To the Exxon Valdez Oil Spill Trustee Council

1. This is to request that you fund the Kachemak Bay State Park buyback lands using the civil penalty money.

It is obvious that the Alaskan public wants this.

Habitat acquisition is a very valid use of money. We support this because we are realistic. The best way to protect and rehabilitate ecosystems polluted by the oil spill is to permanently protect important lands in those ecosystems from development, leave the important habitats.

The only people who seem to have a hard time with this concept is the Council & state & federal bureaucracies.

2. What is your answer to the accusation that as long ago as Dec. 1991, there was discussion behind closed doors between 3 federal agencies on how to spend the \$50 million?

If this is true, it is an illegal action. That money does not belong to the agencies. It belongs to the public.

We look forward to hearing from you on this.

Dear Ms. Long:

Thank you for your comments of September 16 expressing support for the concept of habitat protection in general, and purchase of timber inholdings in Kachemak Bay State Park in particular, as part of restoration activities undertaken by the *Exxon Valdez* Oil Spill Trustee Council.

Kachemak Bay is included as a component of the 1993 habitat protection imminent threat analysis project. This project and the associated process were discussed at the September 14, 1992 Trustee Council meeting. A copy of the press release summarizing the meeting is enclosed for your information.

Your opinions and suggestions, along with those received from other members of the public, will be carefully considered as the Trustee Council makes decisions about the overall restoration program.

We very much appreciate your ideas and concerns. If you have additional comments or questions, please feel free to contact me in care of the address above.

Sincerely yours,

TRUSTEE COUNCIL

September 16, 1992

Dear Dave,

We wish to request that the Council continue to move on aquisition of habitat as a major component of the restoration plan. This is the single most effective action the council can take to benefit both wildlife and the human residents in the areas impacted by the spill. It is the most effective method of insuring that the settlement monies are not simply lost to the wants of federal and state agencies. This program should begin with the purchase of native inholdings in Kachemak Bay State Park. As you are well aware, the public is becoming increasingly frustrated with the reluctance of the Council (as well as the state government) to commit Exxon Valdez settlement funds to habitat aquisition. Many are beginning to feel that the Council is not acting in the best interests of the impacted inhabitants of the spill area.

Also of concern is the stranglehold maintained by government agencies on research monies under the restoration program. Research programs should be put out to open bid with awards made by an independent panel, not by the agencies. Research has gotten a black eye because of the huge amounts of money that were inefficiently spent by agencies in the early phases of damage assessment. To be cost effective, like everything else, research projects must be competitively bid and open to private organizations.

Congressmen George Miller has recieved significant input on these issues and has crafted a bill that addresses them. Hopefully it will not require legislation to force the Council to respond to the will of the people.

Sincerely,

Craig O. Matkin

Dear Mr. Matkin and Ms. Ziegesar:

Thank you for your comments of September 16 expressing support for the concept of habitat protection in general, and purchase of timber inholdings in Kachemak Bay State Park in particular, as part of restoration activities undertaken by the *Exxon Valdez* Oil Spill Trustee Council.

Kachemak Bay is included as a component of the 1993 habitat protection imminent threat analysis project. This project and the associated process were discussed at the September 14, 1992 Trustee Council meeting. A copy of the press release summarizing the meeting is enclosed for your information. In addition, I am enclosing a copy of the 1993 Draft Work Plan for your comments. There are several projects in the Draft Plan which are concerned with habitat protection. Note especially projects 93050, 93051, 93052, 93059, 93060, and 93064. We would be pleased to receive comments from you regarding any aspect of the Draft Work Plan; please note that the deadline for written comments is November 20.

You also expressed some concerns regarding the process the Trustee Council has followed in awarding restoration projects. The Trustee Council operating procedures specify that projects will be managed through state or federal agencies, regardless of whether the projects are put out for competitive bids or handled by an agency. The Trustee Council strongly supports opening up the restoration process to private individuals and non-governmental organizations to perform restoration work. The Trustees plan to make those opportunities available where appropriate.

Your opinions and suggestions, along with those received from other members of the public, will be carefully considered as the Trustee Council

Gentlemen:

RE: Kachemak Bay State Park Buyback

Please make the funding of the Kachemak Bay State Park buyback a top priority use for the civil penalty money from the Exxon Valdez oil spill.

Kachemak Bay is a prime recreational/tourist area. It is one of the most easily accessible spots where all people can enjoy the pristine beauty and the abounding richness of sea life inexpensively. In summer numerous charter boats ply the waters continually; cruise ships anchor outside the small boat harbor; helicopters are frequently seen conducting tours of the Bay as well as giving customers first-hand views of Grewinck Glacier and the ice field. Gull Island is a haven for bird viewing, and the beaches are rich with marine life. This all adds up to millions of dollars in tourist money and hundreds, perhaps thousands, of jobs for Alaskans.

Please do all you can to save this valuable renewable resource. I understand October 1 is the deadline for a down payment to save this Park. I urge you to use the necessary money to save Kachemak Bay State Park from clearcutting.

The Exxon Valdez oil spill was a tragedy--must we suffer yet another environmental tragedy by clearcutting this area? This scenic treasure can be saved--the responsibility is now yours!

Sincerely,

Dianne D. Mahaffey

Dear Sir,

I would like to add my support to the concept of using Exxon settlement money primarily for land acquisition. Land is a lasting durable good. As important as studies are, I am afraid that too much money will be funnelled into a bloated bureaucracy and in the end we will not have accomplished significant mitigation. I would recommend that 80 percent of the funds be strictly allocated to land acquisition. Critical selections have already been identified. The remainder of the funds would be sufficient to cover studies of habitat loss.

Thank you for your consideration.

Sincerely,

Mary Griswold

MEMORANDUM

DATE: September 14, 1992

TO: Exxon Valdez Oil Spill Trustee Council

FROM: Board of Directors, Homer Society of Natural History

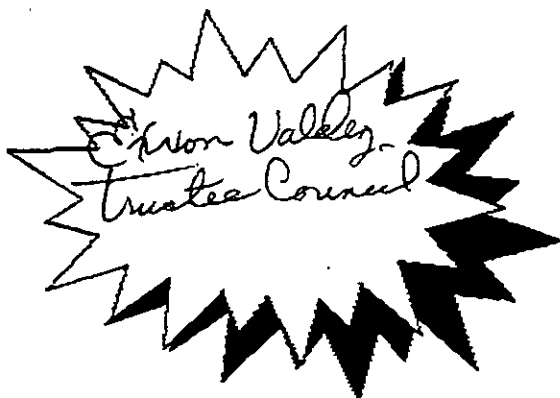

RE: Appropriation of funds to assist in the purchase of Seldovia Native Association lands, timber and mineral rights, within Kachemak Bay State Park

In February 1990, the Board of Directors of the Homer Society of Natural History passed a resolution in support of the State of Alaska's purchase of the SNA lands and the timber and mineral rights within Kachemak Bay State Park. The Society operates the Pratt Museum in Homer and represents over 800 individual, family, and business members residing primarily in the lower Kenai Peninsula, the area most likely to feel the negative impact of logging of SNA lands should reacquisition not occur. We believe that funds received through the settlements with Exxon are best spent to restore and replace habitat that will support recovery of species of animals and birds lost in the *Exxon Valdez* oil spill in 1989.

The SNA lands on the south side of Kachemak Bay are critical habitat for many species damaged by the spill including the endangered or potentially threatened species such as Bald Eagle, Marbled and Kittlitz's Murrelet, and Harlequin Duck. In addition, many nesting bird species and terrestrial mammals, such as black bear, river otter, and mink would lose their habitat completely. Logging operations would severely impact many other species on the shoreline and in surrounding waters including whales, the threatened Steller sea lion, sea otters, harbor seals, many species of ducks and shorebirds, and several species of sea birds that nest on nearby islands and coasts - and find food in coastal waters that would be contaminated by logging operations. Anadromous and marine fish impacted by the oil spill would be further damaged by contamination of coastal waters by siltation and pollution as a result of logging. Archaeological sites known to be along the coast throughout the areas to be logged could also be lost.

The SNA lands and Kachemak Bay are integral parts of a diverse and rich ecosystem that will be further damaged if the lands are allowed to be logged. You have the opportunity to preserve this habitat and allow some of the species which were severely decimated by the oil spill to recover to pre-spill levels by assisting in the purchase of the SNA lands and timber and mineral rights and restoring ownership to the State. We request that you allocate the funds necessary to initiate the buy-back before the October deadline presented by SNA.

Written testimony from public hearing
held 9/14/92
Charlene Ditton

KACHEMAK BAY CONSERVATION SOCIETY
P. O. Box 846 • Homer, Alaska 99603

September 12, 1992

Exxon Valdez
Oil Spill Trustee Council
645 G St.
Anchorage, AK 99501

Dear Trustees:

The Kachemak Bay Conservation Society once again urges the Council to give priority to funding land acquisitions in spill-affected areas in danger of clearcutting or loss through other development. The proposed Kachemak Bay State Park Buyback is now in serious jeopardy with no immediate resolution in sight for this 17-year problem. Timber Trading Company is pursuing permits to allow logging to begin next summer in this critical habitat.

The most expedient method to save Kachemak Bay State Park is to set aside \$23 million from the money that the Trustee Council is managing. This long-standing state issue has very broadbased support. Kachemak Bay Wilderness State Park suffered severe damage on the outer coast, damage that will take years to ameliorate. As mitigation, purchase of the land in the China Poot Bay area is certainly appropriate. The buyback would preserve one of the most productive bays in the state and restore Kachemak Bay State Park to its former boundaries.

As the Council sets priorities for which lands should be purchased first, consideration should be given not only to "imminent" threat, but also to location with respect to sensitive environments such as a critical habitat, value to the economy from tourism and fishing resources, and the history of the area. In Kachemak Bay, citizens have struggled for so long now to rectify a problem created by a loophole in Federal legislation that they are extremely frustrated with continued failures to settle this issue. Please don't just consider "imminent" threat. The idea that logging companies should have their permits in hand and their bulldozers running is too strict a definition. Bureaucracies move too slowly to comfortably use this as a definition of imminent. Just look at how long the State has been working to settle Kachemak Bay's long-standing problem. Using the suggested priorities, the Kachemak Bay State Park Buyback deserves consideration as a top priority for land acquisition by the Trustees Council.

The Kachemak Bay Conservation Society urges the Council to act with expediency and use settlement monies to purchase the 23,000 acres in Kachemak Bay State Park and finally put this issue to rest.

Sincerely,

A handwritten signature in cursive script that reads "Nina Faust".

Nina Faust
President

The Sloudering Kachemak Park Buyback is certainly one area where the Trustee Council is in a position to correct an ongoing and ~~and~~ ever more imminent threat to an important ~~and~~ highly productive habitat. Any type of timber harvest must cause untold destruction to local fisheries and popular recreational opportunities.
Help!

BRAD VALDEZ OIL SPILL
TRUSTEE COUNCIL
ADMINISTRATIVE RECORD

July 17, 1992

Dear Mr. Gibbons:

In wake of Governor Walter Hickel's unconscionable veto of land-acquisition monies, I urge the Oil-Spill Restoration Trustees to seize the moment.

Unless the trustees act immediately, we may lose such gems as Kachemak Bay State Park and Eyak lands to the ax.

The people of Alaska have spoken. Through countless public hearings in support of land acquisition the people have identified many areas needing immediate habitat protection. Not in years has the state legislature seen such an outpouring of public support for an issue. After years of hearings, both the state house and senate agreed upon specific lands needing immediate protection.

I realize the trustees are trying to define a process by which land acquisition will take place. But I implore you not to fiddle while Kachemak Bay State Park is logged. I urge you to move quickly to protect areas immediately threatened in Prince William Sound before it is too late. Likewise, in the longer term, other areas in Prince William Sound, Yakutaga, Afognak and Kodiak need protection.

We do not need to spend the restoration monies on bureaucrats studying issues ad infinitum while the purpose for which the monies were really intended is lost.

You have a responsibility to act now at your July 20 meeting. At a minimum you need address Kachemak Bay and Eyak lands -- areas even the attorney general has recommended for acquisition and deemed consistent with the settlement agreement.

To wait until the August 31 meeting may be too late. Many lands may be logged before acquisition studies are completed. Please do something now!

Very sincerely,

Kevin Harun

EXXON VALDEZ OIL SPILL
TRUSTEE COUNCIL
ADMINISTRATIVE RECORD

Attn: Mr. Dave Gibbons, Interim Admin. Director

Dear Members of the Trustee Council:

We request that you consider Kachemak Bay State Park buyback during the continuation of your unfinished agenda items from the June 29 meeting.

This past week Governor Walter J. Hickel vetoed the purchase of the Seldovia Native Association's inholdings of the 24,000 acres of land and timber in the Kachemak Bay State Park. A 1979 Memorandum of Understanding between the parties specified the state's commitment to put the lands back into the park after native land claims settlement. The people of Alaska have supported this buyback, and half of the money was to come from the Exxon criminal fines, as passed by the legislature this May.

Time is the immediate concern, as the clearcut logging permits could be fully granted this year. The area is to be cleared by 1999, and this is typically a six year project. Please consider an immediate use of Exxon civil penalty fines as an appropriate expenditure for acquisition of this land and timber and mineral rights to be put back into the state park.

Respectfully submitted,

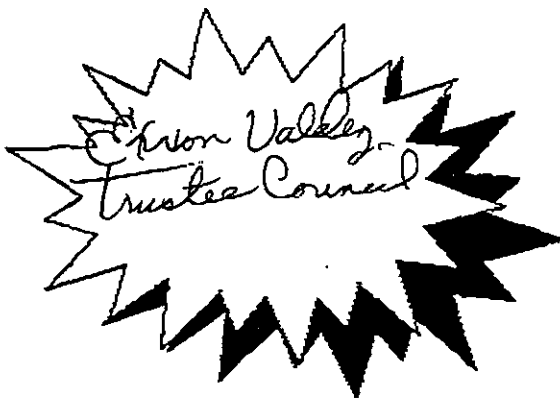

Michael & Diane McBride

From Jay Post
Business Owner
Homer, Alaska

Homer has depended on fishing for its economy. We don't know yet what the long term effects of the oil spill will be on the fishing. People in this community fish in Prince William Sound, Kodiak & The Inlet. We know the possibilities are great that the fish population will decline over the next few years due to the oil spill, what the oil has done to the crab - the shrimp we can only surmise at this point. These fisheries are also important in this area.

To keep the economy going, tourism is necessary in this area. The Lachemak Bay State Park is a major reason for tourists from all over the world to come to this area. I believe that in your deliberations you must consider the human

creatures along with other living
organisms II

 ADMINISTRATIVE RECORD

Dear Chair Pennoyer, Oil Spill Trustee Council

Please consider public taking, Imminent Domain, in your land acquisition alternatives - with unwilling sellers.

I'm familiar with this process from the government acquiring our land on 4th Avenue, after the earthquake of '64, to build a buttress between E+C Streets.

Across the street from your meeting, Mayor Tony Knowles bought the property for the Mini Parking Lot, from Chancey Croft, using public taking.

The big advantage to this method, mostly in buying right-aways, is that the land owner doesn't pay taxes on the sales price.

Important benefit to put money in your pocket!

As a safety ^{value} fair market value, pre-oil spill values (which ever is appraised the highest) should be used by appraisors.

Also, recommend the Kachamak Bay State Park buyback be undertaken by these proven means.

With deference,

John Grames

EXXON VALDEZ OIL SPILL
TRUSTEE COUNCIL
ADMINISTRATIVE RECORD

Dear Trustee Council:

According to recent publications 90% of the Pacific Northwest forests have been cut PLUS private & corporate holdings are literally out of large trees for quality dimensional lumber. Oregon State University and the U. of Washington Schools of Forestry are now saying that even though we thought we were pretty good at tree farming, we have violated the basic farm practice of soil conservation, restoration and enhancement. Cases are now being sited where 3rd growth stands are just plain not coming back. In addition, man is unable to create old growth forest environments. Only nature can do this with vast amounts of time and lack of interference. This old growth is necessary to provide habitat for spill-impacted species. Trees weren't impacted by the spill but many species such as eagles, land otters, and Marbled Murrelets who depend on the sea for food and the forest for cover were. Cutting these forests now will add more destruction to a complex ecosystem already impaired.

Alaska, the last frontier, is under pressure. We have what the rest of the nation has lost to population and industry. The timber industry will pay big short term dollars for our resources and the tourism industry will pay, long term, sustainable dollars to see what they no longer have at home.

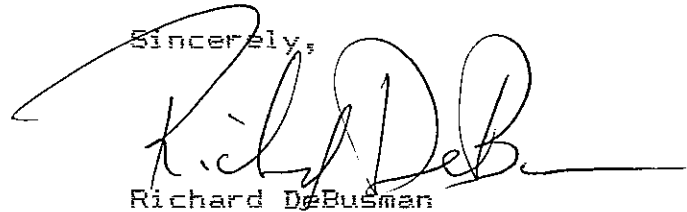

You, as the guardians of the EXXON civil settlement money have the responsibility & moral obligation to do what is right for current ALASKANS and, more importantly, for all future generations.

Given the heavy burden you, our appointed trustees, have over a vast & damaged habitat, I urge you to spend this money for the greatest long term good of all.

In my opinion, that greatest good can only be HABITAT ACQUISITION AND PRESERVATION. This is the greatest permanent fund of all. Setting land aside to view, enjoy, study, tour, and recreat on will have the greatest long term economic & life quality return to the state, our children and their children. I respectfully request that you make habitat acquisition your NUMBER ONE priority and I further request

that you make the purchase of SNA inholdings within Kachemak Bay State Park your first expenditure with others to follow. The K. Bay buy back needs to happen now, IMMEDIATELY and all agree that this is a legal and legitimate use of the civil settlement monies. I request that you use the unallocated \$17 million of 1992 settlement funds for the K. Bay purchase with the additional funds to come from the 1993 settlement.

Sincerely,

A handwritten signature in black ink, appearing to read "Richard DeBusman", with a long horizontal flourish extending to the right.

Wasilla, AK 99645

Dear Mr. Debusman:

Thank you for your comments of September 14 expressing support for the concept of habitat protection in general, and purchase of timber inholdings in Kachemak Bay State Park in particular, as part of restoration activities undertaken by the *Exxon Valdez* Oil Spill Trustee Council.

Kachemak Bay is included as a component of the 1993 habitat protection imminent threat analysis project. This project and the associated process were discussed at the September 14, 1992 Trustee Council meeting. A copy of the press release summarizing the meeting is enclosed for your information.

Your opinions and suggestions, along with those received from other members of the public, will be carefully considered as the Trustee Council makes decisions about the overall restoration program.

We very much appreciate your ideas and concerns. If you have additional comments or questions, please feel free to contact me in care of the address above.

Sincerely yours,

TRUSTEE COUNCIL

MEMORANDUM

DATE: September 14, 1992

TO: Exxon Valdez Oil Spill Trustee Council

FROM: Board of Directors, Homer Society of Natural History

RE: Appropriation of funds to assist in the purchase of Seldovia Native Association lands, timber and mineral rights, within Kachemak Bay State Park

In February 1990, the Board of Directors of the Homer Society of Natural History passed a resolution in support of the State of Alaska's purchase of the SNA lands and the timber and mineral rights within Kachemak Bay State Park. The Society operates the Pratt Museum in Homer and represents over 800 individual, family, and business members residing primarily in the lower Kenai Peninsula, the area most likely to feel the negative impact of logging of SNA lands should reacquisition not occur. We believe that funds received through the settlements with Exxon are best spent to restore and replace habitat that will support recovery of species of animals and birds lost in the *Exxon Valdez* oil spill in 1989.

The SNA lands on the south side of Kachemak Bay are critical habitat for many species damaged by the spill including the endangered or potentially threatened species such as Bald Eagle, Marbled and Kittlitz's Murrelet, and Harlequin Duck. In addition, many nesting bird species and terrestrial mammals, such as black bear, river otter, and mink would lose their habitat completely. Logging operations would severely impact many other species on the shoreline and in surrounding waters including whales, the threatened Steller sea lion, sea otters, harbor seals, many species of ducks and shorebirds, and several species of sea birds that nest on nearby islands and coasts - and find food in coastal waters that would be contaminated by logging operations. Anadromous and marine fish impacted by the oil spill would be further damaged by contamination of coastal waters by siltation and pollution as a result of logging. Archaeological sites known to be along the coast throughout the areas to be logged could also be lost.

The SNA lands and Kachemak Bay are integral parts of a diverse and rich ecosystem that will be further damaged if the lands are allowed to be logged. You have the opportunity to preserve this habitat and allow some of the species which were severely decimated by the oil spill to recover to pre-spill levels by assisting in the purchase of the SNA lands and timber and mineral rights and restoring ownership to the State. We request that you allocate the funds necessary to initiate the buy-back before the October deadline presented by SNA.

Homer Society of Natural History Board of Directors: Mike Cline, Hazel Heath, Chuck Jay, Margret Pate, Sarah Peterson, Carol Swartz, Cathie Ulmer, Marie Walker, George West

Dear Mr. Jay:

Thank you for your comments of September 14 expressing support for the concept of habitat protection in general, and purchase of timber inholdings in Kachemak Bay State Park in particular, as part of restoration activities undertaken by the *Exxon Valdez* Oil Spill Trustee Council.

Kachemak Bay is included as a component of the 1993 habitat protection imminent threat analysis project. This project and the associated process were discussed at the September 14, 1992 Trustee Council meeting. A copy of the press release summarizing the meeting is enclosed for your information. In addition, I am enclosing a copy of the 1993 Draft Work Plan for your comments. There are several projects in the Draft Plan which are concerned with habitat protection. Note especially projects 93050, 93051, 93052, 93059, 93060, and 93064. We would be pleased to receive comments from you regarding any aspect of the Draft Work Plan; please note that the deadline for written comments is November 20.

Your opinions and suggestions, along with those received from other members of the public, will be carefully considered as the Trustee Council makes decisions about the overall restoration program. We very much appreciate your ideas and concerns. If you have additional comments or questions, please feel free to contact me in care of the address above.

Sincerely yours,

TRUSTEE COUNCIL

committee on —, dated Sept 14 1992.
bill/subject

Regarding the July 1992 Restoration Framework Supplement.

We are in favor of habitat acquisition and protection with Exxon and settlement monies. Habitat acquisition should be on equal footing with other categories of expenditures in Figure 7 of the Supplement (like Management of Human Uses). We also urge that you adopt Threshold Criteria "Set A" for evaluating potential acquisition lands. Lots of the settlement money should be spent on habitat acquisition and protection!

Signed: Richard MacIntosh

Members
Exxon Valdez Oil Spill Trustee Council
645 G Street
Anchorage, AK 99501

Dear Members:

Often overlooked, during discussions of the damage done by the Exxon Valdez oil spill, are the cultural resources of the coastline from Prince William Sound to and including the Kodiak archipelago. Many of these non-renewable, prehistoric or historic sites were adversely impacted. I urge the Council to allocate monies to help restore and protect these significant resources.

The buy-back of Kachemak Bay State Park lands will protect many archaeological sites. Kachemak Bay, including former State Park lands, has a 1500 year-long history of settlement by the Kachemak tradition people. Their ancient, abandoned sites were discovered and described here in 1930.

Three years ago, I identified a site containing an even older culture. It is called the Ocean Bay culture and is probably 4500 to 5500 years old. Fortunately, it was excavated this summer for tides are rapidly eroding it. I believe that other Ocean Bay sites exist along the shorelines of Kachemak Bay yet will be destroyed or damaged with the proposed logging and logging-related activities by Timber Trading Company. Other ancient cultures may exist yet if these lands are not protected, we may never know what we've lost.

I urge you to allocate funds not only to purchase and restore natural habitats but cultural habitats as well. Prehistoric peoples lived in southcentral Alaska because of the abundant, diverse wildlife. The people, themselves, were as diverse and exciting as the animal-life upon which they subsisted. Both need protection.

Thank you.

Sincerely,

Janet R. Klein

Dear Ms. Klein:

Thank you for your comments of September 13 expressing support for the concept of habitat protection in general, and purchase of timber inholdings in Kachemak Bay State Park in particular, as part of restoration activities undertaken by the *Exxon Valdez* Oil Spill Trustee Council.

We recognize the importance of protection of cultural resources as a part of ongoing restoration activities. I am enclosing a copy of the 1993 Draft Work Plan. Note that Projects 93005, 93006, 93007 and 93008 are all concerned with cultural resources, archaeological sites, public information, education and stewardship. I hope you'll comment on these projects; please note the deadline for written comments is November 20.

Kachemak Bay is included as a component of the 1993 habitat protection imminent threat analysis project. This project and the associated process were discussed at the September 14, 1992 Trustee Council meeting. A copy of the press release summarizing the meeting is enclosed for your information.

Your suggestions, with those from other members of the public, will be carefully considered as the Trustee Council makes decisions about the overall restoration program. We appreciate your ideas and concerns. If you have additional comments or questions, please feel free to contact me again.

Sincerely yours,

TRUSTEE COUNCIL

TRUSTEE COUNCIL

REUNITE KACHEMAK BAY STATE PARK!

We the undersigned respectfully request that the Exxon Valdez Trustees Council fund all or part of the purchase of certain land, timber, and subsurface inholdings within Kachemak Bay State Park by October 1, 1992, so that logging will not occur in this prime recreation area and habitat of wildlife that was harmed by the oil spill.

We also request that the US Army Corps of Engineers and the Alaska Division of Governmental Coordination hold public meetings in Homer and Anchorage when Timber Trading Co. applies for permits to log on Seldovia Native Association land within Kachemak Bay State Park.

Documentation
on oil in
Kachemak Bay

CENTER FOR DISASTER ASSISTANCE

HOMER, ALASKA

235-5322

May 15, Monday

The State of Alaska Division of Emergency Services, Kenai Peninsula Borough, and Kachemak Bay Area Protection Incident Command Team provide the following composite of information gathered from the Dept. of Environmental Conservation, the National Oceanic and Atmospheric Administration, the Coast Guard, and various state agencies.

OIL LOCATION

Shoreline on the west side of the base of the Homer Spit, extending north to several miles beyond Anchor Point continues to be impacted with scattered incidences of what NOAA describes as splotches and globs of oil. The oil ranges in consistency from liquid patches to emulsified pats, and in size from saucer-shaped patties to dime-sized spatters. There are approximately 8-12 such pieces of oil for every hundred square feet at the high tide line.

Over the weekend, similar incidences of oil were reported as washing ashore in Little Tutka Bay. Today's weather forecast predicts gale-force northwesterly winds, which, according to NOAA, could conceivably drive this kind of broken-up, emulsified oil well into Kachemak Bay.

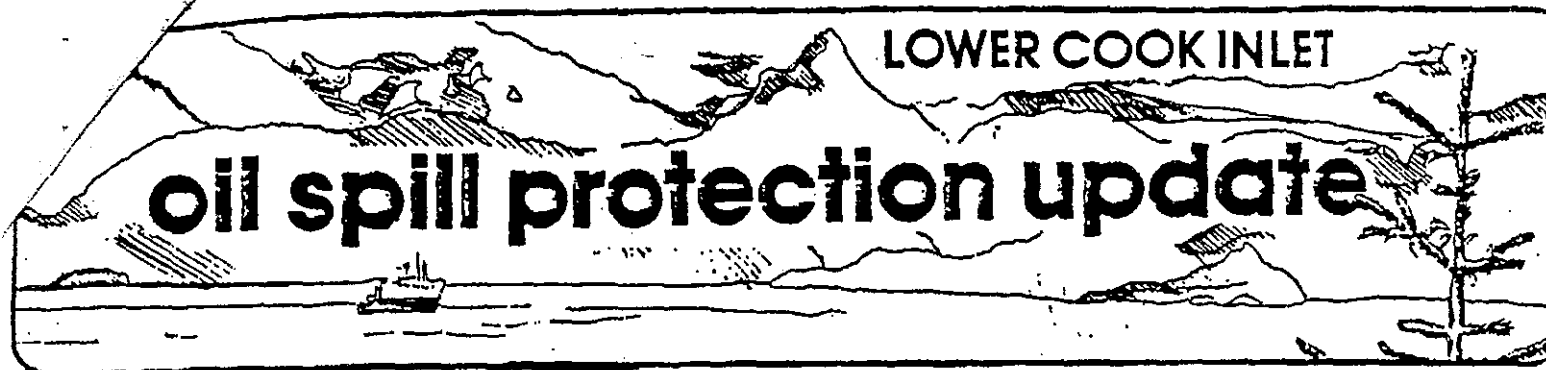

The leading front of the oil spill has now migrated in the form of light to heavy sheen as far south as the Shumagin Islands, in the Shelikof Strait, a total distance of seven hundred miles from the original site of the Exxon Valdez spill. Both DEC and NOAA overflights this weekend confirmed the presence of oil off the southwest coast of Kodiak, as well as significant quantities of mousse and sheen in the area of Shuyak and Afognak Islands, and at the mouth of Dogfish Bay on the Kenai Peninsula.

Light patches of sheen continue to be observed in Prince William Sound.

CLEAN-UP OPERATIONS/SAFETY AND SANITATION

The shoreline between Homer and Anchor Point is officially being monitored from the Homer Spit north for a distance of several miles, and from Anchor Point south for a distance of several miles. It is still not clear whether or not any person(s) or agency(-ies) are monitoring the coastline in between on a regular basis. The Coast Guard will look into this matter today.

GLOVES AND DISPOSAL MATERIALS (BAGS, PLASTIC SHEETING) ARE AVAILABLE AT THE DISASTER ASSISTANCE OFFICE AND AT MANLEY TERMINAL (on Fish Dock Road on the Spit) for those who want to perform beach clean-up. Information has been made available

oil spill protection update

CENTER FOR DISASTER ASSISTANCE

HOMER, ALASKA

235-5322

May 17, Wednesday

The State of Alaska Division of Emergency Services, Kenai Peninsula Borough, and Kachemak Bay Area Protection Incident Command Team provide the following composite of information gathered from the Dept. of Environmental Conservation, the National Oceanic and Atmospheric Administration, the Coast Guard, and various state agencies.

OIL LOCATION

Both paid and volunteer workers in Homer and Anchor Point continue clean-up and surveillance. Yesterday, a crew of five workers cleaned oil from the beach at Hesketh Island. The Emergency Operations Centers in English Bay and Port Graham report that they got hit with more and bigger chunks of emulsified mousse and tarballs yesterday. Some of the oil has been described as being as big as footballs.

NOAA reported that the long streamer of sheen, sighted two days ago in Montague Strait has apparently broken up as it continues its infusion southwest along the outer coast of the Kenai Peninsula. Streamers of sheen, with mousse, were observed in front of Resurrection Bay (Seward.)

Kodiak Island continues to be impacted with oil on its west coast.

The DEC reports that transects of the beach at Gore Point have revealed a 2" substrata of oil at approximately a 4" depth below the beach gravel, and a second substrata of approximately 5 or 6 inches of oil at a depth of approximately 18". At this time, the DEC estimates that 729 miles of Alaskan coastline have been impacted with oil from the Exxon Valdez spill. To date, eight weeks after the tanker accident, not one beach has been "signed off" as clean by the Federal On Scene Coordinator (Vice Admiral Clyde Robbins.)

CLEAN-UP OPERATIONS/SAFETY AND SANITATION

The shoreline between Homer and Anchor Point is officially being monitored from the Homer Spit north for a distance of several miles, and from Anchor Point south for a distance of several miles.

The Homer City Council has requested a written plan for shoreline clean-up from Exxon today. There will be a special City Council Meeting at 7:30 this evening to address local oil-spill

LOWER COOK INLET

oil spill protection update

CENTER FOR DISASTER ASSISTANCE

HOMER, ALASKA

235-5322

May 22, Monday

The State of Alaska Division of Emergency Services and the Kenai Peninsula Borough provide the following composite of information gathered from the Dept. of Environmental Conservation, the National Oceanic and Atmospheric Administration, the Coast Guard, and various state agencies.

OIL LOCATION

At this time, areas of impact within Kachemak Bay include many stretches of beach from the tip of the Homer spit, up its western side and all the way north to several miles above the mouth of the Anchor River, in the vicinity of Whiskey Gulch. Oil has also been collected from Little Tutka Bay, the Herring Islands, Cohen Island, and China Poot Bay. Over the weekend, a total of 866 bags of oil and oily debris were cleaned from the shore in all of these locations. The oil content of what was recovered was estimated to range from 20% to 60%.

NOAA's weather forecast predicts continuing westerly winds. It is likely that the prevailing wind will continue to drive oil blobs of varying sizes onshore in our area.

An observer from the ADF&G reported heavier concentrations of oil north of Bishop's Beach; this area is not currently addressed in Exxon's clean-up plan, despite repeated requests from concerned citizens.

The Dept. of Environmental Conservation will ground-truth at Glacier Spit today.

The Emergency Operations centers in English Bay and Port Graham continue to report the impact of emulsified oil of varying sizes in their bays.

CLEAN-UP OPERATIONS/BOOM ACTIVITY/SAFETY AND SANITATION

The Homer City Council has called a special meeting Wednesday evening to re-assess Exxon's shoreline clean-up plan for the Homer area. The plan as it now stands calls for the daily patrol of local beaches through the end of this month, and every other day thereafter. The current plan does not address the shoreline north of Bishop's Beach and below Bluff Point.

At this point, both Beluga Slough and Mariner Park slough (at the base of the spit) and the fishing lagoon on the spit have been reopened. Boom has been deployed inside the entrance of all three today.

Exxon reported that skimming operations on the outer coast of the Kenai Peninsula continue to be suspended in the absence of any skimmable oil. The U.S. Coast Guard has instructed Exxon to retain

Oil spill protection update

CENTER FOR DISASTER ASSISTANCE

HOMER, ALASKA

235-5322

May 23, Tuesday

The State of Alaska Division of Emergency Services and the Kenai Peninsula Borough provide the following composite of information gathered from the Dept. of Environmental Conservation, the National Oceanic and Atmospheric Administration, the Coast Guard, and various state agencies.

OIL LOCATION

At this time, areas of oil impact within Kachemak Bay and Cook Inlet include many stretches of beach from the tip of the Homer spit, up its western side and all the way north to Whiskey Gulch, Stariski, Deep Creek, and Ninilchik. Free floating mousse and sheen were also positively identified inside the Spit by the DEC. The sightings at Deep Creek, one of which was made by a DNR volunteer, was described as fist-sized chunks of mousse. Oil has also been collected from Little Tutka Bay, the Herring Islands, Anisim Point, Hesketh Island, Cohen Island, and China Foot Bay. Over the weekend, a total of 866 bags of oil and oily debris were cleaned from the shore in all of these locations. The oil content of what was recovered was estimated to range from 20% to 60%.

The Dept. of Environmental Conservation is making arrangements for ground-truthing for onshore oil impact on the coastline of inner Kachemak Bay today.

The Emergency Operations centers in English Bay and Port Graham continue to report the impact of emulsified oil of varying sizes in their bays.

CLEAN-UP OPERATIONS/BOOM ACTIVITY/SAFETY AND SANITATION

The scattered but widespread impact of oil within Kachemak Bay and the lower portions of Cook Inlet requires a major change in Exxon, Coast Guard, and agencies' clean-up strategies for this area. An Action Item was submitted at this morning's MAC meeting calling for the immediate deployment of no less than six fishing vessels to skim or seine or absorb oil in the tidal rips of Lower Cook Inlet. The Anchor Point clean-up crew has expanded their clean-up activities to include shoreline well north of Anchor Point. MarTech, contracting for Exxon, will be in charge of clean-up of the Spit beaches and Kachemak Bay.

In consideration of salmon spawning activity, the ADF&G has recommended the removal of all log and commercial boom in critical spawning streams in the Homer and the Seward areas. However, with the arrival of significant quantities of emulsified oil in the Kachemak Bay area, it is unclear what, if any, protective measures will be employed to replace the boom.

Exxon reported that skimming operations on the outer coast of

oil spill protection update

CENTER FOR DISASTER ASSISTANCE

HOMER, ALASKA

235-5322

May 24, Wednesday

The State of Alaska Division of Emergency Services and the Kenai Peninsula Borough provide the following composite of information gathered from the Dept. of Environmental Conservation, the National Oceanic and Atmospheric Administration, the Coast Guard, and various state agencies.

OIL LOCATION

As of yesterday, areas with pancake-sized patties of mousse scattered on beaches within Kachemak Bay and Cook Inlet include stretches of shoreline from the tip of the Homer spit, along the spit's western side, and all the way north to Whiskey Gulch, Stariski, Deep Creek, and Ninilchik. Areas of impact within Kachemak Bay, as ground-truthed by the Dept. of Environmental Conservation, now include the east side of Glacier Spit, off of Halibut Cove lagoon, China Poot Bay, Neptune Bay, Cohen Island, Anisim Point, Hesketh Island, Little Tutka, and the Herring Islands. The emergency operations centers in Seldovia, Port Graham, and English Bay continue to report incidences of oil impact within their bays. Free floating mousse and sheen were also positively identified yesterday inside the Spit by the DEC.

The sightings at Deep Creek and Ninilchik have been described by observers as ranging from thumbnail size to fist-sized chunks.

The ADEC will provide aerial surveillance of Cape Douglas and Kamishak Bay on a regular basis. The Alaska Dept. of Natural Resources will begin monitoring shoreline impact of Kachemak Bay State Park within Kachemak Bay from their Halibut Cove lagoon station today.

CLEAN-UP OPERATIONS/BOOM ACTIVITY/SAFETY AND SANITATION

The scattered but widespread impact of oil within Kachemak Bay and the lower portions of Cook Inlet, with their respective high recreation, sports and commercial fishery values, requires a major change in Exxon, Coast Guard, and state agencies' clean-up strategies for this area. An Action Item was submitted at yesterday's MAC meeting requesting that Exxon immediately deploy no less than six fishing vessels to skim or seine or absorb oil in the tidal rips of Lower Cook Inlet. Exxon has denied the request.

The Anchor Point clean-up crew has expanded their clean-up activities to include shoreline as far north as Ninilchik, but with a crew-size limit of ten or twelve it is felt that this effort is inadequate. At this point in time, Exxon's intentions

LOWER COOK INLET

oil spill protection update

CENTER FOR DISASTER ASSISTANCE

HOMER, ALASKA

235-5322

Thursday, June 1

The State of Alaska Oil Spill Coordinator's Office and the Kenai Peninsula Borough provide the following composite of information gathered from the Dept. of Environmental Conservation, the National Oceanic and Atmospheric Administration, the Coast Guard, and various state agencies.

OIL LOCATION

The Anchor Point clean-up crew reports that clean-up activities over the past two days retrieved oil and oily debris from various locations on the east side of Lower Cook Inlet. These sites include, but are not limited to, Ninilchik, Deep Creek, Anchor Point, and Bluff Point. Clean-up workers found the greatest concentrations of oil and tar-ball impact to be in the vicinity of Bluff Point.

Homer clean-up crews recovered tar-balls and what was described as "fresh oil" from various locations on either side of the base of the Homer Spit, Bishop's Beach, and extending out along the finger of the spit. Yesterday, a total of 30 bags of contaminated waste were recovered from all Homer sites, with oil content estimated as ranging from approximately 20% to 50%. There continue to be questions concerning how far north the Homer clean-up crew is patrolling, and as to whether or not this effort is indeed overlapping with the Anchor Point effort, as intended. Two dead oiled birds were recovered from the Homer spit.

The most recent DEC overflight, on Wednesday, confirmed the presence of various areas of "mousse-scum", including concentrations in the tide rips in Kachemak Bay, as well as in Halibut Cove and Bear Cove and in front of Seldovia Bay. The DEC observer commented that the sheen is no longer detectable from the air, but that the product continues to give off sheen if it is disturbed and observed at close range.

CLEAN-UP OPERATIONS/BOOM ACTIVITY/SAFETY AND SANITATION

Despite requests from the Homer MAC and the federal on-scene coordinator for increased numbers of personnel to be deployed on the outer coast, the number of workers supervised by Exxon has in fact dropped significantly from last week's totals. There have been only 70-75 workers, total, on designated beaches on the outer coast for the last three days.

On May 30th-31st, 6 Port Graham and 3 Seldovia boats were released from their VECO contracts. Exxon says that they intend

August 25, 1992

To the Exxon Valdez Oil Spill Trustee Council:

As a resident of Kachemak Bay and kayak guide within the park, your actions regarding the buy-back will have a great impact on my future. I am writing to request your support in the Kachemak Bay buy-back by using the civil penalty funds. Your decision could result in either an environmental and financial holocaust or preserve the future of generations to come within this pristine area. You have been given the opportunity to do a great service. Please do so.

Sincerely,

Nancy Brown

Re: Funds for Kachemak Bay State Park Buyback

Dear Honorable Councilmembers:

This letter is an earnest appeal to you to fund the buyback of lands from Seldovia Native Assoc. and timber rights from Timber Trading Co using the court-awarded money from the oil spill.

As I'm sure you are aware, this action is urgent as SNA has placed an Oct 1, 1992 deadline on a good faith downpayment. Please bring this issue to rest and follow the overwhelming public support for the purchase of these lands.

We are placing our hope, faith and trust in your good judgment to do the right thing and immediately allocate funds for this buyback.

Sincerely,

Narda Wilson

Dear Council Members,

I am writing this to urge you to make funding the Kachemak Bay State Park buyback a top priority, as time is so limited and this wonderful area is a very high risk if logging is permitted there. The people of Alaska value the wildlife and recreational opportunities of Kachemake B.S.P. very much. Please help us preserve it, using the civil penalty money from the oil spill. Sincerely, Diane Crawford

The threat of logging in the heart of Homer's famous view and wilderness area is imminent. Many species whose populations were damaged by the oil spill have habitat across Kachemak Bay, such as Loons, Marbled Murrelets, and Bald Eagles. Many other oil spill damaged species that do not nest or feed on land are still affected by the health of the coastal environment. So much logging is being done around the outer coast of the Kenai Peninsula. Coastal habitat is being destroyed continuously. Restoration means protecting this habitat for the species that were affected by the spill. The Kachemak Bay State Park is one wilderness area that we can protect now.

Please fund the Kachemak Bay State Park Buyback with the civil penalty money as soon as possible.

Dear Mr. Zinsser:

Thank you for your comments of August 15 expressing support for the purchase of timber inholdings in Kachemak Bay State Park as part of restoration activities undertaken by the Exxon Valdez Oil Spill Trustee Council.

Kachemak Bay is included as a component of the 1993 imminent threat analysis project. This project and the associated process will be discussed at the September 14, 1992 Trustee Council meeting. A copy of the press release announcing the meeting is enclosed for your information.

Sincerely yours,

Dear Marty:

Thank you for taking the time to meet with Dave Dengel of my staff last week. As Dave indicated, the City has heard that the Exxon Trustees are looking into the possibility of purchasing private lands within the Valdez Duck Flats.

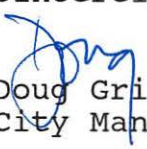

As you may know, the City has been working with the state on developing an Area Meriting Special Attention (AMSA) Plan for the Duck Flats through the Alaska Coastal Management Program.

The AMSA Plan has indicated that the purchase of private property within the Duck Flats is one means of providing protection for this environmentally sensitive area.

The City is interested in discussing the purchase of these lands with you or members of your staff. Attached is a map which shows the boundaries of the Valdez Duck Flats AMSA and also indicates those lands which are currently owned privately or by the University of Alaska.

I would be interested in discussing this with you further at your convenience.

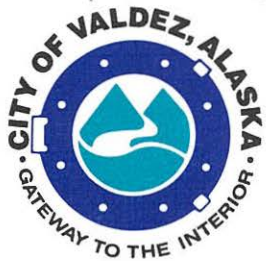

Sincerely,

Doug Griffin

FORMAT FOR IDEAS FOR RESTORATION PROJECTS

Title of Project:

state park enhancement & mgmt

Justification: (Link to Injured Resource or Service)

Kachemak Bay State Park & State Wilderness Park were heavily oiled on Outer Coast, oil still persists

Description of Project: (e.g. goal(s), objectives, location, rationale, and technical approach)

Acquisition of state held lands & waters for state park status such Chugach

Island group

purchase of Native property between Park Dick and Rocky River road for inclusion in Kachemak Bay state wilderness park - guarantee access!!

* Provide funding for 2 positions (Rangers) to continue monitoring impacts of oil spill on Outer Coast Gulf of ALASKA in Kachemak Bay S.W. Park & Dutch Island. Continue clean-up efforts where oil still persists, clean-up other debris, construct rec. facilities

Estimated Duration of Project:

forever

Estimated Cost per Year:

\$75,000⁰⁰ initially for boat/supplies plus approx. 80,000 for 2. 8 month seasonal rangers!!

Other Comments:

monitor human use of area (oil spill widely advertised this remote area causing increased use)

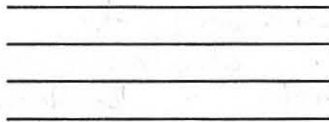

22 million for SNA/TIC buyback!!

EXXON VALDEZ OIL SPILL
TRUSTEE COUNCIL
ADMINISTRATIVE RECORD

Dear Mr. MacCampbell:

Thank you for submitting a proposal regarding Kachemak Bay State Park enhancement and management for consideration as part of the 1993 Exxon Valdez oil spill restoration work plan. Unfortunately the closing date for consideration of 1993 project ideas was June 15. Your idea was postmarked July 21 and received in our office July 22, therefore it was not included in the package of ideas considered by the Trustees.

The Trustees have received a considerable amount of public comment expressing support for the purchase of timber inholdings in Kachemak Bay State Park as part of restoration activities undertaken by the Trustee Council, which is a portion of your proposed action. Kachemak Bay is included as a component of the 1993 imminent threat analysis project. This project and the associated process was discussed at the September 14, 1992 Trustee Council meeting. A copy of the press release summarizing the meeting is enclosed for your information.

Please resubmit your ideas when the 1994 ideas/proposals are solicited. At that time, your comments and suggestions, along with those received from other members of the public, will be carefully considered as the Trustee Council makes decisions regarding restoration projects. I have requested that your name be added to the mailing list for all future public notice mailings.

We very much appreciate your ideas and interest in the activities of the Trustee Council. If you have additional comments or questions, please feel free to contact me in care of the address above.

Sincerely yours,

TRUSTEE COUNCIL

**KACHEMAK BAY CONSERVATION SOCIETY**

P. O. Box 846 • Homer, Alaska 99603

July 19, 1992

Exxon Valdez
Oil Spill Trustee Council
645 G St.
Anchorage, AK 99501

Dear Trustees:

The Kachemak Bay Conservation Society urges you to give priority to funding buyouts in spill affected areas that are in immediate danger of clearcutting or loss through other development. The proposed 23,000 acres buyback for Kachemak Bay State Park is in serious jeopardy since Governor Hickel vetoed the Exxon criminal settlement monies which would have provided \$11 million toward the purchase.

Now that those monies are unavailable, it appears that the most appropriate method to save Kachemak Bay State Park is to set aside \$23 million from the money that the Trustee Council is managing. This is a long-standing state issue with very broadbased support. Kachemak Bay Wilderness State Park suffered very severe damage to its outer coast, damage that will take years to ameliorate. As mitigation, purchase of the 23,000 acres in the China Poot Bay area is extremely appropriate. The buyout would preserve one of the most productive bays in the state and restore beautiful Kachemak Bay State Park to its former boundaries.

Logging is set to begin as soon as permits are granted--possibly this fall. We feel that this buyout is well within the restoration parameters that your group must consider and urge you to act with expediency so that we do not lose this valuable resource.

Sincerely,

A handwritten signature in cursive script that reads "Nina Faust".

July 19, 1992

Exxon Valdez
Oil Spill Trustee Council
645 G St.
Anchorage, AK 99501

Dear Trustees:

Funding priority should be given to land in spill affected areas that are in immediate danger of clearcutting or loss through other development. Since Governor Hickel vetoed the Exxon criminal settlement monies which would have provided \$11 million toward purchase of 23,000 acres for Kachemak Bay State Park, this area is now in serious jeopardy.

Now the most appropriate method to save Kachemak Bay State Park is to set aside \$23 million from the money that the Trustee Council is managing. For more than 10 years citizens have been working with the State and Seldovia Native Corporation to purchase these lands that were once in Kachemak Bay State Park. It makes no sense for the State to let former State Park lands which are the heart of one of the largest state parks be clearcut.

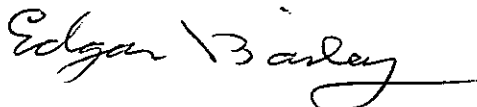

Furthermore, Kachemak Bay Wilderness State Park beaches experienced very severe damage from the oil. As mitigation, purchase of the 23,000 acres in the China Poot Bay area is very justified. The buyout would preserve one of the most productive bays in the state and restore Kachemak Bay State Park to its former boundaries.

Logging is set to begin as soon as permits are granted--possibly this fall. Broad public consensus is that this area should not be logged. The Kachemak Bay State Park buyout fits restoration parameters for land in the spill affected areas. We urge the council to allocate the needed \$23 million to preclude the proposed logging, a project that has the potential for severe ramifications to the Kachemak Bay Critical Habitat.

Sincerely,

Nina Faust

June 29, 1992

Dear Mr. Gibbons,

I am writing in regards the use of the \$1 billion dollar settlement fund for restoration work. The Exxon Valdez Oil Spill Trustees actions for the next ten years will be directed by Volume 1: Restoration Framework.

RECEIVED
AUG 04 1992

I think that it is in our best interests to use the funds for such things as: acquiring coastal forests, purchase of land, conservation easements, and timber rights - which are a most effective means of restoring the Sound and preventing further damage, and should use 80% of the settlement funds. Also the monitoring program should not be short-sightedly dominated by studies of commercially valuable species, but evaluate the long-term effects of the spill on the entire coastal ecosystem.

I am opposed to Governor Hickel and the Bush administrations plans. Placing funds in an endowment, making them unavailable immediately, but possibly used for future "endowments" such as docks, roads, hatcheries, or tourist developments is not a wise way to use the money. The whole purpose of the restoration fund is to help the land to its condition before the spill, I dont think that Bush and Hickel's ideas are going to facilitate restoration.

I lived in Alaska for 12 years and I will most likely move back there some day. It is a beautiful place, the last frontier, and it would be so wonderful if we could preserve what remains and correct any mistakes that have been made. In this case it would be foolish not to as the money is there, and its purpose is just that.

Sincerely,

Julie Bohm

Dear Mr. Dave Gibbons:

May I write to you in regard to the Exxon Valdez settlement?

I would like to proffer my opinion that land acquisition is the best of the settlement money.

Surely Gov. Hickel can see his way clear to reconciling economic progress with the salvation of what remains of our wilderness wonders.

I can assure you that there are very many Americans very willing to sacrifice some creature comforts for the surety that our planet must be shared with those species which share it with us.

There is no shame in "speaking for those who cannot speak for themselves." Indeed, if we don't speak for the voiceless, we shall be shamed into oblivion.

Sincerely,

Restoration Trustee Council Public Participation Comments

Use this form to provide comments regarding public participation or formation of the public advisory group to the Exxon Valdez Oil Spill Restoration Trustee Council. Return it to staff at the public meeting or mail the form with your comments to the Oil Spill Public Information Center, Attn: Mary McGee, 645 G St., Anchorage, AK 99501.

Dear Ms. McGee:

Restoration Process

I agree with many others that a great porportion of restoration funds should go towards acquisition of habitat and not numerous studies or administrative expenses. All agency use of restoration funds should be audited by an independent accounting firm. However, I do recognize that there is need for some studies. As a general rule, I suggest that restoration funds not bespent on fish and wildlife populations that are part of an existing monitoring program. If agencies have been monitoring seabird colonies or fish streams prior to the oil spill, these areas should not be monitored with restoration funds. The funds should supplement the mandated responsibilities of land management agencies. Restoration funds should be directed at populations most susceptible to oil with little or no baseline data. Tufted and horned puffins could have been devastated by my spill had it occurred a month later. However, assessing population changes would have been difficult because there is little or no baseline data. Colonies in the Chiswell Islands and East Amatuli Island in the Barrens would be excellent study sites. Although the data suggests that small numbers of petrels were affected, its small size make recovery of carcass difficult. Existing studies by EXXON on East Amatuli Island suggests that the spill could have impacted their reproduction. I suggest that petrels at Wooded Island be studied to establish a baseline for these species. Once a standard monitoring procedure have been established and natural population fluctuations are known, colonies could be monitored at three year intervals. I further suggest that the bulk of seabird studies be conducted at Gulf of Alaska colonies where the impact was the greatest.

My suggested acquisition of seabird habitat are as follows: Middleton Island, Barwell Island and Cape Resurrection, and Gull Island (Kachemak Bay). Seabird colonies should be managed by Federal refuges since these species are migratory.

Please write your name and mailing address below if you would like to receive future mailings about activities of the Exxon Valdez Restoration Trustee Council.

Mike Nishimoto
407 Rangeview Ave.
Homer, AK 99603

Public Advisory Group

I believe that the public cannot provide meaningful comments on advisory groups without an evaluation of existing forms of advisory groups. Some citizens may be familiar with one or two kinds of advisory groups, but not the range of groups. I was a member of a citizens advisory committee for a comprehensive plan, but cannot appreciate the pitfalls experienced by those who are members of recently formed regional oil spill citizens advisory committees. I suggest that you prepare a packet similar to the voter information packet that describes the pros and cons of a range of different types of advisory groups. However, some general comments could be made now. Some suggested that the restoration funds be divided among different user groups who can then decide how to use that money. This appears appealing, but who decides how to divide the money? If there is a main committee and subcommittees, who represents the subcommittee? There often will be different view points. Some suggested that decisions be made by consensus. This may work in small groups, but its success is doubtful in large groups. The advisory committee would often be bogged down in "hung juries" and therefore no decisions will be made. I would suggest that you hire an unbiased company that can serve as expeditors in advisory group meetings. This company should have experience as mediators and serve in this function if necessary. An alternative approach would be to use the Supreme Court format where a vote is taken and both a minority and majority opinion is written for the Trustees. I further suggest that whenever the Trustees make decisions contrary to recommendations of the advisory group that they be required to prepare a justification for their decision.

EXXON VALDEZ OIL SPILL
TRUSTEE COUNCIL
ADMINISTRATIVE RECORD

To the Restoration Team and Trustee Council,

I am writing to express my opinions and hopes concerning the timber and subsurface buyback legislation which passed the Alaska State Legislature this year.

People around the world look on with interest and dismay at news of the possibility of losing vast tracts of pristine forest land to provide for short term gains, few jobs and loss of #1) habitat for already declining wildlife populations and healthy populations, #2) tourism economies based on wild scenery, scenery which is disappearing all too rapidly even with the buyback, #3) habitat important to a healthy

commercial fishing industry.

In the event that the timber and subsurface rights could be bought back as specified by the Alaska State Legislature then tourism economies based on wild scenery would have a better chance of lasting for many generations employing every aspect of the economy from the outfitters, to the cab drivers, to the biologists, to the medical field to, the tour operators, to the regulators, to law enforcement, to future employees of such businesses and the list continues exponentially.

The Alaska Oil spill was a terrible loss in itself. In the six months following the spill we proved that ~~you~~^{we} simply can't

clean up an oil spill. We need not waste another cent trying to mask a catastrophe larger than any other witnessed during the 1980's. What people need to see is something good occurs as a result of something as inconceivable as the Alaska Oil spill. People want to see surface and subsurface rights buybacks. The Alaska State Legislature conveyed a clear message to that affect to the Governor. The people in the State of Alaska wanted money from the Exxon Valdez Oil spill settlement to be spent on surface and subsurface rights buybacks in Kachemak Bay State Park and in the vulnerable coastal forests of

Prince William Sound and on Kodiak and Afognak Is. and Yakutatga.

It appears that logging interests simply need money in order to discontinue the effort of clearing a forest (forests) which would otherwise be utilized in a much more profitable, wider ranging economy based on tourism and fishing.

People have had enough wastage pass before their very eyes in recent years. ~~the~~ ~~the~~ People don't need to experience the travesty of witnessing the taking of funds collected as a result of one monumental disaster and spending towards anything before surface and subsurface buybacks in Katemak Bay

State Park ~~and~~ Prince William Sound, ~~seas~~.
Afognak, Kodiak and Yakutatga.
In other words allow the people to see

where the settlement money is going. We can see the forests. Anything but surface and subsurface rights buybacks would mean a majority of us will be blind to where the settlement money is spent on research of any kind. ~~The~~ ~~same~~ ~~the~~ point is that we need to buy back surface and subsurface rights before money is spent on research. We also need to protect the people with a foot in the door so to speak, people who rely on the scenic, pristine and renewable aspects of our resources.

There is a better time and place for the forestry interests other than in Kachemak Bay State Park or on Prince William Sound or on Kodiak or Afognak or Yakutat.

Now there is no better place but there

is a better time to do research in the areas affected by the Alaska Oil Spill.

The time for research is after the buybacks of surface and subsurface rights are made as written by the Alaska State Legislature and passed this year 1962.

I am in favor of buybacks of surface and subsurface leases in verbatim with what the Alaska State Legislature has dealt with in HB 411. I support land acquisition money in the Capital Budget affecting lands in Kachemak Bay, Afognak and Kodiak Islands, Prince William Sound and Yakutatka. I regret not writing to Governor Pickel while the decision was in his hands to persuade him to do anything.

but veto the bill dealing with the land acquisition. It was my belief that the issue had been shelved for the years. Recently I heard of the veto.

Americans and Alaskans especially need to show utmost respect and highest regard for ~~the~~ lands we have not already visually harmed. Given what we know we have already done and fears about what we may have done as a result of the Alaska Oil spill, the correct thing to do is to use the oil spill settlement to buy back what we can of what is left. Americans as a whole will feel a proud sense if buybacks are carried out as outlined by the

Alaska State Legislature. While we have the money, we need to meet the forestry interests' demands and acquire the lands prescribed by the Alaska Legislature.

The buybacks are the least we could do to pay for the dismal thing which everyone allowed to happen, the Alaska Oilspill. If it can be payed, then people shouldn't have to pay for one great loss, the Alaska Oilspill with additional loss of forest land. We need to take this golden opportunity to acquire forest land while the opportunity is upon us.

I hope the decision is made to protect the resources as they are. The resources are "money in the bank" if we protect them.

Only this is the type of money that will grow without a doubt.

At a time when tourists are becoming more confined every year by sheer numbers, it does not seem appropriate to continue to keep the forest land in a vulnerable situation such as ⁱⁿ the situation we find the lands prescribed by the Alaska State Legislature for acquisition this year. The language and intent of the Legislature ~~is~~ demonstrated in HB 411 shows the wise use of money collected for damages caused by the Exxon Valdez oil spill in Alaska. The growth of Tourism is inevitable and land should be protected to ensure a

greater chance of Alaska lands being able to provide a quality Alaskan style experience. At a time when many young Alaskans are returning to the State, it would be in their best interest if acquisitions in verbatim with HB 411 be made.

The price for the acquisition is a great value for the State, the forestry interests and the people who will use the land if it is kept in its present form.

Billions of people will be served just knowing the surface and subsurface rights have been saved. Most of these people will not even have to physically sense

11-

The majesty of the land involved. People
are easy to please. Set good examples
and people will be gracious.

Dear Mr. Holton:

Thank you for your suggestions regarding the restoration projects you believe are most important for the Trustee Council to implement following the *Exxon Valdez* oil spill. As you may be aware, a number of other citizens and interest groups also advocate acquisition of habitat or timber rights as an important part of the restoration process.

Your opinions and suggestions, along with those received from other members of the public, will be carefully considered as the Trustee Council makes decisions about the overall restoration program.

We very much appreciate your ideas and concerns. If you have additional comments or questions, please feel free to contact me in care of the address above.

Sincerely yours,

Synopsis: Mr. Holton is advocating using settlement funds for purchase of land and/or timber rights as outlined in Alaska HB 411. He mentions the particular areas of his interest several times: Kachemak Bay and Kachemak Bay State Park Prince William Sound, Kodiak, Afognak and Yakataga.

He favors acquisition in order to prevent loss of: wildlife habitat, tourism opportunities, and habitat which is important to commercial fisheries. He feels that money should be spent on habitat acquisition before it is spent on research, which should instead be conducted after the habitat acquisition is complete. He says to protect the resources "as they are." In his opinion the cost for acquisition is a great value for the state, forestry interests, and the people who will use the land.

TC is considering
Public Acquisition
Proposals and is
developing a process for
evaluation.

Dear Sirs,

Afognak Island meets
all criteria.

1. Hard hit by Exxon Valdez
2. Extremely important productive
wildlife and fish ecosystem
3. Archeologically ancient
areas
4. Old growth rainforest
a rare land for this
area
5. It needs protection from
further logging. The
island is going rapidly
- 6) It is for sale. Afognak Joint Venture
has 120,000 acres of
prime unique habitat
for sale.

7.) This land has a
multitude of diverse
wildlife species.
Deer, Elk, the Kodiak
Brown Bear, (largest of
all bears), otters, sea
otters, martin, Eagles,
Mergansers, Loons, Fox
Rabbit, Squirrel, Mallards,
Partridge, Marbled Murrelet
weasel, Red, Pink, King,
and Chum and Silver Salmon
Rainbow trout. Warblers
Sparrows, Crows, Robins,
Varied Thrush, Hermit
Thrush, Winter wren,
Old Squaw.

The list goes on. A
multitude of flora also
so diverse as old growth
evolves in this manner.

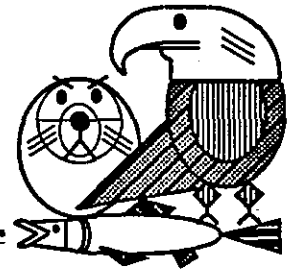

Thank you for your consideration
of Afognak Island.

Sincerely

Frank Rott

EXXON VALDEZ OIL SPILL
TRUSTEE COUNCIL
ADMINISTRATIVE RECORD

Dear Sirs:

Recently I met with Mr. John Thompson, Chair of the Prince William Sound Loggers United, to hear his concerns regarding the impacts to logging industry workers that would result from timber acquisitions or logging moratoria in PWS by the Trustees.

I included his concerns in the Cordova City Council agenda packet, and following Mr. Thompson's presentation, Council authorized a letter of support from the Mayor and City Council of Cordova.

PWSLU is an association of workers employed to log timber owned or controlled by the Eyak Corporation and/or Sherstone, a joint enterprise of Whitestone and Eyak Corporation. Most are employed directly by Whitestone and reside in the Cordova area.

Anticipating approximately 10 years of employment, many of these workers were induced by this security to relocate and participate as productive citizens in our community, assuming the responsibilities of rental agreements, purchase of homes, enrollment of children in school, etc.

We continue to support our resolution for logging moratoria and the purchase of most or all of the timber rights in the PWS area. However, we are very concerned that jobs and security will be eliminated, and feel that appropriate and adequate compensation for this loss should be included in any plan which results in the termination of planned logging activity.

We believe it is an obligation of the Trustees, although not limited to them, to include consideration of these individuals in any transaction that also effectively purchases their jobs. We ask that their employment security interests be given the same level of respect, protection, and compensation as the property and business interests of the resource owners, not only in the Prince William Sound area, but wherever the timber industry and its workers may be affected by trustee decisions.

Thank you for your consideration of this matter.

Sincerely,

Charles K. Weaverling
Mayor

EXXON VALDEZ OIL SPILL
TRUSTEE COUNCIL

Dear Sirs:

I am writing once again to urge you to place Habitat acquisition very high on your agenda. There is little doubt that the remaining coastal habitat around Prince William Sound, the Outer Gulf Coast, the South Shores of Kachemak Bay and portions of Adognak and Kodiak Islands should be protected. All of this area was adversely affected by the spill as we all know.

These highly productive waters and their forested shorelines and drainage systems are also heavily used for recreational activities. The spill was disastrous to the 1989 tourist and recreational season. In the Homer area (with which I am most familiar) there are recreation and education organizations which have yet to recover completely from that dreadful summer.

The dip net fishery in China Foot Bay is still closed down and will likely remain so until that area is returned to Kachemak Bay State Park and public ownership.

This brings me to the state of disarray in which the Kachemak Park restoration (Buy-back) remains at present. This is one of a number of prime examples where the Trustee Council is in a position to correct an ongoing and ever more imminent threat to a very important and highly productive habitat region.

There can be little doubt that any sort of timber harvest, no matter how carefully done and regulated,

will cause untold destruction to local fisheries and recreational opportunities in this very productive and popular region. Erosion into the critical habitat area, blow down of remaining trees, damage to spawning streams and lakes, and the obvious fact that no timber will grow back in this latitude for several generations are a few salient reasons which cry out for the protection of this habitat by restoring the park. Since in spite of many efforts over many years, the State has failed in this, it may well remain for your Trustee Council to accomplish this vital piece of habitat protection.

Go for it!

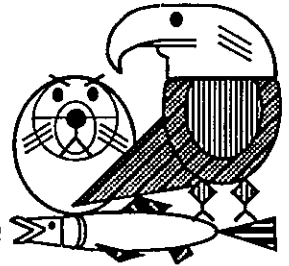

Thank you

Richard W. Tyler

Dear Mr. Tyler:

Thank you for your comments of September 14 expressing support for the concept of habitat protection in general, and purchase of timber inholdings in Kachemak Bay State Park in particular, as part of restoration activities undertaken by the *Exxon Valdez* Oil Spill Trustee Council.

Kachemak Bay is included as a component of the 1993 habitat protection imminent threat analysis project. This project and the associated process were discussed at the September 14, 1992 Trustee Council meeting. A copy of the press release summarizing the meeting is enclosed for your information.

Your opinions and suggestions, along with those received from other members of the public, will be carefully considered as the Trustee Council makes decisions about the overall restoration program.

We very much appreciate your ideas and concerns. If you have additional comments or questions, please feel free to contact me in care of the address above.

Sincerely yours,

TRUSTEE COUNCIL
