're still going to do it. We're eating them but we're concerned about our safety. We're not going to stop, because that's what we live on, as we have for hundreds of years. I think if you looked at the records about subsistence gathering that they collected after the oil spill, the people in Old Harbor showed the largest decline.

Ouzinkie # 5718

One report that came out is that the plankton is affected from the oil.

Port Lions # 6132

It seems to me like you kind of skimmed over the "other" category on your injury table. The concern here is that our shoreline itself is basically dead.

REGION: Outside Alaska

US, Outside Alaska# 1101

As an avid outdoorsperson and traveller, I was shocked to hear the news about the *Exxon Valdez* oil spill on Bligh Reef. Just last week I returned home from a month long trip to Alaska. I spent those four weeks in Prince William Sound sea kayaking. The sounds we heard and the sights we saw were incredible-breaching whales, black bears, Chenega and Blackstone glaciers calving, etc. But, on several occasions, the sights and smells were not pleasant. I can remember paddling along the east side of Chenega Island one day, and smelling the crude oil before I even noticed the wide black oil line above the rockweed.

REGION: Prince William Sound

Tatitlek # 311

Studies of impact of oil on ocean bottom environment and resources is greatly under emphasized -- it makes no sense at all not to study the ocean bottom. The effects that it may have on people that use the resources from it could be harmful and we'd like to know if this is a potential problem.

ISSUE: 6.1 CLM ; Injuries to clams or mussels
--

REGION: Kenai

Seldovia # 5879

Seldovia Bay used to be full of clams. No one can explain why there are no clams. Some say pollution and some say it is an algae. A database of some sort might help to determine why there are no clams.

Seldovia # 5855

When you get to spending these monies, I agree with Mr. Cole on what has happened to our clams.

REGION: Kodiak

Kodiak # 5523

I don't see much mention of shellfish or clams in the brochure and I was wondering why that is? I think that the damage was bad enough, specifically on some clams, that they should be here.

Larsen Bay # 5576

I still feel the same way when I eat clams and I wonder if they still have oil in them. My husband won't eat clams any more because he got sick that one time.

Larsen Bay # 5565

How come you don't have anything in the brochure about shellfish, like clams? That's a pretty wide field, to lump it into intertidal. That includes a lot of other organisms, too. We know the clams have declined on beaches here.

Old Harbor # 5652

They got poisoned from clams here. I don't know if they reported it then or not, but two or three people got sick after the oil spill from eating clams. They're eating clams now, but we find a lot of dead shells down here.

Ouzinkie # 6131

All the thirty years I've been living here there's never been any decline in clams except since the spill. I went up to Campbell's Rock and dug some clams and I couldn't eat one of them. They were dying, they were black and slimy.

Ouzinkie # 6128

Another thing we've noticed is the clam beds are down. What could be done to restore clams and ducks?

Ouzinkie # 5708

I go out to collect clams every clam tide that there is and so do several other people here. I've

had the agency subsistence people come down and go to places where we used to get coastal clams and butter clams. I can show you the beds. You can find the clams but they're dying in the shell. I can show you places in Campbell Rock when the tide is about so much [hand gesture indicating a couple of feet] off the reef there and it all oily. Where all these guys here used to get their clams you can't get a clam over there anymore because nothing will survive. All of us are going to the same beach now and we're cleaning out those clams. [What I'd like to see is some of these funds used to restore those clams. There's many people still scared to eat clams.] Is it still going to be my children after me, afraid to eat the foods? I can remember when the head guy from Exxon was sitting in this room with the head guy from the state. The state guy said eat them, they're clean. I told them I'll make you a deal. You eat our foods for 30 days and then we'll have YOU analyzed. There's many people in our community still afraid to eat subsistence foods. My uncle found a tar ball just the other day. That stuff is still around and it affects our kelp beds, clam beds, and our mussels.

REGION: Prince William Sound

Chenega Bay # 5133

The only thing happening with the clam beds is that the oil is still locked in affecting the clam. I would like to see that cleaned up.

Chenega Bay # 5115

There is also no mention of bivalves (clams and mussels).

ISSUE: 6.1 ECO ; Injuries to the ecosystem

REGION: Anchorage

Anchorage # 1619 The Wilderness Society, Alaska Region

Recovery concept must include protection of habitat that contributes to natural recovery. We believe that enhancement of ecosystem protection is justified under the terms of the settlement and the recovery concept as written is too narrow. Injury to the ecosystem needs to be described. The summaries of injury to habitats are a good start at describing the injury to the entire ecosystem, but further synthesis of effects of coastal riverine, and upland habitats and the array of species they support is needed. As well, food web relationships need greater attention. For example, the ecological significance of uptake of petroleum hydrocarbons by deer from eating kelp was downplayed with the statement "it was determined that the deer were safe to eat," especially since the intertidal habitat section failed to mention the kelp-deer interaction. Initial and potential long-term human health effects from the spill to residents and oil spill workers should be included in the summary since humans are part of the ecosystem.

REGION: Kenai

Port Graham # 1024 Native Village of Port Graham

Port Graham residents continue to have serious concerns about many local species and therefore ask you to fund subsistence studies and restoration projects on the following resources: Bidarkis/Chitons, snails, clams, Blue Mussels, Sea Urchins, Tomcod, herring, ducks of all species,

Puffins and seal. There has been a serious decline in the populations of all of these species and we must travel quite far to find equivalent resources. This document is not meant to be inclusive of all of our concerns and is meant only to supplement verbal testimony that you receive.

REGION: Kodiak

Akhiok # 7

The life cycle has been put off balance because of the oil spill. There has been quite a number of species that has been harmed, and when the life cycle has been off balance it will take years to restore to what it was before the spill.

Kodiak # 187

I think your main concern should be restoring balance and restoration in the waters. Although I did not live in Alaska at the time of the spill, I was very saddened to hear about it in Florida. It was publicized very much. I understand the many people fish for a living and are upset about it. I think this proves to the fishermen a lot. First of all it serves them right. There are so many areas around Kodiak and AK that have been over fished. Point the finger at them too! They have damaged natural ecosystems far worse I believe. What if you looked at it that way? Perhaps the low #'s of life wouldn't have been in the first place. I hope it put some fishermen out of luck. What I'm saying is if you count all the sea animals that die needlessly because of careless fishermen and "nets", one would find the fishermen do much more damage than Exxon ever did. They should be more active in restoration of the world's oceans too.

Old Harbor # 5666

Like you said, they spent \$100 million in research in Prince William Sound. How many miles of beaches were damaged in Prince William Sound and how many miles were damaged on Kodiak? It seems to me the most of the damage was done here. Here the oil busted into little pieces and everything ate it. I don't think there was any species of bird or animal that didn't eat it. Some of them got away, but every beach on Kodiak Island has been damaged and the ocean bottom was damaged, and yet you say they didn't do any research here?

REGION: Outside Alaska

US, Outside Alaska# 1156

The Habitat Protection is sorely needed for although now you can hardly see evidence of the spill "on the surface", the true effect of the spill is beginning to show...the absence in some places of seals, otters and birds that used to congregate to play and live and have a place they knew as home. Last summer's salmon return was the first significant failure ever of salmon returning to Prince William Sound. Only 1/4 to 1/3 of what was projected came back and that suggests an on-going genetic impact of the oil. State and federal scientists have found the effects of the oil from fish all the way to whales and come in the varied forms of brain damage, curved spines, changed feeding habits, eye abnormalities. This is happening right now and this is why the money needs to be spent this way, right now. Although this is one wrong (Spill) that may never be made right, at least, at the very least, it shows that you (Exxon) are committed to taking care of our environment. Did I mention this is a hard subject for me to talk and write about?

ISSUE: 6.1 ARC ; Injuries to archaeology

REGION: Anchorage

Anchorage # 1619 The Wilderness Society, Alaska Region

Better information about Injury to Archeological Resources needed. We recognize that specific information about archeological resources needs to be kept confidential, but if possible, maps or description of which ANILCA conservation units had injured resources would be useful. It is hard for the public to appreciate the magnitude of damage without better information.

Anchorage # 203

Archaeological sites do not have a damn thing to do with the spill unless they were damaged.

REGION: Kenai

Nanwalek # 5651

A lot of our artifacts were stolen after the oil spill. We lost quite a bit.

REGION: Prince William Sound

Chenega Bay # 5163

During the oil spill, our old village site was vandalized by oil spill workers. That hit very near and dear to a lot of people here. There must be some mechanism to restore, monitor and protect the old village site.

Chenega Bay # 5162

The issue of archaeological remains has to play a role somewhere.

ISSUE: 6.1 MUD ; Injuries to air, water, and sediments

REGION: Prince William Sound

Chenega Bay # 5116

Just using the term "sediment" is misleading.

ISSUE: 6.2 SVC ; Injuries to services in general

REGION: Anchorage

Anchorage # 5056

Most of what we have talked about so far does refer very much to species that have been injured or damaged in the process. You made reference to services and human-use damage. It is kind of hard to figure out how long it will take for that to recover. If you don't design programs to support those

commercial uses and some of the fisheries, how are we going to meld these two together? The human resource has been very damaged.

REGION: Kenai

Nanwalek # 5641

I would suggest that in the oiled area more research should be done and then do research on the outside later.

REGION: Kodiak

Kodiak # 5538

It seems to me that human uses are artificially separated from the habitat protection issue. Humans are part of the ecosystem. I believe it should be recognized that human uses are built into the habitat effects.

Larsen Bay # 5580

The services or human use I don't think get enough attention. Recreation includes sport fishing and hunting. A lot of people here don't eat deer because they haven't had feedback on deer, and they don't trust the deer. The brochure doesn't capitalize on human use enough as far as I am concerned. Fish and Game is going to get a lot of money on this, but nothing much is going to be done on the human services side as far as I can tell. I know they have to work on this because the commercial fishermen can't catch enough fish. I think the human use side needs more emphasis in this plan.

Port Lions # 5798

Regarding recreational use, you were talking about recreational cabins. What about things in communities that were stopped because of the spill? We have a foundation across the street for a new community center. That foundation was put down in 1989 but it was never finished because of lack of funding. Could any of the settlement money be used to finish that hall?

REGION: Outside Alaska

US, Outside Alaska# 619

In general, I think the approach taken should be very much like our efforts after a severe hurricane or even the recent floods. This means working to restore the lives of the "residents" of the area to their pre-spill condition.

REGION: Prince William Sound

Chenega Bay # 375

Our fish are gone, the birds are dead, we can't count the birds in a day running in a boat and you see very few sea mammals since the spill.

Cordova # 5296

It seems like you're saying that the left column [in the brochure list of injured resources] is

getting priority. I don't think the human impacts are getting enough priority. For us, the human impact can be best addressed by dealing with the commercial fish species, it is one of the only things we can do to help the human impact.

Cordova # 279

What about the human impact? I don't see any studies being done to assess the socio-economic relationship to the oil spill.

Tatitlek # 5978

When that oil spill happened I remember even before they put out the boom they asked us what resources were most important. The list they came up with said birds, sea otters, hatcheries and other things, but I don't know if they ever put people on the list at all. Why are the human beings always the last to be considered?

Valdez # 6029

It worries me to hear you give such convincing arguments on both sides. You have to decide sometime on what's the best and most supportable opinion and make a decision so you can move forward. It appears to me that this process leans towards one side. I guess if you are looking for input I'd lean towards human use and resources side and see what needs to be developed there, and I think you will find that plays back to your injured species. If you go at it from the species side it will focus too much attention on one or two species that you might not be able to do much for. I don't think we can get it back to the pristine condition. I don't think we can manipulate the life forces out in the sound to do that with just \$900 million.

Valdez # 6015

It is becoming apparent to me that these five different alternatives are based on this list of the injuries, and yet as we have pointed out already there are lots of problems with the data which make up those injuries, from uncertainty about certain species such as pink salmon, to controversy between your data and Exxon's. And there is no weighting towards economic return to the communities, like this man bringing up the murre versus this man bringing up the spotted shrimp.

Valdez # 6013

Most of the things that you have on the list are really not things that affect people economically. Would you spend millions of dollars to fix ducks rather than fix things that help people economically? Most of the discussion I've heard about how to spend the money focuses on spending money to buy land to protect it. Are the areas we're talking about being bought up to protect those birds and animals that are on your injuries table?

ISSUE: 6.2 CF ; Injuries to commercial fishing

REGION: Alaska Peninsula

Chignik Lake # 5273

Now we don't have any fish and the fish prices went down, too.

Chignik Lake # 5240

Fishing and subsistence is our way of making our living. We don't have any jobs here.

REGION: Anchorage

Anchorage # 5062

The fish that the hatcheries are releasing, the ecosystem cannot support. Is the money going for restoration of streams for wild stock salmon? What will be done about this imbalance? They are releasing too many pink salmon. It is so badly destroyed that it can't support the release.

Anchorage # 5058

Part of the problem is you are looking at commercially-introduced replacement for indigenous wild species. That doesn't help the people that live there that use the resource. If you planted commercial mussels, they don't want to pick them off a beach that was polluted by oil. They want their land back. Why wasn't that mandated under law this entire time. I have a document that says the area is still contaminated with CERCLA hazardous substances. I don't understand how you are going to buy off the people by bringing some lousy hatchery fish in to replace what has been their source of sustenance, life and purpose for the last 10,000 years. The alternative is to stop the commercial use and clean hydrodynamically-purged oil. Take the fish out of those lousy hatcheries and put the fish on beaches as fertilizer. Give 10% to the state of Alaska to distribute to the people who paid for the lousy fish. Put the rest back in the water. Drift and set nets kill marbled murrelet and all kinds of sea life. I've been out there. I have been a set netter. I've been a drag shrimper in PWS. I have long lined and seined. I see all the dead animals in all of those commercial uses. I have been in logging sites. You stop the commercial exploitation and let the land recover so the people who respect it can get back in there and use it one of these days.

Anchorage # 5057

My point was for example if it takes ten to fifty years for sockeye to come back to a pre-existing condition, the uses of that resource will have changed substantially from what it is today. These guys will be behind the eight ball.

REGION: Kenai

Homer # 5405

Would that be building new hatcheries and canneries?

Seldovia # 5863

The commercial salmon fishery was very much impacted.

Seward # 5963

Is this for service damages? It takes all six of the board to agree on opening that back up. What does it take to approach the board on people losing their boats and permits? There are people out there who need help bad.

REGION: Kodiak

Akhiok # 6170

None of the seiners got to fish that year, everything was shut down. The salmon were just coming in, they couldn't control them, so I'm sure the streams were just plugged.

Akhiok # 6169

Fish were dying all over that whole bay, even in Alitak canyon there was fish trying to go up that a creek they don't usually go up. The seiners couldn't fish and they stopped them from going up.

Akhiok # 6168

We would have been able to fish them out on the grounds in 1989 but they wouldn't let us. Now you can't hardly get enough fish in there to keep the escapement people happy. They figured there was at least three million out there in front, that place was just so full of fish. Now the last few years there's nothing.

Akhiok # 6167

When we couldn't fish Olga Bay in 1989 the whole side of the bay was just boiling with fish. Since 1989 there's no pickup of any reds.

Akhiok # 6166

Most of the reds that are down here near Akhiok do go up into Olga and Frazier. But last year it was down and they just had to keep it closed.

Akhiok # 6165

The reds near Akhiok are not very healthy, and there's not very many of them. There used to be a lot of fish in Portage Bay and Sulua Bay, but the last two years it's been pretty much closed because there's nothing in there. There was some oil in the area but not so much in there. In the last few years we have always had pretty good returns in there, mostly chum salmon. When they had the area closed because of the spill I went in there with my boat and it was just like October month, there was nothing in there. And then down here last year in August it was the first time in all the years they had it closed during the whole month of August, but they had this whole area closed. In past years that was when we made our season. There was just no commercial fish, so they were trying to make an escapement. There's Frazier and Olga Lakes, there's big runs up there.

Akhiok # 6164

Outsiders from out of town do the gill nets. Nobody from here is gillnetters.

Akhiok # 6163

Most of us here are seiners, we rely on the Red Lake run for commercial fishing. It's way down. We haven't had very much fishing time over there at all for the last couple of years. We fish in the Karluk area, too.

Karluk # 5515

There is some commercial fishing near the town, mostly beach seining outside the lagoon. There are three permits in the village.

Kodiak # 5524

What kinds of factors go into making the decisions on priorities of the kind of habitat that is to be protected? I wonder if more priority will go into consideration of those species that have commercial fishing or subsistence or sport fishing uses.

Old Harbor # 5686

I think the hatcheries are putting too much fish biomass into the ocean and the ocean just can't support it. I think that's why that stock declined. There just wasn't enough food. The fry go into the kelp beds, but once they get out to sea there just isn't enough food. In effect those stocks are affecting us in the long run because they all go out and eat in the same ocean.

Old Harbor # 5668

I had my best year fishing in 1988, I made half a million dollars that year. I bought a new house, I moved to Anchorage, and here comes the oil spill. I didn't fish that year at all. In the seven years that I fished I always brought in 200,000 to 250,000 pinks, and the last two years I got 30,000 fish altogether. We can't make a living fishing on that. I have seen pink salmon decline rapidly, and I hope it comes back.

Old Harbor # 5661

Ever since 1989 we've seen the fish prices decline.

Old Harbor # 5659

Fishing is more than just a way to make a living. There's no way to tell a good story about fishing in 1989 because nobody fished. Fishing is our way of life. It's something you look forward to as soon as you put your gear away. If it was a shitty year, you look forward to next year, you think it's going to be better.

Old Harbor # 5658

In the winter of 1988 and 1989 I built a brand new boat in Seattle. I came up here with the idea I was going fishing. Instead I spent the summer sitting home fighting with the family. My life was all fouled up that year. I think everybody in this room could probably say the same thing. The oil spill was worse than the tidal wave. The oil spill is going to be something on our minds for the rest of our lives because we worry will it happen again. If there's another spill in Prince William Sound where will the oil go? We know how the tides run and we're right in the path. In the end Mother Nature has to take care of it. Even if we had the best things to make it stop how could we contain it. You can't contain something like that. [Emil Christiansen read his statement here.]

Old Harbor # 25

Directly affected is commercial fishing as well as commercial tourism and subsistence way of life.

Old Harbor # 25

Directly affected is commercial fishing as well as commercial tourism and subsistence way of life.

Old Harbor # 24

We were hurt financially in commercial fishing and Native Corporation investments. They have both nearly been blown away but fishing is a way of life so we continue regardless of how little it pays .

now. We wonder if investments will ever look good as they did in 1988. We're always hopeful.

REGION: Outside Alaska

US, Outside Alaska# 1181

Although I'm a conservationist, I believe the PEOPLE PRIMARILY in the fisheries industries should be compensated as well as the habitat. ANIMALS have lost their lives, which is unfortunate and a great loss. But PEOPLE need money lost in the past few years, because of the spill to survive. Exxon should pay for every dollar lost to every person affected by the spill. In addition, Exxon should pay a great amount to the Hatchery Dept. I believe this is where the biggest recovery is necessary. The people in Alaska don't make their money on birds and otters, its made of fish and crabs. Obviously this was and is a great disaster and we'll have to live with it and Exxon pay for it. But most habitat is just plain gonna take time for recovery. Thank you for your time to listen to my opinion and views and hope it makes a difference.

REGION: Prince William Sound

Cordova # 5296

It seems like you're saying that the left column [in the brochure list of injured resources] is getting priority. I don't think the human impacts are getting enough priority. For us, the human impact can be best addressed by dealing with the commercial fish species, it is one of the only things we can do to help the human impact.

Cordova # 1437

Support the Trustee Council buying timber rights for Power Creek, Eyak Lake, and other areas in Prince William Sound. Most important thing to protect is the highly visible areas along main PWS traffic routes so tourists won't get bad impressions. It's also important to protect salmon streams since they are important to commercial fishing. Research and rehabilitation for commercial fisheries should be funded. The only people in Cordova against buying Eyak lands are the loggers, who would profit by not having the land bought. The loggers are a minority in the town and most people, maybe 90%, want the land protected.

Cordova # 1395 Reclaimers of Alaska

We are writing to you as a group of concerned citizens regarding the *Exxon Valdez* settlement funds expenditure. We are apprehensive about the bulk timber buy-back disguised as habitat acquisition and the near total lack of funding for fisheries research and management in comparison. The *Exxon Valdez* released 11+ million gallons of crude oil into the waters of Prince William Sound, possibly resulting in damages to the fishing industry. The 1993 herring return was significantly smaller, larger in biomass, and suffering from lesions. A vast portion of the salmon fry this year had to be destroyed due to the infestation of a contagious disease in the hatcheries. This will devastate the salmon return in four years. It is quite apparent that immediate and long term development needs to be secured as a first priority for our fisheries in Prince William Sound.

Cordova # 709

The fishing industry is the base of the economy in Cordova. I would like to see the Trustee Council .,

focus on restoration of injured commercial fish species as a first priority.

Cordova # 702

I believe the money should be spent helping people help themselves. Such as, payment of PWSAC debt payment. With all that has happened with the oil it is too much debt and we need help. With that done we should be able to help ourselves.

Cordova # 687

The idea that Exxon will "take care" of the commercial fisheries is ludicrous. An equal percentage of funds should go to the restoration of fisheries. The commercial fisheries was the single most damaged user group. Too much emphasis is being placed on "lock-up and view" rather than "restore"!

Cordova # 65

What about these fishermen who are hurting so bad financially because their jobs have been damaged by Exxon's oil? They should be receiving some sort of help!!

Cordova # 5297

You tend to not talk about the human element because people were not killed by the oil spill even though we have definitely been in a financial decline since the spill. We enjoyed a decade of prosperity within our fisheries that we strove hard to create. Since 1989 the community is in dire need, each of us as individuals and as fishermen and those that support the fishing economy -- the whole community -- we have become an endangered species as much as some of these mammals. We're going under as a corporation and individually. We can't make our boat payments. This is the third year we have had a low price for salmon and now we've lost our herring. We haven't spoken much about the human element because we don't want to look like we're greedy. We had a good life and it's been destroyed.

Whittier # 6074

Say that the spot shrimp was on the list and they decide there is nothing they can do for it, is there any restitution for fisher- men who could not fish, or is that under the civil settlement? Would there be no human recompense out of this funding? Humans are not a species. I was out in the Sound since 1973. In Homer they may have seen a piece of oil, but there would be more of them voting. These funds will not go towards people at all?

Whittier # 6066

This will be another season with the areas down the tube by fall.

Whittier # 6063

The rockfish was the only fish closed.

Whittier # 6062

Fish and Game are blaming the fishermen for catching the species.

Whittier # 6061

Can't you find yourself in a chain reaction? For instance, the sockeye salmon, someone could say no more fishing sockeye so that the stocks can recover. You shift your injury because the person who

relied on the sockeye is now the injured party.

Whittier # 6049

Would you have any suggestions for how shrimp fishermen could make some impact?

ISSUE: 6.2 PU ; Injuries to passive use

REGION: Anchorage

Anchorage # 733 AK Sportfishing Assn and AK State Council of Trout Unlimited

These comments are submitted in behalf of the Alaska Sportfishing Association and the Alaska State Council of Trout Unlimited. These comments supplement our accompanying responses to the questionnaire in the plan. These comments focus on the general problem of achieving a rational basis for decisions, explain our recommended alternative which combines elements of alternative 2, 4 and 5, and makes for acquisitions. Achieving A Rational Basis For Decisions: The actions of the Trustee Council are subject to administrative law requirements. Foremost among them are the requirement that actions by the council must be supported by a rational basis and must comply with the NRDA regulations (43 C.F.R. Part 11). To meet these requirements, the Trustees would be wise to recognize that the overwhelming loss was loss of passive use of wildlife generally. That is obvious to anyone who examines the responses to questions A-6A, A-20, and A-20A of the of passive use study released by the Alaska Department of Law. Our conclusion from that study is that the Trustees should fund a follow-up, nationwide survey that will ask respondents to put values on different quantities of wildlife of various injured and uninjured species that could be conserved through various acquisition alternatives both inside and outside the spill area. The purpose of such a study would be to get some handle on how th public trades off conservation of one species versus another. Such a study should provide respondents with some factual basis for making choices; e.g. the quantity or percentage of a wildlife resource that would be protected through an acquisition and the costs associated with alternative acquisitions. Absent such a study, all candidate acquisitions amount to nothing more than guess work as to how well any particular acquisition replaces lost passive use value. Essentially, the problem the Trustee and the public are having is that the trustees are forced to make decisions on buying lands, that have resources that are to some extent quantifiable in biological terms but are not quantifiable in terms of the economic value to the public that would be achieved through conservation of the lands. The result is decisions driven by biological assessment of resources present on the lands and the agenda of interest groups and agencies. The value tot he public is a matter of social science, i.e. natural resource economics, and is not capable of being addressed through the biological sciences or desires of interest groups. Such a study would serve numerous legal requirements. Restoration and replacement actions must be the most cost-effective alternative for providing the lost services. 43 C.F.R. 11.81(f)(1). The lost services must be restored to no more than the baseline level. 43 C.F.R. 11.82(d)(2)(i). Natural resource damages are the residual injury remaining after cleanup. 43 C.F.R. 11.84(c)(2). Here, the greatest residual injury is to passive use. It apparently remains as residual injury the passive use study and its questionnaire focused on injuries to wildlife that involved mortalities and long term injuries to birds and marine mammals. Yet, the justifications for acquisitions to date frequently involve resources and services showing little or no residual injury and lacking in any measures of cost-effectiveness or the contribution made to restoring passive use to baseline condition. The only way we can see of getting a handle on such problems is by funding the type of study we propose.

REGION: Outside Alaska

US, Outside Alaska# 1013 DOI, Bureau of Reclamation

4. Non-Use Value Studies: I know that several non-use studies have been accomplished to date on the issues surrounding the *Exxon Valdez* issues. From the discussions that I have had with several of those researchers it appears certain that many people "value" Prince William ecosystem far more than the minor cost of the birds/otters themselves. This should serve as an indicator that the public needs to be fully appraised of the total ecosystem approach to restoration and the needs to look beyond the name species. We would recommend that a continual public involvement and non-use evaluation be part of the long-term plan.

REGION: Prince William Sound

Cordova # 798 Prince William Sound Conservation Alliance

We ask the Trustee Council to remember that some of the most valuable resources in the EVOS area are aesthetic resources. These are valuable not only as cultural and spiritual resources, but also as economic ones for the tourism and recreation industries. If aesthetic resources are significantly impacted by unsustainable and unrestricted logging and development, then the ecosystem damage caused by the EVOS will be compounded and future cultural and economic opportunities will be lost. Thank you for this opportunity to comment. We will continue our involvement in the EVOS restoration process.

Valdez # 296

I was pleased to see in the presentation the mention of what was called "passive use," what was described as "knowing it's there." I would like to expand the definition of passive use, because there is not an active user of Prince William Sound who is not also a passive user. Before the oil spill there always was a feeling in the Sound that this was a wilderness and even though you could always find a beer can on the beach, you also could always feel you were alone in a wild land, someplace private that very few in the world could reach. As a tour boat operator for many years, I showed thousands of people just a small portion of the Sound, but I could see in the eyes of the intelligent ones the appreciation of a place left alone in the economic mash of the world. I knew what was off the route I had to travel and some of them figured it out, too. I remember a year as a commercial fisherman when I'd stand on deck in the early morning and listen to the skipper curse a bald eagle because it would take a salmon or two. I also knew if that eagle weren't there, this skipper would have felt a loss. The point is, each of us who used the Sound found it not only the economic provider but a spiritual provider as well. But, Exxon took that away. A friend of mine wrote in a poem about the spill "you are nowhere where you are not part of the world." That was the lesson *Exxon Valdez*. This "passive" use was a loss that cannot be repaired. Never again will Prince William Sound be the wild place it was March 23, 1989 and all of Exxon's money cannot restore that.

ISSUE: 6.2 REC ; Injuries to recreation and tourism
--

REGION: Alaska, Outside the Spill

Juneau # 5475

Regarding public use cabins, would that be in oiled areas or unoiled areas?

REGION: Anchorage

Anchorage # 73

I Kayak and boat the Sound and it is very disheartening to land on beaches affected by the spill and see, smell and hear that these places are not recovered and no where near recovered. On the outside and the outsider it may look healed but from the insider experienced "Sounder" the injury is deep- The Soul Knows! I suggest the somehow the message gets out that the consequences of the spill will be around for at least another generation.

REGION: Kodiak

Port Lions # 5822

Even if you tell me the outhouses and the trails have deteriorated for four years, the spill had nothing to do with those things running over. I think that's stupid.

REGION: Prince William Sound

Valdez # 6004

Where on the injury chart would you put visual quality? (Veronica said probably under services as commercial tourism or passive use). Those of us who run tours consider this important, and I know the forest service considers this as well.

Valdez # 1025

The negative impacts of the *Exxon Valdez* oil spill have effected many people and communities in Prince William Sound (PWS). No community in Prince William Sound has been impacted more than Valdez. This impact continues as other spills in the world are immediately compared to the *Exxon Valdez* spill and with movies such as "Dead Ahead." This attention quickly refers to the enormity of the spill, discusses and normally shows film footage of oil on the water, dead animals and birds and all the other damage done. The result of this continuing attention is the reinforcement of the perception that oil is still present and the sound is no longer pristine, is not desirable as a visitor/tourist destination nor a quality place to live.

ISSUE: 6.2 SUB ; Injuries to subsistence

REGION: Alaska, Outside the Spill

Fairbanks # 399

Subsistence service restoration is vastly under emphasized.

Mat-Su Borough # 404

Subsistence service restoration is vastly under emphasized.

REGION: Alaska Peninsula

Chignik Lagoon # 5188

The reason we're real concerned is this is all we've got. We basically survive on summer salmon. It's the same in Perryville, the three Chigniks, and Ivanoff Bay.

Chignik Lagoon # 5190

These people that live in Ivanoff and Perryville, they fish in this area, this is their primary source of income.

Chignik Lagoon # 5188

The reason we're real concerned is this is all we've got. We basically survive on summer salmon. It's the same in Perryville, the three Chigniks, and Ivanoff Bay.

Chignik Lake # 5240

Fishing and subsistence is our way of making our living. We don't have any jobs here.

Chignik Lake # 5264

Last fall was one of the worst subsistence years for red salmon ever. We usually subsist on them. The first week of November we had a hard time finding any fish for drying. There's usually fish all over the lake that time of year.

REGION: Kenai

Nanwalek # 5635

It seems like every time there is a settlement made there is a big concern about sea otters which we really don't use. Is there anything the state and federal governments can do that would provide employment?

Nanwalek # 5627

As far as subsistence users go, the most important part is the subtidal.

Nanwalek # 5624

The house is cutting down on subsistence-use programs. These programs need to be kept open.

Nanwalek # 5601

Were the hydrocarbon studies done on animals which are living now?

Nanwalek # 5600

Since the 1989 spill, how many actual studies have been done to test for hydrocarbons?

Port Graham # 5787

I feel very strong about funds being spent on restoration because so often the villages are left out. I would like to see our subsistence resources restored. I would hope that when my three children are grown, there would be food for them to subsist on.

Port Graham # 1024 Native Village of Port Graham

Port Graham residents continue to have serious concerns about many local species and therefore ask you to fund subsistence studies and restoration projects on the following resources:
Bidarkis/Chitons, snails, clams, Blue Mussels, Sea Urchins, Tomcod, herring, ducks of all species,

Puffins and seal. There has been a serious decline in the populations of all of these species and we must travel quite far to find equivalent resources. This document is not meant to be inclusive of all of our concerns and is meant only to supplement verbal testimony that you receive.

Port Graham # 5784

After the oil spill we didn't hunt a lot because we didn't know how animal food sources were affected.

Port Graham # 5768

It is more important to restore what we have lost in the villages and in the oil-spill area, especially the food source.

Port Graham # 5765

When a Native person catches a fish or seal, there is very little that is thrown away. All of it is used in one form or another.

Port Graham # 5764

One of the things our people have traditionally always done is eating the liver of the cod fish. I am concerned about the hydrocarbons collecting in the liver of those fish.

Port Graham # 5762

During the entire year, Native people do different subsistence things. We have had to go up to Kachemak Bay or purchase mussels. Early in the spring and on into May, the snails are collected. They have returned and are available. People are also just beginning to collect seaweed. They are preserved and used year round in cooking food.

Port Graham # 5758

I made a request for testing the clams. Out here near the clam bed was a cleaning station and I don't know if the stuff at the cleaning station contaminated the clams or if it was a combination. The cleaning station is where the boats came in.

Port Graham # 5754

We as Native people have not had the privilege of being involved in something like this, and we thank you for this opportunity now. What we have to say is very important and should be taken into consideration. Those of us who live along the coastline have been seriously affected. This was the time of year when entire families would walk the beach digging clams, and it was a yearly, seasonal thing. Since the spill, those clam beds were contaminated. These beds have not been tested, and so we have not used them. Every time they have gone to gather seaweed, they have come up with oil. Someone found those tar balls. Subsistence means us taking our children and being able to have fellowship on the beach. Once you have collected those things, sharing them plays a very important role with us as Native people. Sharing is very important. We have always taught our people that the first thing you catch, you give it away. We were impacted culturally. Because of the fear of losing another part of our culture, there is a need to do things. Last year they built a kayak to revive some of the tradition.

REGION: Kodiak

Akhiok # 5005

After the oil spill I was real scared to go out and eat the clams and some of the fish. But as the years go by we are getting back into using subsistence food sources.

Akhiok # 5004

Well, naturally subsistence would have to be coming back because that is our way of life. It's part of our livelihood.

Karluk # 5516

There is a question in our minds whether the clams (and other similar subsistence foods) are still contaminated.

Kodiak # 5524

What kinds of factors go into making the decisions on priorities of the kind of habitat that is to be protected? I wonder if more priority will go into consideration of those species that have commercial fishing or subsistence or sport fishing uses.

Larsen Bay # 6141

Another thing you've got all these animals and fish on the list, but I don't see anything about the human beings. Who's doing the survey about the people? It's not only with the animals, I know a lot of people here in this room that are still injured. They won't eat the seafood because they don't trust it. Who's doing the studies on the people who don't have a Safeway?

Larsen Bay # 6139

When I first moved here it was because the subsistence is easier here. I used to eat clams several times a month, but now I am doing good to eat clams once a month. You open up the clams and they're black inside. They weren't like that before. All these studies you've done are in Prince William Sound, all the studies they did, you're going to tell us they apply here, too? When they first did the testing in 1989 and the first part of 1990, they sent out brochures but we haven't heard anything here since then. How can we justify saying something when we don't even know what the findings were?

Larsen Bay # 5579

What about some of the chemicals that were used? Bioremediation chemicals. Will the testing pick that up? It's possible if there were there injuries from that. Is Exxon responsible for that? Has there been any injuries show up from that?

Larsen Bay # 5578

I would say that one wouldn't want to eliminate all of a person's caution in eating any wild foods. Just because the oil spill did not contaminate the food doesn't mean there can't be other things, and when a person has any hesitation about eating something, it's better that they don't eat it.

Larsen Bay # 5576

I still feel the same way when I eat clams and I wonder if they still have oil in them. My husband won't eat clams any more because he got sick that one time.

Larsen Bay # 5573

What I am getting at is the rules of the settlement. What good is it to restore all this stuff if nobody's going to use it because everybody is so injured mentally? The people who used to eat the ducks won't eat them now. All the charts and graphs doesn't mean anything because the people are still injured in their heads. If it can't come out of this pot of money, which pot of money will it come out of? We can sit here in this room and talk about it, I've had the problem myself. You have a bowl of clams and when you look at them, all you can think about is a bowl of oily goop. How is the younger generation going to learn about these traditional foods? I look at this food and I think about the oil spill. How do I know, does it turn that color every year? A lot of things are not being eaten, or they say heck with it and they eat it anyway because they have to, it is their life. What kind of risk are they taking?

Larsen Bay # 5566

I know one thing that is listed here is subsistence but they don't talk much about subsistence. They're still afraid. Subsistence has come back a little bit but it's not like it used to be. I'm surprised they don't talk much about it here, in the brochure. They list all the other resources, but they don't talk about subsistence very much.

Old Harbor # 5654

We were scared to eat seal meat, too. I don't eat it any more. I used to watch the seals down by the lighthouse. I'd go down with my dogs in the summertime and watch them. I don't see them around any more.

Old Harbor # 25

Directly affected is commercial fishing as well as commercial tourism and subsistence way of life.

Ouzinkie # 5708

I go out to collect clams every clam tide that there is and so do several other people here. I've had the agency subsistence people come down and go to places where we used to get coastal clams and butter clams. I can show you the beds. You can find the clams but they're dying in the shell. I can show you places in Campbell Rock when the tide is about so much [hand gesture indicating a couple of feet] off the reef there and it all oily. Where all these guys here used to get their clams you can't get a clam over there anymore because nothing will survive. All of us are going to the same beach now and we're cleaning out those clams. [What I'd like to see is some of these funds used to restore those clams. There's many people still scared to eat clams.] Is it still going to be my children after me, afraid to eat the foods? I can remember when the head guy from Exxon was sitting in this room with the head guy from the state. The state guy said eat them, they're clean. I told them I'll make you a deal. You eat our foods for 30 days and then we'll have YOU analyzed. There's many people in our community still afraid to eat subsistence foods. My uncle found a tar ball just the other day. That stuff is still around and it affects our kelp beds, clam beds, and our mussels.

Tatitlek # 5994

We're working with ADF&G subsistence on the harbor seals and sea lion project but I don't know of any other species they were looking at. (Marty wants to be sure to note this, Trustee Council promised the subsistence resources study would look at all of the species they're concerned about)

Tatitlek # 402

Subsistence service restoration is vastly under emphasized.

Tatitlek # 311

Subsistence service restoration is very, almost totally under emphasized!

Tatitlek # 30

I think that because subsistence resources include most of the resources impacted by the oil spill, more emphasis should (must) be places on restoring the areas of subsistence users. At this point and time, the Trustee Council seems to place their priorities according to the amount of "bitching" by the special interest groups. A very strong case can be made in favor of subsistence users as the highest impacted group and the council must recognize this.

Whittier # 6050

Was Cordova considered a subsistence community?

ISSUE: 6.3 SOC ; Social injuries

REGION: Alaska Peninsula

Chignik Lagoon # 5226

Exxon said we made too much money fishing that year, because I went way out and fished anyway, they said I owe them money now. I wasn't just going to sit. I told them to come and collect it.

Chignik Lagoon # 5199

You're dealing with a lot of frustration here in this community.

Chignik Lake # 5241

There are some people who didn't want to come to meet with you because they gave up on the claims [note: they think we're Exxon].

REGION: Anchorage

Anchorage # 501

The "shock" damage to people distressed and consequently affected by the spill has not been addressed. The impact on mental/spiritual welfare, assessed as "considerable loss" by your survey nationwide, needs to be remedied. Since the effects of disasters live on in the lives of the impacted, and there are some ways to restore mental and spiritual vitality, we should restore community/personal vitality to those in need. I feel this would be in keeping with the restoration intention.

REGION: Kenai

Nanwalek # 5647

I injured myself when I worked on the spill down in Windy Bay. The only people I talked to were the Alyeska people, and they sent me so much paper work I just gave up. Something happened to my knee, and it is starting to bother me much more. Who do I contact?

Nanwalek # 5646

Would they cover injuries that occurred because of the oil spill? Someone lost their leg because oil got into a cut. Who do you contact for that?

Nanwalek # 5639

You could word a health clinic proposal in a way to propose a long-term study for effects which occurred from people eating subsistence foods contaminated by hydrocarbons. It seems it would be easier for them to be tested here in the village. There is a way to get things like that, but they have to be worded in a certain way.

Nanwalek # 5638

You could justify a clinic here by saying you are studying people's health in relationship to the oil spill.

Nanwalek # 5609

Is the Trustee Council looking at things like a health clinic?

Nanwalek # 5605

Is there any kind of studies or statistics on indigenous people who subsist, long-term effects, increased cancer rates and diseases from eating contaminated seafood?

Port Graham # 5754

We as Native people have not had the privilege of being involved in something like this, and we thank you for this opportunity now. What we have to say is very important and should be taken into consideration. Those of us who live along the coastline have been seriously affected. This was the

time of year when entire families would walk the beach digging clams, and it was a yearly, seasonal thing. Since the spill, those clam beds were contaminated. These beds have not been tested, and so we have not used them. Every time they have gone to gather seaweed, they have come up with oil. Someone found those tar balls. Subsistence means us taking our children and being able to have fellowship on the beach. Once you have collected those things, sharing them plays a very important role with us as Native people. Sharing is very important. We have always taught our people that the first thing you catch, you give it away. We were impacted culturally. Because of the fear of losing another part of our culture, there is a need to do things. Last year they built a kayak to revive some of the tradition.

Port Graham # 301

The impact long-term and 10 years from now on human beings-- who will pay for medical costs? Who will monitor? Who will do follow-up? Who has history of present illness?

REGION: Kodiak

Kodiak # 5525

I was peripherally involved in some of the spill activities and I've followed it some since. My concern is that you don't draw the circle too tightly around what you consider to be affected by the spill. I think there are some things not listed here. Certainly there were commercial fishing losses, but there were other down stream effects, like cannery workers who didn't work and students who wanted to go to college but weren't able to work that year. I see some things with the mammals that were affected that you don't have here. Just during the spill I saw so many things that were not normal, like a Coast Guard family where the husband was flying so much there was a divorce.

Larsen Bay # 5577

I don't think you can help people get over that fear. I think subsistence is a very important part of village life, and the oil spill has affected them mentally.

Larsen Bay # 5572

Just in this village alone since 1989 we've had three people die from cancer. How are you going to address these problems?

Old Harbor # 5682

As far as services, what about our way of life that was disrupted, the everyday life of a village? I feel everything got sped up by the oil spill. I would suggest using different language for services, like subsistence way of life, or maybe small community way of living. When the oil spill hit, life changed. The press came in and all the other people--it just disrupted our whole way of life. We're going to be evaluated as if 'This is Kodiak and this is the village, and why aren't you like Kodiak.' I like going slow; I don't like development. The idea of go fast and go fast, that's not the Native way of life. Now we're blasting a way through the hill to make a new airport, I just think it's too fast. It seems like after the oil spill we just got sped up, everything sped up. I would just like things to go slowly.

Ouzinkie # 6129

One thing we'll discuss was the social problems, turning friend against friend, people who grew up

together. Exxon manipulated the people. Maybe some funds should be used to look into these social problems the people still have, because that kind of impact is still there. I talked to Dolly Reft this morning, she testified last night in Kodiak. I think more funds ought to be addressed to social issues. I see so many of these funds on public information. I don't see why you need to tell people in Southeast Alaska when at the same time I don't hear about something I need to know about subsistence or whatever.

Port Lions # 5821

The governmental process in our community broke down because of the spill. The whole leadership of our community fell apart. How do we get at restoring that? Projects like that building [the community center foundation] across the street and others should have happened, but everybody went this way and that and nothing hung together.

REGION: Prince William Sound

Cordova # 5337

There is a linkage. In the symposium there was a study which identified residents of Prince William Sound as stressed.

Cordova # 5297

You tend to not talk about the human element because people were not killed by the oil spill even though we have definitely been in a financial decline since the spill. We enjoyed a decade of prosperity within our fisheries that we strove hard to create. Since 1989 the community is in dire need, each of us as individuals and as fishermen and those that support the fishing economy -- the whole community -- we have become an endangered species as much as some of these mammals. We're going under as a corporation and individually. We can't make our boat payments. This is the third year we have had a low price for salmon and now we've lost our herring. We haven't spoken much about the human element because we don't want to look like we're greedy. We had a good life and it's been destroyed.

Cordova # 5282

As users of those resources, we are definitely seeing changes taking place since 1989. Those changes are detrimental to our services, our earning capacity. The patterns are changing, spawning patterns of Pacific herring and retention of their eggs. A lot of things are going on that definitely are peculiar. As users we lean to the side that something is wrong. As a reasonable assumption, in any way that you would manage your personal affairs, if everything is going along on a general pattern and all of a sudden things change drastically, a reasonable person would assume that it is the result of a major impact such as the oil spill. It is from that standpoint I base that statement. Those herring and salmon studies should be funded to clarify those problems.

ISSUE: 6.4 OIL ; Oiling

REGION: Alaska Peninsula**Chignik Lagoon # 6120**

The same thing in Hook Bay (much oiling). That beach there, I stepped in oil up to my ankle.

Chignik Lagoon # 5193

You would be hard pressed to tell me that it stopped right here because I used to live in Perryville. The tide is really fast that carries between here and there. I've lived in Perryville all my life and I never saw any oil like that on the shores before or again.

Chignik Lagoon # 5192

I could see land with kelp beds, beaches where we could dip the oil out with a five gallon can. I was dipping it once and a guy was taking my picture and another guy from VECO was taking my picture at the same time. The next week it blew northwest and the whole thing was covered up with sand. I went back and dug down about six inches and hit plain oil. This was at the surf beach on Aniakchak. That northwest blow just covered it up. I imagine that's where all the tar balls are coming from now, when you get an easterly swell.

Chignik Lagoon # 5191

I know a pilot who flew for Exxon, he said he found a lot of oil clear up to Unimak Pass.

Chignik Lagoon # 5189

It looks like the line on the map only goes to Jack's Point, but there was mousse patties all the way out to Kupreanof.

Chignik Lake # 5255

We found oil last fall out at the Aniakchak fishery.

REGION: Anchorage**Anchorage # 5090**

These people don't have control of lobbying. You can't shift anything unless you go through the Senate. Everybody talks about restoration until cleanup has been completed. You can dig down upon layers and layers of oil. After storms there was a fresh layer of oil. It has built up and built up. I have to live in the city because my survival out there is shot.

Anchorage # 1015 P.W.S. Land Managers Recreation Planning Group

The Prince William Sound Land Managers' Recreation Planning Group (PWSLMRPG) would like to bring the following issue to your attention in the restoration planning process. Residual oil in the substrate appears to have a continuing effect on some recreation activities. We suggest that if restoration activities are undertaken to assess or mitigate substrate oil effects, that impacts to recreation uses be included in such projects. We have been working with the recently established Recreation Restoration Working Group in identifying 1994 restoration projects for recreation and cultural

resources. We will continue to communicate the consensus views of the PWSLMRPG with respect to recreation and cultural resource restoration needs through the Working Group. The PWSLMRPG will not be commenting as a group on the Restoration Plan, but members may choose to do so individually. Thank you for your attention.

REGION: Kenai

Nanwalek # 5628

Last year, someone from here found a tar ball. I have a picture of it.

Nanwalek # 5626

The hydrocarbon went below the sediments and who knows when the right condition will happen for it to come back up.

Port Graham # 6099

Is testing(for oil) still going on?

Port Graham # 5750

There was not much oil in this area directly, but we are still finding tar balls.

Port Graham # 5741

How many areas or streams were tested for oil?

REGION: Kodiak

Karluk # 5513

There is still some oil oozing out of our beaches.

Larsen Bay # 5571

You keep saying scientists, referring to our scientists. Are you talking about Exxon scientists? The reason I say that is when Exxon wrote the beaches off around here as being clean, they did their inspection from a helicopter at 1,000 feet and 100 miles an hour. A lot of those beaches are still oily, and we're still finding debris, pompoms all wrapped up in brushes and around trees. And you can go out there and look inside the logs on the beaches, the oil has seeped into the logs and it's still there. I've got some jars of oil they said were 80% water, but it hasn't separated, and it still stinks. They told us by the time the oil got here it was 80% water, but we just don't believe that.

Ouzinkie # 5723

I worked the beaches in 1989. There were two beaches which included this whole side of Afognak, this side of the pass, during the whole oil spill year that we cleaned up there, we couldn't get into those beaches one time because the tide was so rough. We couldn't even get in there to dig down. I haven't heard any one mention that. That's all still there, and it is affecting our wildlife and our seafood.

Port Lions # 5817

When the sun warms up the beach the oil pops up from below. It might be good to put a little bit of .

cleanup in the monitoring project.

Port Lions # 5816

I think you should fund general restoration. Here all the beaches were oiled so we did quite a bit of monitoring. When we did it last time we were specifically doing it for Exxon, just to pick up oil. But it wouldn't hurt to do that again now. I am advocating some manual cleanup of oil on nearby beaches and pickup of spill and other debris at the same time. Pick up some of the stuff that is blatant, especially some of the heavily impacted areas.

REGION: Outside Alaska

Canada # 1006

I am just completing a 25 day sea-kayaking trip in Prince William Sound. I traveled through the Knight Island area and could see the oil stains on the shore. Even at the head of the bays, like Johnson Bay, you can find oil stains in soils along fresh water sources. I am sure that much more severe damages were inflicted to the Sound and have been cleaned and/or repaired by the cleanup effect and nature.

US, Outside Alaska# 1010

Let me first open my letter by first telling you about myself. I am an 18 year old male from Arizona. I have spent the last 30 days kayaking in the Prince William Sound area. I paddled from the port of Whittier down to Point Helen on Knight Island. Among evident oil stained rocks and a depletion in the amount of wildlife, I also found leftover equipment from the cleanup, eg: hardhat, gloves, pipes, etc.

REGION: Prince William Sound

Chenega Bay # 5157

It would really help to mark sites so that kayakers don't come to Bishop Rock. I would like to see something done to funnel kayakers away from the beach. They will move oil all over Sleepy Bay and take it elsewhere.

Chenega Bay # 5151

Throughout many of the public meetings of the Trustee Council, there was much talk about the net environmental benefit as it relates to recovery of the oil. It is my opinion that when Jacqui Michele and her group did the study during the winter, the phraseology was more appropriate to cleaning techniques rather than restoration. I don't think the terms are applicable in the phase we are in now.

Chenega Bay # 5150

There is no sense in putting money into restoring it until you have cleaned it. It doesn't make sense to put animals back in until the subsurface oil is cleaned so it doesn't affect anything. All the shoreline animals travel the beach.

Chenega Bay # 5149

This has to do with further beach restoration and the amounts of subsurface oiling out there. I

understand the current policy is to leave it there and allow nature to clean it. It has been verified that the oil is having affects on resources out there. Something needs to be done. I think a lot of these recreation-oriented people will come out with the same recommendations.

Chenega Bay # 5133

The only thing happening with the clam beds is that the oil is still locked in affecting the clam. I would like to see that cleaned up.

Chenega Bay # 5132

I could take you to Sleepy Bay and show that the oil is still at Bishop Rock.

Chenega Bay # 5112

There is still oil to be picked up which is hurting the environment.

Chenega Bay # 5108

Some things are still dying today because there is oil on the beach still killing them.

Valdez # 6035

There is still oiled shoreline in the sound. I don't know whether or not those rocks should be picked up, or whether or not you can do something about the visual quality of the shoreline.

Whittier # 6087

I did notice that water is on the other list. It would seem that the first step would be to unpollute the Sound any way possible. There is evidence that these hydrocarbons have a chance of giving you cancer. Bush said they had dropped the level of what you could drop in the water. No one knows what has happened to the oil in the food chain.

ISSUE: 6.5 CLN ; Cleanup

REGION: Alaska, Outside the Spill

Fairbanks # 573

I am convinced that in a majority of oil spills, clean up is impossible or negligible compared to that accomplished by natural processes. It is difficult to sit still and do nothing during a disaster such as this but my experience with the marine environment (Alaskan Oceanographer for more then 20 years) and oil spills (studied many of the major ones) has let me to this conclusion. Exposed beaches clean themselves after several years and some oil will be found in PWS sheltered areas for years if not centuries, regardless at the cleanup efforts.

REGION: Anchorage

Anchorage # 6107

I am primarily interested in all the clean-up activities and restoring injured beaches. All these other habitat recovery projects that have to do with species enhancement is what I am interested in and accelerated beach recovery, i.e., beach cleanup. I want the replacement of the harvest

opportunities or species enhancement.

Anchorage # 5085

One of the more honest statements I heard from a Coast Guard person was that the shorelines would not be cleaned during our lifetime. I think we are looking at long term, so an endowment seems appropriate . If you don't want to address the human-use factor, the habitat will be folly. You must include the local villages and towns and empower them to understand the research and involve them in the activities. They will feel cheated if you don't. I hope they will be involved throughout the ten years and beyond.

Anchorage # 5079

Are they surveying these beaches to do hydrodynamic purges? Were these proposed by any contractees or employees of the Restoration Group? I would like to have a listing of all these removal proposals that were done under study or by recommendation of anyone associated with the Restoration Group? If they are necessary to restore PWS to pre-spill condition, it may very well deem further cleanup, and I would like to see DOJ's opinion regarding necessary cleanup which are not compensable under the Water Pollution Control Act, 4603.822.

Anchorage # 5047

I thought that Exxon and Alyeska were mandated under law to pay for all the cleanup, and I don't understand how settlement money is being used for cleanup. Isn't that mandated under two or three federal laws and state law that they are liable for all clean-up costs? How did Exxon buy back their liability under law? So the federal court struck down the state and federal statutes that require them to pay for cleanup? Doesn't it seem kind of silly to pay for their cleanup if they had to pay for it anyway? So you guys all work under Judge Holland? You're all his boys?

REGION: Kenai

Port Graham # 5796

There have been complaints from the men who had the training that they weren't called. They had the boats and training and weren't utilized.

Port Graham # 5793

When Exxon brought in the logs, they may have introduced the spruce beetle to our area. They gave the logs to the people to use.

Seldovia # 5853

Regarding habitat protection, I watched the local people become very involved, and some people had such negative experiences. What are the guarantees for funding in the future for SOS organizations? My son-in-law spent hours on volunteer work. They have the right to any funds which come along. Will some of this money help to fund their activities? Is there some encouragement for local participation? Many of the local people did an outstanding effort of being prepared. During the spill, they were ordered as a group to return to Seldovia, and they refused. There needs to be a change in the manner in which the people in this area were treated by the Exxon officials.

REGION: Kodiak

Karluk # 5522

I wish we would get rid of Exxon's open drums of trash, containers, etc that Exxon left behind. There is lots of trash, absorbent material, etc, left from the clean-up on nearby beaches. Bags of stuff in Halibut Bay and Grants Lagoon.

Larsen Bay # 5582

Do you know what happened to the crew on the F/V M&M that was dispensing that chemical? [assumed he means Inipol] The whole crew had to be evacuated. When they had a meeting to talk about those issues in Kodiak Exxon shut up about those questions really fast.

Larsen Bay # 5581

A lot of the cleanup agents they used, a lot of them were experimental and the decline in resources is the impact.

Old Harbor # 5679

We're the experts because we live here and we know the area really well. I was out surveying the beaches in 1989 with this guy from Exxon, and he thought he was the expert. He was ignoring me. But he was an expert from Texas and he was the oil spill king. I don't think they tried to clean it up, they just tried to get out of there. We were just sitting here with nothing.

Old Harbor # 5677

One expert from Exxon when they were doing the surveys just ignored the beaches that were hit the worst. They wouldn't go there, they'd go someplace where there was no tide and no beach impacts. I think in this village everyone has found oil on every beach.

ISSUE: 7.0 XX ; General comments

REGION: Anchorage

Anchorage # 5087

I took my complaint to the State Ombudsman about the lack of recognition of my copyright which includes the job bill for the whole nation, which would impact restoration of PWS. I am against an endowment because that is what our founding fathers established. An example is the Loussac library endowment. It is being administered by the National Bank of Alaska. That is nothing more than a charade. My address and name are included on my letter. I am against endowment. Pay attention to my copyright.

Anchorage # 5067

My name is Charles McKee, and I have a copyright filed with you people but it is not in here. I would like to talk about the injury to people. From the newspaper quote in the paper today, Exxon is trying to rewrite history and negate long-term damage. After the spill I was doing my own research work and Judge Holland asked for an estimate of damage. I wrote in \$3.5 billion. I am talking about in my copyright the destruction of heritage and historical documentation. They want to destroy

history. They want to destroy the heritage of the people in the affected area. That is injury damage and that is why they spilled the oil. I wanted the average person to read my copyright rather than make a book of it. It is part of the record. I don't see anything as far as people injured in your handout. You ignore their historical heritage.

Anchorage # 344

Big Lake! I think that they should make it a restoration spot so they won't pollute the place really bad.

Anchorage # 73

One thing related to this whole spill incident that is very upsetting to me is the public relations campaign being put on by EXXON to attempt to persuade the public that the wounds of the spill are or soon will be healed that is a crock of garbage!

Anchorage # 10

ITS TOO LATE!! Lets work on research to prevent future damage and improve the environment. We will not be able to band-aid, the effects are too broad and long-term, lets put the money to the long-term solution.

REGION: Kenai

Homer # 195

This is a perfect example of why governments all over are bankrupt--mentally and financially. Virtually every proposed mitigation is couched in phrases like "estimated", "may have been", "perhaps". The fact that huge sums are being spent to buy land, timber, etc. in areas unaffected by the spill tells me that initial evaluation-- that from a biological viewpoint the spill was almost insignificant--is correct. On a recent beach combing flight in the Nuka Island area, I saw more dead birds (murres) than I did at any time during the spill--yet no one was on the beach running in circles and pulling their hair. We are an insane society addicted not only to drugs and booze, but also to spending other peoples money (OPM) (OPTUM). I say, "Give the money back to Exxon". Start the cure.

Kenai # 291

I spent more than half of the years from 1947 to 1960 in the spill area. This was on trips working for the U.S. Army Transportation Corps and Corps of Engineers based in Juneau, Whittier and Anchorage and towing all through the area. Additionally I spent a season operating a small boat for the U.S. Fish and Wildlife at Chignik and three seasons on the USF&WS vessel "Teal" along the Alaska Peninsula from Wide Bay to False Pass. We also did a comprehensive stream survey in PW Sound each year. In many ways the spill is no worse than what man has already done (re: Sea Otter near extinction) or Nature (1964 earthquake and previous ones).

Kenai # 199

I feel since the spill was caused by alcohol abuse not poor spill or oil industry procedures, that much of its money and energy should be put on the tremendous alcohol and drug problems we have in our state. Our prisons are filled with men and women who have made similar mistakes as did our oil tanker captain only in other areas, because of alcohol. Why don't we deal with the real issue

instead of making it so hard on the oil companies with costly and sometimes ridiculous rules and regs. Our environment is important but not "sacred". Human life and fellow natives are the most important resources we have. Guns and oil don't destroy! People kill and destroy! Thank you for listening. And I don't work in the oil industry.

Kenai # 194

The commercial fisherman and sportfishermen, particularly the guides, have been crying for the 33 years I have lived in this state. No matter how much money the oil spill recovery pours out to them, it will never be enough. There will always be some group that thinks the oil companies are contaminating the world--but these same people, or groups, travel in airplanes, buses and boats that all use oil company products. It's amazing!

Other Kenai Borough# 219

Why is everyone so anxious to spend, spend? What are you going to restore? Utilizing some unproven method, like during the spill operation, we boiled all the little organisms and wiped a few rocks--Big Deal. Think People, Think! This whole thing has the smell of a feeding frenzy. Just like with the original oil money - Every politician spending like a drunken sailor in an effort to maintain his hold on the power he wields. Let's face it when we got in bed with the oil co's., we accepted the probability of oil spills and there is very little to be done about them except the passage of time. OH! You can spend the money on every crack pot idea to come down the pike but the results will still be the same- Zilch!

REGION: Kodiak

Kodiak # 5558

Our theme as resource managers is to do what we believe to be balanced. We're certainly for logging. We're also for preservation and because of our fiduciary responsibility to our shareholders we feel no shame for attaining a return on preservation. We would argue as loggers that you do not do damage to water quality. Once you put in a road then the area is no longer pristine. If you want to maintain the pristine characteristics, then it makes sense not just to our shareholders but to the community as a whole. Different native corporations choose to manage in different ways. Our group is more conservative. We don't see a continuum of trees being produced but we do see a continuum of dividends being produced. We see a long term economic benefit to the community of participation of the funds from a permanent fund continuing to roll around in a community. Of even longer economic interest of timber will be recreation. The economic benefit is recreation. We think recreation proceeds will exceed oil. Suffice it to say that killing trees is a lot more profitable than servicing campers, but we see servicing campers as a long term benefit. Our responsibility is to get the highest return for our assets that we can to our shareholders. We're not in the business of subsidizing builders or homeowners. We sell timber to Koreans, to Japanese or to Americans. We have no favorites as is perhaps at some point politically popular. Our responsibility is to bring back a return to our shareholders and then have those dollars invested into an economy in the most efficient allocation of an economy as possible, not to subsidize any one special interest group.

REGION: Outside Alaska

US, Outside Alaska# 1032

Thank you very much for your time. I hope that when I come back to visit Prince William Sound it is just as beautiful and hopefully even more full of life than it is now.

US, Outside Alaska# 1032

I am writing to you in concern for the Prince William Sound area. I recently completed a month long sea kayaking trip in which I lived in the environment of the Northern part of the Sound. I have grown to love the area and would like to voice my opinion on how we can help Prince William Sound best recover from the oil spill accident that occurred in March 1989.

US, Outside Alaska# 415

If the \$900 million runs out before restoration is complete or if it is determined that technology-run restoration is unhelpful, money must be given to those persons damaged by the spill.

REGION: Prince William Sound

Chenega Bay # 243

Recommend state and fed gov't(s) require Exxon to cease ads on full recovery of PWS.

Valdez # 296

Though I am from Valdez, I do not agree with the plan to "clear Valdez's name." If anything Valdez has benefited economically from the reputation. Every tour operator in the city reports increased passenger traffic since the spill. [The spill put the name "Prince William Sound" in front of the American public like no advertising campaign could have. Secondly, knowing marketing, there is not enough money in the settlement to change even 100 peoples' minds about it.]

Whittier # 6070

The logging is going on right now. No one is seeing to the loggers obeying the regulations. A watch dog is needed. That is something that could be done right away. It seems like there are regulations being broken.
