

Sheet 1

There are several program elements that are common to all of the proposed alternatives. They are as follows:

- The restoration program will take an ecosystem approach.
- Projects designed to restore or enhance an injured service must have a sufficient relationship to an injured resource.
- Competitive proposals for restoration projects will be encouraged.
- Restoration projects will be subject to open, independent scientific review before Trustee Council approval.
- Meaningful public participation in restoration decisions will be actively solicited.
- Government agencies will be funded only for restoration work that they do not normally conduct.

Sheet 2

Alternative 2

- Habitat of injured resources and the services they provide within the spill area will be protected from degradation or disturbance.
- Restoration actions will address all injured resources and the services they provide.
- Restoration actions for recovered resources will continue even after a resource has recovered.
- The location of restoration actions will be limited to the spill area.
- Habitat Protection will be used to protect or increase existing human use of the spill area.

Sheet 3

Alternative 3

The most effective actions will be taken within the spill area to protect and restore all injured resources and thereby the services they provide except those biological resources whose populations did not measurably decline . The existing character of the spill area will be maintained.

- Restoration actions would address all resources ***except*** those biological resources whose populations did not measurably decline.
- Restoration actions for recovered resources will cease once a resource has recovered.
- Restoration actions will be conducted that provide substantial improvement over natural recovery.
- The location of restoration actions will be limited to the spill area.
- Restoration actions will be used to restore injured resources and thereby protect existing human use of the spill area.

Sheet 4

Alternative 4

- The most effective actions to protect and restore all injured resources and thereby the services they provide will be taken. Opportunities for human use of the spill area will be increased to a limited extent.
- Restoration actions will address all injured resources.
- Restoration actions for recovering resources will cease once a resource has recovered.
- Restoration actions will be conducted that provide substantial improvement over natural recovery.
- Restoration actions could occur anywhere there is a link to injured resources.
- Restoration actions would be used to restore injured resources and thereby protect or increase existing human use of the spill area.

Sheet 5

Alternative 5

- Restoration activities may be considered for any injured resource.
- Restoration activities will occur primarily within the spill area. Limited restoration activities outside the spill area, but within Alaska, may be considered under the following conditions:
 - 1) when the most effective restoration actions for an injured migratory population are in a part of that population's range outside the spill area, or
 - 2) when the information acquired from research and monitoring activities outside the spill area will be significant for restoration or understanding injuries within the spill area.

Sheet 6

Alternative 5 (Continued)

- Restoration activities will emphasize resources that have not recovered.
- Resources may be enhanced, as appropriate, to promote restoration. Restoration projects may not adversely affect the ecosystem.
- Projects designed to restore or enhance an injured service:
 - 1) must benefit the same user group that was injured, and
 - 2) should be compatible with the character and public uses of the area.
