## Vol 18 2770

(1) PROCEEDINGS  
 (2) (Jury in at 8 47 a m )  
 (3) (Call to Order of the Court)  
 (4) THE COURT Counsel can I see you at the bench just a  
 (5) for a minute?  
 (6) MR. PETUMENOS I'm sorry?  
 (7) THE COURT Would you come up here for a minute?  
 (8) Doesn't take all of you just have a message  
 (9) (Discussion off record at the bench)  
 (10) MR. PETUMENOS Could we have Exhibit 1144 back up on  
 (11) the screen?  
 (12) DIRECT EXAMINATION OF WILMER H. MUNDY (Resumed)  
 (13) BY MR. PETUMENOS  
 (14) Q Dr. Mundy yesterday you pointed out to us that Eklamar was  
 (15) right up here on the northeast part of the Sound and we have a  
 (16) print of that with your little arrow showing where it was  
 (17) When one discusses the impact of a contaminating event on the  
 (18) market is it important to limit have some reasonable limits  
 (19) on the stigma effect of the market by both time and space?  
 (20) A Yes that's important It's part of the analysis uh huh  
 (21) Q And in this instance you have limited your stigma analysis  
 (22) to properties by space within what confines?  
 (23) A Principally the Prince William Sound area and then moving  
 (24) southwesterly along the Kenai Fjords into the Kenai Peninsula  
 (25) area

## Vol 18 2771

(1) Q So basically on this - you have your pen there - the  
 (2) areas in terms of the space that you have limited your stigma  
 (3) analysis to show the jury along the path of the spill where it  
 (4) is that's the northeastern section and then the - there you  
 (5) go  
 (6) A This is just a very rough -  
 (7) Q All right And you in fact were not hired - you're not  
 (8) an appraiser here for the Kodiak landowners there's someone  
 (9) else doing that is that right?  
 (10) A That's correct  
 (11) Q Now in addition to limiting the effects on the market due  
 (12) to a contaminating event of this nature by space you also seek  
 (13) to determine what the time limits are for the period of time  
 (14) that you would analyze the stigma effect on the market is that  
 (15) right?  
 (16) A That's correct  
 (17) Q Could we see please Exhibit Number 1203  
 (18) 1203 is something we saw before which was your summary of  
 (19) the volume of coverage and over time and this is national  
 (20) newspaper index search but you also looked at local coverage  
 (21) as well?  
 (22) A That's correct  
 (23) Q And you also looked at media the electronic TV media  
 (24) coverage as well?  
 (25) A Yes

Vol 18 2772

- (1) Q And one of the things I wanted to make clear when we re  
 (2) talking about the content of this coverage that you looked at  
 (3) you re not suggesting in the coverage that the coverage that  
 (4) took place was necessarily inaccurate coverage or false  
 (5) coverage or anything like that are you?  
 (6) A No We re dealing with actual coverage real things that  
 (7) have happened  
 (8) Q The same sort -  
 (9) A For example based on the scientific work that was done by  
 (10) ICF and others that the jury has heard about  
 (11) Q So that what you analyze is not just what uncertainty might  
 (12) be created by the scientists that the jury may hear in the  
 (13) courtroom but the extent to which that information makes it to  
 (14) the marketplace?  
 (15) A That s correct  
 (16) Q All right Now could we see the next exhibit please?  
 (17) Tell the jury how you have limited this effect on the  
 (18) marketplace based upon the coverage of these matters by time  
 (19) A There are three different time periods that we have used  
 (20) time periods being one year two years and three years For  
 (21) the areas that were most heavily impacted we used a  
 (22) three year  
 (23) stigma and for areas that were not quite as heavily impacted  
 (24) a two year stigma and then areas that were lightly affected  
 (25) only a one year stigma but this shows I think very clearly  
 (26) this exhibit the fact that the stigma in terms of information

Vol 18 2773

- (1) that was being received by the marketplace that would  
 influence  
 (2) their behavior was pretty much at an end at the end of 1991  
 (3) Q Now what if the persistence the actual physical  
 (4) persistence on the property extended beyond this period of  
 (5) time  
 (6) of three years according to the information you had from the  
 (7) scientists what did you do then?  
 (8) A Well if the oil was - this was based on the persistence  
 (9) numbers that were received from ICF persistence being the  
 (10) length of time that we would expect the oil to be there  
 (11) influencing market behavior Then that was another  
 (12) consideration that we took into consideration in estimating the  
 (13) period of time that the property would be damaged  
 (14) Q So if we had a persistence that were longer than three  
 (15) years would you be using stigma for that property?  
 (16) A We use stigma for the first three years and then - then  
 (17) for example if we had a persistence for eight years for the  
 (18) first three years we used the stigma impact and then for the  
 (19) fourth through the eighth year we used the persistence effect  
 (20) so we didn t double count  
 (21) Q You didn t count one on top of the other?  
 (22) A No  
 (23) Q It would be a total of eight years for an eight year  
 (24) persistence?  
 (25) A That s right  
 (26) Q But for property like the Eyak properties which are -

Vol 18 2774

- (1) there s no oil on the beach but there s oil offshore and in the  
 (2) water what did you do for property like the Eyak properties?  
 (3) A We used a one year stigma  
 (4) Q For Tatitlek for those areas that did not have oil on the  
 (5) beach but had oil offshore and on the water affecting those  
 (6) creatures that live there what did you do for that?  
 (7) A We used a wider stigma there too  
 (8) Q In the areas in the western part of the Sound where there  
 (9) was oiling are there some beaches that were - that were  
 (10) physically touched by oil and some beaches that were not?  
 (11) A Yes  
 (12) Q And what would you do with a beach that was not physically  
 (13) touched by oil but was in the middle of an area where oiling  
 (14) occurred?  
 (15) A If the beach was not touched by oil we took - it depends  
 (16) on where the property was but in the western part of the - of  
 (17) the area where there were - was a persistence that was more  
 (18) than three years for the first three years we used the stigma  
 (19) impact And then for years after that we used the persistence  
 (20) effect and the persistence took into consideration the amount  
 (21) of beach that was oiled as well as the severity of the oiling  
 (22) Q Now when we were discussing yesterday how much this  
 (23) land  
 (24) was worth what are we going to do about the fact that the  
 (25) property - at some point in the future the persistence will  
 (26) end according to ICF or Mr Bush or the stigma ends according

Vol 18 2775

- (1) to you how do you account for the fact that the property  
 (2) eventually comes back to a value similar to the value it had  
 (3) before the spill?  
 (4) A What we have assumed is that at the end of the persistence  
 (5) period the property will be essentially back to a point where  
 (6) the market will not be adversely affected Somebody wanting to  
 (7) buy the property or a person who wanted to borrow some  
 (8) money  
 (9) on the property could buy the property or there was a loan  
 (10) involved and a lender requires a level one audit of the  
 (11) property And the person doing the level one audit of the  
 (12) property would go out and inspect the property They would  
 (13) find that the property is essentially - has been cured There  
 (14) still may well be residue that remains but the residue is in  
 (15) essence inert and it s not creating any harm to the  
 (16) environment  
 (17) After that period of time after the property has  
 (18) remediated we have then applied a two year stigma to the  
 (19) property which accounts for the uncertainty in terms of the  
 (20) marketplace What we re dealing with is a market that is not  
 (21) exact And we re dealing with behavior that is not precise  
 (22) and so we have to deal with uncertainty and risk And what we  
 (23) have done is - and we will talk about this in a bit is to  
 (24) assign a slightly higher risk rate for two years to the  
 (25) property that has been affected by the spill  
 (26) Q Okay you re getting a little ahead of me though because

Vol 18 2776

- (1) all I wanted the jury to understand is that you did not take a  
 (2) price for the property the day before the spill and a price for  
 (3) the property the day after the spill and subtract the  
 (4) difference  
 (5) A No I did not  
 (6) Q You accounted for the fact that someday the property s  
 (7) going to come back to its original value and you wanted to  
 (8) determine that period of time and the amount of loss of value  
 (9) for that period of time  
 (10) A That s right It s a temporary effect  
 (11) Q Now in order to take a property value and determine over  
 (12) the course of time how much of the property value was lost  
 (13) when it s going to return to its value what do you have to  
 (14) do? Do you have to become involved with something called a  
 (15) lease rate?  
 (16) A Yes  
 (17) Q Or a stream of cash something like that?  
 (18) A Yes  
 (19) Q Explain that to the jury  
 (20) A We re dealing with as I said yesterday a very unique type  
 (21) of valuation problem and that is is we have a lot of land  
 (22) virtually all of the land which is - does not produce an  
 (23) income stream It s not like a property that is improved with  
 (24) a McDonald s or an apartment building and this type of thing  
 (25) where you have an income stream so that you can analyze the

Vol 18 2777

- (1) income stream We re dealing with a temporary problem and  
 so  
 (2) what we need to do is to figure out some mechanism so that we  
 (3) can figure out a method to calculate the damage to the property  
 (4) over this temporary period of time And so there are a number  
 (5) of approaches that an appraiser uses in estimating value  
 (6) One of those is the income approach and what we have done  
 (7) is we have taken the value of the property we have determined  
 (8) what a typical lease rate would be for real estate and we ve  
 (9) multiplied the value of the property times the lease rate to  
 (10) establish an income stream  
 (11) Q All right And this is something that is common in the  
 (12) appraisal industry to -  
 (13) A Yes it is  
 (14) Q And does it matter that the property wasn t actually going  
 (15) to be leased because it s natural land or land of that nature?  
 (16) A No it does not It s simply a mechanical mechanism by  
 (17) which to estimate value  
 (18) Q Otherwise we can t break the value of the property down  
 (19) year by year?  
 (20) A That s correct  
 (21) Q Could I see exhibit 1205?  
 (22) All right what we re going to build here is the model that  
 (23) you used for doing this task next?  
 (24) A That s correct  
 (25) Q What do we have on the screen so far?

Vol 18 2778

- (1) A Well we have the title the marketability effect showing  
 (2) that this is how we are going to measure the effect on the  
 (3) marketability of the property that is the sale of the  
 (4) property that has been affected by the spill We have a  
 (5) vertical axis which represents value so this is the value of  
 (6) property  
 (7) Q On the horizontal axis we have what?  
 (8) A Time and this represents the time dimension because some  
 (9) properties were affected for a very short period of time  
 (10) others were affected for a much longer period of time  
 (11) Q And what do we have now?  
 (12) A This next line that we have entitled real dollars shows the  
 (13) value of the property as if it were not affected by any kind of  
 (14) a problem or whatever and in this case by the oil spill  
 (15) Q So this would be the value that you came up with when you  
 (16) did the appraisal the day before the spill?  
 (17) A That would represent the value yes And it would show it  
 (18) in real dollars and show it as a constant line If we used  
 (19) nominal dollars we would have a line increasing slightly to  
 (20) reflect inflation or factor inflation out  
 (21) Q We ll keep it a little bit simpler here We re not talking  
 (22) about the price of the property the way we described it to the  
 (23) jury yesterday because we re breaking it down over time year  
 (24) by year the way you rent property or something like that  
 (25) that -

Vol 18 2779

- (1) A That s right This would in essence represent an income  
 (2) stream that would be coming into the property on a  
 (3) basis  
 (4) Q Hypothetical income stream?  
 (5) A Yes  
 (6) Q All right Now?  
 (7) A All right We have here a situation where a problem occurs  
 (8) - and this is March 23rd 1989 when the spill takes place -  
 (9) and the value of the property the rent stream that the  
 (10) property would be able to generate at that point in time that  
 (11) is a person coming into the marketplace that was interested in  
 (12) buying the property and we re expressing this in rent would  
 (13) find a great deal of uncertainty They wouldn t know what to  
 (14) expect in terms of the value of this property and how it s  
 (15) going to be impacted by the oil spill and so the value the  
 (16) property in essence becomes unmarketable and there is no  
 rent  
 (17) stream that a person could attribute to the property so it  
 (18) drops to zero  
 (19) Q This would be the period of time when we saw perhaps the  
 (20) video where the gentlemen were on the beach that we showed  
 (21) during - yesterday during your testimony?  
 (22) A That s right  
 (23) Q All right  
 (24) A Now this goes on for a period of time and this period of  
 (25) time represents the period of uncertainty that we re going to

Vol 18 2780

- (1) see in the marketplace And as I mentioned a bit earlier the  
 (2) period of time is going to vary For some areas like in the  
 (3) eastern part of the Sound it will be relatively short In  
 (4) other areas where there was a substantial oil heavy clean up  
 (5) activity and whatnot it's going to be longer  
 (6) Line three represents a period of time where the market  
 (7) starts to come back to normality It's a period of time where  
 (8) there is enough information that has been assembled by  
 (9) scientists informed people such as Jim Bush at ICF so that  
 (10) they can tell the marketplace that the property is going to  
 (11) be - here is the extent of the effect on the property and a  
 (12) knowledgeable buyer of property can take that information he  
 (13) can assess the risks and he can determine how much he is  
 (14) willing to pay for the property or how much he would be  
 (15) willing to rent the property for  
 (16) Q What if there is - I notice that this arrow doesn't go all  
 (17) the way back yet to the original value of the property What  
 (18) if there is conflict in decision dispute about what the risk  
 (19) is?  
 (20) A It depends on the amount of uncertainty that you have If  
 (21) there is a lot of uncertainty it may not come back at all  
 (22) You may end up with a line staying down at two and not coming  
 (23) back for a long period of time But generally knowledgeable  
 (24) real estate buyers - and that's what we assume in this market  
 (25) value definition - will be able to figure out what the extent

Vol 18 2781

- (1) and nature of the problem is assess the risk and make a  
 (2) knowledgeable purchase decision  
 (3) Q At point three we still have risk present?  
 (4) A There is substantial risk at this point  
 (5) Q Because the arrow hasn't returned to the real dollars line?  
 (6) A That's right There's still a period of time where the  
 (7) property for example in Prince William Sound is oiled so it  
 (8) has not been remediated There is a lot of ownership risk  
 (9) associated with it but we've gone from a period of uncertainty  
 (10) to a period of risk where we can assess the likely damage  
 (11) Q All right And four and five?  
 (12) A Four and five represents the - four would represent the  
 (13) period of time where the property is remediating We know  
 (14) what  
 (15) the nature of the problem is Five represents the short term  
 (16) stigma that is associated with the property as the ownership  
 (17) risk slowly subsides and becomes or evolves goes back to the  
 (18) normal And value would be then at the real value line  
 (19) Q All right Now I want you to explain to the jury how  
 (20) you - this line across the top that says real dollars that  
 (21) lease rate that income stream?  
 (22) A Yes  
 (23) Q Could we see exhibit 1207?  
 (24) And could you explain to the jury how you arrived at what  
 (25) that amount was for these properties? You've got real dollars  
 (26) to this right?

Vol 18 2782

- (1) A That's right  
 (2) Q You've got to apply the model What is 1207?  
 (3) A 1207 represents a number of leases There are some 14  
 (4) leases - 15 leases that we have brought together throughout  
 (5) the State of Alaska It is what land is leased for It shows  
 (6) the relationship - well it's the relationship between the  
 (7) value and how much a person pays per year for rent It's the  
 (8) lease rate and the rate varies between around 8 percent to  
 (9) around 10 percent and we have used an average of 9 percent  
 (10) for  
 (11) the annual lease rate So that's what established that real  
 (12) value line  
 (13) Q How did you go about finding the lease rate as between  
 (14) say a commercial office building or vacant land or - how did  
 (15) you go about determining which comparables to use to define  
 (16) the  
 (17) dots here on a chart?  
 (18) A Well there's a fair amount of leasing activity that takes  
 (19) place within the State of Alaska and what we did was a part of  
 (20) your data research program We went around and talked to  
 (21) people who leased property people who own property that  
 (22) they  
 (23) lease to find information on what lease rates were For  
 (24) example the Alaska Railroad leases a lot of property and we  
 (25) compiled that data and developed this information  
 (26) Q Could I see Exhibit Number 1206 please?  
 (27) Now this looks real complicated so we're going to break  
 (28) this down We've now described how far along the time the

Vol 18 2783

- (1) bottom line of your model how far we go based upon the ICF  
 (2) persistence and based upon your stigma analysis That  
 (3) determined how far we went into the future before the property  
 (4) came back to its original value?  
 (5) A Yes  
 (6) Q We've explained to the jury how you arrived at the amount  
 (7) of income stream for each property using this lease business  
 (8) with - with the percentage of the total value right?  
 (9) A Correct  
 (10) Q Now let's go to a specific example and we're talking here  
 (11) about Chenega Island?  
 (12) A Correct  
 (13) Q And why don't you feel free to use the pen and blow up the  
 (14) chart here to explain how you would have applied this model to  
 (15) the Chenega Island a parcel size of 15 630 acres?  
 (16) A Fine  
 (17) Q What we're going to do here Members of the Jury we're not  
 (18) going to show you obviously each parcel that would take a  
 (19) long  
 (20) time We're going to take one take you through it in detail  
 (21) so you can get the understanding of how - how it works with  
 (22) respect to one parcel in detail  
 (23) Go ahead  
 (24) A There are - just to begin this is a spread sheet  
 (25) developed from a computer and there are some 90 spread  
 (26) sheets  
 (27) that we have developed that relate to the various ownerships

Vol 18 2784

- (1) and what we'll do is I'll just show you some of the  
 (2) information  
 (3) Q Why don't we blow it up rather than highlight it?  
 (4) A That's what I'm trying to do. Here we go  
 (5) Q Okay  
 (6) A So this shows some information on the Chenega Island  
 (7) property. It's owned by the Chenega Corporation. It's 15,630  
 (8) acres - acres in this parcel. The persistence is 8.45 years  
 (9) That's from ICF. The shoreline length for the property is  
 (10) 246,000 and some feet. The amount of oiled shoreline is  
 (11) 100,000 feet. The stigma period, this being in the western  
 (12) part of the Sound where property was actually oiled, is three  
 (13) years. The impairment ratio is 40 percent. The impairment  
 (14) ratio represents the relationship between the oiled shoreline  
 (15) - oiled shoreline divided by the shoreline length. So that  
 (16) is what the impairment ratio is.  
 (17) Q Take off the color first and then do it.  
 (18) A Color off. All right.  
 (19) Now then, the first thing that we did is to summarize the  
 (20) value of the property and that's shown in that little box that  
 (21) I just outlined. So this particular property - and we've  
 (22) already been through this once - there's 36 acres of  
 (23) archaeology at \$3500 an acre. No high amenity land. 15,594  
 (24) acres of natural land at \$950 an acre, and so that came to 14.9  
 (25) million dollars, that's the value of this particular property.

Vol 18 2785

- (1) So that is a property as - the value of the property as if it  
 (2) had not been affected, the March 23rd, 1989 value.  
 (3) The second step involves estimating the damage. Now we get  
 (4) into what is the impairment that has resulted. And you'll  
 (5) recall in the prior screen we had some archaeology. We had 36  
 (6) acres of archaeology. It's our opinion that the archaeology  
 (7) has been permanently impaired, that is, there's a change in the  
 (8) highest and best use of the archaeology because the site is  
 (9) going to have to be excavated, and so it's not going to be an  
 (10) archaeological site anymore. This parcel is principally - or  
 (11) it's all natural land, except for the archaeology, so what  
 (12) we've done is we've taken the 36 acres out of the archaeology  
 (13) category and put it into the natural land category, so all of  
 (14) the land now is valued as if it were natural land at \$950 an  
 (15) acre.  
 (16) The second step is to deal with the impairment of the beach  
 (17) and how the persistence factor is going to play into value and  
 (18) how the stigma is going to affect value. Well, the first row  
 (19) here shows a value for the property of 14.8 million dollars.  
 (20) That's the value if it were not affected by the spill. We just  
 (21) talked about the 9 percent lease rate. The 9 percent lease  
 (22) rate times the value gives the land rent. So that's 1.3  
 (23) million dollars. So what we've done is we've converted value  
 (24) into an income stream. Now we have the annual income  
 (25) stream.  
 (26) We then go to two different columns, column one and column

Vol 18 2786

- (1) two - well, actually column two is this column right here  
 (2) Column one shows the value of the unimpaired income stream  
 (3) and so what we do is we take year one, here's the income of 1.3  
 (4) million, just carry this down to year one, Year one, 1.3  
 (5) million, Year two, 1.3 million, et cetera. We use a 30 year  
 (6) time frame.  
 (7) Q This allows you to determine when the property gets back to  
 (8) its original value?  
 (9) A No. This is as if there was no impairment on the value at  
 (10) all. This is the straight line on the marketability.  
 (11) Q I understand, but when we saw the impaired income stream  
 (12) when it gets back to the level of the unimpaired, where are we  
 (13) at?  
 (14) A That's correct. We'll be back to this number again, and  
 (15) I'll have to expand the screen a little bit to show that what  
 (16) we do is take - there's a process that an appraiser uses and  
 (17) that is to - when a person buys a property, be it a residence  
 (18) or income producing property, they pay an amount today to  
 (19) take advantage of the future use of that property.  
 (20) For an apartment building, you pay an amount today to enjoy  
 (21) the future income stream, so the amount I pay today is the  
 (22) present value of all of the future benefits that I'm going to  
 (23) get from the property. So what we do here is we calculate  
 (24) what's the present value of this income stream, and we use a  
 (25) market discount rate of 9.4 percent. And the market discount

Vol 18 2787

- (1) rate is a rate that is taken from various market evidence, and  
 (2) if we want to see that, we can see it on exhibit 1208, and we  
 (3) can come back to that.  
 (4) So that calculates the discounted present value. I'm going  
 (5) to stay with this one color since we're doing a pretty good job  
 (6) of making it work. 13.2 million dollars, so that's the value  
 (7) of this 30 year income stream. And you'll notice that it  
 (8) varies a little bit from the value that we originally  
 (9) calculated, 14.8 million. The reason for the variance is that  
 (10) we're dealing just with 30 years, and if we dealt with an  
 (11) infinite period of time, it would come back to 14.8 million.  
 (12) Q Another way of describing this discount rate is to say that  
 (13) if a person were to pay for the right to receive this income  
 (14) over time, you would have to apply this discount rate to  
 (15) determine how much they would pay now?  
 (16) A That's right. That's a market rate. It's how much I will  
 (17) pay today to receive income. The same that you do when you  
 (18) buy some stock. If it's a dividend generating stock, you pay an  
 (19) amount today, there's a dividend rate for the stock, you get a  
 (20) certain amount of income. You can sell that stock at a future  
 (21) point in time. The same thing with real estate.  
 (22) Q All right. Then I'm ready for the impaired income column.  
 (23) A Okay. Now the next column, the second column - I'll call  
 (24) this second column - the second column shows the income  
 (25) stream because of the impairment of the property. And I

Vol 18 2788

- (1) mentioned earlier that we had a three year stigma It s my  
 (2) belief that the property would not be able to generate any  
 (3) income for three years that is a person considering leasing a  
 (4) property and having the option of leasing a property in Prince  
 (5) William Sound versus somewhere else – especially a property  
 (6) like Chenega Island where all the oil was – would go someplace  
 (7) else They would not buy the property They would not lease  
 (8) the property here It would not be a marketable property  
 (9) Q They d find some alternative somewhere else?  
 (10) A That s right And so for three years we have an income of  
 (11) nothing  
 (12) Then in the fourth year we do have an income of  
 (13) \$794 000 This represents the 1 3 million times the impairment  
 (14) ratio Remember the impairment ratio measured the amount of  
 (15) oiled beach to the total amount of water frontage that was  
 (16) affected so we re – in this case it was about 40 percent that  
 (17) was affected and so the 794 000 represents 60 percent of the  
 (18) income – 40 percent is not shown 60 percent is shown – so  
 (19) this is 60 percent of the 1 3 million  
 (20) Now what we re working for looking or trying to get to  
 (21) is this number right over here The next thing that we use is  
 (22) a discount rate  
 (23) Q Why do we need a discount rate?  
 (24) A Because as in this first case we discounted the income  
 (25) back at a 9 4 percent rate right here We used this 9 4

Vol 18 2789

- (1) percent rate Now what we have is an investment that is  
 (2) oiled We ve got a property that is oiled The persistence  
 (3) period is running but we re saying that the utility has come  
 (4) back  
 (5) Remember in that little marketability chart for number  
 (6) three the arrow went back up said that the scientists had  
 (7) done their research Now we know the nature of the  
 (8) contamination problem and we can make an informed  
 (9) decision  
 (10) the marketplace can make an informed decision  
 (11) So we re saying that the property now is marketable  
 (12) However there is a price penalty that that property is going  
 (13) to suffer A person will not pay full value for it It s  
 (14) still oiled but they ll pay a part of the value for it And  
 (15) so part of the value is represented in the fact that the income  
 (16) stream is less The second aspect is the fact that the risk  
 (17) rate is higher  
 (18) We re buying a property where there s elevated amount of  
 (19) risk And the 13 4 percent which is – I m going to change  
 (20) the color on this thing – this number right here 13 4 percent  
 (21) represents a risk rate It s our opinion of what an  
 (22) appropriate risk rate would be given the nature of this  
 (23) property It s based on a number of different types of  
 (24) evidence high yield corporate bonds as well as a technique  
 (25) that appraisers use to calculate rates called the Band of  
 Investment Technique But anyway we arrived at the 13 4

Vol 18 2790

- (1) percent rate and here we discount the income stream on a  
 (2) year by year basis  
 (3) What I m going to do is –  
 (4) Q Do you need to take the color off?  
 (5) A I m going to expand this so that we can see what s going on  
 (6) for more than eight years  
 (7) So we have a high risk rate that runs for eight years  
 (8) Eight years is the persistence period And this income is  
 (9) discounted using this discount rate using this discount rate  
 (10) which translates into a factor A factor is something you can  
 (11) multiply by A rate is something you divide by  
 (12) What we do is just convert this rate into a factor and  
 (13) then we multiply the factor – in this case in the eighth year  
 (14) – 38 times the impaired income to get what the present value  
 (15) of that income would be  
 (16) Q For that year?  
 (17) A Today in the eighth year So that tells me that \$704 000  
 (18) in year eight is worth \$290 000 today  
 (19) Q Now one of the things I want you to point out to the jury  
 (20) here is that despite the fact that this chart goes on for 30  
 (21) years or something like that at the end of – or at year  
 (22) nine we re back to the original value of the property am I  
 (23) right?  
 (24) A That s right Go back to the original value of the  
 (25) property at year nine That s – the persistence period has

Vol 18 2791

- (1) ended but we still have this stigma this remaining residual  
 (2) uncertainty to deal with We don t know whether the property  
 (3) is really cleaned or not has it completely bioremediated  
 (4) itself So what we do is we use a slightly higher risk rate  
 (5) for two years rather than 13 4 percent we drop the rate down  
 (6) by two points to 11 4 percent So we discount this income  
 (7) stream at 11 4 percent to get the present value in the ninth  
 (8) and tenth year  
 (9) Q And then by year 11 is it –  
 (10) A Year 11 everything is back to normal  
 (11) Q And there are no further damages according to your  
 (12) calculation after year 11 on this parcel?  
 (13) A So what we do is take the stream of income in this last  
 (14) column which is labeled DPV which stands for discounted  
 (15) present value and we sum –  
 (16) Q Add them up?  
 (17) A We add them up and it comes to 7 88 million dollars The  
 (18) damage then is the difference between the 13 2 million and  
 (19) the 7 88 million  
 (20) Q The difference in the income stream that the property would  
 (21) have had without the event contaminating event versus what  
 (22) you think it – what you re determining it would be with the  
 (23) contaminating event?  
 (24) A That s correct  
 (25) Q So then the final answer is?

Vol 18 2792

- (1) A So this is all summarized then in the bottom part of the  
 (2) table which is the damage conclusion And we have the  
 change  
 (3) in the highest and best use which we talked about and that  
 (4) was \$91 800  
 (5) Q Now when we see HBU on this chart we re talking about -  
 (6) A Highest and best use change in highest and best use And  
 (7) then the part that we just finished talking about is the  
 (8) economic rent loss and that was the difference between the  
 (9) 13 2 million and the 7 6 approximately and that is 5 5  
 (10) million so we add the change in the highest and best use  
 (11) Q That s from the archaeology?  
 (12) A From the archaeology to the economic rent loss which is  
 (13) the persistence period and the residual stigma and we come  
 up  
 (14) with a total damage then of this parcel for 5 6 million  
 (15) dollars  
 (16) Q All right Now with respect to the archaeological highest  
 (17) and best use problem you re not an archaeologist?  
 (18) A No  
 (19) Q But you relied upon the work of archaeologists that you  
 (20) work with?  
 (21) A We relied upon the work of Dr Lob - Jack Lobdel and  
 (22) Dr Lora Johnson  
 (23) Q And those are people the jury hasn t heard from yet so I  
 (24) wanted the jury to understand this is - the decision that an  
 (25) area had to be excavated was not made by you but by one of

Vol 18 2793

- (1) them right?  
 (2) A That s correct  
 (3) Q All right I d like to go back if I could to  
 (4) Exhibit 1196  
 (5) One of the things that I noticed in the analysis that  
 (6) you ve done is that we re dealing with very large amounts of  
 (7) acreage here  
 (8) A Yes  
 (9) Q Large and the last thing that we have on how contamination  
 (10) affects value is parcel unity What do you mean by parcel  
 (11) unity since we haven t talked about that?  
 (12) A Parcel unity deals with the property that is being valued  
 (13) and we just talked about the Chenega Island property that  
 (14) contains some 15 630 acres Well that property consists of  
 (15) two components It s got the beach front component to it and  
 (16) then it s got the back land component and the - the whole  
 (17) property works as a system And in classifying property and  
 (18) analyzing property that is what a appraiser focuses on It s  
 (19) what the market deals with It s for example like a home  
 (20) and you ve got a property that s got a house in the middle and  
 (21) a front yard and a back yard When you value the property you  
 (22) don t just value the front yard you value the whole You  
 (23) value the lot and the improvements that are on it  
 (24) Well in valuing the subject properties we valued the  
 (25) entire property We valued the property as a unit And we

Vol 18 2794

- (1) analyzed what the effect on the entire unit would be because of  
 (2) the oil  
 (3) Q Is the property that we re concerned with with these  
 (4) Native corporations oriented towards the water? Is it  
 (5) marine oriented property?  
 (6) A Yes  
 (7) Q If we were to take an analogy of say a property that is a  
 (8) house on a - in a recreational area does the fact that the -  
 (9) that the house which may have its value in part because of  
 (10) the - its proximity to the water does it have to be on the  
 (11) shoreline itself if it were a quarter mile inland In order  
 (12) to be harmed in its value by a contaminating event on the  
 (13) shoreline?  
 (14) A If it was a contaminating event on the shoreline  
 (15) properties that are a quarter mile in where they impact with  
 (16) the shoreline would certainly be impacted  
 (17) Q So like a hotel or guest house or restaurant that depended  
 (18) upon the ocean for its economics if it were not on the shore  
 (19) it wouldn t matter it would still be affected?  
 (20) A That s correct  
 (21) Q All right Now what about when you re dealing with  
 (22) wilderness properties natural land Is it any different?  
 (23) A It s not different whatsoever It s an entire system You  
 (24) can look at property as a system It s all interlinked It  
 (25) interacts amongst - various parts interact amongst one

Vol 18 2795

- (1) another and it doesn t make any difference whether it s a high  
 (2) amenity parcel or a natural land parcel  
 (3) Q Based upon your land when the Native corporations say  
 (4) took LaTouche Island is it a fair process to divide LaTouche  
 (5) Island up to the mountaintops and ice on the top and say we  
 (6) can t count those acres or is there a different way of looking  
 (7) at it?  
 (8) A In my opinion you look at the whole It s the entire  
 (9) integrated unit It works together For example bears rely  
 (10) on the beach front for fishing the stream areas for fishing  
 (11) MR OPPENHEIMER Your Honor I d object on the  
 (12) grounds of foundation and hearsay  
 (13) THE COURT The objection s overruled counsel  
 (14) A They rely on the back land for their denning areas The  
 (15) entire system works as a unit and that s why we call it the  
 (16) unit rule  
 (17) BY MR PETUMENOS  
 (18) Q And when natural land is exchanged or bought and sold in  
 (19) the market Is it sold bought and sold in those ways like  
 (20) entire islands as opposed to this part not that part the  
 (21) mountains not the beach?  
 (22) A That s correct I mean we talked earlier about the  
 (23) importance of an intact ecosystem That is what the buyer of  
 (24) that property wants  
 (25) Q All right

Vol 18 2796

- (1) MR PETUMENOS Your Honor I don't know when you want  
 (2) to take breaks  
 (3) THE COURT It's a perfect time  
 (4) THE CLERK Please rise This court stands in  
 (5) recess  
 (6) (Jury out at 9 34 a m )  
 (7) (Recess from 9 34 a m to 9 48 a m )  
 (8) (Jury in at 9 48 a m )  
 (9) THE CLERK Please rise This court now resumes its  
 (10) session  
 (11) Please be seated  
 (12) BY MR PETUMENOS  
 (13) Q Dr Mundy are you all hooked up there?  
 (14) A All hooked up and ready to go  
 (15) Q Okay Now the subsurface calculation that you made for  
 (16) the subsurface estate damages did you follow the same  
 (17) methodology that you did for the surface calculation?  
 (18) A Yes we did  
 (19) Q And just to clarify the subsurface estate as we were  
 (20) talking yesterday about the split estate if someone wanted to  
 (21) build a house in the village or something like that they  
 (22) wouldn't have to contact the subsurface owner to lay a  
 (23) foundation?  
 (24) A No  
 (25) Q But if a party in the marketplace wanted to have a parcel

Vol 18 2798

- (1) A That's correct  
 (2) Q And we see for example Chenega Island here the fourth  
 (3) one down  
 (4) A That's correct  
 (5) Q You won't be able to write on it because we're on the  
 (6) Elmo --  
 (7) So if the jury looks at the spread sheet for Chenega Island  
 (8) and compares the numbers there they'll see that it matches up  
 (9) with this one?  
 (10) A That's correct  
 (11) Q And all of the other spread sheets that we have here have  
 (12) been turned over to Exxon counsel and are available for them to  
 (13) use to cross examine?  
 (14) A That's correct  
 (15) Q And are part of your report which has also been turned  
 (16) over to them?  
 (17) A Yes  
 (18) Q All right Could I have the next in order please? And  
 (19) off the Elmo  
 (20) What is --  
 (21) A This is the same table except it's for the English Bay  
 (22) Corporation so it shows the parcels and for our column on the  
 (23) right the damages which sum to 10.6 million dollars  
 (24) MR PETUMENOS Your Honor for the record that was  
 (25) Exhibit 1211

Vol 18 2797

- (1) for a park and they wanted to be sure that it wasn't mined or  
 (2) wasn't dug up they wanted to have a park for a conservation  
 (3) area they would have to purchase both the surface and the  
 (4) subsurface estate to prevent that from happening?  
 (5) A That is correct That is correct  
 (6) Q I wonder if we could then go to exhibit 1213 Could I  
 (7) have the Elmo please?  
 (8) And what is Exhibit 1213?  
 (9) A This exhibit shows for the Chenega Corporation the  
 (10) various parcels as we've identified them What the unimpaired  
 (11) value of the parcel is what the impaired value is and what  
 (12) the damage is And so this is a summary for each corporation  
 (13) This represents one of the six corporations of the damages  
 (14) that we investigated because of the spill  
 (15) Q All right Now I notice that when we say now unimpaired  
 (16) and impaired in these columns we're no longer talking about  
 (17) the entire price we're talking about this income stream  
 (18) unimpaired and impaired that we've described right?  
 (19) A This is -- this is not the income This is the value now  
 (20) We've gone from income back to value That's what we did in  
 (21) that prior spread sheet we spent so much time discussing  
 (22) Q With the impaired with the discount rates and so forth?  
 (23) A Discount present value yes  
 (24) Q And it takes into account the property goes back to its  
 (25) normal marketplace normal situation in a number of years?

Vol 18 2799

- (1) BY MR PETUMENOS  
 (2) Q Now I'm going to show you Exhibit 1212 What is  
 (3) Exhibit 1212?  
 (4) A This is for the Port Graham Corporation shows the various  
 (5) parcels the damages which sum to 16.3 million -- 16.3 million  
 (6) dollars on a rounded basis  
 (7) Q Exhibit 1214?  
 (8) A This is for the Chugach Alaska Corporation It shows their  
 (9) parcels the damages which sum to 17.4 million  
 (10) Q And for the purposes of this chart we're dealing with the  
 (11) surface estate right?  
 (12) A That's correct  
 (13) Q Exhibit 1215?  
 (14) A This is the same thing for the Eyak Corporation the  
 (15) damages 4.6 million dollars on a rounded basis  
 (16) Q And I notice for the Eyak Corporation we're dealing with  
 (17) the Eyak Corporation with stigma as opposed to the persistence  
 (18) curves because Eyak didn't have physical oil on the shoreline  
 (19) right?  
 (20) A That is correct  
 (21) Q And that is why the damages ultimately for Eyak are  
 (22) substantially less than for the other corporations?  
 (23) A Yes  
 (24) Q And Exhibit 1216?  
 (25) A This is for the Tatitlek Corporation It also is a stigma

Vol 18 2800

- (1) damage issue The damage 4 9 million  
 (2) Q And finally Exhibit 1217  
 (3) Could I have the Elmo please  
 (4) What is 1217?  
 (5) A This exhibit summarizes the exhibits which we have just  
 (6) seen on a corporation basis and the right hand column shows  
 (7) what the total damages are Toward the bottom the next to the  
 (8) last entry is Chugach SSE That s the damage to the  
 subsurface  
 (9) estate the estate that Chugach owns throughout the Prince  
 (10) William Sound/Kenai Fjords/Peninsula area The total damage  
 (11) in our opinion is 86 75 million dollars  
 (12) Q And for the Chugach Subsurface Estate we re talking about  
 (13) acreage that exists under all of the surface estates which is  
 (14) - what is on the upper portion right?  
 (15) A That is correct  
 (16) Q So on a per acre basis that s a relatively small amount  
 (17) but there are a lot of acres?  
 (18) A Yes  
 (19) Q All right Now one of the things that - or some of the  
 (20) things the jury has heard here are evidence of damage that may  
 (21) be for some of the resources relevant to this land that may be  
 (22) genetic in nature that may have a permanent impact Does  
 your  
 (23) calculation that you ve done take into account some of these  
 (24) issues relating to potential permanent damages that the jury  
 (25) may have heard?

Vol 18 2801

- (1) A No it does not  
 (2) Q And what you have done is look at the information from  
 (3) Mr Bush with respect to the persistence as he sees it and as  
 (4) you and he have worked that out?  
 (5) A That persistence plus the stigma that we ve also used  
 (6) yes That sets that relatively short time frame  
 (7) Q So if there is uncertainty that is continuing with respect  
 (8) to those issues that would be - that continues beyond  
 (9) those - that period of time that you and Mr Bush came up  
 (10) with that is not accounted for in your damage calculation  
 (11) here?  
 (12) A That s correct it s not  
 (13) Q One other point and that is you understand that this land  
 (14) also supports a subsistence value?  
 (15) A Correct  
 (16) Q And the subsistence component of the land has value as  
 (17) well?  
 (18) A That is correct it does  
 (19) Q And in arriving at your damage figures have you considered  
 (20) as a - as a dollar value factor the amount that subsistence  
 (21) plays in the course of this analysis either in determining  
 (22) highest and best use or in any other way?  
 (23) A No Subsistence values have not been added to the values  
 (24) or the damages which we have estimated  
 (25) Q But nevertheless in your opinion the subsistence value of

Vol 18 2802

- (1) the land is an important value?  
 (2) A It s a very important value yes  
 (3) MR PETUMENOS Your Honor I have no further direct  
 (4) MR OPPENHEIMER Would you leave - would you leave  
 (5) that exhibit?  
 (6) MR OPPENHEIMER Dr Mundy good morning We ve met  
 (7) before I m Randy Oppenheimer  
 (8) A Good morning  
 (9) CROSS EXAMINATION OF WILMER H MUNDY  
 (10) BY MR OPPENHEIMER  
 (11) Q I d like to ask you a few questions with respect to this  
 (12) chart just to start out here  
 (13) This is your value and damage summary this is all of the  
 (14) entities in question and these this column over here, these  
 (15) are all the damages is that correct the far column?  
 (16) A The far right column that s correct  
 (17) Q Far right column okay Let me just ask a few quick  
 (18) questions to get oriented here  
 (19) Chugach SSE subsurface estate underground correct?  
 (20) A Correct  
 (21) Q Seven and a half million dollars give or take?  
 (22) A That s correct  
 (23) Q Okay Now isn t it the case that a fair percentage of that  
 (24) subsurface estate is under what you called natural lands?  
 (25) A Yes

Vol 18 2803

- (1) Q In fact about 35 6 percent of it is under natural lands  
 (2) isn t that correct?  
 (3) A Yes  
 (4) Q And isn t it also your view that the one thing that no one  
 (5) would want to do is to dig up natural land?  
 (6) A That s correct  
 (7) Q Okay So a part of that seven and a half million dollars  
 (8) that you say is part of the damages here is for - is for  
 (9) minerals and gravels and whatever happens to be under the  
 (10) ground under land that is not going to be dug up if it s  
 (11) being used according to its highest and best use?  
 (12) A Well it wouldn t be dug up but it wouldn t be dug up  
 (13) because the purchaser would acquire the subsurface estate to  
 (14) make sure that it wasn t dug up If they acquired the surface  
 (15) estate then they would have no assurance that the subsurface  
 (16) estate wouldn t be altered so that s the reason that they re  
 (17) going to buy the whole rather than just a part  
 (18) Q There s no question in your mind that the minerals the  
 (19) gravels whatever s in the subsurface estate under natural  
 (20) lands that the Native corporations are never going to let that  
 (21) be dug up as long as they own natural lands no doubt in your  
 (22) mind?  
 (23) A I don t know what is going to happen in the future in terms  
 (24) of the subsurface estate  
 (25) Q They d have to change their - the lands that they dug up

Vol 18 2804

- (1) though into some other category besides natural lands  
 (2) wouldn't they if they did that?  
 (3) A Well I think that it would depend a lot on what happened  
 (4) in terms of the digging up activity  
 (5) Now if there were major excavations major open pit mining  
 (6) that would take place this type of thing that would  
 (7) certainly - I would certainly change my opinion regarding the  
 (8) highest and best use of that property to something other than  
 (9) natural land So I would classify it as for example having a  
 (10) highest and best use of minerals rather than natural land  
 (11) Natural land is based on the assumption that it's going to stay  
 (12) in its natural state  
 (13) Q Pristine condition?  
 (14) A And a conservancy organization for example acquiring it  
 (15) or to acquire the fee estate the surface as well as the  
 (16) subsurface to make sure that it did stay in that natural  
 (17) condition  
 (18) Q Okay Let me ask you about Eyak and Tatitlek You have a  
 (19) four and a half million dollar figure and almost a five million  
 (20) dollar figure there and I believe you've told us that that's  
 (21) for purposes of your calculation unoiled land is that right?  
 (22) A That is correct There was a very light oiling that took  
 (23) place on some of Tatitlek's land  
 (24) Q I'd like to go back to the worksheet which I believe is  
 (25) Exhibit 1206 if I may

Vol 18 2806

- (1) sent a letter to a number of people who we have done business  
 (2) with - who we'd done business with in the past and this was  
 (3) shortly after the oil spill indicating to them the work that  
 (4) we have done in valuing environmentally impaired property  
 (5) suggesting to them that there may be some substantial damage  
 (6) that their property could well incur because of the spill and  
 (7) that I would be happy to meet with them and discuss how we  
 (8) could be of service to them We're a - a service  
 (9) organization They were clients of ours seemed like a natural  
 (10) topic to bring up  
 (11) Q And the topic we're talking about is your firm's providing  
 (12) appraisal services to give a damage number to their land?  
 (13) A Helping them understand the extent to which their property  
 (14) had been damaged from a valuation standpoint  
 (15) MR OPPENHEIMER Counsel 13023  
 (16) Your Honor may I approach the witness?  
 (17) THE COURT Yes  
 (18) BY MR OPPENHEIMER  
 (19) Q Dr Mundy I'd like to show you a letter dated March 30  
 (20) 1989 to Mr Pio Park Tell me if you recognize that please  
 (21) A Yes This is our letter that is dated March 30th to  
 (22) Mr Pio Park Chugach Alaska Corporation Three pages in  
 (23) length signed by myself  
 (24) Q And what - when was the oil spill?  
 (25) A It - I believe it was March 23rd 1989

Vol 18 2805

- (1) Now you recognize this this is the worksheet that you  
 (2) were describing to us earlier is that right?  
 (3) A That's right for the Chenega  
 (4) Q Just one very simple point about this worksheet You're  
 (5) saying these numbers are an analysis of the revenue stream  
 (6) that comes in on the property and then you discount it to a value  
 (7) is that right?  
 (8) A A hypothetical revenue stream  
 (9) Q A hypothetical revenue stream?  
 (10) A That's correct  
 (11) Q There is not a single number on this worksheet that  
 (12) represents any actual income isn't that right?  
 (13) A That's correct  
 (14) Q Not a single one - I just want to be sure there's not -  
 (15) am I right there's not a single revenue number there - If I'm  
 (16) not missing anything - that is an actual revenue number?  
 (17) A No that's correct  
 (18) Q All right thank you  
 (19) I'd like to go back to how you got involved in doing your  
 (20) work in this case in the first place and just - just talk to  
 (21) you a little bit about that  
 (22) You - you solicited the plaintiffs in this case to be an  
 (23) expert and to provide a damage calculation for them did you  
 (24) not?  
 (25) A Well I don't think I would use the term solicited I

Vol 18 2807

- (1) Q Well maybe the 24th?  
 (2) A 23rd 24th  
 (3) Q And the first page of your letter reflects you had a  
 (4) conversation with Mr Pio (sic) on the 28th is that correct?  
 (5) A That's correct  
 (6) Q And Mr Pio (sic) is with the Chugach Alaska Corporation?  
 (7) A Mr Park is with the Chugach Alaska Corporation  
 (8) Q Pardon me Park Pio Park  
 (9) A That's correct  
 (10) Q So four days after the spill - were you in his office?  
 (11) A Yes  
 (12) Q So four days after the spill you're in Mr Park's office  
 (13) seeing if you can help him calculate damages?  
 (14) A Four days after the spill I was talking with Mr Park I  
 (15) was here in Alaska on other business and in fact I think some  
 (16) of the business actually involved the Chugach Alaska  
 (17) Corporation and I discussed this matter with Mr Park  
 (18) Q And on the 30th you sent this follow up letter which you  
 (19) have on your table there dated March 30 1989 Exhibit 13023  
 (20) is that right?  
 (21) A That's correct  
 (22) Q Would you turn to the last page of that letter Page 3 and  
 (23) I'm going to try to use this machine How am I doing? Oh  
 (24) good  
 (25) Now this is part of - the last part of the letter that

Vol 18 2808

- (1) you sent Mr Park after you spoke with him We re now talking  
 (2) March 30 right?  
 (3) A That s correct  
 (4) Q Just about a week after the spill?  
 (5) A Yes  
 (6) Q And forego the highlighting for a second I think we can  
 (7) read it here  
 (8) MS SMITH No you ve got it now  
 (9) MR OPPENHEIMER Oh I have Thank you  
 (10) MR OPPENHEIMER You know I m going to leave this  
 (11) alone If I do anymore of this I ll be totally  
 (12) incomprehensible Let me walk over  
 (13) BY MR OPPENHEIMER  
 (14) Q You see this on your screen don t you?  
 (15) A I can highlight it for you if you d like me to  
 (16) Q Would you do that for me please? Would you highlight the  
 (17) first sentence? Thank you You re much better at this than  
 (18) I  
 (19) A Well I don t know if the highlighter s on or not  
 (20) Q Well I tell you what I ll study up a little bit at the  
 (21) break and hopefully I ll do better  
 (22) A Here we go  
 (23) Q I tell you what that I think is going to produce -  
 (24) MR PETUMENOS When he picks it up it s going to be  
 (25) fine

Vol 18 2809

- (1) MR OPPENHEIMER It will? Okay So I don t have to  
 (2) panic  
 (3) BY MR OPPENHEIMER  
 (4) Q Let s leave it that way it s easier to read  
 (5) You say here when you re writing within the first week  
 (6) after the spill to Mr Park whom you re visiting to see if you  
 (7) can work for him it s highly probable that because of this  
 (8) spill there will be a significant value impact on those lands  
 (9) which are affected by the spill You wrote that to Mr Park?  
 (10) A That s correct  
 (11) Q Now at that time you hadn t made any scientific inquiry of  
 (12) what had happened with the spill had you?  
 (13) A No I did not make any scientific inquiries at all  
 (14) Q You hadn t been out to the land had you?  
 (15) A I had not been to the land I saw quite a bit of  
 (16) television coverage of what was happening and also I was very  
 (17) familiar with the lands as I had visited the area several  
 (18) times before  
 (19) Q Right And you hadn t talked to any scientists had you  
 (20) at that time?  
 (21) A Not that I can recall It was - I may well have It was  
 (22) during that period of time that I talked with ICF and I can t  
 (23) remember if it was at that meeting or one shortly thereafter  
 (24) that I talked with ICF But regardless based on my experience  
 (25) in dealing with environmentally impaired property I - and the

Vol 18 2810

- (1) coverage of what was going on I observed it and it appeared  
 (2) to me that there was no doubt that the market value of the  
 (3) property was going to be impaired  
 (4) Q No doubt in your mind whatsoever right?  
 (5) A That s correct  
 (6) Q Let s jump forward a little bit You - you pitched your  
 (7) services to the State of Alaska as well not just to Mr Park?  
 (8) A I also discussed this with the State of Alaska Because I  
 (9) was aware that they had property that they owned In fact I  
 (10) think I sent them a letter very similar to the one that I sent  
 (11) to Mr Park  
 (12) Q It s a little different let s take a look at it  
 (13) MR OPPENHEIMER Well actually counsel Exhibit  
 (14) 13029  
 (15) MR STOLL 02 what?  
 (16) MR OPPENHEIMER 029  
 (17) BY MR OPPENHEIMER  
 (18) Q Dr Mundy this is a letter dated June 16 1989 to Gary  
 (19) Gustafson and Dennis Latterley at the State of Alaska  
 (20) Department of Natural Resources I wonder if you would  
 (21) identify that for me please  
 (22) A This is a letter dated June 16th 1989 to Gary Gustafson  
 (23) and Dennis Latterley State of Department - Department of  
 (24) Natural Resources three pages in length signed by myself  
 (25) Q Okay So this is a little farther into the summer The

Vol 18 2811

- (1) spill s in March it s now June you re writing to the State to  
 (2) see if they ll hire you to do appraisal work in connection with  
 (3) this case for their damages correct?  
 (4) A Exploring that possibility yes  
 (5) Q Exploring that possibility In fact they did not hire  
 (6) you is that correct?  
 (7) A That s correct  
 (8) Q Now as of this time you re proposing something to them  
 (9) aren t you? I mean you ve already explained to us that in  
 (10) March when you talked to Mr Park there was no doubt in your  
 (11) mind that there was damage to the property is that correct?  
 (12) A That s correct  
 (13) Q But you re proposing in this letter something to the State  
 (14) of Alaska aren t you?  
 (15) A Well I would have to review it to -  
 (16) Q Please do I draw your attention to the second and third  
 (17) pages  
 (18) A There s a research plan that we discuss and there s a  
 (19) budget that we discuss for the first phase of the research for  
 (20) we are - suggesting -  
 (21) Q It s a proposal is it not for a \$30 000 research project?  
 (22) A That s correct  
 (23) Q That would be funded by the State if they hired you?  
 (24) A Yes  
 (25) Q And isn t it the case that the purpose of that research

Vol 18 2812

- (1) would involve an attempt to determine if - if there were real
- (2) property impacts from other major oil spills?
- (3) A Well I don't see where that quote is taken from
- (4) Q Let me - I'll tell you what here I'll put it up on the
- (5) computer screen
- (6) MR LIED You want me to do it Randy?
- (7) MR OPPENHEIMER I'll get it
- (8) BY MR OPPENHEIMER
- (9) Q See that on the screen?
- (10) A Yes
- (11) Q The research would involve an attempt to determine if there
- (12) were real property impacts?
- (13) A That's correct
- (14) Q And you wrote that to the State of Alaska inviting them to
- (15) pay you \$30,000 to do a study to find out if that were true?
- (16) A That plus a number of other things that were discussed in
- (17) the proposal but that was one of the elements in the research
- (18) yes
- (19) Q And then the other aspect of the research was to determine
- (20) if there was damage and if so the magnitude of those impacts
- (21) how much damage isn't that also true?
- (22) A Well here we're talking about other spills and to
- (23) determine if research had been done and if impacts had been
- (24) discovered from other major oil spills
- (25) Now the question that you asked me was a little bit

Vol 18 2813

- (1) different than we have here And again I don't see in this
- (2) letter -
- (3) Q You were inviting them to undertake a pretty serious
- (4) project were you not? I mean this was not a waste of their
- (5) money was it?
- (6) A Certainly not
- (7) Q In fact didn't you tell them that you thought that this
- (8) type of study would be necessary to have a successful lawsuit?
- (9) A I can't recall if I mentioned that to them or not
- (10) Q Let's turn back to the first page This is the first page
- (11) of your letter correct on the screen?
- (12) A Yes
- (13) Q It says a much more persuasive type of evidence in fact
- (14) evidence that I believe would be a prerequisite or requirement
- (15) as it were to a successful lawsuit are comparable showing the
- (16) effects on property value views using a before/after method of
- (17) analysis from similar types of disasters
- (18) Does that remind you that you told the State of Alaska that
- (19) they should pay you \$30,000 to do a study to determine if there
- (20) were land damages from comparable types of accidents?
- (21) A Well again I think that this was part of the overall
- (22) research program that we were discussing But that is
- (23) certainly something that I thought would be a fruitful area of
- (24) research back in June of 1989
- (25) Q Would you turn to the second page of the letter that is the

Vol 18 2814

- (1) second page I have on the screen?
- (2) A That's correct
- (3) Q Therefore to determine if there is a reasonable
- (4) probability of bringing a successful lawsuit against Exxon or
- (5) Alyeska I would suggest that we conduct some initial
- (6) preliminary research and that was your proposal to the State
- (7) of Alaska?
- (8) A That we conduct some preliminary research and what we've
- (9) been talking about is what I would call case studies That was
- (10) one aspect of it
- (11) Q Did you undertake the research that you had - we can take
- (12) it off please - that you had proposed to the State of Alaska?
- (13) A No I did not
- (14) Q You didn't undertake it for the State of Alaska?
- (15) A I'm sorry for the State of Alaska no
- (16) Q Did you try to do this study though on your own?
- (17) A I guess you would have to tell me more about what you mean
- (18) by on my own
- (19) Q Sure Did you try to find out whether there were real
- (20) estate impacts from comparable oil spills something you told
- (21) the State of Alaska would be a prerequisite to a successful
- (22) lawsuit?
- (23) A We did some preliminary investigatory work in that area as
- (24) a part of our work for the Native corporations yes
- (25) Q And as part of that you attempted to identify as many of

Vol 18 2815

- (1) the major oil spills as you could is that right?
- (2) A That's correct
- (3) Q And you attempted to identify the character of those
- (4) spills is that right?
- (5) A Yes Again it was not a real exhaustive study it was
- (6) kind of a preliminary research but that was one area we looked
- (7) at yes
- (8) Q And you attempted to examine the effect of those spills on
- (9) tidelands and uplands didn't you?
- (10) A Yes to a limited extent
- (11) Q And you contacted real estate valuers in the markets where
- (12) these spills occurred to see what their view was as to whether
- (13) there had been any real estate impact didn't you?
- (14) A That's correct
- (15) Q And after doing all this isn't it the case that you could
- (16) not bring together any transactional evidence that indicated
- (17) whether there may or may not have been an effect on the value
- (18) of property as a result of those spills?
- (19) A That is correct There had not been studies done on other
- (20) spills of a valuation nature where a person could - or where
- (21) people had in the past quantified the damages to the real
- (22) estate because of the spill
- (23) Q So you -
- (24) A At least based on the research we did we could not find
- (25) any information on that on that line

Vol 18 2816

- (1) Q So you could not find anyone after your research who had  
 (2) themselves done research showing the impact of major oil spills  
 (3) on real property value and your own work was not able to lead  
 (4) you to determine that either isn't that correct?  
 (5) A Well our own work involved following up on the prior oil  
 (6) spills the majority of which were - or many of which were in  
 (7) other countries and we did not do any original data research  
 (8) ourselves to determine if there had been effect on the real  
 (9) estate or not It was all secondary research not that I had  
 (10) done but work done by others  
 (11) Q So the market survey that you proposed to Alaska came up  
 (12) empty but you tried to find evidence of an impact on real  
 (13) estate by looking at other information did you not?  
 (14) A Well as I said before we tried to find other studies that  
 (15) had been done to see if there was any kind of documentation  
 (16) regarding the effect that it had on the real estate market and  
 (17) we could not find any studies that documented real estate  
 (18) effects There had been no studies done  
 (19) Q I understand that and you had not done a study to that  
 (20) effect  
 (21) Now I'm asking you did you then try to find something to  
 (22) look at that would indicate whether there was an impact on the  
 (23) real estate market here in Alaska? Did you look at the Ellamar  
 (24) Development in Prince William Sound?  
 (25) A Oh there's - sure we took a look at a lot of information

Vol 18 2817

- (1) regarding the local market Prince William Sound Kenai Fjords  
 (2) Kenai Peninsula market yes  
 (3) MR OPPENHEIMER Your Honor we jumped right into  
 (4) this This might be an opportune time to take a break I'd  
 (5) like to set up an easel  
 (6) THE COURT Sure sure  
 (7) THE CLERK Please rise this court stands in recess  
 (8) (Jury out at 10 24 a m )  
 (9) (Recess from 10 24 a m to 10 38 a m )  
 (10) (Jury in at 10 38 a m )  
 (11) THE CLERK Please rise This court now resumes its  
 (12) session  
 (13) Please be seated  
 (14) MR OPPENHEIMER Joel would you put up 1204  
 (15) Exhibit 1204?  
 (16) BY MR OPPENHEIMER  
 (17) Q Dr Mundy do you have that on your computer there?  
 (18) A Yes Ellamar lot sales  
 (19) Q Correct Now I don't want - I realize your back is -  
 (20) let me do this I'd like to have you point out and then I'll  
 (21) point it to the jury where Ellamar is on our map If I - if I  
 (22) point here am I about right?  
 (23) A That's about correct yes  
 (24) Q Okay Right about here I'll hold this up just where it  
 (25) says Galena Bay Tatitlek Narrows up here Okay Right in

Vol 18 2818

- (1) there  
 (2) Now in the absence of market studies from other spills  
 (3) establishing impact you looked at this data is that correct?  
 (4) A This is some of the information that we looked at  
 (5) Q This is an important part of the data you looked at isn't  
 (6) it?  
 (7) A Yes  
 (8) Q And the point you're making here as I understand it is  
 (9) that you have all of this activity in '88 and then it drops off  
 (10) in '89 is that correct?  
 (11) A That's correct  
 (12) Q And you attribute that to the spill? You do don't you  
 (13) attribute that to the spill?  
 (14) A I attribute it to the spill The seller of the lots in the  
 (15) Ellamar subdivision also attributed it to the spill  
 (16) Q Now I notice here that - and these numbers are hard to  
 (17) read so let me call them out Tell me if I get one wrong but  
 (18) this is 1983 84 85 86 87 88 89 90 91 and 92  
 (19) Now '83 has a pretty tall column an awful lot of sales in '83  
 (20) right?  
 (21) A That's correct the first column  
 (22) Q First column?  
 (23) A First bar yes  
 (24) Q When we say an awful lot - let me back up a second There  
 (25) aren't an awful lot of sales in the entirety of Prince William

Vol 18 2819

- (1) Sound as a general matter isn't that right?  
 (2) A That's correct  
 (3) Q This is not a place where people buy and sell a lot of  
 (4) land?  
 (5) A There's just not a lot of land to buy and sell  
 (6) Q And not a lot of land to buy and sell Now what accounts  
 (7) for 1983?  
 (8) A Well I am not certain but I presume that that's the first  
 (9) year that the subdivision came on the market and they had a  
 (10) pretty good sales activity  
 (11) Q You bet And that characterizes - oh this is  
 (12) recreational subdivision property isn't it?  
 (13) A That's correct  
 (14) Q That characterizes recreational subdivision sales doesn't  
 (15) it? When there's a marketing event you get a surge in sales?  
 (16) A Oftentimes that's the case yes  
 (17) Q Followed by a drop in sales?  
 (18) A It depends on how the marketing program is administered  
 (19) but that can happen in cases yes  
 (20) Q You've studied this phenomenon in the Sound have you  
 (21) not?  
 (22) A Yes  
 (23) Q That's what you found wasn't it that the sales of  
 (24) property like this that are depicted for this chart for Ellamar  
 (25) have a tendency to go up when there's marketing activity and  
 then drop down?

Vol 18 2820

- (1) A Well there are a lot of other factors that can affect the  
 (2) ups and downs The economy for one An oil spill for two  
 (3) Q Well you re not suggesting are you that there s an oil  
 (4) spill that accounts for the drop from 83 to 84 are you?  
 (5) A No  
 (6) Q And the drop from 83 to 84 is as great as if not greater  
 (7) than the drop from 89 - excuse me 88 to 89 is it not?  
 (8) A Well I - it s about a 71 percent drop in - from 83 to  
 (9) 84 There was a 90 percent drop from 88 to 89 So the  
 (10) drop from 88 to 1989 was greater than from 83 to 84  
 (11) Q Little difference And in fact it s the case is it not  
 (12) that the sale of these properties is characterized by bursts of  
 (13) marketing activity and then long periods of no activity is  
 (14) that right? Isn t that what you found when you studied these  
 (15) types of properties throughout the Sound?  
 (16) A That s not necessarily the case no  
 (17) Q Would it be the case that these properties have experienced  
 (18) erratic absorption with high absorption during periods of  
 (19) active marketing followed by periods of little to no activity  
 (20) would you agree with that?  
 (21) A It depends a lot on the subdivision but some recreation  
 (22) developments that s been erratic others it hasn t been as  
 (23) erratic  
 (24) Q When I m referring to remote recreational subdivisions in  
 (25) Prince William Sound would you agree that those in this area

Vol 18 2821

- (1) that have been developed have experienced erratic absorption  
 (2) with high absorption - meaning people buy them - during these  
 (3) periods of active marketing followed by long periods of little  
 (4) or no activity?  
 (5) A Where the marketing program hasn t been carried on yes  
 (6) Q Okay Do you have any information about what  
 (7) distinguishes in this subdivision the years 1988 from 1989  
 (8) other than your information that an oil spill occurred? Do you  
 (9) know anything else that went on in 87 88?  
 (10) A Regarding the subdivision?  
 (11) Q Correct  
 (12) A There is nothing that I can recall I talked with the  
 (13) person who is responsible for the marketing activity there and  
 (14) there s nothing that I can recall back in 86 87 that was -  
 (15) Q 87 88 87 88 something that would affect the number  
 (16) of sales in 88 the high number of sales something that might  
 (17) cause it  
 (18) A Well I can t recall anything that would cause a - you  
 (19) know an abnormal increase in the sales  
 (20) Q Didn t they put a road in to open up new lots so that they  
 (21) could sell more in 88? Didn t they have a new road in 1988  
 (22) 12 000 feet of newly laid gravel road?  
 (23) A I can t recall that  
 (24) Q Didn t they put a new dock in in 1988?  
 (25) A I - I can t recall a new dock being put in either

Vol 18 2822

- (1) Q Were you - do you know whether or not they conducted new  
 (2) marketing activity in connection with the Ellamar Development  
 (3) in 1988 to take advantage of the new road and the new dock to  
 (4) get more people to buy?  
 (5) A That may well have taken place I think if they - you  
 (6) know and I would accept that just accept that as a working  
 (7) assumption that they put in a new road and a new dock and  
 (8) they did a lot of additional marketing that caused this  
 (9) increase in 1988 I would certainly expect that to spill over  
 (10) to other years And so you know if you re suggesting that  
 (11) that explains 1988 I would think that it would certainly spill  
 (12) over to 1989  
 (13) Q Dr Mundy you don t even - you told us earlier that s an  
 (14) assumption on your part You haven t studied this because in  
 (15) putting together this chart you didn t even know that the new  
 (16) road had gone in and that the dock had gone in So your chart  
 (17) doesn t reflect an analysis of that does it?  
 (18) A As I say I can t recall  
 (19) Q You didn t know?  
 (20) A I may have known at the time but I can t - as I sit here  
 (21) today and discuss this with you I cannot recall the fact that  
 (22) a new road or a new dock was put in It may well have been  
 (23) Q Okay Now if - if the additional activity up here is the  
 (24) result of the new road and the new dock and the marketing  
 (25) activity which you have indicated in your own research causes

Vol 18 2823

- (1) a flurry of market activity followed by a period of inactivity  
 (2) and you adjust this bar in 1988 Isn t it the case that the  
 (3) sales in the Ellamar subdivision are about the same and in  
 (4) fact start going up as early as 1990 to a level which with  
 (5) the exception of 85 is what occurs or is greater than what  
 (6) occurs in most of the prior years?  
 (7) A Well Mr Oppenheimer I - you re I think taking things  
 (8) a little bit out of context here The fact of the matter is  
 (9) that in 1988 there were some ten lots that sold In 1989 the  
 (10) sale activity dropped down to only one lot They had to  
 (11) discount the price of that lot considerably to get that one  
 (12) sale to take place and according to Mrs Groh who -  
 (13) Q She s the manager one of the managers?  
 (14) A One of the managers yes  
 (15) Q Lucy Groh?  
 (16) A Yes of the subdivision The reason that sales dropped  
 (17) dramatically in 1989 was because of the spill They could not  
 (18) market the lots and they tried diligently to do it In 1990  
 (19) prices - or the lot sales went up but it was because they  
 (20) dropped prices significantly  
 (21) Q Let me come back to my question If for the moment you  
 (22) assume that this large bar is a result of their marketing  
 (23) activity do you agree with me that what you see is a  
 (24) relatively even band of sales - I mean after all these bars  
 (25) the jury should understand these bars are at two sales four

Vol 18 2824

- (1) sales six sales We re not talking about dozens of sales
- (2) We re talking about four sales in 84 We re talking about
- (3) four sales in 86 maybe three sales in 87 So one sale would
- (4) be 30 percent of the sales in 87 but wouldn t you agree it s
- (5) a relatively level playing field both before and after the
- (6) spill?
- (7) A No
- (8) Q Okay Now do you know anything about what percentage of
- (9) the Ellamar subdivision lots that sold were on the waterfront
- (10) as opposed to being in the uplands?
- (11) A I do not know the percentage in any particular year no
- (12) Q Do you know as to any particular year how many waterfront
- (13) lots were sold?
- (14) A I can t tell you as I sit here I believe we have that
- (15) information but I -
- (16) Q The 89 sale that you were referring to the one that you
- (17) said was a discounted sale so that it would sell?
- (18) A Yes
- (19) Q That in fact is a waterfront lot isn t it? That s the
- (20) Reid sale?
- (21) A That s correct
- (22) Q That s a waterfront lot isn t it?
- (23) A It may well be I can t recall where that lot s located
- (24) Q Isn t it the indication that for all of the years that are
- (25) shown on this chart or for most of them that on average one

Vol 18 2825

- (1) or two waterfront lots would sell before the spill after the
- (2) spill?
- (3) A I - I can t say how many waterfront lots or backland lots
- (4) were selling
- (5) Q So you can t tell so you don t know?
- (6) A I as I sit here no I don t know
- (7) Q Now as to the Reid sale that you say is the only sale in
- (8) 89 you ve told the jury that that was a discounted sale?
- (9) A That s correct
- (10) Q You are of the opinion that it went from about \$29 000 to
- (11) about \$24 000 is that right?
- (12) A That s correct
- (13) Q Didn t something else change in the terms of that deal?
- (14) This is the Reid sale now 1989?
- (15) A Yes
- (16) Q What else changed?
- (17) A I think that the terms on which the sale took place
- (18) changed
- (19) Q Right More cash got put down up front didn t it?
- (20) A I don t think more cash got put down no
- (21) Q Didn t it go from 10 percent down to 50 percent down?
- (22) A I don t believe that s the case I think \$1 000 was put
- (23) down
- (24) Q So you re not aware of a larger cash payment being made to
- (25) lower the overall price?

Vol 18 2826

- (1) A No Mrs Groh said that she was going to accept whatever
- (2) she could get to - to make the sale
- (3) Q And let me ask you a more general question You are a real
- (4) estate analyst as well as an appraiser is that correct?
- (5) A That s correct
- (6) Q And it is not uncommon is it not in a transaction to
- (7) lower the total purchase price in exchange for increasing the
- (8) amount of cash that s put down as a down payment right that s
- (9) not uncommon?
- (10) A No that s not uncommon
- (11) Q And in fact didn t that happen quite a bit within the
- (12) marketing of that very Ellamar subdivision?
- (13) A The terms and conditions upon which the sales took place
- (14) did vary
- (15) Q I m sorry?
- (16) A The terms and conditions did vary yes
- (17) Q You would agree whatever our other disagreements that by
- (18) 1990 we re back up to four sales in the Ellamar subdivision
- (19) right?
- (20) A That s correct
- (21) Q And you would agree that that s about what we had in - or
- (22) that is what we had in 86 or in 84?
- (23) A Yes
- (24) Q So things are back to what we ve seen in the past by - by
- (25) 90 right?

Vol 18 2827

- (1) A And - yeah that s correct What we said for the eastern
- (2) part of Prince William Sound was that the market was impacted
- (3) for one year
- (4) Q Let s - I d like to ask you a little bit about that
- (5) I apologize I would have set all of this up earlier but
- (6) there s just not enough room
- (7) Can you see that Dr Mundy?
- (8) A Yes
- (9) Q Can you all see that?
- (10) In your stigma analysis you talked about a geographic
- (11) reach of stigma is that right?
- (12) A That s correct
- (13) Q This whole area as far as you were concerned was
- (14) stigmatized right?
- (15) A Yes I don t know to the extent you re referring
- (16) Q Well is there any part of the map that isn t stigmatized?
- (17) A Well we did - you show on the far right hand side of the
- (18) map the Copper River Delta area and -
- (19) Q That would be right here?
- (20) A Yes
- (21) Q Right here okay And when you say you show on the map
- (22) are you saying that was not stigmatized?
- (23) A Well there was no property that we analyzed in that area
- (24) that - or there was property actually that was owned by the
- (25) Native corporations but we did not apply a stigma to that

Vol 18 2828

- (1) area  
 (2) Q That s not my question My question is was it  
 (3) stigmatized?  
 (4) A I think that probably the Copper River area would have had  
 (5) a one year stigma attached to it There was a substantial  
 (6) amount of uncertainty in the marketplace regarding where the  
 (7) oil was what the concentrations were and I think that  
 (8) probably for one year the entire Prince William Sound area was  
 (9) stigmatized  
 (10) Q Now did it go on past – off our map down the coast at  
 (11) all the stigma?  
 (12) A I really didn t take – or study how far I thought it might  
 (13) go  
 (14) Q How did you determine where it stopped?  
 (15) A That was – based on my judgment based on the work that  
 (16) we ve done – involved in contaminated properties  
 (17) Q Well is there a rule of thumb X miles per amount of  
 (18) contamination? I mean how do you tell where the stigma area  
 (19) stops?  
 (20) A This was just based on what I felt was a logical area to  
 (21) include as a part of the stigma – stigmatic area A logical  
 (22) boundary beyond which I didn t think that there would be much  
 (23) of an impact  
 (24) Q Okay Now just out of curiosity there is no – not a  
 (25) single parcel that you were asked to assess damages for for

Vol 18 2830

- (1) Q Right So the fact that property was selling at an  
 (2) abnormally good rate throughout this area in the urban centers  
 (3) was not relevant to you?  
 (4) A That was something that was not part of our analysis If  
 (5) you re suggesting that that property is selling and not  
 (6) affected by the spill I would simply suggest that you ve got a  
 (7) completely different market in urban area than you do in the  
 (8) rural and water area where the oil was affecting the beaches  
 (9) and this type of thing  
 (10) Q Now Valdez is a lot closer to the spill – you re talking  
 (11) about sales up here and other areas that there were sales in  
 (12) this area a lot closer to the spill site than – than for  
 (13) example the areas in here over by the Glacier River area  
 (14) where you did find a stigma?  
 (15) A As I – once again I did not – we did not do research on  
 (16) the urban market including Valdez and – and Cordova  
 (17) Q Okay Now in terms of the range of this stigma I know  
 (18) that you are not hired as an expert in this case for Kodiak  
 (19) that s a man by the name of Larry Shorett Is that correct?  
 (20) A That s correct  
 (21) Q Okay Now I do want to ask you though and let me ask  
 (22) you if you recognize this as a – a map that shows the Prince  
 (23) William Sound area the Kenai Fjords area the Kenai Peninsula  
 (24) Cook Inlet this is Homer and that s Kodiak correct?  
 (25) A That s correct

Vol 18 2829

- (1) any of your clients that is outside an area that you thought  
 (2) was stigmatized is that right?  
 (3) A I don t know whether I fully understand the question  
 (4) Q Well –  
 (5) A I mean if you for example are saying are there lands  
 (6) that Eyak owns that are outside of the –  
 (7) Q No that s not – that s not my question My question was  
 (8) the lands you were assessing for damages for this lawsuit you  
 (9) concluded that all of those were in a stigma area?  
 (10) A That s right We just analyzed the lands that I felt  
 (11) impacted because of the spill  
 (12) Q No doubt in your mind that urban property was selling like  
 (13) hot cakes in this area right?  
 (14) A That is something that we didn t include as part of our  
 (15) analysis We re talking about property in Cordova or Valdez?  
 (16) Q Sure  
 (17) A It s my understanding that during the clean up activity  
 (18) the real estate market in Cordova and Valdez and as well as a  
 (19) number of other markets was doing abnormally well  
 (20) Q Abnormally well And now just – many people may already  
 (21) know these places but we are talking about activity in this  
 (22) area right urban activity?  
 (23) A Well in Cordova and Valdez  
 (24) Q Cordova and Valdez You didn t analyze that?  
 (25) A We did not do any work that involved the urban areas no

Vol 18 2831

- (1) Q Kodiak stigmatized?  
 (2) A Again that s something that we did not do any research  
 (3) on I have no opinion on that  
 (4) Q Well with all the research you ve done you can t – you  
 (5) can t tell me if Kodiak was stigmatized?  
 (6) A Are you talking about the City of Kodiak?  
 (7) Q No I m talking about this area  
 (8) A Well if you re talking about Kodiak Island I think that  
 (9) probably there was a stigma there Again it s something that  
 (10) we haven t researched and so – and it s a question that hasn t  
 (11) been put to me until this instant but there was a considerable  
 (12) amount of oil that worked its way down and around Kodiak  
 (13) Island  
 (14) Q Well I just –  
 (15) A It would have been a stigmatized –  
 (16) Q I m simply asking you whether you had a view So you think  
 (17) it would have been?  
 (18) A Yes  
 (19) Q Okay Urban market in Kodiak the year after the spill  
 (20) also very hot true? Or perhaps you don t know I don t mean  
 (21) to put words in your mouth Do you know whether it was or not?  
 (22) A I have heard that from other sources I can t attest to  
 (23) it  
 (24) Q This is the Kenai Peninsula It was stigmatized?  
 (25) A I believe part of it was yes

Vol 18 2832

- (1) Q And well you have have you not done appraisals for  
 (2) Seldovia - it s not shown as a parcel here but up here in  
 (3) connection with the Kachemak Bay State Park and you ve  
 (4) reached  
 (5) the conclusion that those lands were stigmatized isn t that  
 (6) correct so it goes that far up into the Cook Inlet?  
 (7) A That s correct the oiling there  
 (8) Q Does it cross over the Cook Inlet?  
 (9) A Yes There was oil over in the west side of Cook Inlet  
 (10) too  
 (11) Q So this was stigmatized too this area?  
 (12) A The area to the west of Seldovia Again you re a bit  
 (13) further north than we ve done any research but down in the  
 (14) area to the west of Seldovia which would be sort of southwest  
 (15) of Homer yes  
 (16) Q Was Anchorage stigmatized?  
 (17) A I really have not done any research nor have I formed an  
 (18) opinion about Anchorage  
 (19) Q What is it that tells you geographically which places have  
 (20) the stigma and which places don t?  
 (21) A Well the stigma is going to have an effect on the nature  
 (22) of the real estate market that s being affected by the - the  
 (23) problem and in this case the problem being the Exxon Valdez  
 (24) crude oil that spilled from the Exxon Valdez So it s  
 (25) important - just as we classified land and broke it down into  
 various use categories it s important to look at different

Vol 18 2833

- (1) markets too and because these markets can behave  
 (2) completely  
 (3) differently  
 (4) We re talking about markets for natural land for high  
 (5) amenity land for timberland and talking about buyers and  
 (6) buyer behavior for that type of property  
 (7) Q So you have to look at the specific market?  
 (8) A The type of -  
 (9) Q You have to look at the specific market?  
 (10) A Yes The type of buyer that s involved in an urban area  
 (11) for example Anchorage or Cordova has got a completely  
 (12) different set of attributes that they re using to value it  
 (13) Q So Cordova has a different set of attributes than the Eyak  
 (14) land over here that surrounds it?  
 (15) A The buyers in the marketplace do sure  
 (16) Q Now does Prince William Sound have a market that you have  
 (17) to examine separately from Kenai to determine whether there s  
 (18) stigma?  
 (19) A If we re talking about the remote properties I think that  
 (20) you ve got buyers that would behave similarly in both markets  
 (21) Q So for remote properties you don t have to look at the  
 (22) specific lands is that correct?  
 (23) A In terms - and I assume that we re dealing with the area  
 (24) of stigma  
 (25) Q Yes of stigma  
 A Yes

Vol 18 2834

- (1) Q So for remote properties it doesn t matter where the  
 (2) remote property is?  
 (3) A As long as we re talking about the area that s impacted by  
 (4) the oil spill yes  
 (5) Q Well what I m trying to figure out is how do we know  
 (6) since it obviously includes places that aren t touched by oil  
 (7) is that correct?  
 (8) A Yes  
 (9) Q Eyak and Tatitlek s lands is not touched by oil at least  
 (10) as far as your analysis is concerned right?  
 (11) A That s correct  
 (12) Q But they re stigmatized?  
 (13) A That s correct  
 (14) Q That means that the oil doesn t have to touch a place for  
 (15) there to be stigma But how do we know where there s stigma  
 (16) and where there isn t if the presence of oil doesn t help?  
 (17) A As I mentioned that is something that was based on my  
 (18) judgment and the research that we have done in the past that  
 (19) served as a basis for that judgment  
 (20) Q All right Port Fidalgo is another recreational  
 (21) subdivision in Prince William Sound is that correct?  
 (22) A That s correct  
 (23) Q Is that in this area - well can you tell me where it is  
 (24) can you direct me to it so I can show the jury?  
 (25) A It is on the map

Vol 18 2835

- (1) Q Where s the -  
 (2) A Port Fidalgo is south and east of Tatitlek  
 (3) Q All right So is it in the Fidalgo South parcel?  
 (4) A That - yes Port Fidalgo would probably - is the waterway  
 (5) that would form the north of the Port Fidalgo South parcel  
 (6) Q So Port Fidalgo is the waterway there s a development  
 (7) there just like there was in Eliamar up here correct?  
 (8) A That s correct  
 (9) Q Now there was a fair period of time when the owners of  
 (10) Port Fidalgo didn t want to sell their lots is that correct?  
 (11) A That s correct  
 (12) Q And then they started selling them again 93 94?  
 (13) A Yes  
 (14) Q And when they opened the gates gates to let people buy  
 (15) property again how many lots sold in 93 and 94?  
 (16) A I can t recall  
 (17) Q Was it 50?  
 (18) A There were quite a few lots that sold as I recall in the  
 (19) Port Fidalgo subdivision because of some very aggressive  
 (20) pricing  
 (21) Q Right And we can t attribute to lack of sales in Port  
 (22) Fidalgo because of the oil spill because the owners had just  
 (23) taken them off the market for their own market reasons  
 (24) correct?  
 (25) A They had taken that subdivision off the market It was

Vol 18 2836

- (1) taken off before the spill took place  
 (2) Q Correct Years before the spill took place?  
 (3) A That s correct  
 (4) Q Now so we have a lot of market activity in 94 in this  
 (5) area correct? You d agree?  
 (6) A That s correct It s consistent with our analysis We  
 (7) thought there probably would be about a one year stigma  
 (8) associated with it and the market would return to normal  
 (9) Q So when stigma ends It s like a switch being thrown that  
 (10) is correct Suddenly once that stigma s over people are out  
 (11) there buying land as fast as they can?  
 (12) A Not quite like that but it can have a dramatic effect on  
 (13) behavior -  
 (14) Q How do people know when the stigma is over?  
 (15) MR PETUMENOS Excuse me Judge Mr Oppenheimer gets  
 (16) intent and he s Interrupting the witness I believe  
 (17) THE COURT That s true  
 (18) MR OPPENHEIMER I apologize I ll try not to do it  
 (19) THE COURT That s true  
 (20) MR OPPENHEIMER Mr Petumenos makes a good point  
 (21) BY MR OPPENHEIMER  
 (22) Q Please Mr Mundy continue  
 (23) A The stigma can continue to occur quite rapidly because in  
 (24) major problems such as the Exxon Valdez oil spill there is a  
 (25) tremendous amount of media coverage and that media  
 coverage -

Vol 18 2837

- (1) given the nature of the media that we have today - both  
 (2) television print media can provide the marketplace with news  
 (3) virtually instantly and that can have a very quick effect on  
 (4) the market  
 (5) Q You didn t see northeast newspaper articles in your  
 (6) research that said stigma ends buy land now?  
 (7) A I can t recall I think maybe there were some  
 (8) advertisements that I saw in the paper that Exxon paid for  
 (9) along that line No the - the stigma is something that -  
 (10) Q I don t think there s a question pending Not to interrupt  
 (11) you but I don t have a question for you But I do now  
 (12) Kodiak let me see if I can get a closeup here  
 (13) MR STOLL Can I move over here Your Honor now that  
 (14) he s going the talk about my clients property?  
 (15) THE COURT Yes  
 (16) BY MR OPPENHEIMER  
 (17) Q Kodiak now you ve testified this morning just a moment  
 (18) ago that with respect to remote properties It doesn t matter  
 (19) what market they re in they re all going to be stigmatized  
 (20) alike right?  
 (21) A I think that is a little bit out of context but why don t  
 (22) we go ahead and -  
 (23) Q Well is it wrong?  
 (24) A I - I think that the - the stigma is something that  
 (25) applies in general to a geographical area but I did not mean

Vol 18 2838

- (1) to imply for example that all of Kodiak Island was going to  
 (2) be stigmatized because of the oil that migrated down around  
 (3) Kodiak Island  
 (4) Q So even though Kodiak in your understanding was  
 (5) surrounded by oil you don t think all of it was stigmatized?  
 (6) A I have not really done any research on Kodiak Island  
 (7) I ve - you know do not know where the oil ended up around  
 (8) there If it was only on one side of the island or both sides  
 (9) of the Island I simply have not done the research am not  
 (10) knowledgeable so I just - I can t really express an opinion  
 (11) Q Dr Mundy didn t you rely in a critical way in your report  
 (12) on an analysis of Kodiak remote property land sales that Pat  
 (13) Carlson the Kodiak appraiser did on this land?  
 (14) A There is a chart that we have in our appraisal that shows  
 (15) that remote land sales on Kodiak Island dropped off after  
 (16) the - the spill The material developed by Pat Carlson also  
 (17) shows that sales of urban property increased  
 (18) Q Okay But my question is you relied upon remote property  
 (19) transactions in your report did you not in this area?  
 (20) A That s correct  
 (21) Q Okay Now were you aware that one of the plaintiffs in  
 (22) this case the Kodiak Island Borough Mr Stoll s client  
 (23) actually sold property within the one year stigma period that  
 (24) you re talking about Excuse me I misstated that because it  
 (25) was - it was a few months out of the stigma period November

Vol 18 2839

- (1) 1990  
 (2) MR PETUMENOS I just don t want the jury to be  
 (3) misled I don t think he s testified on a stigma period on  
 (4) Kodiak  
 (5) BY MR OPPENHEIMER  
 (6) Q Well there s a one year stigma period in the spill area  
 (7) isn t there Dr Mundy?  
 (8) A That s what we applied a one year stigma period to some  
 (9) areas in Prince William Sound  
 (10) Q And you used data on land sales on Kodiak Surely you  
 were  
 (11) using land sales on Kodiak because you thought they had been  
 (12) affected by the spill?  
 (13) A That s correct I -  
 (14) Q Okay So you have an understanding in your view that  
 (15) land sales in Kodiak were affected by the oil spill?  
 (16) A Yes on Kodiak Island  
 (17) Q On Kodiak Island?  
 (18) A Remote areas of Kodiak Island  
 (19) Q Are you familiar with Kodiak Island Borough land sale 11?  
 (20) A I don t know if I m familiar with that land sale or not  
 (21) Is that where there were five properties put on the market?  
 (22) Q Correct You have it Onion Bay Raspberry Island?  
 (23) A Onion Bay yes  
 (24) Q Right up here?  
 (25) A If that s where Onion Bay is I -

Vol 18 28-0

- (1) Q I'll represent to you that's where Onion Bay is  
 (2) You're aware that Kodiak Island Borough in 1990 put on five  
 (3) lots. How many of those lots sold?  
 (4) A All five of them, sir.  
 (5) Q All five of them. In how many hours?  
 (6) A It - well, four of them sold at an auction, and then at  
 (7) the close of the auction, the fifth lot sold. There was no  
 (8) bids on the fifth lot and it sold.  
 (9) Q All five sold, and it was in roughly two days, three days  
 (10) correct?  
 (11) A Well, I don't know how much time led up to the auction -  
 (12) for example when the notice went that there would be an  
 (13) auction - so I don't know how much time people had to determine  
 (14) whether they wanted to bid on a lot and to submit a bid.  
 (15) Q Are you aware of the Kodiak Island Borough's policy that it  
 (16) won't sell land to the public at lower than fair market value?  
 (17) A No, I'm not aware of that policy.  
 (18) Q So you don't have an opinion as to whether these lots were  
 (19) sold at the auction at or above fair market value?  
 (20) A No, I do not.  
 (21) Q By the way, I believe I misspoke about the Port Fidalgo  
 (22) sales, the 50 sales in six months. I said '94, but it's  
 (23) actually '92, isn't it?  
 (24) A Again, I - if I had the documents before me, I could tell  
 (25) you what the time frame was, but I don't -

Vol 18 2841

- (1) Q Okay, we'll see. I believe it's in your report, but to the  
 (2) best of your recollection, is it '92 or you can't remember?  
 (3) A As I said, I can't remember.  
 (4) Q I believe I misspoke. We'll get it correct in the record.  
 (5) May we have Exhibit 1144 back on, please? Plaintiffs  
 (6) 1144. And I guess I may have to move this.  
 (7) I just wanted to confirm my understanding that - we'd  
 (8) spoke earlier about the letter that you sent to Mr. - Mr. Pio  
 (9) Park of the Chugach Corporation, soliciting work in this case,  
 (10) is that right? Remember that, it was March 30?  
 (11) A Yes, yes.  
 (12) Q Okay. Now as of March 30, according to this plaintiff's  
 (13) exhibit, the oil had reached only to the second bar there,  
 (14) right?  
 (15) A Some 90 miles from Bligh Island, yes.  
 (16) Q So you were talking to folks about working on this case  
 (17) before the oil had even reached the end of the Kenai  
 (18) Peninsula?  
 (19) A I had talked with Mr. Park about providing services to  
 (20) Chugach Alaska Corporation four days after the spill. And as  
 (21) it happens, Chugach Alaska Corporation owns significant land  
 (22) in Prince William Sound, and maybe you have it turned off, but -  
 (23) there you go.  
 (24) Q I think you're down at the bottom there, yeah.  
 (25) A This is the area where Chugach Alaska Corporation has its

Vol 18 2842

- (1) land ownership.  
 (2) Q When did you and ICF start working together?  
 (3) A I can't recall when we started working together, and it  
 (4) depends a lot on whether you're talking about on a formal basis  
 (5) or informal basis. It was shortly after the spill that I had  
 (6) conversations with ICF about some of the scientific aspects of  
 (7) the oiling problem.  
 (8) Q You also had conversations with them about some business  
 (9) aspects of the spill, isn't that right?  
 (10) A Maybe you could clarify that, Business aspects?  
 (11) Q You and they talked about getting you hired on this case,  
 (12) isn't that correct?  
 (13) A We talked about our working on this case and working with  
 (14) them.  
 (15) Q Do you recall that in August of '89, you and Mr. Klein of  
 (16) ICF were communicating about the proposal you were going to  
 (17) make to Chugach to be hired in this case?  
 (18) A I know that Mr. Klein and I discussed the proposal that we  
 (19) were preparing, yes.  
 (20) Q And he reviewed your draft proposal, is that correct?  
 (21) A That's correct.  
 (22) Q Counsel 15195.  
 (23) Dr. Mundy, I'd like to show you a copy of defendant's  
 (24) exhibit 15195 and ask you to identify that for me.  
 (25) A This is a draft memorandum from Daniel E. Klein to myself.

Vol 18 2843

- (1) Mr. Klein being with ICF Resources Incorporated. There are  
 (2) some ten pages to this document - well, there's not - five  
 (3) pages, I'm sorry.  
 (4) Q You recognize that as a document you received?  
 (5) A Yes.  
 (6) Q Do I have the right document on the screen there?  
 (7) A This - it appears to be the correct document, yes.  
 (8) Q Now Mr. Klein is at ICF, is that correct?  
 (9) A That's correct.  
 (10) Q And what is the draft proposal that he's referring to,  
 (11) there?  
 (12) A That was a proposal that I had developed for Chugach  
 (13) Alaska Corporation, and I sent a draft of it to Mr. Klein.  
 (14) Q Right. And that was a proposal to be hired as an expert in  
 (15) this case, is that correct?  
 (16) A That's correct.  
 (17) Q Did Mr. Klein at ICF have some comments on your proposal?  
 (18) A Yes.  
 (19) Q And did he, in fact, recommend one of the things that you  
 (20) ought to do was to emphasize the number of acres affected and  
 (21) the possible value of those acres, high numbers, high  
 (22) damages?  
 (23) A I can't recall. If you could direct me to -  
 (24) Q Why don't you take a look at Page 3, if you would?  
 (25) A Page 3, all right.  
 (26) MR. OPPENHEIMER: Joel, can you blow up the last

Vol 18 2844

- (1) paragraph for me? I think I need to go to perhaps an advanced
- (2) course after today
- (3) MR PETUMENOS Perhaps not an advanced course
- (4) MR OPPENHEIMER Perhaps one isn't necessary
- (5) BY MR OPPENHEIMER
- (6) Q Do you see the first sentence It would seem to me that
- (7) the key factors to emphasize - now this is in the proposal
- (8) you're sending to Chugach to be hired in this case It seems
- (9) to me the key factors to emphasize are the number of acres
- (10) affected and the possible values and damages per acre do you
- (11) see that?
- (12) A That's correct
- (13) Q And that's in connection with a - an attempt on your part
- (14) and ICF's part to be hired as opposed to someone else being
- (15) hired?
- (16) A It was a suggestion that Mr Klein was making regarding the
- (17) proposal that I was submitting to Chugach Alaska Corporation
- (18) regarding a scope of services that we might provide to them
- (19) Q Well the scope of services has nothing to do with the
- (20) possible values and damages per acre that has to do with the
- (21) result of your work whether they're high damages or low
- (22) damages doesn't it?
- (23) A That's correct
- (24) Q Isn't it the case that in order to get the case you make
- (25) sure you emphasize the high amount of - the high values and

Vol 18 2846

- (1) Q You didn't know whether they were or not? I'm sorry you
- (2) did not know whether they were soliciting other proposals or
- (3) not?
- (4) A I'm sorry I thought you meant that as a statement not a
- (5) question
- (6) Q No it's a question
- (7) A I - I believe that they were talking with at least one
- (8) other appraiser and I can't recall if that was in the context
- (9) of having them do the work rather than us or having us both
- (10) jointly do the work
- (11) Q Wasn't it your concern that somebody else was going to get
- (12) hired if you didn't do a good proposal here?
- (13) A I always try to do a very good proposal
- (14) Q Right but my question Dr Mundy is Weren't you in
- (15) competition for this work?
- (16) A I - as - again I don't know if I was in competition or
- (17) not There may well have been other people that they were
- (18) talking to
- (19) MR OPPENHEIMER Joel would you blow up the
- (20) paragraph immediately in front of this one?
- (21) BY MR OPPENHEIMER
- (22) Q I direct your attention to the -
- (23) MR OPPENHEIMER Well first can you blow it up so
- (24) it shows the heading where it says preliminary estimate of
- (25) damages?

Vol 18 2845

- (1) the high number of acres that your study will show was
- (2) damaged?
- (3) A Well I - I don't know what was in Mr Klein's mind I
- (4) think that in submitting a proposal to a client a standard
- (5) thing that I do anyway is always to provide some background
- (6) information on the nature of the problem And I think that
- (7) it's useful for the client to understand what my feelings and
- (8) thoughts are regarding the nature of the assignment
- (9) Q Okay And -
- (10) A And in this case I don't know whether I put that in the
- (11) proposal or not the number of acres the possible value and
- (12) the damage
- (13) Q Now at this point you hadn't -
- (14) MR PETUMENOS Tim excuse me I'm not sure whether
- (15) Dr Mundy was done
- (16) MR OPPENHEIMER I think he was
- (17) A No I wasn't
- (18) MR PETUMENOS I saw him taking a breath is why I -
- (19) MR OPPENHEIMER I'm sorry
- (20) A But I think that putting the information like that in a
- (21) proposal is something that provides the client in terms of
- (22) insight of what my view of things are And the client may
- (23) have been soliciting numerous proposals
- (24) BY MR OPPENHEIMER
- (25) Q May have been in fact you thought they were?
- (26) A I didn't know if they were or not

Vol 18 2847

- (1) BY MR OPPENHEIMER
- (2) Q Now Mr Klein here in the first sentence is suggesting
- (3) that you expand that section on damages right?
- (4) A That's correct
- (5) Q Now at this time you hadn't done any systematic damage
- (6) inquiry had you?
- (7) A I think that what he's talking about is the area where we
- (8) discussed the method that would be used to go about
- (9) estimating
- (10) damages
- (11) Q And that can -
- (12) A And that we were not going to do just a - what I would
- (13) call one shot valuation analysis and say here's what the
- (14) damage is but that we would work on this project in a number
- (15) of phases One developing a preliminary estimate of what the
- (16) damage was and then discussing that with the client and then
- (17) going on to another phase
- (18) Q You'll - I draw your attention to the - to the next
- (19) sentence after that It's not clear to me that Chugach share
- (20) our view that the underlying appraisal concepts can make an
- (21) enormous difference on the values as well as their
- (22) defensibilities meaning different appraisal techniques produce
- (23) very big differences in damages?
- (24) A That is true For example the cost to remediate approach
- (25) would have generated damages far far in excess of the
- (26) damages
- (27) that we have estimated and is a very legitimate approach to

Vol 18 2848

- (1) use in estimating damage  
 (2) Q And the next sentence says I fear that some of them may be  
 (3) looking at appraisal services as a composite at this to be  
 (4) acquired at the lowest price In other words you re  
 (5) expensive and if you re going to get hired you better  
 (6) indicate to them that you re going to come up with a high  
 (7) damage figure?  
 (8) A Well I find that rather amusing Mr Oppenheimer but  
 (9) the - we have a fee schedule that we provide to clients just  
 (10) like attorneys do and that fee schedule is based on a large  
 (11) part on our capability and I like to think that we re hired  
 (12) based on the quality of services that we provide And my  
 (13) experience has been that clients tend to be fairly price  
 (14) insensitive when it comes to issues that are important to  
 (15) them Now -  
 (16) Q Here - I m sorry  
 (17) A This sentence here I fear that some of them may be looking  
 (18) at an appraisal - or looking at appraisal services as a  
 (19) commodity to be acquired at the lowest price that was  
 (20) Mr Klein s opinion and there are a lot of clients that hire  
 (21) appraisal companies based on that philosophy  
 (22) Q Now this is Mr Klein from ICF the same ICF that Mr Bush  
 (23) is from?  
 (24) A That s correct  
 (25) Q And so this is a communication between you and ICF about

Vol 18 2849

- (1) getting the work that has now come to fruition in this  
 (2) courtroom?  
 (3) A That is correct  
 (4) Q Did you ever worry that it was possible that since - well  
 (5) there s no doubt in your mind by the way based on this and  
 (6) other information you had from ICF that they wanted the work  
 (7) too?  
 (8) A Well I know that ICF wanted to work on this project and I  
 (9) believe that in August of 1989 when Mr Klein wrote this  
 (10) letter they had been engaged  
 (11) Q Did you ever have any concerns that because ICF was  
 (12) working  
 (13) for the plaintiffs that they might bias their information in  
 (14) any way?  
 (15) A I don t think so I mean if you bias information  
 (16) you re -  
 (17) Q Bias it in favor of the plaintiffs?  
 (18) A No  
 (19) MR PETUMENOS Excuse me Judge I think he was in  
 (20) the middle of -  
 (21) THE COURT Well not now And besides the  
 (22) question s been answered  
 (23) MR OPPENHEIMER Fair enough Your Honor  
 (24) BY MR OPPENHEIMER  
 (25) Q Is it a possibility that ICF s data is biased?  
 (26) A I have worked with Mr Bush I have reviewed Mr Bush s

Vol 18 2850

- (1) information the analysis I have visited the beaches with  
 (2) Mr Bush observed the transects where the samples were  
 (3) taken  
 (4) I ve observed other areas and in my opinion Mr Bush has  
 (5) been  
 (6) very objective and very impartial in his assessment of the  
 (7) oiling matter that we find in Prince William Sound the Kenai  
 (8) Fjords and the Kenai Peninsula  
 (9) Q I understand that but my only question is Didn t you  
 (10) recognize that there was a possibility that their work could be  
 (11) biased?  
 (12) A Well there s always that possibility but I -  
 (13) Q And you thought that about them specifically?  
 (14) A No What I m saying is that in general there is a  
 (15) possibility that a scientist may bias the results and it s  
 (16) something that I as a valuer have to be very careful of  
 (17) because I have to In essence sign off on the work that they  
 (18) do because I have to adopt it as a part of our appraisal  
 (19) analysis Consequently I make sure that I understand what  
 (20) they re doing the processes that they re using and that it s  
 (21) not something that is biased  
 (22) MR OPPENHEIMER Your Honor would this be a good  
 (23) time for a break  
 (24) THE COURT Perfect thanks  
 (25) THE CLERK Please rise This court stands in  
 (26) recess  
 (27) (Jury out at 11 33 a m )

Vol 18 2851

- (1) (Recess from 11 33 a m to 12 40 p m )  
 (2) (Jury In at 12 40 p m )  
 (3) THE CLERK Please rise This court now resumes its  
 (4) session  
 (5) Please be seated  
 (6) THE COURT Counsel you have a witness out of order  
 (7) so -  
 (8) MR FORTIER We do Your Honor  
 (9) THE COURT I m sure you know about scheduling  
 (10) difficulties in a case like this Well this is one of them  
 (11) and so what I ve allowed is that a witness be taken out of  
 (12) order That doesn t mean that Mr Mundy s testimony is  
 (13) through He ll be back but he won t be back today We ll  
 (14) simply have this witness in the interim and then I ll let you  
 (15) go from there  
 (16) Counsel?  
 (17) MR FORTIER Thank you Your Honor  
 (18) Plaintiffs call Professor Mark Tumeo  
 (19) THE CLERK Sir would you clip the microphone onto  
 (20) your tie and remain standing for the oath and would you raise  
 (21) your right hand?  
 (22) (The Witness Is Sworn)  
 (23) THE CLERK Thank you You may be seated  
 (24) Sir for the record would you please state your full name?  
 (25) A Mark A Tumeo

Vol 18 2852

- (1) THE CLERK Would you spell your last name?  
 (2) A T as in Tom u m e o as in ostrich  
 (3) THE CLERK What is your occupation?  
 (4) A I m a professor at the University of Alaska Fairbanks and  
 (5) Director of the Environmental Technology Laboratory  
 (6) THE CLERK Thank you  
 (7) DIRECT EXAMINATION OF MARK A TUMEO  
 (8) BY MR FORTIER  
 (9) Q Professor Tumeo can you tell the jury a little bit about  
 (10) yourself please?  
 (11) A Sure I m originally from Columbus Ohio I was born  
 (12) there and brought up there I went to undergraduate school at  
 (13) the University of Notre Dame in South Bend I received a  
 (14) Bachelor s in civil engineering concentrating in  
 (15) environmental and a Bachelor s of Science in biology  
 (16) concentrating on aquatic biology  
 (17) After I graduated from Notre Dame I accepted an internship  
 (18) at Exxon Research and Engineering in New Jersey I went there  
 (19) for the summer and worked on waste problems associated with the  
 (20) cleanup of waste from refining processes mainly doing some  
 (21) consulting work for a refinery in Singapore  
 (22) At the end of that internship I was offered a position at  
 (23) Exxon but it was not in the division that I wanted to work in  
 (24) so I went back to graduate school I went to the University of  
 (25) California Davis for a Master s in environmental engineering

Vol 18 2853

- (1) once again there  
 (2) I worked on my Master s from the fall of 1981 until the  
 (3) fall of 1982 completed my Master s and went to work for a  
 (4) small consulting firm called Moldenhauer Engineering Worked  
 (5) for about a year there and then was offered an appointment at  
 (6) the International Institute for Applied Systems Analysis in  
 (7) Vienna Austria So because the world s round I went the  
 (8) other way I took the Trans Siberian Railway crossed the  
 (9) Soviet Union and went into Vienna and spent four months  
 working  
 (10) in Vienna at the institute dealing mainly with computer  
 (11) modeling of acid deposition because of coal fired power plants  
 (12) and doing impact analysis from the deposition of acids across  
 (13) Europe  
 (14) After my appointment at IIASA I returned to California  
 (15) went back to work with the consulting firm until January of  
 (16) 1984 at which time I returned to get my Ph D I decided to go  
 (17) on to get a Ph D once again at the University of California  
 (18) Davis completed my Ph D in March of 1988 and accepted a  
 (19) faculty position at the University of Alaska Fairbanks where  
 (20) I ve been ever since  
 (21) Q And what was your Ph D in?  
 (22) A Civil environmental engineering environmental engineering  
 (23) is a subdivision of civil engineering  
 (24) Q What does an environmental engineer do Professor?  
 (25) A Environmental engineering s a relatively broad field It

Vol 18 2854

- (1) encompasses any activity where you apply engineering  
 principles  
 (2) to solve pollution problems and it covers the entire gamut  
 (3) from pollution prevention source reduction through treatment  
 (4) of waste streams before they re discharged waste water  
 (5) treatment plants air pollution control devices all the kind  
 (6) of stuff that you find on automobiles to control pollution and  
 (7) then on into the remediation of contaminated sites so if  
 (8) there s a spill or a cleanup or any of the kind of problems  
 (9) associated with adverse impacts working to correct those and  
 (10) including risk analysis and those kind of activities  
 (11) Q Did there come a point in time that you were - were  
 (12) retained were requested to - to look at a beach in the Prince  
 (13) William Sound area?  
 (14) A Yes There s a - we have an ongoing research project in  
 (15) Sleepy Bay on LaTouche Island  
 (16) Q Who is we Professor?  
 (17) A The Environmental Technology Laboratory is a - kind of an  
 (18) umbrella group at the university that brings together experts  
 (19) from across the university to work on problems that are of  
 (20) interest for science engineering research  
 (21) Q So this is - when you say we you mean the university  
 (22) is that correct?  
 (23) A Yes I work for the university  
 (24) Q And when was this that you were contacted in order to -  
 (25) A The research project started in - the actual negotiations

Vol 18 2855

- (1) and proposal and all that stuff started in February March of  
 (2) 1993 and the program itself kicked off with a site visit in  
 (3) June of 1993  
 (4) Q And where was the site visit again please?  
 (5) A It s in Sleepy Bay on LaTouche Island  
 (6) Q And can you tell the jury what the experiment was that you  
 (7) were requested to do?  
 (8) A Sure We re looking at the effectiveness of a  
 (9) biosurfactant by the name of PES 51 to be used to clean up oil  
 (10) that s absorbed on the solids In this case we re looking at  
 (11) specifically a cobbly rocky beach in Prince William Sound  
 (12) that s heavily contaminated from the principals - the Exxon  
 (13) Valdez oil spill  
 (14) So we went in - my student went down in June to do  
 (15) preliminary sampling We went through dug pits along the  
 (16) beach to do a - a preliminary survey to see what the  
 (17) contamination was and how bad it was and we also selected  
 (18) samples for microbial analysis to look at the concentration of  
 (19) the population of heterotrophic bacteria and oil degrading  
 (20) bacteria We then went back after the preliminary sample to  
 (21) find out you know kind of what we had and what the  
 techniques  
 (22) were going to be needed to do the sampling  
 (23) We went back in July and I went on that trip to do the  
 (24) actual experiment itself And what that involved we went in  
 (25) before we started set down a grid on the beach did sampling

Vol 18 2856

(1) along strips so that we could have a – a good idea of where we  
 (2) are so we could go back We collected samples both for  
 (3) chemical analysis and for microbial analysis again and we  
 (4) also collected water samples down below the beach  
 (5) Then over a period of five days the biosurfactant was  
 (6) applied And the way it was applied it was injected down into  
 (7) the subsurface of the beach because that s where the  
 (8) contamination is all resident It was applied right after  
 (9) slack tide for the low tide So you wait till the tide went  
 (10) out and then you would inject the stuff And then as the tide  
 (11) came back up that would flush the stuff up and float the oil  
 (12) to the surface where it could be skimmed and collected with  
 (13) absorbent pads  
 (14) After the application which took about five days we went  
 (15) back and sampled the beach material again and sampled the  
 (16) water  
 (17) again to see what we had after we did the application We also  
 (18) did some water samples during the application to make sure  
 (19) that  
 (20) we weren t solubilizing the oil and putting it into the water  
 (21) column which would be a bad thing to do if we did that So  
 (22) we wanted to make sure that wasn t happening  
 (23) After the experiment then we brought all the stuff back  
 (24) to the lab Then we went out again in August and in September  
 (25) of 1993 and then again in May of 1994 to do sampling again so  
 (26) we could get a picture of the long term effects if any  
 (27) Q Now Professor you used a number of terms Maybe you

Vol 18 2858

(1) THE COURT Sustained  
 (2) BY MR FORTIER  
 (3) Q Let me ask you this Professor You described the  
 (4) experiment Do you know whether or not the State of Alaska  
 (5) was  
 (6) involved in the experiment?  
 (7) A Yes it was We had to get permission to apply to material  
 (8) before we could do so  
 (9) Q Okay And based upon your experience do you know  
 (10) whether  
 (11) or not the State of Alaska will – will give permission to  
 (12) apply biosurfactants without making some determination as to  
 (13) whether or not the material is toxic?  
 (14) A We had to do – the company had to provide toxicity data  
 (15) before it could be applied showing that it was not going to be  
 (16) toxic  
 (17) Q And can you tell us what the results were?  
 (18) A Of the experiment?  
 (19) Q Simply the facts as to whether or not the – simply the  
 (20) facts as to the results of the determination whether or not  
 (21) PES 51 was toxic?  
 (22) MR OPPENHEIMER Your Honor may we approach the  
 (23) bench?  
 (24) THE COURT Don t answer  
 (25) What s the objection? What s the name of the objection?  
 (26) MR OPPENHEIMER The name of this objection is ,  
 (27) nondesignation of expert witness

Vol 18 2857

(1) could explain them to the jury One of those was a  
 (2) biosurfactant Can you tell us what a biosurfactant is  
 (3) please?  
 (4) A Sure A biosurfactant is a biologically derived  
 (5) surfactant What a surfactant is is something that breaks the  
 (6) tension between oil and a solid material The best example  
 (7) the one that we re all familiar with are detergents like Dawn  
 (8) dishwashing liquid that takes grease away It s the same kind  
 (9) of concept It s a detergent and it breaks the tension that  
 (10) holds the oil onto the solid material thereby allowing it to  
 (11) be removed It s called a biosurfactant because it s derived  
 (12) from oil degrading microbes which produce an enzyme  
 (13) naturally  
 (14) to do this Since they want to eat the oil they have to get  
 (15) it off the solid and so they produce an enzyme that naturally  
 (16) does that  
 (17) Q And the name of this biosurfactant was PES 51 is that  
 (18) correct?  
 (19) A That s the tradename yes  
 (20) Q Now Professor from what you ve described would it be  
 (21) fair to assume then that this PES 51 is a biodegradable  
 (22) agent?  
 (23) A Yes by definition  
 (24) Q And so by definition it s nontoxic is that correct?  
 (25) MR OPPENHEIMER Objection Your Honor there s no  
 (26) foundation for that question

Vol 18 2859

(1) THE COURT That surprises me counsel You can  
 (2) approach the bench  
 (3) (Sidebar conference out of the hearing of the jury )  
 (4) MR OPPENHEIMER Your Honor I m prepared to – to be  
 (5) as flexible as I can be in terms of the testimony This is not  
 (6) a designated expert My understanding was he was coming to  
 (7) talk about –  
 (8) THE COURT You mean as to toxicity?  
 (9) MR OPPENHEIMER As to anything except what he saw In  
 (10) the PES 51 test In Sleepy Bay And you know I am going to  
 (11) obviously open the door a little bit on cross because some of  
 (12) what he s saying I think is quite helpful to understanding  
 (13) the situation Frankly helpful to us but I note – for  
 (14) example that where he s identified some tests he did  
 (15) subsequent to that there are areas here he could get into  
 (16) which are clearly going do constitute expert testimony and we  
 (17) have – he s not designated We have to report from him He s  
 (18) never been deposed I have no idea where – where that will  
 (19) end I would like to limit the – again we re – we d like to  
 (20) be flexible I d like to limit this lay testimony to the –  
 (21) the testimony that he definitely would object if we go beyond  
 (22) that into other material and I will ask him some of what he  
 (23) found because we needs to put it into perspective but I will  
 (24) not ask him ability the tests that go on later  
 (25) THE COURT You are asking him for an opinion as to

Vol 18 2860

- (1) whether or not this biosurfactant is toxic correct  
 (2) MR FORTIER No Your Honor I m really not What I  
 (3) was hoping to establish is a foundation was based upon the fact  
 (4) that the test went forward that one could conclude that it was  
 (5) not toxic otherwise the State of Alaska wouldn t have allowed  
 (6) it  
 (7) THE COURT I m going to allow that  
 (8) MR FORTIER Part of the reason Your Honor is  
 (9) because there has been suggestions throughout  
 cross examination  
 (10) that PES 51 was a toxic material  
 (11) THE COURT You mean in deposition?  
 (12) MR FORTIER No during trial Mr Clough stated in  
 (13) his opening it was toxic and then there was a  
 (14) cross examination of a witness  
 (15) THE COURT Anybody to contend it was toxic?  
 (16) MR OPPENHEIMER I have never  
 (17) THE COURT I m not going into that I just want to  
 (18) know in the long run in this case are you going to say that  
 (19) this biosurfactant was toxic  
 (20) MR OPPENHEIMER We are going to talk about the fact  
 (21) that the physical constituents of it are such that the  
 (22) apparatus you see people wearing in the tape are largely a  
 (23) result of the material that they re using otherwise we have to  
 (24) dispell the otherwise erroneous --  
 (25) THE COURT That s the contention but you re not

Vol 18 2861

- (1) going to deal with this witness on that issue?  
 (2) MR OPPENHEIMER You mean to try to get him to say  
 (3) it s toxic? No no  
 (4) THE COURT The objection s sustained judged on the  
 (5) basis of he s not an expert witness and I m not going to let  
 (6) him testify to what s essentially an expert conclusion about  
 (7) the toxicity of this surfactant  
 (8) MR PETUMENOS My concern is then Exxon be precluded  
 (9) from arguing to the jury that s it is toxic  
 (10) THE COURT I may do that in the long run but I m  
 (11) only dealing with the objection made as to this witness  
 (12) understand? I mean what you make as your whole record is a  
 (13) different proposition but as to this witness this objection  
 (14) is sustained  
 (15) MR FORTIER Could I ask Your Honor whether or not  
 (16) the experiment was permitted by the State of Alaska?  
 (17) MR OPPENHEIMER Sure I have no objection to that  
 (18) THE COURT You already have I think  
 (19) MR FORTIER Could I ask him that?  
 (20) THE COURT But nothing that gets into the question of  
 (21) toxicity  
 (22) MR FORTIER I understand Your Honor  
 (23) (Sidebar concluded)  
 (24) BY MR FORTIER  
 (25) Q Professor Tumeo could you tell us whether or not the State

Vol 18 2862

- (1) of Alaska permitted the experiment to go forward in Sleepy  
 Bay?  
 (2) A Yes they did  
 (3) Q Now let me ask you were you -- you weren t retained by  
 (4) any party with regard to the experiment were you?  
 (5) A No  
 (6) Q This was a Tesoro product Tesoro Alaska product is that  
 (7) correct?  
 (8) A Yes They came to the university and asked that we act as  
 (9) an independent third party to collect any data having to do  
 (10) with the effectiveness of this project We do a lot of  
 (11) experiments environmental technology laboratory experiments  
 in  
 (12) a lot of various technology areas and serve as that third  
 (13) party and the university is the contracting agent and I act  
 (14) as a professor of civil environmental engineering and do my  
 (15) job  
 (16) Q Now Professor Tumeo only the facts can you describe what  
 (17) the beach looked like when you went out there?  
 (18) A When we were --  
 (19) Q In July I m sorry  
 (20) A In July when we arrived the beach is very rocky and cobbly  
 (21) on the surface It has like an armor plate which means that  
 (22) the larger flatter rocks sit on the top and cover the  
 (23) subsurface We went in and for the preliminary marking of the  
 (24) beach we marked off 20 foot wide strips around 120 feet along  
 (25) the shoreline and we did six strips moving up the shoreline

Vol 18 2863

- (1) and numbered them one through six one being closest to low  
 (2) tide line  
 (3) Underneath the armor you have finer material some sand  
 (4) and -- and finer kind of beach material small pebbles and  
 (5) sand and it was very heavily oiled Some places measured oil  
 (6) -- instead of measuring it in milligrams which is what we  
 (7) usually do we measured it in percent A couple spots were up  
 (8) to 23 to 25 percent oil which means when you take a sample  
 and  
 (9) you re holding it 25 percent of what you re holding is oil  
 (10) Q Professor Tumeo what I d like to do is show a video You  
 (11) have seen a video that shows generally the scenes is that  
 (12) correct?  
 (13) A Correct  
 (14) MR FORTIER And I would like to have Professor Tumeo  
 (15) narrate the video with the Court s permission It s  
 (16) Exhibit 683 A  
 (17) THE COURT Yes that would be fine Do we need to  
 (18) dim the lights?  
 (19) MR FORTIER I don t believe we do Your Honor  
 (20) (Videotape Played)  
 (21) BY MR FORTIER  
 (22) Q And Professor Tumeo if at any time -- what are we seeing  
 (23) here?  
 (24) A The barge we brought our material the heavy material the  
 (25) booms the biosurfactant We pulled it up this beach This is

Vol 18 2864

- (1) the armor I m talking about Underneath is the finer material  
 (2) that s pretty heavily oiled We had to do a lot  
 (3) To do our samples we had to move some of the armor to get  
 (4) down to the beach material That s a picture of me doing the  
 (5) sampling You can see that some of the finer material - might  
 (6) want to stop it I can t talk that fast  
 (7) MR FORTIER You can stop right there  
 (8) A I talk fast but not that fast This is once again a  
 (9) picture of me sampling You can see the heavier armor on the  
 (10) top the rocks  
 (11) How can I point so that people can see it?  
 (12) BY MR FORTIER  
 (13) Q What you could do I think Professor there is a light pen  
 (14) there  
 (15) A This thing?  
 (16) Q Yes  
 (17) A The wonders of modern technology  
 (18) Q I believe it ll work I believe Mr Oppenheimer and I  
 (19) should take the same class  
 (20) A So does this -  
 (21) MR FORTIER Does anybody know if the light pen  
 (22) works?  
 (23) MR PETUMENOS Doesn t work on a video  
 (24) BY MR FORTIER  
 (25) Q Maybe you can come down here Professor if that would be

Vol 18 2865

- (1) comfortable  
 (2) A Can I do that?  
 (3) THE COURT Sure  
 (4) MR PETUMENOS Does the Court care if he gets  
 (5) perpendicular to the screen and points that thing at it? See  
 (6) that little red light? How s that look?  
 (7) A Oh handy dandy  
 (8) BY MR FORTIER  
 (9) Q Great There you go Professor  
 (10) A Okay This is the heavier armor that I m talking about  
 (11) that we had to remove to get down to subsurface Sampling big  
 (12) rocks like that doesn t really mean much Because you get one  
 (13) big rock it doesn t tell you anything So we went down  
 (14) below  
 (15) We sampled from around two to - well five to ten  
 (16) centimeters which is about two to four inches We would dig  
 (17) into this subsurface material and then we would collect a  
 (18) composite sample in these one liter jars These are glass jars  
 (19) and teflon lined lids because you don t want to cross  
 (20) contaminate any of your samples  
 (21) So we would dig along a strip We would dig five pits and  
 (22) then we would go in and sample from those pits and we d  
 (23) collect a composite sample in one of these big jars We d  
 (24) collect a composite sample triplicate composite samples for  
 (25) microbiology And then we would collect a single sample in a

Vol 18 2866

- (1) smaller jar for some other work that we re doing at the  
 (2) laboratory in Fairbanks  
 (3) Keep going  
 (4) Q Go ahead and roll it  
 (5) A This is me collecting the sample putting it in You can  
 (6) see where it s kind of wet and oily You got a lot of oil on  
 (7) you from these places This is a picture - we set up booms  
 (8) around this so that when you applied the biosurfactant and then  
 (9) the tide came up whatever you floated out didn t get floated  
 (10) out to sea We collected it in the booms and skimmed it off  
 (11) and collected it with pads  
 (12) You can see that the beach is - that has that rocky armor  
 (13) all the way across the top of it There were a couple of  
 (14) places where you d find - behind the bigger rocks where you  
 (15) would find tar balls and higher concentrations of - of oil  
 (16) that s collected which may be from being washed in When the  
 (17) tide goes back out it gets trapped behind those kind of  
 (18) things So this is spreading out the booms and stuff  
 (19) This is the containers of the PES 51 They re worn on the  
 (20) back and then you have an air compressor and a hose that you  
 (21) inject it down in I think there s a picture of that coming  
 (22) up  
 (23) This is as the tide came in You can see that the oil  
 (24) sheen is - is left from the oil coming out This is  
 (25) collecting the oil after the PES 51 has been applied So you

Vol 18 2867

- (1) can see the sheen from the oil there  
 (2) THE COURT Professor could you move the microphone  
 (3) down on your tie? You re jamming our signals here  
 (4) A Sure Oh God  
 (5) Okay so this is once again cleaning up the - the oil  
 (6) that s coming out after the application of the PES 51  
 (7) BY MR FORTIER  
 (8) Q Go ahead  
 (9) A That s the same just cleaning up the oil as it comes out  
 (10) Trying to wipe off the rocks and because as you bring it up  
 (11) out of the subsurface it you know moves up through  
 (12) This is the actual application of the PES 51 You can see  
 (13) flush water being washed down in through it You can see the  
 (14) sheen from the oil We moved quite a bit of - floated quite a  
 (15) bit of oil out of the subsurface as was demonstrated by our  
 (16) tests  
 (17) Couple things here This is the Injection You can see  
 (18) the people are wearing respirators You might want to stop  
 (19) When you inject with air you - you throw up a lot of grit  
 (20) The sand underneath is pretty loose and when you inject in  
 (21) you throw up the sea salt and the gritty kind of stuff And  
 (22) there was oil underneath and so you re throwing up some of  
 (23) the  
 (24) volatiles if there s any in the oil So we had the people  
 (25) wear respirators so that they weren t breathing in sand and  
 (26) grit because it s not real healthy when you breathe in sand

Vol 18 2868

- (1) and grit  
 (2) Q Professor would that also be so they weren't breathing in  
 (3) the volatiles from the oil?  
 (4) A If there were volatiles in the oil that would have  
 (5) protected them from it yes  
 (6) Q Okay  
 (7) A The nice thing about this this particular product is  
 (8) it's real easy to use so it doesn't take a rocket scientist to  
 (9) put it on as opposed to some other things where you have to be  
 (10) real careful  
 (11) You can see this is once again the flush water lots of oil  
 (12) coming up after the surfactant's applied it's releasing it  
 (13) from the solids and it's floating up  
 (14) This is another show of the application Getting in  
 (15) between that armor is pretty hot and then once you see the  
 (16) spray coming in is a big hose we're just spraying the  
 (17) seawater pumping the seawater up to flush through the  
 system  
 (18) Q Professor you said the getting in between the rocks was  
 (19) pretty hot Would you explain to the jury what you meant by  
 (20) that?  
 (21) A Was pretty hard because the rocks the big rocks - and  
 (22) they're very heavy and they're very close together - but all  
 (23) the contamination is down underneath so you have to kind of  
 (24) get down in between them And then in a couple places  
 behind  
 (25) some of the bigger ones you had real hot spots of

Vol 18 2869

- (1) contamination There was a lot of contamination in some of  
 (2) those so you want to really work in those areas to kind of get  
 (3) that contamination out  
 (4) Q Professor if I could ask you do you know what the  
 (5) temperature of the water was that was being injected?  
 (6) A Yeah we were using the Prince William Sound water It's  
 (7) about 14 or 15 degrees Celsius  
 (8) Q So it wasn't a hot water washing?  
 (9) A No no we were just using the regular seawater  
 (10) Once again you can see all the oil coming out floating on  
 (11) the surface More pictures of the application and then the  
 (12) hoses were just pumping seawater out of the - the ocean And  
 (13) then the people are walking around injecting the air and  
 (14) PES 51  
 (15) Q I hope everybody can hear you Professor  
 (16) A I'm sorry it's very unusual for me not to talk loud  
 (17) enough  
 (18) Then another picture of the injection and this shows  
 (19) the - the solid particles being thrown up 100 psi you know  
 (20) it's pretty hefty and so you throw up some of the solids and  
 (21) boil up the water  
 (22) Q Now Professor why - why was an air - could you explain  
 (23) to us what your knowledge is of why the air knife was used?  
 (24) A Well what you want to do - remember the contamination is  
 (25) subsurface It's not on the surface it's down in this

Vol 18 2870

- (1) sediment If you just pour your surfactant on the top that's  
 (2) not going to do you much good so what you want to do is get  
 (3) with as little disturbance as you can get the surfactant down  
 (4) into the sediments so that when the tide rises it washes the  
 (5) surfactant through the sediments and up through the - the  
 (6) beach material and out  
 (7) Q And how deep was this going down?  
 (8) A Well you can see that this - this probe is about a foot  
 (9) You know you shove it down in so you're six to 12 inches into  
 (10) the subsurface once you get in between those big rocks  
 (11) Q And Professor do you have any personal knowledge of  
 (12) whether or not injecting air and water and the surfactant the  
 (13) biosurfactant caused any damage to the organisms?  
 (14) A No I - it's not like you're going in and digging the  
 (15) beach up You're - it's a small air knife and you're  
 (16) injecting at a point and it spreads out They probably get  
 (17) more damage every time a wave hits them  
 (18) Q Continue then  
 (19) A So you can see them washing out and injecting the air down  
 (20) in And then the surfactant was included in that air so it  
 (21) was mixed in  
 (22) This is another picture of after the surfactant's applied  
 (23) You can see all the oil running out from the subsurface as it's  
 (24) being washed out and we were picking it up with booms and  
 (25) absorbing it in these absorbent pads so you can see the pads

Vol 18 2871

- (1) There's several bags of these pads used You can see the  
 booms  
 (2) out here so that it doesn't go any further than right there as  
 (3) the tide came up  
 (4) This is a picture of before we went in and applied - one  
 (5) of the things I was talking about we would find oil in  
 (6) crevices behind rocks This is relative - it's not like  
 (7) asphalt or anything it's actually oil You can wipe it off  
 (8) with your finger It's pretty liquidy kind of stuff It was  
 (9) all over in a lot of the cracks there  
 (10) (Videotape concluded)  
 (11) Q Professor a few more questions  
 (12) You indicated - I'll let you take your seat I'm sorry  
 (13) You indicated Professor that you did some measurements of  
 (14) the sediments before you applied the surfactant?  
 (15) A Uh huh  
 (16) Q And then after?  
 (17) A Uh huh  
 (18) Q Was there a decrease in the amount of - of contamination?  
 (19) A Yeah Beforehand we found on the average between 4,000  
 (20) and to 6,000 milligrams per kilogram of oil components and we  
 (21) measured two different types One is called diesel range so  
 (22) that's indicative of the kind of oil components you find in  
 (23) diesel gasoline And then we also measured semi volatiles  
 (24) which are a little bit higher in carbon link They have a few  
 (25) more carbons in their chain They're a little less volatile

Vol 18 2872

- (1) We found 20 to 30 milligrams per kilogram of the diesel  
 (2) range and between four to 6 000 milligrams per kilogram of the  
 (3) semi volatile range  
 (4) After the application of PES we found - we could not  
 (5) detect any of the diesel range so we had total removal below  
 (6) detection limits of the diesel range and we were down in the  
 (7) 1 000 to 2 000 range for the semi volatiles So we had about a  
 (8) 70 percent removal of the semi volatiles  
 (9) Q Professor one of the points you made too was that you  
 (10) wanted to make sure that the oil didn't get into the water  
 (11) column when you were washing it out?  
 (12) A Right  
 (13) Q Did you satisfy yourself that the oil did not get into the  
 (14) water column when you washed it out?  
 (15) A Yes We took samples of both for both chemistry and  
 (16) microbiology We found no components from the oil in the  
 (17) water  
 (18) column even right above the - right above the beach as the  
 (19) tide came in nor below the beach after the tide went back out  
 (20) so we didn't solubilize any and we had no impact on the  
 (21) biology the number of heterotrophs or the number of oil  
 (22) degraders within that water column  
 (23) Q Professor based upon your - solely upon your observations  
 (24) at that site do you know whether or not the oil that you  
 (25) pumped out would have risen by itself over time?  
 (26) A Because -

Vol 18 2873

- (1) MR OPPENHEIMER Your Honor excuse me no  
 (2) foundation  
 (3) THE COURT Sustained  
 (4) BY MR FORTIER  
 (5) Q Professor you observed oil in pools Could you describe  
 (6) to the jury the oil you observed if any on the surface or  
 (7) just below the surface?  
 (8) A Below the surface there was quite a bit of oil As I said  
 (9) in some places you had up to 23 percent oil The surface - as  
 (10) you walked on the beach you don't see it on the surface  
 (11) because the surface on top of this armor has been washed off  
 (12) by  
 (13) the repetitive action of the waves So what you have  
 (14) underneath is the sediment material that's relatively saturated  
 (15) and you know as the waves wash through it pulls some of that  
 (16) out  
 (17) MR FORTIER Now what I'd like to do with the  
 (18) Court's permission is to show one more video  
 (19) BY MR FORTIER  
 (20) Q You have examined a video Professor Tumeo of the Tesoro  
 (21) experiment that was produced by Tesoro is that correct?  
 (22) A That's correct  
 (23) MR FORTIER With the Court's permission then I  
 (24) would like to show Exhibit 683 A - or 683 I'm sorry  
 (25) MR OPPENHEIMER Your Honor I object It's  
 (26) cumulative It seems late in the day I believe it's the same

Vol 18 2874

- (1) type of material  
 (2) THE COURT How long does it take?  
 (3) MR FORTIER It's a ten minute video Your Honor  
 (4) THE COURT Are you going to be asking him  
 (5) different - what does it show that's different from the other  
 (6) video?  
 (7) MR FORTIER Your Honor it is more of a description  
 (8) of - of the experiment itself There is narration on the  
 (9) tape It describes the product that was injected and a bit  
 (10) more of the results  
 (11) MR OPPENHEIMER Well Your Honor we're not really  
 (12) here litigating PES 51 and it seems to me that it will  
 (13) continue to be cumulative evidence on the same subject  
 (14) MR FORTIER And Your Honor 683 A contained spots  
 (15) that were not in the corporate video I certainly don't want  
 (16) to bore the jury with - with the description of PES 51 in and  
 (17) of itself However I think that the film may demonstrate more  
 (18) to the jury about the experiment than what they have seen thus  
 (19) far  
 (20) MR OPPENHEIMER Your Honor to the extent that there  
 (21) is narration from the company making and selling the product  
 (22) it's also hearsay without any sort of reliability  
 (23) THE COURT The objection's sustained counsel  
 (24) MR FORTIER Thank you I have no other questions  
 (25) CROSS EXAMINATION OF MARK A TUMEO

Vol 18 2875

- (1) BY MR OPPENHEIMER  
 (2) Q Professor good afternoon I introduced myself briefly  
 (3) but my name's Randy Oppenheimer and I represent Exxon  
 (4) and I'd  
 (5) like to ask you a few questions  
 (6) The site that was selected Sleepy Bay I assume was  
 (7) selected because the desire was to test a product that would be  
 (8) sold to people to remove oil?  
 (9) A No The site was selected because it's indicative of the  
 (10) specific type of environment with oil contamination  
 (11) Q And one in which - I'm sure you're aware - was heavily  
 (12) contaminated during the oil spill?  
 (13) A Yes  
 (14) Q And obviously if you're going to test a product whose  
 (15) primary purpose is to remove oil it makes sense to test it at  
 (16) a place where you know there's oil?  
 (17) A Yes  
 (18) Q And there was no doubt in anybody's mind that you had such  
 (19) a beach in Sleepy Bay?  
 (20) A Well from a scientific standpoint we had to make sure  
 (21) first which was the purpose of the preliminary sampling trip  
 (22) Q Sure I understand But insofar as the commercial  
 (23) interests who were testing this product they believed there  
 (24) was oil to be tested at Sleepy Bay?  
 (25) A I didn't discuss those kind of things with the commercial  
 (26) entity involved because my involvement's through the

Vol 18 2876

- (1) university  
 (2) Q Right And I assume that neither the university nor your  
 (3) group within the university has anything to do with the sale of  
 (4) the product?  
 (5) A No  
 (6) Q And there s no funding between the two I assume?  
 (7) A No  
 (8) Q The material that – by the way PES 51 is a product that  
 (9) Tesoro s trying to market is that correct?  
 (10) A Yes I believe so  
 (11) Q And without going into detail even though it is a – it is  
 (12) a biotype product it does give off odor is that correct?  
 (13) A There is a citrus odor associated with it because of the –  
 (14) the carrier solvent fluid which is d limonene  
 (15) Q D limonene right but we re not talking about citrus  
 (16) something you d want around your breakfast table in the  
 (17) morning Some people had headaches for example at the test  
 (18) site?  
 (19) A I was not there when anyone had headaches I didn t find  
 (20) it an unpleasant smell It s kind of like lemon fresh Joy  
 (21) Q You heard reports that some people got headaches from it?  
 (22) A Not from my student I don t recall any of those If there  
 (23) were  
 (24) Q The manner in which PES 51 is injected is through these air  
 (25) knives correct?

Vol 18 2877

- (1) A In this experiment it was yes  
 (2) Q Right Well you could just layer it on but then nothing  
 (3) would come off because in that particular beach there was no  
 (4) oil to take off the surface?  
 (5) A If you layered it on you d probably take off some from the  
 (6) subsurface top layer but that wouldn t be a very effective  
 (7) cleaning mechanism  
 (8) Q Wouldn t bring up much oil?  
 (9) A Well bring up whatever oil was right on the top  
 (10) Q Right And one of the purposes for having a product like  
 (11) PES 51 is that without it the oil is a lot less likely to come  
 (12) out of the environment that it s in it s cleaner?  
 (13) A It increases the rate The oil is going to come out over  
 (14) time anyway  
 (15) Q It increases the rate as which the oil comes out?  
 (16) A Yes  
 (17) Q And by the way a lot of that oil or some percentage of  
 (18) that oil is going to biodegrade naturally Isn t that right?  
 (19) A Not in the subsurface That s a problem with  
 (20) biodegradation in the subsurface you don t have enough  
 (21) oxygen  
 (22) and you re in a really cold environment there and microbes  
 (23) don t tend to munch very heartily when it s that cold and in  
 (24) high concentrations but the bioremediation or the biological  
 (25) degradation naturally in that area is also going to be very  
 very slow

Vol 18 2878

- (1) Q If you get oxygenated water to the subsurface you get  
 (2) biodegradation?  
 (3) A You will probably get an increase but the temperature s  
 (4) going to play a big part in that also  
 (5) Q Now the PES 51 could that be analogized to a detergent  
 (6) for oil?  
 (7) A A detergent s the wrong word because the detergent gives  
 (8) you the sense of cleaning and scrubbing It s a surfactant  
 (9) Q And a surfactant removes oil from things the oil is hanging  
 (10) on to basically?  
 (11) A What it does it breaks the surface tension between It  
 (12) doesn t physically remove It just breaks the tension that s  
 (13) holding them  
 (14) Q And when the tension between the two things is broken then  
 (15) things like the tide water you described can come in and flush  
 (16) out whatever s now not holding onto the hard space?  
 (17) A Correct  
 (18) Q And you saw more sheen type material obviously after the  
 (19) application of PES 51 than before?  
 (20) A I saw oil after the application of PES 51  
 (21) Q Right And that s because it s doing what had not been  
 (22) done naturally at that rate which is to bring oil up out of  
 (23) the surface?  
 (24) A It increased the rate to a very appreciable level  
 (25) visually yes

Vol 18 2879

- (1) Q Right Now you mentioned that waves could approximate  
 (2) the  
 (3) pressure that those air knives were doing is that right?  
 (4) A Not the pressure you never get 100 psi pressure off the  
 (5) wave  
 (6) Q You wouldn t get 100 psi wave?  
 (7) A Right  
 (8) Q Right impossible How many people were out there with air  
 (9) knives? I couldn t tell from the tape  
 (10) A I would say there s probably – there were five to seven  
 (11) I wasn t paying a lot of attention to the actual physical  
 (12) application I was more interested in collecting my samples  
 (13) before they started and then doing the work after  
 (14) Q Okay And they were covering an area that relative to the  
 (15) courtroom was how big would you say? Just give us an  
 (16) estimate  
 (17) A Well it was 120 by about 120 feet so – I m not real good  
 (18) at judging distances It would be longer than the courtroom  
 (19) but not much wider  
 (20) Q And you had five or seven people with air knives out there  
 (21) injecting the material in the ground?  
 (22) A Yeah that start at the top and worked down  
 (23) Q Toward the water?  
 (24) A Right  
 (25) Q Toward the water got it And you tested the water before  
 the test – I m sorry you have to audibilize for the record

Vol 18 2880

- (1) So before the test?  
 (2) A Oh yes We tested before the test below the test site  
 (3) We tested as the tide rose over areas that had been treated and  
 (4) then after the entire set test below the test site and we  
 (5) also tested simply below our reference site  
 (6) Q And did you run the same type of test during the  
 (7) experiment?  
 (8) A As in - same kind of test?  
 (9) Q When the PES 51 testing the water column when PES 51  
 was  
 (10) being applied?  
 (11) A Below yeah where the water came out  
 (12) Q Then you tested afterwards?  
 (13) A Right  
 (14) Q And you didn't detect anything that was water soluble is  
 (15) that correct?  
 (16) A That's correct  
 (17) Q Solubility in water that's one of the pathways that oil  
 (18) or anything that can be soluble gets into an organism isn't  
 (19) that right?  
 (20) A That's one of the ways yes  
 (21) Q And there are things that are related to - like mineral  
 (22) oil for example that are not terribly water soluble and  
 (23) basically would go - you basically swallow it and it goes  
 (24) through your system without getting absorbed into the organs  
 of  
 (25) the body isn't that true?

Vol 18 2881

- (1) A No that's not true Your body can digest organics  
 (2) That's how we eat  
 (3) Q On the other hand an insoluble goes through an organism  
 (4) it is much less likely to get into the organism isn't that  
 (5) correct?  
 (6) A No that's - I'm not an internist for medicine but if you  
 (7) put organics insoluble or not into the system your body will  
 (8) tend to break those down Once they're broken down inside  
 they  
 (9) can - the harmful parts can be absorbed  
 (10) Q Nothing you tested though was water soluble in the tests  
 (11) you've described is that right?  
 (12) A No that's not true What we found - we did not find any  
 (13) solubilized petroleum compounds in the water column That  
 (14) includes basically your volatiles BTEX benzene toluene  
 (15) xylene ethylbenzene  
 (16) Q BTEX?  
 (17) A BTEX right  
 (18) Q Because -  
 (19) A Most of those since they're very volatile and this has  
 (20) been weathered three to four years most of those very volatile  
 (21) components are gone  
 (22) Q Right And you mentioned earlier that one of the reasons  
 (23) for wearing a mask is that you get debris whatnot blown back?  
 (24) A There's a lot of spray yes  
 (25) Q A lot of spray And you had said in response to something

Vol 18 2882

- (1) Mr Fortier said if there were volatiles in there they'd get  
 (2) kicked back at you right?  
 (3) A They could yes  
 (4) Q Do you have any reason to believe anybody got any volatiles  
 (5) kicked back at them given the age of the oil?  
 (6) A I would say there was a possibility since I could smell oil  
 (7) doing the stuff but there wouldn't be a high concentration  
 (8) We did find diesel range petroleum products which are soluble  
 (9) Q But particularly not soluble?  
 (10) A Depends what you said Solubility - everything is soluble  
 (11) at some point  
 (12) Q At some point?  
 (13) A Right But we didn't find unusual amounts in the water  
 (14) column  
 (15) Q About how much of the material got injected into the  
 (16) ground?  
 (17) A I believe the total application of PES was about 120  
 (18) gallons but not all of that was injected into the ground  
 (19) Q I'm sorry you're saying about 120 gallons of PES was  
 (20) injected?  
 (21) A Not injected  
 (22) Q Was available for injection?  
 (23) A Was used  
 (24) Q Not 160?  
 (25) A It could have been 160 I thought it was around 120 but I

Vol 18 2883

- (1) don't have any document with me so I don't remember off the  
 (2) top of my head It was over 100 and less than 200  
 (3) Q And did less come back out than went in?  
 (4) A I didn't measure what came out or came in My - because  
 (5) of the nature of what we were doing we looked at  
 contamination  
 (6) in the sediments so we wanted to know after the experiment  
 (7) was there less contamination in sediment than there was  
 (8) beforehand because if there was that means that our treatment  
 (9) process was successful So that - we didn't look at what came  
 (10) out because we weren't doing the mass bounds in that sense  
 (11) Q And so what you're talking to us about is not the amount of  
 (12) oil that we were seeing here but your calculation based upon  
 (13) what you think was there then you subtracted from it what you  
 (14) found when you went back and sampled the soil at a later time?  
 (15) A Well we went in beforehand so we know what was there  
 (16) beforehand and we know what was there afterwards yes  
 (17) Q Right And - but do you recall that more material - more  
 (18) of the surfactant went in and volume came back out? You have  
 (19) no - do you have no idea one way or another?  
 (20) A Once again I did not measure that  
 (21) Q The sample that came out was thrown away wasn't it?  
 (22) A What -  
 (23) Q Well no one collected the liquid that is shown on the  
 (24) videotape to determine how much of that liquid was oil how  
 (25) much was surfactant how much was muddy water?

Vol 18 2884

- (1) A Well they skimmed the -- the -- when they skimmed the  
 (2) surface of the water it was put into a tank for separation so  
 (3) the oil would separate from the water naturally  
 (4) Q But no one did any sort of scientific tests to determine  
 (5) how much of that material was oil how much was water how  
 much  
 (6) was surfactant?  
 (7) A There would be no need to determine how much was oil the  
 (8) oil versus water because the water and oil would separate  
 (9) naturally  
 (10) Q How about oil and surfactant?  
 (11) A Not that I know of  
 (12) Q When you say not that you know -- I m sorry my question  
 (13) was Would the oil and surfactant separate naturally?  
 (14) A No  
 (15) Q You couldn t tell by looking in the tank whether you were  
 (16) looking at surfactant or oil at least from a scientific point  
 (17) of view?  
 (18) A You couldn t prove whether it was oil or surfactant no  
 (19) Q And NOAA was present at one point during these tests  
 (20) wasn t it?  
 (21) A Yes they were  
 (22) Q Let me get this right National Oceanographic and  
 (23) Atmospheric Administration correct?  
 (24) A Yes  
 (25) Q And you re aware that their observers have commented that

Vol 18 2885

- (1) the liquid that they saw seemed to contain a lot of surfactant  
 (2) which means the -- the cleanser which was being injected in?  
 (3) A No I was not aware of that But that s -- was not  
 (4) relevant to my experiment  
 (5) Q I understand And that wasn t something that you were  
 (6) focused on  
 (7) MR FORTIER Counsel defendants exhibit 15486  
 (8) MR OPPENHEIMER Your Honor may I approach the  
 (9) witness?  
 (10) BY MR OPPENHEIMER  
 (11) Q Professor Tumeo I d like to show you a paper I m going  
 (12) to ask you if you ve seen it before entitled Chemistry and  
 (13) Environmental Effects of Shoreline Cleaner PES 51  
 contributors  
 (14) Gary Shigenaka Ruth Yender and Debbie Payton National  
 (15) Oceanographic and Atmospheric Administration This is 15486  
 (16) Tim?  
 (17) MR FORTIER Counsel I don t believe I received a  
 (18) copy of that  
 (19) THE WITNESS I don t think I ve seen this  
 (20) BY MR OPPENHEIMER  
 (21) Q Would you take a look at page 18 at the top?  
 (22) MR FORTIER Your Honor I ll just enter an objection  
 (23) as foundation on this  
 (24) MR OPPENHEIMER I m going to ask him if he agrees  
 (25) with a statement Your Honor

Vol 18 2886

- (1) MR FORTIER Your Honor if he hasn t seen it --  
 (2) THE COURT Does counsel know what the statement is?  
 (3) MR OPPENHEIMER I m sorry counsel top of page 18  
 (4) BY MR OPPENHEIMER  
 (5) Q I m sorry Professor Tumeo the sentence reads much of the  
 (6) floating product acted like it had a lot of surfactant which  
 (7) is the PES 51 It didn t stick and made discrete small  
 (8) droplets Is that consistent with your observation?  
 (9) A No  
 (10) Q So you disagree with the observation that NOAA made about  
 (11) the material looking as if it had a lot of surfactant in it?  
 (12) A Not having read this I disagree with the underlying  
 (13) assumption  
 (14) MR FORTIER Your Honor the objection is repeated  
 (15) THE COURT It s what?  
 (16) MR FORTIER I repeat my objection as to foundation  
 (17) He hasn t seen the document  
 (18) THE COURT The question is whether -- the question  
 (19) started out to be whether he agreed with a particular  
 (20) statement counsel  
 (21) BY MR OPPENHEIMER  
 (22) Q Professor Tumeo do you know of anyone who tested that  
 tank  
 (23) that contained the oily material that was pulled off the beach?  
 (24) A No  
 (25) Q Do you believe in fact that there never was a test out of

Vol 18 2887

- (1) that?  
 (2) A I have no reason to believe that there was or wasn t Like  
 (3) I said it wasn t my purview It wasn t part of my experiment  
 (4) Q No I understand and you may well not know  
 (5) One last question You did not find oil in all the pits  
 (6) that you dug on Sleepy Bay did you?  
 (7) A Yes every pit that we found had contamination  
 (8) Q Did you find visible oil in each pit?  
 (9) A No  
 (10) MR OPPENHEIMER Okay thank you No more questions  
 (11) Your Honor  
 (12) MR FORTIER Your Honor If I could Just a few  
 (13) redirect questions  
 (14) THE COURT Sure  
 (15) MR FORTIER Thank you  
 (16) REDIRECT EXAMINATION OF MARK A TUMEO  
 (17) BY MR FORTIER  
 (18) Q Professor Tumeo you ve had an opportunity to view what  
 (19) we ve marked as 683 the Tesoro tape?  
 (20) A Yes  
 (21) Q Is it your opinion that the tape accurately reflects the  
 (22) test?  
 (23) A Yes  
 (24) Q Okay And does the tape the Tesoro tape more accurately  
 (25) reflect the test than the short clips that we saw?

Vol 18 2888

- (1) A Yes  
 (2) MR OPPENHEIMER Your Honor that s hearsay  
 (3) THE COURT That s by the boards already counsel  
 (4) The objection has already been sustained If you re using this  
 (5) as a foundation for the Tesoro tape I m not going to let it  
 (6) in  
 (7) MR FORTIER What I d do Your Honor is simply renew  
 (8) my offer on it  
 (9) THE COURT You can make an offer of proof out of the  
 (10) presence of the jury counsel but that objection has been  
 (11) sustained  
 (12) BY MR FORTIER  
 (13) Q Now you were asked some questions about the  
 biodegradation  
 (14) of the buried oil?  
 (15) A Correct  
 (16) Q During cross exam Can you explain to the jury why you  
 (17) believe that the oil would not biodegrade under the ground?  
 (18) A Biodegradation of oil requires a couple of things to  
 (19) happen First of all you have to have the oil in a low enough  
 (20) concentration so it s not toxic to the microbes  
 (21) Second of all you have to have oxygen because oil cannot  
 (22) be degraded anaerobically You need oxygen in some form to  
 (23) break the very complex ring structure  
 (24) And then the third thing is you - you have to have it warm  
 (25) enough so that the bacteria are happy Most of the oil

Vol 18 2889

- (1) degrading bacteria are what are called mesophilic They like  
 (2) moderately warm temperatures you know we re looking in the  
 (3) 15  
 (4) to 20 to 30 degrees Celsius which is you re looking at 70 60  
 (5) 70 80 degrees Fahrenheit  
 (6) When you go into the subsurface environment in these  
 (7) beaches you tend to have a system where you have pockets of  
 (8) large quantities of oil so in those areas you probably have a  
 (9) toxic situation Plus you re in a - in an environment where  
 (10) you don t get much oxygen and that is probably the major  
 (11) limiting factor So if you don t have oxygen they re just not  
 (12) going to do their thing  
 (13) The third thing is it s a relatively cold environment and  
 (14) because you are in the subsurface you don t have a lot of  
 (15) insulation a lot of sun coming down to heat it up because  
 (16) you re down underneath the ground and so you tend to stay  
 (17) cold So as a consequence the rate in which this stuff breaks  
 (18) down biologically is going to be pretty slow  
 (19) MR FORTIER Thank you Professor  
 (20) I have no further questions Your Honor  
 (21) MR OPPENHEIMER Your Honor just two more if I  
 (22) may  
 (23) RECROSS EXAMINATION OF MARK A TUMEO  
 (24) BY MR OPPENHEIMER  
 (25) Q So the rate of breakdown is slow in - but it s there  
 correct it s still breaking down no doubt in your mind?

Vol 18 2890

- (1) A I m sure that there are areas in which it s breaking down  
 (2) yes There may be areas in which it s not because of the  
 (3) limiting oxygen because of the temperature and because of the  
 (4) high concentration it would be toxic  
 (5) Q You don t know of any such areas as a scientist you  
 (6) haven t observed any such areas?  
 (7) A No I have not observed such areas  
 (8) Q Okay thank you Thank you Is it correct that there are  
 (9) no volatile components left in the beach material on Sleepy  
 (10) Bay?  
 (11) A There are no BTEX components that s correct  
 (12) Q And so the statement is correct there are no volatile  
 (13) components left on the beach?  
 (14) A As long as volatile is confined to BTEX yes  
 (15) MR OPPENHEIMER Thank you No further questions  
 (16) MR FORTIER Your Honor I forgot to move for the  
 (17) admission of exhibit 683 - 683 A if I could do that  
 (18) (Exhibit 683 A offered)  
 (19) THE COURT There s no objection?  
 (20) MR OPPENHEIMER No objection  
 (21) THE COURT 683 A  
 (22) (Exhibit 683 A received)  
 (23) THE COURT I m going to let you go for the day  
 (24) Don t talk about the case with anybody including your fellow  
 (25) jurors Don t form an opinion on it until it s submitted for

Vol 18 2891

- (1) your deliberation  
 (2) I have one topic to talk with counsel so what I d like you  
 (3) to do is go to the jury room and you ll get the word in a short  
 (4) time that you can go So please stay in the jury room until  
 (5) you get that word  
 (6) (Jury out at 1 15 p m )  
 (7) THE COURT All right The jury is not present  
 (8) Counsel you can make your offer of proof about that second  
 (9) tape if you choose to do so  
 (10) MR FORTIER Thank you Your Honor I m going to  
 (11) defer to Mr McCallion Your Honor He s done a number of  
 (12) these tapes so he probably has a better background in it than  
 (13) I do  
 (14) THE COURT Your offer of proof is made with the  
 (15) witness counsel  
 (16) MR FORTIER May I do it - may Mr McCallion do it?  
 (17) THE COURT He can do it I don t want it out of the  
 (18) mouth of counsel I want the witness to be testifying  
 (19) MR FORTIER That s fine  
 (20) VOIR DIRE EXAMINATION OF MARK A TUMEO  
 (21) BY MR FORTIER  
 (22) Q Professor Tumeo when you viewed the Tesoro tape did you  
 (23) note the number of workers did it show accurately the number  
 (24) of workers?  
 (25) A It shows a better scan of the - of the beach and I did

Vol 18 2892

- (1) not count the number of workers but you might be able to from  
 (2) it  
 (3) Q Okay And does it show the way in which - does it  
 (4) demonstrate what the beach looked like before the PES 51 was  
 (5) applied?  
 (6) A Yeah It has an aerial view as you come into Sleepy Bay  
 (7) and it shows that  
 (8) Q So it shows a panoramic view of the beach?  
 (9) A Yes  
 (10) Q And that -  
 (11) A You can see our - you can see our experimental beach and  
 (12) our reference beach from that picture  
 (13) Q And that is a view that you observed when you came in too  
 (14) correct?  
 (15) A Yes  
 (16) Q And it accurately displays it correct?  
 (17) A Yes  
 (18) Q Now does the film also accurately reflect the oil that is  
 (19) on the beach in the area that you worked?  
 (20) A Yes There are some pictures of us taking samples that  
 (21) show the - the nature of the oil  
 (22) Q Okay And now it's correct that you were at that site for  
 (23) a period from July 1st through July 3rd while the filming was  
 (24) going on?  
 (25) A That's correct

Vol 18 2893

- (1) Q And there are pictures of you in the film too right?  
 (2) A Yes  
 (3) Q And you were collecting samples before as well as after  
 (4) correct?  
 (5) A To my recollection it shows both before and after and it  
 (6) also shows the marking off of the segment so you get a sense  
 (7) of where we were  
 (8) Q So then the Tesoro film would also show where precisely the  
 (9) area of the beach that the experiment was performed in  
 (10) correct?  
 (11) A Yes  
 (12) Q And the film the Tesoro film shows not only you but your  
 (13) assistant during this period of time?  
 (14) A Yes it shows my student  
 (15) MR FORTIER I renew my offer of proof Your Honor  
 (16) THE COURT Did you want to ask any questions  
 (17) counsel?  
 (18) MR OPPENHEIMER Your Honor I haven't heard anything  
 (19) that wasn't cumulative I don't think it necessary although I  
 (20) - it's very nice that we see a picture of the Professor's  
 (21) assistant and some of the information is also duplicative of  
 (22) what's in Ms Fobes' photographs  
 (23) THE COURT When you say it showed the oil on the  
 (24) beach does it show the oil in some quantitatively or  
 (25) qualitatively different way than the way shown in the first

Vol 18 2894

- (1) video?  
 (2) A The difference between the two films is that the second  
 (3) one the one that Tesoro did isn't broken up so you can see  
 (4) the progression of the experiment and you understand when  
 (5) the  
 (6) oil started coming out versus when it didn't  
 (7) When I was narrating that other one it's very broken up  
 (8) and it's hard to tell at what point in time things are going  
 (9) on So from the standpoint of understanding the experiment  
 (10) and  
 (11) what went on in the process of that - that whole program  
 (12) there the first film with it all broken up is not very  
 (13) helpful At least it's not very instructive to me  
 (14) THE COURT Have you heard the narration on the tape?  
 (15) A On the second one?  
 (16) THE COURT Uh huh  
 (17) A I have heard it yes  
 (18) MR OPPENHEIMER Your Honor I - I simply continue  
 (19) to observe that we're not - we're here not litigating PES 51  
 (20) and I don't know that there is a -  
 (21) THE COURT Is PES 51 Mr Clough's terribly toxic  
 (22) material where awful substances were boiling out of the beach?  
 (23) MR OPPENHEIMER Well actually the word boiling  
 (24) was used by the witness in his testimony  
 (25) THE COURT I didn't say - but he didn't say it in  
 (26) quite the way that Mr Clough did  
 (27) MR OPPENHEIMER No he was not giving an opening

Vol 18 2895

- (1) statement  
 (2) MR STOLL Having just read Mr Clough's opening  
 (3) statement while we were listening to some other testimony  
 (4) that's it Your Honor You got it  
 (5) THE COURT That's it But I don't think the Tesoro  
 (6) tape's going to help and I would not let the narration be used  
 (7) anyway Because the objection as to the narration was a good  
 (8) objection  
 (9) MR FORTIER Your Honor without the narration  
 (10) THE COURT What does an aerial view by the way add  
 (11) to this? I mean how does an aerial view show this more  
 (12) accurately than what was shown?  
 (13) MR FORTIER It shows as you come in Your Honor to  
 (14) put it in context in living color where the sea is  
 (15) THE COURT Context of what?  
 (16) MR FORTIER Why would you need it like that?  
 (17) Because the area Your Honor is only a small area of a large  
 (18) area of a large - of the beach area  
 (19) THE COURT What does that show?  
 (20) MR FORTIER That was used Well it shows you that  
 (21) there was only one area that was actually - that was actually  
 (22) treated by this PES 51 that's surrounded by a much larger  
 (23) area The area Your Honor is similar to that which  
 (24) Mr Clough I believe showed in his opening in other words  
 (25) lots of clean beach too lots of clean rocks all over the

Vol 18 2896

- (1) place So -  
 (2) THE COURT You could see that in an aerial view lots  
 (3) of clean beach and lots of clean rocks  
 (4) MR FORTIER Oh yeah sure You see the rocks from  
 (5) the top  
 (6) THE COURT Didn t this witness say that this beach  
 (7) was clean on the top?  
 (8) MR STOLL Your Honor I I -  
 (9) MR FORTIER Your Honor I defer to Mr Stoll  
 (10) THE COURT No a cumulative objection frequently is a  
 (11) good objection in a case like this because cumulation is what  
 (12) the parties are looking for but I don t necessarily think that  
 (13) this is more probative than the other tape  
 (14) MR STOLL Your Honor if I may I think if the Court  
 (15) viewed the film which I don t believe you ve had the  
 (16) opportunity to do -  
 (17) THE COURT No I haven t that s true What I was  
 (18) trying to do is if I was going to let the jury see it I d let  
 (19) them see it today  
 (20) MR STOLL What I would suggest Your Honor is that  
 (21) the film is much more complete The 683 A has specific small  
 (22) shots of - of areas during the course of the test The  
 (23) suggestion was made by counsel both by Mr Clough in his  
 (24) opening statement and by Mr Oppenheimer in  
 cross examination  
 (25) that this was a small area They sort of cherry picked the

Vol 18 2897

- (1) situation here and you know they re out there looking for  
 (2) oil and I think that the film the Tesoro film demonstrates  
 (3) that here you have this beach this - it shows the whole the  
 (4) size of the area that was tested It shows that that area  
 (5) from the surface looks the same as the rest of the beach and  
 (6) that the - and it shows the whole nature of the test  
 (7) The scenario as Dr Tumeo indicated the sequence of the  
 (8) test whereas the 683 A shows - it s a very narrow film of  
 (9) just a certain shot during the course of the testing It does  
 (10) not show the sequence doesn t show the broad range of the  
 you  
 (11) know of the beach and it doesn t show - the testing area  
 (12) appears to the naked eye at first just the same as the rest  
 (13) of the beach  
 (14) THE COURT Thank you  
 (15) MR OPPENHEIMER Your Honor I think this is a case  
 (16) of pick the poison We got the amended tape which we used  
 (17) today - last night It was the tape that was provided to us  
 (18) for review which we did for the court today and it seems to  
 (19) me that it represented their - at least that s the way we  
 (20) understood it when it was given to us yesterday as their offer  
 (21) here in connection with this testimony And there - all of  
 (22) this could have been put in that tape They could have done it  
 (23) and be done with it  
 (24) THE COURT All of what could have been put in  
 (25) MR OPPENHEIMER Any aerial shots any shots they

Vol 18 2898

- (1) wanted to What we saw today was an edited tape that we got  
 (2) yesterday that was to be the exhibit  
 (3) THE COURT I see  
 (4) MR McCALLION Your Honor -  
 (5) THE COURT All right stop I m going to look at the  
 (6) tape If I - if I agree that the tape can be admitted - this  
 (7) witness doesn t have to be here for the showing of the tape  
 (8) does he  
 (9) MR STOLL That s correct Your Honor  
 (10) THE COURT Right?  
 (11) MR OPPENHEIMER Well Your Honor I reviewed -  
 (12) THE COURT I - wait a minute I m not going to let  
 (13) the voice over in All right? I would let the tape be  
 (14) played It s a ten minute tape and that would be it  
 (15) Now your hearsay objection goes away if the voice over is  
 (16) gone Your cumulative objection may not be well taken once I  
 (17) see the - see the tape It s a short tape otherwise I d  
 (18) consider saying fine play those things that show - the thing  
 (19) that impresses me here about counsel s argument is the shots  
 (20) that show the whole beach as opposed to the area that was  
 (21) subject to the test And if they think that s important to  
 (22) show then fine the tape demonstrates that and apparently the  
 (23) witness agrees with the test but why does the witness have to  
 (24) be here?  
 (25) MR OPPENHEIMER Well Your Honor if that is the

Vol 18 2899

- (1) only part of the tape that s being shown my concern is as I  
 (2) understand it - and somebody can correct me if I m mistaken -  
 (3) is that this is a - this is a tape made by the company that s  
 (4) promoting the product I think it is commercial in the guise  
 (5) of industrial filmmaking and I think that it is - the  
 (6) narration is hearsay but so are the images if what they re  
 (7) designed to do is show prospective purchasers that all this  
 (8) stuff came out I don t think this is anything close to an  
 (9) objective tape It s going to be short pictures  
 (10) THE COURT You may be right You may be right  
 (11) counsel but I may decide against you on that point Why does  
 (12) he have to be here if I let the tape be played?  
 (13) MR OPPENHEIMER I think so - Mr Diamond points out  
 (14) to me something which is driving my assumptions I am loath to  
 (15) release the witness on cross examination on an exhibit that has  
 (16) not been marked before the day is through  
 (17) THE COURT I understand that counsel but what can I  
 (18) say? I don t want the witness to stay here when he doesn t  
 (19) have to  
 (20) MR OPPENHEIMER Is Mr Tumeo -  
 (21) THE COURT I tell you what I ll give you the  
 (22) opportunity to bring him back if you think it s necessary at  
 (23) your own expense How s that?  
 (24) MR OPPENHEIMER That s acceptable Your Honor  
 (25) MR STOLL Thank you Your Honor

Vol 18 2900

- (1) THE COURT So they can - you can let the jury go  
 (2) MR STOLL Your Honor are you going to instruct -  
 (3) if I may just say one thing as long as the jury's here on  
 (4) this business about the instruction the federal court action  
 (5) THE COURT That's for later counsel I'll - we'll  
 (6) talk about that once I let the jury go I'm not going to  
 (7) instruct them today  
 (8) MR STOLL All right  
 (9) THE COURT I don't see that there's -  
 (10) MR STOLL We understood from - indirectly  
 (11) indirectly to me that Judge Holland thought that there was  
 (12) going to be a verdict today is the only reason I brought that  
 (13) up  
 (14) THE COURT Suppose there is why wouldn't any  
 (15) instruction I give be just as effective tomorrow?  
 (16) MR STOLL Well it may be Your Honor except that  
 (17) if there's a - a news broadcast about it this evening it  
 (18) might be -  
 (19) THE COURT So I can - why don't I just tell the  
 (20) bailiff to tell them to be very careful about any news reports  
 (21) that might occur in the paper Of course that could key them  
 (22) into things but we know they're not going to disregard my  
 (23) instructions right?  
 (24) MR STOLL We know that's not going to happen  
 (25) THE COURT Okay Let them go and tell the bailiff

Vol 18 2902

- (1) than I am They submitted a new instruction yesterday  
 (2) THE COURT You're right You're right Hold on a  
 (3) minute Yes I'm sorry It was Exhibit C wasn't it? Well  
 (4) I'm sorry I'm going to give - I'm going to give the  
 (5) plaintiffs proposed instruction all right  
 (6) MR DIAMOND Instruction B that they submitted  
 (7) THE COURT Because Exhibit C is - is verbatim the  
 (8) first paragraph of that proposed instruction  
 (9) MR STOLL That's correct  
 (10) THE COURT Okay Now as to the shareholders which  
 (11) is Exhibit B I'm going to give that also And I'm going to  
 (12) strike the third sentence which begins the amount of  
 (13) damages I'm going to strike the word limited and I'm  
 (14) going to strike the last sentence And for the last sentence  
 (15) I'm going to substitute the following paragraph I will  
 (16) instruct you - following sentence I will instruct you  
 (17) further regarding this issue and others at the end of this  
 (18) trial I'm not sure what my final instruction regarding this  
 (19) evidence will be I have to listen to all the evidence  
 (20) Therefore I'm - I'm loath to commit myself at this point by  
 (21) saying you are instructed not to consider this evidence for any  
 (22) other purpose There may be another purpose that they can  
 (23) consider it for I don't want to foreclose that now  
 (24) So that deals with all of the issues that both proposed  
 (25) instructions were submitted for and I think it does it

Vol 18 2901

- (1) to tell them to avoid any media about any of these cases  
 (2) strictly today okay?  
 (3) Okay you can step down Thanks  
 (4) I'll listen to it I'll watch the tape later this  
 (5) afternoon if you set it up for me  
 (6) Is there anything else to discuss on the record?  
 (7) MR STOLL No Your Honor  
 (8) THE COURT Then let's discuss that instruction so we  
 (9) can finish up today and I won't have to bring you back I've  
 (10) determined that the instruction I'm going to give is this I'm  
 (11) going to give the plaintiffs instruction I'm going to take  
 (12) out the second  
 (13) MR DIAMOND Could I have just a moment Your Honor  
 (14) I just need to get that -  
 (15) THE COURT Sure As to paragraph one in that  
 (16) proposed instruction it refers back to Exhibit B  
 (17) MR DIAMOND Are you looking at the plaintiffs  
 (18) proposed instruction that was submitted yesterday?  
 (19) THE COURT Yes yes uh huh So paragraphs two  
 (20) three and four of that instruction I'm going to give  
 (21) Paragraph one I'm going to give with modifications The  
 (22) modification I'm going to give is this As to the third  
 (23) sentence it is stricken as we discussed The word limited  
 (24) is stricken as we discussed  
 (25) MR DIAMOND This is a - you're on a different page

Vol 18 2903

- (1) adequately  
 (2) MR STOLL Thank you Your Honor  
 (3) MR DIAMOND Your Honor - Mr Stoll is quick at that  
 (4) switch  
 (5) THE COURT For good reason counsel  
 (6) MR DIAMOND Yes  
 (7) MR STOLL I learned a long time ago Your Honor if  
 (8) you - out  
 (9) MR DIAMOND We discussed on Friday the defendants  
 (10) very strong desire to have you instruct as to proof  
 (11) concerning - not proof but the nature of claims being made by  
 (12) commercial fishermen for damage to the commercial fish catch  
 (13) and for claims pending in other courts for subsistence use I  
 (14) don't - is it your intention not to instruct on those things?  
 (15) THE COURT Not to instruct now that's right  
 (16) MR DIAMOND Your Honor you have foreclosed us from  
 (17) conducting cross examination in that area in preference of  
 (18) instructions That's how this all came up We wanted to  
 (19) cross examine the witnesses who have already testified about  
 (20) the existence of claims that they had either directly or as  
 (21) class members for lost subsistence harvest for loss to their  
 (22) commercial catch  
 (23) THE COURT That's true  
 (24) MR DIAMOND As we discussed on Friday we - we  
 (25) suggest and I think you agreed with us on Friday that this

Vol 18 2904

- (1) jury undoubtedly is suffering some measure of confusion as to  
 (2) why they've heard about fish why they've heard about damage  
 to  
 (3) commercial - damage to the subsistence harvest if those are  
 (4) not claims And quite frankly I think the largest  
 (5) determinant in the verdict that this jury returns will be the  
 (6) nature of what they think they are deciding  
 (7) In view of the fact that plaintiffs have been able to put  
 (8) on this evidence without any sort of clarification as to how  
 (9) damage to the commercial fisheries relates to land claims as  
 (10) to how lost subsistence harvest relates to land claims we have  
 (11) a grave concern that this jury is going to get cemented in  
 (12) their view that somehow that must be relevant to land damage  
 in  
 (13) some undefined way and we have not been able to through  
 (14) cross examination to bring out the fact that there are certain  
 (15) claims owned by individuals who are testifying in this case  
 (16) I would urge the Court to reconsider at least the timing  
 (17) of that instruction now that the evidence is coming in on the  
 (18) plaintiffs' side about subsistence catch and about commercial  
 (19) fisheries  
 (20) THE COURT The timing in what sense?  
 (21) MR DIAMOND Well I - I don't know that whether  
 (22) you're planning on instructing the jury at the conclusion  
 (23) concerning what claims are not part of this case and what -  
 (24) THE COURT Yes I'm considering it  
 (25) MR DIAMOND I'm sorry?

Vol 18 2905

- (1) THE COURT Yes I'm considering it because I -  
 (2) THE COURT We would urge -  
 (3) THE COURT I think that's probably the appropriate  
 (4) time to do it  
 (5) MR DIAMOND We would urge the Court do that now  
 (6) while the evidence is coming through  
 (7) THE COURT I'm not going to give them a long  
 (8) instruction on those claims because I think it can only confuse  
 (9) them And you gave me a long instruction If you give me two  
 (10) or three sentences that are dispassionate I'll consider giving  
 (11) them something as it's coming in  
 (12) MR DIAMOND We'll have something in the morning  
 (13) MR PETUMENOS Judge on Mr Diamond's statement on  
 (14) being foreclosed with cross examination I think I take issue  
 (15) with the state of the record on that There have been two  
 (16) witnesses testifying Mr Gordaoff and Mr Totemoff the only  
 (17) two Native businesses who testified and I don't believe either  
 (18) one of them have a claim for commercial fishing or asked for  
 (19) absence of subsistence and I don't think you foreclosed  
 (20) anything And it is further to the notion - my concern is  
 (21) that I don't want I guess there to be a done deal that we're  
 (22) instructing them on that That should depend on you say the  
 (23) state of the evidence  
 (24) THE COURT It's not a done deal That's why I  
 (25) don't - I don't generally give comprehensive instructions at

Vol 18 2906

- (1) the beginning of the case or comprehensive instructions on the  
 (2) second day or on the fifth day or on the 15th day Things are  
 (3) developing and I'm not - and I don't intend to instruct them  
 (4) in a way that's inconsistent with the final instructions in  
 (5) this case  
 (6) MR PETUMENOS I didn't want it to go by that these  
 (7) witnesses had claims as Mr Diamond described because I  
 don't  
 (8) think that's accurate I don't think they did have those  
 (9) claims those two witnesses that testified  
 (10) THE COURT I'm sure there might be a way counsel  
 (11) could cross examine but the record speaks for itself I don't  
 (12) believe that anybody's been unfairly foreclosed and to the  
 (13) extent that there may be confusion Instructions are the  
 (14) appropriate way to deal with it  
 (15) MR DIAMOND I was referring to bench conferences we  
 (16) have had out of the presence of the jury in which we proposed  
 (17) getting into certain lines and the Court indicated what its  
 (18) preference was I think the record will speak for itself  
 (19) THE COURT All right Anything else?  
 (20) MR OPPENHEIMER Yes Your Honor  
 (21) MR McCALLION I'm sorry go ahead  
 (22) MR OPPENHEIMER Your Honor I think we're finally in  
 (23) a position to move admission to the exhibits we discussed two  
 (24) days ago  
 (25) THE COURT Sure

Vol 18 2907

- (1) MR OPPENHEIMER I'll read them for the record We  
 (2) offered DX13227 13239 13240 13258 15480 15481 15482  
 (3) 2734 2761 2769 8942 8943 8944  
 (4) (Exhibits DX13227 13239 13240 13258 15480 15481  
 (5) 15482 2734 2761 2769 8942 8943 and 8944 offered)  
 (6) THE COURT No objection?  
 (7) All right those are all admitted I can't remember them  
 (8) so I won't repeat them Consult with them afterwards to make  
 (9) sure you get those  
 (10) MR PETUMENOS Judge there are a few objections to  
 (11) those exhibits  
 (12) THE COURT Oh I thought there was no objection  
 (13) MR PETUMENOS No one of the objections is I - now  
 (14) I think I heard some numbers I never heard - I haven't heard  
 (15) before Our records reflect that the following exhibits have  
 (16) no testimony connected with them in other words they weren't  
 (17) testified to on cross and I'm willing to look with counsel  
 (18) THE COURT Then clearly this isn't the time Consult  
 (19) with counsel see what your perspective positions are If you  
 (20) can resolve it by agreement then I'll let the exhibit in and  
 (21) if you can't I'll deal with it later  
 (22) MR McCALLION Your Honor I believe with regard to  
 (23) Dr Mundy's testimony there is some minimal outstanding  
 (24) disputes with regard to captions of his 1994 notebook We've  
 (25) resolved I think most of them but I think there's a few

Vol 18 2908

- (1) outstanding
- (2) THE COURT So tell me what they are
- (3) MR McCALLION We could do it now or if Your Honor
- (4) wanted to view the videotape at some appropriate point at your
- (5) convenience this afternoon we could do it at that time
- (6) THE COURT The videotape - no I m not going to view
- (7) the videotape with you in the room yeah that s - so when I
- (8) recess sometime this afternoon I ll just watch the videotape
- (9) but tell me what captions because it seems to me I could
- (10) resolve them now and we ll have more certainty of it
- (11) MR McCALLION Let me just consult with counsel
- (12) MR OPPENHEIMER Your Honor with all due respect I
- (13) think Mr McCallion and I both have had an unusual schedule
- for
- (14) the last two days I do believe it would be more expeditious
- (15) if we sat down I give you my word we ll do so this afternoon
- (16) THE COURT Sure
- (17) MR McCALLION If there s anything remaining Your
- (18) Honor perhaps we could take it up with the Court
- (19) THE COURT You re telling me counsel nothing in
- (20) your position is nonnegotiable is that your position?
- (21) MR OPPENHEIMER Nothing in my position is
- (22) nonnegotiable
- (23) THE COURT Excellent excellent
- (24) Anything else?
- (25) THE CLERK Please rise This court is in recess

Vol 19 2915

(1) PROCEEDINGS  
(2) (Jury in at 8 47 a m )  
(3) (Call to Order of the Court)  
(4) THE COURT Good morning  
(5) MR OPPENHEIMER Good morning Your Honor Good  
(6) morning Dr Mundy  
(7) CROSS EXAMINATION OF WILMER H MUNDY (Resumed)  
(8) BY MR OPPENHEIMER  
(9) Q In opening statements one of plaintiffs counsel  
(10) Mr Petumenos said that the appraiser for the Native  
(11) corporation will divide up the amount of money to a yearly  
(12) income stream which is the way you do temporary damages  
and  
(13) he will track a period of time during which the land is  
(14) impaired based upon what the scientists tell him and when he  
(15) does that he s going to do it not on the basis of the biology  
(16) and on the basis of where it is inside the little herring fry  
(17) Do you agree with that?  
(18) A Well I don t fully understand the statement I would  
(19) agree with that yes if I understand the context of the  
(20) statement  
(21) Q And specifically that you re not giving us a damage  
(22) calculation on the basis of biology?  
(23) A Well I am not providing an opinion based on the biology  
(24) since I am not a scientist in that area Information that has  
(25) been developed by scientists dealing with the biology

Vol 19 2916

(1) particularly people at ICF has - may have had an influence on  
(2) Mr Bush s estimate of the persistence time because the -  
(3) there are a number of things that Mr Bush and myself  
discussed  
(4) regarding the - what would be a reasonable degree of  
(5) remediation That degree of remediation culminating the  
(6) persistence period and the habitat is - was one of those  
(7) variables  
(8) Q Dr Mundy if - just for the moment if you could give me a  
(9) yes or no to the following question When you divided up the  
(10) amount of money to a yearly income stream is it true that you  
(11) did not do that on the basis of the biology and on the basis of  
(12) where it is inside the little herring fry? Just a yes or no  
(13) please  
(14) A The answer would be no but I want to make sure that the -  
(15) my no my answer is not misconstrued  
(16) Q Well let me ask you this Did you take out - did you  
(17) take into account a ten to twenty percent reduction in the  
(18) abundance of fucus in your calculations?  
(19) A Again that is something that the scientists did and it  
(20) was not something that we did  
(21) Q Did you concern yourself with the degree of kelp recovery  
(22) in your calculations?  
(23) A In our calculations no  
(24) Q Did you concern yourself - pardon me did you take into  
(25) account in your calculations the salmon runs in either 90 or

Vol 19 2917

- (1) 91?
- (2) A Well again in our calculations no However if they had
- (3) an effect on the persistence then that would have been
- (4) reflected
- (5) Q Are you aware that Mr Bush has previously testified in
- (6) this trial that he did not take into account the salmon runs in
- (7) connection with his persistence curves?
- (8) A If that s what Mr Bush testified to I would accept it
- (9) Q Did you take into account at all that the salmon runs for
- (10) 90 and 91 were record salmon runs?
- (11) A Again my response is the same that is information that
- (12) Mr Bush would have taken into consideration in his persistence
- (13) numbers
- (14) Q In thinking about stigma did you take into account whether
- (15) there was any favorable response to the fact that the salmon
- (16) runs in 90 and 91 were record salmon runs?
- (17) A That would have been one of many many variables that I
- (18) considered as a part of the stigma estimate the one two or
- (19) three year stigma estimate as it applied to various
- (20) properties
- (21) Q Are you telling us today that you took into account in
- (22) calculating your stigma periods the record salmon runs in 90
- (23) and 91?
- (24) A As I testified before the stigma estimate is based on a
- (25) large number of variables It was based on my professional

Vol 19 2918

- (1) judgment and I tried to be as informed as I possibly could
- (2) regarding things that would influence buyer behavior and I was
- (3) aware in 1990 and 1991 that there were good salmon runs I m
- (4) also aware that the salmon runs have not been so good more
- (5) recently too
- (6) Q Well when you did your calculations of stigma though you
- (7) didn t have available to you the information you just referred
- (8) to right? You had the information on the 90 and 91 runs
- (9) but you didn t have this year s information correct?
- (10) A The material that I had available to the best of my
- (11) recollection involved material from 1989 1990 1991 and
- (12) 1992 And I m not talking only about salmon run information
- (13) I m talking about general information that would influence the
- (14) behavior of buyers in the marketplace
- (15) Q And do you think buyers in the marketplace were influenced
- (16) by the record salmon runs in 90 and 91?
- (17) A I think that there are a lot of things that buyers take
- (18) into consideration in making a decision regarding where they re
- (19) going to purchase property and how much they re going to pay
- (20) for property and that well could have been one attribute or
- (21) one variable that they took into consideration
- (22) Q Did you take into account in your calculation of damages
- (23) any effects the oil spill may or may not have had on the
- (24) harlequin duck population?
- (25) A I do not think that that was something that I took into

Vol 19 2919

- (1) consideration on stigma I don t know if it s something that
- (2) ICF took into consideration on their persistence estimates
- (3) Q Did you take into account in your calculation of damages
- (4) the effect of the oil spill on the seal harbor (sic)
- (5) population?
- (6) A That is a variable that I did take into consideration yes
- (7) Q And when did you first take that into consideration?
- (8) A Well I became aware of that when I initially inspected the
- (9) properties and when I initially met with various members of the
- (10) Village Corporations
- (11) Q And when was that?
- (12) A That was in 1989
- (13) Q Did you do any follow up work on the harbor seal population
- (14) issue?
- (15) A That was a topic that I discussed with various members of
- (16) Village Corporations as well as the ICF people in 1991 1993
- (17) and 1994
- (18) Q How s the seal harbor (sic) population now?
- (19) A It s - my understanding is that the seals are much more
- (20) difficult to find
- (21) Q We talked yesterday about sales activity in the Prince
- (22) William Sound area I wanted to close that topic off this
- (23) morning with a discussion about your method how you - how
- (24) you
- (25) calculated damages One of the things you do is it not is to
- (26) take a look at sales of similar properties in order to

Vol 19 2920

- (1) determine what the value of the property - your clients
- (2) properties in this case - are worth before the spill is that
- (3) correct?
- (4) A Yes
- (5) Q These are commonly known as comparables?
- (6) A Well I don t want to confuse the jury but we look at
- (7) comparables that is sales evidence and we compare that to the
- (8) subject property or the properties that are being valued So
- (9) we take a - we consider the nature of the subject properties
- (10) We also consider comparable sales and how the two compare
- (11) Q Right So you - what you re looking for are transactions
- (12) that you can think about in terms of figuring out what the
- (13) value is on the property that you re assessing damages for
- (14) right?
- (15) A That s correct
- (16) Q Okay And isn t it the case that you looked - and you ve
- (17) collected data on properties such as this so you could examine
- (18) the damages in this case is that right?
- (19) A Now are you talking about the value of the property before
- (20) the spill or the value of the property after the oiling took
- (21) place?
- (22) Q Right now I m talking about the value of the property
- (23) before the spill
- (24) A Okay
- (25) Q Okay you refer to that in your work as the unimpaired

Vol 19 2921

- (1) value right?  
 (2) A That s correct  
 (3) Q Prespill value Now you collected data on other  
 (4) transactions to try to help you understand what the prespill  
 (5) unimpaired value of the Native properties was right?  
 (6) A That s correct  
 (7) Q And isn t it the case that you took a number of post spill  
 (8) transactions as comparables to do that?  
 (9) A That is correct  
 (10) Q Right Do you recall how many post spill comparables you  
 (11) used?  
 (12) A I have not counted them no  
 (13) Q Now a number of those post spill comparables that you re  
 (14) using to figure out the value of the land before the spill were  
 (15) transactions in 1989 weren t they?  
 (16) A There may well have been some 1989 transactions  
 (17) Q And a transaction in the lower Kenai and Peterson Bay in  
 (18) November of 89 does that ring a bell?  
 (19) A I can t recall that transaction  
 (20) Q Do you recall a transaction in the lower Kenai also in  
 (21) Peterson Bay just in January of 1990?  
 (22) A Again that is another transaction that I can t recall  
 (23) Q The lower Kenai is part of your stigma area is that  
 (24) correct?  
 (25) A That s correct

Vol 19 2922

- (1) Q So these are transactions you re using to help you  
 (2) understand the prespill predamage value of the Natives  
 (3) property and these are transactions that are within a year  
 (4) after the spill?  
 (5) A There were literally hundreds and hundreds of transactions  
 (6) that we analyzed as a part of this process I would have to  
 (7) have a look at where those transactions took place so that I  
 (8) could provide you with an accurate response I don t know if  
 (9) those are – those transactions are within the area that we  
 (10) felt was stigmatized or not And I don t know whether they  
 (11) were before the spill or after the spill in 1989  
 (12) Q The easel might be called for here  
 (13) Mr Mundy can you see that?  
 (14) A Yes  
 (15) Q There was a perfect angle at one point I ll try to get it  
 (16) again  
 (17) I just referred to a comparable in the lower Kenai You  
 (18) also have – let me see if you recall – used comparables in  
 (19) May of 89 in the upper Kenai Do you recall using those as  
 (20) comparables for your prespill values?  
 (21) A Again I can t remember the transactions themselves I  
 (22) think that they may have been some recreation lot transactions  
 (23) is that correct?  
 (24) Q That s correct  
 (25) A Okay

Vol 19 2923

- (1) Q So it s starting to ring a bell?  
 (2) A Yes  
 (3) Q Now we re talking about this area are we not?  
 (4) A Yes  
 (5) Q Now is there any doubt in your mind that the stigma  
 (6) applies to that area in the first year after the spill?  
 (7) A The – that area was stigmatized in my opinion The area  
 (8) was lightly oiled There was documentation of the lightly  
 (9) oiling mainly based on anecdotal information and I think that  
 (10) that would be at the margin in terms of where I would say  
 (11) the – there was and was not a stigma I think that you have  
 (12) selected an area right on a line in terms of – well you get  
 (13) up into for example Homer I don t think that the stigma  
 (14) would have affected the Homer area You get over into the area  
 (15) that is west of Homer into that subdivision over there – the  
 (16) name escapes me right now – but I don t think that that area  
 (17) was affected  
 (18) Moving south down closer to Seldovia Native Association  
 (19) lands there was some pretty good evidence that there was  
 (20) oiling in there and I think that that would have raised  
 (21) considerable uncertainty on the part of people So even in the  
 (22) Kenai area there – I would say that because of the more  
 (23) urbanized nature of that area that that area was probably not  
 (24) stigmatized but you go a ways south of there that s where the  
 (25) uncertainty would begin

Vol 19 2924

- (1) Q So just to clarify a little bit lower Kenai where you  
 (2) took some of your comps for post spill no question  
 (3) stigmatized?  
 (4) A I believe that in the lower Kenai depending again on  
 (5) where you are referring to when you hold up your hand but I  
 (6) would say from areas Anchor Point and south that there could  
 (7) well have been – in my opinion there would have been a stigma  
 (8) in that area  
 (9) Q But Homer was not stigmatized you re saying?  
 (10) A I don t think there was any considerable – I don t think  
 (11) there was any stigma in Homer that s correct  
 (12) Q This is Kachemak Bay is that correct?  
 (13) A Its that bay of water that runs to the northeast from  
 (14) Homer that s Kachemak  
 (15) Q Yeah this is Kachemak Bay here Homer is on the north  
 (16) side of Kachemak Bay Homer is about south do I have that  
 (17) right?  
 (18) A That s correct  
 (19) Q And this is Kachemak Bay You re saying north side of  
 (20) Kachemak Bay no stigma south side of Kachemak Bay  
 (21) stigma?  
 (22) A Yes south of where the – the subdivision activity a fair  
 (23) amount of recreation type of development that s in that area  
 (24) and I think that the stigma would not have applied to that  
 (25) area  
 (25) Q Okay Now just – this is the – this is a rather famous

Vol 19 2925

- (1) thing that comes out here people may know about this is  
 (2) called the Homer Spit right?  
 (3) A That s right  
 (4) Q Fabulous piece of land that goes straight out in Kachemak  
 (5) Bay right?  
 (6) A Yes  
 (7) Q Does the stigma reach the spit?  
 (8) A I don t think that the stigma would have had any kind of an  
 (9) impact over there on the Homer side no  
 (10) Q Okay So if you re a buyer in New York or New Jersey and  
 (11) you re thinking about – and I take it by the way you  
 (12) consider that people all over the country would potentially be  
 (13) interested in land here?  
 (14) A They could potentially sure  
 (15) Q So you re a buyer in New York or New Jersey and you re  
 (16) thinking about the area and you have no – you re not affected  
 (17) at all by stigma on the north side of Kachemak Bay but on the  
 (18) south side you wouldn t touch it for at least a year up to  
 (19) three years is that right?  
 (20) A No  
 (21) Q But there s no stigma in Homer?  
 (22) A Well taking things in the context of the example you have  
 (23) used and that is a person that s an out of state buyer I  
 (24) think that there may have been uncertainty and concern on their  
 (25) part about acquiring real estate in that area Now I think if

Vol 19 2926

- (1) they would have done the due diligence that we would expect a  
 (2) knowledgeable buyer to do they probably would have found  
 (3) out  
 (4) that there was not any cause for concern or risk and may have  
 (5) gone ahead and acquired real estate in the Homer area  
 (6) Q So there s no –  
 (7) A However that s not my opinion in terms of the area which  
 (8) is south of Homer and to the Seldovia area where there was  
 (9) more  
 (10) documentation of oiling  
 (11) Q There s a large state park in this area is there not?  
 (12) A Kachemak Bay State Park  
 (13) Q Kachemak Bay State Park No doubt in your mind that was  
 (14) stigmatized?  
 (15) A I think there may have been a stigma yes applying to that  
 (16) area  
 (17) Q In fact you ve rendered an appraisal for Seldovia in  
 (18) another lawsuit that it has against Exxon that its land is  
 (19) stigmatized Isn t that true?  
 (20) A That s true  
 (21) Q And you re supporting a claim for two million dollars in  
 (22) damages for that?  
 (23) A I can t recall the amount  
 (24) Q Okay but no question it s stigmatized?  
 (25) A That s correct  
 (26) Q Okay Do you recall a sale in July of 1990 in lower Kenai  
 (27) on the Kachemak Bay that you used as a comparable?

Vol 19 2927

- (1) A I can t recall that sale as I m sitting here  
 (2) Q Let s go back to Valdez for just a moment Do you recall  
 (3) using a comparable sale at Valdez in June of 92 to establish  
 (4) prespill values?  
 (5) A I may well have used a sale in Valdez as of June of 1992 to  
 (6) establish presale values I think that the same would be true  
 (7) for Homer if we re talking about Homer and the Kenai  
 (8) Peninsula  
 (9) area Those are transactions that probably would not have  
 (10) been  
 (11) impaired  
 (12) Q In fact you – In your work papers you ve assembled all of  
 (13) the comparables that you ve used and as best you know those  
 (14) work papers have all been provided in discovery so each of the  
 (15) comparables can be examined and we can place them in time  
 (16) and  
 (17) place?  
 (18) A That s correct  
 (19) Q I want to switch gears now a little bit and go back to the  
 (20) way that you calculate your damages by calculating a reduced  
 (21) income stream First I ll break this exhibit  
 (22) This is exhibit 155 – 15556 Now do you recognize that  
 (23) as one of your work sheets?  
 (24) A Yes I do  
 (25) Q For – okay and this is for –  
 (26) MR OPPENHEIMER The Barco looks like it s been  
 (27) moved Can the jury see that?  
 (28) THE COURT I can t even see it on this one

Vol 19 2928

- (1) MR OPPENHEIMER Can t? Okay let s see if we can  
 (2) blow this up a little bit  
 (3) BY MR OPPENHEIMER  
 (4) Q This is for Growler Island is that correct?  
 (5) A I believe that s correct It s very difficult to read  
 (6) Q I m going to blow up the top here Okay that s a little  
 (7) easier to read I suppose Growler Island correct?  
 (8) A That s correct  
 (9) Q Dr Mundy is this Growler Island?  
 (10) A Yes  
 (11) Q Is that correct? Okay  
 (12) MR PETUMENOS Judge I have no objection if he does  
 (13) that within the view of the jury because if he doesn t I  
 (14) can t see it  
 (15) MR OPPENHEIMER That s fine I ll do that  
 (16) BY MR OPPENHEIMER  
 (17) Q Growler Island is right here It s in the Prince William  
 (18) Sound correct?  
 (19) A That s correct  
 (20) Q Okay On your workup for Growler Island you have a  
 (21) column and I m just going to – we don t have to actually read  
 (22) this for the moment I just want to point out which column  
 (23) You have a column here which is your column for the income  
 (24) stream that would come in on that property Is that right?  
 (25) It s the one that starts with zero

Vol 19 2929

- (1) A That s the second column the impaired column  
 (2) Q That s - yes  
 (3) A Yes  
 (4) Q And in the first year you have a zero because that s the  
 (5) stigma period is that correct?  
 (6) A That s correct  
 (7) Q Well I m not sure that helps much but - now you told us  
 (8) yesterday that these numbers aren t actual revenue numbers is  
 (9) that correct? In other words you re not -  
 (10) A Yes  
 (11) Q You re not telling us that this is real income that either  
 (12) was or wasn t earned These are completely - these numbers  
 (13) are not real revenue numbers correct?  
 (14) A There s no revenue that s coming in to Chugach Alaska  
 (15) Corporation in the amount of \$13 700 per year for that island  
 (16) Q From Growler Island?  
 (17) A That s right  
 (18) Q However in point of fact there is some revenue on Growler  
 (19) Island isn t there?  
 (20) A If you re referring to the Stan Sears lease yes  
 (21) Q I am referring to the Stan Sears lease And what - what  
 (22) kind of operation does Mr Sears run on Growler Island?  
 (23) A He has a tourist type of operation There are - there s  
 (24) I think about one permanent building a number of tent  
 (25) platforms and a community platform there People are brought

Vol 19 2930

- (1) in from various locations on tour boats and they visit the  
 (2) location observe the Columbia Glacier Oftentimes they re  
 (3) provided food  
 (4) Q It s the - it s very close to the Columbia Glacier so  
 (5) it s a tourist stop is that right?  
 (6) A That s right  
 (7) Q Now whose land is that?  
 (8) A It s Chugach Alaska Corporation  
 (9) Q And Chugach gets money - by the way I believe it s Stan  
 (10) Sears operation is that right?  
 (11) A Stephens  
 (12) Q You and I were both saying Sears but I believe it s  
 (13) Stephens Mr Stephens operation He pays money on the  
 (14) lease  
 (15) to the Native corporation who owns the land Is that correct?  
 (16) A That s right  
 (17) Q And that revenue was actually not impaired was it?  
 (18) A No That s a long term rental agreement he has with  
 (19) Chugach Alaska  
 (20) Q When you say long term rental agreement what do you  
 (21) mean  
 (22) by that?  
 (23) A It s an ongoing agreement that he has to lease that  
 (24) property  
 (25) Q Do you know the terms of it?  
 (26) A I can t recall the terms of it as I sit here  
 (27) Q You recall though that the income from that lease to the

Vol 19 2931

- (1) corporation didn t go down at any time after the spill  
 (2) correct?  
 (3) A No and I wouldn t expect it to  
 (4) Q Right Do you recall that it is a lease that - well do  
 (5) you know what happened to the visitors at Growler Island? I  
 (6) mean that s actually an odd question I withdraw it  
 (7) Do you know how the numbers went year to year after the  
 (8) spill more or less visitors do you have any idea?  
 (9) A I have not reviewed the statistics of something that I have  
 (10) not been able to obtain  
 (11) Q You have not been able to obtain that data?  
 (12) A No  
 (13) Q Well do you know that part of the lease is that the  
 (14) corporation gets \$2 00 a head for visitors on that island?  
 (15) A That may be part of the lease  
 (16) Q So the more visitors the more money they make?  
 (17) A That s correct  
 (18) Q Now would it surprise you to learn that in 1989 6 562  
 (19) people visited that island?  
 (20) A No that wouldn t surprise me a bit  
 (21) Q Would it surprise you to learn that in 1990 the year after  
 (22) the spill 10 112 people visited that island?  
 (23) A That wouldn t surprise me either And to think that -  
 (24) Q Would it surprise you -  
 (25) A I think what you have brought out is the fact that

Vol 19 2932

- (1) visitation was down in 1989 it was up in 1990 We applied a  
 (2) one year stigma to the property  
 (3) Q Well you say that the visits were down in 89 What do  
 (4) you base that on?  
 (5) A The information that you just provided as well as my  
 (6) general understanding of what happened in terms of the visitor  
 (7) market in Prince William Sound  
 (8) Q So based on your general understanding of what happened  
 (9) to  
 (10) the visitor market in Prince William Sound you think that the  
 (11) number of visitors to Growler Island declined in 89 over 88?  
 (12) A I would have to have a look at the statistics to compare  
 (13) 88 to 89  
 (14) Q So you don t know?  
 (15) A I don t know what the relationship was between 88 and -  
 (16) Q Would it surprise you to learn that in 1988 there were  
 (17) 6 400 visitors There were more visitors in 1988 than 89?  
 (18) A Very small number  
 (19) Q But it s going up?  
 (20) A Barely  
 (21) Q Barely But Dr Mundy you told us based on your  
 (22) experience you would expect to see it go down but it goes up  
 (23) and it goes up again in 90 is that correct?  
 (24) A It s my understanding that in general there was a  
 (25) difficult time with tourism in Prince William Sound in 1989  
 (26) There was a huge amount of money that was spent on  
 (27) advertising

Vol 19 2933

- (1) to try to hold up the visitor count and the tourist industry in  
 (2) Prince William Sound after the spill and I don't want to  
 (3) convey the wrong impression Growler Island continued to  
 (4) generate income in 1989  
 (5) Q Continued to generate more income each year is that  
 (6) correct? Two dollars a head the numbers keep going up They  
 (7) go from 6400 to 6500 to 10 000 in 1990 two dollars a head each  
 (8) time to your client?  
 (9) A That's correct But to imply that that property may not  
 (10) have been marketable and that you would expect the lease to  
 be  
 (11) canceled or terminated is an erroneous and misimpression  
 (12) Q Dr Mundy that's not a pending question and I haven't  
 (13) said anything about that I'm just asking you about the number  
 (14) of tourists going to Growler Island By the way the tanker  
 (15) grounded right over here is that correct? This is Growler  
 (16) Island and the tanker grounded here?  
 (17) A I'd have to come down and look at the map I can't see -  
 (18) Q Well because of your back let me carry it up Growler  
 (19) Island and the approximate location here where I have my  
 (20) finger?  
 (21) A That would be the approximate order of where the tanker  
 (22) grounded yes  
 (23) Q Okay Are you aware of any other actual - actual rental  
 (24) activity in the Prince William Sound area during your stigma  
 (25) period - by the way I'm sorry before you answer that

Vol 19 2934

- (1) question all of this that we've been talking about with  
 (2) respect to Growler Island in '89 that's all in your stigma  
 (3) period is that correct?  
 (4) A 1989?  
 (5) Q Correct  
 (6) A Yes  
 (7) Q So when in fact your work papers have zero for that year  
 (8) the facts of what came in is that that lease was doing better  
 (9) than in '88?  
 (10) A In - in terms of the rental of that one property on  
 (11) Growler Island that is correct  
 (12) Q Okay Are you aware of any other lease activity in the  
 (13) Sound?  
 (14) A Yes  
 (15) Q Are you aware of some - well let's see if we can get a  
 (16) better map Well here Jackpot Bay right? Mr Stowell's  
 (17) lease?  
 (18) A Okay  
 (19) Q You're familiar with that?  
 (20) A I am vaguely familiar with it  
 (21) Q Are you aware - now Jackpot Bay for the jury and I have  
 (22) correctly pointed out this area is that right within the  
 (23) Sound?  
 (24) A I'd have to refer to a map to make sure  
 (25) Q Sure you have a map up there please do Chenega

Vol 19 2935

- (1) Corporation land  
 (2) A Could you point to the area again please?  
 (3) Q Yes absolutely I've got this so you can't see it I  
 (4) apologize Jackpot Bay  
 (5) A Yes  
 (6) Q And Mr Stowell runs I think what's known as a catch and  
 (7) cook operation isn't that right?  
 (8) MR STOLL He's not talking about me Your Honor  
 (9) MR OPPENHEIMER I am not in fact the jury should  
 (10) be clear  
 (11) THE COURT He's a renaissance man  
 (12) MR STOLL Thank you Your Honor  
 (13) BY MR OPPENHEIMER  
 (14) Q But is that - are you aware of that Dr Mundy?  
 (15) A I am vaguely familiar with that yes  
 (16) Q Now do you have any knowledge - well let me rephrase  
 (17) this Were you aware that in the two years after the spill  
 (18) 1990 and 1991 that Mr Fortier negotiated two price increases  
 (19) on that lease to Mr Stowell?  
 (20) A As I recall that's the case I'm not absolutely certain  
 (21) though  
 (22) Q Okay So again an example of another lease where the  
 (23) revenue's going up It's not zero It's not flat It's not  
 (24) going down It's going up Correct?  
 (25) A For that small limited location that's correct

Vol 19 2936

- (1) Q The exhibit number for the worksheet that's on the Barco is  
 (2) 15556  
 (3) Now the jury's previously seen pictures of timbering  
 (4) operation at Windy Bay Are you familiar with that?  
 (5) A Yes  
 (6) Q And with the exception of a modest delay to the - I think  
 (7) what's known in the trade as the LTF the Log Transfer  
 (8) Facility it's a dock any delay in timbering operations on  
 (9) Native land as a result of the oil spill?  
 (10) A Not to my knowledge  
 (11) Q Let's talk a little bit about subsistence You did not  
 (12) take subsistence into account in quantifying the losses from  
 (13) the oil spill is that correct?  
 (14) A If you are referring to estimating a damage to the property  
 (15) because of decreased subsistence harvests that's correct  
 (16) Q You didn't take into account decreased subsistence harvests  
 (17) in your valuation of the value of the land before the spill  
 (18) correct?  
 (19) A That's correct  
 (20) Q And you did not take it into account whether anybody was  
 (21) subsisting at all when you calculated damages after the spill  
 (22) correct?  
 (23) A Subsistence was not - the impact on subsistence activities  
 (24) was not taken into consideration in the - estimating the  
 (25) damages

Vol 19 2937

- (1) Q And in fact isn't it true that the way you've approached  
 (2) all of this you do not take into account in calculating  
 (3) damages how people are actually using the land and what  
 revenue  
 (4) they're actually getting from the land actually now during  
 (5) the period that you stay there's been stigma or damage?  
 (6) A Now you're referring to the subsistence activities?  
 (7) Q I'm referring to any use and enjoyment actual use and  
 (8) enjoyment of land You don't take that into account when you  
 (9) quantify your damages isn't that correct?  
 (10) A Well I want to make certain that there's not any  
 (11) misunderstanding Now in terms of subsistence there was no  
 (12) damage estimates made and no damages attributed to the  
 change  
 (13) in the subsistence activities There are a number of leases of  
 (14) property and you have discussed two of them on the subject  
 (15) lands Those leases are generally small very very small part  
 (16) of the value of the property Generally they are leases that  
 (17) are of a long term nature either renewable yearly and  
 (18) renewable for a very good reason like Growler Island  
 (19) Mr Stephens operation where he has considerable investment  
 (20) that he's made there and would want to continue to lease  
 (21) that Those small leases - excuse me - didn't take into  
 (22) consideration  
 (23) Now then you mentioned the timber and while the timber  
 (24) was harvested we did not value the timber and so there's  
 (25) absolutely no damage that is related whatsoever to the timber

Vol 19 2938

- (1) because all of those properties had the timber rights sold and  
 (2) so those did not factor into our calculation  
 (3) Q Dr Mundy just so I can get a - an answer to a specific  
 (4) question to what extent did you consider actual use that the  
 (5) landowners made of their land during the three year period in  
 (6) your damage calculation?  
 (7) A Well I believe I've done a pretty good job of answering  
 (8) that question  
 (9) Q Isn't the answer to that that you did not take it into  
 (10) consideration?  
 (11) A For the subsistence activities I did not take it into  
 (12) consideration  
 (13) Q Dr Mundy the question I have for you is to what extent  
 (14) did you consider actual use that the landowners made of their  
 (15) land during the three year period in your damage calculation?  
 (16) I just want to know the extent to which you did that isn't  
 (17) the answer that you did not?  
 (18) A Well based on what I just mentioned to you I think that I  
 (19) would agree with that statement  
 (20) Q You did not okay Thank you  
 (21) Are you aware of a single leasing activity where the  
 (22) revenue went down in Prince William Sound or the Kenai?  
 (23) A I cannot recall any no  
 (24) Q Let me change maps here for a second put up a map of the  
 (25) Kenai You recognize this as a map of the Kenai Peninsula?

Vol 19 2939

- (1) A That's correct  
 (2) Q Just to orient ourselves again Kachemak Bay?  
 (3) A Yes  
 (4) Q This is about where the stigma stops?  
 (5) A In that area yes  
 (6) Q This is the Homer Spit?  
 (7) A Correct  
 (8) Q You mentioned earlier in your testimony that one of the  
 (9) attributes of this land is that there is subsistence use in  
 (10) this area is that correct?  
 (11) A That's correct  
 (12) Q And you're talking about the - well this is - this is  
 (13) the - your client's land as marked on here Do you recognize  
 (14) that generally?  
 (15) A Yes  
 (16) Q And is it - is it your view that there's subsistence  
 (17) activity all throughout here?  
 (18) A That's correct  
 (19) Q Have you ever been made aware of any testimony from any  
 of  
 (20) the witnesses in this case from Port Graham or English Bay  
 (21) saying that the Kenai Fjords area - that's this area by the  
 (22) way right?  
 (23) A Yes  
 (24) Q - is too far away to do subsistence hunting?  
 (25) A I have not read statements to that effect no

Vol 19 2940

- (1) Q There's another characteristic of this area that's  
 (2) important to land appraisal isn't there this Kenai Fjords  
 (3) area?  
 (4) A Well there are a lot of factors that's important to it  
 (5) Q It's a national park isn't it?  
 (6) A That is - that's right The Kenai Fjords or that - the  
 (7) Kenai Peninsula area the national park does extend down into  
 (8) that area  
 (9) Q In fact the Kenai Fjords National Park runs from about  
 (10) Resurrection Bay down past your client's land here at West Arm  
 (11) and Nuka Bay right?  
 (12) A I can't tell you where the precise boundaries are  
 (13) Q But that's approximately correct?  
 (14) A I think they may well be correct  
 (15) Q Surely you know whether your client's land is inside the  
 (16) national park  
 (17) A That's correct  
 (18) Q It is inside the park isn't it?  
 (19) A I'm not certain if that - if the park extends over the  
 (20) client's land or not I -  
 (21) Q I'm sorry I didn't understand Are you saying you don't  
 (22) know? When you say over the - your client's land what are  
 (23) you saying?  
 (24) A Well that the land that Port Graham and English Bay own in  
 (25) the area is a part of the park or not? It may well be that the

Vol 19 2941

- (1) park comes down and borders their property but their property  
 (2) would not be included as a part of the park  
 (3) Q But are you telling us that you don't know whether that is  
 (4) the case or not?  
 (5) A What I am saying is that what you implied was that the  
 (6) park extended down and included the property and their  
 (7) property Port Graham English Bay's property is owned by  
 (8) them not by the federal government and the park includes the  
 (9) federal government ownership not the Native ownership  
 (10) Q Aren't there federal regulations Dr Mundy that prohibit  
 (11) subsistence hunting from Resurrection Bay down through Nuka  
 (12) Bay?  
 (13) A There may well be  
 (14) Q Do you know?  
 (15) A It - In the national park area I do not know  
 (16) Q Do you know sitting here today whether there are federal  
 (17) regulations which preclude your clients from conducting  
 (18) subsistence hunting in this coastal area known as the Kenai  
 (19) Fjords area?  
 (20) MR PETUMENOS I'm sorry counsel you blocked my  
 (21) view  
 (22) MR OPPENHEIMER I apologize I was referring once  
 (23) again to the area from Resurrection down past Nuka Bay  
 (24) MR PETUMENOS Including the owned land?  
 (25) MR OPPENHEIMER Including the owned land

Vol 19 2942

- (1) A Including their own lands? I don't think that would be a  
 (2) correct statement  
 (3) BY MR OPPENHEIMER  
 (4) Q You believe they can subsist on those lands?  
 (5) A That's correct  
 (6) Q And do you believe that they were able to do that in 1989?  
 (7) A Yes  
 (8) Q And 1990?  
 (9) A Yes  
 (10) Q And 1991?  
 (11) A Yes  
 (12) Q There are unique features to Native land ownership that  
 (13) make it different from when you or I buy something and have a  
 (14) deed isn't that right? They have different kinds of  
 (15) ownership?  
 (16) A That's correct  
 (17) Q They have something called selected but un conveyed lands  
 (18) isn't that correct?  
 (19) A That is correct  
 (20) Q And there are limitations on the sorts of things that they  
 (21) can do on selected but un conveyed lands Is that right?  
 (22) A There may well be  
 (23) Q Okay Now one of the things that they are precluded from  
 (24) doing in the Kenai Fjords area during the period of time that  
 (25) they have selected but have not yet had conveyed to them the

Vol 19 2943

- (1) land is subsistence hunt isn't that correct?  
 (2) A That may be the case However -  
 (3) Q Okay are you -  
 (4) A - that -  
 (5) Q Are you also aware -  
 (6) MR PETUMENOS Excuse me Judge they're talking over  
 (7) one another  
 (8) THE COURT You can finish your answer go ahead  
 (9) A That may well be the case however I don't want my answer  
 (10) to be a misleading one and I'm concerned that it is Because  
 (11) the properties that we valued were only the properties where  
 (12) they had legitimate selections There were over selections that  
 (13) had been made on ownership in the area that we're discussing  
 (14) And those over selections were deducted from our value of  
 (15) acreage to the acreages that the Native corporations were only  
 (16) entitled to  
 (17) Now there are some lands where there has not been a final  
 (18) conveyance made to the Natives However our valuation  
 (19) analysis was based on the assumption that those lands were  
 (20) fully conveyed to the Natives  
 (21) Q I'm sorry you said your valuation was based on the premise  
 (22) that all of your clients' lands was fully conveyed?  
 (23) A That's right That the acreages that we had were the  
 (24) acreages that they were entitled to and would be receiving  
 (25) Q Well we've used some terms here Dr Mundy that I think

Vol 19 2944

- (1) are worth getting a little clearer on It's complicated but  
 (2) it's important isn't it to know what the attributes of land  
 (3) ownership were when you're appraising lands?  
 (4) A That's correct  
 (5) Q And in fact you've mentioned a couple of terms and I  
 (6) want us to have a clear understanding about them Some lands  
 (7) are conveyed correct?  
 (8) A That's correct  
 (9) Q And some lands are selected but not conveyed correct?  
 (10) Correct?  
 (11) A That's true I think that what we would call those would  
 (12) be interim conveyance  
 (13) Q Sometimes known as IC lands right?  
 (14) A That's correct  
 (15) Q Okay interim conveyance - oops So selected but not  
 (16) conveyed and interim conveyance are roughly the same thing  
 (17) correct?  
 (18) A Roughly the same  
 (19) Q And then you mentioned over selections correct?  
 (20) A That's correct  
 (21) Q Now conveyed lands is where - that's the best form of  
 (22) ownership you can have isn't it? That's what's known as a  
 (23) title or a patent the land is yours correct?  
 (24) A That's correct  
 (25) Q Right And the way all this came about?

Vol 19 2945

- (1) MR PETUMENOS Excuse me Your Honor may I - I  
 (2) think I m going to need to approach the bench on this subject  
 (3) area I don t know whether you want to take a break  
 (4) THE COURT Would you like to take a break?  
 (5) MR OPPENHEIMER Sure Your Honor that would be  
 (6) fine  
 (7) THE COURT I ll send the jury out  
 (8) (Jury out at 9 41 a m )  
 (9) MR PETUMENOS I m a little confused -  
 (10) MR OPPENHEIMER Should we ask the witness?  
 (11) MR PETUMENOS If you like  
 (12) MR OPPENHEIMER I don t know what we re getting  
 (13) into  
 (14) THE COURT Dr Mundy you can -  
 (15) MR PETUMENOS We can excuse the witness that s  
 (16) fine I m not trying to spoil their fun Actually I am  
 (17) probably trying to spoil their fun  
 (18) (Witness excused)  
 (19) MR PETUMENOS I m not sure where this cross is  
 (20) going but I m getting a little concerned Depending upon  
 (21) where it s going I may or may not have an objection but I  
 (22) wanted to make the Court s aware of a legal issue that s  
 (23) becoming involved here As the Court s aware of the motion  
 (24) practice in OPA 90 these plaintiffs have the claim for any  
 (25) Exxon Valdez damages for any lands that they have issued an

Vol 19 2946

- (1) irrevocable selection on regardless of whether the land is  
 (2) actually conveyed or not  
 (3) If the jury is left with the impression that Dr Mundy is  
 (4) including in his damage claims lands that these folks don t  
 (5) have the right to claim under I m going to need an instruction  
 (6) at the time of the cross examination so they re not left with  
 (7) the misimpression If this is leading to a different point  
 (8) which it very well may be fine but I m concerned that a  
 (9) misimpression is being left by this area of the  
 (10) cross examination given the state of the law that applies to  
 (11) this case  
 (12) MR OPPENHEIMER Your Honor this is not going to go  
 (13) to OPA 90 and the Natives standing to sue in the sense in which  
 (14) Mr Petumenos is talking about This is simply trying to get  
 (15) straight the various types of land ownership because there are  
 (16) different consequences that flow from it and frankly I hadn t  
 (17) intended to get into it as deeply but I need to because the  
 (18) witness has confused some issues I think here that need to be  
 (19) straightened out He s confused selected but unconveyed I  
 (20) don t think he intended - I intend to clarify it with  
 (21) overselections They re two different things  
 (22) There are consequences for the case we re putting on with  
 (23) respect to the damages that flow directly from understanding  
 (24) these distinctions He talks about these distinctions in his  
 (25) report We re not trying to create any erroneous impression

Vol 19 2947

- (1) that people don t have a right a standing right - a standing  
 (2) right to sue under for lands which they have such a right  
 (3) that s not a part of this It is part of this clearly to  
 (4) explore his understanding of land ownership We have a right  
 (5) to do that  
 (6) MR PETUMENOS I have two requests Either that  
 (7) Mr Oppenheimer in the course of his cross make it clear that  
 (8) the claims are valid against - that the plaintiffs have  
 (9) standing to sue for these Exxon related - Valdez related  
 (10) damages if they have selected but not conveyed or that the  
 (11) Court instruct on that issue his choice  
 (12) I don t want to invade his cross examination if he doesn t  
 (13) want to do that On the other hand I think unintentionally a  
 (14) misimpression is being left here as the jury says oh these  
 (15) have been selected but not conveyed they don t have title in  
 (16) the normal course A juror would think goodness gracious  
 (17) Dr Mundy is making damages for land that these people don t  
 (18) own yet but we have a statutory  
 (19) THE COURT I can understand the concern counsel  
 (20) But frankly I don t think that impression has been created  
 (21) now and if it is created it either gets cleared up in the  
 (22) testimony or I might instruct on it I m not - I m not  
 (23) committing myself to either course right now  
 (24) MR OPPENHEIMER I would suggest any of that could  
 (25) come up in redirect anyway if it seems to be important

Vol 19 2948

- (1) THE COURT That s true If in fact it is a danger  
 (2) maybe the instruction is necessary and it could be at the time  
 (3) of the testimony I don t particularly want to do that  
 (4) MR OPPENHEIMER Your Honor I hope - certainly not  
 (5) the impression I intend to create I doubt I will I ll try  
 (6) to be mindful of it but that s not the direction we re going  
 (7) here  
 (8) THE COURT Enough said counsel  
 (9) MR OPPENHEIMER Yes Your Honor  
 (10) MR PETUMENOS Yes Your Honor  
 (11) THE COURT Anything else?  
 (12) MR PETUMENOS No not at this time Thanks  
 (13) THE CLERK Please rise This court stands in  
 (14) recess  
 (15) (Recess from 9 45 a m to 10 06 a m )  
 (16) (Jury in at 10 06 a m )  
 (17) THE CLERK This court now resumes its session  
 (18) Please be seated  
 (19) BY MR OPPENHEIMER  
 (20) Q Dr Mundy before the break we were talking about different  
 (21) kinds of land ownership that Native corporations have I think  
 (22) I may have inadvertently confused things a little bit  
 (23) We have three categories here but really we ve written  
 (24) down four haven t we? Because there is conveyed there s  
 (25) selected but not conveyed then there s interim conveyed

Vol 19 2949

- (1) right which is separate from selected but not conveyed?  
 (2) A Right  
 (3) Q It s tongue twisting but it s important  
 (4) Let me back up now Conveyed means that the Native  
 (5) corporation has it it s like a Trustee they own it it s  
 (6) theirs In the state of Alaska I believe we call that a  
 (7) patent is that right?  
 (8) A That s right  
 (9) Q Can you briefly describe for the jury - this all comes  
 (10) from ANCSA doesn t it?  
 (11) A That s correct  
 (12) Q And what is ANCSA? First of all tell us what the letters  
 (13) stand for  
 (14) A Alaska Native Claims Settlement Act  
 (15) Q Alaska Native Claims Settlement Act And that was passed  
 (16) in the 70s?  
 (17) A 1971  
 (18) Q Tell us briefly what that is  
 (19) A Well I can briefly provide you what I believe it to be  
 (20) Now I certainly am not an expert on ANCSA but -  
 (21) Q I m sorry you -  
 (22) A I m not a expert on the Alaska Native Claims Settlement  
 (23) Act  
 (24) Q Well that is the act by which the Natives acquired all of  
 (25) the property that s at issue in this lawsuit Isn t it?

Vol 19 2950

- (1) A That s correct  
 (2) Q And that is an act that allowed them to choose certain  
 (3) lands for themselves in exchange for giving up certain claims  
 (4) to other lands in the State of Alaska Isn t that right?  
 (5) A That is correct That s - at least that s my  
 (6) understanding of it  
 (7) Q And is it also your understanding that all of their rights  
 (8) that we re talking about are based upon the type of ownership  
 (9) which they have under ANCSA?  
 (10) A Yes  
 (11) Q When you appraise property it s very important Is it not  
 (12) to understand the nature of the ownership rights of the client?  
 (13) A That is correct  
 (14) Q And in this case the nature of the ownership rights comes  
 (15) from ANCSA?  
 (16) A That s correct  
 (17) Q But you don t consider yourself expert in ANCSA?  
 (18) A Well the Alaska - Alaska Native Claims Settlement Act is  
 (19) a - a large voluminous document and there are parts of that  
 (20) document which I have familiarized myself with but there are  
 (21) many parts that I have not familiarized myself with In  
 (22) addition even the areas that I know something about I would  
 (23) seek the advice of an attorney in assisting me in understanding  
 (24) the nature of the topic Just like I relied on Mr Bush to  
 (25) assist me in understanding the nature of the geology and

Vol 19 2951

- (1) biology and just like I ve relied on Dr Lobdel and  
 (2) Dr Johnson to provide us with insight regarding archaeology  
 (3) Q But among all those people you re the only appraiser?  
 (4) A That s correct  
 (5) Q As you ve described you re the one to whom we look for the  
 (6) value of the property is that correct?  
 (7) A Yes  
 (8) Q Now let - we ll try to keep this short but it is  
 (9) important Some of the Natives land is conveyed that they re  
 (10) suing on here is that correct?  
 (11) A That s correct  
 (12) Q Some is selected but not conveyed?  
 (13) A That is correct  
 (14) Q And some is interim conveyed IC?  
 (15) A That is correct  
 (16) Q Any other types of ownership that they have under ANCSA?  
 (17) A I believe that those three the conveyed the selected but  
 (18) not conveyed and the interim conveyed would encompass the  
 (19) three different types of ownership of lands which we have  
 (20) valued  
 (21) Q Okay You mentioned earlier in your conversation  
 (22) overselection  
 (23) A That s correct  
 (24) Q Now isn t that land - let me back up a step Under  
 (25) ANCSA isn t it the case that the Native corporations are

Vol 19 2952

- (1) entitled to a certain number of acres that they can choose?  
 (2) A That s correct  
 (3) Q And isn t it also correct that the process that s been  
 (4) going on since the 70s to choose that land is that Native  
 (5) corporations would all select but there s be some overlap for  
 (6) one thing right between the corporations? They - on some  
 (7) occasions they d select the same lands?  
 (8) A That s correct  
 (9) Q And there would be some preexisting easements Would  
 (10) you tell us what an easement is?  
 (11) A An easement is a form of ownership It is a right that  
 (12) somebody has to somebody else s property or for the property  
 (13) owner it is rights that they have given up to the property  
 (14) That might be for a road it might be a scenic easement  
 (15) Q Power line?  
 (16) A Power line easement yes  
 (17) Q So some of the land that the Natives chose had preexisting  
 (18) easements rights of use over them and that was another thing  
 (19) that had to be dealt with right?  
 (20) A Yes  
 (21) Q And the idea was that this would eventually all get sorted  
 (22) out and the Native corporations would end up with land that  
 (23) they were entitled to and the amount of acres that they were  
 (24) entitled to correct?  
 (25) A That s correct

Vol 19 2953

- (1) Q But there is a period of time here where it s not clear  
 (2) where those boundaries are is that right?  
 (3) A Yes  
 (4) Q And so the Native corporations would overselect They d  
 (5) take more land than they were actually entitled to This  
 (6) was - I m not suggesting this was unlawful This was done  
 (7) with the federal government the state government but they  
 (8) took more land than they were ultimately going to be entitled  
 (9) to is that correct?  
 (10) A That is correct  
 (11) Q And so if they were entitled to ten acres they d take 11  
 (12) by way of hypothetical?  
 (13) A Right  
 (14) Q And the additional lands are known as overselections  
 (15) correct?  
 (16) A That s correct  
 (17) Q Okay Now at some point this has to come to an end  
 (18) right? We have to know what we own correct?  
 (19) A Yes  
 (20) Q And the Native corporations have been in the process of -  
 (21) of - of giving up their overselections and getting down to  
 (22) what they re going to end up with is that right?  
 (23) A That is correct  
 (24) Q Okay In fact some of the Native corporations in this  
 (25) case very recently gave up some of their overselections isn t

Vol 19 2954

- (1) that right?  
 (2) A Yes  
 (3) Q They went through a - where they basically said we ll  
 (4) take this land and we ll - we will officially give back this  
 (5) land as part of the process of gifting down to what they were  
 (6) going to be entitled to at the very end of the process right?  
 (7) A Yes  
 (8) Q They relinquished part of their overselection?  
 (9) A Right  
 (10) Q Now I want to draw your attention to a part of the Harris  
 (11) Peninsula This is owned by English Bay to your knowledge  
 (12) this plot - this parcel rather?  
 (13) A Yes  
 (14) Q I m pointing to a piece of land that s in between Harris  
 (15) Bay - let me see if I can - can you see that Dr Mundy?  
 (16) Have I obliterated your view? Harris Bay on the south and I  
 (17) believe this is known as Aialik Bay on the north you see  
 (18) that?  
 (19) A Yes Very marginally though  
 (20) Q Sorry there s probably a perfect position as I said  
 (21) before How s that? A little better?  
 (22) A That s a little bit better Go ahead  
 (23) Q All right Now there was recently - English Bay recently  
 (24) gave up some of its overselection in this area isn t that  
 (25) correct?

Vol 19 2955

- (1) A I believe that is correct I can t recall for all of the  
 (2) corporations that we ve done our work for precisely where the  
 (3) lands were that were overselections that they gave up  
 (4) Q You recently revised your report did you not to take into  
 (5) account some of these decisions that your clients have made to  
 (6) give back overselections isn t that right?  
 (7) A That is correct  
 (8) Q Very recently within the last month?  
 (9) A I don t know if it was in the last month but it was very  
 (10) recently within the last several months  
 (11) Q Now you re aware are you not that the land that the  
 (12) Native corporation English Bay retained is down here at the  
 (13) southern part of this parcel by the - by the bay here?  
 (14) A Again I can t recall as I m sitting here where the  
 (15) ownership boundary runs currently  
 (16) Q Well are you aware that just north of that along the  
 (17) coast they relinquished that land to the north They kept the  
 (18) land to the south relinquished to the north Does that ring a  
 (19) bell?  
 (20) A They may have done that I simply can t remember all of  
 (21) the changes that took place  
 (22) Q Are you aware that the land that they relinquished to the  
 (23) north of the bay had not been oiled?  
 (24) A Again I - I am not precisely familiar with each of the  
 (25) parcels that was relinquished

Vol 19 2956

- (1) Q And that the land that they retained on the bay had been  
 (2) oiled?  
 (3) A That may have been the case  
 (4) Q In fact Isn t it the case that there are numerous  
 (5) instances that you have discovered in the last two months  
 (6) where in finally deciding what land to keep the plaintiffs in  
 (7) this case have on more than one occasion chosen property  
 (8) that  
 (9) was oiled over property that wasn t oiled?  
 (10) A That may well have been the case I mean I think that  
 (11) there are a lot of factors that the Village corporations have  
 (12) taken into consideration and the regional corporation in  
 (13) making the selections and in dealing with the overselection  
 (14) issue And as I ve testified earlier this oiling problem is  
 (15) one that is of a temporary nature Some areas are lightly  
 (16) oiled and some areas are heavily oiled  
 (17) I think that the way the Native corporations have  
 (18) approached the selection of lands is from a very long term  
 (19) perspective They have used these lands for years and years  
 (20) and years in the past and they anticipate using them for  
 (21) decades and decades into the future and I think that they  
 (22) realize as I do that the effect that the oiling has had on  
 (23) the properties is one that is temporary And I think that has  
 (24) influenced a lot of their decisions  
 (25) Q Let s go back briefly - oops - let s go back briefly to  
 the types of land As an appraiser when you - when you are

Vol 19 2957

- (1) valuing land it's awfully important to know whether there are  
 (2) restrictions on its use isn't that correct?  
 (3) A That is correct  
 (4) Q I mean after all if you're going to decide that land is  
 (5) great timberland and there's a rule that says you can't timber  
 (6) in it it doesn't make any sense to value it as timberland  
 (7) isn't that right?  
 (8) A That's correct  
 (9) Q Now what is a possessory interest?  
 (10) A A possessory interest?  
 (11) Q Maybe I should - well I'm not going to write it down I  
 (12) don't know how many S's it has but what is a possessory  
 (13) interest?  
 (14) A Well that's an interest somebody else has in the property  
 (15) Q It's a right to actually take possession of the property  
 (16) right?  
 (17) A Yes it could involve that yes  
 (18) Q Right to build things on it?  
 (19) A Could involve that  
 (20) Q Right to let other people build things on it?  
 (21) A Depends on the interest that the person has  
 (22) Q Selected but un conveyed lands the Native corporations do  
 (23) not have a possessory interest in that land do they?  
 (24) A That is something that I can't speak to with authority  
 (25) Q So you can't tell us wherever there are selected but

Vol 19 2958

- (1) un conveyed lands whether a Native corporation could even put  
 a  
 (2) cabin on it?  
 (3) A Again I don't know what the restrictions are for selected  
 (4) lands that have not been conveyed  
 (5) Q Do you know who -  
 (6) MR PETUMENOS Excuse me Judge for the record - I  
 (7) want the Judge - Court to know that I have an objection based  
 (8) upon our previous conference at this time to the manner of  
 (9) this examination  
 (10) THE COURT I understand the objection counsel but  
 (11) for now it's overruled  
 (12) BY MR OPPENHEIMER  
 (13) Q Do you know who Don Emmal is?  
 (14) A Yes  
 (15) Q Who is he?  
 (16) A Don Emmal is the president of English Bay Corporation  
 (17) Q And English Bay Corporation's lands are primarily in the  
 (18) Kenai area correct?  
 (19) A Well some of them are  
 (20) Q You're correct there are some in Prince William Sound as  
 (21) well is that right?  
 (22) A In the Kenai Fjords area  
 (23) Q English Bay has a lot of land in the Kenai Fjords area  
 (24) correct?  
 (25) A And in the Kenai Peninsula area

Vol 19 2959

- (1) Q And in the Kenai Peninsula meaning - you're referring to  
 (2) this land here too?  
 (3) A That's correct  
 (4) Q Yes absolutely Are you aware that Mr Emmal has  
 (5) testified to the effect that he was unable to work out a deal  
 (6) with the Forest Service to put a cabin in the Kenai Fjords area  
 (7) where they would pay him rent because until he gets some form  
 (8) of conveyance of his selected but un conveyed lands He  
 doesn't  
 (9) have control of the lands to put those sorts of things like  
 (10) guest cabins on it and to charge for them  
 (11) MR PETUMENOS Same objection Your Honor  
 (12) MR OPPENHEIMER Goes to use Your Honor  
 (13) MR PETUMENOS Very briefly Judge - do you want us  
 (14) to approach the bench?  
 (15) THE COURT Yeah I think you better  
 (16) (Sidebar conference out of the hearing of the jury)  
 (17) THE COURT Go ahead what's your objection?  
 (18) MR PETUMENOS This line of questioning would be  
 (19) proper in the absence of a statutory amendment to the usual  
 (20) plaintiff rights with respect to property I can understand in  
 (21) the normal course if somebody didn't have a possessory right  
 to  
 (22) put a cabin on or something like that you could undertake this  
 (23) cross but it is misleading in the sense that all claims all  
 (24) claims with respect to the Exxon Valdez oiling inure invest  
 (25) with the Village Corporations as of the time they make their

Vol 19 2960

- (1) Irrevocable selection  
 (2) THE COURT It was my understanding -  
 (3) MR PETUMENOS And so the fact that - the federal  
 (4) government cannot claim at all for anything in connection with  
 (5) the Exxon Valdez so my - my concern is that as counsel gets  
 (6) deeper and deeper into this area and leaves the impression with  
 (7) the jury that because they have less of an interest for other  
 (8) reasons putting cabins in doing things like that  
 (9) THE COURT What are the other reasons?  
 (10) MR PETUMENOS I'm sorry?  
 (11) THE COURT What are the other reasons  
 (12) MR PETUMENOS Well the point is that what's  
 (13) relevant for this lawsuit is who has the claim All of the  
 (14) claim for the land as a result of the Exxon Valdez and the  
 (15) answer to that is the Village Corporations whether they have a  
 (16) possessory interest for purposes of putting up a cabin right  
 (17) now or not to the extent that the land has been damaged they  
 (18) have the claim to the exclusion of anyone else and so -  
 (19) THE COURT You've tried to preserve your - your  
 (20) long term diminution of damages and your loss of use and  
 (21) enjoyment damages haven't you? You're claiming both aren't  
 (22) you?  
 (23) MR PETUMENOS The - the claim for the permanent  
 (24) damages as I understand Dr Mundy's testimony is in that area  
 (25) relating to archaeology where they have to excavate and goes

Vol 19 2961

- (1) to the next highest and best use and then it s permanently or  
 (2) forever lost as an archaeological site But all of the  
 (3) testimony that Dr Mundy has put forth has been that there s a  
 (4) period of time when based on the income stream returns to  
 (5) normal so I don t think it s - I think it s a misleading  
 (6) impression to leave with the jury That s because rights for  
 (7) purposes of development for purposes of the possessory  
 (8) interest somehow affect their claim because if the Forest  
 (9) Service puts up a cabin on this - on these properties the  
 (10) Village Corporations have the claim for the diminution of  
 (11) value It may sound like a legal fiction but it is a legal  
 (12) fiction because if there s a loss of use by the federal  
 (13) government for this period of time by legislation the Village  
 (14) Corporation has its - they have the claim as if it were theirs  
 (15) in 1989  
 (16) THE COURT Go ahead  
 (17) MR OPPENHEIMER Your Honor OPA is a standing  
 (18) statute We re not leading to the conclusion that they don t  
 (19) have a right to bring claims That s not what this is all  
 (20) about But OPA did not create any use rights and that did not  
 (21) previously exist under ANCSA And it is surely our right to  
 (22) show that there are certain uses to which they could not put  
 (23) those lands It s a tenant defensible use there and OPA does  
 (24) not change use rights It is a standing statute and there is  
 (25) simply no doubt that we have ample evidence that they - there

Vol 19 2962

- (1) are certain uses which cannot be made on the property just  
 (2) cannot be  
 (3) THE COURT What you ve shown me here is that one of  
 (4) the - there is one Native corporation thought that he had no  
 (5) right to put - may have felt that he had no right to possess  
 (6) certain property right? I mean that s what you re  
 (7) questioning this witness about  
 (8) MR OPPENHEIMER So far yes  
 (9) THE COURT So far  
 (10) MR OPPENHEIMER So far But the point is Your  
 (11) Honor they don t have possessory Interest and OPA didn t  
 (12) change that They have no right -  
 (13) THE COURT Counsel I don t know that as a matter of  
 (14) law You re giving me a legal proposition here right  
 (15) MR OPPENHEIMER I am that s correct  
 (16) THE COURT And do I have to explore this the legal  
 (17) issue before I allow the testimony?  
 (18) MR OPPENHEIMER I don t think so because I m not  
 (19) aware of any - any theory that says we cannot put on evidence  
 (20) that they - that they cannot legally use their land  
 (21) THE COURT I think that may be so but it s a  
 (22) question of law isn t it?  
 (23) MR DIAMOND Your Honor there are twin contentions  
 (24) here One diminution in value and two loss of use  
 (25) THE COURT Right That s what I said

Vol 19 2963

- (1) MR DIAMOND We re not going to who owns the claim  
 (2) we re going to whether anybody was damaged These  
 plaintiffs  
 (3) If they have not suffered any loss of use because they couldn t  
 (4) make the use in the first place haven t been damaged  
 (5) THE COURT I understand that That s what I said to  
 (6) opposing counsel  
 (7) MR OPPENHEIMER Right that is  
 (8) THE COURT But the question is when you ask a  
 (9) question relating to one lay person s evaluation of what he  
 (10) could do it s different from me saying there s no possessory  
 (11) right hereby  
 (12) MR OPPENHEIMER I don t have to ask anymore  
 (13) questions about - the fact of the matter is that the Native  
 (14) corporations have comported themselves with an  
 understanding  
 (15) that they could not do certain things with their land That s  
 (16) point one  
 (17) Point two is that as - as a matter of this man s  
 (18) expertise he should know what the ownership rights are that  
 (19) follow certain forms of ownership and conveyance and  
 because  
 (20) it does make a difference on the use claim and I think that  
 (21) that s really what we re exploring here  
 (22) THE COURT What I m trying to tell you is I haven t  
 (23) explored the law sufficiently that I feel comfortable making a  
 (24) legal ruling as to the possessory question on whether or not  
 (25) the Native corporations can - can possess certain property and

Vol 19 2964

- (1) use it in certain ways so I can t do that as a matter of law  
 (2) You are exploring facts relating to that issue  
 (3) My feeling is that a question based on the perceptions of  
 (4) the president of Native corporation when he may be wrong is  
 (5) an issue that I would prefer to explore before I allow this  
 (6) kind of speculative testimony not after you get it in because  
 (7) it may very well be that this objection is valid Murky  
 (8) counsel but valid  
 (9) I mean it s too complicated of a legal issue I m not  
 (10) sure that it s appropriate to ask a question about what one  
 (11) person s perception was If you think you can show me that  
 (12) these possessory rights are simply not possessed as a matter of  
 (13) law you should do that with me not this witness  
 (14) MR OPPENHEIMER I m comfortable we can do that I m  
 (15) trying to think how we can do that in terms of the sequence of  
 (16) events I ll tell you -  
 (17) MR PETUMENOS Can I -  
 (18) THE COURT You just go on -  
 (19) MR OPPENHEIMER Why don t I do that I do need to  
 (20) do one thing on the record because I misspoke myself I was  
 (21) referring to Don Emmal and it s in fact Pat Norman  
 (22) THE COURT Just correct that  
 (23) MR OPPENHEIMER I don t have to do that if I have a  
 (24) stipulation of counsel it won t be thrown back later that I  
 (25) had the wrong person

Vol 19 2965

- (1) MR PETUMENOS No I have other things to throw  
 (2) back  
 (3) MR OPPENHEIMER That s fine We ll move on  
 (4) THE COURT Thank you  
 (5) BY MR OPPENHEIMER  
 (6) Q Dr Mundy what is the name of your company?  
 (7) A Mundy Jarvis and Associates Inc  
 (8) Q Mundy Jarvis and Associates Inc Do you have a company  
 (9) with any other names?  
 (10) A Yes  
 (11) Q What s that?  
 (12) A Bill Mundy and Associates Inc  
 (13) Q Any other names?  
 (14) A Companies that I am a principal in or own a principal  
 (15) interest in is that what you re -  
 (16) Q I ll cut to the chase Do you have a company called Mundy  
 (17) Day D a y?  
 (18) A Mundy Day is a - a name we do business as It s a d/b/a  
 (19) of Mundy Jarvis and Associates Inc It s an association  
 (20) between Jack Day and myself  
 (21) Q Jack Day is an appraiser?  
 (22) A That s correct  
 (23) Q That s your Alaskan based operations right? That s how  
 (24) you Mundy Jarvis do business in Alaska Mundy Day?  
 (25) A It used to be Mundy Day Bunn Well it was originally

Vol 19 2967

- (1) lease right?  
 (2) A That may be the case Again I am - except for this  
 (3) deposition - not familiar with that work that Jack did  
 (4) Q Well you were alerted to the fact that your partner Jack  
 (5) Day had done an appraisal in Busby Island dead center in the  
 (6) middle of the stigma area at your deposition is that correct?  
 (7) A That is correct  
 (8) Q And are you telling me you haven t talked to Mr Day since  
 (9) your deposition about his conclusions?  
 (10) A I have not discussed that matter with Mr Day no  
 (11) Q Are you not interested in your partner s opinion of real  
 (12) estate values in the stigma area?  
 (13) A I - it was brought to me as a part of my deposition and  
 (14) Mr Day did some valuation work for a client and expressed his  
 (15) opinion of value and I - I don t see any reason why I should  
 (16) discuss it with Jack  
 (17) Q Well he appraised the value up in the year after the  
 (18) spill didn t he on Busby Island?  
 (19) A As I recall that was a lease and it was for a renewal of  
 (20) the lease that involved a term of five years and what he  
 (21) provided to the client was a recommendation regarding what  
 (22) the lease rate should be for a five year period of time and I  
 (23) believe that that was done like in 1990  
 (24) Q 89 or 90 but he recommended that the lease go up didn t  
 (25) he?

Vol 19 2966

- (1) Mundy Day Associates then it became Mundy Day Bunn Now  
 it s  
 (2) Mundy Day or Mundy and Associates  
 (3) Q Okay And -  
 (4) A We re flexible  
 (5) Q And Jack Day is a long time Alaska resident?  
 (6) A He has lived in Alaska for some time He is no longer a  
 (7) resident of Alaska  
 (8) Q He s an appraiser?  
 (9) A Yes  
 (10) Q Good one?  
 (11) A Yes  
 (12) Q I assume so or you wouldn t be in business with him right?  
 (13) A That s right  
 (14) Q Did your partner Jack Day have occasion to do an  
 (15) appraisal on Busby Island after the oil spill?  
 (16) A I believe Jack did The way we work is very independent of  
 (17) one another and I don t know what Jack does and Jack does  
 (18) not  
 (19) generally know what I and my staff are doing So I am - it  
 (20) seems to me that there as a part of this process I have  
 (21) become aware of or somebody has discussed with me an  
 appraisal  
 (22) that Jack did on Busby Island  
 (23) Q Came up at your deposition didn t it?  
 (24) A I believe that s correct yes  
 (25) Q Right That your partner Jack Day had done an appraisal  
 at Busby Island In connection with something called the Porter

Vol 19 2968

- (1) A That is correct  
 (2) Q And the lease was what s known as a percentage lease?  
 (3) A I can t recall if it was a percentage lease or not  
 (4) Q Well a percentage lease is a type of lease is it not  
 (5) that is a percentage of the land value correct?  
 (6) A No  
 (7) Q Well in this case on the Porter lease it was was it  
 (8) not?  
 (9) A The lease rate the annual lease rate was a percent of the  
 (10) land value yes It was like we ve done here on this exhibit  
 (11) that the jury can see It was a value that Mr Day arrived at  
 (12) for the land and he multiplied that times a rate of return  
 (13) capitalization rate to get an annual income stream  
 (14) Q And you became aware at your deposition in this case that  
 (15) Jack Day your partner had increased the appraisal on Busby  
 (16) Island either in 89 or 90 and you didn t talk to him about  
 (17) the implications of that to your appraisal?  
 (18) MR PETUMENOS I ll object I think the witness said  
 (19) 90  
 (20) BY MR OPPENHEIMER  
 (21) Q 89 or 90 whatever you did not talk to him about the  
 (22) implications of that to your appraisal?  
 (23) A That is correct  
 (24) Q Do you know of a colleague with whom you work by the  
 name  
 (25) of Vicki Adams?

Vol 19 2969

- (1) A Vicki is one of our staff members yes  
 (2) Q And in fact she has played an important role in your  
 (3) appraisal work in this case has she not?  
 (4) A She has yes sir  
 (5) Q You have relied upon work that she has done?  
 (6) A Yes  
 (7) Q She has conducted field research for you?  
 (8) A Yes  
 (9) Q She has conducted interviews for you?  
 (10) A Correct  
 (11) Q She talked to Jack Day your partner about valuations in  
 (12) this case didn't she?  
 (13) A She may have  
 (14) Q And didn't Jack Day tell Vicki Adams when she was  
 (15) interviewing him about the appraisal in this case that downward  
 (16) effects in land values to the extent they existed in Prince  
 (17) William Sound were the result of market behavior and not the  
 (18) spill?  
 (19) A I cannot recall that conversation She may well have had  
 (20) that with Jack and Jack may have expressed his opinion that  
 (21) for this Busby Island property he felt that the value was  
 (22) lower because of the - the market I don't think that Jack  
 (23) was dealing at all with the impact of the spill on property  
 (24) value and did not do any research in that area I think that  
 (25) if you called Jack as a witness and asked him if he had an

Vol 19 2970

- (1) opinion regarding the effect of the oiling on the value of  
 (2) property in Prince William Sound he'd probably say that he  
 (3) didn't have an opinion  
 (4) Q You're speculating aren't you? You never talked to him?  
 (5) A No I'm saying that that's -  
 (6) Q Dr Mundy you never talked to Jack Day about his appraisal  
 (7) on Busby Island have you?  
 (8) A That's exactly what I said  
 (9) Q And you never talked to Jack Day about what he told your  
 (10) colleague Vicki Adams have you?  
 (11) A That's correct  
 (12) Q Have you ever talked to Ms Adams about what Jack Day told  
 (13) her about the appraisal?  
 (14) A Not that I can recall  
 (15) Q Now you've told us that one of the things you've done to  
 (16) appraise this property is to go out and talk to people who are  
 (17) knowledgeable about real estate in the area that you think  
 (18) might have been affected isn't that correct?  
 (19) A That's correct  
 (20) Q But you did not talk to your own partner who had been out  
 (21) doing an appraisal and in your recollection 1990 in the very  
 (22) area you're talking to us about?  
 (23) A No I didn't personally conduct an interview with Jack to  
 (24) find out what his opinion was It might be that Vicki Adams  
 (25) did and if that is a part of the - her deposition transcript

Vol 19 2971

- (1) I would certainly ascribe to it But I would be absolutely  
 (2) amazed if Jack Day was expressing an opinion about the value  
 of  
 (3) property in Prince William Sound because of the oil spill  
 (4) Q You ever have occasion to review Vicki Adams' notes as part  
 (5) of her work with you?  
 (6) A There have been notes that I have reviewed in two  
 (7) contexts  
 (8) One there have been notes that Vicki has sent to me which  
 (9) I have certainly read  
 (10) The second is there are notes that I have reviewed as a  
 (11) part of the deposition process in the preparation for this  
 (12) trial that counsel has presented to me and asked me to review  
 (13) and comment on  
 (14) Q And sometimes the notes she gives you are in her  
 (15) handwriting?  
 (16) A That's correct  
 (17) Q You would recognize her handwriting?  
 (18) A Yes  
 (19) MR OPPENHEIMER Counsel I'd like to show the  
 (20) witness what has been marked as defendants exhibit 1614  
 (21) MR PETUMENOS Hold on a second  
 (22) MR PETUMENOS Could I have a moment to confer with  
 (23) counsel Judge?  
 (24) THE COURT Sure  
 (25) (Discussion off record between counsel)

Vol 19 2972

- (1) BY MR OPPENHEIMER  
 (2) Q Dr Mundy I show you a page of handwritten notes which  
 (3) appears to say at the top 2/4 February 4 Jack Day My first  
 (4) question - I'm sorry excuse me my first question to you is  
 (5) Do you recognize that handwriting?  
 (6) A This appears to be the handwriting of Vicki Adams  
 (7) Q Does that refresh your recollection as to whether Vicki  
 (8) Adams had a conversation with your partner Jack Day about  
 the  
 (9) effect of the oil spill on the real estate market in Prince  
 (10) William Sound?  
 (11) A I'm reading the memo right now  
 (12) It's possible that I was shown this as a part of the  
 (13) deposition process Again I take it for what it's worth and  
 (14) it's obviously a memorandum or some notes that Vicki made to  
 (15) herself as a part of a conversation that she had with Jack  
 (16) Day  
 (17) Q If I may I somehow in the course of two seconds here have  
 (18) misplaced my copy I'd like to take this back from you and put  
 (19) it on the overhead I know this is going to be very hard to  
 (20) read so let me - let me read this in  
 (21) Will send me his comps from Prince William Sound work He  
 (22) says there's such a dearth of sales in that region is the lack  
 (23) of fee and - can you read the next word? Property?  
 (24) A Fee owned properties  
 (25) Q Fee owned properties maybe five to ten total He recently

Vol 19 2973

- (1) updated his comps and searched for more to complete an
- (2) appraisal of Busby Island next to Bligh Reef No new sales
- (3) info
- (4) Subdivisions that are there are having real trouble because
- (5) of economy not oil spill You see that?
- (6) A Yes
- (7) Q Do you consider Vicki Adams to be a good colleague?
- (8) A Yes
- (9) Q You relied upon her interviews in a lot of other contexts
- (10) right?
- (11) A That s correct
- (12) Q Any reason to believe she inaccurately conveyed Mr Day s
- (13) comments?
- (14) A No
- (15) Q Having seen her - her notes here of her conversation with
- (16) Mr Day does this refresh your recollection as to whether you
- (17) ever looked up Mr Day to talk to him about his views?
- (18) A As I say I cannot recall talking with Jack Day about what
- (19) his opinion was on the real estate market in Prince William
- (20) Sound because of the spill I - Jack was not working on the
- (21) project Jack was not doing research to determine what the
- (22) impact of the spill was He was providing Vicki with his
- (23) opinion regarding the market activity around Bligh Island and
- (24) Busby Island as of February 4th It may well have been 1990
- (25) I don t know what year it was And I take that information at

Vol 19 2975

- (1) (Videotape Played)
- (2) VIDEO VOICES
- (3) Q The next page 225 do you know whose handwriting that is?
- (4) A That s mine
- (5) Q Now this states 2/4 Jack Day Do you know when you made
- (6) these notes?
- (7) A 1990
- (8) Q And do you know why you were talking to Jack Day at that
- (9) time?
- (10) A I was attempting to get insights from him regarding Prince
- (11) William Sound sales in subdivisions
- (12) Q It says in the second paragraph of - could you read that
- (13) for us? I can make out some of it not all of it
- (14) A The second paragraph?
- (15) Q Yes
- (16) A Starting He recently ?
- (17) Q Right
- (18) A He recently updated his comps and searched for more to
- (19) complete an appraisal of Busby Island next to Bligh Reef No
- (20) new sales info
- (21) Q As to that do you know if he - Mr Day - did do an
- (22) appraisal of Busby Island then?
- (23) A I don t know for sure
- (24) Q Did you make any efforts to obtain that information that he
- (25) gathered in conjunction with his appraisal of Busby Island?

Vol 19 2974

- (1) its face value I - we ve done our research and I ve formed
- (2) my opinions I believe I ve got a very sound defensible basis
- (3) for them
- (4) MR OPPENHEIMER Counsel at this time I would like
- (5) to - as the witness has not identified the date precisely -
- (6) play a video of the following transcript sections 332 lines 7
- (7) through 334 line 2 and 334 line 15 through 335 line 9
- (8) Your Honor with the Court s permission this is videotape
- (9) of Vicki Adams deposition
- (10) MR PETUMENOS Your Honor could I get -
- (11) MR KENDE Vicki Adams?
- (12) MR OPPENHEIMER That s correct
- (13) MR PETUMENOS Judge I m sure this is okay but I d
- (14) just like to -
- (15) (Videotape started then stopped)
- (16) MR PETUMENOS - the next page 335
- (17) THE COURT Turn it down
- (18) MR PETUMENOS I don t have Ms Adams deposition
- (19) transcript in court Could I confer with counsel what is going
- (20) to be read page and line?
- (21) THE COURT Sure
- (22) (Discussion off record between counsel )
- (23) MR PETUMENOS I have no objection Judge
- (24) MR OPPENHEIMER Joel do I have to back it up or -
- (25) MR GROSS Just restart it

Vol 19 2976

- (1) A Yes that was the - the comparables that he then provided
- (2) to me
- (3) Q Do you know in that appraisal that he was performing
- (4) whether he took into account any impact from the Exxon Valdez
- (5) oil spill on those property values there?
- (6) A I do not
- (7) Q Now it appears that you ve used several comps that were
- (8) confirmed by Mr Day Does Mr Day have particular experience
- (9) in the Alaska market on - with regard to recreational
- (10) properties?
- (11) A Yes
- (12) Q And can you describe generally the types of information
- (13) that you obtained from him relating to that in conjunction with
- (14) your work on the Exxon Indication?
- (15) A Largely comparable sale information some insights
- (16) Q So you had some discussion with him also?
- (17) A I may have or Bill may have
- (18) Q Is it accurate to state that you relied on the confirmation
- (19) of comparables that Mr Day did as to some recreational
- (20) properties in conjunction with your work on the Exxon Valdez
- (21) matter?
- (22) A Yes
- (23) Q Could you look at the next paragraph of what you just read
- (24) and would you read that for us please?
- (25) A Subdivisions that are there are having real trouble because

Vol 19 2977

- (1) of the economy not oil spill We may not be able to reach  
 (2) developers long gone  
 (3) Q Do you know if the developers were ever reached?  
 (4) A Some of them were not  
 (5) Q What impact did Mr Day s comments that subdivisions were  
 (6) having real problems because of economy not the oil spill have  
 (7) on the work that you were doing in looking at the market for  
 (8) recreational properties?  
 (9) A I don t know  
 (10) (Videotape Concluded)  
 (11) BY MR OPPENHEIMER  
 (12) Q Mr Mundy does any of that refresh your recollection  
 (13) whether you ever spoke with Mr Day about his opinions for real  
 (14) estate market for recreational properties in Prince William  
 (15) Sound?  
 (16) A I cannot recall discussing with Jack Day the recreational  
 (17) real estate market in Prince William Sound as a part of our  
 (18) Exxon Valdez research  
 (19) Now Jack and I frequently get together and I talk about  
 (20) what he s doing – or we talk about what one another are doing  
 (21) so there are general conversations we have had about the  
 (22) market And we ve talked in general about some of the things  
 (23) that we ve been doing in terms of the research on this  
 (24) particular matter But to the best of my recollection there  
 (25) is nothing that I have discussed with Jack regarding his

Vol 19 2978

- (1) opinions on property value on market conditions on the impact  
 (2) that the spill had on real estate value  
 (3) Q Let s switch subjects People rely on appraisals in their  
 (4) lives don t they?  
 (5) A There are people that rely on appraisals yes  
 (6) Q Banks rely on appraisals?  
 (7) A Correct  
 (8) Q When people buy and sell homes quite often appraisals are  
 (9) involved?  
 (10) A Yes  
 (11) Q The S and L debacle that s sometimes been attributed in  
 (12) part to bad appraisals which can have bad consequences  
 (13) correct?  
 (14) A That s correct  
 (15) Q Things might loan or not loan depending upon the integrity  
 (16) of an appraisal correct?  
 (17) A I don t know what you mean by the integrity of the  
 (18) appraisal I think that they may or may not make a loan based  
 (19) on the opinion of the appraiser and what the findings are as  
 (20) part of his research I would think that the lending  
 (21) institution in hiring an appraiser would hire an appraiser  
 (22) with integrity  
 (23) Q The point I m trying to get at – I want to see if you  
 (24) agree – is that it is important that appraisals be reliable to  
 (25) be used?

Vol 19 2979

- (1) A That s correct  
 (2) Q And that we can t have a system where everybody creates  
 (3) their own rules of appraisal can we?  
 (4) A I have not really given that concept any really – any real  
 (5) serious thought It makes sense that there are appraisal  
 (6) standards Appraisal Institute of which I am a member does  
 (7) have appraisal standards and I – they re good standards  
 (8) Q Why does the Appraisal Institute have standards for  
 (9) appraisers?  
 (10) A Well there are numerous reasons One of the reasons is to  
 (11) establish a framework within which appraisals are done  
 (12) Another reason is to provide confidence on the part of clients  
 (13) who retain appraisal services that when they receive an  
 (14) appraisal they will receive an appraisal that meets certain  
 (15) guidelines and is done in a certain manner  
 (16) Q And one of the things that that allows us to do is it not  
 (17) is to compare appraisals? If we re all playing by the same  
 (18) rules as appraisers we can compare one appraisal with another  
 (19) and evaluate it?  
 (20) A Well I think you could compare the appraisals without  
 (21) having certain standards  
 (22) Q But there are standards there are standards appraisal  
 (23) standards?  
 (24) A That s correct  
 (25) Q Would you tell the jury what USPAP is?

Vol 19 2980

- (1) A USPAP is an acronym that stands for Uniform Standards of  
 (2) Professional Appraisal Practice  
 (3) Q And it has some guidelines how you go about evaluating  
 (4) property right?  
 (5) A That s correct  
 (6) Q You for example – I will tell you I m not an MAI You  
 (7) sir are is that correct?  
 (8) A That s correct  
 (9) Q Tell the jury sir what is an MAI? An MAI is a  
 (10) professional designation much like AIA for architects or CPA  
 (11) for accountants and there are certain prerequisites to obtain  
 (12) the MAI designation MAI stands for Member Appraisal  
 (13) Institutes?  
 (14) MR PETUMENOS Excuse me Judge could we approach  
 (15) the bench very briefly?  
 (16) (Sidebar conference out of the hearing of the jury)  
 (17) MR PETUMENOS If this examination is going to  
 (18) appraisal standards and his appraisal – whether he conformed  
 (19) with it I have no – but if there s any kind of attempt here  
 (20) to go into complaints or professional like a bar grievance or  
 (21) anything like that I want to hear about it first  
 (22) MR OPPENHEIMER I do not intend to conduct my  
 (23) examination that way And in fact I d be perfectly happy to  
 (24) stipulate that as to your appraisers I m not going to raise  
 (25) that kind of thing As to ours you won t because people write

Vol 19 2981

- (1) letters all the time in that area There are letters on this  
 (2) witness  
 (3) THE COURT Specific complaints are not going to be  
 (4) raised by either side?  
 (5) MR OPPENHEIMER That s right  
 (6) MR PETUMENOS I m not aware Mr Dorchester is the  
 (7) only appraiser I know about Put it this way we ll both  
 (8) approach the bench before we do it  
 (9) MR OPPENHEIMER Wait a minute What s good for the  
 (10) goose is good for the gander  
 (11) THE COURT Put it this way tell everybody that s  
 (12) true  
 (13) MR OPPENHEIMER I m not going to – there are  
 (14) complaints I did not intend to go into them That s not  
 (15) the – that s not what I want to get to here But I do not  
 (16) want a situation where you know Mr Dorchester later is  
 (17) subject to that examination  
 (18) THE COURT I agree I agree And I think what  
 (19) counsel s saying nobody raises it before coming to the bench  
 (20) and that goes for every lawyer on both sides  
 (21) MR PETUMENOS Right And I – Randy –  
 (22) THE COURT Based on the issue of complaints you re  
 (23) not an appraiser and neither are they  
 (24) MR OPPENHEIMER As long as they stipulate that s  
 (25) fine

Vol 19 2982

- (1) (Sidebar concluded)  
 (2) BY MR OPPENHEIMER  
 (3) Q Dr Mundy as an MAI you are bound to follow the tenets of  
 (4) USPAP Is that correct?  
 (5) A That s correct  
 (6) Q And USPAP embodies – one of the things that it does is to  
 (7) help set the standard of appraisal techniques for the appraisal  
 (8) industry?  
 (9) A Yes  
 (10) Q Would you agree with me that you should not lightly diverge  
 (11) from standard appraisal techniques?  
 (12) A I would agree with the statement that you should not  
 (13) lightly diverge from appraisal standards yes  
 (14) Q Because one of the consequences of doing that is that every  
 (15) appraiser would start making up his or her own rules Isn t  
 (16) that right?  
 (17) A Well that is a possibility I don t know whether one can  
 (18) draw that conclusion or not  
 (19) Q Well you certainly wouldn t want to see that happen  
 (20) correct?  
 (21) A I don t know I – we re getting into sort of a  
 (22) philosophical area now and I think that one could argue that  
 (23) there should be standards that appraisals – appraisers abide  
 (24) by and that they don t diverge from those standards  
 (25) But on the other hand one could argue that divergence is

Vol 19 2983

- (1) good because that can foster change It can foster new ideas  
 (2) possibly better ideas better ways to – to deal with things  
 (3) Especially in times like we have right now where there s new  
 (4) information systems that are becoming available new  
 (5) statistical techniques new ways to analyze information  
 (6) So to have a rigorous framework and say that a appraiser  
 (7) cannot diverge from that could be a detriment to the  
 (8) profession  
 (9) Q We ve heard a lot of talk in this case about natural  
 (10) lands Natural lands is a divergence from standard appraisal  
 (11) techniques isn t it?  
 (12) A No it s not  
 (13) Q When you first started developing your natural lands  
 (14) theory you called it public lands didn t you?  
 (15) A There was research that we did and some material which I  
 (16) wrote that dealt with lands that are unique lands for example  
 (17) remote lands wilderness habitat lands as we ve discussed  
 (18) about that it would make sense to retain in the public s  
 (19) interest And in that context we discussed these lands as  
 (20) public interest lands  
 (21) Q Is the answer to my question yes though when you started  
 (22) on your way to developing your natural lands that you re  
 (23) talking to us about you called it public lands?  
 (24) A There was a very short period of time when we referred to  
 (25) those lands as lands that – that had – that were in the

Vol 19 2984

- (1) public interest to retain  
 (2) Q So the answer to my question is yes?  
 (3) A The reason that I restated or that I didn t say yes is  
 (4) that I wanted the audience here to understand what I refer to  
 (5) by public interest lands and what – how it was that for a  
 (6) very short period of time we called these unique remote  
 (7) wilderness lands lands that had a public interest associated  
 (8) with them This was a period of time where I was frankly  
 (9) uncertain as to what an appropriate land use category would be  
 (10) for these lands I didn t know whether it would be appropriate  
 (11) to call them natural lands public interest lands or  
 (12) wilderness lands But what I did call them is lands that  
 (13) should be retained in the public interest  
 (14) Q Dr Mundy isn t it the case that in March of 89 when you  
 (15) wrote to Mr Pio Park soliciting work on this case that you  
 (16) were using the terms public lands and natural lands  
 (17) interchangeably isn t that the case?  
 (18) A As I just said yes  
 (19) Q Okay now –  
 (20) A We called these lands wilderness lands too  
 (21) Q And you were a little bit concerned when you explained your  
 (22) theory to Mr Park shortly after the oil spill that he was  
 (23) going to find those ideas farfetched right?  
 (24) A I can t recall if that s the case or not  
 (25) MR OPPENHEIMER I m going to show 13023

Vol 19 2985

- (1) MR PETUMENOS Do you have a section of the letter  
 (2) counsel so I can refer to it?  
 (3) MR OPPENHEIMER The last paragraph on the first  
 (4) page  
 (5) This is like a game my son plays with  
 (6) BY MR OPPENHEIMER  
 (7) Q Now that was your letter to Mr Park in March of 89 that  
 (8) - when you were soliciting work Does that remind you that  
 (9) you had a little concern that he was going to find this  
 (10) farfetched?  
 (11) A That s what I stated there that the exchange of these  
 (12) lands may seem farfetched  
 (13) MR OPPENHEIMER Your Honor would this be a good  
 (14) time for a break?  
 (15) THE COURT Yes that s fine  
 (16) THE CLERK Please rise This court stands in  
 (17) recess  
 (18) (Jury out at 11 06 a m )  
 (19) (Recess from 11 06 a m to 11 35 a m )  
 (20) (Jury in at 11 35 a m )  
 (21) THE CLERK This court now resumes its session  
 (22) Please be seated  
 (23) BY MR OPPENHEIMER  
 (24) Q Dr Mundy I want to briefly go through the - the role  
 (25) natural lands plays in your damage analysis

Vol 19 2986

- (1) Joel can you bring up 1189 plaintiffs 1189?  
 (2) This is - you recognize this as the plaintiffs exhibit  
 (3) for English Bay Corporation?  
 (4) A Yes  
 (5) Q Have natural land 31 569 acres of natural land?  
 (6) A That s correct  
 (7) Q Just a hair under 30 million dollars of the total 43  
 (8) million dollar value?  
 (9) A Yes  
 (10) Q Joel 1190 please?  
 (11) Natural land component of Port Graham s land value over 43  
 (12) million out of 68 million correct?  
 (13) A Correct  
 (14) Q Joel 1191  
 (15) Chenega Corporation natural land almost 60 million  
 (16) dollars out of 68 million dollars correct?  
 (17) A Correct  
 (18) Q 1192  
 (19) Chugach natural land 38 little over 38 million dollars  
 (20) out of 120 million dollars correct?  
 (21) A Correct  
 (22) Q 1193 Eyak - by the way Eyak never oiled right?  
 (23) A Correct  
 (24) Q Natural land little over 15 million out of 51 million?  
 (25) A Correct

Vol 19 2987

- (1) Q And 1194 Almost 11 million out of 41 million for  
 (2) Tattilek correct?  
 (3) A Correct  
 (4) Q Okay thanks Joel  
 (5) Under your theory of natural land it s primarily the  
 (6) government that buys it Isn t that correct?  
 (7) A The government is a major part of that market that s  
 (8) correct  
 (9) Q The government sees oiling as a short term problem when it  
 (10) looks at land doesn t it?  
 (11) A If you re referring to interviews that we conducted with  
 (12) various federal agencies as a part of this assignment in  
 (13) talking about the - what their opinions were regarding these  
 (14) lands - and as you say a large part of them are natural land  
 (15) - their feelings were that the oiling would be a temporal  
 (16) thing relatively short term in relation to the long term  
 (17) ownership patterns that they have that s correct  
 (18) Q And the government organizations that would buy this land  
 (19) would acquire unique natural resource lands even if they were  
 (20) oiled because of this long term ownership attitude isn t that  
 (21) correct sir?  
 (22) A They may acquire them That is not an absolute It s -  
 (23) Q My question is -  
 (24) MR PETUMENOS Objection objection I don t think  
 (25) he should interrupt the witness

Vol 19 2988

- (1) THE COURT Had you finished sir?  
 (2) A What I was going to continue to say is is that the  
 (3) responses that we received from federal agencies was  
 (4) ambiguous There were some people who said that we would  
 (5) acquire the land even though it was - even because it was  
 (6) oiled because of the long term outlook Others indicated that  
 (7) they would not be willing to acquire it  
 (8) BY MR OPPENHEIMER  
 (9) Q Joel can you give me the overhead?  
 (10) This is page Roman III 26 of the witness report Exhibit  
 (11) Number DX15503 This is the report on Chugach  
 (12) You see the highlighted portion there sir?  
 (13) A Yes  
 (14) Q You wrote that did you not?  
 (15) A Yes  
 (16) Q The organizations would acquire unique natural resource  
 (17) lands even if oiled because of this long term ownership  
 (18) attitude You believed that when you wrote it in your report?  
 (19) A I believed it then and I believe it now  
 (20) Q Okay thank you  
 (21) Now some of the government people that you spoke with said  
 (22) they might expect a price adjustment and others said they  
 (23) wouldn t right?  
 (24) A That s correct  
 (25) Q When you were first pitching this assignment and thinking

Vol 19 2989

- (1) about how you would structure a theory of damages did you  
 (2) consider not including inland parts or parcels mountaintops  
 (3) because it was a little aggressive?  
 (4) A No I don't think that I ever did consider not including  
 (5) mountaintops Now I may have thought about to what extent  
 (6) should we include lands and where should the boundaries be  
 and  
 (7) I think that's a natural process for an appraiser to go  
 (8) through but because of the nature of the ownership pattern  
 (9) because of - of liability that is associated with  
 (10) environmentally impaired property because these lands were  
 (11) owned as a large continuous block I felt it was important to  
 (12) value the entire parcel not just a portion of it Especially  
 (13) given the nature of the real estate transaction of it we were  
 (14) using which was as you pointed out a lot of it is natural  
 (15) land and what natural land sells it's the big block of land  
 (16) the mountaintops are not part that is not sold  
 (17) Q Did you ever have discussions with Vicki Adams - whom we  
 (18) saw on that video - that you ought to take a look at whether  
 (19) you should cut back on certain types of land like mountaintops  
 (20) and be less aggressive?  
 (21) A I may have had a discussion like that with her I can't  
 (22) recall  
 (23) Q So you may have had such a discussion?  
 (24) A I may have had a discussion with her  
 (25) Q But you didn't decide to be less aggressive did you?

Vol 19 2990

- (1) A I decided that the logical ownership area - now talking  
 (2) about the nature of the ownership - would be to include the  
 (3) entire parcel And I feel that as I conveyed to the audience  
 (4) here there's a very good reason for it We discussed the unit  
 (5) rule and I discussed this is the way these lands are  
 (6) transacted  
 (7) Q You decided to be a little more aggressive and put the  
 (8) mountaintops in?  
 (9) A Well I mean - Mr Oppenheimer you can phrase it as more  
 (10) aggressive if you like If the mountaintops were not  
 (11) included there would have been very little effect on the value  
 (12) of the property and there were a lot of tradeoffs that had to  
 (13) be made I mean there were some decisions that we made  
 where  
 (14) the damages would go up There are other decisions that we  
 (15) made where the damages went down And it's a part of the  
 (16) appraisal process And it's not whether the value or damages  
 (17) are going to go up and are going to go down The important  
 (18) aspect is what is the proper way to value the property And  
 (19) for these particular types of properties they sell as large  
 (20) blocks like the Kachemak Bay State Park property and that's  
 (21) the way we value them  
 (22) Q Is there the slightest doubt in your mind by including  
 (23) inland parts of these parcels the mountaintops that the  
 (24) damages are much higher in this case than they would  
 otherwise  
 (25) be? Is there any doubt in your mind about that?

Vol 19 2991

- (1) A As I said the - because of the fact that the back lands  
 (2) are included there is more acreage and because of that the  
 (3) values are higher and consequently the damages are greater  
 (4) Q I'd like to switch subjects  
 (5) A Gosh I was kind of enjoying that subject  
 (6) Q Well you'll enjoy this subject too  
 (7) A Okay Well if I don't enjoy the subject can I just take  
 (8) a recess?  
 (9) MR PETUMENOS I don't know when to object Judge  
 (10) The question and answer thing has sort of gone away  
 (11) BY MR OPPENHEIMER  
 (12) Q Can you see that Dr Mundy?  
 (13) A Half of it  
 (14) Q Half of it Well - I think with all of this I could get  
 (15) this right Is that better?  
 (16) A Well I think that the break in it is becoming more and  
 (17) more pronounced but -  
 (18) Q How's that?  
 (19) A That's fine  
 (20) Q Well I may move it around so others can see  
 (21) MR PETUMENOS He can come down counsel that's  
 (22) fine  
 (23) MR OPPENHEIMER Is your back all right?  
 (24) A Oh sure my back is fine  
 (25) MR PETUMENOS Probably be easier

Vol 19 2992

- (1) MR OPPENHEIMER Now I have hemmed you in haven't  
 (2) I?  
 (3) BY MR OPPENHEIMER  
 (4) Q Now we talked earlier about the Kachemak Bay State Park  
 (5) You had rendered appraisal services in connection with certain  
 (6) property involved in that park is that correct?  
 (7) A That's correct  
 (8) Q And you rendered an appraisal on about a 24,000-acre  
 parcel  
 (9) that the Seldovia Native Association ultimately sold to the  
 (10) State of Alaska as part of the - of that park is that  
 (11) correct?  
 (12) A That's correct  
 (13) Q Point out to us if you would where that property is  
 (14) A That property would be located in this area right in here  
 (15) Q Okay thank you You can take your seat Watch out for  
 (16) the cord Great I'll get this out of your way  
 (17) So once again we're on the south side of Kachemak Bay  
 (18) stigma territory right?  
 (19) A That's correct  
 (20) Q And in fact Seldovia is suing Exxon in another case and  
 (21) you've rendered an opinion that they've been damaged as a  
 (22) result of the oil spill Is that correct?  
 (23) A That's correct  
 (24) Q That property that we're talking about do I have it right  
 (25) in here?

Vol 19 2993

- (1) A Yes  
 (2) Q In here Okay  
 (3) Now before you rendered the opinion for Seldovia in its  
 (4) lawsuit against Exxon you rendered an opinion in connection  
 (5) with their efforts to sell their land to the State of Alaska  
 (6) is that correct?  
 (7) A That s correct  
 (8) Q And that appraisal was to be used by them to negotiate the  
 (9) highest price they could get is that correct?  
 (10) A That is correct  
 (11) Q And what was the date of the first appraisal you did for  
 (12) Seldovia when it was selling its land to Alaska that  
 (13) assignment?  
 (14) A I cannot recall when it was I think it may have been in  
 (15) 1991 Maybe you can refresh my memory  
 (16) MR OPPENHEIMER Counsel I m going to show the  
 (17) witness exhibit 12836 Valuation of Seldovia Native Association  
 (18) Inholdings Kachemak Bay State Park  
 (19) BY MR OPPENHEIMER  
 (20) Q Does that refresh your recollection?  
 (21) A Yes  
 (22) Q When did you do the appraisal in connection with the sale?  
 (23) A This appraisal is as of September 1989  
 (24) Q September 1989 some months after the oil spill?  
 (25) A That s correct

Vol 19 2994

- (1) Q Any reference in there to stigma damage?  
 (2) A No  
 (3) Q Did you do a subsequent appraisal for – well again this  
 (4) is in connection with their sale of the property correct?  
 (5) A That s correct  
 (6) Q So September 1989 no stigma  
 (7) Did you do a subsequent report for Seldovia in its – by  
 (8) the way – well it doesn t – did you do a subsequent  
 (9) appraisal for Seldovia in connection with its sale of this land  
 (10) to the State of Alaska?  
 (11) A Well this was part of that – the purpose with which we  
 (12) did this September 1989 appraisal was for the sale of the land  
 (13) to the State and then there were a number of revisions that  
 (14) were done subsequently  
 (15) Q I m sorry I didn t understand the answer Did you do a  
 (16) subsequent appraisal for Seldovia in its sales activity with  
 (17) the State?  
 (18) A Yes in the same context this appraisal was done  
 (19) Q I understand The – do you remember what date that had?  
 (20) A I can t remember what date it was  
 (21) MR OPPENHEIMER Counsel showing the witness exhibit  
 (22) – defendants 12839 Supplementary Valuation of Seldovia  
 (23) Native Association Inholdings Kachemak Bay State Park  
 (24) A This appraisal is as of November 10th 1989  
 (25) BY MR OPPENHEIMER

Vol 19 2995

- (1) Q Any reference in there to stigma?  
 (2) A I would have to review the appraisal but I don t think  
 (3) that there is any reference in this appraisal to stigma or the  
 (4) oiling  
 (5) Q Then did there come a time when you did an appraisal – by  
 (6) the way if you had found stigma in either of these appraisals  
 (7) your appraisal would have been lower correct?  
 (8) A If we were doing this appraisal on analyzing the effect  
 (9) that the oiling had on the value during this one year period of  
 (10) time there would have been a difference in value I think  
 (11) that it s important to understand the purpose of the  
 (12) appraisal  
 (13) Q Well we ll get to the purpose in a second But first  
 (14) please just answer my question If you found stigma in a  
 (15) September 89 appraisal for Seldovia or the November 89  
 (16) appraisal for Seldovia they would have received less money  
 (17) from the State of Alaska in the negotiations wouldn t they?  
 (18) A I doubt it  
 (19) Q They would have had a lower appraisal to use in  
 (20) negotiations isn t that correct?  
 (21) A If we would have – it depends on the time frame that one  
 (22) is talking about and the assumptions under which the appraisal  
 (23) is made And if the State and if the Seldovia Native  
 (24) Association had agreed that the appraisal should reflect the  
 (25) very short term effect of the oiling on the value of the

Vol 19 2996

- (1) property then that would have been something that we would  
 (2) have taken into consideration as a part of this  
 (3) Q Are you telling me that the client tells you what to do  
 (4) with contamination they tell you how to take it into effect?  
 (5) A The client does not necessarily tell us what to do  
 (6) However oftentimes a client will ask an appraiser to provide  
 (7) a appraisal based on certain assumptions  
 (8) Q Did the Seldovia Native Association ask you to ignore the  
 (9) oiling in these two appraisals?  
 (10) MR PETUMENOS Excuse me I m not sure whether the  
 (11) witness was finished Mr Oppenheimer  
 (12) A I can t recall if that – if there were instructions from  
 (13) the Seldovia Native Association not to include the effect of  
 (14) oiling or not The fact of the matter is Is that the impact  
 (15) of oiling was not included  
 (16) BY MR OPPENHEIMER  
 (17) Q Just so we re clear this is all after the spill remind  
 (18) everyone the spill was in March of 89  
 (19) A That is correct  
 (20) Q And for the periods September and November 1989 you re  
 (21) here telling this jury that based on your analysis they  
 (22) should award tens of millions of dollars against Exxon because  
 (23) land was damaged in the stigma area isn t that correct?  
 (24) A Well now what we re dealing with as a part of our  
 (25) valuation analysis are lands owned by Port Graham English  
 Bay

Vol 19 2997

- (1) Chenega and other corporations What we re talking about here
- (2) is a Seldovia Native Association which is not a matter of this
- (3) trial
- (4) Q Excuse me but are you saying that whether the land is
- (5) damaged by oiling has to do with whether Seldovia owns it or
- (6) Eyak owns it or English Bay owns it or I own it? It s damaged
- (7) or it s not isn t it?
- (8) A That s correct
- (9) Q Okay for Seldovia?
- (10) A You can look at it as if it s damaged or not
- (11) Q I m sorry?
- (12) A You can value it as if it s damaged or not For example -
- (13) Q Are you telling me when you sold - when you were
- (14) participating with negotiations with the State of Alaska you
- (15) just pretended it wasn t damaged?
- (16) A It was valued as if it was not damaged that s correct
- (17) Just as we valued all of the subject properties on an
- (18) unimpaired basis We valued them on an unimpaired basis as if
- (19) they were not oiled and then we went a second step in
- (20) essence a second appraisal We took into consideration the
- (21) nature of the impairment and we valued them on an impaired
- (22) basis
- (23) Q Yes But Dr Mundy you valued the land here in an
- (24) unimpaired basis before the oil spill correct? Your
- (25) unimpaired values before this jury are the values that you

Vol 19 2998

- (1) start with as part of your analysis before the oil spill?
- (2) A That s correct We ve specifically stated -
- (3) Q There s no doubt - there s no doubt that in September and
- (4) November of 89 you re telling this jury that tens of millions
- (5) of dollars worth of damage have been done to the property of
- (6) the plaintiffs here as a result of the oil spill No doubt
- (7) about that is there?
- (8) A Tens of millions of dollars on the subject properties?
- (9) Q Correct
- (10) A That s correct
- (11) Q Okay Now there came a time however when you switched
- (12) gears on Seldovia when they too became a plaintiff isn t
- (13) that correct
- (14) A We didn t switch gears
- (15) MR PETUMENOS I object to the form of the question
- (16) as argumentative
- (17) THE COURT Objection s sustained Restate it
- (18) BY MR OPPENHEIMER
- (19) Q There came a time when you rendered a valuation for
- (20) Seldovia that was not to get the highest price for the sale of
- (21) the property for park land but rather to get the highest
- (22) damages as a plaintiff in a lawsuit is that correct?
- (23) A That s not correct
- (24) Q You never rendered?
- (25) A We have - we have done two appraisals - or sets of

Vol 19 2999

- (1) appraisals two sets of appraisals for the Seldovia Native
- (2) Association One of those was on the lands that the State
- (3) acquired for the Kachemak Bay State Park That was to assist
- (4) them in their negotiations with the State to arrive at a value
- (5) for that transaction
- (6) The second appraisal that we have done for the Seldovia
- (7) Native Association was for the purpose of assisting them in
- (8) understanding the extent to which their property was damaged
- (9) because of the oil spill Two separate appraisals two
- (10) separate purposes
- (11) Q We agree there Isn t it the case that every appraiser is
- (12) under the standard appraisal techniques when doing an
- (13) appraisal
- (14) to disclose and where appropriate discuss contamination on
- (15) property?
- (16) A Yes
- (17) Q And didn t you know when you rendered your appraisals in
- (18) September of 89 and November of 89 for Seldovia as a seller
- (19) to the State that their property was heavily contaminated
- (20) and/or stigmatized by the oil spill?
- (21) A It was not heavily contaminated At that point in time
- (22) there was very considerable uncertainty as to the nature of the
- (23) oiling There was substantial research that we had to
- (24) undertake after we started valuing Seldovia Native
- (25) Association s property to assist them in understanding the
- (26) impact of the oiling Substantial research that we had to do

Vol 19 3000

- (1) to arrive at a conclusion as to whether the property was oiled
- (2) or not and if the oiling had been extensive enough to cause an
- (3) effect on value
- (4) Q So you re saying that in the September and November 89
- (5) appraisals you were sufficiently uncertain whether there was
- (6) any effect from the oil that you didn t mention a word of it to
- (7) the people at the State with whom you were negotiating?
- (8) A The oiling on the Kachemak Bay state property if there was
- (9) any was not mentioned in these appraisals that s correct
- (10) that was done for the State
- (11) Q Now prior to these appraisals - prior to these appraisals
- (12) you were once again soliciting to work as an expert on a
- (13) damage case on those properties in Seldovia isn t that
- (14) correct?
- (15) A In the Seldovia Instance we did not solicit as you define
- (16) it work Seldovia Native Association came to us and asked us
- (17) to provide them with appraisal services The services were
- (18) unsolicited
- (19) MR OPPENHEIMER Counsel I m going to put on the
- (20) Elmo defendants 13027
- (21) MR PETUMENOS Let me stay with you counsel
- (22) MR PETUMENOS I m sorry Judge I don t understand
- (23) the foundation for this exhibit
- (24) MR OPPENHEIMER This is cross examination Your
- (25) Honor this is a letter written by Mr Mundy

Vol 19 3001

- (1) THE COURT May I see it?  
 (2) MR OPPENHEIMER Yes Your Honor  
 (3) (Discussion off record at the bench)  
 (4) BY MR OPPENHEIMER  
 (5) Q Dr Mundy do you recognize this as - this is defendants  
 (6) exhibit 13027 - as a letter that you wrote to Mr Fred Elvsass  
 (7) of the Seldovia Native Association in June of 1989?  
 (8) A I can't make out the date but if it's June of 1989 I will  
 (9) accept that  
 (10) Q Let me give you -  
 (11) A Looks like it's to Fred Elvsass  
 (12) Q Let me give you a clean copy so there's no doubt I'm  
 (13) handing the witness exhibit 13027  
 (14) A Thank you Yes this is a letter dated June 16th 1989 to  
 (15) Fred Elvsass It's a three page letter signed Mundy and  
 (16) Associates and I signed it Bill  
 (17) Q Who wrote it?  
 (18) A I wrote this letter  
 (19) Q And you're telling Mr Elvsass who's property in September  
 (20) and November of '89 you say nothing about having any stigma  
 (21) that he should consider - in fact there's a reasonable  
 (22) probability that there are real property value effects of an  
 (23) adverse nature caused by the oil spill?  
 (24) A That's correct  
 (25) Q So in June long before these two appraisals with - where

Vol 19 3002

- (1) you don't say a word about stigma - you're communicating with  
 (2) the property owners on that property on the subject matter of  
 (3) the potential damage to them from the oil spill?  
 (4) A That is correct  
 (5) Q But there's not a word about that in the two appraisals  
 (6) that form part of the negotiations between Seldovia and the  
 (7) State of Alaska for 24 000 acres to be bought for park land?  
 (8) A That's correct  
 (9) Q Let's get back to the fact that there came a time when you  
 (10) rendered an appraisal for Seldovia not in their capacity as  
 (11) someone selling land to the State but in their capacity as a  
 (12) plaintiff against Exxon correct?  
 (13) A Are you asking me if we provided appraisal services to  
 (14) them?  
 (15) Q Yes I am  
 (16) A In that regard?  
 (17) Q Yes  
 (18) A Yes  
 (19) Q And you found damage there didn't you?  
 (20) A Yes  
 (21) Q You found stigma damage?  
 (22) A That's correct  
 (23) Q Do you remember the date of that?  
 (24) A I do not  
 (25) MR OPPENHEIMER Counsel I'm going to show the

Vol 19 3003

- (1) witness the front page of defendants exhibit 15495  
 (2) BY MR OPPENHEIMER  
 (3) Q Dr Mundy does this refresh your recollection of when you  
 (4) did an appraisal for Seldovia in their capacity as a plaintiff?  
 (5) A This is a cover sheet from a limited appraisal report on  
 (6) SNA Cook Inlet lands It's dated April 12th 1991 and there  
 (7) are just a few pages of the document that are here  
 (8) Q You recognize them as pages from your appraisal?  
 (9) A Yes  
 (10) Q What's the as of date?  
 (11) A April 12th 1991  
 (12) Q And now there's stigma on the property?  
 (13) A This as it - as I stated it's a limited appraisal  
 (14) report and it's a preliminary estimate of what the damage may  
 (15) be to the Seldovia Native Association lands based on a very  
 (16) limited amount of anecdotal information that we had received  
 (17) Q You're saying you're still uncertain whether there's stigma  
 (18) on that land with an appraisal date of April '91?  
 (19) A I think that in April of '91 I was probably fairly certain  
 (20) that the stigma was that there was stigma and that the stigma  
 (21) was going to have an impairing effect on the marketability of  
 (22) property in the Kenai Peninsula area However I was at this  
 (23) point in time still uncertain as to how far into Cook Inlet  
 (24) that stigma might go  
 (25) There had not been any formalized research that had been

Vol 19 3004

- (1) done - for example SCAT teams doing segment analysis  
 doing  
 (2) beach walks and this type of thing - of the properties that  
 (3) are involved with the Seldovia Native Association And there  
 (4) was anecdotal information that we had from a number of people  
 (5) who indicated that there had been some oiling  
 (6) I had spent time with Fred Elvsass walking the beaches  
 (7) attempting to find evidence of oil and was not able to  
 (8) Consequently this limited appraisal report is based on the  
 (9) assumption that there was limited oiling and that there was a  
 (10) stigma  
 (11) Now then In dealing with the Seldovia Native Association  
 (12) valuation analysis that we did to help them in determining the  
 (13) damages - if you'll bear with me - we did exhaustive research  
 (14) subsequent to this date to carefully document the nature of the  
 (15) oiling that had taken place in Cook Inlet And after that  
 (16) research that is when I concluded that a buyer doing diligent  
 (17) research to make sure that he was looking after his interests  
 (18) in buying property would have discovered that there was oil  
 (19) that there was uncertainty amount - in terms of the amount of  
 (20) oil where it was and that it would be justifiable or one  
 (21) would be justified in using the stigma period of one year after  
 (22) the oil spill  
 (23) Q Well you mean you don't reach the determination that  
 (24) there's a one year stigma until two years after the spill?  
 (25) A It was even later than two years after the spill before I

Vol 19 3005

- (1) was convinced that there was – had been enough evidence to  
 (2) arouse an adequate amount of uncertainty on the part of a  
 buyer  
 (3) that would influence his decision making process causing him  
 (4) to either decide not to lease or decide not to buy the  
 (5) property but to go someplace else and make that acquisition  
 (6) somewhere else  
 (7) Q Well tell me Dr Mundy between March of 89 and April  
 (8) 12 91 when there s still some doubt in your mind about  
 (9) whether these properties are stigmatized would you be certain  
 (10) and happy and willing to buy and use them?  
 (11) A Now we re talking about the Seldovia Native Association  
 (12) property is that –  
 (13) Q Sure yes  
 (14) A I think that during the period from March of 1989 until  
 (15) around March of 1990 – when there was very significant  
 (16) clean up activity taking place tremendous amount of press  
 (17) coverage – that a buyer would have been very cautious about  
 (18) buying real estate in this area And that they would have done  
 (19) one of two things They may have decided to go someplace  
 else  
 (20) or to defer making a decision or secondly they may have  
 gone  
 (21) ahead and made the acquisition but at a reduced price to  
 (22) account for the risk that they would be assuming  
 (23) Q So you think there was some stigma in September and  
 (24) November 89?  
 (25) A I think that that – the area in the period after 1989 was

Vol 19 3006

- (1) stigmatized  
 (2) Q But not a word about it in the appraisals in the State  
 (3) negotiations?  
 (4) A That is correct And as I stated the – it was not until  
 (5) quite late – and this is probably 1992 1993 – where we had  
 (6) done the research to adequately serve as a basis for concluding  
 (7) that a one year stigma would be justified  
 (8) Q Would you turn to the third page of what I ve handed you?  
 (9) And it will show page 13 at the top  
 (10) Now this is part of a table is it not from your  
 (11) appraisal showing damage estimates for Seldovia s lands is  
 (12) that correct?  
 (13) A That is correct  
 (14) Q Would you look down until you – well you ll see two  
 (15) entries for KBSP?  
 (16) A Yes  
 (17) Q That s the Kachemak Bay State Park land correct?  
 (18) A That s right  
 (19) Q Now in each case interestingly in the damage appraisal  
 (20) there s a zero next to that isn t there?  
 (21) A That is correct  
 (22) Q Still no number for the stigma on Kachemak Bay State Park  
 (23) land the land that s being discussed for sale to Alaska  
 (24) correct?  
 (25) A That is correct

Vol 19 3007

- (1) Q Right And the land had not sold as of this report yet  
 (2) had it?  
 (3) A No  
 (4) Q Still negotiating with the State over whether to buy that  
 (5) land and what price to pay for it right?  
 (6) A That s correct  
 (7) Q Dr Mundy the moment those sales closed you put a  
 number  
 (8) where that zero is isn t that true? You issued a supplemental  
 (9) appraisal and suddenly there was a damage number there?  
 (10) A Well I don t understand the nature of the question The  
 (11) date – the time that the sales closed that is when the State  
 (12) acquired the property from Seldovia?  
 (13) Q No you didn t associate a damage number from the oil spill  
 (14) with the lands that were being sold to Alaska until the deal  
 (15) closed until after the deal closed with Alaska isn t that  
 (16) true?  
 (17) A The Kachemak Bay State Park transaction closed in  
 September  
 (18) of 1993 and as I just discussed it was in 1992 or 1993 that  
 (19) we had finally done an adequate amount of work for Seldovia  
 (20) Native Association so we felt confident there would have been  
 (21) a one year stigma on that property  
 (22) Q The sale with the State of Alaska of the Kachemak Bay State  
 (23) Park lands closed in September of 1993 correct?  
 (24) A That s correct  
 (25) Q And in October of 1993 barely a month later lo and

Vol 19 3008

- (1) behold in your damage report in this case – which I m about  
 (2) to show you in case you ve forgotten – there s a damage figure  
 (3) for those lands isn t that correct  
 (4) MR PETUMENOS I object to this –  
 (5) A For the Kachemak Bay State Park –  
 (6) THE COURT Hold on Hold on  
 (7) MR PETUMENOS Just for clarification I ll object to  
 (8) this case The Seldovia Association indication is not this  
 (9) case I don t want the jury to be confused  
 (10) THE COURT I think the jury understands  
 (11) MR OPPENHEIMER I m not referring to those lands  
 (12) I m referring to the damage for the lands in the area  
 (13) BY MR OPPENHEIMER  
 (14) Q Would you identify – if you would just read from the  
 (15) bottom of that page of your report in this case  
 (16) A The number is NCX00191676  
 (17) Q And that shows a damage figure for lands in the same area  
 (18) of the lands that were sold to the State as part of the  
 (19) Kachemak Bay State Park is that correct?  
 (20) A This is a spread sheet for the Kachemak Bay State Park  
 (21) lands  
 (22) Q And the first time a damage figure is put to that is in  
 (23) October 1993 isn t that correct?  
 (24) A No  
 (25) Q When was the first time the damage figure was put next to

Vol 19 3009

- (1) it?
- (2) A Well I don't recall when the first time a damage number
- (3) was put to that land. As I indicated the research this
- (4) report the report that you just provided to me was a part of
- (5) the study that had been going on for quite some period of
- (6) time. And the limited appraisal report which you have
- (7) provided to me its exhibit 15495 is dated April 12th 1991
- (8) Q And it has no damage figure in it?
- (9) A At that point in time there was no damage number that we
- (10) associated with the Kachemak Bay State Park and there are a
- (11) number of other lands too where we had no damage number
- (12) associated with them
- (13) Q And the first time -
- (14) A And as I indicated we were - we did a substantial amount
- (15) of additional research in this area to attempt to determine -
- (16) or to determine the degree to which the market may have been
- (17) affected because of the oiling. This was sort of on the edge
- (18) in terms of where in my opinion market behavior would
- (19) change. And there was a substantial amount of research that I
- (20) wanted to do to make sure that I could justify a stigma or
- (21) effect on the value of property during that - during some
- (22) period of time. And this would have been from March of 1989
- (23) through March of 1990 the one year period
- (24) Q So the first time that you published to the world a damage
- (25) figure on lands that are in the area of the lands that were

Vol 19 3010

- (1) sold to the State for the Kachemak Bay State Park was after the
- (2) sale to Alaska closed?
- (3) A That happens to be when that report was dated. The
- (4) research that we had done for that report took several years to
- (5) do and that research was ongoing. To suggest that in October
- (6) of 1992 - or whatever that report is - we're all of the
- (7) sudden (snaps fingers) like that assigned a stigma to that
- (8) property and came up with a value is you know absurd
- (9) MR OPPENHEIMER No further questions Your Honor
- (10) THE COURT Counsel?
- (11) MR PETUMENOS Your Honor we have been in session
- (12) about an hour my redirect will go smoother and more quickly if
- (13) I can review my notes
- (14) THE COURT Sure that's fine I'll give you a break
- (15) THE CLERK Please rise This court stands in
- (16) recess
- (17) (Jury out at 12 22 p m)
- (18) (Recess from 12 22 p m to 12 37 p m)
- (19) (Jury in at 12 37 p m)
- (20) THE CLERK This court now resumes its session
- (21) Please be seated
- (22) REDIRECT EXAMINATION OF WILMER H MUNDY
- (23) BY MR PETUMENOS
- (24) Q First of all Dr Mundy just so the jury has some idea
- (25) what all the documents and records that have been pulled up

Vol 19 3011

- (1) here in the course of your cross examination how many days
- (2) were you in deposition by Exxon total do you have any idea?
- (3) A Fourteen
- (4) Q Fourteen days of deposition. And how many pages of
- (5) documents were created in the course of these appraisals how
- (6) many back up documents how much paper are we talking
- (7) about
- (8) here?
- (9) A Well there was thousands and thousands of pages I mean
- (10) if you're talking about my deposition transcript that's
- (11) probably better than a thousand pages and then all of the
- (12) exhibits that went along with it there must be - I don't
- (13) know 20 to 30 legal size or long boxes of material which we
- (14) had in our office they dealt with
- (15) Q You've been asked lots of questions about this?
- (16) A Yes
- (17) Q We're almost done okay?
- (18) This issue of there not being any money changing on the
- (19) charts you know we had the Chenega Island numbers on the
- (20) chart
- (21) that we all went through together during the direct
- (22) examination and they brought up Growler Island as another
- (23) one. Were there work sheets to come up with damage
- (24) numbers do
- (25) you remember those?
- (26) A Yes
- (27) Q A point was made on cross examination that there's no
- (28) actual money that was paid back and forth that appears on that

Vol 19 3012

- (1) chart and I want to ask you a hypothetical question if I
- (2) could
- (3) Let's assume that I own a house and I've lived in it for a
- (4) long time and I want to stay living in it for a long time and
- (5) somebody spills a contaminant all over my property and I'm
- (6) pretty mad and I want to find out how much I'm owed for that
- (7) event. How would you go about determining first of all how
- (8) much my property was worth at the time that somebody spilled
- (9) gunk all over it?
- (10) A Well to determine how much it was worth we would search
- (11) for sales transactions that have taken place of properties
- (12) similar to yours. We would compare those sales to your
- (13) property and arrive at a value
- (14) Q And if it were to be the case that the property wasn't
- (15) going to have gunk on it forever how would you go about
- (16) determining how much of my value of my property was lost if it
- (17) was going to come back to normal? What would you do?
- (18) A Well one would - since we're talking about a temporary
- (19) damage problem one would need to establish an income
- (20) stream
- (21) for the property deal with it as if you had - were renting
- (22) the property or you had the property rented to somebody else
- (23) And so we would figure out what the rental value of the
- (24) property is on a hypothetical basis and determine to what
- (25) extent that income stream had been impaired
- (26) Q But I haven't sold the property so no money has changed

Vol 19 3013

- (1) hands I m still living in it right?  
 (2) A That s correct  
 (3) Q And I haven t rented the property so no rent has been  
 (4) collected by me because my children are living in it and we re  
 (5) continuing on as we always have is that right?  
 (6) A That s correct  
 (7) Q And then when I want to get a cash settlement now for all  
 (8) the period of time that the property may have gunk on it into  
 (9) the future you have to do some calculations to be fair about  
 (10) how much money I receive now given the fact that the damage  
 (11) may not have accrued yet?  
 (12) A That is correct We have to forecast what may happen into  
 (13) the future  
 (14) Q And that s what all this business was about discounting to  
 (15) present value and the four columns that you had and so forth  
 (16) right?  
 (17) A That is correct  
 (18) Q And when I go through that exercise living in my house and  
 (19) never moving away none of those numbers will be actually  
 (20) cash  
 (21) exchanging back and forth Isn t that so?  
 (22) A That s correct  
 (23) Q Now let s go to this Growler Island business this - this  
 (24) lease that went up in value I was carefully taking notes at  
 (25) that part and looking at the transcript It seems that in  
 (26) 1988 there were 6 400 people who came to Growler Island and

Vol 19 3014

- (1) Chugach got two dollars a head is that what you understand?  
 (2) A Yes  
 (3) Q But in 1999 It went up to 6 562 people and so -  
 (4) THE COURT Wrong year counsel  
 (5) BY MR PETUMENOS  
 (6) Q 1989 6 562 people so it went up from 6 400 to 6 562  
 (7) right?  
 (8) A That s correct  
 (9) Q And they got two dollars more per person for each of those  
 (10) additional people right?  
 (11) A That s correct  
 (12) Q So how much money in this 11 million gallon oil spill did  
 (13) the Chugach Alaska Corporation receive more in 1989 than in  
 (14) 1988?  
 (15) A Well give me the two numbers again and I ll -  
 (16) Q 6 562 6 400 was the previous year and it s two dollars a  
 (17) head?  
 (18) A That would be about \$320  
 (19) Q So what we spent 20 minutes on in court here was the fact  
 (20) that on a small lease here on Growler Island the Chugach  
 (21) Alaska Corporation made an additional \$240?  
 (22) A \$320  
 (23) Q I m sorry excuse me \$320 All right  
 (24) How much of Growler Island is covered by this lease do you  
 (25) know?

Vol 19 3015

- (1) A A very small part  
 (2) Q And how much of the oil spill area are covered by leases  
 (3) like this?  
 (4) A Very very very small part  
 (5) Q We talked about - I think people were talking about a  
 (6) place called Jackpot Bay But I think the real place is Paddy  
 (7) Bay and this was the thing that Mr Fortier so skillfully  
 (8) negotiated for Chenega do you remember that testimony?  
 (9) A Yes  
 (10) Q Are you aware about how much money is involved in the  
 (11) license at that location? Is it thousands is it hundreds?  
 (12) A It s like \$1 200 per year something like that  
 (13) Q And Mr Fortier apparently negotiated that lease up in some  
 (14) amount Do you know whether that was in -  
 (15) A Several hundred  
 (16) Q So Chenega made several hundred dollars more in that  
 (17) location?  
 (18) A Yes  
 (19) Q And that particular lease area is a large part or a small  
 (20) part of that property?  
 (21) A Again a very very small part  
 (22) Q So we re now up to \$500 for this 11 million dollar -  
 (23) 11 million gallon oil spill right?  
 (24) A Yes  
 (25) Q Now there were some questions about this letter that was

Vol 19 3016

- (1) written to Mr Park and the fact that you had made some - you  
 (2) thought it highly probable that there were some real estate  
 (3) impacts from the Exxon Valdez within ten days of the spill  
 (4) Could you tell the jury how the electronic - the TV media that  
 (5) you had looked at compared say with the video that we  
 (6) showed  
 (7) with the jury when we were talking about the severity of the  
 (8) persistence you know the one where the fellow s scooping up  
 (9) the oil - did you see when you made your conclusion a film of  
 (10) a comparable nature?  
 (11) A Yes I did  
 (12) Q Fair amount of it?  
 (13) A A large amount of it  
 (14) Q At that time that you were seeing that film tell the jury  
 (15) a little bit about what your experience had been in looking at  
 (16) other contaminated properties and knowing how those  
 (17) evaluations  
 (18) came out in other situations at the time that you saw that film  
 (19) and reached that conclusion  
 (20) A There were a number of contamination issues contaminated  
 (21) property matters that we were working with during that period  
 (22) of time or had recently completed One of them was a  
 (23) situation that is very close to home right here It s in  
 (24) Peters Creek and there was a service station tank an  
 (25) underground tank that had ruptured in the Peters Creek area  
 (26) and  
 (27) this had gone undetected for quite some period of time A  
 (28) plume had resulted

Vol 19 3017

(1) Water in the area was contaminated actually came up in  
 (2) some of the people s wells in Peters Creek and there was a lot  
 (3) of uncertainty as to where the contamination was and where it  
 (4) was going to be going where it might end up It caused a  
 (5) complete disruption in the market Even after the municipality  
 (6) extended water into the Peters Creek area there was still a  
 (7) substantial stigma and uncertainty regarding the value of  
 homes  
 (8) and what the effect was going to be The marketability of the  
 (9) homes dropped way off It was very difficult to sell homes  
 (10) Values dropped That was one job that we were working on  
 right  
 (11) during this period of time  
 (12) We had just also completed a large project down in Oregon  
 (13) that dealt with the relocation of a site where there was low  
 (14) level radioactive material and there was a new storage site  
 (15) that was developed as a part of this It was not properly  
 (16) built There was contaminated water that resulted It went  
 (17) into a farming area contamination was found in the milk of  
 (18) dairy cattle The entire area had to - all of the cows had to  
 (19) be disposed of all of the milking had to stop and the stigma  
 (20) was so bad that farmers in this entire area couldn t even sell  
 (21) their hay  
 (22) And so those are a couple of examples of research that we  
 (23) had been working on or were working on that dealt with  
 (24) hydrocarbons the way people perceive these problems and  
 how  
 (25) they react to them

Vol 19 3018

(1) Q Dr Mundy was it common sense when you saw the film of  
 (2) the Exxon Valdez and the oil washing up on the shores in the  
 (3) concentrations that you observed that there was going to be an  
 (4) impact to the real estate market when you saw that - that  
 (5) film in your view?  
 (6) A Yes  
 (7) Q Now we talked about a place called Onion Bay You started  
 (8) to explain to the jury - and I wanted to see if you could  
 (9) complete your answer - that this was an auction situation?  
 (10) A That s correct  
 (11) Q Explain to the jury what was going on there with respect to  
 (12) this notion that all of this property sold in a big hurry  
 (13) A Well this was an area on Kodiak Island where there was a  
 (14) small amount of land that the borough owned and they had  
 some  
 (15) problems with squatters on the land - people who were using  
 (16) the land that didn t own it - and so they decided that the  
 (17) best thing to do was to go ahead and dispose of it And being  
 (18) a public body they thought that the fairest way to handle the  
 (19) disposition would be at an auction sealed bids  
 (20) They were going to - or the sale had been scheduled for  
 (21) May of 1989 but because of the spill and all of the  
 (22) uncertainty the borough decided to postpone the spill (sic) -  
 (23) they postponed it to November of 1990 and in November of 90  
 (24) they had the auction  
 (25) The people who were the squatters on the property were

Vol 19 3019

(1) informed of the auction There were five lots that were  
 (2) available There were bids that were submitted on four of the  
 (3) five lots On three of the five lots the only bids that  
 (4) were - I m sorry two of the five lots the only bids that  
 (5) were received were from people who were - actually had been  
 (6) using the land some of the squatters and then one of - a  
 (7) third squatter also had submitted a bid on one of the  
 (8) properties and another person outbid him and so he went to  
 (9) the counter and purchased the last lot  
 (10) So what happened was that there were five lots that were  
 (11) sold all sold at the same time Three of them were sold to  
 (12) people who were already on the land and had been using it for  
 (13) some time The borough made the sale to eliminate this  
 (14) problem The other two were sold to people who wanted to  
 build  
 (15) cabins on the property and had been attempting to acquire the  
 (16) property for some time as a cabin site  
 (17) Q Very good evidence in your opinion Dr Mundy that the  
 (18) oil spill didn t have any effect on property?  
 (19) A It s certainly evidence that the Kodiak Borough didn t want  
 (20) to try to sell the property during this period of time when  
 (21) there was a lot of uncertainty And it s I think a sale  
 (22) situation where there are some very unique circumstances  
 under  
 (23) which the transaction took place  
 (24) Q And what is the - what is the result of these unique  
 (25) circumstances? Why is that important to know?

Vol 19 3020

(1) A Well it s important to know the circumstances under which  
 (2) the sale took place so you know whether it s an arm s length  
 (3) transaction or not whether it s something you can do your  
 (4) value on  
 (5) Q And this one has attributes to it that make it suspect in  
 (6) that regard?  
 (7) A That s correct  
 (8) Q Now Port Fidalgo do you know what s going on there?  
 (9) A Yes  
 (10) Q Tell the jury  
 (11) A Well there are two different properties in Port Fidalgo  
 (12) One of the properties is at Two Moon Bay This is a property  
 (13) that is owned by the Tattilek Corporation and they conveyed to  
 (14) their shareholders lots in this subdivision And part of the  
 (15) conveyance agreement was that the corporation would buy  
 back  
 (16) the lots The lots were valued at \$25 000 each and the  
 (17) corporation said that we will buy back the lots if you don t  
 (18) want them and we ll buy them back at \$12 000 each and so  
 (19) there were quite a number of lots that were conveyed to the  
 (20) shareholders and then a number of the shareholders  
 reconveyed  
 (21) the lots for cash back to Tattilek That is Two Moon Bay  
 (22) Q Is that an arm s length transaction?  
 (23) A No that would not be an arm s length transaction  
 (24) Q Why not?  
 (25) A Well for one the conveyance did not involve any

Vol 19 3021

- (1) consideration going to the shareholders and the second was  
 (2) that this was sort of a buy back favor that the Tattilek  
 (3) Corporation offered to the shareholders for some people who  
 (4) needed some cash resources  
 (5) The second transaction is further on up the Fidalgo Bay  
 (6) area and it's a subdivision where there were some 193 lots  
 (7) It's a part of an old mining claim and back in the early 1980s  
 (8) quite a few of those lots sold and in between 1985 and 1990  
 (9) there was no sale activity at all They - the people who  
 (10) owned the property just did not try to sell any of the lots  
 (11) In 1992 the people who - the person who owned the  
 (12) subdivision decided that he wanted to get rid of as much of the  
 (13) inventory as he could and so he priced the lots very  
 (14) favorably He advertised them He sold them at nothing down  
 (15) no interest and the buyer had the option of selling the lot  
 (16) back within I believe it was either 60 or 90 days if they  
 (17) didn't like it And 40 lots were sold in 1992 on that basis  
 (18) Q What's the significance of telling that - significance of  
 (19) telling us all that?  
 (20) A Well the significance is that it was - I want to make  
 (21) sure that the jury understands that the sale activity that has  
 (22) been discussed earlier took place under some very unique  
 (23) circumstances  
 (24) Q Very good evidence that the oil spill didn't have any  
 (25) effect on the property?

Vol 19 3022

- (1) A Well I think that it certainly is evidence that the market  
 (2) is unique that there wasn't any sale activity for a year after  
 (3) the spill And that even into 1992 to sell the property very  
 (4) unique terms and conditions had to be offered to get the sale  
 (5) to take place  
 (6) Q Now let's - let's as Mr Oppenheimer says switch gears  
 (7) here and talk about the role that subsistence plays in this  
 (8) calculation this analysis  
 (9) When you come up with a highest and best use of natural  
 (10) land for example what kinds of activities take place on  
 (11) natural land and is subsistence one of them?  
 (12) A Subsistence would be one of the activities yes  
 (13) Q So when you take into account what highest and best use to  
 (14) place upon the various parcels that you evaluated you do take  
 (15) into account the use to which the land is put am I correct?  
 (16) A That's correct  
 (17) Q In fact that's one of the principal considerations and  
 (18) analyses that you conduct?  
 (19) A Well it's an important consideration Sometimes land is  
 (20) used at a use - and it doesn't represent the highest and best  
 (21) use - but generally people tend to use the land at the most  
 (22) profitable use or highest and best use  
 (23) Q That is a way though in which you determine that natural  
 (24) land is the highest and best use and that subsistence has  
 (25) value It has a real value That is a component of the

Vol 19 3023

- (1) highest and best use of natural land am I right?  
 (2) A That was an aspect of it yes  
 (3) Now the fact that subsistence activities were taking place  
 (4) on those lands and the Natives could conduct subsistence  
 (5) activities on the natural lands was not a situation where we  
 (6) added value to the lands because of it  
 (7) Q Right But it went into the determination that it is in  
 (8) fact natural land?  
 (9) A That was a factor yes  
 (10) Q And with respect to subsistence activities it is correct  
 (11) that you interviewed a number of people in the area to  
 (12) determine whether or not subsistence use was interrupted and  
 (13) whether there were different ways of conducting subsistence  
 (14) because of the oil spill?  
 (15) A That is correct We did interviews with each one of the  
 (16) Native corporations with members of the Native corporations  
 (17) Q And that would - those disruptions and those concerns that  
 (18) you learned about would impact the use of the natural land  
 (19) because that's one of the value - one of the components of the  
 (20) highest and best use decision am I right?  
 (21) A That's correct  
 (22) Q Now we went through on this easel business the issue of  
 (23) land that was patented or conveyed land that was selected  
 (24) and  
 (25) land that was interim conveyed remember those questions?  
 (26) A Correct

Vol 19 3024

- (1) Q Now are you aware that the plaintiffs in this case with  
 (2) respect to any land for which they have made an irrevocable  
 (3) selection selected that land have the claim for any damages  
 (4) resulting from the Exxon Valdez oil spill  
 (5) MR OPPENHEIMER Your Honor objection calls for a  
 (6) legal conclusion is counterfactual  
 (7) MR PETUMENOS This is exactly what I thought I was  
 (8) allowed to address on redirect  
 (9) THE COURT Approach the bench counsel  
 (10) (Sidebar conference out of the hearing of the jury)  
 (11) THE COURT Seems to be a question that I could - I  
 (12) also said you could question him about the area and  
 (13) appropriate  
 (14) areas but that doesn't mean that Mr Oppenheimer can't  
 (15) object  
 (16) MR PETUMENOS Why don't we do this as judicial  
 (17) notice of law Could we do it that way?  
 (18) THE COURT It depends I mean judicial notice of  
 (19) law contrary to you I mean to me I'm not sure what the  
 (20) final answer's going to be  
 (21) MR PETUMENOS This is going to get too complex to  
 (22) handle I understand  
 (23) THE COURT Yes fine  
 (24) MR PETUMENOS We'll handle it with a jury  
 (25) instruction That's fine  
 (26) (Sidebar concluded)  
 (27) BY MR PETUMENOS

Vol 19 3025

- (1) Q In terms of how you evaluated the lands that were Interim  
 (2) conveyed you evaluated those lands with a bundle of rights  
 (3) that you talked about as being with the Village Corporations  
 (4) is that right?  
 (5) A That s correct  
 (6) THE COURT Counsel you used the term interim when  
 (7) you were using selected but not conveyed before  
 (8) MR PETUMENOS All of the lands - good point  
 (9) Judge  
 (10) BY MR PETUMENOS  
 (11) Q All of the lands that had been - that had had an  
 (12) irrevocable selection which the government placed on them  
 you  
 (13) evaluated those with a full bundle of rights with the Village  
 (14) Corporation?  
 (15) A As if the Village Corporation owned them fee simple  
 (16) estate that s correct  
 (17) Q Now I want to get to this business about your associate  
 (18) Mr Day  
 (19) First of all in the area that we re talking about the  
 (20) area of Bligh Island tell the jury what period of time you  
 (21) concluded that the property was impaired?  
 (22) A There was a one year stigma that we applied to Bligh  
 (23) Island  
 (24) Q And in Exhibit 16174 when the conversation took place with  
 (25) Mr Day and Ms Adams I think what we have here is a date of

Vol 19 3026

- (1) February 4 of 1990 - if I m not mistaken according to the  
 (2) deposition - how far into this one year stigma period are we  
 (3) in when this conversation takes place?  
 (4) A Eleven months  
 (5) Q Eleven months And counsel talked about - I think I m  
 (6) misspeaking I said Bligh I mean Busby Island  
 (7) A Busby Island Bligh it was all part of the same area yes  
 (8) Q And counsel kept talking about an appraisal that was done  
 (9) by Mr Day during his cross examination if I m not mistaken  
 (10) Do you know what the difference between an appraisal and an  
 (11) opinion letter of value is? Have I got that right?  
 (12) A Letter of opinion of value  
 (13) Q Letter of opinion of value?  
 (14) A Yes  
 (15) Q What s the difference?  
 (16) A Well the difference is the content that is included in the  
 (17) report A letter of opinion is a very brief report that does  
 (18) not include back up material and frequently even the basis for  
 (19) which a value opinion is arrived at  
 (20) MR PETUMENOS Counsel -  
 (21) A Oftentimes it s like a two or three page summary  
 (22) MR PETUMENOS Counsel DX12151 please  
 (23) BY MR PETUMENOS  
 (24) Q Dr Mundy showing you what has been marked as - for  
 (25) identification as DX - whatever I said - would you take a

Vol 19 3027

- (1) look at it please and tell me if this does not appear to be a  
 (2) December 28 1989 letter done by Mr Day that we ve been  
 (3) talking about?  
 (4) A Yes it is  
 (5) Q Does he not say in this - no say in this letter this  
 (6) letter appraisal does not meet the minimum requirements of the  
 (7) American Institute of Real Estate Appraisers and thus is  
 (8) offered to you as an indication of value regarding the fair  
 (9) market rental of the subject property At your specific  
 (10) request I would be willing to prepare a full narrative  
 (11) appraisal if required  
 (12) And doesn t he close with the paragraph it should be  
 (13) reiterated that due to the limited nature of this letter that  
 (14) it should be dealt with as an indication of value for the fair  
 (15) market rent of the subject property and should not be  
 (16) interpreted as an appraisal due to the fact that a letter  
 (17) appraisal does not meet the minimum requirements of the  
 (18) American Institute of Real Estate Appraisers The indication  
 (19) of value however as of January 1 1990 for fair market value  
 (20) of the subject property is \$1200 per year  
 (21) Is that the caveat that he put on at the end of the  
 (22) letter?  
 (23) A Yes it is  
 (24) Q So this was by no means an appraisal conducted by  
 (25) Mr Day is that right?

Vol 19 3028

- (1) A That s correct  
 (2) Q And finally I want to discuss with you this Kachemak Bay  
 (3) appraisal business that we ended on in the cross examination  
 (4) First Mr Oppenheimer read to you from certain parts of  
 (5) the appraisal that you did now for the sale of Kachemak Bay  
 (6) the one we wrote down September 1989 and then he wrote  
 down  
 (7) November 1989 But in the appraisal it s important is it not  
 (8) to disclose the limiting conditions upon which you are writing  
 (9) the appraisal right?  
 (10) A That is correct  
 (11) Q And it was well known - indeed we have charts to show it  
 (12) - it was well known that the Exxon Valdez oil spill had  
 (13) impacted in and around that area by everybody including the  
 (14) State?  
 (15) A Yes  
 (16) Q Showing you what s been marked as DX12836 your  
 appraisal  
 (17) as of September 1989 read to the jury what you wrote to inform  
 (18) the State of how your appraisal was limited under the statement  
 (19) assumptions and limiting conditions right here  
 (20) A This is in the fourth paragraph and each one of the  
 (21) paragraphs begins with that so it might seem a bit different  
 (22) or unique but the paragraph reads That no research has been  
 (23) done to determine the absence and presence of hazardous and  
 (24) toxic materials on the subject property Research shows that  
 (25) contamination can have a significant effect on property value

Vol 19 3029

- (1) Because of engineering analysis and value impact analysis  
 (2) regarding contamination is outside the scope of this  
 (3) assignment we render no value opinion on this issue  
 (4) Q You disclosed on the what third page of the appraisal  
 (5) that you had not taken into account any potential impacts of  
 (6) contamination on the property?  
 (7) A That is correct That no research had been done in that  
 (8) regard  
 (9) Q And in the November 1989 appraisal again for the purpose  
 (10) of the sale under assumptions and limiting conditions you did  
 (11) it again right?  
 (12) A Yes  
 (13) Q And you disclosed to the State notwithstanding the fact  
 (14) that it was well known that the spill had hit this general  
 (15) area that you had not attempted to address that issue?  
 (16) A That is correct The same paragraph appears in the second  
 (17) appraisal that is dated November 1989  
 (18) Q Now Dr Mundy you operate a business?  
 (19) A Yes  
 (20) Q You have to pay people for what they do?  
 (21) A That s correct  
 (22) Q You have a staff and they have family?  
 (23) A Yes  
 (24) Q In order to conduct the kind of studies that you do to  
 (25) determine impact on such things like the Exxon Valdez oil

Vol 19 3030

- (1) spill those studies have to be funded don t they?  
 (2) A That s correct  
 (3) Q Somebody has to pay the bills?  
 (4) A Yes  
 (5) Q Had the Seldovia Native Association funded your project for  
 (6) the oil spill related inquiries that you were later to conduct  
 (7) as of the time that these appraisals were done in sufficient  
 (8) amounts to allow you to do the work that you felt had to be  
 (9) done?  
 (10) A They had not funded the work This became a very serious  
 (11) matter with Seldovia Native Association and it was not until  
 (12) considerably later on that I was finally able to convince them  
 (13) that either we did the research or that I was going to withdraw  
 (14) and not do any valuation work for them  
 (15) Q And in the years that went by you finally obtained the  
 (16) appraisal funding to do this project?  
 (17) A That s correct  
 (18) Q And the area that you were talking about was an area about  
 (19) which you had some concern about how to evaluate it how  
 (20) much  
 (21) to evaluate the area because of where it was?  
 (22) A Yes  
 (23) Q Explain to the jury - you were talking before about how in  
 (24) the lower - in the Kenai Fjords area the lower Kenai Prince  
 (25) William Sound the plaintiffs in this case there was a  
 (26) substantial amount of information about the extent of oiling in

Vol 19 3031

- (1) that area and compare that to the kind of information that was  
 (2) available in the Seldovia Native Association area?  
 (3) A Well the difference was like night and day I mean there  
 (4) were for the Prince William Sound Kenai Fjords and lower  
 Kenai  
 (5) Peninsula there had been teams that had walked the beaches  
 (6) This was done on a year by year basis carefully documenting  
 (7) the nature of the oil  
 (8) The clients that we were working with had hired ICF to go  
 (9) in and do special studies of the extent of oiling and the  
 (10) nature of the oiling Very substantial amount of data was  
 (11) available upon which to derive some conclusions regarding the  
 (12) nature and the amount of oiling  
 (13) This had not been done at all in the Cook Inlet area So  
 (14) for the area where Seldovia Native Association owned its land  
 (15) - which was both on the east side and the west side of Cook  
 (16) Inlet - there was no documentation and there was very limited  
 (17) anecdotal material and it was not until after the material was  
 (18) released from the State case that this material became  
 (19) available and a library was set up in Anchorage where we would  
 (20) go to the library and do the research there to find this  
 (21) information  
 (22) Q I m looking for a document here I think in which you  
 (23) basically say that  
 (24) Counsel DX15495 page 14  
 (25) This is the excerpts from the Seldovia Native Association

Vol 19 3032

- (1) appraisal which you did on the oil spill in 1991 which was  
 (2) addressed in your cross examination and I wonder if you would  
 (3) read for the jury the section entitled Determination of  
 (4) Persistence and Stigma?  
 (5) A Okay This is what I had before and was questioned about  
 (6) but what I had before was simply three pages This is a more  
 (7) complete set of information  
 (8) Under - on page 14 - Determination of Persistence and  
 (9) Stigma It reads information on the exact location and degree  
 (10) of oiling within Kachemak Bay and West Cook Inlet has not  
 been  
 (11) as well or completely documented as in Prince William Sound  
 (12) and for the most part has yet to be disseminated to the  
 (13) public  
 (14) Q All right And that you re referring to is the fact that  
 (15) unlike some of the treatment related documents that were out  
 (16) and about in public records a lot of these documents had to  
 (17) come about as a result of actually this litigation right?  
 (18) A That s correct  
 (19) Q Dr Mundy please tell the jury whether you were trying to  
 (20) trick the State of Alaska into paying too much for the Kachemak  
 (21) Bay property by withholding information from them in your  
 (22) appraisals  
 (23) A There was absolutely no way that I was trying to trick the  
 (24) State This process is one where - the process I m talking  
 (25) about where the Seldovia Native Association sold its lands to

Vol 19 3033

- (1) the State has been one that has been very carefully  
 (2) scrutinized The work that we have done has been reviewed by  
 (3) numerous appraisers both who work for the State as well as  
 who  
 (4) have been retained by the State It has also been reviewed by  
 (5) numerous administrative people on the part of the State To  
 (6) try to trick the State would have been foolhardy and absolutely  
 (7) counterproductive  
 (8) Q I have one final subject area to question you about and  
 (9) that is this business about the Native Village Corporations  
 (10) selecting some land that was oiled instead of - and letting go  
 (11) some land that was unoiled  
 (12) We have heard testimony in this case that the degree of  
 (13) oiling and the persistence - and you may be aware of this from  
 (14) your work with with Mr Bush - is related to often how  
 (15) quiescent or quiet the property is with respect to wave energy  
 (16) and the water and how it affects the shore and where it -  
 (17) where it comes up on the shore  
 (18) Do some of these same attributes of waterfront property  
 (19) relate also to its desirability in terms of its real estate  
 (20) potential or its amenity?  
 (21) A They certainly do  
 (22) Q And so when selecting whether property whether a village  
 (23) might want this land and not that land would they be also  
 (24) interested in what the water is like when it reaches the shore  
 (25) the surf pounding versus a quiet place to land and things of

Vol 19 3034

- (1) that nature?  
 (2) A Yes  
 (3) Q And based upon your communications with Mr Bush do you  
 (4) understand that the persistence of oil is likely to be greater  
 (5) in an area that is quiescent or quiet than in one in which the  
 (6) surf pounds?  
 (7) A That s correct  
 (8) MR PETUMENOS I have no further questions  
 (9) MR OPPENHEIMER Fewer than five minutes Your Honor  
 (10) THE COURT All right  
 (11) MR OPPENHEIMER I realize that s a weighty promise  
 (12) I ve just made so I ll hurry  
 (13) RE CROSS EXAMINATION OF WILMER H MUNDY  
 (14) BY MR OPPENHEIMER  
 (15) Q Dennis Latterley is a review appraiser for the State of  
 (16) Alaska for the Kachemak Bay sale correct?  
 (17) A Yes Are you asking is he a review appraiser  
 (18) Q He is is he not?  
 (19) A Yes he is  
 (20) Q Involved with the Kachemak Bay sale?  
 (21) A He was involved with that transaction yes  
 (22) Q Right And he expressed concern over your natural lands  
 (23) appraisal of those lands did he not?  
 (24) A Yes he did  
 (25) Q Reference has been made to some disclaimers on your work

Vol 19 3035

- (1) and to the fact that Mr Day s opinion letter was an opinion  
 (2) letter and not an appraisal In either of those two cases are  
 (3) you suggesting that major contamination should go  
 unobserved?  
 (4) A I can t remember - recall the first instance The second  
 (5) situation that you discussed was the Jack Day limited appraisal  
 (6) letter  
 (7) Q Yes that s correct Does the fact that it s a limited  
 (8) appraisal mean that he would just ignore an oil spill major  
 (9) oil spill?  
 (10) A No  
 (11) Q And the fact that you put disclaimers in into an  
 (12) appraisal does that mean if you know about significant  
 (13) contamination you re not required under USPAP to disclose it?  
 (14) You can t disclaim that away can you?  
 (15) A Well I can t recall if there is - there was back during  
 (16) that period of time anything in USPAP that dealt with the  
 (17) contamination issue Now if you could tell me what time frame  
 (18) it was that we re dealing with again so I - what was the  
 (19) date? The Kachemak Bay 1991  
 (20) Q How about 89?  
 (21) A 1989? There were some guide notes that came out from  
 (22) USPAP Guide Note 8 dealing with the contamination issue  
 And  
 (23) I - it was around 1989 It may have been before or It may  
 (24) have been after 1989 I can t recall exactly when it was that  
 (25) the Uniform Standards of Professional Appraisal Practice

Vol 19 3036

- (1) recommended strongly that appraisals contain descriptive  
 (2) information on contamination  
 (3) Now our appraisal that we did in 1989 had the - had a  
 (4) disclaimer there that indicated that we were not valuing the -  
 (5) or that the appraisal did not reflect the impact of  
 (6) contamination  
 (7) The body of the report does not discuss the Exxon Valdez  
 (8) spill and the oil that came into Kachemak Bay and the  
 (9) uncertainty that we had regarding the nature of the oil at that  
 (10) period of time and I - that is something that sitting here  
 (11) today and looking back to the past I should have done And I  
 (12) should have had a paragraph or two in the report discussing the  
 (13) nature of the oiling But the fact of the matter is is that  
 (14) it wasn t there It was discussed in the assumptions and  
 (15) limiting conditions The client was aware of the oiling as  
 (16) was the State  
 (17) Q I just wanted to end on the subject of Onion Bay Onion  
 (18) Bay is the sale of lots in Kodiak do you recall that?  
 (19) A Yes sir  
 (20) Q Land sale Number 11 right?  
 (21) A I don t know if it was land sale Number 11 or whatever I  
 (22) know it as the Onion Bay land sale  
 (23) Q Held in November of 90 You had indicated it was  
 (24) scheduled to go in May of 89 It actually was scheduled to go  
 (25) in April of 89 wasn t it?

Vol 19 3037

- (1) A The conversation that I had with Pat Carlson the Kodiak  
 (2) assessor indicates that – or indicated that it was in May of  
 (3) 1989  
 (4) Q Do you know who Bud Cassidy is?  
 (5) A No I do not  
 (6) Q Bud Cassidy – let me see if I can refresh your  
 (7) recollection – is the land manager for Kodiak?  
 (8) A I do not know Bud Cassidy  
 (9) Q Have you ever been advised that Mr Cassidy has testified  
 (10) in this case that the land sale Number 11 was delayed from  
 (11) April 89 until November 1990 because he could not get a  
 (12) helicopter for his surveyor to go out and do the boundary work  
 (13) necessary to put on the sale?  
 (14) A It s – that s news to me  
 (15) MR OPPENHEIMER No further questions  
 (16) A The information I have is from the assessor who is very  
 (17) familiar with the transaction and he indicated that it was  
 (18) delayed because of the oil spill  
 (19) BY MR OPPENHEIMER  
 (20) Q Were you aware that it was Mr Cassidy s job as the land  
 (21) manager to conduct that sale?  
 (22) A I do not know what Mr Cassidy s responsibilities are As  
 (23) I mentioned I do not know him  
 (24) MR OPPENHEIMER No further questions Your Honor  
 (25) THE COURT You can step down Watch out for the

Vol 19 3038

- (1) microphone clipped on your tie  
 (2) All right I ll let you go for the day Don t talk about  
 (3) the case with anyone don t form or express any opinion on it  
 (4) until it s submitted to you for your deliberation See you  
 (5) tomorrow at 8 30  
 (6) (Jury out at 1 23 p m )  
 (7) MR PETUMENOS Judge I think I made a mistake  
 (8) There was an exhibit I was going to move into evidence  
 (9) Perhaps we can do it by stipulation without having testified to  
 (10) it Otherwise I have to end up keeping Mr Mundy here  
 (11) overnight but I have Exhibit Number 1541 1541 is the spread  
 (12) sheets for each of the parcels that were involved In view of  
 (13) the cross examination that was conducted I now want to put  
 (14) them into evidence  
 (15) (Exhibit 1541 offered)  
 (16) MR OPPENHEIMER No objection Your Honor  
 (17) THE COURT All right they re in What s the  
 (18) number?  
 (19) MR PETUMENOS 1541  
 (20) THE COURT 1541 is admitted  
 (21) (Exhibit 1541 received)  
 (22) THE COURT You can all sit down there unless you  
 (23) like standing up  
 (24) MR PETUMENOS I wanted to move in the rest of my  
 (25) exhibits if I could and I think Mr Oppenheimer does as

Vol 19 3039

- (1) well  
 (2) MR OPPENHEIMER May I have the same courtesy of just  
 (3) being able to look at them?  
 (4) MR PETUMENOS You want to do them tomorrow?  
 (5) MR OPPENHEIMER I d like to move ours in since we  
 (6) waited three days Is that okay?  
 (7) MR PETUMENOS Which ones?  
 (8) MR OPPENHEIMER The ones we discussed the Bush  
 (9) ones  
 (10) MR PETUMENOS Absolutely I think we already did  
 (11) it  
 (12) MR OPPENHEIMER No we haven t We d like to move  
 (13) in – this is from the Bush testimony – the following  
 (14) exhibits I believe there s no objection Defendants 13227  
 (15) 13239 13240 13258 15480 15481 15482 2734 2761 Page  
 (16) 2 4  
 (17) chart 2 2 of exhibit 2769 exhibit 8942 exhibit 8943 and  
 (18) exhibit 8944  
 (19) (Exhibits 13227 13239 13240 13258 15480 15481 15482  
 (20) 2734 2761 page 2 4 chart 2 2 of 2769 8942 8943 and 8944  
 (21) offered)  
 (22) THE COURT Any objection?  
 (23) MR PETUMENOS No  
 (24) THE COURT All right they re all admitted Here s  
 (25) the list  
 (26) (Exhibit 13227 13239 13240 13258 15480 15481 15482

Vol 19 3040

- (1) 2734 2761 page 2 4 chart 2 2 of 2769 8942 8943 and 8944  
 (2) received)  
 (3) MR PETUMENOS Mr Oppenheimer you want me to wait to  
 (4) move in the Mundy exhibits until you have a chance?  
 (5) MR OPPENHEIMER May I?  
 (6) MR PETUMENOS Sure I think what we have is the  
 (7) nature of a stipulation that we don t have any foundation  
 (8) problems with the Mundy exhibits on either side so if he has  
 (9) to be called back we just wish to move for –  
 (10) MR OPPENHEIMER That was with respect to captions of  
 (11) photographs  
 (12) MR PETUMENOS Yes okay Well then let s  
 (13) hopefully resolve this this afternoon so that I can let  
 (14) Dr Mundy go  
 (15) MR DIAMOND Your Honor pursuant to the Court s  
 (16) invitation of yesterday afternoon concerning jury instructions  
 (17) or perhaps the invitation that I wrangled out of the Court  
 (18) yesterday afternoon  
 (19) THE COURT I ve read it I ve read it counsel I  
 (20) guess it s Mr Stoll You finally get to talk Mr Stoll It  
 (21) must be tough going five hours without saying anything  
 (22) MR STOLL Well this is my big moment What would  
 (23) you like me to say Your Honor?  
 (24) THE COURT I d like you to say that that instruction  
 (25) as modified by counsel is acceptable to you

Vol 19 3041

- (1) MR STOLL No it s not Your Honor  
 (2) THE COURT Why?  
 (3) MR STOLL I think the - I don t have a problem with  
 (4) the - on the second portion of it The - the addition that  
 (5) he added on is Page 2 at the bottom of Page 2  
 (6) THE COURT Uh huh  
 (7) MR STOLL I don t have a problem with that  
 (8) THE COURT Right  
 (9) MR STOLL The problem I have is with the first -  
 (10) the material contained in the first page I think again we re  
 (11) getting into all the claims in the federal court We re  
 (12) drawing attention there I think the focus should be what are  
 (13) the claims in this court and I think that the - the second -  
 (14) the material that s on the bottom of the second page continuing  
 (15) on to the third page puts in context what the - the  
 (16) subsistence used in the commercial fisheries is in this case  
 (17) I don t think that we need to get into anymore Otherwise I  
 (18) am - and I just got this at the beginning of the day and I  
 (19) haven t spent any time drafting on this thing because I just  
 (20) think that - otherwise we got to get into a big explanation of  
 (21) what s involved in the federal court action I don t want to  
 (22) get into that  
 (23) THE COURT Okay tell me This is what you re  
 (24) objecting to right? As you may have heard the claims being  
 (25) litigated there - there being the federal court - include

Vol 19 3042

- (1) claims of commercial fishermen for lost fish catch and claims  
 (2) of Alaskan Natives for lost subsistence harvests of traditional  
 (3) foods These claims go on to belong to individuals not the  
 (4) Native corporations and are not being pursued here  
 (5) MR STOLL That s correct  
 (6) THE COURT That s what you object to?  
 (7) MR STOLL That s what I object to  
 (8) THE COURT What s incorrect about that?  
 (9) MR STOLL Well I d want to explain more Your  
 (10) Honor what s going on in federal court I think that it s -  
 (11) THE COURT Well that s exactly what I stopped  
 (12) Mr Diamond from doing I mean essentially that s what I did  
 (13) when I said compress it  
 (14) MR STOLL I understand  
 (15) THE COURT So I m going to tell you the same thing  
 (16) Compress it But this is the instruction I m going to give if  
 (17) I don t get a contrary - don t get an expanded version by 4 00  
 (18) today Now the question is with what the timing of the  
 (19) instruction should be When do I give it?  
 (20) MR STOLL Can I just say one other thing on this?  
 (21) THE COURT You can say two It doesn t matter I m  
 (22) just telling you where I am and believe me I ve had lots of  
 (23) time to think about this  
 (24) MR STOLL I understand that My only point is is  
 (25) that I don t think that we need to get into what is going on in

Vol 19 3043

- (1) the federal court the nature of that case and you apparently  
 (2) want to explain you know more about what s going on there I  
 (3) just think that it s - the focus really should be as to -  
 (4) more to what is going on in this case  
 (5) THE COURT I tend to agree with you counsel up to a  
 (6) point On the other hand any instruction that lessens  
 (7) confusion - and confusion could be very rampant in this case  
 (8) unless the jury knows what the claims are and why the - we re  
 (9) giving this explanation to them Anything that aids in  
 (10) dispelling confusion is in my view good  
 (11) So as I said yesterday an overlong or argumentative or  
 (12) unbalanced instruction I wouldn t accept On the other hand  
 (13) this is not unbalanced It may be incomplete in your view but  
 (14) it s not unbalanced So you give me something that s concise  
 (15) nonargumentative and objective You can do it But the  
 (16) problem is -  
 (17) MR STOLL 4 00 s fine?  
 (18) THE COURT Within the limits of the adversary system  
 (19) you re going to have to do it by 4 00 or I m giving this  
 (20) instruction  
 (21) MR STOLL I understand  
 (22) THE COURT Okay  
 (23) MR STOLL Your Honor the one question I have  
 (24) though is I don t think that there s been testimony - maybe I  
 (25) just forgot it - but I don t recall any testimony about that

Vol 19 3044

- (1) we ve put on about commercial harvest The commercial  
 (2) harvest I mean the only evidence is there was a closure We  
 (3) haven t - we haven t put on any evidence about you know -  
 (4) THE COURT There s all kinds of evidence - not all  
 (5) kinds but there s substantial evidence in this record of lost  
 (6) commercial fishing opportunities in Prince William Sound  
 (7) MR STOLL Well there is - you mean in the sense  
 (8) that there was a closure in 1989?  
 (9) THE COURT The harvests are bad it was in the  
 (10) testimony of the - of the Native corporation witness  
 (11) MR STOLL Okay  
 (12) THE COURT Anything else? So I m giving the  
 (13) instruction I could give it tomorrow morning You can pick  
 (14) the time When do you want me to give it?  
 (15) MR DIAMOND We would prefer that you do it as soon  
 (16) as possible everybody expects a - a federal jury decision is  
 (17) imminent  
 (18) THE COURT I ll try to give it tomorrow morning It  
 (19) may be the first thing I do  
 (20) MR STOLL That s fine  
 (21) THE COURT Thank you  
 (22) THE CLERK Please rise This court stands in  
 (23) recess  
 (24) MR STOLL Excuse me Judge I just wanted to ask one  
 (25) question As I understand it the instruction you re going to

Vol 19 3045

- (1) give is this instruction Intertwined with -
- (2) THE COURT Plus Exhibit B
- (3) MR STOLL Yeah Thank you
- (4) (Recess at 1 31 p m )

Vol 19 3047

(1) PROCEEDINGS  
 (2) (Jury in at 8 43 a m )  
 (3) (Call to Order of the Court)  
 (4) THE COURT Good morning Mr Petumenos  
 (5) MR PETUMENOS Good morning Judge May we approach  
 (6) the bench?  
 (7) THE COURT Yes  
 (8) (Sidebar held out of the hearing of the jury)  
 (9) MR PETUMENOS A couple of preliminaries this  
 (10) morning  
 (11) We have a witness named John Black who is going to testify  
 (12) today The evidence issues are proliferating to such a degree  
 (13) I don't want to leave the Court in a situation where we have a  
 (14) bench conference with matters can't be solved on the bench  
 (15) We're going to have to file a brief and bump him off the  
 (16) schedule I talked to John Clough about it Next week we can  
 (17) talk about it We're prepared now I want to publish and read  
 (18) to the jury the foreseeability stipulation at this point and I  
 (19) don't know if the Court has an instruction on what stipulation  
 (20) is available to it I'd like to have that read if I can  
 (21) THE COURT I've got it memorized  
 (22) MR PETUMENOS Okay Lastly I also want to read the  
 (23) stipulation since you'll be giving the instruction on the  
 (24) corporate standing which is you know a technical point And  
 (25) then there was a third point darn it and I can't remember

Vol 20 3052

(1) MR STOLL We gave the other instruction yesterday  
 (2) MR PETUMENOS Story?  
 (3) MR STOLL The other instruction  
 (4) MR PETUMENOS Oh the next thing that's going to  
 (5) happen is a deposition so I'm going to need the - you said  
 (6) you were going to give the instruction on depositions the first  
 (7) time one is read and that's what we're going to do That's  
 (8) all I have  
 (9) THE COURT You're going to read two stipulations and  
 (10) I'll tell them what a stipulation is  
 (11) MR PETUMENOS I'm going to announce we're doing a  
 (12) deposition and you tell them what a deposition is  
 (13) MR DIAMOND I'm sorry too many people up here I  
 (14) just saw that stipulation for the first time The stipulation  
 (15) that was signed yesterday is it a good standing stipulation?  
 (16) MR PETUMENOS That's all it is  
 (17) THE COURT You've got a copy of it?  
 (18) MR PETUMENOS Right in my hand  
 (19) THE COURT I just signed it  
 (20) MR PETUMENOS I was just going to read it myself  
 (21) MR DIAMOND Are you going to instruct the jury on  
 (22) the federal verdict?  
 (23) THE COURT What time do you want me to do it? When  
 (24) they break?  
 (25) MR DIAMOND If we're going to do instructions - do

Vol 20 3053

(1) you want to talk about it first?  
 ( ) THE COURT Well the answer to that --  
 (3) MR DIAMOND Yes we object  
 (4) THE COURT It you say want then the answer is no  
 (5) But if you say will I the answer is yes  
 (6) MR PETUMENOS I d rather not give those instructions  
 (7) at the same time I want -- this is sort of an evidentiary  
 (8) thing and then maybe at a later point before they get  
 (9) discharged if that s all right  
 (10) MR DIAMOND That s fine I think Mr Stoll and I  
 (11) probably would like to talk to you about his proposed language  
 ( ) THE COURT Even on the record?  
 (13) MR DIAMOND On the record but we can do that at a  
 (14) break  
 (15) MR STOLL He wants to talk I m a happy camper  
 (16) THE COURT That s it thanks  
 (17) (Sidebar concluded)  
 (13) THE COURT Mr Petumenos is going to read to you some  
 (19) material It s called a stipulation You ve probably heard  
 ( ) that word before A stipulation is simply a way of resolving  
 ( ) what might be contested issues of fact As you know you re  
 ( ) the judges of the facts in this case so normally you d hear  
 ( ) evidence and then decide what the facts were but the parties  
 ( ) in the case are allowed to stipulate that certain facts are  
 ( ) true and once they do stipulate then you the jury are to

Vol 20 3054

(1) accept the facts that are stated in the stipulation as true  
 ( ) So as to these things which are stipulated to you are to  
 (2) accept them as true  
 (4) Mr Petumenos?  
 (5) MR PETUMENOS Thank you Judge  
 (6) It is hereby stipulated that for purposes of this lawsuit  
 (7) the following shall be deemed as established That at all  
 (8) relevant times it was reasonably foreseeable that an oil spill  
 (9) could result in significant impact to the waters and resources  
 (10) of Prince William Sound and could cause significant damage to  
 (11) Native corporation lands within the Prince William Sound and  
 ( ) Kenai Fjords areas including archaeological resources  
 (13) contained on those lands  
 (14) In view of this stipulation the parties have agreed that  
 (15) evidence relating to discussions among the oil companies and  
 (16) Native corporation representatives concerning the release of  
 (17) Native claims to lands located at the Valdez pipeline terminal  
 (18) will not be necessary  
 (19) And Judge I will file this and have it available for the  
 ( ) jury as they require  
 ( ) The second stipulation it is hereby stipulated by the  
 ( ) parties hereto that for the purposes of this lawsuit each of  
 ( ) the Native corporation plaintiffs was as of the date of th  
 ( ) lawsuit as of the date the lawsuit was filed a corporation in  
 ( ) good standing under the laws of the State of Alaska and each

Vol 20 3055

(1) having filed its biannual reports and having paid its corporate  
 ( ) franchise taxes for the last reporting period has fully  
 (2) complied with Alaska statute 10 68 048  
 (4) Judge those are the stipulations  
 (5) Judge Shortell next we would present the deposition of  
 (6) Mr Dan Taft Mr Kende an attorney will be reading the  
 (7) portions of the deposition that were the plaintiffs attorneys  
 (8) involved and I think the defendants attorneys as well  
 (9) Plaintiffs attorney was me but I ve said it once I m not  
 (10) going to say it again and if we could get the instruction to  
 (11) the jury on depositions  
 ( ) THE COURT Sure This is a deposition A deposition  
 (13) is an examination under oath You don t see the witness here  
 (14) but the witness has been examined under oath in a setting  
 (15) that s similar to the courtroom In other words the witness  
 (16) takes an oath It s subject to penalty for perjury if it s  
 (17) found that the witness has lied It has all the solemnities of  
 (18) testimony in court So you just simply accept this testimony  
 (19) as if it were given in court  
 ( ) The instruction that I ll give you later in the case at the  
 ( ) end of the case says that you re to -- you re to -- you are to  
 ( ) consider depositions just as if they were given in court It  
 ( ) you believe somehow as a jury in your collective judgment that  
 ( ) the absence of the witness is significant then you can give it  
 ( ) the weight you think that deserves but basically this is

Vol 20 3056

(1) simply the same as in court testimony except the witness isn t  
 ( ) here before you  
 (3) MR KENDE Good morning Your Honor May I proceed?  
 (4) THE COURT Yes  
 (5) MR KENDE We re going to be having Mr Romero from  
 (6) the Good Kind Office reading for the witness and I have a copy  
 (7) for the Court if the Court would like to follow along  
 (8) THE COURT I appreciate that Thank you  
 (9) THE CLERK Sir could you stand up and attach the  
 (10) microphone? I d like to swear you in  
 (11) MR ROMERO About here?  
 ( ) THE CLERK That s fine Raise your right hand  
 (13) (The Witness Is Sworn)  
 (14) THE CLERK Please be seated  
 (15) MR KENDL Good morning this is the deposition of  
 (16) Daniel Taft which was taken on March 24th 1992 and then  
 (17) there was a second section on October 28th 1993  
 (18) Daniel Taft having been first duly sworn was called as a  
 (19) witness herein and was examined and testifies as follows  
 ( ) DIRECT EXAMINATION OF DANIEL TAFT  
 ( ) BY MR KENDL  
 ( ) Q Mr Taft do you remember where you were when you first  
 ( ) heard that Exxon Valdez had hit the rocks?  
 ( ) A No  
 ( ) Q What was your position with Exxon when that happen d do

Vol 20 3057

- (1) you remember that?  
 ( ) A Yes I was a project leader for the Subsea Production  
 (3) Systems Group at Exxon Production Research  
 (4) Q And what does all of that mean? What did you do?  
 (5) A Subsea Production Systems are where you put a well head  
 on  
 (6) the sea floor and we were the group that - my group was the  
 (7) one responsible for research in that area  
 (8) Q And did you do undersea mapping as part of that group?  
 (9) A No  
 (10) Q Had you done mapping for Exxon before?  
 (11) A No  
 (12) Q What is your educational background?  
 (13) A I went to Michigan for my undergraduate degree in naval  
 (14) architecture and marine engineering and I attended Carnegie  
 (15) Mellon in civil engineering as a graduate  
 (16) Q What years did you receive your degrees then?  
 (17) A 1972 and '76  
 (18) Q And I take it then you did work in undersea drilling all  
 (19) the time you've been at Exxon?  
 (20) A No  
 (21) Q When did you come to Exxon?  
 ( ) A I started in 1972 Well I worked a summer in 1971  
 (23) Q And when you started in 1972?  
 (24) A I was in marine engineering Well I don't know what it  
 ( ) was called at the time but I was a stability person for

Vol 20 3058

- (1) offshore drilling rigs mainly That was my main shop  
 ( ) Q And how long did you work in that?  
 (3) A Until 1974 when I went back to school  
 (4) Q And 1974 where did you go to school?  
 (5) A Carnegie Mellon  
 (6) Q That's when you went to Carnegie Mellon?  
 (7) A Yes  
 (8) Q Was that through any Exxon program that you went there?  
 (9) A No  
 (10) Q On your own?  
 (11) A Entirely on my own  
 (1 ) Q When you came out of Carnegie Mellon you decided to  
 come  
 (13) straight back to Exxon?  
 (14) A Yes I worked for Exxon for a summer while I was at  
 (15) Carnegie Mellon and then I came back to Exxon  
 (16) Q And in what capacity?  
 (17) A Deep water drilling 9 000 foot water depth drilling  
 (18) Q And who called you up to put you into the Exxon team?  
 (19) A I don't know  
 ( ) Q Do you remember what they told you you were going to do?  
 ( ) A My first involvement was at EPR  
 ( ) Q I'm going to stop you every time There are so many  
 ( ) acronyms in this case - acronyms in this case excuse me?  
 ( ) A I'm sorry Exxon Production Research  
 (25) Q And what role did Exxon Production Research have in

Vol 20 3059

- (1) connection with the spill?  
 (7) A I was tasked with putting together a program to evaluate  
 (3) equipment used during the cleanup to plan a program  
 (4) Q Do you remember the approximate date that you were first  
 (5) put on any team having to do with the Exxon Valdez oil spill?  
 (6) A May something I'm not sure  
 (7) Q So some six weeks or so after the spill itself?  
 (8) A Yes  
 (9) Q After you worked on this evaluation plan was it in July  
 (10) you've told me of 1989 that your duties changed?  
 (11) A Yes  
 (12) Q And tell me how that happened  
 (13) A I was called and asked if I was willing to go to Valdez  
 (14) and I was and I went  
 (15) Q And who called you?  
 (16) A I don't know  
 (17) Q When you were called what did they ask you to do in  
 (18) Valdez?  
 (19) A I was asked to work on the shoreline approval process in  
 ( ) Prince William Sound  
 (21) Q How long were you at this job?  
 (22) A From about July 30th to September 6th or 8th something  
 ( ) like that  
 (24) Q And is the significance of the September date when the 1989  
 (25) clean up process began to wind down because of weather?

Vol 20 3060

- (1) A No  
 (2) Q What led do your leaving that position?  
 (3) A It was time for my rotation out  
 (4) Q Tell me how that worked  
 (5) A Most of the Exxon people on shore worked 30 days on and  
 ten  
 (6) days off It was time for me to leave  
 (7) Q You were a little bit overdue?  
 (8) A Yes  
 (9) Q What job did you move to then?  
 (10) A I became the supervisor for the Surveillance Mapping  
 (11) Analytical and Data Base Group  
 (12) Q Is that a group that had previously existed before you  
 (13) became its supervisor?  
 (14) A Not really  
 (15) Q Was that a group that became organized because of a  
 (16) perceived need to have some structure to do that work?  
 (17) A There was a perceived need for collating the data yes  
 (18) Q Were there any firms that were involved in assisting Exxon  
 (19) in surveillance mapping that you were aware had been hired by  
 ( ) Exxon during that period of time July 30 1989? I'm not  
 ( ) saying they were hired at that point but they were engaging in  
 ( ) those activities during that period of time?  
 ( ) A Yes  
 (24) Q Who were they?  
 ( ) A AcroMap U S Woodward Clyde That's it

Vol 20 3061

Vol 20 3063

- (1) Q Can you describe for me how you define the work that  
 ( ) AeroMap did versus WCC? Did they have different tasks that  
 (2) they performed for Exxon in the summer of 1989?  
 (4) A Yes  
 (5) Q How would you define what AeroMap was assigned to do?  
 (6) A Okay AeroMap was asked to remap part of the Sound which  
 (7) was changed from the earthquake in 1964 They also were  
 asked  
 (8) to put the data from the surveys onto those maps Woodward  
 (9) Clyde supported survey teams more of a field operation than a  
 (10) scientific mapping operation  
 (11) Q Now is there an in house Exxon mapping effort that went on  
 (12) in addition to any mapping effort that went on from Aero or  
 (13) WWC?  
 (14) A When?  
 (15) Q At any point in time?  
 (16) A At any point in time yes  
 (17) Q When did that in house mapping effort begin --  
 (18) A September of 1989  
 (19) Q -- with the formation of this group that you became the  
 ( ) head of?  
 ( ) A Yes  
 ( ) Q What was that group called again please?  
 ( ) A Surveillance Mapping Analytical and Data Base called  
 SMAD  
 ( ) Q Why did Exxon form SMAD?  
 ( ) A We realized in 1989 we needed a more coordinated mapping

- (1) light oiling?  
 ( ) A Yes  
 (3) Q And were there specific criteria defining those terms in  
 (4) 1989?  
 (5) A Yes  
 (6) Q And were those written down?  
 (7) A Yes  
 (8) Q And where were those -- where were they written down?  
 (9) A There was a shoreline assessment manual that was used by  
 (10) the survey teams  
 (11) Q And this shoreline assessment manual was not just used by  
 (12) Exxon it was used by other entities as well?  
 (13) A Correct The definitions were agreed on by other entities  
 (14) Q After SMAD was formed did those descriptions of oiling  
 (15) change?  
 (16) A No  
 (17) Q Did you begin using the designations wide medium and  
 (18) narrow?  
 (19) A Yes  
 (20) Q And did you cease using the terms heavy moderate and  
 (21) light?  
 ( ) A Yes  
 (23) Q Why?  
 ( ) A The description if you review the descriptions of wide or  
 ( ) heavy you'll find that they are the same Or light and

Vol 20 3062

Vol 20 3064

- (1) effort with more oversight by Exxon  
 ( ) Q And why did you need -- for what purposes did you need that  
 (2) mapping effort?  
 (4) A There was a lot of the data coming in and that data needed  
 (5) to be selected where it could be got at under one umbrella  
 (6) Q And for what purposes?  
 (7) A For -- both for planning of any future effort and for  
 (8) figuring out what the status was  
 (9) Q So it was for the planning of future clean up efforts  
 (10) When you say future efforts we're talking about future  
 (11) clean up efforts?  
 ( ) A Potentially yes  
 (13) Q And determining what the status was why was that  
 (14) important?  
 (15) A If there didn't need to be any cleanup  
 (16) Q Either way the purpose of putting this group together was  
 (17) to assist in managing the cleanup?  
 (18) A Yes  
 (19) Q And then in October you began implementing the data base  
 ( ) management system that you had selected?  
 ( ) A Yes  
 ( ) Q And then when you began manning that data base system  
 you  
 ( ) used the staff that you had created within SMAD?  
 ( ) A Yes  
 ( ) Q Well do you remember hearing the terms heavy medium  
 and

- (1) narrow you will find that those two are the same The  
 ( ) definition of light is a band width has nothing to do with  
 (2) thickness Description for heavy was a band width had nothing  
 (4) to do with thickness and the connotation of heavy implies  
 (5) thickness to people Therefore we proposed to change the  
 term  
 (6) used in relation to each description to something more  
 (7) appropriate  
 (8) Q So in your mind the change from heavy to wide for  
 (9) example was one of nomenclature and not substance?  
 (10) A Yes  
 (11) Q Is the same true for moderate to medium?  
 ( ) A Yes  
 (13) Q And from light to narrow?  
 (14) A Yes  
 (15) Q Did Exxon begin using a term very light?  
 (16) A Exxon used a term called very light in the summer of 1989  
 (17) outside of Prince William Sound  
 (18) Q Did you continue to use that -- did you continue the use of  
 (19) that term after SMAD was formed?  
 ( ) A In some point we started using it everywhere yes  
 (21) Q So the change if you will was that the term very light  
 ( ) began to be used in other places than out -- phrased  
 ( ) differently the term very light began to be used in Prince  
 ( ) William Sound for example whereas before it was not used?  
 ( ) A Correct

Vol 20 3065

- (1) Q Do you remember having any conversations with any other  
 (2) representatives from other agencies about that change in  
 (3) designation?  
 (4) A Yes  
 (5) Q And who did you have those conversations with?  
 (6) A Jim Stocum from ADC Diane somebody and Rich McMahon  
 from  
 (7) ADNR and somebody from NOAA I m sure was at that  
 meeting  
 (8) Q These conversations took place in a formal meeting?  
 (9) A Yeah  
 (10) Q Do you remember when the meeting took place  
 approximately?  
 (11) A In 1990 early 1990 sometime I would guess in February or  
 (12) March  
 (13) Q Was that part of any ongoing effort that was taking place  
 (14) when you had this meeting?  
 (15) A Yes  
 (16) Q What was that effort called?  
 (17) A It was preplanning for the 1990 survey  
 (18) Q People from as you listed to them people from ADEC for  
 (19) example seemed comfortable with the change?  
 (20) A As I remember everybody thought that they were more  
 (21) meaningful  
 (22) Q I think we left off we were discussing the process of  
 (23) inputting data for the purposes of making maps and you  
 (24) described a field map that was written on and sent in What  
 (25) other kinds of input was used to make oiling maps?

Vol 20 3066

- (1) A We got ecological data from various agencies ecological  
 (2) constraint data basically We got shoreline type data from  
 (3) several different sources We got archa ological sites We  
 (4) obtained land ownership data from some agencies We  
 obtained  
 (5) exposure data wave exposure data These are the major ones  
 (6) Q The ecological data from different sources that you  
 (7) described what were the sources for the ecological data?  
 (8) A We got eagle nest locations from U S Fish and Wildlife  
 (9) Service We received - we obtained salmon stream locations  
 (10) from ADF&G We obtained seal haul out areas from a  
 combination  
 (11) of - I think it was ADF&G and NMFS National Marine Fisheries  
 (12) Service We obtained a lot of data from the Alaska State  
 (13) Habitat Management Guide I believ d that s what it s called  
 (14) Q Did that data include the location of mussels clams  
 (15) edible mollusks?  
 (16) A The Habitat Management Guide gave some guidance there  
 (17) general guidance yeah  
 (18) Q And you said there were different sources for shoreline  
 (19) type data?  
 (20) A Yes  
 (21) Q What were those sources?  
 (22) A One of them was Kay Kreig Another one was the SCAT  
 1959  
 (23) SCAT survey or video survey data This is a video survey  
 (24) Q Right Who is Mr Kreig?  
 (25) A He is a photo interpreter in Anchorage Ray Kreig and

Vol 20 3067

- (1) Associates  
 (2) Q What does he do when he interprets photos?  
 (3) A He can do a lot of different things with photos We asked  
 (4) him to - in the summer of 1989 he was asking to review a  
 (5) series of photographs and say what kind of shoreline type  
 (6) identify the various shoreline types within Prince William  
 (7) Sound by photographically interpreting  
 (8) Q What kinds of conclusions would he draw from those  
 photos?  
 (9) A He would tell you where there were rocks rocky headlands  
 (10) or just bedrock beaches where there were fines in the beach  
 (11) Q Where there were what?  
 (12) A Fines fine sediment Basically he would classify the  
 (13) sediment type on the shoreline  
 (14) Q Where did you get your information on archaeological sites?  
 (15) A From the archaeologists working for Exxon  
 (16) Q Mr Mobley?  
 (17) A And Mr Haggart  
 (18) MR KENDE I believe that should be Haggarty at this  
 (19) and it s a misprint  
 (20) BY MR KENDE  
 (21) Q And did they simply identify for you on a map where they  
 (22) thought the archaeological sites were?  
 (23) A Actually I think we received a lat/long file latitude/  
 (24) longitude file  
 (25) Q Was the latitude/longitude file provided by your

Vol 20 3068

- (1) archaeologists further broken down to the type of site that was  
 (2) involved?  
 (3) A No  
 (4) Q So you would not have any way of knowing whether this site  
 (5) was a surface scatter or a midden pile or a culturally modified  
 (6) tree you have no way of knowing from your data?  
 (7) A No  
 (8) Q What is the difference between the shoreline type data that  
 (9) you described and the exposure data that you described?  
 (10) A Shoreline type is sediment type Exposure is the wave  
 (11) exposure  
 (12) Q I would like to know whether or not the exposure data and  
 (13) the shoreline type data influenced in any way the conclusion as  
 (14) to how much or to what the nature of the oiling was on a given  
 (15) occasion  
 (16) A No  
 (17) Q What was the purpose of inputting shoreline type data and  
 (18) exposure data? And if you ne d to break that down do  
 (19) A Exposure data was inputted to allow us to get a handle on  
 (20) what we thought might happen over the winter of 1989/ 90 to  
 (21) help us in focusing where we survey in 1990 The  
 (22) shoreline type data there were a lot of people that wanted  
 (23) that - that thought that would be useful I don t know as we  
 (24) ev r used it for anything  
 (25) Q When you say there were a lot of people that thought that

Vol 20 3069

- (1) was going to be useful who were you referring to people  
 ( ) within Exxon or outside offer Exxon?  
 (3) A Yes within Exxon  
 (4) Q And in your experience it wasn't used as a management tool  
 (5) that often?  
 (6) A I don't think it was  
 (7) Q Did that group SMAD ever input subsurface oiling data?  
 (8) A Yes  
 (9) Q When?  
 (10) A 1991  
 (11) Q Never before?  
 (1 ) A Never before  
 (13) Q Let me break it down When is the first time that you can  
 (14) remember in any of your capacity as a discussion about  
 whether  
 (15) or not to look for subsurface oiling data in the field?  
 (16) MR KENDE Question from counsel For purposes of  
 (17) mapping or for any purpose?  
 (18) Response from Mr Petumenos for any purpose  
 (19) A 1989  
 ( ) Q And in what context do you remember those discussions?  
 (1 ) A It was August of 1989 about how to treat subsurface oil  
 ( ) Q Presumably in order to treat subsurface oil you would have  
 (3) to know where it is?  
 (4) A Yes  
 (5) Q Was there any discussion of trying to find out where the

Vol 20 3070

- (1) subsurface oil was prior to August of 1989 that you were privy  
 ( ) to?  
 (3) \ No  
 (4) Q Had you been privy to discussions before August of 1989  
 (5) about the accumulation of subsurface oil data?  
 (6) A No  
 ( ) Q Who were the discussions with about the treatment of  
 (8) subsurface oil that you were involved with?  
 (9) A It was discussed in ISCC Interagency Shoreline Cleanup  
 (10) Committee Andy Teal Within Exxon it was discussed with the  
 (11) operations coordinators Scott Naumien - Nommien - and Bill  
 (1 ) Stillings and the operations manager Bill Rainey  
 (13) Q Now I didn't mean to mischaracterize your testimony  
 (14) obviously in the shoreline assessment process in 1989 certain  
 (15) amount of data was coming in about the existence of  
 subsurface  
 (16) oil isn't that right?  
 (1 ) A Yes  
 (18) Q And what decision do you recall being made in August of  
 (19) 1989 with respect to the treatment of subsurface oil if any?  
 ( ) \ By -  
 (1 ) Q Anyone  
 ( ) \ There were discussions about what to do about subsurface  
 (3) oil in the ISCC and in late August it was decided that there  
 (4) would be no further tests of any system to try to address  
 (5) subsurface oil in 1989

Vol 20 3071

- (1) Q Was that the reason that SMAD decided not to attempt to  
 map  
 ( ) subsurface oiling data?  
 (3) A No  
 (4) Q What was the reason?  
 (5) A Twofold One we had plenty of other things to do And  
 (6) secondly the data was not cohesive coherent The data was  
 (7) basically a sheet that said yes there was Yes there was  
 (8) subsurface oil on a segment  
 (9) Q Were any plans made within Exxon to attempt to -- were you  
 (10) aware of any plans at Exxon to attempt to remedy that situation  
 (11) and accumulate some cohesive data about subsurface oiling as  
 of  
 (12) the fall of 1989?  
 (13) A Not as of the fall of 1989  
 (14) Q When do you first recall any discussions within Exxon with  
 (15) respect to the accumulation of data about subsurface oil in a  
 (16) cohesive way?  
 (17) \ Sometime during the winter of 1989 90 I don't know  
 (18) Sometime during that winter  
 (19) Q What was the method that was decided upon for the testing  
 ( ) of subsurface oil in the fall winter of 1989/ 90?  
 (21) A The survey teams were to dig pits where they thought  
 ( ) subsurface oil existed They were to document where they dug  
 (23) pits and what they found  
 (4) Q What were they to use to determine where they thought  
 (5) subsurface oil was?

Vol 20 3072

- (1) \ The oil geomorphologist on the team was to use his  
 ( ) expertise and in the spring of 1990 it was a joint survey  
 (3) and if others thought no you need to dig over there they  
 (4) were supposed to test those areas  
 (5) Q Are you aware of any accumulation of subsurface oil data  
 (6) taking place in a cohesive way by Exxon outside of Prince  
 (7) William Sound sector at any point in time?  
 (8) A Yes  
 (9) Q When?  
 (10) \ 1990 and 1991  
 (11) Q And where was this additional subsurface oil data  
 (1 ) accumulation taken?  
 (13) A Wherever the survey teams went  
 (14) Q Did they go to Kodiak?  
 (15) A Yes  
 (16) Q Did you understand that in 1989 the goal and principal  
 (17) purpose of the cleanup was to remove surface oil?  
 (18) A I wouldn't phrase it that way  
 (19) Q Why not?  
 ( ) A Our goal was to remove as much oil as we could reasonably  
 (1 ) in 1989 bulk oil  
 ( ) Q Including oil in the subsurface if that was reasonable?  
 ( ) \ Yes  
 (4) Q Same is true in 1990?  
 (5) A No

Vol 20 3073

- (1) Q What s the difference?  
 (2) A In 1990 our goal was to do things that would result in a  
 (3) benefit to the shoreline and that benefit that trade off was  
 (4) not always as clear as it was in 1989 And in some cases  
 (5) leaving the oil there was a better option than taking it out  
 (6) So you can t just say removing the oil was our target  
 (7) Granted our treatments were targeted to get rid of as much oil  
 (8) as we could but that was – that wasn t the only criteria  
 (9) Q Certainly if you thought that getting the every last bit of  
 (10) oil would destroy the creatures in the beach beyond what the  
 (11) oil was doing you wouldn t do it is that your point?  
 (12) A Yes  
 (13) Q And that assessment had to be made over and over again on a  
 (14) beach by beach basis?  
 (15) A Yes  
 (16) Q But that process was also undergone in 1989 and 90 I  
 (17) assume but is the difference that the circumstances had  
 (18) changed substantially that the trade off might not come out the  
 (19) same?  
 (20) A Yes  
 (21) Q Would you expect that given the nature of the surveys that  
 (22) were conducted in 1989 1990 or 1991 that there are areas that  
 (23) are depicted with no oil where oil can still be found today  
 (24) March 24 1992?  
 (25) A There could be

Vol 20 3074

- (1) Q What is the most accurate surface oiling map in Exxon s  
 (2) possession for Prince William Sound?  
 (3) A I have lots of very accurate data sets I need to know a  
 (4) time  
 (5) Q Well I want to know right now March 24 1992 the nature  
 (6) and extent of oiling in say Prince William Sound  
 (7) A As of today?  
 (8) Q As of March 24 1992 what is your best map?  
 (9) A The MAYSAP map would be the best map  
 (10) Q Why is it you believe the MAYSAP –  
 (11) MR KENDE that s M A Y S A P  
 (12) Q – maps are the most accurate?  
 (13) A They are the latest survey available They represent the  
 (14) latest look at what the shoreline looked like  
 (15) Q And what data went into the MAYSAP surface maps?  
 (16) A Data from the survey that was conducted by the joint survey  
 (17) teams in April and May of 1991  
 (18) Q And what kind of surveys were they? Let me be more  
 (19) specific Were surveys done on all segments in the spill  
 (20) area?  
 (21) A No  
 (22) Q How were segments determined or selected for survey?  
 (23) A Segments were designated by the involved agencies and  
 (24) landowners Those lists of segments were submitted to Exxon  
 (25) and the other agencies They formed a master list All of the

Vol 20 3075

- (1) interested parties commented on that list Some segments  
 were  
 (2) added and some were deleted  
 (3) Q And the segments that were signed off on if you will in  
 (4) 1990 as requiring no further treatment were not surveyed in  
 (5) 1991 is that correct?  
 (6) A Some of them were not surveyed Some of them were  
 (7) Q Under what circumstances would a segment that had been  
 (8) signed off for no further treatment nevertheless been surveyed  
 (9) as part of the MAYSAP process?  
 (10) A Areas that were of special interest to different parties  
 (11) for instance Areas that we knew the landowner had a very  
 deep  
 (12) interest in Areas that were very sensitive ecologically  
 (13) potentially could have been rescheduled Areas that were  
 (14) designated by an agency as saying this is important for us to  
 (15) look at Some that were designated by Exxon as being  
 important  
 (16) for us to have a record of what they looked at what they  
 (17) looked like in 1991  
 (18) Q And the segments that – were there segments that you re  
 (19) aware of that were not part of the MAYSAP survey that you  
 (20) believe contained oiling?  
 (21) A Yes  
 (22) Q And is that because a segment that as a result of a cost  
 (23) benefit analysis could have oil on it but the decision could  
 (24) be made not to treat it either because of the nature of  
 (25) treatment that would be required and the damage that it would

Vol 20 3076

- (1) cause or for other reasons that it perhaps might not be cost  
 (2) effective to do so?  
 (3) A I do not remember hearing any discussion of the cost of  
 (4) surveying being involved I think the decisions were generally  
 (5) based on we know that the oiling here is not a problem or is  
 (6) sporadic or for whatever reason and we have some time  
 (7) constraints in surveying and because of that and the known  
 (8) conditions and impact of just going to it we elected not even  
 (9) to look at it  
 (10) Q With a very few exceptions the kind of treatment that was  
 (11) being conducted in 1989 1990 and 1991 on the beaches was  
 (12) surface treatment true?  
 (13) A A majority of the treatment was surface treatment yes  
 (14) Q Would you agree that the vast majority of it was?  
 (15) A In 1989 I would agree  
 (16) Q And in 1990 you would not?  
 (17) A I would say a lot of it addressed subsurface in 1990  
 (18) Q Prior to the Exxon Valdez oil spill had you ever worked on  
 (19) an oil spill before?  
 (20) A No  
 (21) Q How does a shoreline produce sheen?  
 (22) A Okay Sheen is produced off of a shoreline by several –  
 (23) there s several methods that wash oil off a shoreline onto the  
 (24) water The most common method and one that we expect is the  
 (25) most prevalent is due to storms or wave action waves

Vol 20 3077

- (1) striking the beach and washing off the beach due to that
- (2) turbulent water
- (3) Another way that moved - that can move oil off the beaches
- (4) is just the tidal cycle cycle pumping off the beach pumping
- (5) of the beach The tide coming in rising up lifting some of
- (6) the oil off the rocks and sweeping some of that oil out into
- (7) the ocean
- (8) Third way which is I believe prevalent - was prevalent in
- (9) March of 1990 - was melt water from the upper inner tide
- (10) lines snow melt causing runoff throughout the - through the
- (11) beaches washing basically water washing the beaches
- Those
- (12) are three of the methods Those are the three prevalent ones
- (13) Q Now are there factors that relate conditions that are more
- (14) conducive than others for the efficacy of that process? In
- (15) other words when the water moves through the oiled shoreline
- (16) are there conditions that would make that more effective
- (17) causing a shoreline to produce sheen than others?
- (18) A Yes
- (19) Q And what are those?
- (20) A First the amount of oil that is mobile on the shoreline
- (21) Secondly the temperature which effects the viscosity of the
- (22) oil And thirdly - and maybe as important or more important
- (23) than the other two - is the velocity of the water that is
- (24) impinging on the shoreline High waves high tides are more
- (25) effective than low waves low tides High runoff rates would

Vol 20 3078

- (1) be more effective than low runoff rates
- (2) Q How about beach tide?
- (3) A To an extent it will have some influence but not
- (4) enough - just in the ability of the water to percolate through
- (5) the beach sediment In most cases in Prince William Sound the
- (6) beach type is not a - water can get in and out of the sediment
- (7) pretty easily in Prince William Sound
- (8) Q So beach type was not a significant factor to this process
- (9) in Prince William Sound?
- (10) A I don't believe so
- (11) Q And upon what do you base that?
- (12) A I base that on the factor that these other - that is
- (13) just not as important as these others That is my opinion
- (14) Q I know but I get the basis of your opinion
- (15) A That the shoreline types in Prince William Sound all allow
- (16) water to percolate pretty easily except for one small area
- (17) That the beaches are fairly porous from a fluid flow
- (18) standpoint
- (19) Q And what about in the Kodiak/Alaska Peninsula area is the
- (20) same true?
- (21) A Yeah pretty much the same
- (22) Q There are things that are sheens that are not necessarily
- (23) petroleum?
- (24) A Okay yeah things that look like sheens
- (25) Q There are organic material on the water that create sheens

Vol 20 3079

- (1) but that aren't petroleum for example but for the purposes of
- (2) nomenclature they are still sheens is that right?
- (3) A Those would still be sheens yes
- (4) Q So to clarify your problem with the State's program it was
- (5) not that they were misidentifying sheens but they were
- (6) misidentifying what they saw as sheens as being oil related is
- (7) that more accurate?
- (8) A No They were identifying things as sheens that had no oil
- (9) of any sort in them That is my belief
- (10) Q Would that be the problem of false sheens?
- (11) A Yes
- (12) Q And what steps did you take in your program to distinguish
- (13) a false sheen from an actual one?
- (14) A We spent a fair amount of time early in the program
- (15) identifying areas that would tend to show those sorts of
- (16) sheen like looking phenomena fresh water outflows for
- (17) instance glacier outflows We also spent some time observed
- (18) or spent some time looking at how we would distinguish wind
- (19) sheens from oil sheens and ways to do that And there are
- (20) methods to do that
- (21) Q Wind sheens from oil sheens?
- (22) A Yes
- (23) Q And what is a wind sheen?
- (24) A A wind sheen is a - is - I don't know if that is really
- (25) the term for it but it is something that will look like a

Vol 20 3080

- (1) sheen on the water from certain angles due to the wind shearing
- (2) the surface of the water and making it look different than the
- (3) surrounding water from certain angles That can appear to be
- (4) a sheen look like an oil sheen a petroleum based sheen From
- (5) other angles it will not look that way So you have to take
- (6) some precautions about that
- (7) Q Okay Now as a result of all these things that are called
- (8) false sheens was it your experience during 1989 1990 1991
- (9) that people often thought that there was oil where there
- (10) wasn't?
- (11) A Yes
- (12) Q And you're smiling as if to indicate that was a common
- (13) occurrence
- (14) A Yes
- (15) Q So to the untrained eye persons might think that water and
- (16) land was subject to oiling that weren't?
- (17) A Yes definitely
- (18) Q And did you observe that phenomenon even fairly far from
- (19) the oiled area?
- (20) A Oh yes
- (21) Q Now you explained that increase in sightings of sheen in
- (22) September of 1990 as corresponding to berm relocation is that
- (23) right?
- (24) A Correct
- (25) Q And what led you to conclude that the berm relocation was

Vol 20 3081

- (1) the cause of the increased sheening?  
 (2) A Well we looked at where the sheens were being spotted and  
 (3) they were being spotted a lot of them near - adjacent to  
 (4) shorelines where we had relocated storm berm  
 (5) Q Why were the berms being relocated?  
 (6) A There was oil in the berms  
 (7) Q Was there oil above the berms?  
 (8) A I do not believe so in general I don't have any  
 (9) experience of there being oil above the berms  
 (10) Q Never in your experience in the course of the - all your  
 (11) experience with the Exxon Valdez did you understand oil had  
 (12) reached above the berms?  
 (13) A I have never visited a shoreline where there was oil above  
 (14) the storm berm And I thought I visited the worst ones so -  
 (15) Q And the storm berm was subject to less water flushing than  
 (16) lower parts of the beach?  
 (17) A Yes  
 (18) Q And as a consequence of that the oil would tend to persist  
 (19) in those berms?  
 (20) A Yes  
 (21) Q And the purpose of the relocation effort was to break down  
 (22) the berms so that the water would go through that part of the  
 (23) beach and be flushed into the sea?  
 (24) A Sort of  
 (25) Q Do you have a quarterer with that statement?

Vol 20 3082

- (1) A Yeah yes  
 (2) Q And what is it?  
 (3) A It doesn't really describe storm berm relocation  
 (4) Q Why don't you describe it?  
 (5) A Okay Storm berm relocation is picking up oiled sediment  
 (6) from the storm berm and moving that sediment down into the  
 (7) intertidal area and allowing the tidal action and the waves to  
 (8) get at it So it's actually moving the material down the slope  
 (9) on the beach  
 (10) Q And the reason for doing that is if the oiled sediment was  
 (11) to stay where it was it would not be subject to as much water  
 (12) flushing and would stay on the beaches longer is that right?  
 (13) A Not be subject to water flushing right  
 (14) Q Now if you were correct that the sheening was the  
 (15) consequence of this berm relocation effort how long would you  
 (16) have expected the sheens to persist on the water before that  
 (17) process dissipated returned to normal?  
 (18) A How long would a sheen persist?  
 (19) Q No the sheens in general in the area if the berm  
 (20) relocation effort took place over a course of time then would  
 (21) you expect the flushing from that process to be complete and  
 (22) you wouldn't see any continued increase in sheening?  
 (23) A I don't know how long it would take to - how long you'd  
 (24) continue to get sheens out of this material  
 (25) Q When you terminated the program was it still happening?

Vol 20 3083

- (1) A Yes  
 (2) Q Near the end of your report you discuss some areas in 1990  
 (3) of persistent sheening which were ultimately boomed and were  
 (4) monitored more closely Page 15 if you want to take a look  
 (5) A Yes okay  
 (6) Q Where were these?  
 (7) A There were several Mares Point on Perry Island Northwest  
 (8) Bay  
 (9) Q That's on Knight Island?  
 (10) A No on Eleanor Island  
 (11) Q Eleanor Island?  
 (12) A At times Parts of Sleepy Bay and Point Helen parts of  
 (13) Smith Island I think those are it pretty much There might  
 (14) have been one on Herring Bay I'm not sure  
 (15) Q Sure Was there ever any subsurface oiling surveys done  
 (16) out of Prince William Sound by Exxon?  
 (17) A Yes  
 (18) Q Where?  
 (19) A In Kenai I'm not sure exactly of which segments but some  
 (20) segments in Kenai  
 (21) Q In the Kenai Fjords?  
 (22) A Well on the Kenai Peninsula someplace  
 (23) Q Did you take any steps - well on the basis of those  
 (24) surveys was subsurface oil discovered?  
 (25) A Where?

Vol 20 3084

- (1) Q On the Kenai Peninsula  
 (2) A I believe there were two small pockets of it discovered  
 (3) yes  
 (4) Q Where were they?  
 (5) A One was Windy Bay and I don't know where the others were.  
 (6) Q Let me ask you this When were those surveys done?  
 (7) A Summer of 1990  
 (8) Q Did you subject that area to aerial surveillance for oil  
 (9) sheens after the survey?  
 (10) A No  
 (11) Q Why not?  
 (12) A It was outside of Prince William Sound I didn't go  
 (13) there  
 (14) Q Why not?  
 (15) A It was outside of our survey area at that point Our  
 (16) design didn't go there so -  
 (17) Q I know but what was the reason that your design elected  
 (18) not to go there at that point in time?  
 (19) A Why didn't we change the design you mean?  
 (20) Q Well did you consider changing the design when you  
 (21) learned  
 (22) that there was subsurface oil in those areas?  
 (23) A No  
 (24) Q Why not?  
 (25) A They were very very small accumulations and we didn't worry  
 (26) about it from a sheening standpoint

Vol 20 3085

(1) MR KENDE That concludes the reading of Mr Tatt s  
 ( ) deposition Your Honor  
 (3) MR FORTIER Your Honor would this be an appropriate  
 (4) time for a break or -  
 (5) THE COURT Yeah I want to discuss a few things with  
 (6) you anyway counsel so I'll send the jury out  
 (7) (Jury out at 9 28 a m )  
 (8) THE COURT All right You can be seated  
 (9) Counsel let s talk about the instruction that I ve  
 (10) proposed to give to the jury at the end of the day today  
 (11) It s - as things have percolated down we have only  
 (12) Mr Stoll s added language to deal with So two things  
 (13) MR DIAMOND I was unclear whether Mr Stoll was  
 (14) proposing that we remove the second and third paragraphs of  
 (15) what you had signed off on tentatively yesterday I assume he  
 (16) has not  
 (17) THE COURT I don t think so This is just changes  
 (18) right?  
 (19) MR STOLL It s just moving one sentence from the -  
 ( ) all I did was reword that first paragraph Your Honor And the  
 (1) first whole sentence is really - the first full sentence that  
 (2) is underlined is the sentence from the last paragraph that  
 (3) was - that Mr Diamond had added yesterday I just moved it  
 (4) from that last paragraph into this paragraph so it was in the  
 (5) context of the other material

Vol 20 3087

(1) of stating the proposition that these people are only  
 (2) plaintiffs in this case I think that probably would do it  
 (3) that sentence  
 (4) THE COURT Thank you counsel  
 (5) Mr Stoll?  
 (6) MR STOLL Your Honor the reason that I added or  
 (7) proposed to add these two sentences one is is that the first  
 (8) sentence explains the nature of the claim here about the lost  
 (9) productivity of the land as a result as an element  
 (10) The second one is I think that that is very necessary  
 (11) given bringing in this - these claims being in federal court  
 (12) because I m very concerned that the jury could be led to the  
 (13) conclusion that well these same people are over in federal  
 (14) court and they re double dipping and that s - and that is  
 (15) the - that is heightened I might say by Mr Clough s  
 (16) statement in his opening statement that - about payments  
 (17) having - Exxon had already made payments or words to that  
 (18) effect that implied that Exxon had already made payments on  
 (19) the archaeological thing Sounds like the Native corporations  
 ( ) in particular are double dipping and so I thought that there  
 (1) was some clarification  
 (2) Again our position was that we didn t want to get into  
 (3) what the claims were in federal court but once you do that  
 (4) then I think we have to explain this is it for these  
 (5) plaintiffs And -

Vol 20 3086

(1) MR DIAMOND I don t have any objection any strong  
 ( ) objection to moving that sentence from one place to another I  
 (3) do object to the - the other additions that Mr Stoll has put  
 (4) in her The first one is on the second line of Page 2 of his  
 (5) instruction which adds the economic value of the - and  
 (6) continues loss of subsistence harvest I think that makes that  
 (7) sentence very confusing and unnecessarily so  
 (8) The two sentences that he has added strike me as - as  
 (9) argumentative the first one dealing with productivity of the  
 (10) land makes it sound like we re dealing with a farm case here  
 (11) Productivity isn t defined comes out of left field and really  
 (12) is duplicative of the prior sentence which talks about causing  
 (13) the Native corporations damage by interfering with the use of  
 (14) their land  
 (15) The addition of this sentence addressing lost productivity  
 (16) of the land strikes me as somewhat argumentative Clearly  
 (17) though the next sentence the state court case is the only  
 (18) case in which these plaintiffs the Native corporations and the  
 (19) municipalities are seeking damag-s caused by the Exxon  
 Valdez  
 ( ) oil spill is something that one would expect to hear in closing  
 (1) argument not a jury instruction And there s nothing in this  
 ( ) paragraph or elsewhere in the two paragraphs to suggest that  
 (3) there s som other case pending in which these corporations  
 are  
 (4) plaintiffs  
 (5) Even if there were there d certainly be a more benign way

Vol 20 3088

(1) THE COURT Counsel isn t this an erroneous  
 ( ) statement The state court case is the only case in which  
 (3) these plaintiffs the Native corporations and the  
 (4) municipalities are seeking damages caused by the Exxon  
 Valdez  
 (5) oil spill isn t that erroneous?  
 (6) MR STOLL No it s not  
 (7) THE COURT Aren t you looking for punitive damages  
 (8) over in federal court?  
 (9) MR STOLL Those are not damages caused by the Exxon  
 (10) Valdez oil spill You want to use the word compensatory  
 (11) damages that s fine I don t -  
 (12) MR DIAMOND There s also the TAPP flow proceedings  
 (13) THE COURT Well counsel the truth is I think this  
 (14) is one of those debates that s - that the resolution of which  
 (15) if I took either one of your versions it would be acceptabl  
 (16) But frankly I like the - I like Mr Diamond s last version  
 (17) the best so that s what I m going to give So I m going to  
 (18) give Exhibit B and I m going to give the - the instruction  
 (19) that Mr Diamond proposed Let s see if I can find it here on  
 (20) the 20th  
 (21) MR STOLL Your Honor could we ask one - one  
 ( ) modification?  
 (23) THE COURT Sure sure  
 (24) MP STOLL And that is that the sentence we move -  
 (5) he doesn t have an objection we moved the sentence that he

Vol 20 3089

- (1) added from the back to the first paragraph so that it s all  
 ( ) together there  
 (3) THE COURT Tell me which sentence  
 (4) MR STOLL Can I approach the bench?  
 (5) THE COURT Sure  
 (6) MR STOLL It s the - it s the first full sentence  
 (7) on my revision I submitted yesterday  
 (8) THE COURT Oh I see  
 (9) MR STOLL It s underlined on - see you have his  
 (10) there  
 (11) THE COURT Oh I see You want to take this and move  
 (12) it back  
 (13) MR STOLL No no no I want to take this sentence  
 (14) - starts right here this sentence - and move it - just a  
 (15) minute  
 (16) THE COURT I tell you what you don t have any  
 (17) objection to changing it do you counsel? That s fine with  
 (18) me What I want you to do is just get me a clean copy so that  
 (19) I can read it Also get me a clean copy of Exhibit B so I  
 ( ) won t read any of the segments that I wasn t going to read  
 (21) And I ll give that at the end of the trial day  
 (22) MR STOLL Fine Your Honor  
 ( ) THE COURT Both of those at the end of the trial  
 ( ) day  
 ( ) Now Mr Petumenos unless you had something else to

Vol 20 3090

- (1) discuss I d like to talk about whatever it was that you came  
 ( ) to the bench for at the beginning of the trial day  
 (3) MR PETUMENOS Sure We thought that by preview of  
 (4) snapshot of what the problem is or -  
 (5) THE COURT Yes you mean this is going to take a long  
 (6) time?  
 ( ) MR PETUMENOS Well it s not going to take a huge  
 (8) amount of time but the problem is we have a witness who  
 (9) documents the administrative claims of Chugach th-  
 management  
 (10) time that was devoted to the oil spill a Mr John Black which  
 (11) is the Chugach administrator that was in the case We received  
 ( ) in the cross examination exhibits a contract with a copy of a  
 (13) check for payment made under the Chugach OSRT program  
 which  
 (14) was the program whereby Exxon paid to have certain Native  
 (15) representatives in the field accompanying th m for survey  
 (16) work  
 ( ) And as I began to work on the problem of their putting in  
 (13) another check for payments and its relationship to the claim  
 (19) that we re making and what appeared to be a contract defense  
 ( ) or an accord and satisfaction defense I began looking at the  
 ( ) pleadings to see if it had been pled as a defense It s not  
 ( ) there whereupon we began writing a brief And I was just  
 ( ) mindful of the Court s situation yesterday over OPA 90 where  
 w  
 ( ) we re trying to argue fairly complex matters at the bench which  
 ( ) was unfair to the Court and decided this was one of those

Vol 20 3091

- (1) And I have Mr Black on the schedule for today and talked  
 (2) to Mr Clough and said I thought that we ought to push it off  
 (3) the schedule or bump him for the day at least because it was  
 (4) just not the sort of thing I wanted to bring to the bench and  
 (5) start fussing about at least without advance notice to the  
 (6) Court  
 (7) I also didn t want to file a brief on the same day as the  
 (8) testimony is because that would have got me in trouble So I  
 (9) want to raise it with the Court where we were I m going to  
 (10) file a brief today Mr Clough will want time to respond I m  
 (11) sure but the issues are getting a little sticky Not overly  
 (12) so but enough that I didn t want to do it at the bench  
 (13) MR CLOUGH If I might briefly respond Your Honor  
 (14) This issue has been out there for several days now We  
 (15) clearly believe that plaintiffs by making this particular  
 (16) claim have opened the door and we were very mindful of your  
 (17) admonition to bring this up argue it in advance outside of the  
 (18) presence of the jury I was and am prepared to argue it  
 (19) outside of the presence of the jury today  
 ( ) My concern is when Mr Petumenos brought this up today  
 (21) about the issue of briefing which I never heard about before  
 (22) this morning is he also suggested pushing the witness off  
 ( ) today s schedule we planned for him today then said well he  
 ( ) might not - he says we re going to file a brief What s the  
 ( ) briefing schedule going to be? And if we can t get it done by

Vol 20 3092

- (1) tomorrow can we do the witness by telephone next week?  
 ( ) Quite frankly I m opposed to doing the witness by  
 (3) telephone We re in a jury trial here The witness is here  
 (4) now My preference would be to argue it orally today get this  
 (5) out of the way and go ahead with the witness Alternatively  
 (6) this witness was originally listed for Tuesday of this week  
 (7) We looked - then thought he was going to be on Wednesday  
 We  
 (8) now thought he was going to be on today I certainly don t  
 (9) want to switch back and I m not prepared to do him by  
 (10) telephone in order to allow Mr Petumenos an opportunity to  
 (11) brief this I don t think it s as complicated an issue and  
 (12) we re prepared to argue it today  
 (13) THE COURT Tell me what the argument is  
 (14) MR CLOUGH There was an agreement between Chugach and  
 (15) Exxon to reimburse a variety of expenses related to the oil  
 (16) spill  
 (17) THE COURT That s what the contract said  
 (18) MR CLOUGH Yes we have listed the contract  
 (19) THE COURT Says that the language is this is to  
 (20) reimburse  
 (21) MR CLOUGH Absolutely it contains a couple of  
 ( ) provisions with it It contains one express provision saying  
 ( ) it pays this person that person lists them out by name It  
 ( ) also says beyond that there s a provision where it adds a ten  
 ( ) percent general overhead charge on top of all of that

Vol 20 3093

Vol 20 3095

(1) Now the claim being asserted by Mr. Black is essentially  
 (2) for \$122,000 for his own time and expenses. Now Mr. Black  
 (3) the evidence will show dealt with Exxon on this particular  
 (4) agreement worked with Exxon on the matters that the  
 agreement  
 (5) covered and our evidence will show that we thought we were  
 (6) paying for his time by that ten percent general overhead  
 (7) charge. We thought this was something that had been paid  
 (8) The expressed defense of accord and satisfaction is not  
 (9) listed in our complaint - excuse me in our answer. However  
 (10) we have pled setoff. We have pled settlement and release.  
 (11) Also under Gilbert vs. Olsen if worse came to worse if we were  
 (12) looking at a pure accord and satisfaction.  
 (13) I would move to amend the pleadings to include the accord  
 (14) and satisfaction defense. What's even more significant on a  
 (15) purely relevance argument this gentleman just for his own  
 (16) time is asserting \$122,300 for a claim. Originally had been  
 (17) closer to 200,000. They cut it down just this week. The  
 (18) entire amount paid under that contract for the 15 people he was  
 (19) supervising was 122,600 and the evidence I believe will show  
 (20) that they never once mentioned to Exxon through the course of  
 (21) all those negotiations that for this one gentleman they were  
 (22) planning to make a request equal to what the entire 15 people  
 (23) that were being compensated under the contract under his  
 (24) supervision on which he was dealing with Exxon. We feel this  
 (25) was - this is one. It's relevant to the issue of whether his

(1) hired specifically to manage the lands advise the corporation  
 (2) as to what they should do and what the land management  
 issues  
 (3) that were raised concerned. So it has got nothing to do with  
 (4) the contract.  
 (5) The cuts that we made that Mr. Clough alludes to relate to  
 (6) this Court's order to make sure that litigation related  
 (7) materials litigation related expenses not be presented before  
 (8) the jury. And there were times when the accounting was such  
 (9) that we had to cut things that were not litigation related but  
 (10) because the accounting didn't track it separately well enough  
 (11) we felt it was improper to put it in front of the jury if it  
 (12) contained a little of both and we couldn't clearly indicate  
 (13) which it was so that had you know nothing to do with these  
 (14) contract principals.  
 (15) So I don't think it's specifically pled. I think  
 (16) Mr. Clough is trying to bootstrap things related to TAPA and  
 (17) some other things that were pled into this situation. The  
 (18) point is it's sufficiently complicated. It's going to be  
 (19) hard. There's back and forth. You've got to see the  
 (20) contract. You've got to hear the law on accord and  
 (21) satisfaction and contract defenses and how it must be pled and  
 (22) I didn't see how we were going to be able to do that at the  
 (23) bench and all I was attempting to do now is get it scheduled  
 (24) not resolve it.  
 (25) THE COURT Give me - give me a brief summary of what

Vol 20 3094

Vol 20 3096

(1) time claim might be exaggerated and two we feel we have  
 paid  
 (2) for this already we feel by making this particular claim  
 (3) They have opened the door  
 (4) MR. PETUMENOS I obviously would have a response if  
 (5) you want to argue the whole thing now  
 (6) THE COURT Go ahead  
 (7) MR. PETUMENOS You have to see the contract. It's  
 (8) not as Mr. Clough represents. There's a - this contract was  
 (9) limited by Exxon to include OSRT related projects. Exxon was  
 (10) not opening the door to all management of the oil spill of the  
 (11) Chugach Alaska Corporation by entering into this contract with  
 (12) Exxon. The contract benefitted Exxon in that it put landowner  
 (13) input into the survey process and it was understood that there  
 (14) might have to be some administration of these people in the  
 (15) field. But Mr. Black's position with Chugach was not related  
 (16) to reporting to Exxon not related to working with Exxon to  
 (17) advise them about what was going on. Mr. Black's duties were  
 (18) to assist the corporation and his duties and loyalties were to  
 (19) the corporation and there are provisions of the contract that  
 (20) limited and exclude general management issues related to the  
 (21) corporation.  
 (22) Mr. Black worked with the United States government with  
 (23) the Forest Service trying to determine what the situation  
 (24) was. He covered archaeological issues. He dealt way outside  
 (25) the contract and its - and its purpose as a management person

(1) the law as you see it on accord and satisfaction and in a  
 (2) notice - notice pleading case like this. Generally all  
 (3) requires fair notice of what the defenses will be.  
 (4) MR. PETUMENOS Accord and satisfaction is an  
 (5) affirmative defense they must establish by the preponderance  
 of  
 (6) the evidence. It is subject to discovery. It is subject to a  
 (7) determination of whether or not the party when they signed the  
 (8) documents or exchanged letters or accepted payment could  
 (9) reasonably be said to be settling the claim that's before the  
 (10) jury now. The conversations surrounding the exchange of  
 (11) letters that Mr. Clough wants to put forward all of that would  
 (12) be appropriately the subject of accord and satisfaction type  
 (13) discovery.  
 (14) We have to have sufficient notice that when they said oh  
 (15) there were settlements. My goodness there were TAPA  
 (16) settlements there was a Chugach fishery settlement for 9.2  
 (17) million dollars. There was all sorts of settlements in this  
 (18) case. If they wanted to plead accord and satisfaction as to  
 (19) Chugach's administrative claims they had several opportunities  
 (20) to do it. And the answer which you remember was a subject of  
 (21) a fair amount of back and forth this winter when we said  
 (22) where's your answer please give us your answer we're going  
 (23) to move to default you please give us your answer we had  
 (24) discussion about the minute order. They finally got it. It's  
 (25) not there. We had order 40 where the specific factual issues

Vol 20 3097

(1) to be tried So if the parties -- if there's any doubt we'd  
 (2) be able to tell what the issues were It's not there  
 (3) So I don't think that they -- it's a notice pleading state  
 (4) but in a case like this which is vastly complex and voluminous  
 (5) amount of discovery to conduct and numerous opportunities  
 (6) we've  
 (7) had to deal with one another I think simply the situation  
 (8) Exxon finds themselves in just before they get ready to  
 (9) cross examine the witness they think here's a theory  
 (10) let's try this and that's what happened  
 (11) I think it's -- I won't tell you you're not without  
 (12) discretion midtrial in a case like this to do it but I don't  
 (13) think it would be good use of your discretion to allow it  
 (14) THE COURT Thanks counsel  
 (15) MR CLOUGH very briefly all right?  
 (16) MR CLOUGH Very briefly Your Honor  
 (17) MR PETUMENOS Just one thing on the telephonic  
 (18) thing that was just a suggestion If Mr Clough wanted to  
 (19) agree to it It's unfortunate that I raised something with  
 (20) counsel and say oh we could try to do it by telephone have a  
 (21) huge objection If he wants to object to by telephone that's  
 (22) fine  
 (23) THE COURT Fine that solves one of my problems  
 (24) MR CLOUGH Mr Petumenos keeps talking a lot about  
 (25) accord and satisfaction What he's saying he doesn't want  
 (26) Mr Black to testify today I have our answer right here It

Vol 20 3098

(1) just plead settlement and release  
 (2) THE COURT Pleads what?  
 (3) MR CLOUGH Claims by some persons may have been --  
 (4) or have been settled and released We have a cover letter  
 (5) They went through a long process including Mr Black where  
 (6) they went through the invoices and made the amount of  
 (7) judgments  
 (8) back and forth There's a cover letter Here's what we agreed  
 (9) on This is what we owed you and no more That's a settlement  
 (10) and release  
 (11) Additionally we talk about -- we have a pleading here We  
 (12) voluntarily paid claims for economic loss Do the words  
 (13) accord and satisfaction appear there? Well no they  
 (14) don't Am I entitled -- if it turns out under the technical  
 (15) rules this is an accord and satisfies not a voluntarily  
 (16) release even after judgment we're not at that stage yet yes  
 (17) that's Gilbert V Olsen that's been the law here in the state  
 (18) for a long time  
 (19) THE COURT I know counsel I see this as a factual  
 (20) matter That's -- that first I don't -- this is the way I see  
 (21) it just in a general sense The pleading issue certainly  
 (22) would not keep a legitimate cross examination under -- under  
 (23) the circumstances that have been described to me from being  
 (24) raised in the trial That's what I believe I will find after I  
 (25) read your pleadings  
 (26) Second this looks like a factual issue to me It looked

Vol 20 3099

(1) like -- when I dealt with this in a dispositive motion context  
 (2) these things looked like factual issues to me and I felt that  
 (3) they should be brought to my attention before the jury heard  
 (4) anything which is exactly what you're doing So I applaud you  
 (5) for that but I -- I have a feeling that -- that all this is  
 (6) over After all the pleadings is in and the arguments are  
 (7) made that this is simply going to be another factual issue  
 (8) that's going to have to be determined on the basis of direct  
 (9) and full fair cross examination which may very well include  
 (10) this contract and payments made  
 (11) So -- but who am I to keep you from -- from briefing  
 (12) issues and who am I to say that you have to stick to a  
 (13) schedule that you've changed so many times in the past and  
 (14) appear to be doing every day So the answer is yes you can  
 (15) take the witness off -- off the presentation list now You can  
 (16) present him later I'll listen to your briefing I'll do it  
 (17) on your schedule that's convenient to both of you You will  
 (18) not present the witness by telephone You will present the  
 (19) witness live  
 (20) You may want to take a look at this issue and see if it's  
 (21) really worth all this  
 (22) MR CLOUGH Thank you Your Honor  
 (23) THE COURT So what does that do to the presentation  
 (24) of the evidence today though?  
 (25) MR PETUMENOS We have a full presentation

Vol 20 3100

(1) THE COURT Good that's good  
 (2) MR PETUMENOS Full experience for the jury  
 (3) THE COURT Anything else?  
 (4) MR DIAMOND No Your Honor  
 (5) MR STOLL Thank you Your Honor  
 (6) THE COURT Well you're welcome  
 (7) Why are you getting up? We're going to get the jury right  
 (8) back in here I don't want to make these breaks last too  
 (9) long  
 (10) MR STOLL Good we'll sit down  
 (11) (Jury in at a m )  
 (12) MR FORTIER Your Honor plaintiffs call Mr Charles  
 (13) Homan  
 (14) THE COURT The jury is present counsel  
 (15) THE CLERK Sir can you attach the microphone to your  
 (16) tie and remain standing for the oath? Raise your right hand  
 (17) (The Witness Is Sworn)  
 (18) THE CLERK Please be seated Sir for the record I  
 (19) need you to state your full name  
 (20) A My name is Charles E Homan H o m a n  
 (21) THE CLERK And your occupation?  
 (22) A I'm a general contractor and consultant  
 (23) THE CLERK Thank you  
 (24) DIRECT EXAMINATION OF CHARLES F HOMAN  
 (25) BY MR FORTIER

Vol 20 3101

- (1) Q Good morning Mr Homan  
 (2) A Good morning  
 (3) Q Mr Homan can you tell the jury a little bit about  
 (4) yourself please?  
 (5) A Yes I m basically – well start with my educational  
 (6) background I am a graduate of Central Washington University  
 (7) in Ellensburg Washington graduated there in 1958 with a  
 (8) Bachelor of Arts degree in economics minors in business and  
 (9) geography that type thing And from there I moved into the  
 (10) banking field in 1959 started working for the Old National  
 (11) Bank and commenced with my training in that field as a  
 (12) management trainee In that particular job and when I moved  
 (13) to Alaska I was – participated in the American Institute of  
 (14) Banking which is a professional trade organization for the  
 (15) education of people in banking institutions  
 (16) Q Mr Homan let me interrupt for a moment When did you  
 (17) move to Alaska?  
 (18) A 1963  
 (19) Q And did you go to work for a bank when you moved up here?  
 (20) A Yes I did I went to work for National Bank of Alaska  
 (21) Q And could you continue with your – with your history?  
 ( ) A And from there I – when I arrived here I worked for  
 ( ) National Bank of Alaska for approximately six years and at  
 ( ) that time I continued my education in the field of banking  
 ( ) earning the prestandard and standard certificates offered by

Vol 20 3102

- (1) the American Institute of Banking and then I specialized into  
 ( ) the field of mortgage banking where I got – graduated from  
 (3) the graduate school of Northwestern University at Evanston  
 (4) Illinois I worked for National Bank of Alaska for – until  
 (5) 1969 when I joined the – what was then called the Matanuska  
 (6) Valley Bank and which later was to become Alaska Bank of  
 (7) Commerce and eventually First Interstate Bank of Alaska  
 (8) In that capacity first in the National Bank of Alaska I  
 (9) worked in the real estate department managed – became the  
 (10) assistant manager We handled primarily home loans in that  
 (11) particular business but we also expanded into financing  
 (1 ) apartments and commercial buildings I was directly  
 (13) responsible for most all of the interim construction financing  
 (14) for both new homes and on commercial buildings  
 (15) When I moved over to the Matanuska Valley Bank I was  
 (16) manager of their home loan department and their mortgage  
 (17) loan  
 (1 ) originations and we provided the opportunity for people to buy  
 (13) homes and get mortgages In that capacity I also developed  
 (19) outlets for commercial buildings and financed multifamily  
 ( ) projects both through the HUD FHA program and through the  
 ( ) conventional sources such as New York Life Insurance  
 ( ) Company  
 ( ) From there when the – the bank in order to increase its  
 ( ) capitalization sold the mortgage department in 1972 is my  
 ( ) recollection and the whole department was acquired by what  
 ( ) was  
 (23) Rainier Mortgage Company It no longer exists as such  
 ( ) because

Vol 20 3103

- (1) it was part of the acquisition that occurred with Bank of  
 (2) America when they bought the Rainier National Bank in Seattle  
 (3) Q Mr Homan let me interrupt for just a moment You have  
 (4) been a banking officer for a number of years is that correct?  
 (5) A That s correct  
 (6) Q And that would be a lending officer?  
 (7) A I ve always been a lending officer in practically all of  
 (8) that experience  
 (9) Q And that would be for a period of time in 1963 until –  
 (10) until when?  
 (11) A In Alaska from 1963 until – with an institution till 1989  
 (1 ) Q Okay And have you worked as a senior loan officer?  
 (13) A Well that s – I was pretty well designated that from –  
 (14) certainly from 1970s on I was considered a senior real estate  
 (15) loan officer  
 (16) Q Now does a senior loan officer senior real estate loan  
 (17) officer work in the area of making loans to people for real  
 (18) estate?  
 (19) A That s our primary activity  
 (20) Q And does that include examining real estate before you make  
 (21) the loan on it?  
 ( ) A That is correct  
 ( ) Q Would – as a senior real estate loan officer have you  
 ( ) examined the collateral that is being offered in order to  
 (23) assess the risk of the property?

Vol 20 3104

- (1) A That is correct We examine to determine the risk of the  
 ( ) property or our perception of the risk  
 (3) Q Okay And that s some thing you ve been doing for how  
 (4) many  
 (5) years Mr Homan?  
 (6) A Thirty years  
 (7) Q In addition to your work experience do you hold  
 (8) certifications?  
 (9) A Yes I do I was – through my work history I was  
 (10) approved as a Fannie Mae appraiser Federal National  
 (11) Mortgage  
 (12) Association when they entered into the conventional loan  
 (13) programs required approval of the appraisers I reached that  
 (14) goal and then I also was approved as a Fannie Mae  
 (15) underwriter  
 (16) meaning that I could underwrite loans to be sold through the  
 (17) Federal National Mortgage Association in the secondary  
 (18) mortgage  
 (19) market  
 (20) As I said I graduated from the School of Mortgage  
 (21) Banking I am also a certified review appraiser I hold that  
 (22) designation with a professional organization National  
 (23) Association of Review Appraisers And I have been designated  
 ( ) as a certified underwriter with another professional  
 ( ) organization  
 ( ) Q In addition to that Mr Homan have you – do you have any  
 ( ) teaching experience?  
 ( ) A Yes I ve taught courses for the American Institute of  
 ( ) Banking in – at the community college Now it s part of UAA

Vol 20 3105

- (1) but at that time it was part of the community college and in  
 (2) mortgage lending and in construction finance  
 (3) Q Approximately how many courses have you taught Mr Homan?  
 (4) A Actually I've only taught about three courses  
 (5) Q Have those been at the University of Alaska?  
 (6) A They are what is now University of Alaska correct  
 (7) Q And in addition to the certifications and training do you  
 (8) have any other specialized training - excuse me certification  
 (9) and teaching do you have any specialized training in the area  
 (10) of real estate lending practices?  
 (11) A Well my - my training mostly is on the job I have taken  
 (12) numerous courses and attended a lot of seminars many  
 (13) different  
 (14) classes to become educated as to the requirements of - for  
 (15) lending institutions to meet both federal and state and for  
 (16) what is normal practice in the area of finance  
 (17) Q And Mr Homan are you presently working as a consultant?  
 (18) A Yes I am  
 (19) Q Can you - have you worked as a consultant in the area of  
 (20) real estate lending for a few years?  
 (21) A Yes I have  
 (22) Q How many years?  
 (23) A Actually I've been working as a consultant basically since  
 (24) about 1985 in conjunction with my other employment  
 (25) Q And in your experience as a real estate - or in your  
 (26) practice as a real estate consultant real estate lending

Vol 20 3106

- (1) consultant have you ever had any - any experiences with  
 (2) working with owners of contaminated property?  
 (3) A Yes I have  
 (4) Q Can you tell the jury about your experiences in that  
 (5) regard?  
 (6) A Well specifically the problem that is faced by owner of  
 (7) property that is contaminated -  
 (8) Q Excuse me Mr Homan explain to the jury one of the  
 (9) experiences you have had  
 (10) A That's what I'm going to do here. In this particular  
 (11) regard one case was for Mr Robert Navrot He owned a  
 (12) garage  
 (13) that - it's called Al's Carburetion on 88th - had a loan with  
 (14) Alaska U S A Federal Credit Union of about a balance of about  
 (15) \$700,000 and they had moved for foreclosure and had asked  
 (16) for  
 (17) relief from stay in the bankruptcy Mr Navrot consulted with  
 (18) me because he wanted to maintain his only means of livelihood  
 (19) which was operating the garage and we reviewed the situation  
 (20) at the garage and I noted the contamination the oil  
 (21) contamination and other types of problems there asked the -  
 (22) met with the officers at Alaska U S A and told them to come  
 (23) out and view the property which they did After their  
 (24) consultations review they reduced the loan balance or  
 (25) actually balance due to \$55,000 because they did not want to  
 (26) lose title to the property The major problem that's faced by  
 (27) a lending institution -

Vol 20 3107

- (1) MR DIAMOND Your Honor may we qualify the witness  
 (2) first before he begins giving substance of his testimony?  
 (3) MR FORTIER Your Honor I had a couple more  
 (4) questions that I was going to move to qualify I don't  
 (5) objection to the interruption  
 (6) BY MR FORTIER  
 (7) Q Mr Homan have you testified in state court as an expert  
 (8) witness on banking and lending practices previously?  
 (9) A Yes I have  
 (10) Q Could you just tell the name of the cases that you  
 (11) testified in?  
 (12) A I can't recall them all sitting here but the most - one  
 (13) of the larger cases was with Great Western Savings Bank -  
 (14) Q That was a state court case?  
 (15) A - versus Easley Construction and involved the Liberty  
 (16) Center where I - I was the expert witness for the bank and  
 (17) talked and set forth the typical bank practice with regards to  
 (18) making construction loans disbursement of funds on  
 (19) construction loans and handling those type of matters  
 (20) MR FORTIER Thank you Mr Homan  
 (21) Your Honor at this time we would move to qualify Mr -  
 (22) Mr Homan as an expert in the area of bank lending practices  
 (23) MR DIAMOND Your Honor I had thought that Mr Homan  
 (24) was being offered as an expert in the contaminated - or the  
 (25) collateral value of contaminated oil spill property If that's

Vol 20 3108

- (1) the purpose for which he's being offered I'd like to voir  
 (2) dire  
 (3) THE COURT Is it both counsel?  
 (4) MR FORTIER I will limit it Your Honor to bank  
 (5) lending practices with regard to contaminated collateral  
 (6) THE COURT So you want to question right counsel?  
 (7) MR DIAMOND I think I do yes  
 (8) THE COURT Yes  
 (9) VOIR DIRE EXAMINATION OF CHARLES E HOMAN  
 (10) BY MR DIAMOND  
 (11) Q Good morning Mr Homan  
 (12) A Good morning  
 (13) Q Let me introduce myself to you My name is Chuck Diamond  
 (14) one of the lawyers for the defendants here Exxon Corporation  
 (15) MR FORTIER Your Honor I'm sorry if I could  
 (16) interrupt at this point Would it be possible to perform the  
 (17) voir dire and make an offer of proof I suppose outside the  
 (18) presence of the jury?  
 (19) THE COURT I don't think that's necessary  
 (20) MR FORTIER Okay Your Honor Thank you  
 (21) BY MR DIAMOND  
 (22) Q I wore my banker suit today You're not currently a  
 (23) banker is that right?  
 (24) A Not on a full time basis I do make loans for - I work  
 (25) with Seattle Mortgage Company as a correspondent for them

Vol 20 3109

- (1) making typically fairly large commercial loans Just completed
- (2) an apartment house loan 146 unit building here in Anchorage
- (3) for Mr Lathrop Processed a number of HUD FHA loans for them
- (4) Q This is acting as a consultant currently?
- (5) A Yes
- (6) Q But your last employment as a bank loan officer was in
- (7) 1989 is that correct?
- (8) A That is correct with Home Savings Bank
- (9) Q And you - your current principal occupations are as a
- (10) self employed general contractor?
- (11) A That is correct
- (12) Q And is it also not true that you are a part time securities
- (13) and insurance salesman?
- (14) A That is also right correct
- (15) Q You weren't involved in the banking business since the time
- (16) of the Exxon Valdez oil spill isn't that right?
- (17) A Not - no that's correct
- (18) Q And you never therefore in your career as a bank officer
- (19) had to deal with a proposed loan being presented by somebody
- (20) who had Prince William Sound property that was contaminated by
- (21) Exxon Valdez oil spill oil?
- (22) A I've never had such a request to handle
- (23) Q You were out of the industry by the time those things
- (24) happened?
- (25) A Well I want to reiterate that I'm still and I have still

Vol 20 3110

- (1) been active in accepting loan applications and processing them
- (2) through the financial institutions
- (3) Q How long has sort of environmental concerns and pollution
- (4) problems been at the forefront of thinking of bankers? That's
- (5) relatively recent is it not?
- (6) A Actually it is fairly recent However the mid 1980s is
- (7) really when the legislation that affected the requirements of
- (8) banks and then the impacts of it have not - did not occur
- (9) until probably the mid 80s to late 80s
- (10) Q That's because in the mid to late 80s banks became
- (11) concerned that if they required collateral they loaned on in
- (12) foreclosure they might get stuck with clean up
- (13) responsibilities?
- (14) A Exactly
- (15) Q And as a result the banking institutions in the late 80s
- (16) began requiring their customers to fill out environmental
- (17) questionnaires and the like?
- (18) A That's correct Generally most of those things were
- (19) instituted in - well we were doing that in 1989 at Home
- (20) Savings Bank when the FDIC moved in and seized the bank
- (21) Q That was your last job for a bank it was for Home Savings?
- (22) A That is correct
- (23) Q Did you continue working for Home Savings after the
- (24) regulators took over?
- (25) A I was there for a period of time

Vol 20 3111

- (1) Q The bank was under supervision of the regulators before the
- (2) takeover was it not?
- (3) A Actual direct supervision was only for a period of about
- (4) two or three months before I left there and closure occurred
- (5) another about eight or nine months later
- (6) Q The bank was having liquidity problems what we generally
- (7) regard as not having enough money on hand everyone before
- (8) the takeover?
- (9) A Insufficient capital requirements
- (10) Q And so during the two years 87 through - I'm sorry 86
- (11) and 87 well -
- (12) A 87 and -
- (13) Q 87 and 89 when you were at Home Home was not doing a
- (14) lot
- (15) of lending was it?
- (16) A On the contrary We were doing a great deal of lending and
- (17) that was why I was brought on board because of my expertise
- (18) in
- (19) commercial loan - real estate loans And we were making
- (20) commercial real estate loans and selling those through the
- (21) Federal Home Loan Bank Freddie Mac
- (22) Q Let me ask you during the two years you were at Home
- (23) before it was taken over were you ever presented with a
- (24) proposed loan commercial or industrial where the collateral
- (25) being proposed to secure the loan was contaminated by some
- (26) sort
- (27) of pollutant?
- (28) A The - can't actually answer that affirmative I've had

Vol 20 3112

- (1) several properties that were presented to me that I'm not sure
- (2) that it was at Home Savings Bank or not because we had a lot of
- (3) polluted properties that have been used for collateral lending
- (4) here particularly in the industrial areas
- (5) Q I'm asking you during your career as a banker at least for
- (6) the last two years 87 through 89 when you were at Home it
- (7) is true that you never had to value collateral that was being
- (8) presented for a loan that had been the subject of a spill or
- (9) other industrial contamination?
- (10) A That - no that wouldn't be true We had to look into
- (11) those issues and we turned down properties that - particularly
- (12) salvage yards and that type of thing where there was obvious
- (13) battery contamination and that type of problem
- (14) Q This was while you were at Home?
- (15) A Yeah
- (16) Q Did you ever - were you ever presented with a loan
- (17) commercial or industrial that was proposed to be secured by
- (18) land that had been the subject of oil contamination oil spill
- (19) contamination?
- (20) A Not that I can recollect
- (21) Q Okay Prior to being at Home you were with Alaska
- (22) Continental Bank?
- (23) A That's right
- (24) Q That also is an institution that was taken over by
- (25) regulators?

Vol 20 3113

- (1) A That is correct  
 (2) Q You were there for what -  
 (3) A Six months roughly  
 (4) Q Six months During the course of your employment with  
 (5) Alaska Continent did you ever - were you ever put in a  
 (6) position where you had to value the collateral being presented  
 (7) in connection with a proposed loan where the land had been  
 (8) contaminated by oil?  
 (9) A That I - I believe in the case of a particular loan that  
 (10) I'm thinking of some people name of Forret (phonetic) that  
 (11) was one of our considerations and we weren't able to extend  
 (12) credit on it  
 (13) Q What kind of property is that sir?  
 (14) A It's still here It's a mini storage area park out here  
 (15) south of town off Arctic  
 (16) Q What kind of pollution?  
 (17) A They had some oil contamination on the property at the  
 (18) time as well as other problems that we were concerned about  
 (19) Q What were the other problems?  
 (20) A I can't recall all of them This is quite a while ago  
 (21) Q Did you get involved in evaluating the likely cost of  
 (22) rehabilitating the property from a contamination sense?  
 (23) A It didn't go that far because if there was contamination  
 (24) that was enough to scare us away  
 (25) Q And your prior employment was with Security National Bank?

Vol 20 3114

- (1) A I was at Security National Bank for a short time on a -  
 (2) basically as a contractor because I sold the mortgage company  
 (3) in which I was an owner And they were having severe financial  
 (4) problems asked me to come on board to handle those  
 problems  
 (5) Q That takes us back to mid 1986?  
 (6) A That's correct  
 (7) Q While you were with Security Pacific Bank?  
 (8) A Security National  
 (9) Q I'm sorry Security National Did you ever have to  
 (10) determine the value of real estate that was being proposed as  
 (11) collateral that had been the subject of oil spill  
 (12) contamination?  
 (13) A Not that I'm aware of That was a very short tenure  
 (14) there  
 (15) Q How about during the five or so years that you were - I  
 (16) guess longer than five or so years what from about February  
 (17) 1984 - well only two years February 84 through 86 you  
 (18) were out on your own?  
 (19) A That's correct  
 (20) Q As a mortgage banker?  
 (21) A That's correct  
 (22) Q During that period of time did you ever represent either a  
 (23) borrower or a lender in connection with a proposed loan that  
 (24) was planned to be secured by contaminated property?  
 (25) A We had presented to us on that occasion in that period of

Vol 20 3115

- (1) time a number of properties that had contamination problems  
 (2) and that was because we were the - sort of the source of last  
 (3) resort because they had tried the other lenders in the area  
 (4) and couldn't get financing And it was obvious that if you had  
 (5) a contaminated property that no outside lender lending  
 (6) institution was going to consider - they were going to give  
 (7) very definite consideration to that problem  
 (8) Q How much such properties were you involved in?  
 (9) A I don't know We had probably half a dozen or such a  
 (10) manner as that  
 (11) Q Were any contaminated as a result of spilled oil?  
 (12) A Most of them a lot of them would have involved like I  
 (13) can recall several of them were service stations that had that  
 (14) type of credit where they had oil contamination as a result of  
 (15) underground storage tank failures  
 (16) Q Leaks into the subsurface?  
 (17) A That's correct  
 (18) MR DIAMOND Nothing further Your Honor  
 (19) THE COURT Let me understand what you're offering him  
 (20) for counsel As an expert testifying as to real estate  
 (21) lending practices as they relate to circumstances involving  
 (22) environmental contamination?  
 (23) MR FORTIER That's correct Your Honor  
 (24) MR DIAMOND Your Honor we have no objection for  
 (25) that purpose so long as the witness is not going to get

Vol 20 3116

- (1) involved testifying about these specific properties  
 (2) THE COURT Well we'll deal - if that comes up  
 (3) counsel I can deal with it  
 (4) MR FORTIER Mr Homan I have a couple more  
 (5) introductory questions for you I suppose One of them  
 (6) whether or not - I'm sorry Your Honor did you -  
 (7) THE COURT That's fine  
 (8) DIRECT EXAMINATION OF CHARLES E HOMAN (Resumed)  
 (9) BY MR FORTIER  
 (10) Q Were you involved during your period of time as a bank  
 (11) lending officer with making loans to Native corporations?  
 (12) A Yes I've been involved with Native corporations  
 (13) Q Was one of those Native corporations English Bay  
 (14) Corporation?  
 (15) A That's correct They had a financing at Security National  
 (16) Bank  
 (17) Q And that was before the oil spill?  
 (18) A That is correct  
 (19) Q Okay Now with regard to what you've been called to  
 (20) testify for today can you tell the jury who retained you?  
 (21) A I was retained by English Bay Corporation Port Graham  
 (22) Corporations and Chenega  
 (23) Q That would be Chenega Corporation?  
 (24) A Chenega Corporation  
 (25) Q And what was the scope of the engagement? What were you

Vol 20 3117

Vol 20 3119

(1) ask d to do?  
 ( ) A I was asked specifically to address the problems of  
 (3) obtaining financing on properties that had been contaminated  
 by  
 (4) oil  
 (5) Q And can you tell the jury what you did in order to -- to  
 (6) undertake this task to do this thing?  
 (7) A Well actually having had quite a bit of experience  
 (8) with -- in the past with what happens when you have  
 (9) contamination I -- that s my background my understanding my  
 (10) knowledge And also the professional organizations which I am  
 (11) a member continuously provide us with like the National  
 (12) Association of Review Appraisers provide us with information  
 (13) relative to federal regulators and the like on meeting  
 (14) contamination requirements and what those are and what  
 things  
 (15) to be aware of in our review of properties  
 (16) With that background I called five lending institutions  
 (17) that I -- officers I knew and discussed with them their  
 (18) attitudes about lending and their institution s attitude about  
 (19) lending on properties that had contaminated oil spill  
 (20) situations and --  
 ( ) Q And approximately what period of time are you doing this?  
 ( ) Excuse me Mr Homan  
 ( ) A Well I did it in two periods at the specific request of  
 (4) counsel The first was in February -- January February of  
 (5) 1993 and then later it was again about in February of 1994

(1) foolhardy to take on a piece of property that had contamination  
 ( ) on it without a thorough investigation and knowledge that it  
 (3) could be cleaned up and what the cost of that cleanup is  
 (4) Q Mr Homan in your experience as a banker and as a  
 (5) consultant can you tell the jury how lenders discover whether  
 (6) or not borrowers have contamination on their property?  
 (7) A Well many institutions require that you do what is call-d  
 (8) a phase one or level one environmental study of the property  
 (9) Q And what is that Mr Homan?  
 (10) A That basically is a historic study of the site  
 (11) Q And this is the collateral that s being proposed by the  
 ( ) borrower is that --  
 (13) A That s the collateral being proposed by the borrower For  
 (14) example this loan that I was referring to that I just was  
 (15) involved with two million plus dollar loan the life insurance  
 (16) company in order to fund that loan required that a registered  
 (17) engineer perform a study He had to go back actually they  
 (18) wanted 50 year history of the property Now 50 year history  
 (19) of a property in Anchorage Alaska really isn t possible in  
 ( ) most areas and it wasn t in that case but they have to go  
 (21) back on the title find out who owned the property what it was  
 ( ) used for and define that in a written report They have to do  
 ( ) aerial photos on site photos determine if by visual  
 ( ) observation there s any obvious contamination Then they have  
 ( ) to reach out a half a mile radius to determine if there s

Vol 20 3118

Vol 20 3120

(1) Discuss-d with them what their positions were On both  
 ( ) occasions all of these lending officers were very specific in  
 (3) saying that they would not lend on properties that had oil  
 (4) contamination They would require cleanup before that could  
 (5) occur or any loans could be made  
 (6) Q Now Mr Homan on either of these occasions did you tell  
 (7) the bankers that you were inquiring as to property that had oil  
 (8) contamination crude oil contamination?  
 (9) A I mentioned crude oil contamination yes  
 (10) Q And did that make a difference to the bankers?  
 (11) A No No it was a perception of contamination that s  
 ( ) primarily the problem  
 (13) Q What I d like to do now for a moment Mr Homan is refer  
 (14) you back to your own experience with -- as a banker Why don t  
 (15) bankers based upon your experience like to make loans on  
 (16) contaminated property?  
 (17) A B cause we -- it s an unknown risk Risk evaluation to a  
 (18) banker is the most critical issue and there are many risks  
 (19) As obviously occurred in Anchorage the oil belt area in the  
 ( ) late 1980s when we had the downturn in the economy and we  
 lost  
 ( ) the vast majority of your lending institutions because of the  
 ( ) economic circumstances that occurred Those were risks that  
 ( ) in many cases the bankers could not foresee but in taking on  
 ( ) a risk of having a contaminated property is something -- you  
 ( ) know you ve got that and it would be a -- in my opinion

(1) anything out there that might affect the value of that  
 ( ) property  
 (3) Q The --  
 (4) A And very specifically they want to know whether that -- if  
 (5) there s contamination out there which there was in this case  
 (6) whether that groundwater is being contaminated that would  
 (7) surface or could cause contamination of the site That s the  
 (8) kind of study that is required  
 (9) Q Now what you ve just described is what a phase one audit  
 (10) is is that correct?  
 (11) A That -- that is correct  
 (12) Q And you indicated Mr Homan that it was a half a mile  
 (13) radius?  
 (14) A That s correct  
 (15) Q This is a half a mile radius around the collateral that s  
 (16) being proposed is that right?  
 (17) A That is correct It s a radius around the collateral being  
 (18) proposed  
 (19) Q Okay Now have you ever heard of the term level two  
 ( ) audit?  
 ( ) A Yes Level two is the next step up  
 ( ) Q What is a level two audit?  
 ( ) A A level two audit is where they suspect or see or find that  
 ( ) there s potential contamination and they go out and they  
 ( ) drill If it s ground contamination oil contamination they

Vol 20 3121

- (1) will drill to determine its presence in the ground what  
 (2) extent take soil samples It s extremely expensive  
 (3) Q Now in your experience as a – both as banker and as a  
 (4) consultant Mr Homan do you know whether or not there – or  
 (5) has it been your experience that before a bank will loan on  
 (6) suspected contaminated property it will require both a phase  
 (7) one and a phase two audit?  
 (8) A Well they may It depends on what s discovered on phase  
 (9) one Phase one is when you find out if there might be a  
 (10) problem and then you usually go into phase two if you do have  
 (11) a problem  
 (12) Q Suppose you re the owner of a contaminated property or  
 (13) property that you know has contamination such as – the source  
 (14) may be crude oil from an oil spill?  
 (15) A Right  
 (16) Q And suppose that that person were to come to you as the  
 (17) banker and say I would like to borrow on this collateral what  
 (18) would you require that individual to do?  
 (19) A I would typically require a phase two environmental audit  
 (20) Which means I d require them to go out to determine if there  
 (21) was any oil contamination on that property still existent  
 (22) that might cause problems or might end up in water in the  
 (23) water contaminant the water the viability of the property  
 (24) We would go from there then We would want to know if they –  
 (25) there was if there was presence of hydrocarbons or that type

Vol 20 3122

- (1) of thing oil what the cost of that cleanup would be before we  
 (2) would ever consider financing it  
 (3) Q And after you determine the cost of the cleanup then  
 (4) would you finance the property although knowing it was  
 (5) contaminated Mr Homan?  
 (6) A Typically they would require – and the lenders I talked  
 (7) to they would definitely require the cleanup be completed  
 (8) before any funding was done on the property An example of  
 (9) that might be a job that my – I just completed for a – for  
 (10) Fred Bailey on what used to be Bailey s Rent All on the corner  
 (11) of Northern Lights and A street the National Bank of Alaska  
 (12) required a level one audit on that site in order for the  
 (13) borrower to acquire financing The borrower in that case  
 (14) happened to be a lessee of Mr Bailey and I agreed – we  
 (15) agreed – this has been – started like three years ago and we  
 (16) agreed to go in our construction company and handle this  
 (17) matter for him because he no longer lives in the area At the  
 (18) request of the bank the lessee requested the owner  
 (19) Mr Bailey to do that  
 (20) We went ahead and acquired the services of an engineering  
 (21) firm Howard Gray Engineer and proceeded to remove three  
 (22) tanks These tanks the engineer found had no leaks but  
 (23) there had been oil spilled around those tanks over the years  
 (24) so they – the amount of contamination just slightly exceeded  
 (25) those that was required The cost of removing the tanks was

Vol 20 3123

- (1) about \$6 000 but the cost of engineering and the reports that  
 (2) had to be filed with the Department of Environmental  
 (3) Conservation for the State of Alaska took the better part of  
 (4) two years and about \$13 500 even though there was no  
 (5) significant contamination properties  
 (6) Q And Mr Homan how large a piece of property was this?  
 (7) A This was a fairly good sized piece of property on the  
 (8) corner of – I m not sure Probably 20 000 square feet  
 (9) Q So about a half an acre then?  
 (10) A Yeah  
 (11) Q And it was \$13 000 in order to comply with the DEC studies?  
 (12) A Just to do the studies yeah  
 (13) Q On a half acre parcel of contaminated property?  
 (14) A That s correct  
 (15) Q Now in contacting the banks did you receive any  
 (16) information from any bank regarding voluntary reporting of the  
 (17) condition of environmental risk like an environmental risk  
 (18) questionnaire?  
 (19) A Yes I did  
 (20) Q Could I have the Elmo for a moment please?  
 (21) Mr Homan I m going to – hope like heck I can get this to  
 (22) work  
 (23) MR STOLL Let me show you  
 (24) MR FORTIER Thank you  
 (25) BY MR FORTIER

Vol 20 3124

- (1) Q Mr Homan I m showing you on the screen there what s been  
 (2) marked for purposes of identification PX1223 It is a  
 (3) document that s been titled Environmental Risk Questionnaire  
 (4) Can you tell us where you received this document?  
 (5) A I received that from Richard Brittain at First National  
 (6) Bank of Anchorage – he s a loan officer there involved in real  
 (7) estate – said that this is what they – ask their borrowers to  
 (8) complete when they re applying for real estate loans  
 (9) Q Is this a document that you received when you made an  
 (10) inquiry regarding whether or not banks would loan on  
 (11) contaminated property or property contaminated by the Exxon  
 (12) Valdez oil spill?  
 (13) A Yes sir that is one of those documents I received  
 (14) Q I don t think I m going to get this in any better focus  
 (15) A I can t read it to be honest with you  
 (16) Q Mr Homan I d like you to just point out a few things to  
 (17) the jury if you could Was it your understanding that this  
 (18) was a form that the First National Bank of Anchorage required  
 (19) to be voluntarily disclosed or filled out by any borrowers?  
 (20) A That s correct It was a form that they required to be  
 (21) completed voluntarily so that – as part of their risk  
 (22) analysis  
 (23) Q Okay And some of the questions I d like to refer you to  
 (24) Mr Homan the question number 3 – can you read that please?  
 (25) A I can t read it I mean I m sorry

Vol 20 3125

Vol 20 3127

(1) THE COURT You can read it to him counsel  
 (2) MR FORTIER I thought it might be better  
 (3) THE COURT You can read it to him You can just read  
 (4) it  
 (5) MR FORTIER Okay  
 (6) BY MR FORTIER  
 (7) Q Question number three Mr Homan says have past owners  
 of  
 (8) the property or have you during your ownership of the property  
 (9) or adjacent owners of property ever handled produced or  
 (10) stored any hazardous substances or waste? Examples of some  
 (11) substances or materials are as follows Diesel fuel and  
 (12) gasoline  
 (13) Now is it your experience that there is a general duty to  
 (14) disclose the -- the handling production or storage of such  
 (15) materials as diesel fuel or gasoline on one s property when one  
 (16) is applying for a loan?  
 (17) A Yes yes  
 (18) MR DIAMOND Objection Your Honor as to duty No  
 (19) foundation Duty to disclose  
 (20) THE COURT The objection s overruled  
 (21) BY MR FORTIER  
 (22) Q And Mr Homan finally did you form an opinion regarding  
 (23) whether or not lands contaminated by the Exxon Valdez oil spill  
 (24) may be used as collateral?  
 (25) MR DIAMOND Your Honor I ll object as beyond the

(1) question  
 (2) A I believe that the value would be substantially reduced by  
 (3) the fact there was oil on the properties and would not be  
 (4) eligible for lending purposes  
 (5) THE COURT What information do you have at your  
 (6) disposal that leads you to that opinion?  
 (7) A Actually my basis is that I m aware because of the  
 (8) general knowledge of the public that there was oil  
 (9) contamination on the sites and on the properties And that oil  
 (10) contamination from what I ve been able to discern from -- on  
 (11) my own is that some of that contamination remains and until we  
 (12) had a level two environmental study on a particular property to  
 (13) determine that there was no remaining oil contamination then I  
 (14) would not want to be a loan officer nor was I -- the loan  
 (15) officers I discussed this matter with and talked to would in  
 (16) my opinion loan on those properties  
 (17) THE COURT Did you ask them specifically about the  
 (18) Exxon Valdez oil spill as it relates to these properties  
 (19) THE WITNESS No I did not  
 (20) THE COURT Counsel what -- this is an offer of  
 (21) proof If you want to ask him some questions you can  
 (22) MR FORTIER Your Honor if I could could I ask just  
 (23) a few more?  
 (24) THE COURT You have more?  
 (25) MR FORTIER I did have a couple more questions

Vol 20 3126

Vol 20 3128

(1) scope of proffer and without foundation  
 (2) THE COURT Second objection now is sustained but how  
 (3) do you want me to treat this? Out of the presence of the jury  
 (4) or in the presence? I m asking you Mr Diamond  
 (5) MR DIAMOND I would prefer it do it without them  
 (6) THE COURT Out?  
 (7) MR DIAMOND Out  
 (8) THE COURT I wonder is the jury room being used?  
 (9) THE CLERK Yes it s being used  
 (10) THE COURT I tell you what I m going to let you mill  
 (11) around out there for a minute If you ll go out for just a  
 (12) second  
 (13) MR DIAMOND Your Honor perhaps we could just  
 (14) approach?  
 (15) THE COURT No I d rather do it outside the  
 (16) presence  
 (17) (Jury out at 10 34 a m )  
 (18) THE COURT I had to get a lemon drop counsel  
 (19) Excuse me  
 (20) All right The question was what counsel?  
 (21) MR FORTIER My question Your Honor is whether or  
 (22) not he formed an opinion as to whether or not the lands  
 (23) contaminated by the Exxon Valdez oil spill have a value as  
 (24) collateral  
 (25) THE COURT Just for the record sir answer that

(1) THE COURT Sure go ahead  
 (2) BY MR FORTIER  
 (3) Q Mr Homan in your view and based upon your exper i nce  
 do  
 (4) you know whether or not media coverage of an event would  
 (5) impact -- such as the Exxon Valdez let s say plays any role  
 (6) in whether or not a lending decision is made on a certain piece  
 (7) of property?  
 (8) MR DIAMOND Your Honor I m going to object as  
 (9) beyond the scope of this expert s report No mention of  
 (10) stigma media coverage or --  
 (11) MR FORTIER Let me -- I can take a bit longer if you  
 (12) want Your Honor  
 (13) THE COURT You can what?  
 (14) MR FORTIER I can ask a few other questions  
 (15) BY MR FORTIER  
 (16) Q Such as Mr Homan do you know whether or not the  
 (17) reputation of a property as contaminated property may affect  
 (18) its value as collateral?  
 (19) A Yes that would be my position  
 (20) Q And do you know whether or not media coverage impacts the  
 (21) reputation of the property?  
 (22) A I think it do s Because it would impact me as a loan  
 (23) officer and that s why it does impact me because I know th se  
 (24) properties have had oil contamination  
 (25) Q Okay So if you were to see something on TV a news show

Vol 20 3129

- (1) on TV about a piece of property that obtains - that has a  
 (2) certain reputation for contamination then you as a loan  
 (3) officer would be influenced by what you've seen when you  
 were  
 (4) being asked to make the loan is that correct?  
 (5) MR DIAMOND Objection leading  
 (6) THE COURT Definitely  
 (7) MR FORTIER Well it is leading Your Honor  
 (8) THE COURT But this is an offer of proof counsel so  
 (9) I'll allow the answer  
 (10) MR DIAMOND We can dispense with the question and  
 (11) answers then  
 (12) A Yes it would definitely impact a person I can't believe  
 (13) that a loan officer would want to walk into his - to his bank  
 (14) or his financial institution and say I made loans on this  
 (15) property that was oiled by the Exxon Valdez oil spill His  
 (16) reputation would suffer  
 (17) BY MR FORTIER  
 (18) Q Okay Now besides the media events are there - besides  
 (19) television events that cover - that cover say that provide  
 (20) reputation evidence on - or reputation to the bank are there  
 (21) other methods by which bankers obtain information concerning  
 (22) contamination reputation of a property?  
 (23) A Well we've already mentioned the level one but we also do  
 (24) on site inspections before we make loans or we're supposed  
 (25) to That's a criteria that is addressed very heavily in many

Vol 20 3130

- (1) of the new federal regulations governing appraisal and  
 (2) evaluation of collateral You have to go out to the site and  
 (3) look And you also have what's called a title report gives  
 (4) you a lot of information relative to the property  
 (5) Q Mr Homan do you know whether it's more likely or less  
 (6) likely that a banker would go out - would require a level one  
 (7) audit of property within the Exxon Valdez oil spill impacted  
 (8) area?  
 (9) A I would say it would require level two  
 (10) Q And why is that?  
 (11) A Because he already knows that history says there's already  
 (12) been oil there There's been crude oil spilled and if it's a  
 (13) known fact that you've got crude oil on this property and  
 (14) you're going to take it for collateral you might become the  
 (15) owner of it If you become the owner of it state statute is  
 (16) very explicit about responsibility for making all that public  
 (17) knowledge if you sell that property and you're not going to  
 (18) sell property that's got oil contamination  
 (19) Q And by you you mean the bank when it comes into  
 (20) possession?  
 (21) A Meaning the bank when I say you  
 (22) THE COURT Hold on Mr Diamond How long do you  
 (23) think you'll take on this?  
 (24) MR DIAMOND Ten minutes five minutes  
 (25) THE COURT Okay I'm going to have her take the jury

Vol 20 3131

- (1) back to the jury room  
 (2) BY MR DIAMOND  
 (3) Q Mr Homan when was your last trip out to Eyak to inspect?  
 (4) A I have not been to Eyak  
 (5) Q What?  
 (6) A I have not been to Eyak  
 (7) Q Ever?  
 (8) A I have not been  
 (9) Q And walked any of their shorelines?  
 (10) A No sir  
 (11) Q When was your last trip to Tatitlek to inspect the oiled  
 (12) condition of their shorelines?  
 (13) A I have never been there  
 (14) Q Never? Not in your entire life?  
 (15) A No not in my entire life  
 (16) MR STOLL There's no jury present Look over there  
 (17) there's nobody in the box over there  
 (18) THE COURT No harm in a reversal counsel  
 (19) BY MR DIAMOND  
 (20) Q You haven't inspected the shorelines of Chenega have you?  
 (21) A No sir  
 (22) Q And you haven't inspected the shorelines at Port Graham or  
 (23) English Bay?  
 (24) A I happened to have been to English Bay only because other  
 (25) things that I was working with on English Bay

Vol 20 3132

- (1) Q You didn't go there to inspect the degree of contamination  
 (2) by oil?  
 (3) A No sir  
 (4) Q What knowledge do you have about the percentage of the  
 (5) lands of any of those entities and the Chugach Alaska  
 (6) Corporation percentage of those entities shoreline that was  
 (7) subject to Exxon Valdez oil do you have any information on  
 (8) that?  
 (9) A No sir  
 (10) Q Just what you read in the newspaper?  
 (11) A That is correct  
 (12) Q What information do you have about the degree to which any  
 (13) of the lands that were oiled were heavily oiled?  
 (14) A Only what I read in the newspaper and what I've seen in  
 (15) print and that type of thing  
 (16) Q What investigation have you made concerning the level of  
 (17) remediation that's already been performed on any of these  
 (18) properties?  
 (19) A Beyond what has been publicized none  
 (20) Q What investigation if any have you made about the  
 (21) decisions by any regulators state or federal concerning  
 (22) whether additional cleanup is required under applicable state  
 (23) and federal law?  
 (24) A Beyond what is published in the media none  
 (25) Q Okay You really don't have any information concerning the

Vol 20 3133

- (1) state of these properties that s any more accurate any more
- (2) knowledgeable or any more thorough than what you presume
- (3) anybody in the jury to have?
- (4) A That is correct
- (5) MR DIAMOND Nothing further Your Honor
- (6) THE COURT What s the objection counsel?
- (7) MR DIAMOND No foundation for this expert for this
- (8) individual to render an opinion on whether these properties
- (9) have any collateral value To the extent that he s relying on
- (10) media coverage and stigma that s certainly beyond what he
- (11) was
- (12) offered for There s nothing in his report about that The
- (13) only opinion he renders in the written report is - concerns
- (14) his reactions as a banker to the potential cost of cleanup and
- (15) what that would do to the collateral value of this property
- (16) There s absolutely no foundation
- (17) THE COURT Was he deposed on this issue?
- (18) MR DIAMOND Was he deposed on this issue stigma
- (19) the notoriety?
- (20) THE COURT Yeah deposed on what lenders would
- (21) require on this specific kind of property
- (22) MR DIAMOND He had no knowledge about these
- (23) properties
- (24) THE COURT That s not my question His testimony
- (25) relates to what a lender would require in view of all of the
- (26) factual circumstances surrounding this property Since this

Vol 20 3135

- (1) MR PETUMENOS Not at all Your Honor I ll go back
- (2) to where I was
- (3) THE COURT The in court clerks have told me I won t
- (4) get any more lemon drops unless I give them a break so I have
- (5) to give them a break
- (6) (Recess from 10 45 a m to 1103 a m )
- (7) (Jury in at 11 03 a m )
- (8) THE CLERK This court now resumes its session
- (9) Please be seated
- (10) DIRECT EXAMINATION OF CHARLES E HOMAN (Resumed)
- (11) BY MR FORTIER
- (12) Q Mr Homan did you form an opinion as to whether or not
- (13) lands contaminated by Exxon Valdez - by the Exxon Valdez oil
- (14) spill have any value as collateral?
- (15) A Yes I did
- (16) Q Could you tell the jury what that is please?
- (17) A I - I don t believe they have value for collateral those
- (18) lands that were affected by the Exxon Valdez oil spill because
- (19) they have contamination
- (20) MR FORTIER Thank you No further questions Your
- (21) Honor - oh Your Honor I would move for the admission of
- (22) exhibit 1223 at this time
- (23) (Exhibit 1223 offered)
- (24) THE COURT What is the number?
- (25) MR FORTIER 1223 Your Honor

Vol 20 3134

- (1) property might be contaminated that s what his testimony goes
- (2) to Okay he was deposed on the issue wasn t he?
- (3) MR FORTIER He was Your Honor
- (4) MR DIAMOND Your Honor I m thinking It s been a
- (5) while since I ve read his transcript Only in the general
- (6) general sense of - I don t think he was asked any - may I
- (7) consult? I don t want to misrepresent
- (8) THE COURT Sure sure
- (9) MR PETUMENOS Judge while he s consulting could I
- (10) have my two cents?
- (11) MR DIAMOND I really can t do - I only have one ear
- (12) that works
- (13) THE COURT That s fair enough No the answer is
- (14) no
- (15) MR PETUMENOS How about after he finishes the
- (16) reading?
- (17) MR DIAMOND Your Honor Mr Lied who conducted the
- (18) deposition of Mr Homan advises me he was deposed about
- (19) whether he would be prepared to lend on property such as
- (20) this
- (21) and why He was not deposed on broader questions of the
- (22) extent
- (23) to which lending decisions would be influenced by reputation
- (24) and notoriety of the property
- (25) THE COURT I see what you mean I don t think that s
- (26) the critical issue counsel I m going to allow the question
- (27) Mr Petumenos do you want to give you two cents worth?

Vol 20 3136

- (1) THE COURT Any objection counsel?
- (2) MR DIAMOND Is that the questionnaire?
- (3) THE COURT 1223
- (4) MR DIAMOND No objection
- (5) THE COURT It s admitted 1223
- (6) (Exhibit 1223 received)
- (7) MR DIAMOND Hello again Mr Homan
- (8) CROSS EXAMINATION OF CHARLES E HOMAN
- (9) BY MR DIAMOND
- (10) Q You re of the opinion that these properties have no
- (11) collateral value is that correct?
- (12) A Those affected by the contamination that is correct
- (13) Q Can you tell the Ladies and Gentlemen of the Jury when the
- (14) last time you visited the Eyak properties was?
- (15) A I ve never visited any of the properties involved
- (16) Q Never visited the Eyak properties in your life?
- (17) A No sir
- (18) Q When was the last time you visited the Tatitlek properties?
- (19) A Never visited any of those properties
- (20) Q With the exception of a visit to English Bay properties for
- (21) an unrelated reason you ve never visited any of the properties
- (22) that we re litigating about in this case isn t that right?
- (23) A That is correct I have not been to the properties
- (24) Q Can you tell the jury what investigation you made - before
- (25) forming an opinion what kind of investigation did you make

Vol 20 3137

- (1) concerning the degree to which the properties that we are  
 (2) litigating over in this case were oiled?  
 (3) A The -- my investigations as I have previously pointed out  
 (4) is in this particular situation was the discussion with other  
 (5) lending officers which I knew and talked to those people and  
 (6) got their perceptions of what contamination creates as a risk  
 (7) or a perceived risk I know in my own experience as a lending  
 (8) officer that the fact that these properties had a perceived  
 (9) risk that was evident by the newspaper media that based upon  
 (10) that fact that without extreme and diligent engineering being  
 (11) performed to determine the exact extent of that oil  
 (12) contamination these properties would not be used for  
 (13) collateral on lending -- normal lending practice  
 (14) Q Okay thank you but that wasn't my question My question  
 (15) was Isn't it true that you have made no investigation or made  
 (16) no effort to inform yourself in a knowledgeable and thorough  
 (17) way about the degree to which any of these properties got  
 (18) oiled?  
 (19) A That is --  
 (20) Q Isn't that true?  
 (21) A That is correct I have not  
 (22) Q All right And wouldn't that be a factor that a prudent  
 (23) banker would want to take into account before turning  
 (24) somebody  
 (25) down on a loan how badly their property was affected by an  
 (26) event like this?

Vol 20 3138

- (1) A In my opinion no The perceived situation is what usually  
 (2) would lead to the turndown  
 (3) Q So you think that whether a bank would or would not loan on  
 (4) these properties really would have nothing to do with the  
 (5) degree of oiling is that your opinion today?  
 (6) A That would be my opinion as to what would happen before --  
 (7) extensive engineering studies were provided  
 (8) Q Mr Homan that wasn't your opinion when you were  
 (9) deposed  
 (10) in this case?  
 (11) A I believe it was  
 (12) Q Are you sure?  
 (13) A Well that's what I believe  
 (14) Q I've put your deposition in front of you You were deposed  
 (15) on -- over the course of two days in this case were you not?  
 (16) A Two occasions yes  
 (17) Q And there was an attorney representing the Native  
 (18) corporations present on your behalf?  
 (19) A That is correct  
 (20) Q And you understood that the deposition was just like giving  
 (21) testimony in court did you not?  
 (22) A That's correct  
 (23) Q Take a look at page 37 of your deposition Did you not  
 (24) state sir that whether a bank would lend on these properties  
 (25) would depend upon the degree of contamination?  
 (26) A That's -- that is correct That's what I've said this

Vol 20 3139

- (1) morning  
 (2) Q So the degree to which these properties were impacted by  
 (3) oil is a factor is it not in whether a bank would lend on  
 (4) them?  
 (5) A The degree -- yes the degree of contamination is going to  
 (6) ultimately determine that but that can only be after  
 (7) engineering studies were completed and the property is found  
 (8) to  
 (9) be free of oil  
 (10) Q You're not telling the jury are you that if a bank  
 (11) conducted a -- an investigation of for example the Eyak  
 (12) properties and determined that they were never impacted by oil  
 (13) that bank still wouldn't make a loan on those properties?  
 (14) A Not saying that at all  
 (15) Q Oh okay You think point of fact if the borrower were  
 (16) otherwise qualified and the property was worth what the  
 (17) borrower was saying it was a loan would be made?  
 (18) A That is correct  
 (19) Q So sitting here today -- are you aware that Eyak wasn't  
 (20) oiled?  
 (21) A I -- no I'm not I have not specifically addressed the  
 (22) on site situations  
 (23) Q All right Let's assume that as a hypothetical Is it not  
 (24) true sir if Eyak was never oiled there would be no obstacle  
 (25) to Eyak getting a loan on these properties isn't that right  
 (26) sir?

Vol 20 3140

- (1) A In review of the contamination of the properties correct  
 (2) Q Okay thank you Wouldn't it also be a relevant factor for  
 (3) you to take into account the extent to which the property being  
 (4) pledged by collateral or the property being pledged for  
 (5) collateral was now here near the shoreline? That's unclear let  
 (6) me start again  
 (7) In making a lending decision on properties such as those  
 (8) that we're litigating about in this case if in fact a  
 (9) significant portion of the property were inland and removed  
 (10) from the shoreline that might be a factor that would lead a  
 (11) banker such as yourself into making a favorable lending  
 (12) decision would it not?  
 (13) A That's a very difficult question because first of all you  
 (14) would have to subdivide you would not want to acquire title by  
 (15) default  
 (16) Q Let's assume you could do that Let's assume that the  
 (17) borrower was willing only to pledge the inland and the upland  
 (18) portions of the property for the loan Wouldn't you agree  
 (19) that under those circumstances some shoreline oiling would  
 (20) not affect the lending decision?  
 (21) A As regards the contamination it would not affect the  
 (22) lending decision but you've got the problem of collateral  
 (23) value that gets involved there because you're parcelling And  
 (24) when you do that usually your highest and best property is the  
 (25) shoreline and it's the access to recreation the access to all

Vol 20 3141

- (1) the maritime activities It's a hard question  
 (2) Also the factor is like with the Department of  
 (3) Environmental Conservation they require you to go for a mile  
 (4) to determine if there's any groundwater penetration of oil  
 (5) contamination so you're talking maybe a mile from the  
 (6) shoreline  
 (7) Q Well we've heard testimony in this case from a prior  
 (8) witness that the inland portions of these properties are worth  
 (9) upwards of 500 to \$1,000 an acre So bear with me an  
 (10) assumption If you assume that the inland and upland portions  
 (11) of the property had sufficient value to secure the loan the  
 (12) fact that there was some shoreline oiling would not be an  
 (13) insurmountable obstacle to borrowing on the property isn't  
 (14) that right?  
 (15) A Not if you could subdivide that property off  
 (16) Q Isn't it true sir that the real problem that banks have  
 (17) in loaning on property that has been subject of exposure to any  
 (18) toxic material is the threat that if the bank forecloses and  
 (19) acquires the property in foreclosure they are going to be  
 (20) facing a substantial clean up bill?  
 (21) A That's - that's the perception There is no question  
 (22) about it  
 (23) Q Right And banks like to make sure that they're not going  
 (24) to be facing that kind of exposure that kind of clean up  
 (25) exposure when they make a loan isn't that right?

Vol 20 3142

- (1) Absolutely  
 (2) Q And if you as a - as a prudent banker had assurances that  
 (3) there would not be any such clean up costs that you would be  
 (4) protected then you'd be perfectly inclined to consider the  
 (5) loan as you would any other loan would you not?  
 (6) A I'd have to agree yes  
 (7) Q All right Wouldn't it make a difference to you as a  
 (8) banker looking at a piece of property that was being offered  
 (9) as collateral if the borrower could represent to you that the  
 (10) person responsible for the spill or what have you was a large  
 (11) solvent corporation which had publicly declared its intention  
 (12) and made a commitment to clean up the property to the  
 (13) satisfaction of all state and federal regulators wouldn't that  
 (14) make a difference to you?  
 (15) A It would be a part of your decision making process  
 (16) Q And don't you know just from reading the newspaper that  
 (17) in this case the Exxon Corporation committed to cleaning up the  
 (18) oil'd shorelines to the satisfaction of the State and federal  
 (19) regulators?  
 (20) A That is -  
 (21) Q Don't you know that?  
 (22) A That is my perception in the newspapers correct  
 (23) Q Mr Homan is it your perception from reading the  
 (24) newspapers that most of the oil that was deposited if not all  
 (25) of the oil that was deposited on these shorelines was

Vol 20 3143

- (1) deposited in the area where the tides come in and out?  
 (2) A That is my understanding correct  
 (3) Q You're aware that the State of Alaska owns that land are  
 (4) you not?  
 (5) A That is correct to the high water mark  
 (6) Q The mean high tide mark?  
 (7) A That's right  
 (8) Q Right? That's the average of the high tide Everything  
 (9) below that seaward is owned by the State is it not?  
 (10) A That's correct  
 (11) Q You know that's where most of the oil got deposited from  
 (12) the Exxon Valdez don't you?  
 (13) A That's correct  
 (14) Q Okay If you were to make a loan on a piece of property  
 (15) shoreside property that was subject or exposed to the oil  
 (16) spill and none of the privately owned property which was being  
 (17) pledged as collateral - by that I mean everything upland of  
 (18) the high mean tide - was clean had never been touched by oil  
 (19) and it could be shown to your satisfaction don't you think you  
 (20) might make a favorable lending decision under that set of  
 (21) circumstances?  
 (22) A As you've outlined the circumstances where you were clean  
 (23) and where there was no ground penetration of the oil had not  
 (24) affected at all the uplands under those circumstances I would  
 (25) agree that that would not badly impact your lending decision

Vol 20 3144

- (1) Q Well you are aware are you not sir that with respect to  
 (2) all of the lands below the mean high tide line there is a fund  
 (3) in existence to clean up those lands in perpetuity are you not  
 (4) aware of that?  
 (5) A No sir  
 (6) MR FORTIER Your Honor can I object for a moment?  
 (7) Could we approach?  
 (8) THE COURT You want to approach the bench? Sure  
 (9) (Sidebar out of the hearing of the jury)  
 (10) THE COURT Go ahead  
 (11) MR FORTIER Your Honor I think that there is a  
 (12) motion in limine or there's an order in limine that prohibits  
 (13) inquiry into third party payments and to the - into the fund  
 (14) that Mr Diamond referred to which is apparently the Exxon  
 (15) Valdez oil spill -  
 (16) THE COURT No there is not That's not pertinent to  
 (17) this question  
 (18) MR DIAMOND Your Honor he has opened the door by  
 (19) saying that in his view continuation of the shoreline would  
 (20) lead to an unfavorable lending decision I want to elicit from  
 (21) him the fact that he is aware first that the fund has been  
 (22) created to clean up all of the shoreline and that he as a  
 (23) banker would not be exposed to that risk and that as a  
 (24) result he would be inclined to make a favorable lending  
 (25) decision Had it not been opened I would not have pursued it

Vol 20 3145

- (1) but Mr Fortier opened this up by asking this gentleman's  
(2) position  
(3) THE COURT How far are you going to pursue this  
(4) counsel?  
(5) MR DIAMOND I want to establish with him the fact  
(6) and I'm going to ask him if in fact it would not lead to a  
(7) more favorable lending decision and otherwise --  
(8) MR FORTIER Your Honor?  
(9) THE COURT Yes  
(10) MR FORTIER I think the fund he's referring to is  
(11) really the restoration fund  
(12) THE COURT The settlement fund?  
(13) MR DIAMOND Settlement fund  
(14) MR FORTIER That has nothing to do with in  
(15) perpetuity  
(16) THE COURT That's the problem counsel  
(17) MR DIAMOND I'm revising the in perpetuity I'll just  
(18) ask him that if in fact he has knowledge of the nine hundred  
(19) million dollar fund to clean up the intertidal zone oiling  
(20) THE COURT I'm not going to let you ask that  
(21) question  
(22) MR DIAMOND Okay all right  
(23) (Sidebar concluded)  
(24) BY MR DIAMOND  
(25) Q Mr Homan as a prudent banker wouldn't you agree with me

Vol 20 3146

- (1) that if a borrower approached you with some property that had  
(2) been subjected to the oil spill or any contaminating event and  
(3) provided you with evidence that the regulators the  
(4) environmental regulators had signed off on the cleanup of that  
(5) event you probably would make a favorable lending decision  
(6) all other things being equal under those set of circumstances  
(7) would you not?  
(8) A After -- yes I would say that's true  
(9) Q And hasn't that happened here?  
(10) A That is what I understand is the signoff The other --  
(11) there's other factors involved when there's -- that may not  
(12) have occurred  
(13) Q Well counsel for the Native corporations has informed you  
(14) that the Alaska Department of Environmental Conservation  
(15) acknowledged that the oil spill cleanup was performed to their  
(16) satisfaction under all state and federal regulations You were  
(17) advised of that were you not?  
(18) A No  
(19) Q No? They didn't tell you that?  
(20) A (No response)  
(21) MR DIAMOND Counsel exhibit 38 -- I'm sorry 3958  
(22) MR FORTIER Counsel before you publish that --  
(23) MR DIAMOND Your Honor I will represent that this  
(24) document was previously furnished to counsel several days  
(25) ago  
(26) THE COURT Counsel wanted to see it didn't you?

Vol 20 3147

- (1) MR FORTIER Could I just take a look at it Chuck?  
(2) I don't have a copy  
(3) MR DIAMOND Sure I'll give you a copy  
(4) BY MR DIAMOND  
(5) Q Mr Homan I'm going to put on the screen a letter  
(6) somewhat out of focus which is dated June 22 1992 which is  
(7) signed by John Sandor Commissioner of the Department of  
(8) Environmental Conservation and ask you surely you've seen  
(9) this letter before this morning have you not?  
(10) A No I have not  
(11) Q Let me direct your attention to where I've highlighted a  
(12) portion of the first sentence which reads the shoreline  
(13) assessment and subsequent clean up work on the Exxon  
(14) Valdez oil  
(15) spill were found to be completed to both federal and state of  
(16) Alaska standards Were you not aware of that before this  
(17) morning sir?  
(18) A Only general reference to it in the newspapers I have  
(19) never seen it no  
(20) Q That might be something that would be important for you to  
(21) know as a banker making a lending decision on properties  
(22) involved in this case would it not sir?  
(23) A It would be important issue  
(24) MR DIAMOND No further questions  
(25) MR FORTIER Mr Homan I have a few questions for  
(26) you

Vol 20 3148

- (1) REDIRECT EXAMINATION OF CHARLES E HOMAN  
(2) BY MR FORTIER  
(3) Q Let me ask you first do you recall questions from defense  
(4) counsel regarding the -- whether or not oiling of the shoreline  
(5) area would impact your decisions as a lending officer?  
(6) A Yes sir  
(7) Q You recall that series of questions Mr Homan how far  
(8) radius is it that needs to be accomplished under a phase one  
(9) audit?  
(10) A One half mile  
(11) Q So that's a half mile radius around the subject property?  
(12) A That is correct  
(13) Q To your knowledge could you tell us whether or not that  
(14) would include the shoreline area if it were within a half mile  
(15) as a contamination area?  
(16) A It would certainly seem it would  
(17) Q Now you were also I think asked a series of questions  
(18) regarding whether or not this oil spill clean up effort had  
(19) been thoroughly accomplished Do you recall those series of  
(20) questions?  
(21) A Yes I did  
(22) Q Okay Now if you were informed that real estate  
(23) appraisers and environmental scientists have recently returned  
(24) from the areas impacted by the oil spill and those real estate  
(25) appraisers and environmental scientists have located oil

Vol 20 3149

- (1) along - along the beach front properties from the Exxon Valdez  
 (2) oil spill? Would that make any difference to you as a loan  
 (3) officer in 1994 that there's still oil out there?  
 (4) A It there's still oil out there obviously it's going to  
 (5) make a difference because you got the contamination present  
 (6) Q Okay So could you tell us what the difference would be?  
 (7) A It would make the difference between either accepting the  
 (8) land as collateral or not accepting the land as collateral If  
 (9) you actually receive facts that there are - there exists oil  
 (10) contamination even though it had previously been cleaned in  
 (11) quotes you'd still have the same perception that you have  
 (12) contaminated property  
 (13) Q So in other words Mr Homan am I correct that regardless  
 (14) of whether or not the state and federal authorities say that  
 (15) the clean up phase is over and now it's time for restoration  
 (16) if you as a bank officer received a loan application from  
 (17) somebody with property contaminated by the Exxon Valdez oil  
 (18) spill you would still want to make sure whether or not there  
 (19) was oil on that property is that correct?  
 (20) MR DIAMOND Objection leading  
 (21) THE COURT Objection sustained It's an awfully long  
 (22) question counsel  
 (23) MR FORTIER Let me try again  
 (24) BY MR FORTIER  
 (25) Q Would you still want to find out whether or not there was

Vol 20 3151

- (1) THE COURT Hold on hold on The objection's  
 (2) sustained  
 (3) BY MR FORTIER  
 (4) Q You also have some experience -  
 (5) MR FORTIER Your Honor could I lay a foundation for  
 (6) that?  
 (7) THE COURT You can try  
 (8) MR FORTIER Thank you  
 (9) BY MR FORTIER  
 (10) Q You also have some experience I think you stated in your  
 (11) certifications that you are certified as an appraiser or you  
 (12) have a certificate as an appraiser is that correct?  
 (13) A Yes I am not a practicing appraiser though Make it  
 (14) very clear  
 (15) Q As a part of your loan duties - as part of your loan  
 (16) officer duties for the past 30 years in real estate loans you  
 (17) have reviewed appraisals?  
 (18) A That was one of my principal duties was to review  
 (19) appraisals yes sir  
 (20) Q And in fact Mr Homan do you hold a certificate as a  
 (21) review appraiser?  
 (22) A I do  
 (23) Q What do review appraisers do?  
 (24) A They - they review the appraisal that's presented to  
 (25) determine the methods of calculation used to formulate a value

Vol 20 3150

- (1) oil on the property?  
 (2) A Yes I'd want to find out if there was oil on the  
 (3) property  
 (4) Q Okay Now another series of questions that Mr Diamond  
 (5) posed to you was whether or not property that was uplands  
 (6) would  
 (7) be - would be useful as collateral property Do you recall  
 (8) that series of questions?  
 (9) A Yes I do  
 (10) Q Now Mr Homan do you know whether or not if you  
 (11) subdivide  
 (12) property in the uplands from the beach front property the  
 (13) property in the uplands is going to be worth substantially  
 (14) less? Do you know anything about that?  
 (15) MR DIAMOND Objection foundation  
 (16) MR FORTIER As a loan officer  
 (17) MR DIAMOND As a loan officer?  
 (18) THE COURT I'm sorry counsel I lost the question  
 (19) Say it again  
 (20) MR FORTIER I will Your Honor  
 (21) BY MR FORTIER  
 (22) Q As a loan officer Mr Homan do you know - having  
 (23) examined a number of real estate loans do you know whether  
 (24) or  
 (25) not property in the uplands that's subdivided from shore front  
 (26) property say a half a mile up is going to be less valuable  
 (27) than if it was a contiguous whole?  
 (28) MR DIAMOND Objection foundation

Vol 20 3152

- (1) to come to a value and what comparables are used to  
 (2) determine  
 (3) market Basically they're reviewing the methodology of the  
 (4) appraiser to see if they arrive at a reasonable value in the  
 (5) reviewer's opinion That's basically it  
 (6) Q And the 30 years that you - how long have you been a  
 (7) review appraiser?  
 (8) A I've worked in the review of appraisals for some 25 years  
 (9) I would guess  
 (10) Q And have you reviewed appraisals that appraise beach front  
 (11) property?  
 (12) A Yes yes Sure  
 (13) Q Have you done that a lot?  
 (14) A Not a lot I have had a couple  
 (15) Q How many is a couple?  
 (16) A Well I've had some fairly large loans that involved beach  
 (17) front properties and yes I've reviewed those  
 (18) Q Did any of those properties also include back lands?  
 (19) A Yes They have the uplands yes  
 (20) Q Now based upon your experience and reviewing appraisals  
 (21) as  
 (22) a lending officer including shore front property and property  
 (23) that includes both - appraisals that include both shore  
 (24) property and uplands property - do you know whether or not  
 (25) the  
 (26) uplands property is as valuable as the shore front property?  
 (27) MR DIAMOND Objection no foundation for this  
 (28) THE COURT The objection's overruled

Vol 20 3153

- (1) A Generally speaking the partition of the shore front  
 (2) property from the uplands devalues the value of your collateral  
 (3) of the upland  
 (4) BY MR FORTIER  
 (5) Q So if you were to subdivide property what would be the  
 (6) result between say a half a mile up and the shoreline?  
 (7) A Typically you would be reducing the value of your overall  
 (8) parcel of property simply because you lose the valuable  
 (9) shoreline properties  
 (10) MR FORTIER Thank you I have no further questions  
 (11) MR DIAMOND No further questions  
 (12) THE COURT You can step down Mr Homan Thank you  
 (13) very much Watch the microphone don t take it with you  
 (14) MR DIAMOND Your Honor we would offer into  
 (15) evidence DX3956  
 (16) THE COURT 56? I thought it was 58  
 (17) MR DIAMOND 56? I m sorry - I grabbed the wrong  
 (18) document 58  
 (19) THE COURT I m right for the first time hey?  
 (20) (Exhibit 3958 offered)  
 (21) THE COURT 3958  
 (22) MR FORTIER If I could Your Honor I d object only  
 (23) on the basis of foundation I don t believe that Mr Homan s  
 (24) testimony establishes that these are - I don t think he s the  
 (25) appropriate witness

Vol 20 3154

- (1) THE COURT It s not necessary to admit it I m not  
 (2) going to admit it not now anyway  
 (3) The next witness counsel?  
 (4) MR FORTIER Your Honor plaintiffs call Dr David  
 (5) Green Yes Dr David Green please  
 (6) THE CLERK Sir can you attach the microphone and  
 (7) remain standing for the oath The little one right there  
 (8) attach it to your tie Raise your right hand please  
 (9) (The Witness Is Sworn)  
 (10) THE CLERK Please be seated  
 (11) Sir for the record I need you to state your full name  
 (12) A My name is George Hayden Green I live at 9611 Burning  
 (13) Bush Anchorage Alaska 99507  
 (14) THE CLERK Can you spell your last name please?  
 (15) A G r e e n  
 (16) THE CLERK And your occupation?  
 (17) A I m the Associate Dean of the School of Business at the  
 (18) University of Alaska Anchorage and I hold a rank of full  
 (19) professor of that university  
 (20) THE CLERK Thank you  
 (21) DIRECT EXAMINATION OF GEORGE H GREEN  
 (22) BY MR FORTIER  
 (23) Q Professor Green how long have you been employed by the  
 (24) University of Alaska?  
 (25) A Twenty years

Vol 20 3155

- (1) Q And can you tell the jury a bit about yourself please?  
 (2) A Yes I received a Bachelor s degree from Northern Arizona  
 (3) University in 1963 in the field of marketing after which time  
 (4) I went to work for a company called the United States Gypsum  
 (5) Company which was at that time the largest manufacturer of  
 (6) building materials in the world  
 (7) My job there in the beginning was to represent the company  
 (8) with architects and builders and engineers I also did sales  
 (9) work with building suppliers My last job with the company was  
 (10) as a - the regional financing credit manager  
 (11) I left that job and while I was there I went to night  
 (12) school received a Master s degree in business administration  
 (13) from Pepperdine University I left that company joined the  
 (14) faculty at Northern Arizona University Flagstaff Arizona as  
 (15) an instructor in the field of marketing While I was at  
 (16) Northern Arizona University I also started the first real  
 (17) estate courses taught at that university and I put on the  
 (18) first graduate realtors institute program there and during the  
 (19) summer months I associated myself with a real estate  
 (20) brokerage  
 (21) company and was licensed in that estate to sell real estate  
 (22) I left Northern Arizona University went to the University  
 (23) of Arkansas in Fayetteville Arkansas where I was a graduate  
 (24) assistant for two years and then assistant professor for one  
 (25) year There I was teaching marketing and I obtained a Ph D  
 in the field of marketing with a subsequent field in the area

Vol 20 3156

- (1) of resource economics and quantitative analysis  
 (2) While I was at the University of Arkansas for three years  
 (3) I had an appraising business to help support my education and  
 (4) there I was appraising property for the FHA the VA some of  
 (5) the lending institutions We appraised mostly houses and land  
 (6) during that period of time  
 (7) I left University of Arkansas and joined the University of  
 (8) Alaska in 1974 as an assistant professor of marketing And  
 (9) after one year I was promoted to an associate professor and  
 (10) after five years I was promoted to a full professor and am  
 (11) currently the senior full professor in the School of Business  
 (12) at the university and I also am the Associate Dean the  
 (13) Academic Dean for the school  
 (14) In 1975 and 76 I served as the director of the Anchorage  
 (15) Urban Observatory which is a research center at the  
 (16) university and there we were doing demographic studies  
 (17) population studies and a variety of economic development  
 (18) studies and issues for most of the south central region and a  
 (19) lot of the areas of Alaska  
 (20) Upon arriving in Alaska in 1974 I associated myself on a  
 (21) part time basis with a firm called Dirksen Appraisal Company  
 (22) In those days we were appraising a lot of the lands having to  
 (23) do with the pipeline and a lot of appraising in the Valdez area  
 (24) and the Dirksen Paul Dirksen and his company specialized in a  
 (25) lot of right of way appraising easements things of that

Vol 20 3157

- (1) nature and I would take overload work from him  
 (2) In 1982 approximately 1982 also I obtained a real estate  
 (3) license salesman license in 1974 here in Alaska And in 1982  
 (4) I formed my own company a company called the Cornerstone  
 (5) Realty and have operated through that company ever since  
 (6) Q Professor let me interrupt you for just a moment  
 (7) A Sure  
 (8) Q Do you teach courses at the university?  
 (9) A Yes I do I -- I started the real estate program at the  
 (10) university in 1974 at the request of the Dean there and I  
 (11) developed a Bachelor's of Business Administration degree in  
 (12) real estate and I have taught approximately eight courses in  
 (13) real estate as part of that degree  
 (14) And in 1975 or '76 I think it was about '76 I put  
 (15) together a Master's degree Master of Science degree in real  
 (16) estate at the university and have taught my recollection is  
 (17) four graduate courses pertaining to that degree I've taught  
 (18) those courses a number of times  
 (19) Q You -- you teach real estate courses Can you tell us what  
 (20) real estate courses are what the field of real estate is?  
 (21) A Yes At the undergraduate level I've taught what we call  
 (22) the basic course course called real estate fundamentals We  
 (23) have real estate law real estate investment analysis property  
 (24) management We've -- used to have a course called real estate  
 (25) computer analysis of real estate and a course on real estate

Vol 20 3158

- (1) financing We offered two courses in real estate appraising at  
 (2) the undergraduate level  
 (3) At the graduate level we've offered a graduate course in  
 (4) real estate appraising a course in doing feasibility and  
 (5) market analysis a graduate course on real estate development  
 (6) and we've had some seminar kinds of courses on special  
 (7) things in the field of real estate  
 (8) Q And these are courses that you teach on a regular basis?  
 (9) A I've taught all of these courses yes  
 (10) Q Professor you also said that you have your own business?  
 (11) A Yes  
 (12) Q Does that business involve appraising of properties?  
 (13) A Yes it does I am a certified general appraiser in the  
 (14) State of Alaska which means I'm qualified to appraise  
 (15) properties of any value as long as it's real property And  
 (16) for the last ten years approximately -- no a little more than  
 (17) that I have specialized in appraising environmental lands  
 (18) easements right of ways things of that nature My appraising  
 (19) work all has to do with land valuation and particularly in  
 (20) remote areas  
 (21) Q You mentioned the term environmental lands  
 (22) A Yes  
 (23) Q Is that unusual a unique term Doctor?  
 (24) A No it's not a unique term  
 (25) Q Can you tell us what you mean by it?

Vol 20 3159

- (1) A Yes The people in the United States and people around the  
 (2) world have begun to recognize that we're running out of a lot  
 (3) of pristine lands lands that have important features to them  
 (4) and there is a -- been a general movement to acquire and  
 (5) preserve a lot of those lands We're talking about the lands  
 (6) that have special historic or archaeological significance  
 (7) lands that have very special biological things such as  
 (8) endangered species or important wildlife activity  
 (9) I was recently called by a group that wanted me to go down  
 (10) to Montana and Idaho and appraise lands that had endangered  
 (11) grasses for example We -- we see issues having to do with  
 (12) old growth forests and rain forests and all kinds of special  
 (13) things special hydraulic -- hydraulic issues and things of  
 (14) that nature  
 (15) Q Now Professor Green could you tell the jury about a  
 (16) couple of the cases you have worked on other than this case  
 (17) involving environmental lands please?  
 (18) A Yes Up on the North Slope I appraised some lands for a  
 (19) company called the UIC Corporation  
 (20) Q What is the UIC Corporation? Is that a Native corporation?  
 (21) A It's a Native corporation Village Native corporation  
 (22) They received lands part of the Native Claims Settlement Act  
 (23) and as part of their -- then they did some trading and their  
 (24) was some fairly complicated trades  
 (25) The United States Navy Surplus the Old Arctic

Vol 20 3160

- (1) Environmental Data Center up there and as part of that the  
 (2) Natives received that I helped consult to them in those  
 (3) negotiations And then as part of that they gave up some  
 (4) lands what was called the submerged lands and then they --  
 (5) the United States Navy conveyed to the borough the rights to  
 (6) the gas fields there And as part of that the Native  
 (7) corporation granted easements across the gas field to the  
 (8) borough and the question asked to me is After all this was  
 (9) done for tax purposes and for other corporate decision making  
 (10) purposes what was the value of all these things that got  
 (11) traded? Easements there was gravel rights there was some  
 (12) buildings there was some actual lands given up and they  
 (13) wanted to look at whether this was all an equal balanced trade  
 (14) Q So Professor would it be fair to understand that work  
 (15) then as involving certain divisible parts of property? You  
 (16) were valuing certain rights and not a whole I guess what we've  
 (17) heard termed here in the last few weeks is fee simple?  
 (18) A Yes Some of it was fee simple surface rights but some  
 (19) of it was parcel rights easements gravel rights things of  
 (20) that nature Yeah I also couple years ago valued the land  
 (21) along the Karluk River Drainage which is part of -- owned by a  
 (22) Native corporation which is very important bear habitat And  
 (23) the U.S. Fish and Wildlife Service was and may still be I  
 (24) believe negotiating with the Native corporation to acquire  
 (25) that land to preserve that habitat for the bears and the

Vol 20 3161

(1) Native corporation hired me to value it so they would know the  
 (2) value of it in their negotiations  
 (3) Q Doctor where is the Karluk area?  
 (4) A It is in Kodiak  
 (5) Q And this bear habitat is that an example of environmental  
 (6) lands?  
 (7) A Yes it is very important environmental lands Kodiak  
 (8) bears do not do well around people and - and there are not  
 (9) many areas left in the world where bear - where there s good  
 (10) bear habitat  
 (11) Q Bears eat people too don t they?  
 (12) A They do They just don t get along with folks real well  
 (13) Q Kind of a mutual feeling there?  
 (14) A Another project I recently worked on - some of you may  
 (15) have even seen it in the paper in the last few weeks - had to  
 (16) do with Anaktuvik Pass The Village Corporation at Anaktuvik  
 (17) Pass and the Park Service desired to exchange some rights  
 The  
 (18) Natives wanted to travel use their ATV vehicles on park land  
 (19) The Park Service wanted to be able to cross anyplace on the  
 (20) Native lands They also had some land that they wanted to  
 (21) exchange The Natives wanted some land that was a little  
 (22) closer to the village and was known to be very good hunting  
 (23) grounds The Park wanted to consolidate some of their park  
 (24) holdings with land that the Natives owned and so the Native  
 (25) corporation hired me to value all the - both the land as well

Vol 20 3162

(1) as the rights that would be exchanged and given up  
 (2) Q This - this exchange of rights was that again exchange  
 (3) of easements?  
 (4) A It s easements yes  
 (5) Q Did it involve a sale of property of - excuse me a sale  
 (6) of a surface estate Doctor?  
 (7) A It s an exchange of some surface estate lands as well as  
 (8) exchange of rights for easements  
 (9) Q And that would be exchange of a right to go in and out of a  
 (10) certain area is that right?  
 (11) A That s correct  
 (12) Q And part of this was that Natives were allowed to - what  
 (13) was being discussed Natives were allowed to take ATVs into the  
 (14) park?  
 (15) A That s what being proposed I believe it s before the  
 (16) Congress right now to make that final determination  
 (17) Q Was that an unusual sort of thing to be able to take ATVs  
 (18) into the park?  
 (19) A Yes  
 (20) Q Is that something the parks - if you know do you know  
 (21) whether or not the Park Service normally allows people to take  
 (22) ATVs into the park?  
 (23) A Not on that not on the gates of the Arctic they do not  
 (24) Q So Doctor did you make any determination as to whether or  
 (25) not the properties that were the subject of the exchange that

Vol 20 3163

(1) the Park Service wanted were as valuable as the right to take  
 (2) in ATVs?  
 (3) A I didn t value the park lands I only valued the Native  
 (4) lands They were my client and they were wanting to know  
 (5) what - what the value of those rights were so they could make  
 (6) decisions in their negotiations  
 (7) Q Have you worked on any - you ve spoken about two  
 exchanges  
 (8) or three exchanges I guess the UIC exchange the Anaktuvik  
 (9) exchange and the Kodiak exchange?  
 (10) A Well the Kodiak exchange there s been no exchange yet  
 (11) In fact that was the - that is as I understand a cash  
 (12) potential sale  
 (13) Q Now besides those Doctor have you worked - let me  
 (14) switch to another area  
 (15) Do you have any experience in the area of contamination and  
 (16) property?  
 (17) A I ve worked on some projects of that nature I worked on a  
 (18) case called Poppy Lane which is down in the Kenai area That  
 (19) was a case where an oil company had dumped drilling mud in  
 an  
 (20) old gravel pit and the - the drilling mud contaminated the  
 (21) groundwater They d hired some appraisers to come in and try  
 (22) to value the - the effect that had on the - on the value of  
 (23) the homes nearby  
 (24) The problem was that because of the - well a lot of it  
 (25) was word of mouth Word got out in that community that there

Vol 20 3164

(1) was this contamination problem and there was some publicity  
 (2) about it The homes in the area didn t sell They went for  
 (3) several years nobody could seem to sell a home there so it  
 (4) was difficult for the appraisers to determine the - how much  
 (5) of the value of the land had been impacted because there  
 (6) hadn t been a sale  
 (7) So I was hired by the home owners through their attorney  
 (8) to do what s called a contingency valuation analysis There I  
 (9) went in and we did a survey of homeowners a controlled  
 survey  
 (10) to determine how much knowledge they had about that  
 (11) contamination and whether it affected their perception of the  
 (12) area and whether they would live in the area  
 (13) One of the interesting things on that case was that the  
 (14) groundwater under the homes had never - was never  
 (15) contaminated The contamination flow was away from the  
 homes  
 (16) but the people - because of that the people in the area had a  
 (17) strong resistance from living in the area and we determined  
 (18) that it would take about a 60 percent discount before people  
 (19) would begin to consider living there and some people wouldn t  
 (20) live there at all We found one what we call a psychographic  
 (21) personality of people that would live there but beyond that  
 (22) it was a very small market  
 (23) Q Can you tell us just a little bit about the psychographic  
 (24) sort of personality?  
 (25) A Well in the marketing research we do one of the important

Vol 20 3165

(1) consumer behavior criteria is that there are different permits  
 (2) different types of people who have different age demographic  
 (3) characteristics as well as certain psychographic or mental  
 (4) characteristics about life and one of the important things we  
 (5) do in marketing is to try to identify the type of people that  
 (6) will react a certain way to certain buying behavior modes and  
 (7) that's what we were doing there  
 (8) Q Now Doctor with regard to the Poppy Lane contamination  
 (9) was there any actual physical contamination on any of the  
 (10) properties?  
 (11) A No  
 (12) Q That were the subject?  
 (13) A No there wasn't It was adjacent to the homes  
 (14) Q And how much adjacent?  
 (15) A The homes were across the street from the - and I don't  
 (16) recall the exact distance but they were across the street and  
 (17) the groundwater plume was going in the opposite direction  
 (18) from  
 (19) those homes  
 (20) I also - if you want me to continue that  
 (21) Q Yeah please continue  
 (22) A I also worked on a case in Anchor River a service station  
 (23) contaminated the groundwater which contaminated the well at  
 (24) the  
 (25) Anchor River inn and I was asked to determine the damages to  
 (26) the Anchor River Inn as a result of that groundwater  
 (27) contamination

Vol 20 3166

(1) I also recently worked for some oil companies on a case out  
 (2) here at Peters Creek where one of their stations contaminated  
 (3) groundwater which affected the groundwater in about five or  
 (4) six subdivisions  
 (5) Q And that was - is that a case that's over now Doctor?  
 (6) A It was settled yes  
 (7) Q And it was a case involving contamination of groundwater  
 (8) is that true?  
 (9) A It was contamination of groundwater yes  
 (10) Q Is that a case where a contamination physically touched the  
 (11) property?  
 (12) A The - the surface properties were never touched only the  
 (13) groundwater  
 (14) Q With regard to the Poppy Lane case and the Peters Creek  
 (15) case do those cases involve stigma? Have you ever heard that  
 (16) term?  
 (17) A I'm well aware of that term and I would say that  
 (18) particularly in the Poppy Lane case that stigma was a very  
 (19) important factor The reputation - the fact that the water  
 (20) wasn't contaminated but the perception that it - it may be  
 (21) or the perception that there might be environmental hazard is  
 (22) what hurt the value of the property In fact I probably  
 (23) should have mentioned that at the time this was going on the  
 (24) drilling mud had already been cleaned up  
 (25) Q It was out of there?

Vol 20 3167

(1) A It was out of there It was just the publicity and the  
 (2) word of mouth and the concern that people had that caused the  
 (3) value of the land to go down  
 (4) Q With regard to the Poppy Lane case was there any  
 (5) determination or did you make any determination about  
 (6) whether  
 (7) or not this publicity was media covered? Do you know whether  
 (8) or not it was?  
 (9) A Some of it was media covered Some of it was result of  
 (10) homeowners concerns that would go before the various  
 (11) agencies  
 (12) and ask for some help or some clarification Quite a bit of it  
 (13) was just word of mouth  
 (14) Q Doctor have you - besides that sort of work have you  
 (15) published any papers over the course of the past 20 years?  
 (16) A Yes  
 (17) Q Could you tell us -  
 (18) A I've published - and I haven't actually ever sat down and  
 (19) counted all of them - but somewhere between 40 and 50  
 (20) published articles research documents things of that nature  
 (21) I've published in the Journal of Appraising the Journal of  
 (22) Real Estate Appraisal Analysis Journal of Real Estate  
 (23) Appraising and Economics the Journal - the Real Estate  
 (24) Research a variety of others as well as I have presented  
 (25) papers on the field of real estate and marketing issues almost  
 (26) every year once or twice a year here in the United States I  
 (27) presented papers in China Taiwan Singapore Australia had a

Vol 20 3168

(1) variety of that kind of normal academic kinds of work  
 (2) Q Have you ever published any papers on use of - on  
 (3) environmental lands? Excuse me  
 (4) A Well I published a paper on that Poppy Lane work that I  
 (5) did yes  
 (6) Q Do any of your - does the subject of any of your work  
 (7) concern the use of GIS systems?  
 (8) A Yes And I did - I recently presented a paper at the  
 (9) American Real Estate Society meetings on some research that I  
 (10) did as a result of some work I did on the North Slope I got  
 (11) interested in the whole issue of rural lands remote lands in  
 (12) Alaska I was not happy with the way it was being appraised  
 (13) I wasn't happy with my knowledge of it and so I submitted and  
 (14) was funded a grant through the Alaska Land Bank through the  
 (15) university and I spent about a year and a half just in my  
 (16) office gathering sales from all over the state of Alaska  
 (17) running a whole variety of different kind of computer models  
 (18) and algorithms that would find a way to predict even valuing  
 (19) land in rural Alaska remote lands And as part of that I  
 (20) developed some ideas and thoughts on it and one of the things  
 (21) I did was present a paper on my thoughts on whether you gain  
 (22) any particular level of - of precision by expending all the  
 (23) extra money that's necessary to do a GIS kind of analysis  
 (24) versus a - the kind of traditional evaluation that an  
 (25) appraiser would normally do

Vol 20 3169

- (1) Q Now was this paper that you've just spoken about peer  
(2) reviewed Doctor?  
(3) A It was peer reviewed yes  
(4) Q What's that mean in real estate?  
(5) A It means that other professors reviewed it Generally  
(6) they are other professors who have a background in appraising  
(7) and would have reviewed it and I made a presentation before  
(8) about I don't know 35 other professors on that paper  
(9) Q Now Professor do you hold - besides the - I think it  
(10) was the general appraiser certificate do you hold any other  
(11) certificates?  
(12) A I hold a General Accredited Appraiser designation from the  
(13) Appraisal Section of the National Association of Realtors I  
(14) am a member of a number of professional organizations  
(15) Q Can you list a few of them for us?  
(16) A I'm a member - in fact I'm a lifetime member of the  
(17) American Real Estate Association that's a group of real estate  
(18) professors primarily from around the world Reason I'm a  
(19) life member is a few years ago the paper I presented at the  
(20) conference was voted the outstanding paper As a result of  
(21) that they made me a lifetime member All that means is I  
(22) don't have to pay annual dues which is nice  
(23) I also am a member of the National Association of  
(24) Realtors I've been a member since about 1968 or '69 member  
(25) of the Appraisal Section of the National Association of Realtors

Vol 20 3170

- (1) member of the Anchorage Board of Realtors and I've been an  
(2) active - involved in the National Association of Corporate  
(3) Real Estate Executives I just recently dropped my membership  
(4) in that The Urban Land Institute Those are the main ones I  
(5) think of right now I belong to a group called FICIB which is  
(6) an acronym for an international real estate organization I  
(7) serve on their faculty to teach courses on international real  
(8) estate  
(9) MR FORTIER Your Honor would this be a good time  
(10) for a break?  
(11) THE COURT Sure  
(12) THE CLERK Please rise This court stands in  
(13) recess  
(14) (Jury out at 12:00 p.m.)  
(15) (Recess from 12:00 p.m. to 12:18 p.m.)  
(16) THE CLERK Please rise This court now resumes its  
(17) session Please be seated )  
(18) THE COURT Mr Stoll?  
(19) MR STOLL Your Honor we have - this thing's  
(20) never-ending We have only one dispute I guess and that  
(21) relates to the Exhibit B which you have before you  
(22) THE COURT Right  
(23) MR STOLL Mr Diamond wants to insert the words in  
(24) the last sentence I will instruct you further and he wants to  
(25) add on this

Vol 20 3171

- (1) MR DIAMOND We don't have a transcript of what you  
(2) said  
(3) THE COURT I said I will instruct you further  
(4) regarding this issue and others at the end of this trial  
(5) MR STOLL Well I didn't know what it was My  
(6) writing was incomplete so that's fine  
(7) MR OPPENHEIMER Your Honor -  
(8) THE COURT I'm going to give that instruction and the  
(9) defendants proposed jury instruction regarding federal  
(10) action  
(11) MR DIAMOND Mr Stoll made one other handwritten  
(12) change on Page 2  
(13) MR STOLL I put it on his copy  
(14) THE COURT I think I've got that  
(15) MR DIAMOND Fine  
(16) THE COURT On Page 2 or Page 1  
(17) MR STOLL One on Page 2 and while you were out  
(18) Your Honor I - we agreed on that  
(19) THE COURT The federal court instead of that?  
(20) MR STOLL Yeah  
(21) THE COURT And allowed here because on the first  
(22) page -  
(23) MR STOLL Yeah  
(24) THE COURT Got it  
(25) MR STOLL No problem

Vol 20 3172

- (1) THE COURT Are we ready for the jury?  
(2) MR OPPENHEIMER Your Honor we thought -  
(3) Mr Fortier and I thought there might be a housekeeping matter  
(4) on some of the direct exhibits that would be faster to take  
(5) care of if we could now so I don't have to object  
(6) THE COURT That's fine  
(7) MR OPPENHEIMER Your Honor we have - we have a  
(8) long list of exhibits which we've resolved objections to but  
(9) we have one two three four five six seven photographs to  
(10) which we still pose an objection and a videocassette to which  
(11) we pose many objections  
(12) THE COURT Which videocassette is it?  
(13) MR OPPENHEIMER This is a collection of news pieces  
(14) and sound bites It's currently designated 12212 A I believe  
(15) THE COURT That's the one I reviewed yesterday?  
(16) MR FORTIER Yes Your Honor  
(17) THE COURT I'm not going to admit it  
(18) MR OPPENHEIMER And we have - we have then a  
(19) collection of these photographs Your Honor If you'd like  
(20) maybe we could just approach the bench and resolve it  
(21) MR FORTIER What they are Your Honor is slides  
(22) that were taken of a certain type of - they don't deal with  
(23) the oil spill they deal with things Dr Green relies upon  
(24) determining the impact of contamination on the value of the  
(25) property And it's kind of fundamental to his statement of -

Vol 20 3173

- (1) MR OPPENHEIMER The spill - for example you just  
 (2) turned to one that says warning these are not - these  
 (3) are - I would analogize them to sound bites you get on the  
 (4) movie  
 (5) THE COURT They are but here s - my impression of  
 (6) these exhibits is this I don't want to have anything against  
 (7) admitting exhibits like this If they are illustrative of the  
 (8) testimony he can point to representative samples and say this  
 (9) is the kind of thing I'm talking about This is the kind of  
 (10) thing that causes the condition or the problem that might  
 (11) affect property values but they're not going to be admitted  
 (12) There's no reason to do that  
 (13) MR OPPENHEIMER You might just check the last Your  
 (14) Honor If you hand them to me I think there might be a  
 (15) generic change and if we have photographs that are  
 (16) illustrative  
 (17) Actually if counsel can just give me a foundation for the  
 (18) last two photographs there  
 (19) MR FORTIER Okay that is the -  
 (20) MR OPPENHEIMER Does this -  
 (21) THE COURT Is that part of the bigger picture?  
 (22) MR FORTIER Foundation here will be that he went  
 (23) down and he reviewed what was available to the public which  
 (24) is  
 (25) included in the public media and that is one of them yeah  
 (26) regarding what was happening on our clients' property

Vol 20 3174

- (1) THE COURT Was this in the media?  
 (2) MR FORTIER It was not in the media it is part of  
 (3) the resource library files  
 (4) THE COURT What's the issue?  
 (5) MR FORTIER The issue is this stuff was publicly  
 (6) available kind of following up on what Mr. Homan discussed  
 (7) These documents are things that relate to the time and the  
 (8) period of the oil spill and that one  
 (9) THE COURT Is that -  
 (10) MR OPPENHEIMER I turned it upside down myself  
 (11) MR FORTIER That's the oil slick in front of Chenega  
 (12) Bay  
 (13) THE COURT That's the same thing available in the  
 (14) public files?  
 (15) MR FORTIER Right  
 (16) THE COURT No  
 (17) MR OPPENHEIMER So those would be exhibits 1247 70  
 (18) and 1247 74  
 (19) THE COURT If he wants to describe or something you  
 (20) can get - as part of research project you can do that in  
 (21) testimony without having to use the photographs  
 (22) MR FORTIER Okay  
 (23) MR OPPENHEIMER Thank you  
 (24) THE COURT Are we ready?  
 (25) Mr. Fortier would you do me a favor? Tell the camera

Vol 20 3175

- (1) people the new ones that they can't film the jury The rules  
 (2) preclude that  
 (3) MR FORTIER Okay  
 (4) (Jury in at 12:25 p.m.)  
 (5) THE COURT Be seated Thank you  
 (6) Counsel?  
 (7) MR FORTIER Your Honor I move to offer Dr. Green as  
 (8) an expert witness  
 (9) MR OPPENHEIMER No objection Your Honor  
 (10) THE COURT He's accepted as an expert witness  
 (11) MR OPPENHEIMER Your Honor perhaps we ought to  
 (12) describe as to what  
 (13) THE COURT Counsel can do that can't he?  
 (14) MR OPPENHEIMER I was afraid if we do it in the  
 (15) front end it might expand in scope  
 (16) MR FORTIER We were so happy Your Honor  
 (17) THE COURT He is not an expert on antique cars  
 (18) counsel?  
 (19) MR FORTIER Your Honor we offer him as an expert  
 (20) witness in the area of real estate valuation and marketing of  
 (21) Alaska rural Alaska properties  
 (22) MR OPPENHEIMER No problem Your Honor  
 (23) THE COURT He's accepted  
 (24) BY MR FORTIER  
 (25) Q Professor Green can you tell the jury who retained you?

Vol 20 3176

- (1) A Yes I was retained by your firm Fortier and Mikko on  
 (2) behalf of the English Bay Port Graham and Chenega  
 (3) Corporations  
 (4) Q And can you tell the jury what the scope of your engagement  
 (5) was Professor Green?  
 (6) A I was asked to look at the damages caused during the first  
 (7) three years while the beaches were being treated on these  
 (8) corporations' lands  
 (9) Q Professor Green are you generally familiar with the  
 (10) location of the Native corporations English Bay Port Graham  
 (11) and Chenega?  
 (12) A Yes I am  
 (13) Q And in undertaking your assignment did you become  
 (14) acquainted with the land ownership of each of the  
 (15) corporations?  
 (16) A Yes I did I studied the legal documents on file with the  
 (17) BIA - BLM rather - and I studied obtained documents from  
 (18) your office as well as from the clients  
 (19) Q Can you describe what the documents were that you  
 (20) reviewed  
 (21) at the BLM? What is the BLM first of all?  
 (22) A Bureau of Land Management That has jurisdiction over the  
 (23) distribution of land under the Native Claims Settlement Act  
 (24) I reviewed the interim conveyances as well as present  
 (25) documents documents pertaining to claims against - against  
 (26) their lands and reviewed maps provided by land consultants  
 and

Vol 20 3177

- (1) others  
 (2) Q Now Dr Green prior to examining the maps did you obtain  
 (3) title documents and check title as to each of the Village  
 (4) Corporations Port Graham English Bay and Chenega?  
 (5) A I did I went through all of the interim conveyance  
 (6) documents and the patent documents and interviewed people  
 at  
 (7) the BLM relative to additional entitlements that these  
 (8) corporations might enjoy  
 (9) Q Have you ever heard the term OPA 90?  
 (10) A I have  
 (11) Q Can you tell us generally what your understanding of OPA 90  
 (12) as it relates to these Native corporations is?  
 (13) MR OPPENHEIMER Your Honor I think it calls for a  
 (14) legal conclusion with respect to standing issues This is the  
 (15) very issue we were talking about yesterday to the extent  
 (16) there is a question that ought to be briefed but this is a  
 (17) question that goes to legal standing issues  
 (18) THE COURT Well I'll let him testify Go ahead  
 (19) The objection is overruled  
 (20) BY MR FORTIER  
 (21) Q Okay Go ahead Professor Green  
 (22) A Well there is three different ways of obtaining title here  
 (23) if you would One is through what is called interim conveyance  
 (24) the other is a patent The only difference between an interim  
 (25) conveyance and a patent is that the patent land has been

Vol 20 3178

- (1) surveyed  
 (2) Native corporations also have land that they have selected  
 (3) but hasn't been conveyed and there is basically two claims  
 (4) against that and one is called OPA 90 Under OPA 90 land the  
 (5) Native corporation has an irrevocable selection They select  
 (6) the land They can't reverse themselves on that but they are  
 (7) also entitled to any damage revenues that they would receive  
 (8) that would be paid on those lands up to the extent of their  
 (9) entitlement  
 (10) MR OPPENHEIMER Your Honor reassert the objection  
 (11) It misstates the law  
 (12) THE COURT Well the objection is overruled This is  
 (13) as far as you're going on this aren't you  
 (14) MR FORTIER This is Your Honor  
 (15) THE COURT Okay go ahead  
 (16) BY MR FORTIER  
 (17) Q Okay Now Professor Green having worked in Alaska as a  
 (18) professor at the university for the past 20 years did you ever  
 (19) research why Native corporations were formed?  
 (20) A Yes I've been involved with Native corporations since I  
 (21) first came to Alaska I've advised many of them worked very  
 (22) closely with these corporations The Native Claims Settlement  
 (23) Act was enacted to resolve aboriginal claims on the lands of  
 (24) Alaska as well as claims against hunting and fishing rights  
 (25) The reason for that is that the Natives of Alaska when the

Vol 20 3179

- (1) United States government purchased Alaska from the -- Russia  
 (2) there was no agreements made with the Alaska Native The  
 (3) Alaska Native was also not a conquered people They weren't  
 (4) conquered in war There was no agreements with them and so  
 (5) they had some what we'll call historic and aboriginal rights  
 (6) to the land as well as to certain hunting and fishing rights  
 (7) The purpose of the Native Claim Settlement Act was to  
 (8) extinguish those claims  
 (9) Q So then they gave up those claims for some land?  
 (10) A For land and some money  
 (11) Q Now Dr Green in your study of Native corporations  
 (12) particularly English Bay Port Graham and Chenega did you  
 look  
 (13) at how land was selected in the Kenai Fjords area?  
 (14) A Well there is two ways the corporations are entitled to  
 (15) land One is what they call 12(a) entitlements and this is --  
 (16) this is entitlement based on population There is also what is  
 (17) called 12(b) entitlements and that is land they get through the  
 (18) regional corporation That is also based on population  
 (19) subsistence rights and other historical uses  
 (20) And if the corporation the Village Corporations are to  
 (21) select their lands in what they call the core townships which  
 (22) is the areas around their village In the case of English Bay  
 (23) and Port Graham there is two corporate -- two villages fairly  
 (24) close together A lot of their selections were cross filed on  
 (25) top of each other When I sorted that all out there wasn't

Vol 20 3180

- (1) enough land in what they call the core township to satisfy all  
 (2) their entitlements  
 (3) Therefore under what is called -- trying to recollect but  
 (4) I think it was 11(a) or 11(c) the Secretary of Interior was  
 (5) required to set additional lands aside for their selection  
 (6) Now those additional lands were required to be lands that were  
 (7) historically used by the corporations and lands that were  
 (8) similar to the core township lands  
 (9) The Native Claims Settlement Act was passed in 1971 and so  
 (10) the Secretary of Interior -- Interior is the -- set these lands  
 (11) in the Kenai Fjords area aside for selection by the Native  
 (12) corporations The park there was set up under ANILCA which  
 (13) is -- was passed in 1980 so most of that was all decided prior  
 (14) to there actually being the Kenai Fjords National Park  
 (15) Q So what you've just told us then Doctor is it correct  
 (16) that English Bay selected in the Kenai Fjords area before the  
 (17) park was created?  
 (18) A The land was designated for their selection prior to the  
 (19) park being designated -- created  
 (20) Q Doctor I'm going to show you a map that has already been  
 (21) entered in this case It is Exhibit 1162 Do you want to --  
 (22) MR FORTIER Would you mind Your Honor if Professor  
 (23) Green came down?  
 (24) THE COURT No he can go ahead yes  
 (25) Doctor you have to keep that microphone on though

Vol 20 3181

Vol 20 3183

(1) BY MR FORTIER  
 (2) Q Professor Green what I'd like to show you is 1162 Can  
 (3) you point out to the jury generally - come here a little  
 (4) closer  
 (5) MR OPPENHEIMER Professor be mindful You're not  
 (6) free to roam as far as you might think  
 (7) A Am I at the end of my rope?  
 (8) MR FORTIER Not yet you haven't been  
 (9) cross examined  
 (10) BY MR FORTIER  
 (11) Q I'm going to point - would you point out to us where  
 (12) English Bay proper is?  
 (13) A English Bay Corporation is the village here and the Port  
 (14) Graham village is right here  
 (15) Q Okay That's what you were talking about about two  
 (16) villages being fairly close together?  
 (17) A This land in this area is their core townships  
 (18) Q And what that means was that some of the land under which  
 (19) you said was 11(a) or something like that that was available  
 (20) for their selection?  
 (21) A For 11(a) as well as 11(b) but there wasn't enough land  
 (22) in this area to satisfy all their selection because also you  
 (23) have Seldovia Native corporation in here too plus the State  
 (24) of Alaska had claims so just literally they ran out into the  
 (25) ocean is what happened when they got so far So lands in this

(1) documents and went over them to verify whether in fact those  
 (2) were correct  
 (3) Q So then you verified the accuracy of the selections as  
 (4) shown on the maps correct?  
 (5) A From all the documents I had yes  
 (6) Q Dr Green what I'd like to do -  
 (7) MR OPPENHEIMER Your Honor before we get into this  
 (8) could we ask a few questions on voir dire? Because two of the  
 (9) questions that were given in response just now suggest that  
 (10) there may be a foundational problem If there's not I'll make  
 (11) no objection  
 (12) THE COURT Yes but limit it I don't want to have a  
 (13) long period of questioning  
 (14) MR OPPENHEIMER Agreed  
 (15) VOIR DIRE EXAMINATION OF GEORGE H GREEN  
 (16) BY MR OPPENHEIMER  
 (17) Q Professor Green are you saying that you've had an  
 (18) opportunity to review the map there that we're about to see  
 (19) recently?  
 (20) A Yes I have  
 (21) Q Okay And have you had an opportunity to investigate the  
 (22) basis for the depiction on that map with respect to the most  
 (23) recent irrevocable selections?  
 (24) A I've read and have copies of - received recently copies of  
 (25) those documents have read them yes

Vol 20 3182

Vol 20 3184

(1) area were then set aside by the Secretary of the Interior for  
 (2) their selections  
 (3) Q Now Doctor I think - is it correct that the lands in  
 (4) here that they were entitled to select were withdrawn were  
 (5) supposed to be lands that were similar in nature and character  
 (6) to that down in the English Bay area?  
 (7) A That's correct  
 (8) Q And the same for Port Graham?  
 (9) A That's correct  
 (10) Q Now Doctor maybe you can clarify a point for us  
 (11) Yesterday we heard some business about - if you would stay  
 (12) there Doctor I want to show you another map  
 (13) We heard some business about English Bay Corporation  
 (14) having  
 (15) relinquished some unoiled property for oiled property in the  
 (16) Harris Bay area Are you generally familiar with English Bay's  
 (17) selections in the Harris Bay area?  
 (18) A Yes I've been - I am  
 (19) Q And are you generally familiar with the status map of  
 (20) English Bay Corporation?  
 (21) A Yes I am  
 (22) Q Okay And this would be the map that you referred to that  
 (23) was shown to you by the land team for English Bay?  
 (24) A Yes Mr Moore prepared those maps as I understand it  
 (25) Q Did you rely upon those maps as you prepared your report?  
 (26) A I relied on those maps but I also took the conveyance

(1) MR OPPENHEIMER Fine  
 (2) MR FORTIER Thank you  
 (3) DIRECT EXAMINATION OF GEORGE H GREEN (Resumed)  
 (4) BY MR FORTIER  
 (5) Q Then I'd like to show you Professor Green what's been  
 (6) marked as D\1133 I'd like to refer you to several areas one  
 (7) is Aialik Bay?  
 (8) A Yes  
 (9) Q And the other is Harris Bay?  
 (10) A Yes  
 (11) Q Now can you point out to us English Bay's 12(b) selections  
 (12) on the Aialik site?  
 (13) A These areas here in - in green are the 12(b) selections  
 (14) Q And those are the English Bay 12(b) selections?  
 (15) A Yes they are  
 (16) Q Now Doctor when a Village Corporation goes about the  
 (17) business of selecting - selecting its properties is - how  
 (18) does it do that? Is it confined by any regulations?  
 (19) A They have the like kind property There has to be some  
 (20) historical uses and there's a requirement they be contiguous  
 (21) properties You cannot leave - select a property less than  
 (22) 1200 acres you can't - you can't - for example you can't  
 (23) select here and hopscotch up here and leave something in  
 (24) between They have to be continuous  
 (25) Q So Doctor you pointed with your pen to I think what's

Vol 20 3185

- (1) been - it's got a big number of a 26 Do you know whether or  
 (2) not that's a priority number?  
 (3) A That - that was the priority number Let's see I believe  
 (4) it was priority number 25 that constitutes their entitlement  
 (5) Priority 26 7 8 29 and 30 are overselections  
 (6) Q Okay So their entitlement is supposed to end it's your  
 (7) understanding at what's been marked here as 25?  
 (8) A Yes as priority 25 that's correct  
 (9) Q So Doctor do you know whether or not English Bay  
 (10) Corporation had any discretion to - as a for instance hopscotch  
 (11) over say Section 24 let's say up to Section 28 so it could  
 (12) avoid oil?  
 (13) A No they would not be allowed to do that  
 (14) Q And why is that Doctor?  
 (15) A Because of the continuous requirement  
 (16) Q So then it has been suggested in this case that English Bay  
 (17) elected to take an oiled property and to forego an unoiled  
 (18) property?  
 (19) A Well I'm not familiar with that issue but I do know that  
 (20) having reviewed their documents that - that priority 25  
 (21) fulfills their entitlements according to the documents that I  
 (22) have reviewed leaving five sections of overselection  
 (23) Q Now Doctor do you know why it is that a Village  
 (24) Corporation would overselect properties?  
 (25) A Well it's recommended by the BLM and required in some

Vol 20 3186

- (1) cases that they overselect and the reason for that is that  
 (2) when this property is originally interim conveyed it's interim  
 (3) conveyed on maps Then the land is later surveyed and then  
 (4) they receive a patent to it Well the maps and the actual  
 (5) field surveys don't always come out the same and there may be  
 (6) deficiencies once the survey comes in  
 (7) Also there are claims against a lot of this land  
 (8) Shareholder claims or Native allotment claims third party  
 (9) claims claims like that and those claims have to be  
 (10) adjudicated And if they are adjudicated and taken out of the  
 (11) Native selection then the - then the corporation is entitled  
 (12) to select some additional lands which would be their next  
 (13) priority lands So they generally overselect so that when  
 (14) those other issues are resolved there is lands that's already  
 (15) been predetermined pre-designated that they would pick up  
 (16) their deficiencies from  
 (17) Q So Doctor then it is possible - is it possible that as  
 (18) a for instance with English Bay on the Harris Peninsula on  
 (19) the peninsula on the Atlix Bay side that they may reach up  
 (20) into Section 26 or 27?  
 (21) A It's possible once all those issues have been adjudicated  
 (22) they may pick those up  
 (23) Q And so Doctor when you examined the title to the Village  
 (24) Corporations in the preparation of your reports did you  
 (25) attempt to define the reports only for the lands up to

Vol 20 3187

- (1) entitlement?  
 (2) A I only valued the - the amount of the lands of their  
 (3) entitlement  
 (4) Q Okay thank you Doctor You can take your seat  
 (5) Doctor when we were talking with you earlier this morning  
 (6) you indicated that you believed that there was such a thing as  
 (7) environmental lands Can you tell us whether or not  
 (8) environmental lands from the viewpoint of an appraiser are an  
 (9) important consideration and why?  
 (10) A Yes One of the things an appraiser does is look at what  
 (11) we call the highest and best use of the property That  
 (12) analysis involves looking at the potential market for property  
 (13) by different segments or classes It involves looking at the  
 (14) physical characteristics of the property It also involves  
 (15) looking at a lot of the legal aspects of the property and  
 (16) it's - and the economic environment around it  
 (17) Then the appraiser would determine in his opinion if  
 (18) that - if that property was placed on the market what would be  
 (19) the - where would - where would be the most probable area  
 (20) that the property would sell for the highest price and it is  
 (21) sometimes the land to be set aside for preservation for public  
 (22) use is the best use of the land  
 (23) It goes back to a basic resource economics issue and that  
 (24) has to do with when the collective whole of people determine  
 (25) that something has value and that value is equal to or greater

Vol 20 3188

- (1) than the value to individuals typically that will be acquired  
 (2) and - for the - for public purposes and that's kind of the  
 (3) issue we're looking at here  
 (4) When you look at a lot of land in Alaska particularly in  
 (5) remote areas or rural areas you have a small market And  
 (6) particularly we have very pristine land like we're dealing  
 (7) with here there is a movement in this country to try to  
 (8) preserve and acquire and preserve a lot of this pristine land  
 (9) And if we looked at the amount of - of - when we look at the  
 (10) market out there for land and how long it would take to sell  
 (11) all this land in the private market we come to the conclusion  
 (12) that the best use of it would be to preserve it for future  
 (13) generations  
 (14) Q Okay And Professor Green you just studied this this  
 (15) concept called environmental lands as a part of your work?  
 (16) A I have I've reviewed literally hundreds of articles and  
 (17) studies on that issue  
 (18) Q Excuse me Professor  
 (19) MR FORTIER Could I have up what's been marked as  
 (20) 1247  
 (21) MR PETUMENOS Mr Fortier you may want to move the  
 (22) case!  
 (23) MR FORTIER I may  
 (24) A And I consider it a very valid market segment  
 (25) BY MR FORTIER

Vol 20 3189

- (1) Q Professor Green I've put on the screen 1247 76 Can you  
 (2) explain what this is for the jury please?  
 (3) A It is just a few headlines from articles that -- about the  
 (4) preservation of lands in the United States around the world  
 (5) At one time my office we were doing some research I had a  
 (6) graduate assistant pulling these articles I literally had  
 (7) boxes of them They're just numerous articles about this kind  
 (8) -- properties in California being purchased for preservation  
 (9) properties in New York Mexico rain forest being preserved  
 (10) private lands and various parts of the United States that have  
 (11) been purchased for preservation purposes  
 (12) Q Professor who are the -- who are the groups who's the  
 (13) market that's buying this environmental land?  
 (14) A Well there are some private groups that buy the land We  
 (15) haven't seen a lot of that in Alaska There is also  
 (16) governmental entities that do It can be the borough or  
 (17) county it can be the state It can be various agencies of the  
 (18) state It can be also various agencies of the federal  
 (19) government  
 (20) Q Professor Green I'm going to show you what's been marked  
 (21) as exhibit 1247 77 Can you tell me what this is?  
 (22) A That's just some more of the same kind of articles that one  
 (23) talks about a sale that occurred recently in Kachemak Bay  
 where  
 (24) the State of Alaska purchased the lands for preservation One  
 (25) in Texas where land has been -- some of the lands that was part

Vol 20 3190

- (1) of the RTC lands which was foreclosure lands that the  
 (2) government acquired which was being turned into a natural --  
 (3) nature preserve One here in California where they passed a  
 (4) 65 million dollar program to protect the California  
 (5) environment which included a portion to buy lands and then  
 (6) some of the issues in the Northwest having to do with the  
 (7) protection of the white owl  
 (8) Q Let's go to 78 please  
 (9) These are some more articles you collected Doctor 77  
 (10) these articles that are on the --  
 (11) A Yes  
 (12) Q If we could please go to 78  
 (13) A This is just an article that was in the Anchorage Daily  
 (14) News here about -- a few months back talking about one  
 (15) scientist who says that there is a link between the environment  
 (16) and the preservation of our natural resources as it relates to  
 (17) the mental health of people who live in urban centers His  
 (18) theory is that human beings have been so attached to nature for  
 (19) so many years that if there isn't some continued involvement  
 (20) that it can cause health problems and so on And we've seen  
 (21) a number of these kinds of issues around  
 (22) Q Is this something you rely upon Doctor in determining  
 (23) whether or not there is such a thing as environmental lands?  
 (24) A It's just a lot of the general things As I've said I had  
 (25) at one time boxes full of these articles in my office

Vol 20 3191

- (1) Q What are the important features to evaluate lands that  
 (2) you're considering whether or not they're environmental lands?  
 (3) A Well I look at the same features whether it's to be  
 (4) environmental lands or -- or some other market segment but the  
 (5) features that I typically look at are here on the board is --  
 (6) Q Doctor I'm showing you what's been marked as Exhibit  
 (7) Number 1253  
 (8) A Yes And these are the things some of the things that I  
 (9) look at These are the access the biological features of the  
 (10) land meaning the wildlife birds mammals things of that  
 (11) nature The hydrology Some lands are very important  
 because  
 (12) of important water resources The geographic features would  
 be  
 (13) things like mountains glaciers streams things like that  
 (14) One of the things you want to recognize is that when you  
 (15) start talking about environmental lands some of the features  
 (16) that we normally think of as in -- as being negative features  
 (17) on land that would be set aside for development purposes are  
 (18) extremely valuable for preservation purposes for -- for the  
 (19) kind of lands we're talking about here Ocean views any kind  
 (20) of views are important Archaeological significant sites  
 (21) historical significance the vegetation and then I look at  
 (22) what's called the absorption rate for the land  
 (23) Q You've got this -- you've got marked here Doctor it's a  
 (24) rating method employed?  
 (25) A I use this method I develop a rating system where I take

Vol 20 3192

- (1) the property that I'm looking at I use maps all kinds of data  
 (2) that I can find about the property and I go through and rat  
 (3) that against a predesignated rating system And then I also do  
 (4) that in looking at other environmental lands and comparing  
 (5) those lands to say the subject land that I'm looking at  
 (6) Q One of the areas you've got here Professor is access?  
 (7) A Yes  
 (8) Q Can you describe to us what you mean by access?  
 (9) A Well we're talking either -- you know access can be  
 (10) roads access by water float plane things of that nature  
 (11) Sometimes for preservation purposes access can be almost a  
 (12) negative factor instead of a positive factor We're looking  
 (13) here at lands that have you might say pristine features  
 (14) although some access is often highly desirable So we're  
 (15) looking at whether there is roads and water access things like  
 (16) that Alaska access is extremely important  
 (17) Q Professor in undertaking this assignment did you utilize  
 (18) a rating method such as that displayed here using these  
 (19) criteria?  
 (20) A Yes I did  
 (21) Q Did you also look Professor at what property rights were  
 (22) involved?  
 (23) A Yes I did  
 (24) Q Could I have exhibit 1250 please?  
 (25) Professor I'm showing you what's been marked as exhibit

Vol 20 3193

- (1) 1250 Can you tell me what that is?  
 (2) A It s a list of the – some of the traditional or  
 (3) fundamental rights to real estate When you look at real  
 (4) estate a lot of times we think of real estate as being the  
 (5) dirt and the trees and the physical aspects of it But a  
 (6) person who owns real estate is also entitled to certain rights  
 (7) that run with the real estate These rights can be sold They  
 (8) can be separated They have value They have value as a  
 (9) group They have value individually One of the first things  
 (10) that an appraiser has to do in appraising land is determine  
 (11) what rights that are being valued  
 (12) Q Are these some of the rights that you looked at when you  
 (13) undertook this assignment Professor?  
 (14) A Yes they are These are very important rights relative to  
 (15) this particular engagement  
 (16) Q Professor I note that one of the rights is quiet  
 (17) enjoyment Would you tell the jury what you mean by that?  
 (18) A Yes People who own real estate have the right to be able  
 (19) to enjoy their real estate That means that they have the  
 (20) right to exclude others from it They have the right to use it  
 (21) for their personal use They also have the right to not use  
 (22) it if they so desire But they – other people do not have  
 (23) the right to infringe upon those particular rights of what we  
 (24) call the quiet enjoyment of our property  
 (25) Q So Professor did you look at whether or not property that

Vol 20 3194

- (1) may not have been used by one of the plaintiffs was interfered  
 (2) with in some way?  
 (3) A Well I think it s important to kind of understand a little  
 (4) bit – when we talk about property rights understand a little  
 (5) bit of what happened out there and what was there prior to the  
 (6) oil spill Prince William Sound the Gulf of Alaska the South  
 (7) Kachemak Bay area that s a quiet pristine area Not a lot of  
 (8) people out there lots of wildlife beautiful area Been  
 (9) described by some as being one of the most pristine areas of  
 (10) the world  
 (11) When the oil spill occurred suddenly we had a situation  
 (12) where there is 11 million gallons of oil heading towards these  
 (13) peoples land That oil is for a period anyway it s –  
 (14) appears to be toxic It is moving around in the water It  
 (15) is – it s been described as goo For a period of time you  
 (16) have no idea where it s going to land where it s going to  
 (17) settle It is moving around in the water so the people  
 (18) downstream of this and where this stuff is heading it s  
 (19) pretty hard for them to at that point in time understand what  
 (20) the consequences is going to be of that – that oil spill if  
 (21) you would  
 (22) Q Professor if I could interrupt for a moment  
 (23) A Sure  
 (24) Q I had a few more questions on this particular subject  
 (25) A Sure

Vol 20 3195

- (1) Q Did you analyze Professor the right to sell property and  
 (2) the right to use and occupy and sell it as part of your –  
 (3) A Oh yes yes All these rights are rights that the  
 (4) property owner enjoys  
 (5) Q Okay One of the rights Professor that you have down  
 (6) here is something called littoral rights?  
 (7) A Yes  
 (8) Q Could you tell us what littoral rights are?  
 (9) A Littoral rights are the rights that an owner of real estate  
 (10) has at the point where water – where the land and water comes  
 (11) together And the property owner has certain rights to be able  
 (12) to access the property and to if you would leave the  
 (13) property and certain rights to resources at that point  
 (14) Q Now Professor do each of the components that are listed  
 (15) on these fundamental rights have a value in itself?  
 (16) A Yes  
 (17) Q Could I see exhibit 1254 please?  
 (18) I m showing you what s been marked as exhibit 1254  
 (19) A Yes  
 (20) Q Professor could you tell me what this is?  
 (21) A This is just an example of some – some examples where less  
 (22) than fee interests have been acquired by different  
 (23) organizations The first one is some property at the Tazimina  
 (24) Lake The National Park Service – it is owned by Native  
 (25) corporation The National Park Service wanted to acquire it

Vol 20 3196

- (1) The Natives wanted to continue to use it but felt in their  
 (2) interest that it would be good to have that land preserved so  
 (3) they entered into an agreement with the Park Service to sell  
 (4) them their – what we would call their development rights to  
 (5) the land They had the land appraised and then they  
 (6) determined  
 (7) that – as my recollection the land was appraised for \$475 an  
 (8) acre and then they paid them a price that represented about 85  
 (9) percent of the fee value of the land to take away those  
 (10) development rights  
 (11) The Natives no longer have the right to borrow money  
 (12) against their land They no longer have the right to build on  
 (13) their land They cannot – they cannot convey it sell it do  
 (14) most of the kinds of things that we re talking about here  
 (15) They still have the right to some use of the land They can  
 (16) hunt and fish on it and have access to it So the agreement  
 (17) was that the Native corporation would give up 15 percent of the  
 (18) value for the rights for those rights and the government  
 (19) would pay them approximately 85 percent of the value for the –  
 (20) to take away these development rights  
 (21) The Salamatoof Native Corporation is down in the Kenai  
 (22) area They have been developing land along the Kenai River I  
 (23) was a consultant to them for seven years which developed  
 (24) three  
 (25) miles of Kenai River on both sides And in that project we set  
 (26) aside what s called nondevelopment easements along the river  
 (27) So we put easements in there stating that no one could do –

Vol 20 3197

Vol 20 3199

(1) build anything or cut any trees or do any kind of development  
 (7) activity from the mean high tide to the top - well actually a  
 (3) little bit beyond the top of the ridge along the river - so  
 (4) that we could protect the integrity of the riverbank  
 (5) The U S Fish and Wildlife Service has then approached the  
 (6) Native corporation and is now negotiating to acquire those  
 (7) development - that nondevelopment easement because they  
 would  
 (8) like to maintain and control that easement to make sure that it  
 (9) is properly protected  
 (10) I looked at some of the files for the Alaska Energy  
 (11) Authority to look at where they have run high powered electric  
 (12) lines things like that what they have paid for easements  
 (13) And I found an example in there where one Native allotment  
 down  
 (14) in the Homer area was - the Energy Authority approached - I  
 (15) believe her name was Mabel Nelson She because it was a  
 (16) Native allotment the BIA has oversight responsibility on that  
 (17) and the BIA chief appraiser said that if they want to acquire  
 (18) that easement they would have to pay 95 percent of the fee  
 (19) value of the land in exchange for the - that easement becau-  
 (20) the lady would have to give up most of or all of her  
 (21) development rights and only have some minor rights In the  
 (22) end they elected to just buy the land in fee value rather than  
 (23) do that but the determination was made that that represented  
 (24) the loss of the right to develop that land and the opinion of  
 (25) the BIA people represented about 95 percent of the value of the

(1) A Yes yes  
 (2) Q And that the government for instance would pay 85  
 (3) percent?  
 (4) A Yes  
 (5) Q Now do you know whether or not environmental hazards  
 (6) impact these property rights we've been talking about?  
 (7) A Absolutely they do  
 (8) Q Okay Could we -  
 (9) A Before I was describing a little bit of what happened in  
 (10) Prince William Sound You know people had land Now some  
 of  
 (11) that land wasn't being used but that doesn't having anything  
 (12) to do with what we're talking about Just like if I have a  
 (13) motorhome sitting beside my house or a cabin a winter cabin  
 (14) or a summer cabin and I'm not using it I don't expect  
 some-body  
 (15) else to come along and use it just because I'm not using it  
 (16) In fact if I discovered that somebody else was involuntarily  
 (17) using my property I would certainly expect them to  
 compensate  
 (18) me for the use of my property or if they infringed upon the  
 (19) rights that - my rights I would expect them to compensate me  
 (20) for that  
 (21) In the case of Prince William Sound we have a quiet  
 (22) peaceful area that where suddenly there's 11 million gallons of  
 (23) oil in the water there are some jurisdictional disputes going  
 (24) on being reported in the press There's reports of tens of  
 (25) thousands of birds and mammals and game dying out there

Vol 20 3198

Vol 20 3200

(1) property  
 (2) Now I looked at some like Matanuska Electric Association  
 (3) I looked at some of the transactions on the Trans Alaska  
 (4) Corridor and I found that depending upon the disruption of -  
 (5) to the land that the rights to transport electricity and oil  
 (6) and stuff across someone's land can represent anywhere from  
 as  
 (7) low as 40 percent to as much as 95 percent of the fee value of  
 (8) the land  
 (9) Q Professor how large was the Tazimina transaction do you  
 (10) recall?  
 (11) A It's quite a large one I'd have to look in my notes  
 (12) Q Professor I'll withdraw the question  
 (13) A Okay  
 (14) Q Was it larger than a few acres than two acres?  
 (15) A Well it's several thousands of acres I'd have to look at  
 (16) the exact amount  
 (17) Q Okay Now does it make any difference with regard to the  
 (18) rights that we're talking about the quiet use or quiet  
 (19) enjoyment rights and the littoral rights and those sort of  
 (20) rights whether or not you own a quarter of an acre or 100 000  
 (21) acres?  
 (22) A No it's the same rights  
 (23) Q Okay And part of this right suspended then is to show  
 (24) us what these rights are worth is that correct? The right to  
 (25) exclude others and -

(1) There's - they suddenly brought into the area thousands of  
 (2) workers who are now on the beaches They're running up - you  
 (3) know they're working in protective clothing which would imply  
 (4) to me that someone - that there may be an environment -  
 (5) health hazard  
 (6) Q Professor before we go into the actual subject what I  
 (7) wanted to do was ask you a couple of questions -  
 (8) A Sure  
 (9) Q - on whether or not you researched the issue of the impact  
 (10) of contamination on the property values?  
 (11) A Well I - yes I have done research on that issue  
 (12) Q Okay I have put on the screen what has been marked as  
 (13) 1247 79  
 (14) A Sure  
 (15) Q Can you tell us what this is please?  
 (16) A Well this is just some articles and in the real estate  
 (17) literature we see a lot of this have been for the last five or  
 (18) six years or so People being - people in the industry being  
 (19) worried about environmental contamination Real estate  
 (20) brokers for example in this state for the last four years  
 (21) there has been mandatory regulation requirement to renew  
 your  
 (22) license as part of the continuing education program that they  
 (23) all study about the environmental hazards The bankers have  
 (24) been warned about it because if a banker takes title - let's  
 (25) say a banker loans money and then has to take title to the

Vol 20 3201

(1) property under foreclosure that's going to expose a banker to  
 (2) liability  
 (3) There have been you know insurance articles to insurance  
 (4) people and real estate appraisers and others warning the whole  
 (5) industry about environmental hazards I personally have taught  
 (6) some classes on that I taught a class before the - the  
 (7) annual realtor's convention here two years ago  
 (8) Q What is this 1247?  
 (9) A This is just some more of the same kind of articles and I  
 (10) just selected a few just to - as an example This is articles  
 (11) having to do with insurance law one from the banking one that  
 (12) was in a banking review one was in a law review So there's  
 (13) been - I just tried to show a sample of how that has permeated  
 (14) the whole industry  
 (15) Q Now Doctor in this case could you describe to the jury  
 (16) how you approached the appraisal problem? You were asked  
 to  
 (17) look at the impact for the first three years after the oil  
 (18) spill?  
 (19) A Yes Well I - as I have just been describing I've  
 (20) looked at all the circumstances surrounding the spill the  
 (21) impact and effect it had on the land and how - and the effect  
 (22) that had on the property rights of these owners and you know  
 (23) as I've just described you have what I would call almost a  
 (24) land that has been traumatized I mean you have - and so  
 (25) what I looked at is to try to find a way to determine what that

Vol 20 3202

(1) impact was to these property rights that these landowners have  
 (2) during that first summer  
 (3) Q Excuse me before you go into that Professor -  
 (4) \ Sure okay  
 (5) Q - what did you look at in order to make that  
 (6) determination?  
 (7) \ Well I looked at - okay these areas that you put up here  
 (8) on the board  
 (9) Q Looking at exhibit 1251?  
 (10) A Yes The physical intrusion of oil on the beaches There  
 (11) was actual physical oil out there There is a disruption to  
 (12) the ecological system which we were able to determine By  
 (13) that - and we're talking about environmental land that is  
 (14) important ecological environment if you would and that  
 (15) environment was disrupted because there was thousands of  
 (16) animals and birds and things that were dying and affected and  
 (17) in some cases the food chain is affected  
 (18) There was the actual intrusion by the clean up effort or  
 (19) the beach treatment if you would Hundreds of people up and  
 (20) down on these beaches There was a certain amount of general  
 (21) chaos that prevailed out there at the time There were a lot  
 (22) of - well there's a lot of uncertainty I mean how does  
 (23) anybody know who owns land that's got 11 million gallons of oil  
 (24) coming at them? How do they know what the effect of that's  
 (25) going to be It's probably one of the most uncertain

Vol 20 3203

(1) situations that you could look at  
 (2) In Alaska owners of land have an obligation to disclose  
 (3) environmental hazards so now we have a situation where the  
 (4) landowner - in order to lease their lands sell their land  
 (5) rent their land convey it in any way - would have an  
 (6) obligation to disclose that there may be a potential  
 (7) environmental hazard  
 (8) There were all kinds of catastrophic predictions being  
 (9) made I read everything from scientists saying oh it'll be a  
 (10) short term thing to some saying that the Prince William Sound  
 (11) these areas will never recover They will never be the same  
 (12) So we had some of the best scientists in the world putting out  
 (13) all kinds of different statements  
 (14) Those of us who are not scientists we would be confused by  
 (15) that And there was some gag orders put on actual scientific  
 (16) materials I read articles pertaining to that - those  
 (17) complaints that from one agency to the other even within like  
 (18) state agencies that wouldn't share information about what was  
 (19) going on And as I mentioned there was some jurisdictional  
 (20) disputes  
 (21) So if you look at all this all these things that are going  
 (22) on you had a lot of mass confusion You had a real unsettling  
 (23) situation if you would You had tremendous uncertainty  
 (24) Q Now with regard to your research into this matter  
 (25) Professor Green can you describe to the jury what you did?

Vol 20 3204

(1) A I - well one thing I was living there when the spill  
 (2) occurred I had two sons working out there I went out and  
 (3) looked early in - early on during the first summer I have a  
 (4) firsthand view of what was going on I viewed the property  
 (5) on - on more than one occasion I've reviewed lots of  
 (6) documents about it about the - about the area I've reviewed  
 (7) literally dozens and maybe hundreds of press releases having  
 to  
 (8) do with what went on I've been to the - the library the oil  
 (9) spill impact library and reviewed lots of documents looked at  
 (10) lots of photographs that were taken during that - about some  
 (11) of those properties I spent days reviewing the documents on  
 (12) file in Mr Fortier's office and I talked to a number of the  
 (13) people who lived out there  
 (14) Q Did you arrive at an opinion as to the harm to the  
 (15) property if any?  
 (16) A I did arrive at an opinion and that is it's my opinion  
 (17) that in the early stages of this - of the spill that the  
 (18) property rights to the - to these landowners that I  
 (19) represented that a portion of the property rights that they  
 (20) typically enjoy were suspended By that I'm saying that it  
 (21) would be unrealistic particularly in the first three or four  
 (22) months following that spill for one to think that business  
 (23) would just go on as usual The landowner could just continue  
 (24) to do whatever they were doing prior to that  
 (25) It's pretty unrealistic to think that would be - would be

Vol 20 3205

- (1) negotiating a sale of property a lease on property unless it  
 (2) was like small isolated agreements It's pretty unrealistic  
 (3) to think that one would be able to use their land in what we  
 (4) would call quiet enjoyment when you have thousands of people  
 (5) running up and down your beaches Access became  
 somewhat  
 (6) difficult  
 (7) I've seen photographs of beach workers with oil up to their  
 (8) shoulders working on those beaches You had boats brought -  
 (9) many boats brought into the area You had helicopters flying  
 (10) all over the place You had barges with huge hoses spraying  
 (11) down the beaches It's difficult to think that you would have  
 (12) what we would call quiet enjoyment of your - of the use of  
 (13) your land during that period of time  
 (14) Q Can we have 1252?  
 (15) MR FORTIER Your Honor would you like to break for  
 (16) the day at this point?  
 (17) THE COURT Well question is counsel would you?  
 (18) I've got 15 minutes but if you want to break I'd be happy  
 (19) to  
 (20) MR FORTIER Oh no I could go for another 15 Your  
 (21) Honor  
 (22) THE COURT Okay go ahead  
 (23) BY MR FORTIER  
 (24) Q Professor Green I'm showing you what's been marked as  
 (25) exhibit 1252 Does this illustrate how you estimated damages

Vol 20 3206

- (1) on account of the oil spill activities during the first three  
 (2) years?  
 (3) A Yes it does What I was - I looked at is that during  
 (4) these first three or four months my understanding - well the  
 (5) spill occurred in March There was a lot of activity going on  
 (6) as I've described through the summer and somewhere - my  
 (7) recollection about October they suspended the beach  
 treatment  
 (8) areas and assessment  
 (9) During that period of time that's when normally in Alaska  
 (10) we do most of our - any development work I've developed  
 (11) quite a little bit of land in Alaska and some other properties  
 (12) and that's when you - that's when you do most of your  
 (13) development activity or work The reason they suspended the  
 (14) beach treatment areas is that it - because of climatic  
 (15) conditions it becomes extremely difficult to work out in those  
 (16) areas So if you miss that first few months the whole summer  
 (17) months in terms of most activity you pretty much miss the  
 (18) whole year So what I did was I looked - I determined that a  
 (19) large share of the property rights these rights that these  
 (20) landowners enjoy were suspended and they were suspended for  
 (21) that first year  
 (22) Q That would be across the whole of the properties owned by  
 (23) Chenega Corporation?  
 (24) A Across the whole of their properties that's correct  
 (25) Q And the whole of the properties of the English Bay

Vol 20 3207

- (1) Corporation?  
 (2) A English Bay Port Graham and Chenega Corporation  
 (3) Q Go ahead please  
 (4) A After that for year two and three I just looked at the  
 (5) areas along the beaches I took a quarter of a section of the  
 (6) land along the beaches because those - those beaches were  
 (7) being continued to be treated for year two and three and so  
 (8) I - I looked at those and in effect what I'm saying is that  
 (9) I looked at it and said there was physical use of the  
 (10) property there was a suspension of the - of a certain amount  
 (11) of these property rights and the company that suspended  
 these  
 (12) rights and was using this property should pay to these  
 (13) corporations rent for the use of their land  
 (14) It's no different than if you discovered somebody living in  
 (15) your house you would expect them to pay you rent for the use  
 (16) of your property Or if you came home and discovered that they  
 (17) dumped trash in your yard or did something to disrupt your use  
 (18) of it you want to be compensated for that That's the same  
 (19) concept we've used here Straightforward concept  
 (20) Q You've accepted for - the bottom bullet for 1252 -  
 (21) damages for long term oil persistence not estimated Do you  
 (22) see that?  
 (23) A Yes I see that I did not look at the long term  
 (24) persistence issue Any issue beyond three years that was  
 (25) being done by Dr Mundy

Vol 20 3208

- (1) Q And Professor when you looked - did you arrive at a  
 (2) value for the lands and therefore of the rights that we  
 (3) suspended for each of the corporations?  
 (4) A Yes What I did was appraise the land using regular market  
 (5) value direct sales comparison approach to value for the lands  
 (6) and I assumed I - you might say a moment before the spill  
 (7) just before the spill what that - what the value of those  
 (8) lands were prior to the spill And then I determined that  
 (9) based on the information that I showed you here previously  
 (10) that since most of the development rights were taken but the  
 (11) Native corporations had some continued use There was even  
 (12) some minor economic use of the property so the way I adjusted  
 (13) for that is I reduced that by 15 percent Otherwise I looked  
 (14) at it from the standpoint that the Natives would continue to  
 (15) have about 15 percent of those rights The Exxon Corporation  
 (16) was in effect using 85 percent of those rights and then I  
 (17) assessed a rent for the use of these property rights and the  
 (18) property  
 (19) Q Professor I put on the screen what has been marked as I  
 (20) believe 1256 and - 1256 and 57?  
 (21) A Well I hope your eyes are better than mine  
 (22) Q My eyes are worse over there but we've got this magic  
 (23) thing here Mr Petumenos dropped the other pen I think but  
 (24) if you grab that pen there - you recall we've done this a  
 (25) couple of times We tried to anyway

Vol 20 3209

- (1) MR PETUMENOS Judge could I assist maybe?  
 (2) THE COURT I certainly hope so  
 (3) MR PETUMENOS So do I  
 (4) BY MR FORTIER  
 (5) Q Would you Professor Green first point out on 125 - on  
 (6) the bottom one there 1257 I believe the amount of value you  
 (7) arrived at for Chenega Corporation and you can do it -  
 (8) MR PETUMENOS You want me to do it for you?  
 (9) MR FORTIER Go ahead  
 (10) MR PETUMENOS What part of the thing do you want?  
 (11) The bottom one?  
 (12) MR FORTIER The bottom one  
 (13) MR PETUMENOS How much?  
 (14) A I can see that now On the Chenega lands I valued it two  
 (15) different - in effect two values  
 (16) One I valued the lower lands what I - I referred to them  
 (17) on my report as the prime lands and these were lands at below  
 (18) as I - my memory serves me correct below either 300 or 500  
 (19) feet elevations which most of the lands around the - around  
 (20) the water and the lower elevations the more developable type  
 (21) lands then I - and I valued those at \$1367 an acre which  
 (22) there was approximately 46 000 - almost 47 000 acres for a  
 (23) value of 64 million dollars  
 (24) Q And this was for the lands that were closer to the  
 (25) waterfront?

Vol 20 3210

- (1) A This was the lower lands yes  
 (2) Q In valuing those lands closer to the waterfront Professor  
 (3) did you look at anything any of the natural resources that  
 (4) were along that area?  
 (5) A Well yes absolutely I looked at a lot of studies I  
 (6) went to the university library and looked at the environmental  
 (7) impact studies that had been done on Prince William Sound  
 (8) and  
 (9) others to try to determine what the resource base was there  
 (10) type of animals type of activities type of vegetation I  
 (11) looked at all of those factors and that's one reason on this  
 (12) particular land I separated it because I felt that these lower  
 (13) lands were the most productive lands  
 (14) Q Let's go to 1257 If we could Mr Petumenos will give me  
 (15) a tutorial  
 (16) Okay I'm showing you now 1257  
 (17) A Yes This was the lands I called less than the prime lands  
 (18) or the - some of the back lands I estimated there to be  
 (19) almost 30 000 acres of those and I appraised those for \$473 an  
 (20) acre for a total value of 14 million dollars  
 (21) Q And did you use the same methodology with regard to  
 (22) English  
 (23) Bay and Port Graham lands as well?  
 (24) A Yes I did The only difference on English Bay and Port  
 (25) Graham is that I valued those all as - as one value  
 (26) Otherwise in effect I merged these values would be the same  
 (27) if I just merged these values together

Vol 20 3211

- (1) MR PETUMENOS I thought I had a day off  
 (2) MR FORTIER I stay away from electric lawnmowers  
 (3) too  
 (4) BY MR FORTIER  
 (5) Q Professor Green I'm showing you what's been marked as  
 (6) 1263 - I'm sorry this is 1259 Can you tell me what this  
 (7) is?  
 (8) A Well I believe this is English Bay and -  
 (9) Q I note that you've got a price per acre of \$668?  
 (10) A That's correct  
 (11) Q Does that include the whole of English Bay's lands?  
 (12) A That's the whole of English Bay lands and that is a value  
 (13) without timber  
 (14) Q And that's rounded to 53 million dollars for all of its  
 (15) lands?  
 (16) A Yes  
 (17) Q And then if we could show Port Graham Corporation I show  
 (18) you what's been marked Doctor as exhibit 1263  
 (19) A Well you have - Sam you have the overhead that only  
 (20) shows the second and third year lands along the beaches  
 (21) You  
 (22) need to put that - the other one where we valued the whole -  
 (23) Q I'm sorry it should have been exhibit 1262 And this one  
 (24) you can see?  
 (25) A Yes This is Port Graham Corporation They have 111 657  
 (26) acres of entitlement I appraised that land for \$668 an acre

Vol 20 3212

- (1) and it rounds to 750 (sic) million dollars  
 (2) Q That's 75 million  
 (3) A I'm sorry 75 million dollars  
 (4) Q And Doctor you also arrived at a value for the - for the  
 (5) next two years for Port Graham and English Bay?  
 (6) A Yes What I did was on year two and three I took the  
 (7) lands within a quarter section of the beaches because those  
 (8) were the beaches that were - where there was those  
 (9) assessment  
 (10) and treatment continuing and I just took the land along those  
 (11) beaches and revalued just the - just the beach areas and  
 (12) there I got a value of \$1146 an acre That would be as if you  
 (13) took the beaches and cut off the back lands Most of the value  
 (14) in these kind of lands are up kind of along the beaches  
 (15) That's the most valuable property and that would be the value  
 (16) per acre if we assumed that we cut off the back lands And  
 (17) then I valued those the amount of land along those beaches  
 (18) Q Did you do a similar sort of analysis with regards to  
 (19) English Bay with regard to the latter two years Doctor?  
 (20) A Yes I did  
 (21) Q So you examined the value of the property along the - the  
 (22) beach front?  
 (23) A I valued all their lands as a whole and then I valued the  
 (24) land along the beaches within a quarter section of the water  
 (25) Q And Doctor you also arrived at a value for the land  
 (26) rights that were suspended during those three years is that

Vol 20 3213

Vol 20 3215

(1) correct?  
 ( ) I arrived at a value then I reduced it by 15 percent In  
 (3) other words I took 85 percent of the value of the land and -  
 (4) to determine the amount of - the total value of the land that  
 (5) was impacted and then I assessed a rent against that  
 (6) THE COURT Counsel this is the time to take a  
 (7) break  
 (8) MR FORTIER Okay Your Honor  
 (9) THE COURT Right on the dot  
 (10) All right I'd let you go for the day Remember don't talk  
 (11) to anybody about this case and don't form or express any  
 (12) opinion on it until it's submitted to you for deliberation  
 (13) Oh I'm sorry I have an instruction to give I forgot  
 (14) about that  
 (15) I have some instructions to give you because I think since  
 (16) you haven't heard the whole trial you may be a little confused  
 (17) about the theories that are in this case as opposed to theories  
 (18) that might be in another case And I have another instruction  
 (19) to give you based on some of the evidence that's been  
 (20) presented so listen very carefully to this These will  
 (21) probably be incorporated in the final instructions also but I  
 (22) thought it appropriate to give them to you now  
 (23) The first instruction is as follows As you know the  
 (24) Native corporations are seeking recovery for damages to their  
 (25) lands Alaska law recognizes any corporation as a person

(1) information and instructions presented to you in this  
 ( ) courtroom You are not to consider whether any other party  
 (3) will or may recover for any claims in the federal action  
 (4) If you hear or see anything pertaining to the federal  
 (5) trial or a result there you should disregard that information  
 (6) because the evidence and issues in that court are different  
 (7) from those in this court Also the information you receive  
 (8) may be incomplete or inaccurate as it will be second or  
 (9) thirdhand and it is not evidence in this trial  
 (10) In fulfilling your duties as jurors in this trial you  
 (11) should consider only evidence I have permitted to be admitted  
 (12) in this trial and you should consider only the issues presented  
 (13) in this trial  
 (14) Exxon and the municipal plaintiffs in the case before you  
 (15) have now settled the claims that were before you that do not  
 (16) relate to the municipality's lands damages Thus the claims  
 (17) of all of the plaintiffs in this case both the Native  
 (18) corporations and the municipalities relate to damages to their  
 (19) land as a - as a result of the Exxon Valdez oil spill  
 (20) In addition four of the Native corporations have claims  
 (21) relating to archaeological damages and Chugach Alaska  
 ( ) Corporation has certain claims relating to administrative  
 ( ) costs Now these claims will all be related to in detail in  
 (24) the final instructions in this case But I thought there might  
 (25) be some confusion here and I do feel that you should  
 remember

Vol 20 3214

Vol 20 3216

(1) distinct from its shareholders Just as an individual is  
 ( ) entitled to own land and recover for injury to his or her  
 (3) property so too is a corporation without regard to the number  
 (4) of shareholders it may have  
 (5) I have allowed testimony regarding the number of  
 (6) shareholders comprising the Native corporations to assist you  
 (7) in evaluating the credibility of witness - witnesses I will  
 (8) instruct you further on this issue and others at the conclusion  
 (9) of this case  
 (10) Now the second instruction is this Many of you may be  
 (11) aware that a trial against Exxon Corporation is also proceeding  
 (12) in the United States District Court As you may have heard  
 (13) the claims being litigated there including - include claims of  
 (14) commercial fishermen for lost fish catch and claims of Alaska  
 (15) Natives for lost subsistence harvests of traditional foods  
 (16) These claims belong to individuals not to Native corporations  
 (17) and they are not being pursued here Evidence of damage to  
 (18) subsistence resources and damage to commercial fisheries has  
 (19) been allowed here because it may be relevant to whether the oil  
 (20) spill reduced the value of the Native corporation's property or  
 (21) caused them damages by interfering with the corporations' use  
 ( ) of their land You are instructed not to consider any aspect  
 ( ) of the federal court proceeding whether by comment of  
 ( ) counsel  
 ( ) media information or other source You are to consider the  
 ( ) claims before you on their own merit only on the basis of

(1) every day the admonition I give you that you're not to consider  
 ( ) sources of information from outside this court Particularly  
 (3) the media And that's - with those words I'll let you go  
 (4) (Jury out at 1:34 p.m.)  
 (5) THE COURT Counsel because of the lengthy  
 (6) discussions on the - on these instructions that I just gave  
 ( ) and other issues regarding instructions I may not have given  
 (8) I'm going to put all of the documents that relate to those  
 (9) issues in the Court's exhibit and it will be Court's Exhibit 19  
 (10) or 18?  
 (11) THE CLERK 19  
 (12) THE COURT 19 Take the yellow tags off I have a  
 (13) question from a juror I've told the juries that if they have  
 (14) questions they can write them down give them to me and then  
 (15) I'll screen them and share them with you and see whether -  
 (16) whether or not we answer their questions And here's the way I  
 (17) deal with this  
 (18) The first - I let you tell me whether you think it's  
 (19) appropriate to get these questions answered To the extent  
 (20) that - that you do think it's appropriate I generally leave  
 ( ) it to counsel to incorporate it in their further examination  
 ( ) If it's something that you think is a delicate subject or  
 ( ) something like that you can ask me to ask the questions and I  
 (24) may or I may not ask them but here's the question  
 (25) We'll make copies of it and you can tell me what you want

Vol 20 3217

(1) to do about that in the morning It s a simple question and -  
 (2) and it appears appropriate for me to find some answer to it  
 (3) Is there anything else now on the record?  
 (4) MR DIAMOND Your Honor we have one matter that  
 (5) probably would require about 15 minutes of your attention this  
 (6) afternoon concerning a witness on schedule for tomorrow It is  
 (7) something that you reserved for trial concerning matrixes of  
 (8) information that I understand the Native corporations wish -  
 (9) wish to present in connection with the archaeology claims as  
 (10) to which we take strong exception  
 (11) THE COURT Well I ll tell you what my schedule is  
 (12) I ve got a calendar call at 2 00 and a calendar call at 2 30  
 (13) That usually lasts until about 3 00 - that s right I have an  
 (14) order to show cause - not with any of you participating in it  
 (15) - at 3 30 I suppose I could fit you in at 3 00 if you want  
 (16) to come over here  
 (17) MR DIAMOND Mr Fortier and I will be there  
 (18) THE COURT Anybody else that wants to come is  
 (19) welcome too  
 (20) MR STOLL Your Honor we submitted with a courtesy  
 (21) copy to your chambers a memorandum regarding the  
 videotape of  
 ( ) the statements by the scientists the tape you previewed  
 ( ) yesterday I believe  
 (24) THE COURT You mean the tape made in Kodiak?  
 (25) MR STOLL Yes

Vol 20 3218

(1) THE COURT Yeah I ll read that  
 ( ) MR DIAMOND We have one on the way  
 (3) MR STOLL And I m just - tomorrow some time - I m  
 (4) sure that s not going to go on tomorrow but maybe we could do  
 (5) that at a break or immediately following  
 (6) THE COURT Talk about it you mean?  
 ( ) MR STOLL Pardon me?  
 (3) THE COURT Talk about it you mean?  
 (9) MR STOLL Yes  
 (10) THE COURT Sure no problem  
 (11) MR STOLL Thank you  
 (1 ) THE COURT So stay here and get your questions  
 (13) okay?  
 (14) THE CLERK Please rise This court stands in  
 (15) recess  
 (16) (Recess at 1 38 p m )

## Vol 21 3225

(1) PROCEEDINGS  
 (7) (Jury in at 8 44 a m )  
 (3) (Call to Order of the Court)  
 (4) THE COURT Good morning everybody Go ahead  
 (5) MR FORTIER Thank you Your Honor  
 (6) DIRECT EXAMINATION OF GEORGE H GREEN (Resumed)  
 (7) BY MR FORTIER  
 (8) Q Good morning Dr Green  
 (9) A Good morning  
 (10) Q Professor Green yesterday when you left off we discussed  
 (11) the values you arrived at for Chenega Port Graham and English  
 (12) Bay land  
 (13) A Yes  
 (14) Q And then we were going to discuss your methodology for the  
 (15) damages for – for what you identified as the chaos and  
 (16) confusion Can you briefly describe to the jury what your  
 (17) methodology was?  
 (18) A Yes Well first I valued the property and then I  
 (15) determined that from first year the property rights to the  
 (20) whole of the property were 85 percent of the property rights  
 (21) were suspended for that first year  
 (72) For year two and three I used the land along the  
 (23) coastline along the beaches and I valued those and then I  
 (74) determined the rate of rent that should be paid on those  
 (25) assets

## Vol 21 3226

(1) Q And was the rate of rent Professor Green based upon  
 (2) percentage?  
 (3) A It was Now when I first started the project that was  
 (4) before it had – the three-year treatment period had been  
 (5) determined So when I first started the project what I did  
 (6) was look at what the corporation could get in the marketplace  
 (7) if they had their money and had it invested in a safe  
 (8) investment  
 (9) And on the chart you can see the last one on there I  
 (10) looked at the Moody s Bond Rate Survey to determine what the  
 (11) bond rate was on March 22nd which was the closest day that  
 was  
 (12) reported and at that point the bond rate for a very safe  
 (13) investment would have been 9 68 percent so I used the 9 68  
 (14) percent in the first year  
 (15) After it was determined that the treatment period would go  
 (16) on we – I added in year two and three and then I looked at  
 (17) the marketplace to try to determine what long term lease rates  
 (18) were on real estate because if – in real estate if you have  
 (19) a period of less than one year generally you treat it as a  
 (20) rental agreement If it goes beyond that you start looking at  
 (21) it as a leasehold arrangement So I started looking at what  
 (22) other people had – were renting or – excuse me leasing their  
 (23) land for and I have a few of those listed  
 (24) The City of Seward has a number of land leases the City of  
 (25) Juneau Cordova and Anchorage and those range anywhere  
 from

Vol 21 3227

- (1) 8 percent to 10 percent at that particular time So I decided  
 (2) to use 9 percent the midpoint there as the rate for –  
 (3) rent rate for year two and three  
 (4) Q Now we're referring to what's been marked as PX1255 I  
 (5) believe  
 (6) A Yes  
 (7) Q Why did you change the rent rate from 9.68 to 9 percent?  
 (8) A Well as I said when I first did this I was only looking  
 (9) at a one year period because that was early in the  
 engagement  
 (10) and we didn't know at that point how long the treatment would  
 (11) go on and exactly how long you might say Exxon would be  
 using  
 (12) their land So I was only looking at the first year and I –  
 (13) in investment analysis typically you look at what's called the  
 (14) safe rate of investment what someone could reinvest their  
 (15) money for and I decided to use the published bond rate at that  
 (16) point in time  
 (17) Q So you used a rate of 9.68 percent for the first year?  
 (18) A For the first year  
 (19) Q And then 9 percent for two years following?  
 (20) A Years two and three  
 (21) Q And Professor Green you talked about this period of  
 (22) treatment Could you explain to the jury what you mean by  
 (23) that?  
 (24) A Well if you followed the – a lot of the – certainly the  
 (25) news coverage and the statements being made when the spill

Vol 21 3228

- (1) first occurred there was a lot of talk about clean – cleanup  
 (2) we'll clean the beaches and that language seemed to change  
 (3) somewhere along the line to the term treatment And then  
 (4) later more recently I've been reading the term net  
 (5) environmental impact as a term being thrown – bandied around  
 (6) I think that to me it implies that there was some change in  
 (7) thinking along the way relative to what clean means  
 (8) Q And so for the first three years you used – you looked at  
 (9) the first three years as treatment?  
 (10) A I did because what I did was use the period of time when  
 (11) the Commander of the Coast Guard stipulated that his opinion  
 (12) there was no additional reason to continue to treat the  
 (13) beaches So I used that three year period there until when  
 (14) that official made the statement that – and determined to quit  
 (15) the beach treatment and that was my – that was my particular  
 (16) engagement on this project  
 (17) Q Professor Green, have you in your studies made any sort of  
 (18) determination as to whether or not the beach treatment effort  
 (19) should conclude all damages as against Exxon against the  
 (20) corporation?  
 (21) A No I don't believe it does All that means is that there  
 (22) is – as what has been defined as a net environmental benefit  
 (23) to continuing the treatment Nobody has ever said that they're  
 (24) going to return this land to the condition it was prior to the  
 (25) spill

Vol 21 3229

- (1) Now it's real easy for government people and Exxon people  
 (2) to say well there's no additional benefit here to continuing  
 (3) to clean the beach but the property owner is left with  
 (4) property that still has oil on it and it's in my way of  
 (5) thinking another way of passing the risk to the property  
 (6) owner I know in one of the videotapes or news show that I  
 (7) watched on NOVA –  
 (8) MR OPPENHEIMER Your Honor hearsay and foundation  
 (9) THE COURT Sustained  
 (10) MR FORTIER Could I lay a foundation Your Honor?  
 (11) THE COURT No you can come to the bench and tell me  
 (12) what the theory is though  
 (13) MR FORTIER Thank you  
 (14) (Sidebar conference out of the hearing of the jury)  
 (15) THE COURT What he's going to say so why isn't it  
 (16) hearsay?  
 (17) MR FORTIER Well it could be hearsay Your Honor  
 (18) but he's entitled to rely upon hearsay He's an expert As to  
 (19) the foundation what I propose to do I could lay more of a  
 (20) foundation about the way in which he prepared for his report  
 (21) and what he did what he watched and the portion of the  
 media  
 (22) THE COURT Is he going to state a scientific  
 (23) proposition as given him by the television show NOVA?  
 (24) MR FORTIER I don't think he'll state that Your  
 (25) Honor I think what he'll probably do is state that over the

Vol 21 3230

- (1) course of preparing his report and reviewing the different  
 (2) television shows and that sort of thing what – what came out  
 (3) was that there was a period of treatment and then there was  
 (4) announcement that it was net environmental benefit  
 (5) THE COURT That's what he said  
 (6) MR FORTIER He may be able to explain what net  
 (7) environment benefit means  
 (8) THE COURT Not through the television show NOVA No  
 (9) television show as a source of foundation period Objection  
 (10) sustained  
 (11) I think it's dangerous because if he somehow thinks he's  
 (12) allowed to say everything that he's ever seen and tell that to  
 (13) the jury then he's going to get it in whether you ask him the  
 (14) question or not He's got to be cautioned  
 (15) MR OPPENHEIMER Your Honor I had another objection  
 (16) to raise  
 (17) This witness has category damages for three years and I  
 (18) have an objection Some questions have been asked about  
 (19) whether he thinks –  
 (20) MR FORTIER I can't hear you  
 (21) MR OPPENHEIMER I renew the objection I made earlier  
 (22) with another witness I think it's more acute here that I  
 (23) think he's about to embark upon the series of questions having  
 (24) to do with analysis of events after three years  
 (25) THE COURT That was my worry too Is that what he's

Vol 21 3231

- (1) going to be doing?
- (2) MR FORTIER Your Honor in his opinion - which they
- (3) had a full opportunity to explore - he expresses the same
- (4) thing
- (5) THE COURT Doesn't make a difference The question
- (6) is whether or not I should let it in now
- (7) MR McCALLION Your Honor if I may I believe that
- (8) Dr Green with regard to the NOVA show was going to limit his
- (9) remarks to statements and admissions made by Mr Otto
- Harrison
- (10) as well as possibly Paul Boehm both of whom
- (11) THE COURT I certainly didn't hear that in the
- (12) question counsel and I'm afraid he's not going to do that
- (13) The objections sustained
- (14) If you want me to hear this out of the presence of the
- (15) jury send this jury out For this minimally important piece
- (16) of evidence I'll do it You want me to do that and chop your
- (17) presentation up?
- (18) MR FORTIER Well Your Honor I think that - let me
- (19) think about that for a minute
- (20) I can -
- (21) MR McCALLION Your Honor we could show - I have
- (22) the tape cued up to that particular segment It would be about
- (23) a two minute -
- (24) THE COURT This is not an issue of whether or not
- (25) there are damages over and above the damages that he's

Vol 21 3232

- (1) estimated?
- (2) MR McCALLION No the issue is whether - what clean
- (3) means what is
- (4) MR OPPENHEIMER That's exactly the point Your
- (5) Honor
- (6) THE COURT I'm not going to let it in I'm not going
- (7) to let it in at this point You have another subject to go
- (8) to?
- (9) MR FORTIER I do Your Honor but if I could just
- (10) make one more point There was an aversion yesterday
- through
- (11) Mr Homan on cross examination that this beach treatment was
- (12) stamped as light moderate by the federal governments and
- (13) therefore there should be no concern on the part of the
- (14) landowner They opened it and we need to address it as
- quickly
- (15) as possible
- (16) MR McCALLION It goes to the definition of the net
- (17) environmental benefit All Dr Green is saying when they
- (18) pulled out and used the term no more net environmental
- (19) benefit -
- (20) THE COURT I'm going to hear this out of the presence
- (21) of the jury I suspect I'm going to keep it all out If you
- (22) want to press it have to have an opportunity to do that you
- (23) want me to send the jury out or do you want to go to another
- (24) subject
- (25) MR McCALLION Go to another subject and perhaps we

Vol 21 3233

- (1) could take it up on break Your Honor
- (2) (Sidebar concluded)
- (3) BY MR FORTIER
- (4) Q Professor Green after arriving at a rate of rent did you
- (5) go on to compute rent for a period of three years of treatment
- (6) that is during a period of time that Exxon was using the lands
- (7) of Chenega Bay Port Graham and English Bay Corporation?
- (8) A Yes I did
- (9) Q Could I see 1258?
- (10) Now Professor Green I'm showing you what has been marked
- (11) as exhibit 1258
- (12) A Yes
- (13) Q Can you explain to the jury what this is?
- (14) A Yes On the first line I determined that the total value
- (15) of Chenega land was 78 million dollars The rights taken were
- (16) 85 percent The rate of rent used in the first year was 9.68
- (17) percent The rate of land lease in year two and three is nine
- (18) percent I used a discount rate for discounting from future
- (19) value to present value of 10.25 percent
- (20) The value of the land damaged in year one The 85 percent
- (21) was \$66,300,000 therefore the rent due in the first year -
- (22) no the first year was \$6,417,840 That's 9.68 percent of the
- (23) 66 million
- (24) The amount of land damage in year two and three was 16.648
- (25) so that's the amount of land along the beaches within

Vol 21 3234

- (1) one-quarter of a section of the - of the mean high tide The
- (2) value of that land in year two and three is 19,343,000 The
- (3) rent due for year two and three is three million dollars and I
- (4) add those the six million and the three million together for
- (5) a total rent due for the three year period of \$9,430,000 for
- (6) the Chenega Corporation
- (7) Q Professor Green what I'd like to do is address rights
- (8) taken for a moment if we could
- (9) A Yes
- (10) Q You've got the rights taken at 85 percent?
- (11) A That's correct
- (12) Q Could you describe for the jury what rights you believe
- (13) were taken and how you analyzed that?
- (14) A Yes I looked at all the rights that we discussed
- (15) yesterday the right of quiet enjoyment the rights to be able
- (16) to rent your land or lease your land or sell your land or the
- (17) littoral rights that we talked about and all the other - all
- (18) the other rights that a property owner generally has and that
- (19) includes the right to do nothing with your property That is a
- (20) very valid right that a property owner has
- (21) I was able to determine that the - there wasn't a complete
- (22) loss of rights that the Native corporation could have some
- (23) minimal use of the land during this period of time They could
- (24) access the land at various points They could continue to
- (25) collect rents on small commercial ventures that they had They

Vol 21 3235

- (1) could continue to enter into negotiations subject to future
- (2) cleanup or treatment with other people
- (3) And so having looked at the kind of agreements that we
- (4) discussed yesterday having to do with utility easements
- (5) nondevelopment easements things of that nature I determined
- (6) that a rate of about 15 percent was a reasonable rate to leave
- (7) for the Natives the minimal uses that the Natives could enjoy
- (8) during that period of time of that land and that a rate of
- (9) about 85 percent would be a reasonable rate for the rights
- (10) taken by the Exxon Corporation
- (11) Q I ve forgotten how to zoom out here I m sorry
- (12) Now Dr Green I also note that you computed the rent for
- (13) the first year across the whole of the property of Chenega
- (14) Corporation?
- (15) A That s correct
- (16) Q And for the next two years you stated it was for a quarter
- (17) mile - or a quarter section of the beach?
- (18) A Of the beach yes
- (19) Q Could you explain to the jury what your reasoning was for
- (20) the whole of the property during the first year?
- (21) A Yes As I described yesterday the tremendous trauma
- (22) subjected to the Prince William Sound and the gulf area in the
- (23) first year would mitigate the ability of a property owner to
- (24) use the property for the normal uses That would include the
- (25) right to just quietly enjoy the property or the right to not

Vol 21 3236

- (1) even use the property when suddenly you have this intrusion of
- (2) both oil and people and all the things that was going on during
- (3) that period of time
- (4) And as I described yesterday it - the initial shock of
- (5) that occurred from March through October of that summer
- (6) That
- (7) was the - what we would call the development season or the
- (8) season when that property could be utilized So once we get
- (9) into the winter everything pretty much stopped so I used the
- (10) first year as a period when all that property was what I would
- (11) call traumatized
- (12) And then from that point the year two and three I
- (13) determined that there was some information coming forward at
- (14) that point enough information that the corporations could
- (15) begin to segment the areas of damage and I then elected to
- (16) use
- (17) the strips along the beaches as the areas that were most
- (18) greatly impacted at that point
- (19) Q And Dr Green again for Chenega Corporation the total
- (20) rent due for the first three years you computed at \$9 430 000?
- (21) A That s correct
- (22) Q Could I see exhibit 1264 please?
- (23) Dr Green I m showing you what s been marked as 1264 Can
- (24) you tell the jury what this is please?
- (25) A Yes That s the Port Graham corporation - wait a minute
- (26) you ve got that - well the first line on that says English
- (27) Bay land so there s a typographical error there I want to

Vol 21 3237

- (1) make sure that that is - let me look at some numbers here on
- (2) that You have a typographical error on that
- (3) Q I ll tell you what could we have the machine switched over
- (4) there for Dr Green s pen? And Dr Green if you would take
- (5) your pen and perhaps cross out the English Bay land and put
- (6) on
- (7) Port Graham land
- (8) A Yes I just want to make sure that that is the correct
- (9) numbers that you re looking at there that there aren t other
- (10) typographical errors in that
- (11) Q I hope not Yes
- (12) A Yes that is Port Graham
- (13) Q So what you can do Dr Green is take your pen there -
- (14) first of all touch the color down on the left hand portion
- (15) where it says color
- (16) MR PETUMENOS It s already on
- (17) MR FORTIER If I could help you
- (18) THE COURT The color s on I think
- (19) MR FORTIER I beg your pardon?
- (20) THE COURT It s already on
- (21) MR FORTIER Okay
- (22) THE COURT You get better as you go
- (23) THE WITNESS I was going to say I need some practice
- (24) on that
- (25) MR FORTIER We ll go over it with you
- (26) MR PETUMENOS This class is getting bigger Your

Vol 21 3238

- (1) Honor
- (2) THE WITNESS I have some students that would say
- (3) that s pretty normal
- (4) BY MR FORTIER
- (5) Q You computed the total value of the Port Graham lands as 75
- (6) million dollars is that right?
- (7) A That s right
- (8) Q And you computed the rights as taken at 85 percent?
- (9) A Yes I did
- (10) Q Why did you do that for Port Graham?
- (11) A It was the same concept that I viewed that there be -
- (12) there would be some continued uses of the property that they
- (13) could access the property at various points They could
- (14) collect some rents for some commercial projects on - on the
- (15) inlands ongoing activities but that most all of the - the
- (16) general activities the general rights to the property would be
- (17) frozen
- (18) Very similar situation to the lands we talked about in the
- (19) Tazimina Lake area where the government purchased away the
- (20) development rights leaving the - you might say
- (21) nondevelopment easements or rights to the land I viewed this
- (22) as a nondevelopment easement that was left to the Native
- (23) corporations although they had the right to collect the - you
- (24) know continue to collect some rents and economic benefits If
- (25) they hadn t been for that fact I would have used a higher

Vol 21 3239

- (1) number 90 or 95 percent but the fact they were able to  
 (2) collect some minor rents and things I decided to use 85  
 (3) percent  
 (4) Q And you used the rate of rent in the first year as 9 68  
 (5) percent?  
 (6) A 9 68 percent which is the volume there  
 (7) Q And similarly the rate of rent for the next two years -  
 (8) A Nine percent for year two and three A discount rate of  
 (9) 10 25 percent and the way I arrived at that I took the  
 (10) average rate of the consumer price index during that period of  
 (11) time and then added to that the average rate of inflation and  
 (12) the - the amount of - the value of the land damaged the 85  
 (13) percent of it was 63 750 000 Rent due in the first year  
 (14) 6 171 000 The amount of land damaged in years two and  
 (15) three  
 (16) the land along the beaches was 13 280 acres according to my  
 (17) calculations and that - the value of that was 12 750 000  
 (18) with rent due of 1 984 867 for a total - for a total rent for  
 (19) the three year period of a total of \$8 156 000  
 (20) Q Now Professor Green did you make any inquiry as to  
 (21) whether or not the lands of Chenega Corporation were actually  
 (22) oiled?  
 (23) A I looked at a lot of - a lot of information Some of the  
 (24) documents from the clean up crews or the assessment crews I  
 (25) looked at the ICF studies I looked at maps prepared by ICF  
 (26) I looked at maps prepared by the State of Alaska as to where

Vol 21 3240

- (1) the oil was out there And I also have visited some of those  
 (2) areas but I didn't do my own personal inspection of all the  
 (3) beaches as far as testing or oil I left that to the  
 (4) experts  
 (5) Q And did you arrive at any conclusion as to whether or not  
 (6) the lands of the Chenega Corporation had been oiled in 1989?  
 (7) A Oh yes there was definite intrusion of oil on those  
 (8) beaches  
 (9) Q And similarly with regard to Port Graham Corporation?  
 (10) A I did the same analysis and I came to the conclusion that  
 (11) there was intrusion of oil on - on beaches  
 (12) Q And with regard to both Chenega Corporation and Port  
 (13) Graham  
 (14) Corporation Professor Green did you make any inquiry as to  
 (15) what sorts of treatment were - were conducted on both of those  
 (16) lands in 1989?  
 (17) A Yes I did I looked at a lot of photographs and read a  
 (18) lot of the data that was on file at various places I recall  
 (19) there being high pressure treatment of those beaches as well  
 (20) as some chemical treatment of the beaches  
 (21) Q Anything else Doctor that you -  
 (22) A Well there was also some talk about letting nature treat  
 (23) some of the beaches  
 (24) Q What did that mean Doctor?  
 (25) A Well that means to me that it is - that the level of  
 (26) technology for cleaning beaches does not exist to return the

Vol 21 3241

- (1) beaches to the condition they were -  
 (2) MR OPPENHEIMER Your Honor foundation  
 (3) A Before -  
 (4) THE COURT The objection is sustained The jury is to  
 (5) disregard the last statement  
 (6) BY MR FORTIER  
 (7) Q Dr Green did you make an inquiry into what it meant to  
 (8) leave it to nature?  
 (9) THE COURT I didn't hear your question  
 (10) BY MR FORTIER  
 (11) Q I asked whether or not he made an inquiry into whether -  
 (12) into what it meant to leave it to nature What did you do?  
 (13) A I talked to various people Jim Bush I talked to some of  
 (14) the people who - from the Native corporations who worked on  
 (15) the - on the site investigation teams just a variety of  
 (16) folks And the conclusion that I came to from that -  
 (17) THE COURT Stop don't give a conclusion  
 (18) MR OPPENHEIMER Same objection foundation  
 (19) THE COURT The objection is sustained Move on  
 (20) BY MR FORTIER  
 (21) Q Now did you also examine the land or the rent due for  
 (22) English Bay Corporation?  
 (23) A Yes I did  
 (24) Q Could I see 1261 please?  
 (25) 1261 could you tell us what 1261 is Doctor?

Vol 21 3242

- (1) A Yes It is the same analysis for the English Bay  
 (2) Corporation I determined that the value of all their land was  
 (3) 53 million dollars I used the same 85 percent as the amount  
 (4) of the rights taken and in the first year I used the 9 68  
 (5) percent rate And the year two and three I used the 9 percent  
 (6) rate I used the 10 25 percent rate of discount for  
 (7) discounting the future values to the present or the date of the  
 (8) spill  
 (9) I determined that the value of the land damaged in year one  
 (10) was 45 050 000 The rent due for the first year of \$4 360 840  
 (11) the amount of land damaged in year two and three was 15  
 (12) million - 15 200 acres The value of those acres was  
 (13) 14 450 000 Rent due for year two and three would be  
 (14) 2 249 000 for a total value of \$6 610 000  
 (15) Q That is the rent due for the three years the treatment was  
 (16) being -  
 (17) A That is the rent that the Exxon Corporation should pay to  
 (18) the English Bay Corporation for the use of their land for that  
 (19) period of time and for the rights that they were suspended  
 (20) during the treatment period  
 (21) Q And with regard to English Bay Corporation Professor  
 (22) Green did you make any sort of an inquiry into whether or not  
 (23) the lands of English Bay Corporation were oiled?  
 (24) A Yes I did I looked at the same documents the ICF maps  
 (25) the State of Alaska oiling maps I reviewed a number of the

Vol 21 3243

- (1) field reports that were submitted by the assessment teams and  
 (2) I determined that there was physical intrusion of oil on those  
 (3) beaches  
 (4) Q And did you also make any determination as to whether or  
 (5) not treatment activities were taking place on English Bay  
 (6) lands?  
 (7) A There was – my understanding there was some treatment  
 (8) activities that did take place  
 (9) Q And what did you rely upon? What information did you have  
 (10) available?  
 (11) A I relied upon the – a lot of the information contained in  
 (12) your files I spent several days going through all those  
 (13) documents looking at the letters from the Coast Guard to the  
 (14) Native corporations talking about treatment and continued  
 (15) treatment and revisitation of certain areas things of that  
 (16) nature  
 (17) Q Now Professor Green you've looked at the subject of  
 (18) stigma in other cases haven't you?  
 (19) A Yes I have  
 (20) Q I think you indicated that the Poppy Lane case down in  
 (21) Kenai involved a stigma?  
 (22) A Yes  
 (23) Q Do you have an opinion as to whether or not – I withdraw  
 (24) that question In examining the facts of this case Professor  
 (25) Green do you believe that stigma would be an applicable

Vol 21 3244

- (1) theory?  
 (2) A Yes I – this is not – was not a well kept secret this  
 (3) oil spill  
 (4) Q Now Professor Green what I'd like to do is come back –  
 (5) we looked at one – one map for English Bay Corporation?  
 (6) A Yes  
 (7) Q I'm going to grab that map If I could have all of the  
 (8) maps please  
 (9) Now Professor Green with regard to the map we've looked  
 (10) at for English Bay Corporation in the Kenai Fjords area you  
 (11) had indicated that you had also – you verified the accuracy of  
 (12) the map by first examining documents from the Bureau of Land  
 (13) Management is that correct?  
 (14) A That's correct  
 (15) Q And then you'd also examined documents – you'd also  
 (16) examined other title documents is that correct?  
 (17) A Yes  
 (18) Q Now did you do a similar sort of inquiry with regard to  
 (19) the lands of Chenega Corporation?  
 (20) A Yes I did  
 (21) Q And do you know whether or not Chenega Corporation also  
 (22) has  
 (23) a base map of its lands?  
 (24) A Yes I do  
 (25) Q Did you verify through records of the Bureau of Land  
 Management that the map is accurate?

Vol 21 3245

- (1) A I went through the – the patent the interim conveyance  
 (2) documents interviewed the BLM officials who were handling  
 (3) these particular lands and I spent a considerable time with  
 (4) Mr Jack Moore who was the land planning consultant that  
 (5) prepared these maps and I used Mr Moore's maps after some  
 (6) verification myself of going over them to document the  
 (7) accuracy of them  
 (8) Q Professor Green if you'd step down here for a moment  
 (9) again  
 (10) I'm going to show you Professor Green what has been  
 (11) marked as Exhibit 1123 Can you tell us what that is?  
 (12) A This is a map of the Chenega Corporation's land  
 (13) entitlements These were the maps that we relied upon – or I  
 (14) relied upon There is on the maps in my report – since I  
 (15) prepared my maps there's been a few acreages that have been  
 (16) eliminated from their selection They were areas of  
 (17) overselection One is the Bettles Island area here which  
 (18) doesn't show on this map In my report it does show that  
 (19) And this area right here that's in – oh this area right here  
 (20) has dropped off since they were prepared and on my map is –  
 (21) MR OPPENHEIMER Counsel could we have the section  
 (22) number? Maybe that would help  
 (23) MR FORTIER He is referring to Section 18 of  
 (24) Township 1 North  
 (25) MR OPPENHEIMER Could I have the prior section he

Vol 21 3246

- (1) pointed to?  
 (2) MR FORTIER It was Section 36  
 (3) A Sorry Section 36  
 (4) And then on my maps also – if I can get my – there's  
 (5) Section 15 here that shows up on my maps because that has  
 (6) since dropped off from their – that was an overselection and  
 (7) has since dropped off from the maps and this map has been  
 (8) reprepared since I prepared my original maps  
 (9) BY MR FORTIER  
 (10) Q And so Professor Green the acreage in – the acreage  
 (11) numbers that are shown on this map then you've verified are  
 (12) an accurate depiction of Chenega Corporation?  
 (13) A Yes These two sections Sections 16 and 21 are also  
 (14) overselections that are shown  
 (15) Q And you're noting that that's outside of the heavier line?  
 (16) A That's correct  
 (17) Q And Professor Green I note that there's also a recorded  
 (18) title document part of 1123?  
 (19) A Yes  
 (20) Q Now within the recorded title documents section there's a  
 (21) notation for irrevocable elections?  
 (22) A Yes there is  
 (23) Q Can you tell us what that is?  
 (24) A Well that's on what we discussed yesterday which is  
 (25) referred to as OPA 90 This is land that they have selected

Vol 21 3247

- (1) They cannot change their mind They re irrevocable The BLM  
 ( ) just hasn t gotten around to conveying them through interim  
 (3) conveyance yet and so they don t actually have the interim  
 (4) conveyance document but they cannot change their mind  
 about  
 (5) it It s not the corporation s fault that the government  
 (6) hasn t gotten around to conveying the property to them but  
 (7) these are lands that have been selected They can t change  
 (8) their mind And they are also lands that they are entitled to  
 (9) receive damages from  
 (10) Q And that s a very small part of what appears on this map?  
 (11) A Yes it is  
 (12) Q Would you point out to the jury what areas they are?  
 (13) A I - I don t recall on this map  
 (14) Q Do you know whether or not this - these numbers four and  
 (15) five is irrevocable?  
 (16) A I believe that is correct It was a very small area  
 (17) MR OPPENHEIMER Pardon me counsel Is that the  
 (18) section number?  
 (19) MR FORTIER It s priority numbers four and five  
 (20) MR OPPENHEIMER Priority numbers?  
 (21) MR FORTIER Yeah  
 (22) BY MR FORTIER  
 (23) Q Now with regard to Port Graham Corporation you also did  
 (24) the same inquiry Doctor?  
 (25) A Yes I looked at Port Graham

Vol 21 3248

- (1) Q Professor Green I show you what s been marked as  
 (2) Exhibit 1125 Can you tell me what 1125 is?  
 (3) A That s Port Graham Corporation s entitlement  
 (4) Q Is this within the core area Doctor?  
 (5) A This is the core area  
 (6) Q What s that mean?  
 (7) A That means it s all within the location of the village that  
 (8) they were entitled to select from  
 (9) Q And to your knowledge are all these lands that are marked  
 (10) in red conveyed lands?  
 (11) A Those are conveyed lands Yes they are  
 (12) Q Professor Green I show you what s been marked as  
 (13) Exhibit 1126 Can you tell me what 1126 is?  
 (14) A These are lands down in the Kenai Fjord area in the Gulf of  
 (15) Alaska These are lands entitlements of the Port Graham  
 (16) Corporation  
 (17) Q And again, Doctor these are lands that have been  
 (18) irrevocably -  
 (19) A Selected  
 (20) Q - selected under OPA 90?  
 (21) A That s correct  
 (22) Q Professor Green I show you what s been marked  
 (23) Exhibit 1127 Can you tell me what it is please?  
 (24) A This is property - it s more of the same type of property  
 (25) elected under OPA 90 in the Kenai Fjords area in what s called

Vol 21 3249

- (1) Aialik Bay area and Harris Lagoon and these are irrevocably  
 (2) selected lands  
 (3) Q So these are lands that Port Graham Corporation has a right  
 (4) to claim damages for with regard to the Exxon Valdez oil spill?  
 (5) A That s correct  
 (6) Q Professor Green I show you what s been marked as 1131  
 (7) Can you tell the jury what this is please?  
 (8) A This is English Bay Corporation This is their - what we  
 (9) refer to as the core township area These are all - these are  
 (10) lands that have actually been conveyed  
 (11) Q And Professor Green I show you what s been marked as  
 (12) Exhibit 1132 Could you tell me what that is?  
 (13) A These are lands as part of OPA 90 They have been selected  
 (14) irrevocably have not been conveyed which belong to the  
 (15) English Bay Corporation  
 (16) Q And again even though these haven t been conveyed  
 English  
 (17) Bay Corporation has a right to claim for damages caused by the  
 (18) Exxon Valdez oil spill for these lands?  
 (19) A Yes they do  
 (20) Q Thank you Doctor  
 (21) MR FORTIER Your Honor I think now might be an  
 (22) appropriate time for a break  
 (23) THE COURT Okay sure  
 (24) THE CLERK Please rise This court stands in  
 (25) recess

Vol 21 3250

- (1) (Jury out at 9 27 a m to 9 40 a m )  
 (2) THE CLERK Please rise This court now resumes its  
 (3) session  
 (4) Please be seated  
 (5) THE COURT We re on the record The jury is not  
 (6) present  
 (7) Counsel you wanted to see me?  
 (8) MR STOLL Not me  
 (9) THE COURT Somebody did Somebody wanted to see me  
 (10) out of the presence -  
 (11) MR McCALLION Yes Your Honor  
 (12) With regard to the matter taken up at side bar in terms of  
 (13) an offer of proof the area which Dr Green was proceeding into  
 (14) related to the issue as to whether when the cleanup was  
 (15) declared over three years after the spill what that meant from  
 (16) a real estate standpoint and he traced the evolution of the  
 (17) clean up goals from cleaning up the spill to treating it  
 (18) And then the term net environmental benefit which to  
 (19) Dr Green from an appraisal of real estate standpoint he would  
 (20) take to mean that while some oil had been removed additional  
 (21) oil was present and that a determination was made that there  
 (22) would be no net environmental benefit to further clean up  
 (23) efforts thereby leaving the remaining oil which had not been  
 (24) cleaned up on the plaintiffs property  
 (25) Now the basis for Dr Green s knowledge relating to this

Vol 21 3251

(1) are the sources which he indicated but the area which he was  
 (2) at least temporarily foreclosed from going into – and properly  
 (3) so without without a hearing on the issue or an offer of proof  
 (4) on it – is certain news media reports namely a PBS NOVA show  
 (5) and other news reports specifically those where Exxon s  
 (6) spokespeople including Mr Otto Harrison who is here in  
 (7) court made statements regarding the objective to treat the  
 (8) beaches to a point where – Mr Otto Harrison s words so we  
 (9) can leave it in a shape where we can achieve the maximum  
 (10) environmental benefit There s no use going out there and  
 (11) killing a lot of wildlife to remove small amounts of oil that s  
 (12) not damaging the environment  
 (13) In addition there is a statement by Dr Paul Boehm who is  
 (14) an Exxon spokesperson and witness for them in this case  
 (15) cleaning up the environment removing all the oil is impossible  
 (16) in this type of environment  
 (17) Now and in addition there s a statement by another Exxon  
 (18) spokesperson This is contained in approximately one to two  
 (19) minutes of the news media broadcast tape plaintiffs exhibit  
 (20) 1222 A which has been redacted and offered and which the  
 (21) Court determined should not be shown to the jury  
 (22) Leaving aside the other aspects of that particular tape  
 (23) the specific sections which I m alluding to namely the  
 (24) statements from Exxon s scientist Paul Boehm Otto Harrison  
 (25) and one other Exxon spokesperson we would like to briefly  
 play

Vol 21 3252

(1) for the Court in just one minute It does provide the basis  
 (2) for Dr Green s testimony on this as well as Dr Mundy s  
 (3) testimony regarding the use of the media or the importance of  
 (4) the news media as the medium by which information about the  
 (5) Exxon Valdez oil spill and the status of the beaches and  
 (6) clean up activity was transmitted to relevant parties namely  
 (7) the public the market lending bankers lending institutions  
 (8) and indeed as Your Honor may recall Mr Homan was  
 (9) cross examined with regard – yesterday wrth regard to  
 (10) information which he may have gleaned from the – from the  
 (11) news  
 (12) I would underscore that at least for this limited purpose  
 (13) we are not relying upon nor does Dr Green rely upon any  
 (14) general news reports of news broadcasters speaking but  
 (15) specifically Exxon representatives and specific statements  
 (16) made by them And I may add Your Honor –  
 (17) THE COURT Could I –  
 (18) MR McCALLION I don t believe this is an issue in  
 (19) dispute  
 (20) THE COURT Hang on counsel You say he s going to  
 (21) testify what it meant from a real estate standpoint What did  
 (22) it mean from a real estate standpoint? I haven t heard that  
 (23) part yet  
 (24) MR McCALLION Yes I believe Dr Green started to  
 (25) go into the area These terms net environmental benefit we

Vol 21 3253

(1) can t clean up all the oil We will be treating the beaches  
 (2) instead of cleaning them was an important issue of dispute in  
 (3) 1989 90 and 91 and Dr Green s view based upon his  
 (4) expertise And I don t think it s an issue seriously in  
 (5) dispute in this case that when the cleanup was completed and  
 (6) the oil spill workers after the third cleanup summer left the  
 (7) beaches that it was understood by all parties at that point  
 (8) And indeed Exxon spokespeople broadcasted their view on the  
 (9) media among other places that while there was still remaining  
 (10) oil on the beaches and on the property for the purposes of  
 (11) this case plaintiffs property that there was no net  
 (12) environmental benefit to be gained from further clean up  
 (13) activity and that the remaining oil should be left to Mother  
 (14) Nature  
 (15) THE COURT What does that mean from a real estate  
 (16) benefit? You haven t told me that  
 (17) MR McCALLION I believe that Dr Green would offer  
 (18) the opinion that that would communicate to the real estate  
 (19) market that there is still oil on the property And since the  
 (20) property is still contaminated that that may further continue  
 (21) the period of damages relating to the property since its  
 (22) basically an admission by Exxon that there is still oil on –  
 (23) contamination on the subject property  
 (24) THE COURT All right Thank you  
 (25) Counsel?

Vol 21 3254

(1) MR OPPENHEIMER Your Honor this case periodically  
 (2) veers very close to just trying Exxon in the press and a  
 (3) couple of observations Dr Green s testimony is about three  
 (4) years of damage This whole line of questioning in my  
 (5) opinion is objectionable because what it does is ask the jury  
 (6) to speculate on a time period that isn t even covered by his  
 (7) damage analysis Your Honor s questions with respect to the  
 (8) effect on an appraiser of these kinds of statements is well  
 (9) taken in a variety of ways but certainly as to that point  
 (10) We are being invited to allow testimony from television  
 (11) shows about a time period after the damage assessment with  
 (12) respect to terms that this witness could only understand to the  
 (13) extent he understands them at all as they come at the  
 (14) television tube – out of the television tube There s no  
 (15) foundation for this it s hearsay  
 (16) There s no evidence it s an inconsistent statement because  
 (17) none of these people have testified in court There s no  
 (18) evidence that in fact he understands what any of these  
 (19) witnesses were saying when they said it and the first quote we  
 (20) heard we heard apparently Mr Harrison explaining that there  
 (21) was no environmental damage We re taking these things from  
 (22) an  
 (23) area that is post the date of his report –  
 (24) THE COURT Counsel assuming this is what the  
 (25) videotape shows Exxon – an Exxon representative s in a  
 full faced shot is saying to the camera we re leaving some oil

Vol 21 3255

- (1) on the beaches Isn't that independently admissible?  
 (2) MR OPPENHEIMER Not with respect to this testimony  
 (3) I don't think that it would be  
 (4) THE COURT All right But it is independently  
 (5) admissible in this case? It's an admission and you're  
 (6) screaming that nature has cleaned up this whole area or  
 (7) somebody's screaming that  
 (8) MR OPPENHEIMER Your Honor on those terms - and  
 (9) there are three - I think the answer to that is yes but not  
 (10) on the foundation we have here That's the problem  
 (11) THE COURT I know what the problem is  
 (12) Dr Green would you take the stand again? I want to hear  
 (13) from you  
 (14) MR McCALLION Your Honor if it would be of aid to  
 (15) the jury the particular tape in question has been cued up to  
 (16) that point where the Exxon representative is speaking and I  
 (17) believe it's approximately one minute  
 (18) THE COURT I just want - Dr Green you're still  
 (19) under oath If you'd put the microphone on please  
 (20) A Yes Yes Your Honor  
 (21) THE COURT Just for the record explain what you saw  
 (22) with regard to Exxon representatives talking about net  
 (23) environmental benefit  
 (24) A Okay I saw one representative of Exxon who indicated that  
 (25) they could not clean up the - all the oil And another one

Vol 21 3256

- (1) indicating that there was - it wasn't that the oil was all  
 (2) cleaned up that the damage to the environment that would be  
 (3) caused by continued cleanup wouldn't justify continuing to  
 (4) cleanup the beaches That would indicate to me that there is  
 (5) still oil on those beaches  
 (6) I have received - I have read reports indicating there is  
 (7) still oil on those beaches and if there is still oil on those  
 (8) beaches then now these property owners have certain risks  
 (9) associated with that They are continuing risks and that would  
 (10) affect the value of that real estate  
 (11) THE COURT All right In - so what significance  
 (12) does that information have to your analysis of the damages in  
 (13) this case?  
 (14) A The only significance is that there is - there is  
 (15) continuing risk and damages that I have not evaluated  
 (16) THE COURT All right So it doesn't add or subtract  
 (17) from the damages that you have calculated right  
 (18) A No it doesn't  
 (19) THE COURT The objection's sustained I'm not saying  
 (20) that this admission can't come in in some way but it's just  
 (21) not part of his analysis  
 (22) Now let's bring the jury in  
 (23) (Jury in at 9:53 a.m.)  
 (24) THE COURT You can all be seated  
 (25) BY MR FORTIER

Vol 21 3257

- (1) Q Professor Green I'm going to show you a series of pictures  
 (2) from 12 - they begin at 1247 and just ask whether or not you  
 (3) took these pictures and tell the jury when you took them  
 (4) A Yes I took these pictures - I took them on a variety of  
 (5) visits to the subject properties the Chenega Corporation  
 (6) English Bay and Port Graham and they were taken at various  
 (7) times I don't recall all the exact dates but these -  
 (8) this - these are - these pictures show the properties in  
 (9) question  
 (10) Q Okay And Professor Green if you could just go through  
 (11) them On the back of the pictures there are exhibit numbers  
 (12) and just tell us what the exhibit numbers are  
 (13) A 124765 124772 124771 58 - do you want me to read all  
 (14) the numbers for - they're all 1247 - 58 60 61 62 94  
 (15) 39 13 37 16 15 9 36 -40 -41 -42 -43 18#  
 (16) number 7 8 14 17 35 -44 -45 and 34  
 (17) Q Okay And Dr Green those are pictures of the Village  
 (18) Corporations lands Chenega Port Graham and English Bay  
 (19) lands?  
 (20) A Yes they are  
 (21) Q Now you mentioned something about looking at  
 (22) comparable  
 (23) properties during your testimony  
 (24) A Yes I looked at the properties that had been purchased  
 (25) by - in the marketplace other similar lands  
 (26) MR OPPENHEIMER Your Honor may we confer just  
 (27) briefly?

Vol 21 3258

- (1) THE COURT Uh huh  
 (2) (Discussion off record between counsel)  
 (3) BY MR FORTIER  
 (4) Q You prepared a map of the comparable properties that you  
 (5) looked at didn't you?  
 (6) A Yes I did  
 (7) Q I'm going to show you a copy of that that map Dr Green  
 (8) and just ask if that's a correct copy  
 (9) Dr Green what's on your screen? Can you tell us what it  
 (10) is?  
 (11) A Yes This is a map of the State of Alaska and it shows  
 (12) the - the general area from each of the different comps that I  
 (13) looked at  
 (14) I should clarify that not all of these properties were  
 (15) actually used as comparables There are six of them that were  
 (16) used in the final analysis Some of the - there's about three  
 (17) or four of them that were only put in there for informational  
 (18) purposes and there's some others that were used to make  
 (19) adjustments to the comps But the comps the primary comps  
 (20) that I used are the ones right in this general area here of  
 (21) South Central Alaska reasonably close to the subject  
 (22) properties  
 (23) Q And Dr Green could you just with your colored pen  
 (24) circle the ones that you actually used as comparables?  
 (25) A Okay I'm going to have to try to remember this from

Vol 21 3259

- (1) memory I used comp number 1 if - and this is a little  
 (2) blurred on my screen so I'm having trouble reading somewhat  
 (3) I believe it's that one - oops that I just blocked out I  
 (4) used comparable number 13 which is right over here  
 (5) Q What is that one Dr Green?  
 (6) A That's the Tazimina Lake area  
 (7) Q That's the one you were describing as the environmental  
 (8) easement?  
 (9) A Yes I used Number 8 which is over here  
 (10) Q And which one is that Dr Green?  
 (11) A It's over in the Tok area This was the one that was the  
 (12) lowest on my - lowest priority on my list  
 (13) Q Is that known as the Backscatter Project?  
 (14) A It is I used number five and six which are here these  
 (15) two here which are in the Kachemak Bay area I used number  
 (16) 10 which is this - this property here  
 (17) Q And which one is that Dr Green?  
 (18) A That's what's known as Point Possession which is across  
 (19) the Inlet from the subject properties  
 (20) Q Is that known as environmental property too Dr Green?  
 (21) A It is environmental property yes I think that's the ones  
 (22) that I used if I'm correct  
 (23) Q And could I have a print of that please?  
 (24) And then Dr Green you prepared pictures with regard to  
 (25) each of these comparables so the jury could view them?

Vol 21 3260

- (1) A Yes I did  
 (2) Q What I'd like to do Dr Green is have you run through  
 (3) those and tell us again from the back what they are  
 (4) A Okay These are photographs and maps that I provided in  
 (5) my  
 (6) report showing the areas of the properties that were purchased  
 (7) and a photograph of the property You want just the numbers?  
 (8) Q Yeah let me - perhaps it would help if I ran through them  
 (9) with you 1247 5?  
 (10) A Yes That's - that is a property in Kodiak that was  
 (11) purchased by Kodiak Borough  
 (12) Q Is that known as the Rifle Range?  
 (13) A Yes it is  
 (14) Q Okay Then the picture next to it 98?  
 (15) A Is the Rifle Range  
 (16) Q Number 30?  
 (17) A This is property in Southeast Alaska called Goat Island  
 (18) This is property that was purchased by the United States  
 (19) Government  
 (20) Q Was that used as a comparable Doctor?  
 (21) A I didn't use it as a comparable because of its location  
 (22) but it's - I used it for making adjustments to my - to my  
 (23) other comparable sales  
 (24) Q Number 46 Doctor?  
 (25) A That is property in the Kachemak Bay area that was acquired  
 by the State of Alaska And I used that

Vol 21 3261

- (1) Q Number 12 is that a locator map Doctor?  
 (2) A On the locator map I believe that's number five  
 (3) Q Which is another Kachemak property?  
 (4) A Oh I'm sorry yeah That is another Kachemak property  
 (5) another acquisition by the State of Alaska  
 (6) Q And also environmental property?  
 (7) A It was acquired to protect environment and the aesthetics  
 (8) of the area  
 (9) Q Would you continue on with two? Do you have two there?  
 (10) A I'm sorry I - I don't know what you're calling number 2  
 (11) Okay we have two pictures on the one for Kachemak Bay  
 Then  
 (12) the next map that I have which is number 19  
 (13) Q Uh huh  
 (14) A That is two properties two Village Corporations over in  
 (15) the general Tok area properties that was purchased for - by  
 (16) the U S Air Force for a radar site And the next four five  
 (17) six photographs are photographs of that - of those  
 (18) properties  
 (19) Q That's 54 55 27 and 26?  
 (20) A Yes And then the next one is a property that was part of  
 (21) that radar site acquisition on the - we're in what I refer to  
 (22) the Glennallen area south - south of Tok and that is some  
 (23) additional property property purchased from the Ahtna  
 (24) Corporation  
 (25) Q The Ahtna Corporation is a Native corporation?

Vol 21 3262

- (1) A Is a Native Village Corporation  
 (2) Q Purchased by the Air Force?  
 (3) A United States Air Force that's correct  
 (4) Q Then the pictures following that are also pictures of the  
 (5) property?  
 (6) A Yes The one picture shows what the land looked like and  
 (7) the other picture shows the generation - the generating plant  
 (8) that was built for that project prior to the project being  
 (9) abandoned  
 (10) Q That's number 48? Go ahead just on the back  
 (11) A I think your numbers are different It's number 52 on  
 (12) mine  
 (13) Q Okay that's fine And following that Doctor?  
 (14) A That is a map of property over in what's called Point  
 (15) Possession  
 (16) Q Okay That was the environmental property?  
 (17) A That is property that was - at the time I used that comp  
 (18) it was a sale in escrow but then later the sale didn't close  
 (19) I understand it's now - it's back in escrow as another sale  
 (20) but it was because of the proximity of that property the  
 (21) features of the property I felt was an important comp And the  
 (22) next the next which is 49 is a picture of that property  
 (23) And the next one is a map of the Tazimina Lower Tazimina  
 (24) Lake area We discussed here - that's number 22 And the  
 (25) next two three photographs - four photographs are pictures

Vol 21 3263

- (1) around the lake and of the properties
- (2) Q Okay Doctor just a couple more points here
- (3) We've heard a lot over the last few days about -- last day
- (4) and a half I guess about environmental lands
- (5) A Yes
- (6) Q You've heard the term natural lands?
- (7) A I have
- (8) Q Are environmental lands similar to natural lands?
- (9) A It's just a term that some people use. It's -- a lot of us
- (10) use different terms mean maybe the same thing
- (11) Q You've heard of Dr Mundy?
- (12) A Yes
- (13) Q You've heard of his theory of natural lands?
- (14) A I've read his article yes
- (15) Q And you relied -- did you cite those articles in your
- (16) report?
- (17) A I did cite those articles
- (18) MR FORTIER I have no further questions Thank
- (19) you
- (20) THE COURT You may examine
- (21) CROSS EXAMINATION OF GEORGE H GREEN
- (22) BY MR OPPENHEIMER
- (23) Q Good morning Professor How are you?
- (24) A Good morning
- (25) Q We met previously but I'm Randy Oppenheimer and I'd like

Vol 21 3264

- (1) to ask you a few questions
- (2) We stopped here on the note of comparables so maybe it
- (3) would be useful to just talk a little bit more about those
- (4) See if I can get an easel here
- (5) Can you see this if I write on it?
- (6) A I can see it
- (7) Q The first one you mentioned was the Rifle Range Now this
- (8) is -- this is Salomie Creek in Kodiak is that right?
- (9) A Yes
- (10) Q Does that ring a bell? Okay The Salomie Creek Rifle
- (11) Range that's not on the water is it?
- (12) A No
- (13) Q And it's near a housing development isn't it?
- (14) A Well it's outside of Kodiak There are homes closer to it
- (15) than any of the other properties yes
- (16) Q Do you treat Salomie Creek as a -- as a remote or rural
- (17) property?
- (18) A I do treat it as that yes
- (19) Q Okay fair enough If I were to represent to you that Pat
- (20) Carlson who is the appraiser on Kodiak does not treat that as
- (21) remote or rural property because it's on the road system would
- (22) that surprise you?
- (23) A I have no knowledge of what Pat would do on that
- (24) Q So you haven't had a chance to confer with him about his
- (25) view of what's remote and what's rural?

Vol 21 3265

- (1) A Well you mentioned the road system There's a lot of
- (2) debate as to who owns that road The Regional Corporation
- (3) contend that they own the road and that they could shut it
- (4) down anytime they want
- (5) Q I noticed in your report when you -- I understand what
- (6) you're saying You referred to the road in the Salomie Creek
- (7) area if you call it that right? I take it it's not a super
- (8) highway?
- (9) A It's far less than a super highway It's a trail
- (10) Q Let's take a look at another comp you mentioned at Tok
- (11) A Yes
- (12) Q And again -- I hope I haven't blocked the view of everyone
- (13) -- but Tok is up here right?
- (14) A Yes
- (15) Q And you referred to that in connection with the Air Force's
- (16) Backscatter Radar Site correct?
- (17) A That's correct
- (18) Q And in fact they had what three or four Backscatter
- (19) sites in that area?
- (20) A They purchased land from three different corporations for
- (21) that project
- (22) Q Right And that project as best we all know has been
- (23) abandoned at this point?
- (24) A It has been abandoned It was started and then it was
- (25) later abandoned

Vol 21 3266

- (1) Q So this was a purchase by the government for a location for
- (2) a radar site?
- (3) A Yes
- (4) Q Point Possession Now the price -- I should back up a
- (5) step
- (6) One of the things -- and I don't mean to oversimplify your
- (7) theory so bear with me I'm just focusing on one aspect of
- (8) the comps that you used -- is the -- is the price per acre from
- (9) those comps correct?
- (10) A Well that's one of the things yes
- (11) Q Sure In other words if you're using a comparable
- (12) property such as the Rifle Range and it sells for
- (13) hypothetically 10 dollars an acre you would take that into
- (14) account in deciding what a per acre price would be for similar
- (15) property in this case?
- (16) A After some adjustments to it
- (17) Q Absolutely And with Point Possession was it not the only
- (18) comp you used where you didn't actually use sale price but the
- (19) asking price?
- (20) A Well it -- I didn't use the asking price I used the -- a
- (21) contract price that was in escrow at the time I used it
- (22) Q And it fell out of escrow?
- (23) A It later did not close that's correct
- (24) Q So when -- I wonder if I could have the Elmo on
- (25) Let me hand you a copy of your report I'm told I just

Vol 21 3267

- (1) misspoke  
 (7) This is a partial copy Doctor -- Professor but this is  
 (3) Exhibit 16108 and what I'd like to do is draw your attention  
 (4) to the Table of Comparable Property Characteristics which is  
 (5) at this page NVC 12774  
 (6) A Yes  
 (7) Q I'm sorry that was 16108?  
 (8) MR OPPENHEIMER 104 I believe  
 (9) MR PETUMENOS 108 is what I have  
 (10) MR OPPENHEIMER Pardon me you're right it's 108  
 (11) 16108  
 (12) BY MR OPPENHEIMER  
 (13) Q So on Point Possession under the price -- pardon me under  
 (14) the date of the transaction let me zoom back out just a  
 (15) second Perhaps let's get a little better fix on this This  
 (16) is a table is it not from your report?  
 (17) A Yes it is  
 (18) Q And one of the -- and this is data that you've collected  
 (19) from each of your comparables?  
 (20) A Yes  
 (21) Q Now one of the dates that you have for each comparable --  
 (22) I hope everybody can see -- is date of sale?  
 (23) A That's correct  
 (24) Q Okay And as we read across we see various dates and  
 (25) when we get under Point Possession we get asking and that's

Vol 21 3269

- (1) understood your testimony correctly in escrow on today is the  
 (7) same price used in your comp?  
 (3) A I do not  
 (4) Q Do you know whether it went up or down?  
 (5) A I don't know  
 (6) Q One of the characteristics of environmental land -- and  
 (7) that is by the way the categorization you've given to all the  
 (8) plaintiffs' land in this case is that true?  
 (9) A Well I refer to it as environment or preservation lands  
 (10) Some of these lands were acquired for purposes other than just  
 (11) the true sense of preservation I think if you'll read my  
 (17) report you'll see that I -- that I indicated that usually a  
 (13) specific purpose why government would acquire these sites  
 but  
 (14) these are all purchases by -- generally purchases by the  
 (15) government or a purchase for some environmental purpose  
 (16) Q Right And the -- the primary purchaser in this market for  
 (17) environmental and preservation lands -- I stand corrected on  
 (18) the term -- is the government?  
 (19) A In Alaska that's correct  
 (20) Q Now I think you've explained that one of the things that  
 (21) would motivate the purchase of this type of land would be to --  
 (22) because it had some sort of historical significance?  
 (23) A Yes I've said that  
 (24) Q And Point Possession in fact has some historical  
 (25) significance -- and I know this because I have read your report

Vol 21 3268

- (1) because it was still in escrow?  
 (7) A Probably a better word would have been pending if you  
 (3) would because I used the data from the closing of the  
 (4) transaction recorded on the deed as the date of sale  
 (5) Q In any event the price you had at that point the deal  
 (6) didn't close but it's pending again?  
 (7) A I understand there is another sale pending yes  
 (8) Q Who do you understand the buyer to be for Point  
 Possession?  
 (9) A The current buyer?  
 (10) Q Is it different from the buyer who was thinking about  
 (11) buying it when you used it as a comp?  
 (12) A I believe it is yes  
 (13) Q Let's start with the first Who did you understand to be  
 (14) buying Point Possession when you used it as a comparable?  
 (15) A I was never given the name of the individual because it  
 (16) was a pending transaction I didn't trust that issue In  
 (17) fact I was told by Ken Gain that there were two buyers that  
 (18) there had been two offers one was accepted and was in  
 escrow  
 (19) and there was another one standing in the wings and it's my  
 (20) understanding that neither of those materialized at that time  
 (21) after I used it  
 (2) Q Do you have information as to who the current potential  
 (3) buyer is?  
 (4) A I do not  
 (25) Q Whether the price that the property is in escrow on if I

Vol 21 3270

- (1) -- what is that? Why don't you tell the jury what that is?  
 (2) A Well there was a -- I recall reading some -- some history  
 (3) but I'm not sure what you exactly -- what you make reference  
 (4) to  
 (5) Q What I'm referring to it's called Point Possession is it  
 (6) not because in 1778 or so goes the theory for the history of  
 (7) that property Captain Cook took possession of some part of the  
 (8) land in this area for -- for England?  
 (9) A Well you know after you look at all the land in the  
 (10) Prince William Sound and all that area every one of them says  
 (11) that he -- he landed there as well as a lot of other folks  
 (12) Q Explorers tend to do that?  
 (13) A There was -- there's a lot of history of folks landing  
 (14) around in that area goes way back before the -- those white  
 (15) explorers got there  
 (16) Q Absolutely absolutely I didn't imply that there wasn't  
 (17) The fact is it does have some historical significance?  
 (18) A Yes  
 (19) Q But as of this point no sale has been closed on Point  
 (20) Possession?  
 (21) A Not to my knowledge Now last time I talked to Ken Gain  
 (22) he and I was working on a project in Fairbanks together and on  
 (23) our trip up there he mentioned to me about the pending sale I  
 (24) haven't discussed with him whether it has closed  
 (25) Q One of the other things I think you mentioned yesterday in

Vol 21 3271

- (1) your theory is that another motivating factor for the purchase  
 (2) of lands is to protect endangered species?  
 (3) A That would be one use yes  
 (4) Q That however does not apply to any of these lands?  
 (5) A To my knowledge there was -- there s no endangered  
 species  
 (6) on the lands that I ve investigated  
 (7) Q Okay One of the other reasons to buy this type of land  
 (8) that you mentioned is to protect it from -- from certain forms  
 (9) of degradation or damage to preserve it in its pristine state?  
 (10) A Uh huh  
 (11) Q You agree?  
 (12) A (Nods head up and down)  
 (13) Q Is clear cutting timber consistent with that use of land?  
 (14) A No it wouldn t be  
 (15) Q So when you -- are you familiar with -- with whether or not  
 (16) there are any areas among the lands that you ve appraised in  
 (17) this case that are suitable for timbering?  
 (18) A Depends on what -- at what level you re making reference  
 (19) to There s no timber on the Rifle Range There s no timber  
 (20) on the Tok properties There is some minor timber or  
 (21) there s -- Point Possession is treed We -- I assisted another  
 (22) Native corporation who owns the property fairly close to that  
 (23) Point Possession property We had a timber survey done at  
 that  
 (24) time and it was determined that it really wasn t of commercial  
 (25) value

Vol 21 3272

- (1) It might be for pulp mills things of that nature but --  
 (2) and depend on the price of the property things of that You  
 (3) have to realize that I looked at these at a point in time and  
 (4) at that point in time in discussion with timber people it s  
 (5) my determination that the timbers on Point Possession had  
 (6) little commercial value  
 (7) Q What about the lands that you re appraising damage for? In  
 (8) other words the lands that you ve used the comps to -- to have  
 (9) a damage estimate for some of those considered timberlands?  
 (10) A Could you be specific?  
 (11) Q Sure Any of the Port Graham lands considered  
 timberlands?  
 (12) A Well I appraised Port Graham and English Bay without  
 (13) timber I took out the stumpage rights  
 (14) Q And the same for Chenega right?  
 (15) A No I included some of the timber on the -- in the Chenega  
 (16) Bay  
 (17) Q And would you consider consistent with the use of these  
 (18) lands as environmental preservation lands for someone to go  
 in  
 (19) and cut the timber?  
 (20) A Well I would consider for example in Chenega Bay that if  
 (21) they started cutting the timber that -- that after they got  
 (22) beyond a certain point that may well hurt the possibility of  
 (23) having it preserved Although it s not -- it s not a total --  
 (24) a totally unreal situation they might want to do that I  
 (25) mean there s a lot of species and a lot of wildlife and other

Vol 21 3273

- (1) things that they -- that might want to well be protected  
 (2) Q Isn t it the case -- let me ask you this You are an  
 (3) expert in -- in marketing real estate as well as in appraising  
 (4) is that correct?  
 (5) A Yes  
 (6) Q And in fact you ve taught courses in that?  
 (7) A Yes  
 (8) Q You have given thought to and you have investigated how it  
 (9) is people sell natural -- I mean environmental and  
 (10) preservation lands what type of marketing techniques they use  
 (11) to sell them isn t that true?  
 (12) A Yes  
 (13) Q And isn t one of the techniques that s used by the Native  
 (14) corporations that you ve looked at in selling land to do things  
 (15) like threaten to clear-cut it unless the government buys it?  
 (16) A Well I think I would take some exception to your term of  
 (17) threatening to clear cut They have options They can -- you  
 (18) know timberland is very valuable in Alaska and one of their  
 (19) options is to harvest the timber Now if they plan to harvest  
 (20) the timber and a public agency or other group desires that it  
 (21) not be harvested and would buy it from them in lieu of that  
 (22) then I certainly would think that you know that s -- that s  
 (23) another option  
 (24) Q In fact you ve seen this phenomena operating in this  
 (25) marketplace have you not?

Vol 21 3274

- (1) A I m not sure what phenomena you re referring to  
 (2) Q The phenomena of threatening to do something that is  
 (3) inconsistent with keeping the land preserved in order to get  
 (4) the government to buy it  
 (5) A Well I don t know that you would call it a threat I  
 (6) think it s more like a reality We have these options and  
 (7) we re going to use our land for this purpose and people find  
 (8) out they re going to be used for that purpose they would  
 (9) rather it not be used for that purpose and purchase in lieu of  
 (10) that  
 (11) Q Well in fact in your research into the way in which these  
 (12) precise types of lands are marketed you ve come across  
 (13) situations where the owners have threatened to take out a  
 (14) permit to create a nuclear dump site on their land in order to  
 (15) get the government to buy the land haven t you?  
 (16) A Well I don t know that it was for the purpose of getting  
 (17) the government to buy the land I believe it was -- you know  
 (18) a permit was filed and the -- to do that I think I m on  
 (19) record as saying that would certainly encourage people to take  
 (20) a look at those lands  
 (21) Q Sure would You -- you ve discovered in your examination  
 (22) of marketing land that it can take years to sell this type of  
 (23) natural preservation land is that correct?  
 (24) A Sometimes -- some of these transactions we ve looked at  
 (25) have taken several years and some have been actually fairly

Vol 21 3275

- (1) short in duration  
 (2) Q And you have found that this technique of threatening to  
 (3) clear cut or put a subdivision in or put a nuclear waste  
 (4) facility in has a tendency to speed up the marketing of these  
 (5) lands?  
 (6) A Well I think I take exception with the – your continued  
 (7) use of the word threat but I would say that the alternative  
 (8) use of them for those purposes yes would help speed up that  
 (9) process  
 (10) MR OPPENHEIMER Counsel playing a part of videotape  
 (11) running from transcript 202 line 13 to 204 line 22 Roll  
 (12) that segment  
 (13) (Videotape Played)  
 (14) VIDEO SPEAKER  
 (15) Q You made reference of a submarket What submarket were  
 (16) you referring to?  
 (17) A The preservation conservation market  
 (18) Q In Alaska?  
 (19) A In Alaska  
 (20) Q With your experience in that market how – if you had  
 (21) property such as the subject property and you wanted to  
 (22) market  
 (23) it who would you approach in an effort to do so?  
 (24) A Which subject properties are we talking about?  
 (25) Q Let s talk about English Bay Port Graham and Chenega  
 (26) A Okay What you would have to do – what has been done in

Vol 21 3276

- (1) the past in terms of the specific strategy to – to sell some  
 (2) of this property There was – for example one Native  
 (3) corporation in Kodiak who applied for a permit to use their  
 (4) property for a nuclear waste disposal area It s amazing to me  
 (5) how quickly suddenly that property became listed as a – as  
 (6) one of the properties that the environmentalists and some of  
 (7) the environmental organizations wanted preserved  
 (8) One of the properties that has been talked about a lot is  
 (9) the property out on – out at the in Pribilof – I always  
 (10) mispronounce that how do you –  
 (11) Q Pribilof  
 (12) A Pribilof Actually that was a mistake that started out  
 (13) with as the bird – the bird cliffs and stuff out there was  
 (14) never intended to be conveyed to the Native corporation  
 (15) anyway That s what I was told It somehow was a mistake and  
 (16) the Indian – when the Natives announced that they were going  
 (17) to subdivide them all of a sudden a lot of people decided that  
 (18) that was a high priority to buy that land back  
 (19) When the Seldovia Natives announced that they were going to  
 (20) clear cut their land across from Homer that became a high  
 (21) priority land for acquisition And I have made reference on  
 (22) several occasions to the marketing strategy that would be  
 (23) necessary to bring about a possible sale of this kind of land  
 (24) I can t go into any of the detail but I happen to be working  
 (25) on – am involved with another transaction another possible

Vol 21 3277

- (1) transaction where the world environmental fund has rated it  
 (2) the number one piece of land in the world for acquisition and  
 (3) it happened to be because these people announced that they  
 (4) were  
 (5) going to build some – start selling sites for – for lodges  
 (6) out there  
 (7) Well there are – there are a number of things that can  
 (8) bring about these kind of transactions We re seeing right now  
 (9) in Cordova when they started trying to clear cut the land  
 (10) along the beaches and around where the salmon run all of a  
 (11) sudden negotiations been going on for years suddenly came  
 (12) about or are coming and very rapidly  
 (13) So in Alaska I realize that things get done differently in  
 (14) other parts of the world in the United States but in Alaska  
 (15) there is a marketing strategy for specific submarket of land  
 (16) that has been relatively successful okay?  
 (17) (Videotape concluded)  
 (18) BY MR OPPENHEIMER  
 (19) Q I want to hold on your – your report for a little bit  
 (20) longer  
 (21) You have before you there I think Professor the pages of  
 (22) comparables Let me just double-check to make sure I m not  
 (23) misspeaking Yes you have before you that part of your report  
 (24) that includes the comparables There are a number of  
 (25) comparables there that you used that are after the spill is  
 that correct?

Vol 21 3278

- (1) A Well the ones that I actually used for analysis?  
 (2) Q Well I m not – you re making a good point and I don t  
 (3) mean to be misleading I am not saying that I m going to ask  
 (4) you about any of the six that you winnowed it down to but you  
 (5) mentioned you had more than just the six comparables and  
 (6) some  
 (7) you used for background and some you used for adjustments  
 (8) that s correct?  
 (9) A That s correct  
 (10) Q Now the table in your report lists 16 properties that you  
 (11) list there as having comparable property characteristics  
 (12) A Actually it may be 17 but I think one is 8 1  
 (13) Q One is 8 1 And by the way that s a comp known as  
 (14) Tanacross?  
 (15) A Yes  
 (16) Q That s another Tok radar site?  
 (17) A That s true  
 (18) Q Of the comps that you looked at were two or three the  
 (19) radar sites?  
 (20) A I listed three of those radar sites I only used one of  
 (21) them as a comp and I used it as one of – the lowest of – in  
 (22) adjusting as opposed to –  
 (23) Q On your screen there Professor I ve put up page 12774  
 (24) which you also have in hard copy in front of you but this is a  
 (25) page from your comparable property characteristics table do  
 you recognize this?

Vol 21 3279

- (1) A Yes  
 (2) Q Just for the moment I want to – Mr Fortier has set a  
 (3) high standard which I m going to try to follow here  
 (4) If you look at the date of sale and then go over we have  
 (5) three sales I d like to focus on for just a minute Now these  
 (6) are all post spill sales are they not?  
 (7) A Yes  
 (8) Q And in fact at least one of them the Rifle Range is  
 (9) Salonic Creek right? That actually did make it into your  
 (10) comps?  
 (11) A Yes it did  
 (12) Q Okay Now the Salonic Creek sale is in May of 92?  
 (13) A Yes  
 (14) Q Did you adjust that for the effect of the oil spill?  
 (15) A No I didn t It wasn t on the water I saw no evidence  
 (16) of impact on that – on that particular transaction  
 (17) Q Because it wasn t on the water?  
 (18) A It – it wasn t oiled  
 (19) Q Do you believe the oil spill had no impact on properties  
 (20) that weren t oiled?  
 (21) A I believe that it – properties that were not oiled may  
 (22) well be and probably were impacted by it but I did not  
 (23) conduct that analysis  
 (24) Q So in choosing the Salonic Creek Rifle Range as a comp for  
 (25) damages in this case you did not think whatever effect the

Vol 21 3280

- (1) spill had – at least as of the date of that transaction in 92  
 (2) – was worth making any adjustment to the comp about?  
 (3) A Not considering who the buyer was and the circumstances  
 (4) around that sale no  
 (5) Q When you say considering who the buyer was what do you  
 (6) mean by that?  
 (7) A Well this is a transaction that had been negotiated and  
 (8) ongoing for some time It wasn t just like it just suddenly  
 (9) occurred in 1992  
 (10) Q Right knowledgeable buyer and seller long history of  
 (11) negotiation?  
 (12) A And long – yes  
 (13) Q And now in terms of most of the land that you ve appraised  
 (14) here that we call preservation – I m sorry I ve mixed up the  
 (15) term again but it is environmental preservation land do I  
 (16) have that right?  
 (17) A Yes  
 (18) Q With respect to most of that land you explained that it is  
 (19) primarily the government that buys it Now the government is  
 (20) a sophisticated purchaser?  
 (21) A Well there s been a lot of debate about that  
 (22) Q At its best at its best is the government a sophisticated  
 (23) purchaser?  
 (24) A The government transactions are typically reviewed by many  
 (25) people They have a lot of public hearings and things go on

Vol 21 3281

- (1) so that there is a great deal of review on those Given that  
 (2) review I would say that those transactions typically if they  
 (3) work within a realm of market value that somebody would  
 (4) certainly look that up  
 (5) Q And with respect to all of these lands that we re talking  
 (6) about today the Port Graham and English Bay and Chenega  
 (7) lands  
 (8) where the government is the primary potential purchaser isn t  
 (9) it clear that starting within hours of the spill it began to  
 (10) amass probably more information about those lands than any  
 (11) other group of people except maybe the State of Alaska and  
 (12) Exxon?  
 (13) A Which government the State –  
 (14) Q The federal government Either the state or the federal  
 (15) government The governments of the State of Alaska and the  
 (16) federal government were intimately involved in the operations  
 (17) of cleanup treatment whatever you want to call it after the  
 (18) oil spill is that correct?  
 (19) A Yes  
 (20) Q And in fact NOAA the National Oceanographic and  
 (21) Atmospheric Administration was the science advisor to the  
 (22) federal on scene coordinator who was in fact in charge of  
 (23) cleaning up all this land is that also true?  
 (24) A If you say so  
 (25) Q Well I understand it to be the case Do you know whether  
 that s true?

Vol 21 3282

- (1) A I read documents and things on that  
 (2) Q So it s your understanding that the most likely purchaser  
 (3) of all the land we re talking about is also directing the  
 (4) cleanup?  
 (5) A Its my understanding that Exxon was in charge of the  
 (6) cleanup  
 (7) Q So you are of the view based on what you looked at that  
 (8) Exxon was in charge of directing these cleanups?  
 (9) A I don t know about directing I believe a lot of cleanup  
 (10) was being done by the Veco Company and they were under  
 (11) contract to Exxon as I understand  
 (12) Q Do you understand the role – do you have an understanding  
 (13) of the role that the federal government played in the cleanup  
 (14) of these beaches?  
 (15) MR FORTIER Your Honor I think this is going  
 (16) outside the scope of the direct It s also assuming a lot of  
 (17) facts not in evidence  
 (18) THE COURT The objection s overruled counsel  
 (19) A Could you restate the question?  
 (20) BY MR OPPENHEIMER  
 (21) Q Certainly Professor  
 (22) Do you have an understanding of the role that the federal  
 (23) and state governments played in the cleanup of these beaches?  
 (24) A Yes They were they were – there was a certain amount of  
 (25) oversight and they were there watching making sure it was

Vol 21 3283

- (1) being done
- (2) Q Do you have an understanding of who was in charge of
- (3) cleanup as between Exxon the State of Alaska and the federal
- (4) government?
- (5) A I m not sure what you mean by in charge The on site
- (6) coordinator was the Commander of the Coast Guard
- (7) Q Okay And it is your understanding that NOAA was the
- (8) science advisor to the federal on scene coordinator?
- (9) A I believe that s correct
- (10) Q And NOAA is a - is a part of the federal government which
- (11) would be the buyer for these lands is that correct?
- (12) A Well when you say the buyer of these lands I think
- (13) it s - I ve often heard the term the government is the buyer
- (14) but there are many government agencies and the buyer may
- (15) be
- (16) one of those agencies and those agencies always are not -
- (17) there s not real good coordination necessarily between them
- (18) So when you say the government is I m not aware that NOAA
- (19) was
- (20) buying any real estate
- (21) Q Are you aware of any instance where a government
- (22) department
- (23) that might be interested in buying lands up here couldn t get
- (24) information from NOAA about its view of the State of cleanup?
- (25) A Well I assume if they wanted information they could get
- (26) information
- (27) Q Now we talked about some of the risks that an oil spill
- (28) like this could create for a potential buyer Let s go down

Vol 21 3284

- (1) just a few of them Let s first - legalities first talk about
- (2) collateral barring you buy property - and Professor I ll be
- (3) straight man for another government observation joke but it s
- (4) worth doing Does the government need to borrow money to
- (5) buy
- (6) this land?
- (7) A It generally buys land through appropriations
- (8) Q So the government doesn t need to go to a bank to borrow
- (9) money to buy this land?
- (10) A It buys it through appropriations
- (11) Q So the government doesn t need to be worried about filling
- (12) out a form disclosing contamination on its property for another
- (13) governmental agency? I mean it is the governmental agency
- (14) isn t that correct?
- (15) A Well that s not exactly true Out on the Tok properties
- (16) that property was bought by the U S Air Force and when they
- (17) started building the Corps of Engineers shut them down
- (18) because
- (19) they didn t have a Corps of Engineers permit -
- (20) Q They eventually got one?
- (21) A Well they eventually got one but they got shut down for
- (22) several months because they forgot to get a permit from
- (23) another
- (24) agency of the government
- (25) Q Point well taken So a few months go by and somebody talks
- (26) to somebody s boss and the Backscatter Project is back up in
- (27) operation or at least the property goes forward right?
- (28) Didn t stop the sale?

Vol 21 3285

- (1) A Well it didn t stop the sale because the folks who bought
- (2) it hadn t thought about the permits and didn t realize that the
- (3) ground was underlain with permafrost
- (4) Q Right But they did get the permit?
- (5) A They got a permit to build one road
- (6) Q You don t agree the government would be buying the
- (7) property
- (8) for the long term if they bought it?
- (9) A Depends on the use If it was being bought to preserve it
- (10) that would be for the long term
- (11) Q That s one of the primary - I believe you explained one of
- (12) the primary motivations in governments buying this kind of
- (13) land which is to preserve it for the long term
- (14) A Yes
- (15) Q Can you think of any group of people with a better capacity
- (16) to assess whether this land would be okay in the long term than
- (17) the federal and state governments in Alaska?
- (18) A Well I think they are in a position to do that I
- (19) wouldn t say they re the best but I think they re in a
- (20) position to do that
- (21) Q Now were you in the courtroom the other day when Dr
- (22) Mundy
- (23) was talking about the attitude that he discovered in his
- (24) research of the - of the federal and state governments with
- (25) respect to the presence of oil on this property?
- (26) A I was not
- (27) Q Would it be consistent with your understanding that in the

Vol 21 3286

- (1) main they view it as a transitory problem something that will
- (2) go away?
- (3) A I can t testify to that I don t have any knowledge of
- (4) that
- (5) Q Have you made any inquiry of these - of this most likely
- (6) potential purchaser of any of its agencies of what its
- (7) attitudes are about the oil spill and whether it affects its
- (8) view of the desirability of these properties as environmental
- (9) preservation lands?
- (10) A Keep in mind counselor I appraised this land first for a
- (11) one year and then a three year period and given all that was
- (12) going on at that particular point in time a lot of things
- (13) stopped a lot of discussion between government and Native
- (14) and
- (15) things actually came to somewhat of a stop because everybody
- (16) was so involved in - in the spill
- (17) So now what would go on beyond the three years that I ve
- (18) been confined to here you know that - I m not going to
- (19) speculate on But part of my analysis was that part of the
- (20) damage here is that these - these negotiations and
- (21) opportunities would come to a halt for at least a period of
- (22) time
- (23) Q Were you aware of any negotiations between the government
- (24) and any of the landowners in this case that came to a halt
- (25) during the period of time covered by your report?
- (26) A There had been some discussion between Port Graham for

Vol 21 3287

- (1) example English Bay some of the lands they acquired One  
 (2) reason they haven't received title to it is the government was  
 (3) objecting to them getting some of that land I believe it was  
 (4) important to them There was some discussions  
 (5) Q Well now those discussions though were objections that  
 (6) some folks in the federal government had to giving part of the  
 (7) Kenai Fjords National Park to the Native corporations isn't  
 (8) that correct?  
 (9) A Well they're lands that in the government's opinion are  
 (10) important and they would like to keep them  
 (11) Q Right But that's -- that's a discussion about the  
 (12) government not wanting lands in the Kenai Fjords area to  
 (13) transfer to the Natives I'm talking about the other way Are  
 (14) you aware of any negotiations that were interrupted by the oil  
 (15) spill between the government for purchase of any of the lands  
 (16) that you've assessed?  
 (17) A Between the government -- not that I recall no  
 (18) Q Now in fact we are talking about huge pieces of land  
 (19) here are we not?  
 (20) A Yes  
 (21) Q And those aren't the sorts of things that you run out  
 (22) during a summer period and just decide you're going to buy  
 (23) 100,000 acres of land right?  
 (24) A No but some -- there have been some transactions occurred  
 (25) in fairly short time periods

Vol 21 3288

- (1) Q Have you ever heard of 100,000 acres being identified  
 (2) negotiated over and sold in one summer buying period?  
 (3) A There has never been 100,000 acres sold in Alaska  
 (4) Q So from your perspective -- and I appreciate that you are  
 (5) very knowledgeable about how these transactions work -- when  
 (6) you buy a piece of property like this this is this is a  
 (7) process a transaction that requires lots of work doesn't it?  
 (8) You have to research as you said with the government the  
 (9) agencies have to talk to each other is that right?  
 (10) A Yes  
 (11) Q They have to do an analysis correct?  
 (12) A Yes  
 (13) Q They probably may have to talk to a congress person or two  
 (14) in some cases these are big purchases?  
 (15) A Yes  
 (16) Q Probably have a lot of work computer workup of various  
 (17) types to do -- to see what kind of resources are there what  
 (18) kind of species whether any of them are endangered Am I  
 (19) giving a pretty good description of some of the variables in  
 (20) this kind of huge purchase?  
 (21) A Yes  
 (22) Q And just out of curiosity you could do some of that or a  
 (23) lot of it in winter months in offices in Anchorage Washington  
 (24) D C correct?  
 (25) A Could do some of that yeah

Vol 21 3289

- (1) Q And in fact isn't that what happens that when these huge  
 (2) purchases are made that take years they involve an enormous  
 (3) amount of negotiation an enormous amount of research and a  
 (4) lot of it has nothing to do with being out at the property  
 (5) looking at the property?  
 (6) A Some of that yes  
 (7) Q And a lot of the information that these potential  
 (8) government buyers have they have had for years about these  
 (9) properties isn't that true?  
 (10) A Yes  
 (11) Q And in many cases they have been thinking about some of  
 (12) these purchases for years is that also true?  
 (13) A Yes  
 (14) Q Isn't it also true that in order to get one of these big  
 (15) deals closed you have to get on -- typically on a government  
 (16) list a priority list of purchases?  
 (17) A No In fact that particular point is what I was  
 (18) discussing on video that you showed here the -- there had been  
 (19) some testimony discussion that lands are never purchased  
 (20) unless they have been on somebody's priority list and I was  
 (21) making a point that most of the lands that I've viewed here in  
 (22) Alaska in fact weren't on the government priority list prior to  
 (23) them being acquired  
 (24) Q And none of the lands here are as best you know on a  
 (25) government priority list correct?

Vol 21 3290

- (1) A Which ones are you talking about?  
 (2) Q Let me back up a step I think you just said -- correct me  
 (3) if I'm wrong -- that one of the ways you can get land purchased  
 (4) from the -- by the government if it's not on a priority list  
 (5) is threaten to clear cut or put a nuclear power plant on the  
 (6) property is that correct?  
 (7) A That speeds the process  
 (8) Q Now if you don't do that don't you in the course of the  
 (9) case of the federal government have to get yourself on what's  
 (10) known as a priority list?  
 (11) A Yes  
 (12) Q None of these lands were on a priority list at the time you  
 (13) examined them?  
 (14) A Not that I know of no  
 (15) Q And the best that you know still none of them are on a  
 (16) priority list?  
 (17) A Which lands?  
 (18) Q Any of the lands you've assessed for damages in this case  
 (19) A Well it's my understanding there has actually been some  
 (20) ongoing negotiations to acquire some of this land  
 (21) Q Recently?  
 (22) A Yes  
 (23) Q And any of them made the priority list?  
 (24) A Not that I know of no  
 (25) MR OPPENHEIMER Your Honor would this be a good

Vol 21 3291

- (1) time for a break?
- (2) THE COURT If you want one
- (3) MR OPPENHEIMER Sure
- (4) THE COURT All right
- (5) THE CLERK Please rise This court stands in
- (6) recess
- (7) (Jury out at 10 50 a m )
- (8) (Recess from 10 50 a m to 11 08 a m )
- (9) (Jury in at 11 08 a m )
- (10) THE CLERK This court now resumes its session
- (11) Please be seated
- (12) BY MR OPPENHEIMER
- (13) Q Professor Green I d like to explore a little bit the -
- (14) the method that you ve used and I d like to walk through a
- (15) couple of things but let me ask you some preliminary
- (16) questions In years two and three of your study - by the way
- (17) let me back up even farther excuse me
- (18) We ve heard testimony from Dr Mundy about a damage study
- (19) that he did and today we re hearing testimony from you about a
- (20) damage study that you have done Your damage study is
- (21) independent and separate from Dr Mundy s is that correct?
- (22) A Yes
- (23) Q So when we think about your study it is - it s not
- (24) something that we re adding to Dr Mundy s study it s
- (25) something that we consider along with it separate from Dr

Vol 21 3292

- (1) Mundy s study It s another way of looking at the first three
- (2) years of the oil spill it s not intended to be added on?
- (3) A It s only the first three years
- (4) Q Only the first three but otherwise what I ve said is
- (5) correct Okay I m going to do a schematic here I don t
- (6) intend to represent that it represents anything to your
- (7) report Feel free to correct me in any way but basically if
- (8) we conceptualize this as the land that you appraised in the
- (9) first year - let s call this year one - you would - and this
- (10) is - bear with me here this is water best I can do - you
- (11) would evaluate the damage to the land by looking at all the
- (12) land so far so good?
- (13) A Yes
- (14) Q Okay Now in years two and three you - you make an
- (15) adjustment that you ve described to us where you take into
- (16) account an area near the shore correct?
- (17) A Yes
- (18) Q And you examine this area for purposes of damage correct?
- (19) A Correct
- (20) Q I believe you said during years two and three the area you
- (21) looked at here - that s the shoreline related area - is
- (22) roughly one quarter of a section?
- (23) A Yes
- (24) Q Now here you may need to correct me but I believe - this
- (25) is the area - I believe a section is 640 acres?

Vol 21 3293

- (1) A Yes
- (2) Q It s a square mile?
- (3) A Yes
- (4) Q And in fact when we saw - just borrow your exhibit Sam
- (5) - when we saw these maps earlier?
- (6) A Yes
- (7) Q And you were discussing with us these boxes those are
- (8) sections?
- (9) A That s correct
- (10) Q So it s a - it s a convention that real estate
- (11) professionals share as a unit of measurement?
- (12) A It s a survey map yes
- (13) Q Survey measure okay So one quarter section in from the
- (14) water in years two or three is that a quarter of a mile in?
- (15) A About a quarter of a mile
- (16) Q Okay And that s the area that you re analyzing that you
- (17) believe may still be affected in years two and three of your
- (18) study correct?
- (19) A (Nods head up and down)
- (20) Q Okay
- (21) MR OPPENHEIMER Your Honor with the Court s
- (22) permission and Mr Diamond s could I ask if Mr Diamond
- (23) could
- (24) just hold this up? I d like to do a comparison here
- (25) MR DIAMOND Only if he can rip it off
- BY MR OPPENHEIMER

Vol 21 3294

- (1) Q Okay Now just for the moment - just for the moment -
- (2) MR DIAMOND I m having a Vanna White experience
- (3) BY MR OPPENHEIMER
- (4) Q I want to go back to year one - I think you re blocking
- (5) the Professor s view
- (6) Professor I d like to go back to year one Hypothetical
- (7) I would like you to assume for the moment that what we analyze
- (8) for damages is the shoreline related area
- (9) Let me take a specific example to see if I can give this
- (10) some - let s take Chenega Now currently in your report
- (11) the damage for the - for the first year for Chenega measured
- (12) as lost rent is 6 4 million Does that seem right to you?
- (13) A Yes
- (14) Q Okay
- (15) A Let me correct one thing You said the lost - that it was
- (16) lost rent I said it was rent on the - on the property for
- (17) the loss of property rights
- (18) Q Point well taken There s no actual rent that s being lost
- (19) that you re aware of or you take into account?
- (20) A That s correct
- (21) Q We ll get back to that in a minute but good point
- (22) Now basically what has happened here what I want to do is
- (23) go over to an analysis which - divide this in half This is
- (24) the actual report and here s the assumption I want you to
- (25) make I will - we can check this in your report if you like

Vol 21 3295

- (1) but I'll represent to you that according to your report the  
 (2) shoreline related area that you used in years two and three -  
 (3) not year one but years two and three is 16 640 square feet  
 (4) okay?  
 (5) A Acres  
 (6) Q Acres pardon me 16 640 acres And that you assigned to  
 (7) those acres a per acre value of \$1 368 sound right?  
 (8) A For - is this for Chenega?  
 (9) Q This is for Chenega  
 (10) A I believe that's correct  
 (11) Q Okay Let's assume we did that in year one so that we say  
 (12) this is - we're going to look at the same area you looked at  
 (13) in years two and three 16 640 acres okay at \$1 368 an acre  
 (14) Now that gives you a number That gives you 22 8 million  
 (15) agreed?  
 (16) A Uh huh  
 (17) Q Now at that point as you've explained to us you - that  
 (18) would be the value Professor - correct me if I'm wrong - for  
 (19) all of the shoreline related area before your adjustment for  
 (20) the fact that there is some use correct?  
 (21) A Okay  
 (22) Q In other words it's before the 85 percent factor is that  
 (23) correct?  
 (24) A Yes I believe that is correct  
 (25) Q Okay So we have to do - this is step number one Now

Vol 21 3296

- (1) we have to do step Number 2 We have to multiply this number  
 (2) by 85 percent In other words we're not going to use the full  
 (3) 22 8 million we're going to use a lower number That's 85  
 (4) percent of it correct?  
 (5) A That's correct  
 (6) Q And then we're going to apply a rental rate to that and  
 (7) the rental rate that we're going to use here is the one you  
 (8) used 9 68 percent?  
 (9) A On year two and three it was 9 percent  
 (10) Q It was lower but I'm going to use the rental rate used in  
 (11) year one for the hypothetical okay? So we have 9 68 percent  
 (12) that would be applied to 85 percent of this number right?  
 (13) A Yes  
 (14) Q Now if we did all those things we did all those things  
 (15) we would have applied an analysis to the shoreline related part  
 (16) of the property correct?  
 (17) A Yes  
 (18) Q Now I understand you didn't do that but that's what we  
 (19) would have done We would not have taken into account the  
 (20) uplands here and if we calculate these out would you agree  
 (21) that the number we would get for the first year would be not  
 (22) 6 4 million but 1 9 million? Agreed on the hypothetical? It  
 (23) would be 16 640 acres times the per acre price of \$1 368 is  
 (24) 28 8 million multiplied by 85 multiplied by 0 968 1 9  
 (25) million?

Vol 21 3297

- (1) A Well if you assume that the backlands were not impacted  
 (2) you're correct  
 (3) Q Absolutely I make that assumption and I fully realize  
 (4) that you did not I understand that I am making that  
 (5) assumption we are not including the uplands Agree with the  
 (6) hypothetical?  
 (7) A Well it's your hypothetical  
 (8) Q It is indeed that But you agree with the numbers that if  
 (9) you didn't - if you looked at the shoreline related area and  
 (10) didn't take the uplands in your damage number would be 1 9  
 not  
 (11) 6 4?  
 (12) A Well I'm assuming your numbers are correct I haven't  
 (13) calculated them I assume you've worked them out in advance  
 (14) Q I couldn't have done this without this cheat sheet  
 (15) Professor This is exactly the type of document you would not  
 (16) allow me to bring into one of your tests I assure you  
 (17) With those representations that I believe I've done the  
 (18) math correctly you would agree that this hypothetical works  
 (19) out this way?  
 (20) A If you accepted all those premises yes  
 (21) MR DIAMOND May I sit down?  
 (22) MR OPPENHEIMER Yes I appreciate it  
 (23) MR PETUMENOS Good job Mr Diamond  
 (24) BY MR OPPENHEIMER  
 (25) Q So at least with respect to that hypothetical including

Vol 21 3298

- (1) the uplands does make a big difference in the final analysis  
 (2) and you don't even need this hypothetical to figure that  
 (3) right?  
 (4) A Yes It's my opinion that yeah if the uplands have been  
 (5) affected if the rights to those properties have been impacted  
 (6) that yes they should be included  
 (7) Q I want to go back to the discussion we were having earlier  
 (8) about the - the impact on use and rental You corrected me  
 (9) earlier rightly so when I referred to an interruption of  
 (10) rental income Your theory does not have anything to do with  
 (11) an actual rental stream coming off the property correct?  
 (12) A That's correct  
 (13) Q And have you been in court at any time during which we have  
 (14) been discussing some of these leases that are out there in  
 (15) Prince William Sound the Growler lease the Porter lease on  
 (16) Busby Island any of the -  
 (17) A I have not been I don't believe  
 (18) Q You are I take it though familiar that there's some -  
 (19) there is in fact some rental income coming in?  
 (20) A Some small amount yes  
 (21) Q Some small amount Now let me ask you to put your  
 (22) professional hat on Let's talk the significance of that from  
 (23) a theoretical point of view Not much rental income coming in  
 (24) on these properties right? You would agree?  
 (25) A Yes

Vol 21 3299

- (1) Q Let me ask you this In your – in your study here did  
 (2) you look at any rental that came into the properties?  
 (3) A Yes  
 (4) Q So you would agree with me that based on your investigation  
 (5) there s not rental income that comes in?  
 (6) A That s correct  
 (7) Q And that s historically been the case is that not right?  
 (8) A That s correct  
 (9) Q Now when you re looking at rentals from land isn t it the  
 (10) case that whether the rental amount is small or large in  
 (11) assessing the value of the land on which the rental is based  
 (12) the fluctuations in rentals can be very important from a  
 (13) theoretical point of view isn t that correct?  
 (14) A Well if you re including the rental – see what you re  
 (15) taking as a small area and trying to somehow equate that small  
 (16) area and that small rent to the whole Is that what you re  
 (17) trying to do?  
 (18) Q No let s back up First of all if these properties have  
 (19) historically had limited rentals and if you wanted to find out  
 (20) whether the value of the property had been affected with  
 (21) respect to the rents you would at least have to look at what  
 (22) information there was isn t that correct?  
 (23) A Yes  
 (24) Q Doesn t matter whether it s a lot of rental property or a  
 (25) little correct?

Vol 21 3300

- (1) A Yes  
 (2) Q Now when rents are based upon – what is a percentage  
 (3) lease typically?  
 (4) A A percentage lease?  
 (5) Q Right  
 (6) A It s a lease that s based on a certain percentage of –  
 (7) Q Of what?  
 (8) A Of the property  
 (9) Q Of the value of the property?  
 (10) A Of the value that s correct  
 (11) Q Now whether that lease throws off two cents in rent or a  
 (12) million dollars a year in rent it is based upon the value of  
 (13) the property is that correct?  
 (14) A That type of agreement is yes  
 (15) Q So in the Porter lease Busby Island goes up or down and  
 (16) it s based on an assessment of the property That s telling  
 (17) you something about the value of the property irrespective of  
 (18) how much the rental is isn t that correct?  
 (19) A Well depends on the term of the lease  
 (20) In answer to your question I just worked on a project for  
 (21) the State of Alaska on the Frontier Building In 1985 when the  
 (22) market crashed they had a lease that they had already entered  
 (23) into so during a period of five six years seven years when  
 (24) the rents went way down their rent didn t go down They were  
 (25) paying over \$3 00 a square foot for rent when everybody else

Vol 21 3301

- (1) was getting lesser Now that agreement just terminated and  
 (2) now they ve renegotiated for a lower rate  
 (3) Q No question if you re in the middle of a lease it s kind  
 (4) of hard to get the terms and conditions That s why we have  
 (5) leases so we have terms that go on to the end of the lease  
 (6) Are you familiar with the terms of the Porter lease on Busby  
 (7) Island?  
 (8) A I am not no I don t recall them off the top of my head  
 (9) Q Let me phrase it in terms of a hypothetical If a lease is  
 (10) based – if a rent rate is calculated as a percentage of the  
 (11) value of the land – well in fact that s – let me back up  
 (12) That s what you ve done here isn t it? You have valued  
 (13) the land You have come up with a value for the land and then  
 (14) you applied either a 9 68 percent rental rate you applied that  
 (15) to the value said the land is worth ten dollars and the rent  
 (16) per year will be 9 68 percent of that correct?  
 (17) A Yes  
 (18) Q Let s take a hypothetical Now whether that rent is two  
 (19) cents or \$100 it still tells us something about the value of  
 (20) the land as I ve described it doesn t it because you have to  
 (21) define what the value of the land is before you can apply the  
 (22) rental rate to it?  
 (23) A If that s the method you ve used  
 (24) Q Sure sure So if you have somebody appraising a lease  
 (25) that s based on the value of the land irrespective of how much

Vol 21 3302

- (1) money s involved they have to form a judgment as to the value  
 (2) of the land?  
 (3) A If that s the method used There are a lot of times that s  
 (4) not necessarily the method used  
 (5) Q Let me ask a – sort of a different question Are you  
 (6) familiar with Growler Island?  
 (7) A With which island?  
 (8) Q Growler Island is – well let me ask without bringing out  
 (9) a map  
 (10) Are you familiar with an operation on Growler Island that s  
 (11) near Columbia Glacier where people get lunch and there s a  
 (12) kind  
 (13) of tour operation there?  
 (14) A I m aware that it goes on I m not aware of any specifics  
 (15) that I can recall  
 (16) Q Let me ask you again Keep your professorial hat on  
 (17) Let s think theoretically here for a minute  
 (18) If I were to tell you that the lease for Growler Island is  
 (19) based in part on a – a modest charge for every person who  
 (20) comes as a tourist to the business there and that in the year  
 (21) after the spill more people went to Growler Island as tourists  
 (22) than in the year before the spill And then in the second year  
 (23) after the spill more came than the year before the spill  
 (24) Irrespective of how much money that generated wouldn t  
 (25) that tell you something about the actual use of Growler  
 Island?

Vol 21 3303

- (1) A Well it would indicate that it was more use and it would  
 (2) indicate maybe that a lot of interest from people to come out  
 (3) and take a look at the -- this big disaster that was in all the  
 (4) newspapers  
 (5) Q Columbia Glacier didn't get oiled did it?  
 (6) A I don't recall  
 (7) Q I'd like to talk a little more about the method that you've  
 (8) used You rate properties on an index as part of the process  
 (9) is that correct?  
 (10) A I fix an index to those properties yes  
 (11) Q And actually I think you explained it quite well on your  
 (12) direct but I'd like to bring out a few things in a little  
 (13) more -- in a little more detail  
 (14) You have a system -- by the way is this a system that you  
 (15) have created?  
 (16) A It's one that I use for myself I've seen other similar  
 (17) ones used I believe the Forest Service used one similar to  
 (18) that but this is one I -- that I use I don't know if others  
 (19) use it  
 (20) Q Let me put one of your exhibits back on You had an  
 (21) exhibit -- I think it would be easier -- which listed the  
 (22) attributes that you rate Give me one second here  
 (23) Well -- I'll have somebody see if we can get that on the  
 (24) screen I think it would help a little bit Let me start so  
 (25) we don't lose time

Vol 21 3304

- (1) You look at properties and you're going to rank them by  
 (2) what you call a developability scale correct?  
 (3) A Yes  
 (4) Q And to do that -- and I have your report close at hand I  
 (5) want to make sure I have this right -- you have a -- you have  
 (6) a -- we have it? Great  
 (7) Okay Well you have a code or a category excuse me for  
 (8) access right?  
 (9) A Yes  
 (10) Q Well if I could spell We'll get that correct You have  
 (11) a code for biological?  
 (12) A Yes  
 (13) Q I say code I should really be saying category right?  
 (14) A Yes  
 (15) Q You have a category for hydrologic That means what?  
 (16) A Water  
 (17) MR FORTIER We found ours if you'd like to put that  
 (18) up  
 (19) MR OPPENHEIMER I'd love it It will be a lot  
 (20) better than somebody trying to read my writing  
 (21) MR FORTIER Billy will put it up not me  
 (22) BY MR OPPENHEIMER  
 (23) Q Here we go okay  
 (24) What you do -- but again correct me if I get this wrong --  
 (25) you go through other properties and you go down each one of

Vol 21 3305

- (1) these categories and you assign a number from -- is it one  
 (2) through five?  
 (3) A It varies  
 (4) Q Okay You assign a number indicating whether it has  
 (5) good -- in effect good or bad qualities in these categories  
 (6) fair statement?  
 (7) A Yes  
 (8) Q Okay And as I understand it zero is not good the higher  
 (9) numbers get better?  
 (10) A Yes  
 (11) Q So if you had four for access then you have a hundred  
 (12) percent access to the property?  
 (13) A I believe that's correct  
 (14) Q Okay Now you have an archaeological category there and  
 (15) you have as I understand it three -- three categories Zero  
 (16) the lowest rating is no known archaeological features That  
 (17) would add value to the parcel correct?  
 (18) A Yes  
 (19) Q Number one which is the next highest rank up is  
 (20) archaeological features of low or average interest That might  
 (21) add a small value to the parcel correct?  
 (22) A Yes  
 (23) Q And three the highest rating -- pardon me it's zero one  
 (24) two so two the highest rating world class archaeological  
 (25) features that would add value to the parcel or might create

Vol 21 3306

- (1) some political pressure that might influence value?  
 (2) A Yes  
 (3) Q What do you mean by some political pressure that might  
 (4) influence value?  
 (5) A Well influence value important archaeological sites are  
 (6) one of the things that can motivate and influence environmental  
 (7) groups and other groups to bring some pressure on the  
 (8) government to acquire the property  
 (9) Q Is there a little bit of contradiction in the model that  
 (10) we're talking about here between the value of the property  
 (11) going up because it has archaeology on it and the fact that --  
 (12) at least we have heard -- that people like to keep  
 (13) archaeological sites secret?  
 (14) A I'm not sure I understand your point  
 (15) Q Well can you think of a way in which having an  
 (16) archaeological site on your property would not be -- would not  
 (17) increase the value that would in fact decrease the value?  
 (18) A Under certain conditions that's true  
 (19) Q And tell the jury what those would be  
 (20) A Well if the property were being sold to a private  
 (21) developer let's say an archaeological site might be under  
 (22) certain conditions -- let's say be set aside or something to --  
 (23) for that property to be developed I do know that -- I'm told  
 (24) that there are markets for archaeological sites around so there  
 (25) is value under certain conditions

Vol 21 3307

- (1) In my model what I try to do and what I discovered when I  
 (2) mentioned I spent about a year and a half doing academic  
 (3) research on this issue under a grant what I came to the  
 (4) conclusion was that the thing that - what influenced the  
 (5) prices of this kind of property is that - are certain features  
 (6) of the property and you know there is a - there is kind of a  
 (7) pressure between the government and private developers to  
 (8) acquire the pressure - the property  
 (9) As certain attributes go up - as the number of attributes  
 (10) go up the competition and pressure between the private side  
 (11) wanting the property and the government side wanting it to  
 (12) preserve it is what forces brings - forces that value  
 (13) upward  
 (14) For example if you have old growth timber that a timber  
 (15) company would love to get and harvest and at the same time  
 (16) an  
 (17) environmental group would - wants it preserved the pressure  
 (18) between those two competing uses is what helps drive the  
 (19) property up So what my - my categories do is help me When  
 (20) I take the property and look at the subject properties I - I  
 (21) go through and kind of rate categories what's there and then  
 (22) I look at the comparable properties to see what was there to  
 (23) see if I can't kind of compare these - the forces of the  
 (24) market that would influence the price  
 (25) Q We've gone a little bit off my question on archaeology but  
 (26) I think into a useful area and I want to stay here for just a

Vol 21 3308

- (1) second You're saying that competition between the  
 (2) government  
 (3) and private parties equals a higher price is that basically  
 (4) correct?  
 (5) A Not necessarily a higher price  
 (6) Q A better price?  
 (7) A Not necessarily a better price  
 (8) Q Not a better price What kind of price a lower price?  
 (9) No?  
 (10) A Well it's these - it's these attributes that we're  
 (11) talking about For example if you take some of the Tok  
 (12) properties those properties were purchased by the United  
 (13) States Government through - through negotiation between two  
 (14) parties If you look at the price of that they sold for in  
 (15) the neighborhood of 400 and some dollars or \$511 an acre If  
 (16) you analyze the property as I do and go through and look at  
 (17) the attributes that those properties have you will see that  
 (18) there are few attributes that would cause the government to  
 (19) have to compete with a private developer to acquire that  
 (20) property  
 (21) Q So the price would go down?  
 (22) A So the price is lower  
 (23) Q Right And if the government had to compete with a private  
 (24) party who say wanted to develop it they'd have to pay more  
 (25) to get it out of the hands of the private party right?  
 (26) A That's the pressures on time

Vol 21 3309

- (1) Q Can't we say better or higher price?  
 (2) A Well a higher or lower price depending on what those  
 (3) competing pressures are  
 (4) Q If there are fewer competing pressures the government can  
 (5) get the preservation land cheaper If it's got to fight a  
 (6) developer it's going to have to pay more?  
 (7) A Assuming that there's a willing seller  
 (8) Q You agree with that as a general principle that where there  
 (9) is competition in the market for the land the government if  
 (10) it really wants this land is going to have to pay more money?  
 (11) A That's a correct statement  
 (12) Q Okay Now isn't it the case that in the areas that we're  
 (13) talking about in this case and especially the Prince William  
 (14) Sound that your investigations have shown you that in fact  
 (15) it has a - it scores very low on your developability end of  
 (16) it not a lot of private developers out there developing it  
 (17) right?  
 (18) A That's why the price is low  
 (19) Q Okay and that you have historically very little interest  
 (20) in recreational development out there correct?  
 (21) A Some but it hasn't been a big market  
 (22) Q And in fact don't you rate all of the properties in this  
 (23) case with a 1 which is a low rating?  
 (24) A I believe that's correct  
 (25) Q One of them is 1.5 I believe?

Vol 21 3310

- (1) A 1.5 And I think Chenega is higher than that I think  
 (2) Q The shoreline related area of Chenega is 3 does that ring  
 (3) a bell?  
 (4) A That's correct  
 (5) Q The highest rating the next highest is 1.5 and most of  
 (6) them are 1 correct?  
 (7) A Yes  
 (8) Q And in fact the 3 applied to the shoreline related area  
 (9) of Chenega and a 1 applied to the upland area correct?  
 (10) A I think that's correct  
 (11) Q Okay let's go back to archaeology I'm a developer Do I  
 (12) want archaeological sites on the land I'm going to develop?  
 (13) A Depends on what you want to develop it for  
 (14) Q Let's say I want to develop a lodge Do I want an  
 (15) archaeological site on my property?  
 (16) A You might if you're trying to bring people there tourists  
 (17) and stuff an archaeological site might be a real attribute  
 (18) Q Let's talk about the plaintiffs in this case You have I  
 (19) think explained to us that you've done a fair amount of study  
 (20) into the area of archaeological lands?  
 (21) A No I don't think I've said that I think I have said that  
 (22) I looked at how archaeological significance and historical  
 (23) significance affects the value of land I've done that but  
 (24) no I'm not an archaeologist  
 (25) Q No I didn't mean to imply - but in doing that research

Vol 21 3311

- (1) you have included have you not that there are two –  
 (2) typically two types of purchasers for archaeological land  
 (3) governments and so called pot hunters?  
 (4) A Well I think you ve got me mixed up with someone else I  
 (5) have not addressed archaeological sites as a separate market  
 (6) I have only addressed the archaeological sites as it relates to  
 (7) the value of the whole  
 (8) Q Well –  
 (9) A I ve only indicated that there were some archaeological  
 (10) significance to the different properties and I ve rated that  
 (11) but I ve not indicated that – that I would separate those out  
 (12) into a separate market  
 (13) Q Okay Fair enough But you – is it generally correct  
 (14) that within your analysis if you have an archaeological site  
 (15) the value of the property is higher?  
 (16) A If there are particularly significant sites and if the  
 (17) people who value those things or put value on it it might be  
 (18) one of the factors that would – that would induce or encourage  
 (19) environmental groups or other groups or governmental groups  
 (20) to want to preserve the land  
 (21) Q Have you encountered in your research Professor  
 (22) situations where developers have gone into a piece of land  
 (23) they didn t know it s an archaeological site have encountered  
 (24) it and have been delayed for years in developing the site  
 (25) because they had to deal with the fact that they had a

Vol 21 3312

- (1) sensitive area that they couldn t develop?  
 (2) A I m aware that that can slow up development  
 (3) Q And from your professional point of view and your – your  
 (4) academic point of view would you agree that the developers  
 (5) who might be competing with the government here and the  
 (6) competition  
 (7) that might drive up the prices would shy away from lands that  
 (8) had archaeological sites on them if they at all could?  
 (9) A Not necessarily We re talking here about large blocks of  
 (10) land The archaeological sites are actually quite a small  
 (11) percentage of that and that could easily be set aside I  
 (12) don t see how that would – in these particular properties how  
 (13) that would have a real negative impact on that  
 (14) Q Well getting back to your rating here if you have an  
 (15) archaeological site where the value goes up on what did you  
 (16) base that conclusion?  
 (17) A I based that conclusion on this competing pressure between  
 (18) government and the private sector and that that is one of the  
 (19) factors that would cause the government to want to bid or be a  
 (20) bidder in the process  
 (21) Q If – if Professor they were in competition with someone  
 (22) correct?  
 (23) A Well they re always in competition with someone  
 (24) Q Are they always in competition with someone?  
 (25) A Well there s always alternative uses of the land  
 (26) Q Yes but as they become more difficult the price goes

Vol 21 3313

- (1) down isn t that correct? There is land that only the  
 (2) government is going to buy isn t that correct?  
 (3) A I m not sure You d have to give me an example  
 (4) Q Let s stuck with archaeology still for a little bit If  
 (5) the government is not competing with a private party for  
 (6) archaeological land it doesn t need to pay as much for  
 (7) archaeological land is that correct?  
 (8) A Are we talking now about – are you addressing to me that  
 (9) they would buy it specifically only for that attribute?  
 (10) Q Well let s take a piece of land where you have a high  
 (11) archaeological value okay?  
 (12) A Okay  
 (13) Q Let s assume that the government might want to buy that  
 (14) preserve it possibly correct?  
 (15) A It would be one of the – one of those economic forces that  
 (16) would be important to them and might drive that property value  
 (17) up  
 (18) Q Now if no one else wanted that site that had high  
 (19) archaeological value because they weren t interested in high  
 (20) archaeological value we the taxpayers could pay less for the  
 (21) archaeological site correct?  
 (22) A If no one else wanted it and for any other reason I mean  
 (23) we may have timber we may have –  
 (24) Q Let met try to simplify I really want to focus on  
 (25) archaeology for a minute

Vol 21 3314

- (1) Let s assume all the other values are zero and for this  
 (2) particular piece of property the property s got a very good  
 (3) well classed archaeological site on it In your case you  
 (4) would give it a 2 highest value The government decides they  
 (5) want to buy the property with an archaeological rating of two  
 (6) Got zero on the rest but in that hypothetical if it doesn t  
 (7) have to compete with anybody else for the property at all it  
 (8) would pay less for the property?  
 (9) A It would but if I could use an example –  
 (10) Q That much is correct you d agree with me there?  
 (11) A Well it s a pretty unrealistic type of thing  
 (12) Q It s a pretty simple hypothetical but it s essentially  
 (13) correct is that right?  
 (14) A If that was the only –  
 (15) Q That s the hypothetical  
 (16) A – asset it had then – but it would fall also in my  
 (17) indexing method as the lowest level  
 (18) Q Who is it that ran this model for you? Who is the  
 (19) gentleman that ran the model for you? Can you remind me of  
 (20) his name? Starts with a D  
 (21) A He didn t run this model for me He just –  
 (22) Q Dirksen?  
 (23) A He used the computer  
 (24) Q Mr Dirksen Paul Dirksen?  
 (25) A He didn t have anything to do with this model

Vol 21 3315

- (1) Q I understand you re not a statistician  
 (2) A I don t sell myself as a statistician no  
 (3) Q You re aware that Mr Dirksen s been deposed in this case  
 (4) A He has been deposed I m not sure on these lands but he  
 (5) has - because he - because he didn t - he did very little on  
 (6) any of this work  
 (7) Q He was asked in the way that this model turns out rating  
 (8) he indicated that the developmental - the developmental index  
 (9) that s up there those pieces go into was the most important  
 (10) variable in coming up with the final number for these - these  
 (11) properties Do you agree or disagree with that?  
 (12) A The index?  
 (13) Q Yes  
 (14) A Yes  
 (15) Q Okay So getting back to just one part of that index the  
 (16) archaeology part again - please bear with me - only  
 (17) archaeological value the government wants it you would agree  
 (18) that if there were no private party out there who wanted it  
 (19) the value should be lower for the property?  
 (20) A Yes  
 (21) Q Okay Have you made any studies to determine who  
 besides  
 (22) the government might compete with the government to buy  
 (23) archaeological lands?  
 (24) A Well let me provide one other caveat to what you have just  
 (25) said and that has to do with the seller

Vol 21 3316

- (1) If the seller puts a lot of value on that archaeological  
 (2) site then there may be problems with say a meeting of the  
 (3) minds If in fact you re saying that the value goes down  
 (4) there has to be a willing buyer willing seller so the seller  
 (5) in this also has - brings some pressure to bear in this - in  
 (6) what you re discussing  
 (7) Q There are lots of things I d love to charge a high price  
 (8) for I ve got a used car that I d like to sell that falls into  
 (9) the same category but unless I find somebody to buy it for the  
 (10) price I want to sell it for we won t have a transaction  
 (11) right?  
 (12) A That s true  
 (13) Q Putting aside how important the archaeological lands are to  
 (14) the owners all I m asking is Have you undertaken any  
 (15) research into who would have competed with the government  
 for  
 (16) archaeological land on the lands that are in this lawsuit?  
 (17) A I have read some studies indicating that there are people  
 (18) who buy archaeological sites I have not assumed that in my  
 (19) model I ve only assumed in my model that as the historical  
 (20) significance of the property goes up that that is part of the  
 (21) pressures that can influence the price And my model includes  
 (22) some you know some adjustments in terms of indexing that  
 can  
 (23) drop out certain factors if - if other factors aren t involved  
 (24) and it s - my model is a accumulation of a lot of factors not  
 (25) one factor

Vol 21 3317

- (1) Q Can you identify for us any public groups that are  
 (2) generally thought to be interested in archaeological land?  
 (3) A I don t deal in those lands and off the top of my head -  
 (4) but I can t recall the names of the groups I have read  
 (5) studies I have read some documents - papers and things  
 (6) indicating that there are archaeological sites that are  
 (7) acquired for preservation I believe in most cases museums  
 (8) Q Are you aware of a single purchase of an archaeological  
 (9) site for archaeological preservation that was in Alaska?  
 (10) A I am not aware of that no  
 (11) Q Do you believe there have been any?  
 (12) A I m not aware of any  
 (13) Q My question though is Do you believe that there have  
 (14) been any?  
 (15) A You re asking me to speculate on something I have no  
 (16) knowledge about  
 (17) Q You re right You re right I don t want to do that  
 (18) Let s go back to Tok Tok and Tanacross These were near  
 (19) Tok Alaska I assume give or take correct?  
 (20) A Yes  
 (21) Q Okay And they were bought by the Air Force for radar  
 (22) sites?  
 (23) A For - yes  
 (24) Q Was the government motivated by a desire to preserve these  
 (25) lands?

Vol 21 3318

- (1) A They - there was actually some agreements there that they  
 (2) would be - that that would be the only use for them so that  
 (3) that land would be preserved and the Natives would have some  
 (4) continued use  
 (5) Q Absolutely That was from the seller s point of view the  
 (6) Native corporations - I don t mean to say corporations I  
 (7) don t know but those who were selling didn t want any uses  
 (8) made whatever they agreed the Air Force could do with respect  
 (9) to the backscatter sites?  
 (10) A That was important consideration in the negotiations  
 (11) Q Sure But the Air Force wasn t buying that land to  
 (12) preserve it was it? It was buying that land for radar sites?  
 (13) A That s right radar sites  
 (14) Q But by using your rating method you are able to in your  
 (15) approach to still assign these various values you can assign  
 (16) a number for access and biological and hydrological and all of  
 (17) that to those lands that the Air Force bought as radar sites  
 (18) is that correct?  
 (19) A Yes  
 (20) Q So that you can take - from your point of view in your  
 (21) theory you can take that purchase of a radar site and you can  
 (22) get some idea of what the government would pay for lands it  
 (23) wants to preserve is that correct?  
 (24) A Yes  
 (25) Q Did you make any study of how important those radar sites

Vol 21 3319

- (1) were to the United States?  
 (2) A Yes I did I talked to quite a few people  
 (3) Q And they were important were they not?  
 (4) A They were important although they had alternative sites  
 (5) They didn't have to build those in Alaska  
 (6) Q Oh that's certainly true Were they part of NORAD?  
 (7) A Yes as I recall  
 (8) Q High priority at the time I realize the project's been  
 (9) canceled but they needed the land for the radar sites?  
 (10) A Yes  
 (11) Q Do you have any idea whether they would have bought that  
 (12) land if they didn't need it for the radar sites?  
 (13) A I would just be speculating on that I know why they  
 (14) bought it  
 (15) Q From your point of view given your -- your theory are you  
 (16) able to look at different kinds of land located different  
 (17) places apply this rating system to it and then make  
 (18) comparisons to land in other locations?  
 (19) A That's the purpose yeah  
 (20) Q In this case -- well let me back up You've done an  
 (21) appraisal of -- of preservation environmental and preservation  
 (22) lands in Tigara is that correct?  
 (23) A I have  
 (24) Q When was that?  
 (25) A I don't recall the exact date of the -- I think it was in

Vol 21 3320

- (1) 89 but I'm sure you can refresh my memory  
 (2) Q I think it was in '89 Does that sound right? We have a  
 (3) copy for you but '89 sounds right to you?  
 (4) A Sounds right  
 (5) Q Before or after the oil spill?  
 (6) A I don't recall  
 (7) Q And again that was the same type of land that you're  
 (8) valuing in this case?  
 (9) A It was the same highest and best use  
 (10) Q Same highest and best use It was environmental  
 (11) preservation land correct?  
 (12) A No I think if you'll read that report I didn't use that  
 (13) term I think that in that report I said the highest dollar  
 (14) amount would come from selling it to a government agency I  
 (15) don't know that I said for preservation I just don't recall  
 (16) but I looked at it from basically the same -- that would be the  
 (17) mark --  
 (18) Q It was the same -- it was the same type of -- it's the same  
 (19) type of land It's the type of land the government would buy  
 (20) to preserve correct?  
 (21) A Yes  
 (22) Q So by any other name it's the same type of land we're  
 (23) talking about here highest and best use that's all I'm  
 (24) talking about correct?  
 (25) A Yes

Vol 21 3321

- (1) Q And did you apply this same rating method to the Tigara  
 (2) land?  
 (3) A I don't recall if I did or not I think I actually  
 (4) developed this after I did that study I realized that  
 (5) that's one reason I applied for the grant that I did a lot of  
 (6) this I realized how imprecise and how little knowledge there  
 (7) was in Alaska about that kind of process  
 (8) Q Did you try to take into account these kinds of qualities  
 (9) in the land in Tigara?  
 (10) A I took those into consideration yes but I -- I don't  
 (11) believe I used this rate -- I'm almost positive I did not use  
 (12) this rating system  
 (13) Q Okay but you looked at the same -- you're trying to figure  
 (14) out the same types of things correct? Value the land as land  
 (15) that would have a certain value to someone wanting to preserve  
 (16) it?  
 (17) A Yes  
 (18) Q Do you recall that you came up with a per-acre price for  
 (19) that particular land of \$190 an acre?  
 (20) A I'm going to answer your question yes but I want to go on  
 (21) record as saying that only because I'm in court that do I feel  
 (22) comfortable about speaking about that That was done in -- for  
 (23) another private individual It was not done as part of this  
 (24) court this assignment that I'm here for and I have no  
 (25) authorization to talk about that from the client

Vol 21 3322

- (1) Q I won't push on it then but let me ask you again here  
 (2) what were your range of per-acre values?  
 (3) A In the range of \$200 an acre  
 (4) Q Well doesn't it range from about 600 to over \$1100 an  
 (5) acre?  
 (6) A What I appraised it for?  
 (7) Q Here in this case  
 (8) A Well -- oh in this case?  
 (9) Q Yes sir  
 (10) A Oh oh I'm sorry I misunderstood  
 (11) Q I may have misspoke In this case  
 (12) A Yes Problem is they're 700 miles apart  
 (13) Q But the Tigara property was pretty amazing property wasn't  
 (14) it?  
 (15) A It's one of the most remote spots on earth  
 (16) Q And it's pretty amazing property?  
 (17) A It's all mountains  
 (18) Q But do you agree with me it's pretty amazing property?  
 (19) A I don't know what you call amazing It's tough terrain  
 (20) I should also point out counselor when you talk about  
 (21) this that property on the North Slope and above the Brooks  
 (22) Range is a somewhat different environment than we have in  
 (23) South  
 (24) Central Alaska  
 (25) MR FORTIER Could I ask counsel what --  
 (25) MR OPPENHEIMER Yes I'm sorry counsel This is

Vol 21 3323

- (1) Exhibit 15037 and I'm going to show - I'll give the document  
 (2) to the witness I'm on page 7 of that document This is the  
 (3) Tigara page  
 (4) BY MR OPPENHEIMER  
 (5) Q Professor if you would look - you can look at any part of  
 (6) it but what I have in mind to ask you about is the beginning  
 (7) of this paragraph While many -  
 (8) A While many arctic tribes were forced to wander in search of  
 (9) food the Inupiat people of the Point Hope area settled  
 (10) comfortable on an amazing piece of real estate they call it  
 (11) Tigara a word that translates as index finger and describes  
 (12) the peninsula that extends into the Chugach Sea directly in the  
 (13) migration of sea mammals and a myriad of game  
 (14) Q My point being it's an amazing piece of property  
 (15) A Not the - not the parcel that I appraised This I'm  
 (16) talking about the point where the village is and I didn't  
 (17) appraise that  
 (18) Q Did it have any effect on the property?  
 (19) A What do you mean effect on the property?  
 (20) Q Are you making just an idle comment in your report?  
 (21) A No I'm pointing out that where that village sits is an  
 (22) important - in fact been described as the oldest continuously  
 (23) inhabited site in the North American continent  
 (24) Q And this is a piece of property that's close enough to it  
 (25) that it's worth observing in that area as amazing property?

Vol 21 3324

- (1) A That point But I want to point out that the property I  
 (2) appraised was up on the mountains away from that  
 (3) Q And that lowered its value?  
 (4) A Did it lower its value?  
 (5) Q I assume that's why you just told me that  
 (6) A I would - I didn't appraise the other but yes I would  
 (7) say that the value there on that point would be greater than  
 (8) the value up on the mountain  
 (9) Q When you appraise property I should - let me make another  
 (10) table as soon as I find my marker I apologize Well perhaps  
 (11) I can do this without drawing I don't feel like drawing  
 (12) anyway  
 (13) Your - what you do is you - you get a value for the  
 (14) property before the spill you - and that's one of the things  
 (15) you have to do in your model is that correct?  
 (16) A In the approach that I used in this appraisal problem?  
 (17) Q Right right  
 (18) A I value the property moments you might say before the  
 (19) spill that's correct  
 (20) Q Before the spill By the way in your analysis you don't  
 (21) care whether the property has been oiled is that correct?  
 (22) That wasn't very well said because there's a sense in which  
 (23) that's inaccurate Let me try this again  
 (24) You - in calculating the damages Professor you don't  
 (25) make a distinction between shoreline that's been oiled and

Vol 21 3325

- (1) shoreline that's been oiled is that correct?  
 (2) A I don't no  
 (3) Q The significance to your theory of the fact that there was  
 (4) even an oil spill is that you believe the property was  
 (5) traumatized and that there were work crews and whatnot that  
 (6) disrupted the use of the property or at least it's theoretical  
 (7) use correct?  
 (8) A That's correct  
 (9) Q Because it is theoretical use is it not? We haven't  
 (10) identified here any actual uses that have been impaired?  
 (11) A No I think I've testified it doesn't matter whether they  
 (12) were using it or not They have the rights to use it  
 (13) Q I understand My point though is nothing you've said  
 (14) today has anything to do with any actual use impairment  
 (15) correct?  
 (16) A Not completely I mean if you've got people running up  
 (17) and down your beaches there's a certain amount of loss of use  
 (18) of it And if you have oil on your beaches there's a loss of  
 (19) use of it but what I have tried - I have looked at is not  
 (20) only - and I talked earlier about the actual physical  
 (21) intrusion of oil on those beaches but in addition the effect  
 (22) that has on - and in all these other factors we talked about  
 (23) on the property rights  
 (24) Q Okay but you're not aware of any actual business  
 (25) interruptions correct? I'm not being critical that's not

Vol 21 3326

- (1) part of your theory you're not aware of any business  
 (2) interruptions correct?  
 (3) A That's correct  
 (4) Q You're not aware of any actual sales being lost?  
 (5) A People have a right to sell or not to sell  
 (6) Q I'm not criticizing but you're not aware of any actual  
 (7) sales that were interrupted?  
 (8) A No  
 (9) Q Are you aware of any sales that were delayed?  
 (10) A No  
 (11) Q Are you aware of any negotiations that were interrupted?  
 (12) Not as speculation do you know of any negotiations that were  
 (13) actually disrupted?  
 (14) A Only some discussions but I'll say no to that  
 (15) Q Okay Know of any actual rental stream that was impaired?  
 (16) A No  
 (17) Q Okay Back to the fact that you're going to place a value  
 (18) on the land that's really an important point important part  
 (19) of what you're talking to us about today because then you're  
 (20) going to - you're going to determine rental rate based on  
 (21) that correct?  
 (22) A Yes  
 (23) Q You have to give us a value for the property In doing  
 (24) that is it important for you to take into account any  
 (25) preexisting contamination?

Vol 21 3327

- (1) A That might – that would be a consideration if I had  
 (2) access to information about that I didn't – in fact I think  
 (3) if you read my report I stipulated up front that I did not  
 (4) have access to or knowledge of any pre environmental damage  
 of  
 (5) concerns there I am aware that at the village there were some  
 (6) oil tanks at Chenega for example there were some oil tanks  
 (7) that –  
 (8) Q There was some –  
 (9) A There was some discussion about being there you know  
 (10) some – some oiling around those but that's a small part of  
 (11) the property  
 (12) Q Sawmill Bay?  
 (13) A I believe that's correct  
 (14) THE COURT Mr Oppenheimer we're going to take a  
 (15) break sometime You can pick a time  
 (16) MR OPPENHEIMER Now would be fine Your Honor  
 (17) THE CLERK Please rise This court stands in  
 (18) recess  
 (19) (Jury out at 12 03 p m )  
 (20) (Recess from 12 03 p m to 12 15 p m )  
 (21) (Jury in at 12 15 p m )  
 (22) THE CLERK This court now resumes its session  
 (23) Please be seated  
 (24) BY MR OPPENHEIMER  
 (25) Q Dr Green we're just about through here

Vol 21 3328

- (1) We were talking about Sawmill Bay Do you recognize this  
 (2) as a picture of Sawmill Bay?  
 (3) A Yes I believe it is  
 (4) Q Well Dr Green could you come down briefly?  
 (5) A Sure Oops  
 (6) Q Sorry All right Now we're looking are we not at  
 (7) Sawmill Bay This is an Chenega land?  
 (8) A Yes It looks like an old photograph  
 (9) Q Okay Now this is the hatchery?  
 (10) A Yes  
 (11) Q Okay And Chenega proper doesn't show up but it's up the  
 (12) coast toward where you're standing is that correct?  
 (13) A I guess that's true yes  
 (14) Q Now are you aware of two sites of potential pre spill  
 (15) contamination in this area?  
 (16) A When you say two sites I'm – the one I am familiar with  
 (17) is the – the oil or the storage gas storage tanks or fuel  
 (18) tanks that have since been remediated  
 (19) Q Going to step over you here  
 (20) Do you recognize this as the site of a cannery located in  
 (21) Sawmill Bay?  
 (22) A I think that's correct  
 (23) MS SMITH Randy the exhibit number?  
 (24) MR OPPENHEIMER I'm sorry pardon me The exhibit  
 (25) number on this is with my eyesight unreadable It is DX9227

Vol 21 3329

- (1) and the exhibit number of the large photograph of Sawmill Bay  
 (2) is DX13221  
 (3) MR OPPENHEIMER Mr Diamond thank you very much I  
 (4) appreciate it  
 (5) BY MR OPPENHEIMER  
 (6) Q Now Dr Green that old cannery site is located right  
 (7) here is it not?  
 (8) A I believe that's correct  
 (9) Q The fishery is here is that correct?  
 (10) A Yes  
 (11) Q And the town site is north You're not aware of the  
 (12) site there near the town site as another possible area?  
 (13) A I'm not aware no  
 (14) Q Do you know how long the cannery has been in this  
 condition  
 (15) as Port Ashton?  
 (16) A How long?  
 (17) Q Yes sir Do you have an understanding it predates the  
 (18) spill?  
 (19) A I believe it did  
 (20) Q Do you know what's in those tanks? By the way do you  
 (21) recognize this as another picture of the tanks?  
 (22) A Yes  
 (23) MR DIAMOND I have another hand free  
 (24) BY MR OPPENHEIMER  
 (25) Q Well here I can use this Do you know what is contained

Vol 21 3330

- (1) in these tanks?  
 (2) A It's my understanding there was fuel in them at one time  
 (3) but other than that I don't know what  
 (4) Q Now do you understand what's running down here along  
 this  
 (5) rock face is from the tanks?  
 (6) A I don't have knowledge of that no  
 (7) Q Do you have any knowledge as to whether it runs into  
 (8) Sawmill Bay?  
 (9) A I have no knowledge of that  
 (10) Q Did you undertake any investigation of the contamination  
 (11) pre spill contamination in Sawmill Bay when you did you  
 (12) appraisal?  
 (13) A I was aware that this economist had but because of the –  
 (14) when we're talking 68 000 acres and this small area I – I put  
 (15) certain caveats in my report that I did not have information  
 (16) that would allow me to make judgments on the adjustments for  
 (17) that  
 (18) Q Was it your understanding that this contamination had been  
 (19) remediated?  
 (20) A At the date of the spill?  
 (21) Q Yes sir  
 (22) A No it had not  
 (23) Q Is it your understanding that it's been remediated as of  
 (24) today?  
 (25) A I believe that there has been some work done there

Vol 21 3331

- (1) Q On what do you base that?  
 (2) A Just discussions that I've heard  
 (3) Q Has someone told you that these tanks and this flowing material has been cleaned up?  
 (4) A I've heard some discussions between individuals that led me to believe there's been some work. I can't testify other than that.  
 (5) Q By the way, both of these - how far would you estimate they are from the fishery?  
 (6) A I don't know exactly.  
 (7) Q All right. Thank you, Doctor. If you'd resume your seat.  
 (8) One more brief set of questions.  
 (9) MR OPPENHEIMER: Counsel, I'm going to show the witness Exhibit 1139, your exhibit again.  
 (10) BY MR OPPENHEIMER:  
 (11) Q Dr. Green, if I could ask you a question, I'm putting before you Exhibit 1139. If you could grab one end and I'll grab the other here for a second. And you had described a selection issue yesterday that had to do with need to maintain a contiguous property line or contiguous property by Port Graham Corporation, do you recall that?  
 (12) A Yes.  
 (13) Q Okay. Do you know of any reason why Sections 19 and 25 and 26 would not have been chosen?  
 (14) A You're asking why they could not have been chosen?

Vol 21 3332

- (1) Q Yes.  
 (2) A At this - I wouldn't have chosen them.  
 (3) Q That's not my question. Do you know of any reason why they could not have been chosen?  
 (4) A No, I don't.  
 (5) MR FORTIER: Your Honor, he can answer the question.  
 (6) THE COURT: I'm sorry, counsel, I lost you. I lost the objection because I was listening to the witness.  
 (7) MR FORTIER: I just wanted him to answer the question he was trying to answer.  
 (8) BY MR OPPENHEIMER:  
 (9) Q That's not quite in keeping with standards of our prior exhibits, perhaps, but the - the map we're looking at, this is the map that - at least in terms of the sections that we looked at yesterday, is it not?  
 (10) A Yes.  
 (11) Q And you were explaining yesterday that where the land was oiled that was relinquished, if the land north of it had been taken, there would have been a - if they'd given up the oiled southern portion around Aialik Bay, that they would not have had contiguous touching property between the holdings on Harris Bay and the holding on Aialik Bay, do you recall that?  
 (12) A Yes.  
 (13) Q But you've just explained that there's no reason why they couldn't - now, may have chosen not to, and I understand

Vol 21 3333

- (1) that - but there's no reason why they couldn't have chosen  
 (2) Sections 19, 25 and 26 which would have given them a contiguous  
 (3) piece of land up to the unoiled shoreline, correct?  
 (4) A You want to remember that the BLM encourages them to select  
 (5) lands that are contiguous because the BLM does not want to have  
 (6) a lot of isolated parcels to manage. It's a land management  
 (7) issue.  
 (8) Q Correct, but they could have chosen those sections?  
 (9) A As I said, I wouldn't have chosen them.  
 (10) Q There may be reasons why someone doesn't, but they could have chosen those sections?  
 (11) A I think they could have, but it wouldn't have been in their  
 (12) best interests to do that.  
 (13) MR OPPENHEIMER: Thank you, Your Honor. No further questions.  
 (14) REDIRECT EXAMINATION OF GEORGE H. GREEN  
 (15) BY MR FORTIER:  
 (16) Q Professor Green, you were asked a series of questions concerning voluntary sorts of decisions that a Native corporation might make for the sale of its property or for the use of its property. Do you recall that series of questions?  
 (17) A Yes.  
 (18) Q One of the questions was whether or not a Native corporation might make a decision to put in a nuclear power dump, do you recall that?

Vol 21 3334

- (1) A Yes.  
 (2) Q Or a nuclear dump?  
 (3) A Yes.  
 (4) Q Now, when you appraised these lands of these Village Corporations, were you appraising any voluntary uses that they were putting the lands to, or were you appraising the involuntary nature of the oiling by Exxon?  
 (5) A The involuntary nature.  
 (6) Q Okay. And when you did that, Dr. Green, did you look at what rights were being used or what - excuse me, what rights Native corporations were using or what Exxon was taking from them?  
 (7) A The rights that were suspended.  
 (8) Q One of those rights was quiet enjoyment, wasn't it?  
 (9) A Yes.  
 (10) Q Did Exxon's oiling have any impact on the financing ability of any Village Corporation?  
 (11) A Well, it was talked about here later that the government can buy lands without financing. I was not talking about that. The right that I was talking about is the ability to use the land as collateral to borrow money. That's one of the rights a property owner has. I believe those rights were hindered.  
 (12) Q Okay. So when you were talking towards financing that wasn't with regard to Village Corporations' rights, though?

Vol 21 3335

- (1) A I m sorry well -  
 (2) Q Maybe - go ahead I m sorry  
 (3) A I m sorry ask your question I missed you  
 (4) Q One of the questions was financing how does government  
 (5) purchase this property?  
 (6) A Yes  
 (7) Q Okay  
 (8) A And that was my response that the - the Village  
 (9) corporations I wasn t talking about hinderance of the  
 (10) government to finance or buy the property I was talking about  
 (11) the ability of the Village corporations to be able to use it as  
 (12) collateral  
 (13) Q Okay And what s your opinion on that?  
 (14) A I believe that it would - the oil spill the presence of  
 (15) oil and all the things that we talked about going on would  
 (16) hinder their ability to use it as collateral  
 (17) Q Now Dr Green you were asked some questions concerning  
 (18) your - your appraisal of Chenega Corporation lands I think  
 (19) it s been marked as DX15108 One of the series of questions  
 (20) that you were asked concerned the use of shoreline related  
 (21) areas do you recall that?  
 (22) A Yes yes  
 (23) Q Can you tell the jury why you appraised for the first year  
 (24) the whole of the property of each of these Native  
 (25) corporations?

Vol 21 3336

- (1) A Yes It was my opinion that the property rights that were  
 (2) suspended extended to all the property during that first year  
 (3) and I used the term traumatized because of all the  
 (4) activities and things that were going on out there It s my  
 (5) opinion that 85 percent of the rights of those - all those  
 (6) properties were certainly being used by Exxon if you will or  
 (7) having been suspended  
 (8) Q Now Dr Green were there other ways to value the harm to  
 (9) the land caused by the Exxon Valdez oil spill?  
 (10) A There are other ways of approaching this problem I  
 (11) suspect that if you had a number of appraisers that they  
 (12) would - might use different approaches yes  
 (13) Q Would one approach perhaps be remediation costs?  
 (14) A Yes that is one of the things that is -  
 (15) MR OPPENHEIMER Your Honor I just object on the  
 (16) grounds of foundation and beyond the scope of the -  
 (17) THE COURT Second objection is sustained but as to  
 (18) any future questions counsel  
 (19) BY MR FORTIER  
 (20) Q Now Dr Green you were also asked some questions  
 (21) concerning the three-year period Do you recall those  
 (22) questions?  
 (23) A Yes  
 (24) Q Okay And among the questions that was posed to you were  
 (25) questions concerning the interplay between NOAA as a science

Vol 21 3337

- (1) advisor and Admiral Ciancaglino do you recall that?  
 (2) A Yes  
 (3) Q Now when you wrote your report you considered that  
 (4) interplay didn t you?  
 (5) A Yes I think if you read my report you see that I used the  
 (6) Admiral s point which he determined that there was no further  
 (7) treatment that would - that would go on I should say  
 (8) Q And in reaching that conclusion Doctor did you conclude  
 (9) that that was the end of - that was the end of the question?  
 (10) A No I think if you read my report I stipulated in my  
 (11) report that the - that his determining that the - that  
 (12) discontinuation of beach treatment does not necessarily mean  
 (13) that all the beaches have been that the beaches are clean or  
 (14) that there isn t some continued presence of oil  
 (15) Q Doctor I put on the overhead page 69 of your report  
 (16) MR OPPENHEIMER Your Honor may we approach the  
 (17) bench?  
 (18) THE COURT Yes  
 (19) (Sidebar conference out of the hearing of the jury)  
 (20) MR OPPENHEIMER Your Honor I think this is the same  
 (21) issue we discussed  
 (22) THE COURT It is the same issue but the question is  
 (23) how far are you going to go with it?  
 (24) MR FORTIER I m just going to ask him that one  
 (25) question

Vol 21 3338

- (1) THE COURT That one question okay you can ask him  
 (2) that one question  
 (3) (Sidebar concluded)  
 (4) BY MR FORTIER  
 (5) Q Dr Green what I d like to refer you to is the second  
 (6) paragraph where the pen is  
 (7) A Yes It says this should not be interpreted - did you  
 (8) want me to read the whole paragraph two sentences  
 (9) Q Go ahead yes No just the last sentence is fine  
 (10) A Okay This should not be interpreted as meaning that he  
 (11) meaning the admiral was stating that - meaning that he was  
 (12) stating that no oil was present only that no additional  
 (13) cleanup was anticipated  
 (14) Q Doctor you were asked some questions concerning Tigara  
 (15) Corporation?  
 (16) A Yes  
 (17) Q Tigara is up on - in the Point Hope area isn t it?  
 (18) A Yes it is  
 (19) Q And that s way up above even Nome isn t it?  
 (20) A It s - yes and I personally feel it s a mistake using -  
 (21) trying to compare properties on the North Slope with properties  
 (22) in South Central Alaska  
 (23) Q And you didn t - did you use the Tigara appraisal as a -  
 (24) or the Tigara property as a comparable?  
 (25) A No

Vol 21 3339

- (1) Q In your appraisals for this –  
 (2) A No I didn't use it at all  
 (3) Q You were asked some questions Doctor concerning whether  
 (4) or not you were a statistician  
 (5) A Yes  
 (6) Q Now did you develop this model with a statistician?  
 (7) A Yes I did  
 (8) Q Who was that statistician?  
 (9) A Professor named Askar Chudary  
 (10) Q Professor where?  
 (11) A At the University of Alaska in Anchorage  
 (12) Q You talked about a paper during your earlier testimony with  
 (13) me  
 (14) A Yes he and I co authored – actually we've co authored a  
 (15) couple papers together We co authored a paper on this issue  
 (16) Q Now have you examined Dr Green whether or not an  
 Alaska  
 (17) Native corporations are willing to sell archaeological sites?  
 (18) A I've never known one to be sold  
 (19) Q And Doctor finally with regard – in your – in your  
 (20) analysis you look at the bond rates the 9 percent bond and  
 (21) the 9.68 percent bond  
 (22) A Well the – the 9.68 was a bond rate The 9 percent was  
 (23) a – a market rate for land uses  
 (24) Q The 9.68 percent rate can you explain what that bond rate  
 (25) means to the jury just a bit?

Vol 21 3340

- (1) A Well that – that was the rate at which if you had money  
 (2) you could go and put it into what we would call a safe  
 (3) investment a – that was a U S government guaranteed bonds  
 (4) so that it's what generally would be considered most  
 (5) conservative rate because it would be insured and guaranteed  
 (6) by the United States government So if I were buying a bond  
 (7) for one year and wanted the safest investment that would be  
 (8) probably what you would buy  
 (9) Q Doctor I'm curious why wouldn't you select those sections  
 (10) that counsel was asking you about in the Kenai Fjords?  
 (11) A They're inland and they're mostly mountains and glaciers  
 (12) I would choose that waterfront property  
 (13) Q Rather than try to get mountains and glaciers?  
 (14) A Yes I would  
 (15) Q And finally Doctor with regard to this – this market of  
 (16) environmental lands is it just the government that's involved  
 (17) in that market?  
 (18) A No there are others like the Nature Conservancy – well  
 (19) my mouth is dry but –  
 (20) Q I would pour you some water but –  
 (21) A But there are private groups that buy this land  
 (22) Q Can you tell us more about that?  
 (23) A Well you know in the Lower 48 we've seen quite a lot of  
 (24) that type of purchase behavior We haven't seen a lot of it in  
 (25) Alaska There have been a few parcels

Vol 21 3341

- (1) Q Now I do have one more question for you Doctor We all  
 (2) looked at some pictures of Sawmill Bay  
 (3) A Yes  
 (4) Q We looked at the cannery  
 (5) A Yes  
 (6) Q The old cannery  
 (7) A Yes  
 (8) Q Doctor do you know whether or not that cannery was  
 (9) constructed before 1964?  
 (10) A I – I don't know I don't recall I do know that it  
 (11) wasn't – well no I don't recall  
 (12) Q Do you know whether or not it was a cannery that was not  
 (13) constructed by Chenega Corporation?  
 (14) A I don't know that  
 (15) MR FORTIER I have no further questions  
 (16) MR OPPENHEIMER Two minutes?  
 (17) THE COURT You got it two minutes  
 (18) MR OPPENHEIMER I promise two minutes  
 (19) RE-CROSS EXAMINATION OF GEORGE H GREEN  
 (20) BY MR OPPENHEIMER  
 (21) Q You would have chosen the sections that we referred to that  
 (22) you couldn't have gone up because they have mountains and  
 (23) glaciers is that right?  
 (24) A They were interior In that area as you go back off the  
 (25) beach it becomes –

Vol 21 3342

- (1) Q Professor there's no glacier on those sections is there?  
 (2) A Well I say mountains and glaciers I don't remember those  
 (3) precise ones but there's a lot of that in that area and you  
 (4) would – I would choose the beach front property  
 (5) Q You have concluded have you not that there would not be a  
 (6) very high demand for the English Bay Port Graham or Chenega  
 (7) lands as an environmental purchase by any private  
 environmental  
 (8) group haven't you?  
 (9) A I'm sorry would you –  
 (10) Q You have concluded that there would not be a very high  
 (11) demand for the English Bay Port Graham of Chenega lands as  
 an  
 (12) environmental purchase by any private environmental group  
 (13) haven't you?  
 (14) A I've concluded that it would probably not be as great as  
 (15) certainly Chenega  
 (16) Q Are you aware of any attempt to use land that was used as  
 (17) collateral that was impeded because of the effect of the oil  
 (18) spill?  
 (19) A It doesn't matter because the –  
 (20) Q Professor my question are you aware of any?  
 (21) A No  
 (22) Q Your study assumes that all uses are available to the  
 (23) plaintiffs in this case during the three year period of your  
 (24) damage analysis is that correct? In other words you do not  
 (25) assume there's any impediment to any activity on the land?

Vol 21 3343

- (1) A You ll have - I m probably - the question -  
 (2) Q It s late and we ve been at this but your study assumes  
 (3) that all uses of the land were available to the plaintiffs in  
 (4) this case during the three year period covered by your study  
 (5) correct?  
 (6) A To the plaintiffs? No I m not saying they were available  
 (7) to the plaintiffs I m saying they suspended those rights  
 (8) I m not saying the plaintiffs had the right to borrow money  
 (9) Q But for - but for the oil spill your study assumes that  
 (10) all land uses were available to the plaintiffs in this case on  
 (11) the lands in question for the three year period correct?  
 (12) A With the surface estate they had full fee - fee rights  
 (13) yeah  
 (14) Q They had fee rights?  
 (15) A Yeah  
 (16) Q Thank you  
 (17) MR OPPENHEIMER Your Honor no further questions  
 (18) THE COURT You can step down sir Thank you very  
 (19) much  
 (20) MR STOLL Your Honor I have a witness I d like to  
 (21) call now  
 (22) THE COURT All right  
 (23) MR CLOUGH Your Honor before this witness takes the  
 (24) stand there is one matter we need to take up outside the  
 (25) presence of the jury It will be brief

Vol 21 3344

- (1) THE COURT Come to the bench let s see if we can  
 (2) solve it up here  
 (3) MR CLOUGH That s fine Your Honor  
 (4) THE COURT Bring the witness in now  
 (5) MR STOLL He s here  
 (6) (Sidebar conference out of the hearing of the jury)  
 (7) MR CLOUGH Your Honor last night we received a  
 (8) phone call from Mr Stoll indicating that he wanted to  
 (9) introduce a new exhibit a physical exhibit He described it  
 (10) as a mousse patty He has it here in a courtroom in a piece of  
 (11) Tupperware I have quite a few objections to this and I will  
 (12) try -  
 (13) THE COURT I hope they re not health objections  
 (14) MR CLOUGH Not a health objection although he  
 (15) hasn t opened the lid yet  
 (16) THE COURT Moose patty?  
 (17) MR STOLL That s not an M-double-o s-e  
 (18) MR CLOUGH That would have been a moose nugget Your  
 (19) Honor  
 (20) THE COURT Excuse me counsel I was using the wrong  
 (21) terms  
 (22) MR CLOUGH First off one of pure timeliness two  
 (23) separate orders of the Court first of all pretrial 40  
 (24) requires identification on the list for exhibits Second new  
 (25) exhibits ordered into -

Vol 21 3345

- (1) THE COURT Explain to me why you produced it now  
 (2) MR STOLL It was pure inadvertence We re going to  
 (3) put it on next week This witness we had to put on this week  
 (4) and frankly we just left it off the list It s not a - it s  
 (5) not a - it s not a - I don t think it s any - all this  
 (6) witness is going to do is say this looks like the mousse  
 (7) patties and you know the tar mousse we saw  
 (8) THE COURT It s not necessary to do that It s  
 (9) fine The objection s sustained  
 (10) MR CLOUGH Thank you Your Honor  
 (11) (Sidebar concluded)  
 (12) MR STOLL Your Honor we call Mr Pete Squartsoff  
 (13) THE CLERK Sir would you clip the microphone to the  
 (14) top of your shirt and remain standing for the oath Closer to  
 (15) your collar if you could That s fine Thank you  
 (16) Would you raise your right hand for the oath?  
 (17) (The Witness Is Sworn)  
 (18) THE CLERK Thank you You may be seated  
 (19) Sir for the record would you please state your full name?  
 (20) A Peter M Squartsoff  
 (21) THE CLERK Would you spell your last name?  
 (22) A S q u a - r t s - o f f  
 (23) THE CLERK What is your occupation?  
 (24) A I m a part time commercial fisherman outfitter and lodge  
 (25) owner

Vol 21 3346

- (1) THE CLERK Thank you  
 (2) DIRECT EXAMINATION OF PETER M SQUARTSOFF  
 (3) BY MR STOLL  
 (4) Q Mr Squartsoff where do you live?  
 (5) A Sir?  
 (6) Q Where do you live?  
 (7) A In Port Lions on Kodiak Island  
 (8) Q How long have you lived in Port Lions?  
 (9) A Since 1971  
 (10) Q And are you married?  
 (11) A Yes I am  
 (12) Q And you have two daughters I believe?  
 (13) A Yes sir  
 (14) Q And you re the Mayor of Port Lions?  
 (15) A Yes sir  
 (16) Q And where were you - where did you grow up?  
 (17) A In Ouzinkie on Spruce Island which is 15 miles from Port  
 (18) Lions  
 (19) Q All right Now I have a map here of Kodiak Island and  
 (20) Ouzinkie is right up here?  
 (21) A Yes  
 (22) Q And then right -  
 (23) A It s right up on the tip there as you come out of Kodiak  
 (24) Q Okay And then Port Lions is right over here?  
 (25) A It - yes in Kizhuayak Bay

Vol 21 3347

- (1) Q Have you lived – other than the time you were in the Army
- (2) have you lived most of your life in this area?
- (3) A All my life
- (4) Q All your life?
- (5) A Yes
- (6) Q Okay And what s your – you operate a lodge up in that
- (7) area?
- (8) A I have an outfitting business in that area I ve had since
- (9) 1980 I m part owner of a lodge which is on the south end of
- (10) the island
- (11) Q And you also work as a herring spotter I believe?
- (12) A Yes I have
- (13) Q And what is that – what is a herring spotter?
- (14) A Herring spotting is you go in a airplane and you fly
- (15) around and look for the fish and direct your boat to try to
- (16) catch these fish with a lot of other competition
- (17) Q And you were a Deputy Mayor of Port Lions I believe from
- (18) 1988 to 1990?
- (19) A Yes
- (20) Q And incidentally counsel suggested some financial
- (21) interest You don t have any financial interest personally
- (22) in this litigation do you?
- (23) A No I don t
- (24) Q Okay And as Mayor do you receive any salary at all?
- (25) A I receive a stipend yes

Vol 21 3348

- (1) Q When you were Deputy Mayor?
- (2) A Yes
- (3) Q But did you keep that money?
- (4) A No I didn t
- (5) Q What did you do with that money?
- (6) A I donated I started a program called Alaska s Future
- (7) Leaders
- (8) Q What s that?
- (9) MR CLOUGH Excuse me Your Honor I personally have
- (10) very high regard for Mr Squartsoff s work in this regard but
- (11) I don t believe this particular testimony is relevant to the
- (12) issues of this litigation so I object on the basis of
- (13) relevant
- (14) MR STOLL Just giving a little background about
- (15) himself
- (16) THE COURT He s given enough on that issue
- (17) MR STOLL Okay
- (18) BY MR STOLL
- (19) Q I may have you do this Joel This is Exhibit 1035
- (20) This is an aerial photograph of Port Lions?
- (21) A Yes it is
- (22) Q And the village of Port Lions is over to the upper upper
- (23) left?
- (24) A Yes
- (25) Q And then the boat dock is in the lower right is that

Vol 21 3349

- (1) correct?
- (2) A Right
- (3) Q I mean excuse me sort of the center there And could we
- (4) also show the photographs of Exhibits 954 960? Let me see if
- (5) I can – is this the picture of Port Lions also?
- (6) A Yes it is This is right downtown center of Port Lions
- (7) and my home is right there by the beach
- (8) Q And this is another picture of Port Lions?
- (9) A Yes it is This is the causeway that links Port Lions
- (10) community with Port Wakefield dock the ferry dock
- (11) Q And this is the boat harbor?
- (12) A Yes it is
- (13) Q I also have a map here of the Port Lions municipal
- (14) property This is Exhibit 1048 Can you see that
- (15) Mr Squartsoff?
- (16) A Yes
- (17) Q And is the property that is in the green area here is this
- (18) the land that s owned by the municipality?
- (19) A Yes it is
- (20) Q And then it s surrounded – this area that s in dots here
- (21) what is this?
- (22) A That s the Settlers Cove that s the bay
- (23) Q And then what s over here with the dots?
- (24) A That s Kizhuyak Bay
- (25) Q Okay So this entire area is ocean front property?

Vol 21 3350

- (1) A Yes it is
- (2) Q Would you tell the jury please what that property is used
- (3) for by the residents of Port Lions?
- (4) A Yes It s mainly recreational area It s for hiking
- (5) sport fishing camping swimming some kids go swimming out
- (6) on
- (7) the point there on the beach and a lot of fishing over by the
- (8) ferry dock
- (9) Q And is there shellfish fishing there?
- (10) A Yes there is in some – some small areas
- (11) Q And is some of this area it s a variety of terrain in
- (12) here isn t that correct?
- (13) A Yes it s heavily timber
- (14) Q And then the shoreline some of that is beach land some of
- (15) it s rocky et cetera?
- (16) A Yes
- (17) Q And incidentally what s – what s this area down here?
- (18) A That s new addition home residence
- (19) Q This is home residential property?
- (20) A Right
- (21) Q And what s this out here this –
- (22) A That s the ferry dock
- (23) Q So this – this park land is adjoining that?
- (24) A What s that?
- (25) Q This park land this area here or this recreation land
- (26) that you described that adjoins –

Vol 21 3351

- (1) A It s not a park yet but I d like to - in the future I ve  
 (2) always wanted to make a lot of that area into a park so it  
 (3) doesn t become developed  
 (4) Q And how many parcels do we have here six - six parcels?  
 (5) A Yeah  
 (6) Q And these - for instance this parcel here number B  
 (7) tract B is - says on here 49 acres of 5 621 feet of ocean  
 (8) front?  
 (9) A Yes  
 (10) Q And that s with - each one of these parcels there is a -  
 (11) the number of acres for instance Tract C is 41 acres and it s  
 (12) got 3300 ocean front feet does this accurately reflect the  
 (13) parcels that are owned by Port Lions?  
 (14) A Yes as far as I know yes  
 (15) Q What type of a community is Port Lions? What - what do  
 (16) people do there?  
 (17) A It s mainly - it s a commercial fishing community  
 (18) Q Somewhat similar to Ouzinkie in that regard?  
 (19) A Sir?  
 (20) Q Is it similar to Ouzinkie -  
 (21) A Yes it is  
 (22) Q - in that regard?  
 (23) A It s a little bit bigger than Ouzinkie is  
 (24) Q Now in May of 1989 did you - you were living in Port  
 (25) Lions then?

Vol 21 3352

- (1) A Yes I was  
 (2) Q As you have I guess most of your life?  
 (3) A Off and on  
 (4) Q Yeah And did you - had you been out spotting or flying  
 (5) around in your airplane?  
 (6) A Yes I was - I was working as a spot a pilot at that  
 (7) time starting the middle of April through the end of May and  
 (8) partially into June  
 (9) Q All right The herring season in - in Prince William  
 (10) Sound had been closed isn t that correct?  
 (11) A As far as I know yes  
 (12) Q And when you came into Port Lions did you notice anything  
 (13) different about Port Lions?  
 (14) A Yes I did Upon coming in there as we were circling over  
 (15) I could see some sheen in the tide streaks around Port Lions  
 (16) out in front of Port Lions And then we landed and I went and  
 (17) asked the VPSO what was going on and he said they weren t  
 doing  
 (18) any work because they were told not to pick up any of the oil  
 (19) without proper - proper training  
 (20) Q What s the VPSO?  
 (21) A Village Public Safety Officer  
 (22) Q And so you talked to him about trying to clean up some of  
 (23) the oil that was out there?  
 (24) A I was wondering why nobody was out picking it up  
 (25) Q And - and what did you do when he told you this statement

Vol 21 3353

- (1) that they were told not to pick it up?  
 (2) A The next day I went into Kodiak and met with some people  
 (3) from Veco One person I - I was a little surprised when I  
 (4) went in there because there was guards all over and  
 (5) everything and I knew one person Yvonne Zharoff and I talked  
 (6) to her about and told her what I thought and why it wasn t  
 (7) being picked up And in fact she - asked me or wanted to  
 (8) talk to some people and asked me if I would - wanted a job  
 (9) working there in the office in Kodiak and I said no my  
 (10) concern was getting the oil picked up out around Port Lions  
 (11) And couple days later a few days later I m not exactly sure  
 (12) but they did send some people out to give the people training  
 (13) so they could start picking up the oil  
 (14) Q Was a safety concern expressed by the Veco people?  
 (15) A Yes  
 (16) MR CLOUGH Excuse me Your Honor I d like to object  
 (17) on basis of relevance again to the issues present in this  
 (18) litigation  
 (19) THE COURT The objection s overruled  
 (20) MR CLOUGH Thank you  
 (21) BY MR STOLL  
 (22) Q I m sorry what was your answer?  
 (23) A I -  
 (24) Q Was there some concern expressed as to the Veco people  
 (25) concerning safety?

Vol 21 3354

- (1) A Yes there was proper training and equipment  
 (2) Q And then did you - at that time and during the course of  
 (3) the summer of 1989 did you observe oil on the beaches in Port  
 (4) Lions?  
 (5) A Yes I did  
 (6) Q And would you tell to the jury please what you saw?  
 (7) A I - depending on the tides and the winds whichever - we  
 (8) have a lot of changing of winds and tide comes in and out  
 (9) every six hours or so depending on which way the wind and the  
 (10) tide blew it would come into different areas and in the tide  
 (11) streaks which have eddies around points and by living there  
 (12) all my life I pretty much knew exactly where to go and look to  
 (13) find this And I went out and I found it many times and it  
 (14) even came in on the beach right down in front of my home  
 (15) Q What did the oil look like? Could you describe that to the  
 (16) jury?  
 (17) A It was various sizes of - of mousse patties like from  
 (18) light brown to fairly dark colored  
 (19) Q And was it - there was attempts to clean this up though?  
 (20) A What s that?  
 (21) Q There was there was - later on not initially but after  
 (22) a while there was attempts to clean this up though wasn t  
 (23) there?  
 (24) A Yes there was  
 (25) Q And after it was - a beach was cleaned up did it just

Vol 21 3355

- (1) stay clean then or what happened?  
 (2) A No it didn't -- well depending again on the tides and the  
 (3) winds and some -- in some areas if we had some hot sunny  
 days  
 (4) it would melt and sink into the sand or the rocks and you  
 (5) couldn't really get it all out without picking up the beach  
 (6) Q The mousse patties as you called them -- that's  
 (7) m o u s s e would those mousse patties would those mousse  
 (8) patties -- not the same ones but would other mousse patties  
 (9) come back after you know with the shift in the tides?  
 (10) A Yes they would They -- the people that were working were  
 (11) designated areas to cleanup so they went from area to area  
 (12) They each had an area for a certain day and a lot of them  
 (13) didn't realize the way it was set up They should have went by  
 (14) the tides and the winds and they would have known exactly  
 where  
 (15) to go to pick up  
 (16) Q After they cleaned up would the tides come back?  
 (17) A If we had a rising tide and the wind was blowing offshore  
 (18) from that area it would get back out in the water and go in on  
 (19) another area  
 (20) Q And did you subsequently go to -- at some point in time did  
 (21) you go up to Prince William Sound to see some oiling there?  
 (22) A Yes I did Well I went to an oiled Mayor's meeting in  
 (23) Valdez  
 (24) Q What was oiled Mayors?  
 (25) A It was mayors from the villages that were in the area of

Vol 21 3356

- (1) the oil  
 (2) Q That had been oiled?  
 (3) A Right  
 (4) Q Okay And when you went up to -- you got a tour of some  
 (5) areas of Prince William Sound?  
 (6) A Yes we did We went out one day on a -- on a charter boat  
 (7) with the Mayors from the Amoco Cadiz spill from Brittany in  
 (8) France and we went out and seen some clean up work being  
 done  
 (9) Q And was the -- the oiling in Port Lions wasn't as bad as  
 (10) the oiling in Prince William Sound?  
 (11) A No I don't believe so  
 (12) Q Okay Now Mr Clough in his opening statement showed a  
 (13) photograph and I want to ask you if this is what kind of  
 (14) oiling that you're talking about in Port Lions Could we see  
 (15) Exhibit D160S009?  
 (16) MR GROSS Could you scan it from the podium?  
 (17) MR STOLL Pardon me?  
 (18) MR GROSS Could you scan it from the podium?  
 (19) MR STOLL This is just -- I've got a photocopy of  
 (20) it  
 (21) MR CLOUGH I think if you scan it Bob it'll work  
 (22) Try it  
 (23) BY MR STOLL  
 (24) Q Now let me ask you this question Mr Clough said this  
 (25) was the oil on Kodiak Is this --

Vol 21 3357

- (1) MR CLOUGH Objection Your Honor that is --  
 (2) THE COURT Sustained objection sustained  
 (3) BY MR STOLL  
 (4) Q Let me ask you this Is this a typical kind of oiling that  
 (5) you're talking about that you're complaining about in Port  
 (6) Lions?  
 (7) A No it is not This looks like it might have been where  
 (8) somebody picked up a mousse patty and the stain on the rocks  
 (9) Q You're -- what size of -- what -- describe a little bit to  
 (10) the jury what you're talking about?  
 (11) A Well --  
 (12) Q With your hands maybe or --  
 (13) A Well with a pencil sitting there and a guy's boot that  
 (14) just look like a little tiny -- little tiny piece had sat and  
 (15) there was just all different sizes of mousse that came in  
 (16) Q And was it -- was it an isolated mousse patty or were there  
 (17) many of them?  
 (18) A There was many of them This looks like there was only --  
 (19) only one there  
 (20) Q Okay Now could you tell the jury -- could you tell the  
 (21) jury what changes if any occurred in terms of the use of  
 (22) these municipal properties by the residents? Did they -- for  
 (23) instance you mentioned swimming Did people continue  
 swimming  
 (24) in this area after -- through 1989?  
 (25) A No they did not

Vol 21 3358

- (1) Q Why is that?  
 (2) A They were afraid afraid of getting oil on them or the  
 (3) kids Nobody went out Nobody went on the beaches in '89  
 and  
 (4) till late probably by late fall of '90 after the spring  
 (5) cleanup summer  
 (6) Q There was more cleanup in 1990 as well?  
 (7) A Yes there was the spring of 1990  
 (8) Q Okay And what about picnicking and other recreational  
 (9) uses on the beaches at Port Lions?  
 (10) A There was none of it done in '89  
 (11) Q And what about the shellfish? Were people -- did people go  
 (12) shellfishing?  
 (13) A No they did not Nobody ate any shellfish  
 (14) Q And what about --  
 (15) A That I know of  
 (16) Q And that -- did that -- did those changes in uses continue  
 (17) until at least the fall of 1990 to your knowledge?  
 (18) A To my knowledge yes  
 (19) Q Okay Now today do you think the beaches are clean or  
 (20) what's your -- what do you --  
 (21) A I -- I think they're clean yes but I'm not 100 percent  
 (22) sure because some of the mousse patties on hot sunny day  
 would  
 (23) melt and sink sink down into the sand  
 (24) MR STOLL That's all I have  
 (25) MR CLOUGH Hi Mr Squartsoff My name John

Vol 21 3359

- (1) Clough We haven't met but I think you met Keith Lied from my  
 (7) office during your deposition back in February Good  
 (3) afternoon sir  
 (4) CROSS EXAMINATION OF PETER M SQUARTSOFF  
 (5) BY MR CLOUGH  
 (6) Q I'd like to start out if I could just by following up on  
 (7) a couple of questions Mr Stoll asked you  
 (8) When you were talking he was reading to you from this  
 (9) chart some acreage and some footage information and you  
 (10) testified it was correct to the best of your knowledge I  
 (11) wanted to ask you have you ever personally measured any of  
 (17) these shorelines?  
 (13) A No I haven't but I've walked around there many times  
 (14) Q Have you reviewed any municipal documents which - where  
 a  
 (15) surveyor has been hired by Port Lions to measure this acreage  
 (16) for you?  
 (17) A Not to my knowledge  
 (18) Q So as you're sitting here today you don't know personally  
 (19) of your own knowledge whether these - whether for example  
 (20) on Tract C is it - it is in fact 3 373 75 feet of shoreline?  
 (21) A No I don't  
 (22) Q You don't know if any of these acreages are correct either?  
 (23) A No I don't  
 (24) Q Now you were in Port Lions during much of the spring of -  
 (25) the spring of 1989?

Vol 21 3360

- (1) A Yes off and on  
 (2) Q And isn't it true sir that it took a while for the oil to  
 (3) make it from the Valdez spill which was up in Bligh Island in  
 (4) Prince William Sound down all the way to the Kodiak Island  
 (5) area?  
 (6) A Yes it did  
 (7) Q Before the spill got there did you have some concerns as  
 (8) to whether in fact your area was going to be oiled?  
 (9) A I - I wasn't really sure I didn't know Personally I  
 (10) didn't - I didn't really think that it would come back that  
 (11) far  
 (12) Q Were other residents of your community concerned?  
 (13) A Yes they were  
 (14) Q Is it fair to say they were quite concerned?  
 (15) A Yes  
 (16) Q Would it be fair to say that they were afraid that Port  
 (17) Lions would be very heavily oiled by the oil spill?  
 (18) A I - I can't speak for them but I - I believe so  
 (19) Q In fact it turned out that their worst fears were  
 (20) never realized isn't that true?  
 (21) A What's that?  
 (22) Q Their worst fears were not realized were they?  
 (23) A No  
 (24) Q And in fact sir the amount of oil that actually reached  
 (25) the Port Lions area was - was relatively small wasn't it?

Vol 21 3361

- (1) A I don't know what you mean by small It - in comparison  
 (2) to Valdez or some of the areas over there I would say small  
 (3) Q Well during your testimony - during your testimony you  
 (4) mentioned your work with the oiled Mayors  
 (5) A Yes  
 (6) Q Do you recall the oiled Mayors retained an organization  
 (7) called IAI to go and interview leaders of the communities  
 (8) throughout the areas affected by the spill?  
 (9) A Yes  
 (10) Q And do you recall back in March of 1990 less than a year  
 (11) after the spill you in fact were interviewed?  
 (17) A Yes  
 (13) Q And you were interviewed by a Dr John Russell who was  
 one  
 (14) of the leaders of that project isn't that correct?  
 (15) A I - I don't remember  
 (16) Q You remember the interview though?  
 (17) A Right  
 (18) Q And do you remember there was a tape recorder there?  
 (19) A I don't remember the tape recorder I don't - I think it  
 (20) was over the phone  
 (21) Q And in fact Dr Russell prepared a transcript of the  
 (22) questions and answers that he asked you during that interview  
 (23) Do you recall being asked questions and answers by Dr  
 Russell  
 (24) during the interview?  
 (25) A Yes

Vol 21 3362

- (1) Q And during the interview you were asked - and this is on  
 (2) page five the bottom of page five to the top of page six and  
 (3) this is back in March let me get the exact date What's the  
 (4) exact date of it? March 14th sir 1990 Back during this  
 (5) interview you were asked by Dr Russell was there any oil  
 (6) that ever actually got there speaking to your community And  
 (7) you responded at that time oh yes it was right on the beach  
 (8) down there you know but it was small The biggest chunks  
 (9) were maybe eight ten inches or so that I've seen around  
 (10) here There was some maybe a little bit bigger than that I  
 (11) guess up in around the backside of the beach there  
 (12) Now is that - is that an accurate statement by you?  
 (13) A Yes it is I'm speaking about right down in front of my  
 (14) house in Port Lions  
 (15) Q And you were - you were asked whether it was a big mess?  
 (16) A Yes  
 (17) Q And was it a big mess?  
 (18) A Not in comparison with Valdez  
 (19) Q And in fact didn't you tell Dr Russell that it was  
 (20) really just in tide streaks?  
 (21) A Yes And the tide streaks landed in different beaches at  
 (22) different times  
 (23) Q That's right And in fact Dr Russell asked you to -  
 (24) talked to you about the fact that you had gone up to Valdez and  
 (25) seen some of the beaches up there isn't that correct?

Vol 21 3363

- (1) A Yes  
 (2) Q And in response to his questions didn't you tell him that  
 (3) if you took all the oil from all the beaches around Port Lions  
 (4) where you lived and stacked it up on just one of the beaches  
 (5) you saw in Prince William Sound it would still look pretty  
 (6) good compared to the other beaches you saw in Prince William  
 (7) Sound?  
 (8) A I - yes that's what I said  
 (9) Q It was really a whole different world of oiling down your  
 (10) neck of the woods versus those beaches up in Prince William  
 (11) Sound wasn't it?  
 (12) A Yes It was a different type of oil  
 (13) Q And there wasn't really a lot of it was there?  
 (14) A In comparison with Prince William Sound no But we're a  
 (15) lot of miles away from Prince William Sound  
 (16) Q That's right And the oil had weathered and fortunately  
 (17) certainly I'm sure you were pleased that your community wasn't  
 (18) oiled anything like Prince William Sound aren't you?  
 (19) A Yes  
 (20) Q Now you talked some about the clean up program that was  
 (21) undertaken in your area And you recall that quite a few  
 (22) people from your community were involved in the cleanup  
 (23) A Yes  
 (24) Q And you talked to Dr Russell about that during the  
 (25) interview also didn't you?

Vol 21 3364

- (1) A Yes  
 (2) Q Isn't it true sir that you were actually concerned that  
 (3) more people worked on the cleanup than was really necessary  
 (4) to clean up the amount of oil in your area?  
 (5) A Yes  
 (6) Q And in fact your own wife worked on the cleanup for a  
 (7) while didn't she?  
 (8) A Short period yes  
 (9) Q And is it fair to say without getting into your domestic  
 (10) situation sir - I'm in perilous waters here - but you  
 (11) actually asked her to leave the clean up program?  
 (12) A Yes  
 (13) Q And the reason you asked her to leave was because you felt  
 (14) pretty strongly that there were too many people out there doing  
 (15) the cleanup?  
 (16) A Oh I don't know if that's - no I don't think that's the  
 (17) reason why I asked her to leave because it was too many  
 (18) people  
 (19) Q Well didn't you think there were too many people out there  
 (20) working on the cleanup?  
 (21) A I - what I was saying there is there was a lot of people  
 (22) that weren't doing what they were supposed to have been  
 (23) doing in the cleanup They were - they just hired everybody that  
 (24) wanted to work Every boat and every skiff they put out there  
 (25) Q And you thought that for the amount of oil in your

Vol 21 3365

- (1) community they had more people working than they needed?  
 (2) A Yes right in Port Lions  
 (3) Q And in fact she told you in terms of - did she work for  
 (4) what about eight or nine days I think?  
 (5) A I'm not exactly sure It was a short period  
 (6) Q And did she tell you about her work on those beaches?  
 (7) A Not really I don't recall  
 (8) Q Did you ever get a chance to observe any of the cleanup  
 (9) being done on any of the beaches around your community?  
 (10) A Yes I did I - I didn't actually walk with the people  
 (11) but I seen them going around the bay  
 (12) Q Okay And is it fair to say that - so you've seen them  
 (13) going around the bay literally the local residents who were  
 (14) working in the cleanup would literally walk along the  
 (15) shorelines is that correct?  
 (16) A Yes they would walk up and pick up the oil that they found  
 (17) as they were walking  
 (18) Q They carried plastic bags with them right?  
 (19) A Bags and buckets yes  
 (20) Q If they came along and found one of those eight inches or  
 (21) ten inches or less mousse patties you were describing to the  
 (22) jury and they saw it they used a pick or shovel or maybe just  
 (23) hands and gloves but picked it up and put it in the bag  
 (24) right?  
 (25) A Yes

Vol 21 3366

- (1) Q And in fact and they were able to pick up this stuff off  
 (2) the beach weren't they?  
 (3) A Yes  
 (4) Q And in fact as they did it they picked up a lot of other  
 (5) stuff too didn't they?  
 (6) A I don't know what they picked up  
 (7) Q Well during your interview with Dr Russell didn't you  
 (8) tell him that - and I'm not criticizing these folks I would  
 (9) have done it too if it had been my shoreline - but that  
 (10) while they were out there they also picked up debris and  
 (11) trash and old fishing stuff and pretty much anything that was  
 (12) on the beach whether it was related to the oil spill or not?  
 (13) A No I think - I believe that was picked up out in the  
 (14) water If there was oil on the kelp or stuff like that out on  
 (15) the beach they picked it up They didn't go on the beach  
 (16) picking up every bit of debris A lot of it was picked up in  
 (17) the water is where I seen a lot of people picking up  
 (18) everything  
 (19) Q Well do you recall when Dr Russell asked you were they  
 (20) actually becoming up oil off the - like the tide speaks like  
 (21) I do you responded among other things and they were putting  
 (22) - everything was going into these bags They kept - I'm  
 (23) sorry counsel this is page 9  
 (24) I apologize There wasn't a piece of kelp or a piece that  
 (25) drifted out in the bay all summer They kept it clean I

Vol 21 3367

- (1) mean they picked up everything not just the oil?  
 (2) A That's what I'm saying out in the bay  
 (3) Q And in fact -  
 (4) A In the tide streaks because the tide brought everything  
 (5) together and the oil and the kelp and everything would be in  
 (6) these tide streaks  
 (7) Q And they filled a lot of bags didn't they?  
 (8) A Yes they did  
 (9) Q But in the individual bags as a general rule there wasn't  
 (10) too much oil in them was there?  
 (11) A On some - some were and some weren't  
 (12) Q Well didn't in your interview with Dr Russell you tell  
 (13) him about in your opinion about 10 or 15 percent of the bags  
 (14) contained oil?  
 (15) A Yes They picked up -  
 (16) MR STOLL Your Honor I don't think that's an  
 (17) accurate statement  
 (18) THE COURT You can take care of it on redirect  
 (19) counsel  
 (20) MR CLOUGH Just a couple more questions  
 (21) Mr Squartsoff because among other things you wanted to get  
 (22) home  
 (23) THE WITNESS My daughter's coming home from summer  
 (24) school at 1:30 she'll be here  
 (25) MR CLOUGH I promise to get done before that My

Vol 21 3368

- (1) daughter she would insist upon it too  
 (2) BY MR CLOUGH  
 (3) Q Are you aware that there was a winter monitoring program  
 (4) that went on over the winter '89 to '90?  
 (5) A Yes I was  
 (6) Q You saw some of the reports that came back from that  
 (7) program?  
 (8) A Yes  
 (9) Q And Dr Russell talked to you about that as well isn't  
 (10) that correct?  
 (11) A Yes  
 (12) Q This is on page 30 The winter monitoring program involved  
 (13) people going out and seeing if they could still find oil on  
 (14) some of the beaches isn't that correct?  
 (15) A Yes yes they weren't marked and designated areas There  
 (16) were small sections where they had to go and check to see if  
 (17) there was oil coming into that area  
 (18) Q And based on what you saw from those reports it appeared  
 (19) there was very very little oil out there, isn't that what you  
 (20) told Dr Russell?  
 (21) A Yes in those areas  
 (22) Q There was another unfortunate incident that occurred in  
 (23) Port Lions in December of 1989 do you recall what that was?  
 (24) A Yes  
 (25) Q What was that sir?

Vol 21 3369

- (1) A The fish processing plant sunk  
 (2) Q When you say the fish processing plant are we referring  
 (3) to a big fish processing vessel - if I pronounce it wrong  
 (4) please tell me - the Smokwa?  
 (5) A Smokwa  
 (6) Q Smokwa thank you It sank while it was actually tied  
 (7) right up to the dock didn't it?  
 (8) A Yes it did  
 (9) Q And it unfortunately leaked quite a bit of fuel oil into  
 (10) the harbor didn't it?  
 (11) A I wouldn't say quite a bit It was boomed off right away  
 (12) Q Didn't a number of residents including people like Janet  
 (13) Thompson come and complain to you including other  
 (14) members of  
 (15) the City Council in fact it leaked on a lot of stuff and #  
 (16) gotten outside the booms and onto their property?  
 (17) A Yes  
 (18) Q And didn't they also complain that they didn't feel very  
 (19) good cleanup had been done of that oil that spilled from the  
 (20) fish processing vessel right there in your own harbor?  
 (21) A Yes  
 (22) Q Now in the following spring in March of 1990 you were  
 (23) involved in a program I believe sir where you walked some of  
 (24) the beaches - and can you help me out what's the  
 (25) pronunciation of the bay?  
 (26) A Kizhuyak

Vol 21 3370

- (1) Q Kizhuyak Thank you sir - where you walked some of the  
 (2) shorelines in Kizhuyak Bay looking for oil?  
 (3) A Yes  
 (4) Q And as part of that process you were asked to fill out  
 (5) essentially daily reports that said where you went what you  
 (6) did and what you saw is that correct?  
 (7) A Yes  
 (8) Q Could we have DX12255 please? 12255 right  
 (9) MR CLOUGH Your Honor I'm going to put this on the  
 (10) Elmo I'm also going to give a copy to the witness directly  
 (11) if I might because these are little difficult to read  
 (12) Is the Elmo on Joel?  
 (13) BY MR CLOUGH  
 (14) Q Okay Now this exhibit consists of four -  
 (15) Zoom it out just a little four separate pages I realize  
 (16) that the jury's not going to be able to read the highlighted  
 (17) language from where you are but what I'm going to do is ask  
 (18) Mr Squartsoff if he from the copy he has in front of him can  
 (19) read the highlighted language Oh is the chart in people's  
 (20) way at all Can you see past the chart?  
 (21) Okay here Now this is a document that's the first page  
 (22) of defendants exhibit 12255 It's dated March 22nd 1990 is  
 (23) that correct Mr Squartsoff?  
 (24) A Yes  
 (25) Q And there's a signature down in the lower left hand

Vol 21 3371

- (1) corner Is that yours?  
 (2) A Yes it is  
 (3) Q And you filled this document out didn't you?  
 (4) A Yes  
 (5) Q And this is your report your daily log sheet for at least  
 (6) one of the sections that you walked out - and you'll have to  
 (7) help me again?  
 (8) A Kizhuyak  
 (9) Q - Kizhuyak Bay thank you looking for oil in March of  
 (10) 1990 is that correct?  
 (11) A Yes  
 (12) Q And under description of activities I've highlighted -  
 (13) it's my highlighting not in the original - I've highlighted  
 (14) some of what you wrote Could you from your copy read to  
 (15) the jury what you wrote at that time?  
 (16) A Yes Walked four miles of beach east side meaning  
 (17) Kizhuyak Bay from Leto Point to three miles from the head of  
 (18) the bay No trace of any type of oil Beaches are very clean  
 (19) on that side of Kizhuyak Bay  
 (20) Q Okay Now sir if you could turn to the second page of  
 (21) the exhibit Now this is entitled Skiff Cleanup Report - and  
 (22) please correct me if I'm wrong but I believe that this is a  
 (23) second page of your report describing the same walk not a  
 (24) different walk - I don't want to mislead anybody - but the  
 (25) same walk that you did on March 22nd 1990 on that portion of

Vol 21 3372

- (1) Kizhuyak Bay is that correct?  
 (2) A Yes  
 (3) Q And that's your signature on the bottom of that as well?  
 (4) A Yes it is  
 (5) Q And this is sort of a fill in the blanks form I don't  
 (6) know if you can see that from where you're sitting Maybe we  
 (7) can - at the top there's a fill in the blank for where you  
 (8) fill in the type of oily material that you observe during the  
 (9) walk and is that the purpose of that blank in the form?  
 (10) A Right  
 (11) Q And I notice that there's nothing filled in under gravel  
 (12) kelp mousse or other Is that because you didn't observe any  
 (13) oily gravel mousse kelp or other during that walk?  
 (14) A Right  
 (15) Q And looking down to the bottom of the form what I've  
 (16) highlighted here there's another fill in the blank for yards  
 (17) of beach cleaned and there's nothing listed Is that because  
 (18) there was in fact nothing to clean when you went out there?  
 (19) A Right  
 (20) Q And it says total bags Now we were talking earlier that  
 (21) the clean up crews out in your area would carry these plastic  
 (22) bags out and just dump a mousse patty or whatever it was into  
 (23) them when they found it When it says total bags here is  
 (24) that the type of bags that that blank in the form is to refer  
 (25) to?

Vol 21 3373

- (1) A Yes  
 (2) Q And you've got zero down for that?  
 (3) A Yes  
 (4) Q And that's because you didn't find anything to put in a bag  
 (5) on that particular trip is that right?  
 (6) A Right  
 (7) Q Now sir if you could turn to the next page in order this  
 (8) is a daily log sheet dated the next day March 23rd 1990 and  
 (9) again the highlighting is on my copy Is this also your  
 (10) signature and handwriting sir?  
 (11) A Yes it is  
 (12) Q And does this describe a separate inspection tour if you  
 (13) want to call it that that you made?  
 (14) A Yes  
 (15) Q And where did you go this time?  
 (16) A Up - up at the head of the bay near the head of the bay at  
 (17) the Terror Lake landing for the hydro pilot  
 (18) Q And could you read the highlighted portion under your  
 (19) description of activities for that walk?  
 (20) A Yes walked about two miles from Terror Lake landing site  
 (21) out to Kaitak (phonetic) Found no traces of oil on beaches  
 (22) head of Kizhuyak opposite -  
 (23) Q Could it be appears if I may presume to try to read your  
 (24) writing for you?  
 (25) A Right It's - copies appears to be clean clean of oil

Vol 21 3374

- (1) Q And the last page of this exhibit sir is another one of  
 (2) those skiff clean up reports and I believe if you take a  
 (3) second to look at it is this the skiff clean up report for  
 (4) your two mile walk along that you just described at the other  
 (5) portion of Kizhuyak Bay?  
 (6) A Yes it is  
 (7) Q And on this one also there's nothing listed under oily  
 (8) material because you didn't observe any?  
 (9) A No  
 (10) Q And there's nothing listed under yards of beach cleaned is  
 (11) there?  
 (12) A No  
 (13) Q Because you didn't clean any beach on that two miles did  
 (14) you?  
 (15) A No  
 (16) Q And there's zero under bags is that correct sir?  
 (17) A Yes  
 (18) Q And that's because there wasn't anything there to be picked  
 (19) up and cleaned during that two miles that you walked?  
 (20) A Right  
 (21) Q And that was on March 23rd 1990?  
 (22) A Yes  
 (23) MR CLOUGH Thank you No further questions Your  
 (24) Honor Thank you very much  
 (25) MR STOLL I have a few questions I just have a few

Vol 21 3375

- (1) questions Mr Squartsoff  
 (7) REDIRECT EXAMINATION OF PETER M SQUARTSOFF  
 (3) BY MR STOLL  
 (4) Q With respect to these eight to ten inch mousse patties  
 (5) that came in at the various times counsel quoted a line out of  
 (6) a statement that you had previously made when you said that  
 (7) these - it came in in tide streaks However how often do the  
 (8) tides come in?  
 (9) A Basically every six hours six and a half hours  
 (10) Q And after your wife quit or you got her to quit working on  
 (11) the clean up crew more oil came in after that later in the  
 (12) summer is that correct?  
 (13) A Yes  
 (14) Q With these tides?  
 (15) A With the tides yes depending on the tides and the winds  
 (16) Q And counsel has referred to a place where you said  
 (17) something about 15 percent Didn't you say also 85 percent -  
 (18) same line counsel that you quoted from earlier  
 (19) MR CLOUGH Which page is that please?  
 (20) MR STOLL Page 9  
 (21) BY MR STOLL  
 (22) Q Didn't you say it was 80 to 85 lot of times they told me  
 (23) 10 to 15 percent oil the rest was - and then it goes on?  
 (24) MR CLOUGH I'd like to object Your Honor perhaps  
 (25) we need to approach to show the Court That I think is

Vol 21 3376

- (1) mischaracterizing what it says there  
 (2) THE COURT Come up here  
 (3) (Sidebar conference out of the hearing of the jury)  
 (4) MR CLOUGH I believe it talks about -  
 (5) THE COURT Let me read it  
 (6) MR CLOUGH Sure  
 (7) THE COURT What this blank is bags? Do you know?  
 (8) MR CLOUGH It's their - this is prepared by their  
 (9) folks Your Honor not ours  
 (10) MR STOLL I don't know what the blank is  
 (11) THE COURT You can read it verbatim From the  
 (12) transcript It's got blanks in it Read what it is  
 (13) MR CLOUGH I have no objection to reading them  
 (14) verbatim Your Honor  
 (15) (Sidebar concluded)  
 (16) BY MR STOLL  
 (17) Q Mr Squartsoff this reference to 10 to 15 percent doesn't  
 (18) it say - it starts to ask what was the percentage of oil and  
 (19) it's blank blank and it was 80 to 85 lot of times they told  
 (20) me 10 to 15 percent oil and the rest was blank blank some  
 (21) drifting in the water and they were putting everything -  
 (22) everything was going into these bags?  
 (23) A Uh huh  
 (24) Q So there are different percentages terms of which tides  
 (25) and what was going on isn't that correct?

Vol 21 3377

- (1) A Yes  
 (2) Q And another thing I'd like to put in context is these  
 (3) beaches the quotes from these monitoring in 1990 when you  
 went  
 (4) out to these various locations in Kizhuyak Bay The first  
 (5) location -  
 (6) May I use the Elmo please?  
 (7) This is that same photograph - little faster to put them  
 (8) up on this  
 (9) The aerial photograph of Port Lions now Kizhuyak Bay and  
 (10) where you're describing you're walking along the beach and  
 you  
 (11) saw no patties on a particular day in 1990 that's not even in  
 (12) this photograph is it?  
 (13) A No it isn't  
 (14) Q In fact the first - the first indication that counsel  
 (15) quoted you from was a location some eight or ten miles away  
 (16) isn't that correct?  
 (17) A Yes  
 (18) Q And then there's no claim by your municipality for any  
 (19) damages resulting from that is it? It's not property you own?  
 (20) A No no not that I know of  
 (21) Q And the second location is some ten miles away from Port  
 (22) Lions isn't that right?  
 (23) A Well yeah Now it's - I believe from the ferry dock to  
 (24) the head of the bay is eight miles  
 (25) MR PETUMENOS Counsel is that on its side that

Vol 21 3378

- (1) photograph? My neck hurts  
 (2) MR CLOUGH Try it the other way  
 (3) MR STOLL Straight on down I don't know it hurts  
 (4) my head any way I look at it or my neck  
 (5) BY MR STOLL  
 (6) Q At any rate it's at least eight miles away?  
 (7) A Yes  
 (8) Q And the purpose of this was you were - you were out there  
 (9) looking around and you were going to give this report and you  
 (10) were trying to get them to open fishing in 1990 isn't that  
 (11) right?  
 (12) A Yes that -  
 (13) Q Commercial fishing?  
 (14) A Yes And there was other days that I did find some oil in  
 (15) other areas These are just two of my - two - I think I  
 (16) worked for two weeks  
 (17) Q So on this - these particular - these particular two days  
 (18) out of two weeks you found no oil?  
 (19) A Right  
 (20) Q Okay Ten miles - some ten miles away or eight miles  
 (21) away excuse me?  
 (22) A Yes  
 (23) Q And did this - did the - to get another thing in  
 (24) perspective here this - this oiling that occurred from the  
 (25) fish processing floating fish processing plant going in was

Vol 21 3379

- (1) that - did that leave mousse patties?
- (2) A No it did not
- (3) Q That was diesel oil wasn't it?
- (4) A Yes it was
- (5) Q And was it anything close to the kind of oil you're talking
- (6) about in the - from the Exxon Valdez?
- (7) A No
- (8) Q What was the - just tell the jury what was the
- (9) difference?
- (10) A It was just diesel oil sheen on the water
- (11) MR STOLL That's all I have
- (12) MR CLOUGH Just two literally just two questions
- (13) Your Honor and I think I can keep to that
- (14) RE-CROSS EXAMINATION OF PETER M SQUARTSOFF
- (15) BY MR CLOUGH
- (16) Q First of all back to the Kizhuyak Bay just to confirm
- (17) you walked a total of five miles of beach on those two days and
- (18) didn't see any evidence of oiling as of March 1990 isn't that
- (19) correct?
- (20) A Yes
- (21) Q And lastly sir I really don't want there to be any
- (22) confusion on this point about 85 percent or 15 percent So if
- (23) I may approach the witness and here we go again Okay
- We're
- (24) going to be talking about this last portion here
- (25) Mr Squartsoff this is again Dr Russell's - the

Vol 21 3380

- (1) transcript of Dr Russell's interview with you and I'm going
- (2) to put the whole thing in context including what you said
- (3) immediately after what Mr Stoll read to you So I think what
- (4) might work best with the Court's permission is I'd like to
- (5) read verbatim into the record what it says here and then
- (6) Mr Squartsoff is free to correct me if he sees any mistakes
- (7) THE COURT Go ahead
- (8) BY MR CLOUGH
- (9) Q The first question was asked to you by Dr Russell Were
- (10) they actually picking up oil off the - off the like the
- (11) tide?
- (12) Then it says tiffel - I'm assuming it's a misprint -
- (13) times a few times not very many I thought if they were to
- (14) pick it up right away like I said depending on the winds and
- (15) tides they would not have - they would have picked up the
- (16) Marmot - does Marmot refer to a location do you recall?
- (17) A No Marmot Island is way out No I don't know what
- (18) this - I don't know what that is
- (19) Q It goes on to read this is again your response There
- (20) wasn't a piece of kelp a piece that drifted out in the bay all
- (21) summer Kept it clean I mean they picked up everything not
- (22) just the oil I was asking my brother and Jackie Nelson and
- (23) ah - who was one of the other ones about ah you know I
- (24) started finally asking them what was the percentage of oil in
- (25) our - there was a blank there Whoever was describing it put

Vol 21 3381

- (1) a blank apparently they couldn't figure out what the word
- (2) was
- (3) MR STOLL Couple blanks
- (4) MR CLOUGH Couple blanks Thank you counsel
- (5) BY MR CLOUGH
- (6) Q And it was 80 to 85 dot dot dot a lot of times they
- (7) told me 10 to 15 percent oil and the rest was blank blank
- (8) some oil drifting in the water And they were putting dot
- (9) dot dot everything was going into those bags - these bags
- (10) Am I correct so far?
- (11) A Yes
- (12) Q Then it says question Dr Russell apparently said oh
- (13) my
- (14) Answer and then you said so there was really a small
- (15) percentage of actual oil that went into all them bags
- (16) Isn't that what you said?
- (17) A Guess so
- (18) MR CLOUGH Thank you Go visit your daughter
- (19) Thank you very much
- (20) MR STOLL Okay Your Honor he's forced me I've
- (21) got to ask another question You have the next page of this
- (22) transcript?
- (23) A Same one?
- (24) MR STOLL Same statement
- (25) REDIRECT EXAMINATION OF PETER M SQUARTSOFF

Vol 21 3382

- (1) BY MR STOLL
- (2) Q Now isn't the very next question that counsel stopped
- (3) reading from about how much of this whole area was oiled do
- (4) you have any sense of that? That's the very next question do
- (5) you see that?
- (6) A Yes
- (7) Q I think that the oil ended up pretty much every -
- (8) everywhere little piece here and there but there were certain
- (9) blades like you know I know like because of living here and
- (10) the tides and like this beach in -
- (11) A Brarobra
- (12) Q - Brarobra gets - because of northeast and the tides and
- (13) it goes right in there You know certain spots - they just
- (14) were the tides and the winds push it into Same thing in
- (15) Prince William when I seen - when I was over there There was
- (16) certain beaches got hit not all the beach
- (17) That's what you've been saying?
- (18) A Yes
- (19) MR STOLL Okay Thank you very much
- (20) THE COURT You can step down sir
- (21) Thanks very much and I'll let you go for I believe it's the
- (22) weekend So I'll see you on Monday at 8:30 Remember next
- (23) Friday we're not in session so don't talk to anybody about
- (24) this case don't form or express any opinion on it until it's
- (25) submitted to you for deliberation See you on Monday

Vol 21 3383

- (1) (Jury out at 1 31 p m )  
 ( ) THE COURT Counsel anything to take up this  
 (3) afternoon?  
 (4) MR STOLL Yes we have a couple of matters Your  
 (5) Honor  
 (6) THE COURT Now?  
 (7) MR STOLL We can do it now or -  
 (8) THE COURT That s fine with me if we can get it all  
 (9) out of the way now  
 (10) MR STOLL Your Honor we have the matter of the Mary  
 (11) Katzke tape of Kodiak We submitted a brief on that and I  
 (12) guess I m still waiting They were supposed to file one  
 (13) yesterday  
 (14) MR DIAMOND I don t know that I was supposed to file  
 (15) one yesterday I said I would have it Mr Stoll as soon as  
 (16) possible and I will get it to him this afternoon Get it to  
 (17) the Court this afternoon as well  
 (18) MR STOLL I thought we were going to argue that this  
 (19) afternoon  
 (20) THE COURT When did you want to use it  
 (21) MR STOLL Monday morning I mean that s - on  
 (22) Wednesday set up a schedule to argue this  
 (23) THE COURT Are you prepared to argue it?  
 (24) MR DIAMOND I d be prepared to argue it this  
 (25) afternoon Your Honor if you d like us to come back

Vol 21 3384

- (1) THE COURT I wouldn t like you to come back I d like  
 (2) for you to argue it now but I ll defer  
 (3) MR DIAMOND There s a Ninth Circuit case directly in  
 (4) point which controls and I don t have it in my hand  
 (5) THE COURT Well as you know I always like to read  
 (6) the cases counsel  
 (7) MR DIAMOND Can I get it to you say by 2 30?  
 (8) THE COURT Sure come over here at 2 30 both of you  
 (9) and bring your case with you I don t mean your briefcase  
 (10) Hang on just a minute  
 (11) MR DIAMOND Just going to say while we were talking  
 (12) about cases directly on point I mentioned yesterday during the  
 (13) hearing there was a case directly on point and issue I was  
 (14) debating with Mr Petumenos and I want to apologize to him  
 (15) and  
 (16) to you I had misremembered that case I went back and read it  
 (17) this morning it was the drug company case and it deals with  
 (18) hearsay within hearsay in the business record and I just  
 (19) didn t want to leave the wrong impression  
 (20) MR PETUMENOS Mr Diamond s credibility is therefore  
 (21) enhanced Your Honor  
 (22) MR CLOUGH Your Honor I just wanted to move in  
 (23) defendants exhibit 12255 the reports we had during this  
 (24) witness  
 (25) (Exhibit 12255 offered)  
 (26) MR STOLL Your Honor I d also like to move in -

Vol 21 3385

- (1) THE COURT You have no objection to that?  
 (2) MR STOLL I have no objection to that  
 (3) THE COURT It s admitted 12255  
 (4) MR CLOUGH Yes Your Honor  
 (5) (Exhibit 12255 received)  
 (6) MR STOLL Your Honor I d like to move the admission  
 (7) of 1048 and the - I don t have the numbers I ll provide those  
 (8) later the little photographs of - I just have -  
 (9) MR CLOUGH I have no objection to the introduction  
 (10) of the photographs I do object to the introduction of the  
 (11) map He testified he has no idea if any of those numbers are  
 (12) right There s no foundation  
 (13) THE COURT Do you have somebody that can lay a  
 (14) further foundation?  
 (15) MR STOLL That s final  
 (16) THE COURT Do you have somebody?  
 (17) MR STOLL Yes I do  
 (18) THE COURT Do it It s not admitted into evidence  
 (19) MR STOLL The photographs Your Honor are 954 960  
 (20) 1035 and 10 - excuse me D160A00 9  
 (21) (Exhibit D160A00 9 954 960 1035 offered)  
 (22) MR CLOUGH Are you certain of that last number? I  
 (23) think that might be wrong  
 (24) THE COURT I think that s probably the radio call  
 (25) numbers counsel

Vol 21 3386

- (1) MR STOLL I have no idea Whatever your - this is  
 (2) the famous pen and boot photograph I don t know -  
 (3) MR CLOUGH I ll track down the proper exhibit  
 (4) number I have no objection to it being introduced I ll  
 (5) track it down for Mr Stoll  
 (6) THE COURT They re all admitted Make sure the clerk  
 (7) has the right numbers all right?  
 (8) (Exhibit D160A00-9 954 960 1035 received)  
 (9) MR STOLL Next I d like to set up a briefing  
 (10) schedule on our motion to enforce pretrial order Number 81  
 (11) which we filed either yesterday or day before yesterday This  
 (12) relates to plaintiffs objection to certain lay witnesses that  
 (13) look like expert witnesses to us They ve never been  
 (14) designated as experts We just need to brief it I don t want  
 (15) to argue it now I just want to -  
 (16) MR DIAMOND Your Honor will you read their motion  
 (17) first before you require us to file a response?  
 (18) THE COURT We can talk about it at 2 30 all right?  
 (19) MR STOLL That s fine And Mr McCallion has a  
 (20) couple of minor housekeeping -  
 (21) MR FORTIER Your Honor before Mr McCallion does I  
 (22) have some green exhibits I have a list of them I could read  
 (23) them into the Court record now or -  
 (24) THE COURT Don t read them now counsel Please  
 (25) don t read them now but I ll get them in for you

Vol 21 3387

- (1) MR FORTIER I beg your pardon?  
 (2) THE COURT I will get them in for you  
 (3) MR FORTIER Thank you Your Honor  
 (4) MR PETUMENOS Judge on this motion I m worried  
 (5) about Mr Diamond s tactic here having counsel read it  
 (6) THE COURT Counsel I said we d discuss it at 2 30  
 (7) that s what we ll do I don t want any argument on it  
 (8) MR PETUMENOS I didn t hear you  
 (9) MR McCALLION Your Honor just a couple of matters  
 (10) As I believe at the Court s suggestion we filed a brief  
 (11) memorandum today addressing the issue on interim conveyed  
 (12) properties that issue and how the Court should deal with the  
 (13) title ownership of the Native corporation  
 (14) THE COURT So the question would be when I take it  
 (15) up Are we going to have continuing dispute during - with  
 (16) these witnesses about this interim conveyance issue?  
 (17) MR DIAMOND I don t know that there is - whether  
 (18) there s a continuing dispute I do think there s some  
 (19) underlying legal issues that you re going to have to deal with  
 (20) to the significance of that  
 (21) THE COURT Sure If I deal with them early resolve  
 (22) the problem you don t have to waste minutes or hours of time  
 (23) questioning and questioning witnesses about maps  
 (24) MR DIAMOND We have in preparation a responsive  
 (25) memorandum and I assume if it s not filed by close of business

Vol 21 3388

- (1) today -  
 (2) THE COURT I ll require you to file it close of  
 (3) business Monday  
 (4) MR OPPENHEIMER That s fine Your Honor  
 (5) MR McCALLION Your Honor hopefully lastly maybe  
 (6) not during the cross examination of Mr Homan yesterday  
 (7) Mr Homan was questioned regarding a letter from the State  
 (8) It s defendants Exhibit 3958 which was the letter dealing  
 (9) with the purported state and federal signoff on clean up  
 (10) activities and during the cross-examination we objected in  
 (11) view of the fact that he did not have that particular document  
 (12) and the cross examination then proceeded  
 (13) This could be an error on our part but I think it may be  
 (14) an error inadvertent error on Mr Diamond s part where he  
 (15) represented that the document had been produced We took  
 (16) that  
 (17) to mean that it had been produced as one of the  
 (18) cross examination exhibits for Mr Homan Our review is that  
 (19) it did not  
 (20) Now that does not mean that Mr Diamond would be precluded  
 (21) from cross-examining Mr Homan on it because each side is  
 (22) permitted what s called a three ambush exhibit What our  
 (23) concern is Your Honor is that the thrust of the questioning  
 (24) relating to the document was not so much to impeach the  
 (25) witness but to I believe impeach the credibility of counsel  
 in that the witness was asked repeatedly didn t counsel show

Vol 21 3389

- (1) you this particular document? We re concerned about that and  
 (2) feel that a curative instruction may be appropriate  
 (3) MR DIAMOND Your Honor I have a -  
 (4) THE COURT You ll have to submit one counsel before  
 (5) I ll give one  
 (6) MR DIAMOND I do want to make a statement to - to  
 (7) Mr Fortier because I have a letter on my desk that s going  
 (8) out today apologizing for the representation I made when he  
 (9) was  
 (10) looking for the exhibit fumbling for it I did say that we  
 (11) had included it in our cross examination materials That was  
 (12) incorrect We had not It was one of the three that was held  
 (13) back I don t think that deflects the cross examination  
 (14) because clearly based on the witness testimony here and in  
 (15) the deposition he had said repeatedly that the significance of  
 (16) the governmental signoff the environmental signoff would be  
 (17) very significant to a lending decision and in fact the ADEC  
 (18) letter is legendary in this case it s no secret and I still  
 (19) would have been entitled to cross examine Mr Homan on the  
 (20) fact  
 (21) that he had not seen that document before But I was in error  
 (22) when I said on the record - and I apologize again for it -  
 (23) that it was one of the documents that we d sent over in advance  
 (24) of the cross-examination That was not correct  
 (25) THE COURT Thank you So submit your instruction  
 we ll see what the other side says and I ll decide at the time  
 - and at the time it s submitted and after the other side s

Vol 21 3390

- (1) had an opportunity to comment whether or not I ll give the  
 (2) instruction  
 (3) MR McCALLION Your Honor will you need a pleading  
 (4) for that or could we simply exchange something with counsel?  
 (5) THE COURT No I don t need a pleading all you need  
 (6) is a clean version of what you d have me instruct the jury on  
 (7) served on counsel  
 (8) MR McCALLION Yes Your Honor  
 (9) THE COURT Is there anything else before 2 30?  
 (10) MR DIAMOND No Your Honor  
 (11) MR STOLL Your Honor I have - I do have the number  
 (12) of that exhibit that Mr Clough  
 (13) THE COURT Xxx22774  
 (14) MR STOLL It s DX13160 9  
 (15) THE COURT That s just as confusing as the last one  
 (16) MR CLOUGH Based on the representation of 007 here  
 (17) I have no objection  
 (18) THE COURT It s admitted  
 (19) (Exhibit DX13160 9 received)  
 (20) THE CLERK Please rise This court stands in  
 (21) recess  
 (22) (Recessed at 1 42 p m )

(11) PROCEEDINGS  
 (12) (Jury out at 8:40 a.m.)  
 (13) (Call to Order of the Court)  
 (14) THE CLERK Please rise  
 (15) THE COURT We're on the record and the jury is not  
 (16) present  
 (17) Counsel did you want to take something up before we  
 (18) start?  
 (19) MR. CLOUGH Yes Your Honor We had three  
 (20) evidentiary and exhibit questions to bring up outside the  
 (21) presence of the jury for the first couple of witnesses. It  
 (22) would be easier to do that at the opening.  
 (23) THE COURT Sure  
 (24) MR. CLOUGH First of all I don't know if this is  
 (25) directed to the clerk or to Jodi they have asked for the sound  
 (26) to be turned on in the auxiliary courtroom I don't know who  
 (27) turns that on. Having made my effort in that direction  
 (28) The first thing I wanted to address was the mousse patty  
 (29) which is back again today. Over the weekend -  
 (30) THE COURT I haven't seen the mousse patty by the  
 (31) way  
 (32) MR. CLOUGH I think it would be good if the Court  
 (33) sees it. And a very fine piece of Tupperware. The mousse  
 (34) patty is listed for all three of the first witnesses and the  
 (35) first two or three tomorrow as well. The objection is

(1) different  
 (2) We have had an opportunity to look at it thank you Mr  
 (3) Stoll given an opportunity to take a brief sample of it over  
 (4) the weekend. However it's my understanding based on what  
 (5) Mr. Stoll told me that this particular mousse patty was  
 (6) collected off a beach in Old Harbor in 1991 and that none of  
 (7) the witnesses here were involved in the picking up of this  
 (8) particular mousse patty.  
 (9) I believe it's going to be offered for is this like what  
 (10) you saw. And if that's what the purpose is I do have an  
 (11) objection to it because there is no foundation through any of  
 (12) these witnesses where this mousse patty came from - where it  
 (13) came from or whoever picked it up off the beach thought it was  
 (14) and whatever else it was stirring around there.  
 (15) It could be from right underneath a boat lubricating oil  
 (16) We would like to make some evidence that there was a lot of  
 (17) things spilled in the water through witnesses testifying here  
 (18) in court as to where the mousse patty came from and the  
 (19) circumstances under which it came. We would object to it  
 (20) being  
 (21) used here in court.  
 (22) THE COURT Counsel it's your mousse patty  
 (23) MR. STOLL Your Honor this happens to be a mousse  
 (24) patty. The answer is that it's similar to the testimony will  
 (25) be by all these witnesses that it's similar to if not  
 (26) identical to mousse patties that they saw or removed from

Vol 22 3399

Vol 22 3401

(1) beaches on numerous occasions. It looks like it. It's the  
 (2) same consistency. It smells like it. It's similar.  
 (3) It's just like having a gun or a knife. You say is this  
 (4) what the knife looked like or is this what the knife looked  
 (5) like? We are not saying this is necessarily a mousse patty  
 (6) from the Exxon Valdez although we think it is. We are - or  
 (7) that this particular witness picked this up. I don't think we  
 (8) need to show that.  
 (9) This is only - these witnesses identify this as being  
 (10) similar to the mousse patties that they saw in their area.  
 (11) That's all. I think it's perfectly admissible for that  
 (12) purpose.  
 (13) THE COURT: You cannot - it's not admissible but you  
 (14) can certainly show it. Let the jury see it and say it was  
 (15) similar to that but I'm not going to admit it not without a  
 (16) foundation for admission.  
 (17) MR. CLOUGH: Your Honor, if I might be heard.  
 (18) I'm leery to revisit a topic once you ruled. My concern is  
 (19) precisely what you said the fact that it's similar or  
 (20) identical. One of the things we've tried to indicate in this  
 (21) case is that there is a lot of oil related products on some of  
 (22) these beaches and in fact they do look somewhat similar.  
 (23) If we had any - obviously they got this from someplace.  
 (24) If they presented us with a foundation under the circumstances  
 (25) which this particular mousse patty was obtained, I could

(1) this letter had apparently made it - requested that a  
 (2) particular investigation be made and this sets forth the  
 (3) results of that investigation. This is, I believe, the type of  
 (4) document that factual findings resulting from a special  
 (5) investigation which is not within the public records  
 (6) exception and obviously we have a particular concern because  
 (7) the description of the last paragraph is Mr. Haakanson's  
 (8) personal observations in the course of this special  
 (9) investigation and he's not being presented here in the  
 (10) courtroom for cross examination.  
 (11) THE COURT: Just a second.  
 (12) MR. STOLL: Your Honor, I think this is - I don't  
 (13) agree with counsel. I think it's straightforward. I think  
 (14) it's a business record and a public document.  
 (15) Mr. Chichenoff is the Mayor of Ouzinkie and this is in the  
 (16) business records of the city of Ouzinkie.  
 (17) THE COURT: Who is Mr. Haakanson?  
 (18) MR. STOLL: He was the Ouzinkie oil coordinator during  
 (19) 1989 and '90.  
 (20) THE COURT: What was he doing when he did this  
 (21) letter?  
 (22) MR. STOLL: He was simply responding to - Mayor  
 (23) Brodic was the chairman of the Oiled Mayors Committee and  
 (24) Mayor Brodic had made an inquiry apparently - I don't exactly  
 (25) know exactly what Mayor Brodic had done. He was just writing

Vol 22 3400

Vol 22 3402

(1) cross examine the witness and they might say it came from  
 (2) under  
 (3) a boat they were changing the oil on.  
 (4) THE COURT: They could have a papier mache moussé  
 (5) patty painted brown and say that's what this looks like.  
 (6) MR. CLOUGH: If I can move on to the next exhibit -  
 (7) and I need to approach the bench.  
 (8) This is a document you're going to get a copy this is  
 (9) 967. Your Honor, if I may retrieve this.  
 (10) THE COURT: Thank you very much. Hold on. I'm  
 (11) finish this okay? I've read it.  
 (12) MR. CLOUGH: Your Honor, this exhibit has been listed  
 (13) with Mr. Chichenoff the Mayor of Ouzinkie who is our first  
 (14) witness here today. He's not the author. He's not cited on  
 (15) it. He's obviously not associated with the City of Kodiak to  
 (16) whom the letter is addressed.  
 (17) Our objection is this does not fit into an exception of the  
 (18) hearsay rule. Mr. Stoll argues that it fits into the public  
 (19) records exception. If you look at Rule 8038(b)(4) part B of  
 (20) subsection 8 on the public records lists the exceptions where a  
 (21) public record does not qualify as admissible in exception to  
 (22) the hearsay rule and it says that one of the things that  
 (23) cannot be admitted are factual findings resulted from the  
 (24) special investigation with particular complaint case or  
 (25) incident.  
 (26) In this particular situation Mayor Brodic according to

(1) Mayor Brodic telling him about the oil on their beaches.  
 (2) THE COURT: Isn't that in the investigative report?  
 (3) MR. STOLL: I don't think it's an investigative  
 (4) report.  
 (5) THE COURT: Why?  
 (6) MR. STOLL: I think in investigative report is one  
 (7) where there is some special investigation conducted. I don't  
 (8) know that this is in that category.  
 (9) THE COURT: What do you think this was?  
 (10) MR. STOLL: I don't know.  
 (11) THE COURT: You don't know and I don't know. What do  
 (12) you think I'm going to do?  
 (13) MR. STOLL: I think that - well I think that it says  
 (14) what it is - it is what it appears to be.  
 (15) THE COURT: What letter led up to this do you have  
 (16) it?  
 (17) MR. STOLL: We don't have that here. Your Honor.  
 (18) THE COURT: I'm with you going to testify as to  
 (19) what he saw out there?  
 (20) MR. STOLL: Mr. Haakanson?  
 (21) THE COURT: The witness.  
 (22) MR. STOLL: The witness is going to testify as to what  
 (23) he himself saw.  
 (24) THE COURT: Is he going to testify he saw the oil out  
 (25) there in these locations?

Vol 22 3403

(1) MR STOLL He's going to say - I don't know about  
 (2) every one of these particular locations but he's going to say  
 (3) generally that he saw oil on Mr - Mr Chichenoff will testify  
 (4) that he saw oil on these various beaches owned by the  
 (5) municipality of Ouzinkie  
 (6) THE COURT I've got some problems with this  
 (7) counsel. It appears to me it may be an investigative report  
 (8) prepared by or for a government public officer or agency  
 (9) This is the city of Ouzinkie right?  
 (10) MR STOLL Right  
 (11) THE COURT In that instance the factual findings  
 (12) resulting from special investigation of a particular  
 (13) complaint I won't know what this is until I see the letter  
 (14) that generated this letter  
 (15) MR STOLL Can I lay a foundation in case we get the  
 (16) preceding letter?  
 (17) THE COURT Sure  
 (18) MR STOLL Should I do that outside the hearing of  
 (19) the jury  
 (20) THE COURT Probably might be able - we'll pick a  
 (21) right time to take a break  
 (22) MR STOLL I don't think he's going to be that long  
 (23) so maybe we can put him at the very beginning  
 (24) MR CLOUGH The last matter - if I may approach the  
 (25) bench - you have asked us to bring to your attention anything

Vol 22 3405

(1) monitoring oil out there He can ask him that question but I  
 (2) think that this monitoring agreement raises all kinds of  
 (3) collateral issues about the amount of pay and so on and I'd  
 (4) object to this monitoring agreement even if it is redacted to  
 (5) take out the amount of dollars because I think we get into an  
 (6) issue of whether they got compensated how much money I  
 (7) think  
 (8) - I think it's a big issue  
 (9) THE COURT Counsel I'll let you ask the questions  
 (10) if he answers in a way that he doesn't remember or say no then  
 (11) you can refresh his recollection with a document The  
 (12) document  
 (13) will probably not be admitted  
 (14) MR CLOUGH That would be fine selection of the  
 (15) sites and the reporting requirements I want to make sure I  
 (16) have that available to get the testimony out  
 (17) THE COURT Do you want that back?  
 (18) MR CLOUGH It's my copy Can I keep this because I  
 (19) may need it?  
 (20) MR CLOUGH Yes  
 (21) THE COURT Are we ready for the jury?  
 (22) MR STOLL Yes Your Honor  
 (23) MR STOLL Your Honor should we put Mr Chichenoff  
 (24) on with respect to this document -  
 (25) THE COURT You want to do it - yes  
 (26) MR STOLL Do it right now and if we can bring in  
 (27) the other documents subsequently

Vol 22 3404

(1) that could come near the issue of payment I don't want to  
 (2) introduce this for dollar amounts or the issue of payment at  
 (3) all but what is an important fact is that the city of Ouzinkie  
 (4) contracted with Exxon to perform shoreline monitoring during  
 (5) the winter of 1989 to '90 and as part of that business  
 (6) contract went out was required to make regular surveys  
 (7) report et cetera I would like certainly to be able to refer  
 (8) to the fact that Ouzinkie - it was Mr Chichenoff this  
 (9) witness in his capacity as Mayor of Ouzinkie who signed the  
 (10) contract  
 (11) I would like to be able to refer to the fact that Ouzinkie  
 (12) contracted with Exxon to perform these services and to the  
 (13) results of their monitoring program I do not want to make any  
 (14) reference to the amount of money conveyed if that would  
 (15) prevent me from doing that If the result would be to block  
 (16) out the amount I'm prepared to do that  
 (17) We do think though we should be entitled to introduce the  
 (18) fact that there was a contract entered into between actually in  
 (19) this case the two parties to perform a particular service  
 (20) related to the main issue at hand what oil was out there And  
 (21) under that contract we were required to make surveys and the  
 (22) reports and the results of those reports  
 (23) MR STOLL Your Honor I think if he wants to ask a  
 (24) question as to whether or not there was an agreement between  
 (25) the city of Ouzinkie and Exxon as to whether they were

Vol 22 3406

(1) THE COURT Sure if you want to  
 (2) MR STOLL Mr Chichenoff?  
 (3) THE CLERK Sir can you please attach the microphone  
 (4) and remain standing for the oath  
 (5) THE WITNESS I have a little problem hearing  
 (6) THE CLERK Can you attach the microphone to your  
 (7) shirt or collar? Can you stand up and raise your right hand  
 (8) (The Witness Is Sworn)  
 (9) THE CLERK Please be seated  
 (10) Sir for the record can you state your full name?  
 (11) A My name the Zack Peter Chichenoff  
 (12) THE CLERK Can you spell your last name please?  
 (13) A C h i c h e n o f f  
 (14) THE CLERK And your occupation?  
 (15) A Retired fisherman and I'm the Mayor of the city of  
 (16) Ouzinkie  
 (17) VOIR DIRE EXAMINATION OF ZACK P CHICHENOFF  
 (18) BY MR STOLL  
 (19) Q Mr Chichenoff I'm going to show you what has been  
 (20) marked  
 (21) as plaintiffs Exhibit 9671 Are you familiar with this  
 (22) document? Is this a document city of Ouzinkie?  
 (23) A I know the signature of the man that signed that thing  
 (24) Q Is this a record of the city of Ouzinkie?  
 (25) A That's one of our whatever you call it It's one of our  
 (26) papers

Vol 22 3407

Vol 22 3409

- (1) Q From your business records?  
 (2) A Yes  
 (3) MR STOLL That's all I have Your Honor  
 (4) THE COURT Mr Stoll is economical with his time He  
 (5) surprised me We're going to have to wait for the jury  
 (6) MR STOLL Your Honor if you recall I put on a  
 (7) witness Friday my direct was less than 30 minutes - 20  
 (8) minutes  
 (9) THE COURT I was thinkin\_ about awarding you a  
 (10) certificate counsel  
 (11) MR STOLL Oh good  
 (12) THE COURT The witness will be sworn before the jury  
 (13) so they can see him  
 (14) MR CLOUGH I have one brief area to follow up on the  
 (15) foundation  
 (16) VOIR DIRE EXAMINATION OF ZACK P CHICHENOFF  
 (17) BY MR CLOUGH  
 (18) Q Mr Chichenoff my name is John Clough I'm from Juncau  
 (19) Good morning  
 (20) Do you still have the document in front of you? Can you  
 (21) hear me okay?  
 (22) A Will you speak up a little louder  
 (23) Q I will be happy to do that Can you hear me now?  
 (24) A Yes  
 (25) MR CLOUGH Permission to approach the witness Your

- (1) Q But you're not asserting\_ involvement for damages of the Dump  
 (2) Beach are you?  
 (3) A Well I don't know that's up to my attorney  
 (4) MR CLOUGH Your Honor rather than put  
 (5) Mr Chichenoff through this paragraph by paragraph I just  
 (6) represent - I don't think Mr Stoll will dispute this only  
 (7) limited portion of the properties listed here are parcels at  
 (8) issue in this litigation That was the point I was trying to  
 (9) get across thank you Mr Chichenoff  
 (10) THE COURT Mr Chichenoff you're going to take the  
 (11) oath again  
 (12) A Beg your pardon?  
 (13) THE COURT You'll take the oath before the jury  
 (14) (Jury in at 9:00 a.m.)  
 (15) THE COURT Good morning everybody You may be  
 (16) seated  
 (17) THE CLERK Sir will you raise your right hand

Vol 22 3408

Vol 22 3410

- (1) Honor I think this would work a little easier  
 (2) THE COURT Fine  
 (3) BY MR CLOUGH  
 (4) Q Mr Chichenoff can you read on your copy do you see  
 (5) where  
 (6) it describes some general areas in the vicinity of your town?  
 (7) See where it starts for example on the northern part of  
 (8) Spruce Island can you read that on that copy sir?  
 (9) A Yes  
 (10) Q Now for that first paragraph there the one that says on  
 (11) the northern part of Spruce Island North Cape Beach is  
 (12) Pinnacle Cove and the island adjacent to Pinnacle Cove  
 (13) none  
 (14) of those are properties owned by the city of Ouzinkie are  
 (15) they?  
 (16) A That portion of Pinnacle Cove  
 (17) Q Aside from the portion of Pinnacle Cove the rest of it is  
 (18) not owned by the city?  
 (19) A As far as I know owned by the Native corporation  
 (20) Q Now let's go to the next one Do you see where it says on  
 (21) the west side Garden Point Beach the Dump Beach Mission  
 (22) Beach and Sourdough Flats Ouzinkie does own Sourdough  
 (23) Flats?  
 (24) A Yes we do  
 (25) Q But the city doesn't own Garden Point Beach or Dump Beach  
 (26) or Mission Beach?  
 (27) A Dump mission is the city property right at the end of the  
 (28) airstrip

- (1) JACK P CHICHENOFF  
 (2) called as a witness herein being first duly sworn to state the  
 (3) truth the whole truth and nothing but the truth testified as  
 (4) follows  
 (5) THE CLERK Sir for the record I need you to state  
 (6) your full name spelling your last name  
 (7) A My name is Zack Peter Chichenoff and my last name is  
 (8) spelled C h i c h e n o f f  
 (9) THE CLERK And your occupation?  
 (10) A Although I'm not Major League Baseball player and  
 (11) fishermen  
 (12) DIRECT EXAMINATION OF ZACK P CHICHENOFF  
 (13) BY MR STOLL  
 (14) Q Mr Chichenoff where were you born?  
 (15) A Pardon?  
 (16) Q Where were you born?  
 (17) A I was born in Alognak Village in the year 1927 September  
 (18) 17th  
 (19) Q And you live in Ouzinkie?  
 (20) A And I moved from Alognak in 1934 and I've lived there ever  
 (21) since  
 (22) Q In Ouzinkie?  
 (23) A Yes in Ouzinkie  
 (24) Q And what was your occupation before you retired?  
 (25) A I've been a fisherman all my life

Vol 22 3411

(1) Q And you re now the Mayor of Ouzinkie?  
 (2) A Yes I've been the Mayor for approximately 15 years steady  
 (3) I think  
 (4) Q Why do you live in Ouzinkie?  
 (5) A Where do I live?  
 (6) Q Why do you live there?  
 (7) A I wouldn't live anywhere else Such a beautiful place We  
 (8) live on an island probably around eight miles long and at the  
 (9) widest point five miles wide and covered with spruce trees and  
 (10) the whole northern end of Kodiak Island We are separated  
 from  
 (11) Kodiak by about a quarter mile call it Ouzinkie Narrows And  
 (12) in other words I think Ouzinkie originated its name from the  
 (13) Russian name Ouzki which means narrows and just like my  
 wife  
 (14) said I never want to live anywhere else but here  
 (15) Q Now just to get our bearings straight here I show you  
 (16) this exhibit this map which is 1354 A and Ouzinkie is up here  
 (17) near the top end of - well it's actually on Spruce Island a  
 (18) separate little island?  
 (19) A Yes it is  
 (20) Q Above Kodiak?  
 (21) A Yes on the northern tip of Kodiak Island  
 (22) Q And the narrows you're talking about are the narrows  
 (23) between Spruce Island and Kodiak Island?  
 (24) A Yes it is  
 (25) MR STOLL Could you just show the jury some pictures

Vol 22 3413

(1) Q And I'd like to show you Exhibit 1034 which is an aerial  
 (2) photograph See if I can do that That is an aerial  
 (3) photograph of Ouzinkie?  
 (4) A Yes it is  
 (5) Q What do people in Ouzinkie do Mr Chichenoff? What's  
 (6) their occupation? What's their principal occupation?  
 (7) A Well I think it's salmon fishing Just fishing period  
 (8) that's the main occupation  
 (9) Q Now I have an exhibit here Exhibit 1046 and are you  
 (10) familiar with this map?  
 (11) A I believe that has to do with municipal property  
 (12) Q Yes and are these various tracts of land are these  
 (13) properties that are owned by the city of Ouzinkie?  
 (14) A Yeah I suppose you could call them municipal reserves  
 (15) but yes they are  
 (16) Q And would you describe to the jury please these areas  
 (17) that are in red here in this cove here? What's this cove  
 (18) here?  
 (19) A That's what we call Ouzinkie Harbor  
 (20) Q And are the beaches in there?  
 (21) A Yes there are  
 (22) Q And also around in this area here (indicating)?  
 (23) A Yes there is beaches there  
 (24) Q And can you describe this area out here on this point?  
 (25) A That's main recreational area It's a wooded area and the

Vol 22 3412

(1) of Ouzinkie 946 and then 951?  
 (2) BY MR STOLL  
 (3) Q Mr Chichenoff on the big screen here you'll see some  
 (4) pictures and I want you to identify if you would those  
 (5) pictures  
 (6) Is this Ouzinkie? Actually you can see it on this screen  
 (7) right in front of you Mr Chichenoff You can see it right on  
 (8) this screen here - totally the same on  
 (9) A That's Ouzinkie  
 (10) Q 1946 is that out of Ouzinkie?  
 (11) A Pardon?  
 (12) Q Is that part of Ouzinkie?  
 (13) A Yes that's part of Ouzinkie  
 (14) Q Can we see 951?  
 (15) Is that a picture of Ouzinkie also?  
 (16) A Yes that's a picture of Ouzinkie  
 (17) Q And then 5004 A is that another picture of Ouzinkie?  
 (18) A That's a picture of Ouzinkie  
 (19) Q And 5004 B Would you pull up 5004 B I think that's the  
 (20) wrong picture Is that also from Ouzinkie?  
 (21) MR CLOUGH I don't think he could hear you  
 BY MR STOLL  
 (22) Q Mr Chichenoff is that also from Ouzinkie?  
 (23) A Yes that's a picture of Ouzinkie and the post office  
 (24) is there

Vol 22 3414

(1) flats over here and everybody uses it during the summertime  
 (2) also back here by this lake There is trails through the  
 (3) spruce trees going this way and also along the shoreline  
 (4) through this picnicking area as we call them And over  
 (5) through this hill here There used to be lakes here before the  
 (6) tidal wave dried them up  
 (7) Q The tidal wave you're talking about the 1964 earthquake?  
 (8) A Yes sir  
 (9) Q Do people use these beaches down here in the harbor?  
 (10) A Yes there is one right here in the center below you  
 (11) Russian church that's used regularly for lapture I don't  
 (12) know It's a ball game And also for the kids go swimming  
 (13) once in a while People cast off this beach for trout and  
 (14) salmon Right there is what we call the sandy beach That's  
 (15) the name of it I guess  
 (16) Q You can take the picture off the screen  
 (17) Now the municipal property has quite a bit of ocean front  
 (18) according to this map is that accurate?  
 (19) A Yes  
 (20) Q Now in 1989 were you - you were the Mayor of Ouzinkie  
 (21) then also is that correct?  
 (22) A Will you repeat that?  
 (23) Q In 1989 you were the Mayor of Ouzinkie?  
 (24) A Yes I was  
 (25) Q And in sometime in May of 1989 did you find oil on the

Vol 22 3415

Vol 22 3417

(1) beaches of Ouzinkie and elsewhere?  
 (2) A Yes Right in those areas I just pointed out  
 (3) Q Would you tell the jury please - would you describe to  
 (4) the jury what you found first time that you were - the first  
 (5) time that you saw oil there Just describe what you saw just  
 (6) tell the jury  
 (7) A Well when the oil first hit Ouzinkie actually we  
 (8) anticipated it would come there I don't know why - whether  
 (9) it just in our minds myself and President of the Native  
 (10) corporation and so we had a few - some funds so we decided  
 (11) we were going to try to protect some of our subsistence areas  
 (12) And the city just got done having an airstrip built and there  
 (13) was some logs laying around and we were having a sanitary  
 (14) landfill cleared for our garbage And we had logs laying  
 (15) around and somebody suggested we make log booms I don't  
 (16) know where it came from So we sort of combined our equipment and  
 (17) materials we had together and that was before VECO or the  
 (18) borough or even some of these other organizations did  
 (19) anything  
 (20) So the corporation had a few dollars and the city had some  
 (21) equipment and the city had some materials so we just  
 (22) combined  
 (23) our efforts together and then built the boom Well during  
 (24) that time after that then when they hired some boats to go  
 (25) out they finally came in and started hiring people to clean up  
 (26) the oil

(1) anything ruined like that  
 (2) And we have - like we have a tidal wave or earthquake  
 (3) it's something we can't really help Something like that is  
 (4) something different I don't know makes me feel bad  
 (5) Q Did you see oil on other beaches in Ouzinkie that year?  
 (6) A Yes, I did  
 (7) Q And would you describe to the jury were - some of this  
 (8) oil that you described - let me start over  
 (9) You described that there were some bags that had been left  
 (10) apparently by some clean up crews and apparently there was some  
 (11) oil there?  
 (12) A Yes there was oil and debris but I wasn't even looking at  
 (13) that I knew that's what we were picking up  
 (14) In fact another thing that made me feel bad my kid were  
 (15) working on that oil spill and anytime you mentioned it or  
 (16) something they wouldn't want to have any of that They had  
 (17) seen dead fish dead animal  
 (18) Q Did it change - now you described - did you see oil down  
 (19) in these beaches down here in the harbor or well?  
 (20) A Yes I have - I had  
 (21) Q And how would you describe the consistency of this oil  
 (22) what would you - tell the jury  
 (23) A What can I say? It's a mess you know I seen what you  
 (24) call tar balls  
 (25) Q Tar balls?

Vol 22 3416

Vol 22 3418

(1) So this one day when the people were all out there was  
 (2) mostly us older guys in the village and some women left so I  
 (3) decided I was going to take a walk and actually see what it was  
 (4) like in some of our picnic areas which only takes about ten  
 (5) minutes from the city to the back what we call the other side  
 (6) Q That's the side over here (indicating)?  
 (7) A Right there by the lake  
 (8) Q Right over here?  
 (9) A Right by the lake yeah And I walked back there with my  
 (10) dog I'm a dog lover I love dogs and I always have dogs or  
 (11) cats following me around I walked there I was sort of - I  
 (12) had a funny feeling in me Walked over there just by myself  
 (13) and my dog And I walked down by the beach where my wife  
 (14) and  
 (15) I and the kids used to go and have picnics There was so many  
 (16) bags already stored there with oily debris in them  
 (17) Q These are clean up bags?  
 (18) A Pardon?  
 (19) Q These were clean up bags?  
 (20) A Yeah And my dog ran out on the beach and all the sudden  
 (21) she stopped - it was a female dog - right by the water's  
 (22) edge and she was shaking her legs And I started walking down  
 (23) there and I saw all this mess down there this oily substance  
 (24) I don't know how to describe it It wasn't natural And the  
 (25) dog shook her legs and walked back up And I tell you - I  
 (26) mean I guess I cried I just couldn't help it I hate to see

(1) A Mouse whatever you call it  
 (2) Q Now let me show you what has been marked for  
 (3) identification as Exhibit 1536 and ask you if that - how does  
 (4) that look compared to the - what you described as mouse in  
 (5) the - on the parcels of Ouzinkie - is that more or less like  
 (6) it looked like or not?  
 (7) A Well yes in a sense but I'm not saying that all of them  
 (8) were that big or anything like that  
 (9) Q Was it just one or a lot of little pieces like that or was  
 (10) it -  
 (11) A No it was all over here and there and some places it was  
 (12) just mixed in with the sand and some places when the sun  
 (13) would  
 (14) come up then it would disappear for a while But it kept -  
 (15) like I told you about the cleanup back there well they had  
 (16) just got done with that beach and they left again Well the  
 (17) tide came in and some more stuff came  
 (18) Q Did that happen continually during the summer of 1989?  
 (19) A Yes it did I don't know how many times they went back to  
 (20) certain places and cleaned it up  
 (21) Q Did it smell like this?  
 (22) A I never got close that close to smelling it no  
 (23) Q Now I want to move this for a moment Now the city of  
 (24) Ouzinkie has made a claim in this court for damages to its  
 (25) beaches caused by the Exxon Valdez oil spill You're bringing  
 (26) that claim correct?

Vol 22 3419

(1) A Yes  
 (2) Q Could we see Exhibit DX13160 9 please?  
 (3) Now what I want to know Mayor Chichenoff is this the  
 (4) kind of complaint that you're making in this lawsuit is that  
 (5) what you're talking about? Is that why you brought this  
 (6) lawsuit?  
 (7) A What is that supposed to be?  
 (8) Q That's supposed to be an oiling of Kodiak I believe  
 (9) MR CLOUGH Your Honor may we approach the bench?  
 (10) THE COURT Yes don't answer  
 (11) (Sidebar conference off the record )  
 (12) (Sidebar concluded )  
 (13) BY MR STOLL  
 (14) Q Mr Chichenoff during the summer of 1989 into the fall  
 (15) the children continue to swim down there during 1989 Did  
 (16) people use the beaches during 1989 like they had in the past?  
 (17) Were they having picnics out there and using these for -  
 (18) A No  
 (19) Q Were they able to use these different areas where they  
 (20) fished for subsistence or sport fishing?  
 (21) A No  
 (22) Q There was no commercial fishing that year was there?  
 (23) A No  
 (24) Q And how long did the oil - I don't mean in the same oil but  
 (25) I mean how long did you have oil in Ouzinkie Did it

Vol 22 3421

(1) Q This one in red And you're personally familiar with that  
 (2) one aren't you sir?  
 (3) A Yes  
 (4) Q Now does the city have any leases or - does the city  
 (5) lease or rent this property out at all?  
 (6) A No not at the moment Not at this time  
 (7) Q Did it back in 1989 or 1990?  
 (8) A Not that I can recall  
 (9) Q And in fact the city doesn't generate any dollar income  
 (10) from these properties does it?  
 (11) A No it doesn't  
 (12) Q Now this particular property people don't use for  
 (13) subsistence off the beach here because there is a sewer outflow  
 (14) there isn't there? Isn't there one down - I think it's the  
 (15) west end of the beach  
 (16) A Yeah I believe there is an outflow yeah  
 (17) Q And that's why people don't use that part for subsistence?  
 (18) A I wouldn't know I suppose  
 (19) Q Now over here - now this is Block 24 that's what the  
 (20) appraisers and real estate people call them blocks What do  
 (21) you call this area here what I'm pointing to as Block 24?  
 (22) A Municipal Reserve I guess  
 (23) Q That section there what you call the municipal Reserve  
 (24) now that also wasn't leased for any money or anything was it?  
 (25) A Not that I can remember

Vol 22 3420

(1) continue into 1990?  
 (2) A Yeah I think it did Because I saw some myself when we  
 (3) were fishing - commercial fishing I didn't pick it up myself  
 (4) but one of the crew members did  
 (5) Q And today people are - are people using these beaches  
 (6) again now in 1994 are they using these beaches like they used  
 (7) to?  
 (8) A Yeah  
 (9) MR STOLL That's all Thank you  
 (10) CROSS EXAMINATION OF ZACK P CHICHENOFF  
 (11) BY MR CLOUGH  
 (12) Q Just one moment Mr Chichenoff I'll be right with you  
 (13) Hi Mr Chichenoff You remember we met a few minutes  
 (14) ago I'm John Clough and I represent Exxon here in th  
 (15) I want to talk to you about just a few things that you  
 (16) testified with Mr Stoll about just a moment ago here if I  
 (17) could And first of all what I would like to talk to you  
 (18) about is some of the parcels When I say parcels do you  
 (19) understand that I mean the properties owned by your city sir?  
 (20) A Yes I do  
 (21) Q And referring to them just trying to get an idea about  
 (22) them try to see Block 23 here Now do you see this property  
 (23) in here  
 (24) A Yes

Vol 22 3422

(1) Q And there is some picnic tables and stuff in there aren't  
 (2) there?  
 (3) A There might be  
 (4) Q And - well a portion of this is a really steep dropoff  
 (5) like a cliff of this part called Block 24?  
 (6) A Yes right  
 (7) Q And is that portion of this land right here?  
 (8) A Right near the dock  
 (9) Q And then it comes down from the dock and that's where you  
 (10) have your dock and boat landing is that right?  
 (11) A Would you repeat that?  
 (12) Q Sure On the other side of the dropoff is where your dock  
 (13) is right?  
 (14) A On the harbor side?  
 (15) Q Right And there is a boat landing area down in here  
 (16) correct? Don't people use this area to land their boats in  
 (17) your town?  
 (18) A Oh I'm getting a little confused about that Can you  
 (19) explain right where you're talking?  
 (20) Q Sure Can I bring it over to you?  
 (21) Don't people use this stretch in here to land their boats?  
 (22) A Of course they do They have skiffs they land there They  
 (23) bring salmon in for smoking  
 (24) Q Exactly Now they used that for boat landings before the  
 (25) oil spill right?

Vol 22 3423

- (1) A Yes they did  
 (2) Q And even during 1989 people still used that to land their  
 (3) boats there didn't they?  
 (4) A Well they used that because they needed boats for the  
 (5) clean up also  
 (6) Q But they were still able to use it as a boat landing is  
 (7) that correct?  
 (8) A I suppose you could say that  
 (9) Q And the oil spill didn't prevent them from using it as a  
 (10) boat landing like they always have?  
 (11) A What option did they have?  
 (12) Q That's the place people always landed their boats is that  
 (13) right?  
 (14) A Right  
 (15) Q Now you talked a lot about all the trails and stuff in here  
 (16) and the paths and the lakes do you remember that?  
 (17) A Yes I did  
 (18) Q This is Sourdough Flats?  
 (19) A That's Sourdough Flats  
 (20) Q And there is a lot of nice trails and stuff back in there?  
 (21) A Yes there is  
 (22) Q And you testified and it's your recollection that people  
 (23) weren't using this recreational area that much back in 1989 is  
 (24) that right?  
 (25) A Well how could they with all the oil on the beaches

Vol 22 3425

- (1) Q And you got out there on some of the shorelines and see the  
 (2) bags that people would pick these up off the beaches and put  
 (3) them into the bags?  
 (4) A That's correct  
 (5) Q And the bags would be carried away?  
 (6) A Not right away  
 (7) Q Sometimes it would be a few days or a week or more?  
 (8) A That's right  
 (9) Q But eventually the bags with the mounds would be taken  
 (10) away?  
 (11) A Eventually yes  
 (12) Q And you described how the tide might come back and bring  
 (13) more of these mousse patties?  
 (14) A Yes they did  
 (15) Q But the people worked throughout the summer?  
 (16) A Yes they worked  
 (17) Q And so they would go back to the coast line that they didn't  
 (18) they?  
 (19) A Yes they did  
 (20) Q And they would pick up the stuff that came in off the  
 (21) tides didn't they?  
 (22) A Yes  
 (23) Q And they would put it in the bags right?  
 (24) A Yes they did  
 (25) Q And they carried it away?  
 (26) A Yes they did

Vol 22 3424

- (1) Q Wasn't one of the reasons that people weren't using it was  
 (2) because all the young parents were out working on the  
 (3) cleanup?  
 (4) A That's possible yes  
 (5) Q And in your deposition didn't you explain that to  
 (6) Mr. Albright that the parents weren't home to take the kids out  
 (7) there that's why they couldn't use that?  
 (8) A Would you repeat that please?  
 (9) Q Let me just put it this way A lot of people from your  
 (10) town were working on the cleanup huh?  
 (11) A That's correct  
 (12) Q And they worked pretty much throughout the summer?  
 (13) A Well they were all working right  
 (14) Q But throughout the summer of 1989?  
 (15) A Yes through the summer yes  
 (16) Q And where is the mousse patty? They were out there to pick  
 (17) up things like this right?  
 (18) A Well yes they were picking oil up I wouldn't say what  
 (19) kind they were picking up  
 (20) Q And there were some tar balls?  
 (21) A There were some tar balls  
 (22) Q And this is a mousse patty There was some mousse patties  
 (23) like this and some of them were smaller than this?  
 (24) A Yes they were  
 (25) Q In fact some of them were a lot smaller right?  
 (26) A Well I wouldn't say that

Vol 22 3426

- (1) Q Now do you know Bill Pyles?  
 (2) A Bill Pyles?  
 (3) Q Yes You know who Bill Pyles is?  
 (4) A Yes of course I do  
 (5) Q Can you tell the jury who Bill Pyles is?  
 (6) A Bill Pyles was the Village Police Safety Officer or VPSO  
 (7) during the 1989 oil spill And I think he was hired by VECO to  
 (8) coordinate the cleanup and -  
 (9) Q Now the Village Public Safety Officer that sort of like  
 (10) the village police officer that type person for your village  
 (11) is that right?  
 (12) A That's right Has to watch out for the health and safety  
 (13) of the people but didn't carry any arms or anything  
 (14) Q Exactly And in a number of small communities in Kodiak  
 (15) Exxon used the public safety officers as the person to  
 (16) coordinate the response effort to clean up the beaches is that  
 (17) right?  
 (18) A That's correct  
 (19) Q And it was Mr. Pyles that they used in your town?  
 (20) A Yes he was from Ouzinkie  
 (21) Q Did you know him fairly well in your capacity as Mayor?  
 (22) A Yes I did  
 (23) Q And he has since moved from Ouzinkie He works in Kodiak  
 (24) as a police officer there doesn't he?  
 (25) A Yes he does

Vol 22 3427

(1) Q Now his job was essentially to supervise all the people  
 (2) from your town that were out there cleaning up the shorelines  
 (3) in your area isn't that right?  
 (4) A Well I don't really know what - how much jurisdiction he  
 (5) had or whatever. Because they had some other coordinators  
 (6) the  
 (7) city had its own - like people that took care of - made sure  
 (8) where they were cleaning up at and made reports and records  
 (9) Like for instance Mr. Haakanson on that paper there he was  
 (10) one of the coordinators also  
 (11) Q But during the summer of 1989 you just testified that they  
 (12) used the Village Public Safety Officer who was Mr. Pyles to  
 (13) coordinate the clean up crews - actually I think he even  
 (14) worked on hiring them to hire and coordinate the clean up  
 (15) crews from your town isn't that right?  
 (16) A I said that - well maybe I did say that  
 (17) Q Now Mr. Pyles has been deposed in this case okay and he  
 (18) testified under oath that by the end of the summer there really  
 (19) wasn't -  
 (20) MR STOLL Hold it hold it Your Honor -  
 (21) THE COURT Ask direct questions counsel don't use  
 (22) hearsay  
 (23) MR CLOUGH I appreciate that  
 (24) BY MR CLOUGH  
 (25) Q Would you agree with me Your Honor - Mr. Chichenoff?  
 (26) THE COURT Probably not

Vol 22 3428

(1) MR CLOUGH Ladies and gentlemen of the jury would  
 (2) you agree with me? I don't think there is anybody in the  
 (3) courtroom that would agree with me at this point. Excuse me  
 (4) everybody. Well h - Your Honor h - the Mayor  
 (5) BY MR CLOUGH  
 (6) Q Your Honor the Mayor Mr. Chichenoff would you agree  
 (7) with  
 (8) me sir that over the course of the summer there was less and  
 (9) less oil coming in with the tide?  
 (10) A I don't know if I could agree with you or not  
 (11) Q Well then let me just ask you this. Would you agree with  
 (12) me that Mr. Pyles as the oil spill coordinator from your town  
 (13) would be in a better position than you to know how much oil  
 (14) was  
 (15) coming in over the summer?  
 (16) A I doubt that also  
 (17) Q Why?  
 (18) A Because I get facts from other people you know my own  
 (19) kids that were working on there - like from other people besides  
 (20) Mr. Pyles. As far as I know he stayed over in that office  
 (21) most of the time for the corporation  
 (22) Q And he was the Village Public Safety Officer for the entire  
 (23) city of Ouzinkie right?  
 (24) A He was a first public safety officer and I wish we had him  
 (25) back again  
 (26) Q Because he was good at his job and you trusted him?  
 (27) A Yeah I trusted Bill

Vol 22 3429

(1) Q Now during the winter of 1989 and 90 your community  
 (2) entered into an arrangement with Exxon to monitor the  
 (3) shorelines in the general vicinity of Ouzinkie to see what oil  
 (4) might be turning up through the winter and into the spring  
 (5) isn't that right?  
 (6) A Yes  
 (7) Q And you signed a contract with Exxon whereby the city of  
 (8) Ouzinkie was actually hired by Exxon to go out and check not  
 (9) just beaches these municipal properties but shorelines in the  
 (10) whole area around your community to see what if anything  
 (11) might be out there in 1990 isn't that right?  
 (12) A Yes  
 (13) Q And as part of that agreement you the city and Exxon  
 (14) selected I think four different sites that would be visited  
 (15) on a regular basis by Ouzinkie residents hired by Exxon just  
 (16) for the purpose of checking how much oil was out there isn't  
 (17) that right?  
 (18) A I guess must be right  
 (19) Q And those sites do you recall were one Sourdough Flats  
 (20) the big area you're talking about here is that right sir?  
 (21) A Yes  
 (22) Q And then some areas I don't think show up quite on the map  
 (23) and maybe you can give us some idea where they are. Camel's  
 (24) Rock Area where is that?  
 (25) A That's right across

Vol 22 3430

(1) Q Would be down in here?  
 (2) A Yeah Kodiak Island side  
 (3) Q On the Kodiak Island side so it would be down in here?  
 (4) A Yes  
 (5) Q And then Garden's Point where would that be?  
 (6) A See where that little tip comes out there little bit  
 (7) further this way right in that area  
 (8) Q This general area here (indicating) And then also Monks  
 (9) Lagoon where would that be?  
 (10) A That's on the south - part of Spruce Island  
 (11) Q So that would be a little farther away?  
 (12) A Right towards Kodiak  
 (13) Q And under your contract that the city signed with Exxon you  
 (14) were required basically to fill out written reports for each of  
 (15) these inspections as to what the people from Ouzinkie found on  
 (16) these shorelines isn't that right?  
 (17) A Yeah I guess  
 (18) Q Would it help if you saw the contract - let me ask do you  
 (19) recall signing the contract on behalf of the city?  
 (20) MR STOLL Your Honor may I approach the bench?  
 (21) (Bench conferred off the record)  
 (22) BY MR CLOUGH  
 (23) Q Mayor Chichenoff sir I just want to show you something  
 (24) which for record purposes if I may refer to it by the exhibit  
 (25) number DX 12363 which is entitled Shoreline Monitoring

Vol 22 3431

Vol 22 3433

(1) Agreement entered into on September 22nd 1989 between Exxon  
 (2) company and the city of Ouzinkie I'd like you to just take a  
 (3) look at that and I think you'll see sir on the last page  
 (4) that you signed this on behalf of the city Just take a second  
 (5) and look at that  
 (6) A My signature  
 (7) Q Now if I could direct your attention sir to the second  
 (8) page and the paragraph here 2 B which has the rather messy  
 (9) blue pen line which is mine and not part of the original  
 (10) Could you read that -  
 (11) THE COURT To yourself  
 (12) BY MR CLOUGH  
 (13) Q Yes very much to yourself  
 (14) A (Witness complies)  
 (15) Q Now looking at that paragraph Mayor Chichenoff do you  
 (16) recall now that part of the terms of your agreement with Exxon  
 (17) for this shoreline monitoring program was that you would send  
 (18) regular written reports back to Exxon documenting what the  
 (19) people from the city of Ouzinkie who worked on this contract  
 (20) found in the way of oil on the shorelines at these sites?  
 (21) A You mean we didn't?  
 (22) Q No all I'm asking wasn't that one of the requirements?  
 (23) A That's what it said right there  
 (24) Q I actually have here Mr Chichenoff - I'd forgotten I had  
 (25) it or I would have put it up earlier

(1) (Sidebar conference held out of the hearing of the jury )  
 (2) THE COURT What's the objection?  
 (3) MR STOLL Hearsay  
 (4) MR CLOUGH Well these are clearly business records  
 (5) compiled under the terms of the contract regularly kept in the  
 (6) course of the business and the contract was entered into  
 (7) between the city and Exxon That's what we were required to  
 (8) do classic business records Rule 8036 exception  
 (9) THE COURT This is - are reports from the village  
 (10) government  
 (11) MR CLOUGH Yes pursuant to the contract  
 (12) THE COURT Isn't it an admission?  
 (13) MR CLOUGH I have that as a fall back argument  
 (14) MR STOLL Okay  
 (15) THE COURT Could very possibly be Objection is  
 (16) overruled  
 (17) (Sidebar concluded )  
 (18) BY MR CLOUGH  
 (19) Q I'm going to be asking you some questions about the reports  
 (20) under the terms of your agreement And I realize that in  
 (21) places this may be a little difficult to read so we'll do the  
 (22) best we can and I'll come up and help you  
 (23) Do we have another copy that we can give the witness?  
 (24) MS SMITH John can't read it at all  
 (25) BY MR CLOUGH

Vol 22 3432

Vol 22 3434

(1) MR CLOUGH Mr Stoll this is a map which I think  
 (2) locates the four sites If you want to look at it first - I  
 (3) apologize I don't have a copy of it  
 (4) BY MR CLOUGH  
 (5) Q Can you see that on your screen Mayor Chichenoff? Can  
 (6) you  
 (7) see the map on your screen there?  
 (8) Mayor Chichenoff does that accurately show the locations  
 (9) of the four monitoring sites we talked about Sourdough Flats  
 (10) C.M.I.s Pock Area Garden's Point?  
 (11) A I can barely make out the letters on that  
 (12) Q It is tough Let me help you out This is Monks - down  
 (13) to this - that's Monks Lagoon I should use the pointer for  
 (14) that Well I can point with my finger That is Monks Lagoon  
 (15) down in that area?  
 (16) A Yeah I suppose  
 (17) Q And over here is Sourdough Flats that we were talking about  
 (18) earlier and up here is Garden's Point?  
 (19) A Yes  
 (20) Q And up here is the North Cape site?  
 (21) A Yes  
 (22) Q And counsel for your reference what I'm referring to is  
 (23) out of defense Exhibit 12080 and portions of Defendants  
 (24) Exhibit 10609  
 (25) MR STOLL We have an objection to this  
 (26) MR CLOUGH That's why I wanted to tell you

(1) Q I'm going to give you this also Mayor Chichenoff This  
 (2) is a written copy what we're going to see on the screen I'm  
 (3) going to try to blow up what's on the screen and we'll see  
 (4) what's the easiest for you to read all right?  
 (5) Zooming in some here The very top it says Winter  
 (6) Monitoring Form Kodiak Island city or village and it says  
 (7) Ouzinkie th re right sir?  
 (8) A Yes  
 (9) Q And there are three names for the monitors Can you read  
 (10) the names? The...  
 (11) gentlemen of the jury are up in this corner of the monitor  
 (12) MR PETUMENOS Plaintiff's pen  
 (13) MR CLOUGH Instruction course would be equally  
 (14) appreciated  
 (15) BY MR CLOUGH  
 (16) Q Are those Andy Christofferson Cliff Panamarioff and  
 (17) Katherine Panamarioff?  
 (18) A Yes  
 (19) Q Those are all residents of the Ouzinkie?  
 (20) A Yes  
 (21) Q And they all worked for the city of Ouzinkie on this  
 (22) program?  
 (23) A Yes I believe they did It's been awhile  
 (24) Q But your best recollection is that they did?  
 (25) A Yeah I think

Vol 22 3435

(1) Q And what they and the other people who worked for the city  
 (2) would do is travel out to these sites on a number of occasions  
 (3) and examine the shoreline and see what they could find right?  
 (4) A Yes  
 (5) Q And then they would fill in these reports reporting what  
 (6) they found. Now I'd like to look at this report. If you can  
 (7) see the date, looks like this one is dated December 27th  
 (8) 1989. Can you see that? Again I apologize it's a copy of a  
 (9) copy. That happens in the field.  
 (10) A Yes  
 (11) Q And then there is a section under this called Type of  
 (12) Oiling Observed During This Survey. Do you see that a little  
 (13) farther down?  
 (14) A Yes  
 (15) Q And it says number of tar balls per hundred yards and it  
 (16) says none right?  
 (17) A Yes  
 (18) Q Number of mousse patties per hundred yards and it says  
 (19) none again right?  
 (20) A Yes  
 (21) Q And then it talks about bands of oil and they didn't see  
 (22) any bands of oil. Still on the first page we're going to get  
 (23) to the second one in a second. Just directing your attention  
 (24) to the first page there Mayor Chichenoff do you see where it  
 (25) says bands of oil and it's checked none or no. Is that

Vol 22 3436

(1) legible from where you are?  
 (2) A Yes I know it  
 (3) Q And no pools or pockets of oil?  
 (4) A Yes  
 (5) Q And no sheens near the shoreline?  
 (6) A Yes  
 (7) Q Now your crew went back out there a little later on  
 (8) January 14th same place Sourdough that's part of the  
 (9) program you keep going out there over and over again to make  
 (10) the observations. So here is what they saw on the 14th and  
 (11) this time looks like it was Cliff and Katherine. And I will  
 (12) in the interest of everybody's time won't walk through them  
 (13) one by one but can you see in fact they observed no oiling  
 (14) tar balls mousse patty tar balls or sheens of any kind  
 (15) during their inspection?  
 (16) A I don't understand what you're trying to do with this  
 (17) Q All I'm asking you sir isn't that what the report file by  
 (18) your city said?  
 (19) A I'm not familiar with these reports. Some of these reports  
 (20) I didn't see.  
 (21) Q All I'm asking you sir is that what it said? That's  
 (22) really all I'm asking.  
 (23) MR STOLL Counsel we'll stipulate that it is  
 (24) that.  
 (25) BY MR CLOUGH

Vol 22 3437

(1) Q Looking to the next page - and again this is the  
 (2) Sourdough property which is the largest property owned by the  
 (3) city - they went out there again or at least a crew went out  
 (4) there again on February 16th  
 (5) MR CLOUGH Perhaps counsel will stipulate again  
 (6) BY MR CLOUGH  
 (7) Q On the February 16th inspection conducted by this case  
 (8) four residents of Ouzinkie on behalf of the city under the  
 (9) monitoring contract there were no tar balls no mousse patties  
 (10) no bands of oil no pools no pockets and no sheens near the  
 (11) shore?  
 (12) MR STOLL Area - we're jumping to the 16th of  
 (13) February to a different beach  
 (14) MR CLOUGH No still the Sourdough test site  
 (15) MR STOLL That's fine says what it says  
 (16) BY MR CLOUGH  
 (17) Q Now I've got a whole lot of these I don't want to put  
 (18) you through putting them up there  
 (19) A You got to take the condition you know that time of year  
 (20) the weather is bad you know probably don't even go in there  
 (21) take a good look  
 (22) Q Let me ask you this A number of different residents of  
 (23) the city worked on this program didn't they?  
 (24) A Would you repeat that?  
 (25) Q Sure didn't a number of different residents of your city

Vol 22 3438

(1) work on the monitoring program?  
 (2) A Right  
 (3) Q And their job was to go out and document oil when they  
 (4) found it?  
 (5) A I understand that  
 (6) Q And do you believe those people did the best job they  
 (7) could?  
 (8) A Well you have to have monitors monitoring the monitors  
 (9) Q My question is Do you believe the residents of your town  
 (10) that were hired to do this job did the best they could?  
 (11) A I suppose  
 (12) Q And if we were to go through all of these reports together  
 (13) isn't it true that although in March they would find a couple  
 (14) of very isolated incidents where they would find a tar patty  
 (15) tar ball or mousse patty isn't it true generally they found  
 (16) very very little oil in 1990 on those sites?  
 (17) MR STOLL Your Honor I have an objection  
 (18) Counsel if you want to put this exhibit into evidence I  
 (19) welcome it And you want to refer to these particular  
 (20) documents covering - I think it's six occasions on four  
 (21) different places out of many months of monitoring - you can do  
 (22) that  
 (23) THE COURT Enough argument counsel You're offering  
 (24) to stipulate the document into evidence?  
 (25) MR STOLL Yeah

Vol 22 3439

Vol 22 3441

(1) MR CLOUGH We would like to offer the entire series  
 (2) of monitoring reports for the entire time  
 (3) THE COURT Counsel?  
 (4) MR STOLL No objection  
 (5) THE COURT I'll admit them You can give me the  
 (6) numbers later  
 (7) MR CLOUGH With that stipulation from counsel - I  
 (8) thought we had no further questions One last question which  
 (9) counsel has properly brought to my attention  
 (10) BY MR CLOUGH  
 (11) Q You did mention in 1990 you yourself did on one occasion  
 (12) see some oil when you were salmon fishing? Do you recall  
 (13) testifying to that this morning?  
 (14) A I'm having a hard time understanding you okay?  
 (15) Q Sure This morning when Mr Stoll was asking you some  
 (16) questions sir - and I'm paraphrasing I'm not trying to quote  
 (17) you - I believe you testified that in 1990 once when you were  
 (18) out salmon fishing you saw some oil?  
 (19) A Yes  
 (20) Q My question for you is Wasn't the oil you saw well out to  
 (21) sea?  
 (22) A Not really Right by the beach there It was floating  
 (23) around the water you know  
 (24) Q Wasn't it about three or four miles away from Spruce  
 (25) Island?

(1) summer - or during 1989 when the people were out trying to  
 (2) clean up these beaches were the children able to use these  
 (3) beaches? The children weren't out on the clean up crews were  
 (4) they?  
 (5) A No the children weren't able to use those beaches during  
 (6) the cleanup because there was oil here and there  
 (7) Q And the -  
 (8) Can I have the use of this Elmo please?  
 (9) This map that Mr Clough put up - the city of Ouzinkie is  
 (10) up here correct?  
 (11) A That's correct  
 (12) Q And the only one of the four sites that people were  
 (13) contracted to inspect that is on municipal property is this one  
 (14) site in this cove on - called Sourdough Cove isn't that  
 (15) right? If you just look at that map  
 (16) A Yeah that's where the site was  
 (17) Q The others are not - the other sites are not on municipal  
 (18) property isn't that right? Garden's Point isn't on municipal  
 (19) property?  
 (20) A What's the question?  
 (21) Q Garden's Point is not municipal property it's not a  
 (22) municipal part?  
 (23) A No it isn't  
 (24) Q And North Cape certainly is not a municipal property is  
 (25) it?

Vol 22 3440

Vol 22 3442

(1) A No In fact it was on Spruce Island  
 (2) Q But Spruce Island isn't part of Ouzinkie property is it?  
 (3) A Come at that again  
 (4) Q Wasn't this oil at least three or four miles away from your  
 (5) village that's all I'm asking?  
 (6) A From the village?  
 (7) Q Yes  
 (8) A It was on Spruce Island though  
 (9) Q But where you saw it it was at least three or four miles  
 (10) from the village?  
 (11) A It was in the Narrows between Wooded Island and close to  
 (12) North Cape  
 (13) Q Do you recall - isn't that three or four miles away from  
 (14) Ouzinkie?  
 (15) A Well from the village right  
 (16) MR CLOUGH No further questions Your Honor  
 (17) MR STOLL I just have a few questions  
 (18) REDIRECT EXAMINATION OF ZACK P CHICHENOFF  
 (19) BY MR STOLL  
 (20) Q With respect to Block 23 counsel asked you about if there  
 (21) was subsistence fishing here This is the beach area where  
 (22) they play that ball game that you were describing They used  
 (23) to play the ball game before the oiling?  
 (24) A Well it went below the church  
 (25) Q Right in this area here (indicating) And during the

(1) A No  
 (2) Q And Monks Lagoon is not municipal property is it?  
 (3) A No  
 (4) Q And Exxon contracted hired people from the municipality of  
 (5) Ouzinkie because Exxon left Ouzinkie in September 1989 isn't  
 (6) that right?  
 (7) MR CLOUGH Objection Your Honor  
 (8) THE COURT The because is the problem counsel  
 (9) Rephrase the question  
 (10) BY MR STOLL  
 (11) Q Did Exxon leave Ouzinkie in September of '89?  
 (12) A I'm not too sure  
 (13) Q It was in the fall of 1989 wasn't it?  
 (14) A Yes  
 (15) Q And did you see anybody from Exxon there during the winter  
 (16) months of 1989-1990 doing cleanup?  
 (17) A Would you repeat that please?  
 (18) Q Did you see anybody from Exxon or VECO there in Ouzinkie  
 (19) during the winter of 1989-1990 or was it just your people  
 (20) from the village?  
 (21) A No I don't believe I did  
 (22) Q Do you know whether Exxon was required by law to have  
 (23) somebody monitor these sites?  
 (24) A No I don't  
 (25) Q With respect to this - Mr Clough asked you a question -

Vol 22 3443

(1) MR STOLL May I approach the witness  
 (2) MR CLOUGH Can I see which page you're talking  
 (3) about?  
 (4) MR STOLL Yeah I'm talking about 11490  
 (5) BY MR STOLL  
 (6) Q Mr Stoll asked you about January 14th 1990 on Sourdough  
 (7) Beach and this also has - one of the things on this form is  
 (8) the number of inches of snow that's covering the ground And  
 (9) would you tell the jury what this says about inches of snow or  
 (10) rain there?  
 (11) A 4 11 inches  
 (12) Q Do you have any difficulty seeing oil under snow?  
 (13) A Been awhile I can't really remember  
 (14) MR STOLL That's all I have  
 (15) CROSS EXAMINATION OF ZACK P CHICHENOFF  
 (16) BY MR CLOUGH  
 (17) Q Several things very quickly  
 (18) First of all the Sourdough site - you and Exxon jointly  
 (19) selected the sites for the monitoring program isn't that  
 (20) true? When I say you I mean the city  
 (21) A I don't know  
 (22) Q Well the contract was signed by both of you right?  
 (23) A Yes  
 (24) Q And there had been discussions back and forth between you  
 (25) and Exxon in advance?

Vol 22 3444

(1) A Yes  
 (2) Q And one of the things you talked about was what sites were  
 (3) going to monitor?  
 (4) A Three  
 (5) Q And the one that you picked for the city site was the  
 (6) great big green one Sourdough Flats?  
 (7) A That's correct  
 (8) Q Not the little red one here right? You didn't pick this  
 (9) little one?  
 (10) A Would you repeat that question?  
 (11) Q Sure The site that you selected to monitor was the great  
 (12) big one the green one?  
 (13) MR STOLL Your Honor may I - you who's you?  
 (14) BY MR CLOUGH  
 (15) Q The site that the contract listed to be the city property  
 (16) to be inspected with the large green parcel Tract C correct?  
 (17) A I guess  
 (18) Q And you're just looking at this map see that Tract C has  
 (19) the great majority of all the shoreline that the city of  
 (20) Ouzinkie is going about in this case doesn't it and you can  
 (21) look and compare the green area versus the little red ones over  
 (22) here?  
 (23) A Both  
 (24) Q Now Mr Stoll asked you a question about Exxon leaving  
 (25) Ouzinkie Exxon was never in Ouzinkie were they?

Vol 22 3445

(1) A They weren't?  
 (2) Q No Bill Pyles was in Ouzinkie for Exxon wasn't he?  
 (3) A And also John Peavey  
 (4) Q John Peavey would come to visit on occasion from Kodiak  
 (5) right? Correct?  
 (6) A I saw him quite a few times  
 (7) Q But Bill Pyles was hired by Exxon full time to be in  
 (8) Ouzinkie right?  
 (9) A I guess I don't know for sure  
 (10) Q Because Bill Pyles was as you said the Village Public  
 (11) Safety Officer for your hometown?  
 (12) A Yes he was  
 (13) Q And he was there throughout the summer?  
 (14) A I suppose yes  
 (15) Q And he stayed on after the summer until he finally moved to  
 (16) Kodiak and became a police officer there?  
 (17) A Oh yes He was a VPSO until just about a year ago yes  
 (18) Q And in fact all the people who worked for Exxon and  
 (19) Ouzinkie were local residents They hired local residents to  
 (20) do this didn't they?  
 (21) A What was that?  
 (22) Q What Bill Pyles did for Exxon was hire local residents from  
 (23) right there in Ouzinkie to do this cleanup?  
 (24) A Well I don't know if he was the hiring person  
 (25) Q The people who were doing the cleanup on your shorelines

Vol 22 3446

(1) were the residents of your own community who had been hired  
 (2) by  
 (3) Exxon right?  
 (4) A Yeah Well they were hired by VECO  
 (5) Q By VECO for Exxon and they were your residents?  
 (6) A Yeah that's correct  
 (7) Q And lastly about the snow on the beaches I looked down in  
 (8) a place - I live down in a place Auke Bay in Juneau I'm  
 (9) fortunate to live on the water When we have heavy snow the  
 (10) tide comes in and out unless it's snowing at that particular  
 (11) moment there is no snow on the intertidal area because the  
 (12) water washes it off doesn't it?  
 (13) A I wouldn't know  
 (14) Q You have never seen - you've seen lots of snow around  
 (15) Ouzinkie come on  
 (16) A What are you trying to say?  
 (17) Q Let me show you some pictures that might help All from  
 (18) DX 10609 which we produced from the winter monitoring  
 (19) program  
 (20) and will be part of all the photographs and materials compiled  
 (21) by the residents of Ouzinkie under this contract?  
 (22) MR STOLL Is this a designated -  
 (23) MR CLOUGH Yes all part of DX 10609  
 (24) BY MR CLOUGH  
 (25) Q Now this is one of the photographs taken and I can show  
 (26) you the contract again by the way but one of the things that  
 (27) your people did under that contract was they took photographs

Vol 22 3451

(1) A I have three two boys nine and seven and a girl who s  
 (2) four  
 (3) Q And you're a commercial fisherman and a school teacher  
 you  
 (4) said?  
 (5) A Yes I am  
 (6) Q And where do you teach school?  
 (7) A I teach school at Kodiak Junior High in Kodiak Alaska  
 (8) Q What do you teach?  
 (9) A Eighth grade science chemistry physics some  
 (10) environmental sciences a little bit of Earth science  
 (11) Q How long have you been a school teacher?  
 (12) A Since 1983 so this will be my eleventh year  
 (13) Q And how long have you been a commercial fisherman?  
 (14) A I started with my father in 1965 so roughly 30 years 29  
 (15) years  
 (16) Q And did you go to college incidentally?  
 (17) A Yeah I went to University of - Oregon State University in  
 (18) Corvallis Oregon from '75 through '81  
 (19) Q Did you obtain a degree there?  
 (20) A I got my Bachelor's degree in biology and a minor in  
 (21) education  
 (22) Q And then did you subsequently get a Master's degree?  
 (23) A Yeah went to the University of Northern Colorado '89 and  
 (24) '90 school year in Greeley Colorado and got a Master's in  
 (25) chemistry

Vol 22 3452

(1) Q You said you're a commercial fisherman?  
 (2) A Yes I am  
 (3) Q Do you have your own permit now?  
 (4) A Yeah I received my own permit in 1976 and had my own  
 (5) permit in 1977  
 (6) Q And where do you fish normally?  
 (7) A Exclusively the Kodiak Island area  
 (8) Q Now here is Exhibit 1334 A and this is a map of Kodiak  
 (9) Island And could you show the jury - you could come down  
 (10) from there  
 (11) THE COURT I leave the microphone on  
 (12) BY MR. STOLL  
 (13) Q And this will follow you around And just show the jury  
 (14) please where you fish on Kodiak Island  
 (15) A Well Kodiak District runs essentially from Cape Douglas  
 (16) which is on the entrance to Cook Inlet down to a place called  
 (17) Kilokak which is down in this area and the entire Kodiak  
 (18) area And as I say I've been fishing for 30 years There is  
 (19) probably nowhere on Kodiak Island that I have not fished in  
 (20) those 30 years of fishing  
 (21) Q Which - do you fish the Ayakulik area as well on the  
 (22) southern end of Kodiak Island?  
 (23) A Early on usually in June it gets a pretty good run of red  
 (24) salmon Yeah I fish there  
 (25) Q Incidentally have you been able to fish in the sockeye

Vol 22 3453

(1) season this year in the Ayakulik area?  
 (2) A Not at all at the Ayakulik  
 (3) Q And you fish - do you sort of move around during the  
 (4) course of summer -  
 (5) A Yeah  
 (6) Q - in a normal year?  
 (7) A Yes we're very mobile  
 (8) Q Describe for the jury please what you do  
 (9) A Salmon season opens in early June We have some  
 (10) traditional spots that have red salmon or sockeye salmon early  
 (11) on One of them is the Ayakulik Other areas include the  
 (12) mainland area Generally the fleet goes out we go to those  
 (13) areas As fish are reported in certain areas we move to those  
 (14) areas If there happens to be fish on the east side of Kodiak  
 (15) I go there If there happens to be fish on the north end  
 (16) Shuyak Afonak we go there We're very mobile move  
 around  
 (17) We have closures certain areas will close we will move to  
 (18) new areas  
 (19) Q Now why do you live in Kodiak?  
 (20) A I guess - that's a good question I grew up there I  
 (21) have a lot of very positive experiences My father was a  
 (22) commercial fisherman started in 1950 and I guess the whole  
 (23) experience of fishing and hunting and the outdoors is  
 (24) something I was raised with and I really enjoy it  
 (25) And now I have three boys - or three children two boys

Vol 22 3454

(1) and a girl and I want to give that experience that I had  
 (2) Both my boys fish with me hunt with me And it's just - I've  
 (3) been a lot of places  
 (4) When I was going to college I traveled a lot and I guess  
 (5) it's to me probably the most beautiful place in the world  
 (6) especially when the weather is nice We do get rain but it's  
 (7) beautiful  
 (8) Q And do you recreational fish and subsistence fish as well?  
 (9) A Yeah Usually in - during the summer from the first of  
 (10) June to September I'm busy salmon fishing but in September  
 we  
 (11) do a lot of - we go out on the weekends when I'm not working  
 (12) take the family we do a lot of sport fishing and we do a lot  
 (13) of hunting  
 (14) Q Do you do clamming and shellfish or did you used to?  
 (15) A Yeah we used to That was kind of like a family thing  
 (16) I'd dig the kids would pick up clams kind of situation It  
 (17) was a family activity I guess  
 (18) There were a lot of beaches in the near vicinity of Kodiak  
 (19) that you can go on the road system and additionally we'd go  
 on  
 (20) hunting trips and sport fishing trips and on low tides we  
 (21) would stop and dig clams  
 (22) Q Would you take your family out on your boat in the summer  
 (23) or in the fall to go on picnics and recreate?  
 (24) A Having the boat is a nice I guess access give us access  
 (25) to remote areas of Kodiak Island and we do that quite a bit

Vol 22 3455

Vol 22 3457

(1) We call it camping. There is no tent involved but it's a  
 (2) camping trip for the kids.  
 (3) Q What would you do? Just describe it for the jury?  
 (4) A I guess we would pick a place and Friday night after  
 (5) school we would load everybody on the boat and sleeping bags  
 (6) and we would travel to you know pick a place that we wanted  
 (7) to go maybe down to Uyak Bay or around some of the areas on  
 (8) Afognak. Especially in the fall we get a lot of silver salmon  
 (9) take the kids to where they can catch a silver. If it's a day  
 (10) trip go to the islands in the near vicinity of Kodiak maybe an  
 (11) hour run go on the shore play on the beach sport fish hike  
 (12) in the woods swim in the ocean. The kids do. It's a little  
 (13) cold for us but those kinds of things.  
 (14) Q Now in 1989 during the summer of 1989 you weren't there  
 (15) has been testimony already you were not able to commercial  
 (16) fish in Kodiak?  
 (17) A That is correct.  
 (18) Q And that was because of the Exxon Valdez oil spill?  
 (19) A That is also correct yeah.  
 (20) Q Now during the course of that summer after the closure  
 (21) did you do some work under the direction of the Alaska  
 (22) Department of Fish & Game?  
 (23) A Yes I did.  
 (24) Q And would you tell the jury please what that was?  
 (25) A I was under the direction of Alaska Department of Fish &

(1) responsible for was from Old Harbor to the south end of Kodiak  
 (2) Cape Trinity in that area there.  
 (3) Q Old Harbor is -  
 (4) MR STOLL Let me move this Your Honor towards the  
 (5) jury so they can see.  
 (6) BY MR STOLL  
 (7) Q Old Harbor is right here and then down to Sitkinak and  
 (8) Trinity Island is here and that was your area?  
 (9) A Yes that is correct.  
 (10) Q And that was the area that you were assigned by the ADF&G?  
 (11) A Yes.  
 (12) Q And so you would make that route back and forth?  
 (13) A Yeah we had a cycle. We talked to various fishermen  
 (14) before they left where do you set? And we would go to those  
 (15) areas and see if it was free of oil.  
 (16) Q Did you get a training course to determine you know what  
 (17) to look for and so on?  
 (18) A I did not. I had a trained observer supplied by Fish &  
 (19) Game.  
 (20) Q And when you were out there did you - incidentally you  
 (21) find that you were told to set your nets if you didn't see any  
 (22) oil?  
 (23) A That is correct.  
 (24) Q Now were these your own nets?  
 (25) A They were supplied I guess by VECO.

Vol 22 3456

Vol 22 3458

(1) Game to do what is called a test fishery. There was -  
 (2) everybody was geared up I guess is where I'll start. We  
 (3) assumed we were going to go fishing the first part of June. I  
 (4) had a salmon crew ready to go the boat was geared up all  
 (5) ready to go salmon fishing and then due to the I guess oil  
 (6) spill we were unable to go.  
 (7) In mid June I was contacted wondered if - they wanted me  
 (8) to be a test boat. I said what's involved? And essentially  
 (9) what I did was went to traditional fishing areas that boats  
 (10) would normally fish determine whether there was oil in the  
 (11) water and monitor or observe and monitor the oil.  
 (12) We - if there was not oil or - evident in a particular  
 (13) area that we would normally fish we were to set our net take  
 (14) samples of fish. We were to do beach surveys which involves  
 (15) getting off the boat and walking around.  
 (16) In addition to myself and the three men that work with me  
 (17) our salmon crew we had a trained observer supplied by the  
 (18) Alaska Department of Fish & Game. Their responsibility was to  
 (19) assist me and yes there is oil no there is not yes set  
 (20) your net no you don't.  
 (21) Additionally he collected samples from fish from the net  
 (22) from the beach from the water monitored the movement of oil  
 (23) in certain areas with the tides. We put out passive monitors  
 (24) which was an oil absorbent material that would pick up oil that  
 (25) might be traveling with the tide. And the area that I was

(1) Q A contractor?  
 (2) A A contractor that supplied the net.  
 (3) Q Were you willing to use your own nets out there?  
 (4) A No I was not.  
 (5) Q Why is that?  
 (6) A There was oil in the water and we were you know - it's a  
 (7) \$20,000 piece of equipment and if it were to be oiled and  
 (8) ruined and not be used again that's a tremendous expense in a  
 (9) business.  
 (10) Q So you would not be in there to believe you said?  
 (11) A Yeah mid June.  
 (12) Q You can sit down.  
 (13) During the initial several weeks that you did this did you  
 (14) have much opportunity to put your nets down?  
 (15) A When we first started in that area we - there was a lot  
 (16) of oil in the water and we were directed not to set the net if  
 (17) there was oil present. And so during the first two or three  
 (18) weeks I would say we did a lot of traveling around and  
 (19) observing oil so no the net was infrequently set.  
 (20) Q Did there come a time when you were - you received other  
 (21) instructions to put your nets down regardless of whether there  
 (22) was oil?  
 (23) A Yeah as we progressed through we were told to set the nets  
 (24) irregardless of the presence of oil or not.  
 (25) Q The fish that you caught in these nets did you then sell

Vol 22 3459

(1) those commercially or did you eat them?  
 (2) A No we did not  
 (3) Q Would you tell the jury please what happened to the fish  
 (4) that were in the net?  
 (5) A We made essentially a traditional salmon set we pursued it  
 (6) up brought the fish up along side the boat One fish would be  
 (7) removed from each set and frozen Five other fish would be  
 (8) wiped with an oil rag to check for the presence of oil and the  
 (9) remainder would be released The five that were wiped would  
 (10) also be released with the others  
 (11) Q Did you also observe beaches?  
 (12) A Yeah we did  
 (13) Q Tell the jury please where you went on those you know  
 (14) the various areas Is that whole coastline along there?  
 (15) A Yeah I would say over the course of essentially two  
 (16) months we probably were on 90 percent of those beaches  
 (17) during  
 (18) that time  
 (19) Q And would you tell the jury please what the - what did  
 (20) the oil appear - how did it look both in the water and on the  
 (21) beaches?  
 (22) MR CLOUGH Objection one of the rare times I would  
 (23) like to raise a double question objection There maybe a  
 (24) substantial difference between oil floating in the water and -  
 (25) MR STOLL That's fine  
 (26) BY MR STOLL

Vol 22 3460

(1) Q Would you describe to the jury please what you observed  
 (2) of oil in the water?  
 (3) A We had a sheet that described to us how to describe the  
 (4) oil It was a - I guess you would call it a sheen on top of  
 (5) the water It varied from a light sheen which would be maybe  
 (6) in streaks or just very light on the oil to heavy sheens  
 (7) silver sheens A variety of terms were used to categorize it  
 (8) as being from very small amounts to very large amounts  
 (9) Traditionally in this area on the water we saw a  
 (10) tremendous amount of sheen virtually everywhere we went  
 (11) The  
 (12) tides are - a lot of tides move in and out and there was a  
 (13) lot of sheen on the water  
 (14) In addition there was what was called mousse It's oil  
 (15) that's very heavy and thick with water mixed in it organic  
 (16) material that would float around look'd like cow patties is  
 (17) the easiest way to say it I guess They ranged in size from a  
 (18) thumbnail size to a dinner plate size So those would be  
 (19) floating in the currents as well  
 (20) They would collect a lot of material bird feather kelp  
 (21) anything that was floating in the water - in the eddies of  
 (22) sheen with the tide you'd have the cow patties  
 (23) Q Now I want to know you what's been marked as plaintiffs  
 (24) Exhibit 1536 I think -  
 (25) A That is what you had we would call a mou se patty  
 (26) Q I that typical of untypical of what you would see?

Vol 22 3461

(1) A Very typical in size and consistency untypical in that  
 (2) there is not the bird feathers and organics that we would find  
 (3) lots of bird feathers dead birds It collects whatever is  
 (4) near it  
 (5) Q Did you see this just during the first two or three weeks  
 (6) of your experience out there?  
 (7) A No  
 (8) Q How long did that continue?  
 (9) A Until we were removed from the contract  
 (10) Q So all summer long essentially?  
 (11) A Yes essentially the whole time we were out there  
 (12) Q Now let's talk about what you saw on the beaches  
 (13) What did you see on the beaches?  
 (14) A Again varying amounts of different types of oil This was  
 (15) very typical to find on all the beaches that we walked on  
 (16) Again varying sizes from very small drops or chunks I guess  
 (17) the sizes of a thumbnail to dinner plate size  
 (18) In addition there were bands of oil left on the beaches in  
 (19) certain areas Oftentimes as I said the organic material -  
 (20) this would be rolled up in a ball of kelp It would be rolled  
 (21) up in bird feathers Whatever was there it would collect and  
 (22) roll up on the beach in So I guess that would be what we  
 (23) would find typically on beaches  
 (24) Q Now let me ask you to look at exhibit - you said it was  
 (25) different varieties of oiling Is this - did you see this

Vol 22 3462

(1) type of oiling as well as -  
 (2) A This dark spot right here?  
 (3) Q Yes  
 (4) A Yeah That was - there was that  
 (5) Q Was this most - would you describe you know most you  
 (6) saw  
 (7) was this kind of oiling or was it a heavier oiling assuming  
 (8) that's an oil spot?  
 (9) A Yeah I guess I'd have to assume that I wouldn't call  
 (10) that oiling compared to what we saw on the beaches When I  
 (11) talk about bands of oil on beaches it would be dark bands that  
 (12) would extend a whole beach that would look like this not a  
 (13) spot on the beach We would see - if you saw that you would  
 (14) find this  
 (15) Q Now did you observe clean up crews out there?  
 (16) A Yes  
 (17) Q And after the clean up crew was gone then was the beach  
 (18) cleaned?  
 (19) A That day it would be clean for a day  
 (20) Q And then what would happen?  
 (21) A New oil would come on the beaches  
 (22) Q How did that happen?  
 (23) A We have tides that move in and out we have currents we  
 (24) have winds that push whatever is in the water around  
 (25) Depending on those things new oil would go on the beaches  
 (26) We walked beaches within a few days after a clean up crew

Vol 22 3463

Vol 22 3465

(1) had been on the beach and they would have bags of cleaning  
 (2) material that would have oil on the bags where the tide had  
 (3) come up and touched them  
 (4) Q You mean the outside of the bags?  
 (5) A Yes now oil  
 (6) Q As well as debris that was collected inside the bags?  
 (7) A Yes  
 (8) Q Now you were out here during the summer months and did  
 (9) you see - did the oil sort of go through here in one swoop and  
 (10) then - then it was gone and just sort of sloshing around so  
 (11) to speak or was the oil more continual?  
 (12) A I would say that there was just as much oil when we went  
 (13) off contract in mid August as when we went on contract in  
 (14) mid June  
 (15) Q Now there were times when you were able to - it appeared  
 (16) that the water was clean?  
 (17) A That is correct  
 (18) Q When you set your nets?  
 (19) A Yes  
 (20) Q And there were times were there not when in fact you  
 (21) were able to bring your nets up - I say your nets the nets  
 (22) that were on your boat  
 (23) A Yes  
 (24) Q And the nets remained clean and there were no oiled fish  
 (25) did that happen?

(1) Exhibit 1322 Is this a map of Sitkinak?  
 (2) A Yes it is  
 (3) Q And did you observe oil in this area?  
 (4) A Yes we did  
 (5) Q And would you tell the jury please what you observed  
 (6) there?  
 (7) A When we went out to Sitkinak area the anchorage is the  
 (8) Sitkinak Lagoon so that was the area we concentrated our  
 (9) efforts in We did beach surveys along the spit  
 (10) I guess of the areas we went this was the most  
 (11) heavily oiled area that we saw in terms of beach surveys  
 (12) There was oil on the outside of the spit there was oil on it  
 (13) inside of the spit  
 (14) Another time we beach surveyed here again there was high  
 (15) concentration of oil on the beach in both of these areas In  
 (16) terms of what kind of oil this is again what we saw again  
 (17) varying sizes  
 (18) Q You're referring to this Exhibit 1336?  
 (19) A That I'm mousse pattu  
 (20) Additionally in the water there was a stream of - always  
 (21) a stream of sheen quite heavy of what we would call a silver  
 (22) sheen which is denoting a higher concentration a heavier  
 (23) amount that extended into the lagoon And then out of the  
 (24) lagoon it would move in and out with the tide every day  
 (25) Q Now this lagoon there is usually a channel that goes

Vol 22 3464

Vol 22 3466

(1) A There was no evidence of oil coming off the net  
 (2) Q Yes And what about the fish?  
 (3) A I guess I don't know if the fish were oiled or not  
 (4) Samples were taken and passed on  
 (5) Q But you did see oil on some occasions?  
 (6) A On the fish?  
 (7) Q Yes  
 (8) A Definitely coming out of the net  
 (9) Q And what about on other occasions did you get your - did  
 (10) the nets get oil with it?  
 (11) A Yes it did  
 (12) Q And you were seeking to tell the jury again you were  
 (13) seeking to do just an average setting of nets or were you  
 (14) looking for areas where it was supposed to be clean?  
 (15) A We were to run to traditional fish areas whether there was  
 (16) oil there or not we were to move to where salmon fishermen in  
 (17) Kodiak traditionally fish monitor or observe whether there is  
 (18) oil there and set the nets and determine whether or not -  
 (19) essentially if we could fish safely or not  
 (20) Q That was late on after this first two or three week  
 (21) period?  
 (22) A Yes  
 (23) Q And did you go to Sitkinak Island?  
 (24) A Yes I did  
 (25) Q And I have here what has been marked for identification as

(1) through Sitkinak Island?  
 (2) A That is correct At low water it's low and if high  
 (3) water it's open That's what this depicts  
 (4) Q Let me ask you another question In initially you  
 (5) mentioned this being heavily oiled Now this -  
 (6) Exhibit 1354 A is a map that's in evidence and it was  
 (7) prepared by a company called ICF Kaiser Engineering and it  
 (8) purports to be reports - call them reports of various surveys  
 (9) that were done of oiling And there's oiled shoreline shown  
 (10) under the name of ADF&G  
 (11) and the triangle shows VECO report  
 (12) Now I know that - you said that down here at Sitkinak  
 (13) this was heaviest oil but I notice on here that there is only  
 (14) a few little dots down here and this is not - not that much  
 (15) oil even in this area here that you patrolled - you're  
 (16) smiling  
 (17) MR CLOUGH Before the witness answers what is not a  
 (18) pending question I think I have an objection following that  
 (19) question on the basis that there is no establishment of any  
 (20) foundations  
 (21) THE COURT That's two objections so we'll let the  
 (22) question proceed  
 (23) BY MR STOLL  
 (24) Q So the question I've got is This map shows relatively  
 (25) little oiling down here and you're saying - but you're saying

Vol 22 3467

(1) that that was a lot of oil?  
 (2) A That is correct  
 (3) MR CLOUGH Excuse me Your Honor objection  
 (4) foundation because the question assumes facts not in  
 evidence  
 (5) about what the map does or does not show about oiling in other  
 (6) areas  
 (7) THE COURT Well he can make assumptions counsel as  
 (8) long as it is clear that they are assumptions If in fact he  
 (9) knows the coasts then you have to establish that  
 (10) MR STOLL That's what I was trying to do Your  
 (11) Honor Not too irritably apparently for Mr Clough  
 (12) BY MR STOLL  
 (13) Q But if you assume that there is - these little dots are  
 (14) ADF&G reports and the triangles are VECO reports and the red  
 (15) are other programs of oiling There is not as much of these  
 (16) little symbols down here on Sitkinak Island Do you see that?  
 (17) A That is correct There are not as many symbols there  
 (18) Q But you in your experience going up and down here  
 (19) what - how did this compare to these other areas up in here?  
 (20) A As I said earlier this area here on the spit and this  
 (21) inside beach here on the opposite side of the spit - I can  
 (22) how on this one if I need to - were the heaviest oiled I saw  
 (23) and no question about it  
 (24) Q Now -  
 (25) A I don't understand that

Vol 22 3468

(1) Q You can sit down We can turn off the screen  
 (2) In 1989 Mr Keplinger did your family continue to use the  
 (3) oil like it used to?  
 (4) A No  
 (5) Q And why not?  
 (6) A One of my sons got oiled on the beach and that was the end  
 (7) of it  
 (8) Q For that year?  
 (9) A Yes  
 (10) Q Your children - you said something about swimming?  
 (11) A That's correct  
 (12) Q Did they go swimming that year?  
 (13) A Not in the ocean  
 (14) Q And did they - did you go on any of these camping trips  
 (15) like you described with your family to beach areas that  
 (16) summer?  
 (17) A No we did not  
 (18) Q And did you do subsistence fishing that year?  
 (19) A Nope no subsistence fishing  
 (20) Q And is subsistence fishing incidentally important to you?  
 (21) A It supplement our food source yes  
 (22) Q And did you do shellfish any shellfish? You talked about  
 (23) clamming  
 (24) A No we didn't do any  
 (25) Q Have you resumed - you're now doing commercial fishing?  
 (26) A Yes I am

Vol 22 3469

(1) Q And have you - you talked about doing the clamming and  
 the  
 (2) shellfish before you know with the kids Do you - have you  
 (3) gone back to that?  
 (4) A No we have not  
 (5) Q Why is that?  
 (6) A I guess we're not sure that they are safe I have a wife  
 (7) that's very concerned about children's safety I would have to  
 (8) say that ultimate is the children's safety  
 (9) Q And in 1990 did you also observe oil in these areas?  
 (10) A No  
 (11) MR STOLL That's all I have  
 (12) CROSS EXAMINATION OF MATTHEW KEPLINGER  
 (13) BY MR CLOUGH  
 (14) Q Hi Mr Keplinger My name is John Clough Good morning  
 (15) sir fast approaching afternoon  
 (16) If I could step up and get PX1536 from you the mousse  
 (17) patty occasionally referred to as cow patties and I can see  
 (18) why  
 (19) A Yes  
 (20) Q You've been a commercial fisherman for many years right?  
 (21) A Yes I have  
 (22) Q Lots of commercial fishing vessels in the Kodiak area?  
 (23) A That's correct  
 (24) Q I just want to - that's what people in Kodiak do  
 (25) commercial fishing?

Vol 22 3470

(1) A Yes  
 (2) Q They use lubricating oil on their commercial fishing  
 (3) vessels?  
 (4) A Yes  
 (5) Q You do too?  
 (6) A Yes  
 (7) Q Can you take a good whiff of that and tell me if it might  
 (8) smell like lubricating oil to you?  
 (9) A Like grease?  
 (10) Q Lube oil yeah  
 (11) A Not particularly  
 (12) Q Have you ever in your experience in Kodiak seen lube oil  
 (13) or grease left on a beach when someone beached their boat  
 and  
 (14) was working on the engine?  
 (15) A No  
 (16) Q Now the test fishing program that you worked for you were  
 (17) on contract with ADF&G Fish & Game?  
 (18) A That is correct  
 (19) Q And you had really sort of two jobs in that program As I  
 (20) understand it you were one test fishing program itself was  
 (21) conducted offshore?  
 (22) A Up against the shoreline  
 (23) Q Is that what's called the near shore area?  
 (24) A Yes  
 (25) Q And then in addition on occasions you would actually get

Vol 22 3471

Vol 22 3473

- (1) out of the boat I assume in a Zodiac or whatever and go to
- (2) the shoreline itself and do what you call a beach survey I
- (3) believe you testified
- (4) A Yes
- (5) Q And so you essentially the ADF&G crew which you were a
- (6) part of compiled two different sets of observations and data
- (7) one on the water testing that you did in the near shore area
- (8) and a second on the beach surveys in the intertidal isn't
- (9) that true?
- (10) A Yes
- (11) Q By the way you said - you mentioned a couple times that
- (12) you saw clean up crews on occasions at work?
- (13) A Yes
- (14) Q And at times you would see oil come up on a beach after a
- (15) clean up crew had departed?
- (16) A Yes
- (17) Q Mousse patties like that or smaller than that or whatever?
- (18) A Yes
- (19) Q Clean up crews worked throughout the summer of 1989
- (20) didn't
- (21) they?
- (22) A Yeah
- (23) Q In fact there was a whole bunch of clean up crews on
- (24) Kodiak weren't there?
- (25) A I know of the ones in my area
- (26) Q More than one in your area alone?

- (1) Q Who was the Fish & Game observer? This is the trained
- (2) observer that you testified about when Mr. Stoll was asking you
- (3) questions?
- (4) A That is correct
- (5) Q Who did you have out there from Fish & Game?
- (6) A His name was Gene and I don't know the last name
- (7) Q Might have been Hirschinger?
- (8) A Very possible
- (9) Q And he's the trained observer supplied to you by ADF&G to
- (10) make these observations?
- (11) A That is correct
- (12) Q Both for the oil in the water on the near shore area where
- (13) you were doing your net testing and those occasions on the
- (14) shore when you did your beach surveys he did the
- (15) observation?
- (16) A Yes
- (17) Q And he was the trained observer supplied by ADF&G?
- (18) A Yes
- (19) Q And who kept the data?
- (20) A Yes
- (21) Q And kept the results?
- (22) A Yes
- (23) Q And made the conclusions about your observations?
- (24) A Yes
- (25) Q Now as the captain you kept a log?
- (26) A That is correct

Vol 22 3472

Vol 22 3474

- (1) A Based out of Old Harbor yeah
- (2) Q And the people from those clean up crews would actually on
- (3) occasion go back to the same beach more than one time
- (4) wouldn't they?
- (5) A I cannot answer that
- (6) Q Let me ask you this When you saw oil on a beach that had
- (7) been cleaned once before did you guys report that in?
- (8) A Yes we did
- (9) Q And do you know if based on your report a clean up crew
- (10) would be sent out to clean up again?
- (11) A No
- (12) Q So you don't know if that happened or not?
- (13) A No
- (14) Q Now you were the captain of the ship?
- (15) A Yes
- (16) Q And it's the El Capitan if I don't have you mixed up with
- (17) your counterpart Mr. Nault outside?
- (18) A That is correct
- (19) Q What's the boat like how big?
- (20) A 42 foot -
- (21) Q I'm sorry go ahead
- (22) A 42 foot scum
- (23) Q How many people did you have on it that summer sir?
- (24) A Myself my normal salmon crew of three and a Fish & Game
- (25) observer five

- (1) Q And you had your logbook and personal notes of what you
- (2) saw
- (3) and did during that time - when in June did you start them
- (4) sorry I forgot?
- (5) A June 20th
- (6) Q From roughly June 20th through mid August when your
- (7) contract with ADF&G came to an end?
- (8) A That is correct
- (9) Q And during that period of time I believe you testified -
- (10) regarding oil spill site 1354 A - that your area of
- (11) responsibility - responsibility was generally from Old Harbor
- (12) down to and including Sitkinik Harbor or Litoon?
- (13) A That is correct
- (14) Q And you maintained your personal notes of generally what
- (15) you saw and observed in that course of period of time didn't
- (16) you?
- (17) A Yes
- (18) Q In your own handwriting?
- (19) A Yes
- (20) MR CLOUGH If I may approach again Your Honor
- (21) BY MR CLOUGH
- (22) Q I have here - it's designated plaintiffs exhibit not
- (23) defense It was designated although they didn't use it
- (24) PX904 which I believe the witness will identify as his log
- (25) A That is correct
- (26) Q Mr. Kiplinger I'm going to be asking you some questions -

Vol 22 3475

(1) keep that up there. There are occasions no offense I can't  
 (2) read your handwriting. In any event you should be able to  
 (3) interpret and say what the words say there.  
 (4) A Okay.  
 (5) Q Now as I looked through - first of all these pages  
 (6) aren't numbered. You may or may not recall this is a Xerox  
 (7) copy. They are all dated so as we look to some particular  
 (8) pages I think you'll find the easiest way to check anything -  
 (9) I've got some excerpts I'd like to go through but if you want  
 (10) to check the context the easiest way will be to check the  
 (11) date because every single page has a date on it somewhere.  
 (12) A Okay.  
 (13) Q What I did at a rather ungodly hour last night was go  
 (14) through your log notes and try and identify about those times  
 (15) not when you were talking about the near shore testing with  
 (16) the - for the fish but on the occasions when you went on the  
 (17) shore and actually looked at what's on the shoreline in the  
 (18) intertidal area.  
 (19) A Yes.  
 (20) Q And what I've done here sir is pulled out every reference  
 (21) I could see -  
 (22) MR CLOUGH And Your Honor it's not as long as you  
 (23) might be afraid.  
 (24) BY MR CLOUGH  
 (25) Q - every reference that I could find to an actually - to

Vol 22 3477

(1) mousse patches on the beach light silver sheen in area  
 (2) samples taken  
 (3) Q That's what you saw when you were there?  
 (4) A That's correct.  
 (5) Q The next one page July 9th and it looks like you did a  
 (6) survey on Ataktalik Island?  
 (7) A Yes.  
 (8) Q What did you find on that one?  
 (9) A Beach recently cleaned by crew 50 to 75 bags on west side  
 (10) of beach some old small patches of mousse very few in the  
 (11) clean area. Rock/sand shoreline appeared wet five to six  
 (12) hours after high water. Dark wet looking bands appeared as  
 (13) streaks of old high tide marks.  
 (14) Q Basically you described this as a clean area. Those are  
 (15) your words?  
 (16) A That is correct.  
 (17) Q The next one I have here is on the 10th and this is about  
 (18) the eleventh page into your notes. You stopped in two places  
 (19) that day. First one I'm not sure. Can you tell if the first  
 (20) entry is an actual shoreline or is that something you did  
 (21) offshore?  
 (22) A That's near shore.  
 (23) Q So that's out in the water?  
 (24) A Yes.  
 (25) Q Later 8:00 p.m. Barling Bay?

Vol 22 3476

(1) your notes of in a tidel which survey that you did that you  
 (2) participated in. And what I'd like to do - I'm in the  
 (3) Elmo if I move this around.  
 (4) What I would like to do is put up your notes on the screen  
 (5) and you'll be able to see them on the small screen here as  
 (6) well. But put them on the screen so we can see what your  
 (7) observations were of the beaches that you surveyed that  
 (8) summer.  
 (9) during your work with ADF&G.  
 (10) Now the first one I was able to find was July 8th. It  
 (11) about the eighth page in there.  
 (12) MR CLOUGH I went and numbered my own copy so  
 (13) ladies and gentlemen of the jury if a page number shows up  
 (14) that's not part of original that's part of my chicken  
 (15) scratch.  
 (16) BY MR CLOUGH  
 (17) Q And I'm going to blow this up but you might want to try to  
 (18) get the page in front of you the July 8th entry and it has at  
 (19) 1600 a place called Cape Trinity.  
 (20) A That is correct.  
 (21) Q Referring to the plaintiffs map can you show us generally  
 (22) about where Cape Trinity is?  
 (23) A This area here (indicating).  
 (24) Q Now what do your notes have you seeing on Cape Trinity  
 (25) when you do your beach survey?  
 (26) A Did beach survey half mile beach quarter to half dollar

Vol 22 3478

(1) A Barling Bay.  
 (2) Q What do your notes say there?  
 (3) A Barling Bay - at stream stream mouth boomed off beaches  
 (4) are clean. Very light sheen present in the area.  
 (5) Q But the sheen is offshore. The beaches were clean right?  
 (6) A Behind the boom.  
 (7) Q Then the next day you went to Barling Bay again - and  
 (8) correct me if I'm wrong but it looks like what you wrote that  
 (9) day did extensive beach survey evening of July 10. This may  
 (10) have been referring me to what you did the night before no  
 (11) mousse beaches recently cleaned by Old Harbor crews that's  
 (12) what you wrote to summarize that survey is that correct?  
 (13) A That is correct.  
 (14) Q Then the next one I came across was on the 15th and I'm  
 (15) going to have to put this up. It's the very bottom one on this  
 (16) page. And it looks like you were at a place called - I'm  
 (17) going to defer to you -  
 (18) A Kaiugnak.  
 (19) Q And if I read it correctly you summarize the survey as  
 (20) 9:30 beach survey north shore 50 yards beach rocky beach  
 (21) is  
 (22) that VL for very light?  
 (23) A That is correct.  
 (24) Q Very light mousse on that?  
 (25) A Yes.  
 (26) Q The next following day July 16th place called Jap Bay?

Vol 22 3479

Vol 22 3481

- (1) MR STOLL Your Honor I'm going to object to the  
 (2) characterization of Mr Clough of what his notes reflect It's  
 (3) what Mr Clough says he found that he wants an excerpt to  
 (4) say - I don't know that's what his notes say  
 (5) THE COURT That's a perspective objection  
 (6) MR STOLL He said this is the next thing your notes  
 (7) say about a clean beach  
 (8) BY MR CLOUGH  
 (9) Q The next - if you see one that I miss on a beach survey  
 (10) point it out please  
 (11) But the next one I was able to find that reflected a beach  
 (12) survey is this one on the 16th - and correct me if I'm  
 (13) wrong - on that day describing that beach survey you wrote  
 (14) anchored in Jap Bay two mile beach survey Jap Bay spit  
 (15) cleaned beach  
 (16) A That is correct  
 (17) Q Then on about the seventeenth page it is a page  
 (18) titled - looks like it's talking about a place called Newman  
 (19) Bay Is this also a place within your area?  
 (20) A Yes it was  
 (21) Q And this one you're going to have to explain to me  
 (22) because - I can read the words but I didn't understand what  
 (23) they meant Your notes reflect beach survey looks like during  
 (24) set?  
 (25) A Hold on

- (1) A Yes  
 (2) Q And basically throughout using the exhibit again  
 (3) throughout the summer you're sort of cruising back up and  
 down  
 (4) again?  
 (5) A Yeah  
 (6) Q Down and back up for the record meaning north and south?  
 (7) A North and south  
 (8) Q All right At Rolling Bay you did a beach survey Let me  
 (9) see if I understand your code there beach survey V.L. would  
 (10) that mean very light?  
 (11) A That is correct  
 (12) Q Mousse from one hill to -  
 (13) A Four  
 (14) Q - four inches in diameter And you surveyed two miles of  
 (15) the beach at 9 15 is that what your writing indicates?  
 (16) A Yes  
 (17) Q The next survey I was able to find in your notes is about  
 (18) the 22nd page in Unfortunately this page doesn't have a  
 (19) date I believe it's about the 20th of July Walters Creek?  
 (20) A Walters  
 (21) Q Did you find that page sir?  
 (22) A Yes I did  
 (23) Q And again if I'm now reading your handwriting right you  
 (24) described as beach recently cleaned by VECO crew?  
 (25) A Yes

Vol 22 3480

Vol 22 3482

- (1) Q Top of it says Newman Bay primary set 12 45  
 (2) A What's the date on that?  
 (3) Q There is not a date on this particular page  
 (4) A The date before that?  
 (5) Q It should be right around the 17th I believe it is the  
 (6) 17th of July  
 (7) A Got it  
 (8) Q And your notes there say beach survey - is that word  
 (9) during?  
 (10) A During set  
 (11) Q One quarter mile of beach and I don't see any description  
 (12) of any oil Do you see a description of any oiling there that  
 (13) I missed?  
 (14) A No I do not  
 (15) Q On July 19th which was the next entry I could find in your  
 (16) notes of a beach survey you had in Rolling Bay?  
 (17) A Yes  
 (18) Q And this makes sense because you guys were moving  
 (19) constantly up and down the coast checking the near shore  
 waters  
 (20) and the intertidals in a variety of locations?  
 (21) A Yes  
 (22) Q Where is Rolling Bay here? Let's try and get some  
 (23) perspective here  
 (24) A Rolling Bay is here  
 (25) Q So you moved back up a little bit at this point?

- (1) Q Clean monitors what does that mean?  
 (2) A Monitors were placed in the water to pick up mousse that  
 (3) would be floating at or about mid-tide  
 (4) Q And they came up clear that day  
 (5) A At that particular day  
 (6) Q And then you did a beach survey at 3 15 in the afternoon?  
 (7) A Yes  
 (8) Q And according to your notes you surveyed hill a mile?  
 (9) A Yes  
 (10) Q Is there any evidence of you finding any oil in that  
 (11) survey?  
 (12) A Not in these notes  
 (13) Q The next one I have for you sir is on the 21st of July  
 (14) moving through your summer program here Looks like Natalia  
 (15) Bay?  
 (16) A Yes  
 (17) Q And you did a beach survey at 7 45?  
 (18) A Yes  
 (19) Q What do you have to describe the beach there?  
 (20) A Says clean beach  
 (21) Q The next one is at Old Kaguviak It's the 25th page in It  
 (22) would be on the 22nd of July At the very top is the words  
 (23) Kuvak set site and it's at the very bottom of the page  
 (24) A Yes  
 (25) Q And apparently did a beach survey there?

Vol 22 3483

- (1) A Yes  
 (2) Q And at 10 20 you surveyed half a mile?  
 (3) A Yes  
 (4) Q And you found some stuff?  
 (5) A Yes  
 (6) Q What did you find?  
 (7) A Frequent mousse both old and fresh - fresh and then the  
 (8) words last tide implying that it came in on the last tide  
 (9) Q So the tide had brought this into that beach?  
 (10) A New oil  
 (11) Q And you reported that to the ADF&G clean up folks?  
 (12) A That's correct  
 (13) Q And you don't know whether a clean up crew came and in  
 (14) fact cleaned it right up off that beach do you?  
 (15) A No I do not  
 (16) Q The next survey entry I've got is on the 26th of July  
 (17) I've got a question for you so I want to make sure it's your  
 (18) handwriting and if not I want to ask you whose it is  
 (19) A Troy Martin  
 (20) Q Who is Troy Martin?  
 (21) A Guy that's been fishing with me for a number of years  
 (22) Q Was he on the boat with you that summer?  
 (23) A Yes he was  
 (24) Q Was he working on keeping the logs of the observation that  
 (25) you and the crew were making?

Vol 22 3484

- (1) A At times  
 (2) Q And you recognize that as his handwriting?  
 (3) A Yes I do  
 (4) Q According to Mr Martin notes you made there's survey it  
 (5) number 702?  
 (6) A Yes  
 (7) Q Do you know what that number is?  
 (8) A I'd look - have to look at the ADF&G chart it's a salmon  
 (9) spawner  
 (10) Q So it's a salmon location?  
 (11) A Yes it is  
 (12) Q What did Mr Martin's - how did it describe that area  
 (13) survey can you read his handwriting?  
 (14) A No wind no way high tide jumpers all along beach  
 (15) towards southern point good buildup of fish  
 (16) Q So no description of any oiling there?  
 (17) A No  
 (18) Q When you say jumpers what do you mean?  
 (19) A Salmon  
 (20) Q Do you recall if on that beach there was oiling?  
 (21) A Been there time No I do not  
 (22) Q One of the purposes of the log note was trying to record  
 (23) things that you saw them in light?  
 (24) A My purpose of keeping this log was more for future  
 (25) fishing. In other words this was in area where I could record

Vol 22 3485

- (1) the amount of fish that was building up so if I wanted to fish  
 (2) there in the future I would know where to fish  
 (3) Q Exactly So what you did was you wrote down what you  
 (4) saw?  
 (5) A Yeah  
 (6) Q And you tried to be accurate?  
 (7) A With regards to fish primarily  
 (8) Q The next one I have is the one that you talked about at  
 (9) some length in your testimony and it's Sitkinak Lagoon on July  
 (10) 26th?  
 (11) A Yes  
 (12) Q Now is this your handwriting or Troy's?  
 (13) A This is Troy's  
 (14) Q And if you can read that go ahead This one you guys  
 (15) found some more stuff?  
 (16) A Outside beach east of spit and east of entrance to lagoon  
 (17) Distance covered two miles New tar - tar was another name -  
 (18) one to six inches thick three to 12 inches in diameter  
 (19) Frequent new mousse six to eight inches in diameter every five  
 (20) yards Four to ten meter band of silver shoen running on  
 (21) lagoon seen on beach Two oiled half eaten birds distance  
 (22) recovered one half mile Frequent new mousse found below  
 (23) high  
 (24) tide mark every 20 yards Two jumpers seen in the lagoon no  
 (25) buildup seen  
 (26) Q This is the one in your testimony you described in your  
 (27) testimony with Mr Stoll as the worst beach you'd seen that

Vol 22 3486

- (1) summer and heavily oiled?  
 (2) A Yes  
 (3) Q And certainly the words from Mr Martin describe a greater  
 (4) level of oiling Do they appear to describe a greater level of  
 (5) oiling than the other beaches we've talked about?  
 (6) A Yes  
 (7) Q Then at 31st looks like you're back at Barling Bay at the  
 (8) bottom of the page?  
 (9) A Yes  
 (10) Q And you notes or Troy's?  
 (11) A Troy's  
 (12) Q And can you tell us what Troy put down on the log for  
 (13) Barling Bay?  
 (14) A Beach survey taken clean beach  
 (15) Q Help me with the straits?  
 (16) A Sitkalidak Straits  
 (17) Q I can I think figure it out but I'm not going to try to  
 (18) put words in your mouth If you can figure it out great  
 (19) A Beach survey taken half mile south of Barling clean  
 (20) gravel beach  
 (21) Q Okay Then the next day you did a whole bunch of beach  
 (22) survey It's all on July 31st probably going to be on the  
 (23) next page It might be easier to follow along on the monitor  
 (24) because I've got the ones highlighted that we're going to look  
 (25) at

Vol 22 3487

- (1) Looks like beach survey northwest corner by small spit  
 (2) A Yes  
 (3) Q Any reference in these notes of any oiling on the shore  
 (4) here?  
 (5) A No  
 (6) Q Farther down you're going to have to help me again  
 (7) A Kaiagnak  
 (8) Q Beach survey inside beach by secondary one eight inch  
 (9) diameter splatter found week old mousse?  
 (10) A Yes  
 (11) Q Anything else other than that down there in that location  
 (12) for beach oiling?  
 (13) A No  
 (14) Q These places must be pretty close together I'm assuming  
 (15) if you got to them all in one day is that correct?  
 (16) A Yes  
 (17) Q What's the next one Kaiavak?  
 (18) A Yes  
 (19) Q And this one you found a little more - what does it have  
 (20) for there?  
 (21) A Recent but not fresh mousse four inch splatters every ten  
 (22) feet  
 (23) Q Was this reported into the clean up center by your ADF&G  
 (24) crew?  
 (25) A No

Vol 22 3488

- (1) Q Why not?  
 (2) A Because we did not report to ADF&G - or to a clean up  
 (3) center we reported to Alaska Department of Fish & Game  
 (4) Q Thank you for the correction  
 (5) Did you report this oil that you found on the Kaiavak Bay to  
 (6) ADF&G?  
 (7) A Yes we did  
 (8) Q Do you know if there was - a clean up crew was dispatched  
 (9) to that beach to clean it up?  
 (10) A No I don't  
 (11) Q Then on to - looks like you're back in Natalia Bay and  
 (12) this might be your handwriting again  
 (13) A Yes it is  
 (14) Q Beach survey 7 a.m. do you see that?  
 (15) MR STOLL What date are we on?  
 (16) BY MR CLOUGH  
 (17) Q Probably be easier for you to check the top of your page  
 (18) Looks like August 1st very upper left corner looks like  
 (19) bottom of an 8/1?  
 (20) A Yep got it  
 (21) Q And what did you write down to describe your beach survey  
 (22) that you did at Natalia Beach?  
 (23) A Beach survey 7 a.m. east shore halfway between the lagoon  
 (24) and the cape clean  
 (25) Q Then on the 8th of August which is the next time I found

Vol 22 3489

- (1) in your notes reference of a beach survey I believe this is  
 (2) your handwriting again here at Kaguyak?  
 (3) A Yes  
 (4) Q And at 10:30 you found some mousse pitfalls right?  
 (5) A Yes  
 (6) Q And at Three Saints Biv your beach survey you found a  
 (7) clean beach?  
 (8) A That is correct  
 (9) Q Now this is on the 9th of August it looks like you were  
 (10) back at Kaguyak 9th on the top at Natasha  
 (11) A Natalia  
 (12) Q Natalia thank you Found looking at the east shore you  
 (13) found some mousse on the shore right?  
 (14) A That's correct  
 (15) Q Excuse me ladies and gentlemen of the jury that I had one  
 (16) off can you see that at the very bottom Then somehow here I  
 (17) apologize the dates got a little out of order - you got that  
 (18) together Looks like on the 6th of August but you'll find  
 (19) it's sequential in your description you were at a place called  
 (20) Cape Trinity?  
 (21) A Yes  
 (22) Q Is that your handwriting?  
 (23) A Yes  
 (24) Q 10:00 a.m. for the beach survey there you found a clean  
 (25) beach?

Vol 22 3490

- (1) A That is correct  
 (2) Q Then we're almost done because we're almost at the end of  
 (3) your contact here Made it to Newman here the next day doing  
 (4) a beach survey?  
 (5) A Got it  
 (6) Q And at Newman Biv you found fresh mousse on the shore?  
 (7) A That is correct  
 (8) Q And this was also reported to ADF&G?  
 (9) A Yes  
 (10) Q And you don't know whether it was - was it  
 (11) dispatched up there to clean it up?  
 (12) A No  
 (13) Q Because there were still clean up crews working that time  
 (14) of year weren't there?  
 (15) A I would assume yes  
 (16) Q Then on the 12th you were out at Two Head?  
 (17) A Twoheaded  
 (18) Q Twoheaded thanks Is this yours or Troy's?  
 (19) A Mine  
 (20) Q Twoheaded Beach survey on the 12th Put a date in there  
 (21) I can't read the parentheses what does it say?  
 (22) A West side/inside  
 (23) Q So that describes where?  
 (24) A Where I was yes  
 (25) Q And it was 3 p.m.?

Vol 22 3491

(1) A Yes  
 (2) Q Do your notes describe any oiling on that beach survey?  
 (3) A No  
 (4) Q That was by the way among your log notes the last entry  
 (5) I was able to find of a beach survey as opposed to - I want to  
 (6) make it clear you did extensive on the water this near shore  
 (7) testing as well?  
 (8) A Yes  
 (9) Q And that was totally separate from your on shore survey  
 (10) that was on the actual lands?  
 (11) A No  
 (12) Q Earlier on - to keep them entirely separate was my  
 (13) mistake but earlier on you said that the ADF&G through your  
 (14) program was maintaining data for the near shore data and  
 (15) separately for the land for the beach survey work?  
 (16) A I don't know if I like the word separately but yes  
 (17) Q As part of it they were keeping track of both of those  
 (18) things?  
 (19) A That word I like They were keeping track of both  
 (20) Q You did certain types of tests on the water You did  
 (21) different types of tests on the intertidal for example in the  
 (22) water you wouldn't write down you know one mouse patty  
 every  
 (23) three yards seen floating rills you'd describe the amount  
 (24) of oil you found in a particular area?  
 (25) A Yes

Vol 22 3492

(1) Q And that was in the intertidal area?  
 (2) A Yes  
 (3) Q And the water work was done in the near shore area?  
 (4) A Yes  
 (5) Q Now it sound ed to you like it was Mr Hirschinger?  
 (6) A Yeah Now that you say it I'm almost certain  
 (7) Q It seem s to me looking at all of your notes in context  
 (8) th it clearly Sitkinak Lagoon was the worst thing you saw that  
 (9) summer?  
 (10) A Yes  
 (11) Q This is one of my -  
 (12) MR STOLL May we have a moment Your Honor? I  
 (13) haven't seen this document before  
 (14) THE COURT Yes  
 (15) MR STOLL I have a matter for the court with respect  
 (16) to this document  
 (17) THE COURT Come to the bench I'll see whether or not  
 (18) it is relevant to the jury  
 (19) (Bench conference off the record)  
 (20) THE COURT Okay  
 (21) BY MR CLOUGH  
 (22) Q Two final questions It was Mr Hirschinger's  
 (23) responsibility to actually transmit the observations He was  
 (24) the trained observer on the crew is that right?  
 (25) A That is correct

Vol 22 3494

(1) Q And it was his responsibility to collect the data and later  
 (2) transmit it to ADF&G?  
 (3) A I would do the transmitting He would do the collecting  
 (4) Q Are you personally familiar with the standards that  
 (5) Mr Hirschinger and ADF&G used to classify beach as heavily  
 (6) oiled moderately oiled lightly oiled or very lightly oiled?  
 (7) A Off the top of my head I can't remember the exact  
 (8) criteria At the time I had a copy yes  
 (9) Q Do you know of your own personal knowledge how  
 (10) Mr Hirschinger classified the Sitkinak Lagoon beach area  
 under  
 (11) those standards?  
 (12) A Not at this time no  
 (13) MR CLOUGH No further questions Your Honor  
 (14) MR STOLL I just have a couple questions  
 (15) MR STOLL Incidentally are you going to offer all  
 (16) his boat logs?  
 (17) THE COURT Are you? Do you want them in?  
 (18) MR STOLL Yeah we'll offer them  
 (19) (Exhibit 904 offered)  
 (20) THE COURT What is the number?  
 (21) MR STOLL Exhibit 904  
 (22) THE COURT 904 is admitted  
 (23) (Exhibit 904 received)  
 (24) REDIRECT EXAMINATION OF MATTHEW KEPLINGER  
 (25) BY MR STOLL

Vol 22 3495

Vol 22 3497

- (1) A No  
 (2) Q You're not absolutely sure?  
 (3) A Yeah  
 (4) Q And is this - are you sure that the oil that you saw and  
 (5) the mousse that you saw that summer on these beaches either  
 (6) tar balls or what you described as mousse - was it different  
 (7) than lubricating oil that you've seen in the harbor?  
 (8) A Very different  
 (9) Q How was it different?  
 (10) A It ranged from dark black to gray. Had organics in it  
 (11) it - I don't know. Lubricating oils aren't black and gray  
 (12) they are green and red, you know that we use, or grease  
 (13) consistency is different. Lubricating oils are thin. This is  
 (14) heavy thick stuff. It's different.  
 (15) MR STOLL: Thank you very much.  
 (16) RE-CROSS EXAMINATION OF MATTHEW KEPLINGER  
 (17) BY MR CLOUGH  
 (18) Q Do you know if the ADF&G trained observer, Mr. Hirsching, or  
 (19) classified any of the beaches you surveyed that summer as  
 (20) heavily oiled?  
 (21) A It's been five years. To the best of my ability, I would  
 (22) assume that Sitkinak area.  
 (23) Q I don't want you to assume. I'm asking, if you know.  
 (24) A I cannot recall.  
 (25) Q Do you know if he classified any of the beaches that you

- (1) THE CLERK: And your occupation?  
 (2) A I'm a commercial fisherman.  
 (3) THE CLERK: Thank you.  
 (4) DIRECT EXAMINATION OF ANDRE J. NAULT  
 (5) BY MR STOLL  
 (6) Q Mr. Nault, how old are you?  
 (7) A 42. I think I was born in 1952. I'm never sure.  
 (8) Q And where do you live?  
 (9) A I live in Kodiak, Alaska.  
 (10) Q How long have you lived in Kodiak, Alaska?  
 (11) A I've lived there since 1964.  
 (12) Q Did you move there with your folks?  
 (13) A I came here with my father and my little brother, eleven.  
 (14) Q Are you married?  
 (15) A Yes.  
 (16) Q Do you have any children?  
 (17) A Two kids, a daughter and a son.  
 (18) Q And how long have you been a commercial fisherman?  
 (19) A Started in 1970.  
 (20) Q Have you continuously been a commercial fisherman since  
 (21) that time?  
 (22) A Yes.  
 (23) Q What do you fish for?  
 (24) A I fish for salmon, Tanner crab, Dungeness crab, codfish,  
 (25) halibut, black rockfish. Just about everything, actually that

Vol 22 3496

Vol 22 3498

- (1) observed as anything other than lightly or very lightly oiled?  
 (2) A I cannot recall.  
 (3) MR CLOUGH: No further questions.  
 (4) THE COURT: You can step down. We're going to take a  
 (5) ten-minute break, just ten minutes.  
 (6) THE CLERK: Please rise. The court stands in recess.  
 (7) (Jury out at 11:40 a.m.)  
 (8) (Recess at 11:40 a.m. to 11:55 a.m.)  
 (9) (Jury in at 11:55 a.m.)  
 (10) THE CLERK: All rise. The court is now in session.  
 (11) session. Please be seated.  
 (12) MR STOLL: Your Honor, hope springs eternal. I'm  
 (13) going to try another short witness.  
 (14) THE COURT: How tall?  
 (15) MR STOLL: Five eleven. Called Mr. Nault, Andre.  
 (16) Nault.  
 (17) THE CLERK: Sir, could you attach the microphone to  
 (18) your jacket lapel and remain standing for the oath. Please  
 (19) raise your right hand.  
 (20) (The Witness Is Sworn)  
 (21) THE CLERK: Please be seated.  
 (22) Sir, for the record, can you state your full name?  
 (23) A My name is Andre James Nault.  
 (24) THE CLERK: And please spell your last name.  
 (25) A Nault.

- (1) we fish in Kodiak.  
 (2) Q Where do you fish in Kodiak?  
 (3) A All around the island and on the mainland from Cape  
 (4) Douglas  
 (5) down to close to Chignik.  
 (6) Q Now, by around the island, I'm showing you what's been  
 (7) marked as - admitted into evidence is 1354 A.  
 (8) A By the island, I mean Kodiak Archipelago.  
 (9) Q And the mainland, you're talking about this area of the  
 (10) peninsula?  
 (11) A Yes.  
 (12) Q Why do you live in Kodiak?  
 (13) A Well, I guess I just - when I was brought there, I got to  
 (14) appreciate all the good things that living on an island has to  
 (15) offer, and I've just chosen to stay there with my family and  
 (16) raise them there.  
 (17) I love the outdoors, and I like the type of a life style  
 (18) that we have on Kodiak. It's more of a small, close-knit group  
 (19) of communities around the island, and I love to hunt, I love to  
 (20) fish, and I love my job. I also want kind of want my kids to  
 (21) be able to see that kind of a life style, because it's fairly  
 (22) unique.  
 (23) Even in Alaska, come to Anchorage, I see it's a lot  
 (24) different here. School systems there, I believe, are real  
 (25) good. Just a great place to live. It's beautiful.  
 (26) Q Do you get - you and your family, do you - traditionally

Vol 22 3499

(1) have you gone out and used the - gone in the outdoors and used

(2) the beaches and so on?

(3) A Oh yeah it's a big part of life around Kodiak to use the beaches for all kinds of purposes. We even go swimming there in the summertime sometimes. Believe it or not it gets warm enough.

(4) We do a lot of sport fishing for all the salmon species.

(5) Avid deer hunting clam digging things like that. We just like to go to the beaches to walk around.

(6) Q In 1989 you were a commercial salmon fisherman is that correct?

(7) A Yes I was.

(8) Q Were you able to - you weren't able to commercial salmon fish that year?

(9) A No we didn't fish salmon in 1989.

(10) Q And would you - did there come a time when you went into a oil spill monitoring or survey system with the Alaska Department of Fish & Game?

(11) A Yes we did.

(12) Q Would you tell the jury please when you started your work in that regard?

(13) A We were hired - we first started our work about the first week in April and at first we weren't on spill monitoring with Fish & Game but we took some biologists out about the first week in April. We did that for about a week and a half and

Vol 22 3501

(1) us on the boat were directed to go out there and do some kind of profiling transects and animal counts and things like that.

(2) to kind of get a count of what kind of animals how many of what and everything like that was out there before any oil hit. If it were to hit they needed to know what they had to compare it to.

(3) Then after that we were assigned to put in the log booms and the other boom material in northern Afognak. What we were trying to accomplish there if the oil were to hit we were trying to keep the oil out of the estuary areas and out of the salmon streams and keep it from damaging those areas if it were to come there but also help direct it to a certain area where they could skim it or clean it up if it became necessary and so.

(4) Q So you put these booms down or some of the booms down before any of the oil got up there?

(5) A Yes we did.

(6) Q Since you put those booms up were you able then to successfully protect those shorelines up there at north end of Afognak?

(7) A I feel like we were able to slow some of it down basically. We were able to stop some of it clean up some of it but nowhere near totally.

(8) Q Why do you say that?

(9) A Well basically I would say because we were working with -

Vol 22 3500

then we went about the next month putting in log booms in conjunction with our other boats that were up on the north end of Afognak and so it would have been probably around the end of May that we started working in conjunction with Fish & Game and we were assigned to do a test there.

(1) Q Now when you say north end of Afognak that's this island here?

(2) A Yes.

(3) Q Part of the Afognak Borough and part of - not owned by the borough but it's part of the borough itself though is that right?

(4) A Yes it's included in the borough boundary.

(5) Q And then the village Afognak is Shuyak Island?

(6) A Yes.

(7) Q So your recollection that you were putting up boom and so on was on the north end of Afognak?

(8) A Yes northern side of northern Afognak.

(9) Q That's in here (indicating)?

(10) A Yes.

(11) Q And when you - could you describe to the jury in that first period of time from April and into May did you see oil?

(12) A Yes we did see oil but we didn't see it right away. In early April we didn't see it.

(13) Q You were putting out boom?

(14) A Yes. For that time we did with the biologists that we were with

Vol 22 3502

(1) number one we had never experienced anything like this before.

(2) so we really didn't know exactly what we were going to expect but we were just trying to kind of put in these booms to help stop any of the stuff.

(3) Basically what we had to work with were spruce logs that were banded together with steel cables as a first line of defense. The next thing that we put in place were some Typar curtains some sort of sorbent material that they use on road beds or something and somebody got the idea that maybe this stuff will stop oil. So we had massive quantities of this stuff that we were putting out in long lines.

(4) Then we had old fish nets that fishermen had donated. They fished - if you hung these absorbent pom poms on them maybe that will stop some of the oil. Then we had this hot dog light or 10 inch diameter shape absorbent boom. It's the type I see in conjunction with a small diesel spill in a boat harbor. It's not designed for ocean duty and it's long and probably 8 foot long pieces.

(5) So anyway we had all these different layers of defense one after another. And that's basically what we tried to put out there to stop it. We couldn't get the big ocean skirt boom. We got some of it but very little. That's the stuff that's actually designed to stop oil spills.

(6) Q But with all these different kinds of booms and pom poms and nets that people donated and so on you still weren't able

Vol 22 3503

Vol 22 3505

(1) to stop all this oil?  
 (2) A No we weren't. The one instance that comes to mind, the  
 (3) most vividly for me was in Paul's Bay - Paul's Lake is one of  
 (4) our major red systems on the Alotnak area and we had that  
 (5) fairly heavily boomed off with all these different materials  
 (6) that I'm talking about. And we got a strong northwest wind for  
 (7) a couple days and even though we had those log booms - I  
 (8) believe the log boom in there was probably 1500 - 1800 feet  
 (9) long and it was anchored with 2,000 concrete blocks  
 (10) Even though we had that stuff in place, the northwest wind  
 (11) was strong enough that it moved the big concrete block and  
 (12) moved  
 (13) the anchor out of place. And as it did, it sort of ripped  
 (14) everything else out behind it and it sort of ended up piling  
 (15) up on the beach.  
 (16) As this was taking place, mousse and stuff was coming in  
 (17) with the current and the wind and whatnot. So it kind of  
 (18) hammered it into a big pile on the beach.  
 (19) Q Now then after a period - I think you said something  
 (20) about May then you did some survey work for the ADF&G  
 (21) Alaska  
 (22) Department of Fish & Game?  
 (23) A Yes I did.  
 (24) Q And tell the jury please what you did in that regard?  
 (25) A Okay. Basically what we were instructed to do there was  
 (26) to - we had a certain area of the island that was where we  
 (27) were supposed to go and all along the island we had certain

(1) way through each day. It took several days but we would work  
 (2) our way through our route and just pretend like we were  
 (3) fishermen and see what happened with the oil.  
 (4) Q Were these your own personal nets or were these old nets  
 (5) that were furnished to you?  
 (6) A These nets were provided to us to use. They were not our  
 (7) own nets.  
 (8) Q Were you willing to use your own nets?  
 (9) A No I wouldn't have used my net.  
 (10) Q Why is that?  
 (11) A It's a very expensive piece of equipment and I didn't know  
 (12) exactly what would happen to it if we got oil in it. And I  
 (13) figure if it got contaminated or something we would just be  
 (14) kind of out the net or something. So very expensive piece of  
 (15) equipment.  
 (16) Q Would you tell the jury - maybe you can walk down here  
 (17) with a microphone and show on this map where you started  
 (18) this  
 (19) program where you went to examine what your territory was in  
 (20) the  
 (21) beginning of May.  
 (22) A Beginning of May, the test fishery.  
 (23) Q When you started, yeah doing your trawl survey?  
 (24) A Yes. My area extended from - actually it had Chiniak  
 (25) Bay we started at Cape Chiniak down the east side through  
 (26) Uyak Bay through Kiliuda all around Sitka Island and this  
 (27) side of the island to Russian Harbor.

Vol 22 3504

Vol 22 3506

(1) traditional hook hauling spots where the sciners always go to  
 (2) to make their sets and we were told to go there and make sets  
 (3) in a traditional manner just as though we were fishing and  
 (4) monitor - also we were to monitor what kind of oil we saw in  
 (5) the water.  
 (6) And another thing we were supposed to do if we couldn't do  
 (7) our test fishery which was supposed to be our primary job if  
 (8) the weather got bad or something like that we had a chance to  
 (9) go on beaches. We were to also go on beaches and do beach  
 (10) surveys over the kind of oil were on the different beaches.  
 (11) We had a trained person that worked for the Department of  
 (12) Fish & Game on the vessel with us and I also took some  
 (13) training myself to help us identify the types of oil that they  
 (14) wanted to talk about whether it was light very light  
 (15) moderate heavy.  
 (16) They had some criteria that they wanted us to be able to  
 (17) use so that they could know what we were talking about. And  
 (18) also they showed us how to fill out the logs and the forms.  
 (19) They instructed us in chain of custody sampling - we were  
 (20) issued chain of custody bottles and tape and locking boxes  
 (21) of cetera and a freezer to keep these samples in.  
 (22) We took samples of fish, samples of oil, samples of oily  
 (23) debris and materials and we were just basically instructed in  
 (24) the type of things they wanted us to do. And then we  
 (25) proceeded  
 (26) to go out there and we had a route and we would just work our

(1) Q How long did you cover that territory?  
 (2) A I can't remember exactly but I think it was probably about  
 (3) 20 to 30 days. I would just guess that I was doing that on my  
 (4) own. And then eventually the Department - or somebody put  
 (5) another boat out there.  
 (6) Q That was Mr. Keplinger's boat?  
 (7) A Yes. Mr. Keplinger came out there and I took from Old  
 (8) Harbor south and I took from Old Harbor north to just split it  
 (9) up. Because this is a pretty large area so it was a lot to  
 (10) cover.  
 (11) Q Incidentally let me ask you another question. A commercial  
 (12) fisherman - I think maybe you already answered that  
 (13) - you fish all over Kodiak Island?  
 (14) A Yes I do. Basically.  
 (15) Q I mean normally?  
 (16) A Some fleet is a mobile fleet. We don't usually stay in  
 (17) one place. We're looking for fish. If we don't catch them in  
 (18) one cove or one bay we move on.  
 (19) Q Try somewhere else?  
 (20) A We're constantly moving.  
 (21) Q Now let me ask you the question. All these samples and  
 (22) these chain of custody, you call them chain of custody jars and  
 (23) containers and all that stuff, what did you do with all that  
 (24) material?  
 (25) A What we would do when we would take a sample we would  
 (26) put

Vol 22 3507

(1) the sample in the jar and I put it in the locked box and  
 (2) put it in the freezer and we would videotape it as well as. We  
 (3) would record anything on a log. I guess you would say that was  
 (4) for the Department.  
 (5) Then approximately once every week or two they would either  
 (6) send a helicopter or airplane out to take those samples from  
 (7) us. And either myself or the observer on the boat were the  
 (8) only two people allowed on our boat to touch those samples  
 and  
 (9) we had to hand give them to a specified person that was coming  
 (10) out specifically to get those samples and the videotapes and  
 (11) they took them away. The Department of Fish & Game.  
 (12) Q You don't have any control over that material?  
 (13) A No sir.  
 (14) Q And did you -- did you turn in these logs? I'm not talking  
 (15) about your vessel log but your log that you -- if that's the  
 (16) right word. I don't know if it's the right word or not but the  
 (17) form that you filled out for the Department of Fish & Game.  
 (18) Did you turn that over? did you maintain that? did you keep  
 (19) that?  
 (20) A No. I didn't keep any of those. Those were all given to  
 (21) that same person who would pick up the samples and the  
 (22) videotapes. Also picked up all the paperwork so that was all  
 (23) given to them.  
 (24) Q So you don't have any control over those documents?  
 (25) A No. I don't.

Vol 22 3508

(1) Q And is that different from your vessel log incidentally?  
 (2) A Oh yeah. The vessel log is just kind of -- each mariner  
 (3) that's out on the ocean normally keeps a vessel log and you  
 (4) kind of put what you want to in there. No hard and fast rules  
 (5) put where you anchor where you're at what you see.  
 (6) Those are official documents that had to be -- we had to  
 (7) follow real specific rules and stuff with those. That's why  
 (8) the training before hand. That's why they had an official  
 (9) observer out there with us so these things had to be precise.  
 (10) Certain procedure had to be followed to the letter. Otherwise  
 (11) they figured it would cause problems later. I guess. So there  
 (12) was a lot of difference --  
 (13) Q Was this observer out there the entire time you were out  
 (14) there?  
 (15) A About the first four or five days that I was on the test  
 (16) fishery I didn't have an observer because they were in the  
 (17) process of still trying to get enough of them together to train  
 (18) them for -- I think there were like seven to ten of us on this  
 (19) test fishery in various places and they didn't have enough  
 (20) on the first four or five days I did the observing myself and  
 (21) the paperwork. But then like I told you I was a trained  
 (22) to do that.  
 (23) Q They gave you a training program before that?  
 (24) A They gave me the same training program they did as the  
 (25) observer.

Vol 22 3509

(1) Q How long did you continue -- after Mr. Keplinger took this  
 (2) other from Old Harbor south how long did you continue to do  
 (3) this northeasterly portion?  
 (4) A I believe it was probably the third week in August. I  
 (5) think when we were finished.  
 (6) Q Towards the end of August?  
 (7) A That's about the time frame, yes.  
 (8) Q Did you observe any oil when you were doing this during  
 (9) this period of time from late May until late August?  
 (10) A Yes. I did.  
 (11) Q Would you tell the jury please -- you can resume the  
 (12) witness stand.  
 (13) Could you describe to the jury what you saw in terms of  
 (14) oiling in that area?  
 (15) A Basically when we first went out on the test fishery we  
 (16) were told that there had been no oil sightings on the east side  
 (17) of Kodiak Island up until that point and when I got out there  
 (18) within three or four hours out of Kodiak I was starting to  
 (19) see long sheens, mousse, tide streaks. And we continued to see  
 (20) mousse, sheen and tide streaks mixed in with bird feathers and  
 (21) kelp for the entire time we were out there.  
 (22) Some days would be worse than others. Some days would look  
 (23) pretty good maybe it wasn't that bad. But basically the types  
 (24) of oil that I saw were pieces of mousse anything from like the  
 (25) size of your fingernail just these little smudgy blob looking

Vol 22 3510

(1) thing all the way up to dinner plate blobs of tuff. And  
 (2) sometimes there would be narrow bands of this. Sometimes  
 there  
 (3) would be real wide bands of it.  
 (4) It varied from day to day from place to place and  
 (5) depending on the conditions. It depended a lot on the wind  
 and  
 (6) the tide and what was going on the particular day. When we did  
 (7) do beach surveys we would see basically mousse on the  
 (8) beaches. There again it was like the same kind of size range  
 (9) anything from the size of a pea up to the size of a big plate  
 (10) or something. And it would normally always be mixed with kelp  
 (11) and bird feathers. For some reason it attracted the bird  
 (12) feathers thousands of them. I don't know why.  
 (13) Also you could see sheen bleeding off the beaches at  
 (14) times. It was like if the tide would deposit a bunch of the  
 (15) mousse on the beach then when the wind would blow offshore  
 and  
 (16) as the tide was falling you could see almost like windrows of  
 (17) sheen bleeding off. And the sheens were different types.  
 (18) Anything from just very light kind of a sheen -- we had  
 (19) different tests that we would do so that we could determine  
 (20) how we were supposed to -- what notation we were supposed to  
 (21) put in these official logs about what type of sheen it was.  
 (22) We would try soap tests and whatnot. And we could see this  
 (23) light sheen sometimes we would see almost like a silvery  
 (24) sheen just kind of thick. I don't really know how to describe  
 (25) it other than it was just silvery. Occasionally I saw kind of

Vol 22 3511

Vol 22 3513

(1) a rainbow like sheen Usually that would be associated with  
 (2) when I would see the windrows coming off the beach Now and  
 (3) then you would see some rain blowing and occasionally we  
 were  
 (4) out cruising up and down the area we would see some rainbow  
 (5) sheen I didn't see as much of that as the other type just  
 (6) real silvery looking stuff Basically that's the types of oil  
 (7) I saw out there  
 (8) Q Now in your experience since 196 - whenever you started  
 (9) going out in the water or actually when you lived in Kodiak  
 (10) had you ever seen anything like this before in terms of the  
 (11) sheens these sheens Let's just take the sheens for example?  
 (12) A No never  
 (13) Q Had you ever seen any mousse what you described as  
 mousse  
 (14) or tar balls like that?  
 (15) A No I never have seen anything like that  
 (16) Q And just so - does this look at all like what you saw out  
 (17) there? This is Exhibit 1536  
 (18) A Yes This looks pretty typical of the oil that we were  
 (19) seeing around in the state that it seemed to be in when it was  
 (20) hitting Kodiak The only thing that looks different about  
 (21) that this is a clean piece and normally we would see a lot of  
 (22) bird feathers stuck to this and sometimes kelp and stuff like  
 (23) that Sometimes it would be a little browner but that smells  
 (24) and - I managed to get it on myself It smells and looks like  
 (25) what we were seeing yes

(1) Q How is that?  
 (2) A Well you surely wouldn't have wanted to be diving any  
 (3) claims on one of these beaches that had the oil We wouldn't  
 (4) have gone out and done the hiking on the beaches that we  
 (5) normally probably would have done Sometimes in the summer  
 (6) when I come in from a fishing trip we did like to go for hikes  
 (7) on the beaches and celebrate and go out to the beaches We  
 (8) wouldn't do anything like that  
 (9) And in the fall after going through the whole thing that  
 (10) summer the last thing I wanted to do was walk around on the  
 (11) beaches and go deer hunting like I normally always do I just  
 (12) kind of wanted to take a break from it all So in that  
 (13) respect yeah it changed the way we did things  
 (14) Q Was there still oil on the beaches in the fall?  
 (15) MR CLOUGH Objection foundation hasn't had any  
 (16) testimony he went out on the beaches in the fall  
 (17) BY MR STOLL  
 (18) Q Did you observe oil on the beaches in the fall?  
 (19) A Like I said I didn't go deer hunting that fall So the  
 (20) last of the oil I would personally have observed would have  
 (21) been my last time on the beach while I was still working on the  
 (22) test fishery  
 (23) Q To this day do you go clamming?  
 (24) A I personally don't go clamming anymore My family doesn't  
 (25) Q Do you think that your habits in terms of the habits that

Vol 22 3512

Vol 22 3514

(1) Q Sorry  
 (2) A I hope I have the last of that on me  
 (3) Q Sorry  
 (4) When you talk about - now this purports to be an oil spot  
 (5) here It's on that little monitor there Is that - would you  
 (6) have classified that as a light or very light oiling is that  
 (7) what you're talking about?  
 (8) A I guess I'm not sure what you mean in  
 (9) Q Well if you saw something like that that spot that's near  
 (10) the beach that summer? Would you put that down in your oiling  
 (11) log?  
 (12) A I don't know as that would even go in the log Unless I  
 (13) could inspect it in person number one it would be hard for me  
 (14) to try to tell if that was oil or not  
 (15) Q Would you inspect something like that to determine if it  
 (16) was oil?  
 (17) A We probably would have walked on by that There was some  
 (18) serious oil on the beach I don't know what this is but no  
 (19) I'm talking about big globs of this stuff in the tide line all  
 (20) over the beach  
 (21) Q Did this oiling that you observed then on the beaches and  
 (22) in the water did this change at all your usage yours and your  
 (23) family's usage of the waters and the beaches of Kodiak in 1989?  
 (24) A During 1989 yes Oh definitely so

(1) you and your family had before of usage of the recreational  
 (2) areas have you observed whether those are common to other  
 (3) residents in Kodiak?  
 (4) MR CLOUGH Objection foundation I don't think a  
 (5) sufficient foundation has been laid for the witness to draw  
 (6) opinions about the populations of Kodiak  
 (7) MR STOLL I'll lay a foundation  
 (8) THE COURT Go ahead  
 (9) BY MR STOLL  
 (10) Q During the 30 years that you've lived in Kodiak have you  
 (11) observed how other people on Kodiak live?  
 (12) A I would say I have  
 (13) Q Do you go - have you used the beaches with your friends  
 (14) that you live with and work with on Kodiak?  
 (15) A Yes  
 (16) Q And have you - did you observe during the summer - the  
 (17) year 1989 how other residents of Kodiak used or didn't use the  
 (18) beaches and other areas of Kodiak?  
 (19) A Yes  
 (20) Q And did you notice any difference in how other residents of  
 (21) Kodiak used the beaches?  
 (22) MR CLOUGH Objection foundation Your Honor If he  
 (23) wants to talk about a particular person I don't have a  
 (24) problem But as to the entire Kodiak populous I don't think  
 (25) foundation has been laid

Vol 22 3515

- (1) THE COURT Your objection is overruled  
 (2) A Could you repeat the question please?  
 (3) BY MR STOLL  
 (4) Q Just did you observe during 1989 how other residents and  
 (5) families on Kodiak used or didn't use the beaches and swam  
 (6) things of that nature?  
 (7) A Yes And for the most part the residents of Kodiak didn't  
 (8) use the beaches like they had in the normal matter because  
 (9) they  
 (10) were - didn't want to get down there where the oil was and  
 (11) they didn't want to take the chance of having their children  
 (12) get into the oil and things like that  
 (13) Q Now did you - one of the areas that you covered was Ugak?  
 (14) A Yes  
 (15) Q I'm going to show you what has been marked for  
 (16) identification as plaintiffs Exhibit 1524 and is this a -  
 (17) this I'll tell you is a map that purports to be Ugak Bay and  
 (18) showing in green land holds of Kodiak Island Borough in Ugak  
 (19) Bay Are you familiar with this area?  
 (20) A Yes I am  
 (21) Q And did you observe any oiling of Ugak Bay?  
 (22) A Yes there was quite a bit of oiling throughout Ugak Bay in  
 (23) the water as well as on several of the beaches that we did  
 (24) visit  
 (25) Q You could come down and just describe the areas on the -  
 (26) where you went in Ugak Bay and if you observed any oiling in

Vol 22 3516

- (1) these - near or around any of these green parcels?  
 (2) A Basically a lot of the oiling that we saw was - what we  
 (3) would normally do - see a lot of these tide streaks and  
 (4) windrows along the beach and in the water like this  
 (5) Sometimes depending on the wind and the weather conditions  
 (6) it  
 (7) may be kind of long streaks of it going this way Other times  
 (8) it could be going in and out of the bay so it was never always  
 (9) in one spot or anything like that  
 (10) B: I specifically remember doing beach surveys along  
 (11) this area and going to here here and here and here and here  
 (12) and up in here (indicating) and I think I did over here but I  
 (13) can't remember for sure But I know I did go a lot in a lot  
 (14) of these areas along here and did beach surveys and we found  
 (15) oil in all the spots that we went to here The lesser amount up  
 (16) in there (indicating) but it seemed like the more out in this  
 (17) direction out here  
 (18) Q Just let the record show that he's identified all the green  
 (19) portions of those areas  
 (20) MR CLOUGH Mr Stoll I'm going to object Just to  
 (21) clarify for the record did he do any shoreline on the head of  
 (22) Ugak Bay parcel? Because he seemed to skip over that with his  
 (23) hand  
 (24) BY MR STOLL  
 (25) Q Did you ever go over here?  
 (26) A I don't recall myself or my crew going ashore here I

Vol 22 3517

- (1) can't remember for certain We did this for several months day  
 (2) after day after day so my memory might be a little hazy I do  
 (3) specifically remember going on this shoreline here here here  
 (4) and here (indicating)  
 (5) MR CLOUGH For the record that would be the  
 (6) southern shorelines in Ugak Bay  
 (7) BY MR STOLL  
 (8) Q And also in Hidden Basin?  
 (9) A Yes I remember going to shore in Hidden Basin  
 (10) Q In all those areas you found oil?  
 (11) A Yes sir I did  
 (12) Q Let me ask you this question Was there free floating oil  
 (13) in the middle of Ugak Bay?  
 (14) A At times we would see like I mentioned before we would  
 (15) see tide streaks with mousse and sheen floating I mean we  
 (16) would come across it I guess in the middle of Ugak and  
 (17) sometimes on the mouth and along the edges  
 (18) Q Now as long as you're down there let me show you what's  
 (19) been marked as plaintiffs Exhibit 1526 which is another parcel  
 (20) map for some other land holds of Kodiak Island Borough  
 (21) including in Shearwater Bay Did you go into Kiliuda Bay and  
 (22) Shearwater Bay?  
 (23) A Yes we did This was also part of our normal route that  
 (24) we were going through And we went through there numerous  
 (25) times<sup>1</sup>

Vol 22 3518

- (1) Q Did you observe oil there also?  
 (2) A Yes we did We observed oil in several locations on the  
 (3) beaches there as well as in the water  
 (4) Q Did you happen to go in the vicinity or on this parcel that  
 (5) is in green on Shearwater Bay?  
 (6) A I don't recall specifically going on this one green parcel  
 (7) between these red lines There again I was on an awful lot of  
 (8) beaches We were in this whole vicinity in this whole area I  
 (9) specifically remember being on this beach right here and this  
 (10) and one day my wife  
 (11) Q What was that like?  
 (12) A There was mousse there on that beach It wasn't a real  
 (13) heavy impact but there was - I mean according to our little  
 (14) criteria but there was definitely mousse all the way up to  
 (15) seven eight inch patties of it and we reported that And  
 (16) ended up a clean up crew came in and did some cleaning in  
 (17) there I remember going and doing another one and it seemed  
 (18) like there was more oil over there again  
 (19) Q Once the clean up crew got in there was everything okay  
 (20) for the rest of the summer?  
 (21) A In my experience and it was fairly limited as far as  
 (22) clean up crews because for one thing we didn't see too many  
 (23) clean up crews We kept wanting to see a lot of clean up  
 (24) crews but when they would come into an area and clean it up  
 (25) occasionally we had gone into the beaches sometimes  
 afterwards

Vol 22 3519

Vol 22 3521

(1) to do another beach survey and we would find in some  
 (2) instances sometimes the beaches remained cleaned and  
 sometimes  
 (3) there were instances of the beach receding. I don't know  
 (4) exactly what you mean by fine.  
 (5) MR STOLL: That's all, thank you.  
 (6) Your Honor, we'll offer all of these exhibits which is  
 (7) 1526, 1524, and then with respect to the prior witness, 1522,  
 (8) and 1046.  
 (9) (Exhibits 1526, 1524, 1522 and 1046 offered)  
 (10) THE COURT: 746?  
 (11) MR STOLL: 1046.  
 (12) THE COURT: They are admitted.  
 (13) (Exhibits 1526, 1524, 1522 and 1046 received)  
 (14) MR CLOUGH: Your Honor, I apologize, I told  
 (15) Mr. Stoll obviously Mr. -  
 (16) THE COURT: All right, counsel, I didn't hear you.  
 (17) MR CLOUGH: This is a survey's map showing anchorage  
 (18) He didn't personally survey it. I told Mr. Stoll if we could  
 (19) confirm about the -  
 (20) THE COURT: If you have a problem with them, once you  
 (21) do that, once you make your investigations, let me know about  
 (22) it because I want them into the record, 1526, 1524, 1522 and  
 (23) 1024.  
 (24) MR CLOUGH: And I don't expect a problem.  
 (25) CROSS EXAMINATION OF ANDREJ NAULT

(1) been enough for you to classify under those ADF&G standards  
 (2) that beaches as being very lightly oiled?  
 (3) A: I think it probably would have been if we could have been  
 (4) able to determine that it was indeed oil.  
 (5) Q: Right. And I said assuming, for the purpose of the question,  
 (6) that it was oil?  
 (7) A: Yes. I would say that it would have been considered very  
 (8) light.  
 (9) Q: Now, here in Shearwater Bay, was it Ladder Island you were  
 (10) specifically talking about earlier during your testimony, do  
 (11) you recall being out on - being out and spotting some mousse  
 (12) patties?  
 (13) A: Yes. I was on Ladder Island and the beach right by it.  
 (14) Q: Was that your testimony where your boat reported that in  
 (15) that there was oil on the beach there?  
 (16) A: We would have reported - anytime we encountered oil in the  
 (17) water or on the beaches we reported it twice a day, every day.  
 (18) Yes.  
 (19) Q: And I believe you said in that instance, based on your  
 (20) report, a clean up crew was sent out there to pick up what you  
 (21) saw?  
 (22) A: I remember reporting that oil in - and I don't know if the  
 (23) clean up crew was specifically sent there in response to that  
 (24) one radio call or not. We made radio calls twice a day, every  
 (25) day for months on end in reporting this oil, and I do remember

Vol 22 3520

Vol 22 3522

(1) BY MR CLOUGH  
 (2) Q: My name is John Clough. I'm here representing Exxon.  
 (3) Mr. Stoll has been showing this one several times here.  
 (4) This is - for the record, I believe it's DX13160, do you  
 (5) remember we talked about this, or you talked about this with  
 (6) Mr. Stoll on the screen just a moment ago?  
 (7) A: Yes.  
 (8) Q: Now this is obviously a very little bit of oil, is that  
 (9) it's oil, right?  
 (10) A: I would say so.  
 (11) Q: Now, for the purposes of what I'm - you told us how you  
 (12) were, at least back in 1989, pretty familiar with the standards  
 (13) that ADF&G was using for its surveying efforts, do you  
 (14) remember?  
 (15) A: Yeah. We had a criteria that we were supposed to be using.  
 (16) Q: Do you - assume for the purpose of the question, if you  
 (17) would, sir, that that is the remnants of a blob of oil there,  
 (18) okay?  
 (19) A: Uh, huh.  
 (20) Q: Do you recall if, under the standards you guys were  
 (21) applying that year, if in fact you had noticed it - I noticed  
 (22) you said you might not have noticed it as you walked past, but  
 (23) assuming you were walking on the beach and you spot it there,  
 (24) it is, and you look at it and say, yeah, it's remnants of oil,  
 (25) do you recall if, in fact, that little bit alone would have

(1) a clean up crew coming out and seeing them around the  
 (2) Shearwater Bay area, you know, so - but whether they were  
 sent  
 (3) in direct response to that or not, I couldn't tell you.  
 (4) Q: To your knowledge, did those clean up crews that were  
 (5) working out of places like Old Harbor, Ouzinkie, and other  
 (6) places on that side, weren't they working all summer long?  
 (7) A: I think they were. I'm not sure, but I think they were.  
 (8) Q: To your knowledge, some beaches were re-oiled, weren't  
 (9) they, with the tide? Mousse patties could come in and mouss  
 patties  
 (10) could go out, right?  
 (11) A: I would assume so.  
 (12) Q: And to your knowledge, weren't - in quite a few instances,  
 (13) wasn't a beach re-cleaned? When it got recoiled, it was  
 (14) re-cleaned?  
 (15) A: I'm really not too sure, because I wasn't involved in the  
 (16) clean up portion of it, other than when I was up on the north  
 (17) end and digging with the log booms. I saw clean up crews  
 moving  
 (18) around from time to time. What if specific instructions  
 (19) were as far as re-cleaning beaches, I couldn't say.  
 (20) Q: What moved these mousse patties around was the tide and the  
 (21) wave action. You described how they - they would literally  
 (22) float in with the tide, that's how something would get recoiled,  
 (23) right?  
 (24) A: Well, that could probably be one way, yes. The currents  
 (25) and the winds and whatnot could move these mousse patties

Vol 22 3523

(1) around. They could go off one beach, come back onto the same beach or go onto another beach. However, in my excursions on the outside of the island it was real obvious to me, being out there, that there was a lot of new oiling that was taking place all throughout the summer as well.

(2) Q We're saying the same thing, but just missing each other when I say "new oil," I don't mean there is a new oil spill, oil from the Exxon Valdez, but blobs of it being moved around by the tides and the waves.

(3) A Yes. But to take it a step further, there was oil coming from the north towards the eastern shore of Kodiak Island. Oil that had never been on a beach in Kodiak, it wasn't just getting lifted off and moved around within a bay, this was more oil coming down from the direction of the Sound.

(4) So I assume a beach could get recoiled with that stuff, as well as stuff floating in a beach.

(5) Q And the same with mousse patties?

(6) A I believe so.

(7) Q And I believe you said you observed clean up crews on a couple occasions?

(8) A Yes, I did.

(9) Q When you see them, they would have shovels and stuff, scoop it up, put it in a bag, and carry it off, right?

(10) A I guess so.

(11) Q You saw that?

Vol 22 3524

(1) A Yes, with them on the beach, with moving around and moving them back and forth. So yes, I remember they were in there cleaning up the mousse and the kelp. I never was a turtle on the beach with a clean up crew while they were doing it.

(2) Q Now you said I believe and correct me if I'm wrong, please, that the turtle thing you were doing was the primary work you were doing with ADF&G, is that right?

(3) A By that what I meant was that the - I felt that it was my primary purpose, to be able to fish, whether or not we could fish safely, put our nets in the water without contaminating our nets or the fish. I felt that that was our most important function. Now I don't ever recall ADF&G ever saying specifically, you know, this is your primary function, but they told us that the beach surveys were not to be what we spent our time doing. This other stuff, they wanted us to be concentrated on that and so that's how I came to that conclusion. That it seemed to be our primary purpose, was to be able to fish safely without oiling the turtles and the fish.

(4) Q I think you testified you would do the beach surveys when weather or other conditions would keep you from doing your main job of the turtle fishing, that is?

(5) A That's right.

(6) Q And you also talked to Mr. Stoll a lot about your captain's log that you kept, right?

(7) A Yes, we kept that.

Vol 22 3525

(1) Q And it's a pretty darn thick log in your own handwriting of your various observations, right?

(2) A Yes.

(3) Q And at times when you go on various beaches throughout - put the other map up here. Throughout your area of operations, and you saw mousse patties and tar balls on a beach, at least maybe not every occasion, but at times you wrote that down in your handwritten notes?

(4) A Yes, we did.

(5) Q And if we were to take everybody's times, we would find instances of you, in your handwritten notes, describing those instances of mousse patties and tar balls on the beaches?

(6) A Yes.

(7) Q And it's true that on quite a few occasions when you went on shore you didn't find anything like that?

(8) A There were times when we went ashore and we didn't find mousse and oil, but for the most part we did.

(9) Q If we were to take out your log notes and go through that for a whole month, wouldn't we find a number of occasions where you went ashore and we found clean beach or very little oiling?

(10) MR STOLL: Which log are you talking about?

(11) MR CLOUGH: His personal handwritten log.

(12) MR STOLL: The one that he kept for his boat or the one for ADF&G?

(13) BY MR CLOUGH:

Vol 22 3526

(1) Q Your personal log, your vessel was the -

(2) A Golden Nugget.

(3) Q Would you agree with me that the best records out there of the shoreline oiling that your crew saw would have been the ADF&G data collected by the trained observer working off your ship?

(4) A I would say that they would have been the record that would have been reliable, yes, because my notations were for my own personal use, to be able to know what we were doing.

(5) Q Now you talked about Ugak, in particular. Do you know where in Ugak - just bear with me, just a second.

(6) MR CLOUGH: Counsel, these were all previously provided to you.

(7) BY MR CLOUGH:

(8) Q Mr. Nault, I've got some photos taken in July of 1989 of some of the - let me clarify here. For you - in Ugak, you had testified I believe that most of your personal on the shore walking in this area was on what I'm calling the southern end of the Ugak Bay, with the exception of the stuff you did up here at Hidden Basin?

(9) A That's where I am specifically going. I know we did beach surveys on the south, too. I can't remember specifically where it was.

(10) Q And you were in Ugak Bay in July of 1989 -

(11) A Yes.

Vol 22 3527

Vol 22 3529

(1) Q - on a number of occasions throughout the month?  
 (2) A Yes  
 (3) Q What I'd like to show you is just a very few photographs of  
 (4) that southern shore the areas along the southern shore of  
 (5) Ugak and from 1989 July?  
 (6) MR STOLL Hold it just a minute  
 (7) Your Honor I don't mind him showing photographs of Ugak  
 (8) Bay if the witness can identify them but I don't think it's  
 (9) appropriate for Mr. Clough - maybe these are taken in July of  
 (10) 1989 -  
 (11) THE COURT Have the witness identify them  
 (12) MR CLOUGH I will see if he can Your Honor  
 (13) THE COURT If you can Can you see the photograph?  
 (14) A It's on here now  
 (15) THE COURT Do you recognize it?  
 (16) MR CLOUGH I confused the technician can we have  
 (17) the monitors but not the Barco? Sorry Your Honor my  
 (18) mistake  
 (19) A I really can't tell specifically where it's at if that's  
 (20) where you want me to tell you  
 (21) BY MR CLOUGH  
 (22) Q For example is that Ugak Bay?  
 (23) A I can't even tell you that for sure I don't see any  
 (24) headlands or anything that I can easily recognize here  
 (25) Q Let me show you again without putting it on the main

(1) 1989?  
 (2) A Yes you could see this type of beach in there  
 (3) Q You could put this up for the jury as well as - with the  
 (4) court's permission  
 (5) Now you described seeing tar balls and globs of mousse on  
 (6) occasions correct on the beaches in Ugak?  
 (7) A Yes I did I saw both of those  
 (8) Q Looking back to the first photograph can you see the log  
 (9) in the front of that?  
 (10) A Yes  
 (11) Q And if we could turn off the Barco here please  
 (12) I'd like to ask you before we show this to the jury  
 (13) looking at the what you see on your screen there if that  
 (14) resembles some of the material you saw on the shoreline that  
 (15) summer on the shores of Ugak Bay  
 (16) A Would you repeat the question?  
 (17) Q Sure trying not to orally describe it to the jury that's  
 (18) why maybe I'm experiencing some difficulty here  
 (19) Do you see what that picture is intended to depict there on  
 (20) the log and I'm asking you did you see in this case - I  
 (21) don't know if you would call it a tar ball or a mousse patty -  
 (22) that looked like that did you see things that looked like that  
 (23) on the shores of Ugak Bay?  
 (24) A Yes We saw things occasionally that looked like that It  
 (25) looks like one that was melted in the sun or something on a

Vol 22 3528

Vol 22 3530

(1) screen one more here See if you can recognize that  
 (2) A I'm not positive that I can identify this spot either  
 (3) Sort of looks like Gull Cape  
 (4) MR CLOUGH What I'd like to ask him are these  
 (5) representative of the types of shorelines he saw in Ugak Bay  
 (6) THE COURT He can answer  
 (7) A Yes  
 (8) MR CLOUGH With that Your Honor -  
 (9) THE COURT You can show him the pictures yes  
 (10) BY MR CLOUGH  
 (11) Q Looking to the photograph here - and I will have to  
 (12) identify to the back of it to get the exhibit number and  
 (13) correct the record later - but is this representative of the  
 (14) types of beach you saw in Ugak Bay in July of '89?  
 (15) A Most of the beaches on the east side of the island are a  
 (16) combination of sand and gravel beaches like that drifts I  
 (17) would say yes it's fairly representative of that type of  
 (18) beach  
 (19) Q I would like to show you another photograph  
 (20) If we can turn off the Barco for the first question here  
 (21) Looking to your screen sir this is the same question  
 (22) generally representative of the types of shorelines that you  
 (23) saw - the witness monitors is not on  
 (24) This is generally representative of some of the types of  
 (25) shorelines you saw on the southern side of Ugak back in July of

(1) log  
 (2) Q If we could publish that to the jury  
 (3) Now going back to the first photograph if you tell from  
 (4) this photograph other than the moussie patty we see on that  
 (5) log if you can see anything else that you can tell is a mousse  
 (6) patty or a tar ball in that photograph?  
 (7) A I can't tell from this photograph  
 (8) Q In fact the mousse patties and tar balls you saw were a  
 (9) variety of sizes weren't they?  
 (10) A Yes they were  
 (11) Q Some of them were quite small weren't they?  
 (12) A Yes they were  
 (13) Q If we could turn off the Barco  
 (14) Is this photograph representative of some of the smaller  
 (15) patches that are on your screen?  
 (16) A Excuse me?  
 (17) Q Is this photograph representative of some of the little  
 (18) patches?  
 (19) A Little patches of mousse?  
 (20) Q Mousse yes  
 (21) MR STOLL Your Honor he can show this one Let's  
 (22) speed this up a little bit  
 (23) THE COURT Besides that that's one on -  
 (24) A This would be a wet kelp on this rock  
 (25) BY MR CLOUGH

Vol 22 3531

(1) Q Assuming light oil?

(2) A Are you talking about this hinge thing in the middle?

(3) Q Put it this way did you see patches of mousse that small

(4) in Ugak Bay?

(5) A Yes occasionally we did

(6) Q To your knowledge when the clean up crews came across that

(7) they would scoop up the bunch of pebbles and put it in a bag

(8) and carry it away?

(9) A I would assume that's what they were doing but I don't

(10) know for sure

(11) Q Did you ever go up to the any of the heavily oiled beaches

(12) in Prince William Sound?

(13) A No sir

(14) Q Did you go up to Prince William Sound at all in 1989?

(15) A No sir I didn't

(16) Q So you're not in any position to compare heavy oiling that

(17) heavy oiling found in portions of Prince William Sound with the

(18) oiling you saw down in Kodiak right?

(19) A No sir

(20) Q As you're sitting here today sir do you recall how the

(21) ADF&G categorized the majority of the beaches that you

(22) surveyed

(23) that summer under their classification system?

(24) A I don't recall specifically no I mean we had all

(25) different types of impacts and what they did with all that

(26) material afterwards I don't know

Vol 22 3532

(1) Q Let me be more precise Do you recall whether for the

(2) beach survey that you and your crew did the trained ADF&G

(3) observer working with you classified the great majority of

(4) beaches surveyed by your crew as either lightly or very lightly

(5) oiled?

(6) A I couldn't tell you for sure I would say light to

(7) moderate kind of comes to mind But like I say there was

(8) many many different areas that we did and it went on for

(9) days so I can't tell you how ADF&G classified them or how the

(10) observer felt about the degree of oiling was a light

(11) to moderate according to their criteria

(12) Q From your recollection?

(13) A Yes that seems to be what I recall

(14) Q But as you testified they did have a very specific

(15) classification scheme?

(16) A Yes

(17) Q And they had a trained observer on your vessel to make the

(18) observations?

(19) A Yes

(20) Q And he did maintain data to a beach by beach shoreline

(21) basis?

(22) A Each time we went to shore yes we would write down the

(23) data for that particular shoreline

(24) Q And you would agree with me that those observations

(25) according to ADF&G criteria are the best existing treatment of

Vol 22 3533

(1) the amount of oiling observed by you and your crew that

(2) summer?

(3) A I would say that that was the best that they had to with

(4) their criteria yes Not that I necessarily agree with their

(5) criteria

(6) MR CLOUGH No further questions

(7) MR STOLL I just have a couple questions

(8) BY MR STOLL

(9) Q Mr Nault this observer by ADF&G you said something

(10) earlier in your direct testimony you got the same kind of

(11) training that that person got?

(12) A Yes basically I did

(13) Q How do you know that?

(14) A Because they told me that they were going to train these

(15) observers and it's the same stuff they gave to me I believe

(16) theirs was a little more extensive

(17) Q And you did these tests essentially all summer I mean

(18) for late May to late August for three months essentially to

(19) see if you could fish safely that was the idea behind this?

(20) A Yes This was an ongoing process It was seven days a

(21) week for months

(22) Q And you had a certain area Mr Kuplinger had an area

(23) there were other people doing other tests in Kodiak is that

(24) correct?

(25) A Yes I think there were seven to ten boats out there

Vol 22 3534

(1) Q Doing these tests to see if you could fish safely?

(2) A Yes

(3) Q And during the entire summer did ADF&G ever open any

(4) area

(5) area to salmon fishing?

(6) A To my knowledge they - I think that they opened the

(7) Alitak district to the set gillnet fleet only

(8) Q That was one small area -

(9) A Yes It's way up in the head of - it's up in Alitak Bay

(10) by Moser Bay It's way up inside

(11) Q What do you mean by way up inside?

(12) A If you have a map it's on the south end This is the

(13) Alitak Bay district down here and the area that they would

(14) have opened was this area up inside here

(15) Q Way inside this -

(16) A Yeah and I'm not exactly sure just exactly whether but

(17) it's the Olga Moser Bay area I believe that they allowed some

(18) fishing to take place there with the setnet boats the beach

(19) seiners beach gillnetters rather

(20) Q And that's the only place that you know of?

(21) A For a commercial harvest And then there was some type of

(22) a very limited thing that they allowed to happen on the inside

(23) at Kitoi Bay but that may have had something to do with the

(24) cost recovery of fish at Kitoi I'm not sure of it

(25) specifically but for the most part there was no commercial

(26) fish seine fishery in that part of the island or any part of

Vol 22 3535

Vol 22 3537

(1) the island  
 (2) Q This one photo graph that Mr Clough used this stick of  
 (3) wood here with a little oil on it is that what you're talking  
 (4) about? Is that what - most of the oil that you saw that  
 (5) summer is that the kind of oiling that you were looking at?  
 (6) A No sir One tad of that would be of no concern to  
 (7) anyone We're talking about oil a lot of oil  
 (8) MR STOLL That's all  
 (9) RE-CROSS EXAMINATION OF ANDREJ NAULT  
 (10) BY MR CLOUGH  
 (11) Q The jury may not understand as well as you as well as some  
 (12) other people what is meant by a cost recovery fishery  
 (13) Correct me if I'm wrong what happens at the hatchery  
 (14) right offshore at the hatchery they fish for them and they  
 (15) then sell those fish don't they?  
 (16) A I guess so  
 (17) Q They sell them to the public to eat don't they?  
 (18) A I believe they had some kind of a deal with one of the  
 (19) canneries I think they had - the canneries had bid on the  
 (20) fish yes  
 (21) Q The cannery puts them in cans and gives them to people to  
 (22) eat right?  
 (23) A Yes  
 (24) Q And it's the money the cannery pays for those fish caught  
 (25) right there in those waters to feed people It's the money

(1) take?  
 (2) MR FORTIER She's going to extend over into  
 (3) tomorrow I'm sure  
 (4) THE COURT We've got a half hour I'm going to give  
 (5) the jury ten minutes that turns into 15 minutes so what would  
 (6) be the point of getting into 15 minutes of testimony? Do you  
 (7) want to go tomorrow?  
 (8) MR FORTIER Why don't we start tomorrow that's  
 (9) fine  
 (10) THE COURT Don't talk about the case with anyone  
 (11) including your fellow jurors and don't form any opinion on it  
 (12) until it's submitted to you for deliberation  
 (13) (Jury out at 1:00 p.m.)  
 (14) THE COURT Counsel anything to take up on the  
 (15) record?  
 (16) MR CLOUGH I'll defer to Mr Diamond I have  
 (17) nothing  
 (18) MR DIAMOND Your Honor with respect to  
 (19) Dr Johnson's testimony you remember on two occasions we  
 (20) have  
 (21) talked about the summary charts - summary matrices we sent  
 (22) over on Friday a list of references on those charts which the  
 (23) claims have been dropped According to most recent iterations  
 (24) they are still there I don't know whether counsel intends to  
 (25) remove them between now and tomorrow but if he doesn't we  
 (26) will  
 (27) be talking to you tomorrow morning about that

Vol 22 3536

Vol 22 3538

(1) that they make from that that's used to pay the cost of the  
 (2) hatchery?  
 (3) A I think that's correct  
 (4) Q So obviously the cannery thought those fish were safe to  
 (5) eat?  
 (6) A Yeah those particular fish were caught inside of a log  
 (7) boom and a series of other booms with clean up vessels and  
 (8) other vessels out there in front of it then they were allowed  
 (9) a limited fishery  
 (10) Q They caught those and and how and and thousands of  
 (11) fish  
 (12) in that area didn't they?  
 (13) A I'm not sure what the catch was  
 (14) Q And finally during the entire summer of all the work you  
 (15) did with ADF&G to your knowledge did they categorize a  
 (16) single  
 (17) beach you surveyed as heavily oiled under their official  
 (18) standards?  
 (19) A I don't know  
 (20) MR CLOUGH No further questions  
 (21) THE COURT You can step down  
 (22) Counsel do you have another witness that you can put right  
 (23) on?  
 (24) MR STOLL I'm done with my witnesses for the day  
 (25) but Mr Fortier has witnesses  
 (26) MR FORTIER I'll need a few minutes to get set up?  
 (27) THE COURT How long is this next witness going to

(1) MR FORTIER We're working hard on getting them out  
 (2) Counsel did bring it to our attention that there were a few  
 (3) scattered through we're trying to address those issues  
 (4) THE COURT Just to get all our mind it's clear it  
 (5) could work at that by 4:30 today then none of us will worry  
 (6) Do your best counsel that's all that I can ask for  
 (7) MR PETUMENOS On the Check point my understanding  
 (8) is that it was faxed to Boyle & Gates office  
 (9) MR DIAMOND If they go to Boyle & Gates I'll never  
 (10) see them  
 (11) MR STOLL Your Honor I would like to bring one -  
 (12) THE COURT Is this what they call a matrix counsel?  
 (13) MR STOLL Your Honor tomorrow I believe the next  
 (14) two witnesses are archeological witnesses that have nothing to  
 (15) do with the case of my clients and would it be - could I be  
 (16) excused from the bench tomorrow  
 (17) THE COURT Many words spring to my lips but I'm not  
 (18) going to say any of them except yes  
 (19) MR STOLL Thank you Your Honor  
 (20) MR FORTIER Your Honor I have one more matter I  
 (21) was going to read in the green exhibits into the record last  
 (22) week or last Monday last Friday Could I do that now Your  
 (23) Honor?  
 (24) THE COURT Sure  
 (25) MR FORTIER Exhibit 1123 1125 through 1127 1131

Vol 22 3539

(1) 1132 1247 2 1247 4 1247 4 A 1247 5 1247 7 through - I m  
 (2) sorry  
 (3) MR OPPENHEIMER I m sorry I have to interrupt  
 (4) These were not on the list that we discussed  
 (5) MR FORTIER I believe these were the 1247 series  
 (6) MR OPPENHEIMER Yes but not those designations  
 (7) MR OPPENHEIMER Your Honor we have a list We ll  
 (8) compare it immediately first thing in the morning  
 (9) THE COURT If you give me a list I will just read  
 (10) them in  
 (11) MR OPPENHEIMER We will do that  
 (12) THE COURT Is there anything else?  
 (13) MR FORTIER Your Honor I don t believe so  
 (14) THE COURT Good we re in recess now  
 (15) (Proceedings recessed at 1 04 p m )

(1) PROCEEDINGS  
 (2) (Call to Order of the Court )  
 (3) (Jury out at 8 45 A M )  
 (4) THE CLERK Please rise  
 (5) THE COURT Counsel you wanted to see me out of the  
 (6) presence of the jury?  
 (7) MR FORTIER We did Your Honor We ll be putting on  
 (8) archaeologists today beginning today Dr Lora Johnson will be  
 (9) the first archaeologist so plaintiffs renew their request for  
 (10) the confidentiality jury instruction  
 (11) I think it was proposed as Jury Instruction 3 A  
 (12) THE COURT I have it here Hang on just a minute I  
 (13) have it Is that acceptable?  
 (14) MR DIAMOND No  
 (15) THE COURT You hurt my feelings counsel  
 (16) MR DIAMOND We discussed this early last week I  
 (17) believe when counsel first wanted this recognized and we  
 (18) explained that was our position that these site locations were  
 (19) not confidential and that part of our case was establishing  
 (20) that in fact most of the sites are well known - many of the  
 (21) sites are well known - the locations are well known and  
 (22) giving this instruction would in effect be directing a  
 (23) finding of fact to the jury on that contested factual issue  
 (24) So we strongly object to that jury instruction  
 (25) THE COURT What s your response counsel?

Vol 23 3547

(1) MR FORTIER My response Your Honor is that the  
 (2) confidentiality of this site is the law of the case There  
 (3) have been - every single document that is submitted to court  
 (4) with regard to archaeology is marked confidential pertains to  
 (5) archaeological sites pursuant to a discovery master order  
 (6) DM119 In addition to that both parties have carefully  
 (7) protected the confidentiality of the sites  
 (8) Finally the jury instruction that you have in front of  
 (9) you Your Honor is a proposed instruction that was a part of a  
 (10) packet that was agreed upon by plaintiffs and defendants when  
 (11) we were putting together the original jury instructions  
 (12) So you know for all those reasons it would seem to me  
 (13) it s compelling to have the confidentiality order or the  
 (14) confidentiality instruction  
 (15) We re concerned We re very concerned Your Honor about  
 (16) disclosing information concerning these sites without some sort  
 (17) of protection and you know frankly that s been the law of  
 (18) this case It s how it was proceeded It took us  
 (19) three and a half years to obtain records from Exxon because  
 (20) they insisted on the confidentiality of the sites including  
 (21) the sites that are owned by plaintiffs  
 (22) THE COURT Do you have a response counsel?  
 (23) MR DIAMOND Your Honor it s law of the case insofar  
 (24) as discovery is concerned We did not hold up production I  
 (25) guess we were concerned about disclosure of confidential

Vol 23 3348

- (1) information Production was held up because we were concerned
- (2) about plaintiffs would characterize our production documents to
- (3) them possibly created a violation that wouldn't otherwise
- (4) exist
- (5) We don't believe that site location information at least
- (6) in specific details are disclosed in this case that anyone
- (7) would be concerned It is a linchpin of our defense one of
- (8) them That there are lots of people out there that know the
- (9) locations of the sites There are lots of publications in
- (10) which they are reported and publicly available And this jury
- (11) is already under instructions to not discuss the case with
- (12) anybody
- (13) We have no objection to instruction at the conclusion of
- (14) the case that wouldn't prejudice our presentation our
- (15) arguments but we do have an objection to the timing of this
- (16) which is in effect an instruction what the defendants are
- (17) telling you about site information is incorrect that this is
- (18) confidential information it is not known it is closely held
- (19) that's highly prejudicial to our case
- (20) With respect to the jury instruction that was proposed I
- (21) think Mr Fortier is telling you half the story That was his
- (22) language that was sent over to one of our lawyers at the last
- (23) minute incorporating - trying to put together a packet of
- (24) preliminary jury instruction The lawyer that was doing that
- (25) was under the impression that this had been agreed to and that

Vol 23 3549

- (1) was as a result of conversation he had with Mr Fortier not as
- (2) a result of conversations with anybody that knows anything
- (3) about the archaeology side of our case
- (4) And it was never an agreement it was an accommodation of
- (5) Mr Fortier that we were discussing in presentation to the
- (6) court We never admitted to any such jury instruction and
- (7) strongly oppose it
- (8) THE COURT Counsel this - I think this instruction
- (9) has all the risks that Mr Diamond set out on the record
- (10) The other thing it is true this jury is under
- (11) instructions to not talk about the case so to the extent that
- (12) they might go out to the local grocery store and talk about
- (13) archaeological sites they have been instructed not to do
- (14) that
- (15) If this is appropriate in the case I'll give it but it's
- (16) not appropriate now I'll put this instruction number 3-A in
- (17) the court's exhibits Court's Exhibit 20
- (18) Counsel I have a list of exhibits here that I assume are
- (19) the list that you've agreed to that can be admitted
- (20) MR FORTIER You're referring to -
- (21) THE COURT Green exhibits
- (22) MR FORTIER Yes I believe those are - have been
- (23) agreed upon but I think there are several that Mr Oppenheimer
- (24) wishes to preserve his objection to
- (25) THE COURT Just tell me which ones they are I'll

Vol 23 3350

- (1) exclude them and I'll admit the others for now
- (2) MR OPPENHEIMER Your Honor if we could just
- (3) preserve our objection We've already argued that these are
- (4) the headline exhibits and we won't take the Court's time to
- (5) reargue those We would just - we are proposing no objection
- (6) to the others We would like to reserve for the record our
- (7) objection to those and they are 1247 76 1247 77 1247 78
- (8) THE COURT That's all?
- (9) MR OPPENHEIMER That's correct Your Honor
- (10) THE COURT So it's 76 to 78 right?
- (11) MR OPPENHEIMER Correct
- (12) THE COURT Then the clerks wanted me to read this
- (13) into the record
- (14) Plaintiffs Exhibit 1123 1125 to 1127 1131 1132 1247 2
- (15) 4 4a 5 1247 7 through 1247 9 1247 12 through 1247 19
- (16) 1247 26 27 30 34 through 39 (sic) 39 through 46 54 55
- (17) 58 60 through 62 65 71 72
- (18) MR OPPENHEIMER I believe it's 1247 77 through 80
- (19) THE COURT 79 would be the next number?
- (20) MR OPPENHEIMER No I believe I had 1247 77 through
- (21) 1247 80
- (22) THE COURT I thought you wanted 77 out
- (23) MR OPPENHEIMER I assume that would remain
- (24) unchanged These were the headline captions We didn't want
- (25) to take the Court's time

Vol 23 3551

- (1) THE COURT 1247 94 98 1250 through 1264a and
- (2) Defendants Exhibit 13221 9227 554a
- (3) MR OPPENHEIMER Correct Your Honor
- (4) THE COURT PX1139 15108 page what?
- (5) MR OPPENHEIMER NVC12774
- (6) THE COURT That's it?
- (7) MR OPPENHEIMER That's it Your Honor Thank you
- (8) THE COURT It wasn't 39 it was 37 1247 34 through
- (9) 1247 37 is corrected
- (10) Exhibits 1123 1125 thru 1127 1131 1132 1247 2 1247 4
- (11) 1247 4a 1247 5 1247 7 thru 1247 9 1247 12 thru 1247 19
- (12) 1247 26 1247 27 1247 30 1247 34 thru 1247 37 1247 39 thru
- (13) 1247 46 1247 54 1247 55 1247 58 1247 60 thru 1247 62
- (14) 1247 65 1247 71 1247-72 1247 77 thru 1247 80 1247 94
- (15) 1247 98 1250 thru 1264e 13221 9227 554a 1139 and 15108
- (16) (page NVC 12774) received)
- (17) MR DIAMOND Before you bring on the jury with
- (18) respect to Dr Johnson's testimony I do want to put on the
- (19) record an agreement with counsel
- (20) Plaintiffs anticipate showing a videotape 1287 which is
- (21) identified as an Exxon Cultural Resource Excerpt into that
- (22) tape has been edited a tape which was prepared by the Native
- (23) corporations that is not part of the Exxon Cultural Resources
- (24) Program
- (25) I understand there will be a statement on the record when

Vol 23 3552

Vol 23 3554

(1) that segment is introduced that it is not an Exxon tape it is  
 (2) a tape prepared by the plaintiffs I just didn't want to jury  
 (3) to be left with a misimpression  
 (4) MR FORTIER That's correct I believe it is 1287a I  
 (5) believe  
 (6) (Jury in at 8:55 a.m.)  
 (7) THE COURT Good morning  
 (8) THE CLERK Ma'am can you stand up and can you attach  
 (9) the microphone?  
 (10) MR FORTIER Before you get started Madam Clerk the  
 (11) plaintiffs call Dr. Lora Johnson  
 (12) (The Witness Is Sworn)  
 (13) THE CLERK Please be seated Ma'am For the record  
 (14) can you state your full name?  
 (15) A My full name is Lora Lee Johnson  
 (16) THE CLERK Can you spell your last name?  
 (17) A J o h n s o n  
 (18) THE CLERK And your occupation?  
 (19) A I'm an archaeologist  
 (20) THE CLERK Thank you  
 (21) DIRECT EXAMINATION OF LORA LEE JOHNSON  
 (22) BY MR FORTIER  
 (23) Q Dr. Johnson how long have you been an archaeologist?  
 (24) A I've been an archaeologist since 1979  
 (25) Q Can you tell the jury a bit about your family history

(1) Archaeology and Art And my specialty there was classical  
 (2) archaeology and I received my doctorate in 1984  
 (3) During that time studies - I also had the opportunity to  
 (4) participate in archaeological explorations and other research  
 (5) connected with archaeology in the Mediterranean area I  
 worked  
 (6) at excavations in Italy and also in Greece and I did research  
 (7) for my doctoral dissertation in Turkey at sites located  
 (8) along - the sites in Turkey  
 (9) Also during that time I had an opportunity to work with  
 (10) archaeological collections at the Center for Old World  
 (11) Archaeology at Brown  
 (12) Let's see after my degree in 1984 I took a position with  
 (13) the American Philological Association in New York and this  
 (14) association is one of the learned societies in the United  
 (15) States It's directed toward classicists that teach at the  
 (16) universities and colleges in the United States and I was an  
 (17) executive assistant there It was an administrative position  
 (18) and what I did with that job was I worked closely with both the  
 (19) American Philological Association and the archaeological  
 (20) Institute of American in terms of planning meeting on an and/or  
 (21) base  
 (22) After this position I moved to Massachusetts where I  
 (23) taught at Clark University and I taught both classics and  
 (24) classic archaeology and art This brings us up to about 1988  
 (25) After this I basically made the decision whether to stay on

Vol 23 3553

Vol 23 3555

(1) please your family background?  
 (2) A Well I think the best way to put it - is this too loud?  
 (3) Q We can hear you well Dr. Johnson that's great  
 (4) A Basically I'm here today both because I'm an archaeologist  
 (5) and also because I'm an Alaska Native of Chugach descent  
 (6) Let's see I suppose I should begin with I guess my family  
 (7) history  
 (8) Q Sure why don't you tell a bit about that  
 (9) A My family is from Prince William Sound my father's family  
 (10) is and his mother was from Nutchek which is a former village  
 (11) over on Hinchinbrook Island So I have family connections with  
 (12) the region and this is part of the reason why I have such  
 (13) concern for the heritage that we're going to be talking about  
 (14) today  
 (15) Q Go ahead  
 (16) A Basically I suppose I can talk about my educational  
 (17) background  
 (18) Q Why don't you tell us about your educational background  
 (19) A To begin with as an undergraduate at the University of  
 (20) Washington my primary focus was classics I received my  
 (21) degree my Bachelor's degree in 1978 in classics with a  
 (22) specialty in classical Greek  
 (23) Subsequent to that I went to Brown University in  
 (24) Providence Rhode Island and studied in the classics  
 (25) department but I actually studied at the Center for Old World

(1) the East Coast or to come back to the West Coast and Alaska  
 (2) and I decided at that time that I did want to return to the  
 (3) West Coast which is where I was from and basically look into  
 (4) the archaeology of this area in particular because of my  
 (5) interest in my own heritage in Prince William Sound  
 (6) After that between 1988 and present I have turned my  
 (7) attention to the archaeology of Prince William Sound This  
 (8) began with the oil spill in 1989 when I received a call about  
 (9) Chugach Alaska Corporation's concern for the heritage sites  
 (10) and I came up in April and I've been working up here since  
 (11) then  
 (12) In terms of my archaeological background in Prince William  
 (13) Sound it includes both the field work connected with oil  
 (14) spill the oil spill response activities that Chugach pursued  
 (15) It also includes field work connected with road construction on  
 (16) the south end of Montague Island excavations on Evans Island  
 (17) connected with the airport project  
 (18) It also includes excavations connected with repatriation of  
 (19) human remains in I believe three different locations in the  
 (20) Sound In addition to that I've done a fair amount of survey  
 (21) work for Chugach Alaska Corporation in connection with their  
 (22) historical sites Well actually in Prince William Sound and  
 (23) also Controller Bay located to the southeast  
 (24) I've also visited numerous sites in Prince William Sound  
 (25) and the Kenai Peninsula as well as - so I have sort of a

Vol 23 3556

- (1) general background in archaeology both in the old world and  
 (2) more recently now in Prince William Sound itself  
 (3) Q Let me ask you a few follow up questions if I could  
 (4) Dr Johnson  
 (5) You finished your doctoral dissertation I take it?  
 (6) A Yes in 1984  
 (7) Q Can you tell the jury what it was in?  
 (8) A It was on the Archaeological Form of Hellenistic and Roman  
 (9) Libraries It was an architectural dissertation - actually an  
 (10) archaeological dissertation because what I was interested in  
 (11) was the physical remains of these library buildings in the  
 (12) Greek world And I should say there are literary references  
 (13) that talk about libraries what - what I was interested in it  
 (14) was the actual physical remains and looking at these to see if  
 (15) you could identify these buildings as libraries strictly based  
 (16) on the architectural form the physical remains of the  
 (17) buildings So that's basically what my study was about  
 (18) Q How old were these buildings?  
 (19) A They ranged from the late 4th century B C to the 2nd  
 (20) century A D  
 (21) Q And then Dr Johnson I wanted to talk to you for a moment  
 (22) about moving back up to Alaska in April of 89  
 (23) A Yes  
 (24) Q You indicated that was on account of the oil spill and your  
 (25) concerns over the heritage sites of the Chugach?

Vol 23 3557

- (1) A Yes  
 (2) Q Can you tell us how long you worked in the area of oil  
 (3) spill response?  
 (4) A I began my work in Prince William Sound as I said in 1989  
 (5) and it was connected with the oil spill response that Chugach  
 (6) Alaska Corporation was organizing My general experience as  
 (7) I said has been in Prince William Sound Controller Bay and also  
 (8) the Kenai Peninsula between 1989 and present and included  
 (9) both  
 (10) the oil spill activities as well as survey work and some  
 (11) substantial excavation work  
 (12) Q In 1989 you visited some sites of the Chugach people?  
 (13) A Yes I did  
 (14) Q How many sites?  
 (15) A In 1989 I would suspect gosh a dozen or two  
 (16) Q Would those visitations be considered reconnaissance by  
 (17) archaeologists?  
 (18) A Yes  
 (19) Q In 1990 you also visited sites is that correct?  
 (20) A Yes  
 (21) Q And that was with regard to oil spill related activities?  
 (22) A Some of it was with regard to oil spill related  
 (23) activities The majority of it was just survey work connected  
 (24) with Chugach historical sites  
 (25) Q And approximately how many sites did you visit for the  
 purpose of surveying?

Vol 23 3558

- (1) A I would say a couple dozen  
 (2) Q You also mentioned Dr Johnson that you did some work  
 (3) with regard to an airport on Evans Island Can you tell the  
 (4) jury a bit about that work please?  
 (5) A Yes In 1993 we conducted an excavation at two sites on  
 (6) Evans Island One was an historical site and the other was  
 (7) possibly a prehistoric site They had been identified by  
 (8) previous surveys in the area and it was determined that there  
 (9) should be some more extensive investigations at these sites  
 (10) prior to construction of the road leading to the  
 (11) airport  
 (12) So basically what we did was excavated at both sites I  
 (13) believe we excavated five test pits or excavation units at one  
 (14) and it was something like 30 excavation units at the other  
 (15) Q That was for road construction by the state is that  
 (16) correct?  
 (17) A That's correct That report was submitted to the  
 (18) Department of Transportation public facilities  
 (19) Q That was at Chenega Bay Dr Johnson?  
 (20) A That's correct  
 (21) Q You've seen what you referred to as the airport since its  
 (22) construction correct?  
 (23) A I've seen it in the process of construction yes  
 (24) Q Is it an airport what we think about in Anchorage terms?  
 (25) A Basically as I saw it it's what you consider a rural

Vol 23 3559

- (1) airport It's like a dirt airport  
 (2) Q It's an airstrip?  
 (3) A Airstrip And the same thing with the road it's not  
 (4) lining a paved road it's your basic gravel road  
 (5) Q Besides your experiences with regard to the oil spill your  
 (6) work at Chenega Bay in 1993 can you tell the jury about some  
 (7) of your other work in Prince William Sound and the lower Kenai  
 (8) Peninsula over the past five years?  
 (9) A The work - some of the work that I've done as I  
 (10) mentioned was connected with repatriation so we did  
 excavate  
 (11) I believe it was three different locations basically pits for  
 (12) the reburial of human remains and these human remains had  
 been  
 (13) returned to the corporations as a result of NAGPA which is a  
 (14) recent law that Native American Graves and Protection -  
 (15) NAGPA Native American Graves -  
 (16) Q Graves repatriation?  
 (17) A Yeah So human remains have been returned to the  
 (18) corporation and it was the dealing of the Chugach that they  
 (19) wanted to re enter these remains at various locations So  
 (20) since they were archaeological sites I did go out to these  
 (21) sites to excavate them archaeologically in the event that we  
 (22) should encounter cultural remains so that is one type of work  
 (23) that I did  
 (24) I also participated in a test excavation at McArthur Pass  
 (25) and that was in conjunction with the Park Service

Vol 23 3560

(1) Then I've also done field work as I've mentioned before  
 (2) most recently in May and June of this year I also  
 (3) participated in field work both in the Kenai Peninsula and  
 (4) also in Prince William Sound  
 (5) Q Dr Johnson have you written any reports concerning your  
 (6) work?  
 (7) A Yes There are a number of reports that are a result of  
 (8) this field work They include reports for various field  
 (9) seasons 1989 in conjunction with Rita Miraglia she was  
 (10) another archaeologist working on the oil spill response team  
 (11) Another report is report of the field activities in 1990  
 (12) and this pertains mainly to the survey work of the historical  
 (13) sites and I believe that it also contains some of the  
 (14) excavations in terms of the repatriation  
 (15) Another is a report it's called the Palugavik repatriation  
 (16) report and this pertains to an excavation at that particular  
 (17) site  
 (18) Also the airport project Chugach Bay airport project  
 (19) There is a sizable report for that outlining what we did in  
 (20) terms of excavations and general investigations in the area  
 (21) I'm sure there are others I just can't think of them  
 (22) Q Do you belong to any professional organizations  
 (23) Dr Johnson?  
 (24) A I belong to two professional organizations connected with  
 (25) archaeology The first is the Archaeological Institute of

Vol 23 3562

(1) basically focus on the physical remains of past human activity  
 (2) and I think that's important to keep in mind We're looking at  
 (3) things this is the primary focus  
 (4) Archaeologists do many things in addition to this but I  
 (5) think that this is the common ground in terms of what  
 (6) archaeologists do In the Mediterranean for example my focus  
 (7) was on the physical remains of library buildings I was  
 (8) interested in trying to understand what they could tell us  
 (9) about library construction in the Mediterranean and from this  
 (10) obviously it would be how this fits into the social and  
 (11) cultural framework of that particular society  
 (12) Here in Alaska I look at other types of physical remains  
 (13) They may be prehistoric remains that tell us something about  
 (14) subsistence activities or perhaps about types of villages or  
 (15) types of settlements or activities at different locations It  
 (16) may be more substantial remains structural remains historical  
 (17) remains for example that tells us about activities during the  
 (18) historical period  
 (19) Q When did you get interested in archaeology Dr Johnson?  
 (20) A Well I think my primary interest was just in how one could  
 (21) look at these physical remains and be able to - well  
 (22) reconstruct the past in a sense That in a sense it's like a  
 (23) puzzle and when it comes right down to it it's just a lot of  
 (24) fun to do So I was interested in it because there was so much  
 (25) potential for learning about the past through archaeology that

Vol 23 3561

(1) America that I mentioned earlier in terms of coordinating with  
 (2) them when I worked for the APA the American Philological  
 (3) Association I've been a member of that organization since  
 (4) about 1984 It's a pretty large organization of about 50,000  
 (5) members and some of you may be familiar with its popular  
 (6) publication which is called Archaeology  
 (7) Another organization that I belong to is the Alaska  
 (8) Anthropological Association and I've been a member since  
 (9) 1991  
 (10) I'm also a member of an advisory board for the Burke Museum  
 (11) in Washington This is the state museum that's located in  
 (12) Seattle and basically what this advisory group does is try to  
 (13) work with the museum in terms of setting up exhibits The  
 (14) membership on this particular council or group includes  
 (15) members that represent indigenous peoples of the North Pacific Rim -  
 (16) excuse me - yeah the North Pacific Rim area  
 (17) The other organization that I should mention I'm a Trustee  
 (18) on the Chugach Heritage Foundation which is a non profit  
 (19) foundation of Chugach Alaska Corporation I've been a Trustee  
 (20) since about 1990 and this year they appointed me - or elected  
 (21) me whatever secretary/treasurer  
 (22) Q Can you tell me what an archaeologist does just in  
 (23) general?  
 (24) A Well basically archaeologists whether they are classic  
 (25) archaeologists or any other type of archaeologist they

Vol 23 3563

(1) it just - it just sort of happened naturally that I became  
 (2) interested in it  
 (3) Q Dr Johnson I think that you know a lot of folks  
 (4) probably included look at archaeology like Indiana Jones  
 (5) and Raiders of the Lost Ark and that sort of thing Can you  
 (6) explain how an archaeologist approaches an archaeology site?  
 (7) A Well it's quite a bit different than that  
 (8) Q Explain  
 (9) A Well there are different approaches obviously that - in  
 (10) terms of Prince William Sound I can talk about that pretty  
 (11) comfortably in terms of what I've done and what I've  
 (12) participated in  
 (13) One of the first steps is identifying locations of sites  
 (14) and usually this is done through - well there are different  
 (15) ways of doing this One of the approaches has been by talking  
 (16) to people You talk to people that know where the sites are  
 (17) and in Prince William Sound this is - this has a lot to do  
 (18) with the Native population in the area Back in the 30s when  
 (19) some of the earliest archaeologists came to the region one of  
 (20) the first things they did they would go out and talk to people  
 (21) in the villages and try to find out what they know about the  
 (22) location of these sites and the activities at these sites And  
 (23) people still continue to do the same thing whether it's  
 (24) talking to people directly or going to documents that are on  
 (25) file at either the state or other federal agencies that you

Vol 23 3564

- (1) first find out what s known about these areas And from there  
 (2) then you may go out and do additional investigations in these  
 (3) locations to find out what else can be seen just from the  
 (4) physical remains  
 (5) The other approach would be simply to go out and just do  
 (6) survey work in terms of locating the sites And this has also  
 (7) been somewhat effective in terms of locating sites that  
 (8) basically no one knows anything about and that there is no type  
 (9) of tradition connected to them  
 (10) Most of the sites in Prince William Sound actually have  
 (11) some tradition connected with them and it s now a matter of  
 (12) filling in the details and looking at the archaeological  
 (13) remains to enhance the story about what s happening or what  
 (14) has happened at these different sites  
 (15) MR DIAMOND Before we get too far down the record  
 (16) perhaps counsel can qualify the witness or tender her as an  
 (17) expert in the subjects that s she s now rendering an opinion  
 (18) on  
 (19) MR FORTIER I could Your Honor I was going to lay  
 (20) a bit more foundation  
 (21) THE COURT Go ahead  
 (22) BY MR FORTIER  
 (23) Q Dr Johnson you mentioned that you could go to a state  
 (24) agency and get records concerning a site Could you explain  
 (25) to  
 (26) the jury what you mean by that please?

Vol 23 3565

- (1) A Well the Office of History and Archaeology maintains a  
 (2) file on historical sites or heritage sites in Alaska and this  
 (3) is a particular file that is considered confidential and  
 (4) access is limited to archaeologists or professionals that have  
 (5) a particular reason in looking at the sites  
 (6) Working for Chugach Alaska Corporation or the villages  
 (7) there have been specific reasons why I ve been interested in  
 (8) them and so basically you go to the office and you tell them  
 (9) what sites you re interested in or what areas you re interested  
 (10) in and they provide the documents for you  
 (11) Other agencies also have documents and you can request  
 (12) them and as a professional archaeologist you would have  
 (13) access  
 (14) to them  
 (15) Q And are those other agency s records also confidential? Do  
 (16) you know Dr Johnson?  
 (17) A Yes I believe they are  
 (18) MR FORTIER Your Honor at this time I move to  
 (19) qualify Dr Johnson as a expert in the area of archaeology  
 (20) MR DIAMOND May I voir dire?  
 (21) THE COURT Yes  
 (22) VOIR DIRE EXAMINATION OF LORA LEE JOHNSON  
 (23) BY MR DIAMOND  
 (24) Q Good morning My name is Chuck Diamond We met briefly  
 (25) in  
 (26) Friday In an effort to educate myself I went and looked up  
 (27) some terms You re familiar with the discipline known as

Vol 23 3566

- (1) anthropology?  
 (2) A Yes  
 (3) Q That s the study of mankind?  
 (4) A Yes  
 (5) Q And I have been told that archaeology is a subset of  
 (6) anthropology  
 (7) A It is a subset of anthropology It s also a subset of  
 (8) classics  
 (9) Q Webster s defines archaeology as the scientific study of  
 (10) material remains of past human life Do you agree with that?  
 (11) A Yes  
 (12) Q Neither your undergraduate nor your graduate degrees are  
 (13) in  
 (14) anthropology are they?  
 (15) A No they are not  
 (16) Q And neither of them are in archaeology?  
 (17) A My doctorate is in classics with a specialty in classical  
 (18) archaeology  
 (19) Q But you got that doctorate from the University of - Brown  
 (20) University is that right?  
 (21) A That s correct  
 (22) Q And you got that in 1984?  
 (23) A That s correct  
 (24) Q That was issued by the department of classics was it not?  
 (25) A That s correct I studied at the Center for Old World  
 (26) Archaeology

Vol 23 3567

- (1) Q The classics department offers two Ph D groups does it  
 (2) not?  
 (3) A Pardon?  
 (4) Q It offers a Ph D in classics and it offers a Ph D in  
 (5) classical archaeology?  
 (6) A Brown University?  
 (7) Q Yes  
 (8) A They may now  
 (9) Q In 1984 didn t they offer two degrees?  
 (10) A Yes in fact I have a letter from the chairman at the time  
 (11) because I was concerned with that myself and he pointed out  
 (12) that at the time - at least according to this letter - at the  
 (13) time there was no additional degree and that in fact my  
 (14) degree was a degree in classical archaeology because  
 (15) basically  
 (16) my advisor was an archaeologist and I studied with  
 (17) archaeologists  
 (18) Q Many universities offer a straight degree in archaeology  
 (19) do they not?  
 (20) A Some do  
 (21) Q You hold no such degree?  
 (22) A No I do not  
 (23) Q Classics is the study of Roman and Greek civilization in  
 (24) the 5th century B C ?  
 (25) A It s much broader than that  
 (26) Q Well let s see how close I am It s the study of Roman

Vol 23 3568

- (1) and Greek civilizations?
- (2) A There are many aspects of it. In classics you have a wide
- (3) range from philologists that study literature to historians
- (4) that study history to archaeologists that study the physical
- (5) remains.
- (6) Q But it encompasses or the principal focus is on
- (7) Mediterranean communities around the 3rd century B.C.?
- (8) A It's not limited to the B.C. My advisor was a prehistorian
- (9) and his focus was on prehistorian peoples of Sicily and the
- (10) Mediterranean.
- (11) Q I'm right on geography?
- (12) A You're right on geography. It extends beyond the
- (13) Mediterranean. It encompasses all of Europe basically and
- (14) there are even some classicists that are talking about the
- (15) classical influence in America so they even go beyond.
- (16) Q But classics in the true sense is not limited to the study
- (17) of past human remains is it?
- (18) A No, classics is not.
- (19) Q And your studies as part of your Ph.D. program included
- (20) studies of Greek and Roman language?
- (21) A To a limited degree.
- (22) Q And literature?
- (23) A I don't believe I took any courses on literature, no.
- (24) Q You took courses on Greek and Roman culture?
- (25) A When I was a graduate student I believe my focus was on

Vol 23 3569

- (1) archaeology and art for the most part. I believe I took a
- (2) couple courses in Latin because as an undergraduate I hadn't
- (3) taken any Latin. I may have sat in on one or two other
- (4) courses but really my focus was on the archaeology.
- (5) Q I've been unable to put my hands on a 1984 Brown University
- (6) catalogue. I have a more recent one. The classics department
- (7) doesn't teach any courses on North American Native culture
- (8) does it?
- (9) A No, it does not.
- (10) Q And it doesn't teach any courses on North American Native
- (11) history, religion, art, philosophy, science or archaeology?
- (12) A No, it does not.
- (13) Q And you took no such courses as part of your graduate
- (14) studies is that correct?
- (15) A Not as part of my graduate studies. Well, actually I
- (16) probably should extend that. I have --
- (17) Q I'm talking about prior to getting your Ph.D.
- (18) A Prior to getting my Ph.D., no.
- (19) Q You told us that you did some -- what I view as Harrison
- (20) Ford Indiana Jones explorations?
- (21) A I did not do that myself, no.
- (22) Q You worked on archaeological excavations?
- (23) A Yes, I have.
- (24) Q And that was during the summer, the time you were getting
- (25) your Ph.D.?

Vol 23 - 3570

- (1) A I worked on excavations both back in -- what would it be --
- (2) 1978 and some other year after that I've also worked on
- (3) excavations '89, '90 and '93 in Alaska.
- (4) Q Prior to getting your Ph.D. degree you never worked on an
- (5) excavation involving Northern American Indian people?
- (6) A No.
- (7) Q And you never worked in Arctic or sub-Arctic excavation?
- (8) A No, I did not.
- (9) Q Your first job after getting your Ph.D. from Brown
- (10) University was learned society whose name I will not attempt
- (11) to pronounce but it's related to study of classics?
- (12) A Yes.
- (13) Q And you were an administrative assistant at that
- (14) organization?
- (15) A That's correct. My title was the executive assistant to
- (16) the secretary/treasurer.
- (17) Q That didn't involve Native American archaeology in any way
- (18) did it?
- (19) A No, it did not.
- (20) Q And then you held a teaching position at Clark University
- (21) from the summer of 1987 to the summer of 1988?
- (22) A Yes, I did.
- (23) Q And you taught courses in the Department of Foreign
- (24) Languages and Literature?
- (25) A I taught classes in the Department of Foreign Languages and

Vol 23 3571

- (1) Literature.
- (2) Q And also the Department of Visual and Performing Arts?
- (3) A That's correct.
- (4) Q Those courses that you taught had nothing to do with Native
- (5) American archaeology did they?
- (6) A No, they focused on classics and classical archaeology.
- (7) Q And then following the summer of 1988 you worked for a
- (8) printing company?
- (9) A Yes.
- (10) Q The Johnson Printing Company?
- (11) A Yes, that's our family.
- (12) Q It's true is it not that since coming back from the East
- (13) Coast you've gone back to school and taken introductory
- (14) archaeology courses at the University of Washington?
- (15) A Between I think it was 1989 there about and 1993 I've
- (16) taken approximately 80 courses -- excuse me 80 credits
- (17) quarterly credits in sciences -- math -- the sciences basically
- (18) chemistry, statistic, some math and the rest were in
- (19) anthropology and archaeology. I believe that's what it is.
- (20) And they included a few undergraduate courses that are
- (21) actually for the most part graduate courses.
- (22) Q And one such course was an introductory class in
- (23) archaeology?
- (24) A Yes.
- (25) Q And another such class you took after coming back and

Vol 23 3572

- (1) getting your Ph D was an introductory course in cultural  
 (2) anthropology is that correct?  
 (3) A As it turns out that was a graduate course  
 (4) Q You've never published in any learned journal or periodical  
 (5) on the subject of archaeology isn't that correct?  
 (6) A No I don't think I have  
 (7) Q You've never had any formal training have you or taken  
 (8) formal studies in Native American archaeology?  
 (9) A The closest that it would come - when I was at the - all  
 (10) right between 1989 about and 1993 I took courses at the  
 (11) University of Washington basically because of my work up  
 here  
 (12) that as a classical archaeologist I felt I needed to look into  
 (13) the discipline of anthropology to see what type of areas they  
 (14) were covering that I might be deficient on as an  
 (15) archaeologist  
 (16) So I basically tried to cover as broad of a range as I  
 (17) could and they included social cultural anthropology I was  
 (18) interested in the introductory course in archaeology just to  
 (19) see what it was they taught In fact it was rather boring  
 (20) from my point of view because we basically cover a lot of the  
 (21) same material in our general course work in classical  
 (22) archaeology as well It may be a different people but the  
 (23) methods and techniques are basically the same  
 (24) I also took other courses graduate courses in final  
 (25) analysis materials and tools - what else? Physical

Vol 23 3573

- (1) anthropology a number of other areas that would have direct  
 (2) application to archaeology in Prince William Sound In fact I  
 (3) did take a course it was a reading course at the University of  
 (4) Washington that I had spoken with the professor there and I  
 (5) wanted to focus on the Chugach region so it was a ten credit  
 (6) course focusing on the prehistory and history of Prince William  
 (7) Sound And as that turned out basically I organized the class  
 (8) because I knew more about the subject than she did And I  
 (9) basically gave her reading lists of what I thought I needed to  
 (10) cover and basically we read through these things together  
 (11) Q Do you have my question in mind? It was Prior to the oil  
 (12) spill you never took any formal course work and formal studies  
 (13) in Native American archaeology is that correct?  
 (14) A I thought I had answered that before yeah  
 (15) Q The answer to my question is that's true you never took  
 (16) such courses prior to the oil spill?  
 (17) A I believe as an undergraduate I might have taken - well  
 (18) no I guess I didn't no  
 (19) Q And then in 1989 you came up here to work on the  
 Chugach's  
 (20) oil spill response team?  
 (21) A That's correct  
 (22) Q At the time that was April of 1989?  
 (23) A That's correct -  
 (24) Q Incidentally your brother helped you get that job didn't  
 (25) he?

Vol 23 3574

- (1) A I got a call from my brother who is the cultural resource  
 (2) manager at Chugach Alaska Corporation He had been  
 involved in  
 (3) cultural resources throughout the 80s And in 1989 I did get  
 (4) a call from him because he had a lot of concern for the sites  
 (5) and he knew that as an archaeologist I might be able to help  
 (6) and address some of the concerns that the people of the region  
 (7) basically have  
 (8) And within a few days I came up because you know I  
 (9) became aware of the problems that there were  
 (10) Q So your brother was instrumental in getting you hired by  
 (11) Chugach isn't that right?  
 (12) A My brother again who is the cultural resource manager is  
 (13) the person that called and told me about the situation yes I  
 (14) did come up as a result of that  
 (15) Q And he helped you get hired?  
 (16) A Inasmuch as he's the person that called yes  
 (17) Q Did he hire you?  
 (18) A No he did not  
 (19) Q Prior to 1989 the only time you had lived in Alaska was  
 (20) over the course of a couple summers between 1984 and 1988?  
 (21) A Yes that's probably correct  
 (22) Q In April of 1989 Exxon was in the market looking for a  
 (23) number of archaeologists to staff its positions for its  
 (24) Cultural Resource Program isn't that right?  
 (25) A Yes

Vol 23 3575

- (1) Q Did you interview for any of those positions?  
 (2) A No I did not  
 (3) Q It's a true statement that you were not qualified to be  
 (4) hired by Exxon's Cultural Resource Program?  
 (5) A I believe that would be a correct statement at the time  
 (6) Q That's because they were operating under - Exxon was  
 (7) operating under permits with the Park Service that required all  
 (8) archaeologists doing permit work to meet the Secretary of  
 (9) Interior's requirements?  
 (10) A That was a decision that Exxon made yes  
 (11) Q And you did not meet the Secretary of Interior's  
 (12) requirements for being hired by the Exxon Cultural Resource  
 (13) Program?  
 (14) A I did not have field experience in Prince William Sound  
 (15) no  
 (16) Q You've never qualified as an expert in any court state or  
 (17) federal?  
 (18) A No this is the first time I've been in court  
 (19) Q Welcome  
 (20) A Well I actually was in court one other time for a brief  
 (21) moment but nothing like this  
 (22) Q And prior to this case you've never conducted an  
 (23) archaeological damage assessment?  
 (24) A No this is the first damage assessment  
 (25) Q You don't consider yourself to be an expert on Carbon

Vol 23 3576

- (1) dating or the effects of oil on carbon dating?
- (2) A I consider myself able to give a general opinion I don't consider myself a carbon 14 specialist
- (3) Q You've never had training in carbon 14 dating techniques?
- (4) A Just general background that one receives in undergraduate work
- (5) Q You've never had any courses in carbon 14 dating techniques
- (6) A Again it's from my reading
- (7) Q You don't profess to be an expert on physical effects of oil on archaeology resources is that true?
- (8) A In terms of the physical effects I guess I would in the sense that some of it is very obvious in terms of artifacts or sites being oiled So in that respect I think I'm qualified to say something about it
- (9) Q But you don't have a chemical background or science background?
- (10) A No
- (11) Q You don't have any background that would permit you to speak knowledgeably about the physical effects chemical and otherwise of oil on artifacts?
- (12) A In terms of erosion natural properties and so forth I have not studied that specifically However as an archaeologist you are concerned for those type of effects whether it's in Greece and the effects of pollution on

Vol 23 3577

- (1) architectural remains or situations like this and oil impact on sites
- (2) Q It is true Dr Johnson that your first real experience with Native American archaeology was after the 1989 oil spill?
- (3) A No that's not correct
- (4) Q It is true that your first employment as an archaeologist in any connection relating to Native American archaeology was after the oil spill?
- (5) A In terms of employment that is correct
- (6) Q And basically as we used to say in the Army your knowledge of Native American archaeology was acquired through OJT on the job training?
- (7) A No that's not correct My knowledge of Native American archaeology has a lot to do with my cultural background and the fact that my brother is the cultural resource manager and I'm an archaeologist and so over the years we have had talks about the importance of cultural sites I have done a lot of the reading even prior to the oil spill Back in the early 80s I had already read a number of publications that were available for the Prince William Sound area I just hadn't come up here and worked or looked that direction for actual employment I had jobs other where you know elsewhere and so I do have more of a background than just coming up in 1989 and going to work
- (8) Q But prior to coming up here in 1989 and going to work you

Vol 23 3578

- (1) really had no formal training in Native American archaeology isn't that right?
- (2) A I had training in archaeology
- (3) Q Native American archaeology Dr Johnson?
- (4) A I did not have training in the archaeology in Prince William Sound
- (5) Q And what you learned of the archaeology in Prince William Sound after the spill you learned principally through on-the-job training as a member of the Chugach oil spill response team?
- (6) A That was one area that helped
- (7) Q There were four archaeologists who were part of that team?
- (8) A Yes there were
- (9) Q You were the most highly credentialed?
- (10) A I had a doctorate
- (11) Q The first report that you issued next with damaged archaeological resources in the region was 1992 isn't that right?
- (12) A I did that's correct
- (13) Q And you jointly authored that with Dr Lobdell who we will hopefully be seeing later today?
- (14) A Yes
- (15) Q The Chenega Bay work that you talked about the airport work was done after that?
- (16) A Yes that was 1993

Vol 23 3579

- (1) Q You also mentioned you had some experience doing repatriations is that correct?
- (2) A That's correct
- (3) Q One such repatriation that you worked on was it Beluga?
- (4) A That is correct
- (5) Q And that was Forest Service property?
- (6) A That's a Chugach heritage site
- (7) Q That caused you to be the subject of professional criticism did it not?
- (8) A No I don't believe that one should characterize it that way
- (9) Q Wasn't there an investigation opened by the Forest Service on your potential violations of archaeological laws in connection with that?
- (10) A No there was no investigation
- (11) MR DIAMOND I have nothing further
- (12) May I approach the bench?
- (13) (Bench conference off the record)
- (14) THE COURT This is going to be a normal-sized break (Jury out at 9:35 a.m.)
- (15) THE COURT Yes counsel?
- (16) MR DIAMOND Your Honor we would oppose the qualifications of Dr Johnson as an expert on subjects of Prince William Sound archaeology such that she could render an opinion on damage to Native American Prince William Sound

Vol 23 3580

(1) archaeological sites Just because one goes to medical school  
 (2) doesn't make one an eye surgeon Because one gets a degree  
 in  
 (3) classical archaeology doesn't mean one can render opinions  
 (4) about different archaeological sites and resources that one  
 (5) encounters in ancient Greece and Rome There is a far cry  
 (6) between a - this is one of the most developed civilizations of  
 (7) antiquity of the hunter gatherer societies of Prince William  
 (8) Sound that this witness will be talking about By her own  
 (9) admissions she was not qualified in 1989 to work as an  
 (10) archaeologist professionally in connection with the oil spill  
 (11) response She's had virtually no subsequent formal training  
 (12) and the only significant professional experience postdates her  
 (13) damage assessment concerning these artifacts We submit  
 that  
 (14) Although Dr Johnson is not unquestionably qualified to render  
 (15) many opinions principally those deals with classical Greece  
 (16) and Rome she is not qualified to render an opinion as to these  
 (17) archaeological resources and the harm that may have been  
 done  
 (18) to these archaeological resources by virtue of the oil  
 (19) spill  
 (20) THE COURT Thank you  
 (21) MR FORTIER Your Honor Dr Johnson has testified  
 (22) that not only has she received a degree in archaeology from  
 (23) Brown University which is of course one of the Ivy League  
 (24) schools but Dr Brown (sic) has -  
 (25) THE COURT I should be impressed  
 (26) MR FORTIER Well just credentials there I always

Vol 23 3581

(1) went to small little schools the ones that let me in so I was  
 (2) impressed the minute I met Dr Johnson Not also that but  
 (3) she's worked in the field of archaeology in Prince William  
 (4) Sound for five years She has taken courses in archaeology  
 (5) I tendered her as an expert in the field of archaeology I  
 (6) don't believe that Mr Diamond has once indicated through  
 (7) evidence of any kind that there is a special field of Native  
 (8) archaeology much less Prince William Sound archaeology  
 (9) The question of whether or not Dr Johnson is qualified as  
 (10) an expert should be answered under Evidence Rule 702 does  
 he  
 (11) have more information than a regular person and could she  
 (12) shed  
 (13) light on important matters in this case can she provide expert  
 (14) opinion Dr Johnson can  
 (15) If you would like I could lay further foundation  
 (16) THE COURT That would be up to you but she's clearly  
 (17) involved in an expert opinion on archaeological matters so the  
 (18) objection is overruled  
 (19) Counsel I'd like to hear a little something about this  
 (20) investigation I really don't want testimony by lawyers that  
 (21) question was if in fact you have some occasion - if your  
 (22) intention is to go into some supposed violation of laws or  
 (23) regulations then you have to let me know beforehand Do not  
 (24) ask a question like that again without letting me know it's  
 (25) coming so I can screen it All right?  
 (26) MR DIAMOND I did not anticipate asking that

Vol 23 3582

(1) question until it was opened up on the direct  
 (2) MR FORTIER Your Honor if I can be heard on that  
 (3) subject  
 (4) I think that there is an order in this case The order was  
 (5) obtained by the defendants in the case dealing with casting  
 (6) aspersions on people without adequate foundation I'd make a  
 (7) motion at this time that the jury be instructed with regard to  
 (8) the question to disregard the question It was clearly out -  
 (9) I would submit to Your Honor that it violates the order  
 (10) The order is actually - the order is directed at  
 (11) plaintiffs and tells plaintiffs they can't ask questions  
 (12) concerning the possibility of violations of law In this case  
 (13) Your Honor I believe that that - that the incident to which  
 (14) Mr Diamond refers was actually sparked by a letter from  
 (15) defense counsel or from the defense with regard to some  
 (16) activities There is nothing in the record and there is  
 (17) absolutely no support for the assertion  
 (18) MR DIAMOND That last statement is simply not true  
 (19) I would be - I do not intend to get into this further on the  
 (20) cross examination of Dr Johnson but if counsel wants to make  
 (21) an issue of it - in fact he can actually - the repatriation  
 (22) that the witnesses testified to in an attempt to qualify  
 (23) herself as far as serving as an archaeologist and objected in  
 (24) writing that this was done without a permit and done in such a  
 (25) fashion as to jeopardize not protect archaeological

Vol 23 3583

(1) resources  
 (2) Again I would not have raised it but again for the fact  
 (3) that it was raised expressly in part of her statements why she  
 (4) was qualified But I have taken the Court's admonition to  
 (5) heart and will not try to do that without discussing it with you  
 (6) first  
 (7) THE COURT All right counsel You really want an  
 (8) instruction? It just - all it does is emphasize the question  
 (9) again Do you want me to give an instruction to disregard that  
 (10) question? I'll give it if you want me to  
 (11) MR FORTIER Your Honor I'd request the instruction  
 (12) be given  
 (13) THE COURT I'll do it when they come in If you  
 (14) change your mind counsel let me know before I start  
 (15) speaking  
 (16) THE CLERK Please rise This court stands in  
 (17) recess  
 (18) (Recess at 9:40 a.m. to 10:00 a.m.)  
 (19) (Jury in at 10:00 a.m.)  
 (20) THE CLERK Please rise This court now resumes in  
 (21) session Please be seated  
 (22) THE COURT Ladies and gentlemen you might recall  
 (23) that I sustained an objection just before you took a break  
 (24) I'd like you to understand something and I said this before  
 (25) but I want to emphasize it  
 (26) When a question is asked that has information in it and

Vol 23 3584

(1) the objection is sustained you re to disregard the question  
 (2) because the question itself if you took it into consideration  
 (3) might be something you wouldn't base a factual decision on  
 (4) The question is not evidence. Nothing the lawyers say in a  
 (5) case is evidence  
 (6) You re to disregard the question that was asked and I  
 (7) sustained the objection to  
 (8) Go ahead  
 (9) MR FORTIER Your Honor I renew my motion for  
 (10) Dr Johnson to be accepted as an expert in the area of  
 (11) archaeology  
 (12) THE COURT She's qualified to give expert opinion in  
 (13) that area and otherwise to give expert testimony in the area of  
 (14) archaeology  
 (15) DIRECT EXAMINATION OF LORA LEE JOHNSON (Resumed)  
 (16) BY MR FORTIER  
 (17) Q Dr Johnson can you explain to the jury what role oral  
 (18) history plays with regard to Prince William Sound archaeology?  
 (19) A Oral history has played a large role in the archaeology of  
 (20) Prince William Sound and the Kenai Peninsula as well I think  
 (21) it's probably best to kind of stay a step back in time back to  
 (22) the 1930s when the first archaeologist and anthropologists  
 (23) came  
 (24) to Prince William Sound And as I said a little earlier  
 (25) basically one of the steps that they took was to talk to Native  
 (26) inhabitants of the area and try to find out something about the

Vol 23 - 3586

(1) And I should point out in some cases the oral tradition may  
 (2) just give a general area for example - an island for  
 (3) example and that it was used heavily by a certain group of  
 (4) Natives and that he they basically used all the shoreline for  
 (5) different purposes There may be particular locations that are  
 (6) identified sometimes it's more general and in terms of  
 (7) archaeologists going out and verifying it sometimes it  
 (8) involves the archaeological survey work to identify locations  
 (9) that have been talked about but not physically located in terms  
 (10) of the oral tradition  
 (11) So I could give an example general example of like the  
 (12) south end of Chenega island there is oral tradition connected  
 (13) with a particular location that it was thought to be like  
 (14) settlement site a village site and there is a strong  
 (15) tradition for it  
 (16) Archaeologists over time the early investigations weren't  
 (17) able to locate it Later on further investigations identified  
 (18) subremains and even later additional investigations identified  
 (19) substantial prehistoric remains So it's like archaeologists a  
 (20) lot of time do look to the oral tradition for indicators where  
 (21) there may be past activities  
 (22) Q Dr Johnson you used several history terms history and  
 (23) prehistoric and Native American archaeology What is  
 (24) prehistoric what does that mean?  
 (25) A Well in Prince William Sound prehistoric is the time

Vol 23 3585

(1) location of sites the importance of sites different types of  
 (2) life style oral history Kaj Birket Smith who was an  
 (3) anthropologist collected a lot of stories from the Sound  
 (4) Fredrick D Lundberg collected a lot of information about site  
 (5) location and what he did with this then she took eight steps  
 (6) further and went out and investigated a lot of these locations  
 (7) to determine if there were actually physical remains at these  
 (8) different locations  
 (9) Oral tradition continues to play an important role in  
 (10) archaeology even beyond this Chugach Alaska Corporation  
 (11) has a  
 (12) lot of historical sites heritage sites and this is based on  
 (13) the oral tradition about these sites the importance of these  
 (14) different locations to the Natives of Sound It can be  
 (15) something as simple as a historic homestead or it could be  
 (16) something that has a much longer history a fish camp area that  
 (17) is known to have been used as far as people can remember  
 (18) And  
 (19) in fact archaeological investigations at these sites may show  
 (20) that it goes back even into prehistoric times  
 (21) What we're finding in terms of archaeology is this is often  
 (22) the case that location that have oral tradition connected  
 (23) with them often end up being sites where there is not only the  
 (24) historic but also prehistoric evidence you know past human  
 (25) activity there and it's generally considered sustained use by  
 (26) the Natives of the area or Chugach so there is a close oral  
 (27) tradition with the archaeological sites

Vol 23 3587

(1) before Russian contact So the middle of the 18th century  
 (2) Q Why is that Dr Johnson? Is that because there was no  
 (3) written language at the time?  
 (4) A Yeah Prior to Russian contact there was no written  
 (5) records of these former people  
 (6) Q So history refers to the time after western contact  
 (7) prehistory refers to the time before western contact?  
 (8) A That's correct I should also point out for even some of  
 (9) these historic times even the records are incomplete little  
 (10) hints of contact And even into the most recent historic times  
 (11) often you really do have to go to the archaeology to see what's  
 (12) going on that the written records are still incomplete  
 (13) So I think the best way to look at it is with historic  
 (14) times you have an additional - an additional lead you can  
 (15) turn to something else Whereas prehistoric times you have no  
 (16) other direction to turn but the archaeological remains  
 (17) Q When you talk about archaeological remains what do you  
 (18) mean Dr Johnson?  
 (19) A I mean physical remains that are located on the land  
 (20) Q Like an archaeological site?  
 (21) A Yes  
 (22) Q And that contains certain things?  
 (23) A Yes  
 (24) Q Can you tell the jury what it is that you as an  
 (25) archaeologist look for when you're examining an  
 (26) archaeological

Vol 23 3588

Vol 23 3590

(1) site?  
 (2) A Well again the first step - the easiest step is you  
 (3) first go to an area - if there is something reported for an  
 (4) area you would go to the location and take a look for obvious  
 (5) cultural remains and these could be something as simple as a  
 (6) culturally modified tree and basically listed as a tree that  
 (7) has a scar on it That's clearly not natural It's clear that  
 (8) it was something that's cultural the shape of the scar or  
 (9) something like this may indicate that So it could be  
 (10) something like a culturally modified tree It could be a  
 (11) particular artifact or any artifact laying on the beach It  
 (12) can be more substantial in terms of midden deposits shells  
 (13) charcoal eroding from the beaches It could be house pits It  
 (14) could be any number of things  
 (15) Q Let's talk about some of those terms What's an artifact?  
 (16) A An artifact is basically - well basically you have to  
 (17) define what you mean by artifact There are a lot of  
 (18) different definitions and the one that I choose to use is an  
 (19) object that is clearly - well clearly shows some sort of  
 (20) cultural activity So an artifact could be like a stone tool  
 (21) generally something that's portable so culturally modified  
 (22) trees you wouldn't define as an artifact that would be more a  
 (23) feature because you can't pick it up and move it around but  
 (24) you can pick up an artifact because they show human  
 (25) activities

(1) presence of past human remains?  
 (2) A Yes Basically again a lot of it has to do with  
 (3) definitions that as an archaeologist walking along the  
 (4) shoreline in an area that's reported to be a location of a  
 (5) certain activity you would look for these - you might call  
 (6) them cultural indicators or artifacts It could be stone tools  
 (7) such as have been described here It could be culturally  
 (8) modified trees It could be depressions It could be any  
 (9) number of different types of evidence  
 (10) In terms of defining the site then usually you define the  
 (11) site based on the presence of these and the likelihood of  
 (12) there being additional cultural remains generally under the  
 (13) ground  
 (14) Q Now Dr Johnson in your work in Prince William Sound over  
 (15) the past five years have you learned whether or not the state  
 (16) has certain laws regarding the confidentiality of sites?  
 (17) A Yes  
 (18) Q Can you tell the jury about that?  
 (19) A Again it basically is the same situation that I described  
 (20) earlier in terms of documents that are held by the State The  
 (21) documents that refer to sites or site locations it's not just  
 (22) site location it's all of the information about the site  
 (23) These are held by the state and they are available for  
 (24) qualified archaeologists or qualified individuals that have an  
 (25) actual need for access to them

Vol 23 3589

Vol 23 3591

(1) There is a wide range of what you mean by artifact and I  
 (2) think it's important to keep that in mind and clear of  
 (3) definitions  
 (4) Q Well let's just talk about a few artifacts that we may see  
 (5) through the course of the day Pictures - are hammer stones  
 (6) artifacts?  
 (7) A Yes  
 (8) Q What are hammer stones?  
 (9) A They are generally cobbles that have evidence of battering  
 (10) on either one of the ends or the side and they are different  
 (11) interpretations in terms of what they were used for But  
 (12) generally you only identify these rounded cobbles that have  
 (13) really clear indication of battering  
 (14) A lot of times in the course of surveying work you might  
 (15) come across some that might be but you generally don't  
 (16) identify them unless you can see it's not from natural causes  
 (17) Q Are arrowheads artifacts?  
 (18) A Yes  
 (19) Q Spear points are they artifacts?  
 (20) A Yes  
 (21) Q Now are those also clues that there is an archaeological  
 (22) site?  
 (23) A Yes  
 (24) Q Is that the sort of thing that archaeologists would look  
 (25) for in addition to the oral history to see this physical

(1) Q Now I'd like to bring you up to 1989 when you came up to  
 (2) Alaska and you began working in Prince William Sound I think  
 (3) you indicated you went to work for Chugach Alaska  
 Corporation?  
 (4) A That's correct  
 (5) Q In the course of your work with Chugach Alaska Corporation  
 (6) did you learn about the Cultural Resource Program as it existed  
 (7) before it began?  
 (8) A I was familiar with it prior to the oil spill During the  
 (9) 80s especially during the 1980 Chugach Alaska Corporation  
 (10) had been involved in a lot of survey work identifying locations  
 (11) of cultural sites or heritage sites in the area This had been  
 (12) an ongoing process - well for a decade at least  
 (13) In addition to that there was a focus on oral tradition  
 (14) and trying to record this and also make it more available for  
 (15) the Chugach Natives themselves It both involved recording  
 new  
 (16) oral histories finding out information connected with a lot of  
 (17) the sites that were being surveyed but it also involved  
 (18) bringing together information that had been recorded  
 elsewhere  
 (19) and making some of the stories a little more readily available  
 (20) just to everyone  
 (21) Q Did those stories lead the Chugach cultural history  
 (22) program or Cultural Resource Program if you know  
 (23) Dr Johnson to the location of sites?  
 (24) A In general they did yes That was a very important part  
 (25) of the survey work was the cultural resource management and

Vol 23 3592

(1) other land managers and other individuals worked in terms of  
 (2) talking with the Chugach Natives throughout the region and  
 (3) other people as well about the sites and the importance of the  
 (4) sites  
 (5) Q And do you know whether or not the Chugach Cultural  
 (6) Resource Program also involved investigation and protection of  
 (7) sites before the oil spill?  
 (8) A Yes it did There has always been a concern for the sites  
 (9) in terms of protection of them basically there was - well  
 (10) there was always a concern The question is always how do  
 you  
 (11) do it How do you preserve them the best way possible And  
 (12) one of the means at least in the past was basically don't  
 (13) talk about it and that's why we always make such a big issue  
 (14) of the confidentiality That was one of the key ways that we  
 (15) had addressed it well even over time  
 (16) If you don't talk about site locations and you don't give a  
 (17) lot of details about the different sites out there you might  
 (18) say there is less interest in them or less opportunity for  
 (19) somebody else to come in and do some sort of harm to a site  
 (20) Q So with the Chugach cultural resource program then  
 (21) Dr Johnson was confidentiality a method of protection of  
 (22) sites before the oil spill?  
 (23) A Yes it was just a method  
 (24) Q Now when you came up to Alaska in 1989 and began  
 working  
 (25) with Chugach concerning the oil spill did you also have an

Vol 23 3593

(1) opportunity to meet and discuss cultural resource programs  
 with  
 (2) the Village corporations?  
 (3) A Yes I've spoken with various individuals about just  
 (4) general approaches to protection of sites  
 (5) Q Can you tell the jury what your understanding is of the  
 (6) Chenega Corporation's Cultural Resource Program about the  
 oil  
 (7) spill?  
 (8) MR DIAMOND Object on the grounds it calls for  
 (9) hearsay and did not appear to be the basis for any opinion  
 (10) that's been offered or going to be offered  
 (11) THE COURT Counsel?  
 (12) MR FORTIER Your Honor she's an expert The  
 (13) opinion that she - I could make an offer of proof if I can  
 (14) approach the bench  
 (15) THE COURT No the objection is overruled If I see  
 (16) a problem I'll stop on it  
 (17) BY MR FORTIER  
 (18) Q Go ahead Dr Johnson  
 (19) A It might be better to talk about it in a general sense in  
 (20) terms of approaches and the idea of confidentiality What it  
 (21) is you have to kind of put it in perspective over time It's  
 (22) like there has always been a concern for these heritage sites  
 (23) on the part of the Natives because they are their heritage  
 (24) sites our my heritage site our heritage sites and there is  
 (25) this connection that it's a place that you know about

Vol 23 3594

(1) For the most part you pretty much leave it as it is you  
 (2) don't do a lot with it It's someplace that you may visit on  
 (3) occasion It may be a place that you just know about but you  
 (4) pretty much leave it alone  
 (5) In terms of Chenega for example there was an avoidance of  
 (6) any kind of impact to these sites it was like really leave  
 (7) them alone You know don't pick up artifacts don't do this  
 (8) type of thing Chugach Alaska Corporation over the course of  
 (9) time has changed this perspective slightly in that for  
 (10) example artifacts that might be readily visible if you feel  
 (11) that they were in danger there was the feeling that they  
 (12) should be collected  
 (13) So it's one of these that's sort of evolved over time  
 (14) That in general the idea is you don't want to collect things  
 (15) you don't want to change things you want to basically keep it  
 (16) intact as much as possible  
 (17) On the other time - on the other hand through the course  
 (18) of time that has become an awareness or increasing awareness  
 (19) that people are picking these things up and if you leave it  
 (20) out there someone may pick it up So you have to look at it  
 (21) over a broad period of time because back in the 30s and even  
 (22) before sometimes individuals would collect them and that was  
 (23) the form of preservation  
 (24) It's like more recently there is a lot more archaeological  
 (25) awareness From the scientific perspective you don't want to

Vol 23 3595

(1) collect them you want to leave them in place because they  
 (2) contain scientific information about the particular location  
 (3) So it ends up being kind of complex in that you want to have  
 (4) these sites basically stay intact as much as possible but you  
 (5) also want to protect them and there is an increasing awareness  
 (6) in terms of the scientific information  
 (7) Q So Dr Johnson just kind of using Chenega as an example  
 (8) before the oil spill Chenega had a policy of not carrying away  
 (9) things is that your understanding?  
 (10) A Yes  
 (11) Q And that was part of the oral tradition of the Chenega  
 (12) people?  
 (13) A That's the tradition I'm aware of yes  
 (14) Q Now with regard to these places - and again we'll just  
 (15) talk about Chenega for a moment - with regard to the places  
 (16) that the Chenega Corporation knows about - and let's focus on  
 (17) it's special places on its lands - can those places have names  
 (18) in the Native language?  
 (19) A Most of them did yes  
 (20) Q Now do you know whether or not Chenega Corporation  
 before  
 (21) the oil spill created a map of the sites on its lands?  
 (22) A I understand that they did that the oral tradition was  
 (23) pretty well known in terms of site locations and I understand  
 (24) that there was a map that was made prior to the oil spill yes  
 (25) Q And that oral tradition was pretty well known by whom

Vol 23 3596

Vol 23 3598

- (1) Dr Johnson?
- (2) A Well this particular oral tradition was known by Chenega
- (3) Q By the Chenega people?
- (4) A Uh huh
- (5) Q Let's turn our attention down to Port Graham Corporation
- (6) In your involvement in this case from the time - let's just
- (7) take it from the time that you were hired by Chugach in 1989 to
- (8) this day Have you become familiar with the Cultural Resource
- (9) Program that the Port Graham Corporation had before the oil
- (10) spill?
- (11) A Well again this is why I talk about it in a general sense
- (12) is that again with my brother as the cultural resource
- (13) manager over the years he's had a lot of opportunity to talk
- (14) with elders throughout the region and just members of the
- (15) different villages and to get a real feel for what was
- (16) important to you know the different villages in terms of
- (17) protecting sites and I've heard a lot of this over the years
- (18) from him I have spoken at times with other members from the
- (19) villages in terms of the protection or their concern for sites
- (20) and basically it's in accordance where what I've heard all
- (21) along
- (22) Q With regard to Port Graham Corporation did you talk with
- (23) anybody connected with Port Graham?
- (24) A I have spoken with Pat Norman
- (25) Q And what is your understanding of the Port Graham

- (1) the impact of the oil and the oil spill but also what should
- (2) be done with the site And basically the direction that both I
- (3) recommended but also that they felt as well was that there
- (4) should be little done during the oil spill the actual oil
- (5) spill activities In other words keep it to a minimum in
- (6) terms of data recovery and so forth until this emergency
- (7) situation was over with and then look at what the situation is
- (8) and try to figure out what it is that you really want What it
- (9) is that might be of value to scientists and what would be an
- (10) appropriate type of response
- (11) Q Now Dr Johnson in your field of archaeology is
- (12) management of cultural resources important?
- (13) A Yes
- (14) Q Why?
- (15) A Well basically it's becoming more important over time
- (16) That sort of the earlier view that basically you knew where the
- (17) sites were and sort of left them alone or you might go visit
- (18) them or something like that but you pretty much left them
- (19) alone It's evolved because of the increasing archaeology and
- (20) the increase just in terms of knowledge about the sites
- (21) people's access to the sites and so that's when you really get
- (22) into the cultural management aspect that all of a sudden you
- (23) have to do something with these because if you don't there is
- (24) like an increasing threat of impacts to them
- (25) Q And Dr Johnson can you give the jury a broad overview of

Vol 23 3597

Vol 23 3599

- (1) Corporation - did Pat tell you about the Port Graham
- (2) Corporation Cultural Resource Program?
- (3) A Well again it's just the sort of general approach to
- (4) sites that basically there are sites that are important you
- (5) know most of them are - virtually all of them are coastal
- (6) sites A lot of them have oral tradition connected with family
- (7) histories or just general information about sites on their
- (8) lands And basically it was like you know they were there and
- (9) you basically left them alone You didn't do a lot with them
- (10) Q Did you keep them confidential on Port Graham Corporation
- (11) land?
- (12) A You definitely didn't make them widely public I mean
- (13) there was talk I'm sure among the village about the sites
- (14) Q Now let's talk a moment about English Bay Corporation
- (15) You're generally familiar with English Bay Corporation Cultural
- (16) Resource Program as well?
- (17) A Again I'm familiar with it again just through
- (18) conversations primarily with my brother John Johnson
- (19) Q And later in the history of the oil spill did you have
- (20) some dealings with English Bay Corporation regarding one of
- (21) their sites?
- (22) A Yes I did
- (23) Q Okay
- (24) A And basically there was a lot of discussion about a
- (25) particular site on the Kenai Peninsula and concern over both

- (1) the history prehistory of the Chugach people?
- (2) A Well just in general that in Prince William Sound the
- (3) earliest dates go back about 6 000 years ago and from there up
- (4) to historic times There haven't been a lot of excavations in
- (5) Prince William Sound Some of the key ones were done back in
- (6) the 1930s There was another one done I believe it was in
- (7) 1989 thereabout And then there have been smaller test pits
- (8) and things like this put in by government agencies in terms of
- (9) some investigation that Chugach sites
- (10) So there is an increasing archaeological investigation in
- (11) the area primarily during the 1980s and near 1990s
- (12) Q Why was that?
- (13) A Part of it is just in the process of identifying Chugach
- (14) sites the Chugach Alaska Corporation sites that basically
- (15) there was the need to document the locations and in some
- (16) cases you might have a few physical remains again a few
- (17) culturally modified trees or indicators
- (18) The next step is often to do some testing to see if there
- (19) is subsurface deposits In some cases there might be shell
- (20) midden In other cases there may be nothing So you did this
- (21) type of testing to try to see what there might be at a
- (22) particular location
- (23) Q So Doctor you don't know is it correct then that
- (24) before the oil spill the archaeological investigations of
- (25) Prince William Sound were those primarily sponsored by

Vol 23 3600

(1) Chugach?  
 (2) A By Chugach and also some agencies in connection with the  
 (3) historical sites yes  
 (4) Well let me backtrack In terms of archaeological  
 (5) investigations back in the 30s the archaeologists and  
 (6) anthropologists that worked in the area they did quite a bit  
 (7) in terms of documenting the location of sites and they did do  
 (8) some excavation From about - well during the 80s there was  
 (9) an increased amount of survey work and in conjunction with  
 (10) this there was testing that was done primarily by agencies  
 (11) Chugach has also done some survey work themselves which  
 (12) is  
 (13) the step usually before the agencies in other words trying to  
 (14) locate the sites For the most part even Chugach has avoided  
 (15) doing testing as much as possible  
 (16) Q Now these studies were written in the 1930s Dr Johnson  
 (17) Are those in general circulation today?  
 (18) A The publications that I'm talking about are again  
 (19) Birket Smith and DeLaguna DeLaguna's work focused on the  
 (20) prehistoric archaeological sites As far as I know they are  
 (21) out of print  
 (22) Q Dr Johnson I'd like to turn now to when you came to  
 (23) Prince William Sound in 1989 You indicated that you received  
 (24) a call - excuse me - from your brother John That you  
 (25) understood that there was an oil spill and that you were asked  
 (26) to come to Alaska

Vol 23 3602

(1) know that for example a Forest Service archaeologist was out  
 (2) in the Sound I think around the 7th or so of April and to  
 (3) the extent that this is connected with the effort the  
 (4) archaeological effort I think you have - you know you have a  
 (5) movement toward a Cultural Resource Program here at the  
 (6) beginning of April  
 (7) The exact date that Exxon - the Exxon Cultural Resource  
 (8) Program was actually in operation I think probably dates  
 (9) around the middle of April I believe that their director had  
 (10) been out to the - one of the sites around the 13th of April  
 (11) and so it's moving this direction but I don't know - at this  
 (12) time I don't think there was anything formulated as a Cultural  
 (13) Resource Program and I'm not sure in terms of the actual dates  
 (14) of who got hired when and when it was called this  
 (15) Q Now Dr Johnson when you arrived in Valdez in - on April  
 (16) 13th or 14th of 1989 did you have any idea one way or the  
 (17) other about whether or not the oil spill would impact cultural  
 (18) resources?  
 (19) A Well upon arriving there you started to get a better idea  
 (20) of what was involved Prior to my coming there I guess it  
 (21) didn't really sink in in terms of what it meant in terms of the  
 (22) oil spill and the clean up activities It was more upon  
 (23) getting there when you realized that there were going to be  
 (24) hundreds and hundreds of people coming in and that you did  
 (25) have  
 (26) oil on the shorelines and that you were going to have clean up

Vol 23 3601

(1) A That's correct  
 (2) Q What did you do when you arrived in Prince William Sound -  
 (3) excuse me before you do that tell us when you arrived  
 (4) A I believe I got the call at the beginning of April and as  
 (5) I best remember it was on or around April 14th that I came  
 (6) up And basically what I did is I came to Anchorage and  
 (7) before I knew it I was on a flight down to Valdez and  
 (8) basically arrived there There was I believe one other  
 (9) person that was working for Chugach Alaska Corporation  
 (10) already  
 (11) in Valdez at the time so basically I met up with this  
 (12) individual and we went into some of the meetings that were  
 (13) going on in Valdez  
 (14) Q That was around April 12th?  
 (15) A No around the 14th  
 (16) Q At that time do you know whether or not clean up activities  
 (17) on the part of Exxon had started up yet?  
 (18) A Oh they had started going yes  
 (19) Q And do you know whether or not Exxon had a Cultural  
 (20) Resource Program in place on April 14th?  
 (21) A Right As I arrived it was in the process of being  
 (22) formulated That there had been discussion even with Chugach  
 (23) Alaska Corporation - well with the agencies and with Exxon in  
 (24) terms of formulating some sort of program It's hard to  
 (25) pinpoint when the actual date is Basically everybody has a  
 (26) different opinion as to when this program actually started I

Vol 23 3603

(1) activities out there and it became more apparent that it was a  
 (2) critical situation  
 (3) Q What do you mean by that it was a critical situation?  
 (4) How would the oil impact cultural resources?  
 (5) A Well it's basically what do you do There is a limited  
 (6) number of archaeologists when it comes down to it And as far  
 (7) as I know there were 20 or 25 archaeologists that worked for  
 (8) Exxon and there were some archaeologists that worked for  
 (9) State  
 (10) agencies and we had some archaeologists And just given the  
 (11) magnitude of the oil spill it's like what do you do What  
 (12) approach do you - what do you do  
 (13) Q So you were concerned about oil on the artifacts?  
 (14) A Yes  
 (15) Q Why?  
 (16) A Well just concerned with - well concerned with oil - I  
 (17) think the initial concern was more with the clean-up activities  
 (18) because the oil was already there It was like that was  
 (19) something you couldn't change It was more concern for the  
 (20) clean up activities and it's like now what's going to happen  
 (21) when you have all these people moving along the shoreline  
 (22) The oil itself as it became - I mean as time went on you  
 (23) realized that the oil had the impact that the sites were oiled  
 (24) artifacts on the site or in the site were oiled this type of  
 (25) thing But I think in Valdez at that time there is nothing you  
 (26) could do about it because it had happened What you were

Vol 23 3604

(1) really focusing on was what else is going to happen to the  
 (2) sites  
 (3) Q How would people – what was your concern about the  
 number  
 (4) of people on archaeological sites? Can you explain that to the  
 (5) jury why were you concerned?  
 (6) A Well it's one of those situations where it's like most  
 (7) people when they are – if they are out at a site it's  
 (8) like – I mean it's basically an issue like of human nature  
 (9) it's like some people when they walk around on an  
 (10) archaeological site won't cause any damage. They are very  
 (11) careful won't walk on some of the cultural beaches. Other  
 (12) people may be less sensitive to the site or the fragile  
 (13) quality of the site and walk around and cause some sort of  
 (14) surface damage.  
 (15) You also have the other extreme where like sometimes there  
 (16) is human temptation to pick things up because they are cool  
 (17) artifacts or it's a cool object or something that you've never  
 (18) seen before and take it home.  
 (19) You have another step where there is like people when they  
 (20) see this then they learn how to do it and basically pick up  
 (21) artifacts different places. And then you go the full extreme  
 (22) where you have actual pocketers. It's almost like a  
 profession.  
 (23) So there is a concern for the wide range of types of  
 (24) impacts and it's like how do you address this. It's like

Vol 23 3606

(1) Q Now you said we Dr Johnson who are you referring to?  
 (2) A Well one of the meetings that I was involved in was called  
 (3) the ISCC in Valdez and that refers to the Interagency  
 (4) Shoreline Clean up Committee. And what this was it was  
 (5) composed of agency personnel from say like Fish & Game  
 Fish  
 (6) & Wildlife ADEC any number of different agencies both state  
 (7) and federal. And then we were on there as – well private  
 (8) landholders. We had a position at the table you might say  
 (9) There were also some other individuals on the table  
 (10) representing I think fishermen's concerns and other things.  
 (11) So this particular group of people met on a daily basis in the  
 (12) morning to review like what it was that was happening and what  
 (13) different concerns were.  
 (14) Q And the we that you're referring to the landowners we  
 (15) is that Chugach Alaska oil spill response team?  
 (16) A Yes. And it might be myself or it might be one of the  
 (17) biologists. It varied over time.  
 (18) Q And this ISCC that was the Interagency Shoreline Clean up  
 (19) Committee?  
 (20) A That's correct.  
 (21) Q That was composed of agencies is that correct?  
 (22) A That's correct.  
 (23) Q And what was their job?  
 (24) A Again it was more or less to I suppose offer advice or  
 (25) voice some concerns that for example there might be work

Vol 23 3605

(1) ideally there wouldn't be all those people out there. It's  
 (2) like a deal you wouldn't have to worry about it you would just  
 (3) have to worry about general you know smaller situations that  
 (4) type of things. But with the numbers I think that was one of  
 (5) the main concerns.  
 (6) Q Dr Johnson did you also during this first few weeks that  
 (7) you were in Prince William Sound in Valdez have an  
 opportunity  
 (8) to go out to the areas that were being treated in Prince  
 (9) William Sound?  
 (10) A I went out to quite a few areas in 1989. Basically when I  
 (11) arrived in April I pretty much stayed through all of 1989 and  
 (12) was in Valdez. We had this oil spill response team and we had  
 (13) two archaeologists on the team and then there were two  
 (14) biologists and another person liaison.  
 (15) We also had two other offices one was in Homer and one was  
 (16) in Seward and so my focus really was on Prince William Sound  
 (17) So we did try to keep track of what was going on in other  
 (18) areas but in terms of familiarity with the oil spill itself I  
 (19) participated in various meetings that were going on and so a  
 (20) lot of times these meetings the participants would go out on  
 (21) trips to take a look at clean up techniques at different  
 (22) locations or just get a feel for it feel for the oiling and  
 the clean up.  
 (23) Q And you also did that?  
 (24) A Yes

Vol 23 3607

(1) orders that came through. And that was one of the focus that  
 (2) work orders would come from Exxon and Exxon participated as  
 (3) well in these meetings and basically all of the agencies and  
 (4) the landowners and some of the other parties on it would  
 (5) receive these work orders.  
 (6) And what the point was was that you were supposed to like  
 (7) you know basically look at how this might impact your  
 (8) particular group or your particular agencies. So for example  
 (9) like with Fish & Game if they knew the cleanup was going to be  
 (10) along a certain shoreline and there was an anadromous stream  
 (11) there might be certain restraints or to inform them that they  
 (12) need permits. It was sort of an inspectional type thing to  
 (13) talk things out.  
 (14) For the Native corporations what it was issues like upland  
 (15) access that when it came time to clean shorelines along Native  
 (16) lands that some of the concerns were with upland access so we  
 (17) would voice those kind of concerns.  
 (18) It was also a place where you learned things. For example  
 (19) different types of treatment that were proposed whether it was  
 (20) a certain type of manual cleanup or using machinery or  
 (21) bioremediation or any number of techniques.  
 (22) Q So these were Exxon work orders that you were reviewing?  
 (23) A Yes they were.  
 (24) Q Based upon your experience on the ISCC do you have any  
 (25) opinion whether or not Exxon was in charge of the cleanup?

Vol 23 3608

(1) A Yes I believe they were  
 (2) Q Now Dr Johnson can you tell us a bit about these work  
 (3) orders that you were reviewing from a let's say from a Native  
 (4) corporation standpoint as an archaeologist? What were you  
 (5) looking for and what were you seeing?  
 (6) A Well basically what these work orders included was like a  
 (7) cover sheet. Then there would be three additional sheets one  
 (8) that was prepared by a biologist one by a geomorphologist  
 and  
 (9) one by an archaeologist. And the individuals that prepared  
 (10) these were on this team that was called the SCAT team Exxon  
 (11) SCAT team. And they were generated and each sheet  
 contained  
 (12) information  
 (13) As an archaeologist I tend to flip back to the third sheet  
 (14) myself but I would look at all of them because of the general  
 (15) concerns for the corporations so what this third sheet would  
 (16) include is information about the reconnaissance situation that  
 (17) the Exxon Cultural Resource Program were conducting in the  
 (18) Sound  
 (19) Maybe take a step back. Sort of the system that was set  
 (20) up at least for archaeology was that you had a SCAT survey  
 (21) that this team of archaeologists biologists and  
 (22) geomorphologists would go out ideally before the clean up  
 (23) activities began and they would briefly or as quickly as  
 (24) possible do a reconnaissance survey of the shoreline and  
 (25) record whether there was oil and what kind of impacts that

Vol 23 3609

(1) might be to the biota or the cultural resources and this type  
 (2) of thing. Then it would come back and the agencies would  
 (3) review it and give recommendations or state their concerns  
 (4) So as an archaeologist I would look at these and I would  
 (5) first basically look at the quality of the survey what was  
 (6) known about cultural resources or archaeological sites in the  
 (7) area and try to make an evaluation myself as to what I thought  
 (8) might be a good idea or bad idea or usually it was what was  
 (9) the best of the worst  
 (10) So for example a segment may come back where we knew  
 (11) there was an archaeological site and we might make a  
 (12) recommendation that they not clean it because we didn't want  
 (13) people around the site. In the meeting what would happen is  
 (14) that other agencies would present their position. They might  
 (15) want it cleaned for some other reason so the meeting was a  
 (16) place where everybody could put their opinion in and basically  
 (17) you know the idea was to get a consensus but it didn't always  
 (18) work that way  
 (19) Basically what you would do sometimes is state what your  
 (20) concerns were. But in 1989 especially the idea there was you  
 (21) wanted to keep the clean up activities moving. Like you didn't  
 (22) want to be the one that held it up so you would state your  
 (23) concern and try to do the best you could but it's like you  
 (24) wanted the clean up activities to keep moving  
 (25) Q So the clean up activities was that taking precedence over

Vol 23 3610

(1) archaeology?  
 (2) A It took precedence over archaeology at times  
 (3) Q These work orders that you were reviewing Dr Johnson did  
 (4) those disclose to you at the time in 1989 whether or not  
 (5) there was cleanup before say the monitoring of an  
 (6) archaeological site or cleanup without monitoring  
 (7) archaeological sites?  
 (8) A Well you have to look at cleanup in the general sense  
 (9) even before the SCAT teams were in operation that you had  
 (10) certain clean up activities going on in terms of setting up  
 (11) booms and things like this different places. You also had  
 (12) like bird pick up crews or people going out and doing survey  
 (13) work. There were a lot of people out there even before these  
 (14) work orders started coming in. So you have this general  
 (15) activity. Then you also have specific clean up activity that  
 (16) followed certain work orders. And in some cases there were  
 (17) failings in that where there might be a monitor that was  
 (18) recommended to the site and in fact there was no monitor. So  
 (19) it depends  
 (20) Q Let's talk about this monitor recommended why would you  
 (21) recommend a monitor at a site?  
 (22) A Well as things evolved in 1989 there ended up being a  
 (23) couple different options in terms of sites that either would  
 (24) be what was called the standard constraint which was go  
 ahead  
 (25) and clean up the beach and let us know if you find something

Vol 23 3611

(1) Another one might be don't clean up the beach stay away from  
 (2) this site. And the other third major option was well we  
 (3) think we want to try cleaning it up but we definitely want a  
 (4) monitor there an archaeologist there. So if there is clear  
 (5) impact that's happening to the site we want that archaeologist  
 (6) to be able to stop things. In general at least Chugach Alaska  
 (7) Corporation always voiced concern for the standard constraint  
 (8) because of the quality of surveys that had been done prior to  
 (9) clean up activities. There was kind of this ongoing fear that  
 (10) sites were being missed or even sites that were known about  
 (11) that there wasn't sufficient information known about them to  
 (12) basically justify just letting clean up activities go  
 (13) But what ended up happening is again you have to look at  
 (14) what was happening in 1989 and that people wanted to  
 clean up  
 (15) activities to keep going. It's like we didn't want to stop  
 (16) things. Nobody wanted to stop things you wanted things to  
 (17) keep going. So it was like you chose one of these options is  
 (18) basically what it was. In some cases they were more complex  
 (19) again a site on the Kenai Peninsula where there were quite  
 (20) elaborate work orders in terms of the archaeological site  
 (21) Q Did it come to your attention during the course of 1989  
 (22) that sites owned by Chugach Chenega Port Graham or  
 English  
 (23) Bay Corporations had been let's say impacted on account of  
 (24) clean up activities in 1989?  
 (25) A Yes they were

Vol 23 3612

- (1) Q Can you explain to the jury in general what came to your  
(2) attention in 1989?
- (3) A Well there were different types of impacts from just the  
(4) general oiling. The oiling itself is considered an impact  
(5) Clean up activities without any kind of archaeologist  
(6) present - again it's a wide range that for example there  
(7) were some sites that were not fully documented until like 1990  
(8) where in 1989 there were clean up activities that occurred at  
(9) the site
- (10) So it's like you didn't know about it at the time but you  
(11) knew about it later and in fact there were impacts to the  
(12) site because you learned about the site in 1990 or fully  
(13) documented the site. I should say in 1990
- (14) In other cases there were - well other types of impacts  
(15) in terms of vandalism and this could be something like  
(16) graffiti or something written on some walls to - well  
(17) actually disturbance of a midden this type of thing different  
(18) types of impacts
- (19) Q Over the course of 1989 did it come to your attention that  
(20) certain treatment activities were also impacting archaeological  
(21) sites?
- (22) A Yeah Well clean up activities that - you have to think  
(23) of the range of clean up activities - basically anything  
(24) anybody does out there is going to impact it but in terms of  
(25) sort of more noticeable impacts like if you have hot water

Vol 23 3613

- (1) flushing - where you have hoses flooding the beach you have  
(2) changes in terms of the arrangement of sediments on the  
(3) beach
- (4) In terms of like the position of artifacts there some of these  
(5) may be washed down the beach. In other cases there may be  
(6) cleanup in the form of picking up tar mats or picking up oil  
(7) and in the process artifacts may be picked up. That's always a  
(8) concern. Let me think. Just kind of a wide range.
- (9) Also sometimes you might say kind of a what happened in  
(10) the field was you would have clean up activity on one beach  
(11) and it was sort of human nature to just kind of walk across the  
(12) uplands to the other people because it was a short walk across  
(13) as opposed to going around the entire shoreline and in some  
(14) cases there were like historical remains right on top. So we  
(15) had concerns in general about these kind of impacts and  
(16) whether you know they are intentional impacts or  
(17) unintentional. That wasn't even the point. It was more we  
(18) just didn't want disturbance to the sites. We wanted to keep  
(19) that to the minimum as much as possible
- (20) Q Dr Johnson you continued working in 1990 on oil  
(21) spill related issues?
- (22) A In 1990 the ISCC actually continued in a much altered  
(23) form. I believe it was located - well it was located as I  
(24) remember in Anchorage and I didn't attend many of the  
(25) meetings. I don't even know if they had many meetings that  
(26) year. What I did participate in was this group which was

Vol 23 3614

- (1) called CTAG. It was the - it was like a technical advisory  
(2) group and again it involved agencies or agencies  
(3) archaeologists and ours to again review different work orders  
(4) that came through in 1990
- (5) Q And those work orders were again from Exxon correct?
- (6) A Yes
- (7) Q And did you get out to the field in 1990 as well?
- (8) A Yes I did
- (9) Q Were you in Prince William Sound in 1990 in the field?
- (10) A Yes I was
- (11) Q Were you anywhere else besides Prince William Sound?
- (12) A Yes I was also down on the Kenai Peninsula
- (13) Q In the Kenai Fjords area?
- (14) A Yes
- (15) Q Whereabouts?
- (16) A I was at a site that was referred to as Seldovia 188
- (17) Q And that's English Bay site?
- (18) A That's correct
- (19) Q Now Dr Johnson after 1990 were you retained by any of  
(20) the Native corporations as an expert?
- (21) A Yes I believe it was 1992 that I was retained as an  
(22) expert
- (23) Q And who first retained you?
- (24) A Chugach Alaska corporation
- (25) Q And we've heard a little bit about that this morning. That

Vol 23 3615

- (1) was with regard to a report you'd written co-authored with  
(2) Dr Jack Lobdell?
- (3) A That is correct
- (4) Q And when you were retained by Chugach Alaska  
(5) Corporation
- (6) can you explain to the jury what the purpose of your retention  
(7) was what were your duties what were you supposed to do?
- (8) A Basically at that time what I was doing was trying to  
(9) document or review documents in terms of impacts and just  
(10) generally information about the sites themselves. In other  
(11) words - I think the best way to put it is what had happened  
(12) like in 1989 1990. There had been a lot of conversations and  
(13) discussions about the types of impacts and the sites
- (14) In 1992 I basically went back and pulled together a lot of  
(15) the paperwork pulled the paperwork together so that we could  
(16) say yes this is the particular site and this is what we know  
(17) about it. This is the type of oiling that occurred there
- (18) This is - well actually I think the focus was actually just  
(19) oil and sites. We didn't really get into individual cases of  
(20) other impacts at that time
- (21) Q Were you subsequently retained - were you later retained  
(22) by Chugach and Port Graham and English Bay Corporations?
- (23) A Yes I was
- (24) Q When was that?
- (25) A That was last fall
- (26) Q Can you tell the jury what you were retained to do by

Vol 23 3616

(1) Chugach Corporation and English Bay Corporation?  
 (2) A Again it was a similar sort of situations in that there  
 (3) had been a lot of discussion about the sites impacts and  
 (4) oiling up to them. But what my focus really was was pulling  
 (5) together some of the documentation that would identify what  
 (6) the type of site was what type of oil there was what type of  
 (7) impacts there was. But again the focus was really on the  
 (8) sites and oil in terms of a lot of specifics about other types  
 (9) of impacts that I don't believe I included a lot of specifics  
 (10) in the report. It was more general ones based on my reading  
 (11) since 1989.  
 (12) Q Dr Johnson in the course of your retentions by Chugach  
 (13) Alaska Corporation Chugach Corporation Port Graham  
 (14) Corporation and English Bay Corporation did you obtain  
 (15) records from the Exxon Valdez Cultural Resource Program?  
 (16) A In terms of - it might be good just to talk about the  
 (17) documents in general because actually I think probably it is  
 (18) going to go back to 1989 when as a member of the oil spill  
 (19) response team there were a lot of documents that we had  
 (20) access to. In the course of the summer at least we gained access to a  
 (21) lot of it and continued to receive documents I believe until  
 (22) the fall and these were the work orders and sometimes field  
 (23) notes connected with actual sites or field investigations. So  
 (24) we reviewed these and other reports or incident reports or  
 (25) whatever in 1989.

Vol 23 3617

(1) In 1990 it was the same situation. It was sort of the  
 (2) second go at these segments so there was another set of  
 (3) documents that came through and reports that had been  
 (4) published by Exxon or just a lot of other supporting  
 (5) documentation.  
 (6) Then let's see I think the next couple years or at least  
 (7) the next - '91 and '92 there were documents that came  
 (8) through but I didn't - as I recall right now I don't recall  
 (9) reviewing them on a regular basis. I may have seen some of  
 (10) them over time but it was then again in 1992 that I went back  
 (11) to look in at the documents again in more detail. And again  
 (12) these were some of the documents I had seen back in '89 and  
 (13) '90.  
 (14) And then the next wave of documents basically came in the  
 (15) fall of 1993 with the State production of documents and the  
 (16) Exxon production of documents. I think some may have been  
 (17) produced earlier but I didn't have access to them at the time.  
 (18) Q Now you mentioned some Exxon reports that you reviewed  
 (19) in  
 (20) 1989 1990?  
 (21) A Yes.  
 (22) Q Were one of those the Exxon Cultural Resource Program  
 (23) report  
 (24) for 1989?  
 (25) A Yes.  
 (26) Q Now based upon your subsequent review of documents  
 (27) which  
 (28) you've testified you obtained in 1993 and subsequently did you

Vol 23 3618

(1) find that the 1989 Exxon Valdez Cultural Resource Report was  
 (2) accurate?  
 (3) A Well even before reviewing those documents back in 1989  
 (4) we made comments on them and I had different objections or  
 (5) different concerns about how the report was presented in terms  
 (6) of what one called an incident or what was considered  
 (7) important. That there was a lot of discussion in terms of what  
 (8) there should be what should be included or how it should be  
 (9) presented and I didn't necessarily agree with what was  
 (10) reported.  
 (11) Q Dr Johnson did you arrive at any opinion as to whether or  
 (12) not cultural resources belonging to Chugach and the three  
 (13) Village corporations were impacted on account of the Exxon  
 (14) Valdez oil spill?  
 (15) A Yes they were.  
 (16) Q And in arriving at your opinion did you review photographs  
 (17) produced by Exxon in 1989 - or excuse me photographs that  
 (18) were taken by Exxon in 1989 and subsequently produced?  
 (19) A Yes I believe that the photographs were both 1989 and  
 (20) 1990. There was quite a few photographs and also videos a  
 (21) lot of videos that were made.  
 (22) Q And you've reviewed those?  
 (23) A Yes.  
 (24) Q And your opinion is based partially upon documents that  
 (25) were obtained from Exxon is that correct?

(1) A That's correct.  
 (2) Q Now you - I think you testified that in 1989 you observed  
 (3) certain methods of beach treatment?  
 (4) A Uh huh.  
 (5) Q Can you tell the methods of beach treatment that you  
 (6) personally observed in 1989?  
 (7) A Well again I saw pretty much the range of beach  
 (8) treatment. Some of it was sort of exhibitions in a sense but  
 (9) some of it was actual work activity. I saw basically  
 (10) everything from the manual pickup of oil using Sorbent pads,  
 (11) and this type of thing to flushing with these large hoses and  
 (12) so forth that basically the water runs down the beach and the  
 (13) idea is to wash it in the water so it can be collected in the  
 (14) water.  
 (15) Other times let's see - there were like some machinery  
 (16) that was used. There was like a machine called the Omni  
 (17) boom  
 (18) or something like this. There were a bunch of different ones  
 (19) water being sprayed on the shore from a boat whether it was  
 (20) with this Omni boom kind of thing or whether it was with  
 (21) hoses. I remember different times out in the Sound coming up  
 (22) to barges with people lined up on the barges with hoses so  
 (23) there were a lot of different techniques that were being used  
 (24) different approaches.  
 (25) Q Dr Johnson are you generally familiar with beach segment  
 (26) CR 4 5 6 in that area?

Vol 23 3620

Vol 23 3622

(1) A One through five I am  
 (2) Q And you've examined certain pictures obtained by -  
 (3) obtained from Exxon with regard to those segments?  
 (4) A Yes  
 (5) Q That were taken in 1989?  
 (6) A Yes  
 (7) Q And you're satisfied that those pictures accurately  
 (8) reflect - they accurately depict the place in C -  
 (9) A Yes It's my understanding based on photo logs generated  
 (10) by Exxon  
 (11) Q I'd like to show you what's been marked as PX1295?  
 (12) MR DIAMOND Your Honor may have a minute to confer  
 (13) with counsel?  
 (14) (Discussion off the record )  
 (15) MR DIAMOND Your Honor we would object to the  
 (16) extent that the photographs do not depict activities on sites  
 (17) for which claims are being made that their introduction would  
 (18) exceed the Court's order in this regard  
 (19) I don't know what - we don't have and have not been  
 (20) previously furnished specific site locations for the  
 (21) photographs but we would ask that counsel be constrained on  
 (22) account of the orders you've established and not publish to the  
 (23) jury any photographs of areas that are not archaeological  
 (24) sites  
 (25) MR FORTIER Your Honor I don't think that that's

(1) including the hoses and workers You can see some of the  
 (2) bags  
 (3) of oiled debris in the background  
 (4) Q This is on a site did you say Dr Johnson?  
 (5) A Basically what I know is that the site is located in the  
 (6) segment And as far as I know based on conversations with the  
 (7) other archaeologists that have also worked at this site that  
 (8) it is in the area of the site That's my understanding  
 (9) Q And you've personally been to this site?  
 (10) A I've been to this site but not during cleanup  
 (11) Q I'm going to show you what's been marked as 1295 6 What  
 (12) is this Dr Johnson?  
 (13) A Again this is what I believe is called the Omni boom and  
 (14) again it's in the same segment that contains the site claimed  
 (15) by Chugach Alaska Corporation  
 (16) Q This is during clean up operations?  
 (17) A Yes And again this is based on the photo log that was  
 (18) produced by Exxon I wasn't personally there at the cleanup  
 (19) but I understand this is the correct location  
 (20) MR DIAMOND Your Honor I'll object on the grounds  
 (21) there is no foundation She wasn't there didn't observe these  
 (22) activities can't authenticate these photographs as being an  
 (23) accurate depiction  
 (24) They may be admissible but I don't know that they are  
 (25) admissible through this witness  
 (26) THE COURT Explain to me how you used the logs to

Vol 23 3621

Vol 23 3623

(1) even necessary I don't intend to show sites other than those  
 (2) for which damages are actually being claimed  
 (3) THE COURT All right  
 (4) MR DIAMOND Your Honor we have a problem because  
 (5) these have been identified as Crafton 4 5 and 6 There is  
 (6) only one claim being made for Crafton He did a magician's  
 (7) slight of hand  
 (8) THE COURT Do you want me to excuse the jury and set  
 (9) some rules?  
 (10) MR FORTIER Your Honor -  
 (11) MR DIAMOND If it's not a problem If counsel is  
 (12) going to show these -  
 (13) THE COURT The problem is I don't want to be faced  
 (14) with a problem afterwards So to the extent you have to  
 (15) confer fine If there is a controversy let me know so I can  
 (16) excuse the jury  
 (17) MR DIAMOND Thank you  
 (18) BY MR FORTIER  
 (19) Q Dr Johnson can you identify what we're looking at?  
 (20) A First of all there are segments only one through five  
 (21) there is no six And in terms of what is on the screen here  
 (22) my understanding from the Exxon video log is that it is on the  
 (23) shoreline adjacent to one of the cultural sites or heritage  
 (24) sites that is claimed by the Chugach Alaska Corporation  
 (25) And basically what you see is clean up activities

(1) identify the locations that these pictures were taken?  
 (2) A Basically for these Exxon last fall produced a photo log  
 (3) with all the photographs and the photo log included segments  
 (4) Exxon shoreline segments It also included the HRS the Alaska  
 (5) Heritage Resource Survey information site logs and then a  
 (6) general description  
 (7) And basically what I would do is look at the location of a  
 (8) site in a segment this type of thing and basically look to  
 (9) those segments in terms of looking for what kind of  
 (10) photographs  
 (11) there were And in the particular case here I also talked  
 (12) with another archaeologist who knew about like the Omni boom  
 (13) operations the clean up activities and so forth in the area  
 (14) at the time because I wanted to make sure that they were not  
 (15) further north than the segment but they were actually located  
 (16) in the site location And she said that they were So it's  
 (17) based on the document Exxon documents and conversation  
 (18) with  
 (19) someone that actually was present there as far as I know  
 (20) THE COURT At the particular site?  
 (21) A At the particular site  
 (22) THE COURT Did you show the photographs to the  
 (23) person?  
 (24) A I didn't show these photographs but I know that there is  
 (25) some other photographs that they have that she had taken  
 (26) THE COURT Okay  
 (27) MR DIAMOND We would renew the objection that these

Vol 23 3624

(1) don't come in is admissions that it has to be in some sort of  
 (2) testimony that these accurately depict what they purport to  
 (3) represent. These are photographs because we produced  
 them  
 (4) and unquestionably to the extent the logging is right and we  
 (5) aren't questioning these various areas of clean up activity  
 (6) but there is a question whether the photographs depict what  
 was  
 (7) shown and we need somebody that was present at this site or  
 (8) that has admissible knowledge what happened at this site and  
 (9) this photograph of the activity. Otherwise it's sheer  
 (10) conjecture. For all we know the angle of this camera may  
 (11) distort it and there is no way we can cross examine this  
 (12) witness about any of this because she was not there.  
 (13) MR FORTIER Your Honor the pictures have been  
 (14) produced by Exxon the logs have been produced and I think  
 (15) it's under the 801 B admission  
 (16) THE COURT Send the jury out. It's time for a break  
 (17) anyway  
 (18) (Jury out at 11:00 a.m.)  
 (19) THE COURT I just want to understand your objection  
 (20) Mr. Diamond You have logs that give the location Exxon -  
 (21) Exxon has logs that give the location of various sites and  
 (22) specify the sites that the photographs were taken at, right?  
 (23) MR DIAMOND We are not questioning whether these  
 (24) photographs were taken of the sites depicted on the photo log,  
 (25) that is admitted. You can take as accepted that this is a

Vol 23 3625

(1) photograph of operations sometime in 1989 at Craighton 5  
 (2) Now our objection is there is an additional foundational  
 (3) requirement with respect to photographs and other visual  
 (4) material that the photograph or visual material accurately  
 (5) represent what is being depicted. In order to satisfy that  
 (6) you have enforced this throughout this trial you have required  
 (7) somebody who was at the site or somebody who could connect  
 it  
 (8) up and say I saw activities of this nature at a site and  
 (9) allow that testimony for relevant purposes but here we have  
 (10) neither. We don't know where this boom is in relation to the  
 (11) intertidal zone if in fact that's over State owned land  
 (12) privately owned land what's going on there what kind of water  
 (13) is coming out I mean is it stream? Is that dust? There  
 (14) are lots of ambiguities for which there ought to be a  
 (15) foundation laid and I'm not saying these are inadmissible I'm  
 (16) saying Mr. Fortier has not laid foundation sufficient to get  
 (17) these into evidence for the jury with this witness  
 (18) THE COURT All right the objection is overruled  
 (19) Sounds like you have a number of items you can cross examine  
 (20) on counsel  
 (21) MR DIAMOND You always say that when you overrule my  
 (22) objections  
 (23) THE COURT I always like to hear the rehearsal so I  
 (24) know what's coming later  
 (25) All right I'm going to take a break

Vol 23 3626

(1) THE CLERK Please rise. This court stands in  
 (2) recess  
 (3) (Recess 11:02 to 11:15 a.m.)  
 (4) (Jury in at 11:15 a.m.)  
 (5) THE CLERK Please rise. This court now resumes in  
 (6) session. Please be seated.  
 (7) BY MR FORTIER  
 (8) Q Dr. Johnson can you tell me what this is please?  
 (9) A Again this is basically an Omni boom which would be  
 (10) located in the water that is steam cleaning shoreline  
 (11) Q Is this in the neighborhood of a Chugach site?  
 (12) A Yes  
 (13) Q Is it on a Chugach site?  
 (14) A The Chugach site - it's part of the Chugach site yes  
 (15) MR DIAMOND May I interpose a late objection and  
 (16) move to strike the last answer without -  
 (17) THE COURT Sustained as to the stream cleaning  
 (18) MR DIAMOND - to whether this was on the Chugach  
 (19) site because all the witness has in front of her is the log  
 (20) and identification which simply says that there is a site on  
 (21) this segment of beach. Some of these beach segments are  
 miles  
 (22) long. This photograph doesn't depict it. She's got no  
 (23) foundation  
 (24) THE COURT Objection sustained. You can ask your  
 (25) question again

Vol 23 3627

(1) BY MR FORTIER  
 (2) Q Dr. Johnson with regard to the prior picture which I  
 (3) believe was 1295.6 you have been to that site?  
 (4) A Yes  
 (5) Q So you're familiar with it?  
 (6) A I'm familiar with the site. And as I said before based on  
 (7) conversations with the other archaeologist it's my  
 (8) understanding that the clean up activity including an Omni  
 (9) boom did take place where the site is - in the vicinity of  
 (10) the site  
 (11) Q Did you verify that through any reports or work orders?  
 (12) A Again in terms of - let's see I believe some of the  
 (13) videos also talk about an Omni boom present at the site  
 (14) Q Dr. Johnson based upon your review of the photo your  
 (15) knowledge of how that site looks did you satisfy yourself that  
 (16) the Omni boom was cleaning on the site?  
 (17) MR DIAMOND Object without foundation the only  
 (18) foundation is hearsay inadmissible hearsay as well as -  
 (19) THE COURT Objection is overruled  
 (20) THE WITNESS Could you repeat?  
 (21) BY MR FORTIER  
 (22) Q I asked whether or not based upon your own observations of  
 (23) the site your knowledge of the site a review of the  
 (24) documentation you satisfied yourself that the Omni boom  
 (25) cleaning activity was taking place on the site?

Vol 23 3628

Vol 23 3630

- (1) A Yes that's what I think
- (2) Q Now Dr Johnson what I want to refer you to is 1295 7 on
- (3) the screen
- (4) A Yes Again based on the photo logs basically the same
- (5) type of evidence This is my understanding that this is
- (6) again the same site the same - probably the same - well it
- (7) is the same clean up activity and it includes the hoses and -
- (8) well various clean up workers
- (9) Q And this is again on the site?
- (10) A Yeah this is the same location
- (11) Q I'm showing you what's been marked as PX1295 8 What is
- (12) this Dr Johnson?
- (13) A This is also part of the site And what this is is a
- (14) shipwreck that was up lifted - well a ship that was uplifted
- (15) probably in - in my opinion it was a ship that was uplifted
- (16) during the 1964 earthquake and the area is the location of the
- (17) historic site
- (18) Q Based upon your experience your knowledge of the site
- (19) itself Dr Johnson where were we - where was the Omni boom
- (20) location?
- (21) A I believe that the Omni boom - the shoreline in front here
- (22) was heavily oiled and I believe that the clean up activities
- (23) occurred along the shoreline and further to the north
- (24) Q Do you know whether or not the gentleman standing on the
- (25) vessel is an Exxon employee?

- (1) A It's the same site yes
- (2) Q Dr Johnson I'm showing you what's been marked as
- (3) 1501 B
- (4) Can you tell the jury what this is please?
- (5) A Again it's the same clean up activities that we've talked
- (6) about
- (7) Q Based upon your review of the photo logs this is from 1989?
- (8) A Yes I believe it is yes
- (9) Q And this is activity that's been conducted on a Chugach
- (10) site correct?
- (11) A Yes I believe it is
- (12) Q Dr Johnson I'm reminded of a couple things I wanted to
- (13) ask you about with regard to this photograph I don't know if
- (14) I can zoom it in at all
- (15) Is there anything Doctor unique about this site? Is
- (16) there an area of this particular site that is of importance
- (17) for - does it have any human remains on it?
- (18) A Yes Actually the historical site does have human remains
- (19) Q Is there a grave marker on the site?
- (20) A Yes there is
- (21) Q Can you point that out?
- (22) A It's not in this particular photograph
- (23) Q Where is the grave marker in relationship to the where the
- (24) activity is taking place?
- (25) A It's located up uplands
- (26) Q I'm going to show you 1501 B again Doctor Is this the

- Vol 23 3629 -

Vol 23 3631

- (1) A I don't know with certainty but that's what I would
- (2) assume
- (3) Q Can I see 1295 10 please?
- (4) Can you tell the jury what we're seeing here Dr Johnson?
- (5) A This is clean up activities further to the south It
- (6) involves well clean up workers here and bags of oiled debris
- (7) and basically historical structures are in the uplands above
- (8) Q Based upon your knowledge of the site Dr Johnson do you
- (9) know whether or not the bags are on the site?
- (10) A Yes they are
- (11) Q And to the best of your knowledge those are bags filled
- (12) with oily debris?
- (13) A Yes that's what I would assume
- (14) Q What is this Dr Johnson?
- (15) A Again the same area there
- (16) Q With the bags on the site?
- (17) A Yes
- (18) Q And are those oil spill workers on the site?
- (19) A Yes I think that's - that's what I think
- (20) Q What I'd like to do now is - can I have the Elmo?
- (21) Dr Johnson I'm showing you what's been marked as 1501 A
- (22) Can you tell me what this scene represents?
- (23) A Again I think it's the location we were looking at before
- (24) earlier and the same clean up activities there
- (25) Q This is again the Chugach site?

- (1) same picture?
- (2) A Again I don't think the grave marker is visible
- (3) Q How far from where the activities are being conducted is
- (4) the grave marker?
- (5) A I'd have to calculate that
- (6) Q In rough figures?
- (7) A It's - basically it's my understanding that this activity
- (8) is occurring towards the north end of the site and the grave
- (9) marker I understand is toward the middle of the site It's a
- (10) pretty large one I don't know
- (11) Q Could I see - now Dr Johnson in addition to reviewing
- (12) pictures and photo logs with regard to Chugach sites you also
- (13) reviewed pictures photo logs and descriptions of the
- (14) activities that took place?
- (15) A That's correct
- (16) Q Did you review any of Chenequa?
- (17) A Yes I did
- (18) Q Are you generally familiar with Chenequa Island?
- (19) A Yes
- (20) Q And are you familiar with the Chenequa school?
- (21) A Yes
- (22) Q With the Old Chenequa Village?
- (23) A Yes I am
- (24) Q Did you find any photographs depicting the Chenequa Village
- (25) site?

Vol 23 3632

- (1) A Yes there are photographs  
 (2) Q And those are from the Exxon Cultural Resources Program?  
 (3) A That's correct  
 (4) Q And you matched those up with the photo log is that  
 (5) correct?  
 (6) A Yes the photo log identifies them  
 (7) Q If I can see 1295 1  
 (8) What is this Dr Johnson?  
 (9) A This is a view of the old Chenega site  
 (10) Q There is a date at the bottom of the photo do you see  
 (11) that?  
 (12) A Yes and it's August 22nd 1989  
 (13) Q Was this picture obtained from the Exxon Cultural Resource  
 (14) Program logs?  
 (15) A Yes I believe it was  
 (16) Q Now was there an incident that came to your attention with  
 (17) regard to the Chenega site?  
 (18) A Yes what I had heard was that there had been graffiti  
 (19) written on the wall of the school house on the inside  
 (20) Q Do you know whether or not that vandalism was connected  
 (21) with the oil spill?  
 (22) A It is thought that it was yes  
 (23) Q Have you seen records of the Exxon Cultural Resource  
 (24) Program indicating its vandalism was connected with the oil  
 (25) spill?

Vol 23 3633

- (1) A Yes  
 (2) MR DIAMOND I'm going to object Your Honor as  
 (3) certainly not the best evidence Has she seen written  
 (4) documents if there are such -  
 (5) THE COURT Objection sustained Jury is to disregard  
 (6) the question and the answer  
 (7) MR FORTIER I'll withdraw the question  
 (8) Could we see 1295 2 please?  
 (9) BY MR FORTIER  
 (10) Q Can you tell what we're looking at here?  
 (11) A Yes this is the graffiti that I referred to There are  
 (12) documents that record this graffiti and state that it occurred  
 (13) during the oil spill cleanup  
 (14) Q There is a date at the top of 4/9/89?  
 (15) A That's correct  
 (16) Q Were there activities occurring on 4/9/89 that you're aware  
 (17) of?  
 (18) A Yes I believe that there were pick up crews some sort of  
 (19) clean up activities going on in the area  
 (20) Q Now Dr Johnson you also discussed a site in the Klana  
 (21) Fjords owned by English Bay Corporation?  
 (22) A Yes  
 (23) Q You have personal knowledge of that site as well you were  
 (24) there?  
 (25) A Yes I have personal knowledge of the site

Vol 23 3634

- (1) Q Did you come across information pertaining to that site?  
 (2) A Yes I've actually reviewed quite a few documents about  
 (3) that particular site because I also participated in field work  
 (4) at the site  
 (5) Q I'm going to show you what's been marked as 1295 3  
 (6) Dr Johnson Dr Johnson do you recognize what is on the  
 (7) screen and can you tell the jury what it is?  
 (8) A Yes It's a test pit that was placed at the site What  
 (9) you see is a two by-two meter test pit and the area here  
 (10) towards the front of the screen is a one-meter area that was  
 (11) extended further - well to a greater depth  
 (12) Q What's on the bottom side?  
 (13) A Basically this test pit is located in the area of the  
 (14) asphalt pavement at the site  
 (15) Q So that's one huh?  
 (16) A Yes  
 (17) Q And Dr Johnson during your investigations did you  
 (18) obtain photographs of oiling and artifacts?  
 (19) A For this particular -  
 (20) Q Of oiled artifacts  
 (21) A In general?  
 (22) Q During the time that you were retained by the corporations?  
 (23) A I've seen pictures of oiled artifacts and oiling yes  
 (24) Q Did those come from the Exxon Valdez Cultural Resource  
 (25) Program?

Vol 23 3635

- (1) A Yes a lot of them did  
 (2) Q Can we show the jury 1295 14 please?  
 (3) What is this Dr Johnson?  
 (4) A I believe that is an oil lamp that was collected and is  
 (5) being cleaned The oil is being cleaned off of it  
 (6) Q And 1295 - I'm sorry  
 (7) Dr Johnson is this in your experience the way in which  
 (8) oil is cleaned off of oiled artifacts?  
 (9) A I actually have not cleaned oil off of artifacts before  
 (10) but this is obviously a method yes  
 (11) Q Do you know whether or not it's necessary to clean oil off  
 (12) of artifacts?  
 (13) A I would think that it would be advisable yes  
 (14) Q Can we go to 1295 15?  
 (15) What is this Dr Johnson?  
 (16) A I believe this is the same artifact prior to its being  
 (17) cleaned  
 (18) Q What is this called?  
 (19) A It's a stone lamp  
 (20) Q To your knowledge was that located in the Prince William  
 (21) Sound area?  
 (22) A Yes It's my understanding that this particular lamp was  
 (23) located at a Chugach Alaska Corporation site  
 (24) Q This is prior to its being cleaned?  
 (25) A Yes

Vol 23 3636

Vol 23 3638

(1) Q Now Dr Johnson you mentioned something about uplands  
 (2) Can you tell me whether or not first of all the corporations  
 (3) had uplands trespass policy?  
 (4) A Yes there was In 1989 - let me think during the course  
 (5) of 1989 it became apparent that there was people going into the  
 (6) uplands Chenega Corporation I remember became very  
 (7) vocal  
 (8) about their concern about people going in the uplands and I  
 (9) believe they established that policy early on Chugach Alaska  
 (10) Corporation also generally had a policy about upland access  
 (11) And here I think we're talking mainly about clean up workers  
 (12) and just generally people out there There was a general  
 (13) concern about anybody up there but the focus was mainly on  
 (14) clean up workers and so there was a policy  
 (15) Q And that was to prevent clean up workers from going on the  
 (16) uplands is that correct?  
 (17) A Yes  
 (18) Q Do you know if the policy was enforced by Exxon?  
 (19) A There was stipulations -  
 (20) MR DIAMOND I'm going to object Your Honor as not  
 (21) being relevant - may I approach -  
 (22) THE COURT Sustained  
 (23) BY MR FORTIER  
 (24) Q Do you know if the policy was enforced?  
 (25) THE COURT Am I missing something here counsel?  
 (26) MR FORTIER I'm sorry Your Honor

(1) portion is above mean high tide?  
 (2) A Generally that is what I assume in most cases Basically  
 (3) yeah a portion of the site is in either location  
 (4) Q Let's take an example Dr Johnson Are you familiar with  
 (5) an area on the southwestern - or southeastern side of Chenega  
 (6) Island?  
 (7) A Yes  
 (8) Q Can you explain to the jury using that area as to how  
 (9) this idea of mean high tide above and below the mean high tide  
 (10) relates to coastal archaeological sites?  
 (11) A All right Basically what it comes down to is definitions  
 (12) in terms of intertidal area mean high tide all of this  
 (13) When - all right as an archaeologist talking about a site I  
 (14) look at the site from the perspective of an archaeologist and  
 (15) basically don't - basically ignore issues of ownership in  
 (16) terms of an archaeologist The site itself being a coastal  
 (17) site is located both in the uplands which is above this mean  
 (18) high tide line and in the intertidal area which is below the  
 (19) mean high tide line but the site you don't divide it into  
 (20) pieces it is one site  
 (21) At this particular location that we're talking about there  
 (22) are cultural remains that have been identified both in the  
 (23) intertidal area middle intertidal area below mean high tide  
 (24) and also cultural remains that have been identified above the  
 (25) mean high tide in the uplands

Vol 23 3637

Vol 23 3639

(1) MR DIAMOND If you're missing the objection I'll  
 (2) make it again  
 (3) THE COURT There was an objection and I sustained  
 (4) it so you don't ask the same question again  
 (5) MR FORTIER I apologize Your Honor  
 (6) BY MR FORTIER  
 (7) Q Have you ever heard the term mean high tide Dr Johnson?  
 (8) A Yes I have  
 (9) Q Can you tell the jury what mean high tide means?  
 (10) A It basically is the average high tide I believe over an  
 (11) 18 year period That's what -  
 (12) Q Now Dr Johnson is mean high tide an important - is it  
 (13) important when you're working with corporation lands?  
 (14) A Yes it is  
 (15) Q Why?  
 (16) A It's important because of the issue of ownership in terms  
 (17) of upland ownership and the State claim to the intertidal area  
 (18) which is located below mean high tide  
 (19) Q Do you know whether or not mean high tide is above or  
 (20) below  
 (21) the intertidal area?  
 (22) A Well mean high tide by definition would be in the  
 (23) intertidal area  
 (24) Q Dr Johnson when you're working with coastal  
 (25) archaeological sites have you ever encountered situations  
 (26) where a portion of the site is below mean high tide and a

(1) What I think is important to understand we're usually  
 (2) talking about the obvious cultural remains indicators of a  
 (3) site so these are the things that are most visible And so  
 (4) based on these different features you try to interpret what  
 (5) the site is and what the potential is for subsurface deposits  
 (6) You have to test to be able to determine whether there are  
 (7) deposits there or not  
 (8) With this particular location there are peat deposits with  
 (9) organic artifacts in the intertidal area Again this is below  
 (10) mean high tide in the intertidal area of the site It is -  
 (11) quite likely that these remains continue up into the uplands  
 (12) above mean high tide It's quite likely that they do In  
 (13) addition there are some visible cultural features in the  
 (14) uplands itself There is a fish weir up there as well  
 (15) From the perspective of an archaeologist you are looking  
 (16) at the entire site you have to look at it in terms of the site  
 (17) and then impacts to the site natural impacts And what the  
 (18) impact is is the wave action that is starting to erode some of  
 (19) these peat deposits and erode portions of the site It's quite  
 (20) likely if one were to do testing in the uplands one would find  
 (21) a continuation of the deposits exposed in the intertidal area  
 (22) At quite a few other sites in the Sound this is in fact the  
 (23) case You have indications in the intertidal area sometimes  
 (24) you have indications in the uplands and based on these  
 (25) indications and subsurface testing you find that it covers this

Vol 23 3640

(1) overall area  
 (2) Q Dr Johnson in your review of the Exxon Cultural Resource  
 (3) Program materials did you locate examples of the site we were  
 (4) looking at - or you just talked about I m sorry?  
 (5) A Yes there are examples  
 (6) Q And did you prepare some videos based upon the Exxon  
 (7) Cultural Resource Program materials?  
 (8) A Yes we prepared a video  
 (9) Q Can you tell the jury - we've got - it's correct there  
 (10) are two videos?  
 (11) A Yes  
 (12) Q What I'd like you to do is discuss the first video Tell  
 (13) the jury what we're going to see  
 (14) A All right The first video as I recall includes three  
 (15) different sites The first one is SEL 188 located on Kenai  
 (16) Peninsula It is the location where we saw that test pit with  
 (17) the deeper test pit within it And what we're going to see  
 (18) there is basically the oiling at the site including pooled  
 (19) oil asphalt pavement This is narrated both by the Exxon  
 (20) Cultural Resource Director Chuck Mobley and also by an  
 (21) Exxon employee Mark Silbert I was present while the video was  
 (22) taken and during the course of the archaeological work that  
 (23) was conducted there  
 (24) Let's see the second site that we're going to look at is  
 (25) at the south end of Chenega Island What we're going to see

Vol 23 3642

(1) clean up work an oil lamp was found at the site and I believe  
 (2) it's this one here - clean-up activities stopped and they did  
 (3) notify Exxon archaeologists that they found it Exxon  
 (4) archaeologists came out to investigate the situation found a  
 (5) few additional artifacts collected these and clean up  
 (6) operations continued  
 (7) The following year then clean up operations also continued  
 (8) at the site and later on it became apparent that there were  
 (9) additional archaeological remains in - well at the site  
 (10) basically So those are the three different sites  
 (11) The first one it's focused basically on the site and the  
 (12) impact of oil and the pavement and pooled oil  
 (13) Maybe we should just go ahead and start  
 (14) Q Could we see 1289 A? I m sorry 1287 A  
 (15) And at the same time Dr Johnson if you want to stop the  
 (16) tape to narrate any part of it indicate that  
 (17) (Videotape played)  
 (18) A We're talking about this area up at the top What you see  
 (19) here is fucus This is vegetation We'll see the oil in a  
 (20) minute The oiling is going to be behind This is fucus in  
 (21) the front It's behind is where the oil is  
 (22) Q Dr Johnson if you would like perhaps you could walk  
 (23) around to the front of the screen here maybe even have a light  
 (24) pen Good we do  
 (25) Dr Johnson I think if you press this button

Vol 23 3641

(1) there is Exxon archaeologists visiting the site and this is -  
 (2) it's important The reason why we're looking at it it shows  
 (3) one of the approaches to investigating sites Basically he's  
 (4) going to look at the site because there is old tradition about  
 (5) the site that there was something there He goes out to the  
 (6) location and looks Fortunately he's a good archaeologist and  
 (7) that he indicates some of the limiting factors that basically  
 (8) prevent him from finding some of the cultural materials there  
 (9) He basically observes some of the most obvious features which  
 (10) is a culturally modified tree and I believe he reports a  
 (11) cobble that was found there during the previous field season  
 (12) This is followed by another segment which is not from the  
 (13) Exxon Cultural Resource Program videos It's actually a  
 (14) segment that was shot by someone at Chenega Village and it  
 (15) shows then artifacts that were subsequently identified at the  
 (16) site from that peat deposit that we're talking about In other  
 (17) words showing that in fact there is a significant site  
 (18) there And basically the more investigations that are done at  
 (19) some of these sites the more we're likely to learn about  
 (20) significant remains at the sites  
 (21) The third location on the first video is located on North  
 (22) Knight Island and basically what it shows are Exxon  
 (23) archaeologists Jim Gallison and Bob Butz again identifying  
 (24) artifacts at the site And it's sort of the process of  
 (25) identifying artifacts in that they - back in 1989 during the

Vol 23 3643

(1) A Basically this in here is the fucus and the oiling that  
 (2) we're talking about is behind We can go ahead and run the  
 (3) video  
 (4) This is looking at it at an angle This is the water down  
 (5) below the fucus in the intertidal area And up above is where  
 (6) that band of oil the asphalt pavement and band of oil is  
 (7) located This is the oiled area in here basically what the  
 (8) sequence is it's going from a broader view of the site to a  
 (9) narrower  
 (10) Now we're looking at the asphalt pavement and pooled oil  
 (11) And he'll show smaller pictures of this area where there is  
 (12) pooled oil  
 (13) Q Before we begin again Dr Johnson can you tell the jury  
 (14) is this site a significant site we're looking at now?  
 (15) A Yes it is It's actually a site that had been known in  
 (16) oral tradition and actually had appeared referenced by  
 (17) DeLaguna but had never been located during the 1989  
 (18) clean up  
 (19) activities  
 (20) The Exxon archaeologists during the course of their  
 (21) surveys did identify artifacts In the process further  
 (22) investigations were conducted and quite a few artifacts were  
 (23) found especially up in the upper intertidal area And I tried  
 (24) to show earlier that it appears that these are eroding from the  
 (25) cut bank in other words this bank up in here  
 (26) In 1990 investigations were also done at the site which

Vol 23 3644

(1) confirmed that there are subsurface deposits in the upland  
 (2) And basically this is what appears to be eroding. The  
 (3) artifacts are slowly working their way down the beach. That  
 (4) appears to be what's happening.  
 (5) Up in here - there were some smaller areas, some of them  
 (6) were larger. It just depended, basically in between the larger  
 (7) and smaller boulders, it sort of accumulated into those areas  
 (8) and seeped into the sediment.  
 (9) Q That was the oil?  
 (10) A That's the oil.  
 (11) I guess what I would indicate here in terms of the degree  
 (12) of oiling, it's like a lot of the pools were these small pools  
 (13) about this size, but they were all over the place, this entire  
 (14) area that is these small pools, and basically what separates  
 (15) them are the large boulders and small boulders, and asphalt  
 (16) pavement. It was like it was either pooled oil or asphalt  
 (17) pavement. It eventually became asphalt pavement.  
 (18) Basically it's like he's removing rocks from this area.  
 (19) Here is what he's showing, is that in fact the oil has  
 (20) penetrated, and once you remove rocks, that there is oil  
 (21) underneath these rocks as well.  
 (22) Maybe we'll stop it. So at that particular site, basically  
 (23) what we wanted to show was the oiling at the site. The test  
 (24) pit that we had seen before was done in this area of the  
 (25) asphalt pavement. And in fact, during the course of that

Vol 23 3646

(1) located out there. There are many, many other ones out there.  
 (2) as well.  
 (3) What is important about this particular site is that there  
 (4) is a historic cabin that is located in the uplands that helps  
 (5) to identify the site as a cultural site or a heritage site. It  
 (6) is a site that - well, it's one of Chugach Alaska  
 (7) Corporation's site and the historical cabin was known  
 (8) during the course of 1989 the site had a standard  
 (9) constraint in terms of clean up activities, and so basically  
 (10) clean up occurred there, and during the course of the cleanup  
 (11) they - one of the clean up workers did find a lamp and  
 (12) followed proper procedure in terms of notifying archaeologists  
 (13) that there was a lamp there. Based on this Exxon  
 (14) archaeologists did come out and take a look at the area of the  
 (15) location of the artifact and found a couple additional  
 (16) artifacts there. These were collected and then clean up  
 (17) activities continued.  
 (18) The following year, beginning of 1990, at the beginning of  
 (19) the field season, kind of kicking things off, this was one of  
 (20) the sites where they started clean up activities, and they did  
 (21) so without an archaeological monitor, even though that was  
 (22) now  
 (23) in the constraints. And subsequent to that - well, eventually  
 (24) it was stopped when they found out there was no monitor. I  
 (25) believe that it is stopped. And subsequent to that, many  
 (26) additional artifacts were also found at this location.

Vol 23 3645

(1) excavation, an artifact was recovered from below the asphalt  
 (2) pavement.  
 (3) Let's see. The other thing, also, that there was clean up  
 (4) that did occur at this site later on, and we have some concerns  
 (5) about the clean up activities there and the adequacy of the  
 (6) archaeological monitoring, but just general concerns about  
 (7) both  
 (8) the impact of the oil and the general clean up activities.  
 (9) The next site then -  
 (10) MR DIAMOND: Your Honor, before she goes on, could we  
 (11) get an identification by name of what site it was?  
 (12) A SEL 188.  
 (13) MR DIAMOND: Is that McArthur Pass?  
 (14) A Yes, it is.  
 (15) MR FORTIER: Your Honor, can we approach the bench  
 (16) for a minute?  
 (17) THE COURT: Sure.  
 (18) (Bench conference off the record)  
 (19) BY MR FORTIER:  
 (20) Q Dr. Johnson, what's the next area we're going to see?  
 (21) A The next area is a site that's located on the north end of  
 (22) Knight Island. It is a site that we had seen that artifact  
 (23) that was being cleaned. That is where it is from.  
 (24) What we're going to see here, basically, is just a number of  
 (25) different artifacts to give you an idea of types of prehistoric  
 (26) artifacts that were found. Or I should say actually that are

Vol 23 3647

(1) The concern that I have from the perspective of Chugach  
 (2) Alaska Corporation is that a lot of these sites, a lot of  
 (3) Chugach's sites contain both historic and prehistoric  
 (4) artifacts. Many of them are readily identified by the historic  
 (5) remains. Cabins are much easier to identify than some of these  
 (6) lithic materials in the intertidal areas or in the uplands  
 (7) whatever the case may be.  
 (8) Q Dr. Johnson, lithic material is?  
 (9) A Stone tools, this type of thing, what has always been a  
 (10) concern to us, very often with the constraint. The  
 (11) constraints were only for identified features such as the  
 (12) cabin, which they assume was in the uplands, so it was less  
 (13) likely to have impact. When, in fact, as an archaeologist, I'm  
 (14) concerned for the entire site and the knowledge that it is  
 (15) likely that where you have even historic remains that you're  
 (16) likely to have prehistoric remains as well, at least at many of  
 (17) the sites in the Chugach region. That there is - the oral  
 (18) tradition talks about many of these in terms of sustained  
 (19) Native use. We're not only interested in historic cabins that  
 (20) may date back to the 1920s or 30s, it's the location that's  
 (21) important, and this is one of the indicators that's important  
 (22) of the sustained use or Native use.  
 (23) Field work that I've conducted here in 1994 also supports  
 (24) this, in that many of the sites that we revisited where  
 (25) historical remains have been documented. We also  
 (26) documented

Vol 23 3648

(1) prehistoric remains in the forms of fire-cracked rock and  
 (2) also often prehistoric artifacts So this is an example of  
 (3) what can happen in terms of basically if you focus only on a  
 (4) certain cultural feature and don't focus on the site you're  
 (5) likely to miss very important components of the site  
 (6) I suppose we can just go There is a number of artifacts  
 (7) just to give you the idea of types of prehistoric artifacts  
 (8) that are encountered out there  
 (9) Q Dr Johnson where is this?  
 (10) A Excuse me talked about the wrong -- maybe we can stop it  
 (11) That is what you would be seeing after this one I got the  
 (12) order of them wrong I won't repeat that later on but let me  
 (13) give you a few words about this particular site  
 (14) The second site here is the one located at the south end of  
 (15) Chenege Island and what it is -- I talked about this one a  
 (16) little bit before in terms of the archaeologists coming and  
 (17) based on the oral tradition and the very limited documents for  
 (18) the site knowing that there was a reported site in the area  
 (19) But all that was reported was a culturally modified tree the  
 (20) scarred tree and I believe a battered cobble He arrives at  
 (21) high tide to do his inspection of the site and it's really  
 (22) significant to know that often when you inspect sites at high  
 (23) tide you're going to miss a lot because the area where the  
 (24) cultural remains are most visible in these coastal sites is  
 (25) often in the intertidal area

Vol 23 3649

(1) So he comes here he basically does not find much evidence  
 (2) for the site and fortunately he does indicate it's high tide  
 (3) and so at least you're alerted to that  
 (4) The second part of this then is the film clip that was  
 (5) prepared by Chenege Corporation The clip shows significant  
 (6) organic artifacts that come from the intertidal that were later  
 (7) collected by the State This is in August of 1990 so I guess  
 (8) we can take a look at this  
 (9) (Videotape played)  
 (10) You should also know that we did cut some of the video so  
 (11) you wouldn't be here for days but he does present the  
 (12) information that has been recorded about it in terms of it  
 (13) being a reported site and the thought that perhaps it had  
 (14) completely eroded away So he's aware of the site but  
 (15) basically continues That's what he does here This is the  
 (16) segment that it's Chenege's video this is not a video shot by  
 (17) Exxon  
 (18) Q Before we go into this could I ask Dr Johnson was the  
 (19) first video showed 8/22/89?  
 (20) A Yes I believe it was  
 (21) Q Was that the time that the Exxon archaeologist was there?  
 (22) A Yes that's what he indicated  
 (23) Q Dr Johnson do you know anything about the cleaning  
 (24) history of that site in 1989?  
 (25) A Well I believe that in terms of archaeological

Vol 23 3650

(1) investigations that there was an investigation earlier in the  
 (2) season the initial SCAT survey As I understand it this  
 (3) survey that has Bob Betz narrating it it was like a  
 (4) post-season clean-up inspection of the site From what I can  
 (5) tell here that the clean up of the site included you know  
 (6) collecting oiled fucus this type of thing In terms of other  
 (7) clean up activities I'd have to look back to the documents  
 (8) Q Do you know whether or not the clean up activities took  
 (9) place with or without a monitor?  
 (10) MR DIAMOND Your Honor I'll object as not being  
 (11) relevant  
 (12) THE COURT What's the relevance, counsel?  
 (13) MR FORTIER Your Honor the relevance is that this  
 (14) was identified as a site subsequently -- cleanup took place  
 (15) before the -- before it was identified as a site If clean up  
 (16) took place prior to the time it was identified as a site then  
 (17) it is likely that there was impact to the cultural resources in  
 (18) the area  
 (19) THE COURT The objection is overruled  
 (20) MR DIAMOND May we approach just for a moment?  
 (21) (Sidebar out of the presence of the jury)  
 (22) MR DIAMOND Mr Fortier has been very careful to  
 (23) avoid thus far issuing of fault  
 (24) THE COURT That was an excellently phrased answer to  
 (25) my question

Vol 23 3651

(1) MR DIAMOND This in our view steps over the line  
 (2) whether we were at fault in not having a monitor out there  
 (3) We're not -- it's beside the point The question is he's not  
 (4) going to talk about any specifics about a monitor whether it  
 (5) was at this location or any other location because we deposited  
 (6) her on the subject So just throwing out the fact that there  
 (7) was not a monitor present and clean up was done on a site  
 (8) subsequently determined to be archaeologically significant  
 (9) simply addresses questions of fault and I don't think the  
 (10) Court wants to open up that door because then we have to put  
 (11) on a defense which we were not planning on doing  
 (12) MR FORTIER We're not using it for the purpose of  
 (13) fault this is strictly ability -- we want to show the impacts  
 (14) to each of the sites on account of the oil spill There was  
 (15) the oil and there was the cleanup there was not monitoring  
 (16) while there was a clean up and it was under a work order then  
 (17) there is a likely impact and I'm laying a foundation for that  
 (18) part of it now  
 (19) THE COURT The objection is overruled counsel  
 (20) (Sidebar concluded)  
 (21) BY MR FORTIER  
 (22) Q Dr Johnson the question was whether or not you know if  
 (23) the site was monitored while it was being cleaned in 1989  
 (24) A In 1989 no I don't believe it was  
 (25) Q Go ahead

Vol 23 3652

Vol 23 3654

- (1) A So basically this last clip here of this particular site
- (2) shows artifacts that were identified in the peat deposit
- (3) eroding peat deposit in the intertidal area And these are
- (4) actually really pretty important wooden artifacts because
- (5) often you don't have that type of preservation at these sites
- (6) And so basically this is just to show you a selection of the
- (7) different artifacts that were collected by the State
- (8) Some of these are artifacts as well This particular
- (9) grommet sort of like a little rope material is what it is
- (10) here wooden piece here And then some other stone artifacts
- (11) over here
- (12) We can go ahead and run it
- (13) Q If we could Dr Johnson what's the significance of wooden
- (14) artifacts in connection with the oil spill?
- (15) A Well in terms of artifacts that - I guess in terms of
- (16) preservation of artifacts themselves I would probably have
- (17) more concern for the contact of oil with wooden artifacts than
- (18) stone artifacts The stone artifacts you can clean using the
- (19) soap and water or these kind of cleansing agents The wood
- (20) also I suspect you could clean but I think you might run into
- (21) more problems with this
- (22) Q Why is that?
- (23) A Just permeability of the wood itself
- (24) Q Would the oil have any impact if you know on radio carbon
- (25) data?

- (1) A Yes
- (2) Q Do you know whether it was surveyed before it was treated?
- (3) A Yes I believe it was surveyed
- (4) Q By an Exxon archaeologist?
- (5) A Yes
- (6) Q Do you know whether or not the Exxon archaeologist located
- (7) cultural materials at the time it was surveyed before it was
- (8) first treated?
- (9) A Basically what happened I think a lot especially in 1989
- (10) is that cultural remains that had been identified in documents
- (11) such as the cabin here or you know other things documented
- (12) that they would go out and verify that they were at the
- (13) particular location
- (14) They would also conduct a general survey but what was
- (15) somewhat unfortunate is that a lot of these surveys were
- (16) conducted very rapidly because they were connected - or
- (17) conducted in conjunction with both the biologist and the oil
- (18) geomorphologist and you have to think of it as kind of rapid
- (19) reconnaissance because they want to get these work orders in
- (20) so
- (21) the cleanup can keep moving
- (22) So on one hand I wouldn't want to criticize the work of the
- (23) archaeologists because they were doing the best they could
- (24) under certain circumstances but in terms of the quality of the
- (25) survey it's at best considered a reconnaissance survey And

Vol 23 3653

Vol 23 3655

- (1) MR DIAMOND Objection beyond the scope -
- (2) THE COURT Objection sustained
- (3) BY MR FORTIER
- (4) Q Go ahead
- (5) A Basically we can take a look at some of the artifacts
- (6) Some of these like slick blades and adzes and so forth These
- (7) green stone adzes another one with adzes
- (8) Q What are adzes?
- (9) A Basically they are generally like woodworking tools is what
- (10) it is Probably some hammer stone in here as well as these
- (11) That's the end of that particular site
- (12) This is the next site that I already kind of went through
- (13) This one in terms of identifying artifacts and it's just to
- (14) give you another view of types of artifacts that were found or
- (15) are found at a site
- (16) Q This is another site that was beach treated?
- (17) A Yes
- (18) Q With or without a monitor?
- (19) A The initial clean up activities was without a monitor
- (20) Then after that there was a monitor that was recommended but
- (21) there was no monitor It was - it was an error on that part
- (22) and I'm not sure if additional clean up activities occur
- (23) thereafter or not but if they did they probably are with a
- (24) monitor
- (25) Q Do you know whether it was cleaned up in 1989?

- (1) Basically we cut this down as much as possible but there
- (2) were other artifacts that they went through but we can go
- (3) ahead
- (4) (Videotape played)
- (5) That's just water here just for clarification
- (6) I think we can probably stop now
- (7) Q Okay Now this KN 104 site was that after the clean up
- (8) activities took place that this filming was taking place?
- (9) A Yes
- (10) Q Was it - was that 1990?
- (11) A Yes
- (12) Q So it had been cleaned twice then?
- (13) A That's my understanding yes
- (14) Q Do you know what the oiling conditions were the first time
- (15) that beach was cleaned?
- (16) A I believe that it was either moderate or heavy
- (17) THE COURT Take a break
- (18) THE CLERK Please rise This court stands in
- (19) recess
- (20) (Jury out at 12 20 p m)
- (21) (Recess at 12 20 p m to 12 35 p m)
- (22) (Jury in at 12 35 p m)
- (23) THE CLERK All rise Please be seated
- (24) BY MR FORTIER
- (25) Q Dr Johnson you have also brought along another video?

Vol 23 3656

(1) A Yes  
 (2) Q Can you please explain to the jury what that is?  
 (3) A The second video is a video showing a fourth site and  
 (4) impacts that occurred during 1989 This one it's a burial  
 (5) cave That is midden deposits and it - it's been documented  
 (6) that there was vandalism at this site Again this is Exxon  
 (7) Cultural Resource Program video footage  
 (8) Q And is this a site on Chugach properties?  
 (9) A Yes This is one of Chugach Alaska Corporation's sites  
 (10) Q Can you give us the segment number?  
 (11) A I don't recall at this moment  
 (12) Q Do you remember the SHPO number?  
 (13) A Yes SEW 004 is the primary number There are other  
 (14) numbers associated with it as well  
 (15) (Videotape Played)  
 (16) BY MR FORTIER  
 (17) Q What's midden Dr Johnson?  
 (18) A It's actually an accumulation of debris Here it includes  
 (19) a lot of animal bones shell some charcoal some wood this  
 (20) type of thing  
 (21) Q How does it fit into an archaeological site?  
 (22) A Well in this particular location it's accumulated through  
 (23) various subsistence activities through the use of these animals  
 (24) or shells and basically it's a garbage heap  
 (25) Q Any idea how old it is?

Vol 23 3658

(1) areas where we haven't had disturbance And there is some  
 (2) areas left there that haven't been disturbed that there is  
 (3) tremendous potential for saying something significant about the  
 (4) site in terms of the past activities  
 (5) So it's still a significant site The impact to it is very  
 (6) unfortunate It's like - as an archaeologist I hope  
 (7) something can be done in terms of scientific data recovery in  
 (8) terms of the site at some point  
 (9) Q Dr Johnson in your review of the field notes and records  
 (10) of the cultural resource program the Exxon Cultural Resource  
 (11) Program did you also prepare selected examples of sites - of  
 (12) site disturbances?  
 (13) A Yes I believe there is an exhibit  
 (14) Q Can I have the Elmo please?  
 (15) What I'd like to do Dr Johnson is show you what's been  
 (16) marked as 1289-B and just talk about a few of the sites  
 (17) At the top of the - the name of this chart by the way is?  
 (18) A Selected Examples of Vandalism Disturbance Impacts to  
 (19) Segments and Sites Taken From the SCAT Archaeological Field  
 (20) Notebooks And what this means is the field boxes are the  
 (21) source of information and this is information that was  
 (22) recorded in them  
 (23) I would point out that many of these - most of these are  
 (24) archaeological sites Some of them refer to just general  
 (25) segments that are owned by the corporations but it was felt

Vol 23 3657

(1) A I don't know off the top of my head here  
 (2) The voices that you hear the one speaking is Bob Betz who  
 (3) is one of Exxon's archaeologists And the teller here in this  
 (4) red coat is another Exxon archaeologist Jim Gallison  
 (5) Actually I should also point out that prior to the oil  
 (6) spill there was impact to this cave What we're interested in  
 (7) here today is the impact that occurred during 1989 and that's  
 (8) what they are going to focus on I think that's the end  
 (9) There are only a couple things I would say about that In  
 (10) terms of impact to the site as I mentioned before there was  
 (11) impact prior to the oil spill and there has been a concern on  
 (12) the part of Chugach Alaska Corporation about vandalism  
 (13) vandalism at this site  
 (14) In early 1989 I also happened to go out to this site I  
 (15) believe it was May and then again in early June and between  
 (16) the two visits that I was there I also was able to document  
 (17) disturbance at the site So it appears that there was several  
 (18) occurrences throughout 1989 based on my own personal  
 (19) experience  
 (20) at the cave and then also these subsequent videos and  
 (21) documentation that Exxon produced  
 (22) The other thing I think that it's important to note is he  
 (23) mentioned the sign that was driven into the midden itself and  
 (24) that apparently it went down to a depth of about five feet  
 (25) That's what I would expect somewhere between five and six  
 (26) feet That if you have very deep cultural deposits here and in

Vol 23 3659

(1) that it was important to put all of this information in there  
 (2) because it represents different types of impacts  
 (3) I'd also note that these different exhibits here don't  
 (4) reflect all of the impacts that are recorded in these  
 (5) particular documents or any other documents that there were  
 (6) many more cases that we could have sighted These are just  
 (7) sort of a selection of different types of impacts - well I  
 (8) guess you could take a look at it yourself  
 (9) The first one there with the CR 2 SEW 004 is actually the  
 (10) site we were looking at The first reference there refers to  
 (11) archaeologists collecting artifacts from the burial caves In  
 (12) fact it was both our archaeologists when we went out to the  
 (13) site that did collect a couple artifacts that were on the  
 (14) surface and there was concern that they would be collected  
 (15) during the clean up activities  
 (16) Now based on the other information it's like I feel that  
 (17) even more strongly because it's evident that there were people  
 (18) out there in the cave doing something  
 (19) The rest of that reference refers to evidence of digging in  
 (20) the midden We also have evidence documented in the video  
 (21) and  
 (22) photographs as well other segments down the list refer to  
 (23) different sites The AHRs number that you see in the second  
 (24) column refers to the Alaska Heritage Resource Survey site  
 (25) number So those that have a number in there are in fact  
 (26) archaeological sites Historical archaeological sites the

(1) segment numbers refer to the Exxon shoreline segment number  
 (2) and this correlated to clean up activities or oil this type of  
 (3) thing  
 (4) Q And you got a number of examples Dr Johnson in this  
 (5) chart?  
 (6) A Yeah There are a number of different examples  
 (7) Q And you also attach backup for each of those?  
 (8) A Yes there is backup for these  
 (9) Q Dr Johnson I'd like to show you what has been marked as  
 (10) plaintiffs exhibit 1290 B What is this?  
 (11) A It's titled Selected Examples of Impact of Oil Selected  
 (12) From SCAT or Archaeological Field Notes Again the SCAT  
 (13) archaeological field notes that refers to the Exxon Cultural  
 (14) Resource books and these were differences that were found in  
 (15) these field notes referring to different types of oiling along  
 (16) the shoreline  
 (17) And again in the second column with the AHRS number that  
 (18) refers to the particular site number as it's listed in the  
 (19) State system There are also a few that have just general  
 (20) comments For example the KN 134 to 136 is shoreline - or is  
 (21) area that does not necessarily contain an archaeological site  
 (22) it's just shoreline that belongs to the corporation  
 (23) Q Then these are records from the field notes that  
 (24) demonstrate the degree of oiling?  
 (25) A Yes Again the same as with the other this is by no

(1) A Well the first lamp was collected after the first  
 (2) treatment and other artifacts were identified after two at  
 (3) least two treatments  
 (4) Q And the comment there Doctor?  
 (5) A The beach in 1989 was heavily oiled and nearly impossible  
 (6) to see surface sediments Oil is in the form of asphalt  
 (7) coating tar patties and discontinuous deposits into the  
 (8) substrate  
 (9) Q Now what happens - were you able to make any  
 (10) determinations as to whether or not when oil obstructs or makes  
 (11) it difficult to see artifacts whether or not artifacts can be  
 (12) accidentally picked up and bagged?  
 (13) A Oh definitely Both in terms of identifying artifacts in  
 (14) an oiled area it's my own thinking that's probably why many of  
 (15) the sites were missed out there in 1989 In addition to that  
 (16) the cleanup activities where you are collecting oiled  
 (17) sediments unless you have an archaeologist sitting there with  
 (18) each person it's quite possible to miss them And again this  
 (19) comes from the experience at the SEL 188 in the Kenai  
 Peninsula  
 (20) where we had done this test pit And when we were going  
 (21) through the asphalt pavement the various materials we were  
 (22) collecting it was even hard for us as archaeologists to figure  
 (23) out what we were doing and whether we were even collecting  
 (24) artifacts or missing them  
 (25) Basically the conclusion was that you need to clean the

(1) means inclusive Reports that I had written before for Chugach  
 (2) Alaska Corporation and the villages I had gone through and  
 (3) pulled together additional information This is coming  
 (4) basically from the field notes so it just happens to be  
 (5) another set of data that I used to look at oiling or impacts to  
 (6) the site  
 (7) Q I'd like to refer you to just a couple of these if I  
 (8) could Dr Johnson One of them is SL 1 SEW 241?  
 (9) A Uh huh  
 (10) Q What is that?  
 (11) A This is actually a folks farm site that has substantial  
 (12) historic remains There are cabin remains boardwalks pilings  
 (13) in the intertidal area There are also prehistoric artifacts  
 (14) and fire cracked rock that have been identified in the  
 (15) intertidal area Also culturally modified trees  
 (16) Q Now Dr Johnson in your review on the impact of oil were  
 (17) you able to determine whether or not heavy oiling obstructed or  
 (18) made it more difficult to see surface artifacts?  
 (19) A Well in the course of a survey it definitely would  
 (20) obstruct visibility  
 (21) Q What I'd like to do Doctor is refer you to this site  
 (22) KN 104 which I believe is the site that we saw in the video  
 (23) A That's correct  
 (24) Q That was where the stone lamps were collected after several  
 (25) treatments?

(1) sediments to see what was - what was in this asphalt pavement  
 (2) Q Refer you down to MR 01 Now Doctor that was the site of  
 (3) the Kenai Fjords on the English Bay land?  
 (4) A Yes This is the site I was just referring to  
 (5) Q Did you understand that - you've got a comment down two  
 (6) only to see?  
 (7) A Yeah  
 (8) Q And you were also there?  
 (9) A Yes Again what it is I think it was pretty well  
 (10) recognized by most archaeologists that the area that had the  
 (11) oiling on it that it was quite likely that you would miss  
 (12) artifacts if you were to walk over it Many of those that were  
 (13) identified were identified either the subsequent year or in  
 (14) the upper intertidal zone  
 (15) Q Doctor for this one I'd like to show you the second page  
 (16) as well There is another reference to the site in the Kenai  
 (17) Fjords owned by English Bay Corporation SEL 188?  
 (18) A Yes And again this is a reference that I mentioned that  
 (19) I actually had some problems with the clean up activities at  
 (20) the site and concern for the ability for - of an archaeologist  
 (21) to monitor all clean up activities Basically I think it's  
 (22) pretty easy to assume that artifacts were missed at - well  
 (23) during the clean up procedure As far as I know there were  
 (24) not very many archaeologists there and in fact there may have  
 (25) been only one archaeologist there when the cleanup occurred

Vol 23 3664

- (1) Q In your reading of the field notes and so on your general  
(2) knowledge of how the beach treatment was conducted in 1989  
(3) excuse me 1990 in that area in the Kenai Fjords area  
(4) SEL 188 do you know what the reference is to rely on  
(5) nozzleman  
(6) to watch for possible artifacts?  
(7) A What I think this refers to in general is the standard  
(8) constraint that was in place for most of the sites out there  
(9) What that referred to is that there was an - like an  
(10) educational program that Exxon tried to develop where they  
(11) would identify types of artifacts that the clean up workers  
(12) might encounter during cleanup And the idea was that they  
(13) would rely on the workers to inform their supervisors or  
(14) whatever should they come across it And I think what this  
(15) refers to is that especially given the fact that it was a  
(16) known site by this time that the nozzleman and other workers  
(17) there were expected to help look out for artifacts or  
(18) whatever  
(19) The problems that would be faced would be whether they  
(20) would identify artifacts in the oiled debris It's like some  
(21) of the more obvious ones might be identified perhaps but  
(22) when  
(23) you're looking at a site like this SEL 188 you're also  
(24) talking about a lot of slate debris a lot of small pieces that  
(25) may not look like much to most people but may be important in  
(26) terms of identifying lithic techniques how they made tools at  
(27) the site or what was happening at the site

Vol 23 3665

- (1) So there is a concern in terms of placing too much of a  
(2) reliance on the workers to be able to identify artifacts  
(3) There is also the problem that we had in terms of handing out  
(4) leaflets this informational packet picture identifying the  
(5) key artifacts just because of our fear of the loss of these  
(6) artifacts you know by clean up workers or other people as  
(7) well  
(8) Q Now Dr Johnson do you know what the reference to the  
(9) nozzleman is? Is that the guy at the front of the hose?  
(10) A Yes I believe it  
(11) Q To your knowledge were they relying on the nozzleman to  
(12) watch out for the artifacts?  
(13) A Yes I believe that's what this refers to  
(14) Q Dr Johnson did you also select examples of clean up  
(15) activities on segments and sites before there was a SCAT  
(16) survey  
(17) or without a monitor?  
(18) A I believe there are references to that  
(19) Q And SCAT stands for the Shoreline Clean up Assessment  
(20) Team?  
(21) A That's correct  
(22) Q And that was part of the Cultural Resources Program  
(23) Exxon's program?  
(24) A Yes  
(25) Q I'd like to show you 1291 B You've got several  
(26) references general references there Doctor one of which is  
(27) SCAT assessments not being done before cleanup

Vol 23 3666

- (1) A Uh huh  
(2) Q Dated 6/3/89?  
(3) A Uh-huh  
(4) Q That was two months into the cleanup?  
(5) A Yes  
(6) Q And why did you think that was important?  
(7) A Well part of the thing is that one of the reliances that  
(8) the Cultural Resource Program had was that - well the idea  
(9) was that if they did the initial survey out there that they  
(10) would identify where the sites were at and be able to protect  
(11) them through either the standard constraint monitoring or  
(12) avoidance So it's significant that in some areas that was  
(13) clean up activities that occurred where we didn't even have  
(14) that minimal reconnaissance to be able to identify whether  
(15) there were sites there or not So there was clean-up activity  
(16) that occurred out there even before these teams got out  
(17) there Most notably it would be like bird pick-up crews or  
(18) boom tenders setting up the booms other people collecting -  
(19) doing manual pickup this type of thing I mean it's a pretty  
(20) complex system in terms of types of cleanups and you know  
(21) types of constraints that might be connected with it But from  
(22) my own experience there was a lot of clean up activity that  
(23) occurred out there either prior to SCAT assessments or in  
(24) areas where there might not have been SCAT assessments  
(25) Q Did you form an opinion as to whether or not such

Vol 23 3667

- (1) activities - in other words treatment exercises being  
(2) performed during the assessments or prior to the assessments  
(3) impacted cultural areas?  
(4) A I would think that they would yes  
(5) Q Doctor in your research did you locate examples in the  
(6) field notes found during or after beach treatment exercises?  
(7) A Yes I believe there are a number  
(8) Q I'm going to show you an exhibit that's been marked as  
(9) 315 B just ask you about a couple of them There's a notation  
(10) here WB 3 SEL 179?  
(11) A Uh-huh  
(12) Q Whose lands are those?  
(13) A I believe those are Port Graham Corporation lands  
(14) Q There is a reference to activities in 1989 that was  
(15) resurveyed Do you see that?  
(16) A Uh huh  
(17) Q Then further down in June of 1990 there were additional  
(18) items found?  
(19) A Yes I think during the course of the clean up activities  
(20) as I always come back to that the initial reconnaissance  
(21) survey didn't identify everything out there and so during the  
(22) course of the clean up itself there were materials that were  
(23) found either by clean up workers or subsequently by Exxon  
(24) archaeologists or other archaeologists in the area And I  
(25) would think that you know in my opinion that sites that

Vol 23 3668

Vol 23 3670

- (1) didn't have adequate protection are likely to have been  
 (2) impacted by the numbers of workers out there  
 (3) Q Also Doctor I point out to you that with regard to  
 (4) KN 104 that was the lamp site we looked at before?  
 (5) A Yes  
 (6) Q There is a notation 7/23/89 with regard to a lamp?  
 (7) A That is the lamp I referred to earlier I can see here we  
 (8) didn't get all of the numbers in Like the KN 104 103 it's  
 (9) the same - this is one of the site designations for the site  
 (10) Again there are several different site designations  
 (11) Q And that's Northern Knight Island?  
 (12) A Yes  
 (13) Q Which is Chugach lands?  
 (14) A Yes  
 (15) Q Doctor did you find examples of visits to these  
 (16) archaeological sites by persons other than Exxon  
 (17) archaeologists?  
 (18) A Yes there were  
 (19) Q I show you what's been marked as 1317 B Is that what  
 (20) we're speaking towards?  
 (21) A Well there were - the first entry refers to Exxon  
 (22) archaeologists at the site Basically this refers to just  
 (23) types of people that would - that would go to these different  
 (24) sites Other ones this one SL 01 I've mentioned this one  
 (25) before as well that there were trails this type of thing

- (1) there were likely sites missed and there was vandalism?  
 (2) A Yes I believe I did  
 (3) Q Doctor I've got on display here page 6 of the memorandum  
 (4) under SCAT survey had you ever heard the phrase emergency  
 (5) circumstances?  
 (6) A In 1989 that's what it was It was - you had that  
 (7) feeling throughout the summer of 1989 and it was only towards  
 (8) the end when it was actually in the process of demobilization  
 (9) that I felt that it wasn't quite the emergency circumstance  
 (10) anymore  
 (11) Q And did you find that the Exxon Cultural Resource Program  
 (12) admitted it had conducted cursory reconnaissance in 1989?  
 (13) MR DIAMOND Your Honor I'm going to object on  
 (14) grounds previously stated Also this refers to a site that's  
 (15) been withdrawn by the plaintiffs and they are no longer  
 (16) claiming for this  
 (17) THE COURT Counsel?  
 (18) MR FORTIER Your Honor the paragraph is in broad  
 (19) general form It refers to a cursory reconnaissance conducted  
 (20) under emergency circumstances in 1989 and the fact that there  
 (21) were sites that were likely missed it has nothing to do with  
 (22) sites that we're not claiming for  
 (23) THE COURT Let me just read it This doesn't refer  
 (24) to a particular site does it Mr Diamond?  
 (25) MR DIAMOND KN 110

Vol 23 3669

Vol 23 3671

- (1) You could see where people are walked across Again it just  
 (2) kind of goes down the list  
 (3) Q Now Doctor in addition to the sites that you have  
 (4) identified and 1316 - 1289 1290 1291 1315 and 137 on the  
 (5) summary sheets were there other examples that you found  
 (6) Doctor?  
 (7) A Yes As I mentioned these primarily come from the field  
 (8) notes of the Exxon archaeologists and there are other sources  
 (9) of information about impacts as well as -  
 (10) Q Doctor in your investigation of the likelihood of impacts  
 (11) to cultural sites did you also examine internal memos of the  
 (12) Exxon Cultural Resources Program?  
 (13) A Some yes  
 (14) Q I'm going to show you a 12 page memo if I could Doctor  
 (15) and ask you to identify it Can you tell the jury what that  
 (16) is?  
 (17) A Basically it's a memo from Jim Haggarty and Chuck Mobley  
 (18) At that time they were co-directors of the Exxon Cultural  
 (19) Resource Program and it's written to Andy Teal and he was the  
 (20) supervisor of the SCAT team and it refers to the Cultural  
 (21) Resource Program Status Report and the 1990 plan and it's  
 (22) dated  
 (23) January 13th 1990  
 (24) Q Thank you Doctor  
 (25) Now Doctor in this memorandum dated January 13th 1990  
 (26) which is Exhibit 1297 did you find admissions by Exxon that

- (1) MR FORTIER Your Honor this particular passage does  
 (2) not refer to it  
 (3) MR DIAMOND May I show you the original?  
 (4) THE COURT Sure  
 (5) MR DIAMOND They have redacted it  
 (6) (Bench conference off the record)  
 (7) BY MR FORTIER  
 (8) Q So Dr Johnson did you find admissions by Exxon that they  
 (9) undoubtedly missed sites?  
 (10) A Yes  
 (11) Q Refer you to page 7 - or page 6 I'll highlight that  
 (12) undoubtedly missed sites and the statement that it was cursory  
 (13) reconnaissance in nature  
 (14) A Yes  
 (15) Q Now by the end of 1989 early 1990 you had made known to  
 (16) Exxon the concerns of the Native corporations with regard to  
 (17) vandalism or other site disturbances hadn't you?  
 (18) A Yes We had expressed our concern toward it  
 (19) Q In your examination did you ever come across - in your  
 (20) research into the Cultural Resources Program did you come  
 (21) across statements by Exxon that it had considered surveillance  
 (22) cameras being placed at high risk areas?  
 (23) A Yes that was something that was considered  
 (24) Q I'll show you page 9 the last part of the document or  
 (25) last part of the site vandalism issue The statement an option

Vol 23 3672

(1) to consider is a possibility of placing surveillance cameras at  
 (2) high risk sites Do you see that?  
 (3) A Uh huh  
 (4) Q Now Dr Johnson did you notice a difference between field  
 (5) notes as they were collected in 1989 and as they were  
 (6) subsequently put together in 1990 with regard to the Cultural  
 (7) Resources Program?  
 (8) A Yes There was a difference in the field notes In 1989  
 (9) it was part of - I mean it was under an emergency situation  
 (10) and archaeologists basically went out and did the  
 (11) reconnaissance survey and pretty much wrote down what they  
 (12) saw  
 (13) or what they thought they saw this type of thing  
 (14) In 1990 you could see a change in the type of things that  
 (15) were recorded that in some cases it seemed like it was more  
 (16) limited in terms of what they would write There was also  
 (17) something more in terms of like damage assessment going on  
 (18) in  
 (19) terms of looking at certain impacts or whatever and explaining  
 (20) them as like sea otter activity or some other type of  
 (21) activity as opposed to vandalism or other types of impacts  
 (22) And as an archaeologist I think it is important to note  
 (23) different impacts and to be careful to justify what your  
 (24) opinions are that type of thing - So I saw a difference in  
 (25) terms of 1989 1990  
 (26) Q Did you find that Exxon considered expanding its program  
 (27) into other areas of site monitor?

- Vol 23 3673

(1) A In terms of other areas of site monitoring?  
 (2) Q Expanding the scope of monitoring  
 (3) A Well there were different types of monitoring that had been  
 (4) considered I went through the basic three which was the  
 (5) standard constraint which is basically if you see something  
 (6) give us a call The next one which is the monitoring where  
 (7) you would have an archaeologist there And the third where  
 (8) you  
 (9) would do avoidance Other different options came up in terms  
 (10) of inspection of sites whether it was over the telephone or  
 (11) whether it was an archaeologist going out to take a look at the  
 (12) site right before the cleanup was to occur And I think what is  
 (13) important there is to realize those are what the options were  
 (14) From my own perspective they weren't really great options  
 (15) but that's what the options were and so you know there were  
 (16) some changes different types of monitoring I suppose  
 (17) Q Doctor what I'd like to point out to you again on the  
 (18) Exhibit 1297 the internal memorandum from Drs Haggarty and  
 (19) Mobley to Mr Teal the statement we should consider  
 (20) expanding  
 (21) the scope of the monitoring programs - program to include  
 (22) other means of site protection  
 (23) A Uh huh  
 (24) Q And continuing on would benefit Exxon in both the short  
 (25) and the long term by preempting their concerns and allowing  
 (26) the Exxon Vilder Cultural Resource Program to retain control  
 (27) over the compliance effort Do you see that?

Vol 23 - 3674

(1) A Yes  
 (2) Q Now go ahead  
 (3) MR DIAMOND Your Honor I would object as  
 (4) irrelevant doesn't go to any damages  
 (5) THE COURT The objection is overruled as it goes the  
 (6) first sentence Let's take that first We should consider -  
 (7) it's overruled as to that I'm having a tough time dealing  
 (8) with the second  
 (9) BY MR FORTIER  
 (10) Q Dr Johnson - could I lay some foundation Doctor?  
 (11) A Well let's -  
 (12) Q Beg your pardon?  
 (13) THE COURT Have her testify about the first  
 (14) statement and I'll get to the objection in a second all  
 (15) right?  
 (16) BY MR FORTIER  
 (17) Q Dr Johnson as to the first statement we should consider  
 (18) expanding the scope of the monitoring program to include  
 (19) other  
 (20) means of site protection?  
 (21) A Yes That was considered and I think I covered some of  
 (22) the types of expansion in terms of inspection of sites That's  
 (23) what comes to mind  
 (24) Q Was there anything else you found?  
 (25) THE COURT Hold on I think we're referring to the  
 (26) second passage The objection is sustained as to the second

Vol 23 3675

(1) passage  
 (2) BY MR FORTIER  
 (3) Q Dr Johnson did you also identify with regard to Chugach  
 (4) Alaska Corporation and each of the Village corporations the  
 (5) impacts of oil upon - impacts of oil and the treatment effort  
 (6) upon certain of their sites?  
 (7) A Yes  
 (8) Q Let me show you what's been marked first as plaintiffs  
 (9) exhibit 1538 Can you tell us what this is Doctor?  
 (10) A Yes It's some charts similar to the other ones that focus  
 (11) on the different types of impact here primarily oil impact to  
 (12) different sites different Chugach Alaska Corporation sites  
 (13) Basically this is similar to what I had done in earlier  
 (14) reports but it was put in the format of a chart and other  
 (15) materials were added to it since 1992  
 (16) Q Doctor at the bottom of the chart you've got marked  
 (17) Confidential Pursuant to Archaeological Site Protective  
 (18) Order  
 (19) A Yes  
 (20) Q And below that you've got an abbreviation key for the jury?  
 (21) A Yes What these different documents refer to are documents  
 (22) that were generated by Exxon and by the State I believe  
 (23) that's what it's limited to I think that's what it's limited  
 (24) to There may be some correspondence for example or  
 (25) Chugach  
 (26) Alaska Corporation assessments but it's - it's the parties

Vol 23 3676

Vol 23 3674

(1) that were involved  
 (2) Q Doctor you've prepared similar charts for each of the  
 (3) Village corporations as well?  
 (4) A Yes There are charts that were prepared And again it  
 (5) follows the work that I had done back in 1993 in terms of  
 (6) recording oil impacts and site information and additional  
 (7) material was added to this  
 (8) Again with these charts just as with the charts I  
 (9) mentioned before they don't - they are not - they don't  
 (10) include everything that's out there it's just a number of  
 (11) different documents that were more readily available  
 (12) Q 1366 A is Chenega Corporation?  
 (13) A Yes  
 (14) Q And you also included backup with that?  
 (15) A Yes the backup is included as well  
 (16) MR FORTIER To save time Judge I'll just approach  
 (17) the witness and have her identify  
 (18) BY MR FORTIER  
 (19) Q Dr Johnson is 1366 charts you prepared for English Bay  
 (20) Corporation?  
 (21) A Yes these are the same charts  
 (22) Q With similar backup?  
 (23) A Yes  
 (24) Q And 1366 C Doctor?  
 (25) A Yes

(1) he used to come up with a program to address these damages  
 (2) As an archaeologist I feel that the program that we came  
 (3) up with addresses this most directly in that for each site we  
 (4) looked at it on a site by site basis and said what do we need  
 (5) to do or what do we feel needs to be done as archaeologists  
 (6) because of the impacts and also because of the loss of  
 (7) confidentiality And basically the answer was always well we  
 (8) feel that there needs to be investigations at the site  
 (9) sufficient to recover the archaeological context of the site  
 (10) And so for each site that's what is the basis for each plan  
 (11) on a site by site basis is the recovery of archaeological  
 (12) context  
 (13) Q Now there were sites on Native corporation lands that you  
 (14) felt were impacted is that correct?  
 (15) A Yes  
 (16) Q And there were sites on Native corporations lands that  
 (17) Native corporations are not making a claim for is that  
 (18) correct?  
 (19) A Yes there are  
 (20) Q With regard to the methodology itself Dr Johnson did you  
 (21) approach it in terms of what you described earlier how an  
 (22) archaeologist does things? First of all you go and look at  
 (23) it?  
 (24) A Yes Basically the approach was first what do we know  
 (25) about these particular sites? What kind of information do we

Vol 23 3677

Vol 23 3679

(1) Q That relates to -  
 (2) A Port Graham  
 (3) Q - Port Graham Corporation?  
 (4) Doctor were the sites harmed on account of the oil spill?  
 (5) A Yes  
 (6) Q Tell the jury how  
 (7) A They were impacted by oil They were impacted by clean up  
 (8) workers by the clean up activities themselves And most  
 (9) importantly I think from the perspective of the Native  
 (10) corporations they were impacted by a loss of confidentiality  
 (11) Q Have you proposed a methodology for fixing - for  
 (12) identifying the impacts?  
 (13) A For identifying impacts?  
 (14) Q I'm sorry for mitigating for fixing the impacts  
 (15) A Yes I have worked with Jack Lobdell We have worked  
 (16) together in terms of coming up with a mitigation plan  
 (17) Q Can you tell the jury what your program entails?  
 (18) A Basically what it is is the program - the way it worked  
 (19) we looked at sites down the list basically and first tried to  
 (20) determine whether we felt that they had been impacted by the  
 (21) oil oil spill activities and oil impact workers  
 (22) From there after we determined that we felt that they  
 (23) had - and again it was primarily based on documentation in  
 (24) terms of field notes or field reports this type of thing  
 (25) Basically we looked at a range of different methods that could

(1) either know personally or through documentation basically  
 what  
 (2) is known Then basically the sites that are on the list are  
 (3) those that we felt were impacted either through oiling through  
 (4) clean up activities or vandalism in some cases that we saw  
 (5) earlier From there then again just looking out on a  
 (6) site by site basis in terms of what would need to be done And  
 (7) basically I guess the perspective is you can't change what's  
 (8) happened I mean that was always my perspective you can't  
 (9) change the fact that there is it out here or whatever or  
 (10) that even clean up activities occurred  
 (11) In terms of the site what you can do is do something to  
 (12) address the change in the status of the site and basically as  
 (13) an archaeologist I recommended the recovery of data and  
 (14) specifically the archaeological context  
 (15) Q And Dr Johnson did you have charts or maps prepared for  
 (16) those sites for which each of the corporations is actually  
 (17) claiming damages?  
 (18) A There are maps that were prepared yes And I believe that  
 (19) Chugach Alaska Corporation maps there is a couple other sites  
 (20) that didn't make it onto the map but they showed general site  
 (21) locations  
 (22) Q For sites that damages are actually being claimed you've  
 (23) made a determination then in consultation with the Village  
 (24) Corporations and with Chugach that those sites would be  
 placed  
 (25) on a map?

Vol 23 3680

- (1) A Yes they were placed on a map  
 (2) Q Could you join me down here for a moment Dr Johnson?  
 (3) Dr Johnson you got to take your gear with you  
 (4) Dr Johnson I'm going to show you first what has been  
 (5) marked as 1167 A Can you tell the jury what this is please?  
 (6) A It's a map that shows approximate locations of most of the  
 (7) sites claimed here by Chugach Alaska Corporation  
 (8) Q And those sites are on the mainland?  
 (9) A Knight Island Disk Island LaTouche Island Some of those  
 (10) that I mentioned that are missing there is one up here in the  
 (11) south end of Culross Island another one located up in here I  
 (12) think we saw that there were three more that didn't make it on  
 (13) the map  
 (14) Q And again the map is also marked -  
 (15) A Green Island Marked that it's confidential  
 (16) Q And Dr Johnson could you tell me what 1110 A is please?  
 (17) A It is a map identifying sites claimed by Chenega  
 (18) Corporation here on Knight Island Chenega Island the  
 (19) mainland  
 (20) up here and also Evans Island  
 (21) Q I don't know if the jury way back there can see this or  
 (22) not There is magenta There is a red color -  
 (23) A Yeah In addition I focused on the sites  
 (24) In addition to that what is represented here is oiling  
 (25) Q And for each of these sites both in the Chugach and the  
 (26) Chenega you've identified prepared - that's what we looked it was

Vol 23 3681

- (1) the summary of impacts as to each site?  
 (2) A Yes that those are the impacts  
 (3) Q And Dr Johnson can you identify what Exhibit 1128 is  
 (4) please?  
 (5) A Yes It's a map of the lower Kenai Peninsula showing sites  
 (6) claimed by both Port Graham and English Bay Corporation  
 (7) Q This area down here is the lower Kenai Peninsula down in  
 (8) the lower part of the map?  
 (9) A Yes  
 (10) Q Do you know whether or not who owns this area in here?  
 (11) A I believe that's Port Graham  
 (12) Q Windy Bay Rocky Bay area?  
 (13) A Yeah  
 (14) Q Up here do you know who owns this area?  
 (15) A No when you start getting into parcels, I know generally  
 (16) but I believe that's English Bay  
 (17) Q Dr Johnson with regard to this area is this what's known  
 (18) as Kenai Fjord?  
 (19) A Yes it is  
 (20) Q And do you know Dr Johnson whether or not lands in this  
 (21) area have been irrevocably elected under the Oil Pollution Act  
 (22) of 1990?  
 (23) MR DIAMOND Objection no foundation  
 (24) THE COURT Objection sustained  
 (25) BY MR FORTIER

Vol 23 3682

- (1) Q Have you done an investigation - can I ask her Judge?  
 (2) THE COURT I'm sure it can be established another  
 (3) way counsel don't do it with this witness  
 (4) MR FORTIER I have no further questions  
 (5) THE COURT We are at the end of the trial day  
 (6) MR DIAMOND I have four minutes  
 (7) THE COURT I'll let the jury go Don't talk about  
 (8) the case with anybody don't form or express an opinion on it  
 (9) until it's submitted to you for deliberation We'll see you  
 (10) tomorrow at 8:30  
 (11) (Jury out at 1:26 p.m.)  
 (12) THE COURT Anything to take up counsel?  
 (13) MR PETUMENOS I have a small matter very small  
 (14) matter As a trial as progressed I've begun to feel safer and  
 (15) safer in here and there is a metal detector out in the front  
 (16) and it's not being manned  
 (17) THE COURT I know I told them that they didn't have  
 (18) to do that it's up there for sort of a presence Counsel I  
 (19) consult with security they wanted it there it's going to stay  
 (20) there  
 (21) MR PETUMENOS Okay  
 (22) MR DIAMOND I had a short matter but a large matter  
 (23) as long as I have a captive audience I was going to advise  
 (24) the court that today is my 13th wedding anniversary and  
 (25) although 13 is typically associated with unlucky in my case

Vol 23 3683

- (1) it's been very very lucky  
 (2) THE COURT Do you want to have an evidentiary hearing  
 (3) on that Mrs Counsel?  
 (4) MR DIAMOND Are you directing that at Ms Smith?  
 (5) MR FORTIER Judge I'd like to take up a - I have a  
 (6) few more questions I'd like to take up with counsel  
 (7) THE COURT Talk to counsel see if he screams with  
 (8) pain  
 (9) MR DIAMOND A few more questions tomorrow?  
 (10) MR FORTIER Yes  
 (11) THE COURT Is there anything else for me to take up  
 (12) this afternoon at all?  
 (13) MR DIAMOND No  
 (14) THE CLERK This court stands in recess  
 (15) (Recessed at 1:30 p.m.)

(1) PROCEEDINGS  
 (2) (Jury in at 8 45 a m  
 (3) (Call to Order of the Court)  
 (4) THE CLERK All rise Please be seated  
 (5) THE COURT Good morning counsel  
 (6) MR FORTIER Thank you Good morning Your Honor I  
 (7) had a few more questions Your Honor  
 (8) THE COURT Fine  
 (9) DIRECT EXAMINATION OF LORA L. JOHNSON Ph D  
 (Resumed)  
 (10) BY MR FORTIER  
 (11) Q Dr Johnson one of the maps that we looked at was 1167 A  
 (12) You'll note that some of the triangles - this is for the  
 (13) Chugach Alaska Corporation - the triangles are on property  
 (14) that is not green  
 (15) A Yes that's correct  
 (16) Q It's these triangles in there Can you tell the jury why  
 (17) that is?  
 (18) A Those are sites that are selected by Chugach Alaska  
 (19) Corporation under the Alaska Native Claims Settlement Act  
 (20) They are also generally referred to as 14H 1 site  
 (21) Q They are referred to as 14H-1 sites and they have been  
 (22) selected by Chugach Alaska Corporation?  
 (23) A Yes  
 (24) Q Under 14 H of ANCSA?  
 (25) A Yes

Vol 24 -3690

(1) Q What is that Dr Johnson?  
 (2) A It provides the opportunity for the regional corporation to  
 (3) select heritage sites All of the sites that are indicated on  
 (4) the maps are sites that are - that have been determined  
 (5) eligible  
 (6) Q That's all of the sites that have been noted on the white  
 (7) here for Chugach?  
 (8) A Yes that's correct  
 (9) MR DIAMOND Your Honor I'm going to interpose a  
 (10) late objection and move to strike the answer based on hearsay  
 (11) The sites according to witness are eligible There is no  
 (12) foundation for that what her basis for that statement is is  
 (13) she expressing a legal opinion or stating a fact that someone  
 (14) related to her?  
 (15) MR FORTIER She's stating an opinion as an expert  
 (16) witness that's been retained by a Native corporation to perform  
 (17) archaeology work Your Honor  
 (18) MR DIAMOND The objection -  
 (19) THE COURT The objection is sustained The question  
 (20) and answer are stricken  
 (21) MR FORTIER Can I lay some foundation Your Honor?  
 (22) THE COURT Yes  
 (23) BY MR FORTIER  
 (24) Q Were you retained by Chugach Alaska Corporation to assist  
 (25) in it's 14H 1 process?

Vol 24 3691

Vol 24 3693

- (1) A Yes I have been  
 (2) Q In the process of performing Chugach Alaska 14H 1 work  
 (3) were you - what did you do?  
 (4) A I acted primarily as an archaeologist investigating sites  
 (5) this - investigating the sites excuse me  
 (6) THE COURT Could you approach the bench counsel?  
 (7) Maybe we can save a little time here  
 (8) MR DIAMOND I don't think so  
 (9) THE COURT Hope springs eternal  
 (10) (Bench conference off the record)  
 (11) BY MR FORTIER  
 (12) Q Dr Johnson you mentioned - yesterday you talked about  
 (13) the remediation program the program to fix - that the  
 (14) impacts - that you told us about that you recognized from the  
 (15) oil spill You talked about the reconnaissance work that would  
 (16) be necessary the survey work You talked about the  
 (17) remediation the excavation work You talked about the  
 (18) curation work In the writing of ethnographic or writing of  
 (19) reports Was there any other component of the program?  
 (20) A Yes There is one additional component and that is site  
 (21) monitoring for the length of time that it takes to address all  
 (22) of the sites So in other words I can't recall off the top  
 (23) of my head what the total number of years is but it would be  
 (24) for the duration of that period until the sites have been  
 (25) addressed

- (1) Q Can you tell the jury what your understanding is of the  
 (2) Windy Bay incident?  
 (3) A What my understanding is -  
 (4) MR DIAMOND Foundation please Objection no  
 (5) foundation This is hearsay  
 (6) BY MR FORTIER  
 (7) Q Dr Johnson how did you hear of the Windy Bay incident?  
 (8) A In 1989 in my capacity as a member of the oil spill  
 (9) response team we had the opportunity to review numerous  
 (10) documents And also speaking with members of the oil spill  
 (11) response team that were located while outside of Prince William  
 (12) Sound  
 (13) Q Your review of these documents was that in the ordinary  
 (14) course of your business as part of the oil spill response  
 (15) team? In other words is that what you were hired to do was  
 (16) to review documents?  
 (17) A That's correct  
 (18) Q And were these documents from the Exxon Cultural  
 (19) Resources  
 (20) Program?  
 (21) A Yes they were  
 (22) Q Were they State documents?  
 (23) A I believe that some of them were State and some of them  
 (24) were Exxon documents  
 (25) Q And they were both received by you - by the OSRT the oil  
 spill response team as part of its job of - with regard to

Vol 24 3692

Vol 24 3694

- (1) Q Why are you recommending site monitoring?  
 (2) A Basically to just keep track of what is happening at these  
 (3) sites between now and when it becomes possible to address  
 (4) them  
 (5) archaeologically Basically we can't address all of them next  
 (6) year that type of thing or the year after because of the  
 (7) number of sites And so it's basically set up to monitor for  
 (8) potential impacts In particular vandalism  
 (9) Q One of the impacts you identified yesterday Dr Johnson  
 (10) was loss of confidentiality Does the monitoring component of  
 (11) your recommendation have anything to do with the loss of  
 (12) confidentiality of those sites on account of the oil spill?  
 (13) A Yes It does It basically - a lot of these sites one of  
 (14) the basics for recommending the entire program is because of  
 (15) this issue of confidentiality and the monitoring program is an  
 (16) attempt to keep track of what is happening at these sites  
 (17) because of fears of vandalism or concerns for vandalism  
 (18) because  
 (19) of this loss of confidentiality  
 (20) Q This loss of confidentiality in your opinion was on  
 (21) account of the oil spill is that correct?  
 (22) A Yes I believe it is  
 (23) Q Now Dr Johnson one of the areas that we discussed  
 (24) yesterday was an area of Port Graham land called Windy Bay?  
 (25) A Yes  
 (26) Q Have you ever heard of the Windy Bay incident?  
 (27) A Yes

- (1) the oil spill is that correct?  
 (2) A That's correct  
 (3) Q And from those documents did you gain an understanding of  
 (4) the Windy Bay incident?  
 (5) A Yes I did  
 (6) Q Besides the documents that you reviewed did you also  
 (7) look - or did you also speak with anybody concerning what's  
 (8) been known as the Windy Bay incident?  
 (9) A Yes I spoke with Pat Norman  
 (10) Q Why did you speak with Pat Norman?  
 (11) A Because I wanted to get sort of the other overall  
 (12) perspective on what had happened at Windy Bay  
 (13) Q When you spoke with Mr Norman - who is Mr Norman?  
 (14) A He is the President of Port Graham Corporation  
 (15) Q When you spoke with Mr Norman was that in your capacity  
 (16) as a consultant with regard to archaeology for Port Graham  
 (17) Corporation?  
 (18) A That's correct  
 (19) Q Did you gain an understanding in your conversations with  
 (20) Mr Norman about what's been known as the Windy Bay  
 (21) incident?  
 (22) A Yes I did  
 (23) Q And besides looking at documents and speaking with  
 (24) Mr Norman did you go to Windy Bay?  
 (25) A Yes I did  
 (26) Q When were you in Windy Bay?

Vol 24 3695

- (1) A It was in May of this year I can't recall the exact date  
 (2) but somewhere around the 23rd somewhere in there 27th  
 (3) Q Now you've also read the 1989 Exxon Valdez Cultural  
 (4) Resource book?  
 (5) A I've read large parts of it  
 (6) Q Did you read the portion of the report pertaining to the  
 (7) Windy Bay incident?  
 (8) A Yes I have  
 (9) Q Based upon your review of documents in 1989 your review  
 (10) of  
 (11) the Exxon Valdez Cultural Resource Program documents that  
 (12) you've referred to over the course of the past day the 1989  
 (13) report and your conversations with Mr Norman did you form  
 (14) an  
 (15) opinion as to what occurred at Windy Bay?  
 (16) A Yes I did basically  
 (17) MR DIAMOND Your Honor before an answer is given  
 (18) I'd like to interpose an objection it's blatant hearsay  
 (19) THE COURT Yes it is  
 (20) MR PETUMENOS May I have an opportunity to approach  
 (21) the bench?  
 (22) THE COURT It might not be hearsay if it's for  
 (23) another purpose other than the matter asserted but it doesn't  
 (24) sound like it is  
 (25) (Sidebar out of the hearing of the jury )  
 (26) MR PETUMENOS Judge we are entitled to support the  
 (27) opinion of the witness on the loss of confidentiality and the

Vol 24 3696

- (1) damage to the sites and you were earlier restrictive on your  
 (2) proof to incidents that occurred on our property We are  
 (3) entitled to put some basis and foundation of hearsay or not for  
 (4) the expert's opinion on this  
 (5) She believes that the confidentiality of the sites have  
 (6) been breached and damaged Exxon's whole thesis in this  
 (7) thing  
 (8) is there is hardly any incidents there is hardly any support  
 (9) for this and speculating and so forth and we've been  
 (10) restricted just to this particular property  
 (11) If we were further restricted but not being permitted to  
 (12) put the basis for the opinion on the property that we own then  
 (13) the opinion is going to be out there standing like there is no  
 (14) support for it  
 (15) THE COURT Counsel look the question seemed to be  
 (16) directed at what happened at Windy Bay I don't know what  
 (17) happened at Windy Bay Somebody might have hit somebody  
 (18) with a  
 (19) shovel  
 (20) MR PETUMENOS I understand the problem  
 (21) MR FORTIER There is another part of the problem  
 (22) We expect that Exxon in its proof will say there are only two  
 (23) incidents of vandalism reported in the oil spill areas  
 (24) MR PETUMENOS He needs to know what the incident in  
 (25) Windy Bay was  
 (26) MR FORTIER The incident in Windy Bay we contend  
 (27) was the oil spill workers trying to protect artifacts at Windy

Vol 24 - 3697

- (1) Bay in the upland Exxon takes a position with these same  
 (2) people who are vandalizing sites  
 (3) THE COURT Their own people?  
 (4) MR FORTIER Yeah  
 (5) THE COURT So this is all directed at the question of  
 (6) whether or not there has been a loss of confidentiality is  
 (7) that it?  
 (8) MR FORTIER It's directed at the question of whether  
 (9) or not there has been a loss of confidentiality and whether or  
 (10) not there was harm  
 (11) THE COURT You know I just get the feeling that the  
 (12) witness is going to answer somehow differently than the lawyers  
 (13) are talking so I better send the jury out  
 (14) (Sidebar concluded )  
 (15) THE COURT I have to send you out for a minute  
 (16) (Jury out at 8 59 a m )  
 (17) THE COURT Mr Fortier you can ask your questions  
 (18) and I want to hear what the witness has to say  
 (19) BY MR FORTIER  
 (20) Q Dr Johnson from the reports you received in 1989 what  
 (21) did you understand the Windy Bay incident was all about?  
 (22) A Basically from the reports in 1989 It talked about the  
 (23) collection of artifacts at Windy Bay by oil spill workers from  
 (24) Port Graham  
 (25) Q And from those reports was there any conclusion reached as

Vol 24 - 3698

- (1) to whether the artifacts were collected?  
 (2) A In terms of - basically what it comes down to is from my  
 (3) review of those documents I don't think it was clear where  
 (4) exactly on the beach they were collected from and that's -  
 (5) from the documents I don't think it was clear  
 (6) Q So from the documents there was a substantial question in  
 (7) your mind as to whether or not the artifacts were collected  
 (8) above or below mean high tide?  
 (9) A Yes  
 (10) Q Can you tell us what the Exxon Cultural Resource Program  
 (11) report states - states what the location is or what the Windy  
 (12) Bay incident was?  
 (13) A I'm trying to think back I haven't looked at that just  
 (14) recently but as I recall it refers to the artifacts being  
 (15) collected on the beach I think is what it says I'd have to  
 (16) look at the documents but -  
 (17) Q Do you know if it calls it a vandalism incident?  
 (18) A Yes I believe it does refer to that  
 (19) Q One of only two incidents of vandalism in the entire oil  
 (20) spill area?  
 (21) A That's correct  
 (22) Q Now you spoke about this matter with Mr Norman as well?  
 (23) A Yes I did  
 (24) Q When you spoke about the matter with Mr Norman what was  
 (25) your understanding?

Vol 24 3699

- (1) A My understanding is that the artifacts were collected from  
 (2) above mean high tide in other words corporation lands  
 (3) Q Did Mr Norman explain to you why the artifacts were  
 (4) collected?  
 (5) A He explained and I had actually had a general  
 (6) understanding of it even in 1989 that they were collected  
 (7) because they feared that they would be basically picked up by  
 (8) oil spill workers  
 (9) Q So they feared a loss of confidentiality?  
 (10) A Yes  
 (11) Q Did Mr Norman explain to you why he was fearful of the  
 (12) artifacts being picked up by other oil spill workers?  
 (13) A Yes because there were oil spill workers in the area at  
 (14) the time I believe that they were like boom tenders or  
 (15) setting up booms this type of thing  
 (16) Q Tell us what Mr Norman explained about - about the oil  
 (17) spill boom workers in the vicinity of the artifacts?  
 (18) A Yeah Basically it was that there was upland access that  
 (19) they were on the site I think that there was a general  
 (20) concern for people collecting artifacts  
 (21) Q Can you tell us what Pat Norman described about the  
 (22) location of the boom as in relation to the midden?  
 (23) A I believe it was very close by  
 (24) Q Do you recall now you've also - do you know David  
 McMahan  
 (25) is?

Vol 24 3700

- (1) A Yes  
 (2) Q Who is David McMahan?  
 (3) A State archaeologist  
 (4) Q Do you know whether or not David McMahan was in Windy  
 Bay  
 (5) in 1989?  
 (6) A Yes he was  
 (7) Q Was one of the reports you read by David McMahan?  
 (8) A Yes it was  
 (9) Q And have you recently read Mr McMahan's deposition  
 (10) concerning the Windy Bay incident?  
 (11) A Yes I have  
 (12) Q Can you tell us what your understanding is?  
 (13) A My understanding is he's not clear where the artifacts were  
 (14) collected That he doesn't know  
 (15) Q He's not clear on where they were collected -  
 (16) A In terms of upland versus intertidal that's correct  
 (17) Q So Dr Johnson based upon your review of the documents  
 in  
 (18) 1989 your discussions with Mr Norman and your review of the  
 (19) deposition of Mr McMahan do you have an opinion as to  
 whether  
 (20) or not the collection of artifacts by the Windy Bay - or by  
 (21) the Port Graham crew in 1989 constitutes an incident of  
 (22) vandalism?  
 (23) A I don't believe that it does no  
 (24) Q And based upon your review of the documents and your  
 (25) discussion with Mr Norman do you have an understanding as  
 to

Vol 24 3701

- (1) whether or not what Port Graham workers did at Windy Bay was  
 (2) acceptable under the Port Graham Cultural Resources  
 Program?  
 (3) A I believe under their general program in terms of  
 (4) protecting artifacts by collecting them that it was consistent  
 (5) with the program  
 (6) Q And based upon your understanding of other oil spill boom  
 (7) workers in the area that weren't related to Port Graham do you  
 (8) think it was consistent with wise cultural resource management  
 (9) in general?  
 (10) A Well it's one of those situations where as an  
 (11) archaeologist you know I would do more in addition I can  
 (12) understand the collection of artifacts out of fear of theft and  
 (13) vandalism because archaeologists do this as well so it's one  
 (14) of these where it's always good if you can document locations  
 (15) and things like that And this is what I would recommend  
 (16) but I can understand the collection of artifacts under those  
 (17) circumstances  
 (18) MR FORTIER That's my offer of proof Your Honor  
 (19) MR DIAMOND May I inquire a little further?  
 (20) THE COURT Briefly I don't want to hold long  
 (21) stories it stands or falls on its own  
 (22) MR DIAMOND I can argue it This is second and  
 (23) third degree hearsay ultimately culminating in an opinion as  
 (24) to whether something was an act of vandalism or not This  
 (25) witness is not qualified as an expert in terms of site

Vol 24 3702

- (1) reconstruction to determine whether the crime the State  
 (2) charged was committed It proves that an act of vandalism  
 (3) didn't happen did not happen and I don't see how it could  
 (4) help the case  
 (5) If you would like me to bring out the facts of this  
 (6) witness -  
 (7) THE COURT Is it your intention to bring out the  
 (8) facts with this witness in your defense case?  
 (9) MR DIAMOND No  
 (10) THE COURT No?  
 (11) MR DIAMOND No There is one fact that I was going  
 (12) to elicit and that is concerning Mr Norman as to who the  
 (13) witness mentioned yesterday not with respect to this incident  
 (14) but just generally Mr Norman  
 (15) THE COURT To the extent that she's an  
 (16) archaeologist - and confidentiality is an important issue with  
 (17) archaeologists in particular the archaeologists in this  
 (18) area - it appears to me that she has taken into account all of  
 (19) the paper generated what the people - what she's gleaned  
 (20) about the particular site to show that there may have been a  
 (21) loss of confidentiality about some artifacts in that area  
 (22) I mean that appears to me to be something she could give a  
 (23) legitimate opinion on But to make - for her to make a  
 (24) distinction between people who were collectors for valid  
 (25) purposes and people who were thieves that appears to me to be

Vol 24 3703

- (1) simply a factual matter not expert testimony  
 (2) And besides it doesn't seem to be a contested issue here  
 (3) at least from what I glean from defense counsel The problem  
 (4) with the offer of proof is that it's hearsay mingled with -  
 (5) it's hearsay that is the basis for opinion mingled with hearsay  
 (6) that's inadmissible and counsel I am having a problem  
 (7) figuring out whether you understand the difference  
 (8) I don't want to go in there and edit your testimony but  
 (9) testimony that deals with the incident as it relates to a loss  
 (10) of confidentiality appears to me to be admissible She has an  
 (11) opinion about that and then a threat in the future  
 (12) But testimony about the motivation of people who are  
 (13) picking up artifacts on that beach should come from those  
 (14) people not from her  
 (15) MR DIAMOND Your Honor on that basis we would  
 (16) object It's simply not relevant What happened on that  
 (17) beach it has nothing to do with loss of confidentiality This  
 (18) was a clean up site I'll give you my offer of proof in  
 (19) response  
 (20) THE COURT If it's on a clean up site and it has  
 (21) artifacts on it and the artifacts according to her stretch  
 (22) up into the uplands then it's certainly an issue whether or  
 (23) not that site and the surrounding area which may have been  
 (24) confidential in the past are no longer confidential and  
 (25) therefore need protection right?

Vol 24 3704

- (1) MR DIAMOND That's not disputed It is not  
 (2) disputed In 1989 there were artifacts on the beach at the  
 (3) Windy Bay site It's not disputed that Mr Norman collected  
 (4) them And if the witness wants to testify that she had  
 (5) secondhand knowledge of that and that supports an opinion of  
 (6) hers how the oil spill workers may now know about sites that  
 (7) they didn't know about before I think as you've just said is  
 (8) entirely permissible  
 (9) For her to go beyond that and get involved in the  
 (10) controversy that existed in 1989 - and apparently plaintiffs  
 (11) want to recreate in this courtroom today as to whether  
 (12) Mr Norman was acting legally or lawfully seems to me to be  
 (13) totally irrelevant proves not their case but proves our case  
 (14) with this not being an incident of vandalism  
 (15) But if you want to get into that -  
 (16) THE COURT Wait a minute I think I agree with you  
 (17) Sometimes I try to think what I say and what you say and I'm  
 (18) trying to figure out whether we've got a controversy here I  
 (19) don't think I disagree with you  
 (20) The act of vandalism whether or not it was an act of  
 (21) vandalism is not the issue here The issue is loss of  
 (22) confidentiality  
 (23) MR DIAMOND So long as we're not getting into what  
 (24) he did and what they said and how this was characterized our  
 (25) objection would be limited to one of relevance

Vol 24 3705

- (1) THE COURT Thank you  
 (2) MR PETUMENOS Can I have a moment Your Honor?  
 (3) THE COURT Do you have anything else counsel?  
 (4) MR FORTIER Well I don't think I do Your Honor  
 (5) THE COURT I'm concerned that you don't go - you  
 (6) don't make this into a controversy that doesn't have to be  
 (7) explored in this particular courtroom So to the extent that  
 (8) she talks about Windy Bay and what happened there as a  
 support  
 (9) for her opinion if that's what she's doing that  
 (10) confidentiality may be lost there and therefore protection is  
 (11) needed She's entitled to testify to that Is that what you  
 (12) intend to do?  
 (13) MR FORTIER That's what I want to do  
 (14) THE COURT Be very careful counsel I'll come down  
 (15) on you like a load of bricks if you go beyond that  
 (16) MR FORTIER I will Your Honor  
 (17) (Jury in at 9 12 a m)  
 (18) THE COURT The jury is present counsel Go ahead  
 (19) BY MR FORTIER  
 (20) Q Dr Johnson with regard to the Windy Bay incident do you  
 (21) know whether or not artifacts based upon your review of the  
 (22) documents and so on whether or not there were artifacts  
 known  
 (23) to exist in the Windy Bay area?  
 (24) A I believe that artifacts - that is a site that was known  
 (25) in the area

Vol 24 3706

- (1) Q And based upon your discussion with Port Graham did you  
 (2) arrive at an opinion as to whether or not the site was a known  
 (3) site to Port Graham Corporation?  
 (4) A Yes  
 (5) Q Was it?  
 (6) A Yes  
 (7) Q And based upon your review of the documents in your  
 (8) discussions with Mr Norman did you arrive at an opinion as to  
 (9) whether or not there were other clean up workers besides Port  
 (10) Graham personnel in the area in 1989?  
 (11) A Yes  
 (12) Q So Dr Johnson did you arrive at an opinion as to whether  
 (13) or not there was a feared loss of confidentiality given those  
 (14) factors?  
 (15) A Yes  
 (16) Q What is your opinion?  
 (17) A That there was a fear of loss of confidentiality  
 (18) MR FORTIER Judge I've got to get some photographs  
 (19) in  
 (20) THE COURT All right go ahead  
 (21) MR FORTIER Just a few more  
 (22) BY MR FORTIER  
 (23) Q Dr Johnson I'm going to show you what's been marked as  
 (24) 1387 and if you could just identify what the photograph is for  
 (25) the record please?

Vol 24 3707

- (1) A Yes It s artifacts Stone tool that is located at Panhat  
 (2) Point  
 (3) Q Was this a photograph that you took?  
 (4) A Yes it is  
 (5) Q When did you take it?  
 (6) A The spring of this year  
 (7) Q Does the photograph accurately reflect what you observed at  
 (8) the site?  
 (9) A Yes it does Actually the photograph has a date on it as  
 (10) well It s June 28th 1994  
 (11) Q And this is Panhat Point?  
 (12) A Yes  
 (13) Q Now I m going to show you Dr Johnson what s been  
 marked  
 (14) as plaintiffs exhibit 1288 and I m just going to refer to the  
 (15) last three photos in 1388 (sic) I think you ve identified  
 (16) everything else besides the last three photos?  
 (17) MR DIAMOND Counsel can you identify those by  
 (18) number  
 (19) MR FORTIER Yes 1288 58 1288 57 and 1288 59  
 (20) THE COURT 1288 or 1388 counsel?  
 (21) MR FORTIER 1288 Your Honor  
 (22) A Yes These are photographs that were taken by Rita  
 (23) Miraglia who was also on the oil spill response team and they  
 (24) are photographs of the south end of Crafton Island Picture of  
 (25) Omni boom and things like that

Vol 24 3708

- (1) BY MR FORTIER  
 (2) Q Were the photographs taken under your direction?  
 (3) A Not particularly under my direction She basically went  
 (4) and took them herself  
 (5) Q She was working under your supervision correct?  
 (6) A No actually we were working together  
 (7) Q You were both on the oil spill response team?  
 (8) A That s correct  
 (9) Q And they were taken during that period of time?  
 (10) A That s correct  
 (11) Q And those show scenes at Crafton Island?  
 (12) A Yes  
 (13) Q Which is the Chugach site?  
 (14) A Yes This particular location yes the Chugach site we  
 (15) were talking about yesterday  
 (16) Q And finally Dr Johnson I wanted to show you a series of  
 (17) eight pictures They are marked 1295 1 2 -3 5 -8 6  
 (18) 7 10 14 11 15 16 20 and 17 And can you just  
 (19) tell us where the pictures were obtained?  
 (20) A Yes The pictures were taken - let me just double check  
 (21) Yes these were all photographs that came from the Exxon  
 (22) Cultural Resource Program  
 (23) Q Again these were pictures you obtained through the  
 (24) discovery process?  
 (25) A That s correct

Vol 24 3709

- (1) Q And the pictures were labeled by the Exxon Valdez Cultural  
 (2) Resource Program?  
 (3) A Yes that s correct  
 (4) Q Dr Johnson I d like to show you a series of photographs  
 (5) that are in general 1296 as an exhibit They have got a  
 (6) series of dash numbers to them Now can you tell us where  
 (7) these photographs came from?  
 (8) A These also come from the Exxon Cultural Resource Program  
 (9) Q From - okay And again they were all labeled?  
 (10) A They were identified on the photo log  
 (11) Q And they have labels on the back of them?  
 (12) A Yes they do  
 (13) Q And those are based upon information from the Exxon  
 Valdez  
 (14) photo log?  
 (15) A That s correct  
 (16) Q Did you attempt to make the labels as accurate as the photo  
 (17) log to reflect the information?  
 (18) A I believe they are accurate  
 (19) MR FORTIER No further questions Your Honor  
 (20) THE COURT Okay counsel  
 (21) MR DIAMOND Your Honor it s so sudden it will take  
 (22) me a minute to regroup  
 (23) THE COURT Sure  
 (24) CROSS EXAMINATION OF LORAL JOHNSON Ph D  
 (25) BY MR DIAMOND

Vol 24 3710

- (1) Q Good morning again Dr Johnson  
 (2) A Good morning  
 (3) Q I d like to talk to you this morning about some specific  
 (4) sites that you ve looked at and that you ve determined with  
 (5) Dr Lobdell were harmed as a result of the oil spill  
 (6) According to documents that your counsel produced there  
 (7) are 44 places in number is that right?  
 (8) A I believe that s generally correct I don t know the exact  
 (9) number  
 (10) Q And you ve looked at them on behalf of Chenega  
 Corporation  
 (11) correct?  
 (12) A Yes  
 (13) Q And English Bay Port Graham and Chugach?  
 (14) A That s correct  
 (15) Q Tatitlek and Eyak don t have any archaeological claims that  
 (16) you re involved in is that right?  
 (17) A Those are sites that I looked at  
 (18) Q Plaintiffs 1292  
 (19) Dr Johnson I have on the screen what s been marked as  
 (20) plaintiffs 1292 It s entitled Chenega Corporation  
 (21) Archaeological Damages Summary Do you see that on your  
 (22) monitor?  
 (23) A Yes  
 (24) Q Are those all places at which you found harm to  
 (25) archaeological resources?

Vol 24 3711

- (1) A Yes they are  
 (2) Q And next to each one if we take the first one Evans  
 (3) Island there is an amount my bad eyesight says about  
 (4) 115 000  
 (5) A That s correct  
 (6) Q And you and Dr Lobdell jointly determined that the damage  
 (7) to the archaeological resources at Evans Island was in your  
 (8) opinion worth \$115 000?  
 (9) MR PETUMENOS I have an objection I think this is  
 (10) beyond the scope of direct This material was to be addressed  
 (11) by the next witness  
 (12) THE COURT Not yet counsel The objection is  
 (13) overruled  
 (14) BY MR DIAMOND  
 (15) Q Correct?  
 (16) A Could you repeat the question?  
 (17) Q Yes You and Dr Lobdell jointly determined that the  
 (18) damages or the compensation that should be paid to Chenega  
 (19) Corporation for harm done to archaeological resources at the  
 (20) Evans Island site was \$115 000 and change isn t that right?  
 (21) A Yes This is - the number is an outcome of our damage  
 (22) assessment yes  
 (23) Q You told us yesterday that in your view an appropriate  
 (24) remedy for harm done to archaeological resources by the spill  
 (25) was a program of remediation?

Vol 24 3712

- (1) A Yes  
 (2) Q Is that right?  
 (3) A That s correct  
 (4) Q And that includes site surveying going out and doing  
 (5) Indiana Jones type work digging curating what s found  
 (6) publishing results is that right?  
 (7) A I don t think that accurately categorizes -  
 (8) Q Those are some of the things you would do?  
 (9) A We wouldn t do any Indiana Jones type archaeology I think  
 (10) what this addresses and I think it s important to understand  
 (11) what the program we outlined We re interested in the  
 (12) archaeological context the recovery of archaeological context  
 (13) In some cases it may involve excavation in fact many cases  
 (14) it does In some cases it simply involves testing Other  
 (15) cases it involved epigraphic research There is a wide range  
 (16) of activities  
 (17) Q You went on a site by site basis a place by place basis  
 (18) and looked at what you thought ought to be done to address  
 (19) harms that you found resulted from the spill correct?  
 (20) A Yes What we did was we looked at the group of sites in  
 (21) the area the oil impact area and first identify whether we  
 (22) felt there was harm to the sites After that we basically  
 (23) came up with the program that we did for each of the sites  
 (24) Q And then you went back and you basically calculated a price  
 (25) tag to do the work that you thought was appropriate for that

Vol 24 3713

- (1) site?  
 (2) A Yes that s -  
 (3) Q That s how we come up with \$115 167 for Evans Island isn t  
 (4) that right?  
 (5) A Yes it is  
 (6) Q I d like to talk to you this morning about some of these  
 (7) sites and what s out there and what harms you found resulted  
 (8) from the spill and your damage analysis and I d like to spend  
 (9) some time doing that  
 (10) Let s begin with - back to Evans Island Let s pick the  
 (11) second of the Chenega sites Granite Bay  
 (12) A Yes  
 (13) Q Just for the benefit of the jury I m going to show you  
 (14) what s been marked as plaintiffs 1167 A This is a Chugach  
 (15) map It s got the eastern - I m sorry western Prince William  
 (16) Sound Can you just point out roughly where Granite Bay is?  
 (17) A I believe it s up in this area up here (indicating)  
 (18) Q Can you be more specific than that?  
 (19) A Not without additional identification  
 (20) Q Do you know where it is in relationship to Eshamy Bay?  
 (21) A I believe it s south  
 (22) Q Do you know how far south?  
 (23) A Not off the top of my head no  
 (24) Q Do you know how far north or south of the tip of Chenega  
 (25) Island it is?

Vol 24 3714

- (1) A Not off the top of my head  
 (2) Q Because you ve never been there have you?  
 (3) A No I have not  
 (4) Q It s a true statement Is it not Dr Johnson that you  
 (5) were - the sum total of your knowledge of the archaeological  
 (6) and cultural resources at Granite Bay come from your review of  
 (7) secondary materials?  
 (8) A Yes It comes from the review of documents  
 (9) Q And one of those documents that you mentioned for us  
 (10) yesterday was a state document AHRS document?  
 (11) A Yes  
 (12) Q In determining harm caused by the spill to these various  
 (13) sites you relied on the state AHRS documents to determine  
 (14) what was out there?  
 (15) A When it s available that s one of the documents I  
 (16) consulted yes  
 (17) Q I m going to put on the screen Defendants Exhibit 16142 13  
 (18) with counsel s consent I know this is a little bit hard to  
 (19) read Let me zoom in on the top portion of the document Can  
 (20) you see that Dr Johnson?  
 (21) A Yes I can  
 (22) Q This is entitled Alaska Heritage Resources Survey This is  
 (23) the document that the State prepares with respect to all  
 (24) archaeological places and resources in the state?  
 (25) A Not all places that are heritage sites are in this but

Vol 24 3715

- (1) there is an attempt to incorporate that information yes  
 (2) Q And what the State does among other things is collect and  
 (3) collate all the information available as to what is at that  
 (4) site based on reports by others as well as its own  
 (5) inspections?  
 (6) A Basically what these forms do is try to summarize you  
 (7) might say highlights of what's there in terms of being  
 (8) complete They are not always complete and in some cases  
 they  
 (9) are not totally accurate  
 (10) Q Let's take a look at what the State says is at the Granite  
 (11) Bay site if we can  
 (12) According to this there are the remains of two tent frame  
 (13) structures  
 (14) A Yes  
 (15) Q Five 55 gallon drums inside the tent structures are a set  
 (16) of rusted bed springs and a rusted shovel And there is also  
 (17) a bar And it also makes reference to a pile of lumber with  
 (18) round nails several iron bars Are you aware of any other  
 (19) resources at the Granite Bay site?  
 (20) A Yes If you continue down to culturally modified trees  
 (21) Q I'm sorry yes let's talk about culturally modified trees  
 (22) for a second Those are known in the trade as CMTs?  
 (23) A That's correct  
 (24) Q And a culturally modified tree is any tree which shows any  
 (25) marks that might have been caused by humans?

Vol 24 3716

- (1) A They generally refer to a certain types of marks  
 (2) Q But marks that you could attribute to human action as  
 (3) opposed to animal action?  
 (4) A Yes that's correct or other natural forms  
 (5) Q And you would also consider a culturally modified tree to  
 (6) be a stump?  
 (7) A Sometimes they are included Very often there is a  
 (8) distinction made between stumps When I record CMTs I  
 (9) generally refer to those with the scars on the trunk and  
 (10) identify stumps separately  
 (11) Q You can't assume that every CMT on site is a sign of human  
 (12) habitation is that right?  
 (13) A No You wouldn't assume it's habitation no  
 (14) Q The materials that are listed here the manufactured  
 (15) materials you have no reason to believe that they have any  
 (16) Native origin or Native connection?  
 (17) A It depends on the interpretation In other words they may  
 (18) be western objects but the site itself may have been - or  
 (19) appears to have been occupied or may have been occupied by  
 (20) Natives It depends  
 (21) Q But you don't know that?  
 (22) A No that's part of what the research would be  
 (23) Q But sitting here today you don't know that there is any  
 (24) Native connection between these manufactured items and any  
 (25) habitation that took place at Granite Bay?

Vol 24 3717

- (1) A That's correct  
 (2) Q All of the materials listed on this AHRS form are in the  
 (3) uplands are they not?  
 (4) A The features or the items that are identified here in the  
 (5) AHRS form I believe are all in the uplands  
 (6) Q The oiling at Granite Bay didn't reach the uplands did it?  
 (7) A I don't recall I'd have to look at the forms to see the  
 (8) distribution  
 (9) Q Do you have any reason to believe that oil from the Exxon  
 (10) Valdez spill proceeded uphill beyond the beach area in Granite  
 (11) Bay and reached the uplands?  
 (12) A There are a lot of documents that indicate there is oiling  
 (13) above mean high tide  
 (14) Q Do you have any reason to believe that that happened to  
 (15) Granite Bay?  
 (16) A Again I would have to look at the individual documents  
 (17) Q Sitting here today you can't tell us that?  
 (18) A Not off the top of my head  
 (19) Q It's a fair statement though that you're not aware of any  
 (20) oiling of any of these materials listed on the AHRS form isn't  
 (21) that right?  
 (22) A I'm not aware of specific oiling of these no  
 (23) Q You have no reason to believe do you that any of these  
 (24) items were trampled or disturbed or otherwise affected in any  
 (25) way by clean up workers during the 1989 1990 cleanup?

Vol 24 3718

- (1) A I don't know specifically that these were  
 (2) Q You have no basis to say that that happened?  
 (3) A I have not been at the site and I don't recall specific  
 (4) reports of you know human impact here  
 (5) Q In coming up with a damage figure for this site you  
 (6) reviewed all the available documentation have you not?  
 (7) A No I have not reviewed all of it I reviewed as much as I  
 (8) could  
 (9) Q There are things pertaining to Granite Bay that you have  
 (10) not reviewed?  
 (11) A It's quite possible  
 (12) Q But you can't say that's true sitting here today?  
 (13) A I'm not sure what you're saying  
 (14) Q Are you aware of anything out there that would give us more  
 (15) information as to the effects of the oil spill or the cleanup  
 (16) of the cultural resources at Granite Bay?  
 (17) A There is documentation of the oiling and I believe that's  
 (18) some of the exhibits that we've offered before I can't  
 (19) think - I don't know on a site by site basis off the top of  
 (20) my head the degree of oiling in each site  
 (21) Q My question is Are you aware of anything that would  
 (22) pertain to the effects of the spill or the cleanup on the site  
 (23) that you did not review?  
 (24) A No I think if I had reviewed it I would be aware of  
 (25) it

Vol 24 3719

- (1) Q It s true is it not coming up with your analysis of harm  
 (2) to archaeological sites you attempted to review all relevant  
 (3) information that you could put your hands on is that right?  
 (4) A As much as we could yes  
 (5) Q And in none of that documentation have you seen any  
 (6) reference whatsoever to any disturbances by clean up workers  
 of  
 (7) the cultural resource workers at Granite Bay?  
 (8) A As I sit here today I don t recall specific instances In  
 (9) general during my review of the documents I did come across  
 (10) different instances that did not even make it into our charts  
 (11) and so it s quite possible that there is something referring to  
 (12) this I don t remember - I don t recall  
 (13) Q Are you telling the jury that you are aware of any  
 (14) disturbances by clean up workers to the artifacts or  
 (15) archaeological resources at Granite Bay?  
 (16) A What I m saying is that in the course of reviewing  
 (17) documents basically we looked at the different types of  
 (18) documents whether it was degrees of oiling or clean up  
 (19) activities We did not go through and make detailed lists of  
 (20) every type of impact that we came across on a site-by site  
 (21) basis We tried to gather this information for the exhibits  
 (22) but it does not include all of the information out there so  
 (23) for this particular site I m not aware of particular cases of  
 (24) impact for this one  
 (25) Q So you can t tell us anything happened at this site in 1989

Vol 24 3720

- (1) or 1990?  
 (2) A I would say that it was oiled  
 (3) Q You can t tell us if anything happened to these  
 (4) archaeological resources Isn t that right?  
 (5) A I think a distinction needs to be made between the physical  
 (6) remains that are listed in the AHRs report -  
 (7) Q That s what I m talking about You can t tell us that in  
 (8) 1989 or 1990 there was any impact to these physical resources?  
 (9) A Again what I want to make clear is we make a distinction  
 (10) between the site and what I would consider like clear  
 (11) indicators of the activity at the site These particular  
 (12) items I m not aware if any particular one of these was oiled  
 (13) however the site itself I believe was  
 (14) Q At the shoreline?  
 (15) A Yes  
 (16) Q In your review of the documentation it is true is it not  
 (17) that you have seen no indication whatsoever that after the  
 (18) cleanup there was any subsequent vandalism at the site?  
 (19) A Again I m not aware of specific instances of vandalism  
 (20) here no  
 (21) Q At this site?  
 (22) A No  
 (23) Q You ve come up with a damage assessment for Granite Bay  
 (24) have you not?  
 (25) A Yes Jack Lobdell and myself reviewed this

Vol 24 3721

- (1) Q PX1268 page 22  
 (2) MR PETUMENOS May we approach the bench?  
 (3) THE COURT Yes  
 (4) (Bench conference off the record)  
 (5) BY MR DIAMOND  
 (6) Q Dr Johnson you recognize that document don t you?  
 (7) A Yes I do  
 (8) Q As hard as it is to read this is the damage calculation  
 (9) that you and Dr Lobdell jointly came up with for Granite Bay  
 (10) is it not?  
 (11) A Yes it is  
 (12) Q There are three parts to this -The top part is a  
 (13) computation of the cost for archaeologists time working on  
 (14) this site under your program is it not?  
 (15) A What it is is - it lists the investigators the number of  
 (16) hours and then the estimated cost for those yes  
 (17) Q We ll get to that I just want to - if I can break this  
 (18) up into three parts The part above the red line is your  
 (19) estimate of the number of hours of archaeologists time it  
 (20) would take to do this project is that correct?  
 (21) A Yes it is  
 (22) Q And then in the middle there are all the incidental costs  
 (23) for analysis research et cetera?  
 (24) A Yes that s correct  
 (25) Q And then on the bottom you ve come up with a figure that

Vol 24 3722

- (1) you adjust for inflation given the fact that you won t be able  
 (2) to do all these sites in one year?  
 (3) A Yes that s correct  
 (4) Q Zoom in on the top part of this if we can  
 (5) Now Dr Johnson your analysis of the work that needs to  
 (6) be done on the Granite Bay site includes 40 hours of time of a  
 (7) principal investigator?  
 (8) A That s correct  
 (9) Q A principal investigator would be a senior archaeologist?  
 (10) A Yes it would be the person in charge  
 (11) Q Someone such as yourself?  
 (12) A Yes  
 (13) Q And you ve also determined that in order to do the  
 (14) requisite survey inspection testing and excavation work at  
 (15) Granite Bay you would require the assistance of a field  
 (16) archaeologist?  
 (17) A Yes  
 (18) Q And a field ethnohistorian?  
 (19) A That s correct  
 (20) Q And a support worker?  
 (21) A That s correct  
 (22) Q And you ve given your- a contingency for specialists here  
 (23) as well?  
 (24) A That s correct  
 (25) Q And you ve come up with - basically that s 160 hours of

Vol 24 3723

- (1) time -  
 (2) A That is correct  
 (3) Q - plus analysis Analysis would be outside of the field?  
 (4) A Yes that is  
 (5) Q So 360 hours each for the principal investigator and the  
 (6) lab technician?  
 (7) A That s correct  
 (8) Q For a subtotal of \$57 000 and change?  
 (9) A That s correct  
 (10) Q We can work through the second portion of this In  
 (11) addition to the 50 some odd thousand dollars for direct  
 (12) archaeological costs labor costs to analyze these sites  
 (13) you ve also come up with miscellaneous expenses such as  
 (14) laboratory and office space computer time photographic field  
 (15) communications totaling another \$33 000?  
 (16) A That s correct  
 (17) Q Tying into inflation your total estimate comes up to  
 (18) \$113 300?  
 (19) A Yes that s correct  
 (20) Q Dr Johnson you ve explained to us a couple rationales for  
 (21) undertaking work at a site like Granite Bay One I understand  
 (22) is a concern that there is - a concern for potential future  
 (23) vandalism  
 (24) A That s correct  
 (25) Q That as a result of the oil spill clean up workers went to

Vol 24 3725

- (1) from the site?  
 (2) A It s my opinion that it s a thing that should be done yes  
 (3) Q So this program in your mind makes sense as an  
 (4) appropriate response to the potential that there would be  
 (5) future site vandalism whether malicious or not?  
 (6) A It s even a little bit broader than that It has to do  
 (7) with both the presence of oil - basically from my  
 (8) perspective is prior to the oil spill there was a certain  
 (9) state After the oil spill there was a different state  
 (10) Q I didn t mean to suggest that was the only one but a  
 (11) principal reason for this program is to extract the science  
 (12) the history the information that can be defined from these  
 (13) resources before somebody shows up and damages them?  
 (14) A Basically the idea is we feel that one needs to recover  
 (15) the archaeological context  
 (16) Q You ve used that term That means the available  
 (17) information that could be defined from both the resources and  
 (18) their relationship to one another is that right?  
 (19) A That s correct and their situation  
 (20) Q Indulge me - a hypothetical  
 (21) Let s assume that there was no threat of future vandalism  
 (22) Let s assume that we could erect a fence an electrified fence  
 (23) around Granite Bay There was no concern on your part of  
 (24) anyone coming back returning to Granite Bay in any way  
 (25) disturbing these resources all right?

Vol 24 3724

- (1) Granite Bay and they have acquired information that they didn t  
 (2) previously possess and there is concern that one day they may  
 (3) come back and vandalize or loot the site?  
 (4) A Actually I think it s a little broader than that It  
 (5) includes vandalism but other types of impacts as well In  
 (6) other words it involves this idea of loss of confidentiality  
 (7) and that people in the future may be coming back not  
 (8) specifically to vandalize the site but coming back to take a  
 (9) look at it and maybe in the process pick up something which  
 (10) would then be vandal- - I mean there are different levels of  
 (11) vandalism  
 (12) Q But your concern is that because people have information  
 (13) that they didn t possess prior to 1989 they may one day return  
 (14) and disturb a site that would otherwise have gone undisturbed  
 (15) is that right?  
 (16) A Yes It s my opinion with the number of oil spill workers  
 (17) in the area there are a lot more people that know about sites  
 (18) yes  
 (19) Q Incidentally you don t know how many oil spill workers  
 (20) were in Granite Bay do you?  
 (21) A Not specifically at Granite Bay no  
 (22) Q And your theory in proposing a plan of site surveying  
 (23) exploration excavation is that before it s too late before  
 (24) any of these materials fall prey to folks that might return in  
 (25) the future it is necessary to extract the available science

Vol 24 3726

- (1) What would be the justification in your mind of having  
 (2) Exxon spend \$113 000 to conduct archaeological research at  
 (3) Granite Bay?  
 (4) A Well I guess my perspective on that is that the  
 (5) construction of a metal fence is a form of mitigation I mean  
 (6) there are different ways you can address this change from  
 (7) pre oil spill to post oil spill The method that we have taken  
 (8) in terms of looking at site context the archaeological  
 (9) context that is one approach and from the perspective of  
 (10) science it s a valuable approach So it s sort of  
 (11) replacing - I don t know how to put it I m trying to think  
 (12) how to put this So I guess what it is is with the question  
 (13) with the fence is that that in itself -  
 (14) Q That would take care of the problem for you wouldn t it?  
 (15) A No  
 (16) Q No Let s assume that such a fence was erected let s just  
 (17) assume it exists or that the memories of everybody who went to  
 (18) Granite Bay in 1989 were obliterated so they are no longer a  
 (19) threat to these resources What harms caused by the spill in  
 (20) your mind would be fixed by undertaking the \$113 000  
 (21) program  
 (22) of archaeological restoration that you propose?  
 (23) A What it comes down to again is the threat of vandalism is  
 (24) not the only impact  
 (25) Q Let s assume that away What harms would that program fix  
 (26) that were caused by the spill?

Vol 24 3727

- (1) A What we re assuming is that it was not oiled and that it  
 (2) was not cleaned up that there was not -  
 (3) Q No I m not assuming that  
 (4) A Well I guess what I m saying is that those are the other  
 (5) impacts and so you can t - it s not the same  
 (6) Q Well you ve told us about your opinion that the cleaning  
 (7) of these beaches the use of washing and the like may well  
 (8) have dislodged archaeological resources may well have  
 pushed  
 (9) them down the beach may well have put them out at the sea  
 (10) Doing \$113 000 of archaeological research at Granite Bay is not  
 (11) going to bring them back will it?  
 (12) A No As a matter of fact any type - no matter what we do  
 (13) we can never restore it to the pre spill condition that s  
 (14) correct  
 (15) Q And you are also concerned or have expressed the opinion  
 (16) that another impact of the oil spill was the possibility - I  
 (17) guess you would say probability that clean up workers may  
 have  
 (18) inadvertently picked up a artifact thrown it into a debris  
 (19) bag barged down to Seattle and sitting in a landfill will  
 (20) never be recovered Your program of \$113 000 of  
 archaeological  
 (21) research is not going to restore that artifact to it s place  
 (22) will it?  
 (23) A Basically you can never restore it to the pre spill  
 (24) condition that is absolutely true  
 (25) Q And if an artifact was pilfered doing the research you

Vol 24 3728

- (1) propose isn t going to fix that will it?  
 (2) A Basically what it is it is a method of mitigation  
 (3) Q It s not going to fix the fact that an artifact that was  
 (4) once on the site is no longer there?  
 (5) A It s not going to return it to pre spill conditions no  
 (6) Q Isn t it true that your sense that that program ought to be  
 (7) taken at Granite Bay and 43 other places if we put aside a  
 (8) fear of future vandalism as just sort of a notion it s fair  
 (9) that Exxon do something because of potential impacts to  
 (10) artifacts?  
 (11) A Again it s not simply the fear of future impacts it s  
 (12) this change from pre spill conditions to post spill conditions  
 (13) Q Tell the jury specifically what will this program of  
 (14) archaeological research fix that got broken during the spill?  
 (15) A What got broken was the oiling of sites and the clean up  
 (16) activities that caused impact to sites the loss of  
 (17) confidentiality and it s like you can t fix that You can t  
 (18) change that It s like all you can do is basically come up  
 (19) with an answer which is at best - I mean it s not the best  
 (20) answer The best answer is that the oil spill didn t occur  
 (21) Q Well if artifacts got oiled your program of research  
 (22) isn t going to fix that right?  
 (23) A No they were oiled  
 (24) Q And they probably - if they have been recovered they have  
 (25) been cleaned isn t that right?

Vol 24 3729

- (1) A I would hope that if they have been recovered to date they  
 (2) have been depending on the situation  
 (3) Q They have been curated They are sitting in some  
 (4) collection somewhere?  
 (5) A It s my understanding artifacts collected during the oil  
 (6) spill are being curated yes  
 (7) Q So your program of archaeological exploration for Granite  
 (8) Bay and other places is not intended to fix any oiling of  
 (9) artifacts that may have happened in 1989?  
 (10) A Again I would say that doesn t really characterize what  
 (11) we re doing Again I keep coming back to this because this is  
 (12) what I see as the point We can t restore it to pre spill  
 (13) conditions and basically all you can do is look at it in terms  
 (14) of what should one do? What can one do because things have  
 (15) changed?  
 (16) Q Isn t it true Dr Johnson that putting aside loss of  
 (17) confidentiality and the threat of future vandalism your  
 (18) program of archaeological research at Granite Bay and 43 other  
 (19) places is not a remedy for any of the harms done by the spill  
 (20) or the cleanup?  
 (21) A Again -  
 (22) Q It s not going to fix them?  
 (23) A Again basically there is no remedy I mean in that  
 (24) perspective but this is the answer we recommend as  
 (25) archaeologists

Vol 24 3730

- (1) Q As archaeologists?  
 (2) A That s correct  
 (3) Q To the best of your knowledge - I think you may have told  
 (4) us this - none of the oil spill workers who were at Granite  
 (5) Bay in 1989 have returned have they?  
 (6) A I don t know if they have or not  
 (7) Q You have no evidence that they have isn t that right?  
 (8) A That s correct  
 (9) Q And isn t it the sheerest speculation on your part that any  
 (10) will?  
 (11) A No I don t think it s just sheer speculation  
 (12) Q What do you base it on?  
 (13) A It is based on the change in terms of what is known about  
 (14) sites and the number of people that were in the oil spill area  
 (15) the fact that there were similarly 10 000 in Prince William  
 (16) Sound and the overall clean up area in 1989 This change in  
 (17) terms of what people know about sites site locations I can t  
 (18) say specifically they are going to come back to Granite Bay  
 (19) but I think that there is a high likelihood that people will be  
 (20) coming back to different sites  
 (21) Q You haven t done any research on the question of whether  
 (22) spill workers have or are likely to return to sites that they  
 (23) cleaned to spoil them vandalize them or otherwise disturb  
 (24) them?  
 (25) A I have not specifically conducted a study no

Vol 24 3731

- (1) Q And you have not read any such studies have you?  
 (2) A I m trying to think of those that might exist There have  
 (3) been studies on vandalism that I believe Jack Lobdell knows  
 (4) quite a bit about this not myself  
 (5) Q You haven t read any studies concerning Prince William  
 (6) Sound the cleanup and the prospect of future vandalism right?  
 (7) A I think that what would be fair to say is that I have read  
 (8) various documents in the course of the years and many of  
 these  
 (9) have expressed concern for people returning to sites  
 (10) Q I m talking about scientific reputable studies published in  
 (11) reputable journals you haven t read any of those have you?  
 (12) A No I have not  
 (13) Q No one has done any research on that have they?  
 (14) A I do not know  
 (15) Q So you re basically telling us there is a threat of future  
 (16) vandalism based on your own common sense correct?  
 (17) A It s In part my common sense but also I believe it s  
 (18) through my review of just all the documents - well that I ve  
 (19) gone through and various opinions about the likelihood of  
 (20) future vandalism Also there are reports about vandalism  
 (21) and again I believe that Jack Lobdell will speak a little  
 (22) more on this  
 (23) Q Doesn t common sense tell you that if an oil spill worker  
 (24) was going to return to Granite Bay to take artifacts or  
 (25) otherwise disturb the location he or she would have done that

Vol 24 3732

- (1) in the first five years?  
 (2) A Not necessarily  
 (3) MR DIAMOND Your Honor I have not been keeping  
 (4) track of time  
 (5) THE COURT It s been about an hour so - but the  
 (6) jury was going in and out so I was going to let it go You  
 (7) can call it  
 (8) MR DIAMOND I can call time out myself?  
 (9) THE COURT Yes  
 (10) BY MR DIAMOND  
 (11) Q Let me ask you about another Chugach site Evans Island I  
 (12) think we actually have a map - did I say Chugach? This is  
 (13) a - I said Chugach This is a Chenega site Do you know  
 (14) where this one is?  
 (15) A Yes I do  
 (16) Q You ve not been to this site have you?  
 (17) A I believe that I ve been along the shoreline I don t  
 (18) believe that we landed at that particular location  
 (19) Q You have not inspected the archaeological artifacts  
 (20) remains resources at this location have you?  
 (21) A No I don t believe no  
 (22) Q So all of your knowledge about the artifacts at this Evans  
 (23) Island location is based on documents you ve read?  
 (24) A Yes documents I ve read And I m trying to think I may  
 (25) have spoken with another archaeologist about it but primarily

Vol 24 3733

- (1) the documents yes  
 (2) Q I m going to put on the screen defendants 15335 I ll  
 (3) give you a minute This is a Dr Lobdell s 1992 report  
 (4) Waiting for counsel s approval  
 (5) You recognize this as Jack Lobdell s 1992 report?  
 (6) A Yes  
 (7) Q And you ve reviewed this have you not?  
 (8) A Yes I have  
 (9) Q If we could turn to the page that has the number 300259  
 (10) that deals with Evans Island Blow it up  
 (11) This is the portion of Dr Lobdell s report that summarizes  
 (12) the archaeological resources at this location and I point out  
 (13) to you that Dr Lobdell mentions historic site existing of  
 (14) milled lumber with nails CMTs including saw cut tree stumps  
 (15) Are you aware of any other archaeological resources at this  
 (16) location?  
 (17) A I believe it is considered an historic site It may have  
 (18) been Phippen one of the Exxon archaeologists I don t  
 (19) remember exactly who it was that did a survey of this area and  
 (20) I think he thought that there was very high potential for  
 (21) additional cultural remains in the area  
 (22) Q Potential?  
 (23) A Yes  
 (24) Q My question is Are you aware of any other known  
 (25) archaeological or cultural materials?

Vol 24 3734

- (1) A I believe that these are the physical remains that have  
 (2) been identified basically the obvious physical remains that  
 (3) have been identified  
 (4) Q So the answer to my question is yes you re not aware of  
 (5) any others?  
 (6) A I would have to look back As I sit here right now I m  
 (7) not aware of any We may have covered the additional ones  
 (8) based on AHRs forms Actually I m not sure if this one even  
 (9) has an AHRs form  
 (10) Q This is your moment in the sun do you want to consult  
 (11) anything? Do you have a cheat sheet we could hand you?  
 (12) A No Actually I think that basically this is what I  
 (13) understand is there in terms of the milled lumber with the wire  
 (14) nails and culturally modified trees That s fine And also  
 (15) cut stumps  
 (16) Q To your knowledge none of the materials - the wood with  
 (17) nails or the culturally modified trees - relate to Native as  
 (18) opposed to non Native activities?  
 (19) A Actually I would suspect that with the culturally modified  
 (20) trees here and other locations that there is a high probability  
 (21) that it did pertain to Native activities yes  
 (22) Q You don t know that do you?  
 (23) A There is a pretty good indication that many of the CMTs are  
 (24) related to Native activity  
 (25) Q These?

Vol 24 3735

- (1) A I haven't seen these particularly cultured modified trees  
 (2) to --  
 (3) Q So you can't tell us that they relate to any Native  
 (4) activity?  
 (5) A No, but I think there is a high probability that they do  
 (6) Q You have no knowledge of any oil getting on these  
 (7) materials?  
 (8) A I don't believe that the particular milled lumber or trees  
 (9) or cut stumps have oil on them  
 (10) Q It is true, Dr. Johnson, that you have no knowledge  
 (11) whatsoever of any damage done to these resources during the  
 (12) course of the cleanup?  
 (13) A Again, to these specific items, I'm not particularly aware  
 (14) of any damages, no.  
 (15) Q It is true, is it not, Dr. Johnson, that you're not aware  
 (16) of any damage done to the actual physical location where these  
 (17) items are located?  
 (18) A I believe that the site was oiled.  
 (19) Q At the location of the milled lumber with nails?  
 (20) A At the site location, yes.  
 (21) Q Isn't it true you have no knowledge of oil getting on any  
 (22) of the materials?  
 (23) A Again, I think what's important to point out is the  
 (24) distinction between remains, such as this milled lumber, wire  
 (25) nails, culturally modified trees or sawed stumps, what I call

Vol 24 3736

- (1) indicators of the site, these are the things that are readily  
 (2) visible and the site itself.  
 (3) And again, from my experience, in terms of documentation  
 (4) of sites, it's that you often go through a step process, and  
 (5) going back to Kake Cove, one of the sites we were talking about  
 (6) yesterday, it was first identified in terms of a culturally  
 (7) modified tree and a battered cobble, which is similar to this  
 (8) in terms of a few remains.  
 (9) The next step eventually is you do survey work to see if  
 (10) in fact there was additional materials out there. I have seen  
 (11) other historical sites where they have only recorded few  
 (12) physical remains, but in fact there is a lot more to the site  
 (13) than just three objects that are reported either in the AHRS  
 (14) forms or in summaries that archaeologists write up, that  
 (15) basically these are usually records of field works which are  
 (16) basically notes.  
 (17) So in terms of what the site consists of versus you might  
 (18) say the identifiers of the site, there is a difference.  
 (19) Q This may be one of those, what do they call them,  
 (20) tautologies, question with his own answer, you have no  
 (21) knowledge, do you, of any buried cultural or archaeological  
 (22) materials at Evans Island that have not been unearthed yet?  
 (23) A As I believe -- I don't believe I've been to the site.  
 (24) However, from my experience as an archaeologist, when one  
 (25) finds physical remains such as this, this is a high probability that

Vol 24 3737

- (1) there will be something below to the surface.  
 (2) Q But you don't know that?  
 (3) A I don't know that would certainly be the case, but it's  
 (4) definitely a possibility.  
 (5) Q The best you could give us is an educated guess?  
 (6) A No, I think it would be a professional opinion.  
 (7) Q Isn't it also possible that there is nothing else on Evans  
 (8) Island?  
 (9) A At this particular location?  
 (10) Q Yeah.  
 (11) A This is what has been identified to date.  
 (12) Q So it's possible that there are no subsurface, no buried  
 (13) artifacts anywhere near the shoreline?  
 (14) A Again, based on my own experience of survey sites such as  
 (15) this, I have surveyed a -- quite a few where there were only a  
 (16) few indicators, and even without doing subsurface testing  
 (17) ourselves, there were times when we were able to look at  
 (18) exposed banks and, in fact, find subsurface deposits or find more  
 (19) extensive physical remains even on the surface. And very  
 (20) often, especially with historical sites, you have moss covering  
 (21) a lot of the remains, and so that's -- you know, that would be  
 (22) part of what the program would be -- would entail, would be  
 (23) looking at this.  
 (24) Q You have no reason to believe that there are any artifacts  
 (25) scattered along the site around the milled lumber or CMTs that

Vol 24 3738

- (1) has not already been discovered?  
 (2) A No, I think there is a high likelihood there will be.  
 (3) Q That's a guess on your part, you can't tell the jury there  
 (4) will be?  
 (5) A I don't believe it's a guess. I think it's my professional  
 (6) opinion that there is a high probability.  
 (7) Q High probability. And with respect to any of those  
 (8) artifacts, you can't tell the jury that any of them were oiled  
 (9) isn't that right?  
 (10) A I would say that that's correct.  
 (11) Q So you can't tell us that anything that may be out there  
 (12) that you don't know about for sure, but think that there is a  
 (13) high probability may exist, was damaged by the oil?  
 (14) A Again, we have to go back to the differences --  
 (15) Q Can you answer my question before you go back?  
 (16) MR FORTIER, Your Honor, I object, counsel's  
 (17) arguing --  
 (18) THE COURT, Let's hear the question, counsel, start  
 (19) all over again. Give the question and let her answer the  
 (20) question.  
 (21) BY MR. DIAMOND.  
 (22) Q With respect to any artifacts that may still be lying  
 (23) around the surface at this Evans Island location, isn't it  
 (24) correct, Dr. Johnson, that you can't tell us that any of them  
 (25) were harmed by oil?

Vol 24 3739

Vol 24 3741

- (1) A Again you re referring to artifacts that have been  
 (2) identified?  
 (3) Q No You just told us there is a high probability that  
 (4) there may well be artifacts laying on the surface in the  
 (5) vicinity of these CMTs and boards with nails With respect to  
 (6) any that may be there you don t know whether any were  
 harmed  
 (7) by Exxon Valdez oil isn t that a true statement?  
 (8) A I guess I would say no  
 (9) Q You know that there are artifacts out there and that they  
 (10) were harmed by the Exxon Valdez oil?  
 (11) A No I guess what I m saying - maybe I am getting confused  
 (12) with what you re saying but I understand that first - what I  
 (13) was saying before is that I believe that there is a high  
 (14) probability that there are additional remains out there in  
 (15) addition to what has been listed here And of those there is  
 (16) a - it s quite possible that there are artifacts that are in  
 (17) the intertidal area that were oiled  
 (18) Q And it s equally plausible that if there are such  
 (19) artifacts that they weren t oiled isn t that right?  
 (20) A If they - well again I d have to look at what the degree  
 (21) of oiling was at this particular location  
 (22) Q Assuming this was a lightly oiled spot it s equally  
 (23) plausible that those artifacts were not oiled?  
 (24) A Again it s quite possible that specific artifacts were  
 (25) not but again my focus as an archaeologist is on the entire

- (1) A Basically what I m saying I believe I was talking about  
 (2) subsurface testing in terms of that but it would apply to even  
 (3) survey work but generally from my experience in terms of  
 going  
 (4) out I tend to find more than what has been reported and so  
 (5) from my own perspective I would expect to find something in  
 (6) addition to what s listed here  
 (7) BY MR DIAMOND  
 (8) Q Isn t it a true statement that even when there are cultural  
 (9) resources which suggest something until you start digging you  
 (10) don t know whether there is going to be anything in the  
 (11) subsurface?  
 (12) A No that s not true I -  
 (13) Q Didn t you testify to that yesterday?  
 (14) MR FORTIER She didn t finish  
 (15) A No And if I did I wasn t correct because there are  
 (16) different ways of determining subsurface deposits Testing is  
 (17) an approach In terms of field work that I conducted one can  
 (18) also look at exposed banks and see subsurface deposits but  
 (19) testing in terms of the extent of the site in the uplands yes  
 (20) once you re up in the uplands and have a vegetated cover you  
 (21) would need to dig yes  
 (22) BY MR DIAMOND  
 (23) Q You haven t done any digging at Evans Island to test this  
 (24) hypothesis?  
 (25) A That s correct

Vol 24 3740

Vol 24 3742

- (1) site not just specific artifacts So the site would be oiled  
 (2) Q The answer to my question is You don t know and you can t  
 (3) tell us whether there are any artifacts out there that were  
 (4) harmed by Exxon Valdez oil?  
 (5) A I can t say without a doubt there are no  
 (6) Q All you can say is that there is a probability of them at  
 (7) best?  
 (8) A Yes  
 (9) Q Don t you have to do some testing in order to know?  
 (10) A Testing to know whether they were oiled or not?  
 (11) Q In order to know whether there are any archaeological  
 (12) resources along a shoreline don t you have to go out and  
 (13) investigate first and do some testing?  
 (14) A Well first the evidence that we have right now shows that  
 (15) there are cultural remains there  
 (16) Q But as to whether there are any additional that may be in  
 (17) the shoreline that have not yet been discovered isn t it true  
 (18) that you don t know until you go out and do some testing?  
 (19) A One would have to go out and take a look yes  
 (20) Q Didn t you tell us yesterday that sometimes you come up  
 (21) empty handed?  
 (22) A At times you do  
 (23) Q And until -  
 (24) MR FORTIER Can she finish  
 (25) THE COURT Go ahead and finish

- (1) Q You haven t done any digging to test this hypothesis at any  
 (2) of your 44 locations true?  
 (3) A No I did not do subsurface testing with the exception of  
 (4) McArthur Pass  
 (5) Q And that was as part of the joint Exxon effort to remediate  
 (6) that site?  
 (7) A Yes the National Park Service and Chugach worked in the  
 (8) uplands and Exxon worked in the intertidal area  
 (9) MR DIAMOND Your Honor this would be a good time  
 (10) THE CLERK Please rise This court stands in  
 (11) recess  
 (12) (Jury out at 10 15 a m )  
 (13) (Recess from 10 15 a m to 10 28 a m )  
 (14) (Jury in at 10 28 a m )  
 (15) THE CLERK Please rise This court now resumes in  
 (16) session Please be seated  
 (17) BY MR DIAMOND  
 (18) Q Dr Johnson when we broke we were talking about Evans  
 (19) Island one of the Chenega sites Refresh everybody s  
 (20) recollection This is the site with the milled lumber and wire  
 (21) nails culturally modified trees and saw cut tree stumps You  
 (22) did a damage analysis of this site as well as did you not?  
 (23) A Yes in conjunction with Jack Lobdell  
 (24) Q And let me place before you plaintiffs Exhibit 1542 page  
 (25) 15819 That s your damage analysis for Evans Island?

Vol 24 3743

- (1) A Yes that s our damage analysis uh huh  
 (2) Q And you are quantifying the costs of the study program that  
 (3) you think is appropriate for Evans Island as what roughly 160  
 (4) hours of archaeologists and ethnohistorian time 360 hours of  
 (5) analysis for a total of \$57 500 roughly?  
 (6) A That s correct  
 (7) Q And then your program would also entail support costs  
 (8) amounting to another 35 000?  
 (9) A That s correct  
 (10) Q So the total you are seeking for the site which consists  
 (11) of some milled lumber wire nail culturally modified trees and  
 (12) saw cut tree stumps is \$115 000?  
 (13) A Again the 115 is for the site yes  
 (14) Q If you could turn to the third Chenega Corporation site  
 (15) Guguak Bay are you familiar with that?  
 (16) A Yes  
 (17) Q That s based on your readings?  
 (18) A Yes  
 (19) Q Never been to this site either?  
 (20) A No I haven t  
 (21) Q There are really two sites are there not or two finds at  
 (22) Guguak bay?  
 (23) A Basically there are two AHRS numbers assigned to cultural  
 (24) remains in the area  
 (25) MR DIAMOND Counsel I m going to put up DX10597

Vol 24 3744

- (1) diagram of Guguak Bay It s hard to read but let me blow up  
 (2) this section  
 (3) MR FORTIER Before you do that could we approach  
 (4) the bench?  
 (5) (Bench conference off the record)  
 (6) MR DIAMOND Your Honor I cannot do that it s  
 (7) technically impossible  
 (8) THE COURT There is always a simple solution to a  
 (9) problem counsel  
 (10) MR DIAMOND Can we put that back up please?  
 (11) BY MR DIAMOND  
 (12) Q This is a rough depiction of the Guguak Bay area is it  
 (13) not?  
 (14) A That s correct  
 (15) Q And there are two separate AHRS listings for Guguak Bay  
 (16) are there not?  
 (17) A That s correct  
 (18) Q And that s because the cultural resources were found at two  
 (19) locations correct?  
 (20) A Basically yeah two  
 (21) Q And as far as you are concerned there is no connection  
 (22) between the two though?  
 (23) A It s very unlikely  
 (24) Q Let s take a look at this location here first northernmost  
 (25) island The archaeological resources at this portion of Guguak

Vol 24 3745

- (1) Island exist of a metal pulley that was found in the intertidal  
 (2) zone  
 (3) A That s correct  
 (4) Q That s the only thing that s ever been found there is that  
 (5) correct?  
 (6) A That s correct  
 (7) Q Can we put up 10600-83? 10600-83  
 (8) This is a photograph of that pulley is it not  
 (9) Dr Johnson?  
 (10) A Yes it s been collected  
 (11) Q You ve seen photographs of this before?  
 (12) A That s correct  
 (13) Q And this is the only known archaeological or cultural  
 (14) resource ever discovered at the northern island at the Guguak  
 (15) Bay site?  
 (16) A This is the - yeah this is a cultural remain that s been  
 (17) collected from the site  
 (18) Q You don t have the foggiest notion where this came from do  
 (19) you?  
 (20) A From the north end of the island  
 (21) Q You don t have the foggiest notion how it got there?  
 (22) A No  
 (23) Q It was just found lying in the intertidal zone wasn t it?  
 (24) A That s correct  
 (25) Q You have no idea of the origin of this metal pulley? 7<sup>W</sup>

Vol 24 3746

- (1) A No I haven t really done any investigation  
 (2) Q And you have no knowledge of any connection it might have  
 (3) to Native activities?  
 (4) A That s correct  
 (5) Q You don t even know how old it is?  
 (6) A That s correct Historic  
 (7) Q Historic means more than 50 years?  
 (8) A That s correct  
 (9) Q How do you know that it s historic?  
 (10) A I would assume both by the corrosion the type of pulley it  
 (11) is in general and also the fact that it s listed in the AHRS  
 (12) system that it is historic  
 (13) Q You assume based on the fact that the State included it in  
 (14) survey forms?  
 (15) A Yes  
 (16) Q You re not an expert on pulleys?  
 (17) A That s correct  
 (18) Q This pulley was recovered from the intertidal zone where it  
 (19) was found?  
 (20) A That s correct  
 (21) Q And it s now at the University of Fairbanks museum?  
 (22) A I believe that s where it is  
 (23) Q All cleaned off if it ever was oiled?  
 (24) A I would assume that it was but  
 (25) Q DX16142 11 I d like to talk about the cultural resources

Vol 24 3747

- (1) found at the other island the southernmost island This is an
- (2) AHRs form is it not?
- (3) A Yes it is
- (4) Q And it indicates Guguak hearth?
- (5) A That s correct
- (6) Q The form says this site exists of a probable hearth
- (7) located above a seal haulout and it gave a measurement and
- (8) then it says exists of rocks on two sides and the base of a
- (9) large hemlock as the third site Do you see that?
- (10) A Yes
- (11) Q You re not aware of any other archaeological or cultural
- (12) resources found on the southern island in the Guguak Bay
- (13) area?
- (14) A This is what has been identified there
- (15) Q You have no knowledge of anything else?
- (16) A I have no specific knowledge of other cultural resources
- (17) that have been reported or documented no
- (18) Q You ve seen photographs of the hearth haven t you?
- (19) A Yes
- (20) Q There is some doubt in your mind as to whether it s
- (21) actually a hearth?
- (22) A It appears as though it is
- (23) Q Are you sure?
- (24) A I d have to - as I said I haven t been to the site I
- (25) would go out to the site and take a look I could probably
- (26) give a better opinion

Vol 24 3748

- (1) Q You gave deposition testimony in this case did you not?
- (2) A Yes I did
- (3) Q And you were asked about this hearth were you not?
- (4) A I believe I was yes
- (5) Q Page 146 - can I get a copy of that I m going to show
- (6) you page 146 of your deposition of December 6 1993 and
- (7) direct
- (8) your attention to lines 14 through 18 Do you recall giving
- (9) deposition testimony in this case?
- (10) A Yes
- (11) Q Do you recall that you were sworn and told that the answers
- (12) you gave were under penalty of perjury? Counsel for the Native
- (13) corporation was in attendance?
- (14) A Yes
- (15) Q Were you not asked And when you state on page 19 that
- (16) there is the presence of a probable hearth does that indicate
- (17) that there is some doubt as to whether an actual hearth exists
- (18) or not?
- (19) Answer Yes The wording probable hearth is taken from
- (20) the AHRs site report
- (21) Did you not give that answer?
- (22) A Yes
- (23) Q So you don t know whether this is an actual hearth or not?
- (24) A No It s listed as a probable hearth
- (25) Q And you have no information as to who might have - a
- (26) hearth that s just a ring of rocks or an assembling of rocks

Vol 24 3749

- (1) inside one would make a fire?
- (2) A Yes it s usually slabs
- (3) Q Kayakers and campers make hearths don t they?
- (4) A I don t believe they make them quite like this
- (5) Q Isn t it true you have no reason to say that this hearth
- (6) could not have been built by some kayaker or fisherman in the
- (7) area?
- (8) A I cannot prove that it was not but based on the setting
- (9) and the probable hearth again that it is a probable hearth of
- (10) historic - from historic times I think that s what it s
- (11) thought to be
- (12) Q Dr Johnson it could have been built by some kayakers or
- (13) fishermen in the area correct?
- (14) A I believe with its setting and the lack of like recent
- (15) campfire at the area I believe that that must be what the
- (16) setting is Again I would need to take a look at it in the
- (17) field to make a distinction between a definite hearth a
- (18) probable hearth and not a hearth
- (19) Q Page 698 of Dr Johnson s deposition lines 9 through 14
- (20) I m going to place in front of you page 698 of your deposition
- (21) and direct your attention on lines 9 through 14 Did you not
- (22) state as part of an answer but you re right that it could be
- (23) connected with you know fishermen or kayakers or something
- (24) else
- (25) Question So right now in your mind it s not clear one

Vol 24 3750

- (1) way or another
- (2) Answer That s correct
- (3) You gave those answers did you not?
- (4) A Can I take just a second to look at the context sir?
- (5) Q You certainly can So the jury can see what we re all
- (6) reading those were your answers were they not?
- (7) A That s correct
- (8) Q Do you want to change your sworn testimony?
- (9) A Well basically it s pretty much the same as what I m
- (10) saying here That based on the AHRs form that the hearth has
- (11) been - or these stones out there have been identified as a
- (12) probable hearth What was discussed is it is - you know it
- (13) is a possibility that it could be something that was done by
- (14) kayakers at some point in the past
- (15) Again when I think about it I go back to the original
- (16) identification of it as a probable hearth suggesting that it
- (17) is historic Again because of its entry in the AHRs system
- (18) but I can t swear that the possibility that it s you know
- (19) made by kayakers I can t swear that that is definitely not a
- (20) possibility
- (21) Q Thank you DX1268 824 please 1268 824
- (22) Dr Johnson this is the program of archaeological
- (23) exploration excavation et cetera that you did for Guguak Bay
- (24) jointly with Dr Lobdell is it not?
- (25) A That s correct

Vol 24 3751

- (1) Q This one is a little less expensive Your budget for the  
 (2) principal archaeological investigator and so forth is -  
 (3) together with the analysis is \$36 800?  
 (4) A That s correct  
 (5) Q And your total for doing exploration and excavation of this  
 (6) site which contains - once contained a pulley and a possible  
 (7) hearth is \$83 000?  
 (8) A I think what needs to be explained is what this refers to  
 (9) The dollar amount is -  
 (10) Q That s all I asked The dollar amount right is it not?  
 (11) A The dollar amount is right but it does not pertain to  
 (12) investigation simply of the pulley and the hearth itself It  
 (13) pertains to the recovering archaeological context of the site  
 (14) associated with these features  
 (15) Q Dr Johnson isn t it the case that you are not aware of  
 (16) any other archaeological resources or cultural resources at  
 (17) either of the two locations?  
 (18) A At the specific locations this is what has been reported  
 (19) I think what s important to understand is that there are also  
 (20) culturally modified trees that have been identified in the  
 (21) vicinity specifically to the east And so based on the  
 (22) presence of these culturally modified trees and the presence of  
 (23) this probable hearth it is felt that there is likely to be -  
 (24) well that there is a site there and this is what this  
 (25) addresses

- Vol 24 3752

- (1) In terms of the damage calculations and basically what s  
 (2) important to understand we re looking at it in terms of what  
 (3) type of field work we feel or what type of investigations we  
 (4) feel is necessary again to recover the archaeological  
 (5) context Our focus in this particular case was on the probable  
 (6) hearth also with the presence of these culturally modified  
 (7) trees in the vicinity this together suggests that we need to  
 (8) look at it in terms of what type of activities were occurring  
 (9) at the location of the hearth  
 (10) It s quite possible that investigations will also - we ll  
 (11) become aware of additional cultural features in particular  
 (12) other culturally modified trees in the area possibly also  
 (13) subsurface deposits The pulley itself basically was  
 (14) associated with this area because it was found in the area and  
 (15) it s in the general geographic area  
 (16) The reason why I included this as a cultural feature  
 (17) associated with the areas that I m not sure whether it s -  
 (18) comes from the shipwreck or whether it represents historic  
 (19) activity in the area and I think in terms of the  
 (20) investigations one needs to consider both the probable hearth  
 (21) and these culturally modified trees in the vicinity which  
 (22) suggest Native activity But one also needs to consider this  
 (23) pulley which suggests industrial - historical industrial  
 (24) activity in the area  
 (25) So when we re listing these different AHRS site

Vol 24 3753

- (1) designations we re listing them just to provide as much  
 (2) information as we can about the identified cultural features in  
 (3) the area The investigations are based on the presence of  
 (4) these but also on the probability based on my and Jack s  
 (5) opinion that these indicators indicate that there is a site  
 (6) there  
 (7) So in terms of the damage assessment for this particular  
 (8) site we re looking at a week s worth of work in the field and  
 (9) analysis of this which would include studies into where - what  
 (10) this pulley is associated with if it is from a shipwreck or  
 (11) whether there was historical activity in the area we re  
 (12) looking at trying to identify what prehistoric activity there  
 (13) might have been and what historic activity there might have  
 (14) been in the area  
 (15) So in answer to your question yes this damage assessment  
 (16) does pertain to the pulley and the hearth but it s a little  
 (17) bit more complex than simply those two identified cultural  
 (18) remains And in fact with the pulley since it has been  
 (19) recovered it s like we would obviously be going back out to  
 (20) the location this general area looking for historical  
 (21) remains as well as prehistoric remains as well  
 (22) Q Dr Johnson did you rehearse that answer with counsel for  
 (23) the Native corporations during our break?  
 (24) A No I did not  
 (25) Q You discussed it with them didn t you?

Vol 24 - 3754

- (1) A No I did not  
 (2) Q You have no knowledge knowledge of the existence of any  
 (3) other cultural resources in this area Isn t that right?  
 (4) A As I mentioned there are culturally modified trees in the  
 (5) area  
 (6) Q Other than culturally modified trees in the area you have  
 (7) no knowledge of any cultural or historical resources in this  
 (8) area correct?  
 (9) A Based on archaeological evidence there is more tradition  
 (10) about Native activity in the area  
 (11) Q Let s see if you can answer my question for the jury Do  
 (12) you know whether there is anything else of archaeological or  
 (13) cultural significance?  
 (14) A Again in terms of the physical features these are the  
 (15) physical features that I m aware of  
 (16) Q And there are no others that you know of correct?  
 (17) A There are no others that I know have been documented no  
 (18) Q And you have not done any digging or other exploration in  
 (19) search of any others correct?  
 (20) A That s correct  
 (21) Q You want Exxon to pay for that correct?  
 (22) A What we are looking at in terms of the assessment again  
 (23) goes back to - it s the whole process The pre spill  
 (24) condition versus post spill condition This is a program that  
 (25) we are recommending in terms of data recovery so in that

Vol 24 3755

- (1) respect yes we are
- (2) Q To find out whether there is anything else out there
- (3) correct?
- (4) A Basically what we re looking at is identifying and
- (5) documenting the archaeological context of this site yes
- (6) Q Let s go to some Chugach sites?
- (7) MR McCALLION What was that again?
- (8) MR DIAMOND 1544
- (9) MR McCALLION Was this on your predesignated
- (10) cross examination list?
- (11) MR DIAMOND I think it s on yours
- (12) BY MR DIAMOND
- (13) Q Dr Johnson to show you what we ve marked as plaintiffs
- (14) 1544 this is a list of Chugach Alaska Corporation sites is it
- (15) not?
- (16) A Yes it is
- (17) Q And next to each is the amount of dollars that you
- (18) calculated would be necessary to conduct what you view as
- (19) appropriate archaeological research at each?
- (20) A Yes
- (21) Q Let s talk about Culross Island south which is the fourth
- (22) one and which you ve estimated expenses of about \$243 000
- (23) I ll show you PX12084-43 photograph?
- (24) MR McCALLION That s plaintiffs exhibit
- (25) MR DIAMOND That s - I don t know the number PX or

Vol 24 3757

- (1) Culross Island south this is one of the things you relied on?
- (2) A This is one of the documents I relied on yes
- (3) Q And this site consists of the following resource does it
- (4) not CMTs 12 tree stumps and fire cracked rock that may be of
- (5) modern origin?
- (6) A The site at the south end of Culross Island based on
- (7) documentation and conversation with Bureau of Indian Affairs
- (8) archaeologists I understand the site has both an historic
- (9) component and prehistoric component It includes fire cracked
- (10) rock I believe it also includes prehistoric artifacts and
- (11) then there is also an historical component
- (12) Q With respect to the features that are out there the AHRS
- (13) survey report lists them all at least all those that are
- (14) known?
- (15) A No I don t believe it does
- (16) Q What additional archaeological features are you aware of
- (17) that are not listed in the AHRS survey report?
- (18) A I believe there are additional historic remains that are
- (19) not recorded and in fact this may not include - I mean
- (20) there is reference to fire cracked rock but I may not actually
- (21) refer to the fire cracked rock that were found in the area
- (22) Q Do you think there is additional fire cracked rock that is
- (23) not listed on this report?
- (24) A Basically what it is there are two different locations for
- (25) this particular site One of them is primarily an historic

Vol 24 3756

- (1) DX
- (2) MR FORTIER Must be a DX number
- (3) Your Honor we object showing a photograph that was not on
- (4) any predesignation list that we received
- (5) MR DIAMOND I think we -
- (6) THE COURT I m not going to go through this
- (7) counsel You can show the photograph
- (8) BY MR DIAMOND
- (9) Q Dr Johnson do you recognize this as a photograph of the
- (10) Culross Island south area?
- (11) A I do not recognize it no
- (12) Q Is that because you ve never been to this location either?
- (13) A I have been to the area just south of Culross Island and
- (14) I ve had the opportunity to look at the site from the south so
- (15) I m familiar with site locations from that perspective
- (16) Q You ve just never seen it from that vantage point?
- (17) A Yes I m not sure which vantage point this is
- (18) Q You ve never physically inspected the site have you?
- (19) A That s correct
- (20) Q And your information about what s out there in Culross
- (21) Island south is based on other people s accounts correct?
- (22) A Yes on documents
- (23) MR DIAMOND DX1614 13 AHRS report
- (24) BY MR DIAMOND
- (25) Q Dr Johnson you re familiar with this AHRS form the

Vol 24 3758

- (1) site and the second is prehistoric The AHRS documentation
- (2) does not always provide all of the information for these
- (3) sites My information for this one comes both from the AHRS
- (4) information and also through conversations with Bureau of
- (5) Indian Affairs archaeologists
- (6) Q The Native corporations are not making any claim to any
- (7) harm to any other AHRS site location in Culross south are
- (8) they?~
- (9) A There is not others currently identified
- (10) Q You are aware of another location on Culross Island that
- (11) contains fire cracked rock?
- (12) A Yes it s actually a small islet just south
- (13) Q On the mainland of Culross Island or on the mainland you
- (14) are not aware of any other cultural resources?
- (15) A I think it s best to explain this The site that Chugach
- (16) Alaska Corporation has identified as a site includes both the
- (17) location that is described here that s on the mainland It
- (18) also includes the islet just to the south which also includes
- (19) prehistoric remains So one of the words of caution is that
- (20) the Alaska heritage resource surveys does not always include
- (21) all of the information that is available partly because it s a
- (22) working process in terms of documenting it It kind of comes
- (23) in spurts so this does represent some of the cultural remains
- (24) that are known to be located in the area but in addition to
- (25) that there is additional remains

Vol 24 3759

- (1) Q What are the prehistoric remains on the other land mass  
 (2) that you referred?  
 (3) A I believe that it is fire cracked rock and prehistoric  
 (4) artifacts that have been identified on this site location  
 (5) There may also be culturally modified trees  
 (6) Q Other than those fire cracked rocks and artifacts and  
 (7) what's listed here on the Alaska Heritage Resource Survey form  
 (8) are you aware of any other features or resources at this  
 (9) location?  
 (10) A Again I believe that there are also culturally modified  
 (11) trees as mentioned here but also in the other site as well  
 (12) Q All of the cultural modified trees at the Seward 060 site  
 (13) are in the upland are they not?  
 (14) A Yes I believe that they are  
 (15) Q And there is no indication that any of those were oiled?  
 (16) A I don't know I don't believe that they were  
 (17) Q You're not aware of any vandalism to this site during the  
 (18) course of the Exxon Valdez oil spill cleanup?  
 (19) A I'm not aware of specific cases of vandalism no  
 (20) Q And you have no knowledge of any vandalism taking place at  
 (21) this site in the last five years?  
 (22) A I'm not aware of specific cases of vandalism no  
 (23) Q Are you aware of any general cases of vandalism at this  
 (24) site?  
 (25) A Again I think the distinction should be made between

Vol 24 3760

- (1) vandalism and impacts It's like there is a concern for  
 (2) impacts to it  
 (3) Q Are you aware of any disturbances to this site that have  
 (4) taken place since the end of the cleanup?  
 (5) A I am not aware of specific impacts no  
 (6) Q You've calculated an appropriate amount of expenditures for  
 (7) this site as well?  
 (8) A Yes we did for this site  
 (9) Q DX16157 My triggerman made a mistake I'll blow up this  
 (10) and you can read it better  
 (11) MR FORTIER Your Honor I'll just note an  
 (12) objection This is another document that wasn't designated  
 (13) It's outside -  
 (14) THE COURT I'm going to explore the issue on the next  
 (15) break We'll see what was designated and what wasn't This  
 (16) case has got to flow a little bit and I can't take these  
 (17) things at the bench every time somebody THINKS a document  
 (18) wasn't designated  
 (19) BY MR DIAMOND  
 (20) Q Your analysis of this site suggests this is a bigger  
 (21) project than the ones we've looked at before?  
 (22) A Yes  
 (23) Q You've estimated \$120,500 for archaeologists' time doing  
 (24) this research work?  
 (25) A Yes that is what the dollar amount is

Vol 24 - 3761

- (1) Q And your total for this site as I said before is roughly  
 (2) a quarter of a million dollars?  
 (3) A That's correct  
 (4) Q Do you know Danger Island?  
 (5) A Yes  
 (6) Q What's at Danger Island?  
 (7) A There are historic remains  
 (8) Q What remains?  
 (9) A Structural remains as I understand it What the site is  
 (10) it is a Chugach site heritage site and it's known as a  
 (11) location that in the past people from Chenega would have gone  
 (12) to And the reason why they went there was to select a certain  
 (13) kind of seaweed this type of thing and so it's known that  
 (14) there is some sort of - it's a location of some sort of  
 (15) activity and that there would have been some sort of temporary  
 (16) settlement in the least at this location The physical remains  
 (17) for it that have been documented to date are structural  
 (18) remains  
 (19) Q Can you be any more specific than just saying structural  
 (20) remains?  
 (21) A No I'm afraid that I can't  
 (22) Q DX16141 56 counsel Put on the screen a description  
 (23) according to AHRS report of Danger Island did you see that?  
 (24) A Yes  
 (25) Q The known resources at this location consist of a log and

Vol 24 3762

- (1) board ruin correct?  
 (2) A Yes  
 (3) Q And a possible smokehouse?  
 (4) A That's correct  
 (5) Q And a collapsed cabin?  
 (6) A That's correct  
 (7) Q And to your knowledge all of these resources are in the  
 (8) uplands are they not?  
 (9) A My understanding is that these are in the uplands  
 (10) Q And these were not oiled?  
 (11) A I don't believe that these particular remains were oiled  
 (12) Q You have no indications of any disturbances during the  
 (13) course of the cleanup at this location?  
 (14) A I believe that the island itself was heavily oiled and so  
 (15) in terms of disturbance that clean up activity that occurred  
 (16) would have been had some sort of impact  
 (17) Q Are you aware of any disturbances during the course of the  
 (18) cleanup to these specific cultural archaeological resources?  
 (19) A Not to these listed here no  
 (20) Q To your knowledge no clean up workers have returned to  
 (21) the  
 (22) Danger Island site in the past five years?  
 (23) A I don't know that they have no  
 (24) Q You have no information to that effect?  
 (25) A No I do not  
 (25) Q Your analysis of this site suggests that appropriate

Vol 24 3763

- (1) exploration excavation documenting et cetera would require
- (2) 250 hours for two archaeologists and ethnohistorian and support
- (3) workers Does that look about right?
- (4) A That sounds about right
- (5) Q 520 hours of analysis correct?
- (6) A I'd have to look at our forms
- (7) Q Elmo please
- (8) And you're requesting \$117,000 for that?
- (9) A Yes
- (10) Q Rua Cove do you know that one?
- (11) A Yes I do
- (12) Q That's a Chugach site?
- (13) A That's correct
- (14) Q You were there in 1990 were you not?
- (15) MR DIAMOND Counsel I want to show 10600
- (16) photograph number 87
- (17) BY MR DIAMOND
- (18) Q Does that appear to be a photograph of the Rua Cove area?
- (19) A It appears to be an aerial photograph
- (20) Q DX 16141 44 survey report Elmo please
- (21) Dr Johnson the known archaeological features at this site
- (22) include a wood frame cabin correct?
- (23) A Yes
- (24) Q That's in the woods?
- (25) A That's correct

Vol 24 3764

- (1) Q The remains of three tent frames correct?
- (2) A That's correct
- (3) Q And a road extending to the valley?
- (4) A That's correct
- (5) Q And remains of two collapsed frame structures at the end of
- (6) a rail - roadway?
- (7) A Yes these are some of the structural remains that have
- (8) been documented
- (9) Q And there is a tailing pile?
- (10) A Yes
- (11) Q Former mining activities in the area?
- (12) A Yes that's correct
- (13) Q All of the known archaeological resources at the Rua Cove
- (14) area are in the uplands are they not?
- (15) A The cultural resources that have been documented in that
- (16) particular area on the AHRS form are in the uplands yes
- (17) Q And you have no information of direct oil impacts to any of
- (18) these resources?
- (19) A Not to these listed here
- (20) Q There wasn't a clean up activity at Rua Cove was there?
- (21) A It was heavily oiled I would have to look back in the
- (22) documents
- (23) MR DIAMOND Counsel attached to PX1538 - it's a
- (24) document bearing Native corporation 105492 It's a 6/1 6/2
- (25) report of Rua Cove

Vol 24 3765

- (1) BY MR DIAMOND
- (2) Q Dr Johnson is this one of the documents that you relied
- (3) on in formulating your opinions in this case?
- (4) A Yes it is
- (5) Q You've seen documents in this form before?
- (6) A Yes I have
- (7) Q And these were oiling reports?
- (8) A These are oiling reports
- (9) Q Prepared by whom?
- (10) A This one here is by a fella named McDonald
- (11) Q Working for?
- (12) A I believe for Exxon
- (13) Q According to this report next to degree of oiling it's
- (14) marked light or no oil observed at Rua Cove Are you mistaken
- (15) about the degree of oiling in Rua Cove?
- (16) A Could I take a look at the date on this one?
- (17) Q Certainly can Dated 6/1 and 6/2 I'll point out on the
- (18) bottom of the form it says Insufficient oiling to justify
- (19) cleanup
- (20) A All right There is a cove Rua Cove that was heavily
- (21) oiled and this is the area that has access to the historical
- (22) site The cove itself was heavily oiled I would need to look
- (23) back at the documents to see if perhaps I did make a mistake or
- (24) if this is for some other segment beyond the oiled area
- (25) Q No this is KN 213 That's Rua Cove isn't it?

Vol 24 3766

- (1) A I don't know off the top of my head no
- (2) Q It could be an error though?
- (3) A It could be
- (4) Q In any event Dr Johnson you're not aware of any direct
- (5) oil impacts to any of the resources that are previously
- (6) discussed in the AHRS form?
- (7) A The features that were identified in the form I'm not
- (8) aware that they were oiled no
- (9) Q And whether or not there was a cleanup at this location
- (10) you're not aware of any disturbance to the location during the
- (11) course of cleanup?
- (12) A Again in terms of cleanup at the site I believe that
- (13) there were clean up activities in the area In terms of having
- (14) specific knowledge of impacts I do not have that
- (15) Q Direct impacts of the oil spill or the cleanup to the best
- (16) of your knowledge to the wood frame house or the cabin in the
- (17) woods or the remains of the three tents?
- (18) A To my knowledge there was no direct oiling of these
- (19) features In terms of impacts to the site I do not have
- (20) personal knowledge
- (21) Q You're not aware of any clean up workers going into the
- (22) uplands and disturbing these features?
- (23) A No I'm not
- (24) Q And in the five years since the oil spill it is true that
- (25) you have no information concerning any oil spill worker coming

Vol 24 3767

- (1) back and disturbing this site?
- (2) A I have no specific knowledge of it no
- (3) Q Your estimate of the necessary archaeological work for this
- (4) site is close to \$200 000?
- (5) A That s correct
- (6) Q Are you familiar with the Short Arm shipwreck?
- (7) A Yes I am
- (8) Q That s one of the Chugach sites which claim is being made
- (9) in this case?
- (10) A Yes it is
- (11) Q Have you been to that site personally?
- (12) A I have been along the shoreline yes
- (13) Q Have you seen the cultural or archaeological features that
- (14) are at that site?
- (15) A I believe I ve seen the shipwreck yes
- (16) Q DX10600 129 Is this a photograph of the Short Arm
- (17) shipwreck taken?
- (18) A It looks like it is yes
- (19) Q And the only known resources archaeological or cultural or
- (20) historic at this site consist of that piece of ship s hull
- (21) that floated in from somewhere?
- (22) A That s what s currently identified yes
- (23) Q And a piece of furniture found on the beach?
- (24) A Yes
- (25) Q And a rusty old ship s anchor? Would you like to see the

Vol 24 3768

- (1) A HRS form?
- (2) A I believe you
- (3) Q Do you have any idea where the ship hull came from?
- (4) A No I do not
- (5) Q It s generally believed to have been blown in during the
- (6) storm?
- (7) A Yes
- (8) Q That wouldn t be an indication to you of any Native
- (9) activity on this site would it?
- (10) A What it is is that - the focus is on the shipwreck itself
- (11) that s correct
- (12) Q Are you of the opinion that there are additional cultural
- (13) or archaeological resources at this site because a piece of
- (14) battle of the ship blew in during the storm?
- (15) A No the cultural resources would be associated with that
- (16) ship Apart from that no
- (17) Q You re not aware of any though?
- (18) A I m not aware of any no
- (19) Q The ship itself was not oiled Isn t that correct?
- (20) A I don t believe that it was but I don t know for sure
- (21) Q Well this was located at a place where there was no oil
- (22) correct?
- (23) A I would have to look back Short Arm there may have been
- (24) some oiling tar balls and so forth
- (25) Q Exhibit 16230 Kirk Wilson s cultural resource evaluation

Vol 24 3769

- (1) form on KN 206 that s Short Arm shipwreck is that right?
- (2) A That sounds about right
- (3) Q I ll show you this document This is page 2 This is one
- (4) of the documents you relied on in formulating your opinions in
- (5) this case?
- (6) A This is one of the documents I relied on in terms of
- (7) formulating my opinions on the cultural resources It also
- (8) provides some information about oiling but in terms of the
- (9) degree of oiling I would turn to the shoreline oil evaluation
- (10) that is another sheet in this packet
- (11) Q I ll direct your attention to the cultural resources
- (12) evaluation cover page I direct your attention to the last
- (13) sentence which reads It is located where there is no oil and
- (14) no additional restrictions beyond the norm should be
- (15) necessary Do you see that?
- (16) MR FORTIER Can I get an exhibit number?
- (17) MR DIAMOND Same exhibit 16230
- (18) BY MR DIAMOND
- (19) Q Did you see that?
- (20) A Yes I do
- (21) Q Do you want to revise your opinion about oiling of the bow
- (22) pieces and the ship s hull?
- (23) A Again what I said before is that I don t know specifically
- (24) that the hull was oiled What I said was that I believed that
- (25) there may have been some oiling in this area especially in the

Vol 24 3770

- (1) form of like mousse balls this type of thing
- (2) Q You re not aware of any human disturbance to this site
- (3) during the course of the cleanup?
- (4) A I m not aware of specific instances no
- (5) Q And in the five years since the oil spill you have no
- (6) information about any oil spill worker returning to the Short
- (7) Arm shipwreck site and disturbing the site?
- (8) A Again I do not have specific information about that
- (9) Q Your estimate for the necessary -
- (10) A It s the last one Short Arm
- (11) Q Thank you \$69 000?
- (12) A That s correct
- (13) Q Disk Island burial cave are you familiar with that site?
- (14) A I am familiar with that site yes
- (15) Q That s a site that you have personally been to?
- (16) A Yes it is
- (17) Q It is a burial cave containing a midden and other
- (18) artifacts?
- (19) A That s correct
- (20) Q The cave itself is located 225 feet up in the air Isn t
- (21) it?
- (22) A I believe that s what I estimated
- (23) Q Didn t get oiled did it?
- (24) A The site itself was not directly oiled In terms of people
- (25) walking up into the uplands it s quite possible that oil was

Vol 24 3771

Vol 24 3773

- (1) tracked up
- (2) Q Anything is possible You have no information of anybody
- (3) tracking oil up into the cave?
- (4) A I have no specific information about that
- (5) Q In fact you have no information about any clean up workers
- (6) going into the cave during the course of the oil spill cleanup?
- (7) A I believe that there was some concern about it
- (8) Q I m sure that there may have been concern
- (9) A I believe that the Forest Service did have concern about
- (10) that this specific site
- (11) Q You re not aware of any evidence of vandalism or
- (12) disturbance to this site subsequent to the oil spill?
- (13) A With the exception of that one concern I m not aware of
- (14) any other specific instance no
- (15) Q The one report that you received from the Forest Service?
- (16) A Yes it was through the review of documents that came
- (17) across it
- (18) Q That did not document any actual harm to any cultural
- (19) resource in the cave?
- (20) A As I recall it was a brief reference to it and I haven t
- (21) been able to follow that
- (22) Q You ve done an estimate of the necessary archaeological
- (23) work for this site as well?
- (24) A That s correct
- (25) Q And that includes over almost 2 000 hours of field work by

- (1) sound right?
- (2) A It s quite possible that s what it is
- (3) Q Do you want to take a look at the AHRS?
- (4) A That might help
- (5) Q 16141 18 This site consists of according to this report
- (6) a tent frame a fish smoking area three anchor cables for
- (7) floating fish traps and four pitch cut trees Do you have any
- (8) information about any other cultural or archaeological
- (9) resources at this location?
- (10) A I m not able to speak about them now but it s quite
- (11) possible that there are additional features that are known
- (12) Q You don t know of any though?
- (13) A Not as I sit here right now
- (14) Q Can we show you anything that might help you?
- (15) A Well see there are other documents in addition to the
- (16) AHRS form that provides information about the sites I know
- (17) that there is a historical site of the corporation and that
- (18) there are substantial remains there and it is clearly
- (19) connected with Native activity
- (20) Q Have you had access to all those documents before you
- (21) testified today?
- (22) A I have spoken with different people and have had access to
- (23) some documents
- (24) Q And you ve reviewed all the documents you can get your
- (25) hands on?

Vol 24 3772

Vol 24 3774

- (1) four archaeologists an anthropologist and a support worker?
- (2) A That s correct
- (3) Q And over 3 000 hours of analysis?
- (4) A That s correct
- (5) Q And your total estimate for Disk Island is \$711 000?
- (6) A That s correct
- (7) THE COURT Mr Diamond we re going to take a break
- (8) pretty soon You pick the time
- (9) MR DIAMOND Let me ask her a question about one
- (10) short one
- (11) THE COURT Sure go ahead
- (12) BY MR DIAMOND
- (13) Q Marsha Bay fish camp is a Chugach site?
- (14) A That s correct
- (15) Q Put a photo on the Barco It s DX 10600 158
- (16) Do you recognize this as a picture of the Marsha Bay fish
- (17) camp?
- (18) A Not specifically
- (19) Q Let s give you another view This is 57 Do you recognize
- (20) that?
- (21) A Again not specifically I know that there are structural
- (22) remains at this site I haven t been to the site
- (23) Q This site consists of - It s - the known resources at
- (24) this site consist of a tent frame a fire pit a wood pile
- (25) drying rack three anchor cables and four CMTs Does that

- (1) A No
- (2) Q No?
- (3) A I haven t had time to review everything that I would like
- (4) to review
- (5) Q So the investigation you made in this case is not as
- (6) thorough as you would have liked to have made?
- (7) A When it comes down to it the site itself I feel
- (8) comfortable with what I know about the site in terms of there
- (9) being structural remains and its importance
- (10) And in terms of the details we did consider these that
- (11) were listed in the AHRS form when we discussed the damage
- (12) assessment so I do feel comfortable with what is here
- (13) But I guess what I m saying It s quite likely that there
- (14) are additional features but this is what was taken into
- (15) account
- (16) Q What documents could we show you that might refresh your
- (17) recollection?
- (18) A I m trying to think I believe some of this actually was
- (19) through conversations with John Johnson my brother who is
- (20) the
- (21) cultural resource manager for Chugach
- (22) Q I can t show you conversations
- (23) You don t recall any specific archaeological or cultural
- (24) resources he may have mentioned to you at this site?
- (25) A Not off the top of my head
- (26) Q So sitting here today this is the sum and total of your

Vol 24 3775

- (1) knowledge about what features and resources are at Marsha Bay
- (2) fish camp?
- (3) A Yes
- (4) Q You re not aware of any of these things the tent frame the fish smoking area the anchor cables the pitch cut trees coming into contact with oil?
- (7) A I m not aware that they did
- (8) Q And you re not aware of any disturbances of clean up workers during 1989 of these resources?
- (9) workers during 1989 of these resources?
- (10) A I m not aware of specific instances no
- (11) Q And you have no information of any clean up workers returning to this location in the last five years?
- (12) returning to this location in the last five years?
- (13) A That s correct
- (14) Q Your estimate for this is approximately \$80 000?
- (15) A That sounds about right
- (16) MR DIAMOND Good time for a break
- (17) THE COURT Let the jury out Go ahead
- (18) (Jury out at 11 28 a m )
- (19) THE COURT Counsel the jury is not present Let s resolve this problem of the designated exhibits all right so I don t have you approaching the bench all the time and I don t have to rebuff somebody in the presence of the jury
- (20) resolve this problem of the designated exhibits all right so
- (21) I don t have you approaching the bench all the time and I don t have to rebuff somebody in the presence of the jury
- (22) don t have to rebuff somebody in the presence of the jury
- (23) The question is whether or not some of these documents were predesignated I want to find out about the two that there
- (24) predesignated I want to find out about the two that there
- (25) were controversy about and see whether they were designated

Vol 24 3776

- (1) then we can go on to the Barco question
- (2) MR DIAMOND Can we take that up at the other end of this recess because we have asked for those documents to be brought to court and we don t have that
- (3) this recess because we have asked for those documents to be brought to court and we don t have that
- (4) brought to court and we don t have that
- (5) THE COURT You don t have your designations?
- (6) MR DIAMOND Correct
- (7) THE COURT Ten minutes then
- (8) MR FORTIER The point of it is if the rules change I want to bring it to the Court s attention that the rules have changed so that you know we don t get tagged with it either
- (9) I want to bring it to the Court s attention that the rules have changed so that you know we don t get tagged with it either
- (10) changed so that you know we don t get tagged with it either
- (11) If they want to change the rules it s just a matter of let s change the rules
- (12) change the rules
- (13) MR DIAMOND We re not changing any rules we believe and hopefully I can show Mr Fortier to satisfaction that all of these documents were on the designation list
- (14) believe and hopefully I can show Mr Fortier to satisfaction that all of these documents were on the designation list
- (15) that all of these documents were on the designation list
- (16) MR PETUMENOS Judge I don t think plaintiffs want to make an issue or huge objection
- (17) MR PETUMENOS Judge I don t think plaintiffs want to make an issue or huge objection
- (18) THE COURT When repeated objections are made it is an issue and I feel it is my duty to resolve the issue so everybody knows what s going on otherwise we have what in essence are veiled accusations which of course will be responded to by the other side taking the jury s attention away from the evidence they are supposed to be listening to That s why I was resolving it now So I ll resolve it at the end of this break
- (19) an issue and I feel it is my duty to resolve the issue so
- (20) everybody knows what s going on otherwise we have what in essence are veiled accusations which of course will be responded to by the other side taking the jury s attention away from the evidence they are supposed to be listening to That s why I was resolving it now So I ll resolve it at the end of this break
- (21) essence are veiled accusations which of course will be responded to by the other side taking the jury s attention away from the evidence they are supposed to be listening to That s why I was resolving it now So I ll resolve it at the end of this break
- (22) responded to by the other side taking the jury s attention away from the evidence they are supposed to be listening to That s why I was resolving it now So I ll resolve it at the end of this break
- (23) from the evidence they are supposed to be listening to That s why I was resolving it now So I ll resolve it at the end of this break
- (24) why I was resolving it now So I ll resolve it at the end of this break
- (25) this break

Vol 24 3777

- (1) (Recess at 11 28 a m to 11 45 a m )
- (2) THE CLERK Please be seated
- (3) THE COURT Counsel we re on the record The jury is not present so tell me about the designations please
- (4) not present so tell me about the designations please
- (5) counsel
- (6) MR DIAMOND Your Honor an objection was raised to 1542 plaintiffs 1542 These are the remediation reports that Dr Johnson did with Dr Lobdell What we designated several days ago - seven days ago when Dr Johnson was first scheduled to testify - were the remediation reports identified as PX1268 for villages and 1266a for Chugach And I ll approach and show you what these are
- (7) 1542 plaintiffs 1542 These are the remediation reports that Dr Johnson did with Dr Lobdell What we designated several days ago - seven days ago when Dr Johnson was first scheduled to testify - were the remediation reports identified as PX1268 for villages and 1266a for Chugach And I ll approach and show you what these are
- (8) Dr Johnson did with Dr Lobdell What we designated several days ago - seven days ago when Dr Johnson was first scheduled to testify - were the remediation reports identified as PX1268 for villages and 1266a for Chugach And I ll approach and show you what these are
- (9) days ago - seven days ago when Dr Johnson was first scheduled to testify - were the remediation reports identified as PX1268 for villages and 1266a for Chugach And I ll approach and show you what these are
- (10) scheduled to testify - were the remediation reports identified as PX1268 for villages and 1266a for Chugach And I ll approach and show you what these are
- (11) as PX1268 for villages and 1266a for Chugach And I ll approach and show you what these are
- (12) approach and show you what these are
- (13) These are on our designation for Dr Johnson After we filed those - I m sorry after we filed that designation plaintiffs recompiled the same information as plaintiffs 1542 and rather than use the outdated version of that the plaintiffs had assembled what I had been using today as the current 1542 The pages are the same
- (14) filed those - I m sorry after we filed that designation plaintiffs recompiled the same information as plaintiffs 1542 and rather than use the outdated version of that the plaintiffs had assembled what I had been using today as the current 1542 The pages are the same
- (15) plaintiffs recompiled the same information as plaintiffs 1542 and rather than use the outdated version of that the plaintiffs had assembled what I had been using today as the current 1542 The pages are the same
- (16) and rather than use the outdated version of that the plaintiffs had assembled what I had been using today as the current 1542 The pages are the same
- (17) plaintiffs had assembled what I had been using today as the current 1542 The pages are the same
- (18) current 1542 The pages are the same
- (19) THE COURT The pages you were using are the same?
- (20) MR DIAMOND Yeah they are the same
- (21) With respect to the photographs they are all in the series of 10600 slides 1 through 175 and these too were on the predesignation list
- (22) of 10600 slides 1 through 175 and these too were on the predesignation list
- (23) predesignation list
- (24) THE COURT Give me that again so that I understand what your position is
- (25) what your position is

Vol 24 -3778

- (1) MR DIAMOND We predesignated these documents The only difference is I ve been using plaintiffs current version 1542 as opposed to the version that existed at the time we predesignated exhibits for use in cross examination but the documents are the same We designated the documents
- (2) only difference is I ve been using plaintiffs current version 1542 as opposed to the version that existed at the time we predesignated exhibits for use in cross examination but the documents are the same We designated the documents
- (3) 1542 as opposed to the version that existed at the time we predesignated exhibits for use in cross examination but the documents are the same We designated the documents
- (4) predesignated exhibits for use in cross examination but the documents are the same We designated the documents
- (5) documents are the same We designated the documents
- (6) THE COURT I knew that What about DX10600
- (7) MR DIAMOND All the photographs we were using were part of 10600
- (8) part of 10600
- (9) THE COURT So you did designate them
- (10) MR DIAMOND Yes
- (11) THE COURT Okay counsel what if anything Mr Diamond said has been incorrect
- (12) Mr Diamond said has been incorrect
- (13) MR FORTIER We didn t object I don t think Your Honor to the 10600 series As far as the -
- (14) Honor to the 10600 series As far as the -
- (15) THE COURT The photograph
- (16) MR FORTIER Beg pardon?
- (17) THE COURT You didn t object to the use of the photograph?
- (18) photograph?
- (19) MR FORTIER I don t believe we objected to the use of any photographs that had been previously designated Your Honor
- (20) of any photographs that had been previously designated Your Honor
- (21) Honor
- (22) THE COURT Which photograph was it?
- (23) MR DIAMOND Here is the photograph they objected to Maybe I misspoke I may have been 16000?
- (24) to Maybe I misspoke I may have been 16000?
- (25) THE COURT 12084-43 right

Vol 24 3779

Vol 24 3781

(1) MR DIAMOND 12084?  
 (2) THE COURT I just - tell me - I can't remember what  
 (3) specific location the photograph was of Counsel would know  
 (4) what we're talking about So he can remember whether or not  
 he  
 (5) objected  
 (6) MR FORTIER It was Culross Your Honor  
 (7) THE COURT And there was an objection?  
 (8) MR FORTIER Yes there was  
 (9) THE COURT And it was on the basis that it wasn't  
 (10) previously designated right?  
 (11) MR FORTIER That's true Your Honor I don't have  
 (12) it on the list I had been relying upon Perhaps that was error  
 (13) on my part Your Honor  
 (14) THE COURT So the objection was mistaken your  
 (15) objection as to that was mistaken correct?  
 (16) MR FORTIER Well Your Honor if he claims it's on a  
 (17) list of pre-designated documents  
 (18) THE COURT Counsel I see it on the list  
 (19) MR FORTIER Well then it was a mistake Your  
 (20) Honor  
 (21) THE COURT That's what I'm talking about You can  
 (22) jump up and object and it takes five minutes to discuss and I  
 (23) have to explore it and it doesn't help your case So you were  
 (24) mistaken and you've admitted your mistake but be careful of  
 (25) accusing counsel in the future when in fact you're dead

(1) don't make me explore these things and take the jury's  
 (2) attention They are gone once we are up here at the bench and  
 (3) then they have to get back and focus It's not good for either  
 (4) one of you So try to resolve these problems a little more  
 (5) efficiently than this okay and we will go on to better  
 (6) things  
 (7) MR DIAMOND May we approach and take up one thing?  
 (8) THE COURT Absolutely not  
 (9) MR DIAMOND I do have an area of inquiry  
 (10) THE COURT Yes  
 (11) MR DIAMOND I would like to do that without the  
 (12) presence of the witness  
 (13) THE COURT Now please take these ever-changing  
 (14) documents back  
 (15) MR DIAMOND OPA 90 this touches on archaeological  
 (16) claims in the following way Some of the Port Graham - some  
 (17) of the English Bay archaeological sites are in the Kenai Fjords  
 (18) National Park The Park Service will not permit - and this  
 (19) witness knows that - will not permit English Bay to do any  
 (20) archaeological restoration any digging any kind of work  
 (21) whatsoever without a permit without it being done under the  
 (22) supervision of the Park Service I would like to raise that in  
 (23) connection with the site that we were discussing with her  
 (24) because it bears upon the relationship of any harm and what  
 (25) they are asking for in that they are asking costs for an

Vol 24 3780

Vol 24 3782

(1) wrong  
 (2) MR FORTIER I apologize Your Honor  
 (3) THE COURT Let's talk about 1542 or 12468 1266a  
 (4) MR FORTIER 1542 is a Lobdell exhibit I believe  
 (5) The objection was simply that - I didn't know where it came  
 (6) from It wasn't on the Lora Johnson cross list so it kind of  
 (7) came in under Lobdell You know again Your Honor it  
 appears  
 (8) that I was mistaken and I apologize for that I think that  
 (9) counsel's explanation makes perfect sense  
 (10) THE COURT Counsel was it on the Lora Johnson?  
 (11) MR DIAMOND The predecessor version was on the Lora  
 (12) Johnson They consolidated into a new plaintiffs exhibit We  
 (13) have been using the preliminary one rather than the old one  
 (14) What I put on the screen was part of what we pre-designated  
 (15) THE COURT So counsel's confusion is not  
 (16) unpredictable you can see where he would be confused right?  
 (17) MR DIAMOND Yes but I can see why he was confused  
 (18) documents keep changing in this case on both sides and I will  
 (19) not fault Mr Fortier for not keeping track of his own  
 (20) documents I sometimes have the same problem  
 (21) THE COURT Now what I want you to do when an  
 (22) objection occurs to you which - when I was a trial lawyer an  
 (23) objection occurred to me with every question but I didn't make  
 (24) the objection because sometimes that's counterproductive  
 (25) Check your documents ask counsel don't approach the  
 bench

(1) archaeological dig and can't perform That seems somewhat  
 (2) relevant  
 (3) THE COURT If they get a permit they can do it  
 (4) MR DIAMOND If the Park Service were to approve it  
 (5) Although I want to bring out if they get this money there is no  
 (6) foregone conclusion that they would be able to do it  
 (7) MR FORTIER Your Honor I guess our response is  
 (8) several  
 (9) First of all there is the OPA 90 itself which conveys all  
 (10) right title and interest to all the damages to the land to  
 (11) the Native corporation So maybe all we need is a judicial  
 (12) interpretation or a judicial notice of that particular act  
 (13) In addition we previously briefed the question of a  
 (14) settlement known as the Luthan (ph) settlement between the  
 (15) federal and state governments and English Bay Corporation  
 with  
 (16) regard to archaeological remediation work in the Kenai Fjords  
 (17) and that settlement agreement claims that they have a right to  
 (18) claim for all damages for archaeological sites including  
 (19) remediation work  
 (20) THE COURT Yes but the question is Are they going  
 (21) to have to go through a permitting process in order to do that  
 (22) work with the federal government?  
 (23) MR FORTIER Well - and Your Honor there I think  
 (24) the question I suppose does it make any difference whether or  
 (25) not they have to There is as a matter of law an assignment

Vol 24 3783

- (1) of those rights  
 (2) THE COURT Can the federal government tell them no  
 (3) you can't do this?  
 (4) MR FORTIER The federal government - I guess Your  
 (5) Honor the federal government could give a permit assuming  
 the  
 (6) land doesn't get interim conveyed in the meantime And if you  
 (7) have to go to the federal government for a permit it may take  
 (8) awhile Whether or not the federal government can prohibit  
 (9) them from doing it - from doing it I guess turns on the  
 (10) regulations themselves but it's a matter of time They are  
 (11) going to get the land And besides that they have already got  
 (12) the claim  
 (13) THE COURT It's land within the park right?  
 (14) MR FORTIER Well it's lands that are now within a  
 (15) park They selected the land and then the park was made  
 They  
 (16) selected the land in the early 70s The park was made in 1980  
 (17) as part of ANILCA  
 (18) THE COURT If it's lands within the park isn't it  
 (19) still subject to park regulation?  
 (20) MR FORTIER It is  
 (21) THE COURT So don't they have to go through a  
 (22) permitting process in order to be able to do this work?  
 (23) MR FORTIER Right now they would  
 (24) THE COURT If that land is conveyed would they still  
 (25) have to do it

Vol 24 3784

- (1) MR FORTIER No no if the land is conveyed under  
 (2) federal law it's their land It's outside of the park It's  
 (3) no longer an inholding within the park  
 (4) THE COURT Is that true?  
 (5) MR DIAMOND I believe we believe that's the case  
 (6) Once it leaves ownership of the federal government it won't be  
 (7) part of the park  
 (8) THE COURT So if they get the land then they get to  
 (9) do the work  
 (10) MR DIAMOND If they get the land but that's an if  
 (11) Right now they are asking for damages today They are asking  
 (12) for damages to conduct work that they can't do today without  
 (13) permission of the federal government  
 (14) THE COURT I don't see it as a major issue How long  
 (15) do you intend to spend on this?  
 (16) MR DIAMOND Two questions probably  
 (17) THE COURT You can do it  
 (18) Anything else?  
 (19) MR DIAMOND No  
 (20) MR FORTIER Well Your Honor if he gets to ask  
 (21) questions about that then do I get to ask questions about the  
 (22) other part of it? In other words the assignment of all the  
 (23) interests OPA 90? It's theirs You didn't let me ask  
 (24) Dr Johnson those questions  
 (25) THE COURT Do you get to ask questions - Is there an

Vol 24 3785

- (1) expectation that this land will be conveyed and that at that  
 (2) point there will be no restrictions on this sort of remediation  
 (3) work?  
 (4) MR FORTIER Yes  
 (5) THE COURT Yes you do  
 (6) MR FORTIER Thank you  
 (7) Let's bring them in  
 (8) (Jury in at 11 58 a m )  
 (9) THE COURT The jury is present  
 (10) BY MR DIAMOND  
 (11) Q Dr Johnson I want to ask you about one Port Graham site  
 (12) and then I'll move on to other things  
 (13) Northwestern Lagoon this is the largest single budgeted  
 (14) archaeological work that you and Dr Lobdell formulated Isn't  
 (15) that right?  
 (16) A That's correct  
 (17) Q You are seeking over seven and a half million dollars of  
 (18) Exxon's money to conduct archaeological research in this area?  
 (19) A Yes Port Graham is  
 (20) Q You know the Port Graham site - I'm sorry the  
 (21) Northwestern Lagoon site?  
 (22) A Yes I do  
 (23) Q DX12084 photograph is - can you identify this as an  
 (24) aerial view of the Northwest Lagoon?  
 (25) A I've seen other photographs that showed different

Vol 24 3786

- (1) perspectives I'm familiar with other photographs  
 (2) Q From this perspective you can't tell whether you're  
 (3) looking at Northwest Lagoon?  
 (4) A Not without absolute certainty  
 (5) Q What's your best judgment? Doesn't it look like it?  
 (6) A My best judgment is basically caution I trust that you  
 (7) wouldn't show another photograph but I'm just used to talking  
 (8) about other photographs that I have seen  
 (9) Q You have not visited the site until just a month before  
 (10) last?  
 (11) A That's correct  
 (12) Q And you had done all of your seven and a half million  
 (13) dollars in calculations without setting foot on that claim?  
 (14) A That's correct  
 (15) Q The site consists of a heavily forested area I will  
 (16) represent this to you but you're not sure There are a number  
 (17) of cultural and archaeological features in the forested area?  
 (18) A That's correct  
 (19) Q It consists among other things of a log cabin in the  
 (20) uplands?  
 (21) A That's correct  
 (22) Q And CMTs?  
 (23) A That's correct  
 (24) Q And numerous upland housepits?  
 (25) A That's correct

Vol 24 3787

- (1) Q Housepits are important to archaeologists because they are  
 (2) sites of what people suspect were former residences?  
 (3) A Yes  
 (4) Q And there is an expectation if you dig into a housepit  
 (5) people being pack rats that they are – probably would have  
 (6) packed the subsurface soil with remnants of their prior  
 (7) habitation?  
 (8) A It occurs at times  
 (9) Q That s a long way of saying there is probably stuff under  
 (10) housepits?  
 (11) A Generally – I mean it depends on housepits Some of them  
 (12) have a substantial amount others don t  
 (13) Q And there is also other cache pits in the uplands?  
 (14) A Yes  
 (15) Q This is viewed as a potentially valuable source of  
 (16) archaeological information for the area is it not?  
 (17) A Yes it s been a very important site for archaeology  
 (18) Q But the site was never oiled was it?  
 (19) A The site itself I believe there was some oiling in the  
 (20) area yes  
 (21) Q Are you sure about that?  
 (22) A I believe that s the case  
 (23) Q Seven and a half million dollar question Are you sure  
 (24) that there was oiling on this site?  
 (25) A I believe that there was yes

Vol 24 3788

- (1) Q I m going to show you some documents that you have  
 (2) previously seen I m sure The first is Exhibit 16130 which  
 (3) is a – do we have a cover sheet?  
 (4) MR DIAMOND Counsel do you have that?  
 (5) BY MR DIAMOND  
 (6) Q This is a fax cover sheet Dr Johnson from Mr Fortier s  
 (7) firm to Jack Lobdell attaching Mr Zollers notes Mr Zollers  
 (8) was a member of the Chugach OSRT?  
 (9) A That s correct  
 (10) Q He was a colleague of yours in investigating sites in 1989?  
 (11) A I don t believe that we ever had the opportunity to go out  
 (12) together but he was an archaeologist  
 (13) Q He was doing the same thing you were doing?  
 (14) A Yes In general  
 (15) Q And this says Mr Zollers notes followed You have  
 (16) reviewed – is it Pete Zollers?  
 (17) A Yes It is  
 (18) Q You ve reviewed Mr Zollers notes in connection with  
 (19) coming up with opinions in this case have you not?  
 (20) A I have reviewed some of his notes in 1989 I believe it  
 (21) was – I reviewed you know most of his notes as well  
 (22) Q Can we put up the page for Harris Bay This is a page of  
 (23) those notes You ve seen these before have you not?  
 (24) A Yes  
 (25) Q And the site that we ve been discussing Northwest Lagoon

Vol 24 3789

- (1) is along Harris Bay?  
 (2) A Yes it is  
 (3) Q Is that right?  
 (4) A Yes  
 (5) Q And this in fact identifies the site here as Northwest  
 (6) Lagoon/ does it not?  
 (7) A Yes  
 (8) Q I want to direct your attention to the bottom of the page  
 (9) Mr Zollers writes – try this again No oil was seen on our  
 (10) extensive survey Did you take that into account in  
 (11) formulating the opinion that Northwestern Lagoon was oiled?  
 (12) A Yes I did  
 (13) Q But you rejected it in favor of other information?  
 (14) A Yes I believe that there was other information that  
 (15) indicated that there was oiling  
 (16) Q Let me show you another document which is part of  
 DX16139  
 (17) it s entitled Chugach Alaska Corporation Cultural Resource  
 (18) Survey  
 (19) Zoom in on this in the upper right hand corner  
 (20) This is a Cultural Resource Survey report for Northwest  
 (21) Lagoon done by Mr Zollers is it not?  
 (22) A Yes it is  
 (23) Q And this was a form that was regularly filled out by the  
 (24) OSRT people?  $\frac{1}{2}$   
 (25) A I wouldn t say regularly More sporadically as opposed to

Vol 24 3790

- (1) regularly  
 (2) Q But it was a form that was in use by Chugach OSRT to  
 (3) document the condition of archaeological sites?  
 (4) A Yes it was available for use yes  
 (5) Q Direct your attention what Mr Zollers writes Under oil  
 (6) condition of shoreline he writes no oil spotted Does this  
 (7) change your view as to whether Northwest Lagoon was ever  
 (8) touched by oil?  
 (9) A What it indicates to me is that he did not observe oil  
 (10) that Pete Zollers did not but I believe there is other  
 (11) documents  
 (12) Q Well there are some other documents Dr Johnson I m  
 (13) going to show you what s part of DX16062 It s the National  
 (14) Park Service assessment of Northwest Lagoon You looked at  
 (15) National Park Service documents in reaching your opinions as  
 (16) well?  
 (17) A Yes I believe I did  
 (18) Q Put this on the Barco  
 (19) Try this one more time I note – you recognize the form  
 (20) of this document Dr Johnson?  
 (21) A Yes I do  
 (22) Q And this is an archaeological clearance form that was in  
 (23) use by the Park Service in 1989?  
 (24) A I believe that s the case  
 (25) Q And this refers to the Northwest Lagoon right here do you

Vol 24 3791

- (1) see that?
- (2) A Yes I do
- (3) Q The second page of the document is a paragraph entitled
- (4) Effects of the Oil Spill on Resource Do you see that no
- (5) event as of 26 May 1989?
- (6) A Yes I do
- (7) Q Does that change your opinion as to whether Northwest
- (8) Lagoon was oiled or not?
- (9) A Again I believe that I did see some reference to oiling
- (10) Q Well I think you did too but I think you looked at the
- (11) wrong thing
- (12) A I think probably in the reports that I have written the
- (13) damage assessment that I wrote for the villages in October I
- (14) believe would indicate whether I had indicated there was
- (15) oiling there or not
- (16) Q Let me show you another document which is part of 16062
- (17) It's a handwritten form which I think you'll be able to
- (18) recognize
- (19) Back this out a little bit
- (20) Do you recognize this form?
- (21) A Yes I do
- (22) Q And this was a form that was in use also during the course
- (23) of the oil spill to record oil sites and locations?
- (24) A Yes that's correct
- (25) Q A document that Mr Fortier told us about yesterday 1366a

Vol 24 3792

- (1) which is a schedule of all of the sites in this case with
- (2) selected site documentation - I'll approach if I may and show
- (3) you this
- (4) Referring to page 17 of this document under Northwest
- (5) Lagoon Harris Bay you have segment HA 1 is that correct?
- (6) A Yes that's correct
- (7) Q And then you have with respect to oiling information a
- (8) reference to SOE What does that refer to?
- (9) A That would refer to this particular document
- (10) Q So your evidence of oiling as recording on the summary of
- (11) the site documentation comes from the document that we have
- (12) on
- (13) the screen?
- (14) A It appears to yes
- (15) Q And in fact is that a document on the screen that we have
- (16) looked at that does show oiling light oiling in the splash
- (17) zone 20 percent of the segment correct?
- (18) A That's what the form indicates yes
- (19) Q And then there is some tar formation correct?
- (20) A Yes
- (21) Q And then drift debris oil yes in the upper tidal zone
- (22) correct?
- (23) A That's correct
- (24) Q That all corresponds to Exhibit 1366a do you want to
- (25) check? You would think it would?
- (26) A If this was the form I took it off I would expect it

Vol 24 3793

- (1) would
- (2) Q And this was the course of your information that Northwest
- (3) Lagoon was oiled?
- (4) A I believe that the segment that's identified there is the
- (5) HA 1 It appears to be yes
- (6) Q Well we'll see HA 1 which is the sand beach and it
- (7) says on the east side of Harris Peninsula right that's what
- (8) you're considering Northwest Lagoon?
- (9) A I could have made a mistake if that's what I did
- (10) Q Mr Leppo will help me I'm going to show you what's been
- (11) identified as DX16108 Could you come down for a second?
- (12) Harris Peninsula correct?
- (13) A That's correct
- (14) Q This oiling form relates to the east side of Harris
- (15) Peninsula I always have trouble with that but that's this
- (16) one
- (17) A Yes that's correct
- (18) Q So HA 1 would be on this side of the peninsula correct?
- (19) A Yes
- (20) Q And lo and behold here is segment HA 1 correct?
- (21) A Yes it appears to be an error
- (22) Q That's not Northwest Lagoon is it?
- (23) A No it wouldn't be
- (24) Q You made a seven and a half million dollar mistake didn't
- (25) you?

Vol 24 3794

- (1) A In terms of the reporting of oil yes
- (2) Q Thank you No oil no clean up right?
- (3) A I don't know
- (4) Q Well you didn't have any experience in 1989 of an Exxon
- (5) Valdez oil clean up crew going to an unoiled beach?
- (6) A I believe there were areas where there was little or no oil
- (7) reported where there were clean up activities
- (8) Q You have no information Dr Johnson to believe that any
- (9) clean up workers went out to Northwest Lagoon?
- (10) A I believe that there is something in documentation about
- (11) concern for clean up activities at Northwestern Lagoon
- (12) Q Dr Johnson I'm going to refer to page 318 of your
- (13) deposition line 16 through 24 Do you have that?
- (14) A Actually I put them back on your desk
- (15) Q Isn't it true Dr Johnson - if you can take a look at
- (16) that - that at least at the time of your deposition you had no
- (17) information about the effects of the clean up activities on the
- (18) Northwest Lagoon?
- (19) A At the time of my deposition I did not say that I was
- (20) aware of any
- (21) Q Do you doubt for a moment now that we've looked at this
- (22) documentation that Northwest Lagoon was unoiled?
- (23) A Excuse me?
- (24) Q Do you have any doubt now that we've looked at the
- (25) documentation that Northwest Lagoon was not touched by oil?

Vol 24 3795

- (1) A No I still have - I don't know  
 (2) Q Well let me show you the oiling map that plaintiffs have  
 (3) put in evidence in this case Perhaps you ought to come down  
 (4) again I'm going to show you what's been marked as 1128a  
 (5) This is a map that plaintiffs have prepared in conjunction with  
 (6) ICF showing oiled shoreline and unoiled but surveyed  
 (7) shorelines Can you point out where the Northwest Lagoon site  
 (8) is on this map?  
 (9) A Yes It's right here (indicating)  
 (10) Q You don't see any red or purple or magenta?  
 (11) A No you see the blue line  
 (12) Q Blue means claimed to have been surveyed with no oiling  
 (13) found by at least one survey group?  
 (14) A Yes no oiling found by at least one survey group  
 (15) Q You're not aware of any disturbance to this site by any  
 (16) clean up workers or others in five years since the cleanup  
 (17) ended?  
 (18) A I'm not aware of specific impacts no  
 (19) Q And you were out there just two months ago and so no  
 (20) evidence of any recent vandalism?  
 (21) A I was out there yes in May and I did not observe any  
 (22) Again we were not out looking for disturbances  
 (23) Q I'm done with sites Let's talk about some of the pictures  
 (24) you showed us yesterday - -  
 (25) You showed us some pictures of Crafton Island south and the

Vol 24 3796

- (1) clean up work that were being conducted at that site  
 (2) A Yes  
 (3) Q Do you remember the big Omni booms?  
 (4) A That's correct  
 (5) Q I'll have Mr. Leppo put up on the screen that plaintiffs  
 (6) identified as 12956 that we were shown yesterday Do you  
 (7) remember this?  
 (8) A Yes I do  
 (9) Q You rendered the opinion to us yesterday that this depicts  
 (10) activity which in your view occurred at an archaeological  
 (11) site?  
 (12) A That's correct  
 (13) Q In reaching the opinion - In reaching that opinion you  
 (14) had to reach a conclusion as to where along the coastline this  
 (15) photograph was taken?  
 (16) A Basically the way I reached that opinion is that the site  
 (17) is located - I believe it's in CR 5 and that it is known that  
 (18) clean up activities including this Omni boom took place in  
 (19) this segment in the location of the site I believe that this  
 (20) is the case but I couldn't - I can't prove it based on the  
 (21) photograph  
 (22) It's based on this plus a series of other photographs and  
 (23) basically what it is there is additional photographs that show  
 (24) the boom in operation and with conversations with the  
 (25) individual that took those photographs I believe that the Omni

Vol 24 3797

- (1) boom was in operation at the location of the site  
 (2) Q Well the photographs that counsel showed us - and  
 perhaps  
 (3) Mr. Fortier can dig it out of his box - it was dated August 9  
 (4) 1989 correct?  
 (5) A I don't recall  
 (6) MR DIAMOND Counsel do you have that  
 (7) MR FORTIER We're looking for it  
 (8) BY MR DIAMOND  
 (9) Q While they are looking for that Jim Gallison you know Jim  
 (10) Gallison?  
 (11) A Yes I do  
 (12) Q He was an Exxon archaeologist?  
 (13) A Yes he was  
 (14) Q And we actually saw at least a piece of him in your  
 (15) videotape of the Crafton Island cave?  
 (16) A Yes that's correct  
 (17) Q Mr. Gallison like all of the other Exxon archaeologists  
 (18) compiled very detailed field notes of what they did did he  
 (19) not?  
 (20) A He did take field notes yes  
 (21) Q And you've had access to those field notes?  
 (22) A We've had access to the field notes yes recently  
 (23) Q You've also had access to the maps that Mr. Gallison drew  
 (24) as part of his field notes?  
 (25) A I don't recall them offhand but yes

Vol 24 3798

- (1) Q Let me show you on the Barco a map of Crafton Island south  
 (2) that purports to be prepared by J. Gallison and Pete Phippen  
 (3) You remember Pete Phippen?  
 (4) A Yes Pete Phippen Yes I do  
 (5) Q The date of this is July 26th It got cut off in the  
 (6) xeroxing apparently  
 (7) Is this an accurate depiction of Seward 248 according to  
 (8) AHRS designation?  
 (9) A The site is located in the southern quarter of the - yes  
 (10) it is  
 (11) Q And it's right in this area over here correct down here?  
 (12) A And it continues up  
 (13) Q And it continues up to this cove here?  
 (14) A Keep going  
 (15) Q How far up does it go?  
 (16) A It continues further As far as I know it continues up to  
 (17) at least a little bit further north  
 (18) Q Well these are numbered can you read the numbers?  
 There  
 (19) Is an eight here there is a nine  
 (20) A I believe that it continues up to at least eight  
 (21) Q That's your definition of the site correct?  
 (22) A That's my understanding of what the site is yes  
 (23) Q Well I take it archaeologists disagree on what constitutes  
 (24) a site and site boundaries?  
 (25) A There have been different definitions of site boundaries

Vol 24 3799

- (1) Q According to this map prepared by Mr Gallison Seward 248  
 (2) was in this area right here?  
 (3) A Excuse me I do stand corrected with the SEW 248 I m  
 (4) talking - when I m talking about this site I m talking about  
 (5) Chugach Alaska Corporation site which includes several HRS  
 (6) numbers  
 (7) Q Well I m talking about the photograph which you said  
 (8) yesterday depicted clean up work by an Omni boom spraying  
 high  
 (9) pressure hoses in the vicinity of Seward 248  
 (10) A No I believe I said they were operating in the vicinity of  
 (11) the Chugach heritage site  
 (12) MR FORTIER Counsel I do have the photograph  
 (13) BY MR DIAMOND  
 (14) Q I ll show you the photograph that we were shown yesterday  
 (15) 1295-6 It has it posted on the back number 33 Seward 248  
 (16) That s the designation of an official Alaska heritage resource?  
 (17) A Yes that is  
 (18) Q Are you telling us that you no longer are of the opinion  
 (19) that the Omni boom that we see in this photograph was being  
 (20) operated very close to 248?  
 (21) A What I m saying is in terms of the notes on the back of  
 (22) those with this site and other sites I might only refer to  
 (23) one AHRS number That is I believe the number that refers to  
 (24) the homesite itself But there are several other AHRS numbers  
 (25) associated with it

Vol 24 3800

- (1) Chugach Alaska Corporation has a site located in this  
 (2) area Within that area there are various AHRS numbers  
 assigned  
 (3) to different cultural remains When I refer to the Omni boom  
 (4) in the vicinity of the 248 that is incorrect What I m  
 (5) referring to is that it s in the vicinity of the Chugach Alaska  
 (6) Corporation site which encompasses 248 and these other site  
 (7) designations  
 (8) Q Well there is only one other site designation in the  
 (9) southern portion of the Crafton Island that we re looking at  
 (10) Isn t that right?  
 (11) A No I believe there are several  
 (12) Q Let me show you what is marked as 248 AHRS number 248  
 (13) consists of five houses two sheds an outbuilding outhouse  
 (14) boardwalk dock three boats in deteriorated condition It  
 (15) goes on to say it was first settled by non Native for use as a  
 (16) fox farm and then purchased in the 40s by Frenchie Allen  
 (17) Shankey (ph) That comports with your knowledge?  
 (18) A Yes it does  
 (19) Q And there is also Seward 474 which is a kayak?  
 (20) A That s correct  
 (21) Q That s no longer there correct?  
 (22) A It has been collected that s correct  
 (23) Q It s now in a museum or being curated?  
 (24) A Yes it is  
 (25) Q When you testified yesterday about the operation of the

Vol 24 3801

- (1) Omni boom you didn t mean to suggest that it was being  
 (2) operated down here at the bottom of the cove close to -  
 (3) A What I understand in terms of the operation of the boom  
 (4) was that it was operating I believe - could you slide this up  
 (5) just a little bit so I get the number correct?  
 (6) Q Sure  
 (7) A A little more That it was operating somewhere to the  
 (8) south of number nine  
 (9) Q How far to the south?  
 (10) A I believe that it was operating in this little bay  
 (11) (indicating)  
 (12) Q Were you of the opinion or did you reach the opinion that  
 (13) in any way Exxon was operating that equipment or its contractor  
 (14) was operating that equipment in a manner that was not being  
 (15) reasonably - was not being reasonably prudent in light of  
 (16) archaeological materials in the vicinity?  
 (17) A I believe that they were operating it under standard  
 (18) procedure in terms of the operation of the boom In terms of  
 (19) potential impact on cultural remains I would have a concern  
 (20) Q Have you reviewed Mr Gallison s field notes for the  
 (21) period?  
 (22) A Not recently but I have  
 (23) MR DIAMOND You ve seen these in one form or  
 (24) another This is DX16243 This has not been previously  
 (25) produced to counsel in this form although they have the field

Vol 24 3802

- (1) notes Do you want to see it  
 (2) MR FORTIER That s fine  
 (3) BY MR DIAMOND  
 (4) Q Have you reviewed Mr Gallison s field notes?  
 (5) A As I said I have reviewed at least some of them  
 (6) Q Don t Mr Gallison s notes for the clean up area emphasize  
 (7) concern for archaeological artifacts in the area?  
 (8) A I don t recall specifically but I believe -  
 (9) Q Do you have any doubt -  
 (10) A No I don t have any doubt that he would have concern  
 (11) Q He would have mapped the entire area before any cleanup  
 (12) took place wouldn t he?  
 (13) A No  
 (14) Q He wouldn t have?  
 (15) A No  
 (16) Q Didn t he in this case?  
 (17) A He may have mapped some of the remains associated with  
 (18) SEW 248 but I don t believe that he mapped the entire site  
 (19) the entire Chugach Alaska Corporation site  
 (20) Q Didn t he map the site where clean up work was taking  
 (21) place?  
 (22) A I would have to look  
 (23) Q Take a look at page 37 of his field notes under July 30th  
 (24) 1989 You re on page 37?  
 (25) A Yes I am

Vol 24 3803

- (1) Q And in the second paragraph didn't Mr Gallison say Spent  
 (2) the remainder of the day with Pete mapping the beach front in  
 (3) location of kayak That's number 9 on our map?  
 (4) A Yes I'm sure that he did map this area  
 (5) Q And he also says We made a sketch map of the kayak and  
 (6) surrounding terrain?  
 (7) A That's correct  
 (8) Q That's before the date of the photograph of the clean up  
 (9) operations that you showed us?  
 (10) A All right  
 (11) Q Isn't that right?  
 (12) A I don't recall the dates  
 (13) Q It says 8/9/89  
 (14) A All right  
 (15) Q So more than a week before he was out there mapping  
 wasn't  
 (16) he?  
 (17) A Yes he was  
 (18) Q Take a look at pages 53 54 And I won't go through every  
 (19) page of everything Mr Gallison did in this area but doesn't  
 (20) he say at the bottom of page 53 and the top of page 54 he  
 (21) returned to the cove area located in the lower one third of the  
 (22) island and placed flagging tape around the burial marking as  
 (23) per requested by Chuck Mobley Incidentally Mr Mobley was  
 (24) director of Exxon CRP?  
 (25) A That's correct

Vol 24 3804

- (1) Q And burial area was closed off by flagging tape ten meters  
 (2) across the front north and three meters out from the cliff  
 (3) base?  
 (4) A Yes that's what it says  
 (5) Q In your expert opinion that does show concern for  
 (6) archaeological features in the area does it not?  
 (7) A Yes it does  
 (8) Q Take a look at page 96 This is his entry I'll skip  
 (9) ahead more than a week to August 9 1989 This is the date of  
 (10) your photograph Take a look at - two-thirds down there is a  
 (11) sentence beginning "travel to CR 5"  
 (12) A All right  
 (13) Q And doesn't this reflect that on the day of the clean up  
 (14) operations depicted in your photograph he traveled to CR 5  
 (15) kayak at 0800 Omni 8 work in progress below the site during  
 (16) tide Made surface inspection of the beach front already  
 (17) washed  
 (18) A Yes  
 (19) Q That shows concern for the archaeological resources in the  
 (20) area doesn't it?  
 (21) A Yes it does  
 (22) Q In fact it's your understanding that it was Mr Gallison  
 (23) who took these pictures that show us the clean up activities of  
 (24) the beach?  
 (25) A Yes that's probably the case

Vol 24 3805

- (1) Q Take a look at page 99 Still on August 9 reflect CR 5  
 (2) surface inspection of the washed beach deposits revealed  
 (3) several pieces of rusted sheet metal fragments parens eight  
 (4) round wire nails parens two a boat engine part parens two  
 (5) handle of fiberglass fishing pole and rope fragments All  
 (6) materials discovered are recent historic drift garbage no  
 (7) artifacts or features were exposed during the wash of the  
 (8) Omni 8 that are associated with the fox pen location on kayak  
 (9) site?  
 (10) A Yes I do  
 (11) Q In your opinion doesn't that in effect manifest concern  
 (12) for the archaeological resources in the area?  
 (13) A What I think it indicates is that he does have concern for  
 (14) them I don't doubt Jim Gallison's concern  
 (15) Q Doesn't it - let me strike that  
 (16) Let me ask you first go back to the map up here he said  
 (17) the Omni 8 was north of the kayak The kayak is depicted as  
 (18) number nine on our map up at the top dot that is yellow We  
 (19) talked yesterday about the grave marker which is number four  
 (20) and if I zoom back here is a scale on this map in meters  
 (21) Hundred meters is roughly a football field meter is roughly a  
 (22) yard  
 (23) A Yeah the football field was the problem  
 (24) Q Sorry?  
 (25) A Yeah

Vol 24 3806

- (1) Q According to this map the Omni 8 that we saw in operation  
 (2) in your photograph was probably one and a half to two football  
 (3) fields away from the grave markers?  
 (4) A Yes  
 (5) Q You also showed us pictures of further clean up operations  
 (6) in this area see if I can do this without taking them out of  
 (7) the cover Do you remember these?  
 (8) A Yes I do  
 (9) Q Another one?  
 (10) A Yes  
 (11) Q This was also in CR 5?  
 (12) A Yes  
 (13) Q Dig out copies for Mr Fortier But those were later in  
 (14) the week around the 12th of August were they not?  
 (15) A That's -  
 (16) Q Several days after the Omni boom picture correct?  
 (17) A I don't recall the specific dates but that's probably  
 (18) correct  
 (19) Q Take a look at page 120 of Mr Gallison's notes which talk  
 (20) about that operation First sentence three lines down  
 (21) Mr Gallison writes This activity like before transported  
 (22) gravel at smaller size charts downslope below tide zone No  
 (23) new material I.e. recent modern beach trash observed on  
 (24) freshly washed deposit  
 (25) It goes on and talks about the hose activity There is a

Vol 24 3807

- (1) sentence hose and deluge that s where they swamp the beach?  
 (2) A Yes  
 (3) Q Hoses and deluge are in places across the southern end of  
 (4) the cove extending from southwest corner to ten meters past  
 (5) burial marker Hoses and equipment and crew are well away  
 from  
 (6) flagged off areas That reflects concern on the part of  
 (7) Mr Gallison does it not in your mind that the importance  
 (8) and the sensitivity of these archaeological resources?  
 (9) A It reflects his concern for the burial marker yes  
 (10) Q Let s go north on Crafton Island up to the burial cave Do  
 (11) you remember you showed us pictures of that?  
 (12) Could we put up just to remind the jury what we re talking  
 (13) about PX1288 2  
 (14) This is a photograph of the Crafton Island burial cave is  
 (15) it not Dr Johnson?  
 (16) A Yes it is  
 (17) Q There was a reference to bones in the videotape - and I  
 (18) know the jury hasn t seen them - Mr Fortier showed you some  
 (19) photographs this morning of bones in the burial cave Are  
 (20) there bones -  
 (21) A I m trying to think back to this morning  
 (22) Q Long time ago  
 (23) A Yeah I don t remember  
 (24) Q Well let me cut through it It s a fact is it not that  
 (25) over 20 years ago the Forest Service removed all of the human

Vol 24 3808

- (1) remains in Crafton Island burial cave?  
 (2) A It s not a fact  
 (3) Q Not true?  
 (4) A I don t believe they have removed all of the human  
 (5) remains They may have removed all of the visible remains  
 (6) Q But you re saying some may be buried deep down in the  
 (7) midden?  
 (8) A It s quite likely that there are  
 (9) Q The photographs of modern day photographs should any  
 be  
 (10) offered into evidence of Crafton Island at least as recently  
 (11) that you ve been there don t show any human remains do  
 they?  
 (12) A No I don t believe they do At least none that have been  
 (13) identified as such  
 (14) Q Let s go back to the human remains question Isn t it the  
 (15) case that human remains have been removed from the site?  
 (16) A That s correct  
 (17) Q Those that were on the surface?  
 (18) A I believe some on the surface and possibly some that were  
 (19) subsurface  
 (20) Q And that was done by an archaeologist?  
 (21) A I believe it was  
 (22) Q McAster M c A s t e r?  
 (23) A Yes  
 (24) Q In 1969?  
 (25) A Yes that s what s reported

Vol 24 - 3809

- (1) Q You said there were concerns about vandalism of Crafton  
 (2) Island burial cave in 1989 Crafton Island burial cave has a  
 (3) long history of being vandalized hasn t it?  
 (4) A It has been vandalized prior to 1989 yes  
 (5) Q It s visible you can see it from the water?  
 (6) A It is visible yes  
 (7) Q And in fact Chugach Alaska Corporation in the - in 1988  
 (8) requested the help of the Forest Service in protecting the  
 (9) site?  
 (10) A That s correct  
 (11) Q And your brother was instrumental in urging the Forest  
 (12) Service to do more than they were doing to protect the site?  
 (13) A Yes there was a high concern for the site  
 (14) Q You re aware from documents that you ve reviewed that  
 (15) there is a long history of pot holding by fishermen at this  
 (16) site?  
 (17) A It s clear that there has been vandalism at this site prior  
 (18) to 1989 yes  
 (19) Q The 1989 vandalism that you suspect may have taken place  
 (20) no one was ever caught for that were they?  
 (21) A No As far as I know they were not  
 (22) Q And no one was ever identified as having been responsible  
 (23) for that vandalism?  
 (24) A I don t believe no  
 (25) Q You have no way of knowing whether the people who were

Vol 24 3810

- (1) involved - if in fact they were people - were in any way  
 (2) connected with the oil spill?  
 (3) A Again I am not aware - I don t believe so - let s - I m  
 (4) not aware of anyone specifically being identified in terms of  
 (5) the vandalism whether oil spill worker or not  
 (6) Q And in fact the vandalism or digging that you saw in that  
 (7) cave during the summer of 1989 might well have been animals  
 (8) digging?  
 (9) A I don t think so  
 (10) Q Aren t you uncertain whether the digging that you observed  
 (11) personally with Rita Miraglia was human or animal?  
 (12) A I have seen animal digging and I ve seen at least  
 (13) photographs - well I know what it looks like in terms of -  
 (14) well excavation and the areas that I saw in terms of  
 (15) disturbance appeared to be disturbance not by animals but  
 (16) likely to be by humans  
 (17) Q Are you sure?  
 (18) A Not absolutely  
 (19) Q You weren t able to determine whether it was animal or  
 (20) human origin Isn t that right?  
 (21) A At the time I didn t indicate one way or the other no  
 (22) Q At the time you weren t able to determine whether it was  
 (23) animals or people who were doing the digging?  
 (24) A At the time I was just noting disturbance that s correct  
 (25) Q It is - it s a known fact that otters do dig in coastal

Vol 24 3811

- (1) caves like this?
- (2) A They do in middens yes
- (3) Q That s a problem that archaeology preservationists have to deal with?
- (4) A Yes it is
- (5) Q You showed us a videotape of - I believe it was a 1990 videotape of McArthur Pass Do you remember that?
- (6) A Yes I do
- (7) Q And you showed us pictures of pooled oil deposits that had congeal between the rocks?
- (8) A Yes
- (9) Q Just so that the jury can remember I m going to ask that we - do we have a video clip of that I m going to put up a piece of a clip that we showed yesterday Our editors didn t include a visual of pooled oil I don t know why they didn t but this is a visual of McArthur Pass that you talked about yesterday
- (10) A That s correct
- (11) Q There was a reason there was still a lot of oil there in 1990 isn t there?
- (12) A Yes there is
- (13) Q And that s because no clean up work was done in 1989?
- (14) A That s correct There was not -
- (15) Q A decision was made jointly by Exxon the Coast Guard the Park Service personnel and the landowner your client to

Vol 24 3813

- (1) Exxon also undertook very significant archaeological research at this site?
- (2) A Research was conducted at the site yes
- (3) Q You re aware that the entire intertidal zone the entire beach area was gridded meter square grids were created and the
- (4) cleanup was done very carefully so as to preserve and protect any archaeological material?
- (5) A It was squared off in grids In terms of the ability to preserve and protect all archaeological materials in the area there is a question
- (6) Q Well extraordinary concern was taken wasn t it?
- (7) A There were efforts given yes I absolutely degree
- (8) Q I have a photograph which is the cover of book marked DX15293 and I ll put it on the Barco You ve seen this photograph It doesn t translate well to the screen but you ve seen this before?
- (9) A Yes
- (10) Q You re very familiar with the book I ve just referred to?
- (11) A Yes I m familiar with the publication
- (12) Q This photograph depicts does it not the gridding that was done of the intertidal zone and the removal of oil?
- (13) A Yes it does
- (14) MR DIAMOND Your Honor could I pass this around because it s hard to see?
- (15) BY MR DIAMOND

Vol 24 - 3812

- (1) postpone clean up so that it wasn t done on a rush basis?
- (2) A That s correct
- (3) Q And in 1990 people returned to that site to figure out how best to clean it?
- (4) A That s correct
- (5) Q And one of the concerns was this is an area the inland area is known to contain significant archaeological remains?
- (6) A That s correct
- (7) Q And nobody wanted to inadvertently disturb any?
- (8) A There were a lot of concerns how not to disturb the cultural materials in the intertidal area as well as the uplands yes
- (9) Q So the cleanup was postponed for a year?
- (10) A That s correct
- (11) Q To give people an opportunity to reflect and think and plan about how best to do it and not endanger cultural material?
- (12) A That s correct
- (13) Q You were in fact part of that process were you not?
- (14) A Yes I was
- (15) Q Therefore you have personal knowledge about how the cleanup was conducted in 1990?
- (16) A I wasn t present during the cleanup no
- (17) Q You ve read information about that?
- (18) A Yes I have
- (19) Q As part of the cleanup isn t it true Dr Johnson that

Vol 24 3814

- (1) Q The cleanup that we ve just discussed was only part of what the Exxon archaeologists and others did at that site in 1990 and again in 1991?
- (2) A In terms of archaeological work?
- (3) Q Yes
- (4) A Yes that s correct
- (5) Q All of the artifacts that could be identified in the intertidal zone were collected and cleaned?
- (6) A Artifacts that were identified were collected
- (7) Q And there were artifact collections undertaken in the uplands?
- (8) A Yes a test pit was excavated
- (9) Q And as part of the process all recovered archaeological resources were curated somewhere?
- (10) A Yes that s correct
- (11) Q Subsurface testing was done in the spring and summer of 1990?
- (12) A Yes that s correct
- (13) Q Radio carbon dating was done of samples taken from those tests?
- (14) A Yes radio carbon samples were taken in the uplands
- (15) Q And Exxon archaeologists prepared detailed stratigraphic profiling you ve seen those?
- (16) A In terms of the upland excavation it was the Park Service and myself

Vol 24 3815

- (1) Q And all of this culminated in more than a 200 page
- (2) publication that the jury is currently looking at?
- (3) A That s correct
- (4) Q Despite all of that Dr Johnson here is 1294 McArthur
- (5) Pass still appears on your list of sites?
- (6) A That s correct
- (7) Q And you ve allocated over \$850 000 for further research in
- (8) this area?
- (9) A That s correct
- (10) Q One thing I want to do while we re on the subject of
- (11) McArthur Pass before you put it on This is DX 10600-9 This
- (12) is a little clearer photograph than the one you get from the
- (13) video Does this look like McArthur Pass?
- (14) A Yes it does
- (15) Q You can see markings on this rocks down at the lower end
- (16) of the shoreline are darker in color than the ones up at the
- (17) top Is that as you would interpret this because these are wet
- (18) and these are dried?
- (19) A The area - let s see - this area down in here there is
- (20) fucus along in here The asphalt pavement I believe that we
- (21) were looking at yesterday is just beyond the photograph this
- (22) direction
- (23) Q I call your attention to the markings on the tree stumps
- (24) that are here Those are tide markings are they not?
- (25) A Yes

Vol 24 3816

- (1) Q And you can trace those on various of the tree stumps that
- (2) are on the shoreline?
- (3) A Yes
- (4) Q And that represents the high water mark correct?
- (5) A Yes It does
- (6) Q So you could look at this photograph and basically - and
- (7) I ll do it very roughly If you disagree with this you can
- (8) tell me Just by virtue of the different colorations you can
- (9) sort of draw a line as to where the tide comes Is that about,
- (10) right or would you make it lower?
- (11) A Its looks like it should be lower
- (12) Q Let s do it again
- (13) A Probably better to do it at an angle so you have the
- (14) perspective
- (15) Q Sort of like this?
- (16) A I was thinking if you started with the line in the front
- (17) and go there -
- (18) Q I ll let you do it Do you want to pick up your light
- (19) pen? You can just pick up your light pen there and Joel will
- (20) turn the color on for you and just use it as if it were a
- (21) magic marker Hold it against the screen Isn t that amazing
- (22) where would the tide be?
- (23) A Its in this direction (indicating)
- (24) Q Why don t you change the color bar? Draw where you think
- (25) the high tide mark is going back into the recess of the picture

Vol 24 3817

- (1) toward that way?
- (2) A It extends beyond the edge of the photograph
- (3) Q How about toward the center of the photograph?
- (4) A The clean rocks appear to be somewhere along this line in
- (5) here (indicating)
- (6) MR DIAMOND Joel can I have this back?
- (7) BY MR DIAMOND
- (8) Q So you would agree with me that all of this area in here is
- (9) below the high tide is that correct?
- (10) A Yes I believe that s the case
- (11) Q The Native corporations don t own this do they?
- (12) A They own - they do not own the intertidal area
- (13) Q It s owned by the State of Alaska?
- (14) A That s correct
- (15) Q It s owned by all of us who live here?
- (16) A That s correct
- (17) Q And in fact any artifacts that are found in the area that
- (18) I ve drawn are not the property of Native corporations are
- (19) they?
- (20) A I believe that they were the property of the State but
- (21) that the Native Cultural Group has an interest in them
- (22) Q Undoubtedly they have an interest in them but this is
- (23) State land Is it not?
- (24) A That s my understanding
- (25) Q And before you dig or explore in this area you need to go

Vol 24 3818

- (1) to the State and get a permit?
- (2) A That s correct
- (3) Q And you can t even remove an artifact off the beach without
- (4) a State permit is that right?
- (5) A I believe that one needs a State permit
- (6) Q Regardless whether you re a Chenegan or non Native?
- (7) A I believe that s the case
- (8) Q I was going to go over the charts that were introduced
- (9) yesterday
- (10) Do we have 1290-B? You can take it off the screen the
- (11) Barco
- (12) Do you remember this chart Dr Johnson?
- (13) A Yes I do
- (14) Q You ve identified this as selected examples of impact of
- (15) oil?
- (16) A Yes
- (17) Q Was this intended to convey impacts of oil on actual
- (18) archaeological artifacts or resources?
- (19) A It was intended to indicate oil on archaeological sites
- (20) Q That wasn t my question Was it intended to indicate areas
- (21) of field notes where you found a reference to oiling of
- (22) archaeological materials?
- (23) A Archaeological sites yes
- (24) Q You re saying sites including all of the surrounding area?
- (25) A Yes that is the definition of site

Vol 24 3819

- (1) Q So we should not take from this chart the message that each  
 (2) one of these locations any known cultural resources got  
 (3) oiled?  
 (4) A That's correct. And again that is in terms of the  
 (5) documentation of known cultural features. The sites in my  
 (6) opinion were oiled.  
 (7) Q I'm not going to ask you about all of these. I intended  
 (8) to but I don't want to belabor matters. But there is a  
 (9) reference doesn't have a segment. AHR's reference to VECO  
 video  
 (10) re Toxicity of oil. Let me show you what's attached as 1290b  
 (11) as a report of - this is somebody's log notes?  
 (12) A That's correct.  
 (13) Q And what it actually says is 5/25/89 spent the morning  
 (14) in safety and health training lecture and short videos through  
 (15) VECO dangers of toxicity of oil equipment to bears. That  
 (16) doesn't have anything to do with archaeology does it?  
 (17) A No it has to do with toxicity of oil.  
 (18) Q Toxicity of oil archaeological resources?  
 (19) A No the charts were meant to indicate oil the focus is on  
 (20) oil and most of those refer to archaeological sites but not all  
 (21) of them.  
 (22) Q So the jury should not take your chart as an indication  
 (23) that wherever you have an entry there is a corresponding entry  
 (24) of field notes to oiling of archaeological resources?  
 (25) A For example - that's correct. For example the KN 134

Vol 24 3820

- (1) 35 and 36 those refer to oiling but not specifically  
 (2) oiling of an archaeological site. Where you see the AHR's  
 (3) number that refers to an oiling of a site.  
 (4) Q In fact if we looked at KN 134 135 and 136 we would find  
 (5) references to the field parks smelling or seeing oil or oily  
 (6) debris but in fact in reach of those instances field arts  
 (7) noted that there were no cultural resources found is that  
 (8) right?  
 (9) A I believe in this some of these cases that they have  
 (10) noted something but the focus here was not on oiling of  
 (11) archaeological sites it was oiling of shorelines.  
 (12) Q I'll show you the first page of 1289b which you also  
 (13) talked about yesterday. This is a chart you prepared which is  
 (14) entitled Selected Examples of Vandalism Disturbances and  
 (15) Impacts. And again I'm going to skip over some of these.  
 (16) You've attached the backup to all these entries and copies that  
 (17) will go to the jury?  
 (18) A Yes I believe.  
 (19) Q So they can read them themselves?  
 (20) A That's the idea.  
 (21) Q Take a look at Crafton Island 2 the July 26th 1980 field  
 (22) notes says graffiti - Crafton Island 02 that's the burial  
 (23) cave isn't it?  
 (24) A Yes this is the - yes.  
 (25) Q And this says graffiti using oil on rocks vertical oil

Vol 24 3821

- (1) drive hi mom Guns & Roses and smiling face?  
 (2) A Yes.  
 (3) Q You didn't mean to suggest that the field archaeologist  
 (4) observed graffiti in the burial cave?  
 (5) A No I believe that was not the case. That's why the field  
 (6) notes are attached so they can see what it refers to.  
 (7) Q In fact he didn't get to the Crafton Island burial cave  
 (8) until the next day isn't that right?  
 (9) A I don't know the specific dates.  
 (10) Q Don't you think this is a little misleading?  
 (11) A No it's not meant to be misleading. It's meant to  
 (12) indicate instances of vandalism and disturbance and the  
 (13) graffiti itself is the disturbance. Whether it's in the cave  
 (14) or some other location it doesn't matter. What is important  
 (15) here actually is that it's in the segment CR 2.  
 (16) Q Segment CR 2 is the location of the burial cave?  
 (17) A That's correct. Maybe just for clarification that what  
 (18) those are they are references and rather than drawing more in  
 (19) terms of conclusions it was felt that these are selected  
 (20) examples. Some of them I'm able to explain without any  
 (21) problem that type of thing. Other ones they are just  
 (22) references. And the key thing there is remember the idea of  
 (23) the graffiti.  
 (24) Q They are references to graffiti but not graffiti on  
 (25) archaeological significant resources necessarily?

Vol 24 3822

- (1) A Not necessarily that's correct.  
 (2) Q Or they are evidence of digging but not necessarily  
 (3) evidence of human digging?  
 (4) A I believe I indicated in that one that it could have been  
 (5) animal disturbance.  
 (6) Q And it's evidence of oiling but not evidence of  
 (7) necessarily of oiling of archaeological resources?  
 (8) A It is oiling of archaeological sites. It may not be  
 (9) specific oiling of identified artifacts.  
 (10) Q Let's talk about secrecy very important in your analysis  
 (11) loss of secrecy. We've already talked about Crafton Island  
 (12) burial cave that's long been a place where there has been  
 (13) vandalism?  
 (14) A Vandalism has been -  
 (15) Q Long before the spill?  
 (16) A I don't know the exact dates when it became an issue.  
 (17) Q The Chenega Village pictures that you showed us yesterday  
 (18) that's also been an area of pre spill vandalism?  
 (19) A I'm actually not personally aware of pre spill vandalism.  
 (20) Photographs suggest that there are or that there is I know  
 (21) that the site itself was heavily damaged during the earthquake  
 (22) and tsunami.  
 (23) Q Let me show you 160082. It's hard to tell on this Barco  
 (24) but it's an August '89 photograph that was done up. Do you  
 (25) recognize this as the Chenega Village schoolhouse?

Vol 24 3823

- (1) A I believe it's one of the structures there yes
- (2) Q The incident that gave rise to the Chenega problem was
- (3) graffiti painted on the wall?
- (4) A Yes
- (5) Q Somebody pulled the ceiling down on the Chenega Village
- (6) schoolhouse long before the oil spill didn't they?
- (7) A It is collapsing yes
- (8) Q 17 Somebody kicked holes in the walls of the Chenega
- (9) Village schoolhouse long before the oil spill didn't they?
- (10) A There is definitely - looks like vandalism to me
- (11) Q Let's go back to the picture that you showed us There are
- (12) various references in this photographs to pre spill vandalism
- (13) aren't there? Tim was there in August of '85?
- (14) A That's correct
- (15) Q What's the date of this '87?
- (16) A Is that what it is? I'll take your word for it
- (17) Q The incident of vandalism that was investigated in
- (18) connection with the spill was this one Exxon and a
- (19) description of what Exxon can do with themselves?
- (20) A I believe it included more than that In addition this
- (21) Robert 21 '89 all of that in the dark
- (22) Q This area here?
- (23) A That area there and to the left both areas
- (24) Q Robert P and Mike and Joe the guys from Ventura they
- (25) were never connected with the cleanup were they?

Vol 24 3824

- (1) A I don't know if they were or not
- (2) Q And the fella who left his name Robert April 9 1989 he
- (3) was never identified as being connected with the cleanup was
- (4) he?
- (5) A No We had asked for any type of incident reports and
- (6) asked to see if some of these names could be traced and we
- (7) never did receive any reports on that
- (8) Q Location of many of the sites to which you had quantified
- (9) damages is not really secret is it?
- (10) A This particular location?
- (11) Q No Chenega Villages in - I'm just talking generally?
- (12) A Chenega Village is known
- (13) Q Well here is a copy of a book that's been marked 15513 1
- (14) and I hope Judge Shortell won't make me file it as an exhibit
- (15) because this was checked out of the Anchorage Public Library
- (16) that is DeLaguna's book You're familiar with this?
- (17) A Yes
- (18) Q And this is generally available in any metropolitan or
- (19) university library?
- (20) A Actually it's in many collections I have gone to many
- (21) collections where it's been stolen or is missing
- (22) Q Vandals they are everywhere
- (23) DeLaguna I just went through briefly and pulled out
- (24) references to some of the sites we've talked about in this
- (25) case but we talked about Culross Island DeLaguna talks
- about

Vol 24 3825

- (1) Culross Island doesn't she?
- (2) A Yes she does And in fact I think the AHRs forms refers
- (3) to it
- (4) Q And she included in her books various maps of where things
- (5) were?
- (6) A Yes she does
- (7) Q Let's turn to pages 30 through 31 There is a reference to
- (8) Chenega Village here?
- (9) A That's correct
- (10) Q Kake Cove Kake Cove is the place you showed us video
- from
- (11) where the archaeologists came after the tide had come in and
- (12) there were garbage bags piled on the shore side?
- (13) A That's correct
- (14) Q Kake Cove is discussed in DeLaguna's book as well?
- (15) A That's correct
- (16) Q And there is a claim for Kake Cove?
- (17) A Yes there is
- (18) Q Middle Bay that's one of the claims?
- (19) A Yes it is
- (20) Q Point Helen is one of the claims?
- (21) A That's correct
- (22) Q Sawmill Bay?
- (23) A Yes
- (24) Q Mummy Island?
- (25) A Yes it is

Vol 24 3826

- (1) Q Panhat Point?
- (2) A Yes it is
- (3) Q All these are depicted on DeLaguna's map aren't they?
- (4) A I believe that most of them are
- (5) Q She also talks about lots of settlements can't make it any
- (6) wider Yalik Bay there is an archaeological claim for Yalik
- (7) Bay?
- (8) A That's correct
- (9) Q McArthur Pass?
- (10) A That's correct
- (11) Q An Ayaliak Bay?
- (12) A I'd have to check on that one
- (13) Q Koyuktoik Dogfish Bay there is a claim?
- (14) A Yes
- (15) Q They are all discussed in DeLaguna's book?
- (16) A They are mentioned yes
- (17) Q Are you familiar with Paradise of The North available at
- (18) Captain Cook bookstore?
- (19) A Actually I've never seen it before
- (20) Q Exhibit number 15512 do you recognize that as a picture of
- (21) the Chenega Village schoolhouse?
- (22) A Yes I do
- (23) Q Adjacent to that do you recognize that as a picture of -
- (24) Gail Evanoff and her husband Larry?
- (25) A That's correct

Vol 24 3827

- (1) Q Cruising Guide to the Prince William Sound do you know  
 (2) this one?  
 (3) A Yes I do  
 (4) Q This has got various references to sites that we've  
 (5) discussed yesterday and today?  
 (6) A It has references to some of the sites yes  
 (7) Q We talked about or at least we began talking about 14H 1  
 (8) claims 14H 1 claims are claims that a regional corporation  
 (9) can make for land on which there are significant historical or  
 (10) cemetery places?  
 (11) A Yes  
 (12) Q You're familiar with a process by which a regional  
 (13) corporation like Chenega Alaska has to go through in selecting  
 (14) a 14H 1 site?  
 (15) MR FORTIER That's Chugach Alaska  
 (16) MR DIAMOND I'm sorry?  
 (17) A I'm familiar with part of the process  
 (18) BY MR DIAMOND  
 (19) Q And you've looked at the regulations on that?  
 (20) MR PETUMENOS Objection  
 (21) THE COURT Is it the same objection I dealt with  
 (22) earlier?  
 (23) MR PETUMENOS I thought the plaintiffs were  
 (24) precluded from going into this area  
 (25) THE COURT If it's not the same question come on

Vol 24 3828

- (1) up  
 (2) (Sidebar held out of the hearing of the jury)  
 (3) MR FORTIER The issue this morning -  
 (4) THE COURT We had whether or not they could get -  
 (5) MR DIAMOND No I've dropped that issue sensitivity  
 (6) to Mr Fortier in as much as this is something else  
 (7) THE COURT Hold on let me read it  
 (8) MR PETUMENOS I don't know where he's going  
 (9) THE COURT So is the objection still -  
 (10) MR PETUMENOS May not be  
 (11) MR FORTIER Your Honor I think I asked almost an  
 (12) identical question this morning the objection was sustained on  
 (13) it  
 (14) MR DIAMOND Question was whether he heard expert  
 (15) testimony I could have objected on a foundation based this  
 (16) is simply the procedure that you mentioned of Chugach Alaska  
 (17) THE COURT What?  
 (18) MR DIAMOND It was a published paper  
 (19) THE COURT Okay  
 (20) MR PETUMENOS I'll see where it goes  
 (21) (Sidebar concluded)  
 (22) BY MR DIAMOND  
 (23) Q Dr Johnson there are regulations that are promulgated  
 (24) before a corporation like CAC before they could select lands of  
 (25) archaeological or historical significance?

Vol 24 3829

- (1) A Yes there are  
 (2) Q Let me show you a portion 43 CFR section 2653 5 which  
 (3) deals with that process This says In making the  
 (4) application - and I'll represent to you it's 14H 1 - the  
 (5) regional corporation should identify accurately and with  
 (6) sufficient specificity the size and location of the site for  
 (7) which the application is made as an existing cemetery site or  
 (8) historical place to enable the BLM to segregate the proper  
 (9) lands You're familiar with that?  
 (10) A That's what it says  
 (11) Q You're familiar that CAC has to go through that process to  
 (12) make it a 14H 1 selection which it has done in the past?  
 (13) A Yes that's the process  
 (14) Q And is it not also part of the process that notice of the  
 (15) filing of such applications specifying the regional  
 (16) corporation the size and location of the segregated lands  
 (17) encompassing the site for which application has been made a  
 (18) data filing and the day by which any protest shall be made  
 (19) shall be published once in the Federal Register and in one or  
 (20) more newspapers of general circulation in Alaska once a week  
 (21) for three consecutive weeks  
 (22) You're familiar with that?  
 (23) A No actually I'm not familiar with that  
 (24) Q If in fact Chugach Alaska Corporation has to publish in  
 (25) the paper the location of all of its 14H 1 sites don't you

Vol 24 3830

- (1) think that most people who are curious would be able to go find  
 (2) out where their sites are?  
 (3) A It is definitely a concern in terms of confidentiality  
 (4) yes  
 (5) Q Show you a blowup of a map which Mr Leppo will hold up  
 (6) for  
 (7) me This is defendant's 16197  
 (8) MR FORTIER This is a freebie  
 (9) MR DIAMOND This is a new exhibit  
 (10) MR FORTIER I haven't seen this before Your Honor  
 (11) THE COURT Okay  
 (12) MR PETUMENOS I haven't seen it either because  
 (13) Mr Fortier is standing in front of it  
 (14) BY MR DIAMOND  
 (15) Q This is a township map from the United States Bureau of  
 (16) Land Management You've seen these before haven't you?  
 (17) A Yes Actually I don't know if I've seen it  
 (18) Q Let me show you this one if my walking poster board will  
 (19) follow me  
 (20) This is a township management map which in fact shows  
 (21) Chugach Alaska selections You've seen these before?  
 (22) A I have seen these  
 (23) Q And right in this box here - if you could turn it towards  
 (24) the jury - there is an AA12591 That refers to part of  
 (25) Chugach Alaska selections of historical places does it not?  
 (26) A Yes it does

Vol 24 3831

- (1) Q That s the number of an application that was filed by CAC?
- (2) A That s correct
- (3) Q And this is fairly small this is measured in chains but
- (4) that s about what a quarter mile square if that?
- (5) A Yeah if that
- (6) Q This is the site of the Disk Island burial cave that we
- (7) talked about earlier today isn t it?
- (8) A Yes it is
- (9) Q In reaching the conclusion that the spill compromised
- (10) confidentiality did you take into account whether or not maps
- (11) such as this are publicly available for the asking at the
- (12) Bureau of Land Management?
- (13) A Yes and there is a concern about this
- (14) Q You can walk into the BLM and get this map just for asking
- (15) can t you?
- (16) A I ve never done it so I don t know 1294 these are
- (17) the -
- (18) Q 1294 these are the English Bay sites?
- (19) A That s correct
- (20) Q None are burial caves?
- (21) A No I don t see anything
- (22) Q None are known to have any human remains?
- (23) A I don t believe human remains have been documented at the
- (24) sites
- (25) Q You have no knowledge of any vandalism during the spill by

Vol 24 3832

- (1) clean up workers at any of these sites?
- (2) A I do not have specific knowledge of it no
- (3) Q Now five years later you still have no knowledge of any
- (4) vandalism by returning clean up workers at any of these sites?
- (5) A Not that I can recall at this time
- (6) Q And the best of your knowledge no clean up worker has
- (7) ever
- (8) returned to spoil any of these locations?
- (9) A I don t know that they have no
- (10) Q Same answer as to Port Graham?
- (11) A Again I m not aware of it
- (12) Q With the exception of Old Chenega Village which we just
- (13) talked about same answers for the Chenega Corporation sites?
- (14) A In terms of - could you repeat the question?
- (15) Q The question was you have no knowledge of vandalism
- (16) during
- (17) the course of the cleanup by clean up workers at any of these
- (18) sites with the exception of the old Chenega Village?
- (19) A I m not aware of it no
- (20) Q And you have no knowledge five years later that any
- (21) clean up workers has ever returned to spoil or otherwise
- (22) vandalize any of these sites?
- (23) A I have not documented it no
- (24) Q Finally Dr Johnson you consider yourself a social
- (25) scientist do you not?
- (26) A No I consider myself an archeologist
- (27) Q Archaeology is a branch of social sciences?

Vol 24 3833

- (1) A It s both in the social sciences and humanities
- (2) Q You re a researcher are you not?
- (3) A That s correct
- (4) Q And as a researcher would you agree with me that people
- (5) who are doing research in the social sciences ought not to have
- (6) an interest in that which they are doing research about a
- (7) pecuniary interest?
- (8) A I didn t understand
- (9) MR DIAMOND Your Honor may I approach for just a
- (10) second?
- (11) (Bench conference off the record )
- (12) BY MR DIAMOND
- (13) Q Dr Johnson the question that I asked you perhaps
- (14) inartfully don t you agree with me that someone who is doing
- (15) research in an area of the social sciences or the sciences for
- (16) that matter ought not to have any kind of pecuniary monetary
- (17) financial interest in the outcome of the research?
- (18) A I would say that basically my research is based on my own
- (19) evaluation of what the evidence is
- (20) Q Let me ask you my question My question is Don t you
- (21) think that the integrity of research might be looked at
- (22) differently if the person doing it has a - stood to gain in
- (23) some way directly or indirectly from the research that he or
- (24) she is doing?
- (25) A I think it depends on a case by case basis

Vol 24 3834

- (1) Q Wouldn t you look at SCATs and research done on drug
- (2) safety
- (3) by a scientist who had an ownership in the drug he was testing?
- (4) A I guess I would look first at the qualifications of the
- (5) individual
- (6) Q Something that might affect your appraisal evaluation
- (7) consideration of the findings wouldn t it?
- (8) A Not necessarily
- (9) Q It s something you would want to know in evaluating the
- (10) findings isn t it?
- (11) A In reference to myself being a shareholder -
- (12) Q I m not referencing that Generally isn t that something
- (13) you would be interested in knowing whether the person doing
- (14) research has a financial interest?
- (15) A Yes
- (16) Q And you just volunteered that you are a shareholder of
- (17) Chugach Alaska Corporation are you not?
- (18) A That s correct
- (19) Q And so are your brothers?
- (20) A That s correct
- (21) Q And so are your sisters?
- (22) A That s correct
- (23) Q And so are your cousins?
- (24) A That s correct
- (25) Q And you have cousins who have shareholders - that are
- (26) shareholders in the Chenega Village?

Vol 24 3835

- (1) A Very distant
- (2) MR DIAMOND Thank you No further questions
- (3) THE COURT Counsel I ve given you a choice you can
- (4) start now or in the morning
- (5) MR FORTIER Why don t we start tomorrow morning
- (6) It s been a long day
- (7) THE COURT I ll let the jury go
- (8) Don t talk about the case with your fellow jurors Don t
- (9) form or express any opinion until it s submitted to you for
- (10) deliberation We ll see you tomorrow morning
- (11) (Jury out at 1 25 p m )
- (12) THE COURT Counsel anything to take up on the
- (13) record?
- (14) MR DIAMOND May I be absolved of filing the original
- (15) of 15513 Can it be returned to library at the end of these
- (16) proceedings?
- (17) THE COURT No you ll just have to pay a fine
- (18) MR DIAMOND Well my friend who has the library card
- (19) is going to be chagrined about that
- (20) THE COURT Well you used the term loosely Yes
- (21) you re absolved
- (22) MR FORTIER The only other matter to take up I
- (23) wanted to bring to the Court s attention that we did file an
- (24) OPA 90 reply
- (25) THE COURT I ve got them all here

Vol 24 3836

- (1) MR PETUMENOS I have an application - and can the
- (2) witness stand down Judge?
- (3) THE COURT Sure
- (4) MR PETUMENOS It would be my - I m going to be
- (5) referring to the motion and order in limine that this court
- (6) entered with respect to the archaeological matters that were
- (7) addressed in court here in the past two days And to put it in
- (8) context I will - I think we had two issues that related to -
- (9) in my way of background we had filed a motion in limine with
- (10) respect to real estate inquiry generally of other oil spills
- (11) and the Court has sort of a reserved ruling on it You denied
- (12) it at the time You wanted to see how the proof developed with
- (13) respect to expert opinion on the impact of oil spills with
- (14) regard to other real property but you granted at least for
- (15) the present the motion in limine on impacts or vandalism
- (16) things like that on archaeological sites in the same oil
- (17) spill
- (18) I think also pending how the evidence developed at least
- (19) pretrial you denied it Excuse me you granted Exxon s and
- (20) denied ours I believe that the way that the cross examination
- (21) has developed in this case in which the expert has been
- (22) challenged in her expert opinion based upon a rigorous
- (23) cross examination that she doesn t know of individual specific
- (24) incidents on this site - on that site within the lands owned
- (25) by the Native corporations but in fact does know about

Vol 24 3837

- (1) incidents to that effect within the oil spill area And there
- (2) are some very well documented incidents to that effect within
- (3) the oil spill area that I believe any archeologist who is
- (4) working in this area this is not an uncommon situation
- (5) whether you re building a road or a development or an oil well
- (6) whatever you re doing that s the sort of thing that an
- (7) archeologist considers makes the order in limine unfair
- (8) It seems to me that the nature of the cross examination has
- (9) opened up for evidence what the archaeologists do know about
- (10) vandalism within the oil spill area within Prince William
- (11) Sound
- (12) THE COURT What do they know?
- (13) MR PETUMENOS My understanding is that we had a very
- (14) extensive chart that related to incidents of vandalism and so
- (15) forth on sites that were owned by the governments for
- (16) example
- (17) within the area where these sorts of things happened
- (18) THE COURT And you wanted to use it with this
- (19) witness?
- (20) MR PETUMENOS And I would renew the offer to use it
- (21) on redirect or with the next witness
- (22) THE COURT Which witness the main -
- (23) MR PETUMENOS I m sorry
- (24) THE COURT Which witness I need to know which
- (25) witness
- (26) MR PETUMENOS On the specific offer I d have to

Vol 24 3838

- (1) defer to Mr Fortier
- (2) MR FORTIER I think it would probably be Dr Johnson
- (3) for a little bit but I also know that Dr Lobdell has examined
- (4) the charts as well It s actually Dr Lobdell -
- (5) THE COURT Do you have a copy of the chart? I d like
- (6) to see it
- (7) MR FORTIER Of your order?
- (8) THE COURT No I want to see the chart
- (9) MR PETUMENOS The chart in its form before we cut it
- (10) back?
- (11) MR FORTIER No I didn t bring it with me today but
- (12) what I did was -
- (13) THE COURT How many instances of vandalism were
- (14) there?
- (15) MR FORTIER Pardon?
- (16) THE COURT How many instances of vandalism were
- (17) there?
- (18) MR FORTIER I can think of four or five off the top
- (19) of my head
- (20) THE COURT And so let s just assume there were four
- (21) or five instances of vandalism and the specifics circumstances
- (22) are going to be described
- (23) MR FORTIER The circumstances from the field notes
- (24) would be described yeah
- (25) THE COURT Do you have the field notes?

Vol 24 3839

- (1) MR FORTIER I don t have them with me no Your  
 (2) Honor  
 (3) THE COURT Mr Diamond?  
 (4) MR DIAMOND The basis for our objection this just  
 (5) opens up a huge door because the - most of the examples that  
 (6) were on the chart that we objected to were over in Kodiak  
 (7) Kodiak Most of the sites can be reached by car or by  
 (8) vehicle It's very different We did not want to have to  
 (9) start trying a half dozen sites what happened there who did  
 (10) what to whom was it similar to Prince William Sound sites  
 (11) which is very remote as you ve seen were they different It  
 (12) just opened up a whole can of worms and you agreed with us  
 (13) that  
 (14) we didn t want to have to try all that We re dealt here with  
 (15) approximately 50 sites that s more than a representative  
 (16) sample of these sites There is testimony that there has been  
 (17) vandalism at these sites I m not denying that there was  
 (18) testimony about Crafton Island burial cave and Chenega  
 (19) Village but if they get into this we re going to get into  
 (20) this and we re going to end up trying a whole lot of lawsuit  
 (21) based on hearsay documents I don t think that s something  
 (22) you  
 (23) want to open up  
 (24) THE COURT What s the question counsel? There are  
 (25) many things I don t want that I have to listen to but that  
 (26) doesn t mean I can preclude them  
 (27) MR DIAMOND I understand that You ve already

Vol 24 3840

- (1) precluded this testimony on the same argument  
 (2) THE COURT I did as a perspective matter but when  
 (3) counsel cross examines they run the risk of the door opening  
 (4) partially You see I have to deal with those in terms of an  
 (5) offer of proof and I hear from you - and this better be  
 (6) true - that this witness can say yes I know of four or five  
 (7) instances of vandalism that weren t on the property that these  
 (8) corporations owned but were post spill instances of vandalism  
 (9) and that is I take it to show that vandalism in the future  
 (10) might be a problem  
 (11) MR FORTIER No actually Your Honor the offer -  
 (12) she would say that the charts demonstrate instances of  
 (13) vandalism during the oil spill The approach -  
 (14) THE COURT Hang on If she knows about four or five  
 (15) instances of vandalism she can testify to that She can t  
 (16) testify to the great cosmic scheme of vandalism that s  
 (17) described in some chart that shows 50 instances That s why I  
 (18) asked for offers of proof counsel I got to know what the  
 (19) witness is going to say Bring her in here let s hear what  
 (20) she has to say  
 (21) MR DIAMOND Based on our pretrial proceedings I can  
 (22) tell you what we re dealing with for the most part are  
 (23) incidents that took place while there were clean up workers  
 (24) around The whole issue here is post clean up vandalism not  
 (25) vandalism committed during the course of -

Vol 24 3841

- (1) THE COURT Counsel what do you think the best  
 (2) evidence is of the testimony coming in is what the lawyers say  
 (3) or what the witness says?  
 (4) MR DIAMOND Probably what the witness says after the  
 (5) lawyers talk to her  
 (6) THE COURT That s why I want to get her in here now  
 (7) before she s talked to by the lawyers  
 (8) MR McCALLION Your Honor I believe she went  
 (9) downstairs  
 (10) THE COURT I ll take a break I want to hear from  
 (11) her and I don t want anybody to be talking to her I want to  
 (12) hear it straight out of her mouth without preparation  
 (13) THE CLERK Please rise This court stands in  
 (14) recess  
 (15) (Recess at 1 30 p m to 1 40 p m )  
 (16) THE CLERK Please rise This court now resumes  
 (17) THE COURT Counsel we re on the record and the jury  
 (18) is not present  
 (19) To the extent that you want to question counsel about the  
 (20) area we discussed you re welcome to do so if counsel was  
 (21) here  
 (22) MR DIAMOND We have no further questions  
 (23) MR PETUMENOS I can try I can see if I can find  
 (24) them Hold on Judge  
 (25) MS SMITH Your Honor while we re sitting here  
 (26) maybe I should let the record reflect Chuck and I have only

Vol 24 3842

- (1) been married for 11 years but for him it seems like 13  
 (2) THE COURT I knew there would have to be a  
 (3) qualification and should be corrected for the record  
 (4) MR DIAMOND There goes my credibility  
 (5) THE COURT Time flies when you re having fun  
 (6) MR PETUMENOS Without prejudice to Mr Fortier s  
 (7) question do you want me to start?  
 (8) THE COURT Sure  
 (9) VOIR DIRE EXAMINATION OF LORA L JOHNSON Ph D  
 (10) BY MR PETUMENOS  
 (11) Q Dr Lobdell (sic) when you looked at all the field notes  
 (12) do you remember looking at field notes relating to incidents  
 (13) that occurred on other than Native corporation land?  
 (14) A Yes I m Johnson  
 (15) Q Doctor -  
 (16) A Yes I do  
 (17) Q What sorts of things were you looking for when you were not  
 (18) restricted to Native corporation land?  
 (19) A Basically just looking for incidents in terms of impact of  
 (20) vandalism whatever  
 (21) Q When you form your opinion that there has been impacts  
 (22) based upon a loss of confidentiality is part of the basis of  
 (23) that opinion what you observed within the oil spill area on  
 (24) these lands that are not Native corporation land?  
 (25) A Yes it is

Vol 24 3843

- (1) Q Could you tell the Judge in general terms what you found  
 (2) how many such incidents where they were things like that?  
 (3) A There were quite a few incidents on lands that we re not  
 (4) claiming here today Do we want specifics in terms of what  
 (5) kind of -  
 (6) Q Well can give the Judge an approximately idea of how many  
 (7) with reference to the fields notes that could pertain to these  
 (8) in general? - -  
 (9) A I m trying to think how many things we took out There  
 (10) were quite a few  
 (11) THE COURT Were they all in the area that you re  
 (12) talking about Prince William Sound?  
 (13) A Most of them were There were a few that were - primarily  
 (14) Prince William Sound I believe maybe a few the Kenai  
 (15) Peninsula and then there were additional ones down at Kodiak  
 (16) THE COURT Can you give me just some approximation of  
 (17) how many you saw in Prince William Sound?  
 (18) A In terms of the references themselves there is many more  
 (19) references the number of incidents What I m thinking of is I  
 (20) know there is like a couple clear cases of vandalism that type  
 (21) of thing There are other miscellaneous types of impacts  
 (22) THE COURT Tell me what those are as opposed to  
 (23) vandalism  
 (24) A It would be like walking over the site and oil spill  
 (25) workers in the uplands and these type of general things at

Vol 24 3844

- (1) location of sites  
 (2) THE COURT But you think there were only a couple of  
 (3) incidents of vandalism on land that wasn t owned or claimed by  
 (4) the plaintiffs here? -  
 (5) A Like documented What comes to my mind is there is one  
 (6) real clear case of documented vandalism on a site that  
 (7) plaintiffs aren t claiming  
 (8) THE COURT Where was that?  
 (9) A It was at Knight Island It was the Knight Island burial  
 (10) cave  
 (11) THE COURT Do you remember specifically what the  
 (12) other one was?  
 (13) A I m trying to think here I believe that there was another  
 (14) one another cave I better just stick with that one in terms  
 (15) of what I remember  
 (16) THE COURT Go ahead  
 (17) MR PETUMENOS I m sorry I didn t mean to interrupt  
 (18) BY MR PETUMENOS  
 (19) Q We caught you kind of cold on this but you had looked at  
 (20) the notes and researched this and there are notes that you have  
 (21) made back at the office?  
 (22) A Yes  
 (23) Q Was there an incident that you recall on Afognak?  
 (24) A Yes  
 (25) Q And was the Afognak area - this incident took place

Vol 24 3845

- (1) accessible by road and a lot of people that could drive to it  
 (2) or was it a remote area?  
 (3) A I believe it was a remote area  
 (4) Q Tell the Judge what you know about that incident  
 (5) A The incident that I m thinking of from that area had to do  
 (6) with bird pick up crews the bird pick up crews and picking up  
 (7) oiled debris and artifacts this type of thing  
 (8) And there was also another incident down there in terms of  
 (9) boat tenders and possible connections with vandalism this type  
 (10) of thing down in that area What it is I am kind of caught  
 (11) cold because I ve been trying to stay away from all those so I  
 (12) don t talk about it and I really have put a lot of it out of  
 (13) my mind That there are some real key you might say hot spots  
 (14) that there was clear that there was impacts There is more  
 (15) general references to kind of - well more general types of  
 (16) impacts  
 (17) MR PETUMENOS I defer to the late arriving  
 (18) Mr Fortier  
 (19) MR FORTIER I did find the unamended list of sites  
 (20) and there were 117 examples  
 (21) THE COURT Go ahead and show it  
 (22) VOIR DIRE EXAMINATION OF LORA L JOHNSON Ph D  
 (23) BY MR FORTIER  
 (24) Q Dr Johnson I m going to show you what was marked as  
 (25) 1289 Actually there is 120 there Does that refresh your

Vol 24 3846

- (1) memory?  
 (2) A Yes  
 (3) Q Can you tell the Court what the title of the document is?  
 (4) A Again It s the same title as one of the other exhibits  
 (5) It s called Selected Examples of Vandalism Disturbance  
 Impacts  
 (6) to Segment Sites Taken from the SCAT Archaeological Field  
 (7) Notebooks Same title it was just edited  
 (8) Q And are there sites listed there throughout Prince William  
 (9) Sound?  
 (10) A Well the sites that are on the exhibits currently are on  
 (11) here In addition to that there are other references to  
 (12) possible vandalism pot holding duck pipe (ph) bird crews  
 (13) the removal of human remains this type of thing There is  
 (14) many additional types of impact  
 (15) Q And there is also references to such activities on sites  
 (16) along the Gulf of Alaska including Cook Inlet or Lower Cook  
 (17) Inlet and the Kenai Fjords?  
 (18) A Yes Kenai Fjords It s Prince William Sound It s the  
 (19) same spill area basically but primarily Prince William Sound  
 (20) the Kenai Peninsula and the Kodiak area  
 (21) Q And Dr Johnson in the preparation of those - of those  
 (22) particular sites excuse me In the preparation of the sheets  
 (23) themselves did you examine field notes?  
 (24) A Yes I did  
 (25) Q Why did you do that?

Vol 24 3847

- (1) A Well it was basically in the course of even 1989 1990  
 (2) going through all of these that the different incidents or  
 (3) concerns came to mind both on sites that we ultimately - or  
 (4) that the plaintiffs ultimately claimed damages on But  
 (5) throughout the oil spill we were concerned about impacts to all  
 (6) sites and that did affect my own opinion in terms of possible  
 (7) impacts  
 (8) Q Why were you concerned about impacts to all sites?  
 (9) A Well because you get a better feeling for what's happening  
 (10) in the area It wasn't just limited to our particular sites  
 (11) you know It's like the cleanup occurred throughout the oil  
 (12) spill area and you see different documentation for different  
 (13) areas and you get kind of a different perspective than you  
 (14) would in terms of just looking at our subset of sites  
 (15) basically  
 (16) Q So you began with the big picture in order to figure out  
 (17) what people should be worried about with regard to their  
 (18) individual sites would that be fair?  
 (19) A That's correct  
 (20) Q And you didn't necessarily rely upon the field notes for  
 (21) the truth of the matter asserted so much as to find out what  
 (22) was going on throughout the oil impacted area during the oil  
 (23) spill clean up would that be fair to say?  
 (24) A Yes And part of the concern is just numbers of different  
 (25) possible incidents that are reported here that from an

Vol 24 - 3848

- (1) archaeologist's point of view you're still only looking at a  
 (2) small number of these types of things that are occurring You  
 (3) don't often get people to admit to doing things so these are  
 (4) observations and clues in terms of what appears to be  
 (5) happening  
 (6) out there  
 (7) Q Those are the ones that made it into the books?  
 (8) A That's correct  
 (9) Q And in addition Dr Johnson you also were concerned  
 (10) about number of visits to sites by persons other than  
 (11) archaeologists?  
 (12) A That's correct  
 (13) Q And that again is throughout the oil spill area?  
 (14) A Yes that's correct  
 (15) Q And why was that?  
 (16) A Again it has to do with the confidentiality issue and just  
 (17) people's awareness of sites that you know it's impossible to  
 (18) prevent everyone from going But on the other hand it is  
 (19) possible to minimize the number of people that get firsthand  
 (20) knowledge about some of these sites  
 (21) Q Did you find that the archaeologists were also trying to  
 (22) track the number of people going into the uplands and in fact  
 (23) did experiments to determine it at certain sites?  
 (24) A There were also experiments in terms of an artifact  
 (25) collection experiment where fake artifacts were put out to see  
 whether they would be collected or not There is a general

Vol 24 3849

- (1) concern  
 (2) Q And these fake artifacts were at sites other than what the  
 (3) plaintiffs are claiming damage for?  
 (4) A Yes that's correct  
 (5) Q What happened to the artifacts?  
 (6) A Some of them were recovered by archaeologists when they  
 (7) went back Other ones were not found for whatever reason  
 (8) Q Let me hand you a chart that's marked as 1317 selected  
 (9) examples visits to segments by persons other than  
 (10) archaeologists and refer you to an experiment that took place  
 (11) at KN 209 on August 5 1990 Can you tell us what that's  
 (12) about?  
 (13) A Okay This is one of the sites that has human remains  
 (14) there is burials there and it refers to KN 209 The comment  
 (15) here is experiment concerning graves and that the crew kept  
 (16) going on to the back area that basically with this one of the  
 (17) concerns was people going up into the uplands at the location  
 (18) of these graves and for the regional corporation and the  
 (19) Village corporations I think there is probably a greater  
 (20) sensitivity to the issue of human remains And what ended up  
 (21) happening is it became apparent that clean up personnel were  
 (22) going up into the uplands  
 (23) Q Did that - in your opinion when you found these things  
 (24) did it cause you to be concerned about whether or not visits  
 (25) resulted in disturbances or vandalism?

Vol 24 3850

- (1) A Well in some cases it's just not possible to document you  
 (2) know actual occurrences of vandalism but the fact that there  
 (3) is at least one case where it's really clear that a clean up  
 (4) crew member did vandalize a site and take human remains that  
 (5) it makes one concerned about other sites as well  
 (6) Q And did you also examine sites other than those for which  
 (7) damages are being made - excuse me look at field notes other  
 (8) than for those which examples are now being made concerning  
 (9) what happens when a site is cleaned without being monitored  
 (10) for  
 (11) survey?  
 (12) A Yes there were other sites that this occurred at  
 (13) Q Did you find that there were artifacts that were put into  
 (14) bags and nothing was ever checked?  
 (15) A Yes I believe there is a reference to that  
 (16) Q And is that why you looked at these other sites?  
 (17) A Well in general we had concerns for the issue of  
 (18) monitors if they weren't present because of these general  
 (19) concerns Basically what it comes down to is during the course  
 (20) of 1989 and after that our concerns and you might say  
 (21) actions in some ways was a result of the kind of overall  
 (22) picture of what was happening  
 (23) Q I'm going to hand you what's been marked as 1315  
 (24) Dr Johnson selected examples from archaeologists field  
 (25) notes  
 found during or after clean up  
 Now again when you looked at the field notes you were

Vol 24 3851

- (1) looking at the field notes in order to obtain an example of the  
 (2) sorts of impacts to sites and not necessarily for the truth of  
 (3) the matter asserted is that correct?  
 (4) A Could you repeat that one more time?  
 (5) Q Sure You were looking at the field notes to find out what  
 (6) sorts of things could happen to sites?  
 (7) A That s correct  
 (8) Q You didn t necessarily take the field notes as the God s  
 (9) honest truth of what happened?  
 (10) A That s correct  
 (11) Q And that caused you to believe that there were additional  
 (12) impacts to the sites that you re claiming - that your clients  
 (13) are claiming damages for now?  
 (14) A Yes sort of the occurrence of these kind of impacts some  
 (15) of which are clearly impacts and others suggest impacts were  
 (16) part of what influenced my opinions yes  
 (17) Q Did you also look for clean up activities on segments  
 (18) before monitoring to find out whether or not there were impacts  
 (19) to the sites such as artifacts being picked up and put in bags?  
 (20) A The question is whether -  
 (21) Q What sort of impacts - did you look at the field notes in  
 (22) order to determine whether there would being impacts to sites  
 (23) being cleaned without survey or monitor?  
 (24) A Yes And actually the survey - that was always a concern  
 (25) that while you know in many cases that the survey itself also

Vol 24 3852

- (1) missed artifacts In cases where there was no survey at all  
 (2) those were probably greater concern -  
 (3) Q Did you find examples of artifacts being picked up in  
 (4) screening for - through the artifacts when they were already  
 (5) in bags?  
 (6) A Yes I believe there are  
 (7) Q Let me show you what s been marked as 1291 which is  
 about  
 (8) 17 examples of those activities When you reviewed the field  
 (9) notes and you found these kinds of things in them Dr Johnson  
 (10) did you arrive at any conclusions as to what impact clean up  
 (11) effort would have on the archaeological sites of your clients?  
 (12) A Yes I do have a concern for the clean up activities  
 (13) Q That would be another example of some sort of impact?  
 (14) A Yes  
 (15) MR FORTIER I have no further questions Your Honor  
 (16) THE COURT Do you have any questions counsel?  
 (17) MR DIAMOND Very briefly Your Honor  
 (18) VOIR DIRE EXAMINATION OF LORA L JOHNSON Ph D  
 (19) BY MR DIAMOND  
 (20) Q With respect to Kenai and Prince William Sound the only  
 (21) incidents of vandalism that you have knowledge are Knight  
 (22) Island burial cave and Crafton Island?  
 (23) A Those are the ones that come to mind  
 (24) Q You don t know of any others?  
 (25) A In terms of vandalism the graffiti at Chenega is also

Vol 24 3853

- (1) considered vandalism Basically what it comes down to at what  
 (2) point can you call it vandalism and what point do you call it  
 (3) impacts because the - another one that comes to mind is the  
 (4) south - actually just forgot to mention it the south end of  
 (5) Crafton Island one For example persons there there was  
 (6) part of a board that was broken off and it was documented that  
 (7) it had changed position since the last time archaeologists were  
 (8) there and put back in place While that probably is not  
 (9) vandalism it is an impact and there are other cases of this  
 (10) Q So of the four actual or possible acts of vandalism on  
 (11) Prince William Sound and Kenai that you gleaned from all your  
 (12) reading three of those are on Native owned property?  
 (13) A No I believe that other issues of vandalism - there are  
 (14) other ones as well In particular Afognak comes to my mind  
 (15) Q I m talking about Prince William Sound and Kenai  
 (16) A I m sorry  
 (17) Q Three of the four that you have knowledge firsthand  
 (18) secondhand or thirdhand are on Native owned properties?  
 (19) A In terms of are these properties that we are claiming  
 (20) damages on is that the - is that what the question is?  
 (21) Q Yes  
 (22) A Some of these we are not claiming claims  
 (23) Q Knight Island?  
 (24) A That s correct  
 (25) Q The other three are on properties which you re claiming

Vol 24 3854

- (1) damages Crafton Chenega and South Crafton?  
 (2) A Yes we are claiming damages for those  
 (3) Q You have no firsthand knowledge of vandalism on Kodiak  
 (4) isn t that right?  
 (5) A I have no firsthand knowledge no  
 (6) Q And you haven t been deposed in this case on any vandalism  
 (7) in Kodiak?  
 (8) A No I haven t  
 (9) Q Kodiak is a lot different in terms of - at least Afognak  
 (10) is different in terms of dissemination of site location  
 (11) information?  
 (12) A There is a great problem down there yes  
 (13) Q Well in fact that Native corporation has in fact -  
 (14) well tourism advertised site locations?  
 (15) A I m not personally aware of their just advertising for  
 (16) tourism It probably depends on the site by site cases as to  
 (17) whether you want to do that or not I don t know  
 (18) Q Hasn t that gone on out in Kodiak?  
 (19) A I don t know I know that they have had volunteers come in  
 (20) and work on excavations In terms of inviting people in in  
 (21) terms of -  
 (22) Q How about the Dig Afognak Program?  
 (23) A That s what I m referring to  
 (24) Q Come to Afognak and dig you mean archaeology  
 resources?  
 (25) That s a program that s promoted to tourism?

Vol 24 - 3855

- (1) MR PETUMENOS Object to the offer of proof She  
 (2) indicated she is aware of an incident of oil spill workers if  
 (3) he wants to conduct the cross later I don't know if the  
 (4) evidence is admissible as to the weight  
 (5) THE COURT Objection is overruled  
 (6) BY MR DIAMOND  
 (7) Q The pending question is you're aware of the Dig Afognak  
 (8) Program as being something that the folks in Kodiak have done  
 (9) to promote tourism?  
 (10) A I'm aware of the - this program What I have heard about  
 (11) it has been from Rick Knecht who I believe is running the  
 (12) program and I guess I saw it as a program where they were  
 (13) inviting volunteers to come in and work at the site with  
 (14) archaeologists  
 (15) Q That doesn't happen in Prince William Sound and Kenai to  
 (16) the best your knowledge?  
 (17) A I don't believe that it has  
 (18) Q In your professional opinion if there is cleanup  
 (19) undertaken without monitoring on one particular site that  
 (20) doesn't mean on some other particular site that cleanup was  
 (21) done without monitoring?  
 (22) A There was an attempt to record where monitoring was taking  
 (23) place  
 (24) Q I understand that but the question is Would you infer  
 (25) from the fact that cleanup took place without a monitor on one

Vol 24 - 3856

- (1) particular location that it happened on another specific  
 (2) parcel?  
 (3) A I guess what I would say is that if I was aware that it had  
 (4) happened I would think that it was possible that it occurred  
 (5) in other locations as well  
 (6) Q Do you think that an upland trespass in one location means  
 (7) that an upland trespass took place and harmed some other  
 (8) specific sites?  
 (9) A I would think that it's quite likely  
 (10) Q Do you think that refuse disposal at one particular  
 (11) location means that refuse was disposed of over archaeological  
 (12) sites at another location?  
 (13) A I would think that's a possibility  
 (14) Q If it happened at one place probably means it happened at  
 (15) someplace else?  
 (16) A It could happen  
 (17) Q Holes dug at one site means it could have happened at  
 (18) another specific place?  
 (19) A Yes In terms it could increase the possibility in other  
 (20) locations as well  
 (21) MR DIAMOND Nothing further  
 (22) THE COURT Do the parties want to be heard?  
 (23) MR PETUMENOS Just very briefly I would point to  
 (24) the Court a couple of evidence rules  
 (25) THE COURT Do you have a copy of the pretrial order I

Vol 24 3857

- (1) issued?  
 (2) MR PETUMENOS I probably do yes I've been  
 (3) carrying it in every day and finally -  
 (4) THE COURT Surprised you don't have this on a Barco  
 (5) counsel  
 (6) MR FORTIER Try 76  
 (7) MR PETUMENOS What's the number?  
 (8) MR FORTIER I think it's 76  
 (9) MR PETUMENOS Right I have it  
 (10) MR FORTIER I remember Judge Shortell's orders  
 (11) MR PETUMENOS But I bring them to court  
 (12) THE COURT That's what I thought it said All right  
 (13) I've heard - I don't need argument I've heard the offer of  
 (14) proof It's clear to me that this area has been opened up  
 (15) It's clear to me that the testimony and the offer of proof is  
 (16) admissible  
 (17) MR DIAMOND Your Honor that's equally true with  
 (18) respect to Afognak because we have had no opportunity to  
 (19) inquire into these areas  
 (20) THE COURT With respect to Afognak?  
 (21) MR DIAMOND Yes  
 (22) THE COURT If the plaintiffs choose to put that  
 (23) evidence on it is Yes it is  
 (24) MR DIAMOND I raise that simply because we will have  
 (25) no opportunity to conduct discovery Our most recent

Vol 24 - 3858

- (1) deposition was taken after the entry of this order I also  
 (2) imagine we're going to have to amend our witness list to bring  
 (3) on people who are knowledgeable because we're going to get  
 (4) into  
 (5) a swearing contest firsthand information versus secondhand  
 (6) information  
 (7) THE COURT We'll see I suspect that all these dire  
 (8) possibilities aren't going to occur  
 (9) MR PETUMENOS Judge I had some exhibits to move in  
 (10) Monday I think it's late can I do that tomorrow?  
 (11) THE COURT Absolutely  
 (12) Are we done here?  
 (13) MR McCALLION Your Honor during Dr Johnson's  
 (14) cross examination there was some questioning as to whether  
 (15) the  
 (16) Natives had an interest in archaeological artifacts on  
 (17) State owned lands in other words below mean high tide  
 (18) Dr Johnson testified that she did believe they had an  
 (19) interest It's our view that it's really a matter of law and  
 (20) would be appropriate for a judicial notice with regard to a  
 (21) specific Alaska statute which deals with the rights of Natives  
 (22) to artifacts -  
 (23) THE COURT What does it say?  
 (24) MR McCALLION I'm referring to 41 35 020a of the  
 (25) Alaska Historic Preservation Act  
 (26) THE COURT So tell me what their rights are counsel  
 (27) MR McCALLION Well I'll read the paragraph if I

Vol 24 3859

- (1) may The State reserves to itself title to all historic  
 (2) prehistoric and archaeological resources situated on land  
 owned  
 (3) or controlled by the State including tideland and submerged  
 (4) lands and reserves to itself the exclusive right of field  
 (5) archaeology on State owned or controlled land However  
 (6) nothing in 41 35 010 and it cites the statute diminishes the  
 (7) cultural rights and responsibilities or persons of aboriginal  
 (8) descent or infringes upon their right of possession and use of  
 (9) those resources that may be considered of historic prehistoric  
 (10) or archaeological value  
 (11) THE COURT So what do you think that means  
 (12) MR McCALLION That much akin and analogous to the  
 (13) Native corporations littoral or riparian rights with regard to  
 (14) State owned land below mean high tide In the archaeologica  
 (15) area as well Trial and ministerial (ph) could apply but this  
 (16) specific statute within the bundle of rights the Native  
 (17) corporations have there is in addition to these common law and  
 (18) littoral rights some statutory basis for an interest in  
 (19) archaeological sites and artifacts below mean high tide Now  
 (20) it may well be that Natives would have to approach the state  
 (21) and get a license but it s our view that they do have a  
 (22) property interest which is cognizable under the law and the  
 (23) court could take notice of that  
 (24) THE COURT You mean as opposed to having her testify  
 (25) what rights that she thinks she had is what s in the statute

Vol 24 3860

- (1) MR McCALLION That s essentially it I believe she  
 (2) was alluding to the statute and it seems to us to be a matter  
 (3) of law although inquiry might be made as to her  
 understanding  
 (4) but ultimately it s a matter of law  
 (5) THE COURT Counsel?  
 (6) MR DIAMOND We would have no objection trying extra  
 (7) additional notice I would look to - look at the statute and  
 (8) investigate what we believe the meaning is  
 (9) THE COURT The question because it s raised at the  
 (10) time I m assuming that counsel may want to deal with it with  
 (11) the witness tomorrow morning and I don t want to have to go  
 (12) out of the presence of the jury at that time to determine what  
 (13) I allow and don t allow It sounds to me like she could refer  
 (14) to that statute and say this is what I meant There is an  
 (15) interest a valid a Native corporation interest in artifacts  
 (16) as far as even below the mean high tide  
 (17) MR DIAMOND I think that it s probably inappropriate  
 (18) for a lay witness to start telling the jury what the law is we  
 (19) got in problem with Dr Green doing that I think you ought to  
 (20) be the one doing that so we are in agreement this is what the  
 (21) law is otherwise we re end up in the OPA 90 situation  
 (22) THE COURT You agree counsel I should be the one to  
 (23) do it?  
 (24) MR McCALLION Your Honor I believe that would be  
 (25) appropriate for the witness since she works in the area to

Vol 24 3861

- (1) give her understanding but that ultimately would be a matter  
 (2) of law  
 (3) THE COURT I guess I should make my question  
 (4) specific Do you intend to elicit it from her?  
 (5) MR McCALLION Yes in terms of her understanding  
 (6) THE COURT You may do so Is there anything else?  
 (7) MR DIAMOND With respect to these new entries that  
 (8) we re going to have to deal with on recross tomorrow we don t  
 (9) have back up for this and obviously we re going to need to  
 (10) look at it before we cross  
 (11) THE COURT You mean the actual field notes?  
 (12) MR DIAMOND Well the field notes that go with all  
 (13) these corresponding entries  
 (14) THE COURT I m sure you can get that  
 (15) MR DIAMOND Direct counsel to get that to us by 5  
 (16) for anything they are going to use so we can have an  
 (17) opportunity to read it  
 (18) MR FORTIER We ll sure try We gave it to them two  
 (19) months ago  
 (20) THE COURT We ve been through this When you give  
 (21) them a pile like this it s not the same thing as giving them  
 (22) specific things that makes it plain to me that I should order  
 (23) it I order that the backup material be provided for counsel  
 (24) by 5 00  
 (25) MR FORTIER Ms Mikko is here

Vol 24 3862

- (1) THE COURT Was it specifically provided attached to  
 (2) the particular -  
 (3) MS MIKKO As I recall yes and in either case it  
 (4) would be impossible to provide it by 5 00  
 (5) THE COURT How about 5 10?  
 (6) MS MIKKO It s four volumes of documents  
 (7) THE COURT It can t be four volumes of documents  
 (8) attached to those particular slips of paper those particular  
 (9) field notes  
 (10) MS MIKKO The unedited is that correct  
 (11) THE COURT That s exactly what I m talking about If  
 (12) she s going to be referring to those particular sheets of  
 (13) paper then they refer to field notes which would be specific  
 (14) to each entry That s what I m ordering it s got to be done  
 (15) by 5 Is there anything else?  
 (16) MR McCALLION Your Honor on the issue we just  
 (17) discussed with plaintiffs trial memorandum with the statutes  
 (18) but I read it into the record I could hand up to the Court a  
 (19) shorted trial memorandum on the aboriginal rights on the  
 (20) artifacts  
 (21) THE COURT You can file it serve it on counsel and  
 (22) counsel can have an opportunity to reply if there is any reply  
 (23) necessary Anything else?  
 (24) MR DIAMOND No  
 (25) (Proceedings recessed at 2 12 p m )
