Phone: (907) 278-8012 Fax: (907) 276-7178

Restoration Office Tentative Meeting Schedule

September, 1995

- 19-20 Public Advisory Group field trip to Valdez & Chenega
- 19-22 AAS Alaska Science Conference--(Fairbanks)
- 22-23 Elders/Youth Conference
- 26-29 Systematic Development of Informed Consent Training
- 28 LB&A meeting--(Fairbanks)
- 29-Oct. 1 Pacific Seabird Restoration Conference--(Girdwood)

October, 1995

- 5 Restoration Work Force meeting
- 17 Restoration Work Force meeting
- 25 Octopus project - technical review
- 26 Clam project - technical review--(Seward)
- 30 Harlequin duck project - technical review

DRAFT

November, 1995

- 1-2 Shoreline Treatment & Monitoring Workshop
- 16-17 Pacific herring projects - technical review
- 27-28 Pink salmon genetics, straying & stock ID projects - technical review
- 29 Coghill Lake/Sockeye project - technical review
- 30-Dec. 1 Seabird/Forage fish, APEX project - technical review

December, 1995

- 6-7 PAG meeting*
- 12* Trustee Council meeting on final projects in FY96 Work Plan

January, 1996

- 16-19 Annual Restoration Workshop
- 20-22* SEA program - technical review

February, 1996

- 7-8 PAG meeting*

June, 1996

- 5-6 PAG meeting*

Trustee Agencies

State of Alaska: Departments of Fish & Game, Law, and Environmental Conservation

United States: National Oceanic and Atmospheric Administration, Departments of Agriculture and Interior

July, 1996

31-Aug 1 PAG meeting*

For more information on any of the above meetings, please contact the Anchorage Restoration Office at 1-800-478-7745.

PUBLIC SERVICE ANNOUNCEMENT

Date: September 18, 1995
Subject: Presentation on seabird restoration October 1
Contact: L.J. Evans or Stan Senner 278-8012

Please announce or post!

Public Meeting on Seabird Restoration

Seabird restoration techniques and restoration options specifically designed for seabird species not recovering from the *Exxon Valdez* oil spill will be discussed at a public meeting at the Alyeska Prince Hotel in Girdwood on Sunday, October 1, from 1:00 to 3:00 PM. The meeting will be hosted by the Pacific Seabird Group and the *Exxon Valdez* Oil Spill Trustee Council.

During a one-hour overview of seabird restoration at the Sunday session, seabird biologists will explain the processes that need to be followed in developing a restoration plan and provide a preliminary report on a seabird workshop taking place over the weekend. After the presentation, members of the public will have the opportunity to ask questions or make comments.

TRUSTEE COUNCIL MEETING ACTIONS

August 25, 1995 @ 8:30 a.m.
Continuation Meeting From August 15, 1995

By Molly McCammon
Executive Director

DRAFT

Trustee Council Members Present:

- Jim Wolfe, USFS
- Deborah Williams, USDO
- Bill Hines, NMFS

- Frank Rue, ADF&G
- Ernie Piper, ADEC
 - * ● Craig Tillery, ADOL

* Chair

● Alternates:

Jim Wolfe served as an alternate for Phil Janik for the entire meeting.
Deborah Williams served as an alternate for George T. Frampton, Jr. for the entire meeting.
Bill Hines served as an alternate for Steve Pennoyer for the entire meeting.
Ernie Piper served as an alternate for Gene Burden for the entire meeting.
Craig Tillery served as an alternate for Bruce Botelho for the entire meeting.

1. Approval of the Agenda

APPROVED MOTION: Approved the Agenda. (Attachment A)

APPROVED MOTION: Approved June 1, June 16 and August 15, 1995 Trustee Council meeting notes (with noted changes to August 15 meeting notes). Motion by unidentified, second by Wolfe. (Attachment B)

2. Public Advisory Group (PAG) Report

APPROVED MOTION: Request Executive Director and staff to develop criteria to differentiate between oil spill-related projects and normal operation functions of EVOS Trustee agencies. Criteria to be reviewed by the PAG, then presented to the Trustee Council. Motion by Williams, no opposition.

Trustee Agencies

State of Alaska: Departments of Fish & Game, Law, and Environmental Conservation

United States: National Oceanic and Atmospheric Administration, Departments of Agriculture and Interior

3. Resolution Honoring Walter Meganack, Sr.

APPROVED MOTION: Resolution honoring Walter Meganack, Sr., presented to members of his family. Motion by Williams, second by all Trustee Council members.

4. Additions to the Injured Species List

APPROVED MOTION: Add Common Loons and Kittlitz's Murrelets to the injured species list and re-examine the data on cormorants and scoters and present findings to the Trustee Council to determine if they should also be added to the Injured Species List. Motion by Williams, second by Unknown.

5. FY95 Technical Budget Amendment

APPROVED MOTION: Approved the transfer of \$52,000 from the Alaska Department of Environmental Conservation and \$50,000 from the National Oceanic and Atmospheric Administration to the Alaska Department of Fish and Game for the purpose of contracting for an external audit in FY95. Motion by Williams, second by Rue.

6. FY96 Work Plan

APPROVED MOTION: The Trustee Council adopts the recommendations for FY96 projects as outlined in the spreadsheets of August 15, including the conditions outlined in a memo of August 15, making the changes reflected on page 12 of today's handout and with the following additional conditions. If the principal investigator has an overdue report from a previous year, no funds may be expended on a project involving that principal investigator until the report is submitted or a schedule for submission is approved by the Executive Director. The Council approves \$589,100 for FY97 report writing costs associated with FY96 field work for the following SEA program projects, 96320 - I, J, M, and N. These costs will be considered as part of the FY97 Work Plan. Also, \$50,000 is added to project 96027. Amended language for the sockeye projects 96255 and 96258A to clarify that authorized funding is for FY95 closeout with deferral of discussion on future work. Motion by Rue, second by Williams.

DRAFT

APPROVED MOTION: Approved funding for administration, public information and science management, project 96100, at \$3,439,600. Motion by Williams, second by Rue.

APPROVED MOTION: Approved funding for the third payment of \$12 million into the *Exxon Valdez* Restoration Reserve fund, project 96424. Motion by Williams, second by Wolfe.

APPROVED MOTION: Approved investment strategy similar to that for original \$24 million reserve deposit.

APPROVED MOTION: Approved, subject to further review in late September or Early-October, \$1,193,000 for project 96126, Habitat Protection and Acquisition Support. These funds will continue work for the large and small parcel acquisition and protection process which includes work for negotiations appraisals, title searches, and hazardous materials surveys. Motion by Wolfe, second by all Trustee Council members.

7. Additional Follow-up Requested

Directed the Executive Director to establish a small group to review the costs and logistics for habitat acquisition, and report back to the Trustee Council with any recommended changes.

Directed the Executive Director to report back to the Trustee Council at a future date on the Oil Spill Public Information Center.

Requested the Executive Director to ensure that the *Exxon Valdez* Oil Spill audit include an examination of the transfer and handling of money between funds in order to improve efficiency and maximize interest earnings.

Requested that the Executive Director clarify the explanation of the "Adjustments" category contained within the "Past and Estimated Future Uses of the Civil Settlement Fund" table.

Meeting adjourned.

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 1

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
Pink Salmon Projects				\$3,597.4	\$3,644.2	\$3,242.3	\$3,325.3	\$2,558.8	\$2,056.8	\$11,183.2		\$1,284.6	\$1,957.7
<i>PAG Recommendation: The pink salmon cluster budget appears high and should be examined in an effort to reduce costs. The PAG supports the Executive Director's efforts to bring experts together to examine the program, and suggests that knowledgeable PAG members be invited to participate.</i>													
96076	Effects of Oiled Incubation Substrate on Straying and Survival of Wild Pink Salmon	NOAA	NOAA	\$393.8	\$393.8	\$393.8	\$715.0	\$525.0	\$260.0	\$1,893.8	2nd. yr. 5yr. project	\$107.7	\$286.1
<u>Abstract</u>				<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>					
This project examines the effects of oil exposure during embryonic development on straying, marine survival, and gamete viability of pink salmon. Controlled experiments relating oil exposure to pink salmon straying will determine the role of oil and other factors on straying so that field studies of straying in PWS after the spill can be interpreted, and so that the significance of straying on management and restoration strategies can be evaluated.				This is a technically excellent proposal that will document the extent of straying of pink salmon in Southeastern Alaska due to exposure to oil. This study could be a crucial part of the overall pink salmon damage if 95191B establishes heritable genetic damage from oil exposure. However, genetic damage has not been established, and there appear to be better methods for considering straying with respect to management strategies. Since this project is being initiated in FY 95, it should be evaluated following the return of the adults in 1996 to see if there is sufficient reason to continue.				Defer pending further review of all pink salmon proposals addressing genetics/straying/stock identification questions (fund interim). If funded, evaluate degree of straying after FY 96 returns to decide whether the project should close-out or continue. This project could establish that increased straying is an effect of oil exposure, which will aid interpretation of EVOS damage assessment results. Potential for future management applications not as high as for other pink salmon projects.					
6093A	Restoration of PWS Pink Salmon by Diversion of Harvest Effort: Quantitative Genetic Assessment of Early-Returning Pink Salmon Broodstock	ADFG	Smoker/UAF	\$111.9	\$111.9	\$111.9	\$198.4	\$211.7	\$171.9	\$693.9	1st yr. 5yr. project		\$111.9
<u>Abstract</u>				<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>					
Development of early-returning broodstock at hatcheries might beneficially reduce fishing on injured stocks. However, a risk is that early stocks might interbreed with local salmon and hurt their fitness. Risk might be reduced by stock selection or broodstock management. This research uses quantitative genetics to assess 1) genetics of run timing in donors (predicts effectiveness of stock selection and broodstock management) and 2) fitness loss from interbreeding (exposes loss by laboratory breeding experiment).				Rated more highly than 96076, as the latter does not answer questions fully. This is a technically excellent and feasible proposal that will measure the strength of the genetic basis for straying in discrete pink salmon populations and whether out-breeding depression could result from hybridization of early and late-run pink salmon. Investigators are among the best in the world. The project will eventually contribute greatly to management of pink salmon stocks.				Defer pending further review of all pink salmon proposals addressing genetics/straying/stock identification questions. If funded, fund for two pink salmon life-cycles (4 years). Determine future funding then. This project will estimate the genetic variability of run timing in pink salmon. In combination with 96093B-BAA, the two projects will determine mechanisms by which pink salmon at different spawning localities interact genetically. This information is essential to determine whether management strategies should address a single or multiple stocks and whether it is possible to develop early-run hatchery stock, the harvest of which will not compete with depressed wild stocks.

<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
Development of early-returning broodstock at hatcheries might beneficially reduce fishing on injured stocks. However, a risk is that early stock fish might stray and interbreed with local salmon and reduce their fitness. The risk can be estimated by measuring gene flow experimentally. Potential early run pink salmon will be tagged with a natural gene marker and planted in a local stream, simulating straying. The effect will then be directly estimated over generations by measuring the genetic tag in the test stream and its gene flow to others.		This is a technically superior proposal that will answer basic questions about gene flow among separate streams in Prince William Sound. This will establish whether there are only a few or many stocks in Prince William Sound. These are very significant and basic questions that will influence the nature and cost of future pink salmon management.		Defer pending further review of all pink salmon proposals addressing genetics/straying/stock identification questions. If funded, fund for two life-cycles (4 years). Determine future funding then. This project will estimate the genetic effects of "straying" in pink salmon. In combination with 96093A-BAA, will determine mechanisms by which pink salmon from different spawning localities interact genetically. This information is essential to determine whether management strategies should address a single or multiple stocks and whether it is possible to develop early-run hatchery stock, the harvest of which will not compete with depressed wild stocks.									
96093C	Restoration of Prince William Sound Pink Salmon by Diversion of Harvest Effort	ADFG	PWSAC	\$647.0	\$727.4	\$727.4	\$933.9	\$860.8	\$1,271.9	\$3,794.0	1st yr. 7 yr. project		\$727.4
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
Pink salmon egg mortality attributed to oiling of anadromous streams has contributed to a reduction in adult pink salmon returns. Natural populations of pink salmon are harvested with large numbers of hatchery pink salmon in mixed stock fisheries, which may limit escapement to damaged streams and thereby delay recovery. This project will evaluate the feasibility of changes in hatchery production to reduce exploitation of injured wild stocks. Specific projects will focus on changing the location and timing of hatchery returns in western PWS.		This project is an enormous scientific effort, and in combination with 96093A and B, would establish a program leading to the diversion of harvest effort from injured wild stocks. However, the project description does not do an adequate job of tying together all of the elements needed to implement such a program, nor does it sufficiently explain the risks involved, which are many. Previous guidance from the Trustee Council has emphasized remote releases rather than changes in run timing. This proposal needs further evaluation in the context of the fall review of pink salmon genetics, straying, and stock identification proposals.		Defer pending further review of all pink salmon proposals addressing genetics/straying/stock identification question.									

9/1/95 DRAFT/PAGE 3

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
95139A1	Salmon Instream Habitat and Stock Restoration - Little Waterfall Barrier Bypass Improvement	ADFG	ADFG	\$55.0	\$55.0	\$55.0	\$35.0	\$15.0	\$55.0	\$160.0	2nd yr. 4 yr. project	\$55.0	
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This proposal will provide for continuation of Project 95139A1 to complete the barrier bypass improvement at Little Waterfall Creek. It will evaluate whether the improvements are successful once construction is complete. The project will increase spawning habitat use by pink and coho salmon and thus will increase salmon production in ensuing years.			This proposal is technically sound and its implementation will likely enhance pink salmon production.			Fund. Project is intended to increase available spawning habitat and thus provide additional pink and coho salmon for harvest as a replacement for salmon lost in EVOS.							
95139A2	Spawning Channel Construction Project Port Dick Creek, Lower Cook Inlet	ADFG	ADFG	\$223.1	\$230.5	\$230.5	\$37.0	\$23.2	\$30.0	\$320.7	1st yr. 5 yr. project	\$230.5	
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
The proposed Port Dick Pink Salmon Spawning Channel would restore wild pink and chum salmon stocks. The proposed project would increase the spawning habitat available in Port Dick Creek by restoring formerly used tributaries by excavating down to stable water sources.			Implementation of this proposal will likely enhance pink salmon production, and contains plans to monitor performance of the modified channel. It had been previously approved in 1995.			Fund. Project is intended to increase available spawning habitat and thus provide additional pink and chum salmon for harvest as a replacement for salmon lost in the oil spill.							
95139C1	Montague Riparian Rehabilitation Monitoring Program	USFS	USFS	\$43.1	\$9.7	\$9.7	\$0.0	\$0.0	\$0.0	\$9.7	3rd yr. 3 yr. project	\$9.7	
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This project is a continuation of 94139 and 95139C. In FY 94, funding was granted to construct 25 to 30 structures in streams flowing through clearcut areas on Montague Island. These structures were designed to improve fish spawning and rearing habitat, prevent erosion, and help restore the natural flows and stream features that existed prior to logging. The 1994 work also included the improvement of 20 acres of riparian vegetation. This project is to continue evaluation of structures, repair any damage that may have occurred and assess changes in the aquatic habitat, stream channels, and substrates. The riparian vegetation work will also be evaluated.			This proposal is for the third year of a project that improves riparian habitat on Montague Island. The proposal is for monitoring and evaluation of actions taken in 1994 and 1995, which is appropriate.			Fund. This project is designed to monitor results of a previous EVOS project.							

This project is a continuation of 94139 and 95139C. In FY 94, funding was granted to construct 25 to 30 structures in streams flowing through clearcut areas on Montague Island. These structures were designed to improve fish spawning and rearing habitat, prevent erosion, and help restore the natural flows and stream features that existed prior to logging. The 1994 work also included the improvement of 20 acres of riparian vegetation. This project is to continue evaluation of structures, repair any damage that may have occurred and assess changes in the aquatic habitat, stream channels, and substrates. The riparian vegetation work will also be evaluated.

This proposal is for the third year of a project that improves riparian habitat on Montague Island. The proposal is for monitoring and evaluation of actions taken in 1994 and 1995, which is appropriate.

Fund. This project is designed to monitor results of a previous EVOS project.

9/1/95 DRAFT/PAGE 4

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96139C2	Salmon Instream Habitat and Stock Restoration - Lowe River and Valdez Arm Drainages	ADFG	ADFG	\$174.6	\$174.6	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This project would provide an in-depth evaluation of in-stream habitat restoration possibilities in the Lowe River and Valdez Arm drainages. It continues a project halted when concerns were raised during review of an environmental assessment to construct habitat improvements in the Lowe River for chum and pink salmon.			There are no clearly identified methods in the proposal for estimating the enhanced production of fish in the Lowe River. Therefore, it was not possible to evaluate the risks and benefits of the project.			Project withdrawn by agency.							
96139D	Supplemental Monitoring for the Proposed Spawning Channel Construction Project, Port Dick Creek, Lower Cook Inlet	ADFG	Coble Geotech.	\$9.2	\$9.2	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
A separate project (96139A2) to construct the proposed Port Dick Pink and Chum Salmon Spawning Channel would restore the wild pink and chum salmon stocks to pre-spill levels. This project would provide hydrologic monitoring for that project.			Reviewed jointly with 96139A2. Same recommendation.			Do not fund as separate project. Activity funded as part of 96139C1.							
96179	Relationships Between Stream Habitat and Stream Classification Within Prince William Sound	USFS	USFS	\$218.1	\$218.1	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
Channel types represent similar hydrological and geological reaches of stream. They should also be relatively good descriptions of what is present for in-stream fish habitat. Channel type interpretations should provide a quantitatively replicable measure for presence of in-stream spawning and rearing habitat. This project will further the understanding of the relationships between habitat and production of juvenile salmonids within PWS.			Although this is a solid proposal to continue developing a stream classification system, the proposal is not justified in the context of the oil spill program.			Do not fund.							

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 5

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96186	Coded Wire Tag Recoveries From Pink Salmon in Prince William Sound	ADFG	ADFG	\$260.5	\$254.9	\$254.9	\$260.5	\$260.5	\$85.0	\$860.9	7th yr. 10yr. project	\$254.9	
<u>Abstract</u> This project funds recovery of coded-wire tags in PWS pink salmon. The recovered tags are used to help ADFG manage the commercial fishery to protect injured stocks. The project is part of a program to transition to a more precise in-season tool, otolith marking, with a permanent funding source other than the Trustee Council. (This project was formerly numbered 95320B.)				<u>Chief Scientist's Comments</u> This project is necessary to support the transition to the otolith thermal mass marking. This project should be discontinued only after feasibility of TMM is demonstrated.				<u>Trustee Council Action</u> Fund. Future years' funding, as recommended, includes two years of overlap with Otolith Thermal Marking Project (96188).The project provides information that allows managers to vary the timing and location of commercial harvest to protect injured wild stocks. This is especially important for stocks in the hard-hit Southwest District in PWS and would enable continued fishing in this area.					
96188	Otolith Thermal Mass Marking of Hatchery Reared Pink Salmon in Prince William Sound	ADFG	ADFG	\$95.2	\$93.2	\$93.2	\$100.5	\$100.5	\$48.8	\$343.0	2nd yr. 6 yr. project	\$93.2	
<u>Abstract</u> This project will develop otolith mass marking as an in-season stock separation tool for pink salmon in PWS. In-season stock composition data is used by fishery managers to protect damaged wild pink salmon stocks from overharvest in mixed-stock fisheries. Coded-wire tags are presently used for this purpose in the Sound. Transitioning to otolith marking will reduce costs and increase precision. (This project was formerly numbered 95320C.)				<u>Chief Scientist's Comments</u> This is the continuation of a previously approved program. It is innovative, cost effective, and probably one of the most effective steps the Trustees can support to improve pink salmon management.				<u>Trustee Council Action</u> Fund. Otolith marking is a more accurate and less expensive technology for providing the information now obtained through coded wire tags. Future years' funding, as recommended, includes two years of overlap with Coded Wire Tag (Project 96186). Funding for application of this technique will make a transition to non-Trustee sources by FY 99 (only closeout funds proposed in '99).					
96190	Construction of a Linkage Map for the Pink Salmon Genome	ADFG	Allendorf/UM	\$240.0	\$240.0	\$240.0	\$250.0			\$490.0	1st yr. 5yr. project		\$240.0
<u>Abstract</u> Proposal would construct a detailed genetic linkage map for pink salmon by analyzing the genetic transmission of several hundred DNA polymorphisms. The ability to genetically map the location of oil-induced lesions will allow the thorough identification, description, and understanding of oil induced genetic damage. This research will also aid other pink salmon studies including estimation of straying rates, description of stock structure, and testing if marine survival has a genetic basis.				<u>Chief Scientist's Comments</u> This project is very challenging and potentially worthwhile for pink salmon management. Implementation of this project might await the outcome of the laboratory oil exposure experiments (95191A & B). It should be considered along with other related proposals in the Fall review.				<u>Trustee Council Action</u> Defer pending further review of all pink salmon proposals addressing genetics/straying/stock identification questions. Tentatively consider not funding at this time, pending results of 95191A & B.					

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/ Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96191A	Oil-Related Embryo Mortalities in PWS Pink Salmon Populations	ADFG	ADFG	\$474.6	\$474.6	\$474.6	\$407.0	\$246.0	\$0.0	\$1,127.6	5th yr. 7 yr. project	\$389.5	\$85.1
<u>Abstract</u> Elevated embryo mortalities were detected in populations of pink salmon inhabiting oiled streams following the oil spill. The purpose of this project is to continue to monitor the recovery of pink salmon embryos in the field, provide laboratory verification of the field results, and verify and identify the occurrence of genetic damages. Results of these studies may provide the first evidence of heritable injury in fish exposed to chronic or acute sources of oil pollution.			<u>Chief Scientist's Comments</u> The assessment of embryo survival in the field is worthwhile to verify the 1994 result that no survival difference exists between oiled and unoiled streams for even-year pink salmon. However, the search for microlesions in the genome of injured pink salmon, through employing a variety of the latest genetic techniques, may not be able to detect these very rare events in the many possible locations for such mutations. The molecular genetics should not go forward in FY 96 until the results from FY 95 have been reviewed in the fall. If the adults from the 1994 brood year that were exposed as eggs do not produce a f2 generation, then only closeout funding should be provided.			<u>Trustee Council Action</u> Fund ongoing component of project. Defer decision on funding molecular genetics component of project pending further review of all pink salmon proposals addressing genetics/straying/stock identification questions. This project monitors potential on-going injury to and recovery of pink salmon and explores the hypothesis that oil spill injury is being passed on genetically.							
96191B	Injury to Salmon Eggs and Pre-emergent Fry Incubated in Oiled Gravel (Laboratory Study)	NOAA	NOAA	\$169.3	\$169.3	\$169.3	\$75.0	\$88.0	\$0.0	\$332.3	5th yr. 7 yr. project	\$72.8	\$96.5
<u>Abstract</u> This project will determine if oil can cause heritable damage to pink salmon reproductive capacity. This requires culturing three generations of pink salmon which provides opportunities to examine other immediate and long-term effects of incubating in oiled gravel. The project already is underway and oil exposures were completed in 1994. This FY 96 proposal focuses on incubating eggs from maturing adults in 1995 and coded-wire tagging the second generation for release in Spring 1996.			<u>Chief Scientist's Comments</u> This work is absolutely essential to continue in order to resolve any remaining questions about the nature of the injury to pink salmon, the course of recovery and the persistence of injury. However, if the returning adults from the 1994 brood year that were exposed as eggs do not produce a f2 generation, then funding should be reduced appropriately.			<u>Trustee Council Action</u> Defer pending further review of all pink salmon proposals addressing genetics/straying/stock identification questions (fund interim.) Tentatively consider funding contingent on review of results of FY 95 field season. Budget will be reduced if insufficient numbers of net-pen raised salmon from FY 95 survive. This is a laboratory companion project to 96191A.							
96194	Pink Salmon Spawning Habitat Recovery	NOAA	NOAA	\$182.5	\$182.5	\$182.5	\$75.0	\$0.0	\$0.0	\$257.5	1st yr. 2 yr. project		\$182.5
<u>Abstract</u> This project would examine the level of oil contamination in pink salmon streams in 1989-90 and in 1995. Analyses would allow a better assessment of the oil exposure in 1989 and 1995 and would complement the elevated salmon egg mortalities measured since 1989. This study would also synthesize information from other Trustee studies to determine the likelihood of damage from oiled stream gravels. If restoration of contaminated stream gravels were contemplated, knowing the contamination levels in 1989 and 1995 would be valuable, as would the synthesis effort of prior studies.			<u>Chief Scientist's Comments</u> This is an excellent study that will likely tie actual concentrations of oil in gravel in pink salmon streams to embryo mortalities and finally illuminate the role of direct exposure to oil in potentially causing the observed multi-year effects in pink salmon embryos.			<u>Trustee Council Action</u> Defer. Consider delaying project one year. Samples are in freezer and stable. Project will be more meaningful once results of 96191 are available. This project ties actual concentrations of oil as obtained from field samples in 1989 and 1990 in pink salmon streams to embryo mortalities and illuminates the role of direct exposure in potentially causing the observed multi-year effects in pink salmon embryos.							

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 7

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/ Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96196	Genetic Structure of Prince William Sound Pink Salmon	ADFG	ADFG	\$178.5	\$178.5	\$178.5	\$0.0	\$0.0	\$0.0	\$178.5	3rd yr. 3 yr. project	\$71.3	\$107.2
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
Previous work found that wild-stock pink salmon suffered both direct lethal and sublethal injuries as a result of the oil spill. An understanding of the population structure of pink salmon in PWS is essential to assess the impact of these injuries on a population basis and to devise and implement management strategies for restoration. This project is designed to delineate the genetic structure of populations of wild pink salmon inhabiting PWS. (This project was formerly numbered 95320D.)			This is the second year of this work on the genetic stock structure of pink salmon in Prince William Sound. This is a good proposal being conducted by well-qualified geneticists. The proposed breeding experiments are justified in order to interpret the heterozygosity of certain genes used as markers.			Fund close-out of current work. Defer new data gathering pending further review of all pink salmon proposals addressing genetics/straying/stock identification questions. This project is designed to determine geographic extent of genetic differences in PWS pink salmon. In combination with 96093A and B, this information will guide development of management strategies for single vs. multiple stocks.							
Herring Projects				\$1,581.8	\$1,432.2	\$1,432.2	\$1,154.9	\$1,013.5	\$1,169.2	\$4,769.8		\$787.1	\$645.1
PAG Recommendation: Fully fund herring projects and, where possible, enhance funds (that is, fund deferred projects if technical and other questions are resolved to the Chief Scientist's satisfaction).													
96074	Herring Reproductive Impairment	NOAA	NOAA	\$347.7	\$200.0	\$200.0	\$69.5	\$0.0	\$0.0	\$269.5	3rd yr. 4 yr. project	\$200.0	
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This study will examine long-term oil impacts on herring due to the oil spill using field and laboratory measurements. The field component will search for reproductive impacts in PWS stocks and the laboratory portion will determine if exposure of various life stages to oil causes genetic damage. This project began following the crash of populations in PWS and represents one of several projects focused on causes of the crash and prospects for recovery.			Most of the major objectives of the work have been accomplished in 1994 and 1995. The remaining work in 1996 is costly relative to what it will add to our knowledge of toxicity of oil to herring reproduction. I therefore recommend close-out funding for this project with no support for additional field or laboratory work.			Fund close-out of the oil-exposure laboratory portion and continuation of field portion. Purpose of study is to understand possible injury to herring reproduction from oil exposure.							

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/ Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96162	Investigations of Disease Factors Affecting Declines of Pacific Herring Populations in Prince William Sound, AK	ADFG	UW/UCD/SFU	\$635.0	\$635.0	\$635.0	\$510.6	\$461.7	\$0.0	\$1,607.3	3rd yr. 5 yr. project	\$204.1	\$430.9
<u>Abstract</u> Field and laboratory studies will focus on Viral Hemorrhagic Septicemia (VHS) and <i>Ichthyophonus hoferi</i> , a pathogenic fungus, to determine their role in the disease and mortality observed in PWS herring since 1993. Herring in PWS will be monitored three times per year for signs of disease and immune status. Specific pathogen-free herring will be used to determine the degree of mortality, blood chemical changes and pathogenicity produced by these organisms alone and in combination with exposure to stressors such as petroleum hydrocarbons, temperature and crowding. (This project was formerly numbered 95320S.)			<u>Chief Scientist's Comments</u> This is an innovative and thorough approach to investigating the potential relationship between oil exposure and manifestation of disease in herring, although the time between the spill and the population crashes raises questions about cause and effect. Nevertheless, there is a plausible basis for the questions being addressed by this work. By exposing pathogen-free herring to oil and challenge by VHS virus and <i>Ichthyophonus</i> in laboratory experiments, the role of these pathogens in the population crashes will be clarified. Also, learning more about the circumstances of disease transmission may benefit herring management.			<u>Trustee Council Action</u> Defer until FY 95 results are evaluated (fund interim). Project is designed to investigate potential link between oil exposure and disease and between disease and the population decline in PWS. Understanding the lack of recovery is important for restoration and resumption of a herring fishery.							
96164	Pacific Herring Program Leadership	ADFG	ADFG	\$49.2	\$49.2	\$49.2	\$49.2	\$49.2	\$49.2	\$196.8	1st yr. 4yr. project	\$49.2	
<u>Abstract</u> The purpose of this project is to enhance coordination, integration and critical review of projects that are designed to study different aspects of Pacific herring in the PWS ecosystem; to better understand the interactions of the components of the ecosystem; and to aid in the recovery of the injured resource and lost services.			<u>Chief Scientist's Comments</u> As revised, this proposal provides the leadership the herring research program deserves.			<u>Trustee Council Action</u> Fund. Increased leadership should increase the effectiveness of the EVO herring program. Note that the balance of funds needed to hire a program leader should come from 96162, 96165, and 96166. It is unlikely this project will transition into normal agency management. In future years, funding will be rolled into other herring projects.							
96165	Genetic Discrimination of Prince William Sound Herring Populations	ADFG	ADFG	\$105.8	\$103.9	\$103.9	\$120.0	\$97.0	\$0.0	\$320.9	3rd yr. 5 yr. project	\$103.9	
<u>Abstract</u> The PWS herring fishery has been in catastrophic decline since 1992. The Alaska Department of Fish and Game recovery effort includes incorporating a knowledge of genetically derived population structure into harvest management. This continuing project will delineate the structure of PWS population(s) and related North Pacific populations using both nuclear and mitochondrial DNA analyses. Tests for temporal and spatial diversity within years and temporal stability across years will be done.			<u>Chief Scientist's Comments</u> This is a continuing project that will directly affect issues of importance for managing Prince William Sound herring. The investigators have performed admirably on past projects, and I recommend further support for the project in 1996.			<u>Trustee Council Action</u> Fund. This project addresses basic questions about the genetic composition of PWS herring in relation to other North Pacific populations. This information is important to management. When setting harvest limits, it is important to know whether there exists one or more genetically distinct populations.							

9/1/95 DRAFT/PAGE 9

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96166	Herring Natal Habitats	ADFG	ADFG	\$444.1	\$444.1	\$444.1	\$405.6	\$405.6	\$1,120.0	\$2,375.3	3rd yr. 9 yr. project	\$229.9	\$214.2
<u>Abstract</u>				<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>					
Past studies have documented damage from oil exposure in adult herring, hatching success of embryos, and levels of physical and genetic abnormalities in larvae. The PWS herring spawning population has drastically declined since 1993, and pathology studies implicated Viral Hemorrhagic Septicemia (VHS) and <i>Ichthyophonus</i> as potential sources of mortality as well as indicators of stress. The project will continue to provide estimates of spawning herring abundance and investigate the lethality of suspected pathogens and the role of environmental contaminants in disease transmission through laboratory and field studies.				Relates to SEA hypothesis and causes of decline in herring, which are fundamental to the EVOS restoration program. However, there is concern about the extent to which some activities can be considered on-going agency management. The budget is too high.				Defer decision pending 1) review of FY 95 results in fall; 2) a review of the recovery objective for herring based on FY 95 results; 3) a review of the project budget; and 4) agreement on plan for transition to normal agency management. In addition, there is a question whether herring spawn deposition surveys are a cost-effective management tool (juvenile herring survey may be more effective). Fund interim. The goal of the project is to improve estimation of spawning biomass, in order to establish harvest levels and guidelines that allow natural restoration to occur and that will sustain a healthy fishery.					
Sound Ecosystem Assessment (SEA)				\$4,783.6	\$5,154.8	\$4,525.7	\$3,600.0	\$2,600.0		\$10,725.7		\$4,525.7	
PAG Recommendation: Fully fund projects in this cluster, as recommended by the Executive Director.													
96320	Sound Ecosystem Assessment (SEA)	ADFG	Cooney, et al				\$3,600.0	\$2,600.0		\$6,200.0	3rd yr. 5 yr. project		
<u>Abstract</u>				<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>					
SEA is a multi-component, interdisciplinary study of factors controlling the production of pink salmon and Pacific herring in PWS. The study investigates the early life stages of these species. Hypotheses about how the physical environment (temperature, salinity, circulation, and water structure) interacts with fish and plankton populations in the region are used to focus and guide the field sampling and modelling studies.				Project helps provide the larger context of ecosystem structure under which restoration must be considered to be effective, and is likely to contribute valuable information for the management of salmon and herring in PWS. A review workshop should be held in January 1996, at which we would expect a substantial review of the first 2 years' work.				Fund. Project 96320 recommendation of \$4525.7 reflects funding for continued work in FY 96. Also, an additional amount for PWSSC report writing in FY 97 (\$589.1) is recommended as result of transition to the NOAA-BAA process. Authorization for these report writing funds is needed to enter into NOAA-BAA contracts. Future program effort and funding will be considered after mid-January SEA program review session. Projected cost in FY 97 is \$3600.0; FY 98 is \$2600.0.					

9/1/95 DRAFT/PAGE 10

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96320E	Salmon and Herring Predation	ADFG	ADFG	\$670.5	\$637.7	\$637.7				\$637.7	3rd yr. 5 yr. project	\$637.7	
<u>Abstract</u> This project would determine the extent to which variations in predation on juvenile pink salmon affect survival and describe mechanisms that cause variation in predation. This would include the identification of fish predators (distribution, abundance, species, and size composition) along the juvenile salmon migratory pathway. The project will also collect samples for a variety of the other SEA efforts.				<u>Chief Scientist's Comments</u> See 96320.				<u>Trustee Council Action</u> See 96320.					
96320G	Phytoplankton and Nutrients	ADFG	McRoy, UAF	\$162.2	\$162.2	\$162.2				\$162.2	3rd yr. 5 yr. project	\$162.2	
<u>Abstract</u> This project would focus on primary production and provide nutrient and phytoplankton data to help evaluate the influence of phytoplankton dynamics on the PWS food web. The project would examine variations in phytoplankton production in relation to zooplankton production and oceanographic conditions.				<u>Chief Scientist's Comments</u> See 96320.				<u>Trustee Council Action</u> See 96320.					
96320H	Zooplankton in the PWS Ecosystem	ADFG	Cooney, UAF	\$329.9	\$323.6	\$323.6				\$323.6	3rd yr. 5 yr. project	\$323.6	
<u>Abstract</u> This project would continue to investigate the annual zooplankton bloom and its relationship to fish predator abundance. The project would sample and monitor the distribution and composition of PWS macrozooplankton populations in collaboration with the physical oceanography component of SEA.				<u>Chief Scientist's Comments</u> See 96320.				<u>Trustee Council Action</u> See 96320.					
96320I	Isotope Tracers - Food Webs of Fish	NOAA	PWSSC	\$194.9	\$270.3	\$195.8				\$195.8	3rd yr. 5 yr. project	\$195.8	
<u>Abstract</u> This project would analyze tissue samples and use shifts in stable isotope ratios that occur with trophic level and food source to describe food sources and predation relationships among species in PWS.				<u>Chief Scientist's Comments</u> See 96320.				<u>Trustee Council Action</u> See 96320. (Note: An additional \$74.5 is recommended to fund report writing costs in FY 97 as a result of transition to the NOAA-BAA contracting process.)					

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 11

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96320J	Information Systems and Model Development	NOAA	PWSSC	\$489.9	\$655.9	\$482.7				\$482.7	3rd yr. 5 yr. project	\$482.7	
<u>Abstract</u> This project would continue work initiated in FY 94 as part of the PWS System Investigation (Project 94320). This particular sub-project would provide an information system appropriate for the PWS System Investigation effort and develop the modeling resources needed to achieve the program's objectives. This sub-project provides for overall data management and technical support to other PWS System Investigation efforts through field data communications; descriptive modeling; numerical modeling; support with sampling technologies; and providing for on-line analysis and visualization tools to provide the means by which various data can be collected, used and understood.			<u>Chief Scientist's Comments</u> See 96320.			<u>Trustee Council Action</u> See 96320. (Note: An additional \$173.2 is recommended to fund report writing costs in FY 97 as a result of the transition to the NOAA-BAA contracting process.)							
96320K	PWSAC: Experimental Fry Release	ADFG	PWSAC	\$55.1	\$61.4	\$61.4				\$61.4	3rd yr. 5 yr. project	\$61.4	
<u>Abstract</u> This project would support the rearing of salmon fry for release , part of an effort to investigate the possible influence of fry size as a determinant of survival during early marine residence as part of the SEA study effort.			<u>Chief Scientist's Comments</u> See 96320.			<u>Trustee Council Action</u> See 96320.							
96320M	Physical Oceanography in PWS	NOAA	Salmon, PWSSC	\$506.9	\$645.8	\$499.4				\$499.4	3rd yr. 5 yr. project	\$499.4	
<u>Abstract</u> This project would investigate the physical oceanographic structure of PWS including the space/time variability of atmospheric and oceanic processes within PWS, investigate relationships between atmospheric forcing (wind, storms, long term temperature changes) and wind and buoyancy-driven currents; determine how these relationships act to retain/disperse food resources for ecologically important species within PWS; and investigate large and fine scale oceanographic structures and major climatic cycles and events.			<u>Chief Scientist's Comments</u> See 96320.			<u>Trustee Council Action</u> See 96320. (Note: An additional \$146.4 is recommended to fund report writing costs in FY 97 as a result of the transition to the NOAA-BAA contracting process.)							

9/1/95 DRAFT/PAGE 12

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96320N	Nekton/Plankton Acoustics	NOAA	PWSSC	\$485.2	\$682.6	\$487.6				\$487.6	3rd yr. 5 yr. project	\$487.6	
<u>Abstract</u> This project would describe macrozooplankton distribution and biomass in real time using hydroacoustics; describe fish predator distribution/biomass in real time using hydroacoustics; investigate hypothesis that plankton/nekton/predator populations aggregate in cyclic patterns and specific locations due to currents and bottom morphology.				<u>Chief Scientist's Comments</u> See 96320.				<u>Trustee Council Action</u> See 96320. (Note: An additional \$195.0 is recommended to fund reporting costs in FY 97 as a result of the transition to the NOAA-BAA contracting process.)					
96320Q	Avian Predation on Herring Spawn	USFS	USFS	\$35.0	\$32.7	\$32.7				\$32.7	3rd yr. 5 yr. project	\$32.7	
<u>Abstract</u> This project would close out research to determine herring egg loss to avian predators such as glaucous-winged gulls, surf scoters, black turnstones and surfbirds.				<u>Chief Scientist's Comments</u> See 96320.				<u>Trustee Council Action</u> See 96320.					
96320R	SEA Trophodynamic Modeling and Validation Through Remote Sensing	ADFG	Eslinger/UAF	\$204.0	\$202.7	\$202.7				\$202.7	3rd yr. 5 yr. project	\$202.7	
<u>Abstract</u> This is a new SEA project in FY 96 as a result of an internal reorganization. Some of the work performed under 95320-G and J is to be done under this project in FY 96 and beyond. This project would continue the trophodynamic modeling of phytoplankton and zooplankton begun in FY 95 and add modeling of ichthyoplankton, herring larvae in particular. It will evaluate and verify the model against field data to be collected using a variety of remote sensing and in situ sampling platforms. (Funds for this project are included in 96320.)				<u>Chief Scientist's Comments</u> See 96320. This reorganization of the SEA program seems logical and effective. This work is central to development of an understanding of controls of year-to-year variation in recruitment success of fish in Prince William Sound.				<u>Trustee Council Action</u> See 96320.					

9/1/95 DRAFT/PAGE 13

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96320T	Juvenile Herring Growth and Habitat Partitioning	ADFG	Narcross, UAF	\$1,234.6	\$1,141.6	\$1,141.6				\$1,141.6	3rd yr. 5 yr. project	\$1,141.6	
<u>Abstract</u>				<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>					
This project would investigate what may be causing the failure of herring runs in PWS by investigating the dynamics of larval and juvenile herring. The proposed project, together with other investigations being undertaken as part of the SEA program would attempt to describe the relative importance of zooplankton abundance, oceanic conditions, habitat requirements, and density dependent predation in determining large fluctuations in herring abundance.				See 96320.				See 96320.					
96320U	Energetics of Herring and Pollock	ADFG	Paul, UAF	\$190.3	\$189.5	\$189.5				\$189.5	3rd yr. 5 yr. project	\$189.5	
<u>Abstract</u>				<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>					
Project would focus on the seasonal somatic energy cycles of two important forage fish species in the spill area— Pacific herring and walleye pollock. The project would explore overwinter survival of juvenile herring and herring reproductive biology and provide energetic information to quantify trophic interactions (food webs) involving pollock.				See 96320.				See 96320.					
96320Y	Variation in Local Predation Rates on Hatchery-Released Fry	ADFG	PWSSC	\$120.0	\$40.0	\$40.0				\$40.0	3rd yr. 5 yr. project	\$40.0	
<u>Abstract</u>				<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>					
Project close out of investigation of the size, composition, behavior and duration of foraging aggregations of predators, especially birds, at fry release sites.				See 96320.				See 96320.					
96320Z1	Synthesis and Integration	ADFG	Cooney/UAF	\$65.1	\$68.8	\$68.8				\$68.8	3rd yr. 5 yr. project	\$68.8	
<u>Abstract</u>				<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>					
This project provides support for synthesis and integration activities associated with the application of SEA field and modelling studies to the restoration of pink salmon and Pacific herring populations in PWS.				Necessary for effective project management, although cost for administrative support seems high.				See 96320.					

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96320Z2	Sound Ecosystem Assessment (SEA): Coordination & Communications	NOAA	PWSSC	\$40.0	\$40.0	\$0.0				\$0.0	3rd yr. 5 yr. project		
<u>Abstract</u>		<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>							
The project is intended to provide coordination, logistical support, and personnel to assist the SEA scientists with coordination and incorporation of local knowledge; and to assist the Restoration Office with communication of project activities and results to communities in PWS.		The project seems less focused upon incorporating Native knowledge and more of a public relations effort for the SEA program and the Prince William Sound Science Center. The Principal Investigator is well qualified and dedicated, but the need to be addressed is best done by the Restoration Office for the entire Restoration Program.				Do not fund. Communications are ongoing effort under other projects (96100 and 96052) and also are responsibilities of sponsoring institution and agencies.							
SEA Program -- Related Projects				\$375.2	\$375.2	\$112.7	\$85.0	\$85.0	\$170.0	\$452.7			\$112.7
96054	Mass-Balance Model of Trophic Fluxes in Prince William Sound	ADFG	Pauly/UBC	\$105.9	\$105.9	\$0.0				\$0.0			
<u>Abstract</u>		<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>							
A workshop is proposed where experts would assemble the materials for a mass-balance model of trophic fluxes in PWS. Model construction would be prepared using the widely-used ECOPATH II approach. A graduate student would collate the results and prepare material for an evaluation meeting where the use of the ECOPATH II model will be considered. An educational video and interactive software for display in the Alaska Sealife Center will also be prepared.		This is an excellent proposal to construct a trophic flux model of Prince William Sound that has the potential to integrate the SEA (96320) and APEX (96163) programs. The initiation of this project would be most appropriate in FY 97. However, I recommend that the Principal Investigator for this project be invited to participate in both the SEA review workshop and the annual science meeting in January 1996.				Do not fund in FY 96. However, project proposer will be invited to participate in the 1995 SEA review workshop and the annual restoration workshop in January 1996.							

9/1/95 DRAFT/PAGE 15

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96193-BAA	Flux and Nutritional Quality of Particulate Organic Carbon: Relationship to Survival of Juvenile Pelagic Fish	ADFG	Naidu/UAF	\$156.6	\$156.6	\$0.0				\$0.0			
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
Particulate organic carbon is the ultimate source of food and energy for marine organisms. Propose to test the SEA Program's (96320) river-lake hypothesis for PWS by correlating the seasonal fluxes and nutritional quality of particulate organic carbon to the time-series variations in primary production and hydrodynamic conditions, with implication on the growth and survival of juvenile pink salmon and Pacific herring. This testing will help to clarify whether the yearly fluctuation in the two fish stocks is related to natural causes, and provide a basis in decision making for either restoration or optimizing the two fish stocks.		Organic carbon undoubtedly plays an important role in the Prince William Sound ecosystem, but the results of this project would probably not measurably contribute to achieving the objectives of the present ecosystem study (i.e., SEA project 96320). More active integration with that program would strengthen this proposal.		Do not fund. Project would not contribute sufficiently to restoration objectives to justify starting a new project.									
96195	Pristane Monitoring in Mussels and Predators of Juvenile Pink Salmon & Herring	NOAA	NOAA	\$112.7	\$112.7	\$112.7	\$85.0	\$85.0	\$170.0	\$452.7	1st yr. 5 yr. project		\$112.7
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
This project will measure pristane in predators of juvenile pink salmon and larval herring to determine the dietary dependence of these predators on alternative prey, <i>Neocalanus</i> spp. copepods. This project will also monitor pristane in mussels as an indirect index of potential year-class strength for pink salmon and herring. These results will be used to evaluate the prey-switching hypothesis of the SEA plan and identify critical marine nursery habitat in PWS.		An extremely valuable and elegant proposal with tremendous potential as an integrative tool for future monitoring of the Prince William Sound ecosystem. Among the highest-rated proposals.		Defer. This is a technically innovative and excellent project. Collecting and measuring pristane in mussels may provide a simple measure of marine productivity, thus allowing predictions about future fisheries production and harvest levels. Evaluate in December based on availability of funds.									

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
	Sockeye Salmon Program			\$2,201.5	\$2,198.0	\$1,765.3	\$427.0	\$75.0	\$150.0	\$2,417.3		\$771.0	\$994.3
	<i>PAG Recommendation: The PAG directs staff to review sockeye projects with an eye to identifying budget reductions, and to close out management-related aspects of the sockeye cluster as expeditiously as possible.</i>												
96048-BAA	Historical Analysis of Sockeye Salmon Growth Among Populations Affected by Overescapement in 1989	NOAA	NRC, Inc.	\$86.7	\$116.9	\$116.9	\$0.0	\$0.0	\$0.0	\$116.9	1st yr. 1 yr. project		\$116.9
	<u>Abstract</u> Overescapement of sockeye salmon in several areas of Alaska occurred in 1989 as a result of the oil spill. Overescapement appears to have reduced salmon growth, leading to reduced survival. However, few records of sockeye growth in these systems occurred before 1989. This project will use adult sockeye scales to reconstruct the growth of sockeye salmon before, during, and after the oil spill event. These data will be used to document the effects of the spill and the subsequent recovery of the sockeye stocks.		<u>Chief Scientist's Comments</u> Excellent proposal. Will help synthesize existing information on sockeye salmon overescapement using an approach not used before in the program. Will supply information that won't be available from Kenai overescapement program. Will help resolve disagreements over data collected in NRDA and restoration program.							<u>Trustee Council Action</u> Defer pending further review. This project would synthesize existing information on sockeye overescapement to resolve questions about the geographic extent and mechanisms of EVOS-related injury due to overescapement, and would provide information needed to design management strategies to overcome EVOS injury. If funded, NOAA should review the proposer's indirect rate during contract negotiations.			
96255	Kenai River Sockeye Salmon Restoration	ADFG	ADFG	\$447.9	\$442.9	\$442.9				\$442.9	6th yr. 6 yr. project	\$239.8	\$203.1
	<u>Abstract</u> Greatly reduced fishing time in upper Cook Inlet in 1989 due to the presence of oil caused sockeye salmon spawning escapements in the Kenai River to exceed the desired amount by three times. The overescapement may have reduced survival of juvenile sockeye salmon. Careful monitoring and possible reduction of Kenai River sockeye salmon harvests may be necessary to ensure adequate escapements. The goal of this project is to restore Kenai River sockeye salmon through improved stock assessment capabilities and more accurate regulation of spawning levels.		<u>Chief Scientist's Comments</u> This has been an excellent program, producing landmark results in '94 and '95. It has achieved its objectives by providing management tools for the upper Cook Inlet fishery. Closeout funds are requested for '96, but the amount seems high.							<u>Trustee Council Action</u> Fund close-out of FY 95 project. Defer a decision on FY 96 and future years until December, pending a review of the 1995 Kenai/Skilak sockeye return and of the overall Kenai/Skilak sockeye program. The project provides in-season identification of actual runs that Cook Inlet fishermen are harvesting which is used by fisheries managers to modify fishing areas and openings to protect Kenai/Skilak stocks.			

9/1/95 DRAFT/PAGE 17

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96256	Columbia Lake Sockeye Salmon Stocking	USFS	USFS	\$40.6	\$60.8	\$60.8	\$0.0	\$0.0	\$0.0	\$60.8	1st yr. 1 yr. project		\$60.8
<u>Abstract</u> Columbia Lake is a 2.8 km ² surface area lake located in Heather Bay near the southeast terminus of the Columbia Glacier. With recession of the glacier, the lake level dropped and the outlet now flows across a moraine, restricting access to salmon. Comparative data suggest that this lake could produce return of 10,000 to 29,000 adult sockeye salmon annually. This project would gather limnological data, transplant fry and monitor the outmigration of smolt and return of adult salmon.				<u>Chief Scientist's Comments</u> Uncertain if this glacial lake can sustain a sockeye run without much more extensive program than proposed.				<u>Trustee Council Action</u> Defer. Revised DPD submitted but not yet reviewed. As requested, the revision combines this project with 96257 and recasts project as a feasibility study. If feasible, these projects could provide significant sockeye salmon to aid PWS subsistence, sport, and commercial fisheries.					
96257	Solf Lake Sockeye Salmon Stocking	USFS	USFS	\$34.3	\$34.3	\$0.0				\$0.0			
<u>Abstract</u> Solf Lake is a 0.61 km ² surface area lake located in Herring Bay on Knight Island. This lake had a run of sockeye salmon until an earthquake in the 1930s blocked the outlet. Limnological data suggest that this lake could produce returns of 19,000 to 22,000 adult sockeye salmon, annually. This project would open the lake to migrating salmon, monitor plankton abundance, transplant fry and monitor the outmigration of smolt and return of adult salmon.				<u>Chief Scientist's Comments</u> This proposed multi-year effort raises questions about mixed-stock fisheries in western Prince William Sound that need to be addressed.				<u>Trustee Council Action</u> Project combined with 96256.					
96258A	Sockeye Salmon Overescapement Project	ADFG	ADFG	\$907.8	\$858.9	\$858.9	\$150.0	\$75.0	\$150.0	\$1,233.9	3rd yr. 6 yr. project	\$460.2	\$398.7
<u>Abstract</u> This proposal provides for a close-out budget for the Kenai lakes sockeye research program with a limited continued sockeye monitoring program for the Kodiak Island lakes. If depressed adult returns from 1989 brood are observed in the Kenai River in 1995, continuation of the evaluation is proposed for the 1996 field season, which would bring the FY 96 cost to \$907,800. In addition, a separate proposal to experimentally evaluate the proposed mechanism leading to reduced production of smolt from the Kenai systems by mean of an <i>in situ</i> enclosure study is integrated into these investigations.				<u>Chief Scientist's Comments</u> Preliminary analysis of the 1995 return appears to confirm a weak return of the 1990 brood year, which would be consistent with an effect of overescapement in 1987 - 1989. The fry weight data and observations on vertical migration of zooplankton might also reflect on effect of overescapement. The application of the limnological work to management is unclear. The closeout costs appear high and further description of the analysis to be conducted on 1995 data is needed. I cannot recommend gathering new data except perhaps in Red and Akalura lakes on Kodiak Island.				<u>Trustee Council Action</u> Fund close-out of FY 95 work on Kenai/Skilak portion; continue limited Kodiak monitoring. Defer decision on FY 96 and future years' Kenai/Skilak work until fall, pending review of 1995 sockeye return and of the overall Kenai/Skilak sockeye program. This project investigates multiple mechanisms for injuries to sockeye caused by overescapement, and also will determine the effects on smolt escapement and ultimate production of returning adults. It also monitors recovery of Kodiak runs and provides information to help restore these runs.					

9/1/95 DRAFT/PAGE 18

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96258B	Sockeye Salmon Skilak Lake Enclosure Project	ADFG	ADFG	\$341.1	\$341.1	\$0.0				\$0.0			
<u>Abstract</u> This proposal will be initiated if the 5-year component of the 1995 Kenai sockeye return is very low. The proposed study examines experimentally 2 major questions about limits to sockeye salmon production. First, can reduced growth rates and subsequent reduced recruitment to fall fry and overwinter survival be explained by decreased availability of zooplankton? Second, are nutrient additions effective at improving zooplankton production and associated decreases in sockeye salmon? This study is a companion to 96258A.				<u>Chief Scientist's Comments</u> There may be reason to fund this in the future but I can not recommend doing this soon.				<u>Trustee Council Action</u> Do not fund in FY 96. Consistent with Chief Scientist's recommendation, decision on future funding should await return of 1995-97 returns, and review of the overall Kenai/Skilak sockeye program.					
96258C	Kenai River Ecosystem Restoration: Starvation-Temperature Study	DOI	DOI	\$57.3	\$57.3	\$0.0				\$0.0			
<u>Abstract</u> This proposal is a companion to 96258A. It will only be initiated if the 5-year component of Kenai sockeye returns at a low level. It examines two questions: First, "Can the variability in overwintering survival of poorly conditioned fall fry be replicated in a laboratory simulation of the naturally observed conditions in Skilak and Kenai Lakes?"... Second, "Can the variability in overwintering survival be modeled with field data on length of winter and seasonal food availability?" The answers will be useful in developing restoration plans and evaluating escapement goals for Kenai sockeye.				<u>Chief Scientist's Comments</u> See comment of 96258B.				<u>Trustee Council Action</u> Do not fund in FY 96. Consistent with Chief Scientist's recommendation, decision on future funding should await return of 1995-1999 returns, and review of the overall Kenai/Skilak sockeye returns.					
96259	Restoration of Coghill Lake Sockeye Salmon	ADFG	ADFG	\$285.8	\$285.8	\$285.8	\$277.0	\$0.0	\$0.0	\$562.8	4th yr. 5 yr. project	\$71.0	\$214.8
<u>Abstract</u> Coghill Lake has historically been a major sockeye producer for PWS. The current production is very low and could jeopardize the sustainability of this sockeye stock without restoration efforts. This project continues a program begun in 1993 to fertilize Coghill Lake to restore the run. A restored sockeye salmon run would provide an important replacement resource for sport and commercial fisheries in PWS.				<u>Chief Scientist's Comments</u> This project is a replacement action for oil spill injury using lake fertilization to increase sockeye salmon production in Coghill Lake. Reviews have identified risks in the approach taken. If the fertilization program does not work, we are not likely to know why. In spite of my reservations about the project, I recommend continued funding.				<u>Trustee Council Action</u> Defer pending review of FY 95 results (fund interim). Consistent with recommendation in FY 95 work plan, there must be a transition to a non-Trustee funding source after FY 97. This project is designed to restore Coghill Lake to its former position as a mainstay of the commercial/sport sockeye fishery in PWS. Although the injury to this fishery was not caused by the oil spill, this project has been conducted on a replacement basis for losses of other fishery resources.

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
Cutthroat and Dolly Varden Trout Projects				\$565.1	\$428.4	\$240.4	\$227.7	\$127.7	\$26.4	\$622.2		\$200.0	\$40.4
<i>PAG Recommendation: Fully fund projects as proposed by the Executive Director, with greater emphasis, if possible (that is, fund deferred projects if approved by the Executive Director).</i>													
96043A	Cutthroat Trout and Dolly Varden Char Population and Habitat Monitoring	USFS	USFS	\$29.6	\$29.6	\$0.0				\$0.0			
<u>Abstract</u>		<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>							
Since 1993 a weir has been operated at Mile 18 Creek near Cordova to monitor the populations of anadromous cutthroat trout and Dolly Varden char, determine population variability, estimate survival rates, and learn more about migration patterns and habitat requirements. Continued study at the weir in 1996 and 1997 will complete the data needed for determining survival rates for several year classes and will give a good indication of the population variability.		This is a new project for Trustee Council funding that proposes to support the operation of a weir on Mile 18 Creek. While this may improve some aspects of sport fishery management at Mile 18, it is not certain how this project will aid the restoration of this species on a regional basis.				Do not fund. Project is part of on-going agency effort.							
96043B	Monitoring of Cutthroat Trout and Dolly Varden Habitat Improvement Structures	USFS	USFS	\$40.4	\$40.4	\$40.4	\$27.7	\$27.7	\$26.4	\$122.2	3rd yr. 5 yr. project		\$40.4
<u>Abstract</u>		<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>							
This project provides for monitoring of habitat improvement structures and their effects on cutthroat trout and Dolly Varden populations. These structures were installed in 1995 under EVOS Restoration Project number 95043B. Additionally this proposal would provide for a project completion report of project number 95043B.		This enhancement project has addressed concerns about supplementation effects and it's technically acceptable.				Defer for resolution of monitoring costs and schedule. This project monitors the success of a previous EVOS project.							
96043C	Cutthroat Trout Habitat Improvement Structures	USFS	USFS	\$100.2	\$100.2	\$0.0				\$0.0			
<u>Abstract</u>		<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>							
This project has the same focus as Project 94043/95043B. Its objective is to improve cutthroat trout rearing habitat in western PWS. In FY 95, the USFS will identify up to four streams with habitat enhancement opportunities. A detailed evaluation and environmental analysis would be conducted and finalized prior to the 1996 field season when implementation of the stream enhancements would take place.		Performance evaluations of previous in-stream manipulations need to be completed prior to commencing new manipulations. In addition, future proposals need to consider species interactions to ensure that manipulations do not provide unintended enhancement of other species.				Do not fund. Reconsider after similar improvements funded under 94043/95043B have been fully evaluated.							

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96145	Cutthroat Trout and Dolly Varden: the Relation Among and Within Populations of Anadromous and Resident Forms	USFS	USFS	\$336.7	\$200.0	\$200.0	\$200.0	\$100.0	\$0.0	\$500.0	1st yr. 3 yr. project	\$200.0	
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
Recovery of cutthroat trout is unknown. Restoration efforts have taken the form of instream habitat modification and stock supplementation. The usefulness of this approach in the long term is unknown. This project would determine the relation between resident and anadromous forms of these fish within the same watershed and between watersheds by examining genetic, meristic, and life-history features of each group. Results from this study will allow a long-term, comprehensive and ecologically sound restoration strategy for these fish to be developed.		This is a fundamentally excellent proposal that will determine the relationships between resident and anadromous forms of Dolly Varden and cutthroat trout. Our lack of knowledge of life history strategies is constraining our ability to identify the most effective restoration strategies for the species. This project will also help clarify damage assessment results obtained previously. Since the findings of this study have national implications, I suggest substantial cost sharing by the USFS.		Fund. The project defines relationships among stocks and life history forms (e.g., anadromous vs. resident), refines understanding of the nature and extent of EVOS injury, and may confirm whether recovery has occurred. This same information has direct implications for management of sport fisheries in Prince William Sound and nationwide, and the USFS is providing significant support for this project.									
96177A	Cutthroat Trout, Dolly Varden Char Habitat Restoration, Lake Elsner Area	USFS	USFS	\$26.6	\$26.6	\$0.0				\$0.0			
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
Timber harvests in the Lake Elsner watershed, 13 miles east of Cordova, may have affected cutthroat trout and Dolly Varden char habitat. The Cordova Ranger District proposes to work with the Eyak Corporation to survey the area and determine if there are any existing or potential impacts. If problems are identified, plans for restoration projects will be developed.		I cannot recommend that the Trustee Council fund the USFS and the Eyak Corporation for restoration of damage apparently caused by the logging practices on private land.		Do not fund.									
96177B	Cutthroat Trout, Dolly Varden Char Habitat Restoration, Port Fidalgo and Port Gravina Area	USFS	USFS	\$31.6	\$31.6	\$0.0				\$0.0			
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
Timber harvests in the Port Fidalgo and Port Gravina area, 20 miles northwest of Cordova, may have affected cutthroat trout and Dolly Varden char habitat. The Cordova Ranger District proposes to work with the Tatitlek Corporation to survey the area and determine if there are any existing or potential impacts. If problems are identified, plans for restoration projects will be developed.		I cannot recommend that the Trustees fund the Tatitlek Corporation and USFS to restore damages caused by logging practices on private land. Perhaps this kind of assistance can be sought through Project 95058 (Assistance to Private landowners).		Do not fund. Desired restoration should be addressed in the ongoing negotiations for purchase of habitat protection in the Tatitlek area.									

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 21

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
Marine Mammal Program				\$1,163.1	\$1,099.5	\$819.0	\$687.3	\$275.1	\$25.0	\$1,806.4		\$792.6	\$26.4
PAG Recommendation: Fund projects of this cluster as recommended by the Executive Director.													
96001	Recovery of Harbor Seals from EVOS: Condition and Health Status	ADFG	Castellini/UAF	\$187.4	\$214.1	\$214.1	\$192.3	\$48.1	\$0.0	\$454.5	2nd yr. 4 yr. project	\$214.1	
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
This project focuses on the health of harbor seals, a marine mammal species that is not recovering in Prince William Sound. Personnel from the University of Alaska in cooperation with the Alaska Department of Fish and Game will work with harbor seals to assess their health, blood and blubber chemistry and size in relation to their ecological and nutritional requirements. The project addresses potential health and nutritional problems that may be impeding harbor seal recovery.		This is a solid technical proposal that addresses a basic question about recovery of harbor seals in the oil spill area. The investigator is well qualified, and is helping to evaluate the most generally accepted hypothesis for the seals' decline.		Fund. This project will document the body condition and nutritional status of harbor seals, thus helping to test the "is it food?" hypothesis for declines in the PWS harbor seal population. This information is necessary to eliminate alternative hypotheses (e.g., predation, disease). This project complements 96064 and will enable managers, subsistence hunters, and others to focus their concerns and efforts on the most probable sources of population decline.									
96012A-BAA	Comprehensive Killer Whale Investigation in Prince William Sound, Alaska	NOAA	N Gulf Oceanic	\$167.5	\$107.2	\$107.2				\$107.2	2nd yr. 2 yr. project	\$80.8	\$26.4
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
This project continues the monitoring of the damaged AB pod and other Prince William Sound killer whales that has occurred on a yearly basis since 1984. It develops a GIS database on killer whales that when coupled with genetic and acoustic data will help evaluate recovery, recognize changes in behavior, and estimate killer whale impact on harbor seals.		This is a very good proposal that will monitor killer whales in PWS to track their recovery, as well as compile past data on this species in GIS usable electronic files.		Fund close-out of prior work including GIS component. Transfer of funds to contractor contingent upon approval of revised DPD and budget, as well as NOAA's approval of contract. Defer decision on monitoring killer whales in FY 96 and beyond until results of FY 95 work and recovery objective for killer whales are reconsidered.									

9/1/95 DRAFT/PAGE 22

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96012B	Impact of Killer Whale Predation on the Recovery of Injured Resources in Prince William Sound	NOAA	NOAA	\$229.5	\$229.5	\$0.0	\$0.0	\$0.0	\$0.0	\$0.0			
<u>Abstract</u> The objective of the proposed project is to investigate the potential impact of killer whale predation on the recovery of PWS injured populations. We will collect biopsy samples from killer whales from each of two putative populations (suspected resident and transient whale populations) from PWS. Killer whale skin and blubber samples will be examined through stable isotope and fatty acid analyses to determine the fraction of the PWS killer whale population that predate on marine mammals versus fish.		<u>Chief Scientist's Comments</u> This proposal would determine the trophic linkages between killer whales and their prey using two tracer methods: stable isotope analysis and free fatty acid ratios. Unpublished results from British Columbia indicate that resident and transitory types of whales can be discriminated easily on the basis of differences in the ratios of two fatty acids. The rate of killer whale predation on various species will not be able to be determined from this approach, and, in general, this proposal does not display a familiarity with the methods that convinces the reviewer that the Principal Investigator can interpret the results.		<u>Trustee Council Action</u> Do not fund. The Chief Scientist has significant technical concerns about this project as proposed.									
96064	Monitoring, Habitat Use, and Trophic Interactions of Harbor Seals in Prince William Sound	ADFG	ADFG	\$381.1	\$347.3	\$347.3	\$347.0	\$100.0	\$25.0	\$819.3	2nd yr. 5 yr. project	\$347.3	
<u>Abstract</u> This project will monitor the status of harbor seals in PWS and investigate the possible causes for the ongoing decline. Aerial surveys will be conducted to determine whether the population continues to decline, stabilizes, or increases. Seals will be satellite-tagged to describe their movements, use of haulouts, and hauling out and diving behavior. Samples of blood, blubber, whiskers, and skin will be collected to study diet, health and condition, and genetic relationships to other harbor seal populations.		<u>Chief Scientist's Comments</u> This is a very good proposal for continuing work on restoration of harbor seals. The investigators are performing well.		<u>Trustee Council Action</u> Fund. This basic study explores reasons for the long-term decline in harbor seals. Focus is on "is it food?" hypothesis, but also addresses alternatives, such as predation and disease. This work will enable resource managers, subsistence users, and others to focus their efforts and concern on the most probable causes of population decline.									
96121-BAA	Stable Isotope Ratios and Fatty Acid Signatures of Selected Forage Fish Species in Prince William Sound, AK	NOAA	Worthy/TXAM	\$51.0	\$51.0	\$0.0				\$0.0			
<u>Abstract</u> This study will examine the feeding ecology of killer whales and their possible impact on harbor seals within PWS. Evidence suggests that the non-recovering status of harbor seals may be due to predation by killer whales. Traditional methods of food web analysis cannot determine whether this is true, but the combination of stable isotope tracer techniques and fatty acid signature analysis will allow us to estimate the degree of interaction between these two injured species.		<u>Chief Scientist's Comments</u> This is a technically innovative program that will analyze fatty acid composition in forage fish, including analysis of the stable isotope composition of the fatty acid molecules. The purpose of the project is to use these findings to decipher the diet of fish-eating killer whales, although it is not certain that these "cutting edge" techniques can discriminate prey species effectively. The project is cost-effective. Coordination with Project 96170 should prevent duplication of effort.		<u>Trustee Council Action</u> Do not fund. Project would document fatty acid/stable isotope composition of forage fishes, which are prey to killer whales and other marine mammals. This project would be appropriate only if 96012A and B were recommended for full funding, but they are not.									

9/1/95 DRAFT/PAGE 23

96025	Mechanism of Impact and Potential Recovery of Nearshore Vertebrate Predators	DOI	DOI	\$1,669.4	\$1,728.2	\$1,728.2	\$1,669.4	\$1,669.4	\$450.0	\$5,517.0	2nd yr. 4 yr. project	\$1,728.2
<u>Abstract</u>				<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>				
The project assesses trophic, health, and demographic factors across a suite of "apex" predators injured by the spill to determine mechanisms constraining recovery and improve knowledge of the status of recovery. Primary hypotheses: 1) recovery of nearshore resources is limited by recruitment processes; 2) initial and/or residual oil in benthic habitats and in or on benthic prey has had a limiting effect on the recovery of predators; and 3) EVOS-induced changes in populations of benthic prey species have influenced the recovery of predators.				This program was peer reviewed in detail in March 1995, and an 18-month workplan was approved by the Trustee Council. A detailed review of the first full field season of this program will be conducted in the fall or winter of 1996 in order to define the program for FY 96.				Fund. Project will be reviewed in fall of 1995 to see if modifications in 1996 Detailed Project Description are necessary based on 1995 field season. Budget will be reevaluated following review session. In general the nearshore ecosystem, including intertidal habitat and organisms, was hardest hit by the spill. This project monitors recovery of intertidal organisms and closely linked vertebrate predators and addresses question of whether continuing contamination is slowing recovery of vertebrate predators.				

9/1/95 DRAFT/PAGE 24

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96027	Kodiak Archipelago Shoreline Assessment: Monitoring Surface and Subsurface Oil	ADEC	ADEC	\$35.1	\$60.0	\$60.0	\$0.0	\$0.0	\$0.0	\$60.0	2nd yr. 2 yr. project	\$60.0	
<u>Abstract</u>			<u>Chief Scientist's Comments</u>					<u>Trustee Council Action</u>					
This project completes work begun in FY 95 to determine the areal extent, toxicity and origin of oil on selected Kodiak Archipelago shorelines. Most of these shorelines were last surveyed in 1990. The information about the remaining oil is necessary to determine whether recovery is proceeding at an acceptable rate; to help local people assess whether the presence of remaining oil is still affecting shoreline activities; to determine the origin and toxicity of any remaining oil; and to determine if any beaches need additional treatment.			This is close-out funding to hold community meetings and complete the final report.					Fund. This project closes out work funded in FY 95.					
96037	Coastal Habitat Intertidal Monitoring	ADFG	Highsmith/UAF	\$609.2	\$550.0	\$550.0	\$550.0	\$550.0	\$360.0	\$2,010.0	1st yr. 3 yr. project		\$550.0
<u>Abstract</u>			<u>Chief Scientist's Comments</u>					<u>Trustee Council Action</u>					
The Coastal Habitat Injury Assessment study showed continued injury to intertidal algal and invertebrate populations when last sampled in 1991. A limited number of sites was monitored in PWS and Kenai through 1994 and showed continued damage. This study proposes to revisit the original sites to determine their recovery status. Intertidal communities are integral to the nearshore ecosystem and monitoring is critical for understanding long-term effects of the spill.			This is a solid program that revisits the spill-wide sites that have not been surveyed since 1991. Damage was extensive in sheltered rocky shores, coarse-textured beaches, and estuarine habitats at that time. This work should be done again. However, I am concerned with the price of the work.					Defer. Although more information on recovery of intertidal biota is highly desirable, this is an expensive, new commitment, which must be considered in the context of other requests for new project support. Primary value of this work is documentation of injury and recovery, with few management applications. Monitoring was last done in 1991.					
96056	Sea Otter Transplantation/Clam Restoration	DOI	D. Warner			\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>					<u>Trustee Council Action</u>					
This project seeks to restore clam populations in the Cordova area by transplanting roughly 300 sea otters from Cordova to the central and southern portions of PWS, followed by restocking razor clam beds with clams from other areas. Restocking dungeness crab is also proposed.			This was a project idea rather than a complete proposal. However, the mobility of sea otters makes the technical approach infeasible. Efforts by the California Department of Fish & Game found that some transplanted sea otters would travel 100 miles in a week to return to their original location.					Do not fund. This project idea is not technically feasible.					

9/1/95 DRAFT/PAGE 25

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96067-BAA	Juvenile Fish Habitat Identification and Assessment	DOI	Mitchell/MBC	\$467.4	\$467.4	\$0.0				\$0.0			
<u>Abstract</u> This study will sample nearshore habitats for juvenile fish. Embayments with eelgrass beds and shallow soft-bottomed coastal areas in PWS will be sampled in oiled and unoiled areas. The study will help define important nursery grounds as well as demonstrate the amount to which these areas have been degraded by oiling.		<u>Chief Scientist's Comments</u> Link to damaged resources has not been made and this proposal is somewhat duplicative of work in progress. Future proposals should be integrated with ecosystem studies now underway.		<u>Trustee Council Action</u> Do not fund. This proposal has a weak link to restoration, and would be strengthened by integration with ecosystem studies.									
96072	Status and Potential Recovery of the Black Oystercatcher: An Apex Predator in the Nearshore Environment	DOI	DOI	\$157.7	\$157.7	\$0.0				\$0.0			
<u>Abstract</u> This proposal questions the current status of the black oystercatcher as a recovering species, and presents a plan of action for improved monitoring of the species and evaluation of factors (e.g., demography, oil toxicity, food, genetic variability) that may be limiting recovery of the population.		<u>Chief Scientist's Comments</u> Although the authors question the classification of the oystercatcher as "recovering," the point remains arguable. I recommend deferring until results of 1996 boat surveys are complete and preliminary results of the NVP project are available, which may indicate continuing contamination in the nearshore food chain/ecosystem. If there is indication of lack of recovery of oystercatchers, a proposal emphasizing use of artificial incubation as a restoration technique might be appropriate.		<u>Trustee Council Action</u> Do not fund at this time. Reconsider for FY 97 based on Chief Scientist's recommendation.									
96086	Herring Bay Monitoring and Restoration Studies	ADFG	Highsmith/UAF	\$185.3	\$173.0	\$173.0	\$0.0	\$0.0	\$0.0	\$173.0	7th yr. 7 yr. project	\$173.0	
<u>Abstract</u> In 1990, intertidal restoration studies were established in Herring Bay in response to the T/V Exxon Valdez oil spill. These studies have continued through the 1994 field season and show continued injury to <i>Fucus gardneri</i> and the associated invertebrate population, especially in the upper intertidal. Data collected during the 1995 field season will be incorporated into the existing Herring Bay database and the rates and extents of recovery determined for injured resources.		<u>Chief Scientist's Comments</u> This is a project that was funded from 1990 through 1995, with close-out scheduled for FY 96. The budget appears to be high for a close-out project.		<u>Trustee Council Action</u> Fund. Project is close-out (data analysis and report writing only) for studies previously funded by the Trustee Council.									

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96088	Fucus as Structure for Other Organisms	ADFG	Stekoll/UAF	\$302.5	\$302.5	\$0.0				\$0.0			
<u>Abstract</u> The brown alga, <i>Fucus gardneri</i> , is the dominant organism in the upper intertidal community where it provides food, foraging areas, and shelter for a variety of other plants and animals. The goals of this project are to 1) define the factors which have limited the recovery of <i>Fucus</i> populations, 2) test various techniques to accelerate the recovery of <i>Fucus</i> populations in the upper intertidal, 3) determine the consequences for other organisms due to this slow recovery of <i>Fucus</i> and 4) define the geographical extent of upper intertidal habitat throughout PWS that has not recovered.				<u>Chief Scientist's Comments</u> This project poses many of the same questions that have been asked in the Herring Bay intertidal studies for the previous five years. This upper intertidal system might be appropriate for work in the future with new questions, possibly in response to an RFP.				<u>Trustee Council Action</u> Do not fund. Lower priority than other coastal habitat work at this time.					
96090	Mussel Bed Restoration and Monitoring	NOAA	NOAA	\$209.7	\$205.1	\$205.1	\$0.0	\$0.0	\$0.0	\$205.1	5th yr. 5 yr. project	\$205.1	
<u>Abstract</u> In FY 96 a comprehensive report will be produced synthesizing and summarizing four years of studies on the persistence of oiling in mussel beds in PWS and the Gulf of Alaska and restoration of 12 of these beds. Chemical analyses of mussel and sediment samples collected in 1995 will be completed early in 1996. No new sample collection or site visits are proposed for FY 96.				<u>Chief Scientist's Comments</u> It is essential to complete this close-out project but the budget appears to be high. The labor for the report writing is very high, given the donation of time by NOAA (which is recognized and appreciated).				<u>Trustee Council Action</u> Fund. Project would close-out previous study on contamination of mussel beds by oil. Oiled mussel beds may be a pathway for on-going contamination of nearshore vertebrate predators. Information gathered could lead to further cleaning and restoration of mussel beds.					
96094	Improving Recovery Rates on Shorelines in PWS Using Enhanced Bioremediation	ADEC	ADEC	\$965.6	\$965.6	\$0.0				\$0.0			
<u>Abstract</u> This 3-year project will identify reasons why remaining subsurface oil on PWS shorelines has not biodegraded and assess the impact this is having on shoreline recovery. Based on site characterization and risk, the project will recommend and test, if appropriate, use of selected non-intrusive, non-commercial bioremediation enhancement methods to accelerate stalled biodegradation.				<u>Chief Scientist's Comments</u> There are serious questions as to whether nutrient supply is a limiting factor in the removal of oil from Prince William Sound beaches. Also, I doubt that the remaining oil is seriously affecting the ecosystem. (The main problem is that oil residue is offensive to local residents, who want something done about it.) This study is expensive and time consuming, and may not satisfy local concerns.				<u>Trustee Council Action</u> Do not fund. However, a workshop will be held this fall with the Chief Scientist, community leaders, agency representatives, and other interested parties to review the status of persisting oil and the objectives of any future shoreline monitoring and cleanup.					

9/1/95 DRAFT/PAGE 27

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/ Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved <i>8/25/95</i>	Deferred Decision to <i>December</i>
96103-BAA	Whale Forestomach Anaerobic Microbes to Detoxify Oil Spills	NOAA	Craig/OSU	\$170.7	\$170.7	\$0.0				\$0.0			
<u>Abstract</u>								<u>Trustee Council Action</u>					
Complete microbial bioremediation of oil spills in the environment is currently limited by oxygen availability. We have preliminary evidence that anaerobic bacteria from the forestomach of bowhead whales have the unique ability to metabolize a range of fuel oil components anaerobically. This project isolates anaerobic bacteria or bacterial consortia responsible for this activity from this habitat, assesses their ability to detoxify fuel oil components, and optimizes their growth for use in environmental bioremediation.			<u>Chief Scientist's Comments</u> This is an imaginative proposal that could lead to the development of microbial cultures or other sorts of biotechnological approaches that might be applied to the clean-up of oil spills. Unfortunately, this research and development project would most likely be applicable to future oil spills and therefore does not address damages or restoration from the Exxon Valdez Oil Spill.					Do not fund. Proposed work falls outside scope of civil settlement.					
96104	Avian Predation on Blue Mussels in Prince William Sound	USFS	USFS	\$127.1	\$155.1	\$155.1	\$130.0	\$120.0	\$60.0	\$465.1	1st yr. 3 yr. project		\$155.1
<u>Abstract</u>								<u>Trustee Council Action</u>					
The nearshore vertebrate predator project (96025) hypothesizes that prey availability and competition for prey, such as blue mussels, could be constraining recovery of sea otters and harlequin ducks. This project will document the impact of avian predators, including surf scoters, glaucous-winged gulls, black oystercatchers, and surfbirds on mussel populations at northwest Montague Island. This project will gather information on the numbers and distribution of avian predators, and variability in their use of mussels.			<u>Chief Scientist's Comments</u> Very responsive to discussion in January workshop. This is a study that would help us interpret the results of the NVP (96025) project. I recommend one year of funding and integration with the NVP program.					Defer subject to availability of funds for new projects and further review of possibilities for integration with 96025. Information on avian predation would usefully complement Nearshore Vertebrate Predator studies (project 96025).					
96106	Subtidal Monitoring: Eelgrass Communities	ADFG	Jewett/UAF	\$239.4	\$250.0	\$250.0	\$0.0	\$0.0	\$0.0	\$250.0	6th yr. 6 yr. project	\$250.0	
<u>Abstract</u>								<u>Trustee Council Action</u>					
This project would provide funds to write the final report for Project 95106. The budget reflects projected costs of sample analysis, data analysis, and report preparation. The final report will incorporate and compare all data collected since 1991.			<u>Chief Scientist's Comments</u> This is a close-out project for work previously funded by the Trustees. The investigator is doing a very good job on subtidal studies.					Fund. Would close out work funded in previous years.					

9/1/95 DRAFT/PAGE 28

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96108	Assessing the Effects of EVOS on Mussels and Fish: Using High Resolution Stable Isotope Records	ADFG	Carpenter/UT	\$84.0	\$84.0	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
Small portions of otoliths and mussel and barnacle shells will be sampled to provide a chemical record of the effects of EVOS on the mussel and fish populations of PWS. Findings will be used to assess the degree of initial and ongoing contamination of these resources. These new techniques will provide a detailed indicator of natural and anthropogenic stressors on these organisms and increase our knowledge of their physiological activity (e.g., growth rate, spawning, food-source variations and disease).			This proposal appears to have technical shortcomings and would contribute little to the restoration program.			Do not fund. Project raises technical concerns and has weak link to restoration objectives.							
96109-BAA	Decontamination and Restoration Process for Oil-Impacted Mussel Beds	NOAA	Alter/PES	\$551.8	\$551.8	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This project's goal is to develop and validate for implementation a treatment process to decontaminate and restore oil-impacted mussel beds. The project includes toxicity tests of oil-removing agents and field evaluations of treatment processes.			Clean-up of oiled mussel beds may or may not be a high priority following completion of 96090. Once the Trustees have a final report on this project, we can assess the need for further work or alternative approaches.			Do not fund at this time. Project should be considered after review of current work.							
96160	Assessment of Recovery from Surface Oiling, Subsurface Oiling, and Subsurface Invertebrate Contamination by Oil on Gulf of Alaska Shorelines	DOI	DOI	\$129.7	\$129.7	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This project would assess and monitor surface and subsurface oil at 12 and 10 sites, respectively. It will document subsurface oil through excavations and monitor its weathering using an innovative system of collection wells. Amphipods, widespread invertebrates living within the beach substrate, will be monitored for tissue contamination by buried hydrocarbons.			It is not clear that continued contamination of the coastal areas of the Alaska Peninsula is very widespread. Amphipods are not very appropriate organisms for monitoring hydrocarbon accumulation; <i>Mytilus</i> would probably be better. The utility of wells is questionable.			Do not fund. However, a workshop will be held this fall with the Chief Scientist, community leaders, agency representatives, and other interested parties to review the status of persisting oil and the objectives of any future shoreline monitoring and cleanup.							

9/1/95 DRAFT/PAGE 29

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96161	Harlequin Duck - Indicator Species for Ecological Monitoring and Recovery	DOI	DOI	\$230.4	\$98.0	\$98.0	\$0.0	\$0.0	\$0.0	\$98.0	1st yr. 2 yr. project		\$98.0
<u>Abstract</u> The harlequin duck is an important ecological indicator in intertidal systems affected by the oil spill. This proposal will address the hypotheses that harlequin duck population distribution and abundance, productivity and physiological condition have been impacted in oiled areas of the Gulf of Alaska.				<u>Chief Scientist's Comments</u> This pilot project would test the effectiveness of satellite tags to monitor the movement of harlequin ducks between Kodiak/Alaska Peninsula and Price William Sound. There is extensive cost sharing by DOI. It could provide a better understanding of harlequin ducks in the spill area, but it needs to be considered within the context of the total restoration effort for this species.				<u>Trustee Council Action</u> Defer. Needs further review in relation to recovery objectives for harlequin ducks and two ongoing harlequin projects (96025 and 96427). Information on interchange among harlequin duck populations in PWS, Kenai coast, etc. will help develop a harvest management strategy that is based on a solid understanding of the biogeography of harlequins in the north gulf coast region.					
96290	Hydrocarbon Data Analysis, Interpretation, and Database Maintenance	NOAA	NOAA	\$119.8	\$116.1	\$116.1	\$121.0	\$120.0	\$470.0	\$827.1	5th yr. 11 yr. project	\$116.1	
<u>Abstract</u> This project is a continuation of the NRDA and Restoration database management, hydrocarbon interpretation and sample storage service. Subsistence response and restoration data will continue to be incorporated into the Trustee hydrocarbon database. A summary report for investigators and managers will be produced with an electronic copy of the database, that will allow easier access to this information. New user groups of the database will be identified, and tailored user interfaces will be generated.				<u>Chief Scientist's Comments</u> This is an excellent proposal. The work is necessary to support the many projects, both past and present, that continue to face the task of obtaining and correctly interpreting environmental hydrocarbon data.				<u>Trustee Council Action</u> Fund. Project is on-going analysis of hydrocarbon data for other Trustee Council funded studies. This project will make these data available to the scientific community and the public, including "on-line" via the computer Internet.					
96427	Harlequin Duck Recovery Monitoring	ADFG	ADFG	\$261.1	\$261.1	\$261.1				\$261.1	3rd yr. 4 yr. project	\$51.0	\$210.1
<u>Abstract</u> This project will compare population parameters between oiled and unoled areas based on population structure, behavior, production, and growth rates. Shoreline boat surveys will be conducted simultaneously. Changes in population size, structure, and production in oiled and unoled areas and between years will be compared. Continued population monitoring and brood surveys will allow us to assess trends and suggest factors limiting recovery.				<u>Chief Scientist's Comments</u> Surveys of harlequin ducks are a high restoration priority. However, without statistical justification, a decision on work for 1997 and beyond should be made later. Three more years of effort are proposed for this project. This request for future work should be examined after review of FY 96 work.				<u>Trustee Council Action</u> Fund interim costs; defer decision on balance of FY 96 funding until report from prior year (Project B11) is submitted. Consider funding for future years after review of FY 96 work. This project continues a series of studies focusing on injury to and recovery of harlequin ducks in PWS. This information will help determine when current harvest restrictions can be lifted and whether additional actions, such as more cleanup of oiled mussel beds, are necessary.

<u>Abstract</u> Common murres were the bird species most heavily impacted by the Exxon Valdez oil spill. The failure to recover documented in this species 5 years after the oil spill may be related to a long-term decline in the availability of suitable forage. Tests of hypotheses concerning food limitation on murre population recovery and the application of puffins as fish samplers require information on the foraging ranges and feeding areas of birds from specific colonies.		<u>Chief Scientist's Comments</u> This is a meritorious scientific study that promises to provide significant new information on diving behavior and foraging range of murres and tufted puffins. The winter location of murres may be identified by this project. The results of the 1995 pilot study and the first year of the APEX program should be evaluated prior to committing funds for FY 96.						<u>Trustee Council Action</u> Defer pending November review and a clearer sense of the importance of this work to objectives in 96163, the APEX project. If funded, recommend funding only common murre component. Project could help interpret hydroacoustic data on the distribution and abundance of forage fish in terms of whether those fish are actually available to foraging seabirds. Will also establish wintering areas of common murres, which could lead to the identification of restoration measures to maintain and protect this injured species.					

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 33

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96031	Development of a Productivity Index to Monitor the Reproductive Success of Marbled and Kittlitz's Murrelets in Prince William Sound, Alaska	DOI	DOI	\$254.6	\$117.6	\$117.6	\$50.0	\$39.9	\$0.0	\$207.5	2nd yr. 4 yr. project	\$67.6	\$50.0
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
This project will develop a means to monitor the productivity of marbled and Kittlitz's murrelets. The reproductive success of these two non-colonial seabirds can not be monitored using standard techniques. To develop a productivity survey protocol, murrelets will be surveyed at sea to determine the timing and abundance of juveniles, the ratio of juveniles to adults and the coastal and marine features that best predict juvenile abundance. By monitoring murrelet productivity in relation to population trends, this index can eventually be used to determine what factors influence murrelet recovery.		An index of marbled murrelet productivity is a desirable product for the restoration program. In addition, results of past Trustee-sponsored marbled murrelet work need to be synthesized and published. Consider for funding after review of 1995 data.		Fund close-out of FY '95 work and synthesis of prior murrelet studies. Defer decision on new murrelet surveys in FY 96 pending the APEX (96163) review in November.									
96038	Publication of Seabird Restoration Workshop	DOI	Pac Seabird Gr	\$31.0	\$15.0	\$15.0	\$0.0	\$0.0	\$0.0	\$15.0	2nd yr. 2 yr. project		\$15.0
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
The Trustee Council has funded the Pacific Seabird Group (PSG) to hold a workshop in September 1995 to bring together experts in seabird biology and restoration. It will include discussions of the theoretical and practical aspects of seabird restoration and provide recommendations for restoration plans founded on the best available scientific information and opinion. This proposal seeks funds for the writing and publishing of manuscripts summarizing the workshop discussions.		The results of the workshop should appear in print and be accessible to the public. I don't recommend funding at the amount requested. However, pending review of a Table of Contents, I could support a lesser amount, perhaps with a matching requirement. Also needs to make greater effort to prepare summary/public information materials for general public as opposed to only a scientific audience.		Defer decision pending review of results of September workshop (95038) to determine whether additional reporting is useful.									
96101	Removal of Introduced Foxes From Islands	DOI	DOI	\$88.9	\$8.4	\$8.4	\$0.0	\$0.0	\$0.0	\$8.4	3rd yr. 3 yr. project	\$8.4	
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
Populations of three species of birds injured by the oil spill (black oystercatcher, pigeon guillemot and common murre) will be allowed to increase by removing introduced arctic foxes from Seguam Island. Although it is outside the area directly affected by the oil spill, Seguam Island has a particularly high potential for restoring populations of these species because it contains substantial amounts of habitat and remnant populations of all three species are present.		I have supported fox removal as a highly effective but low cost restoration technique. One issue is that Seguam Island is far from the spill zone. Target species were injured by the spill, but would have to be justified on replacement/equivalent resource basis. Every opportunity to take concrete measures of program effectiveness should be used.		Fund close-out of prior work (95041). Do not fund new work at Seguam Island because the benefit to spill-affected populations is not established.									

Proj. No.	Title	* Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96120-BAA	Proximate Composition and Energetic Content of Selected Forage Fish Species in Prince William Sound, AK	NOAA	Worthy/TXAM	\$40.9	\$40.9	\$0.0				\$0.0			

Abstract

This study will provide the data necessary for interpreting food web dynamics and ecology of the "apex" predators of PWS. In any long-term study of foraging ecology, especially those investigating the recovery of impacted species, knowledge of prey species composition and energetic value is critical in the interpretation of consumption rates and therefore the impact of consumer species upon prey species stocks. Compositional analysis will also yield important information on the general quality of the environment by assessing the condition of important prey species.

Chief Scientist's Comments

While technically sound, this proposal lacks sufficient linkage to a particular model or hypothesis and there is no prioritization of potential sources of samples. This work should be considered in the future if net-caught forage fish are to be used as an index of prey quality for seabirds.

Trustee Council Action

Do not fund at this time. Project will be considered during November 1995 APEX review (96163). Any funds for this project will need to come from the overall funding approved for APEX.

96122	Mapping Potential Nesting Habitat of the Marbled Murrelet in Prince William Sound Using Habitat Models Linked to Geographic Databases	USFS	USFS	\$168.8	\$123.0	\$0.0				\$0.0	1st yr. 2 yr. project		
-------	---	------	------	---------	---------	-------	--	--	--	-------	--------------------------	--	--

Abstract

This project would identify potential habitat of the marbled murrelet in PWS by linking habitat models to geographic databases of vegetation and physical site characteristics. Areas identified as having a high probability of containing nesting habitat could become focal areas for planning management prescriptions to favor maintenance of murrelet habitat.

Chief Scientist's Comments

This could be an important project, but I have questions about quality of the murrelet habitat model. The habitat model needs additional review by murrelet biologists.

Trustee Council Action

Do not fund. This project would summarize several years of Trustee-sponsored studies on marbled murrelet nesting habitat. Resulting maps of potential murrelet habitat could be useful in planning and carrying out timber harvests that could impact marbled murrelets in the spill area. However, the Public Advisory Group recommended deferring this project until there has been greater advance consultation with private land owners. There also are questions about whether the scale of the resulting maps will be sufficiently large to assist project decisions and land owners on the ground.

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 35

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96142-BAA	Status and Ecology of Kittlitz's Murrelet in Prince William Sound	NOAA	ABR, Inc.	\$110.2	\$168.7	\$168.7				\$168.7	1st yr.	\$168.7	
Abstract		Chief Scientist's Comments		Trustee Council Action									
This project would investigate the status and ecology of Kittlitz's Murrelet, a rare seabird breeding in glaciated fjords of Prince William Sound (PWS). The study will evaluate the abundance, distribution, and productivity of this little known seabird and assess its habitat use and feeding habits in northwestern PWS. Given uncertainty about the effects of the oil spill on this species, a better understanding of its status and ecology is required to ensure its long-term conservation.		This is an excellent proposal on a bird species that was perhaps the most injured of any by the spill. Our knowledge of this species is so sketchy that this project is justified. This project may be useful for discovering restoration actions. The investigator is well qualified with an extensive background in alcid biology. The study should be reviewed after the first year to assess progress and whether the mapping work will be done at a sufficiently large scale to be of use on the ground.		Fund FY 96 only; future years' funding dependent on FY 96 results. Kittlitz's Murrelet has a small world-wide population, and, proportionate to that population, it may have been the species hardest hit by the oil spill. This study will gather basic information on a rare, poorly known seabird, which may lead to identification of restoration measures.									
96143-BAA	Recovery of Bird and Mammal Populations in Prince William Sound After the Exxon Valdez Oil Spill	DOI	ABR, Inc.	\$321.2	\$321.2	\$0.0				\$0.0			
Abstract		Chief Scientist's Comments		Trustee Council Action									
This study will assess the status of recovery of bird and mammal populations injured in the aftermath of the Exxon oil spill and is an extension of a study conducted in Prince William Sound in 1989-91. The project proposes to conduct three surveys each year during 1996-98 in nearshore and offshore habitats and will assess recovery based on wildlife use of oil-affected habitats and population status relative to prespill levels.		This project essentially duplicates the boat surveys of bird and sea otter populations being carried out by the USFWS (96159). Although the proposal is very professional and actually has the advantage of a broader look at population recovery over the USFWS, we would have to abandon the time-series compiled by the government since 1972 due to methodological differences.		Do not fund. Cannot justify support for this new survey while continuing funding of 96159.									
96144	Common Murre Population Monitoring	DOI	DOI	\$101.7	\$101.7	\$101.7	\$125.3	\$44.0	\$458.5	\$729.5	1st yr. 3 yr. project		\$101.7
Abstract		Chief Scientist's Comments		Trustee Council Action									
The project is designed to determine whether common murre populations at a series of index colonies within the area affected by the oil spill are recovering. This objective will be accomplished by counting murrelets at all five locations to document the presence or absence of post-spill population trends. Each location will be surveyed every 3 years, but the field work is planned so that a portion of it will be accomplished annually (i.e. colonies in the western portion of the spill zone will be surveyed in FY 96, central colonies will be counted in FY 97, and the eastern-most colonies will be visited in FY 98).		This is a solid continuing study that is an integral part of the restoration program to monitor recovery of murrelets. However, all '96 monitoring programs are to have done a power analysis to determine the appropriate frequency of sampling. This proposal lacks a power analysis.		Defer. Approval subject to availability of funds. Project can be deferred until FY 97 with no harm to the injured resource. The results of the power analysis should be included in future proposals.									

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96148	Kittlitz's Murrelet: Biology, Abundance, and Population Genetics	DOI	DOI	\$99.8	\$99.8	\$0.0				\$0.0			
<u>Abstract</u> This project will 1) compile and analyze available unpublished and published data to assess the abundance and distribution of Kittlitz's Murrelet in Alaska, and, 2) conduct original research on the breeding biology, pelagic distribution and population genetics of Kittlitz's Murrelet in Alaska.				<u>Chief Scientist's Comments</u> Kittlitz's murrelets are a species that is of great interest to the Trustee Council restoration program. However, the design is not sufficiently explicit nor focused. There is a better proposal before the Trustee Council.				<u>Trustee Council Action</u> Do not fund. Cannot justify support for this project while also starting 96142-BAA, which is a superior proposal.					
96159	Surveys to Monitor Marine Bird Abundance in Prince William Sound During Winter and Summer 1996	DOI	DOI	\$262.9	\$262.9	\$262.9	\$25.0			\$287.9	1st yr. 2 yr. project	\$262.9	
<u>Abstract</u> We propose to conduct small boat surveys to monitor abundance of marine birds and sea otters in PWS during March and July 1996. Previous surveys have observed >65 bird and 8 marine mammal species in PWS. Data collected in 1996 will be used to examine trends from summer 1989-96 and from winter 1990-96 by determining whether populations in the oiled zone changed at the same rate as those in the unoiled zone. Overall population trends for PWS from 1989-96 also will be examined.				<u>Chief Scientist's Comments</u> This is a solid proposal for monitoring seabirds and sea otters. The surveys have been done since 1989 and there are similar data from 1984 - 85. The proposers have done a power analysis that indicates a low power of detecting change in populations with infrequent sampling. The proposed biannual monitoring schedule appears reasonable in light of the analysis, but future commitments should be reviewed with regard to balance between monitoring injured resources and ecological investigations.				<u>Trustee Council Action</u> Fund for this monitoring cycle only. Future monitoring will be evaluated when proposed. The surveys provide basic information on status and recovery of an entire suite of marine birds (and sea otters) in PWS.					
96175	Remote Video System Seabird Monitoring Project	DOI	DOI	\$38.7	\$38.7	\$0.0				\$0.0			
<u>Abstract</u> The project will test the ability of a robotically controlled video monitoring system to remotely collect real-time productivity, nesting chronology, adult time budget, and chick feeding rate data on common murres and other seabirds more accurately and at lower costs than current methods allow at colonies with difficult access. The proposal is based on a prototype system that was designed and successfully tested in Kachemak Bay and the Barren Islands in FY 94. Data will be collected both remotely and manually on the same sets of plots using the same basic methods in conjunction with Project 96163J.				<u>Chief Scientist's Comments</u> The proposed testing of a promising technology is innovative, but the link to restoration (assessing murre productivity) is not compelling given the apparent recovery. The cost effectiveness of this project was questionable given expense of equipment and associated technicians, and the fact that some deployment costs are being absorbed in other projects.				<u>Trustee Council Action</u> Do not fund at this time. Project could be reconsidered in the future if extended monitoring of murres is necessary.					

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 37

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December

<i>PAG Recommendation: The PAG recommends approval of a budget of approximately \$1.3 million, as recommended by staff. (The discussion indicated that fine-tuning may be appropriate for specific projects and budgets may need to be revised.)</i>													
96009D	Survey of Octopuses in Intertidal Habitats	USFS	PWSSC	\$134.0	\$134.0	\$134.0	\$40.9	\$0.0	\$0.0	\$174.9	2nd yr. 3 yr. project	\$37.2	\$96.8
<u>Abstract</u>		<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>							
This project addresses concerns that octopus and chiton have been depleted by EVOS and that subsistence uses are impaired. The first year (FY95) is to establish the feasibility of working on octopus in the Sound, identify suitable study sites, and evaluate techniques. The second year (FY96) will focus on the vertical distribution of octopus in the nearshore where they are harvested. Close-out costs are requested in the third year (FY97).		Defer decision until results of FY 95 field season available.				Defer decision until results of FY 95 field season are available (fund interim). Project is designed to address concern that octopus and chiton have been depleted by EVOS and that subsistence uses are impaired.							
96052	Community Involvement & Use of Traditional Knowledge	ADFG	CRRC	\$210.0	\$261.0	\$261.0	\$250.0	\$250.0	\$1,000.0	\$1,761.0	2nd yr. 8 yr. project	\$261.0	
<u>Abstract</u>		<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>							
This project, submitted by the Chugach Regional Resources Commission (CRRC), will continue a program begun in FY 95. This project will encourage and facilitate communication among the Trustee Council, researchers working on oil spill restoration projects, regional organizations and residents of communities impacted by the oil spill. The goal is to make optimal use of the complementary nature of scientific data and traditional knowledge.		Addresses needed restoration work by furthering interactions between EVOS scientists and community members.				Fund. This project will continue a program to facilitate communication and interaction among the Trustee Council, scientists, and residents of communities impacted by the oil spill.							
96052B	Community Interaction/Traditional Knowledge	ADFG	ADFG	\$298.3	\$298.3	\$0.0				\$0.0			
<u>Abstract</u>		<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>							
This project, submitted by Subsistence Division/ADFG, will continue a program to encourage and facilitate communication among the Trustee Council, researchers working on oil spill restoration projects, regional organizations and residents of communities impacted by the oil spill. The goal is to make optimal use of the complementary nature of scientific data and traditional knowledge.		See 96052.				Do not fund as separate project. See 96052.							

9/1/95 DRAFT/PAGE 38

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96127	Tatitlek Coho Salmon Release	ADFG	Tatitlek IRA	\$52.7	\$26.6	\$26.6	\$15.9	\$15.9	\$15.9	\$74.3	2nd yr. 5 yr. project	\$26.6	
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
Project will create a coho salmon return to Boulder Bay near Tatitlek village. Enough coho eggs to produce 20,000 smolts will be collected from an ADF&G approved stream, incubated and reared to smolt at the Solomon Gulch Hatchery, transported and held for two weeks in net pens in Boulder Bay before release. Release will produce a 2,000 to 3,000 adult return to Boulder Bay for harvest in a subsistence fishery.			Excellent project, technically sound, highly feasible. However, Trustee Council funding should be limited to maximum of one life cycle of coho (approximately 4 years).			Fund. Fund for 4 years (one coho life cycle). Project will create a coho salmon run near Tatitlek as a replacement resource for subsistence resources injured by the oil spill.							
96131	Chugach Native Region Clam Restoration	ADFG	ChugachRRC	\$405.6	\$405.6	\$405.6	\$413.6	\$417.4	\$417.4	\$1,654.0	2nd yr. 6 yr. project		\$405.6
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
Resident clam populations near the Native villages of Port Graham, Nanwalek, Chenega Bay, Tatitlek, Eyak and Ouzinkie will be re-established to restore diminished subsistence opportunities. The Qutekcak hatchery in Seward will annually provide about 800,000 juvenile littleneck clams, cockles and, if possible, butter clams for seeding. Historical information, local and agency expertise, and research will be used to identify areas to seed and methods used. Total seeded area will not exceed 5 hectares.			I recommend that there be a late autumn/early winter review of progress before FY 96 funding is approved. Very promising project; good potential. Environmental assessment (EA) should consider sea otter populations. Need to review production capacity of current facility and plans for future expansion.			Defer decision pending results of FY 95 field season. Project would establish subsistence clam populations near several Native villages as replacement for subsistence resources injured by the oil spill.							
96202	Port Lions Community Hall	ADFG	Port Lions	\$150.0	\$150.0	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
Funds would match \$175,000 requested from the State Legislature for a community hall. Funds for the community hall were received prior to the oil spill but were lost, as no manpower was available for construction.			No link to restoration.			Do not fund. No link to restoration of an injured natural resource.							
96204	Kodiak Subsistence Resource Restoration Planning	ADFG	ADFG	\$39.4	\$39.4	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
The project would implement a more intensive subsistence resource restoration planning effort in Kodiak Island Borough communities as a follow-up to Projects 94428 and 95428. The goal would be to develop a coordinated set of resource restoration proposals for consideration in the FY 97 work plan. Methods will include several workshops and a series of community meetings.			Some further planning seems justified. However, such planning should go on under this project or under 96052.			Do not fund as a separate project. Objectives can be integrated into 96052.							

9/1/95 DRAFT/PAGE 39

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96205	Eyak Subsistence Recovery Camp Planning Project	DOI	Eyak Nat Vill	\$40.8	\$40.8	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This project would plan for a Subsistence Recovery Camp for Alaska Native subsistence users affected by the oil spill. As identified by Picon and Gill (1992), Post-Traumatic Stress Syndrome is directly linked to the environmental damage done by the oil spill and the subsistence way of life. With the results of the oil spill still being felt by the communities through lack of or reduced abundance of specific species, there has been an upsurge of addictive behaviors.			Appears to be worthwhile idea; has worked in other localities. Consider for other funding.			Do not fund. Not appropriate for civil settlement funds. Recommend seeking alternate funding, since idea is worthwhile.							
96206	Old Harbor Lagoon (Midway Culvert) Salmon Enhancement Feasibility Study	ADFG	Old Harbor	\$28.8	\$28.8	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
As a step towards restoring subsistence uses and resources at the community of Old Harbor, this project will determine the feasibility for coho and chum salmon enhancement for the Old Harbor lagoon system, by evaluating the potential for improving the early marine rearing opportunities for chum and coho salmon. It will evaluate the utility of raising the culvert through which this system empties into Sitkalidak Straits to a level which would provide increased water retention in the lagoon and thus increase the rearing area.			Project needs further refinement and greater detail.			Do not fund at this time. Proposer may want to work with agency and Trustee Council staff to strengthen a future version of this proposal.							
96207	Ocean Beach Sockeye Enhancement Feasibility Study	ADFG	Old Harbor	\$92.7	\$92.7	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
As a step towards restoring subsistence uses and resources at the community of Old Harbor, this project will determine the feasibility for sockeye salmon enhancement for the Ocean Beach Lake System, located on the east side of Sitkalidak Island. Feasibility determination efforts would focus on collecting stock status data, identifying minimum and optimum escapement requirements for natural production, and investigating the feasibility of enhancing wild production from this system.			Significant questions raised by this proposal. Would create substantial risks to native species; opportunity to address/minimize risks is low.			Do not fund. Project raises significant questions about risk to native species.							

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96208	Kempff Bay Sockeye Enhancement Feasibility Study	ADFG	Akhiok City	\$70.7	\$70.7	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
As a step towards restoring subsistence uses and resources at the community of Akhiok, this project will determine the feasibility for sockeye salmon enhancement for the Akhiok Village Lake System, located at Kempff Bay on southern Kodiak Island. The feasibility study would focus on collecting stock-status data, identifying minimum and optimum escapement requirements for natural production, and investigating the feasibility of enhancing wild production from this system.			Significant questions raised by this proposal. Would create substantial risks to native species, and opportunity to address/minimize risks is low.			Do not fund. Project raises significant questions about risk to native species.							
96210	Prince William Sound Youth Area Watch	ADFG	Chugach RRC	\$233.4	\$115.0	\$115.0	\$100.0	\$100.0	\$0.0	\$315.0	1st yr. 3 yr. project	\$115.0	
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
Students from Chenega Bay, Tatitlek and some outlying areas will participate in research projects identified by the Prince William Sound Science Center and other EVOS researchers. The objective is to increase the awareness of youth regarding the effects of the oil spill and encourage their involvement in research/restoration. Students will be involved in oceanographic testing, fish monitoring, bird and mammal observations, pristane/mussel analysis and octopus studies.			A solid proposal for a pilot project to involve local youth in the scientific aspects of the restoration program. Well presented and integrated proposal.			Fund as a pilot project. However, no funds should be spent on this project until legal and budget review are complete, liability concerns are resolved, and final approval is received from the Executive Director.							
96211	Community-Based Harbor Seal Biological Sampling Program	ADFG	ANHSC	\$44.0	\$44.0	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
A pilot project for collecting biological samples from subsistence-taken harbor seals from six communities of PWS and lower Cook Inlet would be designed, implemented, and evaluated. "User-friendly" data collection forms and an instructional video would be produced. Village-based technicians would be trained for collecting samples taken by hunters and transporting these samples to Anchorage for further sampling and transport for analysis. Findings would be disseminated by the Alaska Native Harbor Seal Commission (ANHSC) through a newsletter network.			Good approach to addressing the problem of lack of information on status and trends of harbor seals; good community involvement. Integrate with 96244.			See 96244.							

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 41

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96212	Restoration of Subsistence Shellfish Consumption: A PSP Screening Program	ADFG	Kodiak Tribal	\$167.7	\$167.7	\$167.7	\$178.3	\$151.3	\$0.0	\$497.3	1st yr. 3 yr. project		\$167.7
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
Subsistence users in the Kodiak Island Borough probably consume more shellfish (clams and crabs) per capita than any other region of Alaska. Since the oil spill, numerous cases of severe paralytic shellfish poisoning (PSP) have created fear about the safety of consuming these traditional foods. This proposal addresses the health concerns of subsistence users through active participation in a systematic testing program. Faster lab results should curtail the number of cases of PSP and save lives.		Excellent technical merit. However, there are several concerns including 1) the time to perfect the assay is considerable and hiring plans need to be flexible, and 2) availability of multiple saxotoxin standards.		Defer decision until outstanding questions can be answered. Timing of development of chemical assay is uncertain, plus need to develop plan for a transition to non-Trustee Council funding. In addition, there are legal questions about agency liability. This project will increase subsistence users' confidence that the resources injured by the oil spill, or other replacement subsistence resources, are safe to eat.									
96213	Alaska Native Harbor Seal Commission	ADFG	ANHSC	\$99.2	\$99.2	\$0.0				\$0.0			
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
The overall goal is to involve Alaska Natives directly in the harbor seal research and monitoring process and to help find solutions to restore the health of the injured species. Goals of the Alaska Native Harbor Seal Commission include: educating and informing the public and scientists on the traditional and contemporary relationship between harbor seals and Alaska Natives; informing scientists about the type and extent of knowledge held by local people about the harbor seal; involving Alaska Natives in the regulatory and management process.		Proposal is a good approach to harbor seal management, but there is a concern about the appropriateness of the Trustee Council funding operating costs for a statewide commission.		Do not fund as a separate project. It is not appropriate for the Trustees to provide operating support for a statewide commission, but some of the tasks outlined in 96244 will be contracted to the commission.									
96214	Documentary on Subsistence Harbor Seal Hunting in PWS	ADFG	Tatitlek Village	\$74.5	\$77.4	\$77.4	\$0.0	\$0.0	\$0.0	\$77.4	1st yr. 1 yr. project		\$77.4
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
The purpose of this project is to make a documentary on subsistence hunting of harbor seals in PWS. This video will document all facets of harbor seal hunting including the ecological and biological knowledge hunters use to hunt harbor seals. By documenting this knowledge, the project will enhance the restoration of the seal population by providing an indigenous hunter's perspective on harbor seal ecology.		Project is an excellent idea. Will directly serve the interests of the communities, and will assist restoration of harbor seals by allowing subsistence users to make better decisions about the resource.		Fund.									

9/1/95 DRAFT/PAGE 42

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96218	Ouzinkie Clam Restoration Project	ADFG	Ouzinkie Tribe			\$0.0				\$0.0			
<u>Abstract</u> This project will begin to reestablish local clam populations for subsistence use in the Ouzinkie area. Clams were once a major subsistence food in the community of Ouzinkie, but local clam populations have decreased to low levels since the oil spill. Additionally, due to food safety concerns, clams no longer contribute to this community's subsistence harvest.		<u>Chief Scientist's Comments</u> Duplicates 96131; consider as part of 96131.						<u>Trustee Council Action</u> Do not fund as separate project. Objectives are already included in 96131.					
96220	Eastern PWS Wildstock Salmon Habitat Restoration	USFS	Eyak Nat Vill	\$77.2	\$85.1	\$85.1	\$115.0	\$12.0	\$0.0	\$212.1	1st yr. 3 yr. project	\$85.1	
<u>Abstract</u> This project will replace lost subsistence services resulting from the oil spill by increasing wild salmon production in eastern Prince William Sound. Instream fisheries habitat improvement techniques, primarily the installation of log structures, will be employed by local subsistence users to increase the capability of selected streams to produce additional salmon.		<u>Chief Scientist's Comments</u> Good community involvement. Compatible with Trustee Council guidelines on fish supplementation. Excellent technically.						<u>Trustee Council Action</u> Fund, although the specific funding mechanism needs to be resolved. The project proposal was submitted by a private entity who would like to do the work. However, the project may be awarded through a competitive process. This project will replace subsistence services lost due to the oil spill by increasing wild salmon production in PWS.					
96222	Chenega Bay Salmon Restoration -- Anderson Creek	USFS	Chenega IRA	\$17.1	\$16.1	\$16.1	\$56.4	\$0.0	\$0.0	\$72.5	1st yr. 2 yr. project		\$16.1
<u>Abstract</u> This project will open up additional spawning areas for pink and coho salmon, and rearing habitat for coho salmon, in Anderson Creek through placement of a fish pass on a six-foot barrier falls located about one quarter of the way up the stream. Anderson Creek is located adjacent to Chenega Bay village. Additional salmon produced from increased spawning habitat will help replace lost subsistence opportunities in the village.		<u>Chief Scientist's Comments</u> Excellent replacement project involving habitat alteration. Enhancement consists primarily of habitat improvement and appears to be relatively benign biologically, with low risk of failure. Recommend assessment of fish populations upstream of barrier.						<u>Trustee Council Action</u> Defer decision until technical questions regarding assessment of fish populations are addressed.					

9/1/95 DRAFT/PAGE 43

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96225	Port Graham Pink Salmon Subsistence Project	ADFG	Port Graham	\$88.9	\$95.3	\$95.3	\$83.1	\$77.2	\$161.5	\$417.1	1st yr. 5 yr. project	\$95.3	
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This project will help supply pink salmon for subsistence use in the Port Graham area during the broodstock development phase of the Port Graham hatchery. Because local runs of coho and sockeye salmon, which are the more traditional salmon subsistence resources, are at low levels, pink salmon are now heavily relied on for subsistence. This project will help ensure that pink salmon remain available for subsistence use until the more traditional species are rejuvenated.			Potentially worthwhile project that should supplement pink salmon production for the benefit of subsistence users.			Fund. Project is intended to increase the availability of pink salmon for subsistence use, replacing runs of coho and sockeye salmon depleted since the oil spill.							
96226	Resurrection Bay Salmon Stock Enhancement	ADFG	Qutekcak Tribe	\$45.0	\$45.0	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This project would enhance salmon resources and provide employment at the tribal level. By FY 98, the project should be self-supporting by providing a means of value-added marketing to purchase salmon fry. The plan would entail the hiring of a processor/marketer, the purchase of a smoker, and the purchase of fresh salmon to be smoked and dried.			Insufficient technical content to evaluate this proposal.			Do not fund. Project needs additional information. Because its primary goal appears to be economic development, not resource restoration, this project may not be appropriate for funding under the terms of the civil settlement.							
96244	Community-Based Harbor Seal Management and Biological Sampling	ADFG	ANHSC	\$70.0	\$128.5	\$128.5	\$100.0	\$85.0	\$0.0	\$313.5	3rd yr. 5 yr. project	\$128.5	
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
The goal of the project is to facilitate the involvement of subsistence users of harbor seals in the restoration of this species through two workshops, conducting biological sampling, collection and application of traditional knowledge, and development of a traditional knowledge database. A subcontract with the Alaska Native Harbor Seal Commission will contribute to developing a meaningful role for subsistence hunters in research and restoration activities.			This is a well integrated and technically feasible project.			Fund. This project will follow through on recommendations from workshops supported through previous Trustee Council projects. Subsistence users will be involved in harbor seal restoration through collecting biological samples from subsistence-taken animals, and a traditional knowledge database will be developed and distributed.							

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96272	Chenega Chinook Release Program	ADFG	PWSAC	\$42.1	\$52.3	\$52.3	\$51.1	\$0.0	\$0.0	\$103.4	3rd yr. 4 yr. project	\$52.3	
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
Chinook salmon incubated and reared at the Wally Noerenberg Hatchery will be released in Crab Bay, adjacent to the native community of Chenega. Adult salmon returning to the site of release will provide replacement resources and associated services injured by the oil spill. Two releases have taken place (1994 & 1995) as part of this multi-year project. Adult salmon will begin returning in 1996 and 1997, with larger numbers projected at nearly 1,000 adult fish returning in 1998 and thereafter.		Excellent proposal. Good match with Trustee Council's fish supplementation criteria. Good local involvement. Suggest continued Trustee Council funding through at least FY 97, pending project review in Fall 1996 to assess effectiveness.		Fund through one full chinook salmon life cycle (at least FY 97). Review effectiveness in fall of 1996. Project will provide replacement resources for subsistence salmon injured by the oil spill. However, the proposers should develop a plan for a transition to non-Trustee funding.									
96279	Resource Abnormalities Study	ADFG	ADFG	\$71.7	\$71.7	\$0.0				\$0.0			
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
Many subsistence users in the oil spill area have reported abnormalities in resource species. There has been a loss of confidence among hunters and fishermen in their abilities to determine if their traditional foods are safe to eat. This project would provide continued support for a project under which they can send samples of abnormal resources to be examined by biologists or pathologists and receive information back on the possible causes for the deformities.		Fair proposal. Work was originally to be closed out in 1995, and includes training that appears to be slated for funding in FY 96. Budget for ADFG personnel excessive in light of anticipated need for administrative support for this project.		Do not fund. Continued communication about the safety of subsistence resources will be provided through 96052.									
96428	Subsistence Restoration Planning and Implementation	ADFG	ADFG	\$48.8	\$48.8	\$0.0				\$0.0			
<u>Abstract</u>		<u>Chief Scientist's Comments</u>		<u>Trustee Council Action</u>									
This project would fund the final reporting for the two-year-long Subsistence Restoration Planning and Implementation Project. Reporting includes community meetings to convey project results to the participating communities and write up, revision, production and distribution of a final report to the Trustee Council.		FY 95 was 2nd year of 2-year planning effort. Issues addressed are important, but could be done in context of other proposals. 96428 overlaps 96052 substantially.		Do not fund. Any further project planning will be conducted under 9604									

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 45

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
Archaeological Resources				\$3,737.9	\$3,879.0	\$500.7	\$195.0	\$195.0	\$135.0	\$1,025.7		\$500.7	
<i>PAG Recommendation: The PAG supports the budget as proposed by staff.</i>													
96007A	Archaeological Index Site Monitoring	ADNR	ADNR	\$146.5	\$141.6	\$141.6	\$135.0	\$145.0	\$135.0	\$556.6	2nd yr. 5 yr. project	\$141.6	
<u>Abstract</u> Monitoring of archaeological sites on public land injured by vandalism and oiling will concentrate on a sample of index sites in the three regions of the spill. Oiled sites will be tested for re-introduced oil. The 10-year project will end at five years if monitoring shows no continued injury.				<u>Chief Scientist's Comments</u> This is an excellent proposal that represents the minimum that can be done in archaeological site monitoring. There is a need to continue consultations with Native groups.				<u>Trustee Council Action</u> Fund. Proposer should continue and expand consultation with Native groups. The project provides continued monitoring of archaeological sites injured by vandalism and oiling. The ten year project will end at five years if monitoring shows no continued injury.					
96007B	Site Specific Archaeological Restoration	USFS	USFS	\$78.4	\$78.4	\$78.4	\$0.0	\$0.0	\$0.0	\$78.4	3rd yr. 3 yr. project	\$78.4	
<u>Abstract</u> Funding is requested for the final phase of the Forest Service's archaeological restoration at sites SEW-440 and SEW-488. Project 96007B is a continuation of projects 94007 and 95007B. Analysis and interpretation of data gathered during previous field work will result in a peer-reviewed final report, prepared and distributed according to Trustee Council procedures. This will complete the restoration process initially prescribed for these sites in 1991.				<u>Chief Scientist's Comments</u> This is a close-out of a previously funded project. The budget appears reasonable. Continued consultations with Native groups are required by federal law.				<u>Trustee Council Action</u> Fund. Proposer should continue consultation with Native groups. Project closes out previously funded work to restore archaeological sites in the spill area.					
96149	Archaeological Site Stewardship	ADNR	ADNR	\$74.4	\$74.4	\$74.4	\$60.0	\$50.0	\$0.0	\$184.4	1st yr. 3 yr. project	\$74.4	
<u>Abstract</u> The archaeological site stewardship program will provide training and coordination for a cadre of volunteers to monitor vandalized archaeological sites in the oil spill area beyond the ability of agency monitoring. Volunteer site stewards will protect damaged sites in Kachemak Bay, Uganik Bay, Uyak Bay and the Chignik area of the Alaska Peninsula. Further protection will come from increased local awareness of harm from site vandalism.				<u>Chief Scientist's Comments</u> The concept was favorably reviewed. This project could serve as a useful model for protection of sites by local residents.				<u>Trustee Council Action</u> Fund. The project will provide training and coordination for volunteers to monitor vandalized archaeological sites in the oil spill area. This effort is currently beyond the ability of agency monitoring. After FY 98, expenses will be assumed either by volunteer stewards or agency budgets.					

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96150	Expansion of Alutiiq Archaeological Repository	ADNR	Alutiiq HF	\$535.0	\$535.0	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
Many communities within the EVOS area have expressed interest in museums, but the cost of constructing such facilities in all these locations is prohibitive. The new Alutiiq Museum and Archaeological Repository, which is designed to hold collections from the Kodiak area, suggests expanding its existing facilities to hold collections from the remainder of the oil spill area. Selected artifacts would be displayed in other spill communities, where facilities or display areas could exist without the necessity of funding the staff and physical plant needed for large collections.			Needs to be considered in regional context before there is justification for expansion of this facility.			Do not fund at this time. Proposal should be addressed through the planning effort in Project 96154.							
96152	Community Museum, Repository, Archaeological, Site Stewardship, Co-Management Training & Human Resource Development Project	DOI	Chugach OSIR	\$190.3	\$190.3	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This project would provide training and career development for 14-21 local residents or 2-3 participants from each Chugach Oil Spill Impacted Region community engaged in the development of a cultural center, or a subsistence restoration, site stewardship, and/or resource co-management facility, or attendant local service enterprise. Provision for training personnel is a prerequisite to local contracting assumption under P.L. 638 and attendant Federal regulations.			This proposal lacks clear technical details relating to the need for the work, how the goals will be accomplished, and the qualifications of those who will do the training. This could be considered if these points are addressed in another proposal. It is also not clear where the resources for sustained support of the suggested facilities will come from.			Do not fund until significant questions are answered and comprehensive planning is completed.							
96153	Community Cultural Centers, Repositories and Subsistence Restoration Facilities - Comprehensive Design, Engineering, Financing, and Construction Development Project	ADEC	Chugach OSIR	\$2,588.3	\$2,588.3	\$0.0				\$0.0			
<u>Abstract</u>			<u>Chief Scientist's Comments</u>			<u>Trustee Council Action</u>							
This project would provide a consolidated, coordinated and cost-effective approach to the progressive development, financing, and construction of local community and region-wide service facilities. Completed construction of such facilities, scaled to the local needs and capacity of each community, is considered fundamental to achieving and maintaining the region-wide long-term restoration of injured resources, subsistence services, and assuring provision for local and regional repository and site stewardship services.			This proposal does not outline the needs of each community in relation to the restoration program. With an adequate "scoping/project" feasibility assessment, there may be reason to proceed with particular aspects of the plan in the future. Annual maintenance costs of repositories/museums must be considered in future proposals.			Do not fund until significant questions are answered and comprehensive planning is completed.							

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 47

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY 97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96154	Comprehensive Community Plan for Restoration of Archaeological Resources in PWS and Lower Cook Inlet	USFS	Chugach HF	\$125.0	\$271.0	\$206.3				\$206.3	1st yr. 1 yr. project	\$206.3	

Abstract

This project would provide coordinated and cost-effective approach to the provision and delivery of technical assistance planning services to each of the Chugach Oil Spill Impacted Region communities engaged in the development of a cultural center or subsistence restoration facility. The project is designed to facilitate a region-wide effort, coordinate and provide for the various technical service elements associated with and essential to the planning and development of community cultural centers or subsistence restoration facilities and their attendant long-term programs.

Chief Scientist's Comments

A well presented and complete proposal for local restoration of archaeological resources affected by the spill, concentrating on storage and display of artifacts in the spill area. I recommend this planning effort.

Trustee Council Action

Fund. Project description has been revised to reflect a comprehensive community planning effort.

96219	Ouzinkie Archeological Culture Center Project	ADEC	Ouzinkie Tribe			\$0.0				\$0.0			
-------	---	------	----------------	--	--	-------	--	--	--	-------	--	--	--

Abstract

The Ouzinkie Archeological Culture Center will preserve and protect artifacts and the associated data that would otherwise be lost to vandals, looters and erosion or that have been recovered from looters and will preserve local cultural resources and traditional Native culture. This facility will also provide an opportunity for neighboring communities to participate in mini-conferences focusing on issues such as archeological history and the effects of the *Exxon Valdez* oil spill on declining subsistence resources, life skills and native culture.

Chief Scientist's Comments

This project to build an Ouzinkie Cultural Center needs to be better coordinated with region-wide efforts and with the existing Alutiiq Cultural Center.

Trustee Council Action

Do not fund. Proposal should be coordinated with the existing Alutiiq Cultural Center.

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
	Reducing Marine Pollution			\$164.6	\$163.3	\$28.3				\$28.3		\$28.3	
PAG Recommendation: Approve this cluster for funding as recommended by the Executive Director.													
96091	Monitoring for Current and Potential Environmental Impacts of Oil Industry Activities in Cook Inlet	ADEC	Cook Inl RCAC	\$135.0	\$135.0	\$0.0				\$0.0			
<u>Abstract</u> This proposal requests assistance in funding the Cook Inlet Environmental Monitoring Study. For two years, Cook Inlet RCAC has devoted its entire environmental research budget as sole supporter of this critical program. Goals of the program are: 1) establishing baseline hydrocarbon and biological data; 2) evaluating potential hydrocarbon accumulation in Cook Inlet sediments; and 3) evaluating potential environmental impacts of crude oil production and transportation in the Inlet.				<u>Chief Scientist's Comments</u> Link to EVOS is weak; no work in areas that were really oiled, but monitoring sites are in spill zone. Insufficient detail for full evaluation. Focus is on gathering environmental baseline data, as opposed to actively reducing marine pollution.				<u>Trustee Council Action</u> Do not fund. Proposal is not appropriate for EVOS civil settlement funds. It would monitor existing industrial activity, only peripherally related to recovery from EVOS, and prepare for future accidents. Neither of these is allowable under the civil settlement.					
96115	Sound Waste Management Plan	ADEC	PWS Econ DC	\$29.6	\$28.3	\$28.3				\$28.3	2nd yr. 2 yr. project	\$28.3	
<u>Abstract</u> The Sound Waste Management Plan is a comprehensive plan to identify and remove the major sources of marine pollution and solid waste in PWS that may be affecting recovery of resources and services injured by the Exxon Valdez Oil Spill. This request completes the first phase -- planning begun in FY 95. The following phases of the plan will be to implement these solutions using funds from a variety of sources, possibly including the Trustee Council.				<u>Chief Scientist's Comments</u> Prior work won't come to fruition if these final funds are not supplied in 1996. In theory, this project could speed recovery of injured species but those linkages are not clear. Future funding requests need close scrutiny.				<u>Trustee Council Action</u> Fund. Project completes comprehensive planning for PWS communities to determine appropriate strategies for minimizing marine pollution, some of which may be affecting recovery of injured resources and services.					

9/1/95 DRAFT/PAGE 49

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
Habitat Improvements				\$1,077.1	\$963.3	\$766.5	\$800.0	\$600.0	\$0.0	\$2,166.5		\$560.6	\$205.9
PAG Recommendation: Regarding 96058, actively seek landowner participation. If none forthcoming, look at reducing this project. Regarding 96141, do not fund. State managers should work with other public and private operators to obtain needed data. Regarding 96176, do not fund. Regarding 96180, staff should examine expectations of this project relative to other organizations' efforts on the Kenai River.													
96058	Landowner Assistance Project	USFS	USFS	\$205.9	\$205.9	\$205.9	\$0.0	\$0.0	\$0.0	\$205.9	2nd yr. 2 yr. project		\$205.9
<u>Abstract</u>		<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>							
Landowners in the oil spill area have expressed an interest in receiving assistance and advice on how to do a better job of protecting and/or enhancing habitat during resource development activities. Impacts often occur because landowners and development contractors lack an awareness of resource sensitivities during pre-project planning. The project, on an as needed basis, will attempt to make development and restoration objectives compatible so that land use activities do not impede natural recovery.		The concept of providing assistance to private landowners who want to minimize further impacts on spill-injured resources is good. However, I need more information about the results of current ('95) efforts and what is proposed in '96. My impression is that the initial response to the offer of landowner assistance in '95 is weak.				Defer decision until consideration of results of FY 95 effort. Project would continue effort begun in FY 95 to assist private landowners in protecting habitat during resource development activities.							
96141	Afognak Island State Park - Habitat Restoration Survey	ADNR	ADNR	\$45.0	\$45.0	\$0.0	\$0.0	\$0.0	\$0.0	\$0.0	1st yr. 1 yr. project		
<u>Abstract</u>		<u>Chief Scientist's Comments</u>				<u>Trustee Council Action</u>							
The objective of this project is to recommend ways to restore habitat in logged areas and along logging roads in Afognak Island State Park. The park was established in 1994 on land (Seal Bay and Tonki Cape parcels) purchased by the Trustee Council. A private contractor would conduct a regeneration survey that would document the density of seedlings that have returned to the 1200 acres that have been logged, and recommend ways to improve habitat (e.g., tree planting or thinning). The contractor would also recommend cost-effective ways to improve habitat along the 12 miles of logging roads within the park.		This is a technically sound proposal, which appears to have taken into account previous peer review comments. My only concern is that most of the needed restoration actions may not take place for 25 years, and we have no guarantee that in the year 2020 someone responsible for making management decisions at Afognak State Park will have read a survey report from 1996.				Do not fund because of lack of support by the PAG and others. Not a priority for funding.							

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96176	Restoration of Essential Wetland Habitat at San Juan Bay on Montague Island	USFS	USFS	\$67.5	\$67.5	\$0.0				\$0.0	1st yr. 6 yr project		

Abstract

Project has the potential to create wetland habitats used by waterfowl and anadromous fish impacted by the oil spill. Study in FY 96 will determine project feasibility from hydrologic, soils, geomorphology, fisheries, wildlife and engineering perspectives. Detailed project plan will be developed if findings warrant. Environmental analysis will be conducted in FY 97. If project is implemented, succession will be reversed in the uplifted lake at San Juan Bay on Montague Island. Flooding of the uplifted area will maintain the wetland component. Pools/ponds will be created in riparian and floodplain areas to restore associated aquatic vegetation.

Chief Scientist's Comments

This is a feasibility study to restore freshwater wetlands on Montague Island that were altered by the 1964 earthquake. Although this project is proposed as a replacement for wetlands injured by the oil spill, the link to specific injured species is not clear. I need additional justification about the link to injury, as well as more information about what methods, degree of manipulation, and cost, might be required to restore these wetlands.

Trustee Council Action

Do not fund. No additional information was provided linking this project to species injured by the spill, and many technical questions are unresolved.

96178	Second Growth Forest Habitat Enhancement for Injured Wildlife Species	USFS	USFS	\$84.3	\$84.3	\$0.0				\$0.0			
-------	---	------	------	--------	--------	-------	--	--	--	-------	--	--	--

Abstract

The PWS area has several watersheds on National Forest System lands where timber harvest occurred in the early 1970s. These were done without an understanding of optimum stand structure for wildlife populations. This project has the potential to improve habitat for river otter, marbled murrelet, harlequin duck and bald eagle by accelerating succession and developing forest stand structure beneficial to wildlife species faster than natural forest succession. Habitat for old-growth dependent species such as river otter, marbled murrelet, harlequin duck, and bald eagle, whose populations were proven to be damaged by the 1989 oil spill, can be improved with this project.

Chief Scientist's Comments

The proposers seem to have a good understanding of understory characteristics in relation to forest types and management, but they have not presented a persuasive case that enhancing forest growth through pre-commercial thinning will demonstrably benefit river otters, harlequin ducks, marbled murrelets, and bald eagles. Most of the technical references cited concern deer. The link to restoration is weak, and I cannot recommend funding at this time.

Trustee Council Action

Do not fund. Link to restoration is weak.

FY 96 WORK PLAN -- TRUSTEE COUNCIL 8/25/95 ACTION

9/1/95 DRAFT/PAGE 51

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December
96180	Kenai Habitat Restoration & Recreation Enhancement Project	ADNR	ADNR	\$674.4	\$560.6	\$560.6	\$800.0	\$600.0	\$0.0	\$1,960.6	1st yr. 3 yr. project	\$560.6	

Abstract

Adverse impacts to the banks of the Kenai River total approximately 19 miles of the river's 166 mile shoreline. Included in this total are 5.4 river miles of degraded shoreline on public land. Riparian habitats have been impacted by trampling, vegetation loss and structural development. This riparian zone provides important habitat for pink salmon, sockeye salmon and Dolly Varden, species injured by the *Exxon Valdez* oil spill. The project's objectives are to restore injured fish habitat, protect fish and wildlife habitat, enhance and direct recreation and preserve the values and biophysical functions that the riparian habitat contributes to the watershed.

Chief Scientist's Comments

This is a well presented proposal, and the supplementary information provided helps to clarify the relationship to work that is being carried out with funds provided from the *Exxon Valdez* criminal settlement and other sources. This is a strong project aimed at the direct restoration of habitats that are important to the recovery of sockeye and other fish species of commercial and recreational importance.

Trustee Council Action

Fund. This project will aid restoration of habitat for the benefit of sockeye salmon and other fish species of commercial and recreational importance. Some questions remain about specific use of Trustee funds relative to other sources of state and federal support. Further information will be provided prior to 8/25/95.

Information Support

\$0.0

\$0.0

96155 Prince William Sound Information Service ADNR Fairweather

\$0.0

\$0.0

Abstract

The proposed Fairweather integrated information system is designed to accept, process and store scientific and other information from studies and environmental data collection programs from PWS and then allow easy access for manipulation and display of the data. Basic information from PWS studies will be converted to a common data format and stored on computer disk accessible to all researchers, government officials and other interested parties. Users would have a variety of access and display options.

Chief Scientist's Comments

Chief Scientist did not review proposal.

Trustee Council Action

Do not fund. Proposal duplicates work ongoing under 96100 begun under 95089.

Proj. No.	Title	Lead Agency	Proposer	FY 96 Request	FY 96 Revised Request	FY 96 Total Approved/Deferred	FY97 Estimate	FY 98 Estimate	FY 99 to end Estimate	Total FY 96 to end Estimate	Project Duration	Approved 8/25/95	Deferred Decision to December

-------	---	------	------	-----------	-----------	-------	--	--	--	-------	--	--	--

Abstract

This project addresses the need for basic marine research infrastructure important to the long-term restoration effort in PWS. It will expand currently overcrowded research facilities and provide new capacity for research and monitoring of ocean processes, marine plankton and nekton, and interrelationships between physics and the biology of the region. The laboratories will emphasize remote sampling (underwater acoustics and optics), data communication, visualization and numerical modeling.

Chief Scientist's Comments

Chief Scientist did not review proposal.

Trustee Council Action

Do not fund. Proposal incomplete. Planning money already obtained from alternate funding source.

Habitat Protection Process; Small Parcel Process Status Summary

Parcel ID	Name	Owner	Location	Acres	Rank	Agency Sponsor	Description
KEN 19	Coal Creek Moorage	Linda McLane	Coal Creek Moorage Subdivision, Part 1, Block 1; Lots 1,2,3,4, & 5; Block 2, Lot 2, Tract A. This parcel is located at the confluence of Coal Creek and the Kaslof River, part of the Kaslof River Flats.	53	High	ADF&G/ ADNR	The parcel contains an extensive tidal marsh surrounded by uplands of mixed spruce and birch. This parcel benefits pink and sockeye salmon, Dolly Varden, bald eagles, commercial and sport fishing, recreation and archaeological resources.
KEN 34	Cone Parcel	Chester Cone	South of Beaver Loop Road, Kenai AK, T5N, R11W, Sec 11, SM. This parcel is located near the mouth of the Kenai River in an area known as the Kenai River Flats.	100	High	ADF&G/ ADNR	This parcel contains an extensive tidal marsh and is surrounded by uplands containing bog meadow, grass, sedge, rose shrubs and spruce. Wetlands found on this property provide habitat for salmon smolt, Dolly Varden, waterfowl, shorebirds and raptors.
KEN 149	Perl Island	Perl Island Ranch Partners	Island in Chugach Island group south of the Kenai Peninsula. T12S, R14W, Sec. 19 SM, Kenai, AK. This parcel occupies the NW corner of Perl Island, the central of the three islands in the Chugach Islands group.	156	High	ADNR	An anadromous stream on the property provides habitat for salmon and Dolly Varden. In addition, there is a documented concentration of sea otters in the area. Acquisition would eliminate the impact of cattle grazing on injured resources.
PWS 05	Valdez Duck Flats	University of Alaska	0.5 miles north of the city of Valdez, Richardson Highway, Valdez Alaska. U.S. Survey No. 448, T8S, R6W, S29/32.	33	High	USFS	The Valdez Duck Flats are a large and unique complex of intertidal mud flats and salt marsh covering approximately 1000 acres. Millions of salmon fry from these streams and the nearby Spilomon Gulch hatchery feed and rear throughout the Duck Flats.
KEN 1001	Deep Creek	Ninilchik Native Association	Parcel is located at MM 137.3 on the Sterling Highway 2.2 miles south of Ninilchik. T25S, R14W, SM, Lot 5, Sec. 4, Lot 6, Sec. 4, Lot 6 Deep Creek Subdiv., Tracts A&B & Lot 1, Bl 1, Leisure Time Estates.	91	High	ADNR	This parcel has approx. 0.5 miles of shoreline on Cook Inlet and provides restoration benefit for intertidal/subtidal biota, recreation and subsistence.
KEN 1004	Stephanka Tract	Kenai Native Assoc. Inc.	This parcel is located within the Kenai National Wildlife Refuge. T4N, R8W, S.M., Section 1 and E 1/2 of Section 2.	803	High	USFWS	This parcel contains one and one half sections of intermediate and mature forest with small pockets of wetlands. It provides habitat for sockeye and pink salmon, Dolly Varden and river otters and has recreation and cultural resource values.

Habitat Protection Process; Small Parcel Process Status Summary

Parcel ID	Name	Owner	Location	Acres	Rank	Agency Sponsor	Description
PWS 52	Valdez, Hayward	Phillip L. Hayward	Lots 1-4; Block 3 and 4, Zook Subdivision, Mineral Loop Road, Valdez, Alaska. T8S, R6W, S33/34.	9.5	Moderate	ADF&G	This parcel is adjacent to the Valdez Duck Flats and acquisition would provide protection from development adjacent to these unique complex intertidal mud flats and salt marsh.
KEN 10	Kobylarz Subdivision	Elizabeth Kobylarz	Kobylarz Subdivision Tract D, Sec 19, T5N, R10W, SM, Kenai, AK. This parcel is located on Mile 14 of the Kenai River and encompasses approximately 1100 feet of riverbank frontage on Big Eddy.	20	Moderate	ADF&G/ ADNR	This parcel provides access to one of the most popular fishing areas on the Kenai river. Acquisition would provide protection of key salmonid habitat and also benefit Dolly Varden.
KEN 148	River Ranch	Anderson, Hanni, Terry	Government Lot 4, 9, 10 and the NE 1/4 of the SW 1/4, T5N, R9W, Sec 22, SM Kenai AK. This parcel is located near River Mile 32 on the Kenai River.	146	Moderate	ADF&G/ ADNR	This parcel is one of the larger privately owned properties on the river, developed as a horse and cattle ranch. It has high potential for recreational use and habitat protection as acquisition will facilitate management of fisheries and injured resources
KAP 150	Karluk	Karluk IRA Council	Karluk River, Kodiak Ak. T30S, R32W, Section 23, SM. This parcel is located on the west side of Kodiak Island.	5	Moderate	ADF&G/ ADNR	The Karluk River drainage is the single largest salmon system in the Kodiak Island Group. Subsistence fishermen are dependant on Karluk resources including pink and sockeye salmon. Dolly Varden and recreation/tourism will also benefit from protection.
KAP 226	Karluk River Lagoon	Reed Stoops, Ayakulik Associates	USS 362 - Tracts A-D, Karluk River Lagoon, T30N, R32W, Sec. 22. SM.	21.5	Moderate	ADF&G/ ADNR	This parcel provides important public access and recreational service values. The Karluk River is world renown for its highly productive fishery resources including chinook, sockeye, pink, chum and coho salmon. Cultural resources will also benefit.
KEN 54	Salamatof Parcel	Salamatof Native Assoc., Inc.	T4N, R9W, Sec. 6 & 7, SM, Kenai, AK. T4N, R10W, portions of Sec. 1 & 12, SM, Kenai AK. This parcel encompasses approximately two miles of river bank between River Miles 26 & 28 upstream of the Soldotna Airport.	1260	Moderate	ADF&G/ ADNR/ USFWS	This parcel is one of the largest undeveloped privately owned parcels on the Kenai River. Protection will be provided injured resources such as salmon, Dolly Varden, river otters and bald eagles from future development.

Habitat Protection Process; Small Parcel Process Status Summary

Parcel ID	Name	Owner	Location	Acres	Rank	Agency Sponsor	Description
PWS 17	Ellamar Subdivision	Ellamar Properties, Inc.	Ellamar Subdivision in Virgin Bay, Tatitlek Narrows, Prince William Sound. T11S, R9W, S20/29. This parcel is located on Virgin Bay, Approx. 2 miles north of the village of Tatitlek in PWS.	172	Moderate	ADNR	The area is mostly flat, well forested protected by Bligh and Busby Islands to the west and surrounded by mountains to the east. 42 lots have been sold. Benefits exist for salmon, herring, intertidal/subtidal habitats, sea otters and recreation/tourism.
KEN 55	Overlook Park	Cronland, Geisler, Lloyd, McNiven, Whytal	3/4 miles north of Bluff Point from Sterling Highway, Homer, AK. T6S, R14W, Sections 15 & 22, SM, Kenai, AK. This parcel is locally known as Overlook Park. It is situated below and is visible from the Sterling Hwy. scenic overlook.	97	Moderate	ADNR	The parcel lies upland of 3/4 mile of Kachemak Bay shoreline and an extensive tidal pool area unique to the area and accessible from the road system. This intertidal habitat contains especially diverse flora and fauna.
KAP 145	Termination Point	Leisnoi Inc. (Surface Estate)	Monashka Bay, NE coast of Kodiak Island. T27S, R20W, Sec. 6, 7, 8 & 18. SM. This parcel is approx. 12 miles from the town of Kodiak.	1028	Moderate	ADNR	This relatively flat coastal tract with 4 miles of convoluted shoreline and is forested. The parcel also contains productive intertidal habitat and benefits marbled murrelets, pigeon guillemots, recreation, subsistence and archaeological resources.
KAP 130	Uyak Bay	Dodge, Eklund, Povelite, Truitt	Head of Uyak Bay, west side of Kodiak Island. T33S, R27W, Sec. 31, & T34S, R27W, Sec. 6. SM.	318	Moderate	USFWS	This parcel has approx. 0.5 miles of shoreline on Uyak Bay and Uyak River runs through a portion of the parcel. The Uyak River provides habitat for pink, coho, and chum salmon, Dolly Varden, bald eagles. There is also a productive intertidal area.
KEN 12	Baycrest	Michael Bullock (Agent), Baycrest Investment Corp.	T6S, R14W, Sec. 23., below Baycrest Hill west of Homer. This parcel is adjacent to the "Overlook Parcel" on the west and contains 3/4 mile of Kachemak Bay frontage.	90	PMSC*	ADNR	This parcel contains an extensive tidal pool area and is accessible from the road system. Outstanding attributes of this parcel contribute to recreation, public access and management of the Overlook Parcel.
KEN 29	Tulin Parcel	Charles E. & Helen Tulin	Located between the Sterling Highway and Cook Inlet with 3/4 mile of ocean frontage. T6S, R14W, Sec. 8 & 9, SM Kenai, AK	220	PMSC*	ADNR	This parcels contains and runs parallel to Diamond Creek from the Sterling Highway to Cook Inlet. The parcel is dominated by a mixed spruce and birch forest. Outstanding attributes of this parcel are its potential for recreation and public access.

*PMSC (Parcels Meriting Special Consideration)

Habitat Protection Process; Small Parcel Process Status Summary

Parcel ID	Name	Owner	Location	Acres	Rank	Agency Sponsor	Description
KAP 22	The Triplets	Ouzinkie Native Corporation	Marmot Bay, 4 miles north of Kodiak Island, T25S, R25W, Sec. 23 & 26, SM.	60	PMSC*	USFWS	These three islands comprise the largest seabird colony in the Kodiak Archipelago. They contain important breeding habitat for several seabird populations impacted by the oil spill (colonial nesting seabirds, common murre).
KAP 220	Mouth of Ayakulik River	Ayakulik Associates, c/o Reed Stoops	Mouth of the Ayakulik River, USMS 247, lots 1-6, Tract A. This parcel is composed of 6 lots and an adjacent tract at the mouth of the Ayakulik River in western Kodiak.	56	PMSC*	ADF&G	This river is second only to the Karluk for sockeye and chinook salmon production potential. Acquisition would provide outstanding benefits to recreation and fisheries management.
KAP 105/142	Three Saints Bay	Pestrikoff & Boskofsky	Three Saints Bay, Kodiak Island T35S, R27W, Sec. 10 & 11, SM. These parcels adjoin each other and are located within the entrance to the bay.	48 & 40	PMSC*	USFWS	Accessible shorelines and nearshore waters are used for subsistence purposes. Outstanding attributes include the wilderness qualities of the area, subsistence benefits to residents, and cultural resources.
KEN 1015	Lowell Point	James E. McCracken	McCracken Tract A, located in Lot 3, USS 3365, SW 1/4 Sec 22, NW 1/4 Sec 27 SM	19.38	PMSC*	ADNR	Located on Lowell Point, one mile south of Alaska SeaLife Center. Parcel is forested in old growth hemlock and spruce with 700' of sand and gravel beach. The parcel provides recreational opportunities and access to Resurrection Bay.
KEN 1014	Grouse Lake	Mr. Dean Anderson	Portion of the S 1/2, SW 1/4, Section 1, T1N, R1W, SM lying west of Grouse Lake	64	PMSC*	USFS	This parcel is the only level access area to Grouse Lake and Grouse Creek, an area used by campers and anglers for years. Purchase will benefit the restoration of sockeye salmon, Dolly Varden, pink salmon and recreation/tourism.
PWS 1010	Jack Bay	University of Alaska	T10S R8W Copper River Meridian, Alaska, Sec. 2, lot 7, Sec. 3, lot 2, containing 198.64 acres, more or less. T10S, R8W, of the Copper River Meridian, Alaska, Sec. 4: tract A, Sec. 9: tract A, Sec. 10: N1/2, Sec. 11: tract A, containing 743 acres.	942	PMSC*	ADNR/USFS	This parcel provides restoration benefit for pink salmon, herring, bald eagles, harbor seals, harlequin ducks and intertidal and subtidal biota. In addition, this parcel has received much public support and is accessible by boat from Valdez.

*PMSC (Parcels Meriting Special Consideration)

Region: KEN/Kenai, KAP/Kodiak, PWS/Prince William Sound

Comprehensive Habitat Protection Process: Small Parcel Analysis
February 13, 1995, Supplement July 15, 1995

Parcel ID: PWS 05
Valdez Duck Flats

Rank: High **Acreage:** 33 **Agency Sponsor:** USFS

Location: 0.5 miles north of the city of Valdez, Richardson Highway, Valdez, Alaska. U.S. Survey, No. 447, T8S, R6W, S29/32.

Landowner: University of Alaska

Address: Statewide Office of Land Management
2221 E. Northern Lights Blvd., Suite 213
Anchorage, AK 99508

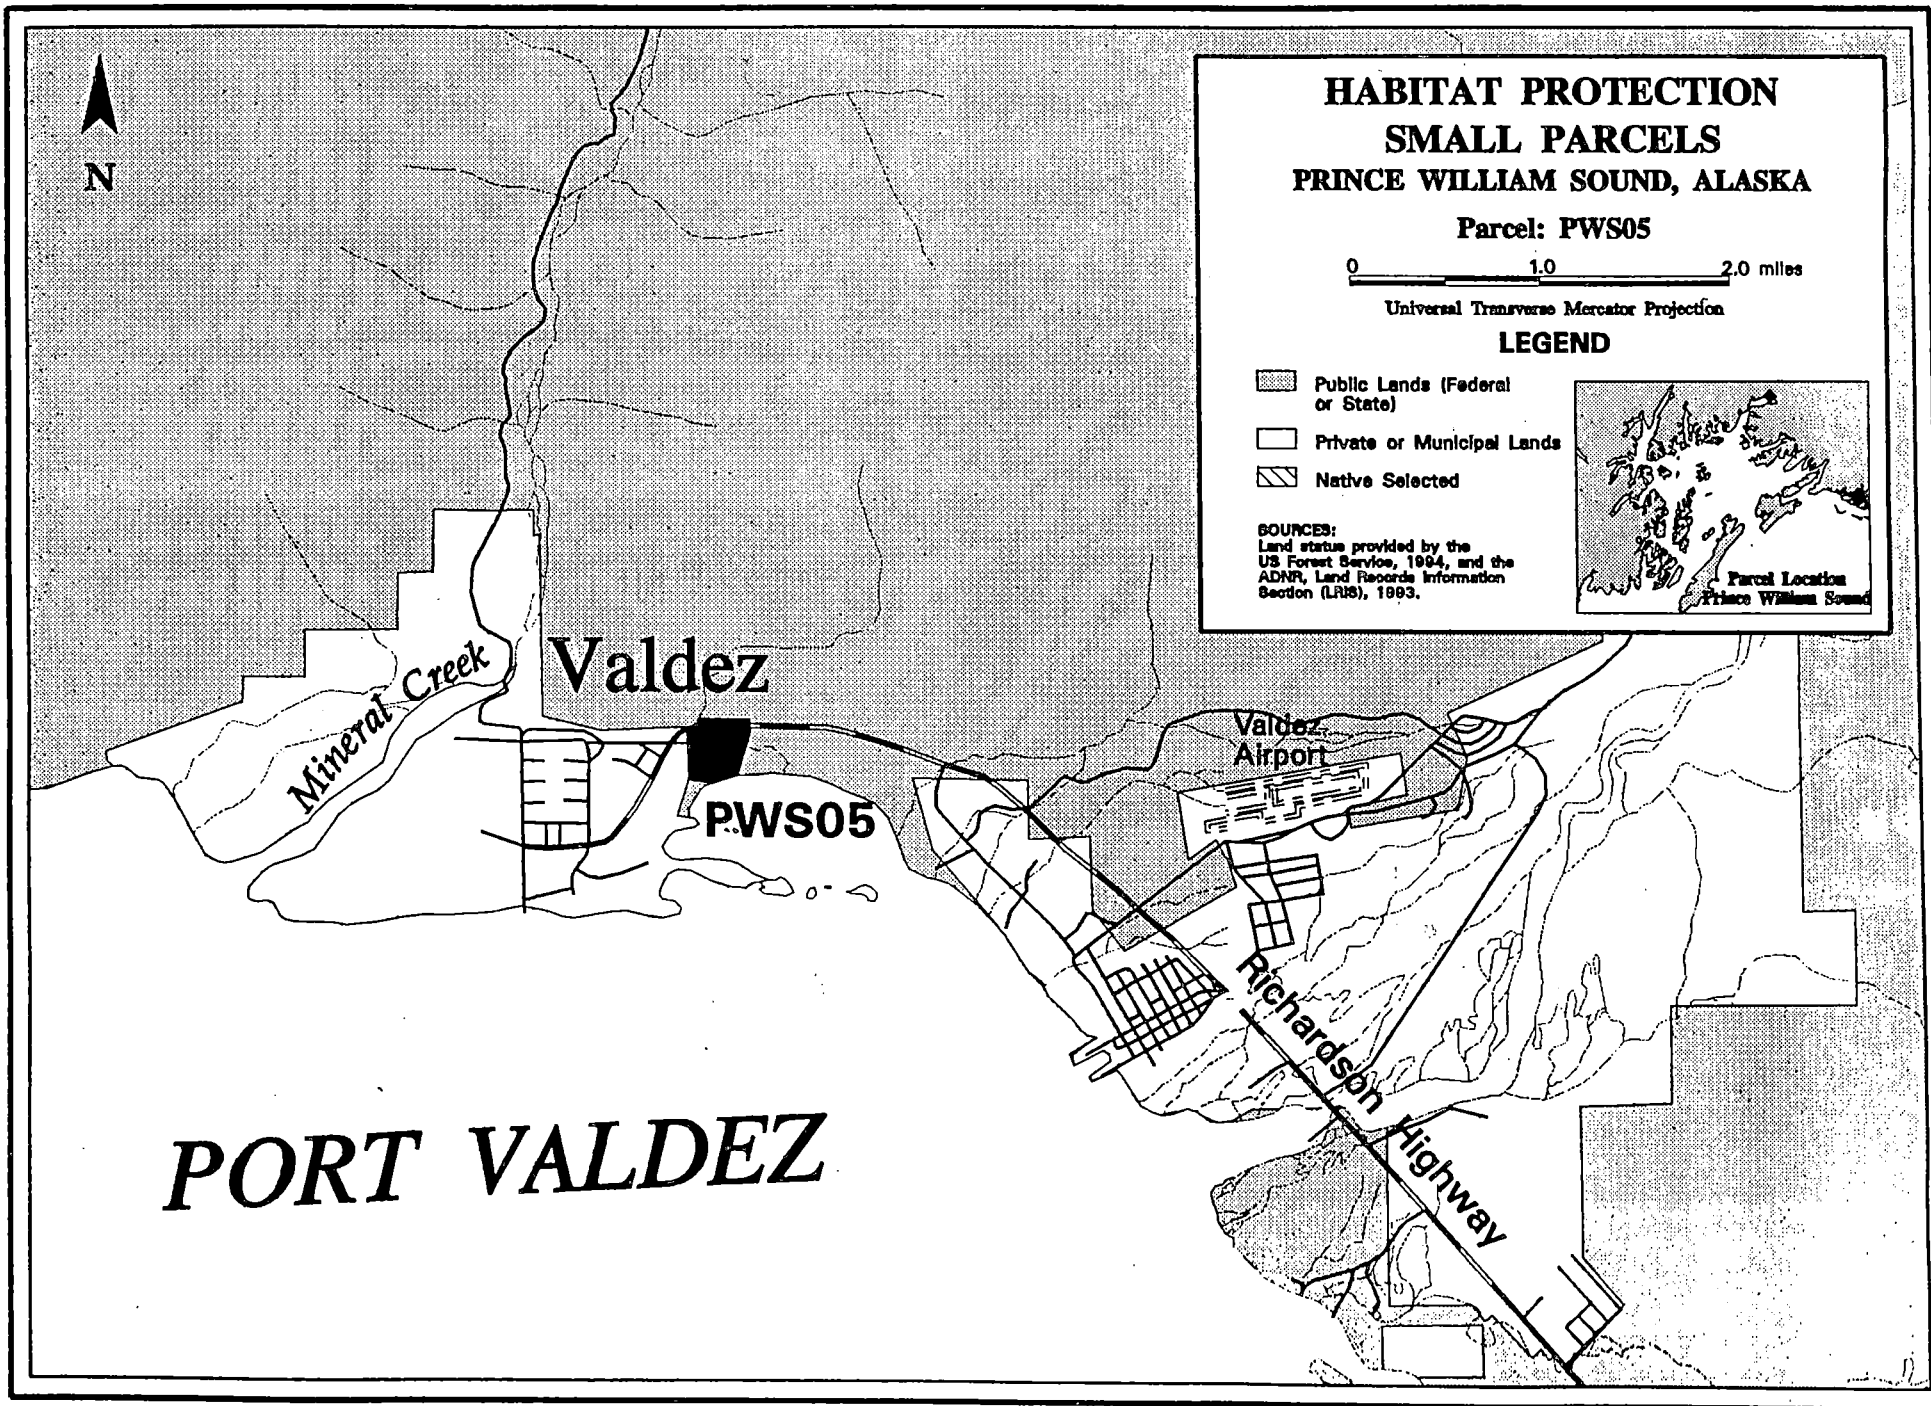

This 33 acre parcel is leased to the USDA Forest Service as a visitor center for viewing pink salmon spawning. The current lease expires in 1998. In 1994, the parcel and associated salmon stream attracted an estimated 80,000 - 120,000 visitors. Tourist use of this site is expected to continue to increase. The parcel includes both the fish viewing area north of the Richardson Highway and a portion of the Valdez Duck Flats south of the highway.

The Valdez Duck Flats are a large and unique complex of intertidal mud flats and salt marsh covering approximately 1000 acres. The flats are flooded regularly by incoming tides that mix with seven freshwater streams creating a productive estuary environment. Millions of salmon fry from these streams and the nearby Solomon Gulch hatchery feed and rear throughout the Duck Flats, assisted by the counter-clockwise currents that flow through Port Valdez. The Duck Flats also provide nesting, molting and staging habitat for 52 species of marine birds, 8 species of waterfowl, 18 species of shorebirds and numerous other passerines and raptors. Harbor seals and sea otters also forage throughout the area for mussels and clams.

The injured resources and services that potentially benefit from acquisition of this parcel include pink salmon, intertidal/subtidal habitats, and recreation/tourism.

Threats to the resources on this parcel are based largely on facilities expansion. Threats to service values i.e., recreation/tourism, except for the potential loss of lease are considered minimal. Facilities expansion may include filling of wetlands for added parking or public access, highway improvements, and interpretive site development. Public ownership of this site would ensure continued public access and visitor enhancements that are consistent with restoration goals.

The USDA Forest Service is presently attempting to purchase this parcel with restitution funds.

Parcel ID: PWS 17
Ellamar Subdivision

Rank: Moderate **Acreage:** 172 **Agency Sponsor:** ADNRR

Location: Ellamar Subdivision in Virgin Bay, Tatitlek Narrows, Prince William Sound. T11S, R9W, S20/29.

Landowner: Ellamar Properties, Inc.

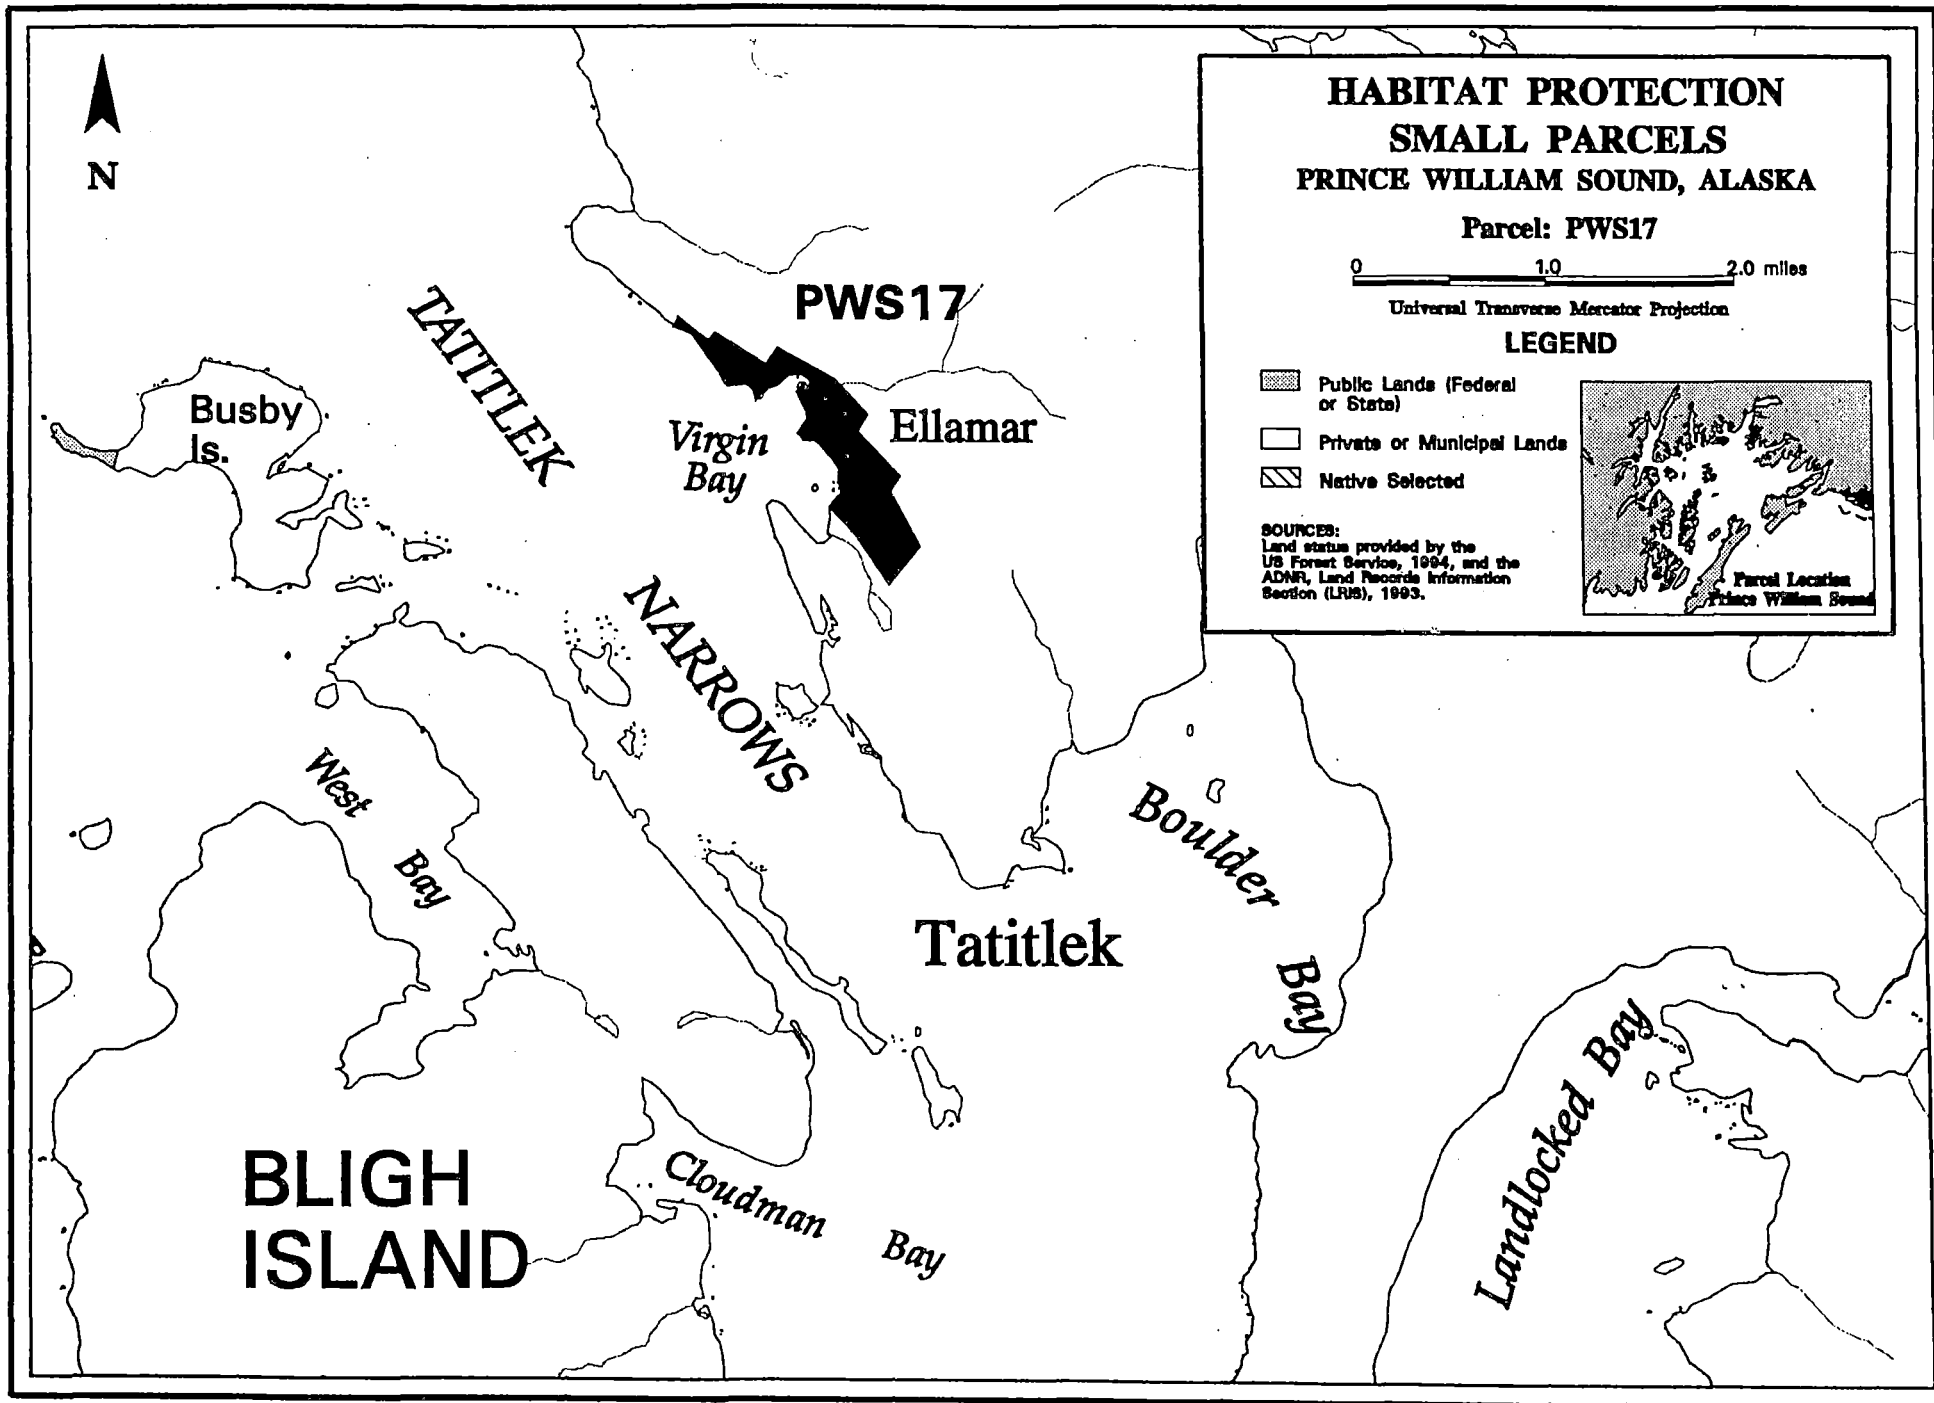

Address: P.O. Box 203113
Anchorage, AK 99520-3113

This 172 acre parcel is located on Virgin Bay, approximately two miles north of the village of Tatitlek in Prince William Sound. The area is mostly flat, well forested, protected by Bligh and Busby Islands to the west and surrounded by mountains to the east. The property consists of a planned subdivision with 157 lots, 42 of which have been sold. Most lots are approximately 1 acre in size, and 10 of the lots that were sold have houses constructed on them. Existing patterns of land ownership could complicate future management of this parcel.

The parcel provides restoration benefits for pink salmon, Pacific herring, intertidal/subtidal habitats, sea otter and recreation/tourism. Gladhaugh Creek, a pink salmon stream, bisects part of the parcel. Virgin Bay supports heavy spawning concentrations of Pacific herring and is a documented concentrated sea otter pupping area. Recreational improvements already in existence on-site include subdivision roads, a boathouse and dock. Virgin Bay also provides a protected anchorage that will enhance public access if surrounding lands become publicly owned.

Threats to injured resources and services are based primarily on increased development of the subdivision. Potential impacts include elevated levels of disturbance, localized pollution, and possible habitat loss from erosion and sedimentation as additional lands are cleared.

The parcel has been exposed to development in the past, including mining on adjacent lands for gold and copper, and operation of a fish cannery. Because of this, hazardous materials are a consideration. Subdivision roads have reportedly been constructed with old mine tailings.

Parcel ID: PWS 52
Valdez, Hayward

Rank: Moderate **Acreage:** 9.5 **Agency Sponsor:** ADF&G

Location: Lots 1-4, Block 3 and Block 4, Zook Subdivision, Mineral Loop Road, Valdez, Alaska. T8S, R6W, S33/34.

Landowner: Philip L. Hayward

Address: 1208 Oxford Drive
Anchorage, AK 99503

This 9.5 acre parcel is located near the intersection of the Richardson Highway and Mineral Loop Road, adjacent to the Valdez Duck Flats. The parcel contains three gravel pads that extend out onto the Duck Flats with little additional improvements other than a shed and trailer.

The parcel's potential restoration benefits are based entirely on its intertidal/subtidal values. The Valdez Duck Flats are a large and unique complex of intertidal mud flats and salt marsh covering approximately 1000 acres. The flats are flooded regularly by incoming tides that mix with seven freshwater streams creating a productive estuary environment. Millions of salmon fry from these streams and the nearby Solomon Gulch hatchery feed and rear throughout the Duck Flats, assisted by the counter-clockwise currents that flow through Port Valdez. The Duck Flats also provide nesting, molting and staging habitat for 52 species of marine birds, 8 species of waterfowl, 18 species of shorebirds and numerous other passerines and raptors. Harbor seals and sea otters also forage throughout the area for mussels and clams.

The Valdez Duck Flats are threatened by increasing development around the perimeter of the flats and pollutants from a variety of potential sources, including the gravel pads that exist on-site. Acquisition of this parcel would mitigate some of that threat. In addition, removal of the gravel pads could assist in restoring a small portion of the Duck Flats by allowing periodic flooding and the reestablishment of native vegetation.

Parcel ID: PWS 11
Horseshoe Bay

Rank: PMSC **Acreage:** 315 **Agency Sponsor:** ADNR

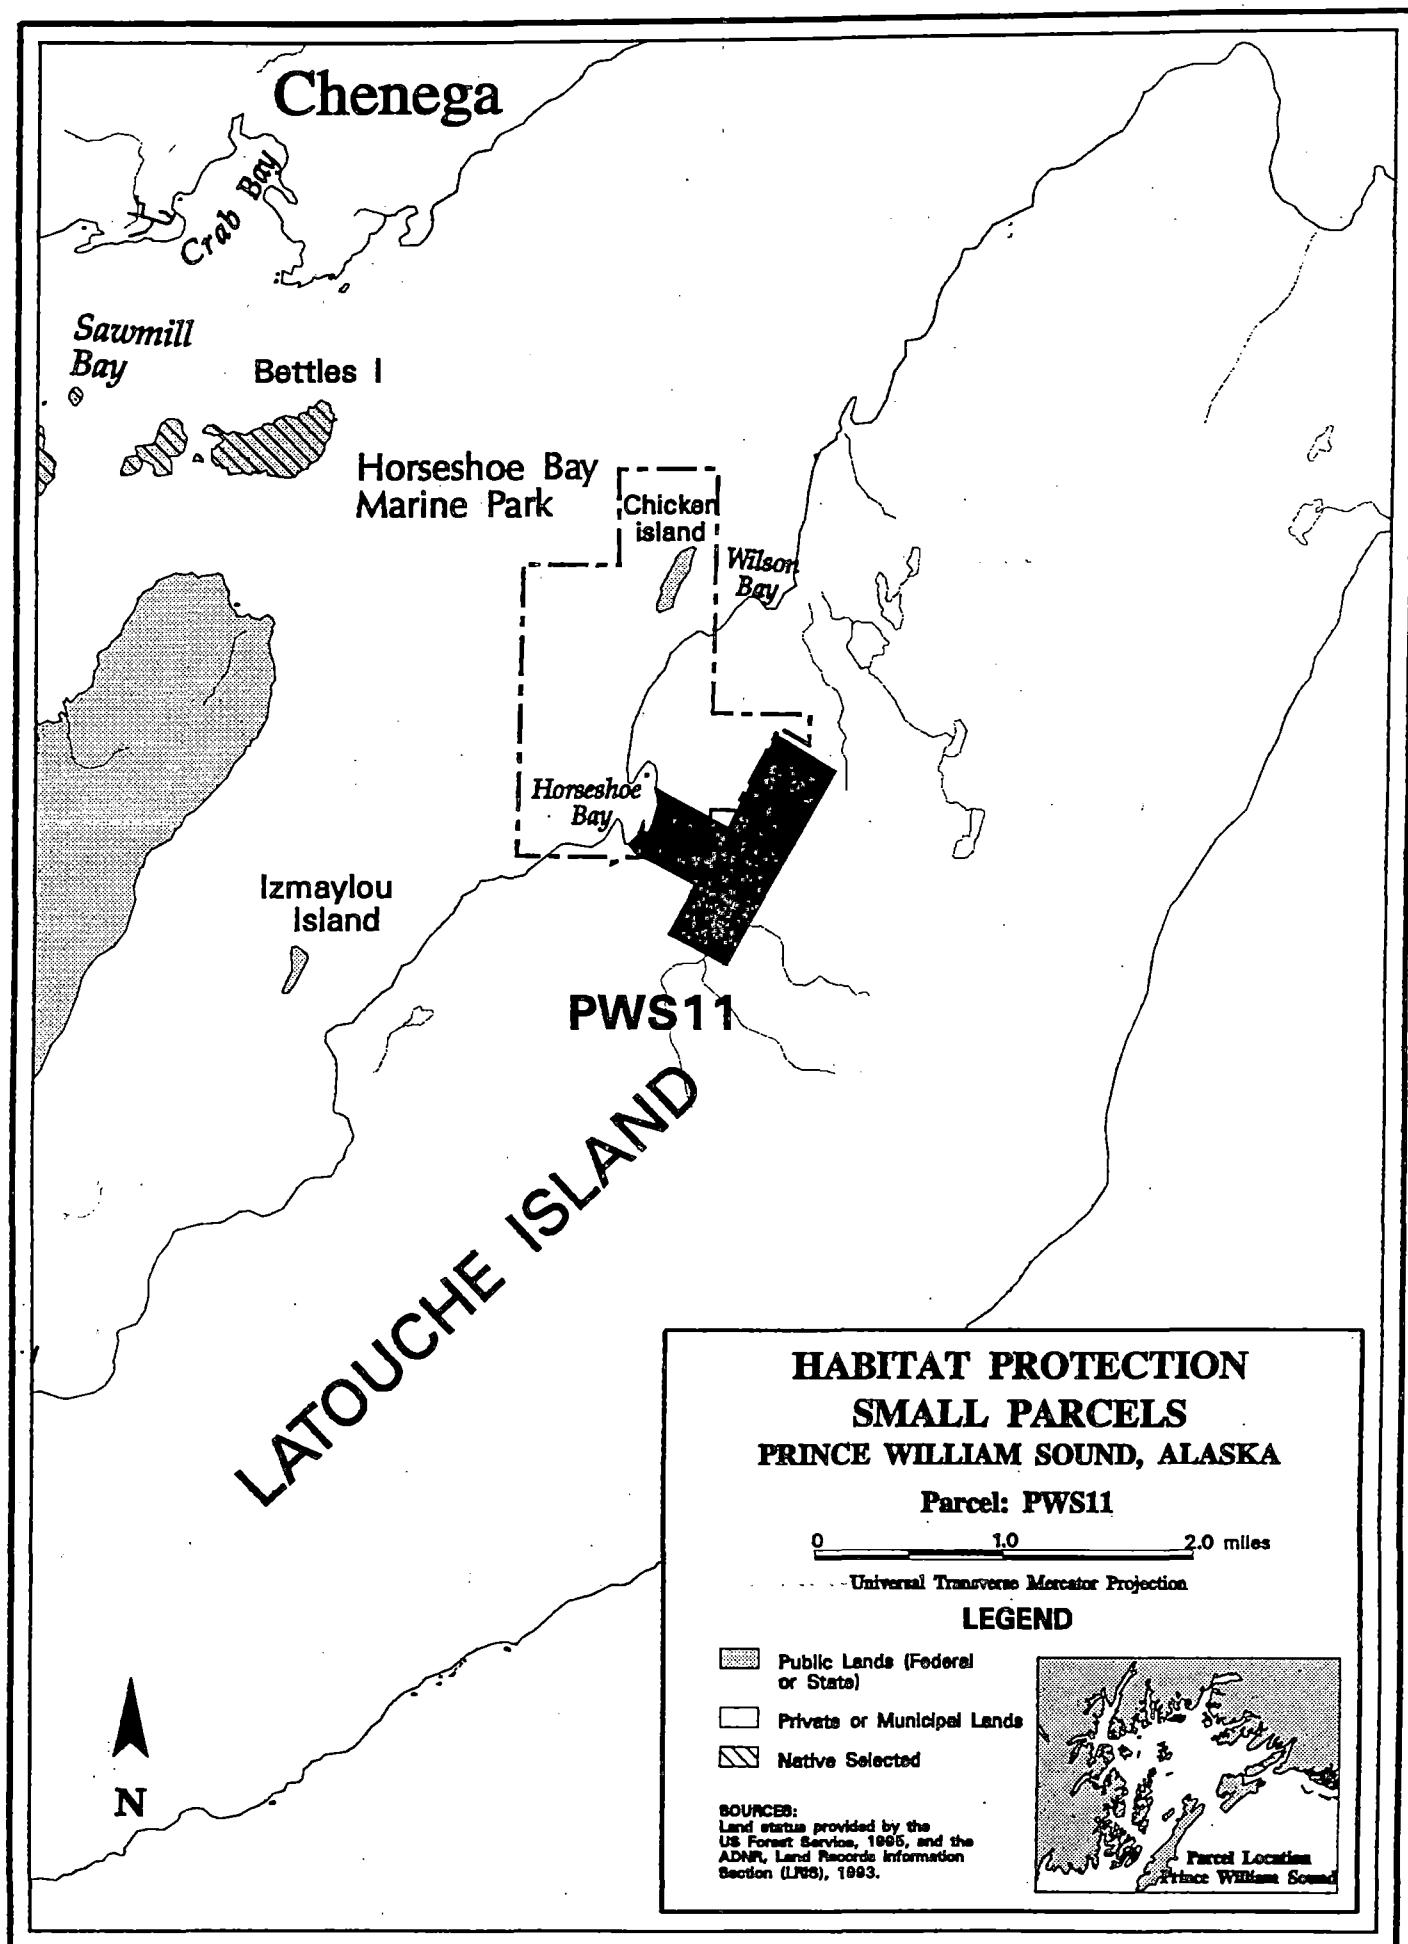

Location: T2S, R9E, Section 9.
Located on Horseshoe Bay, LaTouche Island.
Surrounded by Horseshoe Bay State Marine Park.

Landowner: Lucy W. Groh.

Address: 1576 Coffey Lane
Anchorage, AK 99501-4977

The parcel contains 1600 feet of Horseshoe Bay frontage and includes the mouth of an anadromous stream. The best anchorage in the bay is immediately adjacent to this parcel. Acquisition of this parcel would provide additional protection for pink salmon habitat and facilitate recreational access to the uplands and historic sites on LaTouche Island via existing trails.

Future development of the adjacent uplands, if not acquired, could result in user conflicts between the public and private property owners.

Parcel ID: PWS 1010
Jack Bay

Rank: PMSC **Acreage:** 942 **Agency Sponsor:** USFS/ADNR

Location: T10S, R8W, Section 2, Lot 7, Section 3, Lot 2, containing 198.64 acres more or less, and Section 4, Tract A, Section 9, Tract A, Section 10, North 1/2 Section 11, Tract A, containing 743 acres..

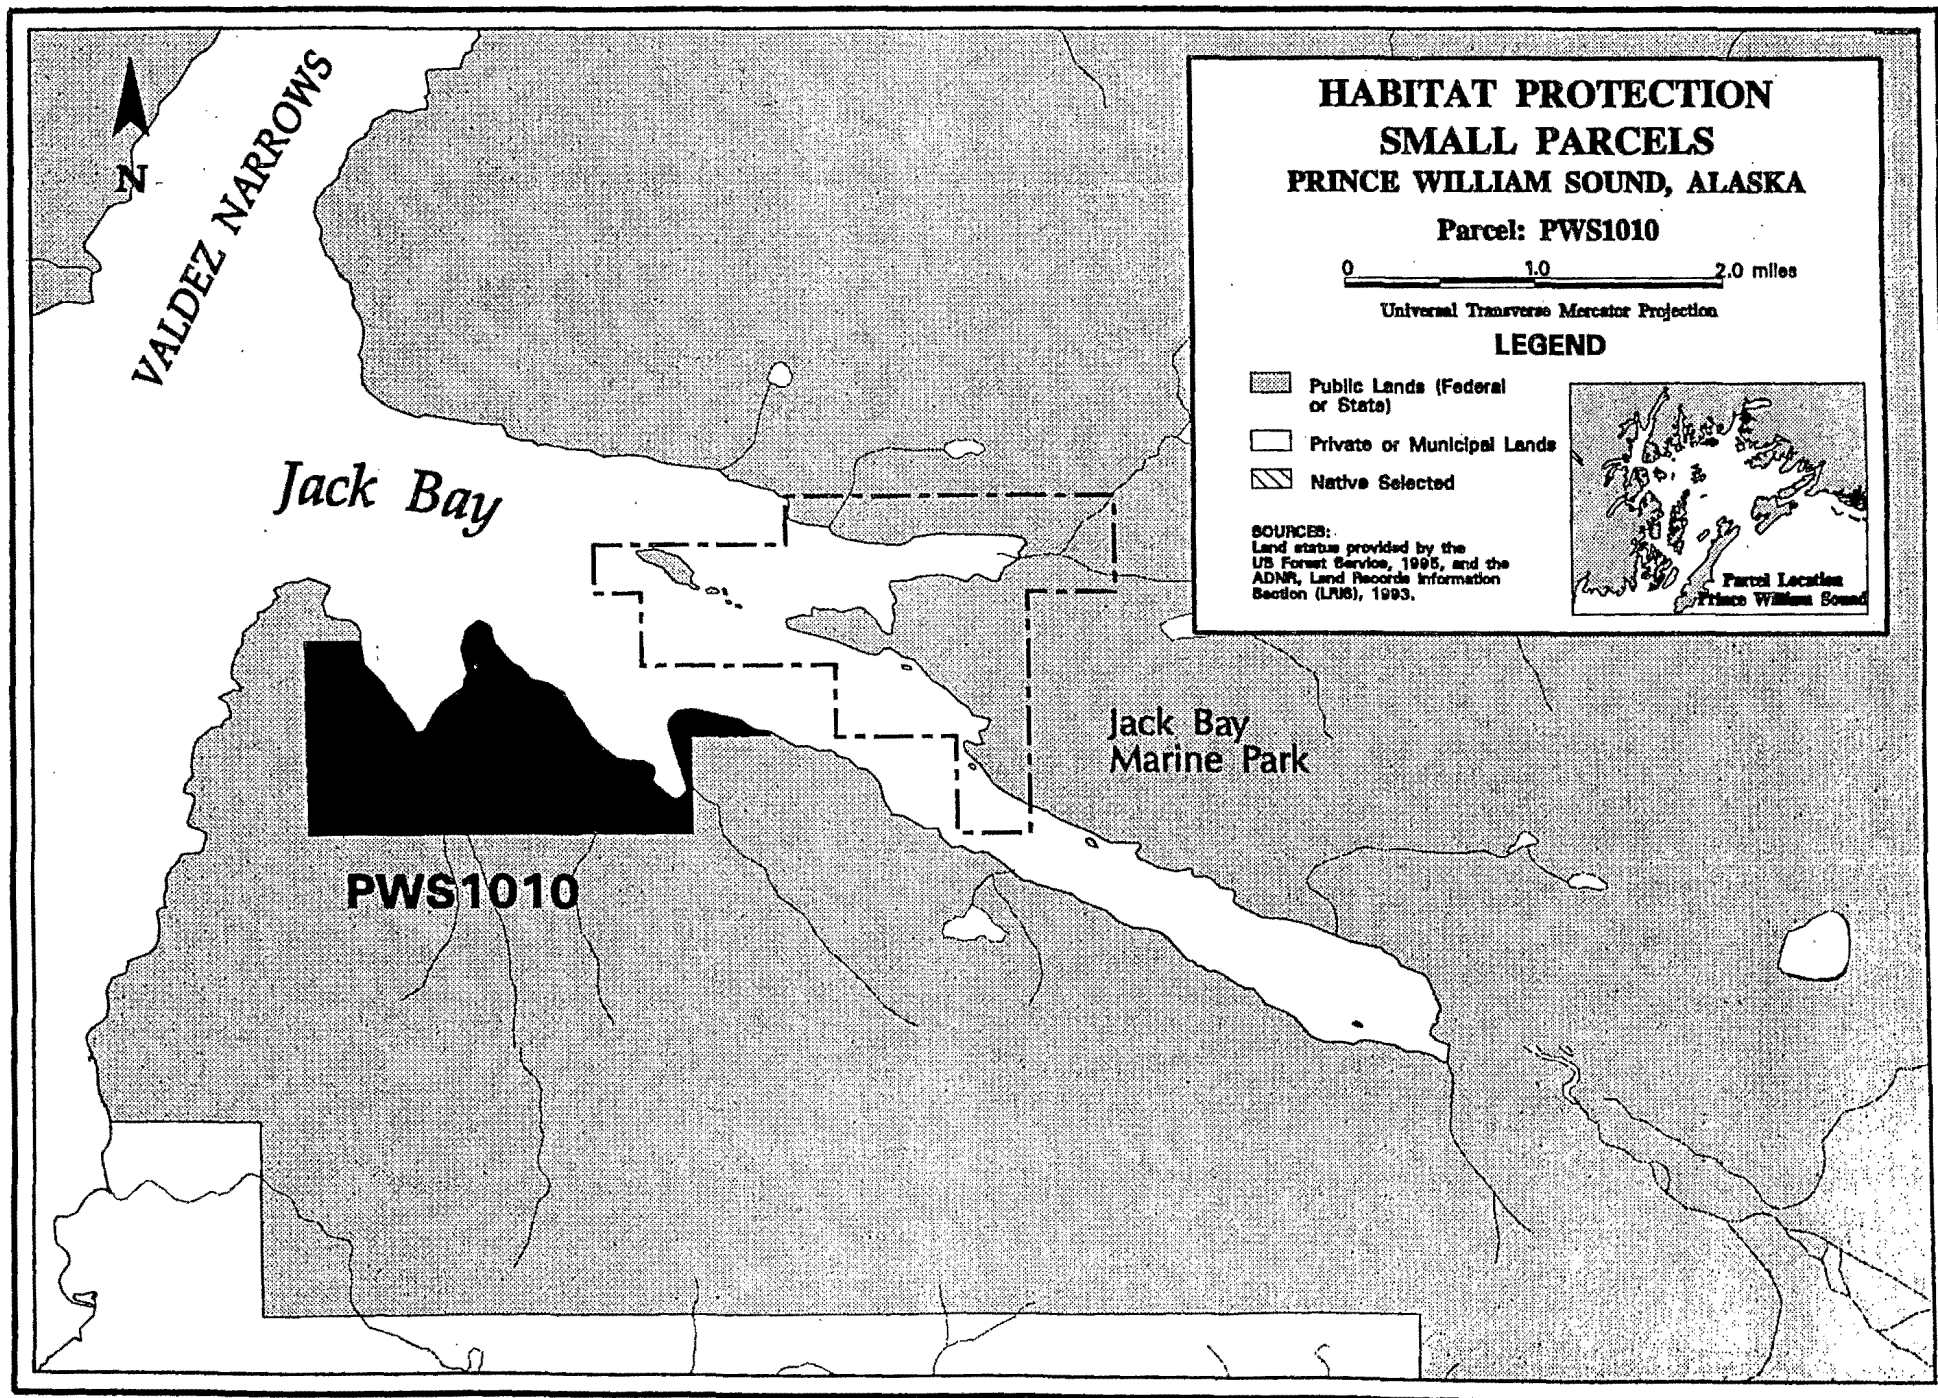

Landowner: University of Alaska

Address: 3890 University Drive
Anchorage, AK 99508

The Jack Bay parcel is located on the south shore of Jack Bay, Prince William Sound, 12 miles southwest of Valdez, Alaska. The parcel borders the Chugach National Forest along the southern boundary. The parcel is heavily forested and has two anadromous streams. The area is viewed by tourboat and the Alaska Marine Ferry passengers entering and leaving Port Valdez. There is an Alaska State Marine Park located across Jack Bay.

Acquisition of this parcel will benefit Pink salmon, Dolly Varden, intertidal/subtidal and recreation. The viewshed entering Port Valdez will also be protected from future development and logging. This parcel has unique characteristics which will provide for the restoration of injured resources and associated services.

Because of it's location there is potential for some recreational facilities development.

Draft Itinerary; PAG Field Trip

The itinerary is heavily dependent on weather and how much time the route takes. Most sites will be viewed from the boat with only a few minutes "loitering" in the water. Some sites will be viewed as we motor past. Between one and three landings are planned (not including docking in Chenega). Each landing takes approximately 2 hours to ferry passengers to and from shore with an hour on shore. A staff member will, in most cases, give a brief presentation of information, or a particular project at each site. We will have maps and reference materials on the boat, and we hope you will take the opportunity to ask staff any questions you may have.

Valdez — Tuesday

Leave Anchorage 7:15 AM; ERA Flight 4800; Arrive Valdez at 7:55 AM

Visit Hatchery (Valdez Fisheries Development Association); Related Projects include: 96186, 96188, Otolith Thermal Marking/Coded Wire Tag

View Valdez Duck Flats/Hayward Small Parcels

At the Valdez City Council Chambers:

- Briefing SERVS Drill
- Briefing Project 96115 — Sound Waste Management Plan (Briefing by Paul Roetman, Prince William Sound Economic Development Council)
- Open House 10:00 — 11:00 AM

M/V Nautilus — Tuesday

⇒ Depart Valdez — Noon, if not sooner

⇒ Lunch

Ms. Linda Burlington and Mr. Eli Reinharz
National Oceanic and Atmospheric Administration
Office of General Council Natural Resources
1315 East-West Highway
SSMC #3, Room 15132
Silver Spring, MD 20910

Dear Ms. Burlington and Mr. Reinharz:

The undersigned members of the Public Advisory Group for the *Exxon Valdez* Trustee Council have reviewed NOAA's natural resource damage assessment rule being proposed under the 1990 Oil Pollution Act. While we have not reviewed the rule in great detail, we have identified what we perceive to be significant problems.

The Public Advisory Group was established by the State of Alaska and the federal government in 1991 following settlement of the governments' claims against Exxon Corporation following the 1989 *Exxon Valdez* Oil Spill. Its mission is to advise the Trustees on the use of restoration funds and conduct of activities to restore the resources and services injured by the spill.

The Public Advisory Group has been an active participant in the development of the Trustees' program to restore the resources and services injured by the 1989 oil spill. We have practical experience in reviewing restoration proposals and observing the problems and opportunities presented by an oil spill and the need for restoration. In our brief review, we have identified three major problems with the proposed rule.

1. *In most cases, a large spill will result in significant injuries that cannot be fully restored, and monetary compensation is appropriate.* Restoration activities are likely to fully restore resources only when damage is confined to a localized animal population (e.g., a few bird nests) or a small physical setting (e.g., a few-acre wetland). For large spills, like that of the *Exxon Valdez*, the injuries may not be restorable except through time, and may not even be identifiable at the time of the spill. Requiring all damages to be estimated in terms of predicted, specific restoration costs will delay and limit the ability of the public to obtain compensation for the injuries. In these instances, monetary compensation remains an appropriate and acceptable alternative, but one that is largely disallowed by the proposed rule. Implementation of the rule would leave the public inadequately compensated for large oil spills.

2. *The requirement for an agreed-upon, project-based restoration plan prior to compensation is unworkable.* The rule assumes that the restoration effort can quickly be put together as a series of well-defined projects. In our experience, future years' restoration needs are dependent on previous years' results. Thus, requiring a detailed, project-based restoration plan to forecast all required restoration projects is not realistic. The 1996 restoration program for the *Exxon Valdez* spill has become a well-integrated program to aid the resources and services injured by the spill, but it could not have been constructed without the results of previous years' scientific investigations.

3. *The proposed rule should allow for the involvement of the responsible parties only at the discretion of the trustees.* The proposed regulations **require** the government trustees to invite the responsible party to join in the NRDA process. This participation should be at the sole discretion of the trustees. A responsible party and the trustees have two different groups of people to whom they are responsible. The responsible party is responsive to shareholders' investment, so it is in their interest to be conservative in their damage assessment and analysis, and narrow in the scope of investigation. A public trustee has a different responsibility, and therefore may take a different path, that is not necessarily in the best interest of the shareholders of the responsible party's company.

Thank you for this opportunity to comment. We appreciate your consideration of our review as you proceed towards a final decision.

Sincerely,

Vern McCorkle, Chairman

Exxon Valdez Trustee Council Public Advisory Group
