Anchorage, Alaska

Vol 12 1796

- (1) Q Describe what that s all about for the jury
- (2) A Well Section 17(b) required that certain types of
- (3) easements be reserved in Native land claims documents the
- (4) title documents My job among others was to - to look over
- (5) the - or review the Native land conveyance proposed
- determine
- (6) where it would be appropriate to reserve certain trail or camp
- (7) site easements or other type of easements that would show up
- in
- (8) their land conveyance documents
- (9) Q Now you worked at the BLM during what period of time
- (10) please?
- (11) A 72 to 77 approximately
- (12) Q And in your experience at the BLM was the land selection
- (13) process with the BLM and the Alaska Natives did that run
- (14) smoothly and go quickly or were there problems?
- (15) A No it did not proceed smoothly It was a very difficult
- (16) process As a bureaucrat working with ANCSA it was a very
- (17) unusual program something that had never been seen before
- it
- (18) was very difficult to implement
- (19) Q Were the people at the BLM always eager to get the land
- (20) conveyed and in the hands of those that Congress determined
- (21) should have it?
- (22) A Not necessarily It was such a new process that many many
- (23) of us just didn t know how to handle it It was a very new
- (24) program
- (25) Q Now after you completed your work at the Bureau of Land

Vol 12 1797

- (1) Management did you work for Native corporations?
- (2) A I left BLM in 1977 to join Interior Village Association
- (3) It was a nonprofit corporation in Fairbanks owned by the
- (4) village corporations in the Doyon Region I provided training
- (5) and technical assistance in land and resource matters
- (6) Q Where is the Doyon Region
- (7) A Its s north of here basically north of the village of
- (8) Cantwell up to the Brooks Range from the village of Kaltag out
- (9) in the Yukon to the Canadian border
- (10) Q Who else did you work for on behalf of Native corporations?
- (11) A I had one small job for Nana Corporation and of course
- (12) the Tattilek Corporation
- (13) Q When did you begin working for the Tattilek Corporation?
- (14) A In 1987
- (15) Q What did you do for them?
- (16) A I began by working on the ANCSA 14C Land Conveyance
- Program
- (17) for the corporation ANCSA requires that certain lands be
- (18) reconveyed to individuals who are living on corporate land in
- (19) 1971 The corporation had to establish policies advertise
- (20) their claim and adjudicate those claims My job was to go out
- (21) into the field investigate the claims and make
- (22) recommendations to the board There was approximately 20 to
- 25
- (23) claims
- (24) Q Did you also assist the Tattilek Corporation in the process
- (25) of making land selections under ANCSA?

Vol 12 1798

- (1) A Not the initial selection no I did not
- (2) Q Did you subsequently do that?
- (3) A I was involved with the corporation in helping them making
- (4) final prioritization of their land selections
- (5) Q Are you familiar with the corporate policies and practices
- (6) of the Tattilek Corporation in making those final selections?
- (7) A Yes I am
- (8) Q Based upon your experience at the BLM your work for these
- (9) other corporations and your work for Tattilek can you
- comment
- (10) upon the duties and priorities of a Native corporation in the
- (11) selection of lands under ANCSA
- (12) A Yes I can The corporations selected their lands for a
- (13) variety of reasons mostly cultural But then there was also
- (14) economic considerations too for the future of the
- (15) corporation
- (16) Q Are there times when decisions relating to economic
- (17) well being of the corporation and its people and the
- (18) preservation of Native life styles and things like that clash
- (19) or where judgments have to be made?
- (20) A You bet That s a day to day occurrence
- (21) Q Are there times when a corporation may elect to forego an
- (22) economic opportunity with their land in order to preserve a
- (23) Native lifestyle issue?
- (24) A That s correct
- (25) Q In the case of Tattilek can you think of any example where

Vol 12 1799

- (1) that happened?
- (2) A Definitely I was - one of the jobs that I had with the
- (3) corporation was to develop a land use plan and come up with
- (4) some administrative land use administrative policies for the
- (5) corporation I did that in I believe it was 88 and early
- (6) 89 Bligh Island we identified areas that were valuable for
- (7) different resources both subsistence resources and timber for
- (8) example Bligh Island which is directly across Tattilek
- (9) narrows from the village was deliberately set aside by the
- (10) corporation for subsistence purposes and placed off limits to
- (11) development
- (12) Q Were there opportunities to development Bligh Island that
- (13) were foregone because of that decision?
- (14) A Yes there were because Bligh Island has a lot of timber
- (15) on it
- (16) Q In the selection process as you observed it at the BLM
- (17) and as you observed it in your work for Native corporations
- (18) did the issue of potential land swaps or exchanges figure into
- (19) the selection process?
- (20) A Yes that did
- (21) Q First tell the jury what we mean when we talk about land
- (22) swaps or exchanges?
- (23) A Its a very complicated process A land swap is used when
- (24) one party wants to exchange land it has that s valuable
- (25) typically for the federal or state government for lands that it

Vol 12 1800

- (1) can develop elsewhere and make money on  
 (2) Q And typically when land is swapped to the federal  
 (3) government what is the purpose that the federal government is  
 (4) generally – or the State government is generally interested in  
 (5) obtaining the lands for?  
 (6) A Typically to protect natural resource values wildlife  
 (7) habitat this kind of –  
 (8) Q Does that then leave the land available to Natives for use  
 (9) in the traditional ways?  
 (10) A Typically it does  
 (11) Q And then they in return can obtain land that might have  
 (12) more commercial or economic value in exchange?  
 (13) A That s correct  
 (14) Q So those sorts of things are a good deal for the Native  
 (15) corporation?  
 (16) A If they re done right yes they are  
 (17) Q Now can you think of some areas within the Tattilek  
 (18) selection process that fit that description?  
 (19) A The Tasnuna Pass area and Heather Island area  
 (20) MR PETUMENOS Could I have the map on the screen?  
 (21) BY MR PETUMENOS  
 (22) Q And do I have the witness light pen on? If you wouldn t  
 (23) mind taking your light pen there and put a little color on it  
 (24) Do you know how to do that or could I show you help? That  
 (25) might be good enough just go ahead and point to it

Vol 12 1801

- (1) A That s Heather Island right there  
 (2) Q And Heather Island was the area where you are describing  
 (3) what in the selection process?  
 (4) A Heather Island was specifically selected for its long term  
 (5) commercial potential which – either development or potential  
 (6) land swap  
 (7) Q Or exchange?  
 (8) A Right  
 (9) Q Where is the Bligh Island area you were talking about that  
 (10) was held off limits to the timber?  
 (11) A This is Bligh Island right there and Tattilek is that  
 (12) point right there  
 (13) Q Right behind it?  
 (14) A Right  
 (15) Q You mentioned Thompson Pass as a potential exchange  
 (16) point?  
 (17) Where is that?  
 (18) A That s off the map in the upper right hand corner  
 (19) Q Tap it twice That was way off the map that s true  
 (20) Okay  
 (21) Now you remember where you were when the Exxon Valdez –  
 (22) let me ask you this do you remember how you found out about  
 (23) the Exxon Valdez running aground?  
 (24) A I ll never forget it A local radio personality in  
 (25) Fairbanks by the name of Gail Malloy woke me up with the news  
 that the Exxon Valdez had gone aground on Bligh Reef

Vol 12 1802

- (1) Q Now at the time that that happened and you learned that  
 (2) what was your duty or role with the Tattilek Corporation?  
 (3) A I was a land consultant for the Village Corporation  
 (4) Q What did that entail?  
 (5) A Like I described earlier I provided land and resource  
 (6) advice and services to the corporation First on the 14C and  
 (7) then on the land use plan and permits and leases this kind of  
 (8) thing  
 (9) Q Did the Tattilek Corporation also use your services to  
 (10) determine the status of their land at given points in time and  
 (11) ask you to inspect it?  
 (12) A That s correct  
 (13) Q Describe that to the jury and why that s important ?  
 (14) A Well a number of times during the time I worked with the  
 (15) Tattilek Corporation we did field examinations and went out  
 (16) through Port Fidalgo which is this area here  
 (17) Q There it is  
 (18) A There we go  
 (19) Q Before we touch it again hit that where it says color on  
 (20) the right there tap it right there on the margin  
 (21) A Oh here?  
 (22) Q Yeah Okay now you can draw  
 (23) A All right We d usually start out from the village and go  
 (24) Boulder Bay and Landlock Bay Fish Bay and come around in  
 (25) through Two Moon Bay down to – that s Irish Cove – no that s

Vol 12 1803

- (1) not Irish Cove Come around through there land selections  
 (2) over to Hell s Hole and back On other trips we d go north in  
 (3) the Valdez arm into Galena Bay over to Sawmill Bay and around  
 (4) to Heather Bay Columbia Glacier is up in this area here  
 (5) Q Now why is it important to the corporation that you  
 (6) conduct these land inspections from time to time?  
 (7) A It s a large land area and it s very popular The whole  
 (8) Prince William Sound is very popular and there s a lot of  
 (9) people that go out and camp and otherwise utilize corporation  
 (10) resources and we needed to keep a handle on that to make  
 (11) sure  
 (12) the people weren t occupying the corporation land or using  
 (13) their resources It s private land  
 (14) Q Now soon after the Exxon Valdez went aground did you get  
 (15) a call from Tattilek?  
 (16) A Yes I did I talked to Mrs Gordaoff  
 (17) Q And is that Mary Gordaoff?  
 (18) A That s correct  
 (19) Q What was her position with Tattilek?  
 (20) A She was president of the corporation  
 (21) Q And what is Mary Gordaoff s relationship to Keith Gordaoff  
 (22) the person the jury s heard from?  
 (23) A I believe that she s his mother  
 (24) Q What were you asked to do?  
 (25) A I was asked to come down and work with the corporation and  
 the Tattilek Village Council to survey the Village Corporation

Vol 12 1804

- (1) lands to see what damages there were and to work with the  
 (2) council in any way that I could  
 (3) Q When did you arrive in the Tattilek area?  
 (4) A Saturday the 25th  
 (5) Q Did you do an inspection?  
 (6) A I flew over the wreck I arrived in Cordova and then I  
 (7) chartered a plane and along with Darrell Olson we flew to  
 (8) Tattilek and picked up Gary Kompkoff who was the Tattilek  
 (9) Village Council president and flew around the wreck  
 (10) Q Then did you get in a boat?  
 (11) A Yes I did  
 (12) Q When did you do that?  
 (13) A It was either late that afternoon or the first thing Sunday  
 (14) morning  
 (15) Q And did you - let s see if we can do one more thing here  
 (16) Perhaps you can exchange it over here just for a minute  
 (17) Okay why don t you give it back to him Can you show me  
 (18) the path that you took?  
 (19) A Sure can we enlarge the Tattilek area?  
 (20) Q Yes just let me have it back one more time How s that?  
 (21) A That s fine  
 (22) Q Why don t you give it back?  
 (23) A The village of Tattilek is here and I believe our first  
 (24) trip with a boat was up through Tattilek Narrows This is  
 (25) Bligh Island here We went through a cut between Busby  
 Island

Vol 12 1805

- (1) which is here and Bligh Island and out into this general area  
 (2) past this island - this is Reef Island and motored out into  
 (3) here in a skiff The Exxon Valdez was out in here someplace  
 (4) I m not exactly sure But it was quite close to Reef Island  
 (5) We went around Reef Island we went down the southern  
 (6) portion of Bligh Island We also went up north into this bay  
 (7) which is West Bay We went around Busby Island in the Tattilek  
 (8) Narrows Up through the Narrows into Boulder Bay and I think  
 (9) the next day we also went into - into Landlock Bay and Fish  
 (10) Bay and then I think we snuck over into Two Moon and came  
 back  
 (11) to the village  
 (12) MR PETUMENOS Could I get a print of that please?  
 (13) Now can I take this down and it will still print?  
 (14) Did you take a videotape of your - portions of your trip  
 (15) that day?  
 (16) A Pretty much all the trip  
 (17) Q All right  
 (18) MR PETUMENOS Your Honor we have I think an  
 (19) understanding of the preadmission of Exhibit 1122 a videotape  
 (20) which I would move into evidence and play to the jury at this  
 (21) time  
 (22) (Exhibit 1122 offered)  
 (23) MR CLOUGH No objection Your Honor  
 (24) THE COURT That s 1122  
 (25) MR PETUMENOS That s correct Your Honor

Vol 12 1806

- (1) THE COURT Okay 1122 is admitted  
 (2) (Exhibit 1122 received)  
 (3) (Videotape Played)  
 (4) Off Busby Island as they said all the boats have left  
 (5) Tattilek with the exception of one You can see Bligh Island  
 (6) the oil spill in the middle of the photo and as we pan on the  
 (7) tanker you can see the oil in the water Columbia Glacier  
 (8) Point Freemantle in the background You can see the oil as it  
 (9) spreads out  
 (10) Ellamar is off to the right hand side of the photo  
 (11) Tattilek Narrows as I pan left West Bay is in the immediate  
 (12) center of the picture This is West Bay here Valdez Narrows  
 (13) in the background Valdez Arm Panning left long rectangular  
 (14) island is Reef Island the one in the center of the picture  
 (15) now  
 (16) You can see the oil in the background touching Reef Island  
 (17) the tanker and a boom Point Freemantle in the background  
 (18) Growler Island at the top of the picture Village of Tattilek  
 (19) in the upper right hand corner the Tattilek Narrows Ellamar  
 (20) Cloudman Bay on the foreground West Bay in the back That s  
 (21) West Bay Bligh Island Reef Island the tanker  
 (22) This is a view across Bligh Island from Cloudman Bay As I  
 (23) bring it up closer you can see the grounded tanker on the  
 (24) left the tanker they re off loading on the right hand side  
 (25) off loading to

Vol 12 1807

- (1) West Bay Valdez Arm Tattilek Narrows Ellamar is now in  
 (2) about the center of the picture That s Tattilek  
 (3) Good morning this is Sunday morning March 26th 1989  
 (4) Tattilek Alaska This is the view from the dock Tattilek  
 (5) Narrows are in front of us Busby Island In the center of the  
 (6) frame directly over this hillside is where the tanker s  
 (7) located That s Busby Island  
 (8) This is Busby Island Tattilek Narrows looking toward  
 (9) Fidalgo and Two Moon Bay That s Two Moon Bay on the  
 (10) right hand side of the frame Tattilek Boulder Mountain -  
 (11) Copper Mountain excuse me The mountains on the left side  
 are  
 (12) the mountains behind and on the other side of Valdez Arm  
 (13) Tattilek Narrows again Busby Island and Bligh Island are now  
 (14) in view Behind this hillside directly in the center of the  
 (15) photo is the location of the tanker grounding  
 (16) Tattilek Narrows Ellamar Copper Mountain Prince William  
 (17) Sound and the tankers  
 (18) That must be Reef Island between us and the tankers - no  
 (19) it s to the left Looking across Valdez Arm in the middle we  
 (20) got Point Freemantle and Glacier Island The grounded tanker  
 (21) is the tanker in the rear The tanker that s taking on oil is  
 (22) the one in the foreground And Reef Island is the island to  
 (23) the left And Busby Island - excuse me Bligh Island Bligh  
 (24) Island and West Bay  
 (25) This is an oil boom on Bligh Island You notice the dead

Vol 12 1808

(1) duck in the center of the photo Come back toward Tattilek  
 (2) Narrows up Valdez Arm Point Freemantle notice the glacier  
 (3) with - the iceberg with oil on it On the right is the Exxon  
 (4) Valdez On the left is the tanker that s off loading Glacier  
 (5) Island in the background That s Glacier Island Storey  
 (6) Island Peak Island and Naked Island  
 (7) The boat that you see in the center of the screen is Henry  
 (8) Millet s from Tattilek  
 (9) We re at the end of Reef Island looking toward Bligh  
 (10) Island In the background you can see Goose Island as a small  
 (11) speck There s a boom operation Those ducks we looked at  
 (12) earlier they re covered with oil I don t think they re going  
 (13) to last very long  
 (14) This is the head of - north head of Reef Island and as I  
 (15) pan around Bligh Island will come into view This is the  
 (16) shoreline of Bligh Island If you look real close you can  
 (17) begin to see along the shoreline in the center of the picture  
 (18) the tide mark and the oil left on the rocks  
 (19) Tuesday morning March 27th we re looking down from the  
 (20) peak of Reef Island at the Exxon Valdez on the right hand side  
 (21) and on the left hand side the off loading tankers and  
 (22) tugboats The noise in the background is the Alascom crews  
 (23) starting some kind of a four cycle engine  
 (24) As you can see there s no boom around the ship and the  
 (25) oil slick is trailing off to the left There s two ships out

Vol 12 1809

(1) there but I believe they re both heading down to Knight  
 (2) Island where most of the ships have been - or boats have been  
 (3) deployed  
 (4) (Videotape concluded)  
 (5) BY MR PETUMENOS  
 (6) Q Mr Costello the trip that you took could you describe  
 (7) for the jury how much oil was in the water and around the  
 (8) water how thick it was what it appeared like to you when you  
 (9) were there?  
 (10) A It was - it s really hard to describe It was  
 (11) overwhelming We - when we left Tattilek and -  
 (12) Q Let me stop you here and make sure you re set up  
 (13) A Thank you  
 (14) When we left Tattilek and went through between Busby Island  
 (15) and Bligh Island we started to encounter crude in this area  
 (16) and basically it traveled through patches of crude and then  
 (17) thick deposits of crude all the way around Reef Island until we  
 (18) came around its southern tip The Exxon Valdez was over here  
 (19) and I think there was a boat with a boom out in here  
 (20) someplace  
 (21) The thickness varied We didn t get very close to the  
 (22) Exxon Valdez although I wanted to We were very concerned  
 (23) about the skiff s outboard motor because they re cooled by  
 (24) water and the oil was so thick that we were afraid that if it  
 (25) got down to the depth of the prop or the water intake it would

Vol 12 1810

(1) overheat the engine and then we d be stuck out there in the  
 (2) midst of all that mess  
 (3) Q There were a couple of scenes in the videotape the one  
 (4) where we saw the oiled bird How far when we saw all that oil  
 (5) gathered behind the boom were you from the shoreline when -  
 (6) when we saw that picture?  
 (7) A The first dead duck was right up against the shore in  
 (8) this - in this little bite right in here between Reef Island  
 (9) and Bligh Island  
 (10) Q Were you close to the shore?  
 (11) A I was within a stone s throw of the shore  
 (12) Q And was the oil very apparent and thick that close to the  
 (13) shore in the water?  
 (14) A It was yes it was  
 (15) Q Now you showed us in the film a high tide strip of giling  
 (16) across the rock And you went back to visit those areas again  
 (17) in subsequent years is that right?  
 (18) A That s correct  
 (19) Q Now it would appear that it s hard to find or there wasn t  
 (20) very much oil on the rocks themselves as compared to what  
 (21) in the water is that right?  
 (22) A That s correct  
 (23) Q And based upon what you saw does the amount of oil that  
 (24) you saw on the shoreline compare to the amount of oil that was  
 (25) in the surrounding waters when you saw it after the spill?

Vol 12 1811

(1) A There s absolutely no way to make a comparison It s like  
 (2) seeing one of the icebergs typically there s 95 percent or 98  
 (3) percent of the iceberg below the surface of the water and  
 (4) that s the same kind of perception I had when you look at that  
 (5) oil that it s such a thin strip along the beach it has no  
 (6) comparison at all to what was in the water at that time  
 (7) Q And it was in the water very close to the shore?  
 (8) A That s correct  
 (9) Q Based upon your experience with the Tattilek Corporation  
 (10) and the people there do you know whether or not there was  
 (11) substantial amounts of uncertainty expressed - apparent from  
 (12) the shareholders there regarding whether the resources  
 (13) surrounding the land were safe?  
 (14) MR CLOUGH Objection foundation hearsay Your  
 (15) Honor  
 (16) THE COURT Sustained objection is sustained  
 (17) MR PETUMENOS I have no further questions  
 (18) CROSS EXAMINATION OF PAUL C COSTELLO  
 (19) BY MR CLOUGH  
 (20) Q Hi Mr Costello  
 (21) A Good morning  
 (22) Q Good morning sir My name s John Clough I m from down  
 (23) in Juneau and I m here representing Exxon Corporation in this  
 (24) litigation along with some of my co counsel sir  
 (25) Couple things I wanted to clarify about your employment

Vol 12 1812

- (1) with Tattilek Corporation if I could just to start off This
- (2) wasn't a full time job for you as a consultant was it sir?
- (3) A That's correct
- (4) Q And in fact during that period of time did you have
- (5) full time employment elsewhere?
- (6) A When - when I first started with the corporation in 1987
- (7) I was a full time land consultant Toward the end of my tenure
- (8) with the Village Corporation in 1990 or 91 I was working for
- (9) the State
- (10) Q The State of Alaska?
- (11) A Right
- (12) Q And so your work in 1989 at the time you went to Bligh
- (13) Island that was a part time job for the -
- (14) A It was full time That was essentially my full time
- (15) commitment as a land consultant
- (16) Q Let me rephrase when you went down there how long were
- (17) you there in Tattilek during that trip in March of 1989?
- (18) A Four or five days
- (19) Q And you didn't return again to Tattilek lands until May of
- (20) that year?
- (21) A That's correct
- (22) Q And how long were you down there then?
- (23) A I think for the same period of time
- (24) Q About the same period and during the intervening time you
- (25) were at your regular job with the State?

Vol 12 1814

- (1) Q Do you recall those observations?
- (2) A Uh huh
- (3) Q Those observations were made on I believe you said
- (4) March 26th which was Sunday when you went out on the boat?
- (5) A Yeah
- (6) Q Do you recall what happened weather wise in that area on
- (7) Sunday afternoon into Sunday night?
- (8) A Sunday was - if I remember Sunday was a pretty calm day
- (9) I think the wind began to pick up on Monday if I remember
- (10) correct and then picked up more on Tuesday
- (11) Q And in fact there was a fairly substantial storm in those
- (12) waters over the course of Sunday into Monday wasn't there?
- (13) A Not that I remember
- (14) Q You do remember the wind picking up let me ask you that?
- (15) A The wind picked up but we were out there both days in a,
- (16) skiff
- (17) Q And wasn't there one day where you weren't able to get out
- (18) there because the wind and waves were too high?
- (19) A I think that was Tuesday
- (20) Q And so it was after that period of time that stretch of
- (21) weather that you came back out again in the skiff and we saw
- (22) that last segment of your video is that correct?
- (23) A No I don't believe that's correct I believe that I was
- (24) out in the skiff in successive days and then the wind did pick
- (25) up and then I - it was a pretty heavy wind We decided not to

Vol 12 1813

- (1) A No I was at - at my office in Fairbanks I had an office
- (2) in my home
- (3) Q How many people live in Tattilek - or excuse me how many
- (4) people lived there at the time of the spill?
- (5) A It was I'd say around a hundred to a hundred and fifty I
- (6) think
- (7) Q And how many of those if you know were shareholders of
- (8) the corporation?
- (9) A I would say the majority of them were
- (10) Q I'd like you to look at sir what's on the screen as yet
- (11) another map We've got one offer Tattilek lands here It's
- (12) DX15704 and I'd like to ask you generally Is this map a fair
- (13) and accurate representation of the geographic location of the
- (14) lands owned by the Tattilek Corporation?
- (15) A Owned or selected yes
- (16) Q And if I could if it's all right with you I'd like to use
- (17) this map as we go over some of the test - your testimony about
- (18) your trips there in March - trip there in March?
- (19) A Okay
- (20) Q Would this map work for those purposes?
- (21) A I think so
- (22) Q First I'd like to ask you about your observations in the
- (23) oil on the water you were describing for the jury You were in
- (24) Reef Island area?
- (25) A Uh huh

Vol 12 1815

- (1) go out About that time I hitched a ride into Cordova to talk
- (2) with the Village Corporation president
- (3) Q And I believe you went back out there on the 28th to the
- (4) same waters around Reef Island do you recall that?
- (5) A I don't remember the exact date
- (6) Q Do you remember that you after your trip on about
- (7) March 30th prepared a written report summarizing your
- (8) observations out there?
- (9) A That's correct
- (10) MR CLOUGH Could we have a copy of that please?
- (11) MR CLOUGH Counsel I'm going to put up here what
- (12) has been marked as DX1544 and I believe a copy was
- (13) previously
- (14) presented to you
- (15) MR PETUMENOS I'm sure it was Could I just look at
- (16) it for one second?
- (17) MR CLOUGH Sure
- (18) MR PETUMENOS I have no objection Your Honor
- (19) BY MR CLOUGH
- (20) Q I'm going to have my first experience with the Elmo here
- (21) so give me a moment There we go I understand this is going
- (22) to be somewhat hard to read but for now I'd just like to ask
- (23) you generally Mr Costello if you recognize DX1540 as a
- (24) report you wrote in 1989 summarizing your observations of the
- (25) days before?
- (26) A That's correct that's mine

Vol 12 1816

- (1) Q And I'd like to if I could direct your attention to  
 (2) what's going to be Page 4 of that report and I've got the  
 (3) highlighted copy here and if you would like sir I can give  
 (4) you - in fact I will give you a complete copy of the report  
 (5) up there if there's anything you want to refer to in it  
 (6) MR CLOUGH Permission to approach the witness Your  
 (7) Honor  
 (8) THE COURT Okay  
 (9) BY MR CLOUGH  
 (10) Q All I wanted to draw your attention to sir on Page 4 was  
 (11) the highlighted language there and specifically at the top  
 (12) this is describing your second trip out after the wind and the  
 (13) waves It says we did not see any oil slicks around Reef  
 (14) Island  
 (15) Do you recall that that was the case when you went back out  
 (16) there after the weather?  
 (17) A That's correct  
 (18) Q And looking a little bit farther down it said concerning  
 (19) West Bay our investigation of West Bay indicated that whatever  
 (20) oil had been there for two days before had disappeared for  
 (21) whatever reason?  
 (22) A Whatever was on the surface right  
 (23) Q That's all I'm talking about is the oil you had seen on the  
 (24) surface so by the time you had gone back out there on  
 (25) March 28th the thick oil that you had seen on the surface was

Vol 12 1817

- (1) gone?  
 (2) A That's correct  
 (3) Q Now I'd like to ask you just a couple of questions sir  
 (4) about the oil that you described and the videotape as having  
 (5) been on the shoreline Can you locate for us on the map where  
 (6) that spot was?  
 (7) A Do you want me to blow that section up around Bligh  
 (8) Island?  
 (9) Q In fact we can - we've got a better map of Bligh Island  
 (10) why don't we put that one up there If you'll bear with me for  
 (11) one moment sir I think I can give you a better version Does  
 (12) this work a little better?  
 (13) A That's fine I can't - oh there you go get the color  
 (14) on The - what was the question again please?  
 (15) Q Sure I just wanted to see if you could locate for us where  
 (16) on Bligh Island the shoreline oiling the band of oil where  
 (17) you said if you look real close you can see the tide mark and  
 (18) the oil left on the rocks if you could show us where that  
 (19) was  
 (20) A It was right in here  
 (21) Q Okay And in the course of your videotape that was the  
 (22) only portion of oiled shoreline that your videotape depicted  
 (23) isn't that correct sir?  
 (24) A That's correct  
 (25) Q And in fact in the course of your investigations that

Vol 12 1818

- (1) was the only place where you personally observed any oil on  
 the  
 (2) shore of Bligh Island isn't that correct sir?  
 (3) A That's correct  
 (4) Q You didn't at any time sir see any oil on the shoreline  
 (5) of Reef Island did you?  
 (6) A I saw a lot of crude around the shoreline of - of Reef  
 (7) Island I couldn't get on this shore of Reef Island It's  
 (8) pretty vertical And there's a lot of wave action there on  
 (9) that particular day We could get on Reef Island by coming  
 (10) around this side here there's a little cove right there  
 (11) Q But my question to you is Did you ever personally observe  
 (12) any oil on any of the shores of Reef Island?  
 (13) A No I did not  
 (14) Q And did you ever personally observe any oil on any of the  
 (15) shores of Busby Island?  
 (16) A No I did not  
 (17) Q If I could go back to the parcel map please Are all -  
 (18) to your knowledge are all the parcels of land owned by the  
 (19) Tatitlek Corporation shown on what's been marked as  
 defendant's  
 (20) 15704 as on the screen here sir?  
 (21) A That's correct And there are some selected lands the  
 (22) last I knew were still selected and not conveyed  
 (23) Q Thank you again for that clarification  
 (24) Looking again to the Heather Bay lands to the northwest  
 (25) portion you never observed any oil on any of those properties

Vol 12 1819

- (1) did you sir?  
 (2) A No I did not  
 (3) Q Did you ever observe any oil on the Sawmill Bay properties?  
 (4) A No I did not  
 (5) Q Did you ever observe any oil whatsoever on the Galena Bay  
 (6) properties?  
 (7) A No  
 (8) Q Did you ever observe any oil whatsoever on the shorelines  
 (9) of the Boulder Bay properties?  
 (10) A No I did not  
 (11) Q Did you ever observe any oil sir on the shorelines of  
 (12) Landlock Bay?  
 (13) A No  
 (14) Q Did you ever observe any oil whatsoever sir on the lands  
 (15) of Port Fidalgo?  
 (16) A No  
 (17) Q Did you ever observe any oil sir whatsoever in the Whalen  
 (18) Bay parcel?  
 (19) A No  
 (20) Q And did you ever observe any oil in that lump them  
 (21) together the whole area surrounding Two Moon Bay?  
 (22) A No I did not  
 (23) Q And in fact the only oil you ever observed on any portion  
 (24) of Tatitlek land was that one cove on Bligh Island is that  
 (25) correct?

Vol 12 1820

- (1) A That s correct  
 (2) Q Could you using the color pen mark on this map I think  
 (3) you can see now where that cove was?  
 (4) A (Witness complies)  
 (5) Q Now according to the scale here Mr Tatitlek - excuse me  
 (6) Mr Costello I apologize sir  
 (7) A Not a bad name really  
 (8) Q It s a good name and I m working on Tatitlek because I  
 (9) understand that is the proper pronunciation  
 (10) According to the scale you ve got something over a mile  
 (11) long there The striping you observed wasn t nearly that long  
 (12) was it?  
 (13) A No it was not  
 (14) Q In fact it was only about an eighth of a mile long wasn t  
 (15) it?  
 (16) A Somewhere in that vicinity  
 (17) Q Could you mark in the margin with the marker pen  
 (18) one eighth  
 (19) of a mile or approximately one-eighth of a mile so when we  
 (20) submit this to the jury when they re out In the Sound you can  
 (21) put length of marking approximately We ll use that and put  
 (22) that out - I m sorry I meant literally write on it one-eighth  
 (23) of a mile I m sorry I apologize  
 (24) And then just put an arrow back towards the - towards the  
 (25) area of the cove that was oiled so we know approximately what  
 (26) we re talking about That s fine Could we have a print of

Vol 12 1821

- (1) that please?  
 (2) While they re printing that I had just a - and I can now  
 (3) delete this screen Thank you  
 (4) If we could put it back up again without the - the parcel  
 (5) map Just a couple of quick questions on the selections sir  
 (6) You indicated a number of the selections made by the  
 (7) Tatitlek Corporation were for various types of commercial or  
 (8) development purposes do you recall that?  
 (9) A That s correct  
 (10) Q And isn t it true that the Sawmill Bay portion was selected  
 (11) as a potential recreational development site?  
 (12) A Either that or a land exchange  
 (13) Q And the - I believe also the Heather Bay was selected for  
 (14) potential commercial development as a recreational site?  
 (15) A Either that or land exchange  
 (16) Q And the Whalen Bay parcel I believe was selected for  
 (17) timbering wasn t that correct?  
 (18) A I believe that was one of the values  
 (19) Q In fact Tatitlek has conducted considerable timbering  
 (20) operations throughout its lands hasn t it?  
 (21) A As part of an effort to generate income for the  
 (22) corporation yes  
 (23) Q And they ve conducted timbering operations at Two Moon  
 (24) Bay  
 (25) area?  
 (26) A That s correct

Vol 12 1822

- (1) Q And in the landlocked bay area?  
 (2) A Not that I m aware of no that s not part of the timber  
 (3) contract  
 (4) Q The timbering operations conducted by Tatitlek were going  
 (5) on at least some of them prior to the oil spill weren t  
 (6) they?  
 (7) A I believe there were some being initiated at that time  
 (8) Q And in fact at the time of the oil spill I believe down  
 (9) at two moon some portion of the videotape you mentioned that  
 (10) they re putting in logging roads to do further operations down  
 (11) there?  
 (12) A That was in the Two Moon Bay area  
 (13) Q And the logging in that area continued unabated after the  
 (14) oil spill didn t it?  
 (15) A To my knowledge it did It might have stopped  
 (16) occasionally for seasonal reasons  
 (17) Q Let me ask you this To your knowledge did those logging  
 (18) operations were they interrupted at all as a result of the oil  
 (19) spill?  
 (20) A I don t know  
 (21) Q And finally Mr Costello - oh do we have that printout  
 (22) now? It s coming okay  
 (23) Finally Mr Costello are you aware that I guess during  
 (24) about 1990 Tatitlek Corporation started a mariculture project  
 (25) in the village?

Vol 12 1823

- (1) A That s correct  
 (2) Q To raise oysters?  
 (3) A Right  
 (4) Q And you were still working as their land consultant at that  
 (5) time?  
 (6) A Yes on a part time basis  
 (7) Q And can you describe the mariculture project for us a  
 (8) little bit?  
 (9) A Not very well It actually was not the corporation but  
 (10) the Village Council that did the project And I wasn t really  
 (11) directly involved with it  
 (12) Q Were they raising oysters there?  
 (13) A Oysters and butter clams I believe  
 (14) Q And they were raising them in the waters off the coast of  
 (15) the village?  
 (16) A That s correct They were located I believe here and out  
 (17) in Boulder Bay  
 (18) Q And in fact those oysters starting a couple years ago  
 (19) have actually been marketed here in Anchorage as Aleutic Pride  
 (20) oysters?  
 (21) A That s correct  
 (22) MR CLOUGH Your Honor I d like to move into  
 (23) evidence DX15704 as marked upon by the witness  
 (24) (Exhibit DX15704 offered)  
 (25) MR PETUMENOS No objection Your Honor

Vol 12 1824

- (1) THE COURT It's admitted 15704  
 (2) (Exhibit 15704 received)  
 (3) MR CLOUGH No further questions Thank you  
 (4) Mr Costello  
 (5) MR PETUMENOS I have no redirect  
 (6) THE COURT You may step down thank you  
 (7) MR FORTIER Your Honor the plaintiffs call Mr Dan  
 (8) Lawn It will be just a moment Your Honor  
 (9) THE CLERK Sir would you please step up into the  
 (10) witness box Would you put the microphone onto your tie and  
 (11) remain standing for the oath Would you raise your right  
 (12) hand?  
 (13) (The Witness Is Sworn)  
 (14) THE CLERK Thank you You may be seated  
 (15) Sir for the record would you please state your full name?  
 (16) A Daniel Lawn L a w n  
 (17) THE CLERK And what is your occupation?  
 (18) A I'm an environmental engineer for the Department of  
 (19) Environmental Conservation in Valdez Alaska  
 (20) THE CLERK Thank you  
 (21) DIRECT EXAMINATION OF DANIEL LAWN  
 (22) BY MR FORTIER  
 (23) Q Good morning Mr Lawn If you need some water there's  
 (24) some right in front of you there  
 (25) Mr Lawn how long have you been employed by the State of

Vol 12 1825

- (1) Alaska as an environmental engineer?  
 (2) A Oh since 1977  
 (3) Q What does an environmental engineer do?  
 (4) A Oh we do a lot of things deal with environmental issues  
 (5) which include drinking water waste water solid waste oil  
 (6) air quality water quality  
 (7) Q And where do you live now?  
 (8) A Valdez Alaska  
 (9) Q And where did you live when you began working for the State  
 (10) in 1977?  
 (11) A Valdez Alaska  
 (12) Q When you were working for the State in Valdez Alaska  
 (13) between 1977 and 1989 can you describe briefly to the jury  
 (14) what your duties were?  
 (15) A Well I was initially hired as the - as an environmental  
 (16) engineer for the State I dealt with the tankers and in the  
 (17) terminal I developed the State's oil tanker inspection  
 (18) program and dealt with a number of environmental issues  
 (19) dealing  
 (20) with the oil industry  
 (21) Q Now you were employed in Valdez in March of 1989 weren't  
 (22) you for the State?  
 (23) A I was  
 (24) Q Okay And what was your job at the time in 1989 for the  
 (25) State?  
 (26) A I was the principal investigator dealing with Alyeska oil

Vol 12 1826

- (1) tanker issues Principally ballast water air quality  
 (2) contingency plan tanker inspection issue I was also the  
 (3) district office supervisor  
 (4) Q Mr Lawn will you tell the jury how you first heard about  
 (5) the Exxon Valdez at Bligh - Bligh Reef?  
 (6) A I received a phone call from the terminal operations  
 (7) control center refer to it as OCC notifying me as a state  
 (8) person that the Exxon Valdez had run aground on Bligh Reef in  
 (9) Prince William Sound  
 (10) Q And about what time was this Mr Lawn?  
 (11) A Oh it was around 1 00 a m or so  
 (12) Q You were at home I take it?  
 (13) A I was asleep at home yes  
 (14) Q And what did you do after you received the call?  
 (15) A I immediately called the Coast Guard to discuss the issue  
 (16) with them because the terminal people had very scant  
 (17) information When I identified myself to the Coast Guard  
 (18) Commander McCall commander heard my name and took the  
 (19) phone  
 (20) and then we discussed what the Coast Guard knew and what  
 (21) our  
 (22) options were  
 (23) Q What if anything did you do next?  
 (24) A Immediately afterwards I called my supervisor in Anchorage  
 (25) to notify him of the incident and requested additional DEC  
 (26) people be notified and immediately sent to Valdez  
 (27) Q Did you request anything else Mr Lawn at that time?

Vol 12 1827

- (1) A Well requested aircraft or helicopter from Anchorage and  
 (2) about a half dozen to eight other people  
 (3) Q And then what can you tell us what happened next  
 (4) Mr Lawn?  
 (5) A Well then I went to the office and made another phone call  
 (6) or two and looked - to other DEC people Some of my staff in  
 (7) Valdez happened to be training in Anchorage so I had to call  
 (8) wives to find out where they were and then got my gear  
 (9) cameras video cameras and notebook and went to the Coast  
 (10) Guard  
 (11) Q Why did you go to the Coast Guard?  
 (12) A Well during my initial conversation with Commander McCall  
 (13) the Coast Guard was going to send some people out there and  
 (14) I  
 (15) was going to go along with them So I went to the Coast Guard  
 (16) to meet their two investigators that were going to go to the  
 (17) ship and then go on out to the - to their dock with the pilot  
 (18) what was to pick us up and take us to the ship  
 (19) Q And what kind of a boat did you - did you get on a boat a  
 (20) Coast Guard boat?  
 (21) A It was a fast pilot boat rather small boat I don't  
 (22) recall the name of it  
 (23) Q About what time of the morning was this Mr Lawn?  
 (24) A I would guess somewhere between 2 00 and 2 30  
 (25) Q It was between 2 00 and 2 30 that you departed from the  
 (26) dock is that correct?

Vol 12 1828

- (1) A In that - in that neighborhood Might have been a little  
 (2) later than that  
 (3) Q And this would be on March 24th?  
 (4) A That s correct  
 (5) Q And how long did it take you to get from Valdez to where  
 (6) the Exxon Valdez was?  
 (7) A Well I don t know Half hour to an hour I don t  
 (8) recall We arrived near the ship at a little after 3 00 a m  
 (9) Q And did you take a video of your arrival?  
 (10) A Yes I shot some footage as we approached the ship and as  
 (11) we waited there at the ship going around behind it had to wait  
 (12) for them to change the boarding ladder s location before we  
 (13) could board the ship  
 (14) Q And approximately what time did you board the Exxon  
 Valdez?  
 (15) A It was around 3 30 in the morning  
 (16) Q And while you were on the Exxon Valdez did you continue  
 (17) the take videos?  
 (18) A Periodically I would shoot some more video to document  
 what  
 (19) my observations were  
 (20) Q Now Mr Lawn you ve had an opportunity to review the  
 (21) video is that correct?  
 (22) A Yes  
 (23) Q And does the video portion that you have reviewed  
 (24) accurately describe or accurately reflect what you saw on the  
 (25) Exxon Valdez?

Vol 12 1829

- (1) A Yes  
 (2) MR FORTIER Your Honor we do have a stipulation  
 (3) with the portion of that video At this time I d move for its  
 (4) admission  
 (5) (Exhibit 268 offered)  
 (6) THE COURT Sure What s the number?  
 (7) MR FORTIER I believe it is 368 - I m sorry 268  
 (8) Your Honor  
 (9) THE COURT 268 is admitted by stipulation  
 (10) (Exhibit 268 received)  
 (11) THE COURT You want to play it now counsel?  
 (12) (Videotape Played)  
 (13) Glacier Island off the bow there Glacier Island light is  
 (14) about bearing 280 degrees which puts it about a point off the  
 (15) port bow In the background here zooming in on it now is the  
 (16) buoy number six right there which is about a mile mile and a  
 (17) half away Oil appears to be drifting to the buoy Up here on  
 (18) another vantage point That s Naked Island in the background  
 (19) Oil in the water  
 (20) See a small iceberg There is a little bit of ice out  
 (21) here See the chunks that you see in the oil slick are  
 (22) icebergs There s the buoy oil slick icebergs There s the  
 (23) buoy There s some ice Swinging back to the north here see  
 (24) ice That would be Glacier Island in the background entrance  
 (25) to Columbia Bay right over there Ice in the background See

Vol 12 1830

- (1) ice there s the Stons standing to and ice here And there s  
 (2) the vessel the Exxon Valdez hard aground and Reef Island  
 (3) right here up on it  
 (4) On the starboard side of the vessel looking at the oil in  
 (5) the water beside the vessel very thick here starboard side of  
 (6) the vessel There s the stern The Narrows in the background  
 (7) here zooming in on the Narrows Valdez Narrows Got a boat  
 (8) here 32 footer It s trying to survey the edge of the oil  
 (9) see where it - where it goes That iceberg there as far as  
 (10) size is concerned is the size of a large conference table  
 (11) Looks like most of the heavy oil is coming out on the starboard  
 (12) side which is also indicated by the ullage soundings in the  
 (13) tanks and looks like it s just drifting around the bow and the  
 (14) stern of the tanker moving on downwind  
 (15) You can see it leaking there by five five port You can  
 (16) see it leaking here five center It s leaking all along the  
 (17) starboard side of the vessel which is what s indicated by the  
 (18) Sound soundings  
 (19) There s the buoy where the oil is out past it You can see  
 (20) the oil still bubbling out here beside the ship That s about  
 (21) five or so four or five These are about five right here and  
 (22) this is four here where it s bubbling up and that s moving  
 (23) towards three Three is about amidships where these folks are  
 (24) standing Right about there is midships That s about three  
 (25) and you can see it bubbling other pilot boats

Vol 12 1831

- (1) (Videotape concluded)  
 (2) BY MR FORTIER  
 (3) Q Mr Lawn can you describe to the jury what the condition  
 (4) of the sea was as you approached the Exxon Valdez that  
 (5) evening - or that morning excuse me?  
 (6) A As we approached a little after 3 00 and it was pretty  
 (7) calm almost no breeze blowing  
 (8) Q And as you approached when did you start encountering  
 oil?  
 (9) A Well the oil as you could see in the video there the oil  
 (10) was fairly close to the ship because the current was moving  
 (11) out or to the south and we approached from the north So it  
 (12) was out away from the ship a few feet to maybe 50 feet or so  
 (13) on the north side of the ship  
 (14) Q And when you - did you go around the ship when you  
 (15) approached it?  
 (16) A Yes You re missing about the first three minutes of the  
 (17) videotape that shows the approach as well as some shots from  
 (18) the stern of the ship although they re very dark you could  
 (19) make - make out what was there We went around to the stern  
 (20) of the ship while we were waiting for them to move the boarding  
 (21) ladder  
 (22) Q And as you went around to the stern of the ship Mr Lawn  
 (23) did you encounter oil?  
 (24) A Oh yes Actually we were in the oil We changed from  
 (25) the small boat that we were on to a larger pilot boat that was

Vol 12 1832

- (1) sitting in the oil The idea was to keep the small boat out of  
 (2) the oil and so we were in the oil as we were around the stern  
 (3) of the ship and you could get a real presence of the oil there  
 (4) with smell and heavy fumes  
 (5) Q And as you went through the oil on the larger vessel were  
 (6) you able to make any determination as to the thickness of the  
 (7) oil?  
 (8) A Well it was really hard to determine My impression was  
 (9) that as we were close to the ship we were essentially floating  
 (10) in oil as opposed to the sea  
 (11) Q And when you left the vessel - when did you leave the  
 (12) vessel Mr Lawn?  
 (13) A In the late afternoon early evening  
 (14) Q And what did you use to leave the vessel boat?  
 (15) A I m sorry?  
 (16) Q Did you leave the vessel with a boat?  
 (17) A Yes I did  
 (18) Q And in which direction did you leave the vessel?  
 (19) A We went to the north back to Valdez  
 (20) Q And did you again go through oil?  
 (21) A Not to the north of the vessel no  
 (22) Q Now did you note as you were on the vessel that oil  
 (23) continued to leak from the vessel?  
 (24) A Yes My videotape is kind of a form of taking notes of my  
 (25) observations but oil continued to leak for several hours It

Vol 12 1833

- (1) was leaking very fast when I was first on the boat and you  
 (2) could see that as we climbed the ladder there was a rolling  
 (3) boil coming up along the side of the vessel And then as the  
 (4) day went on it - the leak slowed down And you can see in  
 (5) this video footage it was after daylight it was considerably  
 (6) slower I have that documented in my field notes  
 (7) Q And Mr Lawn did you make any other overflights of the  
 (8) Prince William Sound area between March 24th and April 30th  
 (9) of  
 (10) 1989?  
 (11) A Flew - flew about every day yes  
 (12) Q And in any of those overflights did you overfly the area  
 (13) known as Point Helen?  
 (14) A I did  
 (15) Q Can you describe to the jury where Point Helen is?  
 (16) A Well it s on the southern - I guess without a chart  
 (17) probably it s the southern tip of Knight Island  
 (18) Q And Mr Lawn during your fly fly overs can you tell us  
 (19) when you flew over the Point Helen area?  
 (20) A Well part of my duty was to go out in the Sound every day  
 (21) and so we flew it practically every day and went to a specific  
 (22) point and so I was flying past the southern tip of Knight  
 (23) Island almost every day  
 (24) Q And on any of your overflights over Knight Island over the  
 (25) Point Helen area did you ever notice a boom?  
 (26) A There was one piece of boom attached to the southern tip of

Vol 12 1834

- (1) Knight Island kind of hanging out to the east area or  
 (2) southeast  
 (3) Q That was - tell us what that boom was doing please  
 (4) MR CLOUGH Excuse me foundation Your Honor  
 (5) THE COURT I don t understand the objection  
 (6) counsel  
 (7) MR CLOUGH He asked what the boom was doing I have  
 (8) no objection to describing the boom but what the boom was  
 (9) doing He wasn t on the ground it was from an airplane  
 (10) THE COURT Rephrase your question please  
 (11) MR FORTIER I will Your Honor  
 (12) BY MR FORTIER  
 (13) Q Tell us what you observed the boom doing Mr Lawn?  
 (14) A Well from the helicopter we had we watched it  
 (15) periodically It was just hanging out there trapping oil as it  
 (16) was coming down the shoreline but there were no collection  
 (17) devices so the oil was going around the end of it or under it  
 (18) and really wasn t being tended so that as the tide went in and  
 (19) out sometimes the boom would be up off the water next to the  
 (20) shore and oil was going right past it respectfully not  
 (21) performing any significant function  
 (22) Q Mr Lawn while you were observing the boom were you able  
 (23) to determine its length?  
 (24) A It looked like it might be a section or two of boom so it  
 (25) could be 100 200 feet something in that neighborhood I

Vol 12 1835

- (1) wasn t - I didn t measure it precisely  
 (2) Q And approximately how many times did you observe that  
 (3) boom?  
 (4) A Well it would be several times I can t give you a  
 (5) specific number  
 (6) THE COURT Counsel we re about to take a break you  
 (7) can pick the time  
 (8) MR FORTIER Okay  
 (9) THE COURT Right now  
 (10) MR FORTIER I have - sure Your Honor this would  
 (11) be a great time to take one  
 (12) THE COURT Okay  
 (13) THE CLERK Please rise This court stands in  
 (14) recess  
 (15) (Jury out at 10 02 a m )  
 (16) (Recess from 10 02 a m to 10 22 a m )  
 (17) (Jury in at 10 22 a m )  
 (18) THE CLERK Please rise This court now resumes its  
 (19) session Please be seated  
 (20) MR FORTIER Your Honor Mr Lawn had to step out for  
 (21) just a couple seconds We apologize  
 (22) THE COURT That s all right  
 (23) MR PETUMENOS Perhaps Your Honor while we have a  
 (24) moment a few housekeeping matters?  
 (25) THE COURT Sure  
 (26) MR PETUMENOS I would like to move into evidence

Vol 12 1836

- (1) what I have marked as Exhibit 1122A That s the same number as
- (2) the videotape and it is the path of Mr Costello that was
- (3) recorded by him when he was testifying
- (4) (Exhibit 1122A offered)
- (5) THE COURT 1122A is admitted
- (6) (Exhibit 1122A received)
- (7) MR PETUMENOS And I think there is some confusion
- (8) about whether I moved into evidence yesterday the photograph of
- (9) the little animals that were circled by Dr Peterson yesterday
- (10) which I had marked as 251 4A which is a similar document
- (11) Judge which is the one he circled with the different kinds of
- (12) animals yesterday Since I know I passed it around to the
- (13) jury I think I moved it into evidence but the clerk doesn t
- (14) have any record of it In any event I move 251 - what did I
- (15) say?
- (16) THE COURT 4A
- (17) MR PETUMENOS 4A into evidence
- (18) (Exhibit 251 4A offered)
- (19) MR CLOUGH If I could have a moment to check with
- (20) Ms Smith - Mr Diamond just spoke we have no problem with
- (21) that
- (22) THE COURT 251 4A is admitted
- (23) (Exhibit 251 4A received)
- (24) MR CLOUGH As long as we are housekeeping if I
- (25) could get one more out of the way I had moved in as a

Vol 12 1837

- (1) printout 15704 I think for record purposes if we could make
- (2) that 15704A since it included an edit or mark on it by the
- (3) prior witness Mr Costello as 15704A
- (4) MR PETUMENOS Judge we can t have that
- (5) THE COURT 15704A is admitted
- (6) (Exhibit 15704A received)
- (7) MR PETUMENOS I m going to check on - oh there he
- (8) is I found him
- (9) THE COURT Went right past you
- (10) Go ahead counsel
- (11) MR FORTIER Thank you Your Honor
- (12) BY MR FORTIER
- (13) Q Mr Lawn do you recognize that area of Prince William
- (14) Sound that s being shown to you?
- (15) A I do
- (16) Q Let s see what I d like to have you do is point out to the
- (17) jury where Point Helen is
- (18) A Do I use the pen?
- (19) MR FORTIER If I could approach the witness
- (20) BY MR FORTIER
- (21) Q Yeah I think you can use the pen
- (22) A Here s the tip
- (23) Q What you might want to do Mr Lawn is to tap the screen
- (24) down where it says color area Okay now go ahead and
- (25) switch it over to him and Mr Lawn if you could then draw

Vol 12 1838

- (1) a - if you could a point or something at Point Helen area
- (2) A Right - right here at the tip of the pencil
- (3) Q Do you want to just draw a circle around there?
- (4) A (Witness complies)
- (5) Q Now if I could have it back to me what I d like to do is
- (6) blow this up a little bit
- (7) Okay Mr Lawn for the color part of this I ve turned on
- (8) the color again What I d like for you to do if you could is
- (9) to draw a - the line of the boom that you described just
- (10) before we took the break at Point Helen
- (11) A Well the problem we re going to have here is the length of
- (12) the boom that was there was so insignificant against the scale
- (13) of what s here I really can t draw anything that would be
- (14) meaningful but I could make a guess - well get it in the
- (15) right spot the lower red point that it s certainly not to
- (16) scale the boom here looks like it s much longer than actuality
- (17) it was
- (18) Q And Mr Lawn if you could then off to the - perhaps in
- (19) the middle of the ocean there middle of Prince William Sound
- (20) if you could just write the size of the boom that you observed?
- (21) A I m going to put a range I m going to call it 100 to 300
- (22) feet
- (23) Q Okay
- (24) A In that neighborhood
- (25) Q And Mr Lawn in your testimony you indicated that there

Vol 12 1839

- (1) was oil that went by the boom?
- (2) A Yes Can I point out without drawing a line on it? Oil
- (3) was coming down what would be the eastern southeastern
- (4) shore
- (5) of Knight Island as well as down this other direction And it
- (6) was kind of following from Herring Bay here kind of following
- (7) the shoreline down in this direction
- (8) Q Okay in the direction your pen moved would you mind
- (9) drawing the lines in for the oil that you observed?
- (10) A Okay
- (11) Q Okay And could you tell us what the name of the island is
- (12) or the area that you re pointing towards there?
- (13) A This is LaTouche Island I believe and Sleepy Bay there
- (14) as I recall
- (15) Q And Mr Lawn in what direction is Sawmill Bay?
- (16) A Well the closest Sawmill Bay the one at the village of
- (17) Chenega is over in this area right here There is another
- (18) Sawmill Bay that s up near the Narrows going into Valdez
- (19) Q Okay Now the Sawmill Bay that you ve just described with
- (20) the circle around it where the village of Chenega is located
- (21) did you in any of your overflights note oil going into that
- (22) area?
- (23) A Yes In fact the oil that came down through the Sound
- (24) from the north down to the southwest I guess was going on
- (25) this side of LaTouche Island as well as the other side of
- (26) LaTouche Island as well as both sides of Knight Island And

Vol 12 1840

- (1) so it was coming and trying to get into any bay that kind of  
 (2) pointed northward kind of like a catcher s mitt so there was  
 (3) oil that was attempting to get into Sawmill Bay  
 (4) Q And can you draw generally describe the path of the oil  
 (5) that you observed?  
 (6) A Well oil was going in this direction It was going in  
 (7) this direction It was going here as well as here  
 (8) Q Now Mr Lawn the boom that you ve depicted as 100 to 300  
 (9) feet off of - 100 to 300 foot length off of Point Helen Was  
 (10) that catching oil as if it was a catcher s mitt?  
 (11) A Well it would intercept oil The problem was I never  
 (12) observed anybody picking it up so it was going under the  
 boom  
 (13) around the boom The boom was not maintained well so when  
 the  
 (14) tide went out it would be sometimes elevated against some of  
 (15) the rocks near the shore so the oil was going underneath it  
 (16) I remarked many times that it would have been a very effective  
 (17) place to pick up oil had anybody been recovering it there  
 (18) Q And Mr Lawn do you know the approximate distance  
 between  
 (19) Point Helen and what you described as the north end of  
 LaTouche  
 (20) Island?  
 (21) A I don t recall Several miles  
 (22) Q And finally Mr Lawn with regard to the video that we  
 (23) observed today did that video - was that video in your  
 (24) opinion of a good quality?  
 (25) A Absolutely not It was - the colors were terrible it

Vol 12 1841

- (1) looked to me like it was a several generation copy of the  
 (2) footage that - the entire footage that I shot And the first  
 (3) part the first three or four minutes were missing  
 (4) Q What was the color of the oil that you observed while on  
 (5) the Exxon Valdez?  
 (6) A Well it - it was dark blackish brown in color and it  
 (7) was - even at night it was clear that you could distinguish  
 (8) between the edge of the oil and the water even though the  
 (9) water was kind of a dark bluish green color  
 (10) MR FORTIER I d like to have a copy of this  
 (11) I have no further questions of Mr Lawn at this time And  
 (12) I d like - oh excuse me Your Honor I d like to have the  
 (13) copy marked after that  
 (14) THE COURT Sure  
 (15) CROSS EXAMINATION OF DANIEL LAWN  
 (16) BY MR CLOUGH  
 (17) Q Hi Mr Lawn As I think you know I m John Clough Just  
 (18) literally two questions for you lawyer s two questions  
 (19) You saw Point Helen on several occasions?  
 (20) A I did  
 (21) Q It s fair to say it was very heavily oiled wasn t it?  
 (22) A Yes  
 (23) Q Did you also see - if I can use the screen here is this  
 (24) Sleepy Bay right down in there?  
 (25) A I think that s correct

Vol 12 1842

- (1) Q In your overflights did you observe Sleepy Bay on a number  
 (2) of occasions?  
 (3) A Yes I did  
 (4) Q It was very heavily oiled wasn t it?  
 (5) A Correct it was catching oil  
 (6) Q In fact it caught an awful lot of the oil that was swept  
 (7) down right in the line along your arrow didn t it?  
 (8) A Yes  
 (9) MR CLOUGH No further questions Your Honor  
 (10) THE COURT You may step down sir Thank you very  
 (11) much  
 (12) MR FORTIER Your Honor I d move admission of I  
 (13) believe it s PX1511  
 (14) THE COURT 1511?  
 (15) MR FORTIER Yes  
 (16) (Exhibit 1511 offered)  
 (17) THE COURT This is 1511 counsel  
 (18) MR CLOUGH No objection  
 (19) THE COURT 1511 is admitted  
 (20) MR FORTIER Your Honor if I could correct myself  
 (21) it s 1511A  
 (22) THE COURT 1511A okay  
 (23) (Exhibit 1511A received)  
 (24) MR PETUMENOS Your Honor the plaintiffs would next  
 (25) call Dr Richard Kocan

Vol 12 1843

- (1) MR CLOUGH Defense team will reshuffle their seats  
 (2) with the Court s permission  
 (3) THE COURT Sure  
 (4) THE CLERK Sir would you please step up into the  
 (5) jury box  
 (6) MR DIAMOND Your Honor before the witness takes the  
 (7) stand we have our resident herring expert Mr Karlberg conduct  
 (8) the examination if I could move his admission for that  
 (9) purpose  
 (10) THE COURT Certainly  
 (11) THE CLERK Sir would you clip the microphone onto  
 (12) your tie And would you raise your right hand  
 (13) (The Witness Is Sworn)  
 (14) THE CLERK Thank you you may be seated  
 (15) Sir for the record would you please state your full name  
 (16) THE WITNESS Richard Michael Kocan  
 (17) THE CLERK Would you spell your last name  
 (18) THE WITNESS K o c a n  
 (19) THE CLERK And what is your occupation?  
 (20) THE WITNESS I am professor in the School of  
 (21) Fisheries University of Washington  
 (22) THE CLERK Thank you  
 (23) DIRECT EXAMINATION OF RICHARD M KOCAN  
 (24) BY MR PETUMENOS  
 (25) Q Dr Kocan could you tell the jury a little bit about

Vol 12 1844

- (1) yourself how old you are where you live?  
 (2) A I m sorry the last part of the question?  
 (3) Q Where you live  
 (4) A Oh where I live Yeah I m 53 and I live in Snoquamish  
 (5) Washington which is on the west side of Puget Sound across  
 (6) from Seattle  
 (7) Q And where do you work?  
 (8) A I work at the University of Washington in the School of  
 (9) Fisheries  
 (10) Q Okay  
 (11) MR PETUMENOS Could we get a little more volume on  
 (12) the mike or perhaps - Judge is his mike there all right?  
 (13) Okay  
 (14) BY MR PETUMENOS  
 (15) Q And what do you teach at the University of Washington?  
 (16) A The course - the course material I teach is aquatic  
 (17) toxicology  
 (18) Q And in connection with aquatic toxicology do you deal with  
 (19) issues of genetic toxicology as well?  
 (20) A That s one of the components or one of the subdisciplines  
 (21) in the area of aquatic toxicology yes  
 (22) Q Do you deal with cell culture and virus identification?  
 (23) A Yes I deal with that actually not in the course that I  
 (24) teach but in lectures I give to other courses and in the past  
 (25) I ve been a virologist for the U S Fish & Wildlife Service

Vol 12 1845

- (1) Q In connection with the courses that you teach directly or  
 (2) other courses in which you teach in other people s disciplines  
 (3) do you deal with cell culture and virus identification as  
 (4) well?  
 (5) A Yes I do  
 (6) Q Do you deal with In vitro methods of virus identification?  
 (7) A Yes  
 (8) Q What is that?  
 (9) A In vitro means simply that the organisms that you re  
 (10) dealing with are grown in culture in glass as it were a test  
 (11) tube rather than in the living animals  
 (12) Q How about the effects of water pollutants on living things?  
 (13) A Yes that s the basic context of the entire aquatic  
 (14) toxicology course  
 (15) Q Have you taught seminars in fish cell cytogenetics?  
 (16) A Cytogenetics?  
 (17) Q Cytogenetics?  
 (18) A Yes Yes I have  
 (19) Q And what s that?  
 (20) A That s the identification of genetic damage that s visible  
 (21) under the microscope  
 (22) Q Do you lecture in the Department of Pathology in  
 (23) chromosomal injury?  
 (24) A Yes I have  
 (25) Q And what is that?

Vol 12 1846

- (1) A That s an area that deals with damage to chromosomes and  
 (2) genes in animal cells  
 (3) Q What is epidemiology?  
 (4) A Literally it means upon the people or upon animals and  
 (5) refers to the spread of disease throughout a population  
 (6) Q Does the word epidemic come from that root?  
 (7) A That s correct  
 (8) Q And do you teach principles of epidemiology?  
 (9) A Yes  
 (10) Q And have you taught seminars on the diseases of marine fish  
 (11) resulting from environmental contaminants?  
 (12) A Yes I have  
 (13) Q And have you taught seminars on the biological effects of  
 (14) contaminated sea surfaces?  
 (15) A Yes  
 (16) Q And have you done that with respect to developing herring  
 (17) and cod in the North Sea and in the Baltic Sea?  
 (18) A Yes in my study in northern Germany and developed  
 (19) techniques with two of the herring experts that live there  
 (20) Q Where did you get your Bachelor s degree?  
 (21) A My Bachelor s degree I received from Hiram College in  
 (22) Hiram Ohio in 1963  
 (23) Q What was your major?  
 (24) A Biology and general science  
 (25) Q And did you - do you have a Master s degree as well?

Vol 12 1847

- (1) A Yes I do  
 (2) Q In what field?  
 (3) A Microbiology and public health Michigan State University  
 (4) Q And did you go on to get a Ph D or doctorate?  
 (5) A Yes I continued on in the same department microbiology  
 (6) and public health and received my degree in 1967  
 (7) Q In order to get a Ph D one has to do a dissertation or  
 (8) scholarly work?  
 (9) A That s right Research independent research  
 (10) Q What did you do your dissertation on?  
 (11) A My dissertation research involved studying damaged  
 (12) immune  
 (13) system in animals following infections  
 (14) Q Have you done special course work since you got your  
 (15) doctorate?  
 (16) A Yes I have  
 (17) Q In what - in what field?  
 (18) A I did special course work in medical mycology that s  
 (19) infectious fungus with the U S Public Health Service I took  
 (20) special training with the U S Fish & Wildlife Service on fish  
 (21) and avian or bird viral diseases and I did a postdoctoral  
 (22) fellowship at the University of Washington Medical School on  
 (23) environmental pathology  
 (24) Q Besides the course work with the Public Health Service  
 (25) have you done other special course work after getting the  
 (26) Ph D ?

Vol 12 1848

- (1) A The – the two I just described that is the postdoctoral  
 (2) fellowship was two years of training under various  
 (3) investigators and several departments in the medical school  
 (4) Q Tell the jury what a postdoctoral fellowship is  
 (5) A Postdoctoral fellowship means following the – is a study  
 (6) period that one does following the receipt of their – their  
 (7) degree their Ph D and generally involves studying at a  
 (8) particular institution under several prominent investigators in  
 (9) a field that you re interested in becoming more proficient in  
 (10) Mine was in environmental pathology and I worked with several  
 (11) of the faculty members in the medical school at the University  
 (12) of Washington  
 (13) Q Are you familiar with the term genotoxic ?  
 (14) A Genotoxic  
 (15) Q I guess  
 (16) A Yes I m familiar with that term  
 (17) Q I m about to be too What does it mean?  
 (18) A Literally it means toxic to genetic components of a cell or  
 (19) of an organism That would be the genes or chromosomes the  
 (20) hereditary material of that organism  
 (21) Q And this has something to do with the postdoctoral  
 (22) fellowship that you were involved in?  
 (23) A Yes The research area that I was involved in during that  
 (24) fellowship involved the effect of environmental contaminants on  
 (25) chromosomes measuring specifically whether they were  
 damaged

Vol 12 1849

- (1) and determining what effects this damage had on the cell  
 (2) following the removal of the contaminant  
 (3) Q Do you have any special experience regarding herring as a  
 (4) species of fish?  
 (5) A Yes I have  
 (6) Q Tell the jury?  
 (7) A The sabbatical I did in Germany which was at the  
 (8) Biologische Anstalt Helgoland which is translated Biological  
 (9) Institute of Helgoland was – involved the study of herring in  
 (10) the North Sea and the Baltic Sea and specifically involved  
 (11) contaminated sea surface microlayer and its effect on  
 (12) developing herring embryos  
 (13) Q Have you since applied what you learned in that work in  
 (14) Germany with – in the herring field?  
 (15) A Yes Since that time I ve done work with herring in Puget  
 (16) Sound Clelland Bay – I mean Port Gamble Bay Cherry Point  
 (17) Fidalgo Bay and in Prince William Sound  
 (18) Q Did you publish articles and findings as a result of some  
 (19) of that work?  
 (20) A Yes I have Virtually all of it s been published  
 (21) Q And with respect to your experience in aquatic or water  
 (22) toxicology can you advise us whether or not you ve done any  
 (23) research in that area?  
 (24) A Yes For the past ten years that s been the major  
 (25) emphasis of my research

Vol 12 1850

- (1) Q Have you received grants in order to do that work?  
 (2) A Yes I have  
 (3) Q From where?  
 (4) A National Institute of Health the Environmental Protection  
 (5) Agency Washington Department of Fisheries  
 (6) Q Do you have – you made publications in the aquatic  
 (7) toxicology as well?  
 (8) A Yes This – this is all in the area of aquatic  
 (9) toxicology  
 (10) Q How about publications that deal with the effects of  
 (11) contaminants and specifically hydrocarbons on fish embryos  
 and  
 (12) fish chromosomes?  
 (13) A Yes I have several publications in that area also  
 (14) Q What is the sea surface microlayer?  
 (15) A The microlayer consists of a very very thin film if you  
 (16) would of chemicals that exist right on the surface of the sea  
 (17) – whether it be fresh water or saltwater – and it s just a  
 (18) few microns thick too small to see with the naked eye And  
 (19) this microlayer being rich in organic materials tends to  
 (20) concentrate contaminants that are in the sea and the  
 (21) contaminants measured in this microlayer are often a hundred  
 to  
 (22) a thousand times greater than what you find just an inch or two  
 (23) below the surface  
 (24) Q Have you done work on that whole topic?  
 (25) A Yes I have This involved exposure of developing – with

Vol 12 1851

- (1) developing fish embryos or eggs to this microlayer to determine  
 (2) its effect  
 (3) Q Have you done work in aquatic toxicology with issues  
 (4) involving the fate and transport in the marine environment of  
 (5) petroleum?  
 (6) A Yes  
 (7) Q And have you taught in that area?  
 (8) A Yes that s part of the course that I present in aquatic  
 (9) toxicology  
 (10) Q And does the course you teach include the principal process  
 (11) by which oil is integrated – oil is integrated into the marine  
 (12) ecosystem and how all that works?  
 (13) A Yes it s in the central part of the course  
 (14) Q Have you ever given testimony before in the federal courts  
 (15) in the area of aquatic toxicology?  
 (16) A I testified in federal court here in Anchorage several  
 (17) weeks ago in regard to this Exxon spill and I believe about  
 (18) five years ago I testified in Boise Idaho in federal district  
 (19) court there on an unrelated matter  
 (20) Q And after your work on toxic substances and genotoxicity  
 (21) did you do some work at the University of Washington Medical  
 (22) School as well?  
 (23) A Well the postdoctoral fellowship I did was at the medical  
 (24) school That was – that was prior to – that was the – my  
 (25) introduction to genotoxicity research and work which I

Vol 12 1852

- (1) subsequently transferred to the field of aquatic toxicology
- (2) MR PETUMENOS Your Honor at this time I would
- (3) tender Dr Kocan as an expert in the field of the biology of
- (4) herring aquatic toxicology and genotoxicity
- (5) THE COURT Any objection counsel?
- (6) MR KARLBERG No Your Honor
- (7) THE COURT He s qualified to give opinions in those
- (8) areas
- (9) BY MR PETUMENOS
- (10) Q Let s talk first about – let s go back again to the
- (11) sabbatical that you took in 1985 and go back to Germany if we
- (12) can
- (13) Could you describe basically the sorts of things that you
- (14) studied there as an introduction to what we re going to address
- (15) today before the jury?
- (16) A Yes Those studies involved going into the field into the
- (17) North Sea and the Baltic Sea and collecting live ripe spawning
- (18) herring bringing these back to the laboratory and spawning
- (19) them artificially in the laboratory and rearing the embryos
- (20) until they hatched and then studying the normal development
- (21) of
- (22) these embryos and the newly hatched larvae This was my first
- (23) introduction to how to do this artificial spawning and how to
- (24) rear these in the laboratory
- (25) And then we then went into the field in various locations
- (26) marinas urban areas areas that were agricultural or had no

Vol 12 1853

- (1) high populations around and collected this sea surface
- (2) microlayer and brought this back to the laboratory and exposed
- (3) the herring embryos to this microlayer to determine whether or
- (4) not it had an effect and we – chemically analyzing the
- (5) microlayer so that we could tell what was in it in the event
- (6) that it did have an effect on these embryos
- (7) Q In the study that you were conducting here was there a
- (8) concern with respect to a particular product that you were
- (9) looking at?
- (10) A Well in that particular study the concern was merely to
- (11) determine whether the microlayer had an effect at all on these
- (12) developing embryos because many fish embryos develop right
- (13) at
- (14) the sea surface They re neustonic they float and once the
- (15) larvae hatch they also feed right at the surface because this
- (16) is the richest area of the sea in microscopic plankton this is
- (17) where all the food is and our concern was to – was whether or
- (18) not this layer was contaminated and sufficiently so to cause
- (19) harm to these embryos and larvae And what we found was that
- (20) in most of the areas we studied that petroleum hydrocarbons
- (21) are the most common contaminant that we encountered
- (22) Q Okay Tell us please what the science of toxicity deals
- (23) with
- (24) A Toxicity or toxicology the area of toxicology deals with
- (25) adverse effects or pathological effects of chemical or physical
- (26) agents on living organisms plants animals or humans

Vol 12 1854

- (1) Q Could you describe for the jury what generally happens to
- (2) an animal when it is exposed to toxic things?
- (3) MR PETUMENOS And could we have Exhibit 465 up
- (4) please to help us do that?
- (5) A Yes there are a number of responses that could result from
- (6) exposure to toxic materials and toxicologists classically look
- (7) at a range of what they call endpoints or toxic responses
- (8) If we can have a our display Here we do we go
- (9) Okay These are just some of the more classic end points
- (10) and I ll point out here that this term acute – why am I not
- (11) writing? Yeah this term acute means it occurs very
- (12) quickly When an organism is exposed to toxic substance and
- (13) responds very quickly lethality that means it s exposed and
- (14) dies very quickly or it becomes irritable It s hurt or
- (15) uncomfortable and it responds behaving strangely Necrosis
- (16) refers to cell death If something is toxic to the cells and
- (17) kills them this is an immediate response
- (18) The subchronic response that we see here means that it
- (19) takes a bit longer for this end point to be seen or observed
- (20) Birth defects for instance would be observed following the
- (21) birth of the organism where it might be exposed in utero or
- (22) while it s in the developing egg Behavioral changes may occur
- (23) down the line when a particular type of behavior is entered
- (24) into For instance an animal s chromosomal balance may be
- (25) upset and later it may go to courtship level and it doesn t

Vol 12 1855

- (1) behave normally because of the hormonal imbalance
- (2) Q What do you mean by courtship ?
- (3) A Courtship?
- (4) Q Yes sir
- (5) A This would be when two animals meet prior to mating and go
- (6) through a behavior pattern to recognize each other recognize
- (7) each other as the same species as male and female and
- (8) interested in each other and they have to do all these things
- (9) in order to successfully reproduce
- (10) Q And toxicity can affect that process?
- (11) A Oh absolutely yeah And the last on that list is
- (12) reproductive loss and that would be if eggs or sperm are
- (13) damaged You wouldn t immediately see this unless you did
- (14) some
- (15) special test but if you were just to expose an organism and
- (16) not do anything special you wouldn t notice there was a
- (17) reproductive loss until after they reproduced You may find it
- (18) did not either reproduce or it aborted its fetus or the newborn
- (19) died This sort of thing could happen
- (20) And then here on the last set of conditions called chronic
- (21) you can have – these take a long time to show up but the top
- (22) on the list there is carcinogenesis or cancer The toxic
- (23) substance may be introduced to the organism in its infancy and
- (24) not show up until the organism reaches old age The length of
- (25) the life span may be reduced which is a long term effect and
- (26) tissue degeneration would be loss of function or structure in

Vol 12 1856

- (1) tissues as the animal ages and this would occur sometime long  
 (2) after exposure to the toxic substance so these are classical  
 (3) endpoints that you can measure expose an animal or a  
 (4) population to a suspect chemical or physical agent and then  
 (5) you observe it and you determine whether or not any of these  
 (6) occur how frequently they occur in that population and how  
 (7) severe each of them was  
 (8) Q Dr Kocan are there ways in which the toxic - a toxic  
 (9) substance can harm an animal without displaying these things  
 (10) that are on the chart here?  
 (11) A Yes there s a subarea of toxicology known as  
 (12) genotoxicology or genotoxicity and -  
 (13) MR PETUMENOS Could we have 466 please?  
 (14) A This is a form of toxicity that affects the genetic  
 (15) material the genes or hereditary material of an organism and  
 (16) classically it s defined as occurring at concentrations below  
 (17) which any of those other endpoints are observed that is  
 (18) nothing else is observed But this genetic damage can occur  
 (19) and its real damage because it can either go on to affect the  
 (20) individual or if it s in the germ line that is the egg or the  
 (21) sperm it can be passed on to the next generation  
 (22) And this - the screen here gives a brief description of  
 (23) genotoxicity that is toxicity directed towards the hereditary  
 (24) components of living species that which is passed on to the  
 (25) offspring

Vol 12 1857

- (1) Q How does that happen? How do toxic things affect the way  
 (2) genetic information is passed on?  
 (3) MR PETUMENOS And could we have 467 please?  
 (4) A Well the damage that occurs to the genetic material can  
 (5) result in a number of different endpoints I guess and this  
 (6) list describing what genotoxic agents do number one you see  
 (7) they alter - obviously alter the genetic components of a  
 (8) species - that is the genes and the DNA  
 (9) They as I just mentioned act at an apparently subtoxic  
 (10) concentration And they affect the hereditary characteristics  
 (11) of the offspring That is the adult may be exposed and if  
 (12) the germ line has been affected then the offspring is affected  
 (13) and you see this in terms of birth defects or unusually high  
 (14) numbers of abortions or miscarriages things like Mongolism or  
 (15) cleft palate Albinism all of these are result of mutations  
 (16) that have occurred or chromosome damage There s many  
 (17) many  
 (18) the list goes on forever and it s quite grotesque but these  
 (19) are the types of things that are hereditary and passed on to  
 (20) the next generation  
 (21) An interesting component here is - is number four and that  
 (22) is that the genotoxic agents are generally not present when the  
 (23) damage is finally detected An individual may be exposed to  
 (24) some gene damaging agent say as an infant or a teenager and  
 (25) then later in adult life of children and this is passed on to  
 the children and whatever they are exposed to is long gone  
 and

Vol 12 1858

- (1) forgotten You don t even know what it was but the damage is  
 (2) still there it remains  
 (3) And this leads to number five which says that mutations  
 (4) can accumulate in a population even after the genotoxic agent  
 (5) has been removed And by that I mean if it s a recessive  
 (6) mutation one that does not express itself unless both parents  
 (7) have donated it to the offspring it can be passed on from  
 (8) generation to generation many times with nothing happening  
 (9) until several individuals both carrying the same trait mate  
 (10) produce offspring that have both of those genes and the trait  
 (11) is observed And one sees this in Albinism for instance  
 (12) Albinos are - or Albinism or nonpigmented skin is hereditary  
 (13) and requires both parents passing a recessive Albino gene to  
 (14) the offspring  
 (15) The second example of that would be sickle-cell anemia An  
 (16) individual carrying one recessive - one gene of the sickle  
 (17) trait is normally unaffected but if it receives two of  
 (18) these genes one from each parent it suffers severe blood  
 (19) problems because they can t carry enough oxygen to survive  
 (20) These are examples in a human population I think that you can  
 (21) understand a little better than the fish of how number four  
 (22) and number five actually function  
 (23) MR PETUMENOS Could we see exhibit 468 please?  
 (24) BY MR PETUMENOS  
 (25) Q Now 468 discusses mutation a little bit further and does

Vol 12 1859

- (1) it tell us what some of the consequences of this mutation can  
 (2) be?  
 (3) A Yes This is just a quick review of something that I  
 (4) touched upon just a moment earlier Here we see under  
 somatic  
 (5) mutation neoplasia or cancer and terata or birth defects  
 (6) Now somatic cells or mutations in somatic cells involve  
 (7) cells that have nothing to do with reproduction This could be  
 (8) skin cells liver cells brain cells any cells in your body  
 (9) that have nothing to do with reproduction and if a mutation  
 (10) occurs there it could go on to develop into - if the cell  
 (11) doesn t die that is it can go on to develop cancer or if  
 (12) it s - it occurs in the fetus that s developing it s not  
 (13) inherited from its parent but the fetus itself is affected  
 (14) while it s developing then the birth defects can result  
 (15) Now germ cell mutations that are depicted here those are  
 (16) mutations that occur in those cells that produce eggs or sperm  
 (17) and those can go on and be passed to the next generation  
 And  
 (18) I just described to you a couple of recessive mutations  
 (19) Albinism being a good example and this is transmitted through  
 (20) multiple generations without affecting the individual unless  
 (21) it has two of the recessive traits And it can also be lethal  
 (22) and frequently what happens there as you see miscarriages or  
 (23) early deaths fetal deaths embryonic deaths Those are the  
 (24) two types somatic cell and germ cell mutations that s that  
 (25) one ceases

Vol 12 1860

- (1) Q So if I understand when you talk about that recessive  
 (2) phenomena what we can see is the children may be okay the  
 (3) grandchildren may be okay but then some pair goes through  
 this  
 (4) courtship process successfully and all of a sudden for the  
 (5) first time many generations down there s a problem is that  
 (6) right?  
 (7) A That s right This trait can be passed on for several  
 (8) generations and accumulate in a population because an  
 (9) individual - well if we re talking about humans recessive  
 (10) trait would be passed on to 25 percent statistically 25  
 (11) percent of the offspring Most people don t have an awful lot  
 (12) of children hardly more than four so every couple might  
 (13) produce one offspring that has the - carries this trait But  
 (14) if we re talking about something like herring they produce  
 (15) 20 000 eggs a year so 5 000 of those may be carrying a  
 (16) recessive trait  
 (17) Q All right Can the process of mutation that you ve just  
 (18) described be seen?  
 (19) A The mutation itself occurs at the biochemical level  
 (20) that s right at the molecular level of the chromosome but the  
 (21) effects of that damage can be seen in some cases  
 (22) MR PETUMENOS Could we see Exhibit 469 please?  
 (23) BY MR PETUMENOS  
 (24) Q Whoops Would you like to talk about this one?  
 (25) A Sure This chart describes two types of lesions that are

Vol 12 1861

- (1) mutations One here is the microlesion Micro meaning very  
 (2) small so small that you can t even see it with a microscope  
 (3) And the way one detects that is to actually grow up the  
 (4) organism or grow up the cells and measure or count the  
 number  
 (5) of mutant individuals that are produced That s very long  
 (6) very tedious very complicated but that is a real mutation  
 (7) that s detected in a real living organism or cell  
 (8) Macrolesions on the other hand are lesions that you can  
 (9) see You can look through the microscope at a dividing cell  
 (10) and actually see the damage to the chromosome and that way  
 you  
 (11) don t have to wait until it actually does something You know  
 (12) it s damaged You don t know what the outcome might be you  
 (13) just know that it s damaged These can be either numerical  
 (14) changes that is more or less chromosomes in a cell or they  
 (15) could be structural changes that is the chromosome may be  
 (16) broken or it may be damaged or may be rearranged or  
 something  
 (17) like that  
 (18) So these are the type that one can see They re visible  
 (19) and you can detect those immediately after exposure to the  
 (20) genotoxic agent  
 (21) Q Could we spend just a half a minute here and talk about the  
 (22) importance of chromosomes and what they do in an animal?  
 (23) A Certainly The chromosomes are chemical strands that carry  
 (24) the genes or the hereditary material that are passed on from  
 (25) one generation to the other Every cell in our body and every

Vol 12 1862

- (1) animal and every plant s body has an identical set of  
 (2) chromosomes or genes that every other cell in that particular  
 (3) organism for that species and these chromosomes carry all  
 (4) these genes that determine how that organism functions  
 whether  
 (5) it s going to make chlorophyll if it s a plant or whether it s  
 (6) going to grow brown hair if it s a moose or whether it s going  
 (7) to have blue eyes if it s a human or whether it s going to  
 (8) have colored scales if it s a fish All of these traits are  
 (9) carried on these chromosomes and they tell each cell what it s  
 (10) going to do how it s going to function and how long it s  
 (11) going to grow and these traits are also passed on in the egg  
 (12) and the sperm to the next generation That s why the offspring  
 (13) look like and function like their parents  
 (14) Q Could you show with respect to this part of the mutation  
 (15) system that you can see the information you give us on the  
 (16) right hand side of the chart could you show us that with a  
 (17) fish egg?  
 (18) A Yes I could show you with fish cells  
 (19) Q Let s take a look at Exhibit 492 then please What s  
 (20) depicted in 492?  
 (21) A What we have here is a fish cell looking through the  
 (22) microscope Obviously this is a very small cell but it s  
 (23) undergoing a process of mitosis or cell division This is a  
 (24) normal cell and what it s doing - just let me show you what  
 (25) the cell is This is the outline of the cell right here

Vol 12 1863

- (1) Okay and if I might these are two bundles of chromosomes  
 (2) right here Now this cell prior to this point has  
 (3) duplicated all of the chromosomes or all of the genetic  
 (4) material in it and made two identical sets and that s depicted  
 (5) by these two clusters of chromosomes you see in the blue  
 (6) circles And now what the cell is going to do it is going to  
 (7) divide into two cells And it s going to do that by laying  
 (8) down cell wall here And now we will have one cell here one  
 (9) cell here each of which is identical to the original cell  
 (10) genetically  
 (11) Now this is a very complex function All of this DNA has  
 (12) to be replicated exactly as it was originally It has to be  
 (13) segregated into two distinct bundles of chromosomes Cell  
 (14) division has to occur with two distinct cells being produced in  
 (15) order for an individual to result This is a single cell but  
 (16) every cell has to go through this process in our body or every  
 (17) other animals body  
 (18) Q Could you add to the top please Exhibit 493 What we  
 (19) have here Dr Kocan on the bottom is the exhibit that you  
 (20) just looked at?  
 (21) A Yes  
 (22) Q And what do we have on the top in Exhibit 493?  
 (23) A On the top again it s a different stain it s like a  
 (24) different magnification Again it s a fish cell same type of  
 (25) cell and it s undergoing the same cell division but it s been

Vol 12 1864

- (1) exposed to benzo(a)pyrene in this case which is one of the  
 (2) many components of crude oil or petroleum - and can I blow  
 (3) that up?  
 (4) Q I think you can but we need to dump the bottom please  
 (5) Okay Maybe it'll work There we go  
 (6) A Okay Just for orientation purposes here this is a cell  
 (7) with a cell nucleus that's not dividing okay? And this is  
 (8) another cell again that's not dividing The nucleus in the  
 (9) center the cell wall around it The cell that we're  
 (10) interested in is this cell right here  
 (11) I think I'd like to blow that up again if I might Can  
 (12) you see that all right?  
 (13) Now the two bundles - let me do the same thing I did with  
 (14) the last one so we're oriented properly Here's the outline of  
 (15) the cell and here are the two chromosome bundles we're going  
 -  
 (16) that are going to separate and become the genetic material for  
 (17) the two daughter cells If you'll notice here that after it's  
 (18) been treated with this chemical that there are bits and pieces  
 (19) of chromosome all strung out in places where they don't  
 (20) belong  
 (21) Now you might imagine that when this cell finally divides  
 (22) that when this new cell wall is formed that both of those  
 (23) cells are probably not going to get the same number of  
 (24) chromosomes or the same amount of DNA as the other The  
 one  
 (25) will get more and one will get less and we'll just depict that

Vol 12 1865

- (1) as saying minus here and plus here  
 (2) Remember I said one of the ways you can tell the difference  
 (3) is numerical changes in chromosomes Generally those that  
 get  
 (4) too few chromosomes die and those that get too many  
 chromosomes  
 (5) develop into some abnormal chemical or function - structural  
 (6) situation  
 - (7) So here you see that this abnormal cell that's been damaged  
 (8) by exposure to petroleum hydrocarbon component is going to  
 (9) result in two damaged daughter cells We don't know exactly  
 (10) what the damage is but we can measure immediately after it's  
 (11) been exposed  
 (12) Q Thank you Dr Kocan I think we can clear that screen  
 (13) I think what one of the things that might be helpful  
 (14) Dr Kocan is if you could show the jury in the case of herring  
 (15) what their developmental stages are and draw for us how that  
 (16) progresses  
 (17) MR PETUMENOS Mr Gross do we have a board that we  
 (18) could use?  
 (19) BY MR PETUMENOS  
 (20) Q Would you like to use -  
 (21) A Come down there  
 (22) Q Yes come on down and do some drawing for us Would you  
 (23) like to use an easel We have some witnesses that like to get  
 (24) on the floor  
 (25) A No I think I'll just stand

Vol 12 1866

- (1) MR PETUMENOS Do we have one of those big boards?  
 (2) Just a blank one would be great  
 (3) A I think they can see this paper all right  
 (4) BY MR PETUMENOS  
 (5) Q Big enough?  
 (6) A That should be all right  
 (7) Q Black?  
 (8) A Let's have a couple colors just to - that's it  
 (9) Q All right  
 (10) A I think during the course of this testimony you're going  
 (11) to hear a couple of terms that I think you ought to keep  
 (12) separate in your minds and one is going to be embryo and the  
 (13) other is going to be larva or larvae And embryo equals the  
 (14) developing egg the pre-hatched egg And the larva or larvae  
 (15) which is plural equals the little newly hatched fish  
 (16) Can you all read this all right?  
 (17) Now larval or embryonic development starts at the moment  
 (18) of fertilization - and we'll do this in a time sequence here  
 (19) So we'll start at this point and we'll move this way through  
 (20) time to about say 21 days And this will be zero days  
 (21) Okay And at this point we have fertilization And at  
 (22) fertilization there's an egg and inside the egg is a yolk and  
 (23) that yolk has a single cell on it and it's waiting to be  
 (24) fertilized And fertilization occurs obviously when a sperm  
 (25) enters the egg and joins with that one cell

Vol 12 1867

- (1) Now remember I was telling you before that the sperm and  
 (2) the egg needed to unite and then the cells begin to divide  
 (3) The cell division process that I just described on the screen  
 (4) is what goes on from this point on The cells keep doubling  
 (5) and what one sees we're going to look down on the top of this  
 (6) you would see the yolk there the shell membrane around it  
 (7) This one cell now would divide into two cells and then it  
 (8) would go on to divide into four cells and then it would go on  
 (9) to divide into eight cells And I'm not going to do this up to  
 (10) 250 billion cells but you get my point that they keep  
 (11) doubling and doubling and doubling And they go through that  
 (12) process I showed you a few moments ago until we reach a point  
 (13) about midway here when these - these cells which all look  
 (14) alike now they - you can't distinguish one from another they  
 (15) all look identical They're called undifferentiated cells  
 (16) At this point if you were to look at the embryo here  
 (17) would be the yolk and over the surface of it all you would  
 (18) see was this large mass of cells and that's the embryo It's  
 (19) made up of thousands of cells That up to this point it goes  
 (20) from one cell to here  
 (21) Now to get beyond this point the cells begin to  
 (22) differentiate and you begin to see eyes and fins and muscles  
 (23) and ears and all the parts of the animal begin to develop  
 (24) until you get to the very end just prior to hatching here and  
 (25) inside this egg is a bona fide little embryo and it's all

Vol 12 1868

- (1) curled up in here and you've got little fins and tail and  
 (2) muscles and ears and all sorts of things He's just waiting to  
 (3) hatch  
 (4) Okay so this is the embryo phase early embryo late  
 (5) embryo and when this hatches you'd have a larva and this  
 (6) larva is basically a little fish It has a big gob of yolk  
 (7) attached to it and that big gob of yolk is what it lives off of  
 (8) for about the next two to four weeks It doesn't eat until it  
 (9) gets to be about three weeks old  
 (10) And this little larva now different from the embryo lives  
 (11) - talking about herring - looking at the water this is the  
 (12) surface of the water this is the bottom of the water here  
 (13) Okay these little guys live for about ten days right at the  
 (14) surface here Okay and at about that time they begin to lose  
 (15) a lot of this yolk they're able to swim a bit better and you  
 (16) find that they become distributed more deeply And by the time  
 (17) they're about 45 days old they're distributed all the way from  
 (18) the top to the bottom and they pretty much can swim on their  
 (19) own These fellows can go only where the tides and the  
 (20) currents take them These can move up and down a little bit if  
 (21) they want and maybe catch different currents but they can't go  
 (22) anywhere intentionally just up and down and these fellows can  
 (23) actually swim against the current or away from the current  
 (24) So during the rest of our discussion remember that this  
 (25) embryo is the developing prehatched egg and the larva is the

Vol 12 1869

- (1) newly hatched little fish that's using up this yolk and growing  
 (2) up to become an adult  
 (3) MR PETUMENOS Your Honor if the Court pleases this  
 (4) would be a good time for a short recess We've been in session  
 (5) for an hour  
 (6) THE COURT Sure  
 (7) THE CLERK Please rise the Court stands in recess  
 (8) (Jury out at 11 18 a m )  
 (9) (Recess from 11 18 a m to 11 37 a m )  
 (10) (Jury in at 11 37 a m )  
 (11) THE CLERK Please rise This court now resumes its  
 (12) session Please be seated  
 (13) THE COURT Okay  
 (14) BY MR PETUMENOS  
 (15) Q Dr Kocan I have strategically before the break said we  
 (16) were through with the chart but then I remembered I had  
 (17) another question to ask about it so we have to go back one  
 (18) more time  
 (19) Could you describe for the jury - come right over here -  
 (20) and I wanted to get it out of the way so you could get back to  
 (21) the witness stand when we're done  
 (22) What can happen when we have the intrusions of hydrocarbon  
 (23) contaminants in any of these various stages of development  
 (24) with  
 (24) a brand new herring?  
 (25) A Okay As I mentioned to you a bit earlier in the

Vol 12 1870

- (1) presentation these developmental stages progress from a  
 single  
 (2) cell to a fully formed larva ready to hatch from the egg And  
 (3) just to keep this in context I'll draw these eggs real quick  
 (4) nuclei here and during this early phase of development  
 (5) through say the first two or three cell divisions if the  
 (6) embryo is exposed to toxic substance normally what happens  
 is  
 (7) that the whole system dies because there's just a few - few  
 (8) cells here that are capable of producing that entire embryo  
 (9) And if the cell is damaged or killed there isn't a sufficient  
 (10) amount of biomass to go on produce a whole embryo  
 (11) Now later as this progresses to where there's thousands  
 (12) and tens of thousands of cells and the egg looks something like  
 (13) that and it begins to be virtually solid cells in here and  
 (14) then progresses down to being a piece of tissue like that  
 (15) that's still undifferentiated From this stage on to where we  
 (16) first see organs forming if these cells are exposed to toxic  
 (17) substances what generally occurs during that phase is that the  
 (18) embryo is born deformed or has some birth defect Once you  
 see  
 (19) a - an embryo no matter how undeveloped it may be once it  
 (20) starts to become an embryo and you see developed organ  
 systems  
 (21) eyes or muscles or skin or whatever from that point on until  
 (22) it hatches usually toxic substance aren't - don't have much  
 (23) of an effect immediately The effect tends to be much longer  
 (24) term  
 (25) An example of that would be studies I've done and a number

Vol 12 1871

- (1) of other people have done if you expose these later stage  
 (2) embryos they live they hatch they look normal they grow  
 (3) up But a year later or so they may develop liver tumors or  
 (4) kidney tumors or some other kind of tumors So the message  
 (5) here is that the very earliest stages when there's a few  
 (6) cells the organism dies when it's exposed to a toxic  
 (7) substance During the intermediate developmental stages  
 prior  
 (8) to it becoming a developed embryo damage to the cells results  
 (9) in a deformed larva and later on there's generally no  
 (10) mortality no death but there are long term consequences like  
 (11) cancer  
 (12) Q You can resume the witness stand Dr Kocan And what I  
 (13) have had marked this chart here as 1512 thank you  
 (14) THE COURT Not admitted Pat? Not admitted You  
 (15) want it admitted?  
 (16) MR PETUMENOS What I thought I'd do is as we break  
 (17) up the examination we're keeping track and I would go ahead  
 (18) and move them in at the end  
 (19) THE COURT That's fine  
 (20) MR PETUMENOS That's acceptable?  
 (21) THE COURT Sure  
 (22) MR PETUMENOS All right Thank you Mr Karlberg  
 (23) BY MR PETUMENOS  
 (24) Q Did there come a time when you became involved or  
 received  
 (25) a call to assist in some study regarding the Exxon Valdez oil

Vol 12 1872

- (1) spill?
- (2) A Yes
- (3) Q When were you called?
- (4) A The first contact I recall was oh in late 1989 early
- (5) 1990
- (6) Q And who contacted you?
- (7) A I believe I was contacted at that time by Dr Robert Spies
- (8) who s the chief scientist for the Exxon Trustee Council
- (9) Q Okay And to remind the jury the Exxon Trustees are?
- (10) A The Exxon Trustees are a group of individuals who are the
- (11) head of I believe it s Department of Agriculture Department
- (12) of Interior Forestry Alaska Fish & Game Fish & Wildlife
- (13) Service
- (14) Q Good enough
- (15) A It s an environmental group or conservation agency
- (16) Q Now at the time that you were first hired was there
- (17) information coming in from the field data coming in from the
- (18) field in Prince William Sound already on herring?
- (19) A Yes When I was first contacted studies had already
- (20) begun They began almost immediately after the spill and data
- (21) had been coming in by the time or projects already had begun
- (22) and data was collected by the time I was asked to participate
- (23) Q What kind of data had come in and what was it showing?
- (24) A The earliest data - well my involvement at that time was
- (25) to review data from all of the different projects - or many of

Vol 12 1873

- (1) the different projects not all of them - and my involvement
- (2) was with the herring study the pink salmon study the rock
- (3) fish study and the clam and mussel studies
- (4) Q Were you doing peer review?
- (5) A That s what I was doing primarily That was my - excuse
- (6) me what I was requested to do was to review the data that was
- (7) coming in and make suggestions as to where these projects
- (8) might
- (9) change course or proceed or what best to do from that point in
- (10) order to get the best data from Prince William Sound
- (11) Q And with respect to the herring studies what was the goal
- (12) of the herring studies?
- (13) A Well Initially the herring study was to determine whether
- (14) or not the oil spill had had any effect on the - the adult and
- (15) juvenile herring that were present in the Sound and at the time
- (16) of the spill and whether or not the newly laid eggs and newly
- (17) hatched larvae were affected by the oil
- (18) Q Did there come a time when you were asked to do something
- (19) else besides conduct peer review?
- (20) A Yes In 1990 I was contacted by Alaska Department of Fish
- (21) and Game and asked if I would participate in actually doing a
- (22) part of the herring study in conjunction with the group that
- (23) had already been working since 1989
- (24) Q And what did they - what part of it did they want you to
- (25) do?
- (26) A Specifically they wanted me to do laboratory and fieldwork

Vol 12 1874

- (1) that would be used to - used to compare to the field data they
- (2) had collected in 1989 In other words they had data that was
- (3) collected in the field It was observational data and they
- (4) wanted experimental studies done to determine whether or not
- (5) what they were seeing in the field was actually related to
- (6) exposure to oil
- (7) Q And what was this data in the field showing?
- (8) A At that time they had found that there was tissue damage
- (9) to adult herring that had been collected at oiled sites
- (10) specifically liver damage They had found that there was an
- (11) increase in number of abnormal larvae hatching from eggs that
- (12) were incubated at oiled sites compared to unoiled sites They
- (13) were finding differences in hatching weight in the larvae that
- (14) hatched at the oiled sites lighter than those from the unoiled
- (15) sites and there was also genetic damage observed in the larvae
- (16) that had hatched from - or had incubated as embryos in the
- (17) oiled sites
- (18) Q So in order to take a look at this data and determine what
- (19) you thought it meant what did you do in the laboratory? What
- (20) was your approach?
- (21) A Okay specifically in order to - to make some sense of
- (22) the data that was coming out of the field because there s -
- (23) the field data is difficult to gain full control over that is
- (24) there are many variables that exist there and what you collect
- (25) with is what you have You don t have much control over where

Vol 12 1875

- (1) it came from and what it is You have to take what nature
- (2) gives you So the experiments I designed followed a three step
- (3) sequence
- (4) One the question was Does Exxon Valdez oil have any
- (5) effect on herring embryos or larvae? Because if it has no
- (6) effect under controlled laboratory conditions then there s no
- (7) sense looking any further
- (8) But if it does have an effect then the second question
- (9) was What do these effects look like effect or effects? In
- (10) other words describe what happens to the embryos and the
- (11) larvae after they ve been exposed to the oil
- (12) And once these effects have been described How do they
- (13) compare to what was observed in the field? That would be the
- (14) third step in the process
- (15) So one was to determine if anything happened two describe
- (16) what happened and three to compare what happened to what
- (17) was
- (18) observed in the field
- (19) Q And what conditions did you set up in the laboratory to
- (20) answer those questions? First did it have an effect and what
- (21) were they?
- (22) A The - there were several components to my study the first
- (23) year That was in 1991 One was a laboratory component and
- (24) one was a field component
- (25) The laboratory component consisted of mixing Exxon Valdez
- (26) crude oil with synthetic or artificial seawater and allowing it

Vol 12 1876

- (1) to separate To give you an idea how this works we mix the  
 (2) oil and water together in a vessel a glass container and  
 (3) shake it all up until it's all mixed like you would shake  
 (4) vinegar and oil salad dressing And you know how you get the  
 (5) emulsion in that shaken up bottle and then you let this stand  
 (6) undisturbed for a while and the oil floats to the top and the  
 (7) water is at the bottom We let this stand for about 18 hours  
 (8) overnight And at the end of that time we took the water off  
 (9) the bottom we left the oil remain inside and this water now  
 (10) is contaminated with whatever oil was able to get into the  
 (11) water and stay there  
 (12) This water was then diluted with clean seawater until we  
 (13) had dilutions down to one tenth of a percent And in these  
 (14) various dilutions from the hundred percent extract that I made  
 (15) down to a tenth of a percent I put newly fertilized herring  
 (16) embryos or eggs into each a series of these dilutions and  
 (17) these embryos were derived from Prince William Sound adult  
 (18) spawning herring that I collected here in the Sound in 1991  
 (19) These were allowed to incubate develop hatch And after  
 (20) they hatched and within the first 24 hours after hatching I  
 (21) removed the larvae and these larvae the little fellows that I  
 (22) drew on the board here that had the yolk sac on them these  
 (23) were then examined for physical defects for birth weight and  
 (24) for chromosome or genetic damage  
 (25) The second component of the study was to take these newly

Vol 12 1877

- (1) fertilized eggs put them into little chambers that I had  
 (2) developed and put them in the Prince William Sound at oiled  
 and  
 (3) unoiled sites allow them to incubate there until just before  
 (4) they hatched then bring them back into the laboratory and let  
 (5) them hatch in the laboratory and then compare the difference  
 (6) between those that were incubated in the field at oiled sites  
 (7) and those were incubated in the field at unoiled sites So  
 (8) this would be a natural exposure to oiled and unoiled sites in  
 (9) the field sometime  
 (10) Q What was your conclusion to the first question which is  
 (11) Does Exxon Valdez oil have an effect upon the growing herring?  
 (12) A The overall conclusion was Yes it does have an effect on  
 (13) the developing embryos and larvae  
 (14) Q So did that cause you to go on to the next step which was  
 (15) to try to determine in what ways it had an effect?  
 (16) A That's correct What I did was to look at a variety of  
 (17) different endpoints mortality time of hatching physical  
 (18) abnormalities birth weights genetic damage  
 (19) Q Showing you what has been marked for identification as  
 (20) Exhibit Number 475 what is depicted in 475?  
 (21) A Here we have my little marker - this is a photograph  
 (22) through a dissecting microscope These are magnified about  
 (23) oh I'd say a normal herring would be about that long so I  
 (24) think they're magnified quite a bit These are normal herring  
 (25) larvae right after hatching from the egg and you can see here

Vol 12 1878

- (1) the eye right there  
 (2) Q Excuse me Dr Kocan I'm sorry to interrupt you but you  
 (3) just said they're about that long but I think you were looking  
 (4) at a little smaller screen than what the jury's looking at  
 (5) Did we just have a problem there? On this screen they're  
 (6) about this big?  
 (7) A Well in relation to the whole larva you see the actual  
 (8) ones are that big so shrink him down to that size and they're  
 (9) there You can see them but they're very small You can see  
 (10) here's the eye these dark objects are the eyes right there  
 (11) and here's the yolk sac described to you earlier That's got  
 (12) the yolk material in it and obviously this is the head end  
 (13) here and this is the tail over here  
 (14) And you can't see all of the structures here but you can  
 (15) see through the microscope gills and what are comparable to  
 (16) ears in a fish and muscle bands and intestines and all that  
 (17) stuff These are perfectly normal The head is normal and the  
 (18) eyes are normal and these are normal in herring  
 (19) Q Showing you next superimposed over the top here will be  
 (20) Exhibit 486 and you have the - ability to blow that up in the  
 (21) top if you need to  
 (22) A Just as a brief explanation the top panel shows a group of  
 (23) herring larvae that were derived from the same parents as the  
 (24) bottom panel but had been exposed to petroleum  
 hydrocarbons  
 (25) during embryonic development while they were in the egg And I

Vol 12 1879

- (1) think without much description you can see they're not the  
 (2) same So there is an effect You see bent spines and deformed  
 (3) jaws and fin problems gill maldevelopments lot of things go  
 (4) on that are just visible with the naked eye  
 (5) Q Showing you next what has been marked as Exhibit Number  
 (6) 487 put the - I put Exhibit 475 on the bottom here the  
 (7) normal ones?  
 (8) A And the bottom panel is still that normal group The upper  
 (9) panel shows the larva that was alive when it hatched It has  
 (10) obviously a curved spine which is abnormal If you'll notice  
 (11) there are no eyes This thing was born without eyes and a  
 (12) curved spine but it was alive It had a heartbeat and it was  
 (13) wiggling around a bit but obviously it wasn't going to survive  
 (14) to become a herring And this was exposed to petroleum  
 (15) hydrocarbon I should say specifically this was exposed to  
 (16) Exxon Valdez Go ahead  
 (17) MR PETUMENOS Could I see Exhibit Number 485  
 (18) please?  
 (19) A This is another example of a deformed larva Again here  
 (20) you can see that the eyes are protruding from the side of the  
 (21) head That's very abnormal And again we have this severe  
 (22) curvature of the spine This animal is not able to straighten  
 (23) that out This is the position it remains in even if it's  
 (24) moving its fins and trying to swim it'll swim in little  
 (25) circles because the development of the muscles on both sides of

Vol 12 1880

- (1) the body are uneven  
 (2) MR PETUMENOS Exhibit 477 please  
 (3) A This one came out upside down but I think we can still  
 (4) show what you need to here This larva is upside down  
 (5) obviously The yolk sac is on the top instead of the bottom  
 (6) Here on the top of the head you can see a protuberance which  
 (7) is probably not an abnormal growth but it's just a  
 (8) malformation of the skull And if you look right here where  
 (9) there should be a lower jaw there is no lower jaw  
 (10) This animal was alive and - excuse me obviously here  
 (11) there's so much deformity in the head that if we look in this  
 (12) area here you see that the eyes don't even have any tissue on  
 (13) which to rest The animal was oriented normally There's  
 (14) nothing from this point down The eyes are protruding down  
 (15) into what would be the oral cavity  
 (16) Q Where's its mouth?  
 (17) A It's mouth is missing there's no jaw It's what I  
 (18) depicted here the lower jaw is missing The mouth should be  
 (19) here  
 (20) MR PETUMENOS Excuse me one second  
 (21) BY MR PETUMENOS  
 (22) Q Were the larvae from Prince William Sound then also  
 (23) examined?  
 (24) A Yes Larvae were collected in 1989 1990 from Prince  
 (25) William Sound - well let me back up a little bit Eggs

Vol 12 1881

- (1) developing eggs were collected in 1989 1990 and incubated in  
 (2) the laboratory and the newly hatched larvae were then  
 examined  
 (3) and these eggs were collected from oiled sites and unoiled  
 (4) sites in the Sound  
 (5) Later in the year starting in April or May another study  
 (6) actually collected free swimming larvae I caught in my net and  
 (7) examined them These larvae then they didn't know where  
 they  
 (8) had come from they just knew they were in the Sound and  
 where  
 (9) they had collected them  
 (10) Q Exhibit 503 does that exhibit portray two larvae from  
 (11) previously oiled sites and one from an unoiled site?  
 (12) A Correct That top individual the upper individual is a  
 (13) normal larva from Prince William Sound That's this - that's  
 (14) this fellow here and the two bottom individuals are abnormal  
 (15) larvae collected from oiled sites in Prince William Sound and  
 (16) these were collected in 1989  
 (17) Q Dr Kocan did you make a comparison between larvae  
 exposed  
 (18) to different concentrations or levels of Exxon Valdez crude in  
 (19) your laboratory tests?  
 (20) A That's correct The initial laboratory component of my  
 (21) study in 1991 involved exposure of the developing embryos in  
 (22) different concentrations of Exxon Valdez crude oil or soluble  
 (23) components of the crude oil not the whole oil  
 (24) Q Showing you what's been marked as - for identification as  
 (25) Exhibit 511 During a break I took a look at this from that

Vol 12 1882

- (1) seat up there in the corner it's hard to read so could we  
 (2) sort of go through it point by point and maybe blow up the X  
 (3) and Y axis a little bit with the pen? Or I can do it if you  
 (4) like so we can tell all the jurors what this graph depicts?  
 (5) A Sure I may even be able to write those numbers on here  
 (6) On the - okay the bottom axis or this lower set of  
 (7) numbers represents concentrations of soluble petroleum  
 (8) hydrocarbons That is what had dissolved into that lower water  
 (9) later I described to you a few minutes ago and the highest  
 (10) concentration is on this end - no I didn't want to do that  
 (11) Q I'm going to take it from you here just a minute Could I  
 (12) drive for a while?  
 (13) A Sure  
 (14) Q I just want to do one thing for the jurors that can't see  
 (15) so well The Y axis first of all shows what?  
 (16) A Normal larvae And when he says the Y axis he means this  
 (17) vertical axis This tells you the percent of normal larvae  
 (18) that hatched from the egg  
 (19) Q And then along the bottom we have -  
 (20) A These represent parts per million of - this should read  
 (21) soluble petroleum hydrocarbons  
 (22) Q What does that mean?  
 (23) A Those are the - the components of the oil that actually  
 (24) dissolved into the water phase of that mixture I explained  
 (25) Q So as we go from left to right across the graph is the

Vol 12 1883

- (1) concentration of oil increasing?  
 (2) A The concentration increases from zero you can see here to  
 (3) almost ten parts per million and the lowest concentration  
 (4) is .01 or 1/100th of a part per million  
 (5) Q Who's driving? Thanks you can give it back to the Doctor  
 (6) if you would  
 (7) A Okay  
 (8) Q So what did you find out about how concentrations of oil  
 (9) relate to this?  
 (10) A As an overall impression as you see the concentration  
 (11) increase from zero to a hundred you also see that the number  
 (12) of normal individuals the percent of normal individuals  
 (13) decreases Now this point on there were zero percent  
 (14) normal They all hatched They didn't die but they were all  
 (15) abnormal totally deformed  
 (16) Okay the first place that you see a significant decrease  
 (17) in number of normal individuals is here at this concentration  
 (18) which is .48 or less than one half of a part per million  
 (19) Q Now to remind the jury -  
 (20) A I'd like to just explain  
 (21) Q Go ahead  
 (22) A This next concentration .24 was not significantly  
 (23) different from no treatment That is there was a very  
 (24) significant loss in the number of normal individuals or an  
 (25) increase in the number of abnormal at .48 parts per million

Vol 12 1884

- (1) but at 24 there was no significant difference between no  
 (2) treatment at all  
 (3) Q Okay Now I d like to have you remind the jury we re  
 (4) talking here about larvae and you drew for us on the easel the  
 (5) different stages of development What stage of development  
 (6) does this graph depict the rate of normal larvae on - is it  
 (7) the beginning or the end?  
 (8) A These are the newly hatched larvae the day they hatch  
 (9) first 24 hours after they hatch They were from the beakers  
 (10) where they were growing or incubating and they were  
 observed  
 (11) or they were examined for all the various endpoints I was  
 (12) looking for So this represents the newly hatched larvae that  
 (13) had been exposed during the time they were eggs incubating  
 and  
 (14) developing in these embryos  
 (15) Q Next I have a short video clip to show you Dr Kocan  
 (16) Exhibit 247A and I wonder if you could look at it with us and  
 (17) comment upon what we re going to see  
 (18) MR PETUMENOS And Your Honor this videotape will  
 (19) actually be testified to for the entire tape by a subsequent  
 (20) witness  
 (21) (Videotape Played)  
 (22) BY MR PETUMENOS  
 (23) Q You ve had a chance to review the tape before?  
 (24) A I believe this is the Rick Rosenthal tape  
 (25) Q Correct

Vol 12 1885

- (1) A Taken in Prince William Sound  
 (2) Q Right And what do we see here?  
 (3) A Here we see a diver underwater and he s wiping the - the  
 (4) bottom the kelp that s on the bottom See this right here  
 (5) this is kelp growing on the bottom and he s wiping it with -  
 (6) or she I don t know is wiping it with these white towels and  
 (7) you can see on the white towels the black tarry substance  
 (8) which is petroleum or Exxon Valdez oil and this vegetation is  
 (9) vegetation on which the herring deposit their eggs  
 (10) MR KARLBERG Your Honor can we get clarification  
 (11) where this video was taken whether it s anywhere related to  
 (12) where a spawn occurred?  
 (13) THE COURT Can you do that counsel?  
 (14) MR PETUMENOS There will be a witness later to  
 (15) testify to the location of the videotape where the boat was  
 (16) and where they went on  
 (17) MR KARLBERG It s my understanding Dr Kocan does  
 (18) not know  
 (19) THE COURT Do you know where this tape was taken?  
 (20) THE WITNESS I don t know the exact location no  
 (21) THE COURT Do you know the general location?  
 (22) THE WITNESS Prince William Sound  
 (23) THE COURT That s it  
 (24) THE WITNESS Somewhere in the track of the oil plume  
 (25) THE COURT We know where that is

Vol 12 1886

- (1) BY MR PETUMENOS  
 (2) Q Now with concentrations like the amount of oil that where  
 (3) you get to the point where you can put it on a white cloth like  
 (4) this and see it the way we saw it on the film how does that  
 (5) compare to the concentrations we were seeing on your graph  
 just  
 (6) a moment ago? And perhaps we could have that back  
 (7) MR KARLBERG Objection Your Honor I don t know  
 (8) that there s been any foundation laid for the concent ation  
 (9) level of what was on that white cloth  
 (10) THE COURT The question described that where you  
 (11) could see it on a cloth  
 (12) MR PETUMENOS Right  
 (13) THE COURT Do you know what concentration that is?  
 (14) THE WITNESS That was pure oil Pure as it can be at  
 (15) that stage  
 (16) THE COURT You re going to have to ask some  
 (17) clarifying questions counsel  
 (18) MR PETUMENOS Could I get the graph back up and I  
 (19) can do that  
 (20) BY MR PETUMENOS  
 (21) Q When we re talking about the concentration here at  
 (22) say 48 has that got a concentration where you can show the  
 (23) oil by pulling it off of the place where the herring spawn on  
 (24) the kelp?  
 (25) A No none of these concentrations even at the hundred

Vol 12 1887

- (1) percent level - whoops even at the hundred percent level or  
 (2) almost ten parts per million was any oil visible This  
 (3) appeared to be in the water  
 (4) Q I m sorry?  
 (5) A It appeared to be clean seawater  
 (6) Q Now in those individuals that escaped the individual  
 (7) herring creatures that escaped the physical defects that we ve  
 (8) been able to see here were there other observed differences in  
 (9) the field with respect to the weight of the herring that were  
 (10) being created by their parents?  
 (11) A In the field?  
 (12) Q Yes Were there differences observed between oiled and  
 (13) unoiled areas in the field with respect to the weight of the  
 (14) herring?  
 (15) A There were differences observed - that s right Herring  
 (16) embryos that had hatched into larvae from oiled sites in the  
 (17) field weighed less They were smaller than embryos that  
 (18) hatched and had been developing in unoiled sites This is the  
 (19) same phenomenon I observed in my laboratory study that all of  
 (20) these embryos - all of the embryos that were exposed to any  
 (21) concentration of oil hatched at a lighter weight than did the  
 (22) embryos that were not exposed  
 (23) Q Could I have the light pen please just real quickly for  
 (24) the jurors in the back that are having trouble seeing  
 (25) On the vertical axis here the line going up we have the

Vol 12 1888

- (1) weight of the larvae going up?  
 (2) A That's correct. That tells you how much they weighed.  
 (3) Q And going across the bottom we have the fact that this was  
 (4) done in the laboratory, right?  
 (5) A That's right. This was a controlled laboratory exposure.  
 (6) Q Why do we care what a herring larva weighs?  
 (7) A It's been well established in a number of different species  
 (8) that smaller individuals compete less well. They're less able  
 (9) to escape predators. They're less able to compete for  
 (10) available food supplies. They're less able to obtain ideal  
 (11) habitat for protection. They're just, you know, it's the --  
 (12) the small guy on the beach kind of syndrome, they just don't  
 (13) have the survival potential as -- their survival potential is  
 (14) less than that of larger individuals because they can't compete  
 (15) as well, and I think this shows here that the oil exposed  
 (16) individuals were considerably lighter at birth than were the  
 (17) unexposed, the control individuals, these weighing 120  
 (18) micrograms and these way weighing approximately 80 or  
 (19) maybe  
 (20) 75.  
 (21) Q Now I'm going to show you another exhibit, Number 497 on  
 (22) top, please. And could I have the pen back?  
 (23) Does Exhibit 497, which is now on top, reflect what they  
 (24) observed in the field, itself?  
 (25) A Yes. The top panel represents weights of larvae that were  
 collected in the field. These were -- actually, these were

Vol 12 1889

- (1) parts of a study that I had done in 1991 that I just described  
 (2) a moment ago where I exposed herring larvae at oiled and  
 (3) unoiled sites until just before they hatched, and then I  
 (4) brought them into the laboratory and allowed them to hatch.  
 (5) And after they hatched, I weighed them and compared the  
 (6) weights  
 (7) of the two sites, or the larvae from the two sites.  
 (8) Q What is the significance that these two graphs look very  
 (9) similar to you, sir?  
 (10) A Well, both of the graphs, as you can see, showed that the  
 (11) left-hand bar that represents control, or in this case, control  
 (12) unexposed larvae, and here -- these are larvae that grew on an  
 (13) unoiled site -- were significantly heavier, weighed more than  
 (14) did larvae that were either exposed to a known amount of oil  
 (15) or exposed at an oiled site in Prince William Sound. So the  
 (16) relationship between weight, oiled and unoiled sites and oil  
 (17) exposed and unoiled, unexposed individuals is the same.  
 (18) MR PETUMENOS: We're done with those, Mr. Johnston.  
 (19) Thank you.  
 (20) BY MR PETUMENOS:  
 (21) Q What about -- we've now talked about the weight of larvae,  
 (22) we've been talking a lot about what happens to larvae. Back  
 (23) when we drew your chart on the easel, let's go back to a  
 (24) different stage of development and talk about differences  
 (25) between herring exposed to oil and those not exposed to oil  
 when it comes to the time it takes for eggs to hatch. Were

Vol 12 1890

- (1) there any differences noted between those two?  
 (2) A Yes. In general, what I observed is the higher  
 (3) concentration of oil to which I exposed the developing embryo  
 (4) the earlier they hatched, or, more understandable terms, I guess  
 (5) they were premature. They hatched prematurely.  
 (6) Q Could we see Exhibit 488, please? And when we use the  
 (7) word  
 (8) premature, that's essentially having premature offspring,  
 (9) premature births?  
 (10) A Yes, it's premature. They hatched before they were ready  
 (11) to hatch, before the development was as far along as it was  
 (12) supposed to have been.  
 (13) Q Could you tell the jury, please, what Exhibit 488 is, which  
 (14) is about to come up on the screen?  
 (15) A Certainly.  
 (16) Q And he can drive on this one.  
 (17) A Okay, this is a -- this is a -- these three panels  
 (18) represent three different concentrations or groups of  
 (19) concentrations of the oil, or the soluble oil that I exposed  
 (20) these embryos to. Let's just do the drill here.  
 (21) This is -- the bottom set of numbers represents days post  
 (22) fertilization. That is from the time they're fertilized until  
 (23) they hatched, okay.  
 (24) And this vertical axis here merely represents the number of  
 (25) eggs that hatched each day. And this number here is 12, and  
 this number is 24, so if you look at the top panel -- and I may

Vol 12 1891

- (1) as well, just go ahead and expand it up so we can read it  
 (2) clearly and use it as a reference from now on.  
 (3) This is two separate experiments with two groups of embryos  
 (4) that were exposed to nothing. They were just put in clean  
 (5) seawater at eight degrees centigrade, 24 parts per thousand  
 (6) normal seawater concentrations, and 12 hours of light and 12  
 (7) hours of dark, and they represent two different groups. And  
 (8) there's two sets of lines, and you see here that the greatest  
 (9) number of embryos hatched at about day 19, and by day 20  
 (10) virtually all of the embryos that were going to hatch had  
 (11) hatched. So day 19 is the peak hatching day for control  
 (12) normal, untreated herring embryos that were raised under these  
 (13) conditions.  
 (14) Now, in the next -- in the next panel you see -- I won't  
 (15) blow this one up right away -- you see here that there are  
 (16) three different concentrations. Maybe I better blow that up.  
 (17) These concentrations represent the very lowest to which the  
 (18) embryos were exposed. You see that their hatching day is  
 (19) essentially the same as occurred with the untreated, or in the  
 (20) untreated group.  
 (21) But if we move down to the bottom panel, where the  
 (22) concentrations start increasing and are higher, you see that  
 (23) the peak hatching day now moves over here, and this is now  
 (24) day  
 (25) 15. But it's also, you'll notice, a lot messier. You get a  
 lot of spreading of this. So what's happened here is that the

Vol 12 1892

- (1) days to hatching has decreased or they've hatched prematurely
- (2) relative to the untreated control fish and this happens not
- (3) only under controlled laboratory conditions but it also
- (4) happened in 1989 when the eggs were collected from the oiled
- (5) and unoiled sites. This was done by another investigator and
- (6) reported in the final report so premature hatching appears to
- (7) be related to oil exposure both in the field and in the
- (8) laboratory
- (9) Q All right. Could you tell us whether you observed how
- (10) chromosomal development took place in laboratory tests and
- (11) tests done at Prince William Sound?
- (12) A Yes. The newly hatched larvae that -- those that I showed
- (13) you that I took pictures of and were represented in the first
- (14) bar graph that we looked at that showed the decreasing
- (15) number
- (16) of normal individuals the concentration of oil increased
- (17) Those were subdivided into groups and part of them were
- (18) examined for chromosome damage the type of chromosome
- (19) damage I
- (20) showed you earlier with the two cells that were dividing here
- (21) and these individuals were examined for background levels of
- (22) chromosome damage. That is what one might expect to occur
- (23) normally in an untreated healthy individual and compared to
- (24) increasing concentrations of oil and oiled sites and unoiled
- (25) sites
- (1) Q Now just to make sure we understand when you drew us that
- (2) picture that had the different chromosomes and they had the

Vol 12 1893

- (1) other broken pieces around is that what we're talking about
- (2) here?
- (3) A That's correct. That's what we're talking about
- (4) Q All right. Could I have the Elmo please?
- (5) Dr. Kocan exhibit -- I show you Exhibit Number 499 for
- (6) identification. What is it?
- (7) A Yes okay. This represents three concentrations that I
- (8) chose for a particular reason -- concentrations of oil that
- (9) is that I chose for a particular reason. I'll get into it
- (10) here in a moment. And it shows that -- let me first show you
- (11) the concentrations
- (12) Q We're on a different --
- (13) A Oh can't do that
- (14) Q Can't do that?
- (15) A Okay I'll tell you what they are. This bar represents no
- (16) treatment at all
- (17) Q Which bar could you describe it for us?
- (18) A The bar is the left hand bar that's purple and it looks
- (19) like about 12 or 13 -- no it looks like about 7 or 8 percent
- (20) abnormal chromosomes. This is not unusual you find a small
- (21) number of abnormal chromosomes in all individuals
- (22) The second concentration is a tenth of a part per
- (23) million 1 and it shows about just under 20 percent abnormal
- (24) or cells of abnormal chromosomes. And at 24 parts per
- (25) million we see about 27 or 28 cells with abnormal percent

Vol 12 1894

- (1) abnormal chromosomes. So there's an increase in the number
- (2) of
- (3) abnormal chromosomes or damaged chromosomes as the
- (4) concentration increases and the significance of the numbers I
- (5) chose here if you recall back to a previous graph where I
- (6) showed you where you can first see the abnormal larvae
- (7) Q Could we have Exhibit 511 please?
- (8) A It was at I believe 48 parts per million. At 24 you
- (9) were unable to see any difference between normal -- or between
- (10) the untreated and the exposed individuals but in this graph I
- (11) showed you that at that concentration and lower there was a
- (12) significant increase in the number of damaged chromosomes or
- (13) cells with damaged chromosomes
- (14) Q Here's that graph back where we were talking about zero
- (15) defects in larvae and tell the jury again then at what point
- (16) this chromosome damage began to show?
- (17) A Okay. The three bars we just looked at a moment ago were
- (18) represented -- the bar on the left was represented by this
- (19) column zero no treatment and you remember it was the
- (20) smallest. The next one was represented by this column and it
- (21) was about almost 20 percent abnormal cells. And the next one
- (22) was this column and it was about 27 or so percent abnormal
- (23) You'll see here that we are not in a range of
- (24) concentrations as which you could see a defective larva. They
- (25) appeared all normal at these concentrations but their
- (1) chromosomes were damaged. It's a low concentration that
- (2) caused

Vol 12 1895

- (1) the genetic damage that is not apparent. You can't see it by
- (2) looking at these little fish
- (3) Q Now you talked about what you saw in the laboratory with
- (4) respect to chromosomal damage. Could I have the Elmo back
- (5) please? Showing you what's been marked for identification as
- (6) Exhibit 500?
- (7) A Okay. This represents larvae that were collected in the
- (8) field and the collection sites are represented here by the
- (9) three bars. The bar on the left the lowest one is purple and
- (10) it looks like about 10 or 11 percent abnormal cells with
- (11) chromosome damage. That is from an unoiled site no oil had
- (12) been in that site where these embryos were collected. They
- (13) were collected in 1989 right after the spill
- (14) The second bar came from Rocky Bay which is on the north
- (15) shore of Montague Island which is a -- considered an oiled
- (16) site and you see here we're dealing with about 35 percent
- (17) chromosome damage
- (18) And the far right hand light blue column is Naked Island
- (19) which was completely surrounded in 1989 by the oil slick
- (20) So we have the left hand column representing an unoiled
- (21) site. The two columns to the right representing oiled sites
- (22) different locations and you see the same pattern of increased
- (23) chromosome damage at oiled sites as you did when they were
- (24) exposed to oil in the laboratory
- (25) Q Once again so the jury can just quickly see it this is

Vol 12 1896

- (1) the field – this is a graph of the field data then?  
 (2) A This is field data and –  
 (3) Q And this is a graph of the laboratory data?  
 (4) A Laboratory data that's right  
 (5) Q Depicting a similar spread?  
 (6) A That's right  
 (7) Q Finally did you measure embryo mortality rates in oiled  
 (8) and unoiled areas of Prince William Sound?  
 (9) A Embryo mortality was measured in 1989 – not by myself but  
 (10) by other members of the herring study team – and this was  
 done  
 (11) by determining or observing a specific number of eggs at  
 (12) different locations in the Sound And the system was to look  
 (13) at about 500 billion eggs from each of four sites two oiled  
 (14) sites and two unoiled sites and then follow the development of  
 (15) these eggs until they hatched and the larvae were produced  
 and  
 (16) then follow them until the yolk sac was resorbed that is  
 (17) until they began feeding on their own and they were capable of  
 (18) going out and entering the population of fish And this  
 (19) particular graph shows the data obtained from that study and  
 (20) here – whoops change this This vertical column represents  
 (21) percent embryo mortality  
 (22) Q Percent that were killed?  
 (23) A That's right That's relative to the number of eggs about  
 (24) 500 billion compared to how many actual free swimming larvae  
 (25) were produced after the yolks were resorbed That's the

Vol 12 1897

- (1) measurement we're taking now And on the bottom column  
 here  
 (2) we have four sites the two on the left were oiled the two on  
 (3) the right were unoiled  
 (4) And as you can see the Montague Island site had  
 (5) approximately 65 percent loss of the eggs that had originally  
 (6) been there The Naked Island site which was also oiled had  
 (7) about a 35 percent loss and the north shore and northeast  
 (8) areas had less than 20 percent somewhere between 10 and 20  
 (9) percent  
 (10) So again there's a clear distinction between the oiled  
 (11) sites here and the unoiled sites represented here and you can  
 (12) see that difference quickly there  
 (13) So significantly more embryos were lost if they were  
 (14) incubating and reared at oiled sites than if they were  
 (15) incubated and reared in unoiled sites  
 (16) Q All right Could we get exhibit 494 and Exhibit 495 over  
 (17) that please?  
 (18) Dr Kocan in summary then with these next two exhibits  
 (19) I would like you to tell the jury what opinions and conclusions  
 (20) you reached in respect to the state of health of the herring  
 (21) population in Prince William Sound and its connection to the  
 (22) Exxon Valdez oil spill  
 (23) A Based on laboratory studies that I performed I found with  
 (24) certainty that there was premature hatching of embryos  
 exposed  
 (25) to oil That the larvae that hatched from embryos that had

Vol 12 1898

- (1) been exposed during development they were – they had  
 (2) significantly more abnormalities were significantly more  
 (3) abnormal The weights of oil exposed individuals were  
 (4) normal – were lower than that of the individuals that were not  
 (5) exposed to oil and there was an increase in cytogenetic or  
 (6) genetic damage in the oil exposed larvae  
 (7) Now in the field for 1989 we also found increases in  
 (8) embryo mortality if I might just mark these Okay this is  
 (9) red We also found increases in embryo mortality in the  
 (10) field We also found – I mean I'm sorry that's wrong –  
 (11) abnormalities okay We also found lower birth weights in the  
 (12) field indicated right here We also found an increase in  
 (13) cytogenetic damage indicated here  
 (14) And in 1991 and '92 we again found the same relationships  
 (15) of increased abnormalities and hatching rates And in  
 (16) addition in 1989 in the field we observed increased embryo  
 (17) mortality  
 (18) Now I should point out it's not on here but there was one  
 (19) other the premature hatching which we have here was  
 described  
 (20) by one of the investigators in the 1989 study as having  
 (21) occurred in the field or from field exposed embryos from oiled  
 (22) sites So everything that we found in the laboratory appeared  
 (23) again in the field in 1989 and in some subsequent years and it  
 (24) always seemed to be related to the oiled sites relative to the  
 (25) unoiled sites

Vol 12 1899

- (1) Q Dr Kocan we heard in this courtroom about a record  
 (2) harvest of herring in 1990 and 1991 bigger than its ever  
 (3) been Why would you expect following an event like an oil  
 (4) spill we might see record harvests in the years following?  
 (5) A In 1990 and '91 year classes were expected or predicted to  
 (6) be very high before there was any oil spill They were  
 (7) expected to be high just because of the normal nature and  
 (8) cycling – cyclical nature of the herring spawn population  
 (9) The year – in 1989 the year preceding the harvest the  
 (10) fishery the herring fishery was closed in Prince William  
 (11) Sound which essentially eliminated up to 20 percent of the  
 (12) harvest In other words there were 20 percent of the fish  
 (13) that would ordinarily have been harvested were not harvested  
 (14) so they remained in the population so they survived to return  
 (15) the following year So that accounted for part of the  
 (16) increase  
 (17) Another component is that the fish bird and mammalian  
 (18) predators that would normally feed on herring year-round were  
 (19) also killed in 1989 and these didn't take their toll or remove  
 (20) the number of herring that they ordinarily would So this  
 (21) group of herring hadn't been preyed upon or served as a food  
 (22) source and was also present in 1991 or subsequent years  
 (23) subsequent to the oil spill  
 (24) So this accounts for the increased number of individuals  
 (25) even beyond what was expected to return due to – based on

Vol 12 1900

- (1) ADF&G fish forecasts  
 (2) Q Now what are some of the adverse effects to the herring  
 (3) population as a whole if they become overpopulated?  
 (4) A In general overpopulation can cause a number of problems  
 (5) One that comes to mind immediately would be of course they  
 (6) might outstrip their food supply but that didn't appear to be  
 (7) the case in Prince William Sound because the food base was  
 (8) similar in Prince William Sound and in other areas where there  
 (9) were herring  
 (10) But a more critical event would be the more rapid  
 (11) transmission of disease organisms should they be introduced  
 (12) into the population when you have a denser population that is  
 (13) the closer animals are together or closer they are to one  
 (14) another the more rapid the disease may be transmitted  
 (15) between  
 (16) them You see this in livestock that the disease they get is  
 (17) transmitted much more slowly or less frequently if they keep  
 (18) them in a close corral or small area So this is the concept  
 (19) of what happened in this situation  
 (20) Q What happened to the herring run in 1993 in Prince William  
 (21) Sound?  
 (22) A The 1993 herring run was expected to come back at about 1  
 (23) believe 120 000 or 130 000 tons and it came back at around  
 (24) 24 000 tons There was a loss of around 100 000 tons of fish  
 (25) unexplained between 1992 and 1993  
 (26) Q What was observed within the population of those returning

Vol 12 1901

- (1) herring anything unusual?  
 (2) A Yes 1993 fishermen began to report hemorrhagic or  
 (3) bleeding lesions on the skin of herring they were harvesting  
 (4) from the Sound and this had not been reported by them in  
 (5) previous years or observed by them  
 (6) Q What can you tell us about what was causing those sorts of  
 (7) things and what was observed in those herring with respect to  
 (8) any diseases they carried?  
 (9) A Well I'd like to present that from what I know now as  
 (10) opposed to what I knew when it first was reported but the  
 (11) lesions have been shown to be a direct result of a virus known  
 (12) as VHS or viral hemorrhagic septicemia And this virus is -  
 (13) in 1989 was not even known to be present in North America but  
 (14) has subsequently been found in coho salmon and steelhead in the  
 (15) State of Washington and in I believe around 1990 or  
 (16) thereabouts it was discovered in Prince William Sound in some  
 (17) true cod And in 1993 the lesions that occurred in these  
 (18) herring that did come back in such small numbers were caused  
 (19) by a virus the same virus VHS virus and it's been named the  
 (20) North American strain of VHS  
 (21) There's a comparable strain that occurs in Europe and  
 (22) there it affects trout and it causes total mortality in the  
 (23) trout population so -  
 (24) Q Are there viruses that occur in the population normally  
 (25) that the population is able to handle?

Vol 12 1902

- (1) A Oh yes numerous viruses are present in almost all  
 (2) populations They frequently occur at what are described as  
 (3) latent that is they're present they reproduce at a very low  
 (4) rate or they don't reproduce at all or they cause no problems  
 (5) There's no disease associated with the infection  
 (6) An example might be herpes One gets cold sores when we're  
 (7) under stress and this is caused by herpes virus that many of us  
 (8) carry but rarely know that we have until the disease occurs and  
 (9) that is the little sore that goes on your lip and that's  
 (10) usually associated with some sort of a stress phenomenon  
 (11) Q Are you familiar with the herring population and the  
 (12) comparability of the herring population in the Southeast Alaska  
 (13) or Sitka area with that of Prince William Sound?  
 (14) A Yes Sitka sound has been used traditionally I believe  
 (15) for about the last 20 years as a comparison population to  
 (16) Prince William Sound and the two populations have a  
 (17) tendency - a very strong tendency to increase and decrease  
 (18) and  
 (19) behave similar to one another so what occurs in Sitka  
 (20) generally occurs in Prince William Sound and vice versa  
 (21) Q And how have the Sitka herring returned? Did they return  
 (22) with these lesions or bloody sores on the bodies of some of the  
 (23) herring?  
 (24) A No there's been no change in the Sitka sound herring  
 (25) They've not declined in numbers There's been no disease  
 (26) observed in them but they do carry the virus as do all other

Vol 12 1903

- (1) herring along the Pacific Coast  
 (2) Q Describe for the jury if a person were taking a fish out  
 (3) of the water with the intent of eating it what these fish with  
 (4) these bloody lesions look like?  
 (5) A Well the - the hemorrhages occur over - well it varies  
 (6) from very small little spots of red to massive large red rashes  
 (7) or areas of bleeding under the skin and in some cases they  
 (8) actually ulcerate and cause sores open sores on the outside  
 (9) of the herring and the fish is exposed and appears to be  
 (10) decomposing the body  
 (11) Q Do you have an opinion as to whether or not the  
 (12) phenomenon  
 (13) we're seeing in the return of the Prince William Sound herring  
 (14) in 1993 and you just described it is related to the Exxon  
 (15) Valdez oil spill?  
 (16) A I think there's a very high probability that the two are  
 (17) related that's right  
 (18) MR PETUMENOS Your Honor I have no further  
 (19) questions I would propose to move the exhibits in later so I  
 (20) don't interfere with counsel's time on cross examination  
 (21) THE COURT You want to take a break counsel  
 (22) MR KARLBERG Right now would be good  
 (23) THE COURT Sure  
 (24) THE CLERK Please rise This court stands in  
 (25) recess  
 (26) (Jury out at 12 38 p m )

Vol 12 1904

- (1) (Recess from 12 38 p m to 12 55 p m )  
 (2) (Jury in at 12 55 p m )  
 (3) THE CLERK Please rise This court now resumes its  
 (4) session Please be seated  
 (5) THE COURT Go ahead  
 (6) MR KARLBERG Dr Kocan my name s Ken Karlberg We  
 (7) haven t met yet I m sorry we meet under these circumstances  
 (8) but we have a job to do  
 (9) CROSS EXAMINATION OF RICHARD M KOCAN  
 (10) BY MR KARLBERG  
 (11) Q Let me see if I can put this herring issue in perspective  
 (12) in this land case Have you been out to the Kodiak lands that  
 (13) are an issue in this case?  
 (14) A I ve been in the - what the ADF&G considers their fishing  
 (15) areas north shore northeast southwest of the areas so I ve  
 (16) been to the areas that we described previously this morning in  
 (17) some of the testimony  
 (18) Q Do you know where these lands are relative to the  
 (19) historical spawning areas for Kodiak for Kodiak herring?  
 (20) A For the Kodiak herring?  
 (21) Q Yes sir  
 (22) A No I know the spawning areas are in Prince William Sound  
 (23) Q You re not here today to provide any opinion about the  
 (24) health of the Kodiak herring fishery since the spill?  
 (25) A No

Vol 12 1905

- (1) Q You re not providing any opinion is that correct?  
 (2) A Well I can say that Kodiak herring fishery has not  
 (3) responded or reacted the way the Prince William Sound fishery  
 (4) has I can make that statement  
 (5) Q But you provided no report or no opinion previous to today  
 (6) regarding the Kodiak herring fishery?  
 (7) A That s correct  
 (8) Q And with respect to - with respect to the Cook Inlet  
 (9) Kenai - I should say the Kenai Peninsula land that s at issue  
 (10) in this case have you been to those lands?  
 (11) MR PETUMENOS I m sorry to interrupt counsel I  
 (12) have to object The lands in question in this case were not in  
 (13) Cook Inlet  
 (14) MR KARLBERG I meant Kenai Peninsula and that s why  
 (15) I clarified  
 (16) MR PETUMENOS Kenai Fiords perhaps  
 (17) BY MR KARLBERG  
 (18) Q Have you been to those lands?  
 (19) A I m familiar - well I looked into the herring that part  
 (20) of the Prince William Sound population that do grow as  
 (21) juveniles or are juveniles along the Kenai Peninsula  
 (22) Q But you haven t been to those lands?  
 (23) A I haven t been to the lands  
 (24) Q We respect -  
 (25) A I have not been to the lands

Vol 12 1906

- (1) Q You re not providing -  
 (2) THE COURT Hold on a minute counsel  
 (3) Your voice is not being heard over here so if you could  
 (4) speak up a little bit more It s not just the mike The  
 (5) amplifier really doesn t work that great You have to project  
 (6) okay?  
 (7) THE WITNESS Okay  
 (8) BY MR KARLBERG  
 (9) Q You haven t been asked then - pardon me do you have -  
 (10) do you know where the lands on the Kenai Peninsula are with  
 (11) respect to the historical spawning areas for the Cook Inlet  
 (12) herring fishery?  
 (13) A Not all of them no  
 (14) Q So you re not here to provide an opinion as to the health  
 (15) of the Kenai - pardon me the Cook Inlet herring fishery as it  
 (16) may relate to land values in the Kenai Peninsula?  
 (17) A Only as it relates to the overall Prince William Sound  
 (18) fishery  
 (19) Q All right Now that we ve kind of cleared a little bit of  
 (20) the underbrush out of the way so I kind of understand where  
 (21) your testimony fits in here let me see if I - I might get to  
 (22) understand a little bit more about your opinions of how the  
 (23) failure occurred in 1993  
 (24) Now Mr Diamond suggested that I am the resident herring  
 (25) expert That s not true but I used to be a commercial

Vol 12 1907

- (1) fisherman and a herring fisherman and my brother still is and  
 (2) when I go home this summer I ve got to tell him what  
 happened  
 (3) and I don t think I have quite an understanding of it Let me  
 (4) see if I can put some things into perspective  
 (5) While we were on the break I took the liberty of just  
 (6) jotting a few things down here What I ve done - sometimes it  
 (7) helps to be left handed so I - what I have done is I ve just  
 (8) listed - this is for Prince William Sound - the fishery and  
 (9) the year in this column harvest column and a lesion column  
 (10) Now the spill occurred in 1989 during the sac roe fishery  
 (11) is that correct or right before the sac roe fishery?  
 (12) A Just prior to it yes  
 (13) Q And the sac roe fishery on an annual basis usually occurs  
 (14) in April?  
 (15) A That s correct  
 (16) Q There s also a bait or food and bait fishery is there  
 (17) not in Prince William Sound each year?  
 (18) A That s correct  
 (19) Q That would be in October or November?  
 (20) A It s in the fall I m not exactly sure  
 (21) Q Somewhere in there Now for 1989 the sac roe fishery  
 (22) there s no harvest because there was a closure correct?  
 (23) A That s correct  
 (24) Q All right I m going to put closure there And there s no  
 (25) reported lesions from this VHS disease in 1989 Is that

Vol 12 1908

- (1) correct?
- (2) A That s also correct
- (3) Q All right So I m going to put just no there Now the
- (4) bait fishery occurs later that year As far as you know the
- (5) bait fishery came off and was in healthy and abundant?
- (6) A I really don t know anything about the bait fishery that
- (7) year
- (8) Q You haven t looked into that?
- (9) A No
- (10) Q Let me see if I might - let me hand you the annual fin
- (11) fish report for Prince William Sound for the bait fishery Can
- (12) you confirm for me that the bait fishery for 1989 the harvest
- (13) was as expected and in relatively abundant numbers?
- (14) A For 1989 it looks like it was about 150 - 1500 countings
- (15) yeah
- (16) Q And relative to prior years that was what you expect?
- (17) A Yes it was yes
- (18) Q Just put as expected there To your knowledge no
- (19) lesions from the VHS disease were reported in 1989 Is that
- (20) correct?
- (21) A None that I m aware of
- (22) Q All right I m going to put no there
- (23) 1990 the first sac roe fishery following the spill and
- (24) that year you ve already testified there were record or near
- (25) record harvests is that correct?

Vol 12 1909

- (1) A That s what I understand yes
- (2) Q Fish were abundant so we ll put just good How about we
- (3) put very good ? No lesions reported in the sac roe fishery in
- (4) 1990 correct?
- (5) A Not in herring I think that was the first year they began
- (6) to see lesions in true cod in Prince William Sound but not in
- (7) herring
- (8) Q No no lesions in herring?
- (9) A Correct
- (10) Q Now the bait fishery in 1990 we refer to the 1992 fin
- (11) fish report there it was very good as well wasn t it?
- (12) A About half of what it was in 1989
- (13) Q Relative to prior years?
- (14) A Well relative to most of the prior years it was about
- (15) half
- (16) Q So can we call it -
- (17) A But -
- (18) Q No population effect that you can see that resulted from
- (19) the spill Is that correct?
- (20) A That s correct
- (21) Q Why don t we just put no spill effects no lesions reported
- (22) in the bait fishery for that year is that correct?
- (23) A Again none that I m aware of
- (24) Q Okay Move on to 91 Sac roe fishery again occurred in
- (25) April that was a record year for harvest wasn t it?

Vol 12 1910

- (1) A It was - it was fairly high yes sir
- (2) Q Why don t we put near record is that okay?
- (3) A That s fine
- (4) Q All right 1991 do we have any lesions yet?
- (5) A Again not in herring
- (6) Q No Okay
- (7) The bait fishery in 1991 that was - that was an awfully
- (8) good year was it not?
- (9) A It was yes It was much better than the previous two
- (10) Q Okay very good Any lesions any lesions reported in the
- (11) 1991 bait fishery?
- (12) A No
- (13) Q No okay
- (14) 92 sac roe fishery again came off in April Whoops I
- (15) can t spell April even though I was born in that month April
- (16) that was a record harvest that year correct?
- (17) A That appears to be the record harvest that s correct
- (18) Q Record We re now three years post spill we have a record
- (19) harvest Any lesions?
- (20) A In 92 no
- (21) Q 92 sac roe no lesions Bait fishery for 92?
- (22) A It was near record also
- (23) Q Near record as well I ll put near record Any lesions
- (24) reported in 92 bait fishery?
- (25) A Not reported no

Vol 12 1911

- (1) Q Okay Now we re to 1993 1993 I think you said in the
- (2) sac roe fishery about 24 000 tons about 100 000 tons less
- (3) than you had anticipated?
- (4) A As I recall that s pretty close There was a - there was
- (5) a fishery but it was right on the - on the line I think
- (6) they close it below 24 000 pounds
- (7) Q Okay I just rounded it off to 25 and you say about
- (8) 100 000 tons of fish didn t come back that year?
- (9) A Unaccounted for yes
- (10) Q Okay unaccounted for Lesions that year?
- (11) A Yes
- (12) Q That s a yes Bait fishery for 1993?
- (13) A 93 it had a very high bait fishery
- (14) Q Very good Any lesions reported in the bait fishery that
- (15) year?
- (16) A I don t know
- (17) Q Are you familiar with Dr Myers who s the chief
- (18) pathologist for the ADF&G?
- (19) A Yes
- (20) Q And are you aware that he s of the opinion that there were
- (21) no lesions for the bait fishery for 1993?
- (22) A I m not familiar with his report on the bait fishery at
- (23) all
- (24) Q Are you familiar with what his after the spill - pardon
- (25) me after 1993 as to the bait fishery and what might have

Vol 12 1912

- (1) happened?  
 (2) A I recall 1994 but I didn't specifically discuss the bait  
 (3) fishery no  
 (4) Q We'll put a question mark there and we'll clear that up  
 (5) when Dr. Myers testifies  
 (6) A Yes  
 (7) Q In '94 the most recent sac roe fishery what was the  
 (8) harvest?  
 (9) A There was no harvest. Let's back up a minute. Sac roe was  
 (10) not harvested of 25,000 tons. That was the return.  
 (11) Q Let's call that the biomass.  
 (12) A That's one percent of 25,000.  
 (13) Q I stand corrected. I don't mean harvest. I mean biomass.  
 (14) A About 20,000.  
 (15) Q About 20,000. Lesions in 1994?  
 (16) A Yes.  
 (17) MR PETUMENOS: I'm sorry, counsel, I've forgotten -  
 (18) are we talking about biomass, Judge, or harvest?  
 (19) MR KARLBERG: Biomass.  
 (20) MR PETUMENOS: For both figures?  
 (21) THE COURT: Hold on, hold on. Is that the proper term  
 (22) for both pages?  
 (23) MR KARLBERG: Yes, sir. And Your Honor, I'll  
 (24) correct it when I flip it over.  
 (25) THE COURT: Go ahead.

Vol 12 1913

- (1) BY MR KARLBERG  
 (2) Q And bait fishery has not occurred yet this year?  
 (3) A Not that I know of.  
 (4) Q We don't know what's going to happen there. What I've  
 (5) tried to do is just put a little perspective on what has  
 (6) happened. I got to change this to what has happened since the  
 (7) spill.  
 (8) Now would you agree with me, sir, that whatever happened  
 (9) - and we're going to discuss what you believe happened, but  
 (10) whatever happened happened sometime between 1992 bait  
 fishery  
 (11) when we had a near record harvest and no lesions, and the  
 (12) sac roe fishery in 1993 when we had the disappearance of  
 (13) approximately 100,000 tons of fish?  
 (14) A Would you restate what it is that I'm agreeing to, or that  
 (15) you want me to agree to?  
 (16) Q I'm trying to narrow down the window of what happened and  
 (17) hopefully provide the jury with an understanding of when it  
 (18) might have happened.  
 (19) A Okay.  
 (20) Q And would you agree with me that it's most plausible that  
 (21) whatever happened to these fish in 1993 occurred between the  
 (22) bait fishery in '92 when you had near record harvest and no  
 (23) lesions, and the spring sac roe fishery when you have an  
 (24) unexplained loss of 100,000 tons and the lesions show up?  
 (25) A I would say that that's the first time we observed any

Vol 12 1914

- (1) effect. I won't agree that nothing was going on prior to that  
 (2) time because I don't believe in things occurring  
 (3) spontaneously. Something had to lead up to this.  
 (4) Q But you have -  
 (5) A What I'm saying is we - what we see in 1993 is most  
 (6) probably the result of something that has been going on up  
 (7) until 1993 and that finally manifests itself in the massive  
 (8) loss or disappearance of these fish.  
 (9) Q We'll get into that in a minute.  
 (10) MR KARLBERG: Can we call up Exhibit 4946 A  
 (11) defendants?  
 (12) BY MR KARLBERG  
 (13) Q You've seen this chart before, Dr. Kocan?  
 (14) A Yes.  
 (15) Q It's a chart reflecting herring harvests in Prince William  
 (16) Sound over time?  
 (17) A Yes.  
 (18) Q All right. Would you agree that in '90, '91 and '92 that  
 (19) the spill had no perceptible population impact on the biomass  
 (20) as shown by the outstanding harvests in '90 and '91 and '92?  
 (21) A Yes. I'll agree that there were outstanding harvests in  
 (22) '90, '91 and '92.  
 (23) Q Now let's move. If we might to - you can go ahead and  
 (24) take that down - to your opinion of how this occurred, and I'm  
 (25) going to have to do a little housekeeping just for a second

Vol 12 1915

- (1) here, so bear with me.  
 (2) MR CLOUGH: Can I take this down? I don't know if  
 (3) you folks took notes or not. I'll take it out of the way for  
 (4) the time being. I can give you a hand with that.  
 (5) BY MR KARLBERG  
 (6) Q What I'd like to do is play just a little bit of Sherlock  
 (7) Holmes - that's what the first chart was for - so we might  
 (8) get a better idea when we start to see things.  
 (9) Are you going to be able to see that?  
 (10) A I think I can see it all right.  
 (11) Q My apologies (addressing counsel behind the chart).  
 (12) What I'd like to do now is walk through how you believe the  
 (13) spill translated into this population decline in 1993. In your  
 (14) direct testimony, all you provided was your opinion that it had  
 (15) happened. At this point in time we don't really know how you  
 (16) believe it happened.  
 (17) Now, have you provided ever a report to the defendants on  
 (18) just this issue of the VHS virus and how it translated into the  
 (19) population decline?  
 (20) A Have I given a written report, you mean?  
 (21) Q Yes, sir.  
 (22) A No, I haven't. My opinion on this has developed as I  
 (23) accumulated data, almost by the day, as a matter of fact, on  
 (24) what's been discovered about this virus since it was first seen  
 (25) in herring. So it's a developing process at this point, but I

Vol 12 1916

- (1) do - I still have the same opinion I had two weeks ago  
 (2) Q Okay I only bring that out because I want to explain so  
 (3) the jury will know why we're walking through this because we  
 (4) haven't got a report yet and this has been an evolving thing  
 (5) for you  
 (6) And now as I understand your testimony you've given thus  
 (7) far by deposition and your federal trial transcript it's your  
 (8) belief that the 1989 year class is kind of the catalyst year  
 (9) class that caused the transmission of this - this disease to  
 (10) the biomass just in general terms is that correct?  
 (11) A It's the - right it's the key pivotal year class that's  
 (12) involved in this disease complex that's right  
 (13) Q And it's your belief that because the 1989 year class was  
 (14) exposed to oil in 1989 while they were in the embryonic and  
 (15) larval stage that their immune systems were compromised is  
 (16) that correct?  
 (17) A That's correct  
 (18) Q All right Let me - let me just - I don't know if this  
 (19) is going to work here Okay so this is kind of the first  
 (20) stage of your opinion 1989 year class was exposed to oil?  
 (21) A Okay I can't read it very clearly but I'll -  
 (22) Q Okay And this exposure was in concentration levels  
 (23) sufficient to compromise their immune system?  
 (24) A Yes And that was in our 1992 report to the Trustees  
 (25) Q Okay Now I am assuming since there's a great deal of

Vol 12 1917

- (1) money at stake in this case that you've actually personally  
 (2) done tests to determine that the 1989 year class immune system  
 (3) was compromised is that -  
 (4) A No My conclusion is based on what's known about the VHS  
 (5) virus in fisheries and that is that the only time that it  
 (6) shows up in a disease state is when the immune system's been  
 (7) compromised by some environmental stress and that's based  
 (8) on  
 (9) historical work that's been done for many many years on the  
 (10) European strain of this virus  
 (11) Q My question was Have you done testing yourself to  
 (12) determine that the 1989 immune year was compromised?  
 (13) A No this virus was only identified a year ago less than a  
 (14) year There's no way to conduct tests in the literature  
 (15) Q I just want to confirm no tests have been done by you  
 (16) A No - yes but that's not really exactly the information  
 (17) you need to know  
 (18) Q This immune system was compromised in the year 1989?  
 (19) A I can't give you the specific date It was the result of  
 (20) exposure at some time  
 (21) Q In 1989?  
 (22) A Between the time they were embryos and the time they  
 (23) entered that spawning population that's right  
 (24) Q All right Let me - your opinion then is that - as I  
 (25) understand it their immune systems were compromised in some  
 fashion all the way up till approximately 1993 when they

Vol 12 1918

- (1) reentered the spawning biomass?  
 (2) A That's correct  
 (3) Q Okay Got to learn how to spell here Okay  
 (4) So there is approximately a four-year window where this  
 (5) 1989 year class has a compromised immune system leading up  
 to  
 (6) the 1993 sac roe fishery?  
 (7) A I would give it between - on the basis of my concept of  
 (8) what happened three to four years  
 (9) Q Okay Three four years  
 (10) A That's because the first reentry to the spawning population  
 (11) was at three year olds not as four year olds but their  
 (12) population was so low that it was very difficult to detect  
 (13) them  
 (14) Q All right We're just going to keep walking through this  
 (15) Now let me - let me stop just for a minute I don't have  
 (16) your herring biology background and I can't speak in the same  
 (17) terminology that you can speak in but let me do a reality  
 (18) check if I might at this point I like reality checks just  
 (19) because since I can't - can't figure out all the terminology  
 (20) a reality check that's kind of common sensical makes  
 sometimes  
 (21) a good communicator You earlier said there's a lot of other  
 (22) diseases and viruses and things that are out in the open waters  
 (23) that herring can be exposed to during their life cycle is that  
 (24) a fair statement?  
 (25) A Are you talking about my testimony today?

Vol 12 1919

- (1) Q Yes  
 (2) A I was talking about the general - everywhere in all  
 (3) species not specifically to -  
 (4) Q Would you agree that there are other diseases that herring  
 (5) can be - can come into contact with during their life cycle?  
 (6) A Yes  
 (7) Q And those would include the VEN disease?  
 (8) A That's possible yes  
 (9) Q And various fungus?  
 (10) A Fungus are generally secondary invaders that require some  
 (11) other primary damage before they can pick up the disease  
 (12) Q And blood borne parasites?  
 (13) A That's true  
 (14) Q If the 1989 year class had a compromised immune system  
 (15) from - for three to four years they would be increasingly  
 (16) susceptible to those types of diseases bacteria or viruses  
 (17) than they would otherwise be is that a fair statement?  
 (18) A That's true They would be susceptible to any infection  
 (19) Q Are you aware that Dr Myers of ADF&G is of the opinion  
 (20) that if the 1989 year class had a compromised immune system  
 for  
 (21) three to four years as you suggest he believes that those  
 (22) herring would have died well before 1993?  
 (23) A No he didn't indicate that to me three days ago He  
 (24) indicated that my concept was perfectly justified  
 (25) Q You had a conversation with him just a few days ago?

Vol 12 1920

- (1) A Yes I did  
 (2) Q We'll come back to that All right let's - let's move on  
 (3) to the next component  
 (4) As I understand it it's your belief the 1989 year class  
 (5) that has this compromised immune system is isolated from all  
 (6) the other fish in Prince William Sound until approximately  
 (7) 1993?  
 (8) A It's isolated from the spawning biomass the spawning  
 (9) population during the earliest three years or the early three  
 (10) years of its life that's right When I say isolated I  
 (11) don't mean different oceans I mean they don't necessarily  
 (12) congregate together at the same time  
 (13) Q But they're separate?  
 (14) A Yes  
 (15) Q Okay And the reason why the separateness this isolation  
 (16) is important to you is because the general spawning biomass  
 (17) does have VHS virus correct?  
 (18) A That's correct  
 (19) Q In its latent form?  
 (20) A That's correct some of them do  
 (21) Q Some of them do A portion of them do?  
 (22) A Right  
 (23) Q All right And if the 1989 year class should commingle in  
 (24) any fashion any significant way before 1993 you would have  
 (25) expected an outbreak of this virus and lesions much earlier

Vol 12 1921

- (1) than 1993?  
 (2) A Well I - once they began to mix with the population that  
 (3) was shedding the virus they would be exposed and the  
 (4) infection  
 (5) cycle or the transmission cycle would begin I don't want to  
 (6) give the impression that this is an instantaneous result This  
 (7) takes some time for a virus to spread through the susceptible  
 (8) portion of the population  
 (9) Q All right But again I just want to emphasize for the  
 (10) jury's point of - for the jury's benefit that the isolation  
 (11) this isolation mechanism or concept that you're describing is  
 (12) important to your theory because it keeps them apart so -  
 (13) keeps them apart so this VHS virus in its latent stage does  
 (14) not transmit to them until much later?  
 (15) A Well half right The separation is important for my  
 (16) description of what's going on but the latent virus isn't  
 (17) transmitted It's got to be active at some point to be  
 (18) transmitted  
 (19) Q We'll get to that I'm just trying to go one step at a  
 (20) time here  
 (21) Now let me stop - we did a - kind of a reality check  
 (22) here Let me talk about a reality check here Is it not true  
 (23) that portions some percentage of the 1989 year class came  
 (24) back  
 (25) for the 1991 sac roe fishery?  
 (26) A 91% yes there were some I was there at the time the  
 (27) test fishing in the fishery was going on and they were not

Vol 12 1922

- (1) nonexistent but they were pretty close to it  
 (2) Q And the 1991 bait fishery it's true is it not that the  
 (3) 1989 year class returned in some percentage?  
 (4) A I'm not familiar with those numbers so I can't make a  
 (5) statement on that  
 (6) Q And in the 1992 bait fishery the 1989 year class returned  
 (7) in some percentage did they not?  
 (8) A Like I said in the bait fishery I'm not familiar with the  
 (9) numbers or the age class distribution so I don't know  
 (10) Q You would agree I assume that the 1989 year class was not  
 (11) completely isolated from the biomass between the time they  
 (12) became larvae and became juveniles up to 1993 there was  
 (13) some  
 (14) commingling?  
 (15) A Well like I said yes they were all in Prince William,  
 (16) Sound and they were commingling to some degree but not to  
 (17) the  
 (18) degree they were during the spawning event  
 (19) Q Now this is where I kind of start to break down on your  
 (20) prior testimony because I'm not quite sure of it  
 (21) As I understand it it's your belief that the virus became  
 (22) active and caused this widespread mortality in 1993 primarily  
 (23) because that is the first year the 1989 year class came back in  
 (24) sufficient numbers for this transmission to occur is that a  
 (25) fair statement?  
 (26) A That's correct  
 (27) Q And can you explain just briefly what full recruitment ,

Vol 12 1923

- (1) means for the jury?  
 (2) A Full recruitment?  
 (3) Q What recruitment means just so that there's an  
 (4) appreciation for -  
 (5) A Recruitment refers to the percentage of a particular year  
 (6) class It's the number of fish that were born in '88 or '89 or  
 (7) '90 that return to spawn in a particular year Herring  
 (8) generally don't start to spawn until they're four years old  
 (9) and at four years old about 60 percent of the four-year-olds  
 (10) will enter the spawning population As five-year-olds about  
 (11) 80 percent will enter the spawning population and by the time  
 (12) they're six-year-olds everybody all of them 100 percent  
 (13) will be recruited into the spawning population so that  
 (14) everybody born in one particular year will be fully recruited  
 (15) or they'll all be actively spawning by the time they're six  
 (16) years old They start spawning at four years old and the  
 (17) numbers increase each year  
 (18) THE COURT Mr Karlberg there's only two minutes to  
 (19) the end of the trial day do you want to take a break now?  
 (20) MR KARLBERG That's - we're in the middle of the  
 (21) subject it doesn't make any difference We're not going to  
 (22) finish today obviously  
 (23) THE COURT I don't think so I'll let you go for the  
 (24) day Don't talk to anybody about this case Don't form or  
 (25) express any opinion about it until it's submitted to you for

Vol 12 1924

- (1) deliberation I ll see you tomorrow at 8 30
  - (2) (Jury out at 1 28 p m )
  - (3) THE COURT All right counsel the jury is not
  - (4) present Is there anything to take up on the record at this
  - (5) time?
  - (6) MR DIAMOND Your Honor you had suggested argument
  - (7) on an outstanding motion concerning - it s our motion
  - (8) concerning exclusion of some fish evidence this afternoon
  - (9) before the witnesses were slated to testify Ms Smith and
  - (10) Mr Stoll are going to argue that I don t know whether you ve
  - (11) read the papers but they re prepared to do it now rather than
  - (12) come back later in the day
  - (13) THE COURT I prefer to do it later in day I need a
  - (14) rest
  - (15) MR DIAMOND I think Mr Stoll and I would like a
  - (16) moment of your time in chambers
  - (17) THE COURT Suppose I set the argument at 3 00
  - (18) What s the title of the motion?
  - (19) MS SMITH It s the motion to exclude - hang on let
  - (20) me get it for you
  - (21) MR DIAMOND Part of that has been resolved by
  - (22) agreement
  - (23) THE COURT Which part?
  - (24) MS SMITH The motion to exclude the testimony of
  - (25) Kenneth Parker has been withdrawn because the plaintiffs
- agreed

Vol 12 1925

- (1) to limit the scope of his testimony
- (2) THE COURT So what s still pending?
- (3) MS SMITH Okay Your Honor it s defendant Exxon
- (4) Shipping Company and Exxon Corporation s motion to exclude
- (5) testimony regarding fish run failures on Kodiak Island And
- (6) it s - the expert is Phillip Mundy M u n d y
- (7) THE COURT I ve got that on my desk I ll see you at
- (8) 3 00
- (9) MS SMITH Okay
- (10) MR STOLL Your Honor with respect to this we filed
- (11) a corrected copy I don t know if the Court got a -
- (12) THE COURT I got it
- (13) MR STOLL Okay
- (14) THE COURT Is there anything else on the record?
- (15) MR STOLL No I guess not We can t do it before
- (16) 3 00?
- (17) THE COURT I can t Even judge s need to eat
- (18) counsel
- (19) All right I ll see you in chambers now
- (20) THE CLERK Please rise This court stands in
- (21) recess
- (22) (Recess at 1 30 p m )

## Vol 13 1931

(1) PROCEEDINGS  
 (2) (Jury in at 8 37 a m )  
 (3) (Call to Order of the Court)  
 (4) THE COURT Good morning  
 (5) THE WITNESS Is it working today?  
 (6) THE COURT I think so just clip it on because we  
 (7) get a lot of static in here  
 (8) THE WITNESS Okay let me know if I m not coming  
 (9) through  
 (10) MR KARLBERG Good morning Your Honor Good morning  
 (11) folks Good morning Dr Kocan  
 (12) We re going to get you off the stand today rather quickly  
 (13) I hope I ve got one suit two shirts and two ties and I m  
 (14) at the end of my wardrobe so this is it  
 (15) CROSS EXAMINATION OF RICHARD M KOCAN (Resumed)  
 (16) BY MR KARLBERG  
 (17) Q Yesterday when we finished we were talking about your  
 (18) theory of what happened in 1993 I d like to return to that  
 (19) topic in a minute but first I d kind of like to see if I can  
 (20) get you to agree with some general principles The 1989 year  
 (21) class that we ve been talking about that s the class of fish  
 (22) that were born in 1989 correct?  
 (23) A That s correct  
 (24) Q And that class was predicted by ADF&G to be relatively  
 (25) small in 1989 and that had nothing to do with the spill is

## Vol 13 1932

(1) that correct?  
 (2) A Yes that s also correct  
 (3) Q And it s a fact that ADF&G which is charged with  
 (4) predicting the strength of year classes predicted prior to the  
 (5) spill that the 1989 year class would be about three to four  
 (6) percent of the biomass is that correct?  
 (7) A I don t recall the exact numbers but it was - that s  
 (8) correct  
 (9) Q Somewhere in that neighbor?  
 (10) A I suppose that s correct yeah  
 (11) Q And is it not also a fact that as of 1994 Fish & Game is  
 (12) now of the opinion that the 1989 year class does constitute  
 (13) about three to four percent of the biomass?  
 (14) A I think that s correct  
 (15) Q And that the 1989 year class is performing in Prince  
 (16) William Sound roughly the same as the Sitka 1989 year class  
 (17) which you said is the parallel to the Prince William Sound  
 (18) fish?  
 (19) A They re both extremely low levels that s correct  
 (20) Q But they re parallel they re roughly comparable  
 (21) A Roughly  
 (22) Q Would you also agree sir that the year classes which were  
 (23) hatched in 90 91 and 92 and the years after the spill  
 (24) that the visual the visuals you provided yesterday about those  
 (25) abnormalities and whatnot that the 90 91 and 92 year

Vol 13 1933

- (1) classes didn't suffer that type of impact is that a fair  
 (2) statement?  
 (3) A Well some of the data I generated in 1991-92 said that  
 (4) they did to some extent not all of the same - not at the  
 (5) same level and not as extensively but there was damage seen  
 at  
 (6) oiled sites in 1991-92  
 (7) Q Would you agree sir it was relatively minor in comparison  
 (8) to what you showed about the 1989 year class?  
 (9) A It was less yes  
 (10) Q Now something that I was a bit remiss in doing yesterday  
 (11) since I am familiar with herring I kind of assumed other  
 (12) people know a bit about herring as well and some things that  
 (13) we might not have covered that might be a little helpful  
 (14) Herring live what approximately ten years roughly?  
 (15) A Yes They've been known to go as long as 13 or 14 but I'd  
 (16) say nine or ten years is the average  
 (17) Q And during their life span they will spawn what six to  
 (18) seven years of their life cycle?  
 (19) A Correct They start at four years old and spawn until they  
 (20) die  
 (21) Q But even if - and this is an even if because we know  
 (22) the 1989 year class is performing as expected but even if the  
 (23) 1989 year class had been totally wiped out by the spill you  
 (24) would not have seen this collapse in '93 is that a fair  
 (25) statement?

Vol 13 1934

- (1) MR PETUMENOS Excuse me Judge I'm having a bit of  
 (2) a problem with the statements that are made by counsel before  
 (3) he asks a question I'm not sure that that's the proper form  
 (4) The 1989 year class is performing as expected for example  
 (5) then asking a question So my objection is to the form of the  
 (6) question If he could put a question rather than make a  
 (7) statement  
 (8) THE COURT I'd like the examination to flow but  
 (9) sometimes the question gets lost if it's at the tail end of a  
 (10) long statement So if you shorten up the preface probably the  
 (11) objection will go away  
 (12) MR KARLBERG Okay I'll just rephrase the question  
 (13) BY MR KARLBERG  
 (14) Q Dr Kocan if the 1989 year class had been totally wiped  
 (15) out by the spill that would not have translated into the  
 (16) collapse that you saw in 1993 is that correct?  
 (17) A No that's not necessarily so  
 (18) Q And if you took the entire 1989 years which was going to  
 (19) be roughly three to four percent of the biomass is that  
 (20) correct?  
 (21) A Right  
 (22) Q The biomass in 1993 was predicted to be about 134,000 -  
 (23) 130,000 tons?  
 (24) A That's correct  
 (25) Q And you do the math and that comes out about 5,000 tons?

Vol 13 1935

- (1) A That's correct  
 (2) Q All right And in 1993 the reports were 100,000 tons  
 (3) failed to show up is that correct?  
 (4) A That's correct  
 (5) Q All right So if the 1989 year class had been lost as a  
 (6) consequence of the spill that would only be approximately  
 (7) 5,000 tons of that 100,000 that failed to show up?  
 (8) A If you're just subtracting the biomass of 1989 from the '93  
 (9) spawning biomass but that was not what I had explained Their  
 (10) contribution was not that they had disappeared Their  
 (11) contribution was that they had caused disease to spread  
 through  
 (12) all of the age classes and that we lost the fish from all age  
 (13) classes and that's where they disappeared so their loss is  
 (14) inconsequential in that particular case  
 (15) Q That brings me to my next points If not for your  
 (16) immunosuppression theory that involves the 1989 year class  
 (17) just the fact that the 1989 year class might have disappeared  
 (18) which it did not but if it had that would not account for  
 (19) this large fall?  
 (20) A Not - not just the disappearance of that age class  
 (21) Q All right Now let me - that's a good segue to return to  
 (22) where we were yesterday Now I'm not sure when we were  
 (23) talking yesterday that I ever had you define the immune system  
 (24) and what's its function is Most of us are probably aware of  
 (25) that but would you provide us an explanation?

Vol 13 1936

- (1) A Certainly The immune system in general functions the  
 (2) same in all animals It consists of two components a humeral  
 (3) and cellular that is a liquid of gamma globulin component and  
 (4) a cellular component that are cells that actually destroy the  
 (5) invading organisms or the foreign objects  
 (6) Humeral immunity constitutes gamma globulin It's produced  
 (7) by cells that are permanently established in the body and when  
 (8) a foreign invader enters the body they produce a specific  
 (9) antibody to kill that particular invading organism The  
 (10) cellular component these are white blood cells T cells and B  
 (11) cells You hear a lot about this in HIV infections These are  
 (12) the cells that are responsible for actually seeking out and -  
 (13) well practical purposes eating the invading organisms  
 (14) consuming them And the combination of these two  
 components  
 (15) the cellular and humeral components are what's responsible  
 for  
 (16) eliminating invading organisms from the animal's body  
 (17) Q And if the immune system is compromised in some fashion  
 (18) that makes the organism more susceptible to these external  
 (19) forces that may work on them?  
 (20) A That's correct  
 (21) Q Yesterday I was also a bit remiss I didn't have you  
 (22) define the term biomass Would you do that please?  
 (23) A Biomass merely means the weight or the size of the  
 (24) population You can be talking about biomass of eggs  
 biomass  
 (25) of spawners or total biomass That's what it means

Vol 13 1937

- (1) Q And the spawning biomass is comprised of all ages of  
 (2) herring that are sexually mature and capable of reproducing?  
 (3) A That s spawning biomass that s correct  
 (4) Q So spawning biomass would be age four – some age three  
 (5) age four age five age six age seven age eight age nine and  
 (6) fish It s a kind of a composition of different age classes?  
 (7) A That s correct  
 (8) Q Now if – yesterday we were going through your theory on  
 (9) immunosuppression and it was your belief that for  
 (10) approximately three to four years the 1989 year class had a  
 (11) suppressed immune system which made them more  
 susceptible to  
 (12) these external forces?  
 (13) A Yes that s – that was what I proposed as being the – the  
 (14) initial response or one of the initial results of exposure to  
 (15) oil they had a compromised immune system  
 (16) Q And they had a compromised immune system in your  
 opinion  
 (17) during the 89 bait fishery correct – during the time period  
 (18) of the 1989 bait fishery?  
 (19) A Yes The – I might in terms of explanation the immune  
 (20) system was damaged in one way or another I don t know  
 exactly  
 (21) what mechanism at this time during that first year that they  
 (22) were exposed to The development of that immune system for  
 the  
 (23) remaining time in their life is critical in determining how is  
 (24) this going – or how susceptible they are to disease so this  
 (25) is an ongoing developmental process from the time they re

Vol 13 1938

- (1) exposed until the time some organism invades them  
 (2) So yes to some degree they were compromised in 1989 and  
 (3) continued to be up until today  
 (4) Q All right And their immune systems were compromised  
 (5) during the course of the timing of all these fisheries and  
 (6) somehow they managed to avoid falling prey to these natural  
 (7) external forces you were talking about?  
 (8) A No not necessarily They may have been infected dying  
 (9) all along There are so few of them that it was virtually  
 (10) impossible to find any  
 (11) In 1992 when we expected to see the first returns coming  
 (12) back into the spawning population my recollection is we – oh  
 (13) in four seine hauls and examining tons of fish from the sac roe  
 (14) fishery saw perhaps a few does at most three year old fish  
 (15) So no they were probably becoming affected and dying that  
 (16) whole time For whatever reason I don t know because  
 (17) anything could cause that  
 (18) Q Let me move this out of the way so I can – yesterday we  
 (19) didn t quite finish with the mechanism of how you contend the  
 (20) actual transmission of the disease occurred I d like to do  
 (21) that now but as I understand it there s a field of study that  
 (22) deals with immune systems and that s called  
 immunotoxicology  
 (23) is that correct?  
 (24) A Well immunotoxicology is one field Immunology is another  
 (25) field yes

Vol 13 1939

- (1) Q And you don t consider yourself an expert in that area as  
 (2) I understand it from your testimony?  
 (3) A Actually I did my Ph D thesis on the immune system  
 (4) Q But as I understand and I ll get your deposition  
 (5) transcript out if I have to but as I understand you don t  
 (6) consider yourself to be an expert in immunotoxicology is that  
 (7) a fair statement?  
 (8) A No I didn t say that I think I said that I did do  
 (9) toxicology that involved the immune system That is not my  
 (10) professional objective no  
 (11) Q Pardon me for just a second as I do a little digging  
 (12) Let me – excuse me your deposition was taken back on  
 (13) January 19th 94 is that correct?  
 (14) A Somewhere about that yes  
 (15) Q Let me hand you – refer to pages 563 and 564  
 (16) A All right  
 (17) Q The question is asked Do you consider yourself to be an  
 (18) immunotoxicologist? If I am saying that right see that  
 (19) question?  
 (20) A No  
 (21) Q On page 564 I m sorry  
 (22) A Okay I –  
 (23) Q See that question?  
 (24) A That s at the very top of the page?  
 (25) Q Yes sir

Vol 13 1940

- (1) A My response is no but I ve worked with the immune related  
 (2) diseases in animals and that s how I keep up with the  
 (3) literature  
 (4) Q And you say that s how I keep up a little bit on the  
 (5) literature?  
 (6) A Well –  
 (7) Q Is that correct did I read that correct?  
 (8) A Yes The little bit refers to that which applies to what  
 (9) I m working with not the entire field of immunotoxicology  
 (10) Q Now before we go to this mode of transmission of the VHS  
 (11) is it also true that you have done no personal tests or work  
 (12) yourself on the VHS disease?  
 (13) A No On the herring VHS?  
 (14) Q Correct  
 (15) A That s correct  
 (16) Q You ve done no lab studies or field studies?  
 (17) A That s correct  
 (18) Q That s all been done by ADF&G and Dr Myers as chief of  
 (19) pathology for –  
 (20) A No been done by a number of other people Done by Garth  
 (21) Traxler in British Columbia done by Jim Winton in Seattle  
 (22) done for years by Europeans and as a matter of fact it was  
 (23) one of the major studies we did for the Eastern Fish Disease  
 (24) Lab when I was with Fish and Wildlife Service  
 (25) Q My point is none of it has been done by you is that

Vol 13 1941

- (1) correct?  
 (2) A Not on herring  
 (3) Q Let s see if we can close the loop here As I understand  
 (4) it you ve got the 1989 year class coming back to the biomass  
 (5) in 1993 and since they have a compromised immune system  
 they  
 (6) catch this disease at that time from the adults is that  
 (7) correct?  
 (8) A That s correct That s the way I explained it  
 (9) Q Okay And then because their immune systems are  
 (10) suppressed they get this virus but it breaks out into a  
 (11) disease form and they - and they get lesions?  
 (12) A That s correct  
 (13) Q And they get lesions within days?  
 (14) A I m not sure exactly how long it takes but that s a  
 (15) reasonable amount of time considering the staging  
 (16) Q And in your opinion these lesions then put out these  
 (17) particles into the water and then they - in turn those  
 (18) particles are picked up by that portion of the biomass which  
 (19) previously had not been exposed to the VHS virus is that  
 (20) correct?  
 (21) A Correct except that it s not my opinion It s confirmed  
 (22) that s exactly how it s done  
 (23) Q You haven t done any testing on this particular population  
 (24) to tell that that s exactly what occurred?  
 (25) A I have been in contact with -

Vol 13 1942

- (1) Q In 1993?  
 (2) A - the people who have actually done this with this virus  
 (3) and yes that s what - isolated from this lesion and they  
 (4) affect other herring and they do die Yes this has been done  
 (5) and I ve been in direct contact with these people It s  
 (6) confirmed  
 (7) Q It s possible that s the way it occurred?  
 (8) A That s how it occurs  
 (9) Q All right Now and then as of the time it s retransmitted  
 (10) to the general population then you see this widespread  
 (11) mortality that resulted in the loss of the 100 000 fish?  
 (12) A Well it resulted in the loss of fish The total number I  
 (13) don t have an exact handle on  
 (14) Q Would you agree that it s somewhere in the neighborhood of  
 (15) 100 000 tons of fish?  
 (16) A Oh yes a loss of 100 000 tons of fish that s right  
 (17) Well it was 100 000 tons  
 (18) Q Let me -  
 (19) A That wouldn t be very many fish  
 (20) Q Finish - finish this here  
 (21) Okay in shorthand terms I ve just put the 1989 year class  
 (22) was infected during the spawn and retransmitted the VHS to the  
 (23) blomass is that just in general terms a fair  
 (24) characterization?  
 (25) A Yes that s pretty good

Vol 13 1943

- (1) Q Okay In - I ll stand in front of this just because I  
 (2) can t see it otherwise In 1993 like every year when the  
 (3) fish come back and spawn they spawn in the shallows correct?  
 (4) A That s correct  
 (5) Q And in the shallows these fish can actually be seen from  
 (6) the sky?  
 (7) A Oh yes  
 (8) Q In fact fishermen hire spotter planes so that they can  
 (9) know where the fish are so they can know where to set their  
 (10) nets?  
 (11) A That s right  
 (12) Q And Fish & Game likewise does aerial surveys just to see  
 (13) how many fish is on the spawning grounds?  
 (14) A That s right  
 (15) Q And in 1993 you re not aware of any reports of a mass fish #  
 (16) kill are you?  
 (17) A Other than that there were 100 000 fish missing  
 (18) Q Right  
 (19) A 100 000 tons of fish missing No there were no bodies  
 (20) recovered  
 (21) Q No reports by the fishermen or ADF&G of actual observations  
 (22) of dead fish?  
 (23) A No not of dead fish  
 (24) Q And if - if those fish died shortly after the spawn you  
 (25) would expect to have seen them in the shallows is that

Vol 13 1944

- (1) correct?  
 (2) A If that was the year they were infected that s true They  
 (3) were already carrying the virus or they were already carrying  
 (4) the virus and showed the disease at the time they began  
 (5) spawning which meant that the transmission occurred prior to  
 (6) the time they began spawning  
 (7) Q But for the first time anybody was aware of a massive loss  
 (8) of the biomass was in 1993 during the sac roe fishery?  
 (9) A That was the first time they recognized it that s  
 (10) correct  
 (11) Q Now is it fair to say that your theory of how the collapse  
 (12) occurred in 1993 rests on the accuracy of this  
 (13) immunosuppression theory?  
 (14) A To a large degree yes  
 (15) Q And if that is incorrect would your theory fail to explain  
 (16) the 1993 collapse?  
 (17) A If that s incorrect  
 (18) Q And your theory also rests on the proposition that their  
 (19) immune systems were compromised for three or four years at  
 (20) least up to 1993 93?  
 (21) A To one degree or another yes  
 (22) Q And if that is incorrect your theory would fail?  
 (23) A Yes  
 (24) Q And your theory also rests on the proposition that the 1989  
 (25) year class was somehow separated or isolated from the  
 biomass

Vol 13 1945

- (1) from the time of birth to - up to 1993?  
 (2) A No 1992 when they began reentering the population As I  
 (3) said 92 I was there and saw the initial reentering of the  
 (4) 89 88 89 year class  
 (5) Q So at least three years after the spill your theory rests  
 (6) on the theory that they were in isolation during that period of  
 (7) time?  
 (8) A Up to the third year yes  
 (9) Q If that s incorrect your theory would fail?  
 (10) A Depends on what you mean by isolation We ll have to get  
 (11) into that There s more to this than just single word and  
 (12) epidemiological terms this is significant what isolation  
 (13) means  
 (14) Q Isn t it a fact that you don t know where the 1989 year  
 (15) class was during this entire period of time?  
 (16) A Where every individual was?  
 (17) Q Correct  
 (18) A Yeah Based on historical records I have a pretty good  
 (19) idea of where these fish or some of them the majority of them  
 (20) were yeah  
 (21) Q But you don t - you couldn t sit here and tell the jury  
 (22) today that there wasn t commingling of the 1989 year class with  
 (23) the adult biomass in 91 or 92 or 93 you couldn t say for  
 (24) certain?  
 (25) A With the adult biomass or the spawning fish?

Vol 13 1946

- (1) Q Spawning fish  
 (2) A No spawning fish they did not not until they were three  
 (3) years old  
 (4) Q None?  
 (5) A No Prior to that time prior to the spawning event  
 (6) spring spawning event in 1992 the 1989 year class was not  
 (7) mixing with the spawning actively spawning fish They began  
 (8) in 1992 They may have commingled with them during  
 nonspawning  
 (9) periods of the year to some degree or other but there s a very  
 (10) important distinction to be made here between those two types  
 (11) of encounters  
 (12) Q If you re wrong that the 1989 year class was not mixed  
 (13) with the biomass during spawning then your theory would fail  
 (14) if they had actually mixed prior to 1992 and 1993?  
 (15) A Depends when on the extent Again we need to deal with  
 (16) specifics  
 (17) Q Now yesterday you testified that your theory is  
 (18) developing this has been kind of an ongoing process?  
 (19) A Right I d get data almost continually  
 (20) Q Would you agree with me that it s possible that your  
 (21) theory s wrong?  
 (22) A I would think that anything s possible but not very  
 (23) probable  
 (24) Q But it is possible?  
 (25) A Everything s possible to some degree

Vol 13 1947

- (1) Q Let me take this down if I may I m going to try to use  
 (2) some of the other stuff here  
 (3) Let s if we might go back briefly and take a look at some  
 (4) other things that were going on in Prince William Sound during  
 (5) the time period leading up to the spill  
 (6) MR KARLBERG Can we have DX5331 B please?  
 (7) BY MR KARLBERG  
 (8) Q Dr Kocan you re familiar with this chart?  
 (9) A Yes I ve seen this chart yeah  
 (10) Q This is a graph showing the rate of growth of herring  
 (11) between the fall bait fishery and the spring sac roe fishery  
 (12) from 1984 to 1994?  
 (13) A That s correct  
 (14) Q And normally from the fall bait fishery to the spring  
 (15) sac roe fishery these fish gain some weight?  
 (16) A Normally no not normally They - this is cyclical  
 (17) Over the years some years they gain and some years they  
 (18) don t  
 (19) and some years they lose  
 (20) Q Would you agree that since 1984 however during the winter  
 (21) months the general adult biomass in Prince William Sound has  
 (22) been gaining weight at a steadily decreasing rate?  
 (23) A Right That - that s correct And there s a graph that s  
 (24) virtually identical to this for Sitka Sound that shows the very  
 (25) same phenomenon  
 (26) Q And in 1992 from 1992 to 1993 for the first time in

Vol 13 1948

- (1) eight years these fish actually lost weight over the winter  
 (2) is that correct?  
 (3) A Yes  
 (4) MR KARLBERG Can we pull up DX8525?  
 (5) BY MR KARLBERG  
 (6) Q You re familiar with this chart sir?  
 (7) A Vaguely I m not really - I may have seen that but no  
 (8) it s not something I m -  
 (9) Q You re familiar with the fact that in Prince William Sound  
 (10) they have a number of salmon hatcheries there?  
 (11) A Yes  
 (12) Q You re also familiar are you not that over the years  
 (13) these hatcheries have gradually and in some case more  
 (14) substantially increased their production of salmon fry?  
 (15) A I ll have to take your word for it I really haven t  
 (16) followed the salmon hatchery production rate  
 (17) Q Let me represent to you this graph is intended to just  
 (18) reflect a trend of the production of herring - pardon me  
 (19) salmon fry starting back in 1976  
 (20) A Okay  
 (21) Q And I d like you to assume this is accurate and we ll have  
 (22) another witness come and testify to the accuracy  
 (23) A Fine  
 (24) Q Would you not agree sir that the trend that you see  
 (25) starting back in the early 80s is definitely increasing?

Vol 13 1953

- (1) Q Let me refer to defendant s Exhibit 15459  
 (2) Dr Kocan this is an article entitled relationship between  
 (3) diet and the immune response of fish Are you familiar with  
 (4) this article?  
 (5) A Yes  
 (6) Q And I m told that the author Marsha Landolt is your  
 (7) ex wife?  
 (8) A She s also my boss  
 (9) Q Okay We ll be careful here then  
 (10) A Does that compromise my testimony?  
 (11) Q Let me - that is a dangerous situation Let me refer you  
 (12) to the highlighted portion here I m assuming and this is  
 (13) maybe an assumption I shouldn t make since she s your  
 ex wife  
 (14) but I m assuming you respect her opinions as a scientist?  
 (15) A Oh yes we still work together  
 (16) Q You would consider this to be an authoritative text?  
 (17) A Yes  
 (18) Q Now the highlighted portion there says profound changes  
 (19) in the immune response are some of the earliest manifestations  
 (20) of malnutrition Do you agree with that statement?  
 (21) A If - if we can define malnutrition as more than just  
 (22) weight loss I pointed out loss of body fat is not  
 (23) malnutrition so we need to define that very carefully I know  
 (24) what she s talking about here and it s not loss of body fat  
 (25) Q Would you agree that loss of weight can indeed come from

Vol 13 1954

- (1) inability to get sufficient food in sufficient numbers to have  
 (2) proper amount of dietary supplements vitamins things of that  
 (3) sort?  
 (4) A It s possible to have too little food to be properly  
 (5) nourished that s correct  
 (6) Q I m going to go to DX8996  
 (7) MR PETUMENOS 8996? Can I confer with counsel just  
 (8) a minute?  
 (9) MR KARLBERG Oh you don t? It s a trick  
 (10) MR PETUMENOS It s working We re tricking you  
 (11) We have it Thank you Judge  
 (12) BY MR KARLBERG  
 (13) Q Dr Kocan did you look at temperatures in Prince William  
 (14) Sound as part of your investigation?  
 (15) A I m sorry repeat that question  
 (16) Q Did you look at sea surface temperatures in Prince William  
 (17) Sound as part of your investigation?  
 (18) A My investigations yes  
 (19) Q And you ve seen this chart before?  
 (20) A I don t recall this particular chart but I ve seen  
 (21) temperature data on Prince William Sound yes  
 (22) Q Let me represent to you what this is intended to be  
 (23) This - the lower line is Prince William Sound?  
 (24) A Yes  
 (25) Q Sea surface temperatures?

Vol 13 1955

- (1) A Okay  
 (2) Q During the winter months For instance in - I m  
 (3) interested in 92 to 93 the winter months are defined as  
 (4) December January and February okay?  
 (5) A Okay  
 (6) Q And these temperatures are taken in the Montague Island  
 (7) area all right? Now the Montague Island area is where a big  
 (8) bulk of these herring for Prince William Sound they winter in  
 (9) the Montague Trench is that correct?  
 (10) A That s the way I understand yes  
 (11) Q All right And the temperature that you see for 92 93  
 (12) during the winter in between that fall bait fishery when we  
 (13) had abundant numbers and the sac roe fishery in 93 when we  
 had  
 (14) that loss the temperature is the lowest since 1983 is that  
 (15) correct?  
 (16) A Yes It appears that s what the graph says right  
 (17) Q And finally Dr Kocan isn t it a fact that VHS tends to  
 (18) manifest itself and it s most common when water temperatures  
 (19) are at their lowest?  
 (20) A That s true for - for the European strain of salmonids  
 (21) I m not sure that data s been generated for this strain  
 (22) Q Would you agree generally that VHS outbreaks coincide with  
 (23) low water temperature and as a result breaks out chiefly  
 (24) during the colder months of the year?  
 (25) A In trout and salmon in Europe yes

Vol 13 1956

- (1) Q Now I understand that it s your contention that the spill  
 (2) was a substantial factor in causing this collapse in 1993  
 (3) A Yes that s correct  
 (4) Q Would you also at least give me that there could have been  
 (5) other natural causes at play that contributed to this decline?  
 (6) A Yeah I would say that the - the spill interacted with a  
 (7) number of other environmental situations that resulted - that  
 (8) interaction resulted in what we see today and what we ve been  
 (9) seeing since the time of the spill  
 (10) Q And a number of those other things you re talking about are  
 (11) some of the things we just went through is that correct?  
 (12) A They could be yes  
 (13) Q Would you agree with me that if your immunosuppression  
 (14) theory is wrong that these other factors these other  
 (15) naturally occurring factors that we ve gone through and any  
 (16) others that might be at play could by themselves explain the  
 (17) collapse in 1993?  
 (18) A I haven t seen any data yet that s - that s strong enough  
 (19) or that shows a strong enough impact on that population that I  
 (20) could attribute solely to this mortality that we ve witnessed  
 (21) Q Would you agree that it s possible that you re wrong on  
 (22) your immunosuppression theory?  
 (23) A Well now if I m wrong and nothing happened if there was  
 (24) no oil spill at all I contend that very probably nothing would  
 (25) have been different in Prince William Sound

Vol 13 1957

- (1) Q Are you saying it s impossible that these other factors –
- (2) A Not impossible
- (3) Q – could have caused this collapse by themselves?
- (4) A Impossible?
- (5) Q You re not saying that?
- (6) A Only some possibility
- (7) Q You re giving me that it s possible that these other
- (8) factors could have caused this collapse?
- (9) A Possible but very improbable
- (10) MR KARLBERG You want to go ahead and take this off
- (11) the screen? Thanks
- (12) BY MR KARLBERG
- (13) Q Are you aware of the amount of subsistence fishing by the
- (14) various municipalities that are involved in this and
- (15) corporations Native corporations in this lawsuit?
- (16) A No not at all
- (17) Q Let me – let me represent to you that for the Chenega
- (18) village that in 1992 they harvested approximately 237 pounds
- (19) of herring all right? You re not saying that in 1993 there
- (20) were insufficient herring to allow them in 1993 to recover 237
- (21) pounds of herring are you?
- (22) A No I mean I have no opinion on that sort of thing at
- (23) all I mean that – that s outside of anything I ve looked at
- (24) or been involved with
- (25) Q If I represent to you that Port Graham harvested 307 pounds

Vol 13 1958

- (1) in 1992 you re not saying in 1993 or 1994 that there wasn t
- (2) sufficient herring biomass for them to go out and recover that
- (3) poundage?
- (4) MR PETUMENOS I ll object as beyond the scope of
- (5) direct
- (6) THE COURT Oh beyond the scope objection s
- (7) overruled Go ahead
- (8) THE WITNESS I didn t catch all of that
- (9) MR KARLBERG The question still stands
- (10) THE COURT Yes do you remember the question?
- (11) MR KARLBERG The question do you remember the
- (12) question?
- (13) BY MR KARLBERG
- (14) Q The question I ll represent to you in 1992 Port Graham
- (15) harvested 307 pounds of subsistence herring and you re not –
- (16) you re not stating here that there weren t sufficient herring
- (17) in 93 and 94 for those folks to go out and harvest that same
- (18) amount in those two years?
- (19) A No I couldn t say that no
- (20) Q And if I walk through all the landowners in this case and
- (21) ask you that same question you wouldn t be able to give me a
- (22) response?
- (23) A Unless we were – unless you were giving me numbers that
- (24) exceeded the biomass no I couldn t give you an answer
- (25) That s right I just don t know

Vol 13 1959

- (1) Q Let s switch gears I m almost done here
- (2) Yesterday you spent some time talking about abnormalities
- (3) that you observed in the field and the lab with the 1989 year
- (4) class
- (5) A Yes
- (6) MR KARLBERG Can we go to PX511? This technology
- (7) gets me
- (8) MR PETUMENOS Gets me too
- (9) MR KARLBERG I like chalkboards and things
- (10) BY MR KARLBERG
- (11) Q You recognize this as your own exhibit is that correct?
- (12) A Yes
- (13) Q Let me just kind of refamiliarize everybody just a little
- (14) bit with this Yesterday you talked about at certain
- (15) concentration levels you saw increased abnormalities is that
- (16) correct?
- (17) A Yes physical abnormalities and –
- (18) Q Now if you look over here in the very left hand column of
- (19) your graph where it says zero down below –
- (20) A That s correct
- (21) Q – that means that population of larvae were not exposed to
- (22) any oil is that correct?
- (23) A That s correct
- (24) Q And that bar graph comes up to 55 percent?
- (25) A Approximately yes

Vol 13 1960

- (1) Q Doesn t that mean that even when there s zero exposure you
- (2) had 45 percent of abnormalities that occurred naturally?
- (3) A Oh yes this is standard for a population that produces
- (4) this large a number of offspring
- (5) Q And it s also true that it s been found in Pacific herring
- (6) that up to 68 percent of herring have underdeveloped jaws
- (7) naturally?
- (8) A There – no there s a – first it depends on at what
- (9) stage you re looking at these larvae If you re talking about
- (10) larvae – you said herring you should clarify
- (11) Q I meant larvae yes
- (12) A When I look at these and most people examine larvae that
- (13) they ve collected right after hatching or that they ve hatched
- (14) themselves they look at them right after they ve hatched and
- (15) there are – the newly hatched larvae fall into three stages
- (16) 1 A 1 B 1 C and interestingly enough the 1 A stage is
- (17) something of a precocious or an early hatched individual and
- (18) their jaw is still not fully developed Many of the organs in
- (19) a newly hatched herring larvae are not developed During the
- (20) period the yolk is resorbed the organs continue to grow and
- (21) develop and become normal And it s been customary to look
- (22) at
- (23) missing jaws as being an abnormality when in reality if the
- (24) investigators had waited until the yolk sac was partly
- (25) resorbed they would see that a portion of these that had

Vol 13 1961

- (1) So there - there is a problem in evaluating the missing  
 (2) lower jaws as a significant toxic response unless you consider  
 (3) that particular factor So yeah I agree you could have 68  
 (4) percent with abnormal or missing lower jaws but a week later  
 (5) you could have only 40 percent that are abnormal  
 (6) Q So we're in agreement there can be a fairly significant  
 (7) percentage of abnormalities that occur naturally and those  
 (8) abnormalities could include missing lower jaws curved spine  
 (9) things of that sort?  
 (10) A Oh yes they include everything  
 (11) Q So yesterday you didn't mean to convey by this chart that  
 (12) abnormalities only occur when there's been some toxic  
 exposure?  
 (13) A No what I - what this is demonstrating is differences  
 (14) between exposure - exposed and unexposed  
 (15) Q I see  
 (16) A Meaning control and experimental  
 (17) Q Now referring back to the lower axis down here where you  
 (18) have your concentration levels -  
 (19) A Yes  
 (20) Q - at what were the concentration - or let me state it  
 (21) differently What was the parts per million of exposure in the  
 (22) field in Prince William Sound in 1990 '91 and '92?  
 (23) A That's a very good question I'm not aware that anybody  
 (24) took any concentration measurements under the slick during the  
 (25) period it was there The measurements were taken alongside the

Vol 13 1962

- (1) slick measurements were taken after the oil had exited the  
 (2) Sound Measurements were taken in areas that had oil on the  
 (3) beach but none of these are comparable to each other None  
 of  
 (4) them are comparable to taking it under the slick so that's a  
 (5) very complex question and I don't believe anybody has that  
 (6) answer  
 (7) Q But maybe we're miscommunicating I wanted to know the  
 (8) exposure level in the water column in 1990 '91 and '92 not  
 (9) '89  
 (10) A Oh I don't know that anybody's taken that measurement I  
 (11) certainly didn't  
 (12) Q So you don't know whether or not the exposure was  
 (13) considered by all who looked at it to be below any threshold  
 (14) level not threshold level of harmful effect?  
 (15) A I don't know of anybody that looked at it in 1990  
 (16) MR KARLBERG Do you want to go ahead and take that  
 (17) down?  
 (18) BY MR KARLBERG  
 (19) Q Dr Kocan then in light of your last response is it fair  
 (20) to say that you have no evidence to suggest that in '90 '91 or  
 (21) '92 there was any continuing exposure of harmful levels?  
 (22) A I'm sorry I didn't catch the end of that  
 (23) Q Is it fair to say in light of your last statement that  
 (24) you have no evidence to suggest that in '90 and '91 and '92  
 (25) there were continuing exposure levels that would be harmful to

Vol 13 1963

- (1) herring eggs or the adult biomass?  
 (2) A Do I have evidence? Yeah my evidence says that they -  
 (3) they were harmed when they were at oiled sites I don't have  
 (4) measurements to say what the concentrations were  
 (5) Q So anything - any conclusions you've reached in '90 '91  
 (6) and '92 are without any knowledge of what the concentration  
 (7) levels were?  
 (8) A No this is based entirely on whether they were at oiled  
 (9) sites or unoiled sites I did not take oil measurements  
 (10) Q Now I told you yesterday I was going to return to your  
 (11) telephone conversation with Dr Myers  
 (12) A Yes  
 (13) Q And again he's the chief pathologist for Fish & Game  
 (14) that's responsible for investigating the VHS outbreak?  
 (15) A He's their fish pathologist that's correct  
 (16) Q You had this conversation with him by telephone three days  
 (17) ago?  
 (18) A Yes yes  
 (19) Q Isn't it true sir that when you spoke to him and asked  
 (20) him about your immunosuppression theory he said  
 (21) immunosuppression is stretching it Offhand it sounds  
 (22) reasonable but when you get down to the details and the data  
 (23) it doesn't hold up at all?  
 (24) A That could be what he said  
 (25) Q Isn't it true that he said - when you asked him about the

Vol 13 1964

- (1) possibility that this immunosuppression had occurred for three  
 (2) to four years and there was no adverse effects from other  
 (3) diseases he said where are the other pathogens vibrio VEN  
 (4) why didn't the fish succumb earlier why aren't they riddled  
 (5) with other diseases?  
 (6) A That was not a part of my conversation with him  
 (7) Q So you would disagree with that statement if he - if he  
 (8) did say that just as recently as yesterday?  
 (9) A I would disagree that there's - there was nothing  
 (10) happening to these fish during the previous three years  
 (11) That's right There's no evidence that they were not being  
 (12) affected and infected and dying  
 (13) Q When you spoke to him about your immunosuppression  
 (14) theory -  
 (15) A Yes  
 (16) Q - isn't it true sir that he said that's BS? You told  
 (17) him immunosuppression isn't the answer?  
 (18) A No That's not true He never said such a thing  
 (19) Q So if he's confirmed that statement as recently as  
 (20) yesterday you would disagree with that?  
 (21) A The only thing he said was that he had no evidence that  
 (22) could directly link the oil spill to the VHS outbreak He had  
 (23) no comment whatsoever on whether or not he thought - well he  
 (24) thought the immunosuppression theory was perfectly  
 legitimate  
 (25) His discussion with me was that what I had proposed was

Vol 13 1965

- (1) possible but that they had not collected evidence yet to  
 (2) support it  
 (3) MR KARLBERG I have no further questions at this  
 (4) time  
 (5) MR PETUMENOS Could we take our first morning recess  
 (6) at this time?  
 (7) THE COURT I'd kind of like to finish with the  
 (8) witness I'll give you a break if you really need it  
 (9) MR PETUMENOS Could I have a moment to get the easel  
 (10) back up then and do all that?  
 (11) THE COURT Sure  
 (12) MR PETUMENOS I want to get this easel back up  
 (13) MR GARGAN The one with the paper?  
 (14) MR PETUMENOS The one with the paper is good  
 (15) MR PETUMENOS How about so Dr Kocan can see it?  
 (16) Now you can't see it right? Let's try it back where it was  
 (17) Can you come on down and follow me over here Dr Kocan so  
 (18) we can all see it together?  
 (19) REDIRECT EXAMINATION OF RICHARD M KOCAN  
 (20) BY MR PETUMENOS  
 (21) Q Now Dr Kocan I have never caught a herring When I go  
 (22) fishing I generally catch my daughter's sweater or a lot of  
 (23) fucus that we've talked about here but I think I learned  
 (24) something about these fish They're a little more judicious  
 (25) than say the pink salmon because they don't spawn within  
 two

Vol 13 1966

- (1) years right?  
 (2) A That's correct  
 (3) Q They take longer to do that?  
 (4) A Become sexually mature yes  
 (5) Q And after the other way they're maybe a little more  
 (6) intelligent than salmon is after they spawn they don't die?  
 (7) A Oh no  
 (8) Q They keep living and they spawn again?  
 (9) A That's correct  
 (10) Q All right So for a 1989 generation that we've been  
 (11) talking about in 1989 when the bait catch is happening what  
 (12) did the 1989 herring - how old are they? What are they doing?  
 (13) A In 1989?  
 (14) Q Yeah  
 (15) A Well they're still larvae and juveniles swimming about in  
 (16) Prince William Sound  
 (17) Q So when the 1989 bait catch happens in October or  
 November  
 (18) are they out there catching the 1989 larvae?  
 (19) A Well by - by fall when the bait - by October November  
 (20) they may be an inch or two long I mean I don't think they're  
 (21) a significant portion of that catch  
 (22) Q So what does the bait catch of October or November of 1989  
 (23) have to do with the 1989 generation that's an inch or two long?  
 (24) A Very little that I'm aware of  
 (25) Q What about in 1990 when the sac roe fishery takes place

Vol 13 1967

- (1) what are the 1989 salmon that have just hatched - excuse me  
 (2) herring that have just hatched in 1989 where are they at now  
 (3) in their development?  
 (4) A They're in various growing areas grow out areas where  
 (5) they've established themselves following the '89 hatching in  
 (6) '89 and they're still in a growing phase at that time  
 (7) They're not participating in the spawning activity  
 (8) Q Okay And what about 1991 when we put up here in near  
 (9) record very good Where are these 1989 salmon in their  
 (10) development then - excuse me herring in their development  
 (11) then?  
 (12) A During which fishery?  
 (13) Q During the 1991  
 (14) A There's two fisheries there  
 (15) Q Either one take them one at a time  
 (16) A Well they're not involved in the sac roe fishery because  
 (17) they're still not sexually mature They're still juveniles and  
 (18) they're in their growing foraging phase in the bait fishery  
 (19) they've probably entered the bait fishery by that time and are  
 (20) large enough to be caught to some extent by the commercial  
 (21) fishermen  
 (22) Q Now as opposed to all the other fish that are out there  
 (23) being caught in the bait fishery what amount of the - call it  
 (24) biomass is in the 1989 portion likely to be?  
 (25) A Well its entire portion as we discussed a bit earlier is

Vol 13 1968

- (1) about three percent of the entire biomass  
 (2) Q What does the 1991 bait fishery tell us about the impact of  
 (3) the 1989 herring generation if anything?  
 (4) A Well there were a large number of fish available to be  
 (5) caught This is - this has been relabeled biomass and this is  
 (6) actually the catch rate and catch rate is based on something  
 (7) different than biomass Catch data is an indication of how  
 (8) many fishermen have fished for how long Biomass is how  
 many  
 (9) fish were actually in Prince William Sound so this is not  
 (10) really labeled correct We switched gears  
 (11) Q This column here this column here is it confusing or  
 (12) misleading the way it is right now discussing catches here and  
 (13) biomass here?  
 (14) A Initially when it was harvest it was correct but when it  
 (15) was switched to biomass it became irrelevant because it's  
 (16) entirely different information  
 (17) Q What does the harvest have to do with the biomass What  
 (18) other factors have to do with the amount of herring is caught  
 (19) in any given fish which - besides biomass?  
 (20) A Well the Department of Fish & Game determines how many  
 (21) fish are in the biomass and from that calculation they  
 (22) determine how many can be harvested safely without depleting  
 (23) the spawning population And then the actual catch is a  
 (24) function of how many fishermen fished for how long and how  
 (25) successful - how good they were as fishermen These catch

Vol 13 1969

- (1) records very good indicates there was a high permit level or  
 (2) high allotment and at the same time the fishermen were very  
 (3) efficient at catching the fish  
 (4) Q Now is the decision on how much herring to allow by the  
 (5) regulators often a political one? Are there politics involved  
 (6) in all that?  
 (7) A I hesitate to say no but I don't know  
 (8) Q And does the amount of fish that are caught depend on such  
 (9) things as weather?  
 (10) A Oh yes  
 (11) Q 1993 Dr Kocan what is happening to this 1989 group in  
 (12) 1993?  
 (13) A This is the first year that biologically they re expected  
 (14) to – now this is the first year they re expected biologically  
 (15) to begin spawning They re sexually mature at this time They  
 (16) entered to a small degree as observers in 1992 but they  
 (17) didn't participate in the spawning  
 (18) Q You can resume the stand Thank you very much  
 (19) Now this business of water temperature do you remember  
 (20) the questions that our colleague asked you about that?  
 (21) A Yes we looked at a graph of water temperatures between  
 (22) Sitka Sound – that compared Sitka and Prince William Sound  
 (23) over a period of years  
 (24) Q Did you compare the water temperatures between the  
 (25) unoiled areas that you studied and the oiled areas that you studied

Vol 13 1970

- (1) when you came up with the differences in all of the things that  
 (2) went wrong with the herring?  
 (3) A Yes temperatures were taken at the time these were –  
 (4) these samples were put in the field  
 (5) Q So you controlled for temperature both in the field and did  
 (6) you control it in the laboratory as well?  
 (7) A Yes it was constant in the laboratory and I have the  
 (8) records of what it was in the field  
 (9) Q So keeping the temperature the same for both – both  
 (10) groups what did you find with respect to the unoiled and oiled  
 (11) comparisons?  
 (12) A In virtually every case the oiled sites performed more  
 (13) poorly or they resulted in the production of more abnormal  
 (14) larvae either physically or genetically abnormal and there  
 (15) was no difference in temperature The differences recorded  
 (16) were about one tenth of one degree  
 (17) MR PETUMENOS Counsel could you put up Exhibit 2019  
 (18) for me please?  
 (19) MR KARLBERG Ready?  
 (20) MR PETUMENOS I'm ready  
 (21) MR KARLBERG You want that same quote we dealt with  
 (22) before or a different one?  
 (23) MR PETUMENOS You got it  
 (24) BY MR PETUMENOS  
 (25) Q Showing you Exhibit 2019 you indicated to the jury in your

Vol 13 1971

- (1) answer on cross examination that you would be interested in  
 (2) discussing this passage that you disagree with point by point  
 (3) A Yes I can do that  
 (4) Q Would you please?  
 (5) A I'm sorry?  
 (6) Q Would you please?  
 (7) A Okay Can you all read this? Okay  
 (8) The first sentence here that's highlighted there appears  
 (9) to be no relationship of VHSV isolation with the Exxon Valdez  
 (10) oil spill of 1989 since the virus has been isolated from areas  
 (11) other than Prince William Sound  
 (12) It's known that this virus occurs all the way from Bristol  
 (13) Bay down to San Francisco Bay in herring now It's probably  
 (14) been there for hundreds of years and the statement is true that  
 (15) the presence of the virus is not related to the Exxon Valdez  
 (16) spill But the disease has occurred in Prince William Sound  
 (17) following the oil spill And the only other time I'm aware of  
 (18) a natural – of this occurring naturally in free-ranging fish  
 (19) is in Prince Rupert British Columbia in 1993 I believe and  
 (20) that was in association with a diesel oil spill That's  
 (21) published in the American Fisheries Society Bulletin  
 (22) someplace  
 (23) The next sentence the virus may be an opportunistic  
 (24) pathogen causing periodic occurrences of external and internal  
 (25) lesions in herring following stress from various factors

Vol 13 1972

- (1) Let me stop it at that point I'm surprised very  
 (2) surprised that Dr Myers made the statement because viruses  
 (3) are  
 (4) not opportunistic invaders Viruses require healthy cells in  
 (5) order to function normally and to reproduce themselves These  
 (6) viruses cannot be opportunistic which means they look for an  
 (7) already compromised individual or sick individual before they  
 (8) can – they can invade it or produce – begin growing to  
 (9) produce the disease  
 (10) And then VEN infections I'm sure most of you have heard  
 (11) the term interferon Interferon is a chemical that viruses  
 (12) cause cells to produce that inhibit the invasion and growth of  
 (13) other viruses This gives them sole domain over the cells that  
 (14) they've invaded and that's why we like to use interferon to  
 (15) fight viral infection because we can use the chemical We can  
 (16) put it into cells or into an individual and keep other viruses  
 (17) from invading even though they're already infected  
 (18) So if there were VEN infections then they would inhibit  
 (19) the – I mean if they didn't find VEN infection it's because  
 (20) they were already infected with another virus and it was  
 (21) producing interferon or causing the cells to produce interferon  
 (22) to prevent invasion by a second or any other number of  
 (23) viruses  
 (24) Okay periodic occurrences of infections – stress okay  
 (25) We went through VEN infections that would be eliminated  
 (26) Spawning actually the – at the period of spawning that's the

Vol 13 1977

- (1) A I can t give specific details but I believe the oil plume  
 (2) proceeded out of Prince William Sound down toward Kodiak  
 and  
 (3) Afognak Island yes  
 (4) Q And in your direct testimony before the cross examination  
 (5) began what is your opinion regarding whether the effects of  
 (6) some of the contaminants that these herring underwent in 1989  
 (7) what is your opinion with regard to whether many of them are  
 (8) likely to have been manifesting themselves immediately or  
 (9) within - or as much as years later?  
 (10) A Could you rephrase that?  
 (11) Q What is your opinion with respect to whether the effects of  
 (12) the petroleum hydrocarbons on the herring are all going to be  
 (13) seen immediately or whether you expected that many of them  
 (14) would not appear until years later?  
 (15) A Oh I think classically you would see the effects spread  
 (16) out over a long period of time and very likely the type of  
 (17) effect will change with time also  
 (18) Q When you were looking at the deformities and defect of the  
 (19) herring larvae and looking for things like missing jaws and so  
 (20) forth were you aware of and did you account for the fact that  
 (21) you have to wait until this yolk sac development process  
 (22) finishes its - its work so that you didn t count deformities  
 (23) that might with furthered development resolve themselves?  
 (24) A Yes I was aware of this and I m actually presently  
 (25) working with Elaine Humphrey from British Columbia who

Vol 13 1978

- (1) initially developed this technique and we customarily do not  
 (2) count jaw deformities unless the jaw is either visible and  
 (3) deformed or if the yolk sac is consumed and there s still no  
 (4) jaw so those very earliest stages are not counted one way or  
 (5) the other  
 (6) Q And finally Dr Kocan do you know of any waters around  
 (7) the State of Alaska where the phenomenon that we have  
 described  
 (8) here the lesions and the virus and so forth has occurred  
 (9) where there was not a history of hydrocarbon spill?  
 (10) A Can you define more what you mean by history of  
 hydrocarbon  
 (11) spills?  
 (12) Q The diesel spill you described or the Exxon Valdez oil  
 (13) spill?  
 (14) A Well there s hydrocarbons spilled to some extent  
 (15) everywhere but there s been no large spills anywhere that I m  
 (16) aware of and there s been no VHS disease outbreaks anyplace  
 (17) other than Prince William Sound or in Prince Rupert that  
 (18) were - that occurred in free ranging herring  
 (19) Q And in Prince Rupert was there a spill?  
 (20) A There was a diesel oil spill yes about 50 000 gallons I  
 (21) believe  
 (22) MR PETUMENOS I have no further questions  
 (23) MR KARLBERG Two questions Your Honor if I might  
 (24) RE-CROSS EXAMINATION OF RICHARD M KOCAN  
 (25) BY MR KARLBERG

Vol 13 1979

- (1) Q Dr Kocan the first one has to do with the Prince Rupert  
 (2) spill  
 (3) A Yes  
 (4) Q Isn t it true that the lesions that formed there were  
 (5) within 10 to 11 days after the spill?  
 (6) A If I recall correctly the lesions occurred were observed  
 (7) fairly soon after the spill that s right  
 (8) Q Second point sir is Are you aware of any - any  
 (9) scientific studies that have been published in any scholarly  
 (10) journals that connect the VHS outbreak in Prince William Sound  
 (11) to the spill?  
 (12) A To the spill?  
 (13) Q Yes  
 (14) A No I m not aware of any that do that  
 (15) MR KARLBERG Thank you No further questions  
 (16) THE COURT You can step down sir Thank you very  
 (17) much  
 (18) We re going to take a morning break  
 (19) THE CLERK Please rise This court stands in  
 (20) recess  
 (21) (Jury out at 9 57 a m )  
 (22) (Recess from 9 57 a m to 10 20 a m )  
 (23) THE CLERK Please rise This court now resumes its  
 (24) session please be seated  
 (25) THE COURT Counsel you wanted to take up something

Vol 13 1980

- (1) out of the presence of the jury  
 (2) MR PETUMENOS I just want to move my exhibits in  
 (3) Judge and I didn t want to have the jury sit here while I did  
 (4) that  
 (5) THE COURT Fine  
 (6) MR PETUMENOS I move into evidence exhibits number  
 (7) 465 through 469  
 (8) THE COURT 465 through 469?  
 (9) MR PETUMENOS Through 469 yes inclusive  
 (10) (Exhibits 465 through 469 offered)  
 (11) MR KARLBERG No objection Your Honor  
 (12) THE COURT They re admitted  
 (13) (Exhibits 465 through 469 received)  
 (14) MR PETUMENOS Exhibit 475  
 (15) (Exhibit 475 offered)  
 (16) THE COURT 475 admitted  
 (17) (Exhibit 475 received)  
 (18) MR PETUMENOS Exhibit 477 and 477 A  
 (19) (Exhibits 477 and 477 A offered)  
 (20) MR KARLBERG No objection Your Honor  
 (21) THE COURT 477 and 477 A are admitted  
 (22) (Exhibits 477 and 477 A received)  
 (23) MR PETUMENOS 485 through 487 A  
 (24) (Exhibits 485 through 487 A offered)  
 (25) THE COURT Through - 485 through 487 A Any

Vol 13 1981

- (1) objection?
- (2) MR KARLBERG No objection
- (3) THE COURT Those are admitted
- (4) (Exhibits 485 through 487 A received)
- (5) MR PETUMENOS That includes 488 488 is -
- (6) THE COURT I m just going admit them counsel until I
- (7) hear an objection
- (8) MR PETUMENOS 492 through 500
- (9) (Exhibits 492 through 500 offered)
- (10) THE COURT 492 through 500
- (11) (Exhibits 492 through 500 received)
- (12) MR PETUMENOS 503
- (13) (Exhibit 503 offered)
- (14) THE COURT 503
- (15) (Exhibit 503 received)
- (16) MR PETUMENOS 511
- (17) (Exhibit 511 offered)
- (18) THE COURT 511 is admitted
- (19) (Exhibit 511 received)
- (20) MR PETUMENOS 513
- (21) (Exhibit 513 offered)
- (22) THE COURT 513
- (23) (Exhibit 513 received)
- (24) MR PETUMENOS Exhibit 1512 1512
- (25) (Exhibit 1512 offered)

Vol 13 1982

- (1) THE COURT 1512 admitted
- (2) (Exhibit 1512 received)
- (3) MR KARLBERG Your Honor if I could I d like to
- (4) have the handwritten chart marked and admitted into evidence
- (5) THE COURT Let me see that chart Counsel?
- (6) MR PETUMENOS No objection
- (7) MR KARLBERG And the flip chart
- (8) (Exhibits 15484 and 15485 offered)
- (9) THE COURT Any objection?
- (10) MR PETUMENOS No objection sir
- (11) THE COURT I ll admit them both You just have to
- (12) mark them and the clerk is instructed to admit them as marked
- (13) (Exhibits 15484 and 15485 received)
- (14) MR DIAMOND We ll do that in the next break
- (15) THE COURT Okay good
- (16) MR KARLBERG Thank you Your Honor
- (17) THE COURT Thank you
- (18) Can we have the next witness ready to go when the jury gets
- (19) down here?
- (20) MR STOLL We re ready
- (21) MR DIAMOND Your Honor in my continuing role of
- (22) master of ceremon es on the defense side with us at counsel
- (23) table is my partner Bart Cooper among other things is a
- (24) resident salmon expert I would move his admission
- (25) THE COURT Denied

Vol 13 1983

- (1) MR DIAMOND You don t know how happy you ve just
- (2) made Mr Cooper
- (3) THE COURT I m sure that s true
- (4) MR PETUMENOS I wanted to see Mr Diamond do the
- (5) cross examination off the cuff
- (6) THE COURT Is that it? If I refuse to admit somebody
- (7) you have to take up the -
- (8) MS SMITH No I do
- (9) MR PETUMENOS Never mind then
- (10) (Jury in at 10 24 a m )
- (11) THE COURT The jury is present counsel go ahead
- (12) MR STOLL We ll call Mr Ken Parker as our next
- (13) witness
- (14) THE CLERK Sir would you please step up into the
- (15) witness box There s a microphone laying there Would you #
- (16) clip that below the knot in your tie and remain standing for
- (17) the oath Would you raise your right hand?
- (18) (The Witness is Sworn)
- (19) THE CLERK Thank you You may be seated
- (20) Sir for the record would you please state your full name?
- (21) A Kenneth Paul Parker
- (22) THE CLERK Would you spell your last name?
- (23) A P a r k e r
- (24) THE CLERK And what is your occupation?
- (25) A Fisheries biologist small business owner

Vol 13 1984

- (1) THE CLERK Thank you
- (2) THE COURT Go ahead counsel
- (3) DIRECT EXAMINATION OF KENNETH P PARKER
- (4) BY MR STOLL
- (5) Q Mr Parker good morning
- (6) A Good morning
- (7) Q Until recently did you work for the State of Alaska?
- (8) A Yes I was a fishery biologist for the State of Alaska for
- (9) 18 years
- (10) Q All right And when did you resign with the State of
- (11) Alaska?
- (12) A I retired in October 31st 1990
- (13) Q And would you tell the jury please first of all what
- (14) your academic background is? You have a Bachelor s degree?
- (15) A Yes I have a Bachelor s in zoology and a Master s degree
- (16) in biology
- (17) Q And when did you obtain your Master s degree?
- (18) A Masters was obtained in 1973
- (19) Q When did you commence work with the State of Alaska?
- (20) A That same year
- (21) Q All right And what was your original position with the
- (22) State of Alaska?
- (23) A I started off as a temporary biologist working in Cook
- (24) Inlet for the Division of Commercial Fisheries
- (25) Q And what sort of functions did you perform then?

Vol 13 1985

- (1) A Oh I've worked in - on lake studies in the Upper Cook  
 (2) Inlet area of Alaska collected field data and did some  
 (3) analysis of that data  
 (4) Q And then how long did you stay in that position?  
 (5) A Well it was just a temporary position I was in there for  
 (6) about three months and then I was promoted  
 (7) Q And then what did you do?  
 (8) A I took on an assignment as the assist research project  
 (9) leader for Bristol Bay for the Division of Commercial  
 (10) Fisheries  
 (11) Q And what was that - what did that position entail?  
 (12) A I ran field programs in Bristol Bay to collect fishery  
 (13) information on sockeye salmon and did in season and  
 (14) post season  
 (15) data analysis to determine the size and composition of the  
 (16) annual salmon runs in Bristol Bay  
 (17) Q And were you involved in escapement data as far as Bristol  
 (18) Bay was concerned during that period of time?  
 (19) A Yes I was I was responsible for test fishing projects  
 (20) out in the districts and analyzing the run information and we  
 (21) also had escapement enumeration projects within the rivers that  
 (22) I was responsible for overseeing making sure the data was  
 (23) collected appropriately  
 (24) Q And what - what is escapement? Would you tell the jury  
 (25) please what escapement means?  
 (26) A Sure Escapement is the number of salmon that are actually

Vol 13 1986

- (1) allowed to enter the stream of origin and participate in the  
 (2) reproductive process And it's called escapement because the  
 (3) salmon have to run oftentimes a gauntlet - a gauntlet of  
 (4) fisheries so it's the ones that escape those fisheries that  
 (5) actually get to spawn and we call those escapement fish  
 (6) Q Excuse me Mr - I want to move this up here  
 (7) Is there a term called overescapement?  
 (8) A Yes It's generally applied to situations where the  
 (9) escapement exceeds the established objective for that river  
 (10) system We have a number of spawners that establish for each  
 (11) river system the data and biologists believe are optimum  
 (12) numbers If you have too many fish escaping into that river or  
 (13) not enough the production of salmon overall production of  
 (14) salmon can be hurt  
 (15) Q Why - why is that?  
 (16) A Because of in the case of underescapement not enough  
 (17) spawners to participate and fully utilize the gravel or the  
 (18) habit - spawning habitat in the streams Over for  
 (19) overescapement it would be the situation where either you have  
 (20) too much spawners for the amount of the spawning habitat that  
 (21) you have and you have - spawning activity will actually remove  
 (22) eggs that have been deposited in the stream from earlier  
 (23) spawning You can have competition both within the rearing  
 (24) stream and later on in the lake depending on the species of  
 (25) salmon that you're dealing with

Vol 13 1987

- (1) Q So overescapement you can lose some eggs from the  
 (2) spawning  
 (3) A That's correct  
 (4) Q And also with overescapement you can eat up a lot of  
 (5) the - the fish can eat up a lot of the food source and  
 (6) therefore diminish the size of the fish?  
 (7) A You can end up with increased competition between rearing  
 (8) salmon for a finite amount of food and as a result the  
 (9) overall size of the fish is going to be diminished and that can  
 (10) impact marine survival the amount of survival that the salmon  
 (11) experiences once they pass move into the marine environment  
 (12) into saltwater for the second portion of their life cycle  
 (13) Q So with overescapement that can affect generations of  
 (14) fish subsequent runs of fish?  
 (15) A It can yes  
 (16) Q And is that - is that why the Alaska Department of Fish  
 (17) and Game tries to control the escapement levels into the  
 (18) spawning streams?  
 (19) A Yes When we have that information available to us that  
 (20) indicates a certain optimum level of spawners for a system we  
 (21) try to manipulate the commercial fisheries and any fisheries  
 (22) be it subsistence sport so that we achieve that optimum  
 (23) number of spawners in the stream  
 (24) Q Okay Now I think you were - before we got into this  
 (25) business about escapement explain that to the jury you were

Vol 13 1988

- (1) saying that during the first six years I believe that you  
 (2) were with the ADF&G - you were involved in the Bristol Bay as  
 (3) a project leader is that correct?  
 (4) A That's correct  
 (5) Q And then after that six years that you were in Bristol Bay  
 (6) then what did you do?  
 (7) A I took a position in the headquarters of the Division of  
 (8) Commercial Fisheries as the deputy director for the division  
 (9) Q And what were your duties as deputy director of the  
 (10) division?  
 (11) A Well I was responsible for the in season management of  
 (12) our - of our fisheries program I had responsibilities  
 (13) relative to administrative details and day to day operations of  
 (14) the division and I supervised the regional supervisors who in  
 (15) turn supervised the area staffs So I had supervisory  
 (16) responsibilities just on personnel as well as on management  
 (17) activities of the division  
 (18) Q Is that for the whole State of Alaska?  
 (19) A Yes  
 (20) Q And did you have daily and weekly contact then with the  
 (21) area managers?  
 (22) A Yes I did  
 (23) Q And then how long did you - did you - incidentally  
 (24) during that period of time did you spend time in Prince  
 (25) William Sound and Cook Inlet and Kodiak?

Vol 13 1989

- (1) A Yes As well as the rest of the fisheries in the State  
 (2) Q Okay And did you do fieldwork as well as the area – in  
 (3) these areas as a biologist?  
 (4) A I did field – most of my fieldwork was confined to the  
 (5) Upper Cook Inlet area and Prince William Sound but as  
 (6) operational supervisor of the division I oversaw a lot of  
 (7) field activities throughout the State  
 (8) Q Okay And then how long did you – were you deputy  
 (9) director of the Division of Commercial Fisheries?  
 (10) A For six years  
 (11) Q All right And then – and then what did you do?  
 (12) A I was promoted to the director of the division  
 (13) Q All right What does the director of the Division of  
 (14) Commercial Fisheries for Alaska do?  
 (15) A Well you re the policy chief for the division and of  
 (16) course you – you re ultimately responsible for all of the  
 (17) actions of the division and involved in – in policy planning  
 (18) budget administration personnel issues as well as  
 (19) responsible – the ultimate responsible person for in season  
 (20) management of our fisheries  
 (21) Q And in that regard were you responsible for the regulatory  
 (22) management program in terms of setting overall planning and  
 (23) setting of escapement goals and so on?  
 (24) A Yes  
 (25) Q And again the escapement goals determine how many fish

Vol 13 1990

- (1) are going to be released or the goal is set as to how many  
 (2) fish will not be caught so that there s a sufficient spawners  
 (3) but not too many spawners in the fishing stream In the  
 (4) spawning streams?  
 (5) A That s correct Basically what we re doing is  
 (6) implementing the management plans that were established for  
 (7) each fishery and the management plans are partly developed  
 (8) by  
 (9) the Alaska Board of Fisheries That s a lay group appointed by  
 (10) the Governor  
 (11) Q Did you also serve as an alternate commissioner on the  
 (12) North Pacific Fisheries Council?  
 (13) A Yes I did  
 (14) Q Now in 1989 were you director of the Division of  
 (15) Commercial Fisheries for the State of Alaska?  
 (16) A Yes I was  
 (17) Q And were you involved in 1989 with the setting of policy on  
 (18) opening seasons and setting escapement goals for the State of  
 (19) Alaska?  
 (20) A Yes  
 (21) Q You were the – you were – the buck stopped with you so  
 (22) to speak?  
 (23) A Yes that s correct  
 (24) Q Okay  
 (25) MR STOLL And could we have Exhibit 282 please on  
 the monitor

Vol 13 1991

- (1) BY MR STOLL  
 (2) Q Now the State of Alaska is divided into fishing regions?  
 (3) A Yes  
 (4) Q And is this a map this Exhibit 2 – 282 does this reflect  
 (5) the different management areas for the State of Alaska?  
 (6) A Yes it does We had – let s see how do you make the  
 (7) arrow  
 (8) Q Whoops Let s go back to the –  
 (9) A There we go  
 (10) Q Do you want to put some red – do you want to do some red  
 (11) on there?  
 (12) A Well I was just going to move this pointer around  
 (13) Q All right  
 (14) A The State of Alaska Department of Fish and Game divided the  
 (15) State into administrative regions for the purpose of both  
 (16) administration and fisheries management and this just shows  
 (17) the four regions  
 (18) The first is the southeast region includes the  
 (19) southeastern Alaska panhandle and the Yakutat area  
 (20) The next region is called the central region That  
 (21) includes the fisheries of Prince William Sound Upper and  
 (22) Lower  
 (23) Cook Inlet as well as Bristol Bay  
 (24) The Kodiak or westward region includes the Kodiak area  
 (25) fisheries Chignik fisheries and the Alaska Peninsula Aleutian  
 Island fisheries as well as the crab and groundfish fisheries

Vol 13 1992

- (1) of the Bering Sea  
 (2) And then the region three is the Arctic Yukon Kuskokwim  
 (3) region Includes the fisheries of the Kuskokwim River and  
 (4) Delta the Norton Sound area and the Yukon Delta and River  
 (5) and the Kuskokwim – I mean the Kotzebue Sound fisheries  
 (6) Q Can we have exhibit 2303 please? Now what is this a  
 (7) picture of?  
 (8) A This depicts the Prince William Sound management area  
 (9) showing the commercial fishing districts within the – the  
 (10) management area There are 11 fishing districts beginning with  
 (11) the Copper Bering River area The Southeastern District  
 (12) Eastern District Northern District Coghill District  
 (13) Northwestern Eshamy and Montague Montague s here and  
 (14) the  
 (15) Southwestern District  
 (16) Q All right Now in 1989 when you were director you of  
 (17) course were there when the Exxon Valdez oil spill occurred?  
 (18) A Yes I was  
 (19) Q And was there a determination shortly after the spill to –  
 (20) the spill occurred on March 24th?  
 (21) A That s correct  
 (22) Q And that was before herring or the salmon seasons were to  
 (23) commence in Prince William Sound and Kodiak wasn t it?  
 (24) A The herring fishery usually occurred from early April  
 (25) through late April so we were right on the verge of facing the  
 beginning of our herring fishery when that spill occurred

Vol 13 1993

- (1) Q All right And as a result of the spill was a  
 (2) determination made as to whether or not to open the herring  
 (3) season in Prince William Sound?  
 (4) A Yes We of course were faced with that decision right  
 (5) off the bat and the decision was made to summarily close all  
 (6) of the herring fisheries for Prince William Sound for that  
 (7) year  
 (8) Q And so that would cover all these areas here?  
 (9) A Yes Well the - most of the herring fisheries occur  
 (10) within Prince William Sound proper  
 (11) Q Okay And was a determination also made subsequently to  
 (12) close areas within Prince William Sound to salmon fishing?  
 (13) A Yes it was  
 (14) Q And were you involved in both those decisions?  
 (15) A Yes I was  
 (16) Q And why did you close the herring season and why did you  
 (17) close the pink - or the salmon season?  
 (18) A Well the Department of Fish and Game is charged with the  
 (19) responsibility to manage the fishery resources of the State to  
 (20) protect maintain improve extend as well as to conduct  
 (21) orderly fisheries And in the face of the oil spill we were  
 (22) of course doubtful or didn't believe we could accomplish these  
 (23) objectives and that action was warranted and we in  
 (24) coordination with the Alaska Department of Environmental  
 (25) Conservation who's responsible for protecting the environment

Vol 13 1994

- (1) and the public health and welfare moved to react to the oil  
 (2) spill with - with a certain specific policy that was outlined  
 (3) in a memorandum of understanding between the two agencies  
 (4) and  
 (5) that pretty much dictated our actions on each individual  
 (6) closure  
 (7) Q And was that a - unusual? In your experience had the  
 (8) fishing season ever been closed the entire season for -  
 (9) because of a massive release of pollutants or hazardous waste?  
 (10) A Not the entire system We have faced fishery closures  
 (11) partial fisheries closures as a result of oil spills before  
 (12) Q But that was just one little area?  
 (13) A Yes  
 (14) Q One area of one place?  
 (15) A Yes  
 (16) Q And for a limited period of time?  
 (17) A Yes  
 (18) Q This was for the entire season?  
 (19) A For a number of the fisheries it was for the entire  
 (20) season  
 (21) Q For most of the fisheries in Prince William Sound?  
 (22) A Yes  
 (23) Q Kodiak and -  
 (24) A Yes  
 (25) Q Now could we have exhibit - I guess I have to put this on  
 the Elmo

Vol 13 1995

- (1) MS SMITH Could we get a number on that counsel?  
 (2) MR STOLL Yes this is 304 A  
 (3) BY MR STOLL  
 (4) Q Now what is this area?  
 (5) A This illustration shows the management areas the Lower  
 (6) Cook Inlet salmon management area and the fishing districts  
 (7) within that area  
 (8) MR STOLL You might want to zoom back away from it a  
 (9) little bit to pick up all of it Basically - just a minute  
 (10) here  
 (11) A The line that runs across Anchor Point the horizontal  
 (12) line is the separation between the Upper Cook Inlet  
 (13) BY MR STOLL  
 (14) Q This line in the middle here?  
 (15) A Yes  
 (16) Q The Upper Cook Inlet area management area from the  
 (17) Lower  
 (18) Cook Inlet management area and the Lower Cook Inlet  
 (19) management  
 (20) area you have the eastern outer southern districts the  
 (21) Kamishak District the Baron Island districts  
 (22) Q And in the southern district was fishing closed there as  
 (23) well?  
 (24) A In a number of the districts the fisheries were closed  
 (25) both salmon and shellfish fisheries as well as herring  
 Q Now I show you what has been marked 1162 This just  
 happens to show some property that some of the plaintiffs own

Vol 13 1996

- (1) some of the Native corporations and this map corresponds to  
 (2) the Exhibit 304 A that's on the screen there?  
 (3) A Yes It depicts some of the areas that are illustrated in  
 (4) the Lower Cook Inlet management area  
 (5) Q And the fishing areas that were closed you were just  
 (6) talking about are these areas around the Chugach Islands and  
 (7) around this Port Graham?  
 (8) A Yes  
 (9) Q And these other areas?  
 (10) A That's correct  
 (11) Q And then going back on up to Prince William Sound the  
 (12) fishing was closed in those areas as well?  
 (13) A Yes in the outer district outer and eastern districts  
 (14) Q Okay Now just so we could get this all straight -  
 (15) MR STOLL Sorry I didn't do this before but could  
 (16) we go back onto the screen with Exhibit 2303 please?  
 (17) BY MR STOLL  
 (18) Q And this is - 2303 is the map we were just looking at  
 (19) before and this - does this correspond also with  
 (20) Exhibit 1161? I mean it's the same area?  
 (21) A Yes it does  
 (22) Q And these areas that are here in green these are the  
 (23) properties that are owned by plaintiffs These areas were the  
 (24) areas that - where fishing was closed in 1989?  
 (25) A Yes in various fisheries they were

Vol 13 1997

- (1) Q And in herring and salmon?  
 (2) A Yes  
 (3) Q Okay  
 (4) MR STOLL Could we have 2305 please on the  
 (5) screen?  
 (6) BY MR STOLL  
 (7) Q Mr Parker what is 2305?  
 (8) A This depicts the Kodiak management area and illustrates the  
 (9) management districts within the management area  
 (10) Q And this is the map of the Alaska Department of Fish and  
 (11) Game?  
 (12) A Yes  
 (13) Q And this is another area - you re in charge of the whole  
 (14) state so this was one of the areas that you had control over  
 (15) as far as closures of fishing and so on?  
 (16) A Yeah that s correct  
 (17) Q And did you direct that there be closure of fishing season  
 (18) in this region also?  
 (19) A Yeah There were closures that were required in and around  
 (20) the Kodiak Island and on the mainland  
 (21) Q The mainland being the Alaska Peninsula?  
 (22) A Yes  
 (23) Q And was this also for health reasons?  
 (24) A It was in conformance with the memorandum of  
 understanding  
 (25) between the Department of Environmental Conservation and  
 Fish &

Vol 13 1998

- (1) Game  
 (2) Q All right Now I have another exhibit here that is  
 (3) 1354 A which is of Kodiak and shows some parcels that are  
 (4) owned by the municipality plaintiffs Does this depict the  
 (5) same area that is shown on 2305?  
 (6) A Yes Yes it does  
 (7) Q Where the closures occurred?  
 (8) A Right  
 (9) Q Now and was this a - was this an unusual event also in  
 (10) Kodiak to have closure of the fishing season?  
 (11) A Yes it certainly was  
 (12) Q Prince William Sound am I correct that Prince William  
 (13) Sound and Kodiak are two of the largest fisheries in the world?  
 (14) A I think that would be a fair statement yes  
 (15) Q So this was a fairly drastic action?  
 (16) A Yes it was  
 (17) Q And when you made this decision to close these fisheries  
 (18) did you consult with various people?  
 (19) A Yes We have area biologists that are actually located out  
 (20) in the management area that are responsible for the day to day  
 (21) management of their fisheries and they have to abide by  
 (22) management plans in their actions And on the more  
 (23) controversial closures they have to consult with their  
 (24) regional supervisor and then eventually with me prior to the  
 (25) closures

Vol 13 1999

- (1) Q Okay And did you - so you consulted with these various  
 (2) biologists in various areas of the State?  
 (3) A Yeah from time to time  
 (4) Q And the Exxon Corporation was involved in some of these  
 (5) discussions you consulted with them also did you not?  
 (6) A I believe so that there was some discussions primarily at  
 (7) the area level  
 (8) Q At the area level?  
 (9) A Yes  
 (10) Q That means with the local -  
 (11) A Our local -  
 (12) Q - area manager?  
 (13) A Our local representative yes  
 (14) Q And to your knowledge did Exxon ever object to the  
 (15) closures of these areas?  
 (16) A No  
 (17) Q And now the claims in this case that we re trying here  
 (18) involve the land claims of the - land damage claims of the  
 (19) plaintiffs and one of the claims was that there was some  
 (20) uncertainty in the marketplace which affected land values  
 (21) So what I d like to know from you is Was there  
 (22) uncertainty at the - in 1989 as to what was going to happen  
 (23) with these fisheries in Prince William Sound and Kodiak  
 (24) Island?  
 (25) MS SMITH Your Honor there was an objection during

Vol 13 2000

- (1) the last exam about long preambles before questions I now  
 (2) share that objection  
 (3) THE COURT I ve lost the question now counsel so  
 (4) rephrase it and try to make it shorter  
 (5) MR STOLL Sure I just wanted to give a context and  
 (6) get through this as quickly as possible  
 (7) THE COURT Reask the question  
 (8) BY MR STOLL  
 (9) Q In 1989 you talked to a lot of biologists in this area Is  
 (10) that -  
 (11) A Yes  
 (12) Q Is that correct?  
 (13) A Yes  
 (14) Q And you talked to a lot of people in state government Is  
 (15) that -  
 (16) A Yes  
 (17) Q And you talked to representatives of fishermen and people  
 (18) in the various areas is that a safe statement?  
 (19) A That s correct  
 (20) Q And this was a fairly drastic action that you took in  
 (21) closing these seasons?  
 (22) A Yeah there was a great amount of concern on the part of  
 (23) the fishermen and industry on what was going to happen for the  
 (24) 89 season in light of the spill We didn t know exactly what  
 (25) fisheries were going to be impacted and you know it was

Vol 13 2001

- (1) difficult to second guess so a lot of the management actions  
 (2) really were delayed until we saw that there was an eminent  
 (3) problem then we took action So for a number of fisheries  
 (4) people were kind of on hold during that time period if that s  
 (5) what you re -  
 (6) Q Was there also uncertainty in 1989 as to - strike that  
 (7) Was there uncertainty in 1989 as to what was going to  
 (8) happen to these fisheries in the future?  
 (9) A Oh yes yes  
 (10) Q And was some of this because of the concerns about  
 (11) overescapement?  
 (12) A That was certainly one of our - our concerns We - we  
 (13) foresaw that in certain situations the escapements would  
 (14) probably exceed our optimum goals and could pose problems  
 (15) in  
 (15) future years so that it definitely was a concern that we were  
 (16) looking at and debating within our own ranks on how to  
 (16) proceed  
 (17) Q Were there other concerns as well as far as these  
 (18) fisheries were concerned as a result of the oil?  
 (19) A If you re referring to being able to conduct orderly  
 (20) fisheries and harvest good quality products certainly there  
 (21) was a lot of concern about that  
 (22) Q And since you ve left the ADF&G in 1990 have you stayed  
 (23) interested and informed as to what s going on in these  
 (24) fisheries?  
 (25) A Yes

Vol 13 2002

- (1) Q And is there still uncertainty as to what s going to happen  
 (2) as a result of the Exxon Valdez oil spill?  
 (3) MS SMITH Objection Your Honor no foundation  
 (4) THE COURT Sustained  
 (5) BY MR STOLL  
 (6) Q Are you - are you familiar with - have you talked to  
 (7) biologists and other people in this area?  
 (8) A Yes I have  
 (9) Q And do you know what the concerns are of these people in  
 (10) these areas in Kodiak and Prince William Sound as far as -  
 (11) that they ve expressed?  
 (12) MS SMITH I m going to object on the grounds of  
 (13) hearsay  
 (14) MR STOLL I m not offering for the truth of it I m  
 (15) simply offering for the fact that the concerns were expressed  
 (16) Your Honor  
 (17) MS SMITH I think that s a hearsay objection  
 (18) THE COURT Well the question asked for hearsay but  
 (19) there may be some nonhearsay there Can you rephrase your  
 (20) question?  
 (21) MR STOLL Surely  
 (22) BY MR STOLL  
 (23) Q Have people expressed to you - strike that  
 (24) Are you aware of any concerns in the Kodiak and Prince  
 (25) William Sound areas as to the future of these fisheries as a

Vol 13 2003

- (1) result of the Exxon Valdez oil spill?  
 (2) A Yes I ve had conversations with a number of people that  
 (3) are still involved in the fishery and still working with the  
 (4) department and they ve expressed to me concerns and - about  
 (5) the -  
 (6) MS SMITH Your Honor this is hearsay  
 (7) THE COURT I don t think so counsel The  
 (8) objection s overruled Go ahead  
 (9) MR STOLL Go ahead and answer  
 (10) A About the future of their fisheries both in terms of  
 (11) viability of the stock and the - let me back up that they re  
 (12) concerned they have expressed concern about the viability or  
 (13) current health of the resources that were impacted and of  
 (14) course studies are continuing on that  
 (15) MR STOLL Your Honor we d offer exhibits 282 2303  
 (16) 304 A and 2305  
 (17) (Exhibits 282 2303 304 A and 2305 offered)  
 (18) THE COURT Any objection counsel?  
 (19) MS SMITH No objection  
 (20) THE COURT I don t have the list but do you -  
 (21) THE CLERK We got it  
 (22) THE COURT They re admitted  
 (23) (Exhibits 282 2303 304 A and 2305 received)  
 (24) MS SMITH Mr Parker hello I m Linda Smith and  
 (25) I m going to be cross examining you And I m going to give you

Vol 13 2004

- (1) a copy of your federal court testimony that s this one and  
 (2) your deposition testimony which is this one  
 (3) THE WITNESS A thesis  
 (4) MS SMITH Just so you ll feel comfortable surrounded  
 (5) by all your prior statements  
 (6) CROSS EXAMINATION OF KENNETH P PARKER  
 (7) BY MS SMITH  
 (8) Q Now you were the deputy director of the Division of  
 (9) Commercial Fisheries for six years isn t that what you told  
 (10) us?  
 (11) A Yes  
 (12) Q And that then you became the director of the Division of  
 (13) Commercial Fisheries for another six years?  
 (14) A Yes  
 (15) Q All right And you ve talked to us today about commercial  
 (16) fisheries management and about the closure of some of the  
 (17) commercial fisheries in 1989?  
 (18) A Yes  
 (19) Q Are you aware sir that this case is brought by certain  
 (20) Native corporations and municipalities?  
 (21) A I understand that  
 (22) Q Native corporations are not allowed to have permits to be  
 (23) commercial fishermen are they?  
 (24) A That s correct  
 (25) Q And municipalities aren t allowed to have permits to be

Vol 13 2005

- (1) commercial fishermen are they?
- (2) A That s correct
- (3) Q The plaintiffs in this case don t have a claim for lost
- (4) commercial harvests in 1989 do they?
- (5) A No
- (6) Q And in fact they don t have a claim in any year in this
- (7) case for lost commercial harvest to your knowledge?
- (8) A To my knowledge no
- (9) Q Let s talk about the zero tolerance policy in 1989 You
- (10) testified that Exxon was invited to participate in the
- (11) development of that policy is that correct?
- (12) A I believe at the area level in Cordova there was meetings
- (13) that Exxon was invited and I m not sure if they participated
- (14) or not
- (15) Q Did Exxon ever criticize the zero tolerance policy to you
- (16) as director of commercial fisheries?
- (17) A No
- (18) Q Under the 1989 zero tolerance policy one of the concerns
- (19) was that fishing gear would be fouled by oil is that right?
- (20) A Yes
- (21) Q And that fish would get oiled either by the fouled gear or
- (22) being pulled up through the oiled water?
- (23) A That s correct
- (24) Q Does the Division of Commercial Fisheries put out an annual
- (25) fin fish management report each year?

Vol 13 2006

- (1) A Yes
- (2) Q And I know there s more than this but there s at least
- (3) one - one annually for Prince William Sound for Lower Cook
- (4) Inlet and for Kodiak?
- (5) A That s correct
- (6) Q And those reports are thick they re 150 200 pages and
- (7) they summarize among other things the yearly harvests in
- (8) each of those locations?
- (9) A They re smaller than this
- (10) Q Yes they are Now even with the zero tolerance policy in
- (11) effect in 1989 was there still a commercial harvest in Prince
- (12) William Sound?
- (13) A Yes there was
- (14) Q And it was larger than the 1988 harvest by almost ten
- (15) million fish?
- (16) A I believe so
- (17) Q Did the southwestern - you showed us the different
- (18) districts did the southwestern fishing district suffer the
- (19) most extensive oil impacts of any area affected by the spill?
- (20) A I believe so
- (21) Q It was closed in 1989 under the zero tolerance policy?
- (22) A Right It was closed In addition to the Eshamy and
- (23) Montague district as well as the Northern District was closed
- (24) for ten days right through the peak of the pink salmon
- (25) fishery

Vol 13 2007

- (1) Q In 1989 in the southwestern fishing district are you
- (2) aware that over 3 7 million pink salmon were harvested inside
- (3) the boom at the AFK Hatchery in Solomon Bay?
- (4) A Yes
- (5) Q And the waters inside the booms at the AFK Hatchery were
- (6) maintained clean clean and free of oil through the course of
- (7) the oil spill?
- (8) A That was my understanding I did not observe that
- (9) directly
- (10) Q In 1989 were special use areas created for subsistence
- (11) fishermen in Prince William Sound?
- (12) A I m not clear if I understand your question Special use?
- (13) Q Let me show you something I m going to show you DX3812
- (14) which is the Alaska Department of Fish and Game Division of
- (15) Commercial Fisheries Prince William Sound Area Annual Fin #
- (16) Fish
- (17) Management Report 1989 and I m going to ask you to take a
- (18) look at page 28 of this report
- (19) All right And do you have page 28 sir?
- (20) A Yes I do
- (21) Q Let me play with this for one second
- (22) These reports are not - any chance you guys can read
- (23) this? Not well right? Well I ll read it to you okay
- (24) It says many areas traditionally utilize for subsistence
- (25) were heavily oiled and special use areas within protected and
- (26) boomed bays including Eshamy Jackpot and Sawmill Bays
- (27) were

Vol 13 2008

- (1) opened by emergency order by the Department to provide
- (2) alternatives
- (3) In that context does that refresh your recollection that
- (4) special use areas were created for subsistence fishing fishing
- (5) in 1989 in Prince William Sound?
- (6) A Yes that s correct
- (7) Q Okay And I gather that was done as it says there to
- (8) provide subsistence fishermen with an alternative to their
- (9) usual fishing areas?
- (10) A Yes
- (11) Q And the special use included Eshamy Jackpot and Sawmill
- (12) Bays?
- (13) A Right
- (14) Q And Chenega Bay Village is in Sawmill Bay isn t that
- (15) right?
- (16) A I believe so I d have to see a map to be certain about
- (17) that
- (18) Q And the special subsistence use areas were set up in bays
- (19) that had been boomed?
- (20) A Yes
- (21) Q I d like to show you DX15374
- (22) This is a subsistence fishing emergency order Alaska
- (23) Department of Fish and Game Issued June 6th 1989 at
- (24) Cordova
- (25) And that was issued by James Brady ADF&G Area
- (26) Management
- (27) Biologist for Prince William Sound is that right?

Vol 13 2009

- (1) A Yes
- (2) Q And what is a subsistence fishing emergency order?
- (3) A All of our fisheries in the state are opened and closed by
- (4) emergency orders and that's a delegation of authority that is
- (5) given from the commissioner down to - through me to my
- (6) regional supervisors and then on down to the area biologists
- (7) so the area biologist has the authority to open and close
- (8) fisheries including subsistence fisheries as need basis
- (9) Q So based on that Mr Brady would have checked with you
- (10) before this came out?
- (11) A Well I believe I recall some discussion on this particular
- (12) issue but as long as it abided by our memorandum of
- (13) understanding and didn't conflict I would not object to his
- (14) action
- (15) Q Okay let me show you Page 2 of the document you have in
- (16) front of you and see if we can do any better on the - just as
- (17) bad right? I'll read it to you
- (18) Page 2 says at the bottom the alternative areas open to
- (19) harvest namely Eshamy Lagoon Jackpot Bay Lagoon and
- (20) Sawmill
- (21) and Crab Bays have not been oiled and are safe for the taking
- (22) of salmon for subsistence use Because no commercial fishing
- (23) is anticipated in the southwest district a harvestable surplus
- (24) of fish will exist and the taking of some of these fish by the
- (25) subsistence fishery is not expected to compromise escapement

Vol 13 2010

- (1) Do you agree with that statement?
- (2) A Yes
- (3) Q And also back in 1989 weren't the Copper River Flats
- (4) commercial fishing area opened to Tattilek Village subsistence
- (5) users to provide an alternative to their usual fishing area?
- (6) A Yes that's correct
- (7) Q And that's in eastern Prince William Sound an area of the
- (8) Sound that wasn't oiled?
- (9) A Yeah it's not within Prince William Sound proper It's
- (10) out on the tidal flats of the Copper River Delta and Bering
- (11) River
- (12) Q In your area management regions is it outside the Sound
- (13) region is that what you're saying?
- (14) A No it's in the management area but it's in a different
- (15) management district than Prince William Sound proper
- (16) Q Are you aware Mr Parker that according to the 1989
- (17) annual management report for Prince William Sound as a result
- (18) of the special accommodations that were made for subsistence
- (19) fishermen in 1989 subsistence harvests of salmon for Tattilek
- (20) and southwestern subsistence fisheries actually increased from
- (21) 1988 to 1989?
- (22) A I haven't looked at that specific data
- (23) Q Would it surprise you?
- (24) A It wouldn't surprise me
- (25) Q Okay I'm going to show you DX - okay you already have

Vol 13 2011

- (1) in front of you DX3812 that's the 1989 annual fin fish Can
- (2) you take a look at Page 31? And my question to you is Didn't
- (3) your division conclude in 1989 that overall every one of those
- (4) use areas were greatly restricted and changed total catches
- (5) were not affected and subsistence resource use increased for
- (6) the two areas?
- (7) A Yes that's the impression that was presented by the area
- (8) manager responsible for managing this fishery
- (9) Q Let's talk about 1990 and the zero tolerance policy and I
- (10) want to show you a plaintiff's exhibit It's 274 And I think
- (11) the copy you get has all of my highlighting in it so you'll
- (12) see exactly where I'm going
- (13) Okay and if you start on the second page of this exhibit
- (14) it says Memorandum of Understanding 1990 Commercial
- (15) Fisheries
- (16) Season Alaska Department of Fish and Game and Alaska
- (17) Department of Environmental Conservation Could you tell the
- (18) jury what this document is?
- (19) A Now this is again an agreement between the two agencies
- (20) directly involved in - in monitoring the spill and managing
- (21) the fisheries that is the Department of Environmental
- (22) Conservation and the Department of Fish and Game And this
- (23) just provides the direction to the two agencies and identifies
- (24) what actions each agency is going to take what their
- (25) responsibilities are going to be relative to making decisions

Vol 13 2012

- (1) Q Okay And if you take a look at - it's Page 3 of the
- (2) document but Page 2 of the memorandum where I've got all
- (3) the
- (4) yellow There is a list it's Roman numeral two A through J
- (5) and if you could briefly look at these Are these measures
- (6) that are set forth in this agreement to make sure that the 1990
- (7) commercial fishing season is a safe one?
- (8) A That's the intent
- (9) Q All right And I'm going to just quickly show you this
- (10) This also has very - this is the best copy we could find but
- (11) it's not very easily readable Let me give it a try I'm not
- (12) going to read it all but it has fishery management
- (13) activities A prior to the commercial season for each species
- (14) or species group e.g. herring crab shrimp salmon ADF&G
- (15) will collect fish samples for analysis for ADEC Maybe you can
- (16) explain to the jury how ADF&G was working with ADEC on this?
- (17) A Well we would create commercial fisheries testing hoping
- (18) to obtain samples of the fishery and then provide that to the
- (19) Department of Environmental Conservation for their evaluation
- (20) Q Okay And then it says in B ADEC will evaluate these
- (21) samples - and I'll be surprised if I get this right -
- (22) organoleptic - organoleptically?
- (23) A That's pretty good
- (24) Q Okay Determine biolevels and present samples to the
- (25) Federal Food and Drug Administration and National Marine

Vol 13 2013

- (1) C a potential fishing area will remain closed if samples  
 (2) of fish taken from the area are found by ADEC to be adulterated  
 (3) by oil  
 (4) D prior to the initial openings or subsequent fishing  
 (5) periods ADF&G will survey areas for the presence of oil and  
 (6) document the results of the survey – and it goes on and on and  
 (7) on all the way down to J – to I Let s see if I can get I  
 (8) on the screen  
 (9) ADEC will implement regulations regarding inspections  
 (10) monitoring and recordkeeping for fishing vessels tender  
 (11) vessels and processors ADEC will establish a vessel  
 (12) inspection system for vessels that work on oil spill related  
 (13) activities  
 (14) And J ADEC will provide activity for quality control  
 (15) personnel in processing facilities  
 (16) My question to you sir There are ten measures there and  
 (17) I didn t read them all so if you want to go back and look at  
 (18) them please feel free but were these ten measures  
 (19) implemented?  
 (20) A This was a preseason plan and it was the intent of the two  
 (21) agencies to implement this plan I don t think I could tell  
 (22) you that it was exactly followed in all situations but it was  
 (23) our objective to follow this plan  
 (24) Q Okay And do you know whether ADF&G collected fish  
 samples  
 (25) for analysis by ADEC prior to the commercial season for each

Vol 13 2014

- (1) species?  
 (2) A I don t know that to be a fact I know that we attempted  
 (3) to do that  
 (4) Q After all of these measures went forward or at least as  
 (5) many of them as did go forward throughout the whole of Prince  
 (6) William Sound isn t it a fact that in 1990 the vast majority  
 (7) of the commercial fisheries were open?  
 (8) A Yeah There was some small closures in a couple of  
 (9) fisheries due to the presence of oil on beaches but for the  
 (10) most part the fisheries were conducted in a more normal  
 (11) fashion  
 (12) Q Okay And let me show you DX3810 It s the Prince William  
 (13) Sound management area 1990 Annual Fin Fish Management  
 Report  
 (14) Alaska Department of Fish and Game and ask you please if  
 you  
 (15) can turn to Page 2 Let me read this  
 (16) The Department of the Fish & Game conducted extensive  
 beach  
 (17) surveys and collected fish that were provided to DEC – that s  
 (18) the same thing as ADEC right?  
 (19) A Uh huh  
 (20) Q – for inspection prior to commercial openings in the  
 (21) affected areas of the Sound Some minor beach areas  
 continued  
 (22) to pose an appreciable likelihood for fouling of fish gear and  
 (23) adulterating of catch and were closed for the 1990 season Two  
 (24) small beaches in the Eshamy district 3 5 miles of shoreline on  
 (25) northern LaTouche Island and the shoreline of Eleanor Ingot

Vol 13 2015

- (1) and Knight Island north of 60 degrees 25 minutes – how do you  
 (2) know that – north latitude were closed These closures did  
 (3) not result in any reduction in the harvest of fish Besides  
 (4) this the lingering effects of the oil spill had little impact  
 (5) on the conduct of the 1990 salmon season  
 (6) Do you agree that those were the closures as the result of  
 (7) the 1990 zero tolerance policy in the Sound?  
 (8) A Yes I do  
 (9) Q All right And the statement the second to the last  
 (10) sentence these closures did not result in any reduction in the  
 (11) harvest of fish do you agree with that?  
 (12) A I don t think I d have any reason to disagree with the  
 (13) staff s opinion on that  
 (14) Q Okay And then the last sentence says besides this the  
 (15) lingering effects of the oil spill had little impact on the  
 (16) conduct of the 1990 salmon season do you agree with that?  
 (17) A In the context of this paragraph yes  
 (18) Q Now the zero tolerance policy ended in 1990 didn t it?  
 (19) A Yes it did  
 (20) Q And to your knowledge were there any commercial fisheries  
 (21) in Prince William Sound that were closed in 1991 as a result of  
 (22) zero tolerance policy?  
 (23) A No  
 (24) Q 1992?  
 (25) A No

Vol 13 2016

- (1) Q 1993?  
 (2) A No  
 (3) Q Today?  
 (4) A I don t know about today  
 (5) Q Okay let s turn to the Lower Cook Inlet Now there were  
 (6) commercial fisheries that closed in 1989 in the Lower Cook  
 (7) Inlet because of the zero tolerance policy is that correct?  
 (8) A Yes and you re – you re using zero tolerance policy as  
 (9) just a term to describe the memorandum of understanding It  
 (10) actually wasn t a zero tolerance policy?  
 (11) Q Yes sir I am  
 (12) A Okay  
 (13) Q Okay And if you d like to explain that please feel  
 (14) free  
 (15) A If you want the Court to understand that basically  
 (16) Q Yes I do  
 (17) A When we – right after the spill we had a lot of dialogue  
 (18) with the industry and both the fishermen and processors to  
 (19) determine how we re going to act in light of the spill and how  
 (20) we re going to manage our fisheries And in Cordova some of  
 (21) the initial draft language that the local people came up with  
 (22) being our biologists and local fishermen they coined the term  
 (23) zero tolerance policy that under no circumstances should  
 (24) there be a chance that oiled fish would get on the market  
 (25) Well that kind of evolved to a memorandum of understanding

Vol 13 2017

- (1) that incorporated the terminology appreciable likelihood of  
 (2) fish being fouled of gear – fishing gear being fouled with  
 (3) oil or fish adulterated by oil So it s a completely different  
 (4) concept that the MOU the Memorandum Of Understanding  
 was not  
 (5) a guarantee that fish would not – oiled fish would not end up  
 (6) on the market It was our best shot that it – given the  
 (7) resources that we had between the agencies to minimize the  
 (8) likelihood of that occurring  
 (9) Q All right And when we call it zero tolerance policy it  
 (10) sounds like zero fish and as you said All right in the  
 (11) Lower Cook Inlet not all the commercial fisheries were closed  
 (12) in 1989 correct?  
 (13) A That s correct  
 (14) Q And do you have a recollection – I can show you the fin  
 (15) fish report – that despite what closures there were the total  
 (16) 1989 Lower Cook Inlet salmon catch was about 1 5 million fish?  
 (17) A I wouldn t have any reason to disagree with you if you ve  
 (18) taken those facts out of the national – out of the annual  
 (19) management report  
 (20) Q Let me show it to you anyway I want to ask you something  
 (21) in the follow up  
 (22) This is DX5748 It s the 1989 Lower Cook Inlet Area Annual  
 (23) Fin Fish Management Report and I just have one page I need to  
 (24) ask you about And it s – there s a figure but let s pass on  
 (25) that but it s page 87

Vol 13 2018

- (1) This is Appendix A 14 Lower Cook Inlet Total Salmon Catch  
 (2) By District 1960 through 1989 And if you go all the way down  
 (3) to 1988 the 1988 total catch was 1 571 855 and the 1989 was  
 (4) 1 485 484 is that correct?  
 (5) A Yes  
 (6) Q So the 1989 catch total was about the same as 1988?  
 (7) A That s correct  
 (8) Q Now focusing on subsistence no subsistence fisheries were  
 (9) closed in the Lower Cook Inlet in 1989 as the result of the  
 (10) zero tolerance policy were they?  
 (11) A I m not sure  
 (12) Q Okay let me show you –  
 (13) A I don t recall  
 (14) Q Let me show you PX794 which is plaintiffs exhibit called  
 (15) Oil Spill Impacts Let me ask you to take a look at page 5  
 (16) MR STOLL This is from – I m sorry  
 (17) MS SMITH This is from PX plaintiffs exhibit –  
 (18) oh you re asking each other  
 (19) MR STOLL No I m asking you who is this from who  
 (20) prepared this?  
 (21) MS SMITH I don t know it s your exhibit I m  
 (22) going to ask him that  
 (23) BY MS SMITH  
 (24) Q Did you prepare this exhibit?  
 (25) A One of my staff did Herman Savikko in headquarters

Vol 13 2019

- (1) office  
 (2) Q Have you take a look at page five under Cook Inlet Kodiak  
 (3) and Chignik does it say there s been no subsistence fisheries  
 (4) closures because of oil?  
 (5) A That s correct  
 (6) Q Does that refresh your recollection that there weren t any  
 (7) closures of subsistence fisheries in the Lower Cook Inlet?  
 (8) A Yes As I recall we want to give subsistence fishermen an  
 (9) opportunity to sort out areas where they could harvest and fish  
 (10) for their subsistence needs and because you know the islands  
 (11) were – are so diverse these areas are so diverse that  
 (12) potentially they could do a better job of finding areas that  
 (13) were not impacted than we could dictate in a very complex  
 (14) emergency order  
 (15) Q Okay And at the risk of yet again subjecting myself to  
 (16) geographical ridicule is the Lower Cook Inlet part of the  
 (17) Kenai?  
 (18) A Kenai Peninsula?  
 (19) Q Yes  
 (20) A Yes  
 (21) Q Thank you  
 (22) The two Native corporations in the Lower Cook Inlet that  
 (23) are plaintiffs in this case are English Bay and Port Graham?  
 (24) A Okay  
 (25) Q Does that sound right to you?

Vol 13 2020

- (1) A I would assume so  
 (2) Q Okay Let s take a look at this subsistence harvest  
 (3) figures for Port Graham and English Bay I m going to give you  
 (4) a copy of DX3811 and that is the 1990 Lower Cook Inlet Area  
 (5) Annual Fin Fish Management Report Alaska Department of Fish  
 (6) and Game I ll give you a page in a minute sir  
 (7) Okay take a look at tables 28 and 29 It s page 104 and  
 (8) 105 I m going to turn to 104 first and this says at the top  
 (9) Subsistence Salmon Catch in Numbers of Fish by Species for  
 the  
 (10) Village of Port Graham Lower Cook Inlet 1981 to 1990 I m  
 (11) going to put this up here for a minute like this  
 (12) Taking a look at this it shows that the 1989 total salmon  
 (13) subsistence catch decreased from 1582 – 1 582 fish to 1 267  
 (14) fish right?  
 (15) A Yes  
 (16) Q But it didn t go to zero did it?  
 (17) A No  
 (18) Q And in fact even the 1989 catch was greater than the 1986  
 (19) catch is that right?  
 (20) A That s correct  
 (21) Q And if you take a look at 1990 the total subsistence  
 (22) salmon catch from Port Graham was 2 559 fish is that right?  
 (23) A Yes that s correct  
 (24) Q So one year after the spill Port Graham had the largest  
 (25) subsistence salmon harvest since 1981 true?

Vol 13 2021

- (1) A That s what this data indicates  
 (2) Q Okay let s look at the next page which is page 105 That  
 (3) says at the top Appendix Table 28 Subsistence Salmon Catch  
 (4) in Number of Fish by Species for the Village of Port Graham  
 (5) Lower Cook Inlet 1981 through 1990 and let s take a look at  
 (6) the relevant years Oh that s the same one? Sorry Thanks  
 (7) Tom  
 (8) Okay let s go to table 29 and change it to the Village of  
 (9) English Bay Subsistence Salmon Catch in Number of Fish by  
 (10) Species for the Village of English Bay Lower Cook Inlet 1981  
 (11) through 1990 And you see in 1988 it was 2 222 fish There  
 (12) was a decrease in 1989 right to 1 579 fish?  
 (13) A That s correct  
 (14) Q But it came back in 1990 to 3 107 fish?  
 (15) A Yes  
 (16) Q And that was English Bay s largest subsistence salmon  
 (17) harvest in the past eight years?  
 (18) A It looks like 1982 was larger  
 (19) Q Right since 1982?  
 (20) A 4 788  
 (21) Q Exactly since 1982?  
 (22) A Yes  
 (23) Q Isn t it true that in 1990 the zero tolerance policy  
 (24) required only minor adjustments to ADF&G s management  
 strategy  
 (25) for the outer district because the results of the test fishing

Vol 13 2022

- (1) all came back negative for oil contamination?  
 (2) A That s my recollection  
 (3) Q And you said earlier the zero tolerance policy was not  
 (4) renewed for 1991?  
 (5) A That s correct  
 (6) Q So no commercial fishing closures as the result of zero  
 (7) tolerance policy in 91?  
 (8) A No  
 (9) Q 92?  
 (10) A Yes  
 (11) Q Yes no? Yes no closures?  
 (12) A Well right  
 (13) Q 93 and today?  
 (14) A Yes  
 (15) Q Let s take a look at Kodiak Are you aware that the Native  
 (16) corporations who are the plaintiffs here don t have any  
 (17) parcels of land on Kodiak?  
 (18) A No I don t  
 (19) Q You don t know one way or the other?  
 (20) A No I don t  
 (21) Q And the municipalities don t have a claim for lost  
 (22) subsistence fishing on Kodiak do they?  
 (23) A I wouldn t think so  
 (24) Q You told us about 1989 commercial fishery closures on  
 (25) Kodiak?

Vol 13 2023

- (1) A Uh huh  
 (2) Q All right and I m going to show you DX5766 Why is it  
 (3) that the Kodiak report s fatter than all the others?  
 (4) A Wordy biologists  
 (5) Q This is the Kodiak Management Area Commercial Salmon  
 Annual  
 (6) Management Report 1992 And if you could turn to Page 15 -  
 (7) Table 15 on Page 41  
 (8) MR STOLL What is -  
 (9) MS SMITH We can t read it very well It s the best  
 (10) copy we can find I ll tell you what it says It says Table  
 (11) 15 Subsistence Salmon Fishery Harvest Summary by Species  
 by  
 (12) Year Kodiak Management Area in 1962 through 1992  
 (13) MR STOLL Your Honor there s nothing about  
 (14) subsistence on Kodiak that s involved in this case  
 (15) THE COURT So what is that objection?  
 (16) MR STOLL This objection?  
 (17) THE COURT Counsel what s the relevance?  
 (18) MR STOLL Maybe we should take this up -  
 (19) THE COURT Just give me a brief statement of what you  
 (20) think the relevance is  
 (21) MS SMITH We ve heard about the closure of  
 (22) commercial harvest on Kodiak I assume there s going to be a  
 (23) claim for lost subsistence  
 (24) THE COURT Apparently not counsel That s  
 (25) stipulated right?

Vol 13 2024

- (1) MR STOLL We re not making any kind of lost  
 (2) subsistence on Kodiak That s not a claim by - our claim is  
 (3) the land land claim Haven t heard any testimony about it  
 (4) MS SMITH I guess if the - if the plaintiffs are  
 (5) conceding that none of the Native corporations subsist on -  
 (6) conduct subsistence harvesting of fish on Kodiak then I will  
 (7) not ask these questions  
 (8) MR STOLL Your Honor we don t represent any Native  
 (9) corporations  
 (10) THE COURT We re going to do it out of the presence  
 (11) of the jury counsel You were right I should have sent the  
 (12) jury out  
 (13) If this room is vacant just go on into this room and I ll  
 (14) bring you right back in If that s an if I d like to -  
 (15) actually I hate to do this but you can stand out there for a  
 (16) minute This is not going to take long  
 (17) (Jury out at 11 31 a m )  
 (18) MS SMITH I guess we don t have to come up there  
 (19) right?  
 (20) THE COURT No you don t  
 (21) MS SMITH Your Honor at some point we heard  
 (22) testimony by one of the Natives I forget if it was a CEO of  
 (23) Chugach or Chenega saying that people were coming down to  
 (24) Kodiak to subsistence fish and which would be a far piece for  
 (25) some of these people In addition there s this fear and

Vol 13 2025

- (1) uncertainty theme –  
 (2) THE COURT That s the theme I thought it might be  
 (3) relevant on I mean isn t this the very same issue that the  
 (4) plaintiffs have been arguing for all the way through this case  
 (5) it s not just the commercial fishery it s also the subsistence  
 (6) fishery and all the uncertainty that lessens the land values  
 (7) MS SMITH Yes that s what I heard yesterday I  
 (8) mean it seems to me –  
 (9) THE COURT Yesterday and the yesterday before that  
 (10) and the yesterday before that I mean isn t it the same  
 (11) thing so isn t it relevant?  
 (12) MR STOLL Well I think Your Honor there s  
 (13) certainly – one of our themes is that there was uncertainty in  
 (14) the marketplace and the – in both Kodiak and Prince William  
 (15) Sound and Lower Cook Inlet as to what was going to happen to  
 (16) these fisheries  
 (17) THE COURT Right And isn t the subsistence part of  
 (18) the fishery even if it s a small part part of the great  
 (19) scenario of uncertainty you re talking about that s lessened  
 (20) the land values both in Kodiak and elsewhere on the plaintiffs  
 (21) land?  
 (22) MR STOLL I think you could argue that So  
 (23) withdrawn  
 (24) THE COURT So aren t you conceding that this is  
 (25) relevant?

Vol 13 2026

- (1) MR STOLL Yes Your Honor  
 (2) THE COURT All right the objection s overruled  
 (3) MR PETUMENOS Good argument counsel  
 (4) MS SMITH I think I won and lost at the same time  
 (5) but that s okay  
 (6) (Jury in at 11 33 a m )  
 (7) THE COURT You can be seated  
 (8) I d like the jury to recall that this is the first time  
 (9) I ve been right in my estimate of how much time something  
 would  
 (10) take I figure this is going to – this is the start of a  
 (11) trend  
 (12) BY MS SMITH  
 (13) Q All right we re talking about DX5766 which is that big  
 (14) fat Kodiak management report and this is Table 15 It s very  
 (15) unclear up here but it says Subsistence Salmon Fishery  
 (16) Harvest Summary by Species by Year Kodiak Management  
 Area  
 (17) 1962 through 1982 These numbers are really hard to read  
 But  
 (18) you ve got the original in front of you And doesn t it show  
 (19) that the salmon subsistence harvests on Kodiak increased from  
 (20) 1988 to 1989 from 15 964 – did we get my hair? How does it  
 (21) look okay? – to 17 605?  
 (22) A In total it does indicate that  
 (23) Q All right And the harvest increased again quite  
 (24) substantially in 1990 from 17 605 to 29 009 is that right?  
 (25) A That s what s indicated yes

Vol 13 2027

- (1) Q And in 91 it went up again to 32 423?  
 (2) A Yes  
 (3) Q And in 92 it went down slightly to 31 364 is that right?  
 (4) A Yes  
 (5) Q And isn t it a case if you take a look they have the –  
 (6) the average harvest see if I can – the ten year average and  
 (7) the 30 year average is right here 1962 to 1992 that the 1991  
 (8) salmon subsistence harvest was the highest reported  
 subsistence  
 (9) harvest on Kodiak in the last 30 years?  
 (10) A Yes  
 (11) Q Let s talk for a moment about how the pink salmon fared in  
 (12) the two years after the oil spill Pink salmon make up by far  
 (13) the majority of the Sound salmon harvest don t they?  
 (14) A Yes  
 (15) Q And they have a two year life cycle?  
 (16) A Yes  
 (17) Q And in the 1988 brood year salmon the juveniles that were  
 (18) growing and feeding in the Sound in 1989 came back to spawn  
 or  
 (19) be caught by fishermen in 1990 is that right?  
 (20) A The 88 brood year is an even year cycle so it would –  
 (21) those – the offspring from that spawning would come back in  
 (22) 90  
 (23) Q Okay And they came back in 1990 in record numbers right?  
 (24) A I believe so  
 (25) Q In fact the pink salmon return in 90 was the largest

Vol 13 2028

- (1) record catch in history?  
 (2) A Yes  
 (3) Q And the pinks that were larvae and fed as larvae in 1989  
 (4) they returned to be caught or to spawn in 1991 right?  
 (5) A That s correct  
 (6) Q And they were the second largest return in history?  
 (7) A Yeah that s correct  
 (8) Q Okay Now I want to talk to you just a little bit more  
 (9) about the commercial harvest versus the subsistence harvest  
 (10) The years of the bigger commercial harvests are not necessarily  
 (11) the same year – the same big years for subsistence are they?  
 (12) In other words you have a big commercial harvest do you  
 (13) necessarily have a big subsistence harvest and vice versa?  
 (14) A No The subsistence fishery is more dependent upon need  
 (15) and the number of participants in the fishery as well as  
 (16) availability of the salmon so there s a couple of factors that  
 (17) play into it and it s not always tied to – a record  
 (18) commercial catch is going to equate to a record subsistence  
 (19) catch because there are different controlling factors but  
 (20) certainly the availability of fish to be caught is important if  
 (21) you have a large run then the users are going to be more  
 (22) successful in acquiring the fish that they want for the – to  
 (23) meet the subsistence needs  
 (24) Q Okay I m going to take my first foray into this thing  
 (25) I m going to show you DX15456 That s so cool Okay

Vol 13 2029

- (1) And this is the commercial and subsistence harvest of
- (2) salmon for Kodiak 88 to 92 in both cases And if you look
- (3) at the commercial harvest this is by number of fish Say for
- (4) 1991 almost 24 million salmon were caught commercially in the
- (5) commercial harvest in 1991 you see that?
- (6) A Yes
- (7) Q And if you look over on the subsistence I mean the scale
- (8) is just a lot smaller It s - I think it eats 33 000 fish?
- (9) A Yes that s correct
- (10) Q And the trends also are different For example if you
- (11) look at 1989 it went down for commercial salmon harvests I
- (12) guess I can t point to that on there because it s not there
- (13) but I ll try it I ll try it once Highlight and then color
- (14) on
- (15) All right if you look at 1989 it went down for the
- (16) commercial harvest but if you look at 1989 for subsistence it
- (17) went up a little bit is that right?
- (18) A That s correct
- (19) Q And if you take a look at 1992 It went way down for
- (20) commercial but it was still very high for subsistence is that
- (21) right?
- (22) A That s correct
- (23) Q And I m going to show you DX15454 is that it? Oh this
- (24) doesn t have a bar code That s all right it ll work the
- (25) old fashioned way And this is the commercial and subsistence

Vol 13 2030

- (1) harvest of salmon for the Lower Cook Inlet
- (2) A That s what is indicated here
- (3) Q Okay and again the numbers are markedly different for the
- (4) commercial harvest In 1988 it s about 1 5 million fish and
- (5) for the subsistence harvest it looks like it s around maybe 33
- (6) 3500 fish?
- (7) A That s correct
- (8) Q And again the trends don t match either 1991 was a
- (9) down year for commercial harvest in Lower Cook Inlet but it
- (10) was a year that trended up for subsistence harvesting?
- (11) A That s what s indicated
- (12) Q Okay And let me show you the last one of these It s -
- (13) it s DX15455 and that is commercial and subsistence
- (14) and Tatitlek harvest of salmon And again we see the
- (15) comparison say of 1990 it s practically off the charts
- (16) commercially and it s at least 42 43 million You agree with
- (17) that?
- (18) A That s correct
- (19) Q And over on the subsistence side 90 is very low under -
- (20) well under 500 fish?
- (21) A That s correct
- (22) Q Okay But if you look at the trending 92 goes down
- (23) commercially and is still very very high for subsistence is
- (24) that right?
- (25) A In terms of total catch that s correct

Vol 13 2031

- (1) Q Yeah so even if the commercial catch is low one year that
- (2) doesn t mean that the subsistence fishermen won t be able to
- (3) catch their harvest is that right?
- (4) A Well this data indicates the total number of fish
- (5) harvested It doesn t address the issue of catch per unit of
- (6) what is the individual subsistence fisherman take but in terms
- (7) of totaled catch that s the - that s what s indicated
- (8) Q Okay The oil spill was not the first time the commercial
- (9) fisheries had ever been closed right?
- (10) A In what respect?
- (11) Q Well there had been closures of commercial fisheries
- (12) before the oil spill?
- (13) A Due to ?
- (14) Q Due to any reason
- (15) A Sure we open and close our fisheries normally through a
- (16) season to achieve our management objectives
- (17) Q Okay And the Department of Fish and Game closed
- (18) commercial fisheries at Prince William Sound in 1988 to purse
- (19) seining to make sure that enough pink salmon got up their
- (20) streams?
- (21) A In what fishery?
- (22) Q All I know is Prince William Sound
- (23) A There are - in a normal season we would have closures to
- (24) manipulate the harvest such that it would be balanced with our
- (25) escapement

Vol 13 2032

- (1) Q So you would be monitoring it and if - depending on what
- (2) was going on you could open or close?
- (3) A Yes that s correct
- (4) Q Now I d like to talk to you just for a minute about
- (5) escapement and overescapement And first I have sort of a
- (6) philosophical question for you Setting optimal escapements is
- (7) not an exact science is it?
- (8) A Its the best we have at this point in time There are
- (9) several techniques that are involved and the exactness is
- (10) really related to the exactness of the data
- (11) Q And do optimal escapement goals change based on
- (12) ADF&G s
- (13) experience?
- (14) A Yes
- (15) Q And based on prior years experience for example the
- (16) escapement goals for sockeye were raised three times in the
- (17) Kenai between the late 70s and the mid 80s?
- (18) A In the Kenai River that s correct
- (19) Q Were Ken Florey and Charles Meacham members of the
- (20) Commercial Fisheries Division in Anchorage?
- (21) A Yes
- (22) Q I d like to show you plaintiffs Exhibit 769 It s a
- (23) memorandum dated June 18 1989 from Ken Florey and
- (24) Charles
- (25) Meacham to yourself as well as Doug Eggers And if you take

Vol 13 2033

- (1) escapement for any system in Alaska? Being familiar with the  
 (2) sockeye data from Cook Inlet Prince William Sound and Bristol  
 (3) Bay we certainly do not have sufficient confidence in spawner  
 (4) recruit smolt euphotic volume -  
 (5) A Euphotic  
 (6) Q Thank you okay - and any other theoretical means of  
 (7) describing salmon production to the extent we would want to  
 (8) manipulate escapements beyond what can be accomplished  
 through  
 (9) management of a common property commercial fishery  
 (10) Do you recall receiving this?  
 (11) A Yes I do  
 (12) Q And what was your reaction to that comment?  
 (13) A Well let me go back This was a staff memorandum to me  
 (14) and the chief fisheries scientist Doug Eggers explaining some  
 (15) opinion about an overescapement policy that we were  
 discussing  
 (16) internally It s a policy that was never adopted by the  
 (17) department and they ve raised certain objections through the  
 (18) memo to us And in that particular paragraph that you just  
 (19) read into the record I think they re stating their personal  
 (20) feelings about that issue and I for one don t agree with  
 (21) what they re trying to say here I think it can be mis -  
 (22) misinterpreted from what they re saying as well  
 (23) Do you ever really know what the optimum or maximum  
 (24) escapement for any system in Alaska is? Well like I said  
 (25) before it depends on the quality of the data how close you re

Vol 13 2034

- (1) getting in on certain escapement objectives But in a lot of  
 (2) systems we know a lot about how they re performing and how  
 (3) they re functioning relative to the size of the escapements  
 (4) that go in In other systems we don t know much because we  
 (5) just don t have the data So I think this is an  
 (6) oversimplification of a very complex issue  
 (7) Q Okay If you go down two paragraphs it says we are  
 (8) concerned that we may be overreacting - meaning ADF&G I  
 (9) gather - there is no precedent for the Department to respond  
 (10) to overescapement We have had overescapement in many  
 (11) instances in the past and not responded in this manner  
 (12) Do you agree with that?  
 (13) A Well I m not sure what you mean What part am I  
 (14) agreeing - did you want me to agree with?  
 (15) Q That we have had overescapement in many instances in the  
 (16) past and not responded in this manner  
 (17) A Well we were - what they re relating to of course is  
 (18) the draft policy that would specify the Department step in and  
 (19) prevent an overescapement by conducting a fishery within the  
 (20) confines of a river as an example to harvest the surplus  
 (21) fish Well there s a lot of reasons not to do that both  
 (22) biologically and socially So I guess I m still not tracking  
 (23) your question  
 (24) Q Let me ask you this was it ultimately decided that the  
 (25) Department would not implement the draft overescapement  
 policy

Vol 13 2035

- (1) that is contemplated?  
 (2) A Oh that s correct yes  
 (3) Q And why was that?  
 (4) A Because what I just said that it conflicted with a lot of  
 (5) biological objectives set out for a particular river as well  
 (6) as allocated management plans established by the Board of  
 (7) Fisheries that decides who gets what share of the fish that are  
 (8) returning in those rivers There s a lot of factors and many  
 (9) of them were laid out in this memo  
 (10) Q But the ADF&G could have taken and considered taking  
 steps  
 (11) to deal with 1989 overescapement?  
 (12) A I don t believe so  
 (13) Q The draft policy wasn t a consideration of taking steps to  
 (14) deal with -  
 (15) A We had some in house discussion It was never approved by  
 (16) my office or the commissioner s office  
 (17) Q Was there ever a decision made not to take any steps to  
 (18) deal with 1989 overescapement?  
 (19) A In what respects? I guess -  
 (20) Q Let me ask - let me ask the positive of this question  
 (21) Did ADF&G do anything in 1989 to prevent overescapement?  
 (22) A We - we had the ability to manage our fisheries normally  
 (23) under the confines of the memorandum of understanding sure  
 (24) we d take actions to regulate the escapement relative to our  
 (25) objectives our stated objectives but in situations where we

Vol 13 2036

- (1) could not conduct a normal fishery the escapements occurred  
 (2) beyond our objectives  
 (3) Q And there wasn t any special catch or terminal terminal  
 (4) fishery to try to -  
 (5) A No I think in some situations we liberalized some  
 (6) in river fisheries like the personal use fishery in the Kenai  
 (7) and things like that if that s what you re getting at  
 (8) Q What about places that had weirs like Red Lake? Was there  
 (9) any discussion of closing the weir at Red Lake?  
 (10) A I m sure there was discussion but that is - that wasn t  
 (11) an option  
 (12) Q And can you tell the jury what a weir is?  
 (13) A Yeah A weir is a fence basically that s put in the  
 (14) mouth of a stream to allow the water to pass through it but  
 (15) the fish are obstructed from moving on upstream and they re  
 (16) kind of guided into a small gate area that can be opened and  
 (17) closed so that people on the weir can open that during certain  
 (18) times of the day or tide and count the salmon that are  
 (19) swimming through this narrow gate and get an accurate count  
 of  
 (20) the escapement  
 (21) Q Do you agree that there has been overescapement in many  
 (22) instances in Alaska in the past?  
 (23) A Escapements move our objectives yes  
 (24) Q And isn t it true that you weren t certain in 1989 that  
 (25) overescapement wasn t to the benefit of the fisheries?

Vol 13 2037

- (1) A I think you re going to have to narrow that down Relative  
 (2) to what fishery instance?  
 (3) Q Do you remember having your testimony taken in federal  
 (4) court on June 22nd of this year?  
 (5) A Not every word  
 (6) Q I can t believe it Okay you have your transcript up  
 (7) there Can you take a look at page 4553?  
 (8) MR STOLL That was page 4553  
 (9) MS SMITH Yes lines 19 through 22 And it says  
 (10) Question You also felt did you not that you weren t certain  
 (11) that it was not to the benefit of fishery - fishery in any  
 (12) case that you knew about to have the escapement occur?  
 (13) Answer that s correct  
 (14) Does that refresh your recollection on that point?  
 (15) A Well I d have to read back through the material and  
 (16) discern what - what system we were talking about or - but  
 (17) yeah I agree with myself  
 (18) Q Okay And isn t it the case that in some situations  
 (19) overescapement has led to an increase in escapement goals for  
 (20) future years?  
 (21) A That s correct  
 (22) MS SMITH Thank you I have nothing further  
 (23) THE COURT Mr Stoll?  
 (24) MR STOLL Yes I have some questions  
 (25) MS SMITH Your Honor before - I m sorry I ll do

Vol 13 2038

- (1) it now because otherwise I ll forget We wanted to move the  
 (2) admission of some of what we just saw here Why don t I do  
 (3) this slowly and we ll see what we have  
 (4) Page 28 of DX3812  
 (5) MR STOLL Could we do this later Your Honor? I  
 (6) think it is -  
 (7) MS SMITH That s fine  
 (8) THE COURT It might take some time counsel I ll do  
 (9) it when we take a break  
 (10) MS SMITH All right thank you  
 (11) REDIRECT EXAMINATION OF KENNETH P PARKER  
 (12) BY MR STOLL  
 (13) Q Mr Parker is it safe to say that the issue of escapement  
 (14) varies from stream to stream?  
 (15) A In terms of the -  
 (16) Q In other words whether there s overescapement you can t  
 (17) just say well we got an overescapement problem for the State  
 (18) of Alaska it varies with each region  
 (19) A Yes And to the degree -  
 (20) Q As to whether there s -  
 (21) A To the degree of the escapement that it exceeds an optimum  
 (22) level established optimum level  
 (23) Q And so it - for each - each area each stream or each  
 (24) stream system you have to study what the - whether there s  
 (25) overescapement or not?

Vol 13 2039

- (1) A That s correct  
 (2) Q You can t just have one general rule for the whole region  
 (3) or whole state for that matter?  
 (4) A Well obviously different systems have different  
 (5) objectives escapement objectives depending upon the habitat  
 (6) available and the rearing capacity of the lakes that are  
 (7) involved and so on  
 (8) Q By that you mean that some lakes will have a greater  
 (9) capacity to provide food for the fish in that season and in  
 (10) that - excuse me in that lake than another area?  
 (11) A Certainly  
 (12) Q And so the concern of an area manager in Anchorage as to  
 (13) not having an overescapement problem in his area may be  
 (14) completely different from an area manager in Kodiak or Prince  
 (15) William Sound?  
 (16) A That s correct  
 (17) MR STOLL And since counsel brought up Red Lake  
 (18) could we have Exhibit 333 please? Plaintiffs Exhibit 333  
 (19) BY MR STOLL  
 (20) Q Now the Red Lake area in Kodiak is one of the largest  
 (21) spawning areas or - well spawning areas for red salmon in  
 (22) Kodiak isn t that correct?  
 (23) A That s correct  
 (24) Q And it s one of the largest in all of Alaska for that  
 (25) matter isn t that right?

Vol 13 2040

- (1) A Yes  
 (2) Q Okay Now in 1989 the escapement goal was  
 (3) approximately  
 (4) 250 000 fish for Red Lake Does that sound about right to you?  
 (5) A That s correct yeah  
 (6) Q And in fact because of the closures of the fishing  
 (7) season a lot more fish got into the Red Lake tributaries is  
 (8) that correct?  
 (9) A That s correct  
 (10) Q And would it surprise you if the number was three times the  
 (11) escapement goal?  
 (12) A No it wouldn t  
 (13) Q So you said that it was - and that s depicted on this  
 (14) exhibit 333? Is that depicted on this exhibit?  
 (15) A Yeah that s what s indicated here You can see just by  
 (16) the height of the bars that the actual escapement is about  
 (17) three times the goal  
 (18) Q And so what - what can that - what does that do to the  
 (19) food in Red Lake?  
 (20) A Well I would assume that it would have pretty dramatic  
 (21) impacts on the competition between rearing fry sockeye in that  
 (22) lake as well as other things  
 (23) Q Now you said that it was not an option to ADF&G to close  
 (24) the weir on the tributaries to Red Lake Why is that?  
 (25) A Well that would essentially remove a component of the  
 spawning run from the stock and within a - within a stock of

Vol 13 2041

- (1) salmon You have early returning fish midtiming returning  
 (2) fish and late returning fish And if you just slam the door  
 (3) you re going to eliminate that last part of the genetic  
 (4) diversity of that stock from participating in spawning so you  
 (5) have a biological concern that by slamming that door shut the  
 (6) weir you re eliminating a valuable component of that genetic  
 (7) stock  
 (8) Q Now counsel mixed up pink salmon and red salmon and  
 then  
 (9) had some charts that showed all all number of fish caught Do  
 (10) you recall those? He just said salmon  
 (11) A Yeah we were talking in terms -  
 (12) Q She didn t specify which were red and which were pink and  
 (13) so on  
 (14) A No we weren t looking at by species we were looking at  
 (15) total fish  
 (16) Q That was the exhibits that she was showing you?  
 (17) A Yes  
 (18) Q And red salmon which are involved in Red Lake isn t -  
 (19) A That s correct sockeye  
 (20) Q Sockeye red salmon are the principal and sockeye salmon  
 (21) are the principal salmon in terms of the most valuable harvest  
 (22) in Kodiak isn t that correct?  
 (23) A That s correct  
 (24) Q And sockeye salmon have a much more complex life cycle  
 than  
 (25) do pink salmon am I correct there?

Vol 13 2042

- (1) A Yes that s correct  
 (2) Q And can you tell the jury why that is?  
 (3) A Well pink salmon have a two year life cycle As they  
 (4) mature they come into their home streams later deposit their  
 (5) eggs in late summer and those eggs emerge from the gravel  
 (6) during the winter and early spring and then the fry continue  
 (7) on out almost immediately into the - into the marine  
 (8) environment into the saltwater And then they develop as  
 (9) fingerlings and imminently move out into the ocean open  
 ocean  
 (10) for feeding for another winter before they return as adults  
 (11) Sockeye have a much more complex life cycle They can rear  
 (12) in fresh water from one to three years and then the smolt move  
 (13) out of the fresh water environment into the marine environment  
 (14) and they can be in the marine environment from one to four  
 (15) years So you have all kinds of different combinations of  
 (16) their life in fresh water and saltwater And what we term age  
 (17) class at maturity age of maturity so in any one return a  
 (18) year s return of sockeye could be composed of several different  
 (19) age classing from different spawnings Does that answer your  
 (20) question?  
 (21) Q I think so So does this explain some of the reasons why  
 (22) it was not practical to close the weir at Red Lake because you  
 (23) have these different years of fish going through the system at  
 (24) that time?  
 (25) A Yeah that s correct And without - I haven t looked at

Vol 13 2043

- (1) that data but I would - I would guess that - I don t want to  
 (2) guess but I would say that it s possible that certain age  
 (3) classes would dominate the later part of that run so  
 (4) potentially if you slam that door shut you could eliminate a  
 (5) certain age class from participating in the reproduction of  
 (6) that stock  
 (7) Q You had to leave the weir open at Red Lake?  
 (8) A Yeah  
 (9) Q And you said that the data varied from area to area in  
 (10) other words whether there was a lot of data or not a lot of  
 (11) data  
 (12) A That s correct  
 (13) Q And at the weir - that s where they count the number of  
 (14) fish that are going through and so on?  
 (15) A Yes the weir is used to enumerate the fish that have  
 (16) escaped the fishery that are moving into the stream for  
 (17) spawning  
 (18) Q Now in Red Lake and Kodiak there s a lot of data isn t  
 (19) that correct?  
 (20) A That s correct  
 (21) Q In fact the weir at Red Lake I think was constructed I  
 (22) think in the early 20s 1920s isn t that -  
 (23) A That s my recollection  
 (24) Q So in Kodiak you re able to have a lot of information a  
 (25) lot of knowledge about what - for setting escapement goals is

Vol 13 2044

- (1) that a fair statement?  
 (2) A Relative to many other systems it was a pretty good  
 (3) situation for determining optimum escapement levels and  
 success  
 (4) of various escapements  
 (5) Q And you ve - and you also have a lot of data and a lot of  
 (6) information for Prince William Sound isn t that correct?  
 (7) A For some of the sockeye systems in Prince Willam Sound  
 we  
 (8) do We have systems that are weired that have been weired for  
 (9) a number of years and it depends on the species and the  
 (10) systems that are involved  
 (11) Q Now counsel talked a lot about subsistence fishing and the  
 (12) catches the number of fish that were caught by subsistence  
 (13) fishermen was up in certain years and I was - I noted that in  
 (14) some of the areas that they talked about On the one hand you  
 (15) had run sizes that were in tens of millions of fish?  
 (16) A Yes  
 (17) Q And then you had subsistence fish and she made a big point  
 (18) of the fact that the count went from 1 000 to - it was 1 000  
 (19) or 1200 or 1400?  
 (20) A Yes  
 (21) Q It s not one million to 40 million or 50 million or 60  
 (22) million is it?  
 (23) A That s right That s why it s very dependent upon the  
 (24) number of people that are participating in those subsistence  
 (25) fisheries their success rate what the actual subsistence

Vol 13 2045

- (1) catch is going to turn out  
 (2) Q So this sort of mixing apples and oranges between the  
 (3) subsistence catch and the other I mean when you're talking  
 (4) about tens of millions versus hundreds of thousands or  
 (5) millions things like that?  
 (6) A You have a number of controlling factors in the commercial  
 (7) fishery as opposed to the subsistence fishery  
 (8) Q I want to talk to you a little bit ask you some questions  
 (9) about the concern of a lot of people in 1989 for the closing of  
 (10) these seasons and as I understand your testimony there was  
 (11) concern that the - that there would be oil that would actually  
 (12) get on the outside of the fish - one of the concerns was  
 (13) actually getting globules of oil or a sheen or whatever on the  
 (14) outside of fish because nets would be fouled and they would  
 (15) touch the fish was that a -  
 (16) THE COURT Don't answer  
 (17) MS SMITH I just object no foundation I think his  
 (18) testimony is what it is but I didn't hear that  
 (19) Also I worry about this concern on the part of the  
 (20) people That's hearsay I don't know what people we're  
 (21) talking about  
 (22) MR STOLL I'll rephrase the question  
 (23) THE COURT All right  
 (24) BY MR STOLL  
 (25) Q What was the concern with respect to oiled gear as it

Vol 13 2046

- (1) related to salmon or herring in Prince William Sound or Kodiak  
 (2) for that matter?  
 (3) A Well the concern is once a gillnet or purse seine web is  
 (4) fouled that if you continue fishing you can contaminate other  
 (5) catch that perhaps was taken in a totally clean area so you  
 (6) would kind of compound the problem by allowing gear that was  
 (7) fouled into other fishing areas to continue harvesting salmon  
 (8) because you could have a transmission of oil from the gear to  
 (9) the surface of the fish  
 (10) Q Now maybe the jury knows this but I'm just doing this for  
 (11) the record and that is that when they put out - commercial  
 (12) fishermen put out nets and they bring in the nets they bring  
 (13) in thousands of fish at a time don't they?  
 (14) A The very good fishermen bring in thousands When I did it  
 (15) I didn't catch that many  
 (16) Q The subsistence do the subsistence - are the subsistence  
 (17) fishermen - let me back up for a second Let's go back to  
 (18) bringing in thousands or hundreds of fish at a time When that  
 (19) happens and the commercial fisherman brings them in does  
 (20) he - does he have an opportunity to inspect each fish  
 (21) individually to see if it's oiled or if there's - if it's  
 (22) ingested oil?  
 (23) A No No The catches are - have to be dealt with very  
 (24) rapidly transported from say purse seine into the holds  
 (25) either the seine is just lifted up and the bag of salmon is

Vol 13 2047

- (1) dumped into the cargo hold or they have big bralers that they  
 (2) dip down into the purse to bring up loads of fish  
 (3) In a gillnet fishery the fish is coming through and you  
 (4) have a couple of people on the back picking the fish out of  
 (5) gill nets and usually they have to do that very rapidly to get  
 (6) the net clear so they can reset it so there's no individual  
 (7) inspection  
 (8) Q And secondly with the processing once the fish gets to  
 (9) the fish processor does the fish processor does it have an  
 (10) opportunities - fish processing plants have an opportunity to  
 (11) go through each fish and look inside each fish and see if there  
 (12) happens to be a globule of oil on that fish or not does it  
 (13) - is it too many fish going through to do that?  
 (14) A No They - in some situations they probably could inspect  
 (15) every fish but not to the extent of dissecting the fish That  
 (16) just isn't practical But for the most part in the operations  
 (17) during the oil impacted years the processors in the Alaska  
 (18) Department of Environmental Conservation subsampled the  
 (19) catch  
 (20) as it was brought into the canneries  
 (21) Q They can't check each fish?  
 (22) A Can't check each one was not feasible  
 (23) Q Let's compare that to the subsistence fisherman With the  
 (24) subsistence fisherman is he out there catching hundreds of  
 (25) fish at a time or thousands of fish at a time?  
 (26) A It would be very unusual for a subsistence fisherman to

Vol 13 2048

- (1) catch more than a few hundred at a time It's more in the  
 (2) fifties or tens  
 (3) Q An individual fish?  
 (4) A Yes  
 (5) Q Rod and a hook?  
 (6) A Well subsistence fishermen can use different types of  
 (7) gear fishing gear and some of them do use more efficient  
 (8) commercial fishing gear but they're not allowed to use very  
 (9) much of it so they'll have a gillnet that they can fish in the  
 (10) river but it will be a short gillnet so they are looking at  
 (11) each fish if that's what you're getting at  
 (12) Q That's what I'm getting at In other words they have the  
 (13) opportunity the subsistence fisherman has the opportunity to  
 (14) inspect each fish individually?  
 (15) A Yes and that's essentially what our direction was in many  
 (16) of the subsistence fisheries was that the fisherman has the  
 (17) ultimate responsibility to inspect his fish and make sure that  
 (18) it's - it's not contaminated  
 (19) Q And the fisherman can clean - he cleans each fish  
 (20) individually?  
 (21) A Yes  
 (22) Q So he can see inside each fish whether - the subsistence  
 (23) user can see whether there happens to be oil ingested in that  
 (24) particular fish?  
 (25) A That's correct

Vol 13 2049

- (1) Q So this because the individual subsistence fisherman had  
 (2) control overseeing whether or not his fish was oiled or whether  
 (3) it was ingested oil did that play any part in your  
 (4) determination to permit a subsistence fishing in 1989 even  
 (5) though you closed commercial fishing in 1989?  
 (6) A Yes that's correct  
 (7) Q Why was that?  
 (8) A Well they had the ability to individually inspect fish and  
 (9) make their own determination on what they would want to retain  
 (10) and what they wouldn't and it was - we wanted to allow the  
 (11) maximum opportunity for the subsistence fishermen to find the  
 (12) fish that they need for their families So rather than just  
 (13) have broad sweeping closures like we did in many of the  
 (14) commercial fisheries we left it up - we left the subsistence  
 (15) fisheries open so people could go out and sort out their own  
 (16) areas where they felt the fish would not be contaminated plus  
 (17) they were - many of our area biologists would assist  
 (18) subsistence users by describing areas that they felt were clean  
 (19) and they could obtain fish they needed  
 (20) Q In 1989 and later there was concerns though in all  
 (21) these areas for the safety in eating any of these fish those  
 (22) were expressed to you weren't they?  
 (23) A Yes they certainly were  
 (24) Q In the Copper - there was some reference to the Copper  
 (25) River area That's not really in the Prince William Sound

Vol 13 2050

- (1) management area is it?  
 (2) A It's in the Prince William Sound management area but it's  
 (3) outside Prince William Sound proper  
 (4) Q And for most of Prince William Sound most of the fishery  
 (5) all the herring fishery was closed isn't that correct?  
 (6) A Yes that's correct  
 (7) Q In 1989 - and most of the pink salmon fishery was closed  
 (8) in 1989 isn't that right?  
 (9) A The management program in Prince William Sound was  
 (10) dramatically altered as a result of the spill in 1989  
 (11) Q And the fact that there were open fisheries commercial  
 (12) fisheries in 1990 or 1991 or any subsequent year that was  
 (13) no - there was no determination made by the Department of  
 (14) Fish and Game that there wasn't genetic damage to any fish was  
 (15) there?  
 (16) MS SMITH Objection this exceeds the scope of his  
 (17) direct and has no foundation whatsoever Genetic damage?  
 (18) MR STOLL Well she's -  
 (19) MS SMITH There's been no testimony of that  
 (20) THE COURT I want to hear the question Give me the  
 (21) question again  
 (22) MR STOLL I'll rephrase it again Your Honor Well  
 (23) I'll just try to say it the same way I did  
 (24) BY MR STOLL  
 (25) Q The fact that they didn't close fisheries in 1990 or

Vol 13 2051

- (1) subsequent years was not a determination by the Department of  
 (2) Fish and Game that there was not genetic damage to the fish?  
 (3) THE COURT Well don't answer The objection's  
 (4) sustained You don't - don't answer the question and you're  
 (5) to disregard the question  
 (6) BY MR STOLL  
 (7) Q Was there a change in the regulations in 1988 - 1988 about  
 (8) whether fishermen could harvest subsistence or not?  
 (9) A In 1989?  
 (10) Q 1988  
 (11) A 88?  
 (12) Q Yes  
 (13) A No  
 (14) Q Does the - whether there's subsistence fishing or not  
 (15) when you have these types of numbers like we have in this  
 (16) board  
 (17) on Exhibit 333 is that a way of controlling escapement?  
 (18) A I'm sorry I don't think I understand your question  
 (19) Q Well with the numbers that we're talking about in the  
 (20) subsistence fishing is that a means of controlling  
 (21) escapement?  
 (22) A Generally  
 (23) Q You know for an area?  
 (24) A No there might be some small systems like in Southeast  
 (25) Alaska you have a small stream that is an important subsistence  
 stream and that subsistence harvest can be significant

Vol 13 2052

- (1) relative to the total production but usually it's not  
 (2) MR STOLL Could I just have a moment?  
 (3) MR STOLL That's all  
 (4) MS SMITH I just have a couple  
 (5) RE-CROSS EXAMINATION OF KENNETH P. PARKER  
 (6) BY MS SMITH  
 (7) Q We talked previously about one of the reasons for the zero  
 (8) tolerance policy in 1989 was concerns about food safety safety  
 (9) of the fish?  
 (10) A Yes  
 (11) Q And that the zero tolerance policy continued in 1990 but  
 (12) there were only minor closures?  
 (13) A That's correct  
 (14) Q And there weren't any any closures or any zero tolerance  
 (15) policy after that in any region?  
 (16) A That's correct  
 (17) Q I just have a couple more questions and they're on Red  
 (18) Lake Do you recall that at your deposition you couldn't  
 (19) remember the magnitude of the sockeye overescapement of  
 (20) Red  
 (21) Lake in 1989 or if there was any concern about it?  
 (22) A I'm not sure that - that I didn't have concern I don't  
 (23) recall what I said but I - I would imagine that I probably  
 (24) didn't recall the escapement particulars for Red Lake off the  
 (25) top of my head without seeing a document  
 Q Take a look in your depo it's Volume 3 Page 472 and

Vol 13 2053

- (1) it s -  
 (2) A What volume?  
 (3) Q Volume 3 page -  
 (4) MR STOLL Volume 3 or Volume 2?  
 (5) MS SMITH Well it says Volume 3 on the top Page  
 (6) 472 - 473 - 472 Okay and it s line 18 Question Do you  
 (7) recall the magnitude of the sockeye escapement on the Red  
 River  
 (8) in 1989?  
 (9) Answer No can t say that I do  
 (10) Question Do you recall that there was concern about the  
 (11) escapement in 1989 in the Red River system?  
 (12) I can t say that I specifically recall the concern directed  
 (13) at the Red River as opposed to some of the other systems  
 (14) Since that time have you refreshed your recollection about  
 (15) the Red Lake overescapement?  
 (16) A Well when I had this deposition I was - I couldn t  
 (17) recall whether it was specifically Red Lake that - that was  
 (18) what I was envisioning what I recalled but yeah since that  
 (19) deposition I recall that Red Lake in fact is the - a main  
 (20) issue here  
 (21) Q Now there was an escapement at Red Lake in 1980 that was  
 (22) higher than the 1989 escapement Is that right?  
 (23) A I don t know without looking at data  
 (24) Q Okay Let me show you DX4653 I got it Okay and this is  
 (25) the Ayakulik River sockeye escapement and as you can see in

Vol 13 2054

- (1) 1980 there was an escapement that looks like it s just under  
 (2) 800 000 fish do you see that?  
 (3) A Yes I see that  
 (4) Q And in 1989 there was an escapement that s pretty darn  
 (5) close but it looks like the 1980 is slightly above  
 (6) A Right  
 (7) Q Okay And the 1980 escapement was because of a  
 fisherman  
 (8) strike do you recall that?  
 (9) A No not specifically  
 (10) Q And the 1980 escapement the sockeye that go in five  
 (11) years - do you agree with that?  
 (12) A I don t know what the - the age class composition is of  
 (13) the Red Lake stock That could be four year old fish or  
 (14) five year old fish  
 (15) Q Okay Do you know whether that 1980 overescapement  
 (16) produced a crash at Red Lake?  
 (17) A Not specifically You d have to - that chart that we had  
 (18) showed what the escapement was but you d have to look at  
 total  
 (19) return  
 (20) Q Okay Let me show you DX4652 and if it s helpful to you  
 (21) I can put them - I can hand you one This is the Ayakulik  
 (22) River run size and this is the return from the high 1980  
 (23) escapement and as you ll see it s about - I would say around  
 (24) 9 000 Pretty healthy return would you say?  
 (25) MR STOLL Excuse me Your Honor I m going to

Vol 13 2055

- (1) object to this exhibit I don t know where - what the  
 (2) document is unless this witness knows the facts of this - of  
 (3) the document himself counsel s making some representations  
 -  
 (4) THE COURT Ask him if he recognizes it counsel  
 (5) MS SMITH I know he doesn t recognize the document  
 (6) but the source of the document is the 1992 Kodiak Annual Fin  
 (7) Fish Management Report for Salmon  
 (8) BY MS SMITH  
 (9) Q And you were the director during the time period - I guess  
 (10) you weren t you were the director during the time period  
 (11) through 1990 is that correct?  
 (12) A That s correct Ms Smith  
 (13) Q All right And as the director of the Division of  
 (14) Commercial Fisheries would you have had knowledge of the  
 run  
 (15) size for the Ayakulik River in 1985?  
 (16) A I would have been present yes  
 (17) MR STOLL Excuse me Your Honor the problem I m  
 (18) having is not the raw statistics that counsel has put on the  
 (19) graph It s the editorial about return from high 1980  
 (20) escapement There was a high escapement into the Frazer  
 Lake  
 (21) area in 1980 which was not Red Lake and the Aya - this is -  
 (22) this refers to the Ayakulik River run size  
 (23) THE COURT You can explore that with the witness  
 (24) I m assuming he has the knowledge to testify about all this  
 (25) But counsel we re not going to explore it much further

Vol 13 2056

- (1) either We ve been doing this for some time going back and  
 (2) forth so be judicious about the way you use your time because  
 (3) I m going to cut you off in a little while  
 (4) BY MS SMITH  
 (5) Q All right I guess the only question I have based on this  
 (6) exhibit is when the 1984 and the 1985 run sizes in the Ayakulik  
 (7) River would you say those were a crash?  
 (8) A Just looking at this illustration I would say no  
 (9) Q They look pretty healthy?  
 (10) A It looks like - looks like an average long term recent  
 (11) year average  
 (12) Q Okay Mr Parker you talked about slamming the door on  
 (13) the weir Is there any reason why ADF&G can t regulate the  
 (14) weir so that they could open it let in 250 000 300 000 fish  
 (15) and close it or open it let in 100 000 fish and then as you  
 (16) said if you re concerned that certain years don t come in  
 (17) toward the end of the run close it for a while then when you  
 (18) see those guys coming back reopen it again? Is there any  
 (19) reason why a weir can t be regulated?  
 (20) A Yeah because it wasn t adopted policy by the Department of  
 (21) Fish and Game  
 (22) Q But that - you re saying ADF&G did not choose to chose the  
 (23) weir?  
 (24) A That s correct  
 (25) MS SMITH Okay thank you

Vol 13 2057

- (1) THE COURT Counsel you can follow up on that one  
 (2) point  
 (3) MR STOLL I will  
 (4) FURTHER REDIRECT EXAMINATION OF KENNETH P  
 PARKER  
 (5) BY MR STOLL  
 (6) Q Is that because when you close the weir - I m going to do  
 (7) it with this first Your Honor - you ve got different ages of  
 (8) fish in the stream so you ve not necessarily closing it to the  
 (9) spawning fish as opposed to fry that are going into the lake to  
 (10) grow?  
 (11) A No fry would pass through the weir material usually  
 (12) They re small enough to do that  
 (13) Q Okay Now with respect to counsel s questions about these  
 (14) graphs that she prepared or had prepared by some artist these  
 (15) are not - these are not ADF&G graphs are they?  
 (16) A That s correct  
 (17) Q And could we have - first of all could we have Exhibit  
 (18) 20 - excuse me 4653 DX4653 up on the screen?  
 (19) MS SMITH Here s a copy  
 (20) MR STOLL No I ve got a copy counsel thank you  
 (21) BY MR STOLL  
 (22) Q Okay And with respect to this - first of all could I  
 (23) get this - so I can - this green line here is the - that s  
 (24) the escapement goal?  
 (25) A That s correct

Vol 13 2058

- (1) Q So this shows that in 1989 the escapement goal was  
 (2) exceeded by three fold?  
 (3) A That s correct  
 (4) Q And the Ayakulik River is a system that provides fish to  
 (5) Red Lake and other areas isn t that correct?  
 (6) A Yes that s correct  
 (7) Q And one of the lakes that it provides is Frazer Lake and  
 (8) this same area of Kodiak?  
 (9) A Same general area  
 (10) Q And so the figures for Ayakulik River you don t know  
 (11) what - whether this graph refers to Red Lake or some other  
 (12) area am I correct?  
 (13) A That s correct  
 (14) MR STOLL That s all I have That s all I have  
 (15) THE COURT All right you can step down sir Thank  
 (16) you  
 (17) I ll let you go for a ten minute break all right?  
 (18) (Jury out at 12 30 p m )  
 (19) THE COURT Counsel who s your next witness? Hang on  
 (20) just a minute The jury is not present now Who is your next  
 (21) witness?  
 (22) MR STOLL Phil Mundy  
 (23) THE COURT How long will he take?  
 (24) MR STOLL Take the rest of the day and go into  
 (25) tomorrow

Vol 13 2059

- (1) THE COURT For direct?  
 (2) MR STOLL He ll take - direct we may be able to  
 (3) finish today I don t know  
 (4) THE COURT Okay that s all I wanted to know  
 (5) THE CLERK Please rise this court stands in recess  
 (6) (Recess from 12 31 p m to 12 45 p m )  
 (7) (Jury in at 12 45 p m )  
 (8) THE CLERK This court now resumes its session  
 (9) Please be seated  
 (10) MR DIAMOND May we approach just on one ministerial  
 (11) matter?  
 (12) THE COURT Sure  
 (13) (Sidebar held out of the hearing of the jury )  
 (14) MR DIAMOND It s a pattern of precedent With  
 (15) respect to graphics derived from ADF&G reports obviously  
 these  
 (16) graphs don t appear as they re shown here in the ADF&G  
 reports  
 (17) these are based on numbers we pulled out of the tables  
 (18) THE COURT I see the source data there  
 (19) MR DIAMOND We don t want to have to go through the  
 (20) laborious process of getting a witness on the stand in front of  
 (21) the jury column by column number by number and  
 authenticating  
 (22) each bar and I don t know that the plaintiffs are -  
 (23) THE COURT I don t want to go through it  
 (24) MR STOLL What s that?  
 (25) THE COURT I don t want to go through it

Vol 13 2060

- (1) MR PETUMENOS That wasn t the point The point was  
 (2) if the witness says I made these graphs derived from ADF&G  
 but  
 (3) based on the testimony today with this witness I do  
 (4) THE COURT It maybe a legitimate objection and I  
 (5) know you have to live with a whole bunch of exhibits so  
 (6) sometimes they get confused but the fact is that the only  
 (7) issue would be somehow is this misleading because it s a  
 (8) translation of what s in the reports right?  
 (9) MR STOLL Right  
 (10) THE COURT To the extent - I mean I m going to  
 (11) assume good faith here and I m beginning to assume that that  
 (12) source data can be interpreted in this way If somehow you  
 (13) know that there s some doubtful proposition from the face of  
 (14) the document or from something you know you got to let me  
 (15) know because I m certainly not going to go through an  
 (16) individual deportation of -  
 (17) MR STOLL We re not asking for that  
 (18) THE COURT Yes I know You were asking for was  
 (19) somehow - some form of information that would have cast  
 doubt  
 (20) on counsel s examination and I didn t think that was  
 (21) appropriate  
 (22) MR STOLL Oh no I wasn t doing that either  
 (23) THE COURT Okay fine Good then I misunderstood  
 (24) MR PETUMENOS My objection is this that as the  
 (25) record stands now the exhibits are not admissible when their

Vol 13 2061

- (1) expert – could I finish – when their expert testifies and  
 (2) says that I derived these graphs and this is how I derived them  
 (3) from the ADF&G reports no problem That s where I m at  
 (4) THE COURT There s no problem with me right now If  
 (5) it s a problem for you you have to bring that problem to my  
 (6) attention Otherwise I m going to assume they re admissible  
 (7) MR PETUMENOS My view is the burden is on them to  
 (8) establish admissibility  
 (9) THE COURT It is counsel but I give you the same  
 (10) kind of leeway I give them  
 (11) MR PETUMENOS The connecting up is exactly what my  
 (12) position was I don t think we re in disagreement  
 (13) THE COURT We were but we re not now So could –  
 (14) MR STOLL I don t think we ever –  
 (15) THE COURT Let s continue the case  
 (16) MR STOLL We never disagreed  
 (17) THE COURT Let s continue with the case This is a  
 (18) nonproductive conference Let s start going  
 (19) MR PETUMENOS We didn t call –  
 (20) (Sidebar concluded )  
 (21) MR DIAMOND Would you prefer we handled these  
 (22) exhibits when we conclude with the jury?  
 (23) THE COURT I certainly would counsel I don t want  
 (24) to take the time  
 (25) MR STOLL Our next witness is Dr Phillip Mundy

Vol 13 2062

- (1) THE CLERK Sir would you please step up into the  
 (2) witness box? Would you clip the microphone onto your tie and  
 (3) remain standing for the oath  
 (4) Would you raise your right hand?  
 (5) (The Witness Is Sworn)  
 (6) THE CLERK Thank you you may be seated  
 (7) Sir for the record would you please state your full  
 (8) name?  
 (9) THE WITNESS My name is Phillip with two L s R  
 (10) Mundy M u n d y  
 (11) THE CLERK And what is your occupation?  
 (12) A I m a fisheries biologist  
 (13) THE CLERK Thank you  
 (14) DIRECT EXAMINATION OF PHILLIP R MUNDY  
 (15) BY MR STOLL  
 (16) Q Dr Mundy where do you reside?  
 (17) A I reside in Lake Oswego Oregon  
 (18) Q And would you tell the jury please a little bit about  
 (19) your academic background Where did you obtain a – you have  
 (20) a  
 (21) Bachelor of Science degree?  
 (22) A Yes I have a Bachelor of Science degree in zoology from  
 (23) the University of Maryland  
 (24) Q When did you obtain that?  
 (25) A I got that in 1970  
 Q Then do you have Master s degree also?

Vol 13 2063

- (1) A I have a Master s degree in biology from the University of  
 (2) Alabama I got that in 1973  
 (3) Q And then do you also have a Ph D or Doctorate degree?  
 (4) A Yes I have a Ph D in fisheries biology which I got from  
 (5) the University of Washington in 1979  
 (6) Q All right And when you were getting your doctorate  
 (7) degree what is that in?  
 (8) A That s in fisheries  
 (9) Q And what was the area that you studied in particular in  
 (10) doing your thesis or in your studies?  
 (11) A For doing my doctoral dissertation I worked on Alaskan  
 (12) salmon I worked on sockeye salmon in Bristol Bay and timing  
 (13) of sockeye salmon in Bristol Bay and also in designing fishing  
 (14) regulations for sockeye salmon in Bristol Bay  
 (15) Q And since that time have you served as a professor at  
 (16) various institutions?  
 (17) A Yes  
 (18) Q And where was the first place you were – served as a  
 (19) professor?  
 (20) A From 1979 to 1984 I was professor of biological  
 (21) oceanography at the Old Dominion University in Norfolk  
 (22) Virginia but even being in Virginia my research program was  
 (23) just in Alaska That s just the way the academic world works  
 (24) sometimes and I – while I was there I worked on a variety of  
 (25) marine ecology programs

Vol 13 2064

- (1) Q I m sorry marine what?  
 (2) A Marine ecology programs  
 (3) Q And what is marine ecology?  
 (4) A It s basically looking at the – from my perspective  
 (5) looking at the production of economically important species  
 (6) such as salmon in relation to other animals and plants in the  
 (7) environment  
 (8) Q And after you were at Old Dominion University in Virginia  
 (9) did you continue your teaching elsewhere?  
 (10) A Yes I – 1985 I was given the opportunity to work for the  
 (11) University of Alaska and I was a professor – associate  
 (12) professor at the University of Alaska in Juneau working on  
 (13) salmon problems  
 (14) Q And did you teach both graduate and undergraduate  
 (15) students  
 (16) there?  
 (17) A Yes  
 (18) Q And in what areas did you teach?  
 (19) A I – I taught fisheries mathematics fisheries regulation  
 (20) and generally fisheries management type courses  
 (21) Q And since 1988 to 1990 were you the chairman of the  
 (22) research work group for the Fish Passage Advisory Committee  
 (23) of  
 (24) the Columbia based Department of Fish and Wildlife in  
 (25) Portland?  
 (26) A Yes I left Alaska in 1987 and went to work for the  
 (27) Columbia River Intertribal Fish Commission and I ve been  
 (28) involved with a number of different salmon problems on the

Vol 13 2065

- (1) Columbia River in Idaho Oregon and Washington  
 (2) Q And were you during that same period of time in the late  
 (3) 1980s a member and later chairman of the scientific and  
 (4) statistical committee of the North Pacific Fisheries Management  
 (5) Council in Anchorage?  
 (6) A Yes During the time I was – part of the time I was  
 (7) actually in Alaska and living in Alaska I worked in Alaska  
 (8) every year since 1976 I still keep my research program up  
 (9) here I've lived in a lot of different places but I always  
 (10) spend part of the year in Alaska When I was here with the  
 (11) University of Alaska and with the Alaska Department of Fish and  
 (12) Game I was on the Scientific and Statistical Committee for the  
 (13) North Pacific Fisheries Management Council which manages  
 (14) fisheries of the North Pacific  
 (15) Q And speaking of your position with the Alaska Department of  
 (16) Fish and Game what was your position?  
 (17) A I was chief fisheries scientist for the Alaska Department  
 (18) of Fish and Game  
 (19) Q And during what period of time was that?  
 (20) A That was 1985 86 and 87  
 (21) Q And as chief fisheries scientist for the Alaska Department  
 (22) of Fish and Game what did you do?  
 (23) A Well chief fisheries scientist is the head research  
 (24) scientist for the State of Alaska in advising commercial  
 (25) fishing regulations and study of salmon populations For

Vol 13 2066

- (1) example estimating escapements counting catches and trying  
 to  
 (2) determine the – the appropriate number of salmon that should  
 (3) be permitted to spawn in each system and how to regulate the  
 (4) fisheries to reach those escapement goals for salmon  
 (5) Q Now the last witness Mr Parker testified as being the  
 (6) former director of fisheries for the state on escapement and  
 (7) overescapement You know those concepts a little bit and  
 (8) we'll get into that but those were some of the issues that you  
 (9) were working with as the chief fisheries scientist for the  
 (10) ADF&G?  
 (11) A Yes among others We also worked with all the different  
 (12) marine resources in the state with the crabs and the herring  
 (13) and the other resources but part of that time was spent  
 (14) working with salmon  
 (15) Q And going back to your research on Alaska fisheries going  
 (16) back to 1978 nearly 20 years now did you study escapement  
 (17) issues during that entire period of time?  
 (18) A Yes I – I had occasion to visit escapement issues for  
 (19) salmon on a number of occasions  
 (20) Q And since – when did you first become involved in the  
 (21) research or studying involving the effects of the Exxon Valdez  
 (22) oil spill?  
 (23) A I was retained to work on the Exxon Valdez oil spill  
 (24) investigations by the Department of Justice in September of  
 (25) 1989

Vol 13 2067

- (1) Q Then how long did you work for the Department of Justice  
 (2) with respect to the oil spill?  
 (3) A I worked for the Department of Justice until 1992 They  
 (4) didn't formally release me from the service until early in  
 (5) February of this year but I basically – most of what I did  
 (6) for them was 1989 through 1992  
 (7) Q All right And did there come a time when you became a  
 (8) scientist for the Trustee s Council?  
 (9) A Yes The experts who came to help with the research on the  
 (10) oil spill initially came to work for the – either the federal  
 (11) government or the state government I happened to be picked  
 up  
 (12) by the Justice Department to work in this area And so the  
 (13) Trustee Council reached out and asked the scientists who were  
 (14) working for both the state government and the federal  
 (15) government to advise it on how to design the research  
 programs  
 (16) and how to evaluate the research programs for salmon  
 (17) Q And so what has been your responsibility as far as the  
 (18) Trustee Council is concerned?  
 (19) A As a with the Trustee Council I'm a peer reviewer for what  
 (20) they call their fish studies their fish and shellfish studies  
 (21) and it's been my job to initially look over the design of a  
 (22) number of the different studies to measure impacts and give  
 (23) them comments to both Trustee Council and to the scientists  
 (24) involved on how they could improve the studies or strengthen  
 (25) the studies And then while the studies were in progress my

Vol 13 2068

- (1) job was to consult with the scientists and to review their work  
 (2) and to basically ask questions that could improve their work  
 (3) Q And then do you review – so you're involved in designing  
 (4) the actual type of study that is going to occur with respect  
 (5) to for instance the effects of the spill on salmon?  
 (6) A Well some of the studies not – not all of them And  
 (7) plus some of the studies were designed on the spot at the time  
 (8) of the spill We – Alaska Department of Fish and Game had  
 (9) biologists in the field in Prince William Sound among other  
 (10) places who were out there doing other things and when the oil  
 (11) spill happened and so some of the studies were designed right  
 (12) on the spot to answer questions and take advantage of the fact  
 (13) that we did have scientists in the field when the oil was  
 (14) spilled  
 (15) Later on in the fall of 1989 and after that we had a  
 (16) chance to take a breather and sort of figure out how to design  
 (17) other studies and how to improve the ones that we had  
 (18) Q So you were involved in the designing some of these other  
 (19) studies?  
 (20) A Yes  
 (21) Q And did you review the work that was done the work in 89  
 (22) and subsequent years that was done by the ADF&G and others  
 (23) that were then reported to the Trustee Council?  
 (24) A Yes At one time or another I reviewed all of the work  
 (25) that was done on fish and shellfish

Vol 13 2069

- (1) Q And incidentally have you also authored or coauthored a  
 (2) number of publications?  
 (3) A Yes I have  
 (4) Q And have a number of these been juried publications in  
 (5) other words reviewed by other people before they were  
 (6) published?  
 (7) A Yes In the scientific literature publications that are  
 (8) in national journals and international journals have to go  
 (9) through a jury process They have to be judged by other  
 (10) scientists before they get published and I have published some  
 (11) peer reviewed journals  
 (12) Q And what areas have you published in?  
 (13) A I have published on a lot of different kinds of fish and  
 (14) I've published on shrimp but most of my work since about  
 (15) 1979  
 (16) the publications have been concerned with salmon and salmon  
 (17) management  
 (18) Q And since 1979 at least have you - by salmon management  
 (19) what do you mean by salmon management?  
 (20) A Well how you - first of all how you design fishing  
 (21) regulations to get - to get the proper level of catch Once  
 (22) we know how many fish we want to put into an escapement  
 (23) how  
 (24) many fish we want to allow to go into a river that's just the  
 (25) beginning of the problem because then you have to figure out  
 (26) how to apply the fleet and you don't get to choose the gear  
 (27) because it's already there It's purse seine gear it's

Vol 13 2070

- (1) gillnet gear to figure out how to use that fishing gear to  
 (2) split the salmon run into two pieces the escapement that goes  
 (3) up the river to spawn and the catch and that's not usually a  
 (4) simple problem and I've devised methods for helping scientists  
 (5) decide how to do that  
 (6) Q And have you - you've written on this - these issues  
 (7) also?  
 (8) A On -  
 (9) Q On those issues that you were just describing?  
 (10) A Yes  
 (11) Q And have you - is some of this called harvest and  
 (12) management strategies in terms of this escapement and so on?  
 (13) A Yes  
 (14) Q And have you also written in the area of stock restoration  
 (15) in other words how to restore stock in certain areas?  
 (16) A Yes In the Columbia River Basin we have salmon  
 (17) populations that are not anywhere near as healthy as they are  
 (18) in Alaska A lot of these salmon populations are just barely  
 (19) hanging on and some of them are on the endangered and  
 (20) threatened species list and so the problems that I face in  
 (21) Columbia Basin are kind of the opposite of the problems that I  
 (22) dealt with for so many years in Alaska Salmon population  
 (23) restoration and salmon recovery are two of the areas that I've  
 (24) started doing a lot of research in the last five years  
 (25) Q And does this - the publications that you've written does

Vol 13 2071

- (1) this involve issues of spawning and the life cycles of the  
 (2) various species of salmon as well?  
 (3) A Oh yes All aspects of the biology of the salmon and also  
 (4) the habitat and the ecosystem within which the salmon live  
 (5) Q And I believe you've actually published over three dozen  
 (6) articles is that - is that correct?  
 (7) A I don't know exactly how many That sounds about right  
 (8) Q And are you a member of the graduate faculties of Montana  
 (9) State University University of Washington and Oregon State  
 (10) University?  
 (11) A Yes I am  
 (12) Q And since 1982 have you been a member of the American  
 (13) Institute of Fisheries Research Biologists?  
 (14) A Yes  
 (15) Q And since 1982 have you also been certified as a fisheries  
 (16) scientist with the American Fisheries Society?  
 (17) A Yes  
 (18) MR STOLL Your Honor we would offer Dr Mundy as an  
 (19) expert in fisheries fish population biology and fish  
 (20) population dynamics  
 (21) MR COOPER Your Honor I don't believe we have any  
 (22) objection to those particular categories I anticipate there  
 (23) may be some testimony that goes beyond those areas but as to  
 (24) those particular areas no  
 (25) THE COURT He's qualified to give opinion in those

Vol 13 2072

- (1) areas  
 (2) MR STOLL Thank you Your Honor  
 (3) BY MR STOLL  
 (4) Q Now first of all I'd like to talk about pink salmon  
 (5) That's a dominant species of salmon found in Prince William  
 (6) Sound Is that one of the major species in Prince William Sound  
 (7) and elsewhere?  
 (8) A Yes  
 (9) Q And would you tell the jury please what the life cycle of  
 (10) a pink salmon is?  
 (11) A Okay Pink salmon like all salmon start out their life  
 (12) in fresh water streams and rivers In Prince William Sound  
 (13) the pink salmon are different from the pink salmon you find  
 (14) anywhere else in the world because they spawn very close to  
 (15) the saltwater They spawn in what's called the intertidal zone  
 (16) for the most part Some of them a few of them do go upstream  
 (17) to spawn but generally the streams in Prince William Sound  
 (18) are kind of short They come right out of the mountains and go  
 (19) right into the sea and so the amount of habitat that's  
 (20) available upriver is usually very limited so the pink salmon  
 (21) in Prince William Sound have learned how to take advantage of  
 (22) what they've got and they spawn in the intertidal zone and  
 (23) take advantage of the fresh water as far down as it goes  
 (24) They're always pushing the envelope trying to - trying to  
 (25) get as much spawning habitat as they can The - after they

Vol 13 2073

- (1) deposit eggs in the fall of each year usually in the
- (2) intertidal zone the eggs will incubate during the fall and
- (3) winter and hatch out in the - usually in the winter whenever
- (4) they have accumulated enough temperature units to be able to
- (5) hatch out Then they stay in the gravel for a while because
- (6) when they hatch out they ve got a great big yolk sac hanging
- (7) off of their stomach that s almost as big as they are And
- (8) they live on that until they - they button up and that s
- (9) button up in the sense of belly button - until the yolk is
- (10) gone yolk sac is gone and they will drop usually without
- (11) feeding right out into the marine environment once that yolk
- (12) sac is gone
- (13) They swim up and they leave the stream drop right into the
- (14) marine environment feed in the nearshore marine environment
- (15) until they ve got enough energy stored up to - to make a move
- (16) and then they start - they start moving throughout Prince
- (17) William Sound and then offshore and into the Gulf of Alaska
- (18) when they ve grown sufficiently to do so
- (19) They would normally be heading out into the Gulf of Alaska
- (20) either in the fall of the year - of the year following when
- (21) they were deposited in the gravel So if they were deposited
- (22) in the gravel in 1989 they d be heading out into the Gulf of
- (23) Alaska in the fall of 1990
- (24) Then they spend one winter in the sea and come back to run
- (25) in the fall two years from the time they were deposited in the

Vol 13 2074

- (1) gravel so they d be running - the 1989 fish would be running
- (2) in the fall of 1991 deposit their eggs to continue the - the
- (3) life cycle It s called a two year life cycle which is - and
- (4) it s quite unusual in salmon The fish from the 1989 brood
- (5) line all come back as adults in 1991 and unlike the sockeye or
- (6) other species of salmon don t overlap So the fish from that
- (7) brood line never spawn or interbreed with the fish from the
- (8) even year brood lines so the 1990 fish They would never have
- (9) the chance So the pink salmon life cycle is very unusual and
- (10) very short They spawn as two year old adults and then they
- (11) all die and we ve only rarely ever seen any three year old
- (12) pink salmon and those are usually very special situations
- (13) Q All right Now first of all let s talk about - I want
- (14) to just mention last Friday Dr Charles Peterson testified
- (15) who I believe you know from the Trustee Council maybe
- (16) otherwise?
- (17) A Right
- (18) Q And Dr Peterson explained that intertidal zone that s the
- (19) area between the high tide and the low tide essentially in -
- (20) well that s where it is?
- (21) A Right
- (22) Q Okay
- (23) A Correct
- (24) Q And in Prince William Sound and the other areas of Alaska
- (25) are there - is there anything unusual about the size of the

Vol 13 2075

- (1) intertidal zone?
- (2) A Yes The intertidal zone in Prince William Sound is
- (3) relatively large I mean relative to other areas Other
- (4) areas of the world like south Florida they have tides of one
- (5) or two feet so if you told a biologist in South Florida that
- (6) the salmon were spawning in the intertidal zone they would
- (7) think that was a very small area but up here in Alaska we
- (8) have 20 foot tides so that intertidal zone can be very very
- (9) large So the intertidal zone is - in Alaska is pretty
- (10) extensive
- (11) Q By 20 foot tides you don t mean 20 feet horizontal you
- (12) mean 20 feet vertical?
- (13) A Right exactly
- (14) Q So that could go on for hundreds or maybe thousands of
- (15) feet?
- (16) A Generally several -
- (17) Q Or is that -
- (18) A Generally the stream involved would be several hundred
- (19) yards or more of spawning habitat
- (20) Q And could you - I d like to have you draw a picture if
- (21) you don t mind
- (22) A I have to ask what I do with the microphone
- (23) THE COURT Take it with you
- (24) THE WITNESS Keep waiting for something to crash
- (25) here

Vol 13 2076

- (1) THE COURT Lots of room
- (2) MR STOLL There you go I ll give you that
- (3) BY MR STOLL
- (4) Q Now I d like you to sort of draw a picture if you would
- (5) as to how this cycle works for the pink salmon?
- (6) A Well if we start out with the - with the adult so this
- (7) is - this is kind of the stage take the year for example
- (8) 19 - 1989 and then we look at how we got to this 1989 adult
- (9) here this life history stage and this would be where - this
- (10) 1989 adult was a 1987 egg and that was also in the stream
- (11) Okay it was a fry in the spring of 1988 also in the stream
- (12) I m going to use this term smolt and point it out to you
- (13) especially The term smolt is generally used to apply to
- (14) salmon at the time it makes its transition from the fresh water
- (15) life history stage into the marine environment There s a real
- (16) change to the animals when they get ready to make that
- (17) transition It s a bit of a shock to their system So the
- (18) life history stage the stage here of the smolt and this is -
- (19) the nearshore marine environment is where
- (20) So in the spring and summer of 1988 these fish that were
- (21) 1989 adults are in the nearshore marine environment and as
- (22) they grow - and growth is the key characteristic here because
- (23) if they don t grow sufficiently then they re not going to -
- (24) they re not going to survive because they re more likely to be
- (25) eaten as they grow and gain strength and size they move

Vol 13 2077

(1) offshore when they get big enough so that okay when is  
(2) the - the winter of 88 89 They are subadults at this  
(3) point in time and they re out in the - in the Gulf of Alaska  
(4) Okay the last - the last stage here is the 1989 spring  
(5) and summertime frame the subadults are making the transition  
(6) from the Gulf of Alaska into - into Prince William Sound then  
(7) they are coming into Prince William Sound in the summer and  
(8) fall of 1989 as adults  
(9) MR STOLL Your Honor I m going to call this exhibit  
(10) 1514 PX1514 And offer 1514  
(11) (Exhibit 1514 offered)  
(12) MR STOLL You can resume the stand  
(13) BY MR STOLL  
(14) Q So let me just ask you a question while you re down here  
(15) So the eggs the eggs are put in the stream in 1987?  
(16) A In the fall of the year  
(17) Q In the fall of the year In the spring of 1988 they  
(18) have - they hatch and at first have these yolks egg yolks on  
(19) them?  
(20) A Uh huh  
(21) Q And they re still in the stream at the mouth of the stream  
(22) and typically with the pinks?  
(23) A In the gravel  
(24) Q In the gravel And then they come out in the spring and  
(25) summer as smolt and they re in the nearshore environment is

Vol 13 2078

(1) that where they feed?  
(2) A Yes  
(3) Q After they lose their egg yolk?  
(4) A Yes  
(5) Q And then they winter then the following winter out in the  
(6) Gulf of Alaska and come back the spring or summer as  
subadults  
(7) and then go spawning again in the fall?  
(8) A Right  
(9) Q You can resume the stand  
(10) THE COURT Mr Stoll we re getting pretty close to  
(11) the end of the trial day I just wanted - you can pick a time  
(12) to take a break Just pick a logical time  
(13) MR STOLL Fine I think what I ll do now Your  
(14) Honor is have him explain - maybe actually now that you re  
(15) all seated and everything have you come back and draw the  
same  
(16) picture except for the - maybe explain it though first  
(17) BY MR STOLL  
(18) Q Would it be easiest for you Doctor either - I can t see  
(19) it too many boards here I d like to have you explain the  
(20) cycle now of the sockeye salmon Would it be easier - I d  
(21) like to have you draw a picture would it be easier for you to  
(22) explain it where you re seated and then draw or do it at the  
(23) same time?  
(24) A I think that s better than the pink salmon I d like to  
(25) just walk through it first then I ll diagram it for you

Vol 13 2079

(1) Q Fine  
(2) A Again the basic life cycle for all salmon is the same It  
(3) differs with respect to mainly where they grow up as young  
(4) salmon They all start out their lives in fresh water in the  
(5) case of the pink salmon here the intertidal zone but they all  
(6) need fresh water in order to develop In the case of the  
(7) sockeye salmon you have a very complex life cycle that usually  
(8) in the case of about 98 percent of all the populations we ve  
(9) studied involves a lake There are a few sockeye populations  
(10) are very small that don t utilize lakes but in general  
(11) wherever you have a big healthy sockeye salmon population  
(12) you ve got a lake And in general these lake systems are  
(13) used to name the runs for example the Red Lake system on  
(14) Kodiak the Red Lake run is how that s referred to So the  
(15) lake is really the dominant feature of sockeye Sockeye salmon  
(16) are lake salmon because they have - they usually use a lake to  
(17) complete their life cycle and what they use the lake for is  
(18) the same thing that the pink salmon use the nearshore marine  
(19) environment for and that is to get a start to get a - to get  
(20) their early growth when they re young so they can get big  
(21) enough to be able to move out and be successful in the marine  
(22) environment  
(23) So the sockeye salmon will start their lives typically in  
(24) streams Some of them are even adapted to spawn in gravel  
(25) beaches in the lakes but they get their start in streams The

Vol 13 2080

(1) young instead of dropping into the marine environment like the  
(2) pink salmon do they just drop into the lake and they use the  
(3) lake in the same way that the pink salmon use the nearshore  
(4) marine environment  
(5) Then as they - they grow and how fast they grow and  
(6) how - how good the food base is in the lake determines how  
(7) fast they grow and how well they survive They generally spend  
(8) a summer in the lake and then over winter in the lake feed  
(9) for a short period of time in the spring to get their strength  
(10) up and then they ll drop out of the system  
(11) Now if growing conditions in the lake are not very good  
(12) they may not be able to get big enough by the - before the  
(13) beginning of that second summer of their life to make it in the  
(14) marine environment and might just hold over for a second  
winter  
(15) In the lake system So we see this kind of variation in the  
(16) sockeye and that s why it s a complex life cycle Sometimes  
(17) they ll spend one year in the lake sometimes they ll spend  
(18) three Sometimes the young fish after they go out to sea  
(19) they ll spend rarely one winter but usually two but sometimes  
(20) three or four in the marine environment So sockeye when they  
(21) come back can be four five six seven even eight year olds  
(22) when they come back to spawn and plus the brood years can  
(23) spawn with one another The fish that are put in the gravel in  
(24) 1989 might come back in 1994 to spawn with fish that went in  
(25) the gravel in 1990 They spawn with younger fish that have

Vol 13 2081

- (1) matured earlier and come back and can spawn  
 (2) So sockeye salmon unlike pink salmon you take a look at  
 (3) pink salmon you count the number of pink salmon and you say  
 (4) I've got a thousand pink salmon here in 1991 and then you look  
 (5) back in 1989 and you see that you had a thousand pink salmon  
 in  
 (6) 1989 then you know that those thousand pink salmon pink  
 (7) salmon in 1991 were produced by those thousand pink salmon  
 in  
 (8) 1989 It's straightforward  
 (9) Sockeye is more complex you have to know how old the fish  
 (10) are You have to measure their age in order to know what kind  
 (11) of productivity they have what brood year they came out of  
 (12) and how productive they are So people have - scientists have  
 (13) spent their entire careers trying to figure out sockeye salmon  
 (14) and trying to figure out sockeye salmon life cycles and I've  
 (15) just given you the careers of a whole bunch of scientists here  
 (16) in about three minutes  
 (17) Q You've spent a lot of time studying this yourself haven't  
 (18) you -  
 (19) A Yes  
 (20) Q - over the last 20 years?  
 (21) A I've been working with sockeye since 1976  
 (22) Q Now I'd like you to - Mr Diamond pointed out to me that  
 (23) I just incorporated one of his boards for your last drawing  
 (24) because I went to the wrong stack of boards so I'll use my own  
 (25) board

Vol 13 2082

- (1) Now would you draw please the life cycle of a sockeye  
 (2) salmon?  
 (3) MR STOLL And I'll trade you a board  
 (4) MR DIAMOND It's a deal  
 (5) A Okay start off the with the same example Take in this  
 (6) case a 1994 adult and adult would be coming back to spawn  
 (7) this year sockeye runs in the state have already started  
 (8) They start the beginning of May and generally go to the end of  
 (9) July or maybe a little later in different parts of the State  
 (10) So the 19 - the fish that are coming back this year as  
 (11) adults to spawn in the - the streams and lakes would generally  
 (12) have started out in the year 1989 as eggs in streams and once  
 (13) in a while on the beaches of lakes  
 (14) Then these fish just as is the case with the pink salmon  
 (15) would move along and be in the 1990 they would be fry in the  
 (16) gravel of the streams In also in 1990 they would be  
 (17) fingerlings or - well actually fingerlings and fry call it  
 (18) fry for this part And I'll explain this in just a second -  
 (19) in the lakes  
 (20) All right So the fish from the 1989 spawning or eggs in  
 (21) the gravel in the fall of 1989 in streams and lakes in 1990  
 (22) in the - the winter they are fry in the streams Then they  
 (23) drop down into the lakes to - to start feeding and growing and  
 (24) they drop down They're called - they're called fry  
 (25) They also encounter fish which are there from - in this

Vol 13 2083

- (1) case this would be from the 1988 spawning fish that are  
 (2) actually a whole year older than they are that are also in the  
 (3) lakes trying to get a little food before they drop out to the  
 (4) sea so I'm introducing two different - two different life  
 (5) history stages here to point out the fact that these fry will  
 (6) be in the - in the lake system with last year's last year's  
 (7) fingerlings for some part of - for some period of time In  
 (8) the cases of the lakes where the fish are relatively slow  
 (9) growing sometimes they the fry and - of one year and the  
 (10) fingerlings of the preceding year can be in the lake the whole  
 (11) summer together because these fish just won't go out They  
 (12) don't get big enough to grow and leave  
 (13) So then the 1990 in the - again the fry I'll forget  
 (14) about the 1988 fish for a while - the fry go into the fall of  
 (15) the year and this is a very critical stage for them If  
 (16) they've eaten enough and they have enough fat reserves and  
 they  
 (17) go into the - the fall of the year then they'll usually make  
 (18) it through the winter They'll survive through the winter  
 (19) because during the winter they don't eat or they rarely eat  
 (20) There's not anything around for them to eat So they - if  
 (21) they have enough fat when they hit the - hit the fall of the  
 (22) year then they survive through the winter And if they don't  
 (23) then they'll die in large numbers So the amount of food  
 (24) that's in the lake for the fish is extremely critical in  
 (25) determining how many of them actually make it through the

Vol 13 2084

- (1) winter because it's in the fall and the winter when most of  
 (2) the of the deaths - we call it mortality biologists call it  
 (3) mortalities - when most of the deaths will occur is in the  
 (4) fall winter of their - their first full year of life And  
 (5) this is in the lakes  
 (6) Now in 1991 then the fish are by now fingerlings and  
 (7) they are in the - in the lake If they're big enough then  
 (8) they'll head on out to sea and they'll become smolts and they  
 (9) will be in the nearshore marine If they aren't big enough  
 (10) then they do not pass go they do not collect \$200 and they go  
 (11) back into the lake and have to go back through another  
 (12) feeding cycle in the lake in the winter and come back out  
 (13) Then from this time they're in the nearshore marine  
 (14) environment they gradually grow and the faster they grow the  
 (15) better And they move offshore into the the Gulf of Alaska or  
 (16) the Bering Sea and become subadults and they'll be out here  
 (17) from 1991 and in this case until the spring of 1994 as  
 (18) subadults where - in the Gulf of Alaska and the Bering Sea  
 (19) and the north Pacific  
 (20) Then in the - they move over and come in the fall of the  
 (21) year to be spawning adults in 1994 So that's where the 1994  
 (22) fish who are coming back to spawn this year came from  
 (23) Q Now we'll mark this plaintiff's exhibit 1515 Dr Mundy  
 (24) I think you indicated that in these different areas the fish  
 (25) can stay longer or shorter periods of time in other words in

Vol 13 2085

- (1) the – once they get into the lakes they could stay in the  
 (2) lakes a longer period of time they could stay in the ocean  
 (3) longer period of time is that – those are the two areas that  
 (4) they'd stay in longer?  
 (5) A A variable length of time a variable number of winters  
 (6) Q And normally you say it's a five year cycle for sockeye  
 (7) salmon?  
 (8) A Normally it's a five year cycle but four five and  
 (9) six year cycles are quite common  
 (10) Q And when the fish are – when the – let's say the 1989s  
 (11) are in the streams or lakes are they in there with fish of  
 (12) other years?  
 (13) A In the lake – in the lakes they can be in there with one  
 (14) other year class or rarely two other year classes They can be  
 (15) in there with fish that are one year older than they are or  
 (16) even two years older than they are  
 (17) Q And where do they get their – once they're in the stream  
 (18) they get their – they get their food from their yolk sac when  
 (19) they're eggs – excuse me when they're fry?  
 (20) A Yeah until – until the time that they actually button up  
 (21) that is they absorb their yolk sac and start – start to move  
 (22) that's the only food they have is their yolk sac After they  
 (23) button up they usually don't feed – they can feed  
 (24) immediately but usually they'll just jump up into the current  
 (25) they'll ride the current right wherever it takes them In the

Vol 13 2086

- (1) case of the pink salmon it takes them into the nearshore  
 (2) marine sockeye it takes them into the lake and that's where  
 (3) they eat  
 (4) Q So then they're dependent on the food if any in the lake?  
 (5) A Right  
 (6) Q And who else – are there other fish in that lake when they  
 (7) get there the sockeye salmon?  
 (8) A There are other sockeye and usually other kinds of fish  
 (9) Q And the other sockeye that are already there are those  
 (10) larger or smaller fish?  
 (11) A Those would be a year older than they are so they would be  
 (12) bigger fish  
 (13) Q And then they – then they go for the food that's in that  
 (14) lake?  
 (15) A That's right  
 (16) Q And then they come back out into the nearshore marine  
 (17) environment?  
 (18) A Correct  
 (19) MR STOLL I think this would be a good time to take  
 (20) a break Your Honor  
 (21) THE COURT This is the end of the trial day so I'll  
 (22) let you go Remember don't talk about this case with anyone  
 (23) including your fellow jurors Don't form or express any  
 (24) opinion on it until it's submitted to you for deliberation  
 (25) We'll see you tomorrow at 8:30 Thank you

Vol 13 2087

- (1) (Jury out at 1:32 p.m.)  
 (2) THE COURT All right counsel the jury's not  
 (3) present I want to resolve if I can the issue of the two  
 (4) jurors now Mr Stapleton and Mr Gerwin Can I?  
 (5) MR DIAMOND Yes do you want to talk about that on  
 (6) if record?  
 (7) THE COURT Yes If I'm going to excuse them I want  
 (8) it to be on the record  
 (9) MR STOLL Your Honor I just want to get  
 (10) clarification as to what – if there's – if we go below how  
 (11) this five-sixths works  
 (12) THE COURT Well if you go – you want – you want a  
 (13) vote of five-sixths of the existing jurors so if you go below  
 (14) 12 you have to do that calculation and if you can get the  
 (15) exact five-sixths proportion with the existing jurors then  
 (16) that's fine that would be the proposition  
 (17) On the other hand if you can't reach that number then  
 (18) what would happen is you don't get five-sixths of the jurors  
 (19) you have to go with a higher number So for instance if you  
 (20) have a 12 person jury 10 of them have to be in agreement on  
 (21) any verdict  
 (22) MR STOLL Correct  
 (23) THE COURT If you have an 11 person jury 10 of them  
 (24) would have to be in agreement on any verdict  
 (25) MR STOLL What I – here's my question If you have

Vol 13 2088

- (1) a – I don't think this will happen but I just want to cover  
 (2) this If you have an 8 person jury or let's say – let's say  
 (3) an 8 person jury how many would we have to have?  
 (4) THE COURT You got a calculator?  
 (5) MR STOLL I think that it would be – would it be 7  
 (6) or would it be 6?  
 (7) MR DIAMOND 7  
 (8) MR STOLL 7 and so it wouldn't – it would – after  
 (9) we lose one juror we would always have to have all but one  
 (10) juror unless –  
 (11) THE COURT Yes I think that's right I think that's  
 (12) right I'm not sure  
 (13) MR STOLL So that even if you went to – I  
 (14) understand okay  
 (15) THE COURT All right Given that discussion now  
 (16) counsel what are we going to do about these two jurors?  
 (17) MR DIAMOND Well I don't think this is – we were  
 (18) wondering if we got down to 7 but I don't know that's  
 (19) necessarily an issue I've discussed this with my client  
 (20) Particularly the request that the Court had that we stipulate  
 (21) in advance if the number gets down below 12 we agreed to  
 (22) submit this case to a jury composed of fewer than 12 jurors  
 (23) We are very reluctant to do that in the abstract We are  
 (24) representing the side of this litigation that does not have  
 (25) popular opinion on its side and numbers are our – are our ally

Vol 13 2089

- (1) to the extent that we excuse jurors we potentially excuse a  
 (2) juror who could be for us and could be a force in the jury room  
 (3) to express the sentiment that corporations including  
 (4) corporations that may not be very popular ought to be judged  
 (5) on  
 (6) the basis of facts  
 (7) On the other hand we re mindful of the constraints We  
 (8) don t want to have to do this twice So what we re prepared to  
 (9) say in advance is that if the jury falls below 12 we will  
 (10) either agree to five sixths of the remaining jurors or we will  
 (11) agree to submit the cause to the Court for decision so that we  
 (12) don t have to do this again But we are not prepared to say in  
 (13) the abstract not knowing what the composition of the jury will  
 (14) be that in all events we re willing to go below 12 And if  
 (15) that affects the Court s decision with respect to these two  
 (16) jurors I thought you ought to know what my client s views  
 (17) are  
 (18) THE COURT Well I know what your client s views  
 (19) are Let s see what the other side s views are Counsel?  
 (20) MR STOLL May I just have a moment Your Honor? I  
 (21) didn t know that this was -  
 (22) THE COURT Uh huh  
 (23) MR STOLL Your Honor we accept the Court s  
 (24) proposal You know we d like - we d like to have 10 of -  
 (25) you know have two - two that we don t have to have but we ll  
 agree to the five sixths so that we ll always - you know

Vol 13 2090

- (1) we ll have to get all but one to reach a verdict  
 (2) THE COURT Yes but that s not the question right now  
 (3) because there s now - the defense has thrown in another  
 (4) variable in the situation They want to have a choice between  
 (5) a jury and a nonjury trial if it falls below 12 right  
 (6) MR DIAMOND Correct  
 (7) MR STOLL Your Honor our clients are not willing to  
 (8) waive the trial by jury and the problem is is that we do not  
 (9) want to - we re concerned with the number of jurors that we  
 (10) have that we ve already lost two jurors We lose two more  
 (11) jurors that we - we get - get down what I would suggest  
 (12) perhaps is that the Court under these circumstances since  
 (13) they won t agree to the five sixths that we - the Court  
 (14) inquire of Mr Stapleton s - who is the immediate issue -  
 (15) THE COURT Well no he s not Mr Gerwin s the  
 (16) immediate issue  
 (17) MR STOLL Well Mr Ger - Mr Gerwin isn t a  
 (18) culprit and he s not - for purposes of number I don t have a  
 (19) mistrial if Mr Gerwin is on the jury and I am - at any rate  
 (20) right now I m unwilling to go - I m unwilling to excuse  
 (21) Mr Gerwin unless we have an agreement from Exxon that they  
 (22) will agree to five sixths jury because I - I want -  
 (23) THE COURT So you re going to leave it up to me  
 (24) counsel Both of you I m not just pointing to you You re  
 (25) going to make me make the decision knowing that you could  
 lose

Vol 13 2091

- (1) a jury I just want you to understand what your options are  
 (2) Right?  
 (3) MR STOLL Yeah I can - I m going to lose a juror  
 (4) with Mr Stapleton for sure and I guess -  
 (5) THE COURT No I don t think that s the situation  
 (6) here counsel The one juror that I m prepared to excuse right  
 (7) now in absence of an agreement between you is Gerwin  
 because  
 (8) he s the one that I see who clearly should be excused  
 (9) Stapleton I think I can ask him to go back and get more  
 (10) definite statement of what his hardship is and then I d  
 (11) consider excusing him later  
 (12) Gerwin is a different problem because Gerwin is exhausted  
 (13) You can see it and he s been exhausted throughout this whole  
 (14) trial He s not absorbing any of this that s my opinion and  
 (15) I ve been watching him for days and I m sure counsel have  
 been  
 (16) watching him too He s not going to help anybody in this  
 (17) case  
 (18) So the issue is do I excuse Gerwin now? If you re leaving  
 (19) that decision in my hands I ll make that decision now  
 (20) MR STOLL Your Honor obviously the decision is  
 (21) yours We re not asking for Mr Gerwin to be excused and we d  
 (22) object to him being excused  
 (23) THE COURT All right Are you asking to have  
 (24) Mr Gerwin excused counsel?  
 (25) MR DIAMOND We will leave that in the Court s

Vol 13 2092

- (1) hands We too can see he s not paying attention We don t  
 (2) want to have to do this again but on the other hand having a  
 (3) jury who is not able to fulfill his obligations doesn t serve  
 (4) either side  
 (5) THE COURT I m going to bring him in and talk to him  
 (6) then on the record  
 (7) THE CLERK Mr Gerwin?  
 (8) THE COURT Mr Gerwin yeah  
 (9) MR STOLL Your Honor we ll withdraw our objection  
 (10) THE COURT To him being excused?  
 (11) MR STOLL Yeah  
 (12) THE COURT Counsel?  
 (13) MR DIAMOND We have no objection to Mr Gerwin being  
 (14) excused  
 (15) THE COURT All right I ll excuse him Do you want  
 (16) me to excuse him here in the courtroom or are you satisfied  
 (17) that there s cause to excuse him both of you  
 (18) MR STOLL It s okay to excuse him  
 (19) THE COURT All right Now this is what I d like to  
 (20) do with Stapleton I don t necessarily have to talk to him on  
 (21) the record but what I do need to do is find out what his  
 (22) particular situation is So my proposition to you is that I  
 (23) simply say to him I know that this is a worry to you I want a  
 (24) statement from your employer what his - what the employer s  
 (25) plans are for you in the next four weeks so that we can

Vol 13 2093

- (1) evaluate whether or not you should be excused Is that  
 (2) acceptable to both of you?  
 (3) MR STOLL Yes Your Honor  
 (4) MR DIAMOND Yes Your Honor  
 (5) MR PETUMENOS Yes Your Honor I have another  
 (6) suggestion I don t know - maybe not yet but at an  
 (7) appropriate point perhaps the Court could talk to his  
 (8) employer as well  
 (9) THE COURT Well I told him I ve already told him  
 (10) that his employer might come in here and talk to me on the  
 (11) record to determine whether there really is a hardship or  
 (12) whether it s just speculation So if I can -  
 (13) MR STOLL Your Honor as far as I m personally  
 (14) concerned I think as plaintiffs are concerned we don t - I  
 (15) don t think it s necessary to bring his employer in here As  
 (16) far as we re concerned if the Court wants to talk to him  
 (17) in -  
 (18) THE COURT Just a second Counsel  
 (19) Mr Gerwin we can see that you ve had a lot of trouble  
 (20) just staying awake in th s case and it s because of all the  
 (21) reasons that you gave in jury selection I don t want you to  
 (22) think I m blaming you or anything like that but its s obvious  
 (23) that this trial is - you just can t do it because it seems to  
 (24) me you re exhausted every day when you re here  
 (25) JUROR GERWIN Yes

Vol 13 2094

- (1) THE COURT And you agree with me don t you?  
 (2) JUROR GERWIN Yeah because I work nights so -  
 (3) THE COURT And we have all those reasons because you  
 (4) gave us the statement in your jury examination and by means of  
 (5) your note so everybody has agreed that it s just not the  
 (6) appropriate time for you to serve as a juror so I m going to  
 (7) let you go now You re excused You don t have to come in  
 (8) tomorrow You won t have to come in for the rest of the case  
 (9) JUROR GERWIN Okay  
 (10) THE COURT I know you tried  
 (11) MR STOLL Your Honor could we have an admonition?  
 (12) THE COURT Yes  
 (13) The other thing is I d like you to know that the other  
 (14) jurors and in fact anybody who might ask you about this case  
 (15) I m concerned about any information that comes out of the  
 (16) jury So I don t want you talking to the other jurors about  
 (17) this case at all or reasons why you were excused  
 (18) I also don t want you talking to anybody involved in the  
 (19) case So if anybody comes and tries to talk to you about the  
 (20) case simply tell them the judge has said I m sorry but I  
 (21) can t talk to you about the case okay  
 (22) JUROR GERWIN Okay  
 (23) THE COURT Thanks very much  
 (24) JUROR GERWIN All right thank you  
 (25) MR STOLL Your Honor just saying that as far as

Vol 13 2095

- (1) Mr Stapleton is concerned as far as the plaintiffs are  
 (2) concerned it is satisfactory if you decided that it was -  
 (3) after you talked to Mr Stapleton that it was - that you  
 (4) wanted to talk to his employer I think it would be fine for  
 (5) you to talk to his employer outside of the courtroom without  
 (6) the - you know bringing him down here and having him to go  
 (7) through all that trouble and go on the record and all that I  
 (8) think that would be fine as far as we re concerned  
 (9) MR DIAMOND If the Court wants to do that we d have  
 (10) no objection  
 (11) THE COURT You have no objection now counsel but  
 (12) when I talked to him and give you the reasons why I thought  
 (13) that the employer was important in this whole mix of things you  
 (14) might then ask me questions and I m not prepared to do that  
 (15) kind of - in this environment where you can t agree on a  
 (16) fairly simple thing I m not going to do that If I choose to  
 (17) question the employer you re going to be there when I do it  
 (18) MR STOLL Fine We tried  
 (19) THE COURT Is there anything else to take up before  
 (20) we recess?  
 (21) MR DIAMOND We had admission of exhibits The two  
 (22) exhibits that were previously identified during the  
 (23) cross examination of Dr Kocan one was the board the other  
 (24) was the two pages of flip charts will be respectfully 15484  
 (25) and 15485

Vol 13 2096

- (1) THE COURT You want them in?  
 (2) MR DIAMOND I think they ve already been admitted  
 (3) but we did not have numbers on -  
 (4) THE COURT Oh yes I see Yeah they re the ones I  
 (5) admitted  
 (6) MS SMITH Your Honor we would ask the Court to  
 (7) admit the exhibits that we used during Parker and they are  
 (8) page 28 of DX3812 which is the 1989 Prince William Sound  
 (9) Annual Fin Fish Management Report  
 (10) (Exhibit DX3812 (page 28) offered)  
 (11) THE COURT Let s just talk about that one Do you  
 (12) want - Is there any objection to that?  
 (13) MR STOLL No Your Honor  
 (14) THE COURT Then that s admitted  
 (15) (Exhibit DX3412 (page 28) received)  
 (16) THE COURT Do you have a whole list of them  
 (17) MS SMITH Yes I do  
 (18) THE COURT Would you give - first show the list to  
 (19) counsel I m assuming there will be no objection To the  
 (20) extent that there is no objection you can give the list to the  
 (21) clerk she can mark the list as the Court s exhibit and I ll  
 (22) admit them  
 (23) MS SMITH All right Thank you Your Honor  
 (24) MR STOLL Your Honor the only ones we have an  
 (25) objection to why don t we just deal with that?

Vol 13 2097

(1) THE COURT Yes

(2) MR STOLL There are - I don't have the numbers

(3) which are the ones that -

(4) MS SMITH Those are the graphs These three are

(5) commercial subsistence harvest

(6) MR STOLL Let me just look at this - I mean

(7) there's one that has -

(8) Your Honor the first group of exhibits that she's going to

(9) identify to the clerk we have no objection to They all come

(10) from AD - they're all a page of an ADF&G report We have no

(11) objection to those with the exception - the only one I have

(12) an objection to is 769 which is a memorandum from a Ken

Florey

(13) to Mr Parker This is a fellow in Anchorage that was an area

(14) manager that was objecting to a possible policy that was under

(15) consideration by ADF&G for overescapement

(16) THE COURT The zero tolerance policy?

(17) MR STOLL No not the zero tolerance policy This

(18) was a policy on dealing with overescapement

(19) THE COURT Oh all right

(20) MR STOLL And the policy is not in evidence or the

(21) proposed policy is not in evidence The witness testified that

(22) the policy was never implemented or adopted and I think that

(23) this document is irrelevant and very confusing to the jury

(24) because it confuses I think the zero tolerance policy with

(25) the overescapement policy which was never adopted I mean

so

Vol 13 2098

(1) that's -

(2) THE COURT I understand

(3) MR STOLL There's objection only to 769 I just

(4) think it's confusing

(5) THE COURT Counsel?

(6) MS SMITH This is a document that's a plaintiff's

(7) exhibit that was designated for use with Parker and it is by

(8) as he identified them on the stand two individuals who are

(9) part of the Commercial Fisheries Division in Anchorage

(10) discussing overescapement policy and the reason we want to

use

(11) it is the context that we heard here They report to him they

(12) sent him the memo and they thought that the overescapement

was

(13) very difficult to figure out and that there was no precedent

(14) for the ADF&G stepping in in an overescapement situation

(15) So he knows the memo he received the memo they're his

(16) guys and the plaintiffs designated it as an exhibit in this

(17) case

(18) THE COURT Well I don't care if they designated it

(19) as an exhibit The real question is is it relevant What

(20) does it show to you? Tell me what your argument is based on

on

(21) that exhibit

(22) MS SMITH Well I think it - the argument as to why

(23) it's relevant is it goes to - the paragraphs we wanted were

(24) the ones about who knows what the maximum or optimum

escapement

(25) can be should be and really that no measures should be taken

Vol 13 2099

(1) by ADF&G to react to the overescapement particularly at Red

(2) Lake in 1989 which as you know now is a big issue because of

(3) the plaintiffs argument that this goes to stigma and fear and

(4) uncertainty

(5) Our argument is that the level of escapements are not a

(6) science and that they - that the decision by ADF&G not to do

(7) anything about this overescapement in 1989 not to implement

(8) the draft policy that Parker proposed meant that they either

(9) weren't that concerned worried or et cetera about it and

(10) we're going to make that argument they decided not to close

(11) the weir They decided not to do a number of things like

(12) that What ADF&G decided to do or not do about

overescapement

(13) in 1989 is relevant

(14) THE COURT Okay To cast doubt on the scientific

(15) proposition that the plaintiffs are espousing

(16) MS SMITH Yes Your Honor

(17) MR STOLL Your Honor first of all the things that

(18) Mr Parker - any proposal he didn't - he didn't make a

(19) proposal There was discussion about a methodology for

dealing

(20) with possible overescapement This memo was not necessarily

(21) proposal of Mr Parker It was just an idea What do you

(22) think about this idea?

(23) The things that this document that was quoted from in this

(24) document were questions Do we really know the optimum or

(25) maximum escapement for any system in Alaska? It's not

Vol 13 2100

(1) addressed to Red Lake It's addressed to the State of Alaska

(2) and it's asking a question That's the things they're quoting

(3) from This is very very confusing The Court can look at

(4) this

(5) THE COURT I'm sure it's confusing counsel I've

(6) seen your documents before they're all confusing

(7) MR STOLL But some of them are - they're a table

(8) where this is the number of fish or whatever

(9) THE COURT I understand This is - the - counsel

(10) do you want to respond?

(11) MS SMITH No just only to say that it - it was

(12) drafted by Parker he testified and it's a policy on

(13) overescapement so it's not just an idea it's a draft policy

(14) that he floated to his staff and this was their response

(15) THE COURT Okay and my answer to you on the exhibit

(16) question is this is a very small segment of a larger document

(17) and in fact quite a bit larger document You had an adequate

(18) examination of the witness The words are in the record You

(19) can argue from the words The document is not necessary to

(20) admit So the objection is sustained I won't admit the

(21) document

(22) MS SMITH All right That - that takes us through

(23) everything except the graphics

(24) MR STOLL Yeah On the graphics Your Honor -

(25) THE COURT I'm not going to - this is the - what we

Vol 13 2101

- (1) had the talk at the bench on  
 (2) MS SMITH Yes  
 (3) THE COURT I m not going to admit them now I  
 (4) suspect that I ll admit them when they re properly sponsored  
 (5) MR STOLL Thank you  
 (6) MS SMITH They re ADF&G guys coming in with ADF&G  
 (7) material  
 (8) THE COURT I believe you but I think I m going to  
 (9) wait and see them lay the proper foundation and once they do  
 (10) those graphs will come in  
 (11) MR STOLL Your Honor just let me explain my  
 (12) position If they have - if these are - just haven t had  
 (13) time to check - never mind  
 (14) MR DIAMOND Your Honor we d asked the plaintiffs  
 (15) not to let Mr Parker leave in anticipation of being required  
 (16) to lay this foundation with him If that s the appropriate  
 (17) witness  
 (18) THE COURT In anticipation of laying a foundation for  
 (19) the admission of these documents?  
 (20) MR DIAMOND Yeah because they re his data  
 (21) THE COURT Going through them piece by piece as you  
 (22) said  
 (23) MR DIAMOND We were hoping we would n t have to do  
 (24) that I suppose I m confused what foundation you want  
 (25) THE COURT Who prepared the graphs?

Vol 13 2102

- (1) MR DIAMOND Ultimately there s a chart maker who got  
 (2) the data extracted from a report and he laid the bars down on a  
 (3) computer  
 (4) THE COURT Who prepared the report that gave the  
 (5) statistics that were incorporated into the graph  
 (6) MS SMITH The Division of Commercial Fisheries  
 (7) ADF&G  
 (8) MR DIAMOND Mr Parker  
 (9) MS SMITH Mr Parker was the director at the time  
 (10) THE COURT I know he was the director but -  
 (11) MR DIAMOND We could have our expert testify that  
 (12) they do accurately depict the data that is in the ADF&G  
 (13) reports  
 (14) THE COURT At that point then - I ll give you a  
 (15) fair opportunity even if you make six mistakes to finally  
 (16) produce a witness who can authenticate this document and to  
 (17) get  
 (18) it admitted all right? At this point I can tell you  
 (19) counsel I m just about in the same mental status as a  
 (20) 23 month old pink salmon so I think we ought to recess and  
 (21) figure out something better to do with our time right now  
 (22) MR DIAMOND And on that note I think Mr Stoll and  
 (23) I would like to see you in chambers  
 (24) THE COURT I ll be happy to  
 (25) MR STOLL Your Honor hold it I have one more  
 (26) exhibit - two more exhibits though That s 1514 and 1515

Vol 13 2103

- (1) which we had Dr Mundy identify I d like to offer those  
 (2) (Exhibits 1514 and 1515 offered)  
 (3) MR STOLL I don t know who to deal with Your  
 (4) Honor  
 (5) MR COOPER Oh I don t have any objection to those  
 (6) charts Your Honor Those are fine  
 (7) THE COURT Are they marked or not?  
 (8) MR STOLL Yes they re marked  
 (9) THE COURT Whatever they re marked they re in  
 (10) (Exhibits 1514 and 1515 received)  
 (11) MR PETUMENOS Your Honor I have a matter not to  
 (12) take up now I understand the 23 month thing There is an  
 (13) exhibit that s coming up in the cross examination of not this  
 (14) witness but the next witness that I need to approach the Court  
 (15) on and since they re familiar with it schedule it sometime  
 (16) THE COURT How long do you think the discussion will  
 (17) take?  
 (18) MR PETUMENOS About ten minutes a side I would  
 (19) imagine or less And I have not - I will also say Judge  
 (20) that I have not discussed it with Exxon counsel yet It may be  
 (21) they will withdraw it maybe we should do that first  
 (22) THE COURT I have a 2 30 summary judgment It ll be  
 (23) over by 3 00 If you can t resolve it with counsel I want you  
 (24) back here at a quarter to 4 00 and you can - you can talk  
 (25) about it on the record then All right?

Vol 13 2104

- (1) MR DIAMOND And before you -  
 (2) THE COURT If you do resolve it call my office and  
 (3) say we don t need the hearing  
 (4) MR DIAMOND Before we all smolt away we had  
 (5) submitted a jury instruction on the pending class litigation  
 (6) THE COURT Yeah I have it  
 (7) MR DIAMOND In view of the fact this testimony is  
 (8) coming in about damage to commercial fisheries damage to  
 (9) commercial fish catch we would think this would be an  
 (10) opportune time to clear the decks and get that read I know  
 (11) Mr Petumenos wants to file a brief but every day he delays in  
 (12) filing a brief this becomes a little bit more confused  
 (13) MR PETUMENOS I believe it s filed I believe it  
 (14) was filed today  
 (15) THE COURT I should have the courtesy copy in  
 (16) chambers  
 (17) MR PETUMENOS I asked it be filed when I was in  
 (18) court I don t know that that courtesy copy got filed When I  
 (19) get back to the office I ll see that you get one  
 (20) THE COURT Does the brief contain your version?  
 (21) MR PETUMENOS Yes  
 (22) MR DIAMOND We will endeavor to respond to that by  
 (23) tomorrow afternoon okay?  
 (24) THE COURT You will?  
 (25) MR COOPER Endeavor was the key word there

Vol 13 2105

- (1) THE COURT Your time is my time counsel I can
- (2) wait
- (3) MR DIAMOND I can t
- (4) THE CLERK Please rise This court is in recess
- (5) (Recess at 1 57 p m )

(1) PROCEEDINGS  
 (2) (Call to Order of the Court)  
 (3) THE COURT Good morning counsel  
 (4) Just before you speak I m going to admit certain exhibits  
 (5) that you ve told us about DX5748 DX3811 DX - are there two  
 (6) DX3811 s  
 (7) THE CLERK Different pages  
 (8) THE COURT Okay page 104 and 105 of DX3811 DX5766  
 (9) and as to 5748 it was page 87 I declined to admit PX769 I  
 (10) believe that s it  
 (11) (Exhibits DX5748 (p 87) DX3811 (pp 104 and 105) DX5766  
 (12) received)  
 (13) MR STOLL Your Honor I just thought to make this as  
 (14) orderly as possible if - I d like to get some - establish  
 (15) some rules on - on exhibits that we ve been served with a  
 (16) large number of documents that defendants have indicated  
 they  
 (17) may use in cross examination Some of these Dr Mundy may  
 be  
 (18) familiar with Some of them he s not  
 (19) To the degree that if he s not familiar with the document  
 (20) then I would like to not have any public - publication or  
 (21) examination of the witness because there s no foundation  
 even  
 (22) if it s a government record for that - for that table or line  
 (23) or whatever that is in there  
 (24) I just thought we d establish that now so we don t get into  
 (25) sidebars and jury coming in and going out They can ask him

Vol 14 2114

(1) If he knows he s familiar with it fine He thinks it s  
 (2) reliable fine If there s a proper foundation but otherwise  
 (3) it s hearsay  
 (4) THE COURT Counsel?  
 (5) MR COOPER Your Honor I think I just interpret that  
 (6) as asking there be a foundation laid before the document is  
 (7) shown and I don t have a trouble with that I assume that  
 (8) rule would work both ways  
 (9) MR STOLL Absolutely  
 (10) THE COURT Absolutely Everything works both ways in  
 (11) this case  
 (12) MR STOLL Why should we start now? That s fine  
 (13) We re ready Your Honor  
 (14) THE COURT Okay let s get them in It s going to  
 (15) take some time They re on the other side of the building  
 (16) (Jury in at 8 49 a m)  
 (17) DIRECT EXAMINATION OF PHILLIP R MUNDY (Resumed)  
 (18) BY MR STOLL  
 (19) Q Dr Mundy I d like to now go from the - sort of your  
 (20) general discussion about the - how the life cycles of pink and  
 (21) red salmon operate and the various years that may be involved  
 (22) in that cycle and look at the specifics here And I d like to  
 (23) now refer to your - I guess you started 18 years ago studying  
 (24) salmon in Alaska is that correct?  
 (25) A Yes

Vol 14 2115

- (1) Q And then I'd like to focus in and during that 18 year
- (2) period you studied the salmon in Prince William Sound as well
- (3) as the red salmon in Kodiak as well as other areas is that
- (4) right?
- (5) A Yes I studied pink salmon in Prince William Sound in
- (6) 1980 81 82 83 over a four year period
- (7) Q Long before this litigation before anybody thought about
- (8) any -
- (9) A That's correct
- (10) Q - oil spill here And then I'd like to focus really on
- (11) the findings that you made and other scientists made when you
- (12) were first of all working for the U S Justice Department and
- (13) then subsequently as a scientist for the Trustee Council And
- (14) would you tell the jury please what - I'd like to - let me
- (15) back up one more thing here and that is to show the jury again
- (16) Prince William Sound
- (17) MR STOLL Could we have 2303 on the Barco please?
- (18) BY MR STOLL
- (19) Q Dr Mundy this is Prince William Sound correct?
- (20) A Looks familiar
- (21) Q And on this map here this is 1161 the green areas here
- (22) show the plaintiffs - Native corporations properties in
- (23) Prince William Sound?
- (24) A Yes
- (25) Q I'd like to ask you first of all in Prince William Sound

Vol 14 2116

- (1) the dominant salmon species is pink salmon?
- (2) A Yes the most abundant pink salmon species in Prince
- (3) William Sound is the pink salmon Of course that means that
- (4) it's also the most important commercial salmon species in
- (5) Prince William Sound
- (6) Q Now I'd like to ask you what effect if any did the Exxon
- (7) Valdez oil spill have on pink salmon in Prince William Sound?
- (8) A Well based on the results of the studies that the Trustee
- (9) Council put in the water in 1989 in the year of the spill and
- (10) subsequently has followed up every year since the spill we
- (11) know that the primary impacts of the oil spill on pink salmon
- (12) came in two ways The first impact was to kill eggs salmon
- (13) eggs in the gravel The second was to reduce growth of
- (14) juvenile fish in the marine environment
- (15) Now the impact of killing eggs in the gravel is a - it's
- (16) pretty straightforward We start off with fewer eggs than we
- (17) would have had in that generation and that means that no
- (18) matter what happens environmental variability or whatever
- (19) we're going to have fewer fish than we would have had except
- (20) for the effects of the oil spill
- (21) In the case of growth the - the effect is somewhat
- (22) indirect and that's because I indicated yesterday that fish
- (23) in the nearshore environment and this is where the effects of
- (24) oil on growth were measured The fish try to grow as fast as
- (25) they can is one way to put it so that they can - they can

Vol 14 2117

- (1) get big and get out of the areas where predators can take them
- (2) predators can eat them We say that fish grow to survive so
- (3) if a fish grows slowly if they have reduced growth or
- (4) inhibited growth this translates into increased mortality If
- (5) they grow slower that means more of them will die before they
- (6) can get out of the range of the predators
- (7) There are a lot of predators that can eat small fish
- (8) There are birds and lots of different kinds of fish as well as
- (9) marine mammals that can handle small fish and prefer small
- (10) fish but as they grow there are fewer and fewer predators
- (11) they have to contend with So the quicker they grow the
- (12) quicker they get up to size the fewer of them will die
- (13) So the studies measured those two primary effects The
- (14) impact of the oil on the survival of the salmon eggs the pink
- (15) salmon eggs in the gravel in the streams and also the impact,
- (16) of the exposure to oil on the growth of the salmon in the
- (17) nearshore marine environment
- (18) MR STOLL And what was the - could we put on
- (19) Exhibit 335 please?
- (20) BY MR STOLL
- (21) Q Is this a graph of embryo mortality?
- (22) A Yes
- (23) Q And is this it?
- (24) A That's it This is the pattern that we saw in 1989 with
- (25) respect to the - to the salmon embryo mortality If you look

Vol 14 2118

- (1) - okay I've got it - if you look on this side of the - this
- (2) side of the graph this gives you the embryo mortality Here
- (3) is ten percent mortality That is proportion point one of
- (4) them would die and 90 percent of them would live Up at this
- (5) level 20 percent of them would die and 80 percent of them
- (6) would live so this is - as you go from down here to up here
- (7) this is increasing rate of death for the - for the eggs and
- (8) down on this side here we've got the location from the stream
- (9) mouth It's called height above mean low water but basically
- (10) right in this area we've got the stream mouth and we're moving
- (11) up the stream away from the marine environment here
- (12) Okay the lower line down here the green line are the
- (13) streams that were in the vicinity that were judged not to have
- (14) received direct impacts from oil These were streams that were
- (15) judged not to be - not to be oiled and these are the green
- (16) green line
- (17) The streams that were judged to be oiled are represented by
- (18) the dark blue line in the upper portion You can see that the
- (19) pattern was the same whether we're looking down in the lower
- (20) portion of the stream where most of the salmon are spawning or
- (21) we look up farther up in the stream The embryo mortalities
- (22) as measured in 1989 for the oiled streams were quite a bit
- (23) higher than the embryo mortalities measured in the control
- (24) streams
- (25) This pattern was also seen in 1990 and again in 1991 and

Vol 14 2119

- (1) subsequently we went into the laboratory We went under  
 (2) control conditions at the National Marine Fisheries Service  
 (3) Laboratory oiled gravel and were able to reproduce these  
 (4) results in the laboratory to show that it was in fact the  
 (5) effect of the oiled gravel that we were measuring here  
 (6) Q So these tests were done in - in the field so to speak  
 (7) in 1989 They were done again in 1990 done again in 1991?  
 (8) A Correct  
 (9) Q And all those years you had this - this - you had a -  
 (10) you had a difference in the embryo mortality?  
 (11) A We had significantly higher embryo mortalities in all  
 (12) three all three years  
 (13) Q And then you also did the tests in the laboratory?  
 (14) A Yes Then subsequent to this - we initially expected that  
 (15) the effects of the - the oil would be short lived that's what  
 (16) the scientific literature told us to expect We read as much  
 (17) as we could at the beginning of this and we were told to  
 (18) expect that the effects of oil would quickly dissipate that  
 (19) they would go away and there wouldn't be much of a problem  
 (20) that would persist So we were very surprised when we went  
 (21) out  
 (22) in 1990 and measured the same problems that we saw in 1989  
 (23) in  
 (24) these streams  
 (25) Then again in 1991 and it was - it was very surprising  
 (26) This was not what the - what the scientists had told us to  
 (27) expect from other oil spills This situation was very

Vol 14 2120

- (1) different though from other oil spills because we were in a  
 (2) really good position to measure the fish In big marine oil  
 (3) spills you never get a chance to look at the fish because they  
 (4) die and they sink But in this case we've got salmon that come  
 (5) back to spawn every year so we get a very good look at the  
 (6) fish and I don't think they've ever had such a chance before  
 (7) in science to study the effects of an oil spill  
 (8) So we found - when we found that these effects were  
 (9) continuing we had questions about whether - whether this  
 (10) might be due to the oil spill or other factors so we wanted to  
 (11) go into the laboratory and see whether or not we could  
 (12) reproduce these results see whether or not we would get the  
 (13) same results in the laboratory and generally the laboratory  
 (14) results which - these experiments are still ongoing because  
 (15) with salmon you only get to test them once a year for the  
 (16) eggs They're only depositing their eggs once a year We see  
 (17) that the results are being confirmed with all the information  
 (18) that we're getting out of the laboratory studies  
 (19) Q Now when you did these tests in the field were these both  
 (20) with hatchery fish and wild stock where you saw these  
 (21) differences?  
 (22) A Well the - these embryos refer to wild stock fish Of  
 (23) course the fish inside the hatcheries did not receive any  
 (24) direct effects from the oiling as far as - as far as we  
 (25) know

Vol 14 2121

- (1) The growth studies however were for fish that were in the  
 (2) nearshore marine environment They were actually out  
 (3) collecting fish in the nearshore marine environment and  
 (4) measuring their growth And they had - they separated this  
 (5) into wild fish and hatchery fish and you can - a lot of the  
 (6) hatchery fish are tagged so - they cut a small fin off the  
 (7) back of the fish so they can identify it and then they put a  
 (8) sliver of stainless steel into its head which has a code on it  
 (9) and using a metal detector you can tell whether or not - even  
 (10) if you can't see the fin clip you can tell whether or not the  
 (11) fish has the stainless steel in its head They were able to  
 (12) collect fish in marine environment and tell whether they came  
 (13) out of a hatchery or not Not all the hatchery fish are  
 (14) tagged so they only judged the fish that were clipped and that  
 (15) had the stainless steel in their head to be hatchery fish  
 (16) So the growth studies the depression in growth was  
 (17) measured in 1989 These were the fish that were heading out  
 (18) through the Southwestern District all the fish most of the  
 (19) fish in Prince William Sound as juveniles when they migrate  
 (20) through the Gulf of Alaska go out through the Southwestern  
 (21) District out through the areas where the oil was deposited in  
 (22) Prince William Sound The growth depression was observed for  
 (23) both wild fish and for hatchery fish  
 (24) Q Let's just look at that for a minute If I may on  
 (25) Exhibit 1161 the - could I have that little pen that light

Vol 14 2122

- (1) pen? Well I don't think you can see it  
 (2) Southwest there's been a lot of testimony about the heavy  
 (3) oiling in these areas of Evans Island LaTouche Island and so  
 (4) on and then going on down here what did you say about the  
 (5) fish  
 (6) migrating? They migrated through - is this the area you call  
 (7) Southwest?  
 (8) A Yes that's the Southwestern District of Prince William  
 (9) Sound and generally you can see that the area there is sort  
 (10) of like a natural funnel for the - for the fish We know from  
 (11) tagging studies that were done by the federal government back  
 (12) in the 1920s and from oceanographic studies that the flow  
 (13) patterns in Prince William Sound generally allow the water to  
 (14) exit through the Southwestern District It'll come in it'll  
 (15) come in from the - from the direction of the south and from  
 (16) the direction of the east move up into the Sound and then  
 (17) drop out through the Southwestern District  
 (18) So generally that's the pattern that the juveniles  
 (19) follow They go out when they get big enough with the ocean  
 (20) currents which run out through the Southwestern District and  
 (21) when they return correspondingly as adults they will come  
 (22) back in on that cue come back in on that same signal following  
 (23) those currents right back in when they went out as they were  
 (24) young fish  
 (25) Q I put down below here 1161 which is sort of a  
 continuation It's not the same scale but it's sort of a

Vol 14 2123

- (1) continuation of the same area isn't that right?
- (2) A That's the - that's the southern end of the western margin
- (3) of Prince William Sound
- (4) Q I'm not going to stick my head in there. So even if there
- (5) were pink - even with the pink salmon up in the upper area up
- (6) here in Prince William Sound they're going to have to go when
- (7) they - when they go out to sea to the Gulf of Alaska they're
- (8) going to go through this this area here that is in the
- (9) Southwest?
- (10) A Yes they - in 1989 they - just about all of the
- (11) juveniles that went out of Prince William Sound hatchery and
- (12) wild went out through the areas that had been oiled and/or
- (13) steam cleaned sandblasted sort of in those areas
- (14) Q Now what did the - you mentioned this - the steam
- (15) cleaning What did the steam cleaning do as far as - it
- (16) cleaned the rocks up and so on What did that do if anything
- (17) to pink salmon in Prince William Sound?
- (18) A The - the effects of the of the cleanup itself have not
- (19) been directly measured However we can look at what the
- (20) cleanup did and that is that it removed the plants and the
- (21) animals from the nearshore environment and these are the
- (22) plants and animals that the pink salmon depend on to make
- (23) their
- (24) living
- (25) These are the areas that have their food So that if we
- (26) look at the depression in growth certainly having less food

Vol 14 2124

- (1) would - would have an impact on that So that in general
- (2) the nearshore environment was altered It was abnormal in
- (3) places as a result of both the oiling and the cleanup of the
- (4) oil
- (5) Q Now you mentioned this business about the - the findings
- (6) of the Trustee Council that the reduced - that there was
- (7) reduced growth in these salmon and what - what does that do
- (8) to the ability of the salmon to survive later on?
- (9) MR COOPER Your Honor I think we've just heard a
- (10) fair amount of detail on this already
- (11) THE COURT Yeah I thought we had
- (12) BY MR STOLL
- (13) Q Could we look at Exhibit 343 please? - Excuse me 339
- (14) yeah 339
- (15) Okay are you familiar with this chart Dr Mundy?
- (16) A Yes
- (17) Q What does this show?
- (18) A This graphic again taking a look at what's - what's
- (19) being shown here on this side of the - of the graphic we
- (20) have millions of pink salmon This is basically a five
- (21) million ten million 15 million level up here on the side and
- (22) then down here we have two different categories One is the
- (23) actual 1993 pink salmon returns to Prince William Sound This
- (24) blue area here is the hatchery portion of that and then up at
- (25) the top the brown portion is the natural production for that

Vol 14 2125

- (1) Over in the 1993 forecast that was made by Alaska
- (2) Department of Fish and Game we have the same two
- (3) categories
- (4) The blue is the - is the expected hatchery return and the
- (5) brown is what was expected to return from natural - natural
- (6) production
- (7) So I emphasize the fact that the small box over here is
- (8) a - is a number that's counted in terms of fish coming back
- (9) being caught or going into the escapement This number over
- (10) here this is a projection that's a statistical expectation of
- (11) what the pink salmon run size is going to be in terms of
- (12) hatchery and natural fish
- (13) Q Now when you were the chief scientist for the Alaska
- (14) Department of Fish and Game did you - were you involved with
- (15) these - this forecasting and reviewing forecasting and so on?
- (16) A Yes
- (17) Q And are these forecasts typically accurate?
- (18) A The forecasts are typically highly accurate However the
- (19) public's conception of accuracy I think is more like
- (20) precision The forecasts the forecasts are accurate in that
- (21) they are a good representation usually of the components that
- (22) go into making the salmon run We have counts of the - of how
- (23) many parents there were We have often counts of eggs and
- (24) the
- (25) numbers of smolts produced and those kinds of things but
- (26) because of environmental variability we have an error in our
- (27) forecast We get substantial amounts of error in these

Vol 14 2126

- (1) forecasts so the accuracy is - is how good a job you've done
- (2) of making the estimate where you put in the - all the best
- (3) data and all the right kinds of data but the precision is how
- (4) far you can be off and because of - we're subject to
- (5) variation of the weather just like farmers are and other people
- (6) who depend on natural resources so these errors are
- (7) sometimes
- (8) pretty imprecise
- (9) Q Okay Now do you attribute the difference between the
- (10) actual run size in 1993 that a substantial factor to that
- (11) difference between the actual run size and the 1993 forecast
- (12) was the Exxon Valdez oil spill
- (13) MR COOPER Objection Your Honor could we have some
- (14) additional foundation on this? We're simply looking at a
- (15) forecast and actual I don't know that there's been any
- (16) foundation that the witness has studied this problem that he
- (17) has any reasoning here for coming up with an opinion on this
- (18) THE COURT I'll let him answer the question
- (19) counsel You can go into detail later
- (20) BY MR STOLL
- (21) Q Do you think that the Exxon Valdez oil spill was a
- (22) substantial factor in the run size being a fraction of the
- (23) forecast in 1993?
- (24) A Yes
- (25) Q And would you explain to the jury the basis of your
- (26) conclusion?

Vol 14 2127

(1) A Okay I want to make it clear from the beginning that it s  
 (2) not my opinion that the - the oil spill caused this large  
 (3) negative deviation in the run size here The 1993 pink salmon  
 (4) run in Prince William Sound was substantially failure I mean  
 (5) it was - it was a real sharp decrease in the amount of salmon  
 (6) that should have come a very very sharp decrease in the  
 (7) survival rates And so in looking at the - at the forecast  
 (8) models and trying to make sure that we had the right pieces of  
 (9) information in those forecast models to do a good job to make  
 (10) an accurate estimate as accurate estimate as we possibly  
 (11) could the - all of the pieces at least all of the pieces we  
 (12) could afford to measure were there yet the error in the model  
 (13) was much much bigger than it should have been  
 (14) There were unaccounted for what we call statistics We  
 (15) call that unaccounted for sources of variability and this is  
 (16) what we watch for very very carefully because that means we  
 (17) don t have all of the important factors that go into making up  
 (18) the forecast actually in the model I mean it s a forecast  
 (19) We re missing something Something is not accounted for in  
 (20) the model  
 (21) So the fact that we - we had this - this also hurt in  
 (22) 1992 this was sort of a knife edged decrease We had  
 (23) excellent ones in 1990 and 1991 which gave us every  
 (24) expectation that this should be continued in 1992 and 1993 but  
 (25) it was as if someone had flipped a switch The productivity

Vol 14 2128

(1) just plummeted just plunged and immediately Managers  
 would  
 (2) get very nervous because that creates an awful lot of  
 (3) uncertainty about what we know about forecasting salmon runs  
 (4) when something turns around that fast and we re not - we re  
 (5) not predicting it We re not ahead of it then that means  
 (6) there s something we left out  
 (7) And I would say that because the oil spill in 1989 was such  
 (8) a serious insult to the environment such a serious shock to  
 (9) the environment that that s something that would have to be  
 (10) considered as a substantial factor something of concern  
 (11) particularly given the fact that we have the links to pink  
 (12) salmon egg mortality that have given us some indication that  
 (13) the effects of this oil spill didn t evaporate in 1989 but  
 (14) we re still having some impact on the survival of the pink  
 (15) salmon in Prince William Sound even - even to this day  
 (16) Q And if you had these big runs in 1990 and 1991 why - why  
 (17) can t you conclude from that that everything is - the effect  
 (18) of the oil spill is over? I mean isn t that inconsistent with  
 (19) this conclusion that you reached about the 1993 run?  
 (20) A Well I m hesitating a little bit because looking at a -  
 (21) at a big run of pink salmon in 1990 the year following the oil  
 (22) spill and saying oh look there weren t any problems created  
 (23) by the oil spill this is - in my mind statistically not a  
 (24) fair comparison The - it s as if a person has their house  
 (25) burned down and the insurance adjustor comes out and looks  
 at

Vol 14 2129

(1) the other houses in the neighborhood and finds that the other  
 (2) houses in the neighborhood are in good condition and then  
 they  
 (3) say well gee everybody else is doing fine I guess you don t  
 (4) need any money  
 (5) We had a very large production of pink salmon in 1989  
 (6) Some of those we know that some of those salmon were killed  
 by  
 (7) the effects of the oil spill but not all of them obviously  
 (8) only part of them were killed by the effects of the oil spill  
 (9) and so we got a big return We got a return - the return  
 (10) should have been bigger  
 (11) Parts of the Sound we found that the - one of the big  
 (12) impacts was in the spawning grounds and not all the spawning  
 (13) grounds were oiled in fact only a relatively small portion of  
 (14) the spawning grounds were oiled but by looking and pulling out  
 (15) big catch figures and thinking look we got big catches big  
 (16) catches of salmon there aren t any problems in the  
 environment  
 (17) where the fish are being produced is just not - just not  
 (18) appropriate in my opinion  
 (19) Q And what - what do you - do you have an opinion or have  
 (20) you reached a conclusion Dr Mundy as to what effect if any  
 (21) the oil spill will have as a factor in pink salmon in the  
 (22) future years for Prince William Sound?  
 (23) A Well again I - I can t - other than saying that I  
 (24) think that the oil spill - the oil spill effects are something  
 (25) that we need to continue to study that we need to continue to

Vol 14 2130

(1) watch very very carefully I can t say with any certainty what  
 (2) the impacts of the oil in the future will be except that we  
 (3) need to continue to monitor this and make sure that we don t  
 (4) let anything any effect of the oil spill that we may not  
 (5) understand or may not now fully be able to see get by us as  
 (6) managers and leave us in a situation where we won t be able to  
 (7) properly manage the resources for the State of Alaska in the  
 (8) future  
 (9) Q Now I d like to turn your attention to Kodiak and could  
 (10) we have exhibit 2305?  
 (11) MR COOPER Your Honor could I see that before we  
 (12) introduce that?  
 (13) THE COURT Sure  
 (14) MR STOLL Sure  
 (15) MR COOPER That s fine Your Honor it s a map  
 (16) BY MR STOLL  
 (17) Q Now you re familiar with the - with Kodiak as well?  
 (18) This is the management area map?  
 (19) A Yes I m generally familiar with it  
 (20) Q Okay And the - is it correct that the predominant most  
 (21) valuable salmon species there from a commercial standpoint at  
 (22) least is red salmon?  
 (23) A Yes that s correct  
 (24) Q And is it also correct and I ve got - let me put this  
 (25) thing in a little better map actually

Vol 14 2131

- (1) This area in here this is called Red Lake is that  
 (2) correct?  
 (3) A Yes that's right  
 (4) Q And then the river system that Red Lake where it gets  
 (5) its - where the salmon come from into Red Lake there's been  
 (6) some testimony yesterday about Red Lake that's called the  
 (7) Ayakulik River system?  
 (8) A Yes  
 (9) Q And that's in this area here?  
 (10) A Yes  
 (11) Q And is that a - could you tell the jury please how  
 (12) significant or insignificant that river system is to red salmon  
 (13) in Kodiak?  
 (14) A The Kodiak Island has a lot of lakes that produce sockeye  
 (15) salmon In fact it's - Kodiak is a textbook example that's  
 (16) used in all of the fisheries texts where fisheries scientists  
 (17) are trained and particularly Karluk Lake is the one that's  
 (18) very well known It's internationally famous for its sockeye  
 (19) production and there are four principal sockeye producing  
 (20) lakes on Kodiak four big lakes and lots of smaller lakes and  
 (21) Red Lake is considered to be one of the - one of the four big  
 (22) sockeye producing lakes on Kodiak Island  
 (23) Q And in 1989 none of the commercial fishermen were able to  
 (24) fish because of closures isn't that correct?  
 (25) A There were closures and there was no commercial harvest in

Vol 14 2133

- (1) overescapement situation we know that there's a risk - any  
 (2) overescapement situation - of damaging a lake system and we  
 (3) try to avoid that as best we can  
 (4) But in this case we wanted - we saw such a big escapement  
 (5) and we had the opportunity so we went and actually tried to  
 (6) study the effects and to measure the effects of the  
 (7) overescapement along this lake We found generally that the  
 (8) food availability declined in the lake because a very large  
 (9) number of fry were produced and there apparently was no  
 problem  
 (10) in producing fry There were plenty of places apparently for  
 (11) the fish to spawn lots of fry were produced and the  
 (12) measurements that were taken in Red Lake shows that the  
 amounts  
 (13) of food were reduced  
 (14) The growth and survival of the young fish from the 1989  
 (15) brood year was also reduced and subsequently the number of  
 (16) smolts - also something happened here that was - that does  
 (17) happen in sockeye lakes we've seen it before but up here  
 would  
 (18) also be an effect of the overescapement Instead of staying in  
 (19) the lake for one year and going out the fish didn't get big  
 (20) enough that first year they didn't pass go they didn't get to  
 (21) collect \$200 They had to go back and spend another winter in  
 (22) the lake and of course it's the winter when they die and -  
 (23) they don't have fat reserves so they start dying So most of  
 (24) the fish of the 1989 brood year stayed over an extra winter in  
 (25) the lake and went out as two year olds instead of

Vol 14 2132

- (1) that - that area  
 (2) Q And are you familiar with what happened with escapement  
 (3) into the Red Lake area?  
 (4) A Yes  
 (5) Q What was that?  
 (6) A The escapement goal in the Red Lake is about 250 000  
 (7) Generally managers manage on a range The range there is  
 (8) 200 000 to 300 000 that's what they would like to achieve and  
 (9) the escapement into Red Lake in 1989 was more than three  
 times  
 (10) the number that they wanted - it was about 760 000 sockeye  
 (11) salmon in 1989 - as a result of the management program not  
 (12) being able to use the fishery to reduce the escapement  
 (13) MR STOLL Could we have Exhibit 333 on the monitor  
 (14) please?  
 (15) BY MR STOLL  
 (16) Q Now is this - Dr Mundy is this what you were talking  
 (17) about with respect to the escapement in the Red Lake area?  
 (18) A Yes  
 (19) Q And as a consequence of that overescapement what - what  
 (20) was the consequence of that?  
 (21) A Well the - in the case of this overescapement studies  
 (22) were initiated to look at the amount of food and the types of  
 (23) food that were available in the - in the Red Lake for young  
 (24) sockeye and also studies were undertaken to measure the  
 number  
 (25) of smolts coming out of the lake When we have an

Vol 14 2134

- (1) one year olds  
 (2) But now this being 1994 we have the - the rest of the  
 (3) story We measure these effects in the lakes We saw the  
 (4) changes in the production of sockeye salmon in Red Lake from  
 (5) the 1989 escapement and now we have a chance to confirm  
 that  
 (6) because the - of the timing of the Red Lake run It's more  
 (7) than half over now and the escapement past the weir is about  
 (8) 211 000 The fishery hasn't fished at all  
 (9) They - in talking to the management biologists this week  
 (10) they would expect little or no fishing there this season so  
 (11) we've seen that it's not just a matter of making a scientific  
 (12) estimate or making an educated guess We had the  
 (13) overescapement event in 1989 we measured reductions in the  
 (14) food base in the lake we measured changes in the numbers of  
 (15) smolts that were produced and the ages of those smolts and  
 now  
 (16) the run has come back It's - a lot of the run has come  
 (17) back  
 (18) We won't know for another year what the full story is but  
 (19) the - generally the prediction was made on the basis of the  
 (20) 1989 escapement numbers have been realized for - for this  
 (21) year for 1994 and so I can say with a great deal of  
 (22) confidence that the impact of the overescapement in 1989 in  
 Red  
 (23) Lake was clearly negative  
 (24) Q Why do these - maybe you explained this but I didn't  
 (25) quite get it Why do these salmon the young fry why do they

Vol 14 2135

- (1) stay over a year in Red Lake?  
 (2) A Well one of the effects that they observed during 1990 was  
 (3) reduced growth They pushed - there were already fish of  
 (4) course in the lake from the 1988 escapement The young fish  
 (5) had to compete with bigger fish and there were an awful lot of  
 (6) young fish small fry in the lake that year So while they  
 (7) didn't die outright they didn't grow very well at all and  
 (8) when they don't get enough growth in the first year they re  
 (9) not big enough to go to sea so they stay in the lake an  
 (10) extra - an extra winter and feed again the next spring  
 (11) Q Is - so when there wasn't enough food that's when they  
 (12) died during the winter?  
 (13) A Well they - it's not the - there's generally not much  
 (14) food for them during the winter It's because they didn't get  
 (15) enough food in the summer so they didn't establish the proper  
 (16) fat reserves so they didn't make it  
 (17) Q I see And what is the - what is the run size typically  
 (18) in this - before there was an oil spill what's the run size  
 (19) in this - in the Red Lake system?  
 (20) A Oh generally they count on a run of about 750 000 sockeye  
 (21) salmon They've got an escapement goal of 250 000 so that  
 (22) means that the fleet gets to harvest an average of about  
 (23) 500 000 sockeye salmon a year  
 (24) Q Now you're saying being halfway through what would  
 (25) typically be the season there's been no opening because

Vol 14 2136

- (1) there's no fish?  
 (2) A That's correct There hadn't been sufficient fish to have  
 (3) both escapements and the harvest The top priority in  
 (4) fisheries salmon fisheries management in Alaska is to provide  
 (5) escapement to the streams I believe that that's the reason  
 (6) that Alaska has been so successful in managing its salmon  
 (7) fisheries when salmon fisheries in other states are really  
 (8) depressed and in bad shape  
 (9) But in Alaska by law the escapement has top priority and  
 (10) until the escapements are attained until they have reasonable  
 (11) certainty that they're going to get the right number of fish in  
 (12) the spawning ground they won't permit any commercial  
 (13) fishing  
 (14) So in this case they're still - they're at the bottom of the  
 (15) escapement goal range They would like to be somewhere in  
 (16) the  
 (17) middle of the escapement goal range before they allow any  
 (18) fishing at all  
 (19) Q So what is the conclusion as to whether there will be any  
 (20) fish this year other than those available for the  
 (21) overescapement?  
 (22) A The management biologist's opinion - and I share his  
 (23) opinion based on my own look at the data - is that the  
 (24) chances of a fishery are - are low Not saying there may not  
 (25) be any fishing but if there is any fishing there's certainly  
 (26) not going to be a catch of 500 000 which is their average  
 (27) catch So clearly this - this 1989 overescapement has done

Vol 14 2137

- (1) damage and also that damage is going to be propagated into  
 the  
 (2) future  
 (3) Q Why is that Doctor?  
 (4) A Well because you're - if you don't have the proper  
 (5) escapement goal if they don't make what they - they want to  
 (6) get in terms of their escapement then they won't have the  
 (7) production in the future And the - and consequently that's  
 (8) why we try to avoid overescapement situations is because it can  
 (9) be those damages can be sustained for fairly long periods  
 (10) of time  
 (11) Q So you see the effects of the oil spill on the red salmon  
 (12) in Kodiak as continuing in the future?  
 (13) A Yes  
 (14) Q Now in Kodiak in the early 1990s there were some record or  
 (15) near record red salmon harvests were there not?  
 (16) A Yes  
 (17) Q And why - why if that happened why isn't everything okay  
 (18) and this problem in 1994 and that you're - and that is  
 (19) forecasted for future years why isn't that inconsistent?  
 (20) A Well clearly not all of the - the lakes on Kodiak not  
 (21) all the sockeye salmon lakes on Kodiak received  
 overescapements  
 (22) in 1989 Red Lake and other lake Akalura Lake which is one  
 (23) of the smaller sockeye systems received overescapements and  
 (24) the other systems were apparently in pretty good shape  
 (25) apparently producing fairly well so it's not surprising to me

Vol 14 2138

- (1) that we've gotten some - some very good harvests in Kodiak in  
 (2) sockeye Sockeye in general in Alaska are doing very well  
 (3) now Conditions in the ocean seem to be really almost perfect  
 (4) for sockeye salmon and we're getting record runs and near  
 (5) record runs year after year and particularly in western Alaska  
 (6) and Kodiak area  
 (7) The damages that - that were done on Kodiak to sockeye  
 (8) were clearest in Red Lake one of the major sockeye producing  
 (9) systems and were clearest for that 1989 brood year We don't  
 (10) yet fully know what effects this 1989 brood year might have had  
 (11) on the 1990 escapement when the fish came into this lake  
 (12) system where the food's been reduced We have some  
 indication  
 (13) that it's recovering and we're optimistic that the lake is  
 (14) beginning to recover but there isn't any clear evidence that  
 (15) that's the case at this time  
 (16) Q So there may have been - the sockeye salmon have I think  
 (17) you said depending on how long they're in the lakes or how  
 (18) long they're at sea it could be four to six year cycle?  
 (19) A Yes In the catches in any given year are usually made up  
 (20) of four year old five year old and six year old fishes We  
 (21) say that - we make an approximation say well most of these  
 (22) fish are five years old but in most sockeye populations you  
 (23) know 50 percent or more of them could be four year olds or  
 (24) six year olds It's just the dominant age class or the most  
 (25) common fish in the catch would be five years old usually

Vol 14 2139

- (1) Q So if there was a very large run in 1992 for instance  
 (2) three years after the 89 oil spill that wouldn't  
 (3) necessarily - would that have any - would any of those red  
 (4) salmon come in '92 would they be from the '89 eggs?  
 (5) A Practically none of them Very rarely  
 (6) Q And relatively few of the '93?  
 (7) A Yes  
 (8) Q Now yesterday counsel showed a - a chart which is - and  
 (9) I'd like to have it put up on the board 4650 - DX4653  
 (10) MR DIAMOND Your Honor I believe Mr Stoll raised  
 (11) an objection to the admission of this document yesterday If  
 (12) he objects to its admission It ought not to be published to  
 (13) the jury  
 (14) MR STOLL I want to ask him a question about a  
 (15) factor on this though  
 (16) THE COURT You can ask him  
 (17) BY MR STOLL  
 (18) Q Dr Mundy if these statistics are correct that are shown  
 (19) on this why doesn't this indicate - if there was a large  
 (20) overescapement in 1980 why doesn't this indicate that  
 (21) everything should be fine for the future with respect to the  
 (22) overescapement problem that happened on Kodiak -  
 (23) A Okay  
 (24) Q - in 1989?  
 (25) A Yes In looking - this is not the - not the kind of data

Vol 14 2140

- (1) that fisheries scientist would use to evaluate whether an  
 (2) overescapement has had an impact The - you can look at  
 (3) this - you can look at the - at the 1980 overescapement  
 (4) which is right here and then you can move up here five years  
 (5) in the future and you can say okay this 1985 run was the  
 (6) result of this 1980 escapement and that's - but it's also the  
 (7) result of the 1979 escapement and the 1981 escapement and  
 (8) maybe  
 (9) even a little bit of the 1982 escapement  
 (10) So if we want to tell whether or not the 1980 run was -  
 (11) this overescapement impacted that productivity of that system  
 (12) we have to go to the 1985 catch and look at the age of the  
 (13) fish This is why salmon biologists run around plucking scales  
 (14) off the sides of fish And reading scales we read the scales  
 (15) like tree rings are read to determine the age of a tree and to  
 (16) try to figure out what brood year these fish came from So  
 (17) basically laying out catch data and trying to - trying to  
 (18) figure out whether you've had increased productivity  
 (19) decreased  
 (20) productivity or any effect at all is not - is not really  
 (21) appropriate scientifically The - so I'll leave it there  
 (22) Q So even if these figures - I don't know whether they're  
 (23) right or wrong but even if these figures on this bar chart are  
 (24) accurate in terms of what the escapement was you don't think  
 (25) this is relevant to your analysis for the '89 - the effects of  
 (26) the oil spill on the 1989 escapement and the subsequent years?  
 (27) A I - well first of all it's just the wrong kind of data

Vol 14 2141

- (1) If I were going to explain to you or try to tell you how an  
 (2) escapement had impacted productivity or had helped or  
 (3) damaged a  
 (4) system I wouldn't bring this kind of data to you I would  
 (5) bring brood year data or I'd show you how many fish the 1980  
 (6) escapement produced The other something is that as I  
 (7) previously indicated overescapement may or may not damage  
 (8) a  
 (9) system  
 (10) We believe that it's inappropriate in terms of managing  
 (11) the State of Alaska's resources to take a gamble on an  
 (12) overescapement We believe that usually what happens when  
 (13) you  
 (14) have an overescapement is lower productivity loss of future  
 (15) production therefore loss of income for the people who depend  
 (16) on this fishery so it's just the kind of risk that we don't  
 (17) take Sometimes gambles pay off Sometimes you take a risk  
 (18) and it - it pays off for you but when the odds are bad  
 (19) and you're managing other people's money you just don't take  
 (20) those kinds - those kinds of risks  
 (21) So while it may or may not be the case that the 1980  
 (22) overescapement produced well or didn't produce well I really  
 (23) didn't study - study that issue The issue at hand here is  
 (24) whether or not 1989 escapement produced poorly or produced  
 (25) well and we are virtually at this time certain that it  
 (26) produced poorly  
 (27) We don't have all the of the returns from the 1989 brood  
 (28) year yet Those won't be complete until next year however we

Vol 14 2142

- (1) have most of the returns from the 1989 brood year plus the  
 (2) studies in the lake that show that the food was reduced Plus  
 (3) the studies have showed that the number of smolt that came  
 (4) down  
 (5) the river as a result of that escapement was much lower than it  
 (6) should have been from that number of fish escaping  
 (7) So we have all those pieces of information put together at  
 (8) this time so we can say what 1989 overescapement did and it  
 (9) was what we would have expected it to be and that is it  
 (10) reduced the production It was not what - what the managers  
 (11) would have done with that system had they had all of their  
 (12) harvest tools available to them in the 1989 system  
 (13) Q So I'd like to review with you also another chart that  
 (14) counsel used yesterday and this pertains to Prince William  
 (15) Sound and that is Exhibit DX15455  
 (16) Can we have that?  
 (17) Now I don't know again whether these statistics are  
 (18) right or wrong but let's assume that they are right for the  
 (19) purpose of this question  
 (20) What's the significance if any Dr Mundy as to these  
 (21) figures for the commercial harvest and these figures for  
 (22) subsistence harvests?  
 (23) A The significance with respect to?  
 (24) Q To the oil spill I mean what about the significance the  
 (25) interrelationship of these two subsistence harvest statistics  
 (26) and commercial harvest statistics?

Vol 14 2143

- (1) A I don't believe that this has any significance  
 (2) Q Why is that? I mean it looks like commercial harvest is  
 (3) going up subsistence harvest is going down How - or vice  
 (4) versa  
 (5) A Well first of all these are two different kinds of data  
 (6) Fundamentally these - these data can't be compared because  
 (7) in the case of commercial harvest this is fish ticket  
 (8) information and the accuracy of this information is a matter  
 (9) of state law  
 (10) If the processors don't fill out their tickets and if  
 (11) their tickets on spot checks are found to be inaccurate they  
 (12) can be shut down They can be arrested and their workers can  
 (13) be put on the sidewalk so these - this commercial catch  
 (14) information is also used for tax purposes and is very - is as  
 (15) accurate as human recordkeeping can get to be  
 (16) Q Now let me - let's explain that a little bit how these  
 (17) statistics for the commercial harvest how that - how those  
 (18) are reported I don't think the jury's - may not be - they  
 (19) all may not be familiar with that  
 (20) A At the time the fish - the fish change hands paperwork  
 (21) has to be done by law  
 (22) Q You mean the fish changing hands from the fishermen to the  
 (23) processor?  
 (24) A That's correct The paperwork has to be done and the -  
 (25) and that has to be on record That has to be there if the -

Vol 14 2144

- (1) if the troopers come or any - any agent of the State comes it  
 (2) has to be there and it has to be presented These fish  
 (3) tickets or copies of them are regularly collected by the  
 (4) Alaska Fish & Game staff and they're tallied through the  
 (5) season to get an idea of what level of harvest is being taken  
 (6) so they can manage the escapement  
 (7) They're all - the fish tickets are entered on a computer  
 (8) Spot checks are run to make sure that - sometimes mistakes are  
 (9) made in reporting it We can by looking at average weight of  
 (10) the fish you know if we find a pink salmon landing that has  
 (11) an average of 300 pounds of fish we know that pink salmon are  
 (12) not that big and we can catch those kinds of clerical errors on  
 (13) the ticket Those kinds of commercial errors are legally  
 (14) checked and there are legal penalties stiff legal penalties  
 (15) for failing to comply with recordkeeping  
 (16) Q What about the - now you learned that in your clearance  
 (17) you were the chief scientist for the Alaska Department of Fish  
 (18) and Game?  
 (19) A Well my total association with the Department was 11  
 (20) years Before I was chief fisheries scientist I was a  
 (21) contractor for the - for the State of Alaska I worked as a  
 (22) biologist in a lot of different parts of the state on contract  
 (23) to Alaska Department of Fish and Game  
 (24) Q All right And what about the statistics that go - that  
 (25) the Department of Fish and Game collect on subsistence

Vol 14 2145

- (1) harvests? Could you tell the jury about -  
 (2) A Well  
 (3) Q - how those are collected?  
 (4) A Surely During my time with the Department I spent quite  
 (5) a bit of time in rural Alaska where subsistence harvest is very  
 (6) important to local communities and I had occasion to - to see  
 (7) how the subsistence data are collected and judge the quality of  
 (8) those data for myself  
 (9) Generally there are various methods involved in collecting  
 (10) subsistence data but mostly they rely on voluntary responses  
 (11) and recollections of the individuals involved and are not  
 (12) necessarily a representation of the actual number of fish taken  
 (13) by the people for subsistence use  
 (14) There are two primary methods of collecting subsistence  
 (15) data One is called a subsistence calendar That's when they  
 (16) give you - when you apply for a subsistence permit they give  
 (17) you a calendar You're supposed to write down on the calendar  
 (18) how many of each kind of fish you took It's a voluntary  
 (19) thing and people are supposed to write down what they took  
 (20) and  
 (21) sometimes they may forget to record the information In any  
 (22) event there's a survey method where the government mails you  
 (23) a  
 (24) postcard and you're supposed to write down on the postcard  
 (25) how  
 (26) many you caught and the survey comes back  
 (27) But in general the quality of subsistence data survey  
 (28) data is - just sort of gives a general indication of the level

Vol 14 2146

- (1) of use and if you look at subsistence data you can tell how  
 (2) important subsistence use is in different parts of the state  
 (3) and what species are really important because generally not  
 (4) all species of salmon are equally important to people in  
 (5) subsistence cultures Generally there'll be one species that  
 (6) they really rely upon and the other species are less important  
 (7) so it gives the State an idea of which resources are really  
 (8) important to subsistence economies and which are not  
 (9) But it's not used - it's not the same quality nor is it  
 (10) ever used for the same purposes laying a - putting a graph of  
 (11) subsistence harvest next to a graph of commercial harvest is  
 (12) again in my opinion just not a practice that's appropriate  
 (13) Q And what about the numbers here? I mean the numbers -  
 (14) this refers to number of fish in with commercial harvest over  
 (15) here we've got tens of millions of fish and on the  
 (16) subsistence side you've got hundreds I guess it gets up to  
 (17) 2 000 for the whole Southwest and Tatitlek area but -  
 (18) A Well yeah Well again I have not reviewed this I have  
 (19) not reviewed this particular - this particular data I - I  
 (20) just can't comment on it  
 (21) Q And is there also a problem with the reliability of the  
 (22) data in other areas of the state of Alaska as far as  
 (23) subsistence figures are concerned?  
 (24) A Yes The - the comments I gave you were generally to  
 (25) refer to statewide subsistence data collection These

Vol 14 2147

- (1) practices are - are used in various parts of the state They  
 (2) vary from locality to locality depending on the nature of the  
 (3) community and the nature of the resources that are harvested  
 (4) but generally they use subsistence calendars and they use  
 (5) survey methods to try to get a general idea of what kind of  
 (6) fish people are using  
 (7) Q And is there any question in your mind Dr Mundy that  
 (8) there was a - that the substantial factor for these problems  
 (9) with the red salmon that you ve described coming back in 1994  
 (10) in Kodiak or the problems with the pink salmon in 1993 in  
 (11) Prince William Sound was a substantial factor was the Exxon  
 (12) Valdez oil spill?  
 (13) A No  
 (14) MR STOLL That s all  
 (15) THE COURT Counsel it s been about an hour do you  
 (16) want to take a break before you cross examine?  
 (17) MR COOPER Whatever the Court prefers That s  
 (18) fine  
 (19) MR STOLL Oh Your Honor could I ask one more  
 (20) question on this?  
 (21) THE COURT You want to take a break before you ask  
 (22) the question?  
 (23) MR STOLL No I ll ask the question  
 (24) BY MR STOLL  
 (25) Q Was there also an effect of the oil spill on dolly varden

Vol 14 2149

- (1) probably identify myself as Bert Cooper one of the attorneys  
 (2) for Exxon Corporation  
 (3) How are you Dr Mundy?  
 (4) A Just fine Mr Cooper  
 (5) Q I d like to start off on a subject that you left - or that  
 (6) you dealt with at the end and that has to do with subsistence  
 (7) Now isn t it the case that these numbers concerning  
 (8) subsistence that are gathered by whatever means - I guess you  
 (9) described that means for us those numbers are utilized in -  
 (10) they re at least set forth in the official ADF&G Annual Fin  
 (11) Fish Management Reports are they nct?  
 (12) A Yes  
 (13) Q And these are the numbers that are collected the way that  
 (14) you have suggested?  
 (15) A Yes  
 (16) Q And they re not only presented in that report but the  
 (17) ADF&G draws conclusions based upon those numbers?  
 (18) A Yes  
 (19) Q And when the ADF&G does that the ADF&G in these official  
 (20) reports doesn t say or doesn t put a footnote there that says  
 (21) hey don t rely upon these numbers they don t mean anything?  
 (22) A Well they - they don t need to Mr Cooper  
 (23) Q Could you answer that question first? Do they or do they  
 (24) not put that kind of a footnote?  
 (25) A Have I seen a footnote?

Vol 14 2148

- (1) and cutthroat trout in Prince William Sound?  
 (2) A Yes  
 (3) MR COOPER Your Honor I d object to this I don t  
 (4) believe that this is contained in the expert witness report  
 (5) anywhere  
 (6) MR STOLL Yes it S  
 (7) MR COOPER I may be mistaken  
 (8) THE COURT You can consult  
 (9) MR COOPER But that s my recollection  
 (10) MR COOPER If we could take a break Your Honor we  
 (11) could resolve that problem on the break  
 (12) THE COURT I was about to suggest that  
 (13) THE CLERK Please rise This court stands in  
 (14) recess  
 (15) (Jury out at 9 48 a m )  
 (16) (Recess from 9 48 a m to 10 07 a m )  
 (17) (Jury in at 10 07 a m )  
 (18) THE CLERK Please rise This court now resumes its  
 (19) session  
 (20) Please be seated  
 (21) MR STOLL Your Honor we re completed  
 (22) CROSS EXAMINATION OF PHILLIP R MUNDY  
 (23) BY MR COOPER  
 (24) Q Dr Mundy I don t need to introduce myself to you but I  
 (25) don t believe I ve been introduced to the jury so I should

Vol 14 2150

- (1) Q Have you seen any kind of qualification in those Fin Fish  
 (2) Management Reports that says this information is reliable -  
 (3) unreliable?  
 (4) A No  
 (5) Q And in fact let me show you a piece of Exhibit DX3812  
 (6) MR COOPER Which I believe is already admitted into  
 (7) evidence Your Honor It s the Alaska Department of Fish and  
 (8) Game Division of Commercial Fisheries Annual Fin Fish  
 (9) Management Report for 1989 And that I believe is the cover  
 (10) page  
 (11) BY MR COOPER  
 (12) Q You recognize - you ve seen these documents a number of  
 (13) times have you not Dr Mundy?  
 (14) A Oh yes  
 (15) Q And area biologist James Brady is he the one that is  
 (16) basically responsible for pulling this information together?  
 (17) A James Brady  
 (18) Q Was?  
 (19) A Was the area management biologist He s no longer the area  
 (20) management biologist  
 (21) Q He was the competent individual?  
 (22) A Yes  
 (23) Q And if we go to page 30 of that document there s a section  
 (24) that deals with Prince William Sound subsistence fisheries Do  
 (25) you see that? I can zoom in on that a little bit

Vol 14 2151

- (1) A It's illegible from where I am I can't - I can't read  
 (2) that Okay now I can read it  
 (3) Q And in that section what follows is generally a discussion  
 (4) of the subsistence catch information isn't that right?  
 (5) A Yes  
 (6) THE COURT Counsel can I ask you a question here?  
 (7) DX3812 pages 28 and 31 are the only admitted pages of this  
 (8) document that's correct  
 (9) MR COOPER I'm sorry Your Honor  
 (10) THE COURT Pages 28 and 31 are the only admitted  
 (11) pages of this document  
 (12) MS SMITH That is correct Your Honor  
 (13) THE COURT Are we talking about 28 and 31?  
 (14) MR COOPER No Your Honor we are talking about 30  
 (15) and 31 I'm sorry I didn't realize they were not admitted  
 (16) MS SMITH 31 is admitted  
 (17) THE COURT And 28 is admitted  
 (18) MS SMITH And 28  
 (19) MR COOPER I would ask that 30 be admitted also  
 (20) Your Honor  
 (21) (Exhibit DX3812 (p 30) offered)  
 (22) THE COURT Any objection counsel?  
 (23) MR STOLL No Your Honor  
 (24) THE COURT Okay 30 is admitted also  
 (25) (Exhibit DX3812 (p 30) received)

Vol 14 2152

- (1) BY MR COOPER  
 (2) Q Now in this official ADF&G report they point out numbers  
 (3) of fish in the subsistence catch true? For instance 454 fish  
 (4) here 339 of which were reds you see that?  
 (5) A Yes  
 (6) Q And they go on with other information like that and then  
 (7) they say at the end of that section the overall even though  
 (8) these - or even though use areas were greatly restricted and  
 (9) changed total catches were not affected and subsistence  
 (10) resource use increased for the two areas Do you see that?  
 (11) A Well actually what it says is - it says total catches  
 (12) were not affected Okay that's the language they used  
 (13) Q And the second part of it the one that I guess I'm most  
 (14) interested in is and subsistence resource use increased for  
 (15) the two areas?  
 (16) A Yes  
 (17) Q So they are drawing a conclusion a conclusion there are  
 (18) they not from the subsistence catch information that they put  
 (19) in these reports?  
 (20) A Yes  
 (21) Q At least in this report?  
 (22) A Yes they are drawing a conclusion  
 (23) Q And Mr Brady is not a person who is so irresponsible as to  
 (24) rely upon information that he doesn't think has any meaning is  
 (25) he?

Vol 14 2153

- (1) A Mr Brady is an area management biologist and area  
 (2) management biologists typically deal in the realm of sort of  
 (3) business information They're not dealing in the statistical  
 (4) realm generally They rely - the Alaska Department of Fish &  
 (5) Game has a large staff of statisticians on call to people who  
 (6) work in the area management offices such as Mr Brady and so  
 (7) Mr Brady is not a statistician He - in the previous section  
 (8) back there on page 30 Mr Brady made it clear that he was  
 (9) talking about use of the resource and relative levels of use of  
 (10) the resource  
 (11) Then back here in this section he switches over and he  
 (12) starts talking about catch and I don't believe that generally  
 (13) statisticians would - would find it acceptable to compare  
 (14) levels of catch based on the kinds of data that - that  
 (15) Mr Brady is using But on the other hand practices and  
 (16) standards in statistics and in my part of fisheries science  
 (17) are different from those from - used by the area management  
 (18) biologists  
 (19) Q Well let me try again with the question Dr Mundy Do  
 (20) you believe that Mr Brady is a person who is so irresponsible  
 (21) that he would use data that he thought was clearly erroneous?  
 (22) A Use data for what?  
 (23) Q For the purposes that are set forth in this material that  
 (24) we just looked at  
 (25) A For those purposes?

Vol 14 2154

- (1) Q Yes including the amount of the subsistence catch and  
 (2) whether it increased over prior years If you're saying  
 (3) Mr Brady is that careless I'd like to get that out right  
 (4) here  
 (5) A It's not a matter of Mr Brady being careless It's a  
 (6) matter of how Mr Brady is using the data so your  
 (7) characterization of Mr Brady is careless is something that I  
 (8) wouldn't join  
 (9) Q You're saying then that the information that is in this  
 (10) official report that Mr Brady reports on is information that  
 (11) he should not rely on?  
 (12) A No what I'm saying is is that the information in that  
 (13) report should be looked at for the purposes intended which are  
 (14) generally to keep people informed about qualitative levels of  
 (15) changes in the utilization of subsistence resource and that's  
 (16) the way it's generally understood in the fisheries business  
 (17) Q So you do - you do concede that the information that is in  
 (18) these reports is appropriate for making qualitative - how did  
 (19) you phrase that?  
 (20) A Qualitative indicators yes  
 (21) Q As to whether or not subsistence use for instance has  
 (22) increased?  
 (23) A Qualitative comparisons yes would be valid Not  
 (24) quantitative comparisons  
 (25) Q Thank you

Vol 14 2155

- (1) Now Dr Mundy I'd like to turn to the subject of Red  
 (2) Lake Let me just try one thing here and see if I understand  
 (3) it correctly You offered some opinions on the effect of the  
 (4) spill on the production smolt production from Red Lake Do  
 (5) you recall that general subject matter?  
 (6) A Yes  
 (7) Q If I understood you directly Dr Mundy you indicated that  
 (8) we don't yet have all the returns we don't yet have  
 (9) information about what returns are coming in from - or what  
 (10) the total returns will be from Red Lake this year to Red Lake?  
 (11) A That's correct  
 (12) Q In fact we're not - are we even halfway through the  
 (13) season there where the fish are returning?  
 (14) A Yes I - I believe we are about halfway through  
 (15) Q At about the midpoint?  
 (16) A Right  
 (17) Q So we've got half of the run yet to come in?  
 (18) A Depending where you're talking about You're talking about  
 (19) a very large geographic reference frame If you're talking  
 (20) about the fishery and the escapement site okay and the -  
 (21) where they are in the run okay at various times points in  
 (22) time depends on what particular location you're referring to  
 (23) At I believe that in the reference frame of the weir where  
 (24) they count the escapement that they're about at the -  
 (25) Q About at the halfway mark?

Vol 14 2156

- (1) A Yes or beyond a little beyond  
 (2) Q And if I understood you correctly not only are we not  
 (3) complete with this season we still have half of this season to  
 (4) go but some of the fish from the 89 brood year if I can call  
 (5) it that or year class won't come back until next year  
 (6) A Oh that's right  
 (7) Q So we also don't have the data about how many fish are  
 (8) going to come back next year?  
 (9) A That's correct  
 (10) Q And even though we don't have that data and even though  
 (11) we're only halfway through the season this year you're willing  
 (12) to make predictions about what those numbers are going to  
 (13) show  
 (14) in terms of the effect of the spill on the lake?  
 (15) A In what - in what sense am I making predictions?  
 (16) Q Well is it the case - are you saying Dr Mundy that you  
 (17) really don't know to what extent the Red Lake run may have  
 (18) been  
 (19) impacted by the oil spill because we just don't have enough  
 (20) data in yet to know that?  
 (21) A No absolutely not I'm reasonably certain that the -  
 (22) that the 762 000 sockeye salmon that escaped into the lake in  
 (23) 1989 are not going to replace themselves and that is a  
 (24) circumstance that we like to avoid in fisheries because that  
 (25) means that we put fish that people could have caught and  
 (26) turned  
 (27) into money to make a living into the system to escape and they  
 (28) produce nothing in essence So we - we told people you can't

Vol 14 2157

- (1) fish you can't make money and then we took those fish and we  
 (2) wasted them and that is the situation in a fishery that's the  
 (3) thing that we try to avoid  
 (4) So I - I think that it's fairly clear that the - the  
 (5) returns for the 1989 brood year will - will not be two to one  
 (6) or three to one or four to one levels of return that we've seen  
 (7) in the past So what I am saying is that the fact of the  
 (8) overescapement in this instance in 1989 in Red Lake did result  
 (9) in a - a damage to the resource and a loss and a situation  
 (10) that we wanted to avoid  
 (11) Q But you cannot quantify what that's going to be?  
 (12) A I cannot completely as I - as I previously testified I  
 (13) won't know until the - until the end of the 1995 season  
 (14) exactly what the total - total loss was  
 (15) Q And in fact if you were to - if you were to try to  
 (16) quantify that and project what that loss may be whether it  
 (17) would be big or small or whatever you would be relying upon  
 (18) the same kind of incomplete data wouldn't you that you  
 (19) believe Mr Brady may have inappropriately relied upon in the  
 (20) subsistence area?  
 (21) A No that's not correct Those two kinds of data aren't  
 (22) comparable which is what I previously testified to  
 (23) Q Dr Mundy now let me go back here to another question on  
 (24) Red Lake There was a previous high escapement on Red  
 (25) Lake  
 (26) was there not?

Vol 14 2158

- (1) A Yes  
 (2) Q And in fact that's what was depicted on this chart that  
 (3) was shown to you?  
 (4) A Yes that's correct  
 (5) MR COOPER Could we have I believe it's  
 (6) Exhibit 4653 - 2 or 3 No the escapement  
 (7) BY MR COOPER  
 (8) Q This is the chart that you were shown and you discussed in  
 (9) your direct examination?  
 (10) A That's correct  
 (11) Q Now you indicated if I heard you correctly that before  
 (12) you drew any conclusions about the - about the potential  
 (13) effect or whether this high escapement in 1980 had an adverse  
 (14) impact you would want to see what the run sizes were that  
 (15) returned?  
 (16) A Yes  
 (17) Q And the years that you would be interested in would be 84  
 (18) 85 and 86?  
 (19) A Yes  
 (20) Q Because that's the three year period when these fish tend  
 (21) to return they return over a three year period?  
 (22) A Yes  
 (23) Q Now Mr Stoll didn't show you the companion chart that we  
 (24) provided to him that shows the run size  
 (25) A I'm sorry doesn't -

Vol 14 2159

- (1) Q Did he not show you a companion chart same chart here?  
 (2) MR STOLL Your Honor the companion chart was not  
 (3) admitted because there wasn't a proper foundation laid for the  
 (4) reliability of the figures  
 (5) MR COOPER That's not the question at this point  
 (6) Your Honor I'm just asking if the witness was shown that  
 (7) A I don't recall if Mr Stoll showed me the chart He may  
 (8) have I just don't recall  
 (9) BY MR COOPER  
 (10) Q Have you made any effort to look at that to look at the  
 (11) question of how the returns were in the three years?  
 (12) A In relation to this case  
 (13) MR STOLL Your Honor I'm going to --  
 (14) THE COURT Hold on There's two questions here One  
 (15) is Did he look at a document marked by the defense And now  
 (16) is Did he look at the run size Right?  
 (17) MR COOPER Now I'm just asking about the run size  
 (18) THE COURT You're asking about the run size?  
 (19) MR COOPER Yes  
 (20) A Have I looked at the run size data for the purposes of this  
 (21) case is that the question?  
 (22) BY MR COOPER  
 (23) Q Yes  
 (24) A No my role in this case has not been to quantify damages  
 (25) but merely to look at whether there's a more likely than not

Vol 14 2160

- (1) chance of damages whether these things that happened were  
 (2) likely to damage the environment I'm not -- I'm not putting  
 (3) numbers on damages I can't say how many how many fish will  
 (4) be lost I can only say that fish are lost  
 (5) Q Well Dr Mundy wholly apart from whether you tried to put  
 (6) a number on damages or not you testified on direct the issue  
 (7) would be whether this 1980 escapement produced a run return  
 (8) run size in appropriate numbers or good numbers correct?  
 (9) A That -- no that's not exactly correct  
 (10) Q Let me try it a different way In order to understand  
 (11) Dr Mundy whether or not this escapement in 1980 had a -- an  
 (12) adverse impact on the lake this escapement being essentially  
 (13) the same one that was experienced the same magnitude that  
 (14) was experienced in '89 you would need to look at the run size  
 (15) would you not for '84 '85 and '86?  
 (16) A Yes you would need to look at the run size for '84 and '85  
 (17) and '86 in order to determine that the 1980 overescapement  
 (18) had  
 (19) a negative impact Because you don't have any information on  
 (20) the food for the young salmon in the lakes and -- and on the  
 (21) juvenile outmigration so it wasn't measured  
 (22) Q And you need to look at that and what you're saying I guess  
 (23) is that you have not looked at that?  
 (24) A Obviously I haven't looked at the catches from 1995  
 (25) Q You haven't looked at the catches for '84 or the run size  
 (26) for '84 '85 and '86?

Vol 14 2161

- (1) A Oh well yes The information -- all I've looked at is  
 (2) the information on the age composition of the runs in those  
 (3) years that were presented by the biologists who did the  
 (4) overescapement study and their -- they felt that the age  
 (5) composition that is the four year old fish last year were  
 (6) consistent with damage from the 1989 --  
 (7) Q I guess Dr Mundy one of us isn't communicating I'm  
 (8) talking about 1980 overescapement?  
 (9) A 1980 overescapement?  
 (10) Q 1980  
 (11) A I'm sorry I misunderstood you  
 (12) Q I don't want to have to go back over all of that again but  
 (13) what I was asking you sir was whether in fact you had  
 (14) looked at the run sizes for these four years -- or these three  
 (15) years '84 '85 and '86 in order to try to make a judgment  
 (16) whether that 1980 overescapement damaged the ability of Red  
 (17) Lake to produce smolt  
 (18) A Now I understand I previously testified that --  
 (19) Q Can you just answer that?  
 (20) A Yes I previously testified that I don't know whether -- I  
 (21) didn't examine that information to tell whether '80 was -- had  
 (22) a negative impact or not  
 (23) Q So you really can't say whether or not this 1980 escapement  
 (24) produced any problem in the lake?  
 (25) A Oh no

Vol 14 2162

- (1) Q Have you ever heard of a Mr Pengilly?  
 (2) A I've seen the name but I'm not sure I can place it  
 (3) Q He's an ADF&G -- or at least was an ADF&G employee if he  
 (4) still is not  
 (5) A I used to deal with the state wide operation which is 22  
 (6) area offices I've met most of the people who work for Fish &  
 (7) Game but I'm sorry I just don't recall Mr Pengilly at the  
 (8) moment  
 (9) Q And Bruce Barret he's the --  
 (10) A I know Mr Barret quite well He's the area research  
 (11) biologist in charge of Kodiak  
 (12) Q What I'd like to do is show you Exhibit DX5802 DX5802  
 (13) I'm just going to show it to the witness  
 (14) This report should be a memorandum from Mr Pengilly to  
 (15) Mr Barret dated January 10 1989 and it's the -- the subject  
 (16) is Ricker Model Stock Recruit Analysis for Red River Sockeye  
 (17) 1965 1982 data  
 (18) Have you ever seen this before?  
 (19) A I think it was one of the documents that was designated for  
 (20) me and I -- I probably -- I probably glanced at it I wouldn't  
 (21) have spent much time with it  
 (22) Q If you look at -- well do you recognize this as generally  
 (23) a -- an analysis by Mr Pengilly provided apparently to  
 (24) Mr Barret discussing what the appropriate escapement level  
 (25) might be for Red Lake?

Vol 14 2163

- (1) A Yes  
 (2) Q And he was – he generally looked at data which he includes  
 (3) in some tables to the document you see that?  
 (4) A Yes I see that there are tables  
 (5) Q If you look at table 1 you see there s a reference to the  
 (6) 1980 year an escapement number there?  
 (7) A Yes  
 (8) Q And then there s a return I think you ll recognize if you  
 (9) look at that column and the other two columns that this would  
 (10) be the return from that escapement year  
 (11) A Yes  
 (12) MR STOLL Could I ask a question – excuse me  
 (13) counsel? Could I ask a question in aid of possible objection?  
 (14) THE COURT Can you what?  
 (15) MR STOLL Ask a question in aid of a possible  
 (16) objection Your Honor?  
 (17) THE COURT Yes  
 (18) VOIR DIRE EXAMINATION OF PHILLIP R MUNDY  
 (19) BY MR STOLL  
 (20) Q Dr Mundy do you know – are you familiar with this table  
 (21) that counsel s referring to?  
 (22) A No  
 (23) Q Do you know whether this in fact refers to the figures  
 (24) that counsel says it does?  
 (25) A No

Vol 14 2164

- (1) MR STOLL Your Honor I don t think it s appropriate  
 (2) to ask questions of this witness regarding –  
 (3) THE COURT Counsel can ask – counsel for the defense  
 (4) can ask the questions I ll determine whether or not at some  
 (5) point the examination on this issue stops  
 (6) CROSS EXAMINATION OF PHILLIP R MUNDY (Resumed)  
 (7) BY MR COOPER  
 (8) Q Dr Mundy this is the kind of a document that people in  
 (9) ADF&G as well as experts like yourself rely upon is it not?  
 (10) A These are the kind of – this table shows the kind of data  
 (11) that I would have if I had been asked to look at the return  
 (12) for spawn and to lay out the numbers this is the kind of data  
 (13) that I would have brought – brought to the Court  
 (14) Q And you don t have any reason to think that Mr Pengilly  
 (15) may have been falsifying any data here?  
 (16) A I just don t know who Mr Pengilly is quite frankly I  
 (17) don t know what his credentials are I have no reason to  
 (18) suspect this data  
 (19) Q And in fact you have never suggested to anybody that  
 (20) there s any errors in this document have you?  
 (21) A I – certainly not  
 (22) MR COOPER Your Honor –  
 (23) BY MR COOPER  
 (24) Q Well let me ask you this Dr Mundy  
 (25) The escapement in 1980 that escapement was – I don t have

Vol 14 2165

- (1) that chart up there That escapement was about how many  
 fish?  
 (2) A The escapement listed in this table is 774 328 sockeye for  
 (3) the brood year – I assume this is the brood year It s not  
 (4) labeled as such but –  
 (5) Q It makes sense from the –  
 (6) A I have to make the assumption that that s the brood year  
 (7) Q And that s just about the same size as the escapement was  
 (8) in 1989 that you re concerned about?  
 (9) A Oh yes Yes same order of magnitude yeah  
 (10) Q Now the returns according to Mr Pengilly s table the  
 (11) fish that came back from this 1980 escapement were how  
 many?  
 (12) MR STOLL Your Honor I object to the form of the  
 (13) question This – this statement doesn t say that That s the  
 (14) problem I m having  
 (15) THE COURT So you want him to use the language of  
 (16) the –  
 (17) MR STOLL He can say – he can say what the document  
 (18) says but this document does not say that the 1989 – excuse  
 (19) me the 1980 there was a return of 1980 brood fish of X  
 (20) number It doesn t say that  
 (21) THE COURT Just use the language in the document  
 (22) counsel We ll avoid the objection  
 (23) MR COOPER I shall Your Honor but that s the  
 (24) question I asked the witness twice and I thought I had an  
 (25) affirmative answer twice

Vol 14 2166

- (1) THE COURT Use the language in the document  
 (2) BY MR COOPER  
 (3) Q Isn t it true Doctor that the returns from the 1980  
 (4) escapement were a hundred – or 11 564 013 –  
 (5) A No sir  
 (6) Q I m not going to read it very well 1 156 413 fish?  
 (7) A So it says here  
 (8) Q And that s pretty good return isn t it for that system?  
 (9) A No I wouldn t characterize it as a pretty good return In  
 (10) fact the return for spawners from that – see we – and I  
 (11) don t really know what – what this has to do with this But  
 (12) in any event the return – the answer to your question is no  
 (13) the return for spawner was 1 49 I note that on a very large  
 (14) escapement and the median return for spawner down here in  
 the  
 (15) lower part of the table is represented to be 1 49 So this is  
 (16) at best an average escapement an average return on a very  
 (17) very large investment  
 (18) Q In terms of numbers it s pretty good just absolute  
 (19) numbers a million some odd?  
 (20) A A million return would be above – above the average for  
 (21) that system yes  
 (22) Q And in terms of the number that returned per spawner is  
 (23) just right about at the mean at the average isn t it?  
 (24) A At the median yes  
 (25) Q It s not a crash is it?

Vol 14 2167

- (1) A It s average  
 (2) Q And it s not a run failure and it s not a crash?  
 (3) A No no it s not  
 (4) Q Now if you go back to the last page of Mr Pengilly s  
 (5) document table 3?  
 (6) A I have it  
 (7) Q Now can you tell me in your own words what you  
 understand  
 (8) that third column there to refer to?  
 (9) A I can t tell from - from looking at this I don t have  
 (10) any - any methods to associate with this I don t care to  
 (11) speculate  
 (12) Q Well can you tell by looking at it? I mean these are the  
 (13) kinds of things that you saw frequently didn t you when you  
 (14) were with the -  
 (15) A This is not a standard format for a stock recruitment  
 (16) presentation no  
 (17) Q So despite all your years working with this kind of an  
 (18) issue and working with the ADF&G you re not able to tell us  
 (19) what this - what this table or what that column in that table  
 (20) apparently refers to?  
 (21) A Because of all my years in interpreting stock recruitment  
 (22) data I can tell you that this is not a standard format for  
 (23) presentation I might be able to guess at what that is but  
 (24) without looking at the method section I m certainly not going  
 (25) to speculate

Vol 14 2168

- (1) Q You can t tell by looking at that for instance that  
 (2) that s simply an indication of whether or not - or the  
 (3) probability of a harvest over a certain amount based upon  
 (4) certain escapement levels?  
 (5) A Actually that - if I were going to guess at it I  
 (6) wouldn t think that it had anything to do with harvest at all  
 (7) Q All you can do is guess I don t want you to -  
 (8) A It says escapement It doesn t say harvest it says  
 (9) escapement  
 (10) Q It says p r o b a b l e t return minus escapement?  
 (11) A Oh is that minus escapement?  
 (12) Q That s why I m asking you sir I thought you would know  
 (13) A This person is not trained as a mathematician the author  
 (14) of this and if I read this as a mathematician I would read  
 (15) that as probability of return given the escapement of 250 000  
 (16) and that - it s not actually even correctly stated that way  
 (17) so I m just telling you that the kind of - this - this person  
 (18) obviously did the best job they could with the tools that they  
 (19) had but this is not a standard format or presentation that I  
 (20) would expect to appear in - or an associate of mine to produce  
 (21) in analyzing any of the stock recruitment  
 (22) Q You re not prepared then to discuss that table because  
 (23) you don t understand it?  
 (24) A No that s not correct I - I will not speculate on  
 (25) something that I have not had any - any chance to study or

Vol 14 2169

- (1) look at and that doesn t contain any explanation of its  
 (2) methods  
 (3) Q Well you were certainly willing to discuss were you not  
 (4) this 1980 escapement without having seen the returns in 84  
 (5) 85 and 86?  
 (6) A Well no that s not correct What I was willing to point  
 (7) out and all I testified to was that you couldn t tell what the  
 (8) effect of that 1980 escapement was without looking at the right  
 (9) kind of data And now the right kind of data have been shown  
 (10) to me but they haven t been shown to anyone else because  
 this  
 (11) graph up here doesn t have anything really to do with return  
 (12) per spawner These are just escapements  
 (13) Q That s why we looked at Mr Pengilly s return for spawners?  
 (14) A Some of us looked at Mr Pengilly s  
 (15) Q I think we all did just now  
 (16) Now Dr Mundy let me ask you this question -  
 (17) MR STOLL Your Honor I m going to object to that  
 (18) statement by counsel It implies that the jury -  
 (19) THE COURT The object s sustained The jury is to  
 (20) disregard the comment of counsel  
 (21) MR STOLL Thank you Your Honor  
 (22) BY MR COOPER  
 (23) Q Dr Mundy let me ask you a question about the Ayakulik  
 (24) system There is in fact a weir on the Ayakulik system? I  
 (25) believe you mentioned that

Vol 14 2170

- (1) A Yes  
 (2) Q And the weir is a device that can be - it s like a gate  
 (3) that can be closed?  
 (4) A Yes The Canadians call a weir a fish fence and it is  
 (5) essentially a fence that s put across smaller rivers so that  
 (6) the salmon generally can be crowded into one part of the river  
 (7) so they can be counted easily  
 (8) Q And there is also a weir on some other systems in - in the  
 (9) Kodiak area?  
 (10) A Yes there is In fact there s another weir in this  
 (11) system and there are other weirs in the Kodiak area  
 (12) Q There s a weir on the Dog Salmon River?  
 (13) A I - I haven t reviewed the weir locations on Kodiak I  
 (14) can t - I don t recall at the moment  
 (15) Q Is the Dog Salmon the river system that the Frazer Lake is  
 (16) on?  
 (17) A It - it may be I - I tend to categorize sockeye  
 (18) population by lakes I don t often look at the name of the  
 (19) river  
 (20) Q Well are you - do you have any knowledge respecting the  
 (21) closure of that weir in 1991 as the result of a - well after  
 (22) the fishermen struck and the weir was then closed in order to  
 (23) stop overescapement?  
 (24) A I m sorry I - I don t - I don t recall ever having heard  
 (25) about that

Vol 14 2171

- (1) Q You've not heard that before?  
 (2) A No sir  
 (3) Q I'd like to - well have you looked at any of the AMRs  
 (4) recently for Kodiak the Area Management Reports for Kodiak?  
 (5) A Yes I've - I generally review certain portions of annual  
 (6) management reports and I've recently looked at Kodiak's  
 (7) Annual  
 (8) Management Report for 1989  
 (9) Q Did you look at - have you looked at the - any more  
 (10) recent ones than that?  
 (11) A I don't believe I've had occasion to look at any of the  
 (12) more recent management reports because the kinds of  
 (13) information  
 (14) I'm interested in are generally summarized and the reports are  
 (15) given to me by the research biologists I looked at 1989  
 (16) because I was interested to see what happened with the harvest  
 (17) management or what exactly happened to the regulations  
 (18) Q What I'd like to do is to show you Exhibit 5766 the Area  
 (19) Management Report for the Kodiak Management Area for the  
 (20) year  
 (21) 1992 This is an October 1993 document Page 6 This is a large  
 (22) document I'm only interested in some things that are on page  
 (23) 6  
 (24) A Okay Is that Roman numeral six or Arabic?  
 (25) Q Arabic six  
 (26) A I have it  
 (27) Q First let me ask you this sir is this - this document  
 (28) is basically compiled under the authorship or at least the

Vol 14 2172

- (1) supervision of it is Mr Barret?  
 (2) A Well actually I don't believe that that's the case  
 (3) Generally in Fish & Game offices there are two branches  
 (4) You've got the management and you've got the research and  
 (5) the  
 (6) research people are generally more involved in analyzing the  
 (7) data and the management staff has the job of taking the data  
 (8) and communicating to the public about what happened so that  
 (9) oftentimes harvesters and members of the public who deal with  
 (10) fisheries will pick up a copy of the Annual Management Report  
 (11) just so they can see what happened or help them judge how to  
 (12) manage their business  
 (13) So Mr Barret is a - is a research biologist and while he  
 (14) would contribute information to this document he would not be  
 (15) primarily responsible for putting this document together  
 (16) Q Now the - these are documents if I understood you  
 (17) correctly then that go out to the public and are relied upon  
 (18) by various sectors?  
 (19) A Yes to varying extent yes  
 (20) Q What I would like you to do is look at the second paragraph  
 (21) on that page  
 (22) A The one that starts these four major?  
 (23) Q Yes You see the last sentence there?  
 (24) A Yes  
 (25) Q Have you ever seen that comment before?  
 (26) A No not the - not that I recall I don't recall having -

Vol 14 2173

- (1) having looked at this specific management report  
 (2) Q Is that a comment that has appeared in several management  
 (3) reports?  
 (4) A It doesn't seem an unusual comment It seems a reasonable  
 (5) sort of comment  
 (6) MR COOPER Your Honor I'd like to show this if I  
 (7) may  
 (8) THE COURT Mr Stoll?  
 (9) MR STOLL I have no objections to him showing the  
 (10) comment  
 (11) THE COURT Show it on the machine you mean?  
 (12) MR COOPER Yes  
 (13) THE COURT Sure  
 (14) BY MR COOPER  
 (15) Q This is talking about the four - well the four river  
 (16) systems if you look there at the top the highlighted  
 (17) language that are the major river systems for sockeye in  
 (18) Prince - or in the Kodiak area -  
 (19) A Yes  
 (20) Q - including the Ayakulik system?  
 (21) A Yes  
 (22) Q Which is the one that Red Lake is on?  
 (23) A Yes  
 (24) Q And then in this document the ADF&G makes the comment  
 (25) that's highlighted on down below there that production from

Vol 14 2174

- (1) these systems should remain relatively stable providing  
 (2) existing fish weir programs those are simply programs for -  
 (3) for doing what?  
 (4) A For counting the adult escapements for telling how many  
 (5) fish went on to spawn  
 (6) Q And management strategies?  
 (7) A Yes  
 (8) Q Are not adversely affected and favorable environmental  
 (9) conditions exist?  
 (10) A Yes  
 (11) Q And the management strategies referring probably to  
 (12) funding?  
 (13) A These kinds of documents usually do  
 (14) Q That's the code word for saying if we get the money?  
 (15) A Yes  
 (16) Q So the - in 1993 October of '93 the ADF&G's view was  
 (17) production in the systems including Red Lake would remain  
 (18) fairly stable?  
 (19) A I - I would not characterize that as ADF&G's position  
 (20) For example Mr Barret told me the opposite only two months  
 (21) ago This is the - apparently the opinion of the person who  
 (22) authored this report  
 (23) Q Well I guess you've already indicated that was not  
 (24) Mr Barret so whoever - whoever authored this official report  
 (25) in October of '93 apparently would disagree with Mr Barret as

Vol 14 2175

- (1) you understand it?  
 (2) A No I would say that they didn't turn out to be all that  
 (3) accurate did they?  
 (4) Q Well I guess we won't know for sure the answer to that  
 (5) question until the other half of the runs get in this year and  
 (6) we see what comes in next year isn't that right?  
 (7) A We won't know the complete answer to that but it's quite  
 (8) clear that the - that their comment about the production  
 (9) remaining stable if I were fishing in the Ayakulik District I  
 (10) would certainly not - not join that statement  
 (11) Q Now let me ask you speaking of times here and dates the  
 (12) escapement occurred in 1989 I'm sure we can agree on that  
 (13) and -  
 (14) A The escapement into the Red Lake?  
 (15) Q The escapement that brings us here today the one that you  
 (16) were talking about that you think has affected the production  
 (17) of smolt  
 (18) A Okay  
 (19) Q The - were measurements or I guess measurements is the  
 (20) wrong word but did the ADF&G then do something to try to see  
 (21) how many smolt were coming out of that lake after that  
 (22) escapement?  
 (23) A Yes  
 (24) Q And it was information about the number of smolt that were  
 (25) coming out of that lake that ultimately led to the concern as

Vol 14 2176

- (1) you understand it that the production may go down starting  
 (2) this year?  
 (3) A Partially  
 (4) Q The other part being what just the -  
 (5) A The - the declines in the food availability in 1990 and  
 (6) 1991 I believe  
 (7) Q And that was - that decline was not known until those  
 (8) measurements were taken in 1990?  
 (9) A That's correct Those measurements were taken in 1990  
 (10) Q That was the summer of '90?  
 (11) A Yes  
 (12) Q And the - the number of smolt that were leaving the lake  
 (13) those measurements they were first counted when in 1990  
 (14) also  
 (15) or '91?  
 (16) A Would have been - would have been - no it was '91  
 (17) partially but since a lot of those fish held over for a second  
 (18) year it was also in 1992  
 (19) Q But the point I was trying to get at Dr Mundy is that  
 (20) the counts weren't really made until 1991  
 (21) A Again?  
 (22) Q The counts of the number of smolt that were departing were  
 (23) not made until 1991  
 (24) A For the 1989 brood year yes that's correct  
 (25) Q So the two things that gave rise to concern as you  
 expressed the food quantity of food in the lake that wasn't

Vol 14 2177

- (1) measured until 1990 And the other thing the number of smolt  
 (2) returning that wasn't measured until 1991?  
 (3) A That's correct  
 (4) Q In 1989 nobody had taken those measurements?  
 (5) A Obviously not  
 (6) Q Now are you aware sir that the plaintiffs in this  
 (7) litigation are seeking damages for stigma to their land but  
 (8) only for the year 1989 in Kodiak?  
 (9) A No sir I wasn't aware of the time frame on the -  
 (10) MR STOLL That's not exactly an accurate statement  
 (11) by counsel but I'll let it go  
 (12) MR COOPER Close enough I guess Your Honor  
 (13) MR STOLL No I'm not going to agree with that  
 (14) THE COURT There's no question pending counsel  
 (15) MR COOPER I'm about to pend one here Your Honor  
 (16) BY MR COOPER  
 (17) Q All right Dr Mundy let's switch gears switch  
 (18) subjects Let's go to Prince William Sound and pink salmon  
 (19) Oh incidentally before I do that did I understand  
 (20) correctly that the escapements escapement level for Red Lake  
 (21) has been reached this year?  
 (22) A Yes  
 (23) Q The escapement goal?  
 (24) A The lower - not the middle range not the 250,000 but  
 (25) they are below the - the number

Vol 14 2178

- (1) Q You mean they're above -  
 (2) A Excuse me they're above the lower end of the escapement  
 (3) range  
 (4) Q And generally the escapements - escapement goals have  
 (5) been met for that lake since 1989?  
 (6) A Oh yes  
 (7) Q All right With respect to Prince William Sound we're  
 (8) talking about 1989 the year of the spill if I can focus you  
 (9) on that  
 (10) A Okay  
 (11) Q There - you talked about embryo mortality and salmon eggs  
 (12) dying in the streams In fact most of the salmon that were -  
 (13) started their lives as eggs in 1989 or in 1988 were from  
 (14) hatcheries isn't that right?  
 (15) A Are we - we're talking about - I'm sorry I'm confused  
 (16) Are we talking about 1989 or 1988? Hatcheries streams?  
 (17) Q Let's stick with 1989  
 (18) A 1989  
 (19) Q The embryo mortality that you were concerned about were  
 (20) eggs from the 1989 year class is that correct?  
 (21) A Among others  
 (22) Q And then '90 and '91?  
 (23) A Correct  
 (24) Q And the eggs that you showed us that chart of embryo  
 (25) mortality in those three years remember that?

Vol 14 2179

- (1) A Yes  
 (2) Q Now the - I m just trying to get a picture of how many  
 (3) eggs or how many - what proportion of eggs we re talking  
 about  
 (4) here A number of the eggs that produced ultimately produced  
 (5) pink salmon eggs that were from 1989 year class those were  
 (6) eggs that were from hatchery fish isn t that true?  
 (7) A Yes In total of the salmon eggs that were laid in 1989  
 (8) apparently the vast majority of those were from hatchery fish  
 (9) were taken - I m hesitating - they weren t laid they were  
 (10) taken from fish in hatchery operations from fish returning to  
 (11) those hatcheries  
 (12) Q And in fact the numbers are right around 75 percent or  
 (13) so isn t it?  
 (14) A Yes The majority of the fish were hatchery fish yes  
 (15) Q So about 75 percent or so of the - of the total eggs in  
 (16) 89 were eggs that were never in an oiled stream?  
 (17) A Oh that s right  
 (18) Q And they weren t in an oiled stream because they were in  
 (19) hatcheries where they use a supply of fresh water that was  
 (20) never subject to oiling?  
 (21) A That s my understanding  
 (22) Q So the chart that you showed us is really only - we re  
 (23) only talking about at a maximum 25 percent of the - of the  
 (24) salmon eggs pink salmon eggs that year?  
 (25) A At a maximum yes

Vol 14 2180

- (1) Q And the reason it s at a maximum is because a number of the  
 (2) streams that those wild stock eggs were in were never - were  
 (3) never oiled?  
 (4) A That s true  
 (5) Q Indeed that was the basis of that chart we looked at It  
 (6) was comparing oiled and unoled streams?  
 (7) A That s correct  
 (8) Q So in addition to - if you wanted to know what percentage  
 (9) of the 1989 eggs were subject to this embryo mortality you were  
 (10) concerned about in addition to subtracting out the ones the  
 (11) 75 percent that went into the hatchery or that were raised in  
 (12) the hatchery you d also need to subtract out some number to  
 (13) reflect those that were in streams that were not oiled?  
 (14) A That s correct  
 (15) Q And you haven t tried to make that calculation?  
 (16) A No  
 (17) Q Now the eggs that you were talking about these 1989 eggs  
 (18) whatever that proportion is of wild stock eggs that were  
 (19) deposited in oiled streams when in fact the return - well  
 (20) when did those fish come back into the Sound as adults 89  
 (21) fish?  
 (22) A The fish that were eggs in 1989 returned to Prince William  
 (23) Sound as adult pink salmon in 1991  
 (24) Q And in fact overall that return was at a record level?  
 (25) A Yes

Vol 14 2181

- (1) Q That was a new at least modern day record for the number  
 (2) of adult fish that returned?  
 (3) A Yes  
 (4) Q And those were the fish that experienced this embryo  
 (5) mortality that you ve told us about?  
 (6) A No sir The fish experienced embryo mortality were dead  
 (7) they didn t come back in 1990  
 (8) Q But enough of them enough of them came back so many of  
 (9) them that they did set a record?  
 (10) A Again if the them we re talking about are fish from -  
 (11) that were laid in oiled streams in 1989 we are not talking  
 (12) about the same fish The records that were set were not set by  
 (13) oiled fish -  
 (14) Q Because you re saying they were set by hatchery fish?  
 (15) A Among others  
 (16) Q In fact there were - if you combine the hatchery and the  
 (17) wild stock run that s what produced the record run in - when  
 (18) the - those fish returned isn t that correct?  
 (19) A Yes I m hesitating because I don t believe that the wild  
 (20) stock - I m not sure that - I don t recall whether the wild  
 (21) stock run was in - in 1991 was a particular record The total  
 (22) return was clearly clearly a record return  
 (23) Q And the wild stock run was a pretty good - it was pretty  
 (24) good in the sense that it was greater than the number of  
 (25) parents that produced the wild stock adult run in 90?

Vol 14 2182

- (1) A I believe that it was I just don t recall that it was  
 (2) particularly good but I don t believe that it was bad either  
 (3) Q Now you also talked about the - I think the other thing  
 (4) that you mentioned besides the embryo mortality you talked  
 (5) about the lack of growth or the slower growth that you  
 (6) attributed to the oil  
 (7) A The slower growth for the juveniles  
 (8) Q And the - and the - that would be - the fish that were  
 (9) measured that were examined to see if they grew slower  
 because  
 (10) of the oiling those were fish that were born in 1988?  
 (11) A Yes  
 (12) Q What I guess you would call the 1988 brood year or year  
 (13) class?  
 (14) A That s correct  
 (15) Q And your concern was that these fish would experience some  
 (16) lower survival rate when they came back because of some  
 slower  
 (17) growth?  
 (18) A That the overall survival rate of that - that brood year  
 (19) was lower as a consequence of the slower growth yes  
 (20) Q All right Now that brood year returned in what year?  
 (21) A As 88 you add two years would have returned in 1990  
 (22) Q And when that brood year returned that was pretty close to  
 (23) a record if it wasn t a record by that - up to 1990 isn t  
 (24) that true?  
 (25) A Well it s not a - it s not true in the sense it s a valid

Vol 14 2183

- (1) comparison We re comparing total numbers of return to  
 (2) survival rates and the fact that you you got a lot of fish  
 (3) back in 1990 has nothing to do with the rate at which fish  
 (4) died And it just means - could mean and in fact it did  
 (5) mean - that an awful lot of fish were in fact produced  
 (6) That s solely what it means and the runs should have been  
 even  
 (7) bigger had it not been for the effects of the oil spill  
 (8) Q Even more of a record?  
 (9) A Yes  
 (10) Q Now do you - do you believe that a record pink salmon run  
 (11) somehow stigmatizes the land around that area where those  
 (12) record runs returned?  
 (13) A I m sorry I m not capable of - of drawing that  
 (14) conclusion  
 (15) Q Now the - the Trustee Council had a study did it not  
 (16) which tried to synthesize what the total losses of pink salmon  
 (17) due to the oil spill amounted to?  
 (18) A No I would n t agree with that characterization I believe  
 (19) I know the study to which you re referring but that is  
 (20) certainly not how I would characterize it  
 (21) Q How would you characterize it?  
 (22) A The Trustee Council commissioned a study to take the - the  
 (23) egg mortality information and the information of reduced  
 (24) growth and to try to figure out how much those two impacts  
 (25) which were measured which we could afford to measure in a  
 very

Vol 14 2184

- (1) small part of the Sound what kind of losses those two narrow  
 (2) impacts would have translated into  
 (3) These losses are not clearly the total losses that are  
 (4) attributable to the oil spill but just those that the Trustee  
 (5) Council could afford to measure Taking these measurements  
 is  
 (6) very expensive and the amount of money was limited so the  
 (7) Trustee Council simply commissions some statisticians  
 (8) mathematicians to take these data and translate them into  
 (9) losses resulting from the oiling of those areas that were  
 (10) studied and those fish that were studied  
 (11) Q Well they tried to - they tried to - they studied a  
 (12) number of things isn t that right?  
 (13) A They studied a number of things that s correct  
 (14) Q Yes And they noticed what they believed were some  
 impacts  
 (15) in some of those studies?  
 (16) A That s correct  
 (17) Q And then there was one study that set out to try to  
 (18) synthesize in terms of numbers how many fish were missing if  
 (19) I can use that phrase how many pinks were missing because of  
 (20) the oil spill based upon the studies that identified some kind  
 (21) of an impact?  
 (22) A That were missing in the areas that were studied yes  
 (23) Q And that s this Geiger Study?  
 (24) A The author s name was Hal Geiger  
 (25) Q And he - he concluded that for the 1990 year this is the

Vol 14 2185

- (1) year that we were talking about were the adults that returned  
 (2) in 19 - well what did he conclude with respect to the total  
 (3) number of fish that he believed were missing based upon this  
 (4) study that he did? What was the number?  
 (5) A He initially estimated that from the 1980 brood year as a  
 (6) result of the depression in growth that about 2 7 million pink  
 (7) salmon did not return to Prince William Sound that would have  
 (8) returned except for the effects of the oil This is based on  
 (9) the growth studies so this would have applied to the wild pink  
 (10) salmon and to the - and to the hatchery pink salmon as well  
 (11) So this study was relied on commercial catch data which  
 (12) increases as time goes by when more and more fish tickets are  
 (13) entered into the system and I believe his final estimate of  
 (14) the losses for the 1990 return - that is the 1988 brood year  
 (15) because of the growth problem - was 2 2 million pink salmon  
 (16) Q And do you remember approximately the total size of that  
 (17) return in 1990?  
 (18) A It was really really big Perhaps - I don t remember  
 (19) exactly what it was It was a huge huge salmon return  
 (20) Q More than 20 million?  
 (21) A Oh yes  
 (22) Q In fact it was almost up to 40 million some?  
 (23) A Yes  
 (24) Q So what the Trustees could identify given the studies that  
 (25) they did was that record breaking run of 40 some odd million

Vol 14 2186

- (1) fish might have had a couple more million fish in it more or  
 (2) less had there not been an oil spill?  
 (3) A That s correct  
 (4) Q Then he also looked to see did he not what the impact of  
 (5) the spill based upon the studies that had been done would  
 (6) have been in the year 1991?  
 (7) A Yes The number in 1991 the loss comparison had a  
 (8) different basis It was based only on the embryo mortalities  
 (9) that were observed in 1989 so the 1991 losses are based on  
 (10) just the - the dead eggs in the - in the oiled streams and  
 (11) the number that he estimated there was a loss of 70 000 wild  
 (12) pink salmon returning to those areas  
 (13) Q And the reason that they didn t use the growth basis to  
 (14) make an estimation of missing fish is because the growth  
 (15) studies that they did found that there was no effect in 1990 or  
 (16) 91 on growth - let me rephrase that because I know what  
 (17) you re going to say Dr Mundy The way you would prefer me  
 to  
 (18) phrase it is -  
 (19) THE COURT Counsel counsel back up  
 (20) MR COOPER I m sorry Your Honor  
 (21) THE COURT The way you would prefer me to phrase it  
 (22) is not an appropriate question That question is stricken  
 (23) The jury is to disregard it  
 (24) Now rephrase your question  
 (25) MR COOPER I m sorry Your Honor It was a

Vol 14 2187

- (1) reference to some colloquy we had had in his deposition  
 (2) THE COURT I understand counsel but just ask the  
 (3) question please  
 (4) BY MR COOPER  
 (5) Q Is the - the impact that the Trustees were able to  
 (6) measure Dr Mundy was what number for the return in 1991?  
 (7) A 1991 was 70 000 wild pink salmon  
 (8) Q And that again is out of a total return of about how  
 (9) many?  
 (10) A 1991 again was large I - I don't carry those numbers  
 (11) in the top of my head  
 (12) Q It was in that same range of 30 to 40 million return?  
 (13) A I just honestly don't recall It was a very big salmon  
 (14) return  
 (15) Q And then in 1992 Mr Geiger also made a calculation for  
 (16) the fish that returned then?  
 (17) A Yes that's correct  
 (18) Q And he - the number he came up with there was what?  
 (19) A 40 000 wild pink salmon  
 (20) Q Now Dr Mundy the Trustees Trustee Council has a chief  
 (21) scientist?  
 (22) A Yes  
 (23) Q And his name is?  
 (24) A Is Bob Spies  
 (25) Q And he is sort of the chief scientist for all of the

Vol 14 2188

- (1) science projects of the Trustee Council?  
 (2) A Yes his title is chief scientist  
 (3) Q And he has indicated and stated that as I think you know  
 (4) that the egg mortality for pink salmon in Prince William Sound  
 (5) might translate into a decline of as much as ten percent in the  
 (6) entire adult pink salmon in the Sound if all the other factors  
 (7) which contribute to salmon mortality are added together with  
 (8) the oil stream effect?  
 (9) A Yes I am familiar with that statement  
 (10) Q And you've never told Dr Spies that you disagree with that  
 (11) statement?  
 (12) A No  
 (13) Q Now you also talked Dr Mundy in your examination about  
 (14) the - in your direct examination about the shortfall between  
 (15) the forecast for pink salmon in '92 and '93 and what was  
 (16) actually - what the actual returns were  
 (17) A Yes that was - that was the '93 the difference between  
 (18) the '93 forecasted run and what actually showed up in 1993  
 (19) was - was part of the graphic was the subject of the graphics  
 (20) that we showed earlier  
 (21) Q Now is it right that you have never attempted any  
 (22) quantitative analysis of the extent to which the shortfall  
 (23) between the forecast and the actual in '92 and '93 was due to  
 (24) the spill?  
 (25) A Yes that's correct

Vol 14 2189

- (1) Q You made a reference Dr Mundy to the - I think you made  
 (2) a reference to the Auke Bay study by Mr Rice?  
 (3) A Yes that's - that's the Auke Bay laboratory of the  
 (4) National Marine Fisheries Service  
 (5) Q Could I have DX1998  
 (6) Well let me just ask you this Dr Mundy The experiment  
 (7) that was done in Auke Bay that involved oiling some sediments  
 (8) am I right so far?  
 (9) A Oiling spawning substrate which is basically gravel which  
 (10) is what the salmon put their eggs in  
 (11) Q And then flowing some - basically trying to recreate a  
 (12) stream environment in the laboratory?  
 (13) A That's correct  
 (14) Q And flowing some water over that sediment and trying -  
 (15) then raising some embryos there?  
 (16) A Yes that's correct  
 (17) Q And they used different dosages or different concentrations  
 (18) of oil in the sediments varying concentrations?  
 (19) A Yes  
 (20) Q And do you know whether or to what extent the  
 (21) concentrations of oil that they used in that experiment  
 (22) correlated how well that correlated with what the sediment  
 (23) measures that were actually taken out in the field in the  
 (24) streams in Prince William Sound?  
 (25) A No

Vol 14 2190

- (1) Q So if I were to ask you if - if the sediment  
 (2) concentrations in the experiment in that experiment were  
 (3) higher than what was actually measured in the field you  
 (4) wouldn't be able to tell me one way or the other whether that  
 (5) situation existed?  
 (6) A I'm sorry I just don't know  
 (7) Q Now let me - let me ask you this You may have mentioned  
 (8) it already but the fish that failed to come back in very large  
 (9) numbers in 1992 they were the fish that were present that were  
 (10) deposited as eggs or were in existence as eggs in 1990?  
 (11) A That's correct  
 (12) Q So they weren't even in the - they weren't even there I  
 (13) guess is the right word until a year after the oil spill?  
 (14) A That's correct  
 (15) Q And the fish that failed to come back in very big numbers  
 (16) in 1993 they were not deposited as eggs until 1991?  
 (17) A That's right  
 (18) Q Two years after the oil spill?  
 (19) A Yes  
 (20) Q Are you familiar with Ted Cooney?  
 (21) A Yes I know Dr Cooney  
 (22) Q Dr Cooney is - is he an oceanography?  
 (23) A Dr Cooney is a biological oceanography  
 (24) Q Which means?  
 (25) A Which means he studies plants and animals in the motion

Vol 14 2191

- (1) marine waters  
 (2) Q And you have heard him speak his views on why he thinks  
 (3) there may be - there may be these run failures in 1992 and  
 (4) 1993 in the Sound?  
 (5) A Yes  
 (6) Q Let me show you a document This is exhibit 1936 I d  
 (7) like to ask you if you ve ever seen this one before?  
 (8) A No I - I don t believe I ve ever seen this document  
 (9) Q Well let me ask you this If you look at page - whoops  
 (10) these pages aren t numbered Could I see your copy for a  
 (11) moment?  
 (12) A Sure  
 (13) Q Yeah if you look at the second page of that document -  
 (14) MR COOPER Your Honor may I show that document  
 (15) that page?  
 (16) MR STOLL I m sorry did you say he was or was not  
 (17) familiar with this document?  
 (18) THE COURT The question is whether he can show the  
 (19) document  
 (20) MR STOLL To the witness?  
 (21) THE COURT No I think on the screen  
 (22) MR COOPER On the Elmo  
 (23) MR STOLL If there s a proper foundation laid for  
 (24) it  
 (25) THE COURT Have you seen the document?

Vol 14 2192

- (1) MR STOLL I ve seen the document but I was unclear  
 (2) as to whether Dr Mundy was familiar with this document  
 (3) THE COURT Go ahead counsel ask him a question  
 (4) BY MR COOPER  
 (5) Q Are you familiar with this document have you seen it  
 (6) before?  
 (7) A No  
 (8) Q Did you attend the - did you attend the workshop that s  
 (9) referred to at the beginning there?  
 (10) A I - I don t believe that I did  
 (11) Q Let me ask you this On the second page Dr Mundy that  
 (12) paragraph that begins with the word based on the historical  
 (13) response?  
 (14) A I see it  
 (15) Q That s essentially - that paragraph presents essentially  
 (16) the views of Dr Cooney as you have heard him express those  
 (17) views?  
 (18) A If you ll give me a moment please  
 (19) Yes that s - that paragraph is generally consistent with  
 (20) the views that Dr Cooney s expressed to me in the past  
 (21) MR COOPER Your Honor may I show the exhibit?  
 (22) MR STOLL Well Your Honor I think it s hearsay  
 (23) Dr - If they want to produce Dr Cooney as a witness and we  
 (24) can cross examine him on what his views are that s fine but I  
 (25) don t think the fact that a person out of court has made a

Vol 14 2193

- (1) statement to Dr Mundy that then that is classic hearsay  
 (2) THE COURT Let s do it another way counsel If you  
 (3) can get the information out by asking direct questions go  
 (4) ahead and do it otherwise if you can t we ll take a break  
 (5) and I ll deal with this out of the presence of the jury  
 (6) MR COOPER Fine  
 (7) BY MR COOPER  
 (8) Q Dr Cooney - or Dr Mundy isn t it true that Dr Cooney  
 (9) Dr Cooney s view - well let me first establish who  
 (10) Dr Cooney is We ve talked about the fact that he s a - I  
 (11) think you said biologist and oceanographer and that s at the  
 (12) University of Alaska in Fairbanks?  
 (13) A Yes  
 (14) Q School of Fisheries and Ocean Sciences?  
 (15) A I don t know what his - what his affiliation is  
 (16) Q Now and his view is essentially based upon the historical  
 (17) response of pink salmon production cycles in ocean  
 (18) temperature  
 (19) there s a high probability that the next three to five years  
 (20) will see colder springtime conditions in the Sound variable  
 (21) zooplankton populations and reduced wild and hatchery  
 (22) production of pink salmon  
 (23) That s a view you ve heard him express?  
 (24) MR STOLL Your Honor I think the proper question is  
 (25) whether he did - he agrees with that statement He can t  
 say - this is the problem I m having

Vol 14 2194

- (1) THE COURT Frequently counsel counsel have a  
 (2) different idea of what the proper question is The proper  
 (3) question pending is the question the witness will answer  
 (4) A I m sorry sir what is the question?  
 (5) BY MR COOPER  
 (6) Q You have heard him - that s essentially the view that you  
 (7) have heard him express?  
 (8) A Yes  
 (9) Q And indeed that he was expressing it here in September of  
 (10) 1992?  
 (11) A That s the representation that s made on the cover page of  
 (12) the document  
 (13) Q And he goes on to state the view - looking at the  
 (14) highlighted portion on down there - it must be remembered that  
 (15) the hatchery program developed in Prince William Sound  
 (16) during  
 (17) the last warming period -  
 (18) A I m sorry counsel where are you? I don t have any  
 (19) highlighting  
 (20) Q You don t have it highlighted? I ll show you where it is  
 (21) It must be remembered that the hatchery program developed  
 (22) in Prince William Sound during the last warming period 1976  
 (23) through 1986 bringing with it the expectation that production  
 (24) levels would be high for all the years to come that  
 (25) expectation must now be tempered with the realization that  
 Mother Nature is changing the rules of the game for much of the

Vol 14 2195

- (1) remaining decade Under these new rules region wide  
 (2) production levels will almost certainly decline  
 (3) And again you ve heard him express that view?  
 (4) A Yes  
 (5) Q And you agree at least in part with those views do you  
 (6) not?  
 (7) A I do not completely agree with these views  
 (8) Q But you do agree do you not that there are certainly  
 (9) things that work out there other than the oil spill i e  
 (10) temperature related factors that are an important factor in  
 (11) whatever may be happening with the pink salmon?  
 (12) A Yes  
 (13) Q Could you just explain briefly what those other important  
 (14) factors are?  
 (15) A In addition to factors that are related to the - to the  
 (16) oil spill production of pink salmon in Prince William Sound  
 (17) depends quite a bit on other parts of the environment That  
 (18) seems like a pretty obvious statement but we have a very hard  
 (19) time measuring things like that  
 (20) Dr Cooney s model was one that I in fact referred to  
 (21) earlier when I talk about forecasting salmon upon this because  
 (22) one way we forecast pink salmon upon this is by using  
 (23) Dr Cooney s model That s the easiest way to explain what  
 (24) he s talking about here  
 (25) Dr Cooney measures the number of zooplankters which are

Vol 14 2196

- (1) the small animals in the marine environment that the young pink  
 (2) salmon eat and he measures the temperatures and Dr  
 Cooney s  
 (3) theory is that if you - if you have high levels of plankton  
 (4) and you have appropriate temperatures that you ll have good  
 (5) levels of production in the future  
 (6) So he ll go in the spring and for example of 1991  
 (7) measure the food and the temperature and then he ll make a  
 (8) prediction for the survival of those young salmon as adults the  
 (9) following year because the fish that are going out in the  
 (10) spring of the preceding year are the ones that come back as  
 (11) adults in the following year  
 (12) However Dr Cooney s model Dr Cooney s model makes it  
 (13) clear that these aren t all the factors that explain what s  
 (14) going on neither is any - anything related to the oil  
 (15) because our forecast models not Dr Cooney s not Fish &  
 (16) Game s are able to account for all the factors that determine  
 (17) how many adult salmon we re going to have in the future  
 (18) So that s the best I can do on that  
 (19) Q And Dr Cooney was basically predicting in 1992 that  
 (20) weather factors basically would cause a - a drastic decline  
 (21) in pink salmon production over the next several years?  
 (22) A Dr Cooney s model is based on weather factors could  
 (23) predict a higher return than actually occurred He shot high  
 (24) on that forecast  
 (25) Q He still - he did believe it was the weather that was

Vol 14 2197

- (1) going to cause a precipitous drop?  
 (2) A He believed that the weather should cause some kind of  
 (3) reduction however he did not forecast the precipitous drop or  
 (4) what I characterize as the precipitous drop He didn t  
 (5) characterize the production to be that sharp and that  
 (6) definitive  
 (7) Q He did say Mother Nature was changing the rules of the  
 (8) game  
 (9) A He forecast a reduction that s true  
 (10) MR COOPER If I could have just a moment Your  
 (11) Honor  
 (12) Your Honor have no further questions of Dr Mundy  
 (13) THE COURT Hold on I think you may have some more  
 (14) questions  
 (15) MR STOLL I have a few questions  
 (16) THE COURT Keep that microphone on  
 (17) MR STOLL I m not - this isn t all the questions  
 (18) I m just going to ask the question from a couple of pages that  
 (19) counsel took out of these stacks of reports and I just need to  
 (20) have this so I have the whole thing handy  
 (21) REDIRECT EXAMINATION OF PHILLIP R MUNDY  
 (22) BY MR STOLL  
 (23) Q Dr Mundy let s start at the end and go backwards if you  
 (24) don t mind  
 (25) If the fish that came out in 19 - that were returning in

Vol 14 2198

- (1) 92 and 93 weren t born yet they weren t even eggs at the  
 (2) time of the spill how do you account for your conclusion or  
 (3) the conclusion of the Trustee Council with all these  
 (4) scientists that there was an effect from the oil spill?  
 (5) A Well the - the conclusion that the oil spill is a  
 (6) substantial factor in the decline of the resources in Prince  
 (7) William Sound is based on the observations of continuing  
 (8) damages to the - to the pink salmon populations that we  
 (9) believe are related to the oil  
 (10) Given the fact that we - that the problems associated with  
 (11) the oil spill for the resource didn t evaporate in 1989 and  
 (12) given the fact that we - we see we re measuring continuing  
 (13) effects which were not predicted prior to the - to the oil  
 (14) spill we as management scientists we have to take a look at  
 (15) other factors that might be involved in the - the losses that  
 (16) were associated with the oil spill  
 (17) For example we know that sea birds eat a lot of the  
 (18) predators that eat young pink salmon when they come out of  
 the  
 (19) streams and start their early growth and we ve measured  
 losses  
 (20) of thousands and thousands of sea birds at the time of the 1989  
 (21) spill As a management scientist that s an observation that s  
 (22) of interest to me because that tells me the predator  
 (23) populations may be on the rise We do know that certain  
 (24) predator populations in fact are on the rise so this is  
 (25) generally what people refer to as an ecosystem level effect and

Vol 14 2199

- (1) that just means that we're looking at animals other than the  
 (2) pink salmon trying to figure out what their impact is on the  
 (3) pink salmon populations  
 (4) So that's generally the - the answer  
 (5) Q Well you mean that the - when you talked about these  
 (6) thousands and thousands of birds that were killed by the oil  
 (7) spill do you mean that they eat the predators of the salmon?  
 (8) A Right They - they eat the young of the predators of the  
 (9) salmon so that they - they control those populations and keep  
 (10) them down and if controls on those populations are lifted  
 (11) sometimes predator populations can get on top of the  
 (12) prepopulations and drive them down So that's certainly  
 (13) something that - that is a matter of concern to - to me  
 (14) Q Now Dr Peterson last week testified about this food web  
 (15) and how these - all these different things interrelate Is  
 (16) that what you're talking about when you talk about the - is  
 (17) that the same notion as you're talking about when you say that  
 (18) the thousands of birds are killed then they're not around to  
 (19) kill the predators of the salmon and therefore the predators  
 (20) get out of balance and there's more of them and so on?  
 (21) A Yes that's an example of a food web effect on a  
 (22) commercially important resource  
 (23) Q Does the effect speaking of that same effect when the  
 (24) herring if a herring population is wiped out does that have  
 (25) any effect also on salmon in Prince William Sound?

Vol 14 2200

- (1) MR COOPER Objection Your Honor I don't believe  
 (2) the witness is - has qualified as an expert on herring  
 (3) THE COURT Sustained  
 (4) MR STOLL I'm not asking for his expertise -  
 (5) THE COURT I understand counsel This hasn't been  
 (6) the subject of examination  
 (7) BY MR STOLL  
 (8) Q Now there was reference to a statement by Dr Spies  
 (9) There's a number of scientists on the Trustee Council is that  
 (10) correct?  
 (11) A Yes  
 (12) Q And Dr Spies is - he's certainly a qualified person  
 (13) He's not a salmon biologist however is that correct?  
 (14) A No Dr Spies is a senior scientist He's a physiologist  
 (15) and a toxicologist and he has quite a bit of experience in  
 (16) studying oil spills but he's not a salmon biologist In fact  
 (17) I am a salmon biologist I work for Dr Spies  
 (18) Q And a quotation was taken from what Dr Spies said in the  
 (19) five year report do you recall that by counsel?  
 (20) A Yes  
 (21) Q And that - was that from the five year report of the Exxon  
 (22) Valdez Trustee Council?  
 (23) A That was the result of a meeting of the Trustees that was  
 (24) held on the fifth anniversary of the oil spill this year?  
 (25) Q Do you happen to have the Exhibit 59B3 before you sir the

Vol 14 2201

- (1) five year report?  
 (2) A No I don't  
 (3) Q Now counsel has quoted from one page that talked about  
 (4) the  
 (5) egg mortality and you've testified - you've testified about  
 (6) the mortality that was caused by this shifting of the birds and  
 (7) so on in the food web another type of mortality That's  
 (8) another type of mortality other than egg mortality is that  
 (9) correct?  
 (10) A That's correct  
 (11) Q And then did - did Dr Spies say other things in that  
 (12) report as well about the effects of the oil spill on the  
 (13) salmon?  
 (14) A Yes  
 (15) Q And on page 13 did Dr Spies say that as the oil moved -  
 (16) moved through Prince William Sound and into the Gulf of  
 (17) Alaska  
 (18) the slicks were also swept into the mouths of streams where  
 (19) salmon breed and where the salmon fry were soon to emerge  
 (20) from  
 (21) the gravel and find their way to saltwater?  
 (22) A Yes  
 (23) Q And did he write at 75 percent of the wild pink salmon in  
 (24) the Sound spawned in the mouths of streams?  
 (25) A Yes  
 (26) MR COOPER Your Honor objection I think he's  
 (27) just - he's referring to a document that I never referred to  
 (28) albeit I did use a statement from Dr Spies out of there

Vol 14 2202

- (1) but -  
 (2) THE COURT I'm going to take this out of the presence  
 (3) of the jury counsel They need a break I'm sure  
 (4) (Jury out at 11 30 a m )  
 (5) THE COURT All right the jury is not present Just  
 (6) give me your objection in full counsel  
 (7) MR COOPER Your Honor the - what I did was ask  
 (8) about a particular subject stated basically a statement out of  
 (9) that document although I did not identify the document It  
 (10) appears to me that what's about to happen is that counsel is  
 (11) about to start dealing with a whole lot of other subjects out  
 (12) of that document  
 (13) I don't think that simply because I asked him that one  
 (14) question he's entitled to then go through there and read him  
 (15) everything out of there and say you agree with this you agree  
 (16) with that you agree with this do you agree with that  
 (17) especially as it gets more and more remote from the subject I  
 (18) asked him about  
 (19) THE COURT Forgive me if I don't remember exactly  
 (20) what you asked about but tell me what you asked about It's  
 (21) been an hour and a half counsel One isolated incident of  
 (22) transcript doesn't leap to my mind right now  
 (23) MR COOPER I'm sorry Your Honor The precise  
 (24) statement Dr Spies basically said I'll quote him this egg  
 (25) mortality - this is on the pink salmon - might translate into

Vol 14 2203

- (1) a decline of as much as ten percent in the entire adult pink  
 (2) salmon run in Prince William Sound if all the other factors  
 (3) which contribute to salmon mortality are added together with  
 (4) the oiled stream effect  
 (5) THE COURT Now Mr Stoll how many questions are you  
 (6) going to ask him and what are they?  
 (7) MR STOLL I m going to ask him - can I count the  
 (8) questions  
 (9) THE COURT Let you count the ways counsel Yes  
 (10) MR STOLL Four I think I have four questions on  
 (11) this He took this out of context and the questions I m going  
 (12) to ask him deal with egg mortality they are precisely on the  
 (13) subject that he asked this witness  
 (14) THE COURT Fine ask the questions  
 (15) BY MR STOLL  
 (16) Q Did he meaning Dr - Did Dr Spies also say that in the  
 (17) autumn of 1989 egg mortality of oiled streams averaged about  
 (18) 15 percent compared to about 9 percent in unoled streams?  
 (19) A Yes  
 (20) Q And did he say that since 1989 egg mortality in the oiled  
 (21) areas has generally increased?  
 (22) A Yes  
 (23) Q Did he say that in 91 and 92 approximately 40 to 50  
 (24) percent of the salmon eggs in oiled streams did not survive as  
 (25) to 80 percent mortality in unoled streams?

Vol 14 2204

- (1) A Yes  
 (2) Q Did he say in 1993 the rates of egg mortality had dropped  
 (3) to an average of less than 25 percent in oiled streams and less  
 (4) than 15 percent in unoled streams the difference has still  
 (5) persisted?  
 (6) A Yes  
 (7) MR STOLL I have a couple questions that are similar  
 (8) to that Your Honor but that s basically it I mean -  
 (9) THE COURT Mr Cooper?  
 (10) MR COOPER Your Honor I think that the general  
 (11) question is whether or not the witness had relied upon this -  
 (12) this material I think I m entitled to ask him if he had - if  
 (13) he took it into account I don t believe there was any  
 (14) testimony that the witness had relied upon this information  
 (15) Maybe there is but I haven t heard it yet  
 (16) MR DIAMOND Your Honor I d just say this is  
 (17) governed by 803(18) learned treatise exception which deals  
 (18) with materials called to the witness attention on  
 (19) cross examination and relied upon by him so that it is a  
 (20) foundational requirement that may or may not be established  
 (21) THE COURT Well counsel the cross examination took  
 (22) one passage out of a report right? Doesn t counsel have an -  
 (23) shouldn t counsel have an opportunity to ask questions about  
 (24) other passages that might suggest might suggest that that one  
 (25) passage is not the complete story?

Vol 14 2205

- (1) MR DIAMOND I would think that certainly in the  
 (2) abstract that s a correct proposition as it affects his  
 (3) judgment  
 (4) THE COURT Let s talk about the concrete If one  
 (5) statement is taken that statement that was taken and asked of  
 (6) the witness why shouldn t opposing counsel get an opportunity  
 (7) to try to show by virtue of other statements in the report  
 (8) that that the one passage is taken out of context  
 (9) MR COOPER Your Honor that s fair And I think  
 (10) that s correct And if I heard those questions right what  
 (11) we re talking about is embryo mortality which is what I was  
 (12) talking ability  
 (13) THE COURT Yes yes  
 (14) MR COOPER And not all the rest of the material  
 (15) that s in that document  
 (16) MR STOLL So I can -  
 (17) THE COURT We re on the same pages but I did hear  
 (18) you say and a couple other questions like that counsel  
 (19) MR STOLL Well Your Honor they re totally limited  
 (20) to egg mortality the egg mortality material  
 (21) THE COURT Reason I ask for offer of proof is so I  
 (22) don t get a whole lot of stuff in front of the jury with the  
 (23) lawyer s argument Your offer of proof is acceptable You can  
 (24) ask those questions  
 (25) What other questions are you going to ask?

Vol 14 2206

- (1) MR STOLL That as a result did he also say  
 (2) Dr Spies say it now appears there s an inheritable difference  
 (3) in egg mortality for fish from oiled versus unoled streams?  
 (4) A I m sorry I don t know where you are in the -  
 (5) MR STOLL I m sorry it s on page 13 I think it s  
 (6) further on down  
 (7) A Can you show me?  
 (8) THE COURT My machine is way back in the back in the  
 (9) past Can I get to this to the present?  
 (10) COURT REPORTER Push O for on line  
 (11) MR STOLL I m sorry Your Honor It was the  
 (12) sentence before the one that Mr Cooper read to the witness  
 (13) And that is it now appears there s an - an inheritable  
 (14) difference in egg mortality for fish from oiled versus unoled  
 (15) streams?  
 (16) A Yes  
 (17) MR COOPER Your Honor that raises a whole new  
 (18) subject  
 (19) THE COURT Sure does Tell me - tell me what other  
 (20) questions you re going to ask  
 (21) MR STOLL That s all  
 (22) THE COURT So let s not open up talk about that  
 (23) whole new subject Why shouldn t I allow that question?  
 (24) MR COOPER Your Honor that raises a whole new  
 (25) subject of genetics and inheritable differences which is a far

Vol 14 2207

- (1) away - a far piece from where I was in that document  
 (2) THE COURT I agree with you counsel  
 (3) MR STOLL Your Honor may I have this - may I show  
 (4) the Court the document It s the sentence before -  
 (5) THE COURT Doesn t make any difference to me  
 (6) counsel it looks to me like the subject is different Not  
 (7) only is it different but it s a very complex question  
 (8) One question just did the - did the person say the  
 (9) following things is not the full story and believe me I don t  
 (10) intend to explore the full story on redirect examination I  
 (11) mean you are going to ask that question and get that answer  
 (12) and if that s what you re going to do you can t do it  
 (13) MR STOLL Your Honor may we ask him a question as  
 (14) to whether or not in his - as a result of the report and the  
 (15) information that he had as part of the Trustee Council whether  
 (16) he believes that there is - that it now appears that there are  
 (17) inheritable differences in the egg mortality from fish from  
 (18) oiled versus unoiled streams?  
 (19) A Let s assume that he s going to answer the question yes  
 (20) What are the following questions? Are you going to ask  
 (21) different questions?  
 (22) MR STOLL No  
 (23) THE COURT Counsel it s such a vague statement and  
 (24) it conjures up the possibility of so many lengthy scientific  
 (25) examinations and definitions that that question and that answer

Vol 14 2208

- (1) and in the context of redirect examination seems to me to be  
 (2) inappropriate Because it s confusing it doesn t define it -  
 (3) the question is not fully defined and the jury can t imagine  
 (4) the jury s going to get helpful information from that question  
 (5) and that answer  
 (6) MR COOPER There s a - there would be a lot of  
 (7) material Your Honor I d have to go into if we start opening  
 (8) up that can of worms at this point in time  
 (9) THE COURT That s not a threat that s a promise  
 (10) counsel?  
 (11) MR COOPER Fact of litigation Your Honor  
 (12) MR STOLL May I have just a minute Your Honor?  
 (13) MR PETUMENOS Judge at the risk of turning into -  
 (14) turning you into a late run pink salmon I just wanted to make  
 (15) a record here with respect to my objections of the ruling I  
 (16) believe that it is related the relevant rules evidence rule  
 (17) 106 which is completeness and context and that when we re  
 (18) talking about egg mortality the fact that this scientist wrote  
 (19) about the genetic implications of the - of the egg mortality  
 (20) does not open the door to an extensive recross because we are  
 (21) talking about what this scientist wrote about in context with  
 (22) egg mortality and that to fail to permit Mr Stoll to ask  
 (23) about that aspect of egg mortality within this report is a  
 (24) violation of Evidence Rule 106 and that it should not open  
 (25) recross any farther than the document he s looking at and that

Vol 14 2209

- (1) would be my position with respect to it  
 (2) THE COURT Of course that s a step that I would  
 (3) have - have to take if in fact I allow the question and the  
 (4) answer which I m not going to do  
 (5) MR STOLL Your Honor I would respectfully suggest  
 (6) they also raised this issue when they got into this Auke Bay  
 (7) study this is what they asked him questions about the Auke Bay  
 (8) study and this is what relates also to this genetics  
 (9) THE COURT Hold on Well thank you counsel You  
 (10) made your record The objection s sustained  
 (11) MR COOPER Thank you Your Honor  
 (12) THE COURT I m going the take a break  
 (13) THE CLERK Please rise This court stands in  
 (14) recess  
 (15) MR STOLL I can ask him questions up to that point?  
 (16) THE COURT Yes that question and that answer you  
 (17) can  
 (18) (Recess from 11 42 a m to 12 03 p m )  
 (19) (Jury in at 12 03 p m )  
 (20) THE CLERK This court now resumes its session  
 (21) Please be seated  
 (22) THE COURT Counsel?  
 (23) MR STOLL Thank you  
 (24) BY MR STOLL  
 (25) Q Now we ll resume where we were Dr Mundy

Vol 14 2210

- (1) Did Dr Spies go on to say that since 1989 - in this  
 (2) five year report did he say that since 1989 egg mortality in  
 (3) the oiled areas has generally increased?  
 (4) A Yes  
 (5) Q Did he say that in 1991 and 1992 approximately 40 to 50  
 (6) percent of the salmon eggs in oiled streams did not survive as  
 (7) compared to an 18 to 30 percent mortality in unoiled streams?  
 (8) A Yes  
 (9) Q Did he go on to say that in 1993 though the rates of egg  
 (10) mortality had dropped to an average of less than 25 percent in  
 (11) oiled streams and less than 15 percent in unoiled streams the  
 (12) eggs still persisted?  
 (13) A Yes  
 (14) Q Did he also say that although the differences in salmon egg  
 (15) mortality in oiled and unoiled streams over the first two years  
 (16) were likely attributable to the effects of oil - of oil  
 (17) scientists did not expect these differences to persist as long  
 (18) as four years after the spill?  
 (19) A Yes  
 (20) Q And say that at first they thought oil was directly  
 (21) affecting survival of the pink salmon eggs but as the amount  
 (22) of oil in the shoreline decreased other explanations began to  
 (23) seem more plausible Perhaps there was a genetic effect which  
 (24) young -  
 (25) MR COOPER Your Honor?

Vol 14 2211

- (1) THE COURT Counsel that isn't part of the offer of  
 (2) proof  
 (3) MR STOLL I withdraw that statement then  
 (4) THE COURT The jury is to disregard that last  
 (5) statement  
 (6) BY MR STOLL  
 (7) Q Now there was - counsel asked you some questions about  
 (8) the Auke Bay study And did the Trustee Council find that  
 (9) there was egg mortality even though there was no measurable  
 (10) oil  
 (11) in the water or sediment?  
 (12) A In the Auke Bay study?  
 (13) Q Yes  
 (14) A Yes One of the studies that they did was to use oiled  
 (15) gravel which had been weathered They simply oiled gravel in  
 (16) one year and then didn't use it until the following year so it  
 (17) had been weathered for a year And in fact when they put it  
 (18) in the artificial stream and measured the - the content of the  
 (19) water that came out of that gravel they couldn't measure  
 (20) any - any oil in it There wasn't any - any toxic  
 (21) components It was - it was pure water  
 (22) And they tested embryo survival in that weathered oil  
 (23) gravel against embryo survival in gravel that was clean had  
 (24) never been oiled and they found that the oil weathered gravel  
 (25) suppressed survival of the eggs even though there were no  
 measurable hydrocarbons in the effluent

Vol 14 2212

- (1) Q Now Dr Mundy counsel asked you some questions from  
 (2) some  
 (3) government reports and there was one sentence I think that  
 (4) said  
 (5) escapement goals are going to be met Would you explain to  
 (6) the  
 (7) jury the difference between escapement goals the fact that  
 (8) their escapement goals are met does that mean that the run  
 (9) size is the same?  
 (10) A No No it doesn't mean that at all  
 (11) Q Could you explain to the jury maybe with this - the use  
 (12) of this board what happens with the run size - here I've got  
 (13) a pen here - run sizes versus escapement goals harvests?  
 (14) A This is the fundamental kind of arithmetic for harvest  
 (15) management We have a salmon run and that's the total  
 (16) number  
 (17) of salmon that are coming back to an area that we manage  
 (18) such  
 (19) as the - the area in which the fish bound for Red Lake are  
 (20) harvested This would be a marine harvest district We try to  
 (21) estimate the total number of fish to come back in the run and  
 (22) then we allow some catch and the difference between the run  
 (23) and  
 (24) the catch is the escapement  
 (25) So if you have a - in general if you have a run size  
 that's about 750 000 and you take a catch out of it that's  
 500 000 you get an escapement that's 250 000 But the way  
 that this actually - and that's pretty straightforward  
 arithmetic The way this actually works when you're managing  
 a  
 salmon fishery however is the other way around  
 You've got a salmon run you've got an escapement goal and

Vol 14 2213

- (1) you're looking to get that escapement goal Maybe not all in  
 (2) the - in the river but you need to have enough strength  
 (3) showing in the harvest districts to give you a reasonable  
 (4) expectation that you're going to - going to achieve that  
 (5) number before you allow any of the fish to be taken as harvest  
 (6) so the fact that a - that a - an escapement goal has been  
 (7) achieved is good for the managers because they've - they've  
 (8) done their job in that regard  
 (9) However meeting an escapement goal is not - is not the  
 (10) same as allowing the harvesters to have any catch So the fact  
 (11) that an escapement goal has been made that's good that's  
 (12) commendable and what we try to do when we manage runs  
 (13) the  
 (14) fact that you managed to attain your escapement goal doesn't  
 (15) mean you've allowed any catch at all These are the three  
 (16) major categories for management of data The run the catch  
 (17) and the escapement And it's the escapement number down  
 (18) here  
 (19) that drives everything and until the manager has a reasonable  
 (20) expectation that that number's going to be attained this catch  
 (21) is usually held to - held to zero  
 (22) Q So Dr Mundy when we talked about the situation over in  
 (23) Kodiak with the Red Lake if there are 200 - I think you said  
 (24) 211 000 and they hadn't opened the - the catch yet the  
 (25) season that's because they're trying to get - they're trying  
 to at least meet this this goal before there's anything left  
 for the fishermen to catch?

Vol 14 2214

- (1) A That's right  
 (2) Q So the fact that escapement goals may be - have been met  
 (3) in a particular area does not mean that the run size is the  
 (4) same I mean you could have - you could have 250 000 an  
 (5) escapement of 250 000 fish each year in a particular area it  
 (6) doesn't mean that there is a run of 750 000 fish in that year?  
 (7) A You can't generally tell what the - what the total size of  
 (8) the salmon run was just by - by looking at the escapement  
 (9) Obviously you have to have the catch to know what the total  
 (10) number was  
 (11) Q Now there was another document that counsel used and I  
 (12) only have one copy Unfortunately I can't give you one but  
 (13) it was the - maybe I could come over to -  
 (14) MR STOLL Could I show - stand next to the witness  
 (15) Your Honor?  
 (16) THE COURT Yes  
 (17) MR STOLL It's exhibit 3812  
 (18) BY MR STOLL  
 (19) Q And this is the Fin Fish Management Report for 1989  
 (20) This - counsel took some figures of - dealing with  
 (21) subsistence fishing Do you recall this - the questions at  
 (22) pages 30 and 31? Do you recall some questions about that?  
 (23) A Yes  
 (24) Q And the Fin Fish Management Report is different from the  
 (25) shellfish management this doesn't refer to that at all

Vol 14 2215

- (1) A That s correct This is for - for salmon and herring  
 (2) Q Okay And the area that they are talking about that  
 (3) counsel referred to as Prince William Sound area subsistence  
 (4) fisheries this includes the lower Copper River fisheries?  
 (5) A Yes  
 (6) Q And that area was not an area that was oiled is that  
 (7) right?  
 (8) A That s right  
 (9) Q And did this report find that the 19 - did it also include  
 (10) this statement - that counsel didn t read - the 1989 use  
 (11) dropped considerably from 1988?  
 (12) A Yes  
 (13) Q And the numbers in here are in the - they talk about  
 (14) hundreds or dozens of fish and things of that nature We re  
 (15) not talking about a sampling of thousands like - or millions  
 (16) like you re talking about?  
 (17) A Right it refers to hundreds of fish  
 (18) Q So that - that fishing is in - those are wild those are  
 (19) wild fish isn t that right?  
 (20) A Yes  
 (21) Q And so that s - the wild fish are the ones that had -  
 (22) were affected primarily by the oil spill isn t that - is that  
 (23) correct?  
 (24) A Yes  
 (25) MR STOLL Thank you

Vol 14 2216

- (1) RE-CROSS EXAMINATION OF PHILLIP R MUNDY  
 (2) BY MR COOPER  
 (3) Q Dr Mundy there have been no Trustee studies done have  
 (4) there to ascertain whether there has been an effect on pink  
 (5) salmon in Prince William Sound by virtue of diminished  
 (6) predation by birds?  
 (7) A There have been no studies that I recall that were  
 (8) specifically directed at that question However there have  
 (9) been studies that are relevant and provide information to the  
 (10) determination of that question  
 (11) Q Well there are bird studies that were done correct?  
 (12) A There are also inventories of animals that were killed and  
 (13) oiled and subsequently died during the - the event of the oil  
 (14) spill  
 (15) Q But no study has addressed the question as to whether or  
 (16) not pink salmon are somehow suffering because of decreased  
 (17) predation?  
 (18) A Well no that s not accurate either The Trustee Council  
 (19) last year funded a very ambitious effort called the Sound  
 (20) Ecosystem Assessment and this is an attempt to understand  
 (21) how  
 (22) all of the elements in Prince William Sound contribute to  
 (23) producing economically important species like pink salmon  
 (24) and  
 (25) herring  
 (26) So the Trustee Council has recognized that by virtue of  
 (27) the - the uncertainty introduced in the management by the

Vol 14 2217

- (1) Exxon Valdez oil spill that we need to have a much better  
 (2) understanding of the ecosystem in Prince William Sound in  
 (3) order  
 (4) to conduct fisheries management than we would have otherwise  
 (5) needed or that we d need in other parts of the state So the  
 (6) Trustee Council last year invested a very large amount of  
 (7) money  
 (8) in the Sound Ecosystem Assessment probably about as much  
 (9) as it  
 (10) cost to - to run the entire fisheries management operation in  
 (11) Prince William Sound in toto was put into that one - one  
 (12) study  
 (13) That study does contain elements that attempt to link  
 (14) predation by birds to predators and to understand the relation  
 (15) between the numbers of predators and the numbers of pink  
 (16) salmon  
 (17) and herring in Prince William Sound So yes the Trustees  
 (18) have done essentially a study and it is ongoing  
 (19) Q That study has not been completed Doctor?  
 (20) A No the study is ongoing  
 (21) Q It s just - it hasn t been - it s essentially just  
 (22) getting underway isn t it?  
 (23) A The study - the study was put in motion last - late last  
 (24) fall early last winter  
 (25) Q Now you talked also on redirect about some more  
 (26) discussion  
 (27) about salmon stream mortality Let me see if I can bring out  
 (28) something here Now Mr Bue s mortality studies for 89 90  
 (29) and 91 I guess it was  
 (30) A Yes

Vol 14 2218

- (1) Q He looked at salmon egg mortality in the rivers or in the  
 (2) streams in the fall of each of those years?  
 (3) A That s correct  
 (4) Q And he also then went back in the spring and looked to see  
 (5) of the eggs that had been deposited of a given number of eggs  
 (6) that had been deposited how many fry basically had emerged  
 (7) or had been produced by those eggs?  
 (8) A That s correct  
 (9) Q And when he did that he found that there was no difference  
 (10) between the oiled and the unoiled streams at least no  
 (11) detectable difference?  
 (12) A No detectable difference in what?  
 (13) Q In the - in the number of fry that had emerged had been  
 (14) produced successfully by a given number of eggs  
 (15) A No  
 (16) Q Did he not in fact conclude - well what is your  
 (17) understanding of what he was looking at in the spring  
 (18) Dr Mundy?  
 (19) A What he was looking - what you have there is you have two  
 (20) different - two different estimates The mortality estimate  
 (21) is basically just - just a ratio of two numbers It s the  
 (22) number that you start at - started out with in toto and then  
 (23) it s the - the number that wound up dead  
 (24) So you take the big number and you would divide it into the  
 (25) little number if you did it right And so if you had a

Vol 14 2219

- (1) hundred animals that you started out with in some part of the  
 (2) year and you wound up with ten of them dead later on that's a  
 (3) ten percent mortality so it's a pretty straightforward  
 (4) concept  
 (5) The - what - and what he was - he looked at the embryo  
 (6) mortality by digging eggs in the fall but he also had to  
 (7) dig - to dig those same areas later on in the year because in  
 (8) the fall he was just measuring the embryo mortality that  
 (9) occurred in that - that time frame that narrow time frame  
 (10) between the time the eggs went in the gravel and when he  
 could  
 (11) get out there to dig them which was usually at the end of  
 (12) September and beginning of October in that time frame  
 (13) But of course those were still eggs after he finished his  
 (14) work They were still eggs in the gravel and those eggs were  
 (15) still dying So later on in the year he needed to - he  
 (16) needed a measure of what additional eggs had died So when  
 (17) they went out in the spring to look at the fry and determine  
 (18) the number and condition of the fry he also added an estimate  
 (19) for the dead fry into these - these embryo studies to see  
 (20) whether or not there were appreciable mortalities after the  
 (21) time the egg - the egg digs were done  
 (22) When they looked at the fry mortalities in the spring they  
 (23) didn't find - they didn't find any significant differences  
 (24) because the mortality had occurred before the time of the egg  
 (25) dig There were a lot of dead eggs There were few dead fry

Vol 14 2220

- (1) so the - the number that was driving the mortality estimate  
 (2) was the number of dead eggs That was the big number The  
 (3) small number was the - was the fry number  
 (4) Now when they estimated the fry mortality which was found  
 (5) to be insignificant - that was a ratio again of only two  
 (6) numbers the number of dead fry on the top and the number of  
 (7) dead fry on the bottom - and he didn't find a significant  
 (8) difference among streams for the mortality of the fry but that  
 (9) number the number of dead fry on top and the number of - of  
 (10) total fry on the bottom that number is not the - the  
 (11) comparable to the egg mortality  
 (12) Q Dr Mundy there will be other witnesses that will address  
 (13) this but isn't it the case that he also calculated the number  
 (14) on the bottom the density the density of eggs for a given  
 (15) unit of area in the streambed with me so far?  
 (16) A The density?  
 (17) Q Yes the number of eggs in a particular - I believe it was  
 (18) a square meter but in a unit of area for the streambed do you  
 (19) recall that?  
 (20) A Yes  
 (21) Q And he also then used on the top - the numerator I  
 (22) guess it was - live fry  
 (23) A Yes  
 (24) Q And when he did that he found there was no difference He  
 (25) could detect no difference between the resulting number oiled

Vol 14 2221

- (1) stream versus unoled stream  
 (2) A No that's incorrect  
 (3) Q Now Dr Mundy you talked about the food web on recross -  
 (4) redirect do you recall that?  
 (5) A Yes  
 (6) Q And the food web you were referring to was the kind of  
 (7) nearshore area?  
 (8) A Food web is kind of a general concept in science talks  
 (9) about what eats what That's what a food web is It might be  
 (10) in the nearshore area might be offshore here could be  
 (11) anywhere  
 (12) Q In any event the fish that were feeding in this food web  
 (13) in 1989 the year of the spill the pink salmon that were in  
 (14) that food web those were the ones that came back in record  
 (15) numbers in 1990?  
 (16) A No Again as I've indicated to you sir the - the fish  
 (17) that were feeding in the food web some of them died and didn't  
 (18) come back and some of them did come back So are you - if  
 (19) you're asking me Were these animals in this food web did  
 (20) some of them come back did some of them live? Yes  
 (21) Q Enough of them came back Dr Mundy to set a record run  
 (22) size of harvest?  
 (23) A There was a record there was a record harvest in 1990  
 (24) Q And the same with respect to those that were feeding in  
 (25) this food web in 1990 they returned in 1991 the ones that

Vol 14 2222

- (1) survived in record numbers?  
 (2) A That's right  
 (3) Q You referred Dr Mundy to this experiment in Auke Bay  
 (4) Do you recall that subject?  
 (5) A It was an experiment not done in Auke Bay but it was an  
 (6) experiment done at the Auke Bay Laboratory of the National  
 (7) Marine Fisheries Service  
 (8) Q And you mentioned the fact that there were not detectable  
 (9) levels in the effluent from the water that was passing over the  
 (10) sediment do you recall that?  
 (11) A Yes  
 (12) Q In fact though the hydrocarbons were - there were  
 (13) hydrocarbons were there not in the sediment itself?  
 (14) A That's correct  
 (15) Q And you don't know how those - the quantities or the  
 (16) concentrations of those hydrocarbons as I think you've stated  
 (17) on cross earlier compared to the concentrations of  
 (18) hydrocarbons that were actually out in the field as a result of  
 (19) the spill?  
 (20) A That's correct I don't know exactly how much oil they  
 (21) used  
 (22) Q One final question Dr Mundy We've talked a lot about  
 (23) the Trustees the ADF&G Are you in fact being compensated  
 (24) by the plaintiffs for your testimony and your work in this  
 (25) case?

Vol 14 2223

- (1) A Yes by the plaintiffs and by Exxon as a matter of fact  
 (2) Q By Exxon in the context of?  
 (3) A Depositions  
 (4) Q You re referring to the practice that the parties each pay  
 (5) for the other expert s time?  
 (6) A That s correct  
 (7) Q Time on deposition But you re basically - you were  
 (8) engaged by the plaintiffs were you not?  
 (9) A Oh yes  
 (10) Q And you re being paid by them?  
 (11) A That s correct  
 (12) MR COOPER No further questions  
 (13) THE COURT You can step down sir  
 (14) MR STOLL I just have two questions Your Honor  
 (15) maybe three  
 (16) THE COURT I ll hold you to that Mr Stoll  
 (17) FURTHER REDIRECT EXAMINATION OF PHILLIP R MUNDY  
 (18) BY MR STOLL  
 (19) Q The plaintiffs are paying you for your time here but when  
 (20) you were on the Trustee Council and all these studies were  
 (21) done  
 (22) for the Trustee Council we weren t paying you for doing that  
 (23) were we?  
 (24) A No  
 (25) Q Or when you were working at the Justice - U S Justice  
 Department with respect to the Exxon Valdez oil spill we

Vol 14 2224

- (1) weren t paying you for that?  
 (2) A No  
 (3) Q And with respect to the Auke Bay Study we ll call it the  
 (4) Auke Bay Study the fact is that there were - even though  
 (5) there were not hydrocarbons measurable couldn t measure  
 them  
 (6) there was still a higher egg mortality is that correct?  
 (7) A There were no measurable hydrocarbons in the water and  
 (8) yes the embryo mortality in the - those oiled gravels was  
 (9) higher than that in the clean gravels  
 (10) MR STOLL Thank you  
 (11) THE COURT You may step down sir  
 (12) MR STOLL Three questions  
 (13) THE COURT I saw that yeah I thought you said  
 (14) two  
 (15) MR STOLL I was very careful  
 (16) MR PETUMENOS Plaintiffs call Mr Jim Bush  
 (17) Mr Stoll are you marking this as an exhibit?  
 (18) MR STOLL No I don t think we ll make that an  
 (19) exhibit  
 (20) THE CLERK Sir please attach the microphone to your  
 (21) tie and remain standing for the oath Sir please stand for  
 (22) the oath Raise your right hand  
 (23) (The Witness Is Sworn)  
 (24) THE CLERK Please be seated Sir for the record I  
 (25) need you to state your full name

Vol 14 2225

- (1) A James Gilbert Bush  
 (2) THE CLERK Spell your last name please  
 (3) A B u s h  
 (4) THE CLERK And your occupation?  
 (5) A I m a geologist with ICF Kaiser Engineers  
 (6) DIRECT EXAMINATION OF JAMES G BUSH  
 (7) BY MR PETUMENOS  
 (8) Q Mr Bush could you tell the jury a little bit about where  
 (9) you live and work and also your age because you don t look  
 old  
 (10) enough to be an expert witness  
 (11) A Thank you I live in Richland Washington West Richland  
 (12) specifically I m the senior scientist with ICF Kaiser  
 (13) Engineers I m 45 years old I guess 44 45 somewhere in  
 (14) that range I don t keep track of it  
 (15) Q And what is ICF Kaiser Engineers?  
 (16) A ICF Kaiser Engineers is an international consulting firm  
 (17) dealing principally with - with engineering and environmental  
 (18) management issues  
 (19) Q Are there groups within ICF?  
 (20) A Yes  
 (21) Q What group are you with?  
 (22) A I m with the environmental group  
 (23) Q What do they do?  
 (24) A We principally support government and industry in  
 (25) environmental management environmental issues dealing with  
 the

Vol 14 2226

- (1) environmental problems  
 (2) Q And do you have any technical specialties within ICF?  
 (3) A Yes I do I m ICF Northwest s senior scientist with  
 (4) technical specialties within stratigraphy and sedimentary  
 (5) geology  
 (6) Q With stratigrapher?  
 (7) A Yes  
 (8) Q What s that?  
 (9) A It s a specialty in geology where you investigate the  
 (10) layers of sedimentary rocks how they are formed and  
 (11) distribution and shape  
 (12) Q The second one was?  
 (13) A Sedimentary geology That s a broader science in the same  
 (14) general area  
 (15) Q And does your work ever take you to particular field sites  
 (16) go out into the world and investigate things?  
 (17) A Oh yes yes I ve investigated a number of areas -  
 (18) Q What is your educational background -  
 (19) A Excuse me  
 (20) Q I m sorry did I interrupt you?  
 (21) A I was going to - yes I ve worked in Tennessee Virginia  
 (22) Washington Oregon California and of course Alaska  
 (23) Q And what is your educational background please since high  
 (24) school?  
 (25) A Since high school I attended Ohio State University

Vol 14 2227

- (1) received my Bachelor s from there I was drafted served in  
 (2) the United States Navy then I went back to graduate school at  
 (3) South Dakota School of Mines and Technology Received my  
 (4) Master s of Science from South Dakota School of Mines  
 (5) After that I worked for Anaconda Company for approximately  
 (6) two years I left Anaconda to help form Aspen Exploration  
 (7) Corporation After that I worked for Arco Alaska Inc  
 (8) divisions within Arco and consulted on my own for a short  
 (9) time And after that started with ICF Kaiser  
 (10) Q Now could you define for the jury in very brief terms what  
 (11) we mean by the study of geology?  
 (12) A Well broadly speaking geology is the study of the science  
 (13) of the history of the earth As I mentioned earlier I focused  
 (14) in sedimentary rocks shoreline processes interaction of the  
 (15) ocean with marine sediments and that sort of thing  
 (16) Q Can you explain to the jurors what marine geology is?  
 (17) A Well marine geology is a narrow portion or a more narrow  
 (18) portion of geology and it focuses on primarily - primarily  
 (19) the interaction of the hard portions of the earth the  
 (20) sediments and rocks and so forth the sea floor with the  
 (21) dynamics or wave action and current action of the oceans  
 (22) Q You mentioned some work for Aspen Exploration Who are  
 (23) they? What work did you do for them?  
 (24) A Aspen was a small exploration firm based in Denver  
 (25) Colorado and while I worked for them I worked in various

Vol 14 2228

- (1) areas in Alaska the Panhandle and Cook Inlet primarily  
 (2) Q Exploring for what Mr Bush?  
 (3) A We were looking for precious metals mineral deposits in  
 (4) coastal - coastal shoreline accumulations for the most part  
 (5) Q You mentioned some work for Arco Alaska  
 (6) A Yes  
 (7) Q Can you tell the jury what type of work you did for them?  
 (8) A For Arco Alaska I was an explorationist looking for oil  
 (9) and gas primarily on the North Slope  
 (10) Q And did that involve some study of beaches within Alaska?  
 (11) A Yes it did To explore for oil and gas it s more than  
 (12) just drilling wells and looking at the ancient sediments deep  
 (13) in the subsurface  
 (14) Our principal objective was to examine a number of the very  
 (15) modern I guess recent shoreline deposits on the North Slope  
 (16) try to construct a model from those and determine the nature of  
 (17) the sediments deep in the subsurface and based on what we  
 (18) understood in the surface in the near time the young rocks  
 (19) try to understand where oil might occur in the older deep  
 (20) rocks  
 (21) Q And what techniques would you use to try and get that  
 (22) accomplished?  
 (23) A Well there are - there was a wide variety of ways to do  
 (24) that I think in a genera' sense what I ve explained is the  
 (25) main technique using the modern depositional environments  
 on

Vol 14 2229

- (1) the coast lines and the deeper sea floor to understand the  
 (2) types of rocks that occur deep in the ancient rocks in the  
 (3) subsurface  
 (4) Q What period of time did you do that work?  
 (5) A That was from approximately 1982 through 1985 86 in that  
 (6) vicinity  
 (7) Q Between the work you did for Arco and the exploration  
 (8) company and in this case have you become familiar with the  
 (9) kinds of geology that you can encounter in Alaska in the marine  
 (10) environment?  
 (11) A Well Alaska s a very large state and it has an incredible  
 (12) assemblage o ceologic provinces but I have become familiar  
 (13) with certain areas and certain portions of its geology  
 (14) MR PETUMENOS Could I have Exhibit 1143 please?  
 (15) BY MR PETUMENOS  
 (16) Q And when you say that you have had the opportunity to work  
 (17) in different parts of Alaska has that opportunity given you  
 (18) the variety the amount of variety and the differences of the  
 (19) kinds of beaches that exist even though there are a lot of  
 (20) them in Alaska?  
 (21) A Oh yes  
 (22) Q What is Exhibit 1143?  
 (23) A 1143 is a map of the state and on it are a number of blue  
 (24) dots which indicate various areas where I - where I ve worked  
 (25) with various firms and various projects

Vol 14 2230

- (1) Q So this - you looked at beaches in every area where  
 (2) there s a blue dot?  
 (3) A Well yes Yes we did All of the coastal areas on the  
 (4) North Slope You can see there are a number of them there as  
 (5) well as portions of the Seward Peninsula and the vicinity of  
 (6) Nome and Candle in the north In addition there are areas  
 (7) for example on number 9 and 12 nine is in the Cook Inlet  
 (8) vicinity near Anchorage 12 is a dot located approximately  
 (9) near Juneau but we worked a large number of shorelines in  
 (10) that  
 (11) area looking at the nearshore deeper water sediments  
 (11) Q Let s focus a little bit on your work with ICF Do you  
 (12) work for clients both in the public and the private sector?  
 (13) A Yes  
 (14) Q What kind of things do you do for clients in the public  
 (15) sector?  
 (16) A Well in the public sector I think our principal client  
 (17) has been the EPA at least the largest volume of our work has  
 (18) been with the EPA We ve also worked for the Department of  
 (19) Defense Department of Energy For example the Department of  
 (20) Defense U S Army United States Air Force each have their  
 (21) own special environmental divisions  
 (22) The Air Force for example has a division called the Air  
 (23) Force Center for Environmental Excellence AFCEE is the  
 (24) abbreviation for that In fact a lot of work on the North  
 (25) Slope was for AFCEE looking at contamination problems  
 related

Vol 14 2231

- (1) to dewline sites  
 (2) Q What about in the private sector what kind of work do you do there?  
 (3)  
 (4) A It's similar issues obviously it's environmental  
 (5) contamination For industry I would say the typical work  
 (6) involves responding to spills examining problems that are  
 (7) already in place We attempt to establish a relationship with  
 (8) an industry for example United Technologies large firms like  
 (9) these to where we can initially work with their permitting  
 (10) processes for certain activities that they undertake that  
 (11) involve hazardous materials make sure they stay in compliance  
 (12) with those respond to spills or any problems that they may  
 (13) have and help them respond to them hopefully prior to there  
 (14) having to be legal action taken against the firm or something  
 (15) like that  
 (16) Q When you work in the private sector like this is it normal  
 (17) for you to become involved at a period of time that might be  
 (18) well after the contaminating event took place?  
 (19) A Unfortunately that's more often the case than not  
 (20) Q That's not uncommon?  
 (21) A That's more often the case than not  
 (22) Q Who have been some of your clients with - I think I've  
 (23) covered that question  
 (24) Let's say that you've been asked to do an evaluation of an  
 (25) area or a site that has been contaminated by something in the

Vol 14 2233

- (1) concerned with the number of clients we probably had terms  
 of  
 (2) major clients several dozen in my experience that I've  
 (3) personally worked - not several dozen probably a dozen in  
 (4) terms of operable units that we've worked with which is a term  
 (5) of art that applies to a group of contamination problems  
 (6) probably on the order of 10 to 20 perhaps more  
 (7) In terms of individual sites which have had spill related  
 (8) incidents require sampling some sort of reporting activity or  
 (9) response for that specific event somewhere between 100 and  
 (10) 200  
 (11) Q What locations generally have you worked besides Alaska?  
 (12) A I mentioned earlier some of the states  
 (13) Q I mean specifically with respect to these sorts of problems  
 (14) with respect to petroleum  
 (15) A With respect to specifically coastal damages?  
 (16) Q Yes  
 (17) A All right Well there are a number of places for  
 (18) example on the coast of Alaska the North Slope coast we  
 (19) looked at a number of the military installations there many of  
 (20) which in fact practically every one had fuel related spills  
 (21) that were coasted spills The military has a number of  
 (22) landfills in those areas in which military wastes are being  
 (23) activity eroded by way wave interaction right into the  
 (24) intertidal zone Some of those are also inland and sound areas  
 (25) and protected areas

Vol 14 2232

- (1) environment Can you typically explain what kind of steps you  
 (2) would go through to attack the problem?  
 (3) A Yes Take for example a large tank leak petroleum spill  
 (4) or something similar to that Most sites usually have  
 (5) petroleum contaminants associated with them The first thing  
 (6) we do is determine - well it depends on the state of the  
 (7) situation We may have to take an expedited an emergency  
 (8) action for example to help contain it to stop ongoing  
 (9) contamination But aside from that we would first go in and  
 (10) assess the history of the site That means spending a sizable  
 (11) amount of time reviewing historic documents for the firm  
 (12) documents for exactly what happened with the spill - did it  
 (13) happen recently did it happen a long time ago - and determine  
 (14) exactly where the problems are  
 (15) Once you've done that then you go through a scientific  
 (16) approach to analyze the surface and the subsurface track the  
 (17) pathways of the spill where they move along the surface or  
 (18) down into the groundwater follow the groundwater and drill  
 (19) holes analyze it excerpt the samples Eventually we may  
 (20) exhume the problem area or fence it off in some area  
 (21) Q Have you been involved in site investigations of property  
 (22) which have been impacted by oil or other similar substances?  
 (23) A Yes I have  
 (24) Q Is that a common experience for you?  
 (25) A Yes I mean it depends on how you define site If you're

Vol 14 2234

- (1) There are a number of other examples I had a client in  
 (2) the Washington area along the coast of Puget Sound that had  
 an  
 (3) extremely contaminated groundwater problem which was  
 leaching  
 (4) directly into the intertidal zone with high concentrations of  
 (5) arsenic and dissolved silica and things like that  
 (6) Q Do you have experience in the investigation of impact of  
 (7) contaminants in the nearshore environments?  
 (8) A Yes In fact the projects that I just named were  
 (9) principally focused on shoreline contamination  
 (10) MR PETUMENOS Your Honor I ask that Mr Bush be  
 (11) recognized as an expert in the area of marine geology and  
 (12) specifically with respect to the fate and persistence of oil  
 (13) MR OPPENHEIMER Your Honor despite the apparent  
 (14) youthfulness we have no objection  
 (15) THE COURT He's qualified to give opinions in those  
 (16) areas  
 (17) BY MR PETUMENOS  
 (18) Q What are the main factors that you consider in confronting  
 (19) sites with spilled contaminants in the marine nearshore  
 (20) environment?  
 (21) A Well if we can find the nearshore environment to mean  
 (22) specifically the coastal areas and I think that's probably most  
 (23) appropriate in this case There are three main things we have  
 (24) to look at  
 (25) One of course is the nature of the coastal area itself

Vol 14 2235

- (1) Principally the makeup composition the geometry shape size  
 (2) and so forth of the coastal environment the intertidal zone  
 (3) most specifically  
 (4) Second we need to know the nature of the contaminating  
 (5) materials basic characteristics of that  
 (6) And thirdly of course how that material interacts with  
 (7) the coastal coastal environment  
 (8) Q Let s talk about the task that was presented to you as part  
 (9) of the Exxon Valdez oil spill  
 (10) When were you hired for the first time?  
 (11) A We were first retained in 1989 I don t recall the precise  
 (12) time I believe it was probably April or May June sometime  
 (13) along there  
 (14) Q Who hired you?  
 (15) A We were retained via a letter from Hill Bettes and Nash  
 (16) the firm in New York maritime firm in New York  
 (17) Q But who was their client that you were being retained by?  
 (18) A Authorizing us to work for the Chugach Regional Native  
 (19) Corporation  
 (20) Q And what were you asked to do initially?  
 (21) A We were asked to examine the shorelines that had been  
 (22) impacted by the oil and assess damage and provide a basis if  
 (23) possible from which future projections of damages or recovery  
 (24) could be made  
 (25) Q Did you put together a team for that purpose?

Vol 14 2236

- (1) A Yes we did  
 (2) Q And who was on it?  
 (3) A We put together a fairly diverse team Myself a fellow  
 (4) named Charles Miller who is a soils scientist Larry Thebeau  
 (5) is a oil spill biologist We retained certain specialists  
 (6) Timothy Kana is a coastal process specialist and beach  
 (7) reconstructionist specialist from Coastal Science Engineering  
 (8) We retained Dr Bakus who is a scientist from Southern  
 (9) California We also to a lesser extent retained or at least  
 (10) interfaced with Dr Vandermuehlin (ph) and I believe Don  
 (11) Westlake as well was another specialist  
 (12) Q And were you the fellow that was going to run all these  
 (13) people around and make sure they did it right?  
 (14) A Actually when we first started these projects we  
 (15) distributed the work loads among three people We divided up  
 (16) areas of responsibility As the project evolved however I  
 (17) assumed project management  
 (18) Q How did you understand that your work was going to be  
 (19) used  
 (20) when you were hired?  
 (21) A Well the first request that we had was to find out what  
 (22) was going on with the lands The Native corporations have vast  
 (23) land holdings and land management is an extremely important  
 (24) issue with them and we provided information regarding  
 (25) damaged shorelines and tried to present maps or information that could  
 be used to interpret maps of where oil impact occurred In

Vol 14 2237

- (1) addition to that we were all aware that this may lead to  
 (2) litigation and so we would be providing some litigation  
 (3) support as well  
 (4) Q What was the first thing you did then to begin - begin  
 (5) your work?  
 (6) A Well we assembled a team prepared some plan of attack  
 (7) plans actually of attack on the problem and after  
 (8) recruitment of course moved forward to the field program in  
 (9) Prince William Sound  
 (10) Q Are you familiar with the term fate and persistence of  
 (11) oil ?  
 (12) A Yes  
 (13) Q What does that mean?  
 (14) A Well in my business fate and persistence has become  
 (15) essentially a term of art meaning the fate of a contaminant or #  
 (16) what happens to it and persistence then refers to how long  
 (17) - or how much impact and how long the duration of the impact  
 (18) occurs between this contaminant and the environment It s not  
 (19) a - it s not a - a specific term  
 (20) In other words for example let me give you an example  
 (21) In certain sites contamination from say trichlorethylene  
 (22) It s a petroleum solvent To determine fate and persistence of  
 (23) that we track it as a contaminant But in time the  
 (24) chemistry the chemical itself changes It ages and  
 (25) deteriorates to another compound called trichloroethane TCE

Vol 14 2238

- (1) goes to TCA The fate of TCA is not over in our business We  
 (2) continue to track the subsequent chemical so as the materials  
 (3) weather and degrade the job s not over We can track them  
 (4) through the impact time or the time in which they affect an  
 (5) environment  
 (6) Q As we re talking about the fate and persistence of oil for  
 (7) your testimony as a geologist can you distinguish for the jury  
 (8) the extent to which you are talking about how long the material  
 (9) will be physically in the environment versus that presence s  
 (10) effect on the environment?  
 (11) A There s a significant difference Well egg for example  
 (12) Dr Mundy just testified about how certain oiled sediments  
 (13) without - containing no detectable hydrocarbons in the water  
 (14) in the leach of the water in the oiled stream still appeared to  
 (15) give damaging impact to salmon eggs This is a case where we  
 (16) have an interaction between material in the sediment that is at  
 (17) least apparently or visually or initially thought to be inert  
 (18) and still bringing about some sort of effect  
 (19) So if I m - I think I m losing the question but the point  
 (20) is that we continue to determine the impacts of a contaminant  
 (21) which may extend for some time after the contaminant has been  
 (22) removed from the environment In many sites we ve gone and  
 (23) done restoration work We ve dug out the contaminated soils  
 (24) hauled this off to a hazardous waste facility in Oregon but  
 (25) there s still lingering effects and it takes time for the

Vol 14 2239

- (1) biological ecosystem to recover from those effects  
 (2) MR OPPENHEIMER Your Honor I m sorry I just wanted  
 (3) to register an objection to the effect that the testimony  
 (4) begins to become biological as opposed to the witness  
 (5) expertise in this area  
 (6) BY MR PETUMENOS  
 (7) Q That s actually precisely my point Your testimony you re  
 (8) going to be talking about is not about the biological - the  
 (9) biological effects but in fact about how long this material is  
 (10) detectable and persist in the environment  
 (11) A Generally speaking that s correct  
 (12) Q 1989 what s the first thing you did the first thing you  
 (13) actually did in the field?  
 (14) A In 1989 - I believe we started in late July or early  
 (15) August I don t remember the precise day - we assembled our  
 (16) field equipment in Anchorage and mobilized to Homer boarded  
 (17) a  
 (18) vessel named the Tulchena - I beg your pardon I ve skipped a  
 (19) step  
 (20) Actually we left Anchorage first on a reconnaissance  
 (21) mission and spent about three days flying Prince William Sound  
 (22) to assess aerially the impacted areas and get a feel for the  
 (23) level of activity and the level of treatment activity that was  
 (24) going on at the time and help confirm or gain a better  
 (25) understanding the precision of some of the maps and initial  
 data that we had available to us

Vol 14 2240

- (1) Q And then after you got your reconnaissance or overview  
 (2) done did you get in the boat as you started to describe?  
 (3) A Yes yes We - we mobilized to Homer and departed Homer  
 (4) in a vessel 52 foot vessel the Tulchena I believe and first  
 (5) examined areas in the vicinity of the Kenai Fiords tip of the  
 (6) Kenai Peninsula actually and around the Kenai Fiords worked  
 (7) our way into Seward and gained more water and fuel and so  
 (8) forth and on to Prince William Sound  
 (9) Q And did you return after 1989 after you completed that  
 (10) investigation in subsequent years?  
 (11) A Yes we did  
 (12) Q Tell the jury  
 (13) A We returned in 1992 conducted another field program a bit  
 (14) more expansive than the first one and I returned for a short  
 (15) visit in 1993 and a small field program in 1994  
 (16) Q All right I have next to show you if you can come on -  
 (17) come on down what s been marked as Exhibit 1164 and tell  
 (18) you  
 (19) what I m going to get real close I don t mean to invade your  
 (20) space but I m going to get real close to you here so you can  
 (21) see what we ve got on this map  
 (22) Judge Shortell standard instruction he gives for the  
 (23) microphone for witnesses I think you ve got it down  
 (24) THE COURT I thought you passed it on counsel so I  
 (25) wasn t going to give it this time  
 THE WITNESS Please do

Vol 14 2241

- (1) THE COURT Be careful  
 (2) THE WITNESS Thank you I m being careful  
 (3) MR OPPENHEIMER I m sorry counsel which exhibit is  
 (4) that?  
 (5) MR PETUMENOS That is Number 1164 It is entitled  
 (6) Oil Impact and Sample Location  
 (7) BY MR PETUMENOS  
 (8) Q And Mr Bush could you give the jury a notion of what  
 (9) we ve got here?  
 (10) A Yes This map illustrates the - the Prince William Sound  
 (11) in the most part You can see Montague and Hinchinbrook  
 (12) Islands down here to the south and this would be the Gulf of  
 (13) Alaska and the northern portion of the Pacific Western Prince  
 (14) William Sound in this area various islands and properties that  
 (15) are owned by the Native corporations green designating the  
 (16) properties here and in north and eastern Prince William Sound  
 (17) In addition to that you can see a number of dark spots on  
 (18) here the labels refer to both places where we conducted some  
 (19) detailed studies referred as transects  
 (20) Q Let me stop you there because I ll bet they can t see  
 (21) that The dark spots are - describe it for the jury  
 (22) A Yeah there are two types here we have both sampling  
 (23) locations where we conducted one portion of our 93 program  
 (24) area wide sampling program which are these dots labeled with  
 (25) a series of numbers

Vol 14 2242

- (1) Q Let me stop you there  
 (2) MR PETUMENOS Members of the Jury - and it s really  
 (3) hard to see from the back - the black dot with a number on it  
 (4) is what he s describing as a sample location  
 (5) A You want to move it up closer? You can put it on this  
 (6) MR PETUMENOS Is that all right?  
 (7) MR OPPENHEIMER You want to move the easel too?  
 (8) MR PETUMENOS This will work  
 (9) BY MR PETUMENOS  
 (10) Q What are the squares?  
 (11) A The squares represent areas that - that well there are  
 (12) two squares there actually I believe The rectangular square  
 (13) symbols in black represent a site where we conducted - area  
 (14) where we conducted a special investigation and we focused on  
 (15) some shorelines at this location  
 (16) These rectangular ones represent our transects and the  
 (17) squares represent areas where we have done some - collected  
 (18) some - given a number of samples and had gone back That s  
 (19) comparison studies from 1989 more present  
 (20) Q Tell the jury what you mean by a transect?  
 (21) A Transect is a - an exercise one takes on a shoreline where  
 (22) one does detailed studies We measure the slope of the  
 (23) shoreline point by point sort of like measuring out the steps  
 (24) going out and down to follow the soil  
 (25) We collect samples along this given profile We later

Vol 14 2243

- (1) determine from measurements taken along the transect and we  
 (2) take biological sampling grids sediment samples and  
 (3) investigate how the contour of the shoreline changes with  
 (4) time You can make - along the same transect which is fixed  
 (5) you can measure profile from one year to profile to the next  
 (6) year and look at the differences in the shape and tells you how  
 (7) the sediments are moving along the shoreline  
 (8) Q We'll get into that a little bit more later Is this  
 (9) enough for this map? Can we go down to the area and show -  
 (10) A I'm finished with it  
 (11) Q I am too  
 (12) MR PETUMENOS Very quickly then Exhibit Number  
 (13) 1165 counsel  
 (14) MR OPPENHEIMER Thanks  
 (15) BY MR PETUMENOS  
 (16) Q And what we have here is just simply additional transects  
 (17) and sample sites for the Kenai Fiords area am I right?  
 (18) A That's correct I failed to mention before that this  
 (19) purple or magenta color represents oiling that's occurred on  
 (20) these shorelines all levels all intensities combined into one  
 (21) color  
 (22) MR OPPENHEIMER Your Honor I'm going to make a  
 (23) foundational objection at this time without explanation for how  
 (24) the oiling came on I believe the witness will testify to it  
 (25) later but at this point I'm raising a foundation objection

Vol 14 2244

- (1) MR PETUMENOS That's fine Judge we'll get back to  
 (2) that We'll put more evidence in later  
 (3) THE COURT Okay  
 (4) BY MR PETUMENOS  
 (5) Q That's all I wanted to show the jury was that you did other  
 (6) transects and other sample sites down the Kenai Fiords area  
 (7) A That's correct  
 (8) Q Would you grab that for me and put it on the other side  
 (9) there?  
 (10) A (Witness complies)  
 (11) Q And finally with respect to Exhibit 1354 A is that the  
 (12) transect - the transect map - sure isn't  
 (13) A It depicts essentially the same information sampling  
 (14) activities that occurred in our '93 program out on the - the  
 (15) extended the Alaska Peninsula and the Kodiak islands area  
 (16) Our last sampling site was hidden down here someplace It's in  
 (17) Chignik - it's right here It's a square located right  
 (18) there That's the farthest we sampled to the south  
 (19) Q Down here southwest?  
 (20) A Chignik Lagoon  
 (21) Q West of Kodiak Do you have any idea - I don't know if  
 (22) you do Do you have any idea how far from Kodiak that Chignik  
 (23) site is?  
 (24) A Estimate over 500 miles line miles I think it's probably  
 (25) close to 600 It would be a guess

Vol 14 2245

- (1) Q Okay Thanks  
 (2) A I'm sorry that was from the spill site  
 (3) Q Right Know what? Before you go away let's get the right  
 (4) map up It might help And look at 1166 without the A and  
 (5) what we have here then is the same key showing the sample  
 (6) sites and that's where you were dead right that's where it  
 (7) was down -  
 (8) A Yes  
 (9) Q Okay So actually Members of the Jury 1166 is the map  
 (10) that shows the sampling of the transect sites?  
 (11) A Do you want this one back?  
 (12) Q No I would like - I think to do now is to put you back  
 (13) on the witness stand Can we do that?  
 (14) The - that first map we talked about the special  
 (15) investigation which sounds ominous on LaTouche Island  
 (16) What  
 (17) was the special investigation that you did?  
 (18) A In 1993 our - we conducted three parts to our field  
 (19) program in 1993 The first part was to basically reproduce  
 (20) what we did in 1989 By and large we did that  
 (21) Another portion of it was the special investigation and  
 (22) that was a very focused investigation on approximately five  
 (23) small beaches on the northeast end of LaTouche Island with the  
 (24) intent of trying to compare similar shorelines that were oiled  
 (25) to similar degrees but had experienced different amounts of  
 treatment and we wanted to determine how the effects of the

Vol 14 2246

- (1) treatment and how well it - it - I guess how effective it was  
 (2) in those locations  
 (3) Q Now the jury certainly noticed that you went to Kodiak and  
 (4) beyond Why is that? Were you being asked to do that by the  
 (5) Native corporation?  
 (6) A Actually I'm not sure exactly why we did it The ultimate  
 (7) goal of our '93 investigation was to determine the extent of  
 (8) oil impact and there were reports of oiling all the way down  
 (9) the Alaska Peninsula  
 (10) Q Were you retained by the municipality plaintiffs at some  
 (11) point later in the - in the case?  
 (12) A Yes we were  
 (13) Q And then after your summer fieldwork in 1992 was ICF  
 (14) retained to do some work by the United States Department of  
 (15) the  
 (16) Interior?  
 (17) A Yes they were  
 (18) Q And what did the United States - United States Department  
 (19) of Interior ask you to do?  
 (20) A The Department of the Interior specifically the Bureau of  
 (21) Indian Affairs asked us to provide a compilation of the  
 (22) natural resource damage assessment studies data that were  
 (23) available at that time that applied specifically to subsistence  
 (24) resources impact on subsistence resources which we did  
 (25) Q Did you work on that report?  
 A Yes I did

Vol 14 2247

- (1) Q Who else did?  
 (2) A There were quite a number of people Principally the  
 (3) principal investigators or contributors to that report were  
 (4) myself Dr Peterson Dr Gerald Bakus staff from ICF s  
 (5) clement division which is an environmental risk assessment  
 (6) group specializes in doing environmental risk assessments  
 and  
 (7) Larry Thebeau contributed a small amount I believe offhand  
 (8) those are the principal contributors  
 (9) Q Did you prepare a report of your fields work in 1992?  
 (10) A I m sorry I didn t -  
 (11) Q Did you prepare a report of all this fieldwork in 1992?  
 (12) A Yes  
 (13) Q Did you return to the field in 1993 and 1994?  
 (14) A Yes  
 (15) Q And did you prepare - prepare subsequent reports?  
 (16) A Yes  
 (17) Q And in 1992 when you went - in 1993 when you went back  
 (18) out to the field what was the purpose of that visit 93?  
 (19) A Let s see In 1992 we completed the - the revisit of our  
 (20) 1989 transect sites and the area wide sampling program which  
 (21) collected samples all the way down to the Chlgnik area as  
 (22) indicated on that last exhibit and a special investigation  
 (23) In 93 we returned to the field for a brief visit to go to  
 (24) some of those sites with Dr Bill Mundy the intent being to  
 (25) give him an on site or essentially a hands on view of oiling

Vol 14 2248

- (1) conditions that we identified from the 92 program  
 (2) Q Who is Dr Bill Mundy?  
 (3) A Dr Mundy is the land assessment specialist that the  
 (4) plaintiffs had retained  
 (5) Q Now in 1994 this year you went back out there?  
 (6) A That s correct  
 (7) Q How long ago?  
 (8) A I think we started field activities on the 23rd of May  
 (9) Q Just about six weeks ago or so?  
 (10) A Very close to that  
 (11) Q Okay Who was with you and what were you doing?  
 (12) A Again similar field party members Larry Thebeau myself  
 (13) Charles Miller was no longer involved with the project In  
 (14) fact he was not involved in 1992 However Dr Gerald Bakus  
 (15) returned I believe it was Jeff Dawson was an assistant in the  
 (16) field and also we - not as a member on our team but we -  
 (17) other participants in the program included Lora Johnson for  
 (18) example an archaeologist who works for the Native operation  
 (19) corporations I believe  
 (20) Q You had an archaeologist with you -  
 (21) A Yes  
 (22) Q - on this trip? And was Dr Mundy with you for any  
 (23) portion of it?  
 (24) A Yes he was  
 (25) Q And -

Vol 14 2249

- (1) A Dr Bakus  
 (2) Q Dr Bakus And did you go to the same basic sites that you  
 (3) had gone to before at least some of them?  
 (4) A We went to some of the sites yes  
 (5) Q Did you go to some additional sites?  
 (6) A Yes we did  
 (7) Q What were those?  
 (8) A There were in fact a fair - perhaps even a larger  
 (9) proportion of the sites we went to in 94 were those that we  
 (10) were recommended to visit by other persons we d interviewed  
 and  
 (11) had discussions with Lora Johnson for example and other  
 (12) people that we interfaced with during and prior to the field  
 (13) program  
 (14) Q So did that include some archaeological sites that you  
 (15) visited?  
 (16) A Yes it did  
 (17) Q As part of your work have you also reviewed the work of  
 (18) others that have looked at the location fate and persistence  
 (19) of oil?  
 (20) A Yes I have  
 (21) Q And what have you studied?  
 (22) A I don t know that I could recall all of the studies that  
 (23) we ve examined at this time but certainly we looked at a large  
 (24) portion of the natural resource damage assessment work that  
 was  
 (25) done We ve looked at a large portion of the work that was

Vol 14 2250

- (1) completed by NOAA I know a number of the investigators  
 (2) Q Let me slow you down The national resource damage  
 (3) assessment work that was done by whom?  
 (4) A It s funded through the Trustees  
 (5) Q Okay The jury knows what that is You looked at some  
 (6) material from NOAA?  
 (7) A That s correct  
 (8) Q That s the National Oceanographic and Atmospheric  
 (9) Administration?  
 (10) A That s correct  
 (11) Q And you looked at some work that was done by Exxon?  
 (12) A Well yes We have looked at the work that was done by  
 (13) Exxon yes There are also a number of publications in the  
 (14) public literature oil spill conference proceedings There are  
 (15) a number of other sources of information as well  
 (16) Q Did you talk to private residents in the area and obtain  
 (17) information about oiling information from them?  
 (18) A Yes Not only private residents but we talked to persons  
 (19) that had worked on treatment crews clean up crews in the  
 (20) Kodiak and Alaska Peninsula areas as well  
 (21) Q What is Veco?  
 (22) A Veco is a firm a national firm as far as I know that was  
 (23) retained by Exxon to manage the clean up crews operating in  
 the  
 (24) Alaska Peninsula and Kodiak area  
 (25) Q Did you look at some records of Veco to determine where

Vol 14 2251

- (1) people were going to clean up oil?  
 (2) A Yes we did  
 (3) Q Did you look at records from the Alaska Department of Fish and Game?  
 (4) and Game?  
 (5) A Yes we did  
 (6) Q For what purpose?  
 (7) A We were referred to the Alaska Department of Fish and Game  
 (8) actually I don't recall exactly how we were referred to them at  
 (9) this moment but with respect to a number of occurrences of oil  
 (10) that were not even in the mapping data bases to which we had  
 (11) access Fish & Game had identified in the Kodiak area and the  
 (12) Alaska Peninsula area that we were unaware of so we  
 (13) contacted  
 (14) people with Fish & Game to get additional information on those  
 (15) occurrences  
 (16) Q Now before we get into your actual fieldwork I would like  
 (17) you to describe for the jury if you would in general what  
 (18) happens when crude oil is spilled on the water and hits  
 (19) beaches such as are found in Prince William Sound and the  
 (20) Gulf And I think in order to do that I have to ask you are  
 (21) beaches pretty much the same throughout this area or are they  
 (22) different?  
 (23) A No there's a tremendous amount of variability of the  
 (24) beaches in Prince William Sound in fact over the entire area  
 (25) of impact  
 (26) Q Okay What are the important kinds of differences between

Vol 14 2252

- (1) them and why did - why is that important?  
 (2) A Well there are a number of important differences I think  
 (3) as I mentioned earlier there are three things we have to look  
 (4) at when we look at how a contaminant effects nearshore  
 (5) environment The makeup of the nearshore environment the  
 (6) makeup of the contaminant and how the two interact these  
 (7) three things And so that's one of the major focuses is the  
 (8) makeup of the nearshore environment  
 (9) Well the shorelines the beaches we'll call them in  
 (10) Prince William Sound and the other areas can range from sheer  
 (11) cliff bedrock very impermeable massive structures to fine  
 (12) grain very low energy very quiescent environments and  
 (13) practically every range in between from sand and gravel to  
 (14) large boulder and cobble  
 (15) Q Quiescent meaning quiet?  
 (16) A Yes peaceful  
 (17) Q Peaceful In addition to the different kinds of beaches  
 (18) rock versus sand and so forth can you describe for the jury  
 (19) how the shorelines say of the southeastern part of Montague  
 (20) or Hinchinbrook might interact with the water differently than  
 (21) say the shoreline from the say northwestern side of Chenega  
 (22) Island over here - what would be the difference between a  
 (23) shoreline like this and a shoreline like that?  
 (24) A Yes When we consider the - the interaction of a  
 (25) contaminant with shorelines not only do we have to consider

Vol 14 2253

- (1) the makeup the composition of the shoreline bedrock  
 (2) boulders cobbles sand so forth but we have to consider how  
 (3) it's exposed to wave energy And if you look at that southern  
 (4) or southeastern portion of Prince William Sound on that map  
 (5) you'll see that the long islands of Montague and elongate  
 (6) portion of Hinchinbrook serve essentially as barriers or blocks  
 (7) to the high energy dominant storm waves that can be generated  
 (8) in the North Pacific and Gulf of Alaska Hence we had a sound  
 (9) a protected area in the back behind the ocean proper It's  
 (10) Prince William Sound therefore  
 (11) Furthermore inside the Sound you'll see that the more  
 (12) narrow channels and other areas bays and embayments along  
 (13) the  
 (14) shorelines of the islands themselves offer a further  
 (15) protection so we have a range of energy or environmental  
 (16) protection or environmental exposure for each of those  
 (17) coastlines in those environments and they'll respond  
 (18) differently in terms of preservation of contaminants  
 (19) variability of the shoreline and the material that makes it  
 (20) up  
 (21) Q So that might explain the difference a way of putting it  
 (22) is the fact that Montague Island is between Chenega Island and  
 (23) has Knight Island in front of it as well as has an impact on  
 (24) how the water hits the lands?  
 (25) A Has annual impact on how the water hits the land and how  
 (26) stable the beach itself is that's correct

Vol 14 2254

- (1) Q You talked about bays Would Kodiak be a good example of  
 (2) how inlets and bays interact with the water differently than  
 (3) open coastline?  
 (4) A Well yes Actually there are a number of - this  
 (5) particular area presents a number of ideas and I'll just -  
 (6) Q Exhibit 1354 A for the record is what we're looking at  
 (7) before the jury now  
 (8) A Obviously the shorelines here to the south and east  
 (9) portions of this exhibit are exposed to the full brunt of the  
 (10) Gulf of Alaska and the North Pacific storms tremendous storms  
 (11) impact these shorelines And to the extent that you have and  
 (12) there are fine grained shorelines in those areas those sandy  
 (13) shorelines are very turbulent They're - the sand is easily  
 (14) moved and it's moved extensively from storm event to storm  
 (15) event for example season to season Between Kodiak and the  
 (16) Alaska Peninsula along the Shelikof Strait area there is some  
 (17) buffer  
 (18) Q Excuse me Is the Shelikof Strait this body of water here  
 (19) for the jury who can't see?  
 (20) A Yes between - it's that body between Kodiak and the  
 (21) Peninsula  
 (22) Q So when we're looking at inlets and bays on Kodiak that  
 (23) extend in from the ocean what would be the situation there?  
 (24) A Well there's clearly more protection in those areas than  
 (25) there is in the areas that are exposed and the inlets and bays

Vol 14 2255

- (1) that occur on the Shelikof Strait side have more protection  
 (2) than those on the southeast side that are exposed to the brunt  
 (3) of the North Pacific  
 (4) As I started to say earlier not that Shelikof Strait would  
 (5) be characterized as a quiet body of water by any extent of the  
 (6) imagination it's certainly choppy as well and turbulent But  
 (7) there is a difference between the two areas  
 (8) Q Now we talked about different kinds of beaches as being  
 (9) the second factor that we wanted to make sure the jury  
 (10) understands  
 (11) MR PETUMENOS Could I have the Elmo please?  
 (12) BY MR PETUMENOS  
 (13) Q Showing you what has been admitted as 245 51 and get the  
 (14) right version of the -- I have to zoom out here What does  
 (15) this depict in the way of a beach that you might want to  
 (16) describe to the jury?  
 (17) A Well this beach is a bedrock dominated beach In other  
 (18) words the material that we see here is largely a -- a smooth  
 (19) relatively impermeable rock This is a fairly interesting  
 (20) example because in many cases the shorelines that were  
 (21) dominated by bedrock would be sheer cliffs and in this case  
 (22) we see we have a sloping body of rock It's not quite a  
 (23) platform or a flat portion of beach but it's a sloping body  
 (24) So it represents sort of a type of an in member of the  
 (25) shoreline types

Vol 14 2256

- (1) Q 245 34 as admitted?  
 (2) A This photograph I believe is along the Alaska Peninsula  
 (3) and obviously represents the other extreme of the shoreline  
 (4) types This is a sandy beach and we can see in the -- on the  
 (5) right hand -- in fact can I point with this?  
 (6) Q Go ahead  
 (7) A Is this working?  
 (8) Q It won't on the Elmo It won't be able to point I'm  
 (9) sorry You can point to the screen itself with your finger  
 (10) that still works Down here so they can see it  
 (11) A All right Well I could probably describe it You can  
 (12) see the area on the right hand side of the screen in front of  
 (13) the people that are on the beach with ripples and waves on it  
 (14) Well that's a sandy area and those waves are made fairly  
 (15) easily Upward from that or upbeachward the land you can  
 (16) see  
 (17) a more gravelly area may be a little more stable or less  
 (18) likely to be moved under different conditions Even though the  
 (19) differences are small across this beach it gives you some idea  
 (20) of some of the more subtle features One might suggest that if  
 (21) we move further to land where we can see the gravelly area the  
 (22) gravel may persist with a thin layer of sand on top of it  
 (23) It's not that The entire beach changes throughout its depth  
 (24) It's a layered system not a very deep system  
 (25) Q And will that become important to your analysis later in  
 our discussion?

Vol 14 2257

- (1) A Yes it will It is  
 (2) Q Showing you exhibit 245-44 which has been admitted what  
 (3) kind of beach do we have here?  
 (4) A Well this of course is a shoreline that's somewhere in  
 (5) between the two And I think this is a very good exhibit If  
 (6) you look carefully at the rocks in this intertidal zone you'll  
 (7) see that they're very angular There appears to be not much  
 (8) rounding or weathering They're not very active They're not  
 (9) churned much by waves because if they were these angular  
 (10) edges would be broken off of them and the rocks would be  
 more  
 (11) round  
 (12) Between the rocks we see a lot of sand and gravel smaller  
 (13) sized gravel material that is a matrix between the large  
 (14) grains A good concept to understand the matrix itself sort  
 (15) of provides in the way of binder or material to help hold the  
 (16) rocks in place At some point in time if the matrix moves  
 (17) around enough the rocks will -- will occur close enough to  
 (18) present an armor on this surface to kind of shield this finer  
 (19) grained sediment from wave activity  
 (20) MR OPPENHEIMER Your Honor before the next  
 (21) question I have no problem with what we're seeing but I'd  
 (22) like clarification of the stipulation with respect to  
 (23) admission?  
 (24) Counsel what are you referring to  
 (25) MR PETUMENOS I'm sorry Judge I don't understand

Vol 14 2258

- (1) the objection  
 (2) MR OPPENHEIMER I was unaware that these were  
 (3) admitted Your Honor these are fine for looking at but I'm  
 (4) not aware of the stipulation to which counsel's referring  
 (5) THE COURT Is this admitted? It is I tell you  
 (6) what counsel actually I was going to break in I'd like you  
 (7) to get through the preliminaries and we'll break no matter  
 (8) when it is even if we've got 15 minutes Pick a time to break  
 (9) before we get into the main body of the testimony I'll like  
 (10) to take the break so that we get it all in at one time All  
 (11) right?  
 (12) MR PETUMENOS That would be fine Judge I think  
 (13) I'm at a point where we're very close so --  
 (14) THE COURT Get to that point and then I'll let the  
 (15) jury go  
 (16) MR PETUMENOS Okay Watch this  
 (17) BY MR PETUMENOS  
 (18) Q And finally Mr Bush the exhibit before you here is --  
 (19) does that depict another kind of beach?  
 (20) A Yes And it reflects exactly what I was referring to  
 (21) earlier You can see this -- the rounded large rocks In  
 (22) fact the gentleman is just stepping off of one rock that's  
 (23) been smoothed the surface of that is polished and rounded  
 (24) It's not particularly true that the wave action itself does  
 (25) that it's the churning of the rounded cobbles and gravelly

Vol 14 2259

(1) material that you see around it that abrades that rock This  
(2) happens on all scales  
(3) In some places one can see a bedrock projection that sticks  
(4) up from the sea floor and the sand in a fairly low energy  
(5) environment watches around it creates a nice ring around the  
(6) base of the rock No lichens and of course no resistance  
(7) either so we have this range of shorelines even though it s  
(8) mixed sand and gravel or a sheltered rocky environment or  
(9) something like that with these different levels of veneer and  
(10) different exposures By veneer I mean the thin sand and  
(11) gravel that s on it and different exposures to wave energy that  
(12) allow these materials to be fixed in place or on the other  
(13) hand very mobile and scour the rocks clean  
(14) Q Okay Do beaches neatly fall within these various  
(15) categories or are they sometimes mixed up so that they have  
(16) components of all different ones?  
(17) A If I would say the late 70s NOAA formulated a scale of  
(18) classification for shorelines It has ten shoreline types In  
(19) practice and reality I mean it s a nice concept it s the  
(20) method we end up using to evaluate shorelines and how  
(21) vulnerable they are to oil spills but the fact is that in  
(22) reality they re mixed types NOAA - recent work in September  
(23) of 92 in fact some of their publications began to subdivide  
(24) further one of the categories that they have In many cases  
(25) we see a shoreline In fact I have an illustration later that

Vol 14 2260

(1) will demonstrate a shoreline that has very mixed types of  
(2) shorelines along the same length  
(3) Q Let me show you 245 20 Does this illustrate what you  
(4) mean?  
(5) A In part Obviously this is a large boulder beach the  
(6) gentlemen are working on Volkswagen size boulders shall we  
(7) say In this case maybe they re Cadillac size but we can  
(8) see in addition to that this fine grain of material that s  
(9) armoring the beach around the large rock and that material of  
(10) course would represent a mixed sand and gravel or gravel  
(11) beach So yes we have a mixture of shoreline types  
(12) Q So the beaches don t always cooperate with NOAA and  
(13) define themselves according to NOAA s categories that NOAA would  
(14) like  
(15) to describe?  
(16) A They don t cooperate with me either Yes  
(17) MR PETUMENOS Judge how s that?  
(18) THE COURT That s good  
(19) Okay I ll let you go now Don t talk about the case with  
(20) anyone and don t form or express any opinion on it until it s  
(21) submitted to you for deliberation See you back here at 8 30  
(22) tomorrow  
(23) (Jury out at 1 15 p m)  
(24) THE COURT You can step down Anything to take up  
(25) counsel?  
(26) MR PETUMENOS This afternoon we have the issue of -

Vol 14 2261

(1) can Mr Bush step down?  
(2) THE COURT I told him that  
(3) THE WITNESS I thought you said sit down I m sorry  
(4) THE COURT No I said step down  
(5) MR PETUMENOS We have the issue of the exhibit on  
(6) cross examination of Mr Bush that I raised yesterday with you  
(7) and I have not heard from counsel whether we have a hearing  
(8) on  
(9) that or not  
(10) THE COURT What - yeah we took that hearing off  
(11) right?  
(12) MR PETUMENOS We took it off because I knew that -  
(13) it became apparent to me that the exhibit wouldn t be reached  
(14) this morning and we were operating - I was waiting to hear  
(15) back from counsel He just was looking into his position and  
(16) hadn t had it yet and I just - rather than come to court half  
(17) prepared I thought we d wait  
(18) THE COURT Sure Do you have a position on it?  
(19) MR OPPENHEIMER Your Honor I wonder though if I  
(20) could ask again if the witness could be excused This does  
(21) have to do with the cross examination  
(22) THE COURT Sure sure  
(23) MR OPPENHEIMER Your Honor as I understand the  
(24) objection it is to an exhibit that was produced quite some  
(25) time ago I believe it s exhibit proposed for identification  
(26) 2733 if I have the number correctly which is a work proposal

Vol 14 2262

(1) from ICF which is Mr Bush s company to the plaintiffs And  
(2) it has been - it s certainly intended to be part of our  
(3) cross Has been for some time It was produced quite a while  
(4) ago and it s been a subject of deposition testimony at which  
(5) to my information there s no - no objection was raised to its  
(6) use  
(7) I believe but I don t want to characterize Mr Petumenos  
(8) position for him that the objection is that it is a draft  
(9) report and therefore it shouldn t be used but I don t  
(10) believe that objection s ever been made But I don t think it  
(11) would fall under that category anyway and I apologize but I  
(12) have not been able to locate an order to that effect  
(13) MR PETUMENOS Let me state that position and I ll  
(14) turn the podium over to Mr McCallion who s come prepared to  
(15) argue this But before he takes the podium the objection  
(16) certainly is preserved This is not the sort of objection that  
(17) has to be made at the deposition It wasn t to the form of the  
(18) question  
(19) The background to this is the fact that there was a  
(20) stipulation entered into between the parties relating to the  
(21) discoverability of letters between counsel and experts on draft  
(22) reports or other matters they didn t - we agreed not to  
(23) produce for example compensation materials and so forth  
(24) This stipulation was entered into after our due date for  
(25) the production of materials to Exxon In other words

Vol 14 2263

- (1) according to your pretrial order there was a date by which we  
 (2) had to produce back up materials for experts The stipulation  
 (3) I believe covers the exhibit that Exxon wishes to use The  
 (4) only reason they have it is because the DM 171 matter which  
 (5) was the Discovery Master s order that resulted from the  
 (6) stipulation had not been entered at the time that our discovery  
 (7) obligations were in Consequently none of the Exxon material  
 (8) of a similar nature was disclosed to us and they withheld it  
 (9) and matters far less clear than this were withheld from us  
 (10) before the discovery master  
 (11) Now it has appeared on a cross examination exhibit It is  
 (12) a letter between counsel and ICF discussing what different  
 (13) approaches might be made which was ultimately - and ideas  
 (14) that might be exchanged which ultimately didn t come to pass  
 (15) in some respects which Exxon is wishing to now cross-examine  
 (16) the witness with we believe in violation of the stipulation  
 (17) so Mr McCallion is prepared to address the Court with that I  
 (18) realize -  
 (19) THE COURT I d like to see the exhibit  
 (20) MR PETUMENOS He s got it  
 (21) MR McCALLION If I may Your Honor I ll hand up the  
 (22) exhibit which is mashed as DX2733 And along with it there  
 (23) are two Discovery Master orders There s 171 and  
 (24) supplemental  
 (25) DM 171  
 (26) THE COURT All right I ve read the letter I ve

Vol 14 2264

- (1) read the stipulation  
 (2) MR McCALLION Your Honor if I may put this into  
 (3) chronological context the document in question the exhibit in  
 (4) question dated March 15 1990 I m informed by my  
 (5) co counsel  
 (6) Mr Kende was produced to Exxon in approximately April of  
 (7) 1993 which was the due date for discovery production by  
 (8) plaintiffs in this matter The defendants production was not  
 (9) simultaneous but I believe it was ordered and produced in  
 (10) approximately June of 1993  
 (11) In the intervening time there had been ongoing discussions  
 (12) between the parties and then with the assistance of the  
 (13) Discovery Master DM 171 was entered into on May the 10th  
 (14) 1993 And as it states it would not require a party to  
 (15) produce either draft reports or more significantly in this  
 (16) case under subsection B any communications including notes  
 (17) or memoranda of oral communications between experts and  
 (18) counsel  
 (19) or their agents  
 (20) Subsequently on June 1993 June 21st the parties entered  
 (21) into a supplemental stipulation which went beyond the  
 (22) documentary discovery process and it was decided - or  
 (23) entered  
 (24) into a stipulation with the assistance of the Discovery Master  
 (25) that with regard to expert testimony no party or expert  
 (26) retained to testify in a matter should be required to testify  
 (27) concerning either draft expert reports or communications  
 (28) including notes or memoranda of oral communications  
 (29) between

Vol 14 2265

- (1) experts and their counsel  
 (2) Now clearly based on that supplemental order it would be  
 (3) our position that the communications in question between  
 (4) Mr Bush and plaintiffs counsel namely myself back in 1990  
 (5) could not be the subject of inquiry upon cross-examination  
 (6) The other issue relates to whether the document itself  
 (7) might be introduced as evidence And given all these  
 (8) circumstances here it s our position that the intent of the  
 (9) parties or certainly a fair interpretation of these events and  
 (10) series of events where in good faith the plaintiffs produced  
 (11) to the defendants documents which were subject to discussion  
 (12) and negotiation at that time but that in fact DM 171 hadn t  
 (13) formally been entered into that we had an obligation in April  
 (14) of 1993 to produce that document The defendants - of course  
 (15) we have no drafts or corresponding correspondence between  
 (16) them  
 (17) and their experts presumably this is due to the fact that  
 (18) their discovery was not due until - until June  
 (19) Given the fact that Mr Bush we feel cannot be questioned  
 (20) regarding the document we would think that given these  
 (21) circumstances that the document itself should not be the  
 (22) subject of an exhibit or brought before the jury It s clearly  
 (23) a communication between plaintiffs counsel and the expert  
 (24) which was directly the subject matter of the stipulation which  
 (25) was pending and discussions which were pending during this  
 (26) period of time leading up to the actual signing of the

Vol 14 2266

- (1) stipulation itself in May and June of 1993  
 (2) MR OPPENHEIMER Your Honor first I heard of this  
 (3) was yesterday and the reason that I couldn t find the  
 (4) stipulation and now I realize what they re talking about  
 (5) better is that I had the wrong number  
 (6) A couple of things As I understand the stipulations they  
 (7) are directed to the process of keeping out of testimony the  
 (8) draft report drafting process and they don t pertain to  
 (9) engagement and they don t pertain to exchanges of  
 (10) information  
 (11) I also understand that to apply to the stipulation which  
 (12) is dated I believe - it is May of 93 and consistent with  
 (13) all of that I think two observations The parties haven t  
 (14) been treating 2733 in any way as if it were subject to any of  
 (15) this during the entirety of the litigation I m not making a  
 (16) waiver argument It s just that no one none of us have  
 (17) thought of this document as subject to these things And the  
 (18) deposition of Mr Bush where it was the subject of  
 (19) interrogation was in July which postdates all of these  
 (20) events  
 (21) Counsel on both sides have been treating this document as  
 (22) if it s properly part of discovery and properly part of the  
 (23) case It obviously has substantive information of importance  
 (24) with reference to this witness I certainly intend to use it  
 (25) on cross examination I may well move for admission if the

Vol 14 2267

(1) proper foundation is laid and I think that the fact that this  
 (2) comes up just on the eve of his testimony you know it's been  
 (3) on the list for as long as it has and has been the subject of  
 (4) deposition testimony and has been produced for as long as it  
 (5) has says two things One this is not the right time to raise  
 (6) the argument but secondly no one until yesterday has treated  
 (7) this document this way  
 (8) I should add that we do not to the best of my knowledge  
 (9) have any draft reports I mean the parties have sort of known  
 (10) what they meant when they were referring to those types of  
 (11) materials I don't believe we're in possession of any of those  
 (12) materials in that category So as I say I don't believe this  
 (13) document fits in these categories I don't believe it was  
 (14) intended to Manifestly it has not been treated in that way  
 (15) It's an engagement document and it does have factual  
 (16) assumptions in it  
 (17) And lastly I can say I'm always hesitant to make a waiver  
 (18) argument but I do think that to the extent that everything  
 (19) else that's said to this point is invalid which I don't believe  
 (20) it is is very late in the game to be pulling one of my  
 (21) cross-examination exhibits  
 (22) Thank you  
 (23) THE COURT Mr McCallion?  
 (24) MR McCALLION Your Honor the issue of DM 171 and  
 (25) the scope of what it applies to has been the subject of

Vol 14 2268

(1) considerable correspondence on a number of exhibits As to  
 (2) whether it's covered by the scope I was not able to obtain any  
 (3) specific correspondence relating to this matter but there is  
 (4) numerous correspondence relating to similar matters  
 (5) I'm advised by the parties or at least counsel who was  
 (6) involved in some of these discussions at the time that the  
 (7) reason for the supplemental - and apparent from the  
 (8) supplemental DM 171 itself - that DM 171 was amended and  
 (9) supplemented for the specific purpose of requiring a party  
 (10) to - or an expert witness to testify regarding these kinds of  
 (11) communications with counsel And in fact the category -  
 (12) this category B which is nonexplicitly draft expert reports  
 (13) but communication including notes and memoranda between  
 (14) experts and counsel clearly applied to this - this particular  
 (15) document  
 (16) At the particular deposition in question where this -  
 (17) there was a brief inquiry relating to it and the exhibit was  
 (18) marked as an exhibit in I believe it's the fourth volume of  
 (19) Mr Bush's depositions which went up to eight or ten volumes  
 (20) During the fourth day or volume four of Mr Bush's deposition  
 (21) and these were - took place over a period of time Native  
 (22) corporations their counsel were not specifically present At  
 (23) the time a Mr Prongay who represented other parties was  
 (24) there but in any event counsel and Native Corporations never  
 (25) waived nor sought to amend or waive the provisions of DM 171

Vol 14 2269

(1) And as often happens matters are raised or discussed in a  
 (2) deposition and I believe I'm not the resident expert on the  
 (3) standing orders in the case but certainly objections most  
 (4) objections substantive and procedural are reserved by the  
 (5) parties It's clearly our case our position that there was no  
 (6) waiver that we produced these documents in good faith in April  
 (7) of 1993 given the absence of an ink signed order at that  
 (8) particular time  
 (9) THE COURT How long have you known this document was  
 (10) designated for cross examination of Mr Bush?  
 (11) MR McCALLION Yesterday Your Honor  
 (12) THE COURT You see what designation yesterday?  
 (13) MR STOLL There's a 24 hour rule you know  
 (14) THE COURT Right how  
 (15) MR STOLL It's not one we have -  
 (16) THE COURT Believe it or not I know You've brought that  
 (17) to my attention any a time counsel I just wanted to make  
 (18) sure that the record reflects that you got this designation  
 (19) yesterday  
 (20) Anything else counsel  
 (21) MR McCALLION No Your Honor  
 (22) THE COURT Okay this - yes  
 (23) MR OPPENHEIMER Well I didn't mean to create the  
 (24) basis that that was the basis I believe 2733 is one of  
 (25) the low numbers as opposed to the sequence that starts with

Vol 14 2270

(1) 15 000 2733 is a low exhibit number  
 (2) THE COURT Well that makes your record complete  
 (3) counsel  
 (4) MR OPPENHEIMER Thank you  
 (5) THE COURT Well that's the low number exception  
 (6) right  
 (7) This document which I've - which I've read not in detail  
 (8) but I've read it enough to know what the substance of it is  
 (9) and what the scope of it is clearly I think is a communication  
 (10) between the experts and counsel their agents concerning draft  
 (11) expert reports It doesn't refer specifically to a draft  
 (12) expert report but it's clearly part of the drafting process  
 (13) So it's within the terms of the stipulation  
 (14) I don't think - there's very few questions that I've have  
 (15) had to deal with in this case that seemed to me as clear as  
 (16) this one And under the circumstances especially with the  
 (17) designation and the 24 hour designation rule which I've had to  
 (18) fight with for this entire case it does not seem to me that  
 (19) waiver is an appropriate argument at all to the objection  
 (20) Now that having been said what should I do about it? The  
 (21) answer is well you can't - you have to abide by the  
 (22) stipulation You can't question about this particular  
 (23) document You can't mention it You can't show it It  
 (24) doesn't come to the attention of the jury in any way until you  
 (25) show me and I'm not saying you'll be able to do this You

Vol 14 2271

- (1) show me that there s some unfairness in this process that
- (2) should require you to inquire about a specific area of this
- (3) document
- (4) Now my - having read the document it seems clear to me
- (5) that - and in view of the exhaustive cross examination I ve
- (6) heard of everybody else in this case I got a feeling that
- (7) anything that you would cross examine on out of this document
- (8) is going to be done twice without the document So it ll
- (9) probably - by the time you try to show me that it ll be
- (10) cumulative So that ll be another reason for me not to let you
- (11) question from it but we ll see I m not shutting the door
- (12) completely I m giving you some hope counsel which I think
- (13) is my duty You understand the rule?
- (14) MR OPPENHEIMER I do Your Honor and I ll endeavor
- (15) to edit my cross
- (16) MR DIAMOND Your Honor there is one more matter
- (17) THE COURT Before we do that counsel I want to make
- (18) sure that these discussions are fully documented so the
- (19) defendants designation the document in question and the two
- (20) stipulations and the orders signing off on the stipulations
- (21) will be made the Court s next in order for the purposes of this
- (22) particular discussion What s the number? Court s 15? All
- (23) right it s Court s Exhibit 15
- (24) MR DIAMOND Well first I was going to thank you for
- (25) complimenting my trial staff for their thoroughness in their

Vol 14 2272

- (1) cross examinations but -
- (2) THE COURT That s exactly what I intended to do
- (3) MR DIAMOND I expected that We filed a - a brief
- (4) memorandum I believe yesterday concerning the headline and
- (5) news media evidence that plaintiffs intend to proffer through
- (6) Mr Mundy but counsel tells me he s not going to do that
- (7) tomorrow so we could probably argue - argue that tomorrow
- (8) MR PETUMENOS We d like to respond to the brief and
- (9) working on it should have something to you I don t know
- when
- (10) THE COURT Good
- (11) MR PETUMENOS We ll get that to you
- (12) THE COURT Is there anything else to take up this
- (13) afternoon on the record? All right Let s recess then
- (14) Counsel I d like to see Mr Stoll and Mr Diamond in
- (15) chambers
- (16) THE CLERK Off record
- (17) (Recess at 1 37 p m )

(1) PROCEEDINGS  
 (2) (Jury in at 8 42 a m )  
 (3) (Call to Order of the Court)  
 (4) THE COURT Counsel the jury s all present Would  
 (5) you take the stand please?  
 (6) Good morning everybody  
 (7) MR. PETUMENOS Don t get too comfortable Mr. Bush  
 (8) we re going to come on down  
 (9) Ready to go Judge?  
 (10) THE COURT Yes  
 (11) DIRECT EXAMINATION OF JAMES G. BUSH (Resumed)  
 (12) BY MR. PETUMENOS  
 (13) Q Mr. Bush there s a word that I can t make you stop using  
 (14) so I d like you to come down here and define it for us Could  
 (15) you tell the jury what a clast is a clast? Just going to have  
 (16) you write it up here once so when you use it again -  
 (17) A Yes The term clast refers to the particles that make up  
 (18) sedimentary rocks It s - it s fairly important to understand  
 (19) a few things about sedimentary rocks in respect to this term -  
 (20) I ll take some liberty here Tim  
 (21) Q Tell us how the words sorting and framework relate to  
 (22) this  
 (23) A These are the grains that make up the sedimentary rocks on  
 (24) the beaches Now the way they occur in relationship to each  
 (25) other and their relative sizes is very important in terms of

Vol 14 2279

(1) how well the oil can penetrate into the beach when it hits the  
 (2) shoreline If the clasts are all the same size or shape or are  
 (3) disseminated evenly throughout the sediment we call it well  
 (4) sorted If they re mixed sizes then it s poorly sorted  
 (5) Porosity permeability is better if the sediment is well  
 (6) sorted If the sediment contains a small amount of matrix  
 (7) remember matrix is the fine grain stuff between the large  
 (8) grains and the sediments are a structure that is large grain  
 (9) upon large grain is called being a framework support Large  
 (10) clast beaches are often framework support  
 (11) The alternative to this is matrix support These rocks are  
 (12) all touching each other They could represent cobbles or  
 (13) pebbles or boulders on the beach and the spaces between the  
 (14) grains are open and as a result oil could penetrate through  
 (15) the sediment very easily If it s matrix support we have a  
 (16) similar relationship except that - I m sorry if it s - if  
 (17) it s well sorted it s like this If it s poorly sorted we ll  
 (18) have a relationship where we have fine grain material filling  
 (19) the pores between the grains and although there is still some  
 (20) permeability it s reduced If it s matrix support we have a  
 (21) fine grain rock with clast essentially floating out in the  
 (22) matrix Probably in most cases best permeability lesser  
 (23) permeability least permeability  
 (24) Q Thank you  
 (25) Now we ve talked about differences in the composition of

Vol 14 2280

- (1) the beach We've talked about the differences in exposure to  
 (2) the sea Are there other characteristics used to categorize  
 (3) beaches?  
 (4) A Well yes Some of the information we've just discussed  
 (5) in fact will help characterize beaches I think principally  
 (6) the - probably some of the more significant things relating to  
 (7) exposure and - and the vulnerability of the shoreline to  
 (8) contamination are things such as slope orientation with  
 (9) respect to high energy storm wind directions and that sort of  
 (10) thing  
 (11) Q How does slope affect the problem?  
 (12) A The principal way in which the sediments in a beach are  
 (13) freed of oil is through physical processes A beach that is  
 (14) fairly steep and short in its intertidal extent throughout the  
 (15) tidal range during a storm for example will have all of the  
 (16) energy of that storm focused over a small area of shoreline A  
 (17) beach that has a slow - a low slope or has a long intertidal  
 (18) extent has the same energy of a storm expanded over a large  
 (19) area So in terms of extent of reworking the sediments the  
 (20) slope has a significant implication on how that storm energy is  
 (21) distributed and how rapidly it's distributed across the beach  
 (22) face for each tidal cycle  
 (23) Q Does this help?  
 (24) A Can use it now but it would probably be better to work  
 (25) with three dimensional views when we look at profiles of the

Vol 14 2281

- (1) transects  
 (2) Q Okay you can have it back  
 (3) All right besides the differences in beach composition and  
 (4) exposure you've just described what about things such as  
 (5) tides glaciation salinity sedimentation?  
 (6) A Well these other factors affect the chemical environment  
 (7) and the biological environment as well If you look at - at  
 (8) beaches that are down current down current direction from  
 (9) glacial activity obviously is a fresh water component is  
 (10) introduced into the system so the biological system is tainted  
 (11) or tweaked in that direction  
 (12) MR OPPENHEIMER Your Honor I would raise the  
 (13) foundation objection we raised yesterday with regard to  
 (14) testimony relating to biologic testimony and subject matter  
 (15) MR PETUMENOS Your Honor this isn't biologic  
 (16) testimony this is the relationship of the geology to such  
 (17) issues  
 (18) THE COURT Well I'll hear it for a couple of  
 (19) questions counsel to determine whether or not your  
 (20) objection's well taken  
 (21) MR PETUMENOS Let me ask a few foundational  
 (22) questions  
 (23) BY MR PETUMENOS  
 (24) Q Is this something that you have studied in the course of  
 (25) your work the way the geology affects what lives where?

Vol 14 2282

- (1) A Yes  
 (2) Q And please proceed  
 (3) A Well that's basically all I had to say There's effect  
 (4) from the fresh water in that area In terms of - well that  
 (5) of course impacts the salinity and the salinity is the key  
 (6) factor that affects a major portion of marine ecosystem there  
 (7) Temperature of course is another affect near glacial areas  
 (8) near glacier area or ice bearing shorelines the temperatures  
 (9) are reduced on a local scale  
 (10) Q And in different parts of the Sound is that happening are  
 (11) there glacial runoffs? Is there sedimentation and things like  
 (12) that in the water that you're aware of within Prince William  
 (13) Sound?  
 (14) A Certainly I believe some earlier investigators  
 (15) characterized Prince William Sound adds being pristine and  
 (16) containing crystal clear water and those sorts of things In  
 (17) fact there's a substantial contribution of glacial flow along  
 (18) each of the glacial outwash areas The Sound includes  
 (19) substantial turbid plumes and variety of silt influx from the  
 (20) Alaska coast current As a result for example the impact of  
 (21) that or the significance of it is that an oil slick while  
 (22) usually floating can acquire the silt particles and eventually  
 (23) become heavier than water and sink  
 (24) Q Let's talk some more about oil You've studied the Exxon  
 (25) Valdez oil spill and you are familiar with its size and nature?

Vol 14 2283

- (1) A Generally speaking yes  
 (2) Q What are the factors that affect the oil once it leaves the  
 (3) vessel?  
 (4) A Well once the oil leaves there are a variety of things  
 (5) that affect it Once the oil leaves the vessel obviously we  
 (6) have a leak in a ship and we have an immediate outpouring of  
 (7) the oil so we have a buildup of oil right around the vessel  
 (8) Laterally to that as the oil spreads laterally it thins  
 (9) During this process we have things for example temperature  
 (10) changes as it interacts with the colder sea water Viscosity  
 (11) may change As it spreads out laterally we'll have volatiles  
 (12) that will evaporate from the oil At the same time soluble  
 (13) products in the oil slick will dissolve in the ocean or ocean  
 (14) water column  
 (15) MR OPPENHEIMER Your Honor if I may register  
 (16) another objection with respect to foundation We seem to be  
 (17) ranging quite far field from marine geology  
 (18) THE COURT I agree counsel I think that objection  
 (19) may very well be well taken You may be able to lay a  
 (20) foundation counsel but it does seem to be a different subject  
 (21) matter  
 (22) BY MR PETUMENOS  
 (23) Q Well have you studied - you have worked in areas relating  
 (24) to oil spills sea coast environments and used your discipline  
 (25) to study those things is that right?

Vol 14 2284

- (1) A Well that s correct I ve studied this spill for a number  
 (2) of years and the knowledge of the interaction of oil to water  
 (3) and spilled oil is at part of my business part of fate and  
 (4) persistence in the environmental industry  
 (5) Q Can you understand the fate and persistence of oil on  
 (6) beaches and in the nearshore environment without  
 understanding  
 (7) how the oil interacts physically with the water?  
 (8) A I don t believe you can  
 (9) Q And have you studied how the oil acts physically with the  
 (10) water?  
 (11) A Yes  
 (12) Q One it leaves something like a vessel?  
 (13) A Certainly  
 (14) MR OPPENHEIMER Your Honor I would continue my  
 (15) foundation objection and request an opportunity at least for  
 (16) some voir dire if we re going to go much farther down this  
 (17) line  
 (18) THE COURT That s the extent of the foundation?  
 (19) MR PETUMENOS Well -  
 (20) THE COURT Just say yes or no  
 (21) MR PETUMENOS I m puzzled more about how far I m  
 (22) going to be going with this to see if we re going to take up  
 (23) the Court s time  
 (24) THE COURT You won t be puzzled in a minute Just  
 (25) tell me whether you re done with the foundation

Vol 14 2285

- (1) MR PETUMENOS I believe so  
 (2) THE COURT The objection s overruled and I don t  
 (3) think voir dire is necessary  
 (4) MR PETUMENOS Good example of following the Court s  
 (5) instructions Let me recollect myself here  
 (6) BY MR PETUMENOS  
 (7) Q What difference does temperature make?  
 (8) A Well temperature affects the rate at which different  
 (9) components of the oil will move through the oil solution and  
 (10) evaporate It also affects the viscosity of the oil and how it  
 (11) will spread out across the water surface  
 (12) Q So a cold water oil spill is different than a warm water  
 (13) oil spill?  
 (14) A Clearly it also depends on the composition of the oil For  
 (15) example certain - certain materials very heavy crudes for  
 (16) example may actually form gelatinous like globs and not float  
 (17) out as a slick but actually wind up as globs floating in the  
 (18) water as opposed to a thin film over the water surface  
 (19) Q What happens when oil is exposed to wind from when it s on  
 (20) in the water?  
 (21) A Well if we can continue discussion with respect to the  
 (22) slick as we had before after it begins to spread out and  
 (23) thins then in the case of the Prince William Sound a few days  
 (24) after the spill where the seas were relatively calm This  
 (25) allowed the slick an opportunity to spread out and thin itself

Vol 14 2286

- (1) over a substantial area When the winds pick up you have a  
 (2) variety of currents that come into play surface currents in  
 (3) the water the wind affects the slick directly for example  
 (4) and the slick there are rules of thumb - and I don t know how  
 (5) accurate these are there s discussion about how well they work  
 (6) - but for example the slick may move about three and a half  
 (7) percent say of the wind velocity  
 (8) Water velocity may be different than that There may be  
 (9) actually differential movement between the water surface and  
 (10) the oil slick itself As the wind picks up and the surface of  
 (11) the water becomes turbulent with wave action Waves can  
 (12) actually break plunge down under the water and carry part of  
 (13) the oil into the water column beneath it So we wind up with  
 (14) diffusion of the two fluids together We can get emulsion of  
 (15) oil in water and some cases we develop very commonly we  
 (16) develop emulsion of water in the oil  
 (17) This latter one where oil is the dominant phase is referred  
 (18) to as mousse It looks like chocolate mousse has the  
 (19) consistency of mayonnaise Large rafts of mousse can move  
 (20) throughout the column and within the water column we can  
 (21) develop an oil to-water emulsion which is a light milky or  
 (22) lightish color substance which can move with currents as  
 (23) opposed to the wind So we have differing amounts of  
 movement  
 (24) different directions of movement within this large body of  
 (25) affected - affected water

Vol 14 2287

- (1) In addition to this we have the dissolved components part  
 (2) of the oil slick is soluble in water Dissolved components can  
 (3) follow currents and sediment  
 (4) Q Would it be fair to say then that there is oil in the  
 (5) water in places where you can t see it?  
 (6) A Yes  
 (7) Q I d like to show you some photographs so the jury can see  
 (8) how these principals might appear  
 (9) MR OPPENHEIMER Do you have an Exhibit Number?  
 (10) MR PETUMENOS Yes admitted Exhibit 245-13  
 (11) A Shall I come down here?  
 (12) BY MR PETUMENOS  
 (13) Q Please We can t - we can t use our pen or the other  
 (14) things when we use the projector  
 (15) A Well this is a shot that shows you a good example of  
 (16) turbulence on the surface and parts of the plume mixing have  
 (17) wind streams beginning to flow certain portions of the oil  
 (18) over others You see the wavy surface with the turbulence  
 (19) See the leading edge this particular portion of the plume of  
 (20) the slick that s moving out That s about what this shows  
 (21) Q Showing you next what has been marked as 228 4  
 (22) A Well this is in a different situation We have a calm  
 (23) water setting in this case We see the path of the boat  
 (24) through the oil slick you can see the waves bow waves  
 (25) generated by the boat moving down

Vol 14 2288

- (1) In this case the oil seems to have developed really a
- (2) heavy sheen in places I expect there s some color in this
- (3) photograph that you can t see here
- (4) Q In the slide You can see it better this way
- (5) A Looks like these areas are a rainbow sheen quality which
- (6) is really a very thin layer of oil on the water s surface when
- (7) it becomes approximately a millimeter of thickness something
- (8) in that range It acquires a brown or opaque more opaque than
- (9) what you see here
- (10) This gives you some idea of how the slick doesn t
- (11) necessarily move in a nice uniform shape rather breaks up
- (12) into areas of wind rows or streamers that come off of main
- (13) bodies
- (14) Q Showing you next 245-26 as admitted
- (15) A This is an indication of actually what can happen with a
- (16) slick after its impact with the shoreline
- (17) Q Press this little button a little red dot will appear
- (18) A Okay Actually this slide gives us a variety of
- (19) information here Obviously we can see the oil that s
- (20) impacting the shorelines It s moving out from the shoreline
- (21) streaming in the direction of the wind You can see the wind
- (22) waves generated on the water and it gives us a wind direction
- (23) generally as common sense would dictate this direction as the
- (24) oil moves off the beach
- (25) This also gives us some idea about the heterogenic the

Vol 14 2289

- (1) variability of the shoreline types we were talking about
- (2) earlier We can see in this area we have a lot of bedrock
- (3) exposure rocks extending above the water Over here over
- (4) here
- (5) and isolated occurrences over here These rocks are releasing
- (6) oil to the water surface which moves along the shoreline some
- (7) of which the rising tide for example moves right back into
- (8) this clastic beach sand and gravel mixed sand and gravel
- (9) perhaps I can t tell from the photograph in this area
- (10) So we have a case where oil released from here
- (11) reaccumulates over here You can also see that if we tried to
- (12) map this shoreline on a large scale that - that the true areas
- (13) that were removed from shorelines that are bedrock
- (14) documented
- (15) like this to ones that are clastic beaches or sedimentary in
- (16) makeup sand and gravel are actually pretty sharply defined in
- (17) places Other places we find that they re mixed Down in
- (18) these areas
- (19) Now what you re looking at is a snapshot in time of a
- (20) shoreline If the tide were high tide looks like it s going
- (21) to impact something Around here based on the little berms we
- (22) see developed on the shoreline the snow line and the high tide
- (23) debris or raft that s left on the shoreline maybe mid tide or
- (24) low tide If it were high tide the shoreline would look
- (25) substantially different
- (26) A lot of these rocks we see here might be underwater and
- (27) the shoreline types then just a snapshot view at high tide

Vol 14 2290

- (1) would be different The point being that as the tide moves up
- (2) and down a number of areas turn into things like protected -
- (3) this might be a protected rocky shore environment and this
- (4) area and in here relative to this wind direction this storm
- (5) The other side the same outcrop is exposed high tide it may
- (6) all be underwater
- (7) So we see we have oil moving from portions to portions
- (8) throughout the tidal range up and down this shoreline into and
- (9) from exposed and protected environments We ve done a lot of
- (10) work to analyze these shorelines and generalize them into ten
- (11) basic types What I m saying to you is that it s not perfect
- (12) There s a lot of variability and heterogenic along the
- (13) shorelines
- (14) Q Are you finished with that exhibit?
- (15) A Yes
- (16) Q Show you next what s been admitted as 245 27
- (17) A Well this is an example of the formation of the mousse
- (18) material we were talking about earlier I don t know how well
- (19) this shows up for you in this illustration but we have here
- (20) clearly a rocky shoreline with a small beach interspersed on
- (21) the scale this is mapped - this clastic beach probably doesn t
- (22) even show up on the scale most of the mapping in Prince
- (23) William Sound
- (24) This material it ranges from here - why don t you zoom
- (25) back down now for the larger view The lower portion of the

Vol 14 2291

- (1) photograph It s brownish in color Is mousse This represents
- (2) a mousse raft It s moving shoreward about to impact the
- (3) shoreline Again this is a thick substance much like
- (4) mayonnaise in consistency and here it s moving lateral to or
- (5) directly towards the shoreline
- (6) Q As the oil reaches the shore what happens to it?
- (7) A Well depends on the phase that the oil s in when it
- (8) reaches the shoreline The dissolved components can in fact
- (9) proceed and move along the shoreline fairly freely with the
- (10) water column Mousse material like this it s very sticky
- (11) adheres to materials has reduced permeability and some
- (12) permeability and will move into the sediments to some degree
- (13) If it s liquid form as the classic oil slick it has much
- (14) more freedom to move into the clastic rocks and crevices that
- (15) are available This type of shoreline these rocks cliffs not
- (16) much permeability Granted there s some cracks in some
- (17) places
- (18) for the oil to penetrate but compared to the spaces we have in
- (19) the sand and gravel beach which we talked about in the
- (20) illustration I drew earlier there s a lot more volume of oil
- (21) that can be contained in this kind of shore type as opposed to
- (22) this kind of shore type
- (23) Q All right Could I show you then what s been marked as
- (24) 1148 I ll put it up here for the jury And I think - I
- (25) think we ll have to come over to the exhibit here to do that
- (26) What is depicted on 1148?

Vol 14 2292

- (1) A This is an illustration that will -
- (2) Q Are we too far away for you? All right Okay
- (3) A This is an illustration that depicts sort of the chain of
- (4) events that might happen as oily material on the water surface
- (5) approaches a shoreline In fact it s very fortunate here
- (6) this illustration is very similar to what you see in the
- (7) shoreline This would be a raft It s mousse in this case
- (8) We can imagine it to be oiled liquid or whatever but it s a
- (9) raft like moving into the shoreline on this exhibit
- (10) Let s take a minute to discuss this beach and what it s
- (11) like We see again we have a mixture of things Here we have
- (12) a rocky headland essentially a large portion of bedrock
- (13) vertically in its orientation that moves from the upland area
- (14) where the trees and so forth are towards the waters to the
- (15) ocean It s bedrock exposed bedrock
- (16) Along it is a variety of debris some of which broken
- (17) pieces have caved out of the side of it that sort of thing
- (18) Adjacent to the bedrock in the upper portions are berms which
- (19) are developed by wave action Every high tide cycle you may
- (20) form a small ridge where the wave action pushes small pebbles
- (21) and debris like this near the surface Each one of these berms
- (22) may have associated floating debris with them
- (23) So we have an on wind - onshore wind Floating debris
- (24) will line up and form nice fairly uniform regular lines
- (25) across these berms During very high tides we can develop a

Vol 14 2293

- (1) higher berm This berm will be preserved for time because
- (2) there are no subsequent tides that reach high enough to
- (3) obstruct it and rework it so it s a marker on a shoreline
- (4) In the case of a storm we could have even higher formation
- (5) again onshore winds even higher formation accumulation of
- (6) larger debris Just because you see large debris there
- (7) doesn t necessarily mean it s been a violent storm action Big
- (8) logs float just as well as little ones do Onshore breeze can
- (9) produce a very substantial raft depending on what s in the
- (10) water to begin with
- (11) Adjacent to the bedrock we have a clastic beach
- (12) sedimentary rock fabric beach This particular one again as
- (13) we talked about earlier very briefly the formation of armors
- (14) It has a large number of cobbles and boulders on the surface
- (15) small bedrock protection here with mixed sand and gravel
- (16) scattered boulders deeper beneath
- (17) So as this oil slick moves forward into the shoreline it s
- (18) going to encounter a number of different environments The
- (19) bedrock surface small piece projecting here Sedimentary
- (20) environment if it gets high enough can actually move into the
- (21) storm berms
- (22) This illustration shows what happens after the oil has
- (23) moved closer to shoreline Here we see the waves are
- (24) breaking They form a swash zone That s where they wash up
- (25) onto the beach and they carry the oil with it They actually

Vol 14 2294

- (1) start impacting the shoreline about here See where the oil is
- (2) being driven down into the beach to some extent as the tide
- (3) rises as the tide moves in Splash zone occurs above this
- (4) As the tide continues to rise - move to the next one - we
- (5) can see that the oil continues to be moved landward higher in
- (6) the intertidal range The original oil that was deposited out
- (7) here now has the opportunity to float back up into the water
- (8) system and then be recycled and moved forward In cases
- (9) where
- (10) the waves intersect the beach at an angle you actually have
- (11) lateral movement down the shoreline a longshore drift it s
- (12) referred to So again as the tide rises and the waves work
- (13) inward the oil continues to be moved forward and higher on the
- (14) beach surface
- (15) This illustration shows the upper limit in this case
- (16) which we found between the - these two berms and the storm
- (17) berm
- (18) Now during the falling tide is when we have the greatest
- (19) opportunity for the oil to percolate into the sediments As
- (20) this tide moves the sedimentary body that makes up the beach
- (21) and that which has filled some of the cracks from other
- (22) reservoir areas inside the bedrock have drained the waves
- (23) continue to move forward with the swash action bringing the oil
- (24) onto the surface and allowing it to percolate into the
- (25) sediments As the tide lowers the waves drain away from the

Vol 14 2295

- (1) This little body right here looks like a little sand dune
- (2) Can you see this in the back? It s exactly what it is It s a
- (3) water based sand dune We call them swash bars and it would
- (4) be made up of fine grain material that is moved easily by this
- (5) size of wave But that wave is inadequate to move the large
- (6) rocks so that the small finer grain material moves across that
- (7) surface just like a sand dune does
- (8) Q The sand is moving on top of the rock?
- (9) A The finer grain sand body the little swash bar is mobile
- (10) and moves across this coarser grain cobble boulder surface
- (11) The effect of that is if you re out looking at the shoreline
- (12) and you come back a few days later after the oil spill hit the
- (13) bar is reworked and a bit cleaner At that point you may not
- (14) realize there s substantial oil beneath this little sandbar
- (15) You can walk over it not recognize the thing unless you re
- (16) doing a shoreline survey
- (17) Similarly if subsequent tidal action brings in additional
- (18) sediment from deeper or laterally longshore drift new cleaner
- (19) sediment often gets deposited over the oil that s percolated
- (20) into these sediments and buries the oil even more
- (21) Q All right We done with that one?
- (22) A Yeah I think so
- (23) Q Now is what you described a way that - does this
- (24) mechanism result in the oil some of the oil persisting on the
- (25) beaches?

Vol 14 2296

- (1) A Yes it does The stability of the beach surface as I
- (2) said earlier one of the major ways in which oil is removed
- (3) from shoreline is through physical action The stability of
- (4) the beach surface plays a big role in how well the oil is
- (5) preserved in it If we have a coarser more developed armor
- (6) that helps stabilize or stabilize and strengthen the surface
- (7) It enhances the preservation of the oil that's percolated into
- (8) it
- (9) Q Let's take a look at Exhibit No 1149 - can you get me
- (10) 1149? It will be just a minute because like in the grocery
- (11) store - may I have the light pen please?
- (12) Could you tell us what in general this exhibit is going
- (13) to describe and then we'll go through it point by point?
- (14) A Yes In general this exhibit will explain the mechanism
- (15) by which these armors that we've been talking about are
- (16) formed
- (17) Q Let's start shall we start with the first panel?
- (18) A Certainly If you want to bring the exhibit we have that's
- (19) on display you want to bring that one up and put it on the
- (20) easel as well?
- (21) Q Okay yes We'll have it -
- (22) A I don't know how clear this is
- (23) Q We're going to blow it up
- (24) A It's helpful to look at this both - both these
- (25) individually and then collectively too later I think we'll go

Vol 14 2298

- (1) you shift down a little bit It's exactly what happens to
- (2) these rocks but they're attempting to build a surface as time
- (3) proceeds
- (4) Let's go to the next
- (5) So here's the final product We've had a substantial
- (6) amount of material removed from the shoreline
- (7) MR SANDERS It's thinner than it was before and we
- (8) have a very high ratio of large clast to small clast right
- (9) along the surface So this is sort of an endproduct
- (10) Let's go on to the next one
- (11) Now we're back to our original shaped beach and this is
- (12) what we see in Prince William Sound today in many shorelines
- (13) We have a nice armor developed mixed sand and gravel
- (14) environment some cases just pure sand beneath them Fairly
- (15) stable surface that can resist normal wave energy and even
- (16) typical storm energies Clearly extremely violent storms
- (17) properly oriented with adequate energy can impact these
- (18) armors
- (19) and disrupt them and that happens
- (20) Some of the islands we have - Smith Island for example -
- (21) have a tremendous exposure for water up there It's isolated
- (22) has a thin armor on it thin depth to bedrock and a very high
- (23) energy storm can disrupt that sediment very uniformly and has
- (24) been documented to do so But in many cases along the
- (25) islands
- (26) and more protected areas or areas that are still exposed but
- (27) don't have the extent of fetch or the length of water the

Vol 14 2297

- (1) back and forth between the easel and the illustrations here
- (2) It's - geologically speaking it's kind of difficult to
- (3) get a starting point for a number of things that we see in
- (4) nature so what we're looking at now is a hypothetical starting
- (5) point for a shoreline we'll say in an imaginary way
- (6) This has just appeared We have a shoreline that consists
- (7) of mixed sand and gravel with larger boulders and smaller
- (8) cobbles fairly evenly distributed throughout the material
- (9) And then we have a wave shoreline environment which allows
- (10) this
- (11) material to be worked and reworked That's - go ahead and go
- (12) to the next
- (13) In time the wave action is adequate to remove some of the
- (14) finer grained sand and smaller particles between the cobbles
- (15) and boulders as well as some of the pebbles and we see that
- (16) we have a net volume reduction
- (17) This dashed line at the top is the old surface so after
- (18) the smaller material has been removed we have a change in
- (19) volume We lose some volume The smaller material is washed
- (20) down the beach someplace and we wind up with more cobbles
- (21) and
- (22) boulders on the surface Bear in mind that the wave energy is
- (23) not enough to move the boulders and cobbles but will remove
- (24) the finer grained material so the boulders and cobbles
- (25) essentially stay in place
- (26) Now they move a little bit Obviously if you're standing
- (27) on a shoreline and the water washes the sand beneath your
- (28) feet

Vol 14 2299

- (1) shorelines are more stable
- (2) Q Now let me stop you there When you talk about fetch was
- (3) that the phenomena where we looked at the map and saw
- (4) Montague
- (5) and Hinchinbrook islands with the whole ocean exposed to the
- (6) coastline?
- (7) A Yes
- (8) Q What kind of fetch would that place have?
- (9) A Well it has a tremendous fetch almost the entire Pacific
- (10) ocean I mean there's a limited amount of fetch I don't
- (11) want to overemphasize at this point but clearly there's a
- (12) difference between the islands that face the brunt of the North
- (13) Pacific as opposed to the embayed areas and the areas
- (14) between
- (15) the islands in western Prince William Sound
- (16) Q That point has been made with the jury but I was just
- (17) saying the word fetch as you used it relates to that
- (18) phenomena?
- (19) A Relates to the length of water that's available to generate
- (20) waves that impact the shoreline
- (21) Q All right And we talked about storms When you have a
- (22) well armored beach a well armored beach common well
- (23) armored
- (24) beach is common in the area we're talking about?
- (25) A Within large beaches that have large clast yes
- (26) Q If you have a beach like that what kind of storm does it
- (27) take to alter a well armored beach?
- (28) A Again it depends on the beach If the fetch is small a

Vol 14 2300

- (1) tremendous storm can't do it. I think there's a few points  
 (2) here we need to make in order to answer your question. This  
 (3) process goes on with fairly low energy wave conditions. It's  
 (4) easy for the waves to remove the finer grain material. They  
 (5) don't move the large grain material, so in early NOAA mapping  
 (6) for example, people were not aware of this process, were not  
 (7) incorporating it into their interpretations, and mapped some of  
 (8) these large cobble shorelines, small boulder, large cobble  
 (9) shorelines as high energy based on the texture or used that  
 (10) texture to determine the shorelines when in fact it had been  
 (11) produced by low energy processes.  
 (12) So in that kind of environment, this cobble armor is  
 (13) stable. It's very stable because it's a small fetch, low  
 (14) energy environment. You have what appears to be a high  
 (15) energy beach, very, very strong, structurally strengthened by this  
 (16) armor. We can form a similar armor - for example, parts of  
 (17) the Kenai Fiords that face the Pacific Ocean and those rocks  
 (18) are regularly reworked, reordered and sorted as though they  
 (19) were sand, so those environments are much more -  
 (20) Is this a perfect process? No. Does it go on everywhere?  
 (21) Yes.  
 (22) There are varying variations and varieties as to how much  
 (23) structural strength you get. It's a function of wave energy  
 (24) fetch, this sort of thing, wind, storm, wind velocity and grain  
 (25) size. It's not a general rule. It's the ratio between the

Vol 14 2301

- (1) wave strength or power and the grain size  
 (2) In this illustration, the last one on the - on the chart  
 (3) that you see, the point we're making - does mine work?  
 (4) In this area - we could probably get rid of that. Anyway  
 (5) at the end of that where you see the large wave on that  
 (6) illustration, that's - that's to give you some indication of a  
 (7) ratio of energy, it's not to indicate to you the size of the  
 (8) wave. It's the amount of energy that we have in the wave  
 (9) that's required to disrupt this beach. I don't want to be  
 (10) misleading and think that the waves have to be twice as tall  
 (11) to do that. They don't. It's the amount of energy that's  
 (12) incorporated into the wave.  
 (13) Q All right. Let's discuss the path of the oil - and could  
 (14) you bring up 1144, please - and discuss as the oil progressed  
 (15) how these principles would be applied in the Exxon Valdez oil  
 (16) spill. What is 1144?  
 (17) A 1144 is an illustration that - that displays the path of  
 (18) the oil slick from the spill point up here to the extent of -  
 (19) maximum extent of the samples that were collected that had  
 (20) been correlated to the Exxon Valdez spill. I  
 (21) want to make a comment about this illustration. This is  
 (22) not to depict the total size of the oil slick. Don't make that  
 (23) mistake in viewing this thing. The slick was not this large.  
 (24) This is 500, 600 miles, essentially, away from the spill  
 (25) point. What this is depicting in color here is the path of the

Vol 14 2302

- (1) oil slick for the most part. Nor does it depict that  
 (2) completely it's to give you a general idea the areas that were  
 (3) impacted by the spill as it moved from essentially the Bligh  
 (4) Island area down to Chignik and the Perryville area.  
 (5) Q And those that we see with the dates on them are what?  
 (6) A These represent the progress of the slick with time  
 (7) starting from after the winds blew it a bit from approximately  
 (8) March 27th, is the first start, individually varies, distances  
 (9) and points in time through the May 18th date, and final extent  
 (10) we have no date at which point it impacted that area.  
 (11) Q And therefore, what we're illustrating here is that there  
 (12) are very many different kinds of beaches that would have been  
 (13) touched by oil?  
 (14) A Not only are there very many kinds of beaches, but we have  
 (15) a change in the oil slick as it proceeds from Bligh Island area  
 (16) to approximately 600 line miles away. On the way, materials  
 (17) evaporated, dissolved, changed from liquid to mousse, all of  
 (18) these transitions we talked about before happened en route.  
 (19) That's where you have a different effect of the oil spill as  
 (20) you proceed to the southwest.  
 (21) Q Exhibit 1145, please.  
 (22) We have some exhibits coming up to describe to the jury  
 (23) some comparison so we understand the length and scope of the -  
 (24) or the length of the path of the oil as it might put some  
 (25) perspective with respect to other parts of the United States.

Vol 14 2303

- (1) Could you describe what we've got here?  
 (2) A Yes. In Exhibit Number 1145, the path of the slick that  
 (3) you saw on the earlier exhibit has been removed and then  
 (4) placed  
 (5) near the side of the eastern United States. We can see clearly  
 (6) it exceeds the distance from Boston, for example, to  
 (7) Washington, D.C.  
 (8) Q 1146.  
 (9) A We've done the same thing in this illustration. We've  
 (10) oriented the past path of the slick along the western coast of  
 (11) the United States, and you can see it extends - the length of  
 (12) the slick extends all the way from Washington to California.  
 (13) That is to say the path of the slick, not the length of the  
 (14) slick.  
 (15) Q All right. Now, when you were out in the field in 1994,  
 (16) did you - this last time, did you return to the sample sites  
 (17) and the transect sites that you had visited before?  
 (18) A Not entirely. Returned to a few of them. We didn't return  
 (19) to every one of them.  
 (20) Q Were you able to find oil in 1994 at the sites that you  
 (21) visited?  
 (22) A Yes.  
 (23) Q And you also returned to the sites in 1992?  
 (24) A That's correct.  
 (25) Q How many sites were there where you did the extensive  
 evaluations in Prince William Sound, Kenai Fiords, Kodiak area?

Vol 14 2304

- (1) A To sort of recap our field activity to clarify the sequence  
 (2) of events we were there in 1989 and we studied the Prince  
 (3) William Sound area the Cook Inlet area We returned in 1992  
 (4) and studied the same areas collected samples from those  
 same  
 (5) areas and with emphasis on the same transect sites we  
 (6) investigated in 1989  
 (7) In addition to 1992 we conducted the special investigation  
 (8) on that little portion of the north end of LaTouche Island and  
 (9) we did our area wide sampling program During that program  
 we  
 (10) returned all the way to the - to the Alaska Peninsula the  
 (11) Kodiak area and sampled areas across a broader expanse  
 (12) Did I answer your question I m not sure?  
 (13) Q I think you did  
 (14) Of the sites you had done these evaluations on could you  
 (15) give me how many you did them on and how many you found  
 oil in  
 (16) subsequent years?  
 (17) A In 1989 we established 17 transects I believe 16 we were  
 (18) able to do substantial work on and either 16 or 15 of them  
 (19) were revisited in 1992  
 (20) Q How many of the 16 sites for which you had done these  
 (21) evaluations previously how many were still oiled?  
 (22) A In 1992?  
 (23) Q Right  
 (24) A I believe we found some oil at all sites that were  
 (25) previously oiled in 89 in 1992

Vol 14 2305

- (1) Q And of the ones that you saw in 1994 did you find oil on  
 (2) those as well?  
 (3) A Well 1994 we didn't visit all of the transect sites  
 (4) again We visited approximately - depends how you define a  
 (5) site Some point you may walk along along the shoreline and  
 (6) some point you have to subdivide where you started where you  
 (7) finished but we visited approximately 40 to 45 sites and all  
 (8) of those were oiled We found oil at all of those sites except  
 (9) for four of them  
 (10) Q Now you mentioned the sampling process Could you  
 (11) describe for the jury what you do when you sample?  
 (12) A Well there are a variety of things I guess We could  
 (13) consider two general approaches to sampling One is to collect  
 (14) a sample that's representative of the material that's in the  
 (15) shoreline In other words we like to sample carefully to be  
 (16) sure it's representative quantitatively of the materials in  
 (17) the shoreline  
 (18) Obviously you can't put a boulder in a jar so if you're  
 (19) sampling the material between boulders the matrix that we've  
 (20) talked about before on the shoreline then you need to  
 (21) recognize this and document it in your notes when you try to  
 (22) calculate volume of oil in the sediment or something you must  
 (23) allow for the amount of material that's between boulders That  
 (24) is a representative sampling  
 (25) If you're taking a sample to investigate some other aspect

Vol 14 2306

- (1) for example particular questions about composition you may  
 (2) want to take a biased sample one where you definitely pick  
 (3) some very high concentration material something that's very  
 (4) moussey For example you may want to collect that to study  
 (5) specifically mousse or if you're interested for example  
 (6) water to oil ratios within mousse we'll specifically focus on  
 (7) sampling that material to answer that question The sample is  
 (8) collected to answer a specific question you're investigating at  
 (9) that time  
 (10) We collected samples in 16 ounce large mouth jars which  
 (11) Mr Petumenos is holding there And to the extent possible we  
 (12) filled them two thirds half three quarters full sent to -  
 (13) so that the laboratory would be able to homogenize the sample  
 (14) take a representative aliquot or sample from that jar to be  
 (15) analyzed  
 (16) MR PETUMENOS Judge what I -  
 (17) A I'd like to make one more comment about this the  
 (18) representativeness  
 (19) We've seen some pictures of shorelines and I think you  
 (20) understand now that NOAA has mapped these shorelines ten  
 (21) different types along their length We've seen how variable  
 (22) the shorelines are There's a lot of heterogeneity just in  
 (23) determining the shoreline type and the estimates have been  
 (24) made about the preservation and persistence of oil by shoreline  
 (25) type so you see there's variation there

Vol 14 2307

- (1) When you sample that shoreline you come up with some  
 (2) variation around the area you're sampling Your jar should  
 (3) represent that area as best you can It's not perfect That  
 (4) jar goes to the laboratory The laboratory takes a pinch out  
 (5) of that jar to analyze That pinch needs to be representative  
 (6) of the jar There's some error there as well Again it's not  
 (7) a perfect process  
 (8) MR PETUMENOS Judge we have a stipulation with  
 (9) counsel that we don't see the need to enter these into evidence  
 (10) and maybe have them break or get on somebody or get on your  
 (11) courtroom or something but what we would like to do is have  
 (12) the witness testify to them and show them to the jury  
 (13) THE COURT Sure  
 (14) MR PETUMENOS They can open it up and presumably -  
 (15) and look at it smell it whatever they'd like and then that  
 (16) will be what we do with it  
 (17) MR OPPENHEIMER We do indeed have that stipulation  
 (18) Your Honor I would like though if counsel could just read  
 (19) into the record the exhibit number and the corresponding  
 sample  
 (20) number  
 (21) MR PETUMENOS I had planned to do so  
 (22) BY MR PETUMENOS  
 (23) Q What have you got in front of you there Mr Bush and the  
 (24) lot numbers exhibit numbers things that identify it tell us  
 (25) where it's from and what you know about it

Vol 14 2308

- (1) A These are two samples One was collected in 1989 The  
 (2) second was collected in 1992 Both were collected from Beauty  
 (3) Bay  
 (4) Q And what kind of beaches are we talking about?  
 (5) A It s - Beauty Bay in our transect site was a mixed sand  
 (6) and gravel site  
 (7) MR PETUMENOS Do we have the map of Beauty Bay area  
 (8) that we could get up on the Trial Link? And the exhibit  
 (9) numbers please and the - some of the data for counsel so he  
 (10) can know which ones you re looking at?  
 (11) A To identify the samples lot number sample E 9047010 Was  
 (12) collected on 8 10 89 It s Beauty Bay II 1 - that s Roman  
 (13) numeral two - S 9  
 (14) Q Is that enough?  
 (15) MR OPPENHEIMER That was 89?  
 (16) THE WITNESS That s correct  
 (17) BY MR PETUMENOS  
 (18) Q And the other?  
 (19) A And the second sample is lot number E 9047010 It s  
 (20) collected on 7 1 92 It s sample number is BB S11 also from  
 (21) Beauty Bay  
 (22) MR OPPENHEIMER Could we have the corresponding  
 (23) exhibit number?  
 (24) MR PETUMENOS We have to get that from the exhibit  
 (25) list but I ll stipulate to it

Vol 14 2309

- (1) BY MR PETUMENOS  
 (2) Q Could you tell the jury where Beauty Bay is on the map  
 (3) that s in front of you? You should have the light pen You  
 (4) need a better map than that?  
 (5) A This scale is - I can give an approximate location This  
 (6) scale Beauty Bay is located approximately here I think  
 (7) Q In the Kenai Fiords?  
 (8) A Yes that s correct  
 (9) Q While the jury is looking at the samples you gave some  
 (10) fancy numbers and all of that when you were talking about  
 (11) these - the samples Is there paperwork that goes with these  
 (12) samples that - a process that you go through?  
 (13) A Yes there is  
 (14) Q And what is that called? What process is that called?  
 (15) A When we collect a sample or when we transmit rather a  
 (16) sample from place to place or person to person we have to  
 (17) have  
 (18) a transfer or chain of custody  
 (19) Q Why are you transmitting it from person to person? What s  
 (20) the process you re going through?  
 (21) A For example in 1989 one of the more difficult obstacles  
 (22) to maintain chain of custody we were operating from a vessel  
 (23) In Prince William Sound  
 (24) Q Excuse me Mr Bush you re not answering my question I  
 (25) want to make sure we re on the same wavelength  
 (26) Where were you taking the samples from the field? Where

Vol 14 2310

- (1) were you trying to get the samples to?  
 (2) A The laboratory  
 (3) Q The laboratory And what were you going to do at the  
 (4) laboratory? Why were you sending it to a laboratory?  
 (5) A To have them analyzed  
 (6) Q For what purpose?  
 (7) A Well determine oil content and composition of the oil  
 (8) Q And do you have an opinion as to whether the oil that is  
 (9) contained in these samples is from the Exxon Valdez?  
 (10) A I do  
 (11) Q And what is that opinion?  
 (12) A It is from the Exxon Valdez  
 (13) Q And how do you know that?  
 (14) A We know that based on - I think probably the strongest  
 (15) evidence is based on the time of occurrence and the nature of  
 (16) occurrence These samples came from tar mats or asphalt  
 (17) pavement accumulations in the sediments very high  
 (18) concentration and it s a typical occurrence for spilled oil  
 (19) that impacts a shoreline  
 (20) In addition to that the analytical results indicate that  
 (21) it s definitely a crude oil origin  
 (22) Q Now is there a way that when you examine the way the oil  
 (23) is on the shoreline does the way that it appears - the stain  
 (24) of it spatter of it things like that - provide you with  
 (25) information as to whether it s from the - from an oil spill?

Vol 14 2311

- (1) A Well yes Obviously we have differences because we have  
 (2) material that moves on the beach like a mousse form and liquid  
 (3) oil form as we discussed earlier but clearly we have sediments  
 (4) that have been saturated with pore space between those grains  
 (5) is filled with grain and water oil mixture  
 (6) It s been impacted by a high concentrate of material  
 (7) on the beach as opposed to lining staining or simple  
 (8) discoloration  
 (9) Q Now did you make all of this work with the laboratory and  
 (10) so forth part of your report?  
 (11) A Yes we did  
 (12) Q And you would turn those reports over to me and counsel for  
 (13) Exxon is that right?  
 (14) A That s correct  
 (15) Q Now are you familiar with a term called the joint survey  
 (16) teams the joint beach survey teams?  
 (17) A I am  
 (18) Q And what were the joint beach surveys?  
 (19) A Well the joint surveys were conducted with the  
 (20) participation of the Alaska Department of Environmental  
 (21) Conservation United States Coast Guard Exxon and where  
 (22) appropriate land - private landowners to investigate  
 (23) conditions of the shorelines for determining treatment  
 (24) cleanup  
 (25) Q Now was that the purpose of the joint surveys to determine

Vol 14 2312

- (1) where treatment should take place and what treatment would be appropriate?
- (2) appropriate?
- (3) A The - that's my understanding yes. The teams in fact were named for example SCAT would be Shoreline Cleanup Advisory Team that sort of thing. Their principal focus in the field was to determine what kind of response was needed for those shorelines.
- (4) Q Now if I were to say to you as a proposition that the joint beach survey teams were the most reliable way of determining persistence of oil on the beaches would you agree with that statement or would you disagree?
- (5) A I would disagree.
- (6) Q Why?
- (7) A Well it wasn't the purpose of the field program. They were out there to determine whether or not shorelines should be recommended for additional clean up activity and that's not the same thing as investigating or - for the purposes of its environmental recovery.
- (8) Q Do you have an opinion as to whether oil persisted after 1992?
- (9) A Yes.
- (10) Q What is that opinion?
- (11) A Well it has persisted.
- (12) Q Are you sure?
- (13) A Yes.

Vol 14 2313

- (1) Q And did you attempt to actually estimate how long the oil would persist as we defined the term in Prince William Sound and Kodiak?
- (2) A Yes we did.
- (3) Q And then were your estimates of this persistence turned over to Dr. Mundy who is the land damage appraiser?
- (4) A Yes they were.
- (5) Q In your opinion did your estimates as given to Dr. Mundy overestimate or underestimate the total impact of the oil spill?
- (6) A In my opinion our estimates did not take into account all of the impact from the oil spill and as a result we underestimated the total impact.
- (7) Q Why?
- (8) A Well there are a number of - number of answers to that. Specifically Dr. Mundy had certain criteria to which we were to adhere to make our projections. In addition the predictions were based principally on or were to be focused on the notion of land damages in that area and as a result for example we did not include some estimates of sixty years for recovery of the bird population or a longer time maybe for certain rock fish recoveries. We did not include population age class density and certain aspects like that which we felt based on his criteria would not have a - would not be a significant component to recovery to satisfy his criteria.

Vol 14 2314

- (1) Now there are some exceptions. For example clams in the shorelines obviously a landowner would be concerned about the clam makeup how many adults and large ones there are so some things we did include but by and large we did not include the long term biological effects.
- (2) Q In the information you turned over to Dr. Mundy?
- (3) A That's correct.
- (4) Q Now let's go back to some of the reasons why you believe that the beach surveys are not the most accurate determiner of persistence of oil for purposes of assessing damage. And to do that I'd like to show you again a photograph of a swash bar if I could.
- (5) MR. PETUMENOS See if this thing works. My career as a grocery clerk is about over. I'm sorry counsel I'm showing him Exhibit 1147 12.
- (6) MR. OPPENHEIMER Is this admitted?
- (7) MR. PETUMENOS I don't know if it is or not. This is an ICF photograph?
- (8) A Yes it is. I took this photograph.
- (9) MR. PETUMENOS Doesn't mean it's admitted yet though. Would you prefer that I -
- (10) MR. OPPENHEIMER No we have no objection to your showing this photograph.
- (11) BY MR. PETUMENOS
- (12) Q Showing you Exhibit 1147 which is a photograph that you

Vol 14 2315

- (1) took what does it depict?
- (2) A If you could shift it all the way to the left I think it would be a little more - get the entire edge. Okay that's as far as it goes. Could we refer back to the board exhibit that shows the oil slick moving on the shoreline?
- (3) Q Sure.
- (4) A You can leave the photograph up on the screen. I wanted to have both available at the same time.
- (5) Q Yeah I didn't ask -
- (6) A Okay. Remember the little sand dune that I drew on the shoreline that's a small sand body that's movable by waves at energies that are not enough to move the large coarse surface. When this photograph to give you some idea of the size and how realistic these things are. The individual in the photograph Chris Newbill was one of our team members in 1992.
- (7) His right foot is on a lower older surface which is stabilized by coarse rock. And although it's not easily seen in this illustration there is a very coarse surface and then his left foot the bent knee and the foot is on the top of a swash bar. The steep face faces upshore. The gradual slope back of this in this underwater sand dune extends seaward. Now that swash bar is shaped like a traditional sand dune and is made up though of pebble sized rocks ping pong ball and that sort of thing. So you see we have fairly coarse material being moved by wave action.

Vol 14 2316

- (1) This location we attempted to determine the amount of oil  
 (2) on the beach and obviously raise the notion that this sandbar  
 (3) could conceal oil and that was determined later by an  
 (4) investigation by NOAA that in fact there was oil beneath the  
 (5) sandbar pebble bar  
 (6) Q All right And how far does that swash bar extend across  
 (7) the beach?  
 (8) A I don't recall measuring at the time It's probably about  
 (9) 35 to 40 yards tip to tip and then landward and seaward  
 (10) direction perhaps 15 maybe 20 It's difficult to tell where  
 (11) the thin end of it thin edge the water edge actually  
 (12) terminates  
 (13) Q Showing you next what's been marked as 1147 13 what is  
 (14) 1147 137  
 (15) A This is a photograph of a similar feature in the vicinity  
 (16) of our transect on east Chenega Island There are a large  
 (17) number of things to - to see in this photograph I'll try not  
 (18) to spend too much time on it but obviously we can look at the  
 (19) yellow area in the center  
 (20) Q This is on the Elmo?  
 (21) A Maybe I should come down  
 (22) Q Do you have that - did I take that back from you? Here we  
 (23) go  
 (24) MR PETUMENOS I want the other photograph we had up  
 (25) before Thank you

Vol 14 2317

- (1) A This gray shape is a swash bar of fairly large extent The  
 (2) size of a helicopter would be about like that in this  
 (3) illustration This is a big guy We have a stream that  
 (4) drains and you're looking now at low tide At low tide the  
 (5) stream brings a significant amount of sediment down its course  
 (6) particularly after the storm when it's really ripped and  
 (7) deposits the sediment here at the water interface  
 (8) Now as the tide rises particularly in a day with storm  
 (9) action or waves substantial wind anyway the storms and wave  
 (10) action will mobilize this sediment and bring it back up along  
 (11) the face of this bar It's a gradually sloping feature from  
 (12) this end to here with a very steep face right here so material  
 (13) moves along the bar and is deposited down this face So the  
 (14) whole structure migrates landward and some extent down the  
 (15) shore depending on the extent the waves type and the waves  
 (16) are interacting with the shoreline  
 (17) Behind this bar and the face is about three feet in  
 (18) height We have a large bed of fucus This is a protected or  
 (19) sheltered environment in here based on the rest of the area  
 (20) that we see out here We have a smaller less well developed  
 (21) bar on this side as well this area  
 (22) Our transect was completed across this portion  
 (23) Q I think your angle on the point is so acute that we're not  
 (24) getting a good dot There it is?  
 (25) A Our transect was completed in this vicinity

Vol 14 2318

- (1) Q Can't see it?  
 (2) A Can't see it?  
 (3) Q Come over to this side Mr Bush  
 (4) MR STOLL He can put it not on the Elmo but on the  
 (5) screen and he could use the light pen  
 (6) MR PETUMENOS Oh you have this one on disk? All  
 (7) right let's bring it up on disk Oh yeah  
 (8) A Okay I think this will work  
 (9) BY MR PETUMENOS  
 (10) Q The color is the second one from the left on the bottom  
 (11) You knew this back at the office Jim  
 (12) A There we go That's the approximate location of our  
 (13) transect Then you can see in the same vicinity I just want  
 (14) to get back to the arrow I guess There's a bar right through  
 (15) here This bar that's shown up in red in the little green  
 (16) square is a much smaller feature that shows up on our transect  
 (17) and it's a small scale version of the very large bar that we  
 (18) see down here  
 (19) The red shading indicates - the dark red shading here  
 (20) this vicinity indicates the steep face of the swash bar The  
 (21) pink area of course is the fucus that is sheltered or lives  
 (22) in a separate environment behind that bar Every storm that  
 (23) moves this bar forward buries fucus that was in front of it so  
 (24) the ratio of fine grained material that's in these shorelines  
 (25) is significant The fact of how well it can preserve or

Vol 14 2319

- (1) disrupt these local sensitive niches where fucus and materials  
 (2) like that can survive This shoreline is mapped as continual  
 (3) single type of shoreline in NOAA documents but we see right  
 (4) along the same thing we have sheltered areas areas more  
 (5) exposed So again it's not a perfect process  
 (6) Q How does this then to summarize relate to the  
 (7) persistence of oil? What does it do to keep - what does it  
 (8) tell us about how oil persists in the - on the beaches in the  
 (9) nearshore environment?  
 (10) A The vicinity of our transect the - the oiling was - my  
 (11) recollection is vague I believe it was lightly to moderately  
 (12) oiled in that area but the oil did occur in front of that  
 (13) swash bar which is in the little window along our transect  
 (14) line which is red  
 (15) When we returned in 1992 that bar had migrated forward  
 (16) just enough to bury the oil that we were attempting to sample  
 (17) and we were unable to dig completely through the swash bar  
 (18) face  
 (19) to get down to the same oil horizon that we sampled in '89  
 (20) The key functional word here is to get to the same horizon the  
 (21) same level of sediment that was oiled in 1989 If one would  
 (22) take a series of samples in the lower half of transect you're  
 (23) sampling brand new material new surface not the same  
 (24) surface  
 (25) in 1989 and those results would not represent the persistence  
 of oil if you were able to sample the oil surface if the oil  
 was preserved underneath the swash bar

Vol 14 2320

- (1) Between 1989 three years went by it's possible the area  
 (2) was eroded scoured redeposited the swash bar built again on  
 (3) top of that so that the oil would be gone Problem is you  
 (4) can't tell the difference unless you go out there and dig some  
 (5) really deep pits and major excavation of the shoreline  
 (6) Q Now this swash bar then could - over time could it  
 (7) become removed again and expose the oil again?  
 (8) A Yes  
 (9) Q And then what would happen to the oil that was buried?  
 (10) A It would be exposed to the surface In that case the  
 (11) original 1989 surface is back on the present day surface the  
 (12) day of the investigation and it's exposed to the environment  
 (13) again  
 (14) Q Are we finished with this photograph?  
 (15) A Yes  
 (16) Q Could I have plaintiffs 1147 14 please? The location of  
 (17) this one again where the stream was  
 (18) A East shore of Chenega Island  
 (19) Q All right And what do we show in 1147 14?  
 (20) A This is another example See we have a pebble cobble  
 (21) surface with a finer grain material drape or apron of fine  
 (22) sediment over the top of it the fine sediment extending from  
 (23) the grassy area towards the plane the tip of the plane and  
 (24) back up So this is a fine layer a thin layer that's  
 (25) deposited on top of an otherwise fairly stable surface You

Vol 14 2321

- (1) can see that the cobbly area reoccurs down here in the distance  
 (2) in the view of the photograph  
 (3) Q What is the significance of a fine grain apron like this to  
 (4) the accuracy of beach surveys?  
 (5) A In the case of a rapid survey certainly the case of a  
 (6) helicopter survey or flyover something like that oil that's  
 (7) being mapped on the shoreline might well go missed because  
 (8) there's a thin layer of sediment which might only be two or  
 (9) three inches thick draped over this otherwise pebble cobble  
 (10) beach  
 (11) MR PETUMENOS Judge this would be a good time for a  
 (12) break  
 (13) THE COURT Okay  
 (14) THE CLERK Please rise this court stands in recess  
 (15) (Jury out at 9 50 a m )  
 (16) (Recess from 9 50 a m to 10 57 a m )  
 (17) (Jury in at 10 07 a m )  
 (18) THE CLERK Please rise This court now resumes its  
 (19) session  
 (20) Please be seated  
 (21) BY MR PETUMENOS  
 (22) Q Mr Bush I would like you to if you can go follow  
 (23) through with me the history of a place called Beauty Bay  
 (24) First of all we have Beauty Bay here on Exhibit 1165 and  
 (25) the little red square where you did your transect work on the

Vol 14 2322

- (1) map and if you would show on the map that's on the Barco  
 (2) screen where Beauty Bay is located  
 (3) A Yes Beauty Bay is -  
 (4) Q Put your color on first  
 (5) A Yeah It's this bay right there I've drawn through it  
 (6) but that's the location of the bay  
 (7) Q Judge and Members of the Jury will be able to find that  
 (8) square on this map as well and see where we were talking  
 (9) about  
 (10) And could you put on the screen please 1147 55  
 (11) And how often did you get over to Beauty Bay in the course  
 (12) of your work?  
 (13) A Well we studied Beauty Bay in 1989 and in 1992 I believe  
 (14) I visited again in 1993 I'm not positive of that but each of  
 (15) those years we went out there just one time Sometimes we  
 (16) were there two or three times In each of those years  
 (17) Q Now put your color on if you would and tell us what the  
 (18) jury is first seeing about the beach at Beauty Bay describe it  
 (19) for me  
 (20) A The Beauty Bay beach is a mixed sand and gravel beach  
 (21) and  
 (22) if we look closely - I've drawn - we can see kind of the  
 (23) swash bar  
 (24) MR OPPENHEIMER Your Honor if I could we have no  
 (25) objection to showing in this way without the normal rules  
 involved but could we get - could we have a protocol where

Vol 14 2323

- (1) we've got a date for the photograph?  
 (2) THE COURT Sure  
 (3) A This photograph was taken during our 1992 field season  
 (4) I've drawn the swash bars and the area between Again this is  
 (5) a pebbly to small cobble surface This is a finer grain than  
 (6) with the coarse sand surface on top The area between the red  
 (7) line and green line represents the slip face of the swash bar  
 (8) Q What do you mean by slip face?  
 (9) A Slip face is the direction the bar is migrating It's the  
 (10) direction - for example if we move - change the colors wave  
 (11) action is moving in this direction then we'll have small  
 (12) particles of sand move up the back of the swash bar and slip  
 (13) over the face on the front This portion from here to here is  
 (14) low slope nearly flat This portion here is much steeper  
 (15) Q All right  
 (16) A So we have again a surface of the beach that was oiled  
 (17) This boulder surface was oiled in 1989 Then we have some  
 (18) more  
 (19) recent features these swash bars which migrate across that  
 (20) surface intermittently depending on storm direction wave  
 (21) activity and that sort of thing  
 (22) Q And what's the significance of our - what was the  
 (23) significance to your investigation of what you saw here on the  
 (24) beach?  
 (25) A At this location we visited several times and identified  
 oil around the margins of these swash bars that was repeatedly

Vol 14 2324

- (1) being covered and exposed  
 (2) Q Showing you next what s been marked as 1147 56 which is a  
 (3) westbound photograph of Beauty Bay coming up again here in  
 a  
 (4) minute  
 (5) MR OPPENHEIMER Again could we have the date?  
 (6) MR PETUMENOS As soon as he sees it we ll have him  
 (7) tell us what the date is  
 (8) BY MR PETUMENOS  
 (9) Q Now when was this photograph taken?  
 (10) A 1992 as well This is the same vicinity shown again from  
 (11) a different direction The tape line that we see here  
 (12) represents a line that moves laterally off our transect as we  
 (13) sampled various areas marginal to our transect along its  
 (14) width The transects were up to ten meters wide and at each  
 (15) of these locations sample jars that are here here by each of  
 (16) these markers that we put on the shoreline we found oil all at  
 (17) the edge of the swash bars  
 (18) Q And how did you find it?  
 (19) A My recollection is that we found the material in the second  
 (20) or third visit to the site The site was visited prior to us  
 (21) actually conducting a transect or profile measurements by  
 (22) Dr Bakus and Larry Thebeau and on their visit they found no  
 (23) oil When we returned to do the transect and detailed study  
 (24) we found oil along this location these locations  
 (25) Q Showing you next what s been marked as 1147 57 was this

Vol 14 2325

- (1) taken at the same time?  
 (2) A Yes This is a closeup You may recognize the -- the red  
 (3) crate that was in the other photograph This is a good sample  
 (4) to show you how subtle some of the residual oil can be in the  
 (5) surface This is an example of a tar mat and I ll outline  
 (6) that Actually I m cutting part of it off but this is the  
 (7) obvious portion And the material on to the right as you re  
 (8) viewing it including this material that s in here and all the  
 (9) material you see out here is oil impregnated sediment not  
 (10) unlike what was in some of the jars  
 (11) These are not particularly highly concentrated samples but  
 (12) it s an example of how the sedimentary makeup the same stuff  
 (13) that we see out here and everyplace else gets incorporated in  
 (14) the surface of the oiled sediment rocks like this and these  
 (15) and then the sandy material itself we see here here and  
 (16) elsewhere that disguises or hides or conceals it so the  
 (17) sediment becomes armored in a sense I mean the oil rather  
 (18) becomes armored with sediment such that it looks like the  
 (19) sediment surface It s difficult to see At the same time  
 (20) it s also strengthened by a set of armor  
 (21) Q You say it s strengthened How is it strengthened?  
 (22) A If you look at the surface along the blue line actually  
 (23) there s a little bit of relief It stands up against the rest  
 (24) of the sedimentary area So the places where waves wash this  
 (25) frequently it ll actually wash the loose sediment which

Vol 14 2326

- (1) occurs in this area away and leaves you a small raised edge  
 (2) which an untrained eye might not pick up  
 (3) In this area we can see the edge -- doesn t show up as  
 (4) well it s partially obscured but here -- I ll stay with the  
 (5) same color -- but here it s fairly clear fairly well  
 (6) developed  
 (7) Q Now is the -- are the little grains and so forth are they  
 (8) being held together by oil?  
 (9) A Yes It works as an adhesive or it binds them together  
 (10) It s not Super Glue don t misunderstand me here but it does  
 (11) provide some strength to this and allows this mat or this  
 (12) impregnated sediment to stay in place relative to the other  
 (13) looser sediments that are around  
 (14) Q Now we understand something about how oil gets on  
 beaches  
 (15) and how it stays there I want to talk to you now about what  
 (16) you did to come up with your estimates of persistence  
 (17) beginning with your overall fieldwork  
 (18) We ve looked at the maps of the transects that you did  
 (19) Let s take for example 1164 which is -- shows it pretty  
 (20) well Each square being a transect that you owe created?  
 (21) A Actually -- pardon me some of the squares are sites other  
 (22) than transects as well  
 (23) Q Transects special investigation sites?  
 (24) A And other locations  
 (25) Q All right Describe to the jury what process you went by

Vol 14 2327

- (1) to estimate the persistence?  
 (2) A Well you know we ve done a large number of things I  
 (3) don t know that I can recount every step of the process here  
 (4) but basically we separated the area into three regions The  
 (5) Prince William Sound region region one region two being the  
 (6) Kenai Fiords the lower Kenai Peninsula around up the end of  
 (7) the Kenai Peninsula Homer area approximately Kachemak  
 Bay  
 (8) and region three then consists of the Kodiak area Kodiak  
 (9) Island Archipelago and the Shelikof Straits shorelines as well  
 (10) as lower along the Alaska Peninsula  
 (11) We asked those areas separately and in fact eventually  
 (12) changed our opinion on this combined but initially we looked  
 (13) at them individually assuming the oil would have different  
 (14) characteristics as it impacted those shorelines the  
 (15) persistences and accumulations would be different Obviously  
 (16) Prince William Sound would have more oil less as you move  
 (17) farther away  
 (18) In addition to that we examined some of the aspects of  
 (19) biological recovery Larry Thebeau is an oil spill biologist  
 (20) and worked on our team and he was primarily responsible for  
 (21) those activities  
 (22) As we did this we compared other oil spills and compared  
 (23) the results and recovery times of other oil spills eventually  
 (24) merging all this data and generating a set of curves for  
 (25) recovery of impacted shorelines

Vol 14 2328

- (1) Q All right Let s go next then to exhibit 1284 and describe  
 (2) in detail what we did what you did with respect to the  
 (3) transects Did that go?  
 (4) Now this is a complex looking thing here but I think we  
 (5) can blow it up so that we can break it down into parts Where  
 (6) was this exhibit 1284? What transect does it represent?  
 (7) A This is the Beauty Bay transect which is about halfway  
 (8) down the Kenai Fiords to the end of the Kenai Peninsula  
 (9) Q It s the same one we looked at just a moment ago  
 (10) A That s correct And the same location samples were  
 (11) collected  
 (12) Q All right Let s start if we can with what - in  
 (13) general what kind of a view we re getting of this transect  
 (14) A Well this transect represents two components of the work  
 (15) we did for those persistence estimates we were talking about  
 (16) It focuses largely on the sedimentary makeup and persistence of  
 (17) oil in the sedimentary residues and you re looking at a  
 (18) complex diagram here I think I m going to need - great  
 (19) let s use the three ring binder here to help illustrate this  
 (20) Q Now it s time  
 (21) A Do you have a marker? Could I use a marker for this as  
 (22) well? Thank you  
 (23) In the lower portion of this drawing - and we ll not blow  
 (24) it up now keep it altogether for you at this point - but  
 (25) we re going to go over it in more detail

Vol 14 2329

- (1) The lower portion of this illustration represents the two  
 (2) surfaces that we examined in 1989 and in 1992 And in 1989  
 (3) the surface follows the line that has the sand little round  
 (4) spots sand and gravel drawn along it When we returned in  
 (5) 1992 the surface follows a different line which you can see  
 (6) drapes beneath the old surface and extends beneath it in this  
 (7) direction Note that the tides were different during this  
 (8) time so our extent of coverage was great on this side in 92  
 (9) than it was in 89 and different on this side although closely  
 (10) the same as well  
 (11) So this portion of this drawing is a cross section or as  
 (12) though you were standing in a trench in the beach looking at  
 (13) the trench wall These portions above that represent plan  
 (14) views or an aerial view of the transect line  
 (15) Q Okay looking down on it In other words?  
 (16) A That s correct So the plan view here and here is the view  
 (17) you receive of the profile That s the line down the transect  
 (18) from a helicopter  
 (19) This view - I m going to switch colors - in this vicinity  
 (20) is the cross section view Now you ll notice that we have some  
 (21) dotted lines that run between these views This one in  
 (22) particular denotes the elevation of the mean high tide line at  
 (23) this site What we have is the ability to go from plan view to  
 (24) cross section view and project information back and forth  
 (25) between the two views

Vol 14 2330

- (1) I want to show you how we create a drawing that does that  
 (2) I m going to mark on your three ring binder here Let s assume  
 (3) that this drawing on the face - or the back rather of the  
 (4) three ring binder represents the lower portion of the  
 (5) illustration the cross section part If you re in a  
 (6) helicopter - you re standing in a trench you re in a trench  
 (7) now looking at the face of the trench If you re above this in  
 (8) a helicopter looking at the plan view all you could see is  
 (9) this line  
 (10) So if we take this line and the characteristics of this  
 (11) line and plot them - excuse me offset from the view and then  
 (12) fold the view up so you can see them together you have the  
 (13) illustration that you re looking at on the screen So we ve  
 (14) taken this aerial view of the cross section offset a little  
 (15) bit drawn it on a piece of paper and just folded it up so you  
 (16) can see them altogether  
 (17) Q So In other words this is the - the other two the  
 (18) surface as you would be looking down on it and as a geologist  
 (19) you figured out what it looks like underneath the grounds with  
 (20) the other view?  
 (21) A In the subsurface by drawing by constructing our profile  
 (22) through the transect  
 (23) Q So this is a -  
 (24) A I m not quite finished Any information we find on this  
 (25) part in the cross section view projects up to the surface

Vol 14 2331

- (1) point which we ve offset for the purposes of the drawing So  
 (2) if we saw oil in this vicinity of the transect we could project  
 (3) that up to here This lower line is the 92 plan view and the  
 (4) upper one is what we saw in 1989 and you can compare them  
 (5) all  
 (6) in the same illustration  
 (7) Q Now this was a very detailed examination of the beach am  
 (8) I right?  
 (9) A That is correct it was  
 (10) Q Let s if we can take a look at the legend I ll do that  
 (11) one more time The little circles that you ve drawn down on  
 (12) the plan view are they actually to scale?  
 (13) A Yes the - in the cross section view what we ve drawn in  
 (14) the cross section view  
 (15) Q I m sorry the cross sectional?  
 (16) A Yes they re drawn to scale In other words we estimate  
 (17) the sizes on an average basis across that profile and have  
 (18) transferred that information to this illustration You can see  
 (19) we ve separated into boulders cobbles pebbles and granules  
 (20) for this clastic or sedimentary type beach So the dots you  
 (21) see on that cross section not only represent the right size  
 (22) they also represent the right shape You see angularity along  
 (23) the bottom angularity here illustrated by the shape of the  
 (24) clasts size By this information and if they re massive rock  
 (25) if it s fractured we see that here and here  
 (26) Q So did you do this so that you can have a very thorough

Vol 14 2332

- (1) understanding of how this particular beach worked so that you  
 (2) could understand how oil would stay on it how water would  
 (3) change it how storms would change it so forth?  
 (4) A Yes As I said earlier these beaches don t always  
 (5) cooperate with me either but that was the objective of doing  
 (6) this detailed size analysis yes  
 (7) Q All right Now I wonder if you could take the plan view  
 (8) - I mean the cross section view of this thing and show the  
 (9) jury with a drawing of what your transect person would do what  
 (10) he would physically do to make - to determine what the  
 changes  
 (11) were to the beach over time?  
 (12) A To - to measure the profile and that s the shape of the  
 (13) surface again it s the cross section profile we would use -  
 (14) took a team took two people and basically we would measure  
 (15) the changes in elevation I ll draw a person here And a  
 (16) second person standing - whoops we ll have two legs two  
 (17) arms give him a head he ll hold a stake here a survey stake  
 (18) and this person will sight through what we ll call a transect  
 (19) sighting device and he will sight from one person to the other  
 (20) along the green line to determine the elevation at a subsequent  
 (21) point And by taking stepped measurements across the  
 surface  
 (22) we would record the changes in elevation and thereby record  
 the  
 (23) changes in the profile surface Again this gentleman is  
 (24) standing on the 1989 surface as is this fellow over here  
 (25) In 92 he would have been standing on this surface because

Vol 14 2333

- (1) it had eroded eroded in this area where we had deposition or  
 (2) new material deposited in this section  
 (3) Q Okay split the screen please and have photo 55  
 (4) plaintiffs 553 Okay And what are these Exhibits 553 and  
 (5) 554?  
 (6) A Good -  
 (7) Q Could you tell the jury what we see here?  
 (8) A Yes these are examples of exactly what I ve just described  
 (9) to you Can I get this - yeah I can  
 (10) Q I think you can I m not sure you can  
 (11) A Here s the individual Here s the individual He s making  
 (12) a sight It s not working too well Anyway you can see he s  
 (13) sighting across - there we go - to the gentleman holding the  
 (14) stake I - in fact this is a picture of me I m the one  
 (15) that s doing the sighting in this case  
 (16) This was a different location taken in 1992 and it s a  
 (17) survey of the beach surface I believe it s upper - upper  
 (18) portion of the transect at Point Helen In the upper diagram  
 (19) it s a sampling grid along a transect and within this meter  
 (20) square sampling subgrid subdivided as shown - meter square  
 (21) grid subdivided as shown we made recordation of biological  
 (22) observations and oil  
 (23) Q All right Could we have exhibit 1284 back then please?  
 (24) Now after you determine where the sediment moved and  
 where  
 (25) the oils - where the beach moved over the years did you then

Vol 14 2334

- (1) investigate the initial reports of oil in 1989 to determine if  
 (2) you looked down on the beach in the same place where the oil  
 (3) was found in 1989 whether you could still find it in later  
 (4) years?  
 (5) A Yes we did  
 (6) Q All right As soon as this transect comes back up  
 (7) we ll -  
 (8) MR PETUMENOS Are you getting 1284 for me?  
 (9) MR OPPENHEIMER Counsel 1284?  
 (10) MR PETUMENOS Right  
 (11) BY MR PETUMENOS  
 (12) Q We re going to take your transect now and bring it back up  
 (13) and I m going to ask you to show the jury -  
 (14) A As a point of clarification here the photograph 554 was in  
 (15) a 1989 photograph It s a different location Beauty Bay  
 (16) Q Those photographs are just to show the jury how the process  
 (17) works with the stake and the instruments and so forth?  
 (18) A That s correct  
 (19) Q Now using the 1989 plan view which is looking at the  
 (20) surface of the map you knew where oil was observed in 1989  
 and  
 (21) you mapped it on - you mapped it carefully am I right?  
 (22) A That s correct  
 (23) Q Better than he is on that one  
 (24) Okay so to -  
 (25) MR PETUMENOS You won t believe this Your Honor

Vol 14 2335

- (1) I ve dropped the light pen  
 (2) BY MR PETUMENOS  
 (3) Q Could you take the enlargement the blowup please with  
 (4) your pen from here say to here for the jury?  
 (5) A Show me again  
 (6) Q I want to go from the 1989 plan view through the bottom of  
 (7) the chart if we could  
 (8) A Sure  
 (9) Q Just lift it up  
 (10) A Okay  
 (11) Q Now was there a spot in the 1989 surface that you knew  
 (12) there was oil?  
 (13) A Yes there was If we look at the - and remember again  
 (14) these - the two upper portions here are just folded views of  
 (15) the top of the profile If you look at the line that refers to  
 (16) 1992 - that s this one- and we also look at 1989 - this one  
 (17) - we can see that there is a band across here a bar drawn  
 (18) across the top across the profile line that indicates surface  
 (19) oil scattered tar mat with certain numbers that relate to  
 (20) composition and concentration  
 (21) So we had an area across the transect that extended from  
 (22) here in a cross section view projecting down from the plan  
 (23) views to here that had scattered occurrences of this tar mat or  
 (24) asphalt pavement We specifically had some that were located  
 (25) along this point of the transect

Vol 14 2336

- (1) Now this small bump you see here - and in 1989 I believe
- (2) it was slightly lower down the beach in this vicinity - is
- (3) the location on the profile where we saw the swash bars that I
- (4) drew and outlined with you earlier with the crates along the
- (5) margins of them So this little bump very small in our
- (6) transect represents the thin covering of fine grain sediment
- (7) that occurred along this pebbly surface which I m going to
- (8) draw in green here
- (9) Now notice from 1989 to 92 how close the two lines fall
- (10) across that green area the pebble surface That represents -
- (11) we see it over here as well - that represents a more stable
- (12) surface on the beach with the fine grain material migrating
- (13) across the top
- (14) Q Let me stop you there So that I understand there is a
- (15) line underneath here that was 1989 and right above it another
- (16) line that was 1992?
- (17) A That s correct I m not sure where you are on the
- (18) cross section but both 1989 and 1992 surfaces are shown on
- (19) this cross section view
- (20) Q And they re different?
- (21) A And they are different that s correct One of the
- (22) differences represents this little red area right here where
- (23) the swash bar migrated across the pebble cobble surface and
- (24) that s approximately where we found the oil being concealed
- (25) and
- (25) revealed upon - with different visits

Vol 14 2337

- (1) Q Up on the 1989 plan view then could you show the jury
- (2) where the oil was in 89?
- (3) A Yes it s at the same location essentially
- (4) Q Go to - that s 92 go to 89 first
- (5) A Yes We have samples collected in both years because that
- (6) was part of the study but this entire band across here in 89
- (7) as well as in 92 contained scattered tar mat They were
- (8) substantially less in 92 with the area of coverage and the
- (9) approximate locations were the same
- (10) Q Now would a person walking across the beach in 1992 - say
- (11) right in this area where I m pointing now - would a person
- (12) walking across the beach right there would he be able to see
- (13) oil with his eyes?
- (14) A Unless he were trained probably not
- (15) Q Now you have broken down for us a transect in very careful
- (16) detail Based upon your experience in Prince William Sound
- (17) and
- (17) your experience as a geologist was this an atypical scenario
- (18) for that area or would this be happening all over the area?
- (19) A It is not a -
- (20) MR OPPENHEIMER Excuse me Your Honor foundational
- (21) objection to that question
- (22) MR PETUMENOS I m asking for the opinion on one of
- (23) the ultimate questions I think I m entitled
- (24) THE COURT Counsel is asking for the foundation of
- (25) the opinion

Vol 14 2338

- (1) BY MR PETUMENOS
- (2) Q Based upon all that you studied all the transects you
- (3) conducted all that you read your study of other oil spills
- (4) and your familiarity with Prince William Sound lower Kenai and
- (5) Kodiak areas is the sort of phenomenon that you are describing
- (6) with this transect is this an example of what is going on in
- (7) the area or is this a unique circumstance?
- (8) MR OPPENHEIMER Your Honor there - the area that s
- (9) just been described contains by almost everyone s
- (10) approximation 9 000 square miles of shoreline I don t think
- (11) this witness has any testified yet as to what part of that he s
- (12) looked at and this is asking - unless I misunderstand the
- (13) question in which case I would withdraw the objection - for
- (14) an extrapolation from this one transect to I believe that
- (15) entire area which I think there s no foundation for
- (16) THE COURT So you re asking for a foundation to show
- (17) what - the depth and breadth of the investigation he s done?
- (18) MR OPPENHEIMER Yes Your Honor
- (19) MR PETUMENOS I believe we have shown the transects
- (20) where they are the samples We ve mapped them
- (21) THE COURT The objection s overruled
- (22) BY MR PETUMENOS
- (23) Q Do you remember the question?
- (24) A I believe so I think I can answer it
- (25) This is a type of a type of beach a type of shoreline

Vol 14 2339

- (1) It s a sand and gravel beach At this kind of event it s very
- (2) common for that type of beach that type of shoreline - and
- (3) those types of shorelines occur throughout the impacted area -
- (4) so yes it s typical of the impacted area for this shoreline
- (5) type
- (6) Q So based upon your transect investigation for all of the
- (7) transects that you conducted what conclusions did you draw
- (8) based upon the transect sites?
- (9) A Based upon the transect studies themselves?
- (10) Q Yes
- (11) A I don t know that we had any conclusions that were confined
- (12) to only the transect studies but the transect studies did
- (13) reveal for us that for certain portions of time and certain
- (14) shoreline types after the oil spill it became more difficult
- (15) to locate oil and the oil was generally more concealed than
- (16) earlier on in 1989 the first year of the oil spill
- (17) Q Let s turn then to the special investigation that you
- (18) conducted that we described also on one of these maps and I
- (19) think we re finished with that simple exhibit there
- (20) The special investigation site in Prince William Sound
- (21) where was that located?
- (22) A On the northeast end of LaTouche Island that s correct
- (23) Q We ve heard of a place called Sleepy Bay Is this near
- (24) Sleepy Bay?
- (25) A It s not in Sleepy Bay It s a mile or so away from Sleepy

Vol 14 2340

- (1) Bay proper It s at the northern extent or tip of Sleepy Bay  
 (2) and around the outside of the island outside of the bay  
 (3) Q When did you conduct the special investigation?  
 (4) A In 1992 fall  
 (5) Q What was the purpose of it?  
 (6) A The purpose of that investigation was to try to get some  
 (7) feel for the effectiveness of treatment processes that had been  
 (8) conducted on the shorelines to what extent oil was removed  
 (9) from the surface and the subsurface  
 (10) Q Why would you want to do that?  
 (11) A Because many of the transect sites we studied were heavily  
 (12) treated They were treated after we studied them and some  
 (13) were treated before we studied them So we have a mixture of data  
 (14) going into our analysis of the oil spill and its persistence  
 (15) As a result we needed to have some more site specific  
 (16) information about treatment its effects how well it worked  
 (17) specifically on clastic beaches  
 (18) Q Now what did you understand were the kinds of treatment  
 (19) that had been conducted on beaches when you went out and  
 (20) conducted the special investigation?  
 (21) A There was a large variety of treatments that had been  
 (22) conducted We were principally interested in comparing similar  
 (23) beaches that had no treatment whatsoever mechanical  
 (24) treatment  
 (25) simple hot water or high pressure wash and manual wiping and  
 (26) swabbing There were other treatments but we focused

Vol 14 2341

- (1) principally on those  
 (2) Q Now when you talk about treatment with heavy equipment  
 (3) what kind of treatment are you describing?  
 (4) A The heavy mechanical disruption of the berms were using  
 (5) small equipment or moderate size equipment backhoes  
 (6) bobcats  
 (7) this type of stuff to rework the location and rework the  
 (8) sediments mechanically and treat them and rework across the  
 (9) beach surface  
 (10) Q How did you go about studying the distribution of oil  
 (11) throughout the beaches?  
 (12) A We compared five sites or five locations on the northern  
 (13) end of LaTouche Island We wanted similar beach types  
 (14) similar environments We wanted similar degrees of oiling similar  
 (15) degrees of exposure and similar makeup of composition of the  
 (16) beach You have to have all of these things be fairly  
 (17) similar to make a valid comparison between sites They  
 (18) weren t perfect They weren t perfectly similar but it was  
 (19) close We did have heavy oiling across the sites Fairly  
 (20) similar orientation fairly similar levels of exposure in oil  
 (21) and makeup  
 (22) Q Showing you next what s been marked as Exhibit 1155 did  
 (23) you prepare an exhibit to help describe what - what you  
 (24) learned from this investigation?  
 (25) A Yes  
 (26) Q And you ve named this simplified schematic illustrating the

Vol 14 2342

- (1) typical distribution of residual oil Let s go through what we  
 (2) have here  
 (3) A Well I think the title is pretty appropriate for this  
 (4) guy He s - it simplifies a lot of factors and makes a lot of  
 (5) generalizations but it conveys I think the general notion I  
 (6) think of what s going on in these situations The portion to  
 (7) the left - actually I ll just blow it up We ll look at the  
 (8) first one  
 (9) It represents a protected or unclean portion of the  
 (10) sedimentary or clastic beach You see that the oil has  
 (11) penetrated to some depth depending on permeability and  
 (12) nature  
 (13) and viscosity of the oil We have coarser grained material  
 (14) across the surface We have a variety of creatures that have  
 (15) been drawn here for basically informative but nothing specific  
 (16) and - and two different occurrences of the oil We have a  
 (17) subsurface occurrence which is shown in the lighter brown and  
 (18) we have surface fragments or highly impregnated or  
 (19) concentration zones that s occur across the surface  
 (20) Q What are these two little guys I m pointing to right here?  
 (21) A For certain types of beaches like this we can have clams  
 (22) that persist Obviously the very high energy ones the clams  
 (23) are not apparent - present rather but it depends on the  
 (24) environment and in these cases most of the biota are killed  
 (25) because of the high concentrations of oil  
 (26) Q All right Now what s the next phase of the exhibit that

Vol 14 2343

- (1) you can show us?  
 (2) A This one represents the condition where the shoreline has  
 (3) experienced moderate - is experiencing either moderate  
 (4) exposure washing or minor mechanical that is a shallow depth  
 (5) mechanical cleaning or a complete across the entire shoreline  
 (6) segment You can see we have some persistence of some of  
 (7) the  
 (8) buried oil because cleaning or wave working did not penetrate  
 (9) deeply enough Much of the pavement high concentrations  
 (10) material on the surface are gone Stuff beneath Immediately  
 (11) beneath the portions of the armor in patchy concentrations of  
 (12) distribution might still be present so it s beginning to take  
 (13) on what we call the patchy nature the discontinuous nature on  
 (14) the surface and subsurface as well  
 (15) Q Do beaches that receive this kind of treatment however  
 (16) sustain oiling in the subsurface?  
 (17) A Yes they do As illustrated in the diagram the -  
 (18) usually the deeper portions of oil not yet reworked either  
 (19) mechanically or naturally are still present  
 (20) Q And what are the drawbacks to this kind of treatment hot  
 (21) water wash and high pressure wash?  
 (22) MR OPPENHEIMER Your Honor I raise my foundation  
 (23) objection  
 (24) THE COURT Sustained  
 (25) BY MR PETUMENOS  
 (26) Q Let s go to the next level What does this section show

Vol 14 2344

- (1) the jury?
- (2) A Well this section illustrates high energy beach or one
- (3) that s been - that s highly exposed high energy and has
- (4) extensive mechanical cleaning Again we see a similar effect
- (5) virtually all of the surface material has been removed We ve
- (6) established new biota in the area because it was destroyed or
- (7) disrupted during the cleanup or because of the energy of the
- (8) environment and patchy but less oil remains in the
- (9) subsurface
- (10) Q When the Cat or bulldozer or whatever it is comes in to
- (11) conduct this kind of treatment what happens to the sediments
- (12) that are in the areas above where you show the brown patches?
- (13) A In the case of an armored beach for example major
- (14) disruption of the surface is - has taken place If we recall
- (15) the process and the way armoring is formed fine grained
- (16) sediments are removed from the surface and the big stuff
- (17) remains and you develop an armor Once you disrupt that
- (18) armor
- (19) it s a scar or tear in the surface In which case the beach
- (20) surface has been disrupted There s no - no shall we say
- (21) typical natural process certainly nothing that happens in
- (22) coastal processes that s ever going to put this fine grained
- (23) material back underneath the armor once you ve discarded
- (24) disrupted it you re going to change the beach profile change
- (25) that system essentially permanently
- (26) Now if the beach has for example a bay head beach or a

Vol 14 2345

- (1) pocket beach or one that s bracketed on the sides by bedrock
- (2) projected bedrock which we saw for example the little island
- (3) we saw earlier with the oil streaming off of it that
- (4) illustration If the surface is disrupted in those
- (5) environments the fine grain material is largely trapped
- (6) between these bedrock projections In time it can move away
- (7) But as long as it s trapped in that area it continues to
- (8) migrate around the surface reburying re exhuming the
- (9) surface That has impact on wildlife and biota that might
- (10) persist there as well as concealment and revealing of oil
- (11) material on the surface
- (12) Q Now the decision of what kind of treatment to conduct
- (13) depends upon the kind of beach that you re dealing with?
- (14) A Yes it does
- (15) MR OPPENHEIMER Your Honor the same objection I
- (16) don t believe there s a foundation for this witness to be a
- (17) clean up expert
- (18) MR PETUMENOS I think that we re talking about
- (19) geology here and whether as a matter of geology on certain
- (20) beaches certain techniques work to remove oil
- (21) THE COURT You ll have to lay a foundation counsel
- (22) BY MR PETUMENOS
- (23) Q If one - as a matter of geology and how oil persists on
- (24) the beaches if one were to want to put an effective method of
- (25) removing the oil from the beach does one have to consider the

Vol 14 2346

- (1) geology of the beach?
- (2) A Yes
- (3) Q And what is that consideration?
- (4) MR OPPENHEIMER Your Honor I think we ve gone
- (5) beyond whatever expertise he would have in that question
- (6) There s still no foundation that he has any experience in -
- (7) beach cleanup
- (8) THE COURT It s true counsel
- (9) MR PETUMENOS I m sorry I didn t hear you
- (10) THE COURT It s true counsel The objection s
- (11) sustained
- (12) MR PETUMENOS May I try to lay a foundation for the
- (13) Court?
- (14) THE COURT Yes
- (15) BY MR PETUMENOS
- (16) Q Did you read and study the methods of - of cleanup that
- (17) were the subject of your special investigation?
- (18) A Yes We investigated in fact actually visited the sites
- (19) with the land manager who operated the sites He was present
- (20) during the time of the clean up operations and he described to
- (21) us the specific activities that took place on the shorelines
- (22) Q And did you study the amounts of energy that were applied
- (23) and the - to each beach technique how it would impact
- (24) different kinds of beaches depending upon their
- (25) classification?

Vol 14 2347

- (1) A You ve asked me -
- (2) THE COURT Don t answer it Excuse me?
- (3) MR OPPENHEIMER Your Honor I was raising the same
- (4) objection
- (5) THE COURT I don t understand the question Counsel
- (6) maybe you can make it clearer I don t know what you re asking
- (7) for
- (8) BY MR PETUMENOS
- (9) Q Did you look at the relationship between the kind of beach
- (10) from a - from a geological standpoint and what would be
- (11) effective in terms of removing oil from the surface and the
- (12) sediment did you look at that?
- (13) A Yes
- (14) Q And is that in part a function of geology to determine
- (15) what physical or physics would be involved to remove oil from
- (16) the beaches from the beach types?
- (17) A Physics you mean the types of physical activities?
- (18) Q Yes
- (19) MR PETUMENOS I would proffer the opinion
- (20) MR OPPENHEIMER Your Honor I think the testimony is
- (21) he s received hearsay information about cleanup on one set of
- (22) special investigation sites on north LaTouche
- (23) THE COURT Do you want to ask him questions? You
- (24) want to voir dire?
- (25) MR OPPENHEIMER If that is possible I d like to

Vol 14 2348

- (1) yes  
 (2) THE COURT Yes you can  
 (3) MR OPPENHEIMER Thank you Your Honor  
 (4) VOIR DIRE EXAMINATION OF JAMES G BUSH  
 (5) BY MR OPPENHEIMER  
 (6) Q Do you know how many beaches have been mechanically cleaned  
 (7) in Prince William Sound?  
 (8) A Not specifically how many I guess you'd have to define  
 (9) beach or give me precisely -  
 (10) Q Well let's - for the moment let's use just the segments  
 (11) which appear in your GIS mapping system  
 (12) A Uh huh  
 (13) Q Of those segments - by the way I should back up You  
 (14) agree a GIS mapping system is a computer data base that's  
 (15) able  
 (16) to give you a map of the coastlines of Prince William Sound and  
 (17) the Kenai is that correct?  
 (18) A That's correct  
 (19) Q And do you have any idea how many of the segments  
 (20) reflected  
 (21) in the GIS system have been subjected to mechanical cleaning?  
 (22) A On a segment by segment basis I don't have that  
 (23) information  
 (24) Q Do you have any idea how many of the beaches have been  
 (25) bioremedially cleaned in any way?  
 (26) A I used to know the lengths of shoreline that were treated  
 (27) and the number 2 000 meters pops into mind for one treatment

Vol 14 2349

- (1) I can't recall specific statistics on how long or how much was  
 (2) treated by different techniques  
 (3) Q Fair enough Have you participated in planning any of the  
 (4) cleaning that actually took place in either Prince William  
 (5) Sound or the Kenai Peninsula area?  
 (6) A Not for the joint area program We did provide some verbal  
 (7) recommendations to village residents and private landowners in  
 (8) terms of what should be done to their properties  
 (9) Q I see And what point in time was that?  
 (10) A Probably about 19 - late 1989 early 1990 would be my  
 (11) estimate Again I don't believe it happened at a particular  
 (12) point in time There were several discussions about how to  
 (13) treat what to treat We made one estimate on beach clean up  
 (14) activity using - using grippers and burning equipment which  
 (15) was a higher wind - to answer your question I believe it was  
 (16) late 90 early 91  
 (17) Q It was prior to your studies on north LaTouche which you  
 (18) thought you needed to conduct to learn about the effectiveness  
 (19) of different cleaning methods?  
 (20) A No We conducted the special investigation in 1992 and the  
 (21) other work we did I'm referring to was done in 89 90 91  
 (22) Q Just so I'm clear that advice was given prior to your work  
 (23) on north LaTouche?  
 (24) A That's correct  
 (25) Q Before you conducted the study of effects of cleanup on

Vol 14 2350

- (1) residual oil?  
 (2) A Before we conducted the study of those sites that's  
 (3) correct  
 (4) Q Do you have any ability - you're not a chemist?  
 (5) A I am not a chemist  
 (6) Q Okay And you are - are you familiar with the different  
 (7) techniques for water washing?  
 (8) A In a general way I'm not precisely familiar with specific  
 (9) details but in a general sense I have the idea  
 (10) Q And did any of the recommendations which you gave to any  
 (11) of  
 (12) your clients prior to the time you did this study pertain to  
 (13) water washing?  
 (14) A I don't believe they did apply to water washing  
 (15) Q Okay And did any of them pertain to bioremediation?  
 (16) A We had some discussions about bioremediation that's  
 (17) correct  
 (18) Q And is Dr Bakus on your team who is the chemist is that  
 (19) correct?  
 (20) A He's an intertidal ecologist  
 (21) Q And your role - I'm sorry as biologist your role was at  
 (22) best peripheral in that regard?  
 (23) A In terms of intertidal ecology?  
 (24) Q Yes sir  
 (25) A Yes  
 (26) MR OPPENHEIMER Your Honor I continue my objection

Vol 14 2351

- (1) THE COURT The objection's sustained counsel  
 (2) MR PETUMENOS At a later time I'd like to make an  
 (3) offer of proof if I could  
 (4) THE COURT Sure sure  
 (5) DIRECT EXAMINATION OF JAMES G BUSH (Resumed)  
 (6) BY MR PETUMENOS  
 (7) Q All right based upon your special investigation at  
 (8) LaTouche what then did you conclude about the treatments  
 (9) that  
 (10) were conducted in the area that you studied?  
 (11) A We concluded based on our observations of the shorelines  
 (12) that oil in the subsurface persisted despite the range of  
 (13) clean up efforts that had been applied to those shorelines  
 (14) Q Let's now turn to the issue of the sample locations that  
 (15) we've shown the jury on the map When you looked at - did  
 (16) you  
 (17) look at shoreline summary reports to look at what was reported  
 (18) of oiling on beaches from the survey teams?  
 (19) A Yes we did  
 (20) Q And did you take a look at those shoreline surveys over  
 (21) time to see what they reported?  
 (22) A Yes we did  
 (23) Q And after you looked at those shoreline surveys - and what  
 (24) I understand is they took some in 1989 some later years?  
 (25) A That's correct  
 (26) Q And after you did that study did you develop some concerns  
 (27) about the results?

Vol 14 2352

- (1) A Yes we did  
 (2) Q And did that lead to some of the sampling programs that you  
 (3) did?  
 (4) A Yes it did  
 (5) Q Explain to the jury  
 (6) A In 1992 our field program consisted of three phases we  
 (7) discussed We revisited the transects we did in 1989 and we  
 (8) also did the special investigation but in addition to that we  
 (9) did what we called an area wide sampling program to help  
 (10) choose  
 (11) sites for that area wide sampling program We reviewed all of  
 (12) the results presented in the Alaska Department of  
 (13) Environmental  
 (14) Conservation s summary of shoreline oiling that was released  
 (15) in I think late 1991 Perhaps it was early 92  
 (16) These documents provide a segment by segment history of  
 (17) how  
 (18) the shoreline has been mapped by the joint surveys including  
 (19) the ADEC walk a thon or beach walk as it s also called  
 (20) Q When was that conducted?  
 (21) A In 89 1989  
 (22) Q And ADEC is the Alaska Department of Environmental  
 (23) Conservation?  
 (24) A That s correct Based on that examination we were able to  
 (25) identify several hundred shorelines which we considered to be  
 (26) questionable Some for example were mapped as being  
 (27) cleaned  
 (28) during the first survey or two and showed up as being  
 (29) moderately or heavily oiled later which we found to be

Vol 14 2353

- (1) suspect Some were examined as being heavily oiled early in  
 (2) the history maybe visited one more time a few months later and  
 (3) then either never again visited or were found to be clean after  
 (4) that  
 (5) There were a number of inconsistencies Some shorelines  
 (6) seemed to clean up fast relative to others So as a net  
 (7) result we selected and identified these ones that we found to  
 (8) be suspect pared down the number to a workable number  
 (9) which I  
 (10) think we finally arrived at approximately 75 candidate sites  
 (11) which gave us a good geographical spread as well and we  
 (12) investigated those in 1992  
 (13) Q And then when you - what did you do - you got samples  
 (14) from those sites?  
 (15) A The sampling team which was the team that did the  
 (16) area wide sampling program arrived at each site spent  
 (17) somewhere between 35 minutes 30 minutes and 45 minutes  
 (18) something like that and did a rapid assessment of the  
 (19) shoreline photographs grabbed samples and took off to the  
 (20) next site The program was conducted fast It was a rapid  
 (21) reconnaissance type of survey And many of the shorelines  
 (22) were  
 (23) not fully investigated nor were we able to investigate each  
 (24) shoreline during the range of tides from high tide to low  
 (25) tide  
 (26) Q And what were the results of the sampling program what  
 (27) conclusions did you draw?

Vol 14 2354

- (1) A Oiled areas of what we considered to be significant merit  
 (2) were found at approximately 50 or 55 out of 75 sites We  
 (3) concluded that oil was persistent  
 (4) Q Did that confirm or undermine your suspicions that the  
 (5) survey procedure contained information that was not accurate?  
 (6) A Well given that these sites were ones that we picked from  
 (7) the survey results that seemed to have some variance or some  
 (8) oddity to them we concluded that oil was persisting it would  
 (9) be indicated by the shoreline surveys alone  
 (10) Q Now again the shoreline surveys were not designed in the  
 (11) first place were they to determine persistence of oil?  
 (12) A That s correct  
 (13) Q I d like to show you now what s been marked as  
 (14) Exhibit 1156 If you d come down from the witness stand  
 (15) MR PETUMENOS And Judge if it s okay I m going to  
 (16) get fairly close to the jury because this will be hard to see  
 (17) THE COURT Yes that s all right  
 (18) BY MR PETUMENOS  
 (19) Q This map is entitled for the jury s benefit Oil Impact  
 (20) and Shoreline History Map and it s got boxes blown up out of  
 (21) various locations What do these boxes show the jury?  
 (22) A Well take one that s easy to reach here This is the one  
 (23) that s conducted at the northeast end of LaTouche Island  
 (24) Sleepy Bay is just around the bend here This particular  
 (25) window is an enlargement of the red square that we see over

Vol 14 2355

- (1) here at the end of the island It s an enlargement of the  
 (2) portion of it not the entire thing It enlarges from the edge  
 (3) of Sleepy Bay to the east  
 (4) So at this point we re curving down into Sleepy Bay This  
 (5) is the very head the easternmost head of Sleepy Bay The  
 (6) colors that you see are keyed over here We have two legends  
 (7) for this map The general legend and then the inset legend  
 (8) the window areas being the insets  
 (9) Purple represents heavy oiling magenta is medium this  
 (10) dark orange is light yellow is very light and this greenish  
 (11) turquoise I guess is no oiling claimed  
 (12) Now then a single narrow black line represents shoreline  
 (13) that was unsurveyed So within the window you can see the  
 (14) different levels or intensities of oils in these maps in the  
 (15) various joint survey programs Now you won t be able to read  
 (16) the labels but these finer print labels along each one of  
 (17) these identifies the particular shoreline survey program that  
 (18) map the shoreline  
 (19) So if we look at this portion of LaTouche Island for  
 (20) example during the first two shoreline programs which  
 (21) includes the ADEC survey that s six months plus from the spill  
 (22) time to the SSAT survey which is 13 months after the spill  
 (23) We can see that it s mapped as very light oil  
 (24) In the autumn survey program which is 19 months after the  
 (25) spill the area was not examined Then during MAYSAP it was

Vol 14 2356

- (1) reexamined 26 months after the spill We find these portions
- (2) of the shoreline to be medium and heavily oiled We
- (3) investigated this area during the - during the area wide
- (4) sampling program in 92 because of this relationship It s
- (5) very unlikely that you went from very light oiling to moderate
- (6) or heavy in 26 months so we figured it was an error in the
- (7) original mapping
- (8) Q So in other words the oiling was getting worse over time
- (9) not better over time according to the map?
- (10) MR OPPENHEIMER Your Honor that misstates the
- (11) testimony
- (12) THE COURT According to the map he said
- (13) MR PETUMENOS According to the map
- (14) A Mapping yeah if you took the mapping on its own merit it
- (15) would suggest that at some time between 13 months after the
- (16) spill and 26 months after the spill the shoreline was jumped
- (17) from light to heavy oiling
- (18) BY MR PETUMENOS
- (19) Q That didn t make any sense to you?
- (20) A That s correct
- (21) Q So is that an example of what you re talking about?
- (22) A Yes it s one example If you look at these you ll see
- (23) several examples of the variation things that go from being -
- (24) for example in this area this is - this is fairly good one
- (25) I don t see much change but in this area we see we go from

Vol 14 2357

- (1) medium to light and then back to medium over here There are
- (2) various examples all through this We conducted this study
- (3) because of the - we reviewed some of the original field
- (4) reports the field data from these programs and saw
- (5) discrepancies in descriptions of the beaches in the original
- (6) field data so we were concerned about the original field data
- (7) transposition from field notes to map notes transposition of
- (8) GIS data base and the GIS product The data we were
- (9) reviewing
- (10) was a GIS product and we re concerned about correctness of
- (11) transition from field observations to map
- (12) Q Thanks And just real quickly there s some testimony in
- (13) the record for purposes of admitting the maps Exhibit Number
- (14) 1157 is a shoreline oil impact and shoreline history map for
- (15) the lower Kenai and the Kenai Fiords?
- (16) A That s correct
- (17) Q And you prepared this map?
- (18) A Yes
- (19) Q And it is read the same way as the one we just showed the
- (20) jury only in a more detailed way?
- (21) A Yes
- (22) Q And we have another map - I m putting too many on the
- (23) easel here but I ll leave it up for a second - 1159 is the
- (24) same map showing oil impact and shoreline history for the
- (25) Kodiak area -
- (26) A That s correct

Vol 14 2358

- (1) Q - and the Shelikof Straits area?
- (2) A That s correct
- (3) Q And you prepared that map?
- (4) A Yes that s correct
- (5) Q Let s see Exhibit 1159 I have something to show - why
- (6) don t you come on down again for 1159 I m looking for it
- (7) Here we go Because I forgot to ask you something
- (8) We talked about the phenomenon of swash bars and data
- (9) difficulties and so forth resulting in oiling that according
- (10) to the data appeared to get worse rather than better which
- (11) you found questionable But did you also observe a
- (12) phenomena
- (13) where people stopped looking at beaches?
- (14) A Yes
- (15) Q Show the jury
- (16) A Well this is an example right here This is taken at the
- (17) Foul Bay location We have the orange line which is light
- (18) oiling and light oiling here here and it was not investigated
- (19) afterwards Similarly this went from medium to very light and
- (20) it was never investigated again So the black line being that
- (21) not examined - subsequently not examined Similarly here was
- (22) not examined initially and then it s light very light very
- (23) light but not examined not examined not examined
- (24) Q So did you go to sample locations at those places where you
- (25) saw that they stopped looking relatively soon on in the
- (26) process?

Vol 14 2359

- (1) A Yes we did
- (2) Q And what did you find?
- (3) A Well in particular for Puale Bay we found a number of
- (4) things First off based on the photographic evidence and
- (5) stuff we received from some of the clean up teams there didn t
- (6) appear that it was lightly oiled to begin with and we found
- (7) residues there in 92
- (8) MR PETUMENOS Judge how long have I been in
- (9) session?
- (10) THE COURT It s been about an hour You can take a
- (11) break anytime you choose
- (12) MR PETUMENOS That would be great Thank you
- (13) Judge
- (14) THE CLERK Please rise This court stands in
- (15) recess
- (16) (Jury out at 11 07 a m )
- (17) (From 11 07 a m to 11 25 a m )
- (18) (Jury In at 11 25 a m )
- (19) THE CLERK Please rise This court now resumes its
- (20) session
- (21) Please be seated
- (22) BY MR PETUMENOS
- (23) Q Mr Bush we were talking about the mapping of Puale Bay
- (24) and I d like to show you 1147 1 And as I recall what you told
- (25) the jury according to the mapping data that you came up with

Vol 14 2360

- (1) Puale Bay was originally designated as a lightly oiled beach?  
 (2) A We can refer to the map and see for sure on that I can't  
 (3) see it from here but I believe that's correct  
 (4) Q All right And for Members of the Jury Puale Bay was this  
 (5) guy right here  
 (6) A If you look at the inset you'll see parts of it were not  
 (7) mapped and then other parts of it I believe were never -  
 (8) never remapped  
 (9) Q What is the jury looking at in 1147 1?  
 (10) A This is a view downbeach in Puale Bay The glistening area  
 (11) you see in the foreground - can I -  
 (12) Q Yes you can This is on the system  
 (13) A It's on the system okay That I'll outline here in  
 (14) reddish this glistening area here is continuous continuous  
 (15) oil mat  
 (16) Q That was - that is what was meant by lightly oiling in  
 (17) this particular beach in 1989  
 (18) A Is that a question?  
 (19) Q Yes  
 (20) A I just think it was mismapped  
 (21) MR PETUMENOS Could I have 1147 2? Is there some  
 (22) incantation to the machine I can use to make it come up? I  
 (23) will admit defeat on 1147 2 Let's try 1147 4 Could I have  
 (24) the Elmo?  
 (25) BY MR PETUMENOS

Vol 14 2361

- (1) Q 1147 4 and the last photograph we saw was 1989 am I  
 (2) right?  
 (3) A That's correct  
 (4) Q And this one as well?  
 (5) A This is also 1989 I believe portions of the upper  
 (6) photograph are not being shown here  
 (7) Q Yeah that's right I'll widen it out  
 (8) MR OPPENHEIMER Excuse me Your Honor I'm confused  
 (9) about the exhibit number It was originally identified as  
 (10) 47 2 Is it 47 2  
 (11) MR PETUMENOS It's 47 4 I gave up on 47 2  
 (12) BY MR PETUMENOS  
 (13) Q This is 47 4 And now you can't write on it What do we  
 (14) see?  
 (15) A Well in this exhibit the dark portions are oil There's  
 (16) a log of course in the upper left It's an example of fine  
 (17) grain sand beach See how quickly - this is probably taken I  
 (18) believe estimates are weeks after the oil impacted the  
 (19) shoreline and you can see how quickly the yellowish colored  
 (20) sand is beginning to bury and obscure the oil This is -  
 (21) portions of this beach were heavily oiled and you can see very  
 (22) quickly it's being obscured by the sand cover  
 (23) MR PETUMENOS This is counsel 1147 2  
 (24) BY MR PETUMENOS  
 (25) Q Also Puale Bay in 1989?

Vol 14 2362

- (1) A That's correct This view is taken in the opposite  
 (2) direction from the first photograph that you saw that shows the  
 (3) extent of the oil on towards the helicopter in the background  
 (4) Again if we look - and I can't draw on this but you can  
 (5) see the streaks or ridges of sand that come extend from the  
 (6) upland area on the right down the beach to the left and  
 (7) they're beginning to bury oil in the oiled horizon  
 (8) Q That's good enough That's fine That's all we need  
 (9) I'd like to show you next some photographs of Puale Bay  
 (10) from 1992  
 (11) MR PETUMENOS 1147 counsel dash 11  
 (12) BY MR PETUMENOS  
 (13) Q Tell the jury in Puale Bay what was happening here  
 (14) A This is a - when I visited the site in 1992 the person in  
 (15) the photograph is Jeff Dawson one of our samplers and we're  
 (16) approximately the same location you saw in the previous  
 (17) photographs but it's three years later Those are some of the  
 (18) pitting and sample sites where we've collected tar mat residue  
 (19) oil tar mat  
 (20) Q And when you did your pitting and sampling - and I'm going  
 (21) to show you next 1147 10 - what did you find?  
 (22) A We found these isolated tar balls This is an example of  
 (23) one of them on the surface and although it's difficult to  
 (24) recognize it as an oil impregnated sediment that's because  
 (25) it's coated with sand They were collected and analyzed and

Vol 14 2363

- (1) found to be crude oil  
 (2) Q Does this support the conclusion that just because you  
 (3) don't see the oil on the surface doesn't mean that it isn't  
 (4) there?  
 (5) A That's correct This particular sample actually is from  
 (6) the surface However the - the bearing that we saw on the  
 (7) 1989 photographs supports that notion  
 (8) Q Now let's discuss some other maps that you prepared with  
 (9) respect to the estimation of oiling - we're done with the  
 (10) photo - by various survey teams  
 (11) I believe you'll hear later in the trial from some people  
 (12) that the SCAT2 survey was the most reliable oiling survey Do  
 (13) you know what SCAT2 is?  
 (14) A Yes  
 (15) Q What is it?  
 (16) A The SCAT2 is the recombination reinterpretation  
 (17) compilation reexamination of data collected during the initial  
 (18) SCAT program that was conducted principally by Exxon I  
 (19) believe in 1989  
 (20) Q In 19 when?  
 (21) A 89  
 (22) Q And was the data actually put together at a later point in  
 (23) time than 1989?  
 (24) A Yes It was recompiled and I believe they incorporated  
 (25) data from the other shoreline survey programs as well

Vol 14 2364

- (1) Q Starting with Prince William Sound I d like to show you
- (2) what s been marked as exhibit 1355 Could you come down from
- (3) the stand and tell the jury what 1355 shows?
- (4) A Exhibit 1355 is an illustration of oiling that is - has
- (5) been identified in the field via other shoreline survey
- (6) programs or our investigations that does not show up in the
- (7) SCAT2 data base we received from Exxon as a product of
- (8) discovery
- (9) So the magenta color - we used magenta so you could see it
- (10) - represents shorelines that were unsurveyed or claimed not
- (11) oiled by Exxon and mapped as oiled by other programs or
- (12) through our own investigations
- (13) Q Exhibit 1356?
- (14) A This exhibit is the same format as the previous exhibit
- (15) again showing oiling that s depicted by other programs or data
- (16) that we had that s shown as not being oiled in the SCAT2 data
- (17) base
- (18) Q And that is for what area?
- (19) A This is for the Kenai Fiords the lower Kenai Peninsula and
- (20) around the Kenai Peninsula through the Port Graham English
- (21) Bay
- (22) areas into Kachemak Bay and north of Homer on up to Anchor
- (23) Point
- (24) Q Now we ve been talking from time to time about the Kenai
- (25) Fiords and the lower Kenai What is this area here? Is this

Vol 14 2365

- (1) A Yes part of the Kenai Fiords part of the Kenai Fiords
- (2) National Park
- (3) Q As we get around here this is the lower Kenai?
- (4) A That s correct
- (5) Q Exhibit 1363?
- (6) A Same thing Basically we have - in magenta again -
- (7) shorelines that were oiled that are not depicted in the SCAT2
- (8) data base as having been oiled and sample locations and other
- (9) data is also depicted on the exhibits
- (10) Q Now while we re on this map there is a whole bunch of
- (11) other little black dots and triangles and so forth on there
- (12) Do you know what that is?
- (13) A Yes The triangles apex pointing down on these represent
- (14) approximate locations where oil was cleaned up by crews that
- (15) were managed by Veco
- (16) Q Let me stop you there because I think we have another map
- (17) that even does a better job This map is marked Members of
- (18) the Jury 1354 A and it is entitled Comparison of Oiling Data
- (19) colon Composite Oiling Versus ADF&G and Veco Data
- (20) And what does this map depict to us?
- (21) A Well this map is slightly different This map represents
- (22) the - what we refer to as composite oiling It s a separate
- (23) data base that we generated I actually have to step back a
- (24) step here
- (25) After doing the shoreline history maps which we looked at

Vol 14 2366

- (1) earlier and reviewing a lot of the field survey notes and so
- (2) forth and after having been exposed to this the clean up data
- (3) that was managed by Veco in the Kodiak area and additional
- (4) data
- (5) from the Alaska Department of Fish and Game we believed it
- (6) was
- (7) prudent to combine the various oiling data bases and to present
- (8) a map that showed all of the oil that had been identified by
- (9) all the programs rather than rely on any one data set We
- (10) merged them all So this program is what we call our composite
- (11) oiling and this is a map that s generated from that composite
- (12) oiling data base
- (13) Now that data base searches all of the other oiling data
- (14) bases and pulls out the level of oiling for each what we call
- (15) arc That s each little piece of shoreline segment that has
- (16) uniform characteristics same type same oiling that sort of
- (17) stuff and it compares each little arc along all the data bases
- (18) and collects the one that has the highest level of oiling
- (19) that s been mapped It assembles all of those into a data base
- (20) and plot it up In this case rather than plot that we ve
- (21) compared the composite oiling against Fish & Game data and
- (22) Veco
- (23) data that we received not too long ago
- (24) Q Let s talk about that Let s talk about the ADF&G data
- (25) What information did you receive from the Alaska Department of
- (26) Fish and Game that you found relevant to where the oil was?
- (27) A These were reports that were - that were released from the
- (28) Department of Fish and Game regarding the Lower Cook Inlet

Vol 14 2367

- (1) area as well as the Shelikof Strait Kodiak and Alaska
- (2) Peninsula area As part of zero tolerance policy they
- (3) monitored the shorelines and identified oil
- (4) Q And they would report oil when they saw it?
- (5) A That s correct
- (6) Q So you have marked on the map places where those folks
- (7) found or saw oil that was not reported on SCAT2?
- (8) A That s correct Well we ve marked all of it Some of it
- (9) was reported in various data bases You can see overlap
- (10) between colored lines and various data sets The round dots
- (11) being ADF&G the triangles being the Veco data
- (12) Q On the previous map though we have for Kodiak Exhibit
- (13) 1363 that does that for us doesn t it?
- (14) A Yes
- (15) Q It shows the differences between the SCAT2 mapping and
- (16) ADF&G?
- (17) A And Veco data
- (18) Q Now Veco data what do you mean by Veco data?
- (19) A That s a term that we generated Basically just refers to
- (20) all the data we received as a part of the discovery process
- (21) that relates to clean up crew field notes By and large it s
- (22) most of the clean up crew field notes that were collected or
- (23) that were taken by field crews that were out collecting oil
- (24) from the oiled shorelines primarily on Kodiak
- (25) Q So what we had then was notes indicating that they were

Vol 14 2368

- (1) teams dispatched by Exxon s contractor Veco to actually treat  
 (2) oil on beaches?  
 (3) A That s correct  
 (4) Q On locations?  
 (5) A That s correct They actually collected and bagged the  
 (6) material  
 (7) Q And those beaches which these - where these crews were  
 (8) working were not on the SCAT2 survey maps showing as oiled?  
 (9) A That s correct This - the magenta is what the SCAT2  
 (10) mapping did not show from - compared to other field programs  
 (11) and other mapping programs and the triangular data showed  
 much  
 (12) broader coverage Now some of this does overlap the SCAT2  
 (13) data but it shows a much broader coverage  
 (14) Q Thank you Mr Bush  
 (15) Now let s change the scene if we can a little bit and  
 (16) take Mr Bush from Prince William Sound and Kodiak and lower  
 (17) Kenai to his office  
 (18) What s your task now Mr Bush? With all this data that  
 (19) you have how are you going to estimate the actual persistence  
 (20) of the contaminant in the ecosystem?  
 (21) A We essentially compiled the data that we received and  
 (22) compared this to reports and studies that were done on other  
 (23) oil spills and made projections based on these data about the  
 (24) persistence of oil on various shoreline types throughout the  
 (25) impacted area

Vol 14 2369

- (1) Q And when you say estimates did you receive from Exxon at  
 (2) any point any kind of detailed records on where beach  
 treatment  
 (3) took place?  
 (4) A We did not  
 (5) Q To this day?  
 (6) A To this day  
 (7) Q How does one go about drawing parallels with other spills?  
 (8) A Well it s not easy in a sense to do that Every spill  
 (9) is essentially different There s a lot of variation just  
 (10) like the shoreline types They re not all the same They vary  
 (11) laterally Similarly oil spills vary from spill to spill  
 (12) They spill different materials have different characteristics  
 (13) temperatures are different different climates different  
 (14) shoreline configurations different ratios of shoreline types  
 (15) in spills  
 (16) Some spills are different For example the Metula spill  
 (17) similar climates similar shoreline sites but it wasn t  
 (18) studied very well so even though you might have two spills  
 (19) that would work nicely the people haven t studied them and the  
 (20) data isn t out there so it s difficult to do it  
 (21) But by and large one reviews the literature and one  
 (22) incorporates the opinions of experts that visit those spills  
 (23) and draws what conclusions can be drawn I don t believe it s  
 (24) possible to draw a direct parallel and comparison between  
 these  
 (25) two but one uses this information to understand the processes

Vol 14 2370

- (1) that go on on the shorelines Based on these processes you  
 (2) can gain an understanding of how the oil may persist in select  
 (3) environments  
 (4) Q I ve placed in front of you Exhibit Number 1150 Was this  
 (5) prepared by you?  
 (6) A Yes it was in a sense I mean it - this source material  
 (7) was not prepared by us this specific exhibit was prepared by  
 (8) us  
 (9) Q Explain to the jury  
 (10) A This exhibit is a slight modification of information that s  
 (11) presented in a briefing book Exxon prepared for their  
 (12) manager  
 (13) Q What is it - the data then was taken from the Exxon  
 (14) briefing book?  
 (15) A That s correct  
 (16) Q And what does it depict?  
 (17) A Well it depicts the estimated persistence of impact and  
 (18) I m not sure how that s defined in this context but it  
 (19) indicates that persistence for the various shoreline types  
 (20) which are identified by the sides  
 (21) Q And why don t you blow that up for us?  
 (22) A Sure I will  
 (23) Q What is meant by marine community -  
 (24) A The marine community -  
 (25) MR OPPENHEIMER Your Honor if I may we have no

Vol 14 2371

- (1) problem with what s been said so far by this witness about this  
 (2) exhibit and there may be a witness on the plaintiffs list who  
 (3) can talk further about it but again this is an ecological  
 (4) recovery chart There ll be a lot of testimony about that  
 (5) later but I don t believe this witness is qualified to speak  
 (6) to that issue  
 (7) THE COURT A what?  
 (8) MR OPPENHEIMER If we could back up to the - if you  
 (9) could zoom back out show the Judge You see Your Honor  
 time  
 (10) required for ecological roughly -  
 (11) THE COURT Oh yes uh huh  
 (12) MR PETUMENOS Perhaps I can ask a question  
 (13) THE COURT Well is the issue whether or not this is  
 (14) a persistence calculation or something more than that?  
 (15) MR OPPENHEIMER Your Honor this is a - this is -  
 (16) MR PETUMENOS Perhaps if counsel s going to speak a  
 (17) length we could have this out of the presence of the jury  
 (18) THE COURT I don t think it s necessary  
 (19) MR OPPENHEIMER It s based upon biological data  
 (20) Your Honor It s not geological information  
 (21) THE COURT Let s see what this witness did with this  
 (22) diagram  
 (23) MR PETUMENOS That s just what I wanted to do  
 (24) BY MR PETUMENOS  
 (25) Q Mr Bush how did you use this data from - first of all

Vol 14 2372

- (1) let me understand something When you worked on your  
 (2) persistence estimates was this an endeavor that was done by  
 (3) your entire team at ICF?  
 (4) A Yes  
 (5) Q And for the jury again who was on this team that you were  
 (6) the project manager of?  
 (7) A Well all of the field team personnel that were involved in  
 (8) our field studies played various roles I think the principal  
 (9) players were myself Larry Thebeau -  
 (10) Q What is his discipline?  
 (11) A Larry Thebeau is a biologist  
 (12) Q Please continue who else?  
 (13) A And of course Dr Bakus Dr Vandermuehlin to some  
 (14) extent  
 (15) Q Who are they and what are their disciplines?  
 (16) A Dr Bakus is an intertidal ecologist and Vandermuehlin is a  
 (17) biologist with the oil spill expertise and experience  
 (18) Q And putting together the model for the persistence  
 (19) estimates that the team came up with of which you were a  
 (20) project head did you consult with those scientists on your  
 (21) team?  
 (22) A Yes we did  
 (23) Q And did they peer review and quality control the work among  
 (24) each other?  
 (25) A Each played a separate role There was no single

Vol 14 2373

- (1) Individual that peer reviewed and quality controlled the entire  
 (2) thing each followed in his area of expertise  
 (3) Q And how was this particular data used in your estimates of  
 (4) persistence?  
 (5) A These data weren't used directly in our estimates of  
 (6) persistence - persistence other than for comparisons and a  
 (7) general guide to what was thought by other investigators  
 (8) prepared for Exxon's management  
 (9) Q And was this used as a check or a comparison data piece to  
 (10) determine whether your - how your estimates fit in with these  
 (11) estimates?  
 (12) A As a comparison piece that's its principal function yes  
 (13) MR PETUMENOS Your Honor I'm prepared to proceed  
 (14) MR OPPENHEIMER Your Honor my objection is only to  
 (15) this particular witness I don't know where the next question  
 (16) leads  
 (17) THE COURT Neither do I counsel Let's hear it  
 (18) MR OPPENHEIMER We'll see it  
 (19) BY MR PETUMENOS  
 (20) Q All right I just want you to explain what the chart shows  
 (21) and what at this point you - the material along the Y axis or  
 (22) the vertical axis refers to to your understanding  
 (23) A Well the Y axis differentiates different communities as  
 (24) it's indicated and the X axis or the horizontal axis at the  
 (25) bottom indicates years

Vol 14 2374

- (1) MR OPPENHEIMER Your Honor continue my objection  
 (2) THE COURT Yeah I understand  
 (3) MR OPPENHEIMER He's referring to the ecological  
 (4) ones  
 (5) THE COURT I understand the objection counsel and  
 (6) I'm considering it I just want to hear more so I can  
 (7) determine what place this got this particular diagram played  
 (8) in this witness analysis  
 (9) MR OPPENHEIMER Understood Your Honor fine  
 (10) BY MR PETUMENOS  
 (11) Q According to the Exxon briefing book what does the - or  
 (12) what do the bars represent?  
 (13) A A range of times for recovery  
 (14) Q And did you use these range of times of recovery as a check  
 (15) against the persistence that you ultimately estimated based  
 (16) upon all of your work?  
 (17) A Not in a precise way We used it as a comparative guide  
 (18) that's all Not really a guide but as a comparison  
 (19) THE COURT Do you equate the term recovery with the  
 (20) term persistence?  
 (21) A Not entirely Recovery in a general sense represents the  
 (22) termination of a fate and persistence issue we discussed  
 (23) earlier on Recovery is when things will have returned to  
 (24) pre-spill conditions or to conditions as though the spill would  
 (25) not have happened This is dealing more specifically with

Vol 14 2375

- (1) communities and ecological recovery So our persistence  
 (2) estimates combined a number of things within limited  
 guidelines  
 (3) that are put forth by the land management group the land  
 (4) management investigators  
 (5) So I think I've answered your question but this is one  
 (6) component of the work that we did  
 (7) THE COURT I see Okay The objection's overruled  
 (8) MR PETUMENOS And then let's if we can go to  
 (9) Exhibit 1154 - whoops I guess it's 1153 Is this Elmo?  
 (10) Could I have 1153 please? I'm sorry give me the Elmo  
 (11) please  
 (12) BY MR PETUMENOS  
 (13) Q Showing you what's been marked as 1153 - and we don't  
 have  
 (14) this where you can write okay - but can you tell me what 1153  
 (15) is?  
 (16) A Yes 1153 is a diagram graphical presentation of examples  
 (17) of particular accumulations of oil that persisted or were  
 (18) persistent in other oil spills  
 (19) Q And we have along the bottom axis here what term?  
 (20) A Time years after the initial spill event  
 (21) Q And I note that on some of these circles we have little  
 (22) arrows going off the scale What do they depict?  
 (23) A They represent that either that's the last time of the  
 (24) investigation or a particular study that was - that was  
 (25) reviewed for this - to acquire this particular data indicated

Vol 14 2376

- (1) that the persistence is waning or that in that investigators
- (2) mind it could continue for a particular period of time so
- (3) we re looking at sort of a trailing event
- (4) Q And what is going up the vertical - what s the information
- (5) on the vertical axis?
- (6) A That depicts concentration of the sample
- (7) Q What do you mean by concentration of the sample ?
- (8) A How much oil residue remained in the sediment sample the
- (9) rock sample or both Actually in some cases there are fish
- (10) samples and tissue samples and other things as well
- (11) Q And in a minute here we re going to match the numbers to
- (12) the little circles on the - on our graph What does
- (13) Exhibit 1154 depict?
- (14) A Exhibit 1154 is the key to this previous exhibit indicating
- (15) what the circles represent on the graph
- (16) Q All right Could you take one of these as a - for
- (17) example let s say you mentioned Metula or one of those are
- (18) they contained on this?
- (19) A Yes
- (20) Q Why don t you blow up Metula and explain how these charts
- (21) could be used by the jury to understand what you ve attempted
- (22) to depict
- (23) A The Metula spill was a spill that occurred on the tip of
- (24) South America the Straits of Magellan and the material that
- (25) was spilled In this case was Arabian crude and smaller amount

Vol 14 2378

- (1) semiplastic and essentially seals it off so that the mousse
- (2) material underneath is preserved for a longer period of time
- (3) It s protected in an envelope
- (4) 5C was a projected impact on marshes based on some
- (5) investigators and they indicated they thought that marsh had
- (6) not recovered for as much as a hundred years That s of
- (7) course full and complete recovery All the same specie types
- (8) age class abundance that sort of thing a very high quality
- (9) level of recovery
- (10) 5D is the observations that were made by Ed Owens 12 and
- (11) half years after the spill in which he saw very high
- (12) concentrations 50 000 parts per million that s milligrams p-
- (13) kilogram in the asphalt pavement with visually unaltered oil
- (14) In other words the mousse looked unaltered to him visually
- (15) without doing detailed laboratory analyses 12 and a half years #
- (16) after the spill
- (17) Q Now I think you mentioned a whole bunch of terms here
- (18) asphalt pavement skinned mousse backshore nearshore the
- (19) tidal and intertidal and subtidal effects of some of these
- (20) things Have you prepared a videotape that would show the
- (21) jury
- (22) how some of those same similar things that we saw in the
- (23) Metula spill appear in the Exxon Valdez spill area?
- (24) A Yes
- (25) Q Could I have 1368 put on the screen please? And we ll be
- (26) pausing this from time to time

Vol 14 2377

- (1) of Bunker C which is very heavy heavy oil occurred in 1974
- (2) One of the team members on our team Larry Thebeau In fact
- (3) investigated the spill six years after the event
- (4) In addition to that it was investigated 12 years after the
- (5) event 12 and a half by Ed Owens who is a contractor for
- (6) Exxon I have five points of data on the large graph previous
- (7) exhibit which correlate to numbers 5A 5B 5C and 5D which I
- (8) indicated here
- (9) Q Here s 5C 5A 5D and 5B?
- (10) A So each of those data points is described here in an
- (11) abbreviated manner 5A for example represents a very high
- (12) percentage of oil in the sample One to 45 percent was a
- (13) range most of them range from 2 to 7 percent and those
- (14) samples were collected
- (15) If you look at the other example the other exhibit rather
- (16) and follow down the X axis you ll see how many years after the
- (17) spill the samples were collected So at that time samples
- (18) that ranged from largely 2 to 7 percent and up to 45 percent of
- (19) oil could still be collected from that spill site
- (20) 5B is posted on there At the time they observed visually
- (21) or unaltered oil containing what we referred to as skinned
- (22) mousse You might recall some of the photographs of these
- (23) asphalt pavements or tarry areas where the segment becomes
- (24) incorporated in the oil Skinned mousse is a situation where
- (25) the upper surface of a mousse residue becomes tar like or

Vol 14 2379

- (1) (Videotape played)
- (2) A We re in the Kenai Flords area now zooming in on the Beauty
- (3) Bay site which we ve talked about several times
- (4) VOICE FROM VIDEO We re looking at here what we call the
- (5) tar mat tar mat comprised of oil mixed with sands
- (6) BY MR PETUMENOS
- (7) Q Now we ll let you talk instead of Mr Thebeau there
- (8) A That s Larry Thebeau He s the Texan here with us and
- (9) Larry s digging up a tar mat from 1989 in the Beauty Bay area
- (10) give you an example of the skinned surface
- (11) Q Would you freeze that?
- (12) A Can I draw with this now?
- (13) Q Not on the videotape
- (14) A Can I come down on there?
- (15) Q Go ahead
- (16) A Show what the image displays here This the shiny surface
- (17) is a weathered skin that s formed over a more - more moussey
- (18) interior and we ll see in a moment - go ahead and roll it for
- (19) a second - as he turns it over and if the color is visible on
- (20) this you ll see that the interior portions - I think they ll
- (21) zoom in - the brownish material is a more fresh or more fluid
- (22) mousse material mayonnaise consistency material This area
- (23) in
- (24) here Most of the broken material in this case consists of
- (25) less weathered more fluid material
- (26) This is the same site in 1992 was investigated very early

Vol 14 2380

- (1) on by Jerry Bakus and other persons - Dr Bakus Jerry Bakus  
 (2) took the film and at this point they concluded the beach  
 (3) surface was clean However when we returned a few weeks  
 (4) later remember the story about the swash bars Here are the  
 (5) swash bars again you ve seen in photographs earlier and these  
 (6) items mark the oil we saw off the leading edge of the swash  
 (7) bars along an arm of our transect  
 (8) And you ve seen this one the still photograph  
 (9) Now we ll move from the lower Kenai Kenai Fiords area  
 (10) Beauty Bay of that sample into Prince William Sound and we  
 zoom  
 (11) into Squirrel Island This is a pocket beach in Prince William  
 (12) Sound The surface is pebbly  
 (13) Let s go back Can you run it back for that? Just freeze  
 (14) it here This is fine  
 (15) Again this is a Mr Thebeau there s his biological grid  
 (16) where he took his measurements This was moderate to heavily  
 (17) oiled and it s largely a coarse grain sand beach with some  
 (18) mixed class particulars slightly coarser grained material as  
 (19) well Locally small pebble coverage in this vicinity We  
 (20) found heavily oiled berm and asphalt pavement near the  
 upland  
 (21) portion of this shoreline Strong contamination high  
 (22) concentrations of oil throughout this area and this dark line  
 (23) you see along the shoreline is the elevation that oil impacted  
 (24) the margin of the coastline of this island  
 (25) Go ahead sorry go forward please Freeze it again

Vol 14 2381

- (1) thank you  
 (2) This is a photograph of - taken at the same time in 1989  
 (3) where we moved - the tide was coming in when we did the  
 (4) survey I think that s correct In any event we re wiggling  
 (5) the shovel underneath the water in the sand and you can see  
 (6) these little silver dots that you see are droplets of oil  
 (7) rising up through the water They break on the surface so the  
 (8) oil was very fluid at this location and it sheened readily with  
 (9) each tidal - each change in tide Okay  
 (10) Okay stop this one too This is in 1992 and I mentioned  
 (11) the asphalt pavement that we saw in 1989 - well we returned  
 (12) to the same site These are the rocks off to the side that  
 (13) were darkly stained in 1989 They re now much less stained  
 (14) We can see here asphalt pavement this dark area shows up  
 (15) here is sand that is saturated with oil and - oil residue and  
 (16) it s approximately between 10 and 12 centimeters thick is my  
 (17) recollection The material around this - I don t know how  
 (18) well you can tell how visible that is - is loose and not bound  
 (19) together as the residue depicted  
 (20) Okay This is a closeup showing you the surface You can  
 (21) see again this is resistant It ll hold its shape in a  
 (22) vertical cliff here whereas the sediment around it will  
 (23) collapse and flow and create a normal angle for -  
 (24) This is a scale for thickness  
 (25) Q Could we go back there I had a question about that

Vol 14 2382

- (1) Freeze that if you would The question I had about it is what  
 (2) is holding that material together more firmly in than the  
 (3) surrounding area?  
 (4) A The oil residues that are inside in the pores of the  
 (5) sediments holding the grains together  
 (6) Q Go ahead You have anything more you want to say?  
 (7) A No nothing else to say  
 (8) Now 1992 three years later That s our plane pilot in  
 (9) fact scraping residue off As you can see this is residual  
 (10) stain on the rocks from the heavy coating that we saw in 89  
 (11) He s scraping it off Spruce needles or spruce leaves I  
 (12) guess more precisely are stuck to the surface More of the  
 (13) same  
 (14) This area was heavily coated  
 (15) Q Freeze that please?  
 (16) A Actually I would say roll it  
 (17) Q I ll let you drive  
 (18) A Let s go forward Now - okay freeze it here This area  
 (19) was heavily coated and again skinned over but as it warms in  
 (20) the sun the mousse will become fluid again and material  
 (21) beneath the skin will break loose and run drip down the  
 (22) sides In fact that s what happened here and it puddled in  
 (23) this area So in 1992 we still had material that would flow  
 (24) down as it warms in warm days and puddle on the rock and  
 (25) that s exactly what happened here

Vol 14 2383

- (1) This is Mr Thebeau again and he s standing in an area in  
 (2) 1992 discussing the fact that we found oil here the asphalt  
 (3) pavement where he s waving his arm and we ll just wait for him  
 (4) to quit talking  
 (5) And we ve pitted various areas across the - across the  
 (6) shore and he s indicating up where we found the tar mat in  
 (7) 92 and that was up in this beneath these berms up here -  
 (8) zoom in - to give you relative perspective on size and shape  
 (9) This is the area  
 (10) Then he s taking a sample again in 1992 Remember how the  
 (11) oil drops came up from the water in 89 this is essentially  
 (12) the same experiment at lower tide level You can see that the  
 (13) material three years later still readily sheens One small  
 (14) shovel full to give you a sheen like this It s easy to  
 (15) conclude that a large portion of the beach has the substantial  
 (16) to yield a large amount of oil in each tidal cycle Not that  
 (17) it does that because the oil doesn t bleed out as readily  
 (18) because it s in the subsurface and the permeability and  
 (19) porosity affects that And we do see sheens In fact we saw  
 (20) sheens here in 1994 as we ll see in a minute  
 (21) This is in 1994 Again the same asphaltic coating We  
 (22) can see picking up areas that are patchy now clean areas  
 (23) between the more continuous coat that we saw in 1992 Spruce  
 (24) leaves still stuck to the tar And the digging crew is on -  
 (25) on site

Vol 14 2384

(1) Let s freeze this in a minute right about here - right  
 (2) here Maybe this isn t the best place but I want to discuss  
 (3) This is a sample that we dug deeper than we expected to find  
 (4) oil We looked at it carefully and there s a lot of material  
 (5) in here that s very fine grain like silt or clay or  
 (6) something It s impacted There s a rock or pebble here but  
 (7) much of this material is fine grain There s not much grainy  
 (8) structure to it that you would see if it were sandy or granule  
 (9) like which is what much of this beach is made of  
 (10) Roll it forward Freeze right here In fact what I m  
 (11) pointing at with my finger here looked like a woody fragment  
 (12) was stuck here We determined in the field this might not be a  
 (13) typical asphalt pavement might be something else there was  
 so  
 (14) much material it would have to be a solid glob of oil with  
 (15) woody fragments We decided to submit it to the laboratory to  
 (16) see what it was It may be oil debris but it s organic with  
 (17) other sediments  
 (18) Roll the film This is the sandy bottom of it which is  
 (19) more granular Again compare the difference between them  
 (20) This then is exactly the same spot where we found the asphalt  
 (21) pavement In 92 slightly removed and you can see it s almost  
 (22) uniformly granular It s more like a sandy granular material  
 (23) that s glued or held together by the asphalt residues in the  
 (24) oil Much different texture and composition than the material  
 (25) we saw earlier Again you can see that it s held together

Vol 14 2385

(1) It s still quite oily comes off on your hands but it s I  
 (2) guess bound or glued in place and holds that angle compared  
 to  
 (3) this material which is loose That s much more resistant  
 (4) This is more loose  
 (5) Q Are these the pits that were dug?  
 (6) A Yes This is Mr Thebeau again discussing distribution of  
 (7) pits across the lower portion of the beach I think they re  
 (8) lower than the tidal in this particular photograph and another  
 (9) sheen test The sun angle is very low at this time It s very  
 (10) difficult to see it come to the surface but I think as the  
 (11) shadows move in you can see it with the wave action you can  
 (12) see the movement of the sheen in that area This sheen is also  
 (13) a more silver sheen or a thinner sheen not as strong or  
 (14) concentrated as the sheens you saw before but nonetheless  
 (15) here we are in 1994 and the material is still - still giving  
 (16) off oil  
 (17) Q You re all trying to get in the way of the sun there so the  
 (18) individual you can -  
 (19) A We were trying to use our shadow so you can see Well you  
 (20) can see - when it moves out of the shadow you can hardly see  
 (21) the material in the water It s quite clear there  
 (22) Now we re moving into another location this is the  
 (23) northeast end of LaTouche Island Some of the spots that we  
 (24) visited - please freeze That s good Our special  
 (25) investigation I think this is a good example of beach

Vol 14 2386

(1) morphology Tide is incoming at this time there s a gentle  
 (2) wind not a major storm You see the debris that s moving in  
 (3) in a nice uniform line across the shoreline The previous  
 (4) tide deposited material here the previous tide Perhaps this  
 (5) is a spring tide larger debris in the back which I doubt is  
 (6) recognizable would be during a storm tide especially if it  
 (7) was a spring tide and a storm in the same day  
 (8) MR OPPENHEIMER May we have a year please?  
 (9) A I beg your pardon?  
 (10) MR OPPENHEIMER I m sorry what year is this?  
 (11) A 1992 And the debris in the back is the shoreline as a  
 (12) result of the 64 earthquake so it doesn t relate to recent  
 (13) modern processes  
 (14) Okay This is a mussel bed This is 1992 same general  
 (15) location These sites are close together in that same area  
 (16) You can see here substantial oil beneath the mussels - shaking  
 (17) the camera sorry about that We re not professional  
 (18) photographers here Anyway we have a mussel cover byssal  
 (19) threads that attach to the mussel and sedimentary area beneath  
 (20) it  
 (21) Here s another pit nearby same thing You can begin to  
 (22) see the oil that works its way up Each of the black dots -  
 (23) go ahead and freeze the frame Each of the black dots that s  
 (24) on the water are actually droplets of oil residue that have  
 (25) come up through the sediment and are floating on the water

Vol 14 2387

(1) Q In your 1994 trip what did you observe about mussel beds  
 (2) that you saw?  
 (3) MR OPPENHEIMER Your Honor again if it can be  
 (4) limited I have no objection but to the extent it becomes a  
 (5) biological rhetoric My objection is foundation  
 (6) THE COURT Fair enough  
 (7) MR PETUMENOS Judge I m going to ask him what he  
 (8) saw  
 (9) THE COURT Exactly  
 (10) BY MR PETUMENOS  
 (11) Q What did you see when you looked at the mussel beds out  
 (12) there?  
 (13) A This photograph is 1992 1994 went back to the same  
 (14) location and the mussels that were - that were attached to the  
 (15) sediment substrate there were a lot of dead mussels there I  
 (16) would say estimate we visually estimated in a walk through  
 (17) without doing specific sampling on that but approximately 35  
 (18) to 40 percent of the mussels were open and dead including  
 some  
 (19) small clams as well  
 (20) Q What did you observe of the mussels that were not in the  
 (21) area where the oil was underneath them?  
 (22) A That description referred to the mussels that were attached  
 (23) to the sediment substrate Mussels seaward and higher on the  
 (24) hard rock surfaces if you recall some of the scenes we ve  
 (25) shown of this there are bedrock projections out in the open

Vol 14 2388

(1) water there were fewer killed or fewer dead mussels less  
 (2) mortality On the mussels that were on the outside of the  
 (3) rocks exposed to the open water perched more highly in the  
 (4) intertidal zones there were no dead ones observed there  
 (5) Q Were these mussels that you found live in 1992 when you  
 (6) observed them?  
 (7) A We observed practically no kill prior to 1994 no  
 (8) mortality  
 (9) Q All right go ahead  
 (10) A That's a little creature that swam out there and he's  
 (11) dwelling in this environment I have no idea what it was We  
 (12) could never catch him quick enough to do a good identity but  
 (13) in any event this area is still oiled There's oily material  
 (14) that persists beneath that mussel bed and this environment is  
 (15) being affected by that material This is a slightly deeper  
 (16) pit gives you some idea of the depth and extent and level of  
 (17) coating on the larger rocks that are found in the armor that's  
 (18) beneath the mussel bed These are all mussels  
 (19) Q Say it louder so we can hear you  
 (20) A These are all mussels underneath and this is all mussel  
 (21) type of surface Again the same thing with the sheen on the  
 (22) water and the oily material rising to the surface These are  
 (23) all different locations and different pits  
 (24) This is moving farther upland from that same mussel bed  
 (25) You can see we're getting into an armored vicinity with the

Vol 14 2389

(1) larger rocks  
 (2) Q That's what you mean by armor when you've got -  
 (3) A Yeah this layering of larger rocks here and the finer  
 (4) grain substrate beneath it This is Dr Kana with us in the  
 (5) field at the time And again the same issue with the oil  
 (6) material oil residue black dots floating up onto the water  
 (7) It's difficult to see from video photography but it's - these  
 (8) rocks are all well oiled  
 (9) And this is the sheen which in a moment you'll be able to  
 (10) see There's surge action It'll come in and you'll see it  
 (11) moving There  
 (12) This sheen was all released through natural processes We  
 (13) did not disturb the beach or cause this to be released at all  
 (14) Further up on the beach underneath some protected areas  
 (15) protective niches you'll see very high concentrations of  
 (16) residue saturated sediments or near saturation There's an  
 (17) example of - that's Peter Bachuella (ph) another one of our  
 (18) crew members - of oil stain on a rock These are all  
 (19) collected near the surface  
 (20) Stop let's go back to that and freeze the frame for a  
 (21) second Forward as it zooms away from the image There  
 (22) you can see the streaks When we came to this site a few  
 (23) of these rocks had already been collected by someone placed  
 (24) on  
 (25) top of this and as far as we could determine the streaks were  
 draining from the rocks that had been left there so as the

Vol 14 2390

(1) material warms in the sun again it's able to run and drain  
 (2) down across the surface of the boulder Okay go forward  
 (3) Now we're at the same mussel bed in 1949 Stop please  
 (4) This is the same mussel bed in 1994 These are some of the  
 (5) bedrock projections I was referring to earlier where the  
 (6) mussels were healthy as opposed to - no mortality was  
 observed  
 (7) there as opposed to the mussels in the substrate Continue to  
 (8) roll please More of the rocks Stop please This white  
 (9) material up on the rocks here and the fucus and barnacles  
 (10) MR OPPENHEIMER Your Honor I would impose my  
 (11) objection of foundation  
 (12) THE COURT The objections overruled Go ahead  
 (13) THE WITNESS That's very simple the white material  
 (14) that you see lower in the surface are open mussels That's  
 (15) all You can roll the film forward  
 (16) Similarly you can see the shapes there are different  
 (17) angles but open mussels barnacles in the lower portion on the  
 (18) rock  
 (19) This is a pit dug at the same time oil droplets again on  
 (20) the surface released from the sediment with tidal action  
 (21) floating to the surface and exposed  
 (22) Now we're in a different location in 1992 close to the  
 (23) same area but we've moved along Go back to the previous  
 (24) portion Okay what we're going to see in the next portion  
 (25) two things at this site we dug some pits in this lower area

Vol 14 2391

(1) but what you're going to see next is I'll walk along this berm  
 (2) in the background and see how much oil in our return was  
 (3) captured in that upper berm That's a pretty high storm berm  
 (4) up there and it's an indication of the movement of the oil  
 (5) after storm conditions and high tide conditions in 1989  
 (6) So I'm into that storm berm now You can see the scattered  
 (7) dots on the surface of the storm berm but if you dig into the  
 (8) berm - we move fast through here because we were in a race  
 (9) for time on this particular time period - the occurrence of oil  
 (10) becomes more common There's more of it on the rocks It's  
 (11) more prevalent You can see it in some of the other places  
 (12) Q Did that extend uniformly across the storm berm?  
 (13) A Relatively uniformly Again it's a heterogeneous system  
 (14) but this type of residue was found across the entire storm  
 (15) berm And this is another area You can see it's near the  
 (16) surface here perhaps some protection from the log other  
 (17) material Of course this is oil residue on the other side of  
 (18) the boulder  
 (19) Now we're looking at three pits that we dug in the surface  
 (20) just beneath - well a ways beneath this same berm which is up  
 (21) here so that photograph just oriented you with those three  
 (22) pits and you see we're beneath several tide lines definitely  
 (23) intertidal probably upper mid intertidal  
 (24) Let's go back I'm sorry Missed a point That's good  
 (25) that's good right here

Vol 14 2392

- (1) Same concept is in place now This is an exposed area on
- (2) the northeast end of LaTouche Island has excellent exposure
- (3) we have cobble armor in places boulder in size Beneath that
- (4) we have this fine grain layer of material so our process and
- (5) the notion of this arming effect with fine grain material
- (6) continues and the base of this pit we have another cobble
- (7) layer which we believe at this point - and I think we re
- (8) still pretty convinced of this - it represents the 1989
- (9) surface
- (10) Again roll forward Freeze
- (11) This cobble was exhumed from the base of the pit and it s
- (12) turned upside down It s heavily coated with mousse As far
- (13) as we could determine in these pits the armor the old armor
- (14) layer that s been stratigraphically or layered beneath it
- (15) representing an older surface Still contains mousse in all
- (16) the pores of the cobble
- (17) Forward I m just explaining it came from the bottom of
- (18) the pit and we see this in three locations Walk to the next
- (19) one now I have still photos of this which I believe are
- (20) exhibits I m not sure but this is all - back up just a
- (21) second - here s a still photo great
- (22) This is where I just had my hand and you can see the mousse
- (23) impregnation in this area Again cobbles on the service finer
- (24) grained materials beneath although you can t really
- (25) distinguish it These are large rocks buried and older

Vol 14 2393

- (1) probably 1989 surface
- (2) Okay forward And this is a rock again indicating clean
- (3) on one side impregnated with mousse on the other Let s
- (4) freeze the frame for a second here So the process that we ve
- (5) interpreted for this site we have an old 1989 surface fine
- (6) grain material on top of that and another coarse armor
- (7) During severe storms it s likely that the armor itself and
- (8) maybe the fine grain material itself are intermixed and
- (9) agitated This is the mechanism by which the old surface gets
- (10) cleaned on its upper portions We found very little oil on
- (11) this upper portion So we think it s either new sediment
- (12) deposit on top new armor formation and it may be responsible
- (13) for cleaning the upper parts of these guys Whereas this layer
- (14) underneath it still contained oil from 1989
- (15) Okay now go forward Clastic armor fine grain material
- (16) and larger older rocks at depth So this mechanism or process
- (17) now is - is an example of the process that we ve been talking
- (18) about all along The mousse is on the bottom started at the
- (19) other side of that If I turn it over here - I don t recall
- (20) if I do or not - it s cleaner and it came from the bottom of
- (21) the pit
- (22) Same thing again that s the intensity of mousse that we
- (23) find still preserved in these lower lower layers
- (24) Again 1992 at another site this indicates that oil
- (25) reached clear up into the storm berms up into the vegetated

Vol 14 2394

- (1) areas which is upland in the accumulation well above mean
- (2) high tide It can be squeezed out of the vegetation It
- (3) adheres to the oil
- (4) Q 1992 north LaTouche?
- (5) A Same time frame different stop again approximately a
- (6) hundred yards away It s a boulder we exhumed Again you
- (7) can
- (8) see the oil has drained off and dripped down into this pool
- (9) We intended at this time to visit this stop This is mousse
- (10) impregnation Again this is an occurrence on the surface
- (11) Stop the frame for a second
- (12) At this beach - there are a variety of types here - it s
- (13) a cobble pocket beach in one area and out to the margins you
- (14) get to rocky headlands As you approach the rocky headlands
- (15) you find more protected areas more protected areas and you
- (16) see less oil As you move lateral the oil moves at the
- (17) surface and at depth As you move from the surface that has
- (18) large rocks and protected environment The oil initially on
- (19) the surface is better preserved That s what we have here Go
- (20) ahead and roll it And there it is thicker than mayonnaise by
- (21) now
- (22) Now we ve going to move to the Kenai Fiords We hoped to
- (23) be able to come back and look at that rock after about a week
- (24) of tidal action but we were unable to do that but we were
- (25) able to do it in 1994 at a different site at Morning Cove

Vol 14 2395

- (1) of our transect sites
- (2) This is May 26th 1994 brown mousse in the bottom of rocks
- (3) similar occurrence to what we saw a little while ago on the
- (4) north end of LaTouche Island
- (5) This is June 2 same rock same place very little
- (6) difference in mousse that was on the rocks After about a week
- (7) or five or six days whatever time we saw the material in 1994
- (8) still persists on the bottom of that rock
- (9) This is one of our transect sites in Shelter Bay We re
- (10) back in Prince William Sound now
- (11) Q CC stands for Chenega Corporation?
- (12) A That s correct Chenega Corporation s property That s a
- (13) pan of the site This is a sample pit that was dug by another
- (14) team that investigated our transect These are rather large
- (15) sampling pits Usually we confine them to smaller areas if
- (16) possible Still get a representative sample but this place
- (17) continues to be sampled Pretty soon there s nothing left to
- (18) study
- (19) Q In other words someone came to your site and dug in it
- (20) that s what you re saying?
- (21) A That s correct Stop for a second What we re showing now
- (22) again is another example of asphalt pavement in 1994 again
- (23) It s difficult to see with the naked eye unless you re trained
- (24) for it This area falls between cobbles and boulders It s a
- (25) close up view and it continues up between these and that s all

Vol 14 2396

- (1) oil impregnated sediment that s glued together again by the oil  
 (2) residues Continue the tape  
 (3) There it is again you can see the - stop for a second  
 (4) Whoops okay You can see the relief on the face of the  
 (5) pavement where the mousse sediment s been washed away  
 from  
 (6) here This is a rock underneath it And here it is cemented  
 (7) again The cementing properties give it some strength  
 (8) Continue  
 (9) There it is again same spot For scale these are cobbles  
 (10) size about that big and this mat continues around them up  
 (11) through here It would be very easy for a person to walk over  
 (12) that and not see it This area - it s not easy to see but  
 (13) you see if we wiggle the rock here the whole surface moves  
 (14) out to here The whole surface is a pavement  
 (15) That s the sampling Freeze I m standing on  
 (16) approximately the center of our transect perhaps a little bit  
 (17) to the southwest of it and this individual is Mr Dawson at  
 (18) the location we ve just filmed Behind him is an individual  
 (19) called Claire Doyle (ph) and Mr Mundy is over here This  
 (20) asphalt occurs in a zone varying from about four to six meters  
 (21) wide We didn t measure it specifically different amounts of  
 (22) coverage but among all those people that much length across  
 (23) the transect in that direction  
 (24) We can see the large rocks here It s fairly fairly prone  
 (25) to have many protected niches or small areas where they d be

Vol 14 2397

- (1) protected from wave action That s Mr Mundy there He s also  
 (2) looking at tar mat  
 (3) Q Mr Mundy being the land damage appraiser?  
 (4) A I m sorry Dr Mundy Yes  
 (5) Q Dr Mundy?  
 (6) A In the other direction we found much less Probably as  
 (7) low as a percent cover This is a surface of the rock which we  
 (8) collected oiled moss in 1989 and same material persists here in  
 (9) 1994 The significance of it is the particular work here is  
 (10) how far up in the upper intertidal to upland zone it ll reach  
 (11) during that time freeze All of this is moss that still smells  
 (12) of petroleum in 1994  
 (13) This is Shelter Bay a fairly protected area It s still  
 (14) - at this time adequate wave energy was available to move oil  
 (15) as it came into that bay to the higher elevations above the  
 (16) supratidal or the spray zone into the upland area  
 (17) I think this is about it Go ahead and finish the tape  
 (18) This is the Bay of Isles site Probably everybody s heard  
 (19) about it It s Knight Island 136 Very little minor amount  
 (20) of treatment was done at this location There s some  
 (21) impregnated sediments around the margins pavements that  
 still  
 (22) persist oil in the sediments This gives an excellent example  
 (23) of the skinned mousse phenomena we were talking about  
 earlier  
 (24) Sheen released in the water You can see the sheen  
 (25) This is all skinned mousse right here and close up

Vol 14 2398

- (1) There s other debris incorporated into this of course but  
 (2) these fractures and cracks have open more fluid material  
 (3) beneath them with an asphaltic skin on the surface As you  
 (4) turn it over you can see it s more fluid underneath  
 (5) (Videotape concluded)  
 (6) MR PETUMENOS Judge we have with agreement of the  
 (7) Exxon lawyers asked to interrupt Mr Bush s testimony to put on  
 (8) a witness that we need to get on today because of scheduling  
 (9) problems  
 (10) THE COURT How long will the witness take?  
 (11) MR PETUMENOS Take 45 minutes I m told  
 (12) THE COURT Direct and cross?  
 (13) MR PETUMENOS Direct and cross?  
 (14) MR FORTIER I think we can end today Your Honor  
 (15) THE COURT Excuse me ?  
 (16) MR FORTIER I believe we can get the next witness on  
 (17) and off the stand by 12 30 (sic)  
 (18) THE COURT Should I give the jury a short break  
 (19) before that?  
 (20) I m going to give you a quick break I have to talk to the  
 (21) parties about the schedule so I ll let you out  
 (22) (Jury out at 12 29 p m )  
 (23) THE WITNESS I m down I guess  
 (24) THE COURT Yes I see that  
 (25) All right the jury s not present Counsel I need to talk

Vol 14 2399

- (1) to you about a couple of things and I wanted to do it - the  
 (2) question arises because of the new letter from Mr Stapleton  
 (3) what I m going to do with him so tell me What am I going to  
 (4) do with him?  
 (5) MR STOLL Your Honor as far as the plaintiffs are  
 (6) concerned we will - we think that we should release him I  
 (7) think his - pretty clear that he has a real hardship We re  
 (8) also concerned as far as being able to get - have a juror that  
 (9) is thinking - obviously with the extreme financial burden on  
 (10) him keeping focused on the case And perhaps - I don t know  
 (11) which way it cuts frankly resenting one or the other party  
 (12) for keeping you know causing him financial ruin So we think  
 (13) that - we propose the five sixths thing They were unwilling  
 (14) to agree to that Reluctantly we will agree that we still  
 (15) think that he should - he should be released though  
 (16) THE COURT Counsel?  
 (17) MR DIAMOND Your Honor we re - we re not  
 (18) unsympathetic to Mr Stapleton s problems What concerns us  
 (19) though is slippery slope He s not the only one with that  
 (20) problem I believe he s seated next to Mr Sheldon  
 (21) Mr Sheldon told us during voir dire that he has the same  
 (22) problem that this substantially affects his ability to earn  
 (23) enough money in his busy season to tide him over for the  
 (24) winter There are probably other individuals who have now  
 (25) forgotten who indicated similar problems

Vol 14 2400

- (1) Since we don't have agreement as to what's going to happen  
 (2) if we fall below 12 we're very reluctant to see anybody depart  
 (3) at this point particularly under circumstances in which one  
 (4) departure may well lead to another which may well lead to  
 (5) another  
 (6) I think the -- it's in your lap as to what you want to do  
 (7) but I don't know that we're prepared to stipulate to  
 (8) Mr Stapleton's departure  
 (9) THE COURT Okay I think I'm going to have to let  
 (10) him go I've been watching him through the trial His  
 (11) attention -- he was pretty good for a while He really stayed  
 (12) on it and that's -- as opposed to the juror I just let go  
 (13) Mr Gerwin His level of attention was -- was much different  
 (14) but he's changed in the last couple of days and I -- and I  
 (15) can't help but suspect that part of it is due to resentment  
 (16) He's been consistently trying to get off this jury ever since  
 (17) the beginning He's told you the basis of the hardship My  
 (18) problem was I couldn't really see objectively that -- that it  
 (19) was more than just what his supposition was about what would  
 (20) happen to him  
 (21) The letter from the employer which we received today  
 (22) indicates objectively that he's really going to -- that he's  
 (23) going to suffer hardship The employer will too but I'm not  
 (24) that concerned about the employer's hardship I think that  
 (25) this is going to have a bad effect on Mr Stapleton I think

Vol 14 2401

- (1) the longer he stays the more resentful he's going to get The  
 (2) way he's been watching this case is -- his attention has  
 (3) lapsed He's now starting to look up at the ceiling He  
 (4) doesn't really show me that he's involved in the case at all  
 (5) That may be because he expects to get off this jury It may  
 (6) also be because he's getting angry at me particularly about  
 (7) the entire process We've got two alternates left and the  
 (8) question ultimately becomes how much time can I expect this  
 (9) case to take so that I don't have to worry about this day in  
 (10) and day out from other jurors  
 (11) Have your estimates of the time that the case will take  
 (12) changed?  
 (13) MR DIAMOND The one significant development was we  
 (14) pursued to conclusion our discussions in chambers yesterday  
 (15) which means that the economic claims the nonland claims will  
 (16) go out  
 (17) THE COURT They will go out?  
 (18) MR DIAMOND Yes That shortens I suspect  
 (19) Mr Stoll's presentation It does not considerably shorten our  
 (20) presentation  
 (21) MR STOLL Your Honor we --  
 (22) THE COURT How many days?  
 (23) MR STOLL Your Honor we think that we will finish  
 (24) the plaintiffs case and we've I think had a generous  
 (25) estimate of their cross examination in -- in no more than nine

Vol 14 2402

- (1) more trial days  
 (2) THE COURT The plaintiffs case finishes in nine  
 (3) days?  
 (4) MR STOLL That's our present estimate Your Honor  
 (5) THE COURT That gets us to the 28th and we're going  
 (6) to take the 29th off right?  
 (7) MR STOLL We think we'll actually finish on the  
 (8) 27th But it doesn't -- you know in that time zone We --  
 (9) that's correct  
 (10) THE COURT What does Exxon estimate as its time for  
 (11) trial?  
 (12) MR DIAMOND With the caveat that I don't want to be  
 (13) held to this we've -- we plotted out highly probable witnesses  
 (14) and rough estimates of how much time -- and that's going to  
 (15) change depending on what happens in the next nine days --  
 but  
 (16) we're figuring at a minimum 18 trial days right now  
 (17) THE COURT Taking -- I'm not getting --  
 (18) MR DIAMOND Three and a half weeks we figured 17  
 (19) trial days  
 (20) THE COURT Three and a half weeks for your case?  
 (21) MR DIAMOND Yes  
 (22) THE COURT Which puts us where?  
 (23) MR DIAMOND I haven't calendared this because I  
 (24) didn't know what plaintiffs estimate was  
 (25) THE COURT That puts us at the end of August right?

Vol 14 2403

- (1) MR STOLL It's about the -- I would guess about the  
 (2) 20th of August Judge  
 (3) THE COURT Who is it on the jury that's left that has  
 (4) a problem with the end of August?  
 (5) MR DIAMOND You have -- I forgot her name the last  
 (6) alternate  
 (7) THE COURT Swangler  
 (8) MR DIAMOND Yes Has written you a letter about her  
 (9) departure plans  
 (10) THE COURT The 24th  
 (11) MR STOLL I think that's correct Your Honor I  
 (12) think it's the 24th  
 (13) THE COURT Anybody else?  
 (14) MR DIAMOND Your Honor none come to mind I'd have  
 (15) to go back and check my notes  
 (16) THE COURT Well then it's likely she's going to be  
 (17) gone right?  
 (18) MR DIAMOND If you excuse her it's likely she's  
 (19) going to be gone  
 (20) THE COURT I'm going to let her go on the 24th  
 (21) Well I don't think I've got any alternative but to let  
 (22) Mr Stapleton go huh?  
 (23) MR STOLL Your Honor we -- I think that the other  
 (24) jurors seem to be -- have already been here for three or four  
 (25) weeks now and they seem like they're very interested and

Vol 14 2404

(1) they - they all seem healthy I mean anything can happen  
 (2) THE COURT That s the next piece of information I  
 (3) have for you Mr Bennett s baby sitter has the chicken pox  
 (4) He s got a - he s got a three month old child and his wife  
 (5) called today and said get home And I said well he can t  
 (6) And he said - he then called and he s a very good humored  
 (7) person and he s trying to work it out and he promised me he d  
 (8) be here tomorrow but I guess the issue is does he get a  
 (9) baby sitter is it communicable at this stage and so it s as  
 (10) complex an issue as some of the issues you re trying I just  
 (11) want you to know that that s - that s the uncertainty factor  
 (12) we have here  
 (13) I m not - I mean I m not proposing to let him go but he  
 (14) may have some specific hardship that would - and some other  
 (15) jurors may have some specific hardship that might require them  
 (16) to take a couple days off I don t know and I ll certainly  
 (17) resist that possibility Okay? So that - that s all I know  
 (18) about it There could be things under the rocks that I haven t  
 (19) seen yet though  
 (20) MR STOLL Just like there s oil under rocks  
 (21) THE COURT Right according to you according to  
 (22) you  
 (23) MS SMITH We object to that statement  
 (24) THE COURT According to you counsel We ll find  
 (25) out

Vol 14 2405

(1) MR PETUMENOS Judge I just had a comment about  
 (2) something you said yesterday with respect to this jury thing  
 (3) Sometimes if you inform the Court that the fact finding process  
 (4) may be potentially returning to the Court three quarters of  
 (5) the way through the trial that s unfair to the Court I m  
 (6) assuming that - that suggestion made by Exxon yesterday I m  
 (7) assuming that that is an option for the parties if we have the  
 (8) disastrous situation of going below 12 that the Court is  
 (9) sufficiently in a position to take over the fact finding  
 (10) process if that became what the parties desired  
 (11) THE COURT Well I have no statement on that  
 (12) counsel I have to react to you  
 (13) MR PETUMENOS I understand I was just informing  
 (14) the Court of that so we weren t confusing yesterday s remarks  
 (15) of Mr Stoll that s an option we re considering if we lose the  
 (16) 12 jurors rather than retry the case So I didn t think it  
 (17) would be unfair to inform - I didn t want the Court to be  
 (18) under the misimpression that we wouldn t consider it  
 (19) THE COURT Let me tell you something counsel I  
 (20) know what will happen if that occurs if we go below 12 the  
 (21) strategic considerations change and there may not be a waiver  
 (22) I could see that and you can t require that on that basis  
 (23) All right so I think I know - I m going to let Stapleton  
 (24) go at the end of the trial day And I think I m going to get  
 (25) the jury in here and try to explain that the schedule for the

Vol 14 2406

(1) case has compressed a little bit and that I understand that  
 (2) they re undergoing a hardship too but I ve had to let these  
 (3) jurors go and - and endeavor to get this case to them  
 (4) efficiently Okay?  
 (5) Is there anything else?  
 (6) MR CLOUGH Your Honor if I can bring up one  
 (7) matter  
 (8) Mr Fortier and I were successful in resolving most of our  
 (9) potential objections regarding exhibits for the next witness  
 (10) testimony with the exception of one It regards some  
 (11) foundations that the research maps Sam and I talked about a  
 (12) couple times We haven t reached resolution It might be  
 (13) preferable if we re going to argue it either now or shortly  
 (14) after the break before the jury comes back so we get that  
 (15) resolved It s really only two types of exhibits for this  
 (16) witness A 17 minute video and these maps  
 (17) THE COURT Let s do it now Let s do it now What s  
 (18) the issue?  
 (19) MR CLOUGH Your Honor the nature of the objection  
 (20) is that Mr Rosenthal is an underwater photographer He s  
 (21) going to be presenting a 17 minute film He s going to narrate  
 (22) it like some of the other videos We resolved the issues  
 (23) regarding the film Listed as exhibits for him are four - I  
 (24) don t know the precise - four maps depicting resource areas  
 (25) Apparently prepared by NOAA N O - National Oceanographic

Vol 14 2407

(1) Atmospheric Administration There s not a date on them  
 (2) There s been no foundation offered by any prior witnesses as to  
 (3) how they re prepared what date they re prepared whether  
 (4) they re current whether they re accurate Apparently  
 (5) Mr Fortier wants to ask this witness some questions about  
 (6) those particular maps He s made some representations to me  
 (7) that what he wants to ask the witnesses is Do you in your  
 (8) work - the witness also has some training as a marine  
 (9) biologist although he doesn t have a Ph D and isn t listed as  
 (10) an expert - do you in your work as a marine biologist rely  
 (11) on these maps? Completely aside from the issue of the opinion  
 (12) testimony from the witness the maps have never had any  
 (13) foundation offered for them whatsoever There s not even a  
 (14) date on them So the objection to the maps is foundation  
 (15) THE COURT Tell me what part the maps play in your  
 (16) examination of this witness Mr Fortier  
 (17) MR FORTIER Well Your Honor the maps play the part  
 (18) that it sets the scene It - the maps illustrate to the jury  
 (19) the sorts of environmentally sensitive areas of Prince William  
 (20) Sound Mr Rosenthal the witness in fact has had some prior  
 (21) dealings with those maps  
 (22) We anticipate laying a sufficient foundation to show that  
 (23) he in fact wrote a report concerning the maps and what the  
 (24) environmental sensitivity of certain areas of Prince William  
 (25) Sound were We don t intend to do that as an expert We only

Vol 14 2408

- (1) intend to have him state what the facts are that he was out  
 (2) swimming around there that he recorded some things in 79  
 (3) We re going to show a little bit of a video from 92 and a  
 (4) little bit from 89  
 (5) MR STOLL Your Honor if I may just add these are  
 (6) National Oceanographic and Atmospheric Administration maps  
 (7) They re NOAA maps They re not - they re government maps I  
 (8) mean they re not - this is not some -  
 (9) THE COURT Sure but the -  
 (10) MR FORTIER Your Honor if I could there was a  
 (11) stipulation several weeks ago - I didn t bring a copy of it -  
 (12) but there was a letter that was exchanged between counsel that  
 (13) provided the maps that were prepared that were not prepared  
 (14) for  
 (15) litigation that were prepared by government sources were  
 (16) admissible  
 (17) MR CLOUGH Your Honor that wasn t across the board  
 (18) stipulation at least not my understanding  
 (19) THE COURT Wait a minute I don t know how much of an  
 (20) issue there is I only know the importance Is the issue  
 (21) Mr Clough that you don t really know how these maps are  
 (22) going  
 (23) to be used?  
 (24) MR CLOUGH I have no idea why this guy is going to  
 (25) be talking about maps from 79 if in fact that s when it s  
 (26) from There s not even a date on this  
 (27) THE COURT He s there to show - be a sponsoring

Vol 14 2409

- (1) witness for a videotape showing certain things?  
 (2) MR FORTIER That s correct Your Honor  
 (3) THE COURT Is he going to draw conclusions about the  
 (4) things that are shown on the videotape?  
 (5) MR FORTIER He will not  
 (6) THE COURT So what s he - why is the map showing  
 (7) supposed environmentally sensitive areas part of his  
 (8) testimony?  
 (9) MR FORTIER Well because part of his job Your  
 (10) Honor- not his opinion but part of his job is to go to places  
 (11) and take wildlife pictures He s a wildlife or underwater  
 (12) wildlife photographer These maps show the environmental  
 (13) sensitivity in certain areas of Prince William Sound that he  
 (14) goes  
 (15) THE COURT Objections sustained  
 (16) MR CLOUGH Thank you Your Honor  
 (17) THE COURT Let s get the Jury In I want to be  
 (18) finished with him if we can  
 (19) MR CLOUGH With that we can finish with that I  
 (20) need at least 120 seconds for a break  
 (21) THE COURT Take a deep breath It ll take 120  
 (22) minutes I m not leaving counsel I m enjoining myself  
 (23) MR DIAMOND Your Honor while we have - may we  
 (24) approach side bar and put our agreement on the record?  
 (25) THE COURT Can we do that at the end of the day?

Vol 14 2410

- (1) MR DIAMOND We certainly can I didn t want to do  
 (2) it in open court and thought I d use up the time  
 (3) THE COURT I just don t want you to be in the middle  
 (4) of it when they come back  
 (5) MR STOLL Clough s back so they can -  
 (6) MR DIAMOND Okay  
 (7) MR CLOUGH Thank you for your indulgence sir  
 (8) THE COURT Sure  
 (9) (Jury in at 12 47)  
 (10) THE COURT All right counsel the jury s present  
 (11) I d like to know something That the witness that has been  
 (12) testifying is not on the stand now and the reason is because  
 (13) for scheduling - because of scheduling difficulties I m going  
 (14) to allow the parties to call one witness out of order because  
 (15) it s a relatively brief witness and I think probably we ll be  
 (16) finished by 1 30 so don t think that that witness is done He  
 (17) will be back the previous witness Mr Bush  
 (18) All right counsel  
 (19) MR FORTIER Thank you Your Honor Plaintiffs call  
 (20) Mr Rick Rosenthal  
 (21) THE CLERK Sir could you attach the microphone and  
 (22) then remain standing for the oath Raise your right hand  
 (23) (The Witness Is Sworn)  
 (24) THE CLERK Please be seated  
 (25) Sir for the record I need you to state your full name?

Vol 14 2411

- (1) A Yes I m Richard Rosenthal from Langley Washington  
 (2) THE CLERK Can you spell your last name please  
 (3) A R o s e n t h a l  
 (4) THE CLERK And your occupation?  
 (5) A I m a marine biologist and a wildlife nature photographer  
 (6) THE COURT Go ahead  
 (7) MR FORTIER Thank you Your Honor  
 (8) DIRECT EXAMINATION OF RICHARD ROSENTHAL  
 (9) BY MR FORTIER  
 (10) Q Mr Rosenthal can you tell the jury a little bit about  
 (11) yourself how long you ve been a wildlife photographer and  
 (12) about your education?  
 (13) A Yes I m a - have a Bachelor s and a Master s degree in  
 (14) biology and marine biology and course work completed for a  
 (15) Doctorate in marine biology And about 20 years ago I first  
 (16) came to Alaska to - to work in marine biology with the state  
 (17) and the federal government and the university on a consulting  
 (18) basis and was a resident of Alaska for - for over a decade  
 (19) living in Cordova and Homer Sitka and Juneau And the past  
 (20) 12  
 (21) years I ve been doing film work for the BBC and PBS the  
 (22) nature series National Geographic on marine and water related  
 (23) stories for world television and specifically things that  
 (24) live around the water  
 (25) Q Mr Rosenthal are you familiar with Prince William Sound  
 (26) area?

Vol 14 2412

- (1) A Yes I am Beginning in 1973 74 I was a resident in  
 (2) Prince William Sound and lived in Cordova and had a research  
 (3) boat and a fishing boat and did a great deal of nature walking  
 (4) photography diving and research in Prince William Sound  
 (5) Q Mr Rosenthal what I d like to do is bring up a map on the  
 (6) screen of Prince William Sound and have you point out to the  
 (7) jury some of the places you ve gone over since your time in  
 (8) Prince William Sound in 1973  
 (9) MR FORTIER Could we have up defendants Exhibit  
 (10) 10214 B?  
 (11) BY MR FORTIER  
 (12) Q Mr Rosenthal do you recognize Prince William Sound area?  
 (13) A Yes I do  
 (14) Q Okay Could you show the jury some of the areas you have  
 (15) been?  
 (16) A Well areas that I have been and also that I ve spent a  
 (17) good deal of time in based in Cordova We would periodically  
 (18) on a seasonal basis whether it was research or in cruising  
 (19) Prince William Sound since 74 a great deal of time spent up  
 (20) in this area south of Valdez Arm all in this area and out  
 (21) into the Naked Island group Is that coming across? And the  
 (22) southern part of the Sound Hinchinbrook and Montague Island  
 (23) and down to the western end of the Sound So this area which  
 (24) is probably about half of Prince William Sound I ve spent  
 (25) hundreds and hundreds of days out there whether it s doing

Vol 14 2414

- (1) Q Mr Rosenthal when we show the video you understand we  
 (2) just want the facts?  
 (3) A Yes I do  
 (4) MR PETUMENOS Show the video and you can watch on  
 (5) your monitor Mr Rosenthal  
 (6) (Videotape Played)  
 (7) BY MR PETUMENOS  
 (8) Q Now were you in - is this a film that you took in Prince  
 (9) William Sound before the spill Mr Rosenthal?  
 (10) A Some of the material came from stock footage I had for a  
 (11) program I did for the State of Alaska the sea school series of  
 (12) high school kids in Alaska so in 1982 we produced that  
 (13) program  
 (14) and I did some shooting in Prince William Sound and a great  
 (15) deal in Southeast Alaska and this is from the air scenes up  
 (16) around Valdez Arm and Columbia Glacier  
 (17) THE COURT Counsel is this the best we can do?  
 (18) MR FORTIER We can see if we have a better film  
 (19) Your Honor  
 (20) THE WITNESS That s jumping all around Did you want  
 (21) me to continue?  
 (22) MR FORTIER Do we have a better one? I think this  
 (23) is what we ve got here today Your Honor  
 (24) MR CLOUGH I might have a copy Your Honor If I  
 (25) have a better one -  
 (26) THE COURT I tell you one thing I don t know about

Vol 14 2413

- (1) research or diving or taking pictures  
 (2) Q And as a result of that traveling Mr Rosenthal have you  
 (3) become generally familiar with areas of wildlife  
 (4) concentrations?  
 (5) A Most particularly marine animals on the shoreline in the  
 (6) marshes the estuaries and the rocky intertidal and shallow  
 (7) subtidal waters  
 (8) Q How much of your time over the past say 73 to 89 was  
 (9) spent diving in the Prince William Sound area?  
 (10) A Each year we would probably spend up - upwards of maybe  
 (11) a  
 (12) hundred days alone in the field diving and walking the  
 (13) shoreline and reoccupying sites that we were familiar with  
 (14) as - as research stations and wandering as sort of a curious  
 (15) naturalist to understand more about the - the rhythms and how  
 (16) the Sound ticked  
 (17) Q Now Mr Rosenthal did you bring a video with you today?  
 (18) A Yes I did  
 (19) Q What I d like to do with the Court s permission Is show  
 (20) the jury It s Exhibit 247A  
 (21) MR CLOUGH We have no objection Your Honor and we  
 (22) understand the witness would like - will be asked to narrate  
 (23) to it If he could be given the same instruction to please  
 (24) limit the narration to the description of date and location of  
 (25) what the film depicts so we don t get into a problem of -  
 (26) B MR FORTIER

Vol 14 2415

- (1) the jurors but I m going to get dizzy if I watch this  
 (2) MR CLOUGH Mr Fortier served me with a better copy  
 (3) than this I don t know if I brought it to the courtroom but  
 (4) if I did I d be happy to give it to him  
 (5) THE COURT While you re doing that counsel we re  
 (6) going to go ahead and go We can go on no longer so let s  
 (7) just keep the film rolling  
 (8) THE WITNESS So the northern sea lion the steller  
 (9) sea lion scenes were in an area called the Pinnacles Needle  
 (10) area Montague Strait This is some underwater footage up in  
 (11) the Naked Island group Again the seaweed canopies that  
 (12) overlay the bedrock in Prince William Sound miles and miles of  
 (13) seaweed And the herring in their annual ritual spawning  
 (14) ritual they stage and begin to aggregate in the large  
 (15) schools When they lay their eggs and deposit their eggs  
 (16) they re deposited like snow on the vegetation and the rocky sea  
 (17) bed  
 (18) From the air the white area along the shoreline is the  
 (19) milt and spawn that can run for hundreds of miles on normal  
 (20) spawning years and sea lions and diving birds aggregate  
 (21) around  
 (22) those spawning areas and that is Montague Island  
 (23) And sea otters are another resident of Prince William Sound  
 (24) that are also found in those same shoreline habitats The  
 (25) so called red snapper or yellow eye rock fish is a resident of  
 (26) Prince William Sound and is found as far up as Valdez and

Vol 14 2416

(1) these colorful bottom scenes are from a place called Danger  
 (2) Island off LaTouche Island in Montague Strait LaTouche  
 (3) Passage the southwest end of the Sound a very pristine high  
 (4) energy system  
 (5) Q Now were you also in the Valdez area following the oil  
 (6) spill Mr Rosenthal?  
 (7) A Yes four days after the grounding of the Exxon Valdez I  
 (8) flew up to Cordova and was working with NOVA the PBS series  
 (9) and with the BBC on a series called Trials of Life and with  
 (10) the State of Alaska So I had my camera systems with me and I  
 (11) was flying over the - the tanker aground on Bligh Reef And  
 (12) this was I believe on March 29th on a Wednesday afternoon  
 (13) I m afraid I can t see very much in that picture either But  
 (14) this is the position of the tanker and the vessels alongside of  
 (15) it  
 (16) Again from the air there s a small fishing boat to the  
 (17) right hand side of the boat the larger vessels There was a  
 (18) good deal of wind on that particular afternoon and there was a  
 (19) lot of streaking of - of the oil from the tanker and the slick  
 (20) was moving in - in a westerly southwesterly direction at that  
 (21) time of day  
 (22) This is the slick when the Exxon Valdez was moved over to  
 (23) Naked Island for repair work and we were working around the  
 (24) perimeter of the ship doing herring spawn and herring egg  
 (25) research and filming

Vol 14 2417

(1) Some of the sites that we revisited with the State of  
 (2) Alaska biologists and with our film crews were sites that we  
 (3) had occupied and had studied and had done some of our  
 (4) natural  
 (5) history work there like Little Smith Island here This cove  
 (6) was one of our research stations in 1974 through 79 And this  
 (7) is at Little Smith Island and for scale the rubber zodiac  
 (8) boat will show you the extent of chocolate mousse the oil  
 (9) along the shoreline Part of our film crew our research crew  
 (10) or some of the fishermen from Cordova and Homer that were  
 (11) helping us out in terms of vessel support And this chap is  
 (12) one of the commercial fishermen in the area Again this is  
 (13) Little Smith Island  
 (14) Q Approximately what date is this Mr Rosenthal?  
 (15) A That s in early May the first two weeks of May in 1989  
 (16) So we didn t have to stage anything on this particular beach  
 (17) line We just asked handy - the fishermen to walk in and I  
 (18) rolled the camera What you see is what was happening at that  
 (19) day and on that particular beach  
 (20) That s Seal Island which is nearby This is the shoreline  
 (21) as we found it in early May It s much more of a rocky  
 (22) cobblestone shoreline with bedrock and seaweeds and the tide  
 (23) is out here and the shoreline is exposed and so the brown  
 (24) areas are - are oiled areas and it s oiled over the seaweeds  
 (25) and the rocky shoreline  
 (26) Again this is Seal Island in early May of 1989 So I m

Vol 14 2418

(1) just panning then across the intertidal zone on the low  
 (2) tide You can see the light-colored area possibly up near the  
 (3) woods  
 (4) Booms were used to try to stop - an attempt to stop the  
 (5) oil from impinging on the shoreline And this boom is at  
 (6) Herring Bay on Knight Island and the underwater scenes are  
 (7) underneath the boom The diver is with the Department of Fish  
 (8) and Game and on this particular day and hour the oil was  
 (9) running over the booms and under the booms with the current  
 (10) pushing it under the boom skirts and we found as much oil on  
 (11) the back of the boom as we found in front of the boom And  
 (12) this is an example of the oil in back of the boom You can  
 (13) look up and you re looking up through the water and seeing the  
 (14) forest in the background  
 (15) Now the diver is 20 feet below the surface on this tide  
 (16) level This is high tide The diver is a Fish & Game diver  
 (17) with the asbestos - or with absorbent pads and wiping the  
 (18) seaweed vegetation and rocks and the oil is coming off on  
 (19) the - on the rags and all over our wet suits and dry suits and  
 (20) equipment on this particular day in early May in Herring Bay  
 (21) Again this is on high tide cycle and six hours later  
 (22) this area may be totally exposed to the - to the air as the  
 (23) scene showed it on Smith Island So with the tide going up and  
 (24) down six hours later It will be a different scene  
 (25) The oil off Green Island was entrapping many of the diving

Vol 14 2419

(1) birds and diving ducks and marine mammals and as we did our  
 (2) beach walks with our camera gear we were routinely finding  
 (3) carcasses in early May And even the red snapper that you saw  
 (4) in that earlier shot sea otters diving ducks diving sea  
 (5) birds  
 (6) MR CLOUGH Your Honor if the witness could from  
 (7) his recollection please endeavor to give us locations  
 (8) THE WITNESS Yes I ll give you a location It s  
 (9) between Green Island and Montague Island on a - on a small  
 (10) rocky island  
 (11) This shot is back on Seal Island in the intertidal zone and  
 (12) actually up into where the sea grasses and above that into the  
 (13) marshy areas  
 (14) Naked Island the - the clean up crew I landed here in a  
 (15) helicopter with Alaska Fish & Game biologists and this was in  
 (16) late April early May and we were viewing and I was filming  
 (17) with video and film gear the clean up effort in McPherson  
 (18) Passage on Naked Island  
 (19) This is in Herring Bay on Knight Island This - this  
 (20) clean up effort that was going on while I sat up on the rocks  
 (21) and as a - an observer and videoed the various efforts to  
 (22) clean the shoreline And at this particular time I was - I  
 (23) was just doing some investigative just - just shoreline walks  
 (24) and looking at clean up effort  
 (25) The same site that the diver was in this is a site at

Vol 14 2420

- (1) Herring Bay of the boom and the oil behind and in front of the
- (2) boom Now the herring when they spawn again during this
- (3) spring ritual -
- (4) MR CLOUGH Your Honor I think he s going beyond the
- (5) description of the scenes shown
- (6) THE COURT I d like you to confine it to just what
- (7) you saw If this is necessary for - to explain what is being
- (8) seen it s all right
- (9) A Sure all right
- (10) We re seeing the herring spawn deposition in the shallow
- (11) subtidal zone and research going on by the Alaska Department
- (12) of
- (13) Fish and Game biologists And they re inventorying they re
- (14) surveying the amount of egg deposition how much spawn is
- (15) being
- (16) deposited on the seaweeds and on the sea floor
- (17) When a storm or the tide or a disturbance takes place
- (18) underwater these eggs that aren t adhering can be suspended
- (19) in
- (20) the water column and actually wash up on the beaches so you
- (21) may get miles of beaches with spawn up along the shoreline
- (22) looking like a frosting And the biologists here at Montague
- (23) Island in Rocky Bay we were finding not only thousands of
- (24) shore birds that were feeding on those eggs and refueling at
- (25) that point from these eggs as well as resident gulls but
- (26) birds like the surf bird almost the entire northern population
- (27) of surf birds was in that intertidal site only for a two day
- (28) period and gone again This was a scene I was doing for the

Vol 14 2421

- (1) trials of life the BBC series
- (2) Q And approximately when was this taken?
- (3) A That was in late April of 1989 And I can t see that
- (4) either so - the fishery took place again in the following
- (5) year in 1990 The herring fishery in Prince William Sound
- (6) and I was filming for the State of Alaska a video on the
- (7) herring fishery and the herring ponding the methods and the
- (8) research that was taking place on the - on the herring fishery
- (9) and the herring biology
- (10) So the fishermen are seining for - and this is up in the
- (11) Galena Bay area northern Prince William Sound - they re
- (12) fishing for the herring They re catching them live and then
- (13) they introduce them into ponds and pens and hold them there
- (14) prior to the spawning and then put seaweeds and kelp into the
- (15) pond and hope that the herring will lay their eggs on those -
- (16) on those seaweed substrates So these herring are all destined
- (17) to be taken to a pond or a series of ponds where they re
- (18) enclosed in a netted area and then seaweeds are introduced
- (19) Now the fleet has to move around and this is from the air
- (20) looking into Port Gravina and they will do all the processing
- (21) and grading
- (22) MR CLOUGH If the witness could state what year this
- (23) was also
- (24) A This was 1990
- (25) MR CLOUGH Thank you

Vol 14 2422

- (1) A Spring of 1990 again with when the herring are
- (2) concentrated in these ponds and net areas where they can have
- (3) the - have the ability to spawn on these commercially valuable
- (4) seaweeds or kelps
- (5) Now the herring do move around a great deal and even
- (6) though we may want to - want them to spawn on a certain
- (7) substrate at times they will spawn in the nets on rocks or
- (8) other types of seaweeds So this is - we were filming the
- (9) various substrates that herring used for - for spawning for
- (10) egg deposition and it s a variety of seaweeds
- (11) Q And when was this Mr Rosenthal?
- (12) A This is 1990
- (13) Q Where is it please?
- (14) A This is up in the Galena area where the pond fleet was
- (15) stationed Port Gravina Galena
- (16) Q And where is that in relationship to the Bligh Island?
- (17) A That s - that s within a few miles of Bligh Island Bligh
- (18) Reef North and south of Tatitlek Narrows in those two
- (19) areas So the commercially valuable seaweeds the giant kelp
- (20) is brought up from Southeast Alaska and flown up or brought
- (21) by
- (22) ship and then hung on - on lines and put into the pens where
- (23) the herring are - are awaiting their spawning ritual They re
- (24) grading and looking at the roe prior to spawning to determine
- (25) the quality of the eggs and the roe and the condition of the -
- (26) of the herring themselves

Vol 14 2423

- (1) Again the miles of shoreline that from the air and the
- (2) divers involved in their research at this time in taking -
- (3) taking the eggs for research purposes And counting and
- (4) measuring and looking at the amount of - of shoreline that is
- (5) used by herring and quality of the seaweeds and the spawning
- (6) deposition
- (7) Q Now Mr - Mr Rosenthal were you also - did you return
- (8) to Prince William Sound does your film return to Prince
- (9) William Sound in 1989?
- (10) A I didn t hear that
- (11) Q Do you do a return in your film to 1989?
- (12) A Right Yes it does
- (13) Q And do you return to Naked Island?
- (14) A Yes That was one of the research sites that the Alaska
- (15) Department of Fish and Game had for their survey work in May
- (16) of
- (17) 1989
- (18) Q And what sort of survey work was that?
- (19) A That work was determined the amount of spawning
- (20) deposition the sites that the herring were spawning in site
- (21) specific locations the amount of egg coverage and then to
- (22) take those eggs samples subsamples from those seaweeds
- (23) and to
- (24) determine the health and viability of those eggs and to rear
- (25) those eggs to look at - at the success of the - or failure of
- (26) the brood stock and those larvae
- (27) Q Now when you took the pictures in 1990 what was your

Vol 14 2424

- (1) purpose in doing that as part of the spill?  
 (2) A The purpose was I was part of the research team for the  
 (3) State of Alaska to provide an overview of the techniques of  
 (4) the methodology of the scientific sampling of the fishery and  
 (5) so that not only the researchers and people that were trained  
 (6) to do this kind of work but the lay public could have a  
 (7) firsthand look at - at the fishery and the research in  
 (8) action  
 (9) MR FORTIER Your Honor with your permission what I  
 (10) would like to do is to move for the admission of Exhibit 247A  
 (11) the very bad video with the - with additional permission if  
 (12) you would Your Honor to replace it in the future  
 (13) THE COURT You got it  
 (14) MR FORTIER With my most humble apologies Your  
 (15) Honor  
 (16) MR CLOUGH No objection Provided as counsel knows  
 (17) we agreed on that the actual text of the one to be shown make  
 (18) sure that s the exact text  
 (19) THE COURT Same video better quality  
 (20) MR FORTIER Understood Your Honor much better  
 (21) quality Your Honor  
 (22) THE COURT Wouldn t be hard counsel  
 (23) MR FORTIER I hope not  
 (24) CROSS EXAMINATION OF RICHARD ROSENTHAL  
 (25) BY MR CLOUGH

Vol 14 2425

- (1) Q Hi Mr Rosenthal I m John Clough I m from down in  
 (2) Juneau one of your former Alaska haunts and I recognize sir  
 (3) that the problems with the machines that was not a quality of  
 (4) your photography whatsoever I ve seen the good version and  
 (5) you re a great photographer  
 (6) A If it is I m out of work  
 (7) Q I have just - partly given the hour and partly given the  
 (8) nature of your testimony - just a couple of points I wanted to  
 (9) go over with you if I could  
 (10) First of all you were explaining about the kelp the oiled  
 (11) kelp pictures that you took at high tide?  
 (12) A Right  
 (13) Q I just want to make sure we re absolutely clear here You  
 (14) had testified that that kelp was exposed to the air I guess  
 (15) whenever we go through the tidal cycle correct?  
 (16) A Exactly  
 (17) Q And it s also at that time exposed to the water surface of  
 (18) the water?  
 (19) A Yes  
 (20) Q And if there s oil on the surface of the water at the time  
 (21) the tide change then that oil on the surface of the water  
 (22) washes back and forth through the kelp every tide change  
 (23) doesn t it?  
 (24) A Yes  
 (25) Q So you weren t trying to imply with that video that all of

Vol 14 2426

- (1) that oil somehow dropped down from 20 feet above from the top  
 (2) of the sea were you?  
 (3) A No no we were not We were showing what was there  
 (4) Q You showed some - and I apologize some of my questions  
 (5) you probably needed to see the right tape for and I ll either  
 (6) delete them if they make no sense or whatever - you showed  
 (7) some pictures of some of the hot water washing operations you  
 (8) observed?  
 (9) A Yes  
 (10) Q I don t know if the jury was able to see but I want to  
 (11) clarify a couple of things about it The oil was - you know  
 (12) they used the omni booms I guess they call them to wash the  
 (13) oil down off the rocks towards the shore correct?  
 (14) A Towards the - towards the shore or toward -  
 (15) Q Towards the water?  
 (16) A Towards the water  
 (17) Q And didn t they also in fact - if we could have seen a  
 (18) good copy of your video wouldn t the Jury have been able to  
 (19) see pretty clearly that they ran booms around that portion of  
 (20) the shoreline where they were washing the oil down?  
 (21) A Yes  
 (22) Q And the purpose of those booms was to trap that oil as it  
 (23) was coming down off the beach so it doesn t get back all over  
 (24) the Sound again?  
 (25) MR FORTIER Objection Your Honor lack of

Vol 14 2427

- (1) foundation  
 (2) THE COURT Objections sustained on the same basis I  
 (3) sustained the other  
 (4) MR CLOUGH I withdraw the question Your Honor  
 (5) BY MR CLOUGH  
 (6) Q My other question for you though and in your video  
 (7) doesn t it also show skimmers in operation inside those booms  
 (8) picking up off the surface of the water the oil which the omni  
 (9) boom had washed back down?  
 (10) A I believe it does  
 (11) Q Are you aware sir from your observations out there that  
 (12) the overwhelming majority of shorelines in Prince William  
 (13) Sound 90 percent plus were never ever hot water washed?  
 (14) MR FORTIER Objection Your Honor lack of  
 (15) foundation  
 (16) A I can t address that  
 (17) THE COURT Sustained the objections sustained The  
 (18) jury is to disregard the question  
 (19) BY MR CLOUGH  
 (20) Q You said you spent a great deal of time in the areas of  
 (21) Prince William Sound How much time have you had -  
 (22) MR CLOUGH Can I approach to get a map Your Honor?  
 (23) Probably make this a little easier  
 (24) THE COURT A map?  
 (25) MR CLOUGH One of the many here just a billboard

Vol 14 2428

- (1) map  
 (2) THE COURT All right  
 (3) MR CLOUGH Which is the one with northeast Prince  
 (4) William Sound? All right Yeah this is it I m going to pop  
 (5) this around a little bit so you can see it as well as the  
 (6) jury - start with the jury okay? It may be easier  
 (7) Mr Rosenthal if you step down Your microphone will just sort  
 (8) of follow with you  
 (9) BY MR CLOUGH  
 (10) Q Now you had said you d been a resident of Cordova for a  
 (11) while  
 (12) A Yes  
 (13) Q And you re generally familiar with these portions here  
 (14) what s called here northeast Prince William Sound?  
 (15) A Correct  
 (16) Q And you had testified earlier that you had spent your time  
 (17) at least some of your time during the herring film in Galena  
 (18) Bay is that correct?  
 (19) A Galena and - and well I can - I ll have to come  
 (20) forward  
 (21) Q Could you show us on the map where that was?  
 (22) A Sure The bulk of the work during - during 1989 -  
 (23) particularly 1990 was in Port Fidalgo and in - and in Galena  
 (24) Bay and in Tatitlek Narrows here  
 (25) Q And in your other experiences in Prince William Sound have

Vol 14 2429

- (1) you been up into the Galena Bay area?  
 (2) A Oh yes  
 (3) Q And have you photographed up there?  
 (4) A Yes  
 (5) Q I ve taken the liberty of excerpting one scene from your  
 (6) video  
 (7) MR CLOUGH If we could have that put up Joel See  
 (8) if you could identify it We re going to put this up on the  
 (9) screen here  
 (10) MR GROSS Do you know what excerpt you d like?  
 (11) MR CLOUGH Yes Yes I do as a matter of fact  
 (12) It s the one that says mountain on it parts with mountain  
 (13) MR CLOUGH This is from that portion of your video  
 (14) that you had labeled Prince William Sound before the spill  
 (15) Oh we got lucky on the technology okay  
 (16) BY MR CLOUGH  
 (17) Q Can you identify for us where this is sir?  
 (18) A Yeah we re west of -  
 (19) MR CLOUGH I m sorry Joel can you put that back up  
 (20) and freeze it for him? Go ahead  
 (21) A Okay On this particular shot I believe we re looking  
 (22) into Galena Bay here  
 (23) BY MR CLOUGH  
 (24) Q And this would be Galena Bay right here on the map that s  
 (25) marked DX I think it s 15427 (sic 15457)?

Vol 14 2430

- (1) A Yeah  
 (2) Q And that mountain in the background is that Mount Denson  
 (3) do you know sir?  
 (4) A I can t tell you  
 (5) Q Would that mountain be essentially located somewhere  
 behind  
 (6) the back of Galena Bay?  
 (7) A The back yeah  
 (8) Q And could you pointing to the map here as best you could  
 (9) show us about where that mountain is?  
 (10) A Again this is just my recollection I d have to look at  
 (11) my field notes to determine exactly but I think the view here  
 (12) is we re looking into the bay here here s this narrow area  
 (13) right here The mountain range is somewhere back in here  
 (14) Q That would be somewhere in the gray area which is marked  
 on  
 (15) the map as Silver Lake parcel owned by Chugach Alaska  
 (16) Corporation?  
 (17) A I assume  
 (18) MR CLOUGH No further questions Your Honor  
 (19) THE COURT Mr Fortier did you have any questions?  
 (20) MR FORTIER I have no questions of Mr Rosenthal  
 (21) Your Honor  
 (22) THE COURT Mr Rosenthal you can step down Thank  
 (23) you very much  
 (24) I ll let the jury go for the day Remember don t talk  
 (25) about the case with anybody Including your fellow jurors /

Vol 14 2431

- (1) don t form of express any opinion on it until it s submitted to  
 (2) you for deliberation  
 (3) I d like you to do me a favor today would you wait in the  
 (4) jury room I need to talk to at least one of you once we  
 (5) recess I ll be right there All right?  
 (6) (Jury out at 1 25 p m )  
 (7) THE COURT Counsel if you have something to discuss  
 (8) on the record I ll be happy to do it with you but I m going  
 (9) to let Mr Stapleton go and I m also going to ask Ms Swangler  
 (10) - I just wanted to remember exactly what her situation is  
 (11) And I may just briefly talk to Mr Sheldon too to find out  
 (12) what his situation is before - so that I can let you know Is  
 (13) that all right if I do that off the record?  
 (14) MR DIAMOND That s fine  
 (15) MR STOLL That s fine  
 (16) THE COURT Do you want to discuss anything on the  
 (17) record?  
 (18) MR DIAMOND Just in terms of pending and unresolved  
 (19) matters there is a motion with respect to the headline  
 (20) exhibits  
 (21) THE COURT That s true  
 (22) MR DIAMOND For use in connection with Dr Mundy  
 (23) The plaintiffs filed a responsive brief We could argue that  
 (24) at any time I suspect  
 (25) THE COURT When does it have to be argued in order to

Vol 14 2432

- (1) get a ruling?  
 (2) MR PETUMENOS It is late in the direct of the  
 (3) witness that we are calling after Dr - after Mr Bush  
 (4) THE COURT Well Mr Bush is going to be on the stand  
 (5) forever isn't he?  
 (6) MR PETUMENOS Is that directed at me Judge?  
 (7) THE COURT Well no I was actually thinking take  
 (8) five days with a witness on direct they probably feel it's  
 (9) necessary to take five days on cross so it refers to  
 (10) everybody  
 (11) MR PETUMENOS I have about ten minutes of direct  
 (12) THE COURT Excuse me  
 (13) MR PETUMENOS I have about ten minutes left of  
 (14) Mr Bush's direct  
 (15) THE COURT I tell you what as to the matter you  
 (16) wanted to discuss at side bar I'll be happy to come into court  
 (17) and do that but I have to talk to these jurors first  
 (18) MR DIAMOND Okay  
 (19) THE CLERK Please rise this court stands in  
 (20) recess  
 (21) (Recess from 1 27 p m to 1 35 p m )  
 (22) THE CLERK Please rise this court now resumes its  
 (23) session Please be seated  
 (24) THE COURT We're on the record and the jury is not  
 (25) present

Vol 14 2433

- (1) Counsel I've let Mr Stapleton go I've also talked to  
 (2) Mr Sheldon and he says he has no significant problems So  
 (3) that's one concern that I think may be allayed a little bit  
 (4) Ms Swangler is going for a week long reunion as you know  
 (5) from the jury selection We get down to that end and she's the  
 (6) twelfth juror we're recessing for a week and then - I've  
 (7) already told her that that could happen and she said fine with  
 (8) her So I mean I'm going to - that's what happens in these  
 (9) cases At the end you just really hold them in and that's  
 (10) what I'm going to have to do  
 (11) MR STOLL Is her week the 24th Your Honor?  
 (12) THE COURT The 16th  
 (13) MR STOLL Oh the 16th  
 (14) THE COURT The 16th but it's the 16th through the  
 (15) 23rd then she starts school on the 29th and that would pose a  
 (16) whole new scheduling problem which I'm flexible enough to  
 (17) work around if I have to My suggestion to both of you is take  
 (18) these things into consideration and perhaps shorten your  
 (19) presentation a bit  
 (20) MR CLOUGH I tried to cut back on that last one  
 (21) Your Honor  
 (22) THE COURT I noticed that counsel  
 (23) All right so that's the situation that we have now with  
 (24) the jurors  
 (25) Was there anything else put on the record?

Vol 14 2434

- (1) MR DIAMOND We were going to - we were going to put  
 (2) our understanding on the record and we can do that in open  
 (3) court  
 (4) THE COURT All right  
 (5) MR DIAMOND The agreement that the defendants have  
 (6) reached with all of the municipalities is that in exchange for  
 (7) a payment of \$700,000 Exxon will receive - Exxon and Exxon  
 (8) Shipping will receive a general release from those defendants  
 (9) for all claims -  
 (10) MR STOLL Those plaintiffs  
 (11) MR DIAMOND I'll sorry those plaintiffs save and  
 (12) except those claims currently being litigated in this court  
 (13) namely the claims of the four villages in Kodiak Island  
 (14) Borough To the extent that an appeal is successfully  
 (15) prosecuted in this Court's summary judgment on diverted  
 (16) services and should that claim go to trial and result in a  
 (17) verdict in favor of the plaintiffs Exxon will receive a credit  
 (18) applied to any damage award before application of attorneys  
 (19) fees and statutory interests of \$175,000 and I believe those  
 (20) are the complete terms that we have agreed upon  
 (21) MR STOLL That's correct Your Honor  
 (22) THE COURT Counsel how many of your witnesses does  
 (23) that drop out of the case or how many - how many days of  
 (24) presentation I suppose  
 (25) MR STOLL I think it dropped out four days of - I

Vol 14 2435

- (1) mean four days We're still - we're still working with this  
 (2) Your Honor so when I said that we had nine more days we  
 (3) were  
 (4) hoping it'll be shorter  
 (5) THE COURT Yeah I am too I am too Your  
 (6) estimate that had already taken out the time that you would  
 (7) have taken to counter those claims  
 (8) MR DIAMOND As Mr Stoll has frequently reminded me  
 (9) I didn't have a lot of time budgeted to counter those claims  
 (10) We had one expert who was going to deal with the accounting  
 (11) claims and basically cross-examination of his witnesses so it  
 (12) does not reduce our trial estimate appreciably  
 (13) THE COURT Okay All right Is there anything  
 (14) else?  
 (15) MR DIAMOND The only other issue is resolution of  
 (16) the - the outstanding motion with respect to the headline  
 (17) documents and media evidence I think parties preference  
 (18) obviously subject to your ruling is to go along is to do  
 (19) that now if you've had an opportunity to read their papers  
 (20) which came in today  
 (21) THE COURT I haven't had an opportunity to skim it  
 (22) I'd like a little more time just to review it one more time I  
 (23) have a domestic case calendar call at 2:00 and another at  
 (24) 2:30 I'd be done with that at 3:00 I could be ready for you  
 (25) at 3:30 You can argue it at 3:30 Is that acceptable?  
 (26) MR McCALLION Yes judge

Vol 14 2436

- (1) MR DIAMOND Yes
- (2) THE COURT That s it for today
- (3) MR DIAMOND We were trying to work schedules around
- (4) for tomorrow There is a possibility that we will complete
- (5) Mr Mundy s direct examination shortly before 1 30 If that
- (6) happens I requested of Mr Petumenos that we postpone the
- (7) commencement of the cross examination until Monday morning
- (8) because of the way the straws got drawn last week
- (9) Mr Oppenheimer also has that cross examination and if he
- (10) cross examines Mr Bush for two to two and a half hours
- (11) tomorrow it - it probably is cruel and unusual punishment to
- (12) make him start again with another expert in the late morning
- (13) I think there s no objection from the plaintiffs if we do
- (14) that
- (15) MR PETUMENOS I have no objection if it s a short
- (16) period of time but -
- (17) THE COURT The general rule would be if it s after
- (18) 12 00 I ll probably let you do that If it s before 12 00 I
- (19) probably won t
- (20) MR PETUMENOS That was exactly my position
- (21) THE COURT I anticipated you counsel
- (22) MR PETUMENOS A lawyer for cross examination it
- (23) seems like
- (24) MR DIAMOND You don t want to encourage an overly
- (25) lengthy cross examination of Mr Bush just to make sure we get

Vol 14 2437

- (1) to 12 00
- (2) THE COURT No comment
- (3) MR DIAMOND We ll see you at 3 30
- (4) THE COURT Thanks
- (5) THE CLERK Please rise This court stands in
- (6) recess
- (7) (Recess at 1 42 p m)

Vol 14 2438

JULY 15, 1994

Please find attached pages 43 & 44 of the Condensed State Trial Transcript for Thursday, 7/14/94. These pages were missing from the original copy provided last evening

Also, you will not find a "page 42" because it is blank.

Sorry for the inconvenience.

Sheila

A handwritten signature in black ink, consisting of several overlapping loops and a long vertical stroke extending downwards.

(1) PROCEEDINGS  
 (2) (Call to Order of the Court)  
 (3) THE COURT Good morning the jury is not present not  
 (4) here counsel They are not upstairs yet so I figured I'd take  
 (5) the proceedings out of the presence of the jury and hope that  
 (6) they'll be here within a few minutes  
 (7) MR PETUMENOS All right Judge I'm only - I'm  
 (8) aware of the fact that the Court likes not to take matters if  
 (9) the jury is waiting but this matter that I want to take up  
 (10) relates to this witness which presumably will be off the stand  
 (11) mid morning  
 (12) I wanted the Court to be aware of what is missing from the  
 (13) testimony as a result of objections made We didn't have a  
 (14) chance to discuss it fully  
 (15) Could I have 1155 please up on the Judge's monitor?  
 (16) We have called witnesses in the form of Dr Peterson and  
 (17) others relating to the harm to the biota that that is caused  
 (18) by certain kinds of cleanup and that evidence is in the  
 (19) record This schematic which was before the jury when the  
 (20) objection was raised is a geologist's schematic attempting to  
 (21) show the jury what oil is left by what kinds of cleanup  
 (22) As the Court will recall there was some testimony about  
 (23) the cost benefit that goes into any clean up decision and the  
 (24) fact that it was - Dr Peterson described the worst of both  
 (25) worlds the two bad alternatives leaving it there or

(1) intervening in a way that would - that could be harmful What  
 (2) the geologist's information provides is for the different kinds  
 (3) of cleanup what kind of oil is removed which is the physical  
 (4) process that results  
 (5) The first schematic discusses protected and uncleaned The  
 (6) second one discusses the different kinds of what he calls  
 (7) moderate exposure or different kinds of cleaning and what kind  
 (8) of oil that leaves in the environment And the last one is the  
 (9) very aggressive or the tilling of the soil the plowing under  
 (10) of the beach and so forth which takes the most oil out of the  
 (11) environment but also has the most disruption to the beaches  
 (12) That was the point that I have not got into evidence yet  
 (13) that I wanted to get from his - from his expertise which is  
 (14) that there is - there is a weighing between the folks that try  
 (15) and figure out what the biota consequences are versus how  
 (16) much  
 (17) oil is removed and his opinion that - and he has an opinion  
 (18) which I think he is qualified to give that such a substantial  
 (19) amount of oil remains in part two the middle frame there that  
 (20) it doesn't make sense to him to do those sorts of cleanup based  
 (21) upon the amount of oil that it leaves  
 (22) It's the other side of the cost benefit analysis That is  
 (23) testimony that a geologist or beach morphology which is what  
 (24) Mr Bush is He is the one that will testify how much oil  
 (25) remains behind when that technique is used (cannot the) I  
 think we've more than met the test under Wilson because as  
 the

Vol 16 2444

- (1) Court knows there's a very liberal test in the State of
- (2) Alaska more liberal than the federal court when a witness can
- (3) testify on a subject area and the expert can also rely upon his
- (4) team. And in this case the evidence is clear that there's a
- (5) whole - there's a whole project there's a whole unit from ICF
- (6) which is a think tank. It's interdisciplinary that on his
- (7) team when he did the advice to Chugach when he did his
- (8) special investigating indeed - which is what this relates to
- (9) a specific study to the effect of treatment on beaches - that
- (10) he consulted with these other disciplines in determining the
- (11) cost benefit analysis
- (12) I am mindful of the Court's admonition yesterday to try to
- (13) shorten our case and we could I suppose divide this up and
- (14) call - and they're on the witness list and call the biologist
- (15) that was on this team and say I worked with Mr. Bush and I
- (16) came to the conclusions that this form of treatment given the
- (17) amount of oil it leaves is a bad idea
- (18) I'm trying my best to remove from the witness list that
- (19) biologist and not call him if I can possibly get away with it
- (20) and I think under the Wilson test I've met it that he can
- (21) appreciably help the jury and knows more than the average
- (22) person about this topic. And I believe the record is such and
- (23) we can supplement it if you wish that in prior work as well
- (24) as in this case he has dealt with clean up problems on the
- (25) shoreline has advised clients about that and one of the

Vol 16 2445

- (1) components of any decision to be made upon how to intervene
- (2) on
- (3) a beach has to be how much oil will be removed and I think
- (4) that that portion of the testimony should be permitted and I'd
- (5) like to go back and pick it up
- (6) THE COURT Mr. Oppenheimer?
- (7) MR. OPPENHEIMER Your Honor procedural suggestion
- (8) There are certain arguments I would make about this that I
- (9) would just as soon not make in front of the witness prior to
- (10) cross. I'm not asking Mr. Bush leave. I do have a suggestion
- (11) which is I don't think it would take much more time if we
- (12) revisited this at the end of the cross and I think my comments
- (13) would perhaps make more sense. I think it might benefit the
- (14) Court to have some more factual information
- (15) THE COURT To have more factual?
- (16) MR. OPPENHEIMER To have a little bit more factual
- (17) information which I think may be developed
- (18) THE COURT I can't - I have to -
- (19) MR. OPPENHEIMER Let me address it on the basis of
- (20) this
- (21) THE COURT If you want me to exclude the witness I
- (22) will because I can't understand - I won't be able to
- (23) understand why you want to do that unless you tell me why all
- (24) right?
- (25) MR. OPPENHEIMER Your Honor this - this map

Vol 16 2446

- (1) at least through its title to suggest that that is oil which
- (2) typically remains after cleaning processes and the witness
- (3) doesn't have a foundation for that
- (4) And secondarily it is a - it amounts to an opinion
- (5) certainly when it's introduced as to the efficacy of various
- (6) cleaning methods and that is simply not something this witness
- (7) can speak to
- (8) I would also add that I don't believe this is going to
- (9) have - I don't think this goes to the merits but I don't
- (10) think this is going to have an effect on whether Dr. Bakus
- (11) testifies or not. He's still on the list. I think he will be
- (12) testifying. I don't think we're in a situation where - though
- (13) I'd be happy to discuss it with counsel - where we could
- (14) really sit down and shorten things up. I frankly would be
- (15) prepared to try to work something out maybe changing a few of
- (16) the title pieces of getting a stipulation for the basis of its
- (17) admissibility
- (18) If we could really shorten the trial by limiting a witness
- (19) - that's the first I've heard of that. On its face - in its
- (20) current format on the face it looks like a body of testimony
- (21) about this witness isn't competent to give about what oil
- (22) remains after various kinds of cleanup procedures and I just
- (23) don't believe he's in a position to give that kind of
- (24) testimony
- (25) THE COURT You know one of the problems I have here

Vol 16 2447

- (1) counsel is this was - the objections made some time ago
- (2) The words out of your mouth might be different than the words
- (3) out of the witness' mouth which always happens if you want to
- (4) make an offer of proof. It's going to have to be through him
- (5) You can put him on the stand and I'll listen to the testimony
- (6) and see whether or not in my view it's admissible
- (7) MR. OPPENHEIMER Your Honor I would request that
- (8) we - that we not do that. What I would - what I'd rather not
- (9) do frankly is start early with cross examination. I think
- (10) there are some questions that legitimately go to Mr. Bush's
- (11) experience in the field that I'd like to get into in due course
- (12) of cross examination and frankly I'd not do it through
- (13) repeated process of cumulative offer of proof
- (14) I'm going to be left in an uncomfortable situation of not
- (15) wanting to get in position of doing cross outside of the
- (16) presence of the jury. I renew my request. I realize it is
- (17) inconvenient but I think the Court would better understand
- (18) some of my comments after cross with respect to this issue
- (19) MR. PETUMENOS Judge I don't think that's proper
- (20) procedure. The proper procedure is for me to make an offer of
- (21) proof and if he can attack the offer of proof at the time that
- (22) I make it during my direct he needs to do so. And if he -
- (23) and at this point I believe the state of the record is - is that
- (24) he has not and in the absence of - of valid objection I
- (25) think the Wilson case controls. And my offer of proof is

Vol 16 2448

(1) adequate under Wilson and if he wishes to undercut the weight  
 (2) of the testimony that he believes it is - the opinion is  
 (3) entitled to that's one thing but we're not talking about  
 (4) admissibility We're not talking about whether the jury gets  
 (5) to hear it at all and under Wilson if the expert can  
 (6) appreciably help the jury and knows more than the average  
 (7) person on the subject areas - as this witness clearly does -  
 (8) it's entitled to be admitted and thereafter if he can reduce  
 (9) the weight of the testimony he's entitled to do so but I'm  
 (10) entitled to a direct that is complete that is organized and  
 (11) that redirect is supposed to be for rehabilitation on  
 (12) cross examination and nothing else  
 (13) MR OPPENHEIMER Your Honor as an attempt to  
 (14) compromise the situation I think Mr. Petumenos is right that  
 (15) he's probably allowed to have his cross proceed uninterrupted  
 (16) Would the Court entertain a motion to exclude the evidence if  
 (17) it's entered now if I can make a showing afterwards? And I  
 (18) would request though that the title be deleted because I  
 (19) think in talking about clean up procedures it's very  
 (20) misleading to talk about a typical description residual of  
 (21) oil It's making a different point  
 (22) THE COURT Well I'd consider that I think I'd have  
 (23) to listen to the testimony and figure out whether or not the  
 (24) exhibit had to be changed or whether it was simply - simply  
 (25) the witness version of what happened as opposed to yours  
 and

Vol 16 2449

(1) I'm sure your exhibits say things that they don't want in their  
 (2) titles  
 (3) MR OPPENHEIMER I hope so  
 (4) THE COURT Yeah Are you suggesting counsel that  
 (5) you'll simply bypass the objection for now?  
 (6) MR OPPENHEIMER If I have an opportunity if it's  
 (7) appropriate to raise - it may not be necessary after the cross  
 (8) to raise it after the cross  
 (9) THE COURT Yeah that's true  
 (10) MR OPPENHEIMER That would be a procedure acceptable  
 (11) to me  
 (12) THE COURT So the jury gets to hear it?  
 (13) MR OPPENHEIMER Well they've already seen this  
 (14) THE COURT Right I know that You know that's the  
 (15) problem I'm having problems remembering the specific  
 (16) objection because it was so -  
 (17) MR OPPENHEIMER It was a foundation objection Your  
 (18) Honor It went to his status as an expert  
 (19) THE COURT Right so -  
 (20) MR OPPENHEIMER I was quite proud of it It was one  
 (21) of few I had sustained so I cherished it  
 (22) MR STOLL They have a score card over there Your  
 (23) Honor  
 (24) MR PETUMENOS That's part of the story counsel It  
 (25) was sustained when we began talking about the content of the

Vol 16 2450

(1) exhibit The foundation objection was not made to the title -  
 (2) you'll see this in the transcript - until we were well into  
 (3) it  
 (4) THE COURT It was to a particular question right  
 (5) MR PETUMENOS Right So this business about the  
 (6) title not being right is I think a little late  
 (7) THE COURT Well it's -  
 (8) MR OPPENHEIMER It hasn't been moved into evidence  
 (9) THE COURT Just like you counsel there's been time  
 (10) to think in between  
 (11) MR PETUMENOS That usually - if I have time to  
 (12) think it usually -  
 (13) MR OPPENHEIMER Your Honor if that procedure is  
 (14) acceptable and if I have no motion to bring to the Court I  
 (15) won't after cross  
 (16) THE COURT That's fine Do we have a jury?  
 (17) MR DIAMOND Your Honor before you do that -  
 (18) MR PETUMENOS I have one more thing  
 (19) MR DIAMOND Before you do that Mr. Petumenos has  
 (20) one more thing  
 (21) MR PETUMENOS I have some other sample jars as I  
 (22) told the Court in federal court I was hopeful that by the  
 (23) time we got to the end of this testimony that perhaps I could  
 (24) have them but they are in the jury room in deliberations  
 (25) locked up I don't dare go to Judge Holland and ask him to

Vol 16 2451

(1) remove some jars of oil while the jury's locked up  
 (2) We're working with counsel If I have additional samples  
 (3) to bring in and show to the jury some of our best samples are  
 (4) there I hope not to have to bring back Mr. Bush to testify to  
 (5) their foundation and authenticity and simply be able to get  
 (6) them in to the jury in the same fashion that we have before  
 (7) The reason for that is these samples that we have left to  
 (8) us are not from some of the areas and from some of the times  
 (9) that are - that really show what the oil is like The ones we  
 (10) have left were later in time farther down the coast things  
 (11) like that and I have - I have some additional samples in  
 (12) other words I want for the jury to be able to see handle and  
 (13) so forth  
 (14) THE COURT So what do you want me to do?  
 (15) MR PETUMENOS I want to put on the record that it's  
 (16) not necessary for me to call Mr. Bush back to testify to the  
 (17) foundation and authenticity of those samples that I cannot  
 (18) bring into court physically because they're in the jury in  
 (19) federal court  
 (20) MR OPPENHEIMER We - we may have - we may have a  
 (21) misunderstanding because I was under the impression that we  
 (22) had spoke about those samples which have already been  
 (23) provided  
 (24) to the jury This may be obviated by colloquy with counsel  
 (25) THE COURT Talk about it That's fair enough  
 MR DIAMOND One final matter that has not been

Vol 16 2452

- (1) resolved by colloquy  
 (2) Earlier this week Mr Fortier amended his exhibit list  
 (3) designating a new exhibit which was labeled Sediment Samples  
 (4) We sent somebody - actually his partner was good enough to  
 (5) bring the samples over to us yesterday and it turned out It s  
 (6) not one sediment sample there are 35 samples that ostensibly  
 (7) were collected by a witness scheduled to testify today Gail  
 (8) Evanoff  
 (9) We reserve our right to object to the admission of those  
 (10) based on the timing of all of this but we have requested of  
 (11) Mr Fortier to produce those samples so that we can take  
 (12) specimens and have it analyzed He is agreeable to doing  
 (13) that  
 (14) Our difference of opinion concerns the work product  
 (15) privilege and Rule 34 We would like an agreement that - and  
 (16) an order from this Court that I need to share with him the  
 (17) results of the analysis that I perform whether or not I use  
 (18) them in court It s my view that that s my work product If  
 (19) we do use those tests with the witnesses obviously he s  
 (20) entitled to all the backup of the analyses but that decision  
 (21) hasn t been made yet and I need not to have to do that in  
 (22) advance At least that s my view I think we need a decision  
 (23) on that  
 (24) THE COURT I ll give you the decision The decision  
 (25) is that you don t - if you re not going to use the material

Vol 16 2453

- (1) you don t have to provide the results That s the decision for  
 (2) now But I think there s a secondary question and that is if  
 (3) they provided them to you and you don t use - and you do test  
 (4) them and you don t use the results do they get to say well  
 (5) we gave it to them and you don t see any contrary evidence  
 (6) MR DIAMOND I think that s a risk that a party  
 (7) always takes when it undertakes analysis  
 (8) THE COURT Just as long as you know it s a risk  
 (9) It s a serious risk too  
 (10) MR DIAMOND My eyes are open  
 (11) MR FORTIER Your Honor if I could just a couple  
 (12) other things about the exemplars themselves They re all in  
 (13) jars Each of these tests is in a small mason jar We would  
 (14) like some limitation on the amount of the oil they could take  
 (15) out of each jar I m informed that they just intend to take a  
 (16) little bit but you know I mean we want some in the jar left  
 (17) when we show it to the jury  
 (18) THE COURT You want non destructive testing  
 (19) MR FORTIER They can destroy whatever they take  
 (20) MR DIAMOND It clearly will be non destructive I am  
 (21) told Very small amounts now I didn t ask how many  
 (22) millimeters but the folks I talked to said we re talking about  
 (23) very small amounts of this  
 (24) THE COURT Fine  
 (25) MR DIAMOND And if I could have agreement that those

Vol 16 2454

- (1) would be produced today we will then be in a position to  
 (2) hopefully get the results back before the trial is over  
 (3) MR FORTIER There s no problem with that Your  
 (4) Honor I m advised though that there should be no more than  
 (5) four grams - 40 grams - no more than 40 grams You Honor  
 (6) taken from each jar  
 (7) THE COURT You can work that out  
 (8) MR DIAMOND We have an expert telling us and I m  
 (9) sure he s right  
 (10) THE COURT Let the lawyers take the samples so you  
 (11) can get your hands dirty  
 (12) MR FORTIER We did bring over Rubber gloves for  
 (13) them yesterday but they didn t want them  
 (14) THE COURT It s going to take some time to get the  
 (15) jury in here I m going to go down and get them okay?  
 (16) THE CLERK Please rise This court stands in  
 (17) recess  
 (18) (Recess time 8 52 a m )  
 (19) (Jury in at 9 12 a m )  
 (20) THE CLERK This court now resumes its session  
 (21) Please be seated  
 (22) THE COURT Good morning everybody  
 (23) DIRECT EXAMINATION OF JAMES G BUSH (Resumed)  
 (24) BY MR PETUMENOS  
 (25) Q Can I see Exhibit 1155 please?

Vol 16 2455

- (1) Mr Bush this jury has heard some testimony from other  
 (2) witnesses in the ecological biological area regarding the  
 (3) decisions being made about treatment and how it can affect the  
 (4) biota I don t want to ask you about that part of the  
 (5) question which is what can happen to the biota with certain  
 (6) kinds of treatment What I do want to ask you about is with  
 (7) respect to the hot water wash and some of those minor  
 (8) mechanical means of treatment  
 (9) What you can tell us as a geologist relating to how much  
 (10) oil is left behind in the subsurface when those treatments are  
 (11) applied? And if you could do that using Exhibit 1155 please  
 (12) A Yes Well Exhibit 1155 is a simplified illustration that  
 (13) provides general insight into the kinds of things that can  
 (14) happen after certain remedial actions that were taken on the  
 (15) shorelines and it generalizes and it s principally -  
 (16) principally applies to the gravel type or mixed sand and gravel  
 (17) type of shorelines  
 (18) Q Can you - let me see if I can get this middle one up here  
 (19) which is the one I wanted you to talk about in particular As  
 (20) I understand it - or what does this schematic intend to  
 (21) represent to the jury with respect to such cleaning mechanisms  
 (22) as washing and light mechanical work?  
 (23) A For example if the shoreline in this category was  
 (24) initially heavily oiled had minor tilling may have happened  
 (25) in certain areas by mechanical equipment backhoe perhaps or

Vol 16 2456

(1) small bobcat something along those lines or piece of  
 (2) equipment with rippers in the beach the margins or sites of  
 (3) most of the gravel beaches are usually transitional  
 (4) environments into bedrock for example or rocky headlands  
 In  
 (5) those areas certain portions of the equipment for example the  
 (6) rippers or backhoe blade are less effective than they are in  
 (7) areas of central portions of the beach for example where it s  
 (8) more deeply laden with sediment  
 (9) So if the area is fairly uniformly oiled to begin with as  
 (10) you see in the frame of this illustration to the left there ll  
 (11) be places where the equipment has intermittent effectiveness  
 (12) and it misses certain areas either due to the inability of the  
 (13) equipment to work in some areas because of bedrock and large  
 (14) rocks creating sort of a cleaning shadow instead of a wave  
 (15) shadow or it may be due to just the design of the equipment  
 (16) itself or the depth of penetration As a result you have  
 (17) partial removal of material or partial excavation and  
 (18) incomplete - incomplete effectiveness  
 (19) Q So you will have whatever the effects that the biologist  
 (20) will tell us happened when this kind of mechanism is used plus  
 (21) you will have a fair amount of oil in the subsurface remaining?  
 (22) THE COURT Don t answer  
 (23) MR OPPENHEIMER Your Honor objection on two  
 (24) grounds  
 (25) One he s not competent to tell us definitely there s no

Vol 16 2458

(1) are heterogeneous A piece of equipment generally is not And  
 (2) so as it encounters different environments along the  
 (3) shorelines it s going to be more or less effective in certain  
 (4) areas The amount of oil that s left depends upon the  
 (5) relationship of what the equipment does the nature of the  
 (6) shoreline type the depth of the oil to begin with For  
 (7) example this thing might be - might have depths in the order  
 (8) of penetration of 40 centimeters in some locations If  
 (9) clean up exercises excavate sediments to the depth of 20  
 (10) centimeters then they re partially effective What this is  
 (11) indicating is what we observed in certain areas So it depicts  
 (12) that and that can be extrapolated to other sites to the extent  
 (13) the sites are comparable  
 (14) Q So you actually observed sites that had been subject to  
 (15) this kind of treatment and you actually observed situations  
 (16) that had oil in the subsurface as depicted in this chart?  
 (17) A That s correct  
 (18) Q And when we talk about the treatment techniques they from  
 (19) a geological standpoint certain techniques work best with  
 (20) certain kinds of beaches Is that the point you ve been trying  
 (21) to make?  
 (22) A I think you have to define the word techniques again  
 (23) Generally speaking that s the idea Obviously certain types  
 (24) of equipment would be more effective in certain areas the  
 (25) treatment programs are designed that way

Vol 16 2457

(1) foundation for testimony about how a biologist will interpret  
 (2) this data with respect to species and I would make the  
 (3) objection as to the caption going to the same issue where it  
 (4) talks about the effect on the species  
 (5) And secondly this is - this I believe graph is not  
 (6) intended to depict the amount of oil which remains on some sort  
 (7) of typical basis I don t believe Mr Bush has testified to  
 (8) that so it misstates his -  
 (9) MR PETUMENOS I waive argument  
 (10) THE COURT The objection s overruled  
 (11) MR PETUMENOS You can answer the question  
 (12) Mr Bush  
 (13) THE WITNESS Please restate the question  
 (14) BY MR PETUMENOS  
 (15) Q The jury will understand from other testimony whatever  
 (16) effects these treatment techniques have on the biota or on the  
 (17) creatures but in addition to whatever effects they might have  
 (18) what does this schematic depict with respect to the amount of  
 (19) hydrocarbons it leaves in the system?  
 (20) A Again for - for shoreline that s oiled heavily oiled to  
 (21) begin with as it is indicated in the illustration to the left  
 (22) it s really the depth of penetration for the equipment is more  
 (23) the determining factor for example and the amenity of the  
 (24) shoreline type to that particular type of treatment  
 (25) I guess the point to be made here is that the shorelines

Vol 16 2459

(1) Q The beaches themselves let me just say they re  
 (2) heterogeneous  
 (3) A Heterogeneous  
 (4) Q Does that mean - does that mean they re not across a given  
 (5) stretch of beach you can t find the ideal beach for different  
 (6) kind of treatment very often?  
 (7) A No You may find ideal beach but across a section of  
 (8) beach there may be variations in and out of that range of  
 (9) uniformity  
 (10) Q Now we had some testimony about finding oil and the  
 (11) trained eye and all that yesterday Could you comment for the  
 (12) jury on whether in your investigations throughout Prince  
 (13) William Sound the lower Kenai and Kodiak whether there  
 (14) were - whether a - the oiling that you found and observed was  
 (15) obvious enough that an untrained person would know that the  
 (16) oil was on their property?  
 (17) A You re asking me can untrained people find oil on the  
 (18) shorelines?  
 (19) Q Yes or does it take someone like you to - with your  
 (20) degrees and expertise to find it on the property?  
 (21) A Well in fact we were directed towards the oil by other  
 (22) persons during the 94 field program so it does not require a  
 (23) degree or any special expertise to find the oil Obviously a  
 (24) little common sense is required but you don t have to be an  
 (25) expert

Vol 16 2460

- (1) Q What kind of people were directing you to the oil were any  
 (2) of them property owners?  
 (3) A Yes  
 (4) Q And the other thing I wanted you to comment on you were in  
 (5) the Windy Bay area in 1994?  
 (6) A Yes we were  
 (7) Q And did you – what did you find when you went to those  
 (8) areas in 1994 in the Kenai Fiords – and Windy Bay is in the  
 (9) Kenai Fiords?  
 (10) A Well southern end of the Kenai Fiords southwest in the  
 (11) lower Kenai or upper end of the peninsula depends how you  
 (12) look  
 (13) at it but yes my recollection is we stopped at two sites in  
 (14) the Windy Bay area and found oil residues in a rebel slope at  
 (15) one site and then along a small – I'd say relatively protected  
 (16) gravel beach in another area  
 (17) Q And then lastly have you had the opportunity to review  
 (18) time lapse photography of wave energy and – and the status of  
 (19) beaches over a long period of time on film?  
 (20) A I've reviewed some I haven't reviewed extensive amounts  
 (21) of those but I have seen some of the photography yes  
 (22) Q Could you comment for the jury on whether or not this –  
 (23) one of the things I wanted to ask you is you came back year  
 (24) after year and found the presence of oil despite the fact that  
 (25) there have been storms over time?  
 (26) A That's correct

Vol 16 2461

- (1) Q And could you comment upon how this time lapse  
 (2) photography  
 (3) whether or not it is – it depicts a necessarily accurate  
 (4) picture of how the beaches rework themselves with respect to  
 (5) the persistence of oil?  
 (6) A Well a photograph is a photograph Usually they're pretty  
 (7) accurate providing the camera hasn't been moved or  
 (8) something  
 (9) like that But – but in high speed films or in time lapse  
 (10) photography that's speeded up so you can see it it can be  
 (11) misleading and I think you need to look at it carefully And  
 (12) to interpret the results I think you need to have some  
 (13) understanding about the different environments in the shoreline  
 (14) to be able to distinguish berms and mobile portions of the  
 (15) beach that are expected to be mobile from those that are more  
 (16) more stable or less less mobile  
 (17) Q Are some of the things that you see moving around rapidly  
 (18) in a time lapse photography scenario thing that would  
 (19) necessarily affect the persistence of oil on a beach like a  
 (20) log or something like that?  
 (21) A Well obviously if you have an oiled storm berm and the  
 (22) storm berm is reworked excessively there's going to be a lot  
 (23) of oil removal and a lot of mechanical agitation Something's  
 (24) going to happen from that but the sediments beneath the storm  
 (25) berm or other vicinity of the beach more stable less reworked  
 (26) and upper surface of those can be reworked without changing the  
 (27) lower surface and oil will be retained in the lower surface

Vol 16 2462

- (1) That's exactly what we observed  
 (2) Well this previous exhibit for example also refers to  
 (3) sites that have various levels of agitation to shoreline those  
 (4) are – agitation or beach turnover doesn't happen deep enough  
 (5) the oil remains  
 (6) Q And finally before we turn to your final conclusion when  
 (7) oil remains in the subsurface is it out of sight out of mind  
 (8) something we don't have to worry about or does it become –  
 (9) does it come back into the environment over time? Could you  
 (10) explain to the jury how –  
 (11) A Well yes I think we – we examined some sites for  
 (12) example at Squirrel Island where sheen has been released  
 (13) There are other sites where oil is in the subsurface that with  
 (14) the tidal action we have 10 12 15 sometimes 18 foot tidal  
 (15) ranges With winds and storm activity the tidal range can be  
 (16) enhanced so to the extent that you have that kind of hydraulic  
 (17) head flushing up and down a shoreline even though the oil is  
 (18) at depth small amounts of sheening small amounts of material  
 (19) are released through these processes During the storms  
 (20) during beach turnover each time it scours it more deeply and  
 (21) begins to affect and remove the oil that's at depth it's  
 (22) brought back into the environment  
 (23) Q All right Now in making your conclusions about  
 (24) persistence let me make sure I understand what it is that you  
 (25) have considered Did you consider the composition of the beach

Vol 16 2463

- (1) involved?  
 (2) A Yes we did  
 (3) Q Did you consider the exposure to the ocean that the beach  
 (4) had?  
 (5) A Yes  
 (6) Q And did you consider the degree of oiling that is how  
 (7) much oil was present on the beach?  
 (8) A As presented in – in available data bases mapping data  
 (9) bases that's correct we did  
 (10) Q All right Could we see Exhibit Number 1280 please?  
 (11) Now exhibit 1280 in the first column talks about what  
 (12) factor that we're talking about where it says marshes  
 (13) A I'm sorry it talks about the beach factor yes It talks  
 (14) about the beach type  
 (15) Q And then you have here three different kinds of exposure to  
 (16) oil?  
 (17) A That's correct  
 (18) Q All right And could you explain then – we'll take  
 (19) moderate oiling here We're at moderate oiling in a marsh  
 (20) What you have done with this little graphic that we see for  
 (21) your final conclusions on the persistence of oil?  
 (22) A Yes this – this graph is an indication of a term we'll  
 (23) call recovery You can see that – that it takes for example  
 (24) in this particular graph we've – we've achieved a – well  
 (25) I'm sorry these graphs have been changed I'm used to  
 (26) looking

Vol 16 2464

- (1) at these in terms of recovery These graphs indicate the Y  
 (2) axis the percentages  
 (3) Q The Y axis meaning the vertical one?  
 (4) A Yes The percentages indicate impact residual impact from  
 (5) the contamination So at the top of the Y axis the vertical  
 (6) axis we have a hundred percent which indicates right  
 (7) immediately after the spill and at 75 percent some recovery  
 (8) 25 percent recovery in that sense 50 percent is at five  
 (9) years  
 (10) We have a dashed line there indicating that we put a break  
 (11) in slope there where we believe that the final stages of  
 (12) recover require a longer period of time I think the point to  
 (13) make on this is that the initial few years of recovery from an  
 (14) oil spill are rapid There s a tremendous amount of oil on the  
 (15) shorelines The percentage of removal of that material is  
 (16) rapid and the onset of recovery is rapid from the immediate  
 (17) mortality effect  
 (18) The final stages however taper off on these long tails  
 (19) and that refers to removing oil through wave shadows the oil  
 (20) that is still buried at depth and the recovery of species that  
 (21) take several years to rebound  
 (22) Q All right And in the case of marshes have we selected in  
 (23) marshes the kind of beach environment that has the longest  
 (24) persistence according to your conclusions as opposed to  
 (25) other beach types?

Vol 16 2466

- (1) have here in exhibit 1275?  
 (2) A These are sheltered rocky shores Again this refers to  
 (3) the classification that was devised by NOAA some time ago I  
 (4) might point out that Larry Thebeau is one of the field mapping  
 (5) team members for NOAA when they mapped the Shelikof  
 Straits  
 (6) Alaska Peninsula coastlines and at that time there were  
 (7) certain aspects of sheltered rocky shores and gravel beaches  
 (8) that weren t recognized  
 (9) More recently the same firm that works for NOAA who  
 (10) devised this process has recommended subdivided sheltered  
 (11) rocky shores into more or less two sensitive - a more  
 (12) sensitive category and a less sensitive category That s still  
 (13) in the process of investigation  
 (14) Q Now could we split the screen please and put up exhibit  
 (15) 1276?  
 (16) 1276 that we see is called exposed tidal flats?  
 (17) A That s correct  
 (18) Q Now the term exposed and tidal flats the first word  
 (19) that we have there is that - and sometimes you use the word  
 (20) as we ll see here in a minute sheltered Does the - I  
 (21) didn t do that did I? Does the term sheltered versus  
 (22) exposed take into account one of the factors that you are -  
 (23) that you were considering for your persistence conclusions?  
 (24) A That s correct The notion of exposure to a large water  
 (25) wave generation area is incorporated in these shoreline types

Vol 16 2465

- (1) A That s correct We should - we should be clear that the  
 (2) beach types that we used here are the 10 NOAA beach types  
 (3) that  
 (4) have been devised through consultants that have worked for  
 NOAA  
 (5) approximately 15 years ago And this is one of those ten  
 (6) types We have then ten of them that we ll be working with  
 (7) so that s correct It is the most sensitive or the highest  
 (8) ranking on the vulnerability index  
 (9) Q What we re going to do in the subsequent exhibits is go  
 (10) through the different kinds of beach types and the persistence  
 (11) estimates or persistence conclusions that you ve made  
 (12) Could I see exhibit 1279 please?  
 (13) What is 1279?  
 (14) A 1279 is the next sensitive shoreline type It s referred  
 (15) to as sheltered tidal flats  
 (16) Q Did you go through the same process in reaching your  
 (17) conclusions?  
 (18) A Yes we did  
 (19) Q Could I see Exhibit 1275 please? And for the jury we  
 (20) have endeavored to go through and place in order in terms of  
 (21) the most sensitive or the longest persistence conclusions to  
 (22) the - the beaches that recovered the most quickly  
 (23) A That s correct  
 (24) Q So we re putting them in those order aren t we?  
 (25) A So far  
 (26) Q So far okay Stop me if I make a mistake What do we

Vol 16 2467

- (1) Q So that we don t just - we don t just consider what kind  
 (2) of beach like a tidal flat or a rocky shore we also consider  
 (3) wave energy?  
 (4) A That s correct yes  
 (5) Q Could we go to the next exhibit please 12 -  
 (6) A Actually before we go to that one we should point out  
 (7) that another modification to the scheme included two types of  
 (8) exposed tidal flats and two estimations of sensitivity in  
 (9) different areas  
 (10) To simplify this whole process we ve left them at this  
 (11) particular location in the vulnerability scheme but also there  
 (12) are other types of tidal flats low biomass types of tidal  
 (13) flats for example or ones that are considered to be - have a  
 (14) different sensitivity different locations and they re  
 (15) positioned differently in the scheme We ve left it here as a  
 (16) matter of convenience  
 (17) Q You ve made even finer distinctions than that is that what  
 (18) you re saying?  
 (19) A We have not made finer distinctions others have  
 (20) Q The next exhibit please 1277  
 (21) What is 1277?  
 (22) A Gravel beaches  
 (23) Q Same story This is a different -  
 (24) A I beg your pardon?  
 (25) Q Same story This is a different kind of beach

Vol 16 2468

- (1) A Major shoreline type primarily cobble boulder beaches  
 (2) very common in Prince William Sound and other impacted areas  
 (3) and generally low in matrix low in sand in comparison to the  
 (4) next category  
 (5) Q Okay Exhibit 1278?  
 (6) A Mixed sand and gravel beaches which of course includes  
 (7) the matrix material as we talked earlier about that that is  
 (8) the difference in permeability or the potential difference in  
 (9) permeability  
 (10) Q Exhibit 1274?  
 (11) A Coarse grain sand beaches  
 (12) Q 1273?  
 (13) A Fine grain sand beaches  
 (14) Q Is that one of the beaches we saw for example down in the  
 (15) Shelikof Straits when we were looking at those photographs?  
 (16) A That s - that is correct  
 (17) Q Exhibit 1272 what is an exposed wave cut platform?  
 (18) A Well that s a - that s another beach type that consists  
 (19) of either bedrock or resistant sediment dominated surface  
 (20) that s been planed off or generally planed off and carved to a  
 (21) gentle slope by wave action and tidal action currents and so  
 (22) forth on which we have typically a veneer of sediment a  
 (23) veneer of sand and gravel  
 (24) Q Exhibit 1271?  
 (25) A These are exposed rocky shores

Vol 16 2469

- (1) Q And the exposed rocky shores are the beaches that are most  
 (2) likely to recover the quickest is that correct?  
 (3) A That s correct  
 (4) Q Now could we add on top please exhibit 1280?  
 (5) If we then were to take exposed rocky shores and light  
 (6) oiling on the bottom and marshes and heavy oiling on the top  
 (7) would the jury then have the two extremes in the conclusion  
 (8) that you ve made for persistence of oil in the nearshore  
 (9) environment?  
 (10) A Yes they would  
 (11) Q Now this information then is this the information then  
 (12) that was turned over to Dr Mundy the land damages appraiser  
 (13) for his use in his calculation of the monetary damages that the  
 (14) jury will hear later in the trial?  
 (15) A Yes this is the information  
 (16) Q Now you ve also prepared some maps called property oiling  
 (17) maps am I right?  
 (18) A That is correct  
 (19) Q Showing the jury 1161 a property oiling map for the  
 (20) entirety of Prince William Sound we ll just let you sit there  
 (21) - and I realize the jury can t see the legend here but we  
 (22) can describe it for them so that they can understand it when  
 (23) they deliberate - but these property oiling maps give the jury  
 (24) a - a picture of the heavy medium and light oiling that we ve  
 (25) seen in your - your persistence conclusions and you ve mapped

Vol 16 2470

- (1) them in each area am I right?  
 (2) A I believe so I can t see the key from here but I believe  
 (3) you ve characterized that correctly  
 (4) Q Do you want to come down and make sure then? Let s be  
 (5) precise  
 (6) A This does it demonstrate the different categories or does  
 (7) it -  
 (8) Q It says heavy oiling medium oiling very light oiling and  
 (9) unsurveyed  
 (10) A You re correct  
 (11) Q It s called property oiling Prince William Sound Alaska?  
 (12) A That s right  
 (13) Q And then we have in exhibit 1306 the same map essentially  
 (14) as Exhibit 1161 but with the western Prince William Sound  
 (15) section blown up Is that what we have for the property  
 (16) oiling?  
 (17) A That is correct That allows the western or what we call  
 (18) the target area of the Sound properties to be more easily  
 (19) seen  
 (20) Q I ll bring it closer just one time to show the jury  
 (21) There s the key and there s the different colors on the borders  
 (22) of the map and how you can use it  
 (23) As I go through the final two maps for this purpose -  
 (24) whoops going the wrong direction here- tell the jury for all  
 (25) of these maps what the source of the data was that you used to

Vol 16 2471

- (1) come up with these estimates of the various kinds of oiling?  
 (2) A These maps plot oiling as depicted in our - I should say  
 (3) better as recorded in our composite oiling data base and that  
 (4) has screened all of the major joint survey programs including  
 (5) ADEC s walk a thon or beach walk data set and the SCAT2 data  
 (6) set from Exxon and has compiled all those as I described to  
 (7) you earlier and plotted them in the appropriate shoreline  
 (8) segments  
 (9) Q Did it also include other data that you were able to come  
 (10) up independently with?  
 (11) A In addition to those - yes In addition to those GIS data  
 (12) sources we have interviewed a number of property residents  
 (13) and  
 (14) personnel who ve worked on various clean up crews and were  
 (15) able  
 (16) to include data that we could present in line format By that  
 (17) I mean the data you can see that s shown in colors along the  
 (18) shoreline for various parts of the Alaska Peninsula and some  
 (19) other areas in Prince William Sound vicinity based on their  
 (20) descriptions and discussions affidavits photographs and so  
 (21) forth  
 (22) Q Exhibit 1163 - excuse me Exhibit 1162 is the same  
 (23) property oiling map for the Lower Kenai and Kenal Fiords?  
 (24) A That s correct yes And I think it extends up into  
 (25) Kachemak Bay  
 (26) Q Now with respect to the Kodiak area you have - rather  
 (27) than when you were working with the damage appraiser there it

Vol 16 2472

- (1) was a different person did you simply map oiled and - oiled  
 (2) shoreline as opposed to the degrees of oiling for Kodiak?  
 (3) A No In the Kodiak vicinity we - we did do that but in  
 (4) addition to that we - we were able to obtain additional data  
 (5) from the Alaska Department of Fish and Game which is plotted  
 (6) on a dot basis and then data that relates to the clean up  
 (7) activity was undertaken by the Veco crews Veco being a  
 (8) subcontractor who managed those and plotted that data on a  
 more  
 (9) or less site specific basis along the shorelines  
 (10) MR PETUMENOS I m not sure Judge I have that map  
 (11) in the courtroom but perhaps with counsel we can work out a  
 (12) stipulation with respect to that  
 (13) THE WITNESS I didn t follow that  
 (14) MR PETUMENOS I was talking to the Judge The  
 (15) Judge probably didn t follow it either but -  
 (16) A The data that are plotted there as triangles and as dots  
 (17) are approximately located because the information we were  
 given  
 (18) through these other field efforts were not very - or were not  
 (19) precisely location specific so those are approximate  
 (20) locations  
 (21) BY MR PETUMENOS  
 (22) Q Yeah Explain that to the jury the kind of data that you  
 (23) got that resulted in the triangles Tell the jury more about  
 (24) what that data was and why you used triangles instead of  
 (25) lengths of shoreline with colors on them

Vol 16 2473

- (1) A Well we - the reason we used triangles and dots we  
 (2) wanted to be able to to distinguish between the data that was  
 (3) provided from the Veco efforts versus the data that was  
 (4) obtained through Fish & Game references The data that we  
 (5) received for example from the Veco efforts were field  
 (6) clean up crew reports that were submitted to management or to  
 (7) crew leaders and they reference a specific segment or  
 (8) shoreline area or use local nomenclature for certain beaches  
 (9) which makes it difficult to precisely locate them We were as  
 (10) critical as we could be with the data but still there was a  
 (11) limit as to how well you can work with it and so our locations  
 (12) are sometimes within 50 yards sometimes maybe a quarter of  
 a  
 (13) mile  
 (14) MR PETUMENOS Judge Shortell I have no further  
 (15) questions  
 (16) THE COURT Counsel do you want a break or do you  
 (17) want to go ahead?  
 (18) MR OPPENHEIMER We do have a have a few maps to set  
 (19) up so perhaps a break Your Honor  
 (20) THE COURT Okay we ll take a break  
 (21) THE CLERK Please rise this court stands in  
 (22) recess  
 (23) (Jury out at 9 31 a m )  
 (24) (Recess at 9 31 a m to 9 47 a m )  
 (25) (Jury in at 9 47 a m )

Vol 16 2474

- (1) THE CLERK Please rise This court now resumes its  
 (2) session  
 (3) Please be seated  
 (4) MR OPPENHEIMER Mr Bush good morning  
 (5) CROSS EXAMINATION OF JAMES G BUSH  
 (6) BY MR OPPENHEIMER  
 (7) Q My name is Randy Oppenheimer I m going to be asking you  
 (8) some questions this morning in connection with Exxon s case  
 (9) You ve heard this a lot but I m going to ask you not to get  
 (10) too comfortable yet I have a few maps I d like you to point  
 (11) out some locations on I ll come out from behind one  
 (12) A You want me to come down?  
 (13) Q Would you please?  
 (14) A (Witness leaves the stand )  
 (15) Q Thanks Now I d like to get a better sense of where some  
 (16) of your investigations took place And one of the first things  
 (17) I want to ask you you came south in some of your trips down  
 (18) onto the Alaska Peninsula is that correct?  
 (19) A That is correct  
 (20) Q Is that where Puale Bay is?  
 (21) A Yes  
 (22) Q Now Puale Bay to your knowledge is not a land parcel in  
 (23) this case is that right?  
 (24) A That s correct  
 (25) Q That s correct And a number of your sites in fact many

Vol 16 2475

- (1) of them were not on land parcels is that correct?  
 (2) A That is correct  
 (3) Q Okay You also conducted some site work in the Kenai  
 (4) Fiords That s this area here?  
 (5) A That s correct  
 (6) Q And you conducted area work at the end of the Kenai  
 (7) Peninsula or is that wrong?  
 (8) A That s correct  
 (9) Q Did you go up into Kachemak Bay?  
 (10) A No we did not  
 (11) Q Okay Where -  
 (12) A We didn t do a transect study there We departed from  
 (13) Homer this direction to do our work  
 (14) Q You were in a helicopter some sort of flying machine?  
 (15) A We were in a boat  
 (16) Q You were in a boat?  
 (17) A In 1989 yes  
 (18) Q Did you do any either transect work or area wide site work  
 (19) or special investigation work in this area at the tip of the  
 (20) Kenai here?  
 (21) A Yes we did a transect in Port Chatham which -  
 (22) Q It s right here is it not?  
 (23) A Yes And boat reconnaissance large scale around the tip  
 (24) of the peninsula in 1989  
 (25) Q Okay very good Now the Port Chatham transect site you

Vol 16 2476

- (1) pointed to - which we'll come back to in a bit - that was the  
 (2) uncontaminated control site for the transects you did in 1989?  
 (3) A It was the control site that's correct  
 (4) Q What do you mean by control site?  
 (5) A Well at the beginning of the study we were concerned with  
 (6) comparison particularly biological recovery between oiled and  
 (7) unoiled sites so we - we established that site based on a  
 (8) storm haven area and we took it as a site of opportunity We  
 (9) observed no oiling in the immediate vicinity of the transect  
 (10) site so we set up a control site there  
 (11) Q So in other words the storm drove you into Port Chatham  
 (12) that gave you an opportunity to get an uncontaminated site?  
 (13) A That's exactly what happened  
 (14) Q This water can get quite rough you've had that experience?  
 (15) A That's right  
 (16) Q You had occasion to bypass a number of your sites number  
 (17) of your transect points because of the weather in this area?  
 (18) A A number of sites I don't know what you mean by that  
 (19) Q Some sites?  
 (20) A Some sites yes  
 (21) Q Fair enough I'm - before you sit down we're going to  
 (22) put up one more chart?  
 (23) MR OPPENHEIMER If I could ask you to give me a  
 (24) hand I call these charts but they're maps See if we can  
 (25) get both of these on You all see that?

Vol 16 2477

- (1) BY MR OPPENHEIMER  
 (2) Q Mr Bush this is generally referred to as the Sound is  
 (3) that correct?  
 (4) A That's correct Prince William Sound yes  
 (5) Q Now in your work you were interested in looking at the  
 (6) fate and persistence of oil is that correct?  
 (7) A It was - it was one of the topics  
 (8) Q One of the major purposes?  
 (9) A One of the major thrusts was to - to determine the extent  
 (10) of oiling on properties and potential for long term studies  
 (11) that's correct To establish a baseline in a sense from  
 (12) which work could be continued yes  
 (13) Q What you're interested in doing is finding locations that  
 (14) have oil that you can study productively is that correct?  
 (15) A Generally speaking yes  
 (16) Q Okay Now I want you to exclude for my next question  
 (17) Bligh Island which is up here and the space between say  
 (18) Tattilek and north of Tattilek because I - I don't want to  
 (19) mislead anyone I think you have some views about oil there  
 (20) but you did not conduct any systematic scientific inquiry of  
 (21) any of this area in eastern Prince William Sound or up here in  
 (22) these areas is that correct?  
 (23) A That is correct  
 (24) Q Okay And the reason for that is that there's no reason to  
 (25) believe there's any oil up there?

Vol 16 2478

- (1) A I don't believe that's necessarily the reason for it Oil  
 (2) has been observed possibly on Hinchinbrook and the northern  
 (3) areas here and claims have been raised about oil farther  
 (4) east Clearly though the document impact of the spill and  
 (5) the wind blew westward so that was the prime target area  
 (6) Q Fair enough I want to explore that area a little bit  
 (7) more You say claims have been made with respect to Bligh  
 (8) Island and what across the Tattilek Narrows?  
 (9) A That's correct  
 (10) Q And Busby Island?  
 (11) A That's correct  
 (12) Q And I believe this is Bligh Reef We don't have it marked  
 (13) but that's Bligh Reef?  
 (14) A Bligh Island  
 (15) Q Pardon me excuse me Excuse me But in this area  
 (16) Now you've conducted I assume your work with as much  
 (17) information as you could on where oil hit the shorelines in  
 (18) Prince William Sound and the Kenai is that correct?  
 (19) A Whatever was available we could get we got it  
 (20) Q Best you could get you got it?  
 (21) A That's right  
 (22) Q And as best you could tell from all the available  
 (23) information to you this was an area not worth studying for  
 (24) oil is that correct?  
 (25) A For oiled shorelines yes that's correct

Vol 16 2479

- (1) Q Because there's no reason to believe there's oil on those  
 (2) shorelines?  
 (3) A Well I think that's stretching it a bit but generally  
 (4) speaking the dominant movement was westward yes  
 (5) Q Let me ask you this You're aware are you not that Eyak  
 (6) which owns a number of these parcels Eyak Lake Eyak Glacier  
 (7) River and this whole area is dominated by Eyak property In  
 (8) this litigation they have given discovery that says no oil  
 (9) touched the land Are you aware of that?  
 (10) A Yes  
 (11) Q Okay In any event you conducted no systematic studies in  
 (12) this area?  
 (13) A Yes  
 (14) Q Your efforts were focused where the isle moved which is  
 (15) down this direction and down the Kenai?  
 (16) A That's correct  
 (17) Q Okay good Let's talk just a little bit then about  
 (18) Bligh Island and Tattilek What I'd like to do is put -  
 (19) MR PETUMENOS Let me warn you I've tried to put  
 (20) three maps on that easel and it doesn't work  
 (21) MR OPPENHEIMER I appreciate the warning Perhaps  
 (22) we'll make us all safer if we take one off  
 (23) BY MR OPPENHEIMER  
 (24) Q All right Now this was demonstrated earlier in your  
 (25) testimony This is a smaller map Let me hold this up so

Vol 16 2480

- (1) everybody can see it a little bit better if I could This is  
 (2) a map of the same area that - well it s this area up here is  
 (3) that correct?  
 (4) A Yes  
 (5) Q Okay And this is a map which has lines which show the  
 (6) areas of the shoreline where you found - the data you were  
 (7) able to collect indicated to you that there was oiling on the  
 (8) shorelines and the degree of that oiling is that correct?  
 (9) A That is correct  
 (10) Q Okay Now you mentioned earlier that there were claims of  
 (11) oiling at Bligh Island and Busby and those are marked on your  
 (12) map is that correct?  
 (13) A That is correct  
 (14) Q Now you ve never observed oil up there is that right?  
 (15) A Well -  
 (16) Q By up there I mean Bligh Island and Busby Island  
 (17) A At those specific locations?  
 (18) Q Correct  
 (19) A Yes that s correct  
 (20) Q Okay Have you observed oil anywhere in this area?  
 (21) A Yes  
 (22) Q Okay Where is that?  
 (23) A Right inside this little peninsular arm just inside the -  
 (24) right there  
 (25) Q That s just north of Tattilek?

Vol 16 2481

- (1) A That s correct  
 (2) Q You believe that to have been Exxon oil?  
 (3) A Yes I do  
 (4) Q We ll get back to that in a minute then  
 (5) Now you or field people with whom you work actually went  
 (6) back to Bligh Island twice looking for oil is that correct  
 (7) once in 89?  
 (8) A Two years that s correct  
 (9) Q On neither visit could you find oil?  
 (10) A That is correct  
 (11) Q Okay Let s put up - you know you re witnessing  
 (12) something my family s only been able to see folding and  
 (13) unfolding maps on a car trip okay But what I m about to show  
 (14) you is another one of the maps you talked about earlier This  
 (15) of the Kenai Peninsula and that s this area right?  
 (16) A That is correct  
 (17) Q Now you mentioned earlier that in connection with your  
 (18) transect site work you had a transect site placed in Port  
 (19) Chatham and that was a control site which you believe to be  
 (20) uncontaminated It was going to be the benchmark so it would  
 (21) help you study other transects is that correct?  
 (22) A Yes  
 (23) Q Other transects would have been oiled ?  
 (24) A That s correct  
 (25) Q This one would have been uncontaminated?

Vol 16 2482

- (1) A At that time yes  
 (2) Q And it s the only one of the transects you had that would  
 (3) be uncontaminated?  
 (4) A That s correct  
 (5) Q What does it show on your map?  
 (6) A Shows it as being oiled I believe  
 (7) Q Right over here?  
 (8) A Yes  
 (9) Q Right over here  
 (10) Thank you you can take your seat I appreciate it  
 (11) MR OPPENHEIMER Your Honor I have this up if it s  
 (12) okay maybe I could keep standing if that would be  
 (13) appropriate  
 (14) THE COURT Sure  
 (15) MR OPPENHEIMER Thank you  
 (16) BY MR OPPENHEIMER  
 (17) Q Your own map shows your uncontaminated control site as -  
 (18) as contaminated?  
 (19) A That is correct  
 (20) Q But that s not really a mystery is it? I mean there are  
 (21) lots of things that could explain why your crew wouldn t happen  
 (22) to see - and this is by the way light oiling If you like I  
 (23) can show you  
 (24) A Yes light or very light yes  
 (25) Q It was light or very light is that correct?

Vol 16 2483

- (1) A Yes  
 (2) Q So this this map shows different degrees of oiling and  
 (3) this particular case where your clean transect was It shows  
 (4) light oiling or very light oiling?  
 (5) A That s correct  
 (6) Q Now very light oiling is something that can come and go  
 (7) is that correct? It can wash on and off the beach even?  
 (8) A Yes  
 (9) Q Okay So somebody perfectly well intentioned going out to  
 (10) find oil see oil whether they re trained or not might  
 (11) observe oil there one day and not the next and it would be  
 (12) gone that second day?  
 (13) A Well from the standpoint of having a - a large  
 (14) accumulation asphalt pavement or large mousse patty or you  
 (15) know area that s impacted like that Sometimes yes if it s  
 (16) very premature just arrived on the beach But once it s  
 (17) implanted in the beach it doesn t move around that much But  
 (18) very light oiling has a lot of variability along its lengths so  
 (19) one can investigate a sizable chunk - 25 30 yards perhaps -  
 (20) see nothing there whereas there may be oiling on either side  
 (21) of that  
 (22) Q In fact you had an entire field crew on the ground at Port  
 (23) Chatham and for whatever reason either because it had been  
 (24) cleaned up or because it hadn t gotten there yet or because it  
 (25) had come and gone you didn t see the oil?

Vol 16 2484

- (1) A To say we had an entire field crew might be exaggerating a  
 (2) little bit Three of us were there under fairly stormy  
 (3) conditions  
 (4) Q Fair enough fair enough  
 (5) MR OPPENHEIMER I m sorry Tom would you just grab  
 (6) for me the Prince William Sound board and just hold it up? Is  
 (7) this completely blocked? Let s put up here Two I can put  
 (8) two on without knocking it over  
 (9) BY MR OPPENHEIMER  
 (10) Q Now we ve established that in your work in the Prince  
 (11) William Sound area - can you see this at all?  
 (12) A Not really but we can - if I need to get down yeah  
 (13) Q I prefer to let you - allow you to keep seated if  
 (14) possible  
 (15) We ve established that you have not done systematic  
 (16) scientific investigation of the shorelines here and that  
 (17) means I take - well have you visited any of these parcels on  
 (18) this side of Prince William Sound?  
 (19) A I have not  
 (20) Q You re aware that there are claims being made for all of  
 (21) these parcels in this lawsuit is that correct?  
 (22) A I am aware of that  
 (23) Q And as a matter of application of your work everything  
 (24) you ve told us in court about the persistence of oil on  
 (25) shorelines as a matter of common sense that is not something

Vol 16 2485

- (1) that describes any of this area at all is that correct?  
 (2) A That s my understanding yes  
 (3) Q And that would also be true for the area from Growler  
 (4) Island up through Sawmill Bay just south of Valdez?  
 (5) A Sawmill Bay  
 (6) Q There are two Sawmill Bays I know there s another one  
 (7) There s another one down here on Chenega I m referring to the  
 (8) one in the north  
 (9) A Yes  
 (10) Q So we should bear in mind In thinking about the curves and  
 (11) the data that you ve been talking about that those are - those  
 (12) are about the area from - and I m talking about the parcels  
 (13) from the area of Eshamy Bay and Knight Island southwest down  
 (14) through the Kenai and Kodiak?  
 (15) A With - with restriction to the parcels  
 (16) Q Correct I m only interested in damage parcels  
 (17) A That s right  
 (18) Q That s correct You haven t within that area- I m  
 (19) talking about now from this part of the Sound on down - you ve  
 (20) not been to all of the parcels that are involved in this  
 (21) lawsuit is that correct?  
 (22) A That is correct No  
 (23) Q You have a mapping system that we talked about briefly the  
 (24) other day when I was asking you questions before the - before  
 (25) your examination concluded called a GIS system?

Vol 16 2486

- (1) A That is correct  
 (2) Q Would you explain briefly tell the jury what is a GIS  
 (3) system  
 (4) A Geographic Information System It s a system whereby one  
 (5) can - via computer processes - relate data data sets to -  
 (6) especially to areas that can be posted on a map For example  
 (7) the parcels we just referred to have been mapped with the  
 NOAA  
 (8) vulnerability index and so we relied on that mapping to  
 (9) determine the characteristics of those shorelines and one  
 (10) can - with the GIS system one can simply select an area of  
 (11) shoreline from a map that s posted on the screen of the  
 (12) computer and automatically be able to plot the data that  
 (13) describes that shoreline and gives the information about oiling  
 (14) characteristics shorelines so on  
 (15) Q If you re familiar with the system it s relatively easy to  
 (16) call up information out of it In fact this map showed us  
 (17) earlier produced by your GIS system the computer has  
 (18) information in it and it draws the lines and those lines  
 (19) correspond to what you called arcs along the coastline is that  
 (20) correct?  
 (21) A That is correct  
 (22) Q Okay Now even without looking at your GIS data I assume  
 (23) you would agree with me that somewhere between - and I ll be  
 (24) very conservative here and say 75 to 80 percent in that range  
 (25) - of this entire area was unoiled talking about the Prince

Vol 16 2487

- (1) William Sound?  
 (2) A Of this entire area what -  
 (3) Q The Prince William Sound area  
 (4) A Of the total Prince William Sound?  
 (5) Q Correct  
 (6) A That s probably about right  
 (7) Q So most of this?  
 (8) A We would have to check the shoreline lengths and so forth  
 (9) Q But as a general -  
 (10) A When you say 75 percent of the area I assume you mean 75  
 (11) percent of the shoreline lengths?  
 (12) Q Good point I m not asking you to include anything because  
 (13) if it s off the shoreline it s not going to have been oiled  
 (14) MR PETUMENOS I ll object to the comment and ask  
 (15) that it be stricken  
 (16) MR OPPENHEIMER Withdraw it  
 (17) THE COURT You withdraw it?  
 (18) MR OPPENHEIMER I withdraw it Your Honor  
 (19) THE COURT The jury can disregard it then  
 (20) BY MR OPPENHEIMER  
 (21) Q Your GIS system has it in the shoreline types that you were  
 (22) talking about earlier is that right?  
 (23) A That is correct  
 (24) Q Which means that those ten NOAA shoreline types that you  
 (25) were telling us about and that you have a graph for persistence

Vol 16 2488

- (1) for each one on you've actually got that in your computer  
 (2) system?  
 (3) A That's correct That is correct yes  
 (4) Q And you also have in your computer system the information  
 (5) about each part of the shoreline and how heavily lightly or  
 (6) moderately it's oiled is that right?  
 (7) A Yes  
 (8) Q Now have you had occasion to make a comparison of the  
 data  
 (9) on your GIS system which talks about or contains the  
 (10) information about the degree of oiling heavy moderate and  
 (11) light on the - on the parcels involved in this case to  
 (12) compare it against the data that you got from Exxon in its  
 (13) oiling information?  
 (14) A Yes we did  
 (15) Q Okay And do you have any conclusions about how they  
 (16) compare?  
 (17) A In what regard? I mean you know we have generated maps  
 (18) that show the comparisons between what was shown on some  
 data  
 (19) sets and other data sets  
 (20) Q I'm going to disappear behind this for just a second  
 (21) A Certainly  
 (22) Q When you wander you tend to lose things  
 (23) Do you have a - an understanding based on a comparison of  
 (24) the degree of oiling data in your GIS system and the degree of  
 (25) oiling data that you got from Exxon how they compare with

Vol 16 2489

- (1) respect to how much of the lands were heavily moderately and  
 (2) lightly oiled that are on parcels that were oiled in the Prince  
 (3) William Sound area and the Kenai?  
 (4) A I have a general understanding I don't keep the specific  
 (5) numbers in my head because it's a complicated issue and  
 there's  
 (6) a lot of heterogeneity of the shorelines but I have a general  
 (7) notion  
 (8) Q Absolutely we'll get to that in a minute Your point  
 (9) about heterogeneity in the shorelines is there are a lot of  
 (10) different shorelines out there is that correct?  
 (11) A That is correct  
 (12) Q And your curves and any other information are subject to  
 (13) the fact that they can only approximate what's actually out  
 (14) there is that right?  
 (15) A That is correct  
 (16) Q Sure okay Would it sound right to you if I told you that  
 (17) your GIS system shows that in the Prince William Sound area  
 and  
 (18) the Kenai area - that's this area here and this area on the  
 (19) parcels - that your system shows that 16 percent of the  
 (20) parcels shorelines were heavily oiled and Exxon's data shows  
 (21) that 15 percent were heavily oiled Does that sound about  
 (22) right?  
 (23) A I should check the numbers to be sure but since they are  
 (24) so comparable -  
 (25) Q Sounds right?

Vol 16 2490

- (1) A It sounds right  
 (2) Q All right And that your numbers show on those same  
 (3) properties that about 14 percent of the shoreline was  
 (4) moderately oiled and Exxon's numbers showed that about 12  
 (5) percent were moderately oiled Does that sound about right?  
 (6) A Well two percent's a little bit strong for a difference  
 (7) Is there a rounding error there?  
 (8) Q Well these are to the best of my knowledge not Let me  
 (9) ask you just about yours 14 percent moderately oiled sound  
 (10) about right?  
 (11) A I would want to check the system to be sure on that I do  
 (12) have some numbers with me we could look at that might be  
 (13) helpful on this  
 (14) Q Before we do that just based on your recollection does  
 (15) that sound about right 14 percent? You can go -  
 (16) A Sure shoreline types combined  
 (17) Q Correct  
 (18) A Which shoreline are we using  
 (19) Q Talking about the parcels in Prince William Sound and on  
 (20) the Kenai Peninsula?  
 (21) A My question is Which shoreline are we using?  
 (22) Q We're using your shoreline data  
 (23) A Which shoreline is Exxon using?  
 (24) Q I'm not asking for a comparison Just to simplify my  
 (25) question - I myself got a little tongue tied - I'm just

Vol 16 2491

- (1) asking you now does it sound about right that your GIS system  
 (2) shows that about 14 percent of your clients' property in Prince  
 (3) William Sound in the Kenai was moderately oiled?  
 (4) A I'll accept that for now  
 (5) Q Okay Now does it also strike you as about right that on  
 (6) both your system and Exxon's system 70 percent 70 to 73  
 (7) percent of your clients' land in Prince William Sound and Kenai  
 (8) was lightly or very lightly oiled?  
 (9) A The numbers do add up  
 (10) Q Now that's of the stuff that was oiled?  
 (11) A Yes  
 (12) Q Got it Some of it wasn't oiled at all?  
 (13) A That is correct  
 (14) Q We've already established that Eyak has said it didn't have  
 (15) any oil touch its property  
 (16) A That's correct  
 (17) Q Now have you - are you familiar with the mainland piece  
 (18) of property?  
 (19) A In what context?  
 (20) Q Have you ever been there?  
 (21) A No  
 (22) Q I don't know if you can see this it's a little bit - can  
 (23) you see me pointing to the mainland property?  
 (24) A Yes  
 (25) Q You have not been to that piece of property Are you aware

Vol 16 2492

- (1) that there s a claim for damages on that property of over seven  
 (2) million dollars?  
 (3) A I m not aware of the values involved in the claims no I  
 (4) have no association with that  
 (5) Q Fair enough You re focused on the fate and persistence of  
 (6) oil?  
 (7) A Yes  
 (8) Q Understood This property has a huge amount of shoreline  
 (9) judging from the map does it not?  
 (10) A Judging from the map yes  
 (11) Q Judging from the map correct And based on what you ve  
 (12) told us so far that shoreline is going to be highly varied is  
 (13) that right?  
 (14) A That is correct  
 (15) Q Sitting here today you couldn t possibly tell me what type  
 (16) of shoreline that is is that right?  
 (17) A Well we could make some estimates based on the shape  
 (18) There s some information we can derive just from the shape of  
 (19) shorelines Accuracy is probably not its best point but yeah  
 (20) it s much easier to review the shorelines from the index  
 (21) mapping  
 (22) Q Before we do that let me ask you Because you are a  
 (23) geologist and you have some familiarity with the area what do  
 (24) you think is the predominant shoreline on the mainland parcel  
 (25) mainland?

Vol 16 2493

- (1) A Can I come down and look at it?  
 (2) Q Absolutely  
 (3) A Well judging from a quick glance I would say there s  
 (4) probably a substantial amount of - of sheltered rocky and  
 (5) lesser amount of exposed rocky and then in most of the  
 (6) internal embayment areas little inlets the embayments  
 (7) they ll be gravel cobble beaches  
 (8) Q Okay  
 (9) A Sandy gravel and cobble  
 (10) Q I m sorry you said sandy gravel and cobble?  
 (11) A Mixed sand and gravel and cobble  
 (12) Q Most of it rocky shoreline?  
 (13) A Yes basically  
 (14) Q Is rocky shoreline a predominant feature in the shoreline  
 (15) both in Prince William Sound and the peninsula?  
 (16) A Not particularly dominant  
 (17) Q Majority of the shoreline type?  
 (18) A It s interesting that you ask this There have been a lot  
 (19) of numbers bandied around about it being very high but I don t  
 (20) believe that those aren t without some combinations of  
 (21) shoreline types I don t think that s particularly accurate  
 (22) Q Why don t you go ahead and take your seat  
 (23) A (Witness resumes the stand )  
 (24) Q But for the storm that drove you into Port Chatham and the  
 (25) uncontaminated control site you would or would not have been

Vol 16 2494

- (1) looking for a control site for your study for a clean place to  
 (2) include among your transect sites?  
 (3) A You mean would we have not looked for a control site there  
 (4) or would we have not looked for one at all?  
 (5) Q Let me try to phrase my question in better English I  
 (6) apologize  
 (7) When you set out to put your transects up - this is in  
 (8) 1989 this is your first -  
 (9) A Yes  
 (10) Q - exercise out there you wanted to set up some transect  
 (11) sites which is as you described it a place on a beach where  
 (12) you put a line down and then you put some grids out from that  
 (13) line and you carefully examine that part of the beach to see  
 (14) what kind of oil s there and hopefully what s going to happen,  
 (15) to it over time is that right?  
 (16) A That is correct  
 (17) Q And when you chose your sites initially did you have in  
 (18) mind that one of them would be unoiled?  
 (19) A Yes we d intended to find an unoiled site use one  
 (20) Q Why is that? Why is that?  
 (21) A As I mentioned earlier to look at biological -  
 (22) principally ecological and biological recovery over time to  
 (23) compare the oiled sites  
 (24) Q If you re going to study the effects of something over  
 (25) time you d like to have something as a benchmark something

Vol 16 2495

- (1) that s unaffected that you can compare it to is that right?  
 (2) A It s appropriately right There are actually ten shoreline  
 (3) types out there including ice when you go 11 and variation of  
 (4) exposed tidal flats we could probably add another on a  
 (5) separate problem To do a complete study like that with  
 (6) statistical variation or viability one would be perhaps ten  
 (7) maybe 20 or 30 control sites suddenly this becomes  
 (8) overwhelming  
 (9) Q The fact of the matter is you can t really do a full flood  
 (10) of scientific analysis of fate and persistence of oil in these  
 (11) areas with the number of transect sites you ve got is that  
 (12) right?  
 (13) A In what context? We can do a completed study which we  
 (14) did which provides good information about particular  
 (15) processes  
 (16) that operate that is extrapolatable to particular shoreline  
 (17) types which is the approach we took In terms of doing what  
 (18) we ll call a full blown statistical analysis or numerical  
 (19) analysis of those areas  
 (20) Q Can t do that right?  
 (21) A Very difficult In fact I don t think many of the studies  
 (22) out there can be successful of that  
 (23) Q Okay And in fact didn t you tell us yesterday that  
 (24) those curves that we saw the fate and persistence curves that  
 (25) help you explain to us how long you think the oil will be on  
 the beaches and how long it will take to recover that those

Vol 16 2496

- (1) curves are not the result of your work just with those  
 (2) transect sites is that correct?  
 (3) A That is correct  
 (4) Q Right And they re not a result in fact just of your  
 (5) fieldwork In other words just the fieldwork wouldn t really  
 (6) enable you to give us those curves today is that right? You  
 (7) need something more don t you?  
 (8) A We may be confusing a few issues here In terms of  
 (9) generating the persistence curves they re one thing The  
 (10) application of interpretation of persistence of oil is  
 (11) another To generate the curves we use one set of data To  
 (12) extrapolate that to shorelines we have to use the NOAA  
 (13) mapping the graph data  
 (14) Q Just focusing on the curves for a moment To generate  
 (15) those curves which you showed us you need to look at  
 something  
 (16) in addition to the fieldwork you ve done The fieldwork alone  
 (17) won t do it is that right?  
 (18) A That is correct  
 (19) Q You need to look at other spills?  
 (20) A Yes  
 (21) Q And you did that?  
 (22) A Yes  
 (23) Q And one of the spills that you looked at that you found  
 (24) highly analogous and very useful in your work was a spill of  
 (25) the Metula is that correct?

Vol 16 2497

- (1) A That is correct  
 (2) Q That s a spill that occurred in 1974?  
 (3) A I believe that date s correct  
 (4) Q And indeed Mr -- is it Thebeau or Thebeau (clarifying  
 (5) pronunciation)?  
 (6) A Thebeau  
 (7) Q Mr Thebeau in your -- your company even went and looked  
 (8) at that spill about six years after it happened isn t that  
 (9) right?  
 (10) A Six and a half years that is correct  
 (11) Q And that was a spill of a little different kind of  
 (12) substance than we re dealing with here isn t it?  
 (13) A That s correct If memory serves me correct it s Arabian  
 (14) like and small amount of Bunker C  
 (15) Q And Bunker C is much heavier than Alaskan crude?  
 (16) A That s correct  
 (17) Q Different viscosity characteristics?  
 (18) A That is correct  
 (19) Q Different stuff?  
 (20) A To some extent It s a product that s produced from the  
 (21) refining process of crude oil so it represents a selective  
 (22) group of components of crude  
 (23) Q It s a refined product?  
 (24) A Yes or a product of the refining process  
 (25) Q Refining process stand corrected Isn t the area that the

Vol 16 2498

- (1) Metula spilled into partly marshy?  
 (2) A I beg your pardon? Partly marshy?  
 (3) Q Partly marshy as marsh  
 (4) A Yes  
 (5) Q And marshes are the most vulnerable the most susceptible  
 (6) to the impacts of oil spills?  
 (7) A Yes  
 (8) Q And indeed the very longest period of persistence on any  
 (9) of your tables that you showed us this morning the very first  
 (10) one we saw is for marshes?  
 (11) A That s correct  
 (12) Q So the Metula spilled into a marsh into marshes?  
 (13) A As well as other shoreline types  
 (14) Q As well as other shorelines but the longest estimates of  
 (15) persistent oil at the Metula site are for the marsh areas?  
 (16) isn t that correct?  
 (17) A That is correct  
 (18) Q That s what the literature shows?  
 (19) A Yes  
 (20) Q And there s another distinguishing characteristic between  
 (21) the Metula and this spill isn t there? A big one?  
 (22) A Distinguishing characteristic?  
 (23) Q Was there any cleanup at the Metula site?  
 (24) A Oh I m sorry not about the spill about the process  
 (25) afterwards?

Vol 16 2499

- (1) Q Yes sir  
 (2) A Actually there are two distinguishing characteristics  
 (3) There was no cleanup and also hasn t been studied in the  
 (4) depth as the Exxon Valdez spill has  
 (5) Q I want to get back to your process for a second In 89  
 (6) you went out and you conducted studies at transect sites You  
 (7) went back out in 92 and you revisited the transect sites and  
 (8) you went to what you called the area wide sites?  
 (9) A That is correct  
 (10) Q I m a little confused about numbers I ve heard references  
 (11) or seen references in your work to -- I believe to 54  
 (12) area wide sites Do I have that number incorrect because I  
 (13) thought I heard you testify yesterday to over 70?  
 (14) A 55 is the number that comes to my mind We selected 70 to  
 (15) 75 for prime investigation target sites What we were able to  
 (16) get to during the field program was approximately 55  
 (17) Q I see okay So you started with 75 and you winnowed that  
 (18) down to the mid fifties 54 55?  
 (19) A No no We started with several hundred areas of concern  
 (20) We reduced that too by making the criteria more strict  
 (21) Eventually we chiseled down the target sites to 70 to 75  
 (22) wanting a good area of coverage et cetera We were able to  
 (23) reach in the field 55 of those  
 (24) Q So 75 was a good area of coverage and you could get to  
 (25) about 55 When you say a good area of coverage you mean it

Vol 16 2500

- (1) had oil?  
 (2) A No I mean it had good geographic extent from Prince  
 (3) William Sound down through the Alaska Peninsula  
 (4) Q One of the criteria was that it had good oil coverage and  
 (5) similar oiling characteristics?  
 (6) A You ve asked two questions there  
 (7) Q Did - let me start with oil Did you prefer they had oil  
 (8) on them when you studied them?  
 (9) A Let me think about that Not precisely although I think  
 (10) indirectly it did happen We investigated the shoreline oiling  
 (11) summary reports that were produced by ADEC and looked at  
 (12) the  
 (13) results of recovery or comparison between various areas Now  
 (14) some of those sites initially were mapped as oiled and later  
 (15) cleaned or something like that So generally speaking yeah  
 (16) most of the places we went to were oiled but I think in fact  
 (17) some of them may have been clean and were either adjacent to  
 (18) or  
 (19) maybe later shown to be oiled so we have a mixed answer with  
 (20) respect to time  
 (21) Q Let me see if I can clarify my question Your intention is  
 (22) what I m interested in  
 (23) A The intention was these sites were questionable in some  
 (24) regard from the day that we saw We wanted to investigate  
 (25) what  
 (26) was going on because they seemed to be questionable Most  
 (27) of  
 (28) the time that involved oil on the site that s correct  
 (29) Q And at about 13 of those sites you couldn t find oil Does

Vol 16 2501

- (1) that strike you as right from your report?  
 (2) A I don t recall I think you re right I think 40  
 (3) something out of 55 or something like that That s right  
 (4) Q And then in 93 you made a quick trip right? I believe  
 (5) you referred to it as a cursory trip a short look see?  
 (6) A Yes  
 (7) Q How long was that?  
 (8) A Few days just a few days  
 (9) Q Few days And that s when you had Mr Mundy with you  
 (10) that  
 (11) is the appraiser?  
 (12) A That s correct  
 (13) Q By that I mean the plaintiffs appraiser  
 (14) A Yes Dr Mundy yes  
 (15) Q During that trip did you all go anywhere here in the  
 (16) eastern part of the Sound?  
 (17) A In 93 with Mr Mundy I don t believe we did go to the  
 (18) eastern - eastern Sound  
 (19) Q Then in just this year you ve gone back out to the field  
 (20) again?  
 (21) A Yes  
 (22) Q How was the weather?  
 (23) A Much better  
 (24) Q So you got to see some more places?  
 (25) A Yes  
 (26) Q And there s no doubt this time when you were headed back

Vol 16 2502

- (1) out you were looking for oil?  
 (2) A That is correct  
 (3) Q That was your prime consideration go out find the oil  
 (4) study the oil?  
 (5) A I wouldn t say it was to find the oil We were out looking  
 (6) at oil that others had already observed or claimed to be  
 (7) present or that we knew was there yeah  
 (8) Q You had discussions with people before you went out to  
 (9) make  
 (10) sure you could identify places You wanted the places that had  
 (11) the most oil and highest concentrations of oil is that  
 (12) correct?  
 (13) A I don t know about the most and highest concentrations  
 (14) Most of the people we talked to were not particularly  
 (15) quantitative about the oil but having oil there was a - was  
 (16) you know a prime consideration I think the people were  
 (17) always able to say quantitatively how much was there We also  
 (18) talked to people that were in the field  
 (19) Q Getting back to the trip planning though and what you  
 (20) were looking for your intent in talking to people was it not  
 (21) was to find as high a concentration of oil that people knew of  
 (22) in the Prince William Sound and the Kenai?  
 (23) A I guess I don t recall it being a specific objective to say  
 (24) it was the highest concentration We wanted to know where  
 (25) people had found oil and observed it but - I guess that s not  
 (26) my recollection

Vol 16 2503

- (1) Q I ll get you something that may help Well this will be  
 (2) my first experiment with this  
 (3) MR PETUMENOS Your Honor could I have a -  
 (4) MR OPPENHEIMER I - pardon me counsel  
 (5) absolutely Page 1448 of Mr Bush s June 7 deposition  
 (6) MR PETUMENOS June 7 94  
 (7) MR OPPENHEIMER 94 lines 16 through 21  
 (8) MR PETUMENOS I m sorry  
 (9) MR OPPENHEIMER Lines 16 through 24  
 (10) MR PETUMENOS I got that part I missed the date  
 (11) MR OPPENHEIMER June 28 Mr Bush I m going to -  
 (12) MR PETUMENOS Just a minute counsel  
 (13) MR OPPENHEIMER I m going to give you - with the  
 (14) Court s permission may I approach the witness  
 (15) THE COURT Yes  
 (16) MR OPPENHEIMER I m going to give you a stack of  
 (17) materials which may be useful as we go forward Let me briefly  
 (18) explain what they are  
 (19) First I will give you a copy - I will go back and get you  
 (20) a copy of your deposition I m going to give you your field  
 (21) notes going to give you a summary of one of your reports -  
 (22) pardon me one of your reports Your testimony in the federal  
 (23) case for the moment That s it But let me get you what you  
 (24) really need which is a copy of your deposition We ll have  
 (25) somebody point out just exactly what part that is

Vol 16 2504

- (1) Tim?  
 (2) BY MR OPPENHEIMER  
 (3) Q You recall being deposed in June?  
 (4) A Yes  
 (5) Q And you were asked what discussions you had with respect to  
 (6) your site visits in '94 and you said We simply requested to  
 (7) go to as many sites that contained visible oil a significant  
 (8) concentration or as high a concentration as people knew of  
 (9) And we'd also like to return to our transects and that was the  
 (10) extent of it  
 (11) A I agree with that It's not that people could always give  
 (12) you highest concentrations of oil the information we tried to  
 (13) glean was that  
 (14) Q You wanted to know that information I understand  
 (15) A Yeah  
 (16) Q In fact you're quite right are you not that a number of  
 (17) people with whom you spoke could not tell you where the oil  
 (18) was Claire Doing (sic) is that a name you're familiar with?  
 (19) A Yes  
 (20) Q Doing that's a man?  
 (21) A Yes  
 (22) Q Mr Doing (sic)?  
 (23) A Yes  
 (24) Q Mr Doing (sic) was a representative of the Tattilek  
 (25) Corporation?

Vol 16 2505

- (1) A It's Doing Doing  
 (2) Q Pardon me Doing and he's a representative of the Tattilek  
 (3) Corporation?  
 (4) A Yes He's either a representative or employee that's  
 (5) correct  
 (6) Q You understood yourself to be talking to someone who knew  
 (7) about Tattilek lands when you talked to him?  
 (8) A As a land manager yes  
 (9) Q And one of the reasons you were talking to him was to find  
 (10) out if he could tell you where there was oil?  
 (11) A Actually indirectly correct Part yes and part no I  
 (12) think he came along on the trip principally to meet with  
 (13) Dr Mundy and have discussions with him  
 (14) Q In any event Mr Doing was unable to tell you about any oil  
 (15) on Tattilek property?  
 (16) A In any event Mr Doing had little to no knowledge about  
 (17) oiling at all  
 (18) Q And in fact did anybody tell you for the trip in '94 -  
 (19) well let me stop for a second  
 (20) In addition to Mr Doing you spoke also with Pat Norm is  
 (21) that correct?  
 (22) A Yes  
 (23) Q Again trying to find places with oil and the highest  
 (24) concentrations of oil?  
 (25) A That he was aware of

Vol 16 2506

- (1) Q That he was aware of?  
 (2) A Yes  
 (3) Q And he's a representative for Port Graham operation and  
 (4) English Bay?  
 (5) A That's correct  
 (6) Q Talked to Gail Evanoff is that right? Is that correct?  
 (7) A Yes  
 (8) Q And she is - she was speaking on behalf of Chenega  
 (9) Corporation?  
 (10) A Yes  
 (11) Q You talked to Larry Gilman?  
 (12) A Oh yes I'm sorry First name threw me  
 (13) Q The vessel Good Times first mate on the vessel Good  
 Times?  
 (14) A That's correct  
 (15) Q Knowledgeable fellow He had worked on some cleanup  
 crews  
 (16) is that correct?  
 (17) A Yes  
 (18) Q What else did you do to try to find oil for your '94 trip?  
 (19) A We talked to Lora Johnson  
 (20) Q Would you tell us who Ms Johnson is?  
 (21) A Lora Johnson is an archaeologist working -  
 (22) Q On this case?  
 (23) A - on this case? Exactly  
 (24) Q For the plaintiffs  
 (25) A (Indicating)

Vol 16 2507

- (1) Q Did you talk to a Jack Lobdel?  
 (2) A Yes Not directly I think by telephone He may have  
 (3) visited us at the dinner table That's about it  
 (4) Q So when you were back out in the field in '94 looking for  
 (5) oil and what you reported to us about that trip was based on  
 (6) as extensive a process as you could engage in to find out where  
 (7) the best places were to go to find the most oil?  
 (8) A I should point out that the discussions with Mr Lobdel I  
 (9) don't believe involved looking for oil  
 (10) Q Those were archaeological sites?  
 (11) A No we weren't - I don't think we discussed looking for  
 (12) oil with Mr -  
 (13) Q Did - they had to do with neither I won't ask about  
 (14) them  
 (15) A Thank you But in terms of going out to the sites and  
 (16) trying to understand the nature and extent of residual oil  
 (17) yes that's what we did  
 (18) Q Now in all of this work up through this period of time  
 (19) did you ever go back to Port Chatham to see how the  
 (20) uncontaminated site was doing?  
 (21) A In 1994 we were in the general vicinity but didn't -  
 (22) excuse me but did not get back on the transect proper  
 (23) Q Didn't see any need to go back to the control site?  
 (24) A I'm sorry?  
 (25) Q Didn't see a need to go back to the control site?

Vol 16 2508

- (1) A I wouldn't go that far but we did not go back to it  
 (2) MR OPPENHEIMER Your Honor I've lost track of how  
 (3) long we've been running We're about to go to another set of  
 (4) exhibits If this would be a good time for a break we could  
 (5) set up another exhibit  
 (6) THE COURT Actually you can take breaks at reasonable  
 (7) times about an hour hour and a half okay?  
 (8) MR OPPENHEIMER Sounds right  
 (9) THE CLERK Please rise This court stands in  
 (10) recess  
 (11) (Jury out at 10 30 a m )  
 (12) (Recess from 10 30 a m to 10 53 a m )  
 (13) (Jury in at 10 53 a m )  
 (14) THE CLERK This court now resumes in session Please  
 (15) be seated  
 (16) BY MR OPPENHEIMER  
 (17) Q Before the break we were talking about transect sites  
 (18) And again these are the sites that you went to in '89 and  
 (19) then revisited in '92 and revisited some of if I understand it  
 (20) correctly in '94 These are your basic test sites is that  
 (21) correct?  
 (22) A That is correct  
 (23) Q Are those basic scientific test sites representative of  
 (24) your client's land?  
 (25) A You have to explain by what you mean by representative

Vol 16 2509

- (1) Q Let's focus on the degree of oiling Are they  
 (2) representative of the degree of oiling on your client's land?  
 (3) A In some capacities yes and others no To answer it  
 (4) fully I think we have to separate the transect and the  
 (5) properties into respective shoreline types and look at the  
 (6) degree of oiling from shoreline to shoreline type Clearly I  
 (7) think we may have a bias towards moderate or heavily oiling  
 (8) but I'm not positive I haven't compared that -  
 (9) Q Well it -  
 (10) A - to strictly the proper parcels  
 (11) Q Let's explore that for just a second In the Prince  
 (12) William Sound area you have ten transect sites is that  
 (13) correct?  
 (14) A I believe that's right yes  
 (15) Q Six of those are placed on sites that were heavily oiled?  
 (16) A Yes  
 (17) Q Sixty percent of the transect sites the study sites in  
 (18) Prince William Sound were in that capacity but we've already  
 (19) discussed that by either your data or Exxon's data less than  
 (20) 20 percent of your client's land was heavily oiled is that  
 (21) correct?  
 (22) A That's correct  
 (23) Q And would it be your recollection that about four out of  
 (24) your 15 transect sites were on medium oiled lands?  
 (25) A I think that's correct

Vol 16 2510

- (1) Q Right And that's - give or take and that's about as a  
 (2) percentage twice the percentage of the median oiled land as  
 (3) compared to what your client's land is actually oiled In  
 (4) other words it's about 30 percent of your transect sites but  
 (5) only about 15 percent of your client's land was heavily oiled?  
 (6) A That's correct  
 (7) Q And about four of your scientific transect sites were on  
 (8) light or very lightly oiled lands does that sound about right?  
 (9) A Uh huh  
 (10) Q So 15 percent of your transect sites were on light or very  
 (11) light but at least 70 percent of all the oiling that occurred  
 (12) to your client's land was on light or very light?  
 (13) A Yes  
 (14) Q Okay So in that sense would you conclude that your  
 (15) transect sites that the distribution of oiling that - the  
 (16) distribution of oiling along the beaches which you found in the  
 (17) transects was unrepresentative of the distribution of oiling  
 (18) levels among your client's land generally?  
 (19) A Well I think we're missing the point Perhaps if we keep  
 (20) this directly within the - or explicitly within the context of  
 (21) your statement it's true However what needs to be done in  
 (22) our analysis is to understand movement of oil within the  
 (23) particular shoreline types so we've got to view these  
 (24) different shoreline types and look at oiling in them It's  
 (25) impossible to sample every variety out there with any usual or

Vol 16 2511

- (1) typical budget one can handle within a month or so  
 (2) Q Sure understood You're referring however now to  
 (3) varieties of shoreline in other words the types of shore  
 (4) You were talking about earlier the cobble or -  
 (5) A That's correct  
 (6) Q That's correct? Just focusing on the type of oiling  
 (7) heavy medium light your transects are not representative of  
 (8) your client's land is that right?  
 (9) A Well within that very narrow context  
 (10) Q I'm just talking about -  
 (11) A Yes  
 (12) Q - whether they were -  
 (13) A Yes  
 (14) Q They're biased in favor of heavily oiled sites?  
 (15) A Within that narrow context that's correct  
 (16) Q In fact you went out again in '94 Did you form an  
 (17) opinion as to whether the sites you visited could be  
 (18) extrapolated to every location that was oiled in the Prince  
 (19) William Sound and the Kenai?  
 (20) A Repeat the question About -  
 (21) Q The sites you went out to see -  
 (22) A To be extrapolated to -  
 (23) Q - could they be extrapolated to every oiled site in Prince  
 (24) William Sound and Kenai?  
 (25) A The sites we visited in '94 could they with be -

Vol 16 2512

- (1) Q In 94?
- (2) A Well of course not There are differences all across the
- (3) areas That is it s very heterogeneous
- (4) Q Let s go back if we may to testimony yesterday You -
- (5) you gave us a description of one of your transect sites on east
- (6) Chenega Do you remember that?
- (7) A Yes
- (8) Q And I believe what you were helping explain to us was the
- (9) notion of swash bars moving across the beach and occasionally
- (10) covering up oil that was one of the things you were talking to
- (11) us about?
- (12) A That s one of the notions The notion is the mobile
- (13) sediments that move freely across the surface is the general
- (14) notion There are different types yes
- (15) Q Do you recognize this as a photograph of your east Chenega
- (16) transect?
- (17) A I think it s an excellent photograph of the area
- (18) Q Thank you
- (19) MR OPPENHEIMER Your Honor I d like to publish this
- (20) to the jury
- (21) THE COURT Sure
- (22) BY MR OPPENHEIMER
- (23) Q Could I ask you to come down one more time? I m going to
- (24) give you a little piece of tape and I m going to ask you to put
- (25) it on the part of the transect - I m sorry on the part of the

Vol 16 2513

- (1) photograph that corresponds with your transect
- (2) We are currently looking at an exhibit that has been marked
- (3) for identification DX13258 You re probably more used to doing
- (4) this kind of stuff sample work but I m going to start it for
- (5) you Could you tear off a piece - and I realize this is not
- (6) going to be the right scale but give us all an understanding
- (7) of where your transect was
- (8) A It was approximately something like this Pretty tough
- (9) tape I see why you took the first job
- (10) Q Like cutting pieces of pie
- (11) Okay now I m going to try to turn this
- (12) You can go back and sit down again I ll try to turn this
- (13) so you can see it Can you all see that?
- (14) So this is the study site - oh I m sorry Got that?
- (15) A Yes
- (16) Q Okay Can you see this Mr Bush?
- (17) A Sure
- (18) Q This is the study site you re referring to as your
- (19) transect is that correct?
- (20) A That is correct
- (21) Q Now you were referring to a phenomena where a - some
- (22) earth swash bar was moving inland -
- (23) A That s correct
- (24) Q - is that right? Okay
- (25) A Or lateral to the shoreline as well

Vol 16 2514

- (1) Q Or lateral which means in this direction?
- (2) A Parallel roughly right
- (3) Q And sometimes that can cover up oil?
- (4) A That is correct
- (5) Q Okay Now not every coastline has this characteristic is
- (6) that right?
- (7) A When you say characteristic you mean?
- (8) Q Of swash bars
- (9) A You mean are swash bars everywhere
- (10) Q Correct Are there swash bars everywhere?
- (11) A No
- (12) Q Okay Now this particular beach actually has some unusual
- (13) characteristics for the Kenai Prince William Sound area does
- (14) it not?
- (15) A Unusual in the sense that they re not widespread across all
- (16) the shorelines but streams and rivers do commonly come out
- (17) into the Sound and take features yes
- (18) Q As a geologist you would consider this a - this material
- (19) as at least in part having been brought down from some
- (20) source
- (21) on land pushed out and then brought back in to some degree
- (22) by
- (23) the water?
- (24) A Well that s the - that portion of that material is
- (25) transported by the stream or introduced into the environment by
- (26) the stream It s a bit more complicated than that but you
- (27) have the general sense of that part of the system

Vol 16 2515

- (1) Q Quite often This is from a glacier or can carry material
- (2) in it whenever it is pushing new material out which is in some
- (3) way getting pushed back?
- (4) A Or a long ways whatever s upstream is contributing to it
- (5) that s correct
- (6) Q And where for example you have a beach like this up here
- (7) - can you see that?
- (8) A Uh huh
- (9) Q You don t have new material coming down to be pushed
- (10) back
- (11) up is that correct?
- (12) A Well in the same capacity same volume yes
- (13) Q You don t have the same volume which means you don t
- (14) have
- (15) as much?
- (16) A Right There s a low tide delta up there obviously
- (17) Q This is a delta correct?
- (18) A Yes
- (19) Q Low tide delta?
- (20) A Low tide delta
- (21) Q Where you have an area like this you have much less
- (22) material coming off the ocean coming up to the beach is that
- (23) correct?
- (24) A Much less material what do you mean?
- (25) Q This area you see protruding out into the ocean is because
- (26) there s material coming down off the land and coming back to
- (27) the shore Isn t that correct?

Vol 16 2516

- (1) A Yes
- (2) Q You don't see that in other parts of the beach because that
- (3) phenomenon is not occurring?
- (4) A That's correct
- (5) Q Where that phenomenon doesn't occur you don't get the
- (6) kind
- (7) of swash bar you talked about yesterday you get a different
- (8) phenomenon but you don't get the kind you talked about
- (9) yesterday?
- (10) A That's not correct We talked about a range of swash
- (11) bars It occurs in some areas to a much less degree than
- (12) others You don't get giant ones here
- (13) Q My point exactly This is a giant swash bar?
- (14) A It's a whopper
- (15) Q It's a whopper all right It's a big one and that is not
- (16) a common occurrence in Prince William Sound and the Kenai?
- (17) A That is correct
- (18) Q How fast do these swash bars move? I mean is this a case
- (19) where scientists flee to the uplands like those old movies as
- (20) the swash bar approaches or is it slower?
- (21) A It is slower
- (22) Q Okay it is slower And can you describe for us how - how
- (23) fast or slow it is?
- (24) A Well it can vary from centimeters a storm event or even a
- (25) meter a storm event to meters in a year depending on the
- (26) frequency of storms ratio between the storm activity and

Vol 16 2517

- (1) grain size and all those sorts of things
- (2) Q You described before that this was biota here this is
- (3) living stuff?
- (4) A Fucus
- (5) Q Fucus Fucus is what?
- (6) A It's green algae yes Intertidal
- (7) Q Okay And as I understand what you were telling us
- (8) yesterday this fucus is kind of growing on the surface that
- (9) more closely proximates the surface in '89 when the oil hit
- (10) than this surface we see here which is on top of the swash
- (11) bar is that right?
- (12) A That's correct
- (13) Q And there's stuff growing all over?
- (14) A In the sheltered pocket behind the - the steep face of the
- (15) swash bar that's correct
- (16) Q And I assume as best we know you have no reason to
- (17) believe otherwise that until the swash bar covered it up it
- (18) was growing in front of that too? You have no reason to
- (19) believe it was otherwise?
- (20) A Yeah We don't know what happened before we got there
- (21) Q By the way you're not a biologist but let me ask you one
- (22) question This is sometimes referred to as an estuarine
- (23) environment is that right?
- (24) A That's a little extreme to call that an estuary but there
- (25) certainly is fresh water input there

Vol 16 2518

- (1) Q There's fresh water and that has implications when you
- (2) measure biology when you measure what's living?
- (3) A That's correct
- (4) Q As a general matter -
- (5) A In a marine system you're referring to?
- (6) Q In a marine system You've got seawater you've got fresh
- (7) water and in that balanced area the biota tends to be less
- (8) biomass of - the biota tends to be less than in areas where
- (9) you don't have that fresh water/seawater interaction?
- (10) A Total biomass?
- (11) Q Yes
- (12) A Well the point is for the species that are affected by
- (13) the fresh water that's correct Yeah
- (14) Q Correct Do you recall how badly oiled east Chenega was
- (15) initially original oiling?
- (16) A I think - yeah in 1989 moderate to light light to
- (17) moderate is my recollection
- (18) Q Moderate?
- (19) A Yes
- (20) Q And has it improved?
- (21) A Yes
- (22) Q So all the way down to light?
- (23) A As of 1992?
- (24) Q As - right as early as '92 it was down to light?
- (25) A I don't - I think that's correct I believe that is

Vol 16 2519

- (1) correct yes
- (2) MR OPPENHEIMER Counsel with your permission I'm
- (3) just going to put this on the screen This is a page from the
- (4) February '93 report
- (5) MR PETUMENOS No problem
- (6) BY MR OPPENHEIMER
- (7) Q Mr Bush I draw your attention to page 24 of your
- (8) February '93 report Yes sir that's correct That's Exhibit
- (9) DX2769 DX2769
- (10) Seems a little fuzzy Well I think we can make do here
- (11) Now I draw your attention to a line in this report This
- (12) is - by the way you recognize this do you not as a page -
- (13) a table of your transect sites from your February '93 report?
- (14) This is on the trips you made in '92
- (15) A Yes I do actually
- (16) Q It's a table 23?
- (17) A Yes I was questioning - font size seems to be different
- (18) but I think it's the right table
- (19) Q And you see the entry for east shore Chenega Island?
- (20) A Yes
- (21) Q Started as moderate and went to very light by 1992?
- (22) A That's correct
- (23) Q Okay You testified yesterday about the - the oil that
- (24) was being buried here I don't think though that you told us
- (25) about your most recent trip to the east Chenega transect site

Vol 16 2520

- (1) You were there just this summer weren't you?  
 (2) A I don't recall if we got there or not in '94. Let's see  
 (3) we went to about 40 sites East Chenega? I could look back  
 (4) through my field notes  
 (5) Q I'd be happy to - in fact please do  
 (6) A If you have a page  
 (7) Q Well I have the date. They're dated at the top 5 - I  
 (8) believe it's May 29 1994  
 (9) A And you're referring to the return to the Chenega Village  
 (10) the Chenega Island or this Chenega transect site?  
 (11) Q On the right hand side of the note back I believe -  
 (12) correct me if I'm wrong - you have notes with respect to your  
 (13) village you have notes with respect to your return to the  
 (14) transect site  
 (15) A Well certainly you're right but -  
 (16) Q It's a page back  
 (17) A 5 29 - 5 28 Oh very good thank you Yes  
 (18) Q Okay Now yesterday you were telling us that there could  
 (19) be oil under that swash bar or you weren't telling us that?  
 (20) A I don't believe so  
 (21) Q But you were using this to describe -  
 (22) A Talking about this - the same site same swash bar  
 (23) Q Correct You were using this to describe a situation where  
 (24) a swash bar could cover up oil and then the swash bar could  
 (25) be removed and the oil would be exposed again?

Vol 16 2521

- (1) A That's correct  
 (2) Q Were you intending to imply that there was oil here?  
 (3) A On the - under the giant swash bar?  
 (4) Q Under the giant swash bar  
 (5) A No it brings up the uncertainty of the issue but -  
 (6) Q You don't know whether there's oil there?  
 (7) A That's correct  
 (8) Q When we say giant swash bar how deep is it where it's  
 (9) covering up your old transect level?  
 (10) A Which it - are you - I think we have a miscommunication  
 (11) Q We may and undoubtedly my fault Let me see if I can  
 (12) explain  
 (13) The swash bar as I understand it changed the look of the  
 (14) land over your transect site so it - there's earth over where  
 (15) there had been in '89?  
 (16) A That's correct  
 (17) Q Okay And my question to you is Did you make a  
 (18) calculation or do you have an understanding of how much new  
 (19) earth there is because of the swash bar over your old transect  
 (20) site?  
 (21) A The - I think you have some confusion here The swash bar  
 (22) that covered our transect site is the one that's located up  
 (23) farther on where the bright orange line is on the  
 (24) illustration We've also been talking about this giant one  
 (25) farther down to the mouth of the stream and shoulder of that

Vol 16 2522

- (1) so the two are different sizes magnitude  
 (2) Q You're talking about the swash bar that's up in this area?  
 (3) A That's correct  
 (4) Q Excuse me I think you're right to correct me That swash  
 (5) bar covered up part of your transect site?  
 (6) A Uh huh  
 (7) Q How deep is that swash bar over your old transect site  
 (8) level?  
 (9) A Well it's - I'd have to refer back to the transects to  
 (10) give you an accurate number It's approximately a foot and a  
 (11) half two feet something like that knee high or a little  
 (12) less And it migrated landward between the two transect  
 (13) measurements which of course there's intervening years so  
 (14) it may have gone farther up and come back in the meantime  
 (15) But  
 (16) the difference between the two transect measurements was  
 (17) three  
 (18) meters or something like that if I remember correctly  
 (19) Q So in order for you to get back to your old transect to  
 (20) take a look for oil you have to dig through a foot and a half  
 (21) of dirt?  
 (22) A Additional foot and a half yes  
 (23) Q Did you do that?  
 (24) A We dug through the face of it in '92 as best we could the  
 (25) problem being of course until you complete your transect  
 (26) profile and plot the measurements you don't know exactly  
 (27) where  
 (28) you have to be to dig deeper

Vol 16 2523

- (1) Q This is in '92 now?  
 (2) A That's correct And unfortunately we dug deeper right up  
 (3) to the edge of the oiling the previous year so we didn't  
 (4) actually test the subsurface at the right location  
 (5) Q You stopped just before the place where you found oil  
 (6) before?  
 (7) A Yes  
 (8) Q And you didn't dig another pit to find out whether there  
 (9) was still oil there?  
 (10) A Well at the time we hadn't completed the profile  
 (11) restoration so we didn't know we had to go farther seaward  
 (12) Q So it was accidental?  
 (13) A Yes  
 (14) Q You went back in '94 and you dug again?  
 (15) A That's right  
 (16) Q Find any oil that you could see?  
 (17) A We did not  
 (18) Q Did you get down to your original '89 level?  
 (19) A I think we did  
 (20) Q Your notes suggest that you did isn't that right?  
 (21) A Uh huh I think so  
 (22) Q And you couldn't smell any oil?  
 (23) A No  
 (24) Q Okay So nothing that you could - you could perceive  
 (25) there in the field as indicated that there was oil in it?

Vol 16 2524

- (1) A That s correct I believe that - I think that site is a  
 (2) good example of one where the effectual wave energy on the  
 (3) shoreline and the grain size on the beach are adequate to bring  
 (4) about a lot of reworking  
 (5) Q Oh good so this beach has been cleaned up?  
 (6) A I think there s been substantial recovery there  
 (7) Q Even though it s got a big swash bar and even though it s  
 (8) got a delta like situation the best we know it s clean?  
 (9) A To the best of our knowledge yes  
 (10) Q By the way you don t know when that occurred as between  
 (11) your visit in 94 and your visit in 92 the cleanup is that  
 (12) correct?  
 (13) A I don t know when what occurred  
 (14) Q When the final cleaning occurred as between 92 and 94?  
 (15) A I do not  
 (16) Q I wanted to go back to one other issue that we talked about  
 (17) yesterday You went to one study site just this last summer  
 (18) where you believe you saw some problem with the mussels is  
 (19) that right? There seemed to be - they seemed to be dying?  
 (20) A We saw an increased mortality yes  
 (21) Q Increased mortality Do you remember which transect site  
 (22) that was at?  
 (23) A It was not a transect site It was ones of our special  
 (24) investigation sites  
 (25) Q I misspoke So that would have been northeast LaTouche?

Vol 16 2525

- (1) A Yes  
 (2) Q You visited - if I m correct you did not visit northeast  
 (3) LaTouche in 1989?  
 (4) A That s correct  
 (5) Q You did visit -  
 (6) A Actually  
 (7) Q Pardon me?  
 (8) A Let me correct that We may have cruised that area in the  
 (9) skiff and done some light reconnaissance It s vague in my  
 (10) recollection  
 (11) Q You did however go there in 92?  
 (12) A Yes we did  
 (13) Q Right You did not go there in 93?  
 (14) A At this particular mussel bed site?  
 (15) Q Correct  
 (16) A I m not positive about that We may have gone  
 (17) Q Can t remember having been there in 93?  
 (18) A Fast three days or four days yes  
 (19) Q You were there again in 94?  
 (20) A Yes  
 (21) Q Until 94 according to your testimony yesterday you had  
 (22) not seen the mortality the mussels dying that you saw that  
 (23) you believe you saw in 94 In other words before that visit  
 (24) this summer you hadn t seen evidence of that kind of mortality  
 (25) in the mussels?

Vol 16 2526

- (1) A That is correct  
 (2) Q All right Are you aware of any unusual events that might  
 (3) have produced the result in those mussels that you saw in  
 (4) 1993 - I m not saying you saw in 93 but are you aware of  
 (5) anything that happened in 1993 that might have produced what  
 (6) you saw among those mussels you saw in 1994?  
 (7) A We don t know the cause of the mortality I have  
 (8) speculated We know the relationship we see between the  
 (9) residual oil and the mussels but we don t have a cause and  
 (10) effect for the mortality 93 -  
 (11) Q Just so we re clear then you were not trying to tell us  
 (12) yesterday that you have any sort of opinion that anybody  
 (13) should  
 (14) rely upon in calculating money damages or anything else that  
 (15) those mussels were in the state you saw them in 94 because of  
 (16) the oil?  
 (17) A Well there s a correlation but cause and effect is  
 (18) difficult to determine and we ve taken no samples and  
 (19) undertaken no analyses to make that determination  
 (20) Q Fair enough You don t have a scientific opinion?  
 (21) A You do have a correlation which is suspect but it s  
 (22) certainly not been confirmed through any kind of analytical or  
 (23) toxicological investigation  
 (24) Q As a scientist you don t know?  
 (25) A That s right  
 (26) Q Now let me get back to 93 Did something else happen in

Vol 16 2527

- (1) 93 that might have affected these mussels?  
 (2) A Other than other investigators going to the site I m not  
 (3) aware of anything If I might elaborate here a little bit  
 (4) You know we noticed things in 94 that may have had some  
 (5) impact For example there s -  
 (6) Q No I m just talking about 93  
 (7) A Yes No  
 (8) Q Are you aware that 93 was one of the hottest summers on  
 (9) record in the Sound?  
 (10) A I m aware of this hypothesis yes  
 (11) Q The intertidal zones you saw these in the intertidal  
 (12) zones?  
 (13) A Yes  
 (14) Q That s a delicate environment in the ecological system  
 (15) isn t it?  
 (16) A To some extent yes  
 (17) Q There are critters in there Sometimes in water they re  
 (18) sometimes out of water correct?  
 (19) A Yes and stressed accordingly  
 (20) Q And stressed accordingly They don t like being out of  
 (21) water for very long We heard Mr Peterson talk about that  
 (22) A That s correct  
 (23) Q The particular mussel bed you saw was high up on the  
 (24) intertidal zone is that right?  
 (25) A That is correct

Vol 16 2528

- (1) Q You bet and actually mussels?
- (2) A Actually let me rephrase that You got northeast going -
- (3) quickly here I don't know exactly how high that mussel bed is
- (4) in the intertidal zone I don't know if that's true or not
- (5) Q You don't know if the -
- (6) A When you say mussel bed now you're referring to the
- (7) mussels that are on the sedimentary substrate where we had
- (8) the
- (9) mortality?
- (10) Q Correct
- (11) A We observed mussels at a higher elevation than that so
- (12) obviously they're not the top of the - you know the surviving
- (13) realm in the intertidal zone
- (14) Q I didn't mean to imply they were all the way out there in
- (15) the supratidal zone?
- (16) A Right Nor are they at the highest point in the intertidal
- (17) zone where they can't survive
- (18) Q Understood And I did not mean to suggest they were But
- (19) you don't know you just don't know whether those '93 summer
- (20) temperatures caused the mortality you saw Could have?
- (21) A Well we have some idea about that because mussels that
- (22) were in the same vicinity - in fact even at a higher
- (23) elevation that were exposed to the same summer - did not
- (24) exhibit the same mortality
- (25) Q You have no knowledge about what percentage of the
- (26) mussel
- (27) population would be responsive would die as a result of an

Vol 16 2529

- (1) unusually hot summer do you? You're not a biologist?
- (2) A Do I have knowledge of what percentage of a mussel bed -
- (3) you mean would some mussels be more responsive or more
- (4) susceptible to warm exposure than other mussels in the same
- (5) bed?
- (6) Q Right
- (7) A No I have no knowledge of that
- (8) Q All right I'd like to show you now two photographs and
- (9) have you identify them for me if you would I believe - and
- (10) I hope you like them as well - that they are photographs of
- (11) your Bay of Isles transect site opening photograph of the area
- (12) and a photograph of the site itself is that correct?
- (13) A Yes
- (14) Q Okay I hope I'm okay here For the record this is
- (15) exhibit 8942
- (16) Now Mr Bush tell us if you can see - I apologize if
- (17) the angle's not right - can you describe for the jury what is
- (18) this a photograph of?
- (19) A Well it's a photograph of the Bay of Isles You can see
- (20) the isles standing out there and from this angle I can't tell
- (21) whether we're looking down the south arm or east or west or
- (22) where we're at but it's the Bay of Isles
- (23) Q The land we see here this is your client's land is that
- (24) correct?
- (25) A Yes

Vol 16 2530

- (1) Q That whole coastline there
- (2) MR OPPENHEIMER Tom could you help me?
- (3) A The entire coastline? I would have to check back to the
- (4) maps I think some of the northern coastline may not in fact
- (5) be on their property but you should check with the land
- (6) manager for positions
- (7) Q Fair enough You did the mapping for the land managers -
- (8) A We -
- (9) Q - for this case?
- (10) A We prepared the - that's not entirely correct We
- (11) translated some AutoCad maps and files into the GIS system
- (12) and
- (13) produced the maps but the mapping was done by someone
- (14) else
- (15) Q For our purposes now based on your understanding having
- (16) been a field investigator out there looking at your clients
- (17) lands this depicts - most of what we see here is your clients
- (18) shoreline?
- (19) A Yes I believe so
- (20) Q How many marshes are you aware of in this - by the way
- (21) would you agree with me if I told you having looked at your
- (22) GIS system that we're looking at about 29 miles of coastline
- (23) here?
- (24) A I've never measured it
- (25) Q Never measured okay
- (26) A That sounds reasonable
- (27) Q Okay How many marshes are there in this area?

Vol 16 2531

- (1) A In what context? There's a -
- (2) Q As a context of what do you know?
- (3) A In the GIS system as a shoreline type?
- (4) Q Sure
- (5) A I think the only area that's mapped that is this small
- (6) area in the GIS system that you're referring to the transect
- (7) site that was on this other illustration
- (8) Q If I could bother you to come down one more time
- (9) Now it's correct is it not that in all of this area you
- (10) chose to place your transect site - well where did you choose
- (11) to place your transects?
- (12) A I believe the location is right in here judging from
- (13) several miles away
- (14) Q Right in there? Right in there?
- (15) A That's it
- (16) Q Okay Let me have you stand there for one second Sorry
- (17) You previously identified this as the site of your transect
- (18) site I'm going to zoom in as it were to marsh in the Bay of
- (19) Isles Now is that where you put your transect site?
- (20) A Yes
- (21) Q Red tape I've got that Could I ask you to do the same
- (22) thing you did before to show us?
- (23) MR PETUMENOS Your Honor I also thought there was
- (24) red tape in this litigation now I know
- (25) THE COURT You anticipated me counsel

Vol 16 2532

- (1) MR DIAMOND Don t steel the Judge s lines  
 (2) MR PETUMENOS Sorry  
 (3) THE COURT Yeah that could get you in a lot of  
 (4) trouble  
 (5) A We ll just generalize this It goes behind the trees here  
 (6) okay That s approximately correct It s a little bit high  
 (7) MR OPPENHEIMER Give this to me I ll put it in my  
 (8) pocket It ll be there at the cleaners For the record we ve  
 (9) just put the transect marker on DX8943  
 (10) BY MR OPPENHEIMER  
 (11) Q Out of all that coastline how big is this marshy tidal  
 (12) area here that we re talking about?  
 (13) A Out of all that coastline?  
 (14) Q Well we ve been talking about the coastline We had seen  
 (15) as a photograph coming in here  
 (16) A 29 miles versus - versus this eighth or tenth of a mile  
 (17) section  
 (18) Q This is some of the most sensitive lands you can have if  
 (19) you have an oil spill is that right?  
 (20) A That s correct  
 (21) Q Lasts the longest?  
 (22) A The impact persistence yes  
 (23) Q Right  
 (24) A Okay  
 (25) Q Less than one percent of the Prince William Sound in the

Vol 16 2533

- (1) Kenai is made up of that kind of material?  
 (2) A As mapped that s correct  
 (3) Q As mapped?  
 (4) A Yes as mapped  
 (5) Q You can sit down again please  
 (6) A (Witness resumes the stand )  
 (7) Q When you were working on your persistence curves you  
 were  
 (8) concerned were you not that you did not have adequate  
 (9) information on clean up activities?  
 (10) A That is correct  
 (11) Q Did you have any concern about whether you had adequate  
 (12) information on the clean up activities here at the marsh of the  
 (13) Bay of Isles?  
 (14) A It was a generic concern  
 (15) Q And by generic you mean it was a concern as to every -  
 (16) concern you had every place you looked at?  
 (17) A Sure  
 (18) Q Because obviously - well excuse me persistence is one of  
 (19) the - it s getting late and I apologize Cleanup is one of  
 (20) the factors that effects persistence how long the oil will  
 (21) stay on a place?  
 (22) A When you refer to residence time of petroleum residues in  
 (23) the subsurface that s correct  
 (24) Q So the answer is yes it does?  
 (25) A You re saying persistence and I m not sure if we re

Vol 16 2534

- (1) talking about just the residue or overall recovery ecological  
 (2) and everything else included  
 (3) Q Let me rephrase my question How much oil stays on a  
 (4) shoreline is partly a question of how much cleanup is done?  
 (5) A The treatment process yes that s correct  
 (6) Q And in fact you - you went to your special investigation  
 (7) sites on northeast LaTouche to find out about the effects of  
 (8) cleanup on the - on the recovery process?  
 (9) A For those beaches that - those conditions that s correct  
 (10) Q Sure and you - and ideally you would have that  
 (11) information for all of the beaches that you studied because  
 (12) it s a factor right?  
 (13) A It is a factor that s correct  
 (14) Q Now what actually happened is that you went to beaches  
 and  
 (15) in some cases you didn t know whether you were going to a  
 beach  
 (16) that had even been cleaned before you got there is that  
 (17) correct?  
 (18) A That s correct yes  
 (19) Q And in some cases you d gone to beaches and studied  
 (20) beaches and you haven t gone back to and you don t know if  
 they  
 (21) have been cleaned?  
 (22) A Well we know some knowledge about cleaning on some of  
 the  
 (23) beaches but I m not sure of an exact example of the one you  
 (24) described exists but yes there s uncertainty about clean up  
 (25) activities between your transects before our transects I

Vol 16 2535

- (1) don t think there is much afterwards I could be wrong on  
 (2) that  
 (3) Q Do you have any uncertainty at all about the type of  
 (4) cleanup that was done at Bay of Isles?  
 (5) A My understanding is that - that it was essentially likely  
 (6) to be not treated There may have been some manual activity  
 (7) which - I know there was some booming and manual cleanup  
 on  
 (8) the site but I have no information about the clean up  
 (9) activities that occurred to that in a formal sense  
 (10) Q Now even in this very sensitive environment you saw  
 (11) improvement did you not?  
 (12) A Oh yes  
 (13) Q In fact even in this most sensitive of all environments  
 (14) it went from moderate in 89 to light in 92?  
 (15) A I don t believe that s correct I believe you skipped a  
 (16) line  
 (17) Q Perhaps I did Pardon me Pardon me Excuse me I did  
 (18) A We still classified it as heavy  
 (19) Q Right  
 (20) A But you did see improvement  
 (21) Q You still classified that as heavy but you saw  
 (22) improvement?  
 (23) A Yes  
 (24) Q Why would there be improvement?  
 (25) A I guess I don t follow the question

Vol 16 2536

- (1) Q Well -  
 (2) A Two years passed and -  
 (3) Q We don't know what sort of cleanup has gone on if any  
 (4) it's a protected environment. Would you agree structurally  
 (5) now as a geologist - we're back on your home turf here - this  
 (6) is clearly a protected environment is it not?  
 (7) A Yes it is  
 (8) Q So what gets in there is going to be protected against the  
 (9) elements that might clean it up right?  
 (10) A Well I can - I can discuss this here for a second  
 (11) The - in '89 there were a number of booms and Sorbent  
 (12) material pompoms and related material on site that may have  
 (13) been removed in '92. There may have been some manual  
 (14) wiping  
 (15) taking place at the same time frame. We're not sure of that  
 (16) But I know the debris oiled debris that was there a  
 (17) substantial amount of material so people had been on the  
 (18) site. Also there are two streams that enter into the site and  
 (19) do have some impact on the site. So portions of the site  
 (20) reflect the - the marsh environment and other portions are  
 (21) less precise than the marsh environment  
 (22) Q Now you make a good point. There's another fresh water  
 (23) stream in this environment?  
 (24) A Yes  
 (25) Q So it's another place where saltwater and fresh water are  
 (26) mixing?

Vol 16 2537

- (1) A That's correct  
 (2) Q I wanted to be clear about a point. You discussed  
 (3) yesterday mechanical action on the beach that could contribute  
 (4) to cleaning the beach up is that right?  
 (5) A That's correct  
 (6) Q Rocks move that's one thing that can clean the beach up  
 (7) is that right?  
 (8) A Yes  
 (9) Q Sediments can be pulled back and forth across the beach  
 (10) that can help clean things up?  
 (11) A That's correct  
 (12) Q In some cases the cleanup can actually occur on the beach  
 (13) but not because of the ocean but things coming off the land  
 (14) for example you can have fresh water streams that percolate  
 (15) through cobble and that sort of thing out to the water that  
 (16) helps clean things up?  
 (17) A I don't know that there's a tremendous contribution in that  
 (18) regard until the stream migrates laterally for example and  
 (19) actually moves the sediment or distributes sediment to the wave  
 (20) action but I'm sure there's some contribution from the  
 (21) groundwater outflow yes  
 (22) Q Well there's something else that's also important about  
 (23) oxygenated water getting into the ground percolating into the  
 (24) ground isn't there?  
 (25) A That's correct

Vol 16 2538

- (1) Q What's that?  
 (2) A Oxidation itself  
 (3) Q Oxidation. There's little bugs - and there are little  
 (4) bugs eating the underground oil is that right?  
 (5) A That is correct  
 (6) Q So the fact that oil is under the ground doesn't mean it  
 (7) isn't going away?  
 (8) A Certainly doesn't mean it's in preservation in perpetuity  
 (9) Q It's going away right?  
 (10) A Yes  
 (11) Q And not only is it going away but something else is  
 (12) happening. It's going away in a specific sort of way what  
 (13) they call the higher fractions are constantly disappearing  
 (14) It's getting down to what is known as inert material?  
 (15) A Some extent it is depending what hydrocarbon fraction but  
 (16) generally it's true  
 (17) Q But as a general proposition the longer the oil is under  
 (18) the ground the less toxic it becomes?  
 (19) A That's a horse of a different color  
 (20) Q Before we get to the horse of a different color let me  
 (21) just ask you about the sheer volume. The oil just the amount  
 (22) of it is decreasing right?  
 (23) A That's correct Yes  
 (24) Q Okay I want to ask you. There are a couple of places  
 (25) where you say you saw sheen just as the result of the normal

Vol 16 2539

- (1) tidal action on the beach?  
 (2) A Uh huh  
 (3) Q That's right that's what you told us yesterday?  
 (4) A That is correct yes  
 (5) Q As opposed to where you would take a shovel of dirt and  
 (6) move it in the water and get a sheen coming off of that?  
 (7) A That's correct yes  
 (8) Q How often did you see these sheens without there being  
 (9) some  
 (10) agitation by a scientist?  
 (11) A In 1994 it was more common than we actually would have  
 (12) guessed  
 (13) Q But how often did you see it?  
 (14) A I would say common. I haven't counted them so I don't  
 (15) know precisely  
 (16) Q At the beaches that you went to that you looked for that  
 (17) had the oil on them?  
 (18) A Yes  
 (19) Q Now do you have any familiarity with how much oil it takes  
 (20) to create a sheen?  
 (21) A Roughly yes  
 (22) Q Not very much right?  
 (23) A Very small amount yes  
 (24) Q And studies have shown that you can take a couple of drops  
 (25) and put a sheen over a hundred square meters isn't that  
 (26) right?

Vol 16 2540

- (1) A Might be stretching it for a couple of drops but you're in  
 (2) the ballpark  
 (3) Q Five drops I'm in the ballpark go up or down a hundred  
 (4) percent?  
 (5) A Sheens have range from five thousandths of a millimeter  
 (6) yes  
 (7) Q Very small amount?  
 (8) A Small amount of oil yes  
 (9) Q You're not a biologist but what we're talking about is a  
 (10) sheen that could be reflecting a very little bit of oil getting  
 (11) out away from the shore is that right?  
 (12) A That is correct yes  
 (13) Q By the way other things cause sheens too decaying  
 (14) vegetable materials right?  
 (15) A Yes  
 (16) Q So for example this marsh is not like Potter's Marsh on  
 (17) the edge of town here this is a different kind of marsh?  
 (18) A That's correct  
 (19) Q If you go out to Potter's Marsh and walk down that walkway  
 (20) you can see what looks like oil sheen can't you?  
 (21) A I believe you can  
 (22) Q It's not oil?  
 (23) A It's not petroleum derived oil yes  
 (24) Q Has some of the same things in it doesn't it?  
 (25) A That's correct

Vol 16 2541

- (1) Q That's what gives it the sheen?  
 (2) A That may not be the only thing that gives it the sheen  
 (3) but -  
 (4) Q May may not?  
 (5) A Yes  
 (6) Q You talked to us yesterday about Beauty Bay I believe Do  
 (7) you remember that?  
 (8) A Yes The question is do I remember yesterday  
 (9) Q I apologize How many visits had to be made to Beauty Bay  
 (10) before anybody could find oil?  
 (11) A In 1989?  
 (12) Q Pardon me in 1994  
 (13) A In 1994 Just one  
 (14) Q Okay And how many in 1992?  
 (15) A For the transect team one For - I believe it was two -  
 (16) the two biologists they visited first before we were there and  
 (17) found no oil  
 (18) Q I'm sorry We have two trips or three trips to find the  
 (19) oil?  
 (20) A Two trips in '92 I think that's correct yes  
 (21) Q Oh thank you I'm sorry  
 (22) Do you recognize this as a picture of the - I think they  
 (23) call it an oblique of the Beauty Bay area  
 (24) A I believe that's correct yes Yeah yeah  
 (25) Q For the record this is exhibit 15480?

Vol 16 2542

- (1) MR PETUMENOS I'm sorry counsel I didn't hear  
 (2) you  
 (3) MR OPPENHEIMER 15480  
 (4) BY MR OPPENHEIMER  
 (5) Q Some more of your client's land?  
 (6) A Yes  
 (7) Q Including these glaciated peaks?  
 (8) A I would imagine so I don't know for certain I don't  
 (9) know where the property boundary goes upland  
 (10) Q Okay Your focus is the shore because that's where the oil  
 (11) is?  
 (12) A Primarily yes  
 (13) Q Can you see this well enough so that if I point -  
 (14) A I think so  
 (15) Q This is the - it's in this area that your transect site is  
 (16) located is that correct?  
 (17) A That's correct  
 (18) Q The part of your field team who initially went did you say  
 (19) they did not find oil until the second trip?  
 (20) A That's correct In 1992?  
 (21) Q Yes  
 (22) A Yes  
 (23) Q Dr Bakus was the person on the field the first time  
 (24) looking for oil?  
 (25) A And Larry Thebeau

Vol 16 2543

- (1) Q And Larry Thebeau yes Couldn't find any?  
 (2) A That's correct  
 (3) Q Do you recognize these two photographs as pictures of the  
 (4) delta area at the end of - of the bay there?  
 (5) A Yes  
 (6) Q Okay For the record these are exhibits 15482 and 15481  
 (7) With Your Honor's permission we'll just lean these up in front  
 (8) here I'm afraid I will have to ask you to come down I was  
 (9) hoping not to have to do that to you again but I failed  
 (10) A You want me on this side now?  
 (11) Q Sure that would be great I'm not suggesting that these  
 (12) you know fit together but it's a wide area  
 (13) By the way these trees here to my untrained eye look  
 (14) dead You understand them to be dead?  
 (15) A Pretty nearly so yes  
 (16) Q But not the oil spill right?  
 (17) A That's right  
 (18) Q That's a result of the 1964 earthquake?  
 (19) A That's the most recent interpretation yes  
 (20) Q Fair to describe this as another delta - I'm sorry can -  
 (21) we'll hold it up - another delta?  
 (22) A Yes we're not going to be real precise about it It's a  
 (23) tidal flat as well It's very flat and very planar except for  
 (24) the channels but leave it as a delta  
 (25) Q Once again we have a situation probably heavily influenced

Vol 16 2544

- (1) by just the fantastic amount of material that s melting and  
 (2) coming down on these peaks where a lot of new material is  
 (3) getting put down onto that area is that right?  
 (4) A Well historically that would be the case Whether it s  
 (5) true for the current recent five years depends on the  
 (6) climactic variations and those types of things and  
 (7) precipitation yes  
 (8) Q Once again this is like our east Chenega site This is  
 (9) one of those places where you could as you described get a  
 (10) kind of swash bar situation because you have new material  
 (11) coming down onto the beach from upland?  
 (12) A Not necessarily That s because we have new material  
 (13) coming down It s because of the wave environment and the  
 (14) availability of fine grain material coupled with a more  
 (15) strengthened armor surface The idea you have two  
 (16) stratigraphic entities that can interact yes  
 (17) Q You would not describe this as a typical shoreline for the  
 (18) Prince William Sound and Kenai?  
 (19) A It is one of the types  
 (20) Q But it s not typical?  
 (21) A It s typical of those types It s not a widespread type  
 (22) Q Right understood Thank you  
 (23) A Although many of the Kenai Fiord heads are similar to this  
 (24) the bay heads are very similar to this  
 (25) Q Again this is Beauty Bay

Vol 16 2546

- (1) voice I believe it to be Dr Bakus looking at Beauty Bay on  
 (2) one of those trips  
 (3) (Videotape Played)  
 (4) VOICE ON VIDEOTAPE This is Beauty Bay and as you  
 (5) can see it s heavily covered with brown algae and this other  
 (6) algae which may be halosaccion Here you see some marsh  
 (7) grasses and there s enteromorpha quite a bit of it in the  
 (8) intertidal It s the upper intertidal and the bay We re  
 (9) testing for oil in the sediments but we haven t found any I  
 (10) think it s a clean beach  
 (11) (Videotape Turned Off)  
 (12) Q Dr Bakus talking?  
 (13) A Yes it is  
 (14) Q With a trained field crew on Beauty Bay?  
 (15) A Trained field crew partly true  
 (16) Q Best we got?  
 (17) A Yes  
 (18) MR OPPENHEIMER Your Honor would this be an  
 (19) appropriate time for a break?  
 (20) THE COURT Sure  
 (21) THE CLERK Please rise this court stands in recess  
 (22) (Jury out at 11 45 a m )  
 (23) (Recess at 11 45 a m to 12 08 p m )  
 (24) (Jury In at 12 08 p m )  
 (25) THE CLERK This court now resumes its session

Vol 16 2545

- (1) A Yes  
 (2) Can I sit down now?  
 (3) Q Oh yes excuse me  
 (4) MR OPPENHEIMER Your Honor with the Court s  
 (5) permission and counsel we d like to play a part of a  
 (6) videotape okay that is a portion of the video that was played  
 (7) yesterday plaintiffs 1368 We would like to play it with the  
 (8) sound on The sound was turned off yesterday  
 (9) THE COURT I didn t do it  
 (10) MR PETUMENOS Is this Mr -  
 (11) MR OPPENHEIMER This is Mr Bakus  
 (12) MR PETUMENOS - Bakus?  
 (13) MR OPPENHEIMER Yes that s correct  
 (14) MR PETUMENOS I probably don t have an objection  
 (15) Judge but if I could probably confer with counsel  
 (16) MR PETUMENOS Shall we go behind -  
 (17) MR OPPENHEIMER Yes behind We don t want any  
 (18) inferences drawn  
 (19) MR STOLL I ll give you a blow by blow  
 (20) MR PETUMENOS Okay Judge  
 (21) MR OPPENHEIMER Nothing more suspicious than two  
 (22) lawyers going behind a board  
 (23) One second before you run it I m going to ask the  
 (24) witness and the jury to listen carefully to the sound track  
 (25) and I m going to ask you afterwards just to identify the

Vol 16 2547

- (1) Please be seated  
 (2) BY MR OPPENHEIMER  
 (3) Q Mr Bush you mentioned that you also had a transect in  
 (4) Windy Bay is that correct?  
 (5) A That is correct  
 (6) Q Do you recognize this as a photograph of Windy Bay here?  
 (7) A If you d move it back a little  
 (8) Q Sure  
 (9) A Yes I do  
 (10) Q For the record this is exhibit 13227  
 (11) Mr Bush this - once again this is your clients land?  
 (12) A Yes  
 (13) Q And I ll tell you what in order to see if I can keep from  
 (14) making you come up and down I will point to the area where I  
 (15) think your transect is and if I can locate it perhaps I ll  
 (16) put on the tape for you Is your transect somewhere in this  
 (17) area?  
 (18) A That s close  
 (19) Q About where the tree is here?  
 (20) A I think so if I remember right  
 (21) Q Okay Well here we go Which direction does it run down  
 (22) the beach to the shoreline?  
 (23) A Perpendicular to the shoreline yes  
 (24) Q Perpendicular to the shoreline How did you do this?  
 (25) A Yes secrets we have

Vol 16 2548

- (1) Q I ve made this too big so I m going to fold it Now I  
 (2) realize why I let you do this  
 (3) MR PETUMENOS I object to Mr Oppenheimer doing the  
 (4) red tape  
 (5) MR OPPENHEIMER With good cause Your Honor It  
 (6) won t happen again  
 (7) BY MR OPPENHEIMER  
 (8) Q This will be the first transect you ever set but it s  
 (9) going right there We ll change it We ll fix it later  
 (10) Mr Bush you ve been out to this area?  
 (11) A Yes  
 (12) Q Thank you My colleague will give me a device  
 (13) You have been out to this area when most recently?  
 (14) A Actually we didn t get back to the transect site in 94 my  
 (15) mistake there so it was in 92  
 (16) Q You went back to this area but you didn t go back to the  
 (17) transect site?  
 (18) A That s correct  
 (19) Q Where - I m sorry I guess I do have to ask you to come  
 (20) down Well describe for me which side of the bay did you go  
 (21) into left or right?  
 (22) A I m sorry I misspoke In 94 we did go to the general  
 (23) location of the transect but we didn t study the transect  
 (24) Q You went back to the general location but you didn t study  
 (25) it?

Vol 16 2549

- (1) A Yes  
 (2) Q Why was that?  
 (3) A Because in 1992 we found very little oil there  
 (4) Q Right okay With where did you go when you moved away  
 (5) from the transect site?  
 (6) A We walked the area to the north up behind the trees  
 (7) Q You ll have to help me The north is this direction?  
 (8) A I m sorry up in - the illustration is not north actually  
 (9) it s west but up in that we walked in the area looking for  
 (10) some team party members failed to find them returned to the  
 (11) shoreline and walked to your right - to your left that s  
 (12) correct  
 (13) Q This direction?  
 (14) A Perhaps I should come down  
 (15) Q There s no doubt about it There s no doubt about it  
 (16) Okay Now in more competent hands why don t you show  
 (17) me?  
 (17) A I don t know if they re more competent but at least the  
 (18) errors will be confined to one source  
 (19) Up this way along this way and I believe we walked to  
 (20) about here crossed over inspected this portion of the  
 (21) shoreline  
 (22) Q What did you find?  
 (23) A Scattered patchy residue  
 (24) Q Now do we have a protected area here?  
 (25) A Yes we do

Vol 16 2550

- (1) Q Okay What is this that we see?  
 (2) A Land  
 (3) Q Clear cutting?  
 (4) A Specifically -  
 (5) Q Clear cut logging?  
 (6) A Yes logging yes  
 (7) Q Is there - is there a loading dock to your knowledge  
 (8) somewhere in this area for logs?  
 (9) A Here  
 (10) Q Down here pardon me down here Do you have any  
 (11) knowledge by the way about whether at any time during the oil  
 (12) spill activities the logging activities in this area were  
 (13) affected at all?  
 (14) A In what context?  
 (15) Q Well do you have any information as to whether they were  
 (16) interrupted in any way?  
 (17) A We haven t studied the logging activities no  
 (18) Q Do you have any information that would suggest that any of  
 (19) the work you have done would lead you to conclude that  
 logging  
 (20) interruptions would be affected in this area?  
 (21) MR PETUMENOS I ll object that s beyond the scope  
 (22) MR OPPENHEIMER I ll withdraw the question Your  
 (23) Honor  
 (24) THE COURT All right  
 (25) BY MR OPPENHEIMER

Vol 16 2551

- (1) Q Do you notice any oil cans when you were walking up around  
 (2) this area?  
 (3) A During the visit when we were just there?  
 (4) Q Right right  
 (5) A There was storm raft flotsam/jetsam material there I  
 (6) don t recall specifically what the contents were but I don t  
 (7) think of it as being oil cans at this site  
 (8) Q You noticed oil cans at other sites?  
 (9) A Yes  
 (10) Q What other sites?  
 (11) A Good question  
 (12) Q Why don t you take your seat and I m going to give you a  
 (13) chance to sit down  
 (14) A I believe we observed oil can at Badger Cove  
 (15) Q By the way if there had never been an Exxon Valdez oil  
 (16) spill would there have been oil in the Prince William Sound  
 (17) area?  
 (18) A In what context? Natural oils or quantities that happened  
 (19) from the spill or -  
 (20) Q Let s start with natural oil Would there have been  
 (21) natural oil in the Prince William Sound?  
 (22) A Natural hydrocarbon compounds yes  
 (23) Q Yes right You re familiar with the Katalla area?  
 (24) A Yes I am  
 (25) Q Let s bring out a map Is this a good one?

Vol 16 2552

- (1) MR CLOUGH The one against the podium I think  
 (2) MR OPPENHEIMER Good  
 (3) BY MR OPPENHEIMER  
 (4) Q This is the Copper River Delta is that right?  
 (5) A Yes it is  
 (6) Q Can you tell the jury - well are you aware that there are  
 (7) natural oil seeps - for the moment I'll call it proximate to  
 (8) - near the Prince William Sound area?  
 (9) A Proximate meaning 40 miles 50 miles  
 (10) Q What area - can you tell us on this map where those oil  
 (11) seeps are?  
 (12) A Maybe not on that map I've seen the location  
 (13) Q It's about here?  
 (14) A Yes  
 (15) Q And -  
 (16) A I think they range from 50 to 100 miles away  
 (17) Q And the water that goes by those oil streams where oil is  
 (18) coming naturally out of the earth that same water goes through  
 (19) this area and down is that correct?  
 (20) A That is - well not that - not all of it  
 (21) Q Not all of it but - well eventually all of it?  
 (22) A A portion of the water goes in through the Hinchinbrook  
 (23) Entrance and comes out through Montague Straits  
 (24) Q Could I have the Kenai - I'll do it with a different map  
 (25) borrow one

Vol 16 2554

- (1) A Unfortunately yes  
 (2) Q Has a fair number of names with the word oil in it?  
 (3) A Yes  
 (4) Q And in the case of Oil Creek for example it explains that  
 (5) that's because for over sixty years people have known there  
 (6) was oil in that creek?  
 (7) A I don't know about the time frame on that  
 (8) Q But in any event you are familiar with Oil Creek?  
 (9) A Yes roughly yes  
 (10) Q Now we were talking about oil in the area even if it  
 (11) hadn't been - even if there had not been a spill and talked  
 (12) about a couple of natural sources This might be a mixed  
 (13) source but there's another event that caused oil to go into  
 (14) the - the atmosphere as well isn't that right?  
 (15) A I'm sorry?  
 (16) Q The '64 quake?  
 (17) A You said into the atmosphere  
 (18) Q Into the water into the water column?  
 (19) A Yes  
 (20) Q And that caused some oil tanks to break in Valdez isn't  
 (21) that right?  
 (22) A That is correct  
 (23) Q And those contained asphalt?  
 (24) A Yes  
 (25) Q And asphalt is different from what was on the Exxon Valdez

Vol 16 2553

- (1) And that oil that we're talking about it comes out of  
 (2) cracks in the earth is that right? It's a naturally occurring  
 (3) event?  
 (4) A Right It's an oil seep Cracks might not be the best  
 (5) characterization but yes  
 (6) Q Now this is one of your oiling maps This is - this is  
 (7) - how many miles away from the oil spill did you say this  
 (8) area was?  
 (9) A Oh 500 plus or minus depending on where you are  
 (10) Q And this is the Shelikof Strait here?  
 (11) A Yes that's correct  
 (12) Q And there's another area where you get oil naturally  
 (13) occurring in the water environment in this area is that right?  
 (14) A In the water environment?  
 (15) Q Somewhere along here there is - you can identify for me I  
 (16) take it a place where we have other oil seeps natural oil  
 (17) seeps?  
 (18) A Yes yes Bachelors Creek  
 (19) Q Oil Creek do you recall Oil Creek?  
 (20) A Yes where - right  
 (21) Q By the way as a geologist did you have occasion to use a  
 (22) book that describes how Alaskan rivers and whatnot get their  
 (23) names?  
 (24) A The Alaska Dictionary of Place Names you mean?  
 (25) Q Exactly And it has a fair number of names?

Vol 16 2555

- (1) is that right?  
 (2) A Yes  
 (3) Q And that asphalt has been found in the Prince William Sound  
 (4) area and on the Kenai ever since then?  
 (5) A To the extent it's been found in the Kenai I'm not sure  
 (6) It's been identified in Prince William Sound yes  
 (7) Q A number of the transect sites that you studied were in  
 (8) protected areas is that right?  
 (9) A That's correct  
 (10) Q Those are areas that are going to be harder to clean out  
 (11) among other things clean more slowly?  
 (12) A Generally speaking yes  
 (13) Q Don't let me cut your hand off there  
 (14) Do you recognize this as a photograph of your transect site  
 (15) area Eshamy Bay?  
 (16) A Yes  
 (17) Q For the record this is defendant's Exhibit DX8944 I've  
 (18) learned my lesson If I could ask you to come down and if we  
 (19) could do our standard operating procedure here if you would  
 (20) put the tape where your transect site is - was?  
 (21) A Well this is a skewed view here It's a little more  
 (22) difficult to say with certainty but it's approximately in this  
 (23) area  
 (24) Q Did you have occasion to go back there in '94?  
 (25) A Yes

Vol 16 2556

- (1) Q What did you find in '94?  
 (2) A We found a discontinuous asphaltic asphalt pavement  
 (3) beneath and around the cobble armor  
 (4) Q Discontinuous means it's not one piece?  
 (5) A That's correct  
 (6) Q Where did you find it?  
 (7) A Well we found it across the transect in this vicinity  
 (8) and then for some distance on in this direction  
 (9) Q How - how deep is the cobble armor up there?  
 (10) A It's fairly shallow When you say up there you're  
 (11) referring to -  
 (12) Q Where you found the mat?  
 (13) A It's fairly shallow from one to two cobbles mostly one in  
 (14) most places  
 (15) Q Do you have any information about how the life that lives  
 (16) in the intertidal area is affected as you move up the  
 (17) intertidal zone toward the supratidal zone - you're not a  
 (18) biologist I won't ask that question  
 (19) A But I mean generally speaking yes I guess if you can be  
 (20) more specific I'll try to stay within my knowledge realm  
 (21) Q Rather than induce you not to let me reword it  
 (22) How did you know there was a tar mat up there?  
 (23) A We investigated the site in 1989 and we returned in '92  
 (24) found residue of oil and returned in '94 and found residue  
 (25) then as well

Vol 16 2557

- (1) Q And from the residue that you were able to see you  
 (2) concluded that you had a mat running along the top here like  
 (3) this?  
 (4) A Roughly that location yes  
 (5) Q Let's - for this particular one would you put a piece of  
 (6) tape where you found that mat?  
 (7) A Well again this will be fairly approximate  
 (8) Q Sure  
 (9) A And this is the limit I think that we walked it while we  
 (10) were in the field Something like about that Might be a  
 (11) little over I think that's close to right  
 (12) Q Okay let me have you stand for one second I'm going to  
 (13) show you three photographs -  
 (14) MR OPPENHEIMER Counsel this is defendant's  
 (15) exhibits 15475 15476 15477  
 (16) Just to be on the safe side I can't remember whether I  
 (17) read into the record the Eshamy Bay photograph so while  
 (18) counsel's looking at that I'll read it again DX8944  
 (19) BY MR OPPENHEIMER  
 (20) Q Mr Bush if you would take a look at the three exhibits  
 (21) I'd like to have you tell me if they are in fact photographs  
 (22) that you took of Eshamy Bay around your transect area and as  
 (23) you were exploring this mat?  
 (24) A Okay Yes they are Not that we were truly exploring the  
 (25) mat but - yes Those are the photographs

Vol 16 2558

- (1) Q It is on the basis of work shown in these photographs that  
 (2) you concluded and just told the jury that there is a mat up  
 (3) here?  
 (4) A Yes  
 (5) Q No doubt in your mind?  
 (6) A There is a band with discontinuous asphaltic residue yes  
 (7) Q No doubt in your mind about that?  
 (8) A There's no doubt  
 (9) Q Tell us what we see here if you would  
 (10) A Well we see Dr Bakus He's looking at a sample in his  
 (11) hand standing by a boulder that's been turned up In the  
 (12) distance we see Jeffrey Dawson making field notes with a  
 (13) flag by his feet showing where he traced - the extent to which  
 (14) he traced the residue  
 (15) Q Now is this a - is this a -  
 (16) MR OPPENHEIMER Thank you I didn't think I was  
 (17) walking that fast  
 (18) BY MR OPPENHEIMER  
 (19) Q Is this a pit Mr Bush? I don't know can you see where  
 (20) I'm pointing?  
 (21) A I believe to the left of the red handle of the shovel  
 (22) Q Might have to bring you down  
 (23) A Where the rock's been moved out of the beach surface  
 (24) Q Right here where this rock has been moved out of here?  
 (25) A Yes That's not a pit it's a place where we moved a rock

Vol 16 2559

- (1) from the surface  
 (2) Q I understand Is that the rock?  
 (3) A Yes sir  
 (4) Q And so what you're telling me is you - you dug down here  
 (5) and you found a part of this mat that you say runs along here?  
 (6) A Yes  
 (7) Q No doubt about it?  
 (8) A Well it's impregnated sediment If you want to argue  
 (9) about the definition of a mat we can discuss that but there's  
 (10) material there  
 (11) Q Okay now this is a pit This is also a part of the  
 (12) process you used to determine that there was a mat at the top  
 (13) of the beach?  
 (14) A Also a process that you what - you were walking away  
 (15) Q This is part of the process you were going places and  
 (16) finding parts of the mat?  
 (17) A Yes  
 (18) Q Is this the pit that that rock just came out of in other  
 (19) words there's a pit here and a pit here?  
 (20) A The one that's beside the rock here the lower portion of  
 (21) the photograph  
 (22) Q Yes?  
 (23) A Yes that's the pit where the rock came out  
 (24) Q How many pits did you dig?  
 (25) A I don't recall precisely I would imagine - I think just

Vol 16 2560

- (1) the - just the turned over rock and the one pit that you see  
 (2) there is all I recall  
 (3) Q They re about that far apart from each other?  
 (4) A I think they re a little farther than that  
 (5) Q That far apart from each other?  
 (6) A Maybe a little more than that but you re in the ballpark  
 (7) MR OPPENHEIMER I move the admission Your Honor of  
 (8) defendants exhibits 15475 15476 15477  
 (9) (Exhibit DX15475 DX15476 DX15477 offered)  
 (10) THE COURT They re admitted  
 (11) (Exhibit DX15475 DX15476 DX15477 received)  
 (12) MR OPPENHEIMER Sorry I just poked myself with a  
 (13) pen  
 (14) BY MR OPPENHEIMER  
 (15) Q Taroca Arm Mr Bush another transect site?  
 (16) A Yes  
 (17) Q You needn t been terrified I m not going to go through  
 (18) all of them  
 (19) This is another protected site is it not?  
 (20) A Yes it is  
 (21) Q And this is a highly protected site isn t it?  
 (22) A I m not sure what you mean by highly but it s one of the  
 (23) more protected sites of the ones that were on our transects  
 (24) that s correct  
 (25) Q I m sorry excuse me do you recognize this as a photograph

Vol 16 2562

- (1) A Close enough right  
 (2) Q Now this transect site you ve described in your report  
 (3) have you not as protected by this piece of land this spit  
 (4) here?  
 (5) A That s correct  
 (6) Q Right As a natural phenomena this spit s not unlike the  
 (7) Homer Spit the way it s being built out?  
 (8) A That s correct  
 (9) Q Smaller example of that Did you have an opportunity to go  
 (10) back to Taroca in 95 (sic)?  
 (11) A Yes  
 (12) Q What did you find?  
 (13) A Did you say in 94 or just go back?  
 (14) Q I did say 95 and I did not mean to I meant to say 94?  
 (15) A We went back in - we went back in - I don t think we did  
 (16) get there in 94  
 (17) Yes we did I remember  
 (18) Q You do remember being back there in 94?  
 (19) A Yes  
 (20) Q And do you remember what you found?  
 (21) A Yes  
 (22) Q What did you find?  
 (23) A Scattered patchy patches of asphalt pavement  
 (24) Q And how did you identify the asphalt pavement?  
 (25) A I guess I don t follow the question You know we go to

Vol 16 2561

- (1) of the transect site location of your transect at Taroca?  
 (2) A Yes I do  
 (3) Q Am I correct that your transect was in this area?  
 (4) A Very close yes  
 (5) Q Do you recognize this as a photograph of your transect  
 (6) area?  
 (7) A Yes  
 (8) Q I think I can actually do this one this time Am I in the  
 (9) neighborhood of your transect area?  
 (10) A I believe it s farther towards me  
 (11) Q Here?  
 (12) A Past the tree I think  
 (13) Q Past this?  
 (14) A I think we re past the tree  
 (15) Q Do you think you re over here?  
 (16) A The oblique angle makes it difficult  
 (17) Q Here?  
 (18) A Right in there yes I believe that s about it  
 (19) MR OPPENHEIMER Mr Diamond could you hold my pen  
 (20) here for just a second? Thank you Here we go yeah thanks  
 (21) BY MR OPPENHEIMER  
 (22) Q Right about there?  
 (23) A I think so From this angle may have gone too far but  
 (24) it s close  
 (25) Q Close enough?

Vol 16 2563

- (1) the rocks and found places where they were bound together by  
 (2) oil residue and identified them  
 (3) Q Did you conclude it was another mat?  
 (4) A Another mat?  
 (5) Q Yes Well that there was a mat there  
 (6) A Or the portions of a mat that was there previously that was  
 (7) left  
 (8) Q The mat was deteriorating?  
 (9) A Yes  
 (10) Q From your last visit?  
 (11) A Yes  
 (12) Q Was the mat perpendicular or - excuse me parallel to the  
 (13) water did it run off?  
 (14) A Parallel to the shoreline?  
 (15) Q Parallel to the shoreline  
 (16) A Yes  
 (17) Q I d like to identify for the record that the closeup of the  
 (18) transect with the transect marker is exhibit 13240 and the  
 (19) broader view is exhibit 13239  
 (20) We talked about the transect sites I want to come back  
 (21) briefly to the maps you showed us earlier  
 (22) You recognize this as you testified before as an oiling  
 (23) map?  
 (24) A That is correct  
 (25) Q I want to be absolutely clear about something with respect

Vol 16 2564

- (1) to these exhibits These do not show the oil today?  
 (2) A That is correct  
 (3) Q They do not show the oil in 93?  
 (4) A That is correct  
 (5) Q They do not show the oil in 92?  
 (6) A That s correct  
 (7) Q They do not show the oil in 91?  
 (8) A That is correct  
 (9) Q Or 90?  
 (10) A That s correct  
 (11) Q Okay And this is information that you collected from  
 (12) every source that you could find with respect to where oil  
 (13) would be that you found in any way shape or form to be  
 (14) reliable?  
 (15) A It consists of observations made in 1989 That s - does  
 (16) that answer the question?  
 (17) Q Well I m being a little more specific What I want to  
 (18) know is where you got the information that went on - let me be  
 (19) even more specific Does this include what s known as  
 (20) anecdotal information?  
 (21) A Yes it does  
 (22) Q And is anecdotal information people who you may not know  
 (23) making a report to someone that eventually gets to you and it  
 (24) gets into the computer system?  
 (25) A That s correct

Vol 16 2565

- (1) Q You weren t able to do a reliability check on all of this  
 (2) information were you?  
 (3) A No we were not  
 (4) Q You did the best you could but you for example got some  
 (5) information from DNR which is the Department of Natural  
 (6) Resources do I have that right?  
 (7) A That s correct  
 (8) Q Do you have any idea what s in their data base?  
 (9) A Well we have it  
 (10) Q You have it I know you have it and I know it s reflected  
 (11) in the maps is it not?  
 (12) A Yes  
 (13) Q But do you know what s in it?  
 (14) A We re looking at what s in it I don t follow the  
 (15) question  
 (16) Q I understand we re looking at where that data base when  
 (17) you print it on the computer tells you where there s oil?  
 (18) A Yes  
 (19) Q Question is What s in the computer data base?  
 (20) A It was the data that was submitted to us by the Department  
 (21) of Natural Resources which had been acquired from the Alaska  
 (22) Department of Environmental Conservation and gone through  
 (23) the  
 (24) appropriate screening and production control processes  
 (25) Q Is it your understanding that the data that you got from  
 the Department of Natural Resources was only from ADEC?

Vol 16 2566

- (1) A Not only not only from ADEC  
 (2) Q Came from other sources too?  
 (3) A The largest proportion I believe was  
 (4) Q It came from other sources too?  
 (5) A I believe that s correct  
 (6) Q It came from reports of people?  
 (7) A Not the information from the Department of Natural  
 (8) Resources I don t believe that came from the reports of other  
 (9) people  
 (10) Q You don t think there s any -  
 (11) A We had a separate anecdotal file which we set up for  
 (12) anecdotal data we received  
 (13) Q You don t think there s any anecdotal data in the DNR disk?  
 (14) A I can t say There may not be  
 (15) Q You don t know?  
 (16) A I don t know  
 (17) Q You do know that you have a file that has nothing but  
 (18) anecdotal data in it?  
 (19) A Yes  
 (20) Q Those are statements people make about where they think  
 (21) they ve seen oil right?  
 (22) A That s correct  
 (23) Q You can mistake things for oil that aren t oil can t you?  
 (24) A Yes you can  
 (25) Q We talked a little bit earlier about the fact you can

Vol 16 2567

- (1) mistake decaying animal - pardon me decaying vegetable  
 matter  
 (2) for oil isn t that right?  
 (3) A I don t know if we talked about it or not  
 (4) Q The sheen?  
 (5) A Oh referring to the sheens  
 (6) Q Yes  
 (7) A There can be sheens produced by natural biologic things  
 (8) yes  
 (9) Q Which the untrained observer would think was oil?  
 (10) A Yes  
 (11) Q There could be lichen that the untrained observer would  
 (12) think was oil?  
 (13) A Yes  
 (14) Q Indeed isn t there something called tar spot lichen?  
 (15) A Yes I m not precisely familiar with that name but there  
 (16) are spotty lichens that do appear to be tar yes  
 (17) Q One of the things you had to do when you were doing your  
 (18) field work is that you weren t mistaking lichen for oil?  
 (19) A That s correct  
 (20) Q And there are boats that travel around in the water?  
 (21) A Yes there are  
 (22) Q They give off oil gasoline?  
 (23) A On some occasions yes  
 (24) Q Some occasions not that an owner would admit to but it  
 (25) happens We talked earlier about there are natural oil seeps?

Vol 16 2568

- (1) A Yes  
 (2) Q We talked earlier about the fact that the 1964 earthquake  
 (3) caused an asphalt event that was not so insignificant  
 (4) A Ruptured tanks in Valdez and spilled asphaltic material  
 (5) that s correct  
 (6) Q And in fact there can be local pockets of things which  
 (7) put oil and - and asphalt type material into this environment  
 (8) which an untrained observer could conclude was oil?  
 (9) A Depending on the nature of the occurrence they re  
 (10) describing yes  
 (11) Q You never saw oil at Bligh Island neither you nor any of  
 (12) your colleagues in two visits to Bligh Island?  
 (13) A That is correct  
 (14) Q But it s - it s on the map as oiled?  
 (15) A That is correct  
 (16) Q And were you here when Mr Costello testified in our - in  
 (17) our courtroom here about the oil he saw?  
 (18) A I was not  
 (19) Q Would you be surprised to learn that he indicated that he  
 (20) could only be definitive about oil on about one eighth of a  
 (21) mile of the shoreline?  
 (22) A Not particularly surprised no  
 (23) Q Okay Can you tell - and let me bring this closer to you  
 (24) - I assume you know your system well enough that you can but  
 (25) tell me if you can t that what you have marked as oiled on

Vol 16 2569

- (1) Bligh Island is substantially more than an eighth of a mile?  
 (2) A Yes that s correct  
 (3) Q It is okay Now earlier on you indicated to me that you  
 (4) had found some oil in - in this area you thought personally?  
 (5) A That s correct  
 (6) Q And was that in 94?  
 (7) A Yes it was  
 (8) Q This year you made a trip to north of the Tattilek Village?  
 (9) A Yes  
 (10) Q That was by float plane?  
 (11) A Yes  
 (12) Q And you found something there on a beach?  
 (13) A Yes  
 (14) Q You think it was Exxon oil?  
 (15) A The analyses indicate that it s Exxon oil The occurrence  
 (16) and nature of it were more speculative more questionable to  
 (17) my  
 (18) eye  
 (19) Q I ll show you two photographs and ask you to identify  
 (20) them They re marked for identification as defendants exhibit  
 (21) 15473 and 15474 I wonder if you could tell us what those two  
 (22) photographs are  
 (23) MR PETUMENOS Could I -  
 (24) MR OPPENHEIMER I m sorry pardon me  
 (25) MR PETUMENOS Sorry to interrupt  
 (26) MR OPPENHEIMER Let me show counsel first I m

Vol 16 2570

- (1) sorry  
 (2) MR PETUMENOS Thanks  
 (3) Thank you counsel I have them now  
 (4) BY MR OPPENHEIMER  
 (5) Q Mr Bush?  
 (6) A Thank you This doesn t represent all the photographs that  
 (7) we took but they re a couple of them yes  
 (8) Q By the way is that - there seem to be two post its or  
 (9) markers at the bottom of the photograph Is that your  
 (10) handwriting?  
 (11) A Yes  
 (12) Q When I say that I mean one each on 15474 and 15473  
 (13) A Yes  
 (14) Q And are these in fact photographs of the oil you found at  
 (15) Tattilek?  
 (16) A Some of the oil we found that s correct  
 (17) MR OPPENHEIMER Your Honor these do not come across  
 (18) too good on the Elmo May I move for their admission and  
 (19) circulate them briefly among the jury?  
 (20) MR PETUMENOS No objection  
 (21) (Exhibit DX15473 and DX15474 offered)  
 (22) THE COURT Yes Just tell me one more time what they  
 (23) are  
 (24) MR OPPENHEIMER Yes Your Honor they re -  
 (25) THE COURT What are the numbers?

Vol 16 2571

- (1) MR OPPENHEIMER The numbers are 15474 15473  
 (2) THE COURT All right those - they are admitted  
 (3) (Exhibit DX15473 and DX15474 received)  
 (4) BY MR OPPENHEIMER  
 (5) Q How long were you at Tattilek?  
 (6) A How long you mean specifically investigating the  
 (7) shoreline?  
 (8) Q Yes  
 (9) A On the Tattilek area actually we hadn t planned on  
 (10) investigating the shoreline at all We simply arrived on the  
 (11) float plane got off and were on our way to meet Claire Doig  
 (12) I believe  
 (13) Q Claire Doig?  
 (14) A Yes And at the plane site we stumbled onto some tar  
 (15) patches on the cobble armor  
 (16) Q Is one of the things that you ve been asked to do to help  
 (17) the plaintiffs map their land that is to say to put it on  
 (18) maps their parcels?  
 (19) A I don t follow the question excuse me  
 (20) Q Did you play a role in creating maps that show their  
 (21) parcels that show -  
 (22) A Yes  
 (23) Q The legal boundaries?  
 (24) A Yes  
 (25) Q That you were told were the legal boundaries of their land?

Vol 16 2572

- (1) A Yes  
 (2) Q And do you have an understanding as to the point at which  
 (3) the legal boundary ends as you get toward the water?  
 (4) A No  
 (5) Q When you originally began to investigate oil in 89 did  
 (6) you not write that you wanted to be careful because the Native  
 (7) lands did not begin until the mean high tide line?  
 (8) A I wouldn't say that - that we knew that at that time We  
 (9) questioned the issue It became unresolved and we had to  
 (10) move  
 (11) to the field so we assumed that that was the case and  
 (12) collected data as carefully as possible in order to delineate  
 (13) the mean high tide boundary should that be the case  
 (14) Q I'd like to change subjects now to the curves the  
 (15) persistence curves We have as I understand it ten  
 (16) persistence curves corresponding to ten NOAA beach types?  
 (17) A That's correct  
 (18) Q NOAA mapped the beaches of Prince William Sound and the  
 (19) Kenai back what in the 70s?  
 (20) A I believe so I believe that's correct yes It was the  
 (21) early 70s for the Kenai - or the Shelikof Straits area  
 (22) Q Let's put one of these up  
 (23) MR PETUMENOS Mr Oppenheimer are you going to need  
 (24) this map on the easel?  
 (25) MR OPPENHEIMER I'm sorry?  
 (26) MR PETUMENOS I can move it if you don't need it no

Vol 16 2574

- (1) plaintiffs property is that right?  
 (2) A That - that would actually be applicable to a single piece  
 (3) of plaintiffs property is that what you're saying?  
 (4) Q Yes  
 (5) A I think that's probably incorrect The curves average out  
 (6) a lot of - a lot of issues a lot of processes to achieve one  
 (7) result and I would imagine that there are isolated sites that  
 (8) fall right on the curves Some may persist or have persistence  
 (9) longer than is indicated by the curves and some have less  
 (10) The idea being that they average out that the situation will  
 (11) average out  
 (12) Q This doesn't tell you though what any particular beach is  
 (13) going to do though does it?  
 (14) A Any single isolated parcel  
 (15) Q Correct  
 (16) A Correct way to phrase that is we can't find a single piece  
 (17) with certainty that would fit precisely the curves  
 (18) Q That would fit these curves okay  
 (19) Now this is really very hard to read but I'd like to look  
 (20) a little more carefully at this This curve comes down and  
 (21) then it goes out again is that right?  
 (22) A That is correct  
 (23) Q That's called a slope?  
 (24) A Yes  
 (25) Q And you've got 100 percent up here and you have zero down

Vol 16 2573

- (1) problem  
 (2) MR OPPENHEIMER Sure give me a hand Thank you  
 (3) BY MR OPPENHEIMER  
 (4) Q This is a little hard to read Mr Bush but it comes up on  
 (5) your monitor There's a footnote to this graph of the  
 (6) persistence curves Would you read that for us?  
 (7) A Number one or number two  
 (8) Q Number 2 please Pardon me  
 (9) A Does not fully incorporate effects of beach treatment  
 (10) Q It's part of the problem that you just don't have adequate  
 (11) site specific data on beach cleanup?  
 (12) A On what?  
 (13) Q On beach cleanup  
 (14) A That's correct  
 (15) Q Don't know what's been cleaned what's not been cleaned  
 (16) and cleaning is important to any specific beach whether it has  
 (17) recovered whether it has been or hasn't been whether it's  
 (18) been done well or bad?  
 (19) A On a site specific basis We have general information on  
 (20) it but nothing that is work site specific  
 (21) Q We're dealing with very specific sites here We're dealing  
 (22) with property that people are making claims about?  
 (23) A That is correct  
 (24) Q Okay There isn't any curve that we've seen today that  
 (25) would actually be directly applicable to a single piece of the

Vol 16 2575

- (1) here right?  
 (2) A That's correct  
 (3) Q Okay And as you go down the beach is improving right?  
 (4) A That is correct  
 (5) Q So where you have a steep curve it's improving fast?  
 (6) A That's correct  
 (7) Q And where you have what's called a shallow curve a little  
 (8) less fast?  
 (9) A That's correct  
 (10) Q You have a little - we didn't talk about this earlier but  
 (11) you have a little - there's another little mark there  
 (12) MR OPPENHEIMER Your Honor would it be permissible  
 (13) to pass some of these out among the jury?  
 (14) MR PETUMENOS Counsel they'll blow up on the -  
 (15) MR OPPENHEIMER Okay They will? I'll use the  
 (16) machine  
 (17) MR PETUMENOS I was doing that  
 (18) MR OPPENHEIMER In fact we have one on the  
 (19) machine Can you just put it up on the - it's - here I'll  
 (20) give you this one it's 1273  
 (21) Well that's a little better Can you folks see that?  
 (22) BY MR OPPENHEIMER  
 (23) Q Okay These numbers go from 100 percent down to zero  
 (24) but  
 (25) there's this little line here right  
 (26) Now this tells us does it not that at - after - well

Vol 16 2576

- (1) in this case a year this might be a little clearer because  
 (2) it's bolder in a - oh this is wonderful Okay There we  
 (3) go There they are  
 (4) In one year this particular beach will be - I'm guessing  
 (5) here- I'll give you the benefit of the doubt but better than  
 (6) 85 percent recovered?  
 (7) A Yes  
 (8) Q Okay Let's talk about this point out here and here's a  
 (9) moderate oiling beach and according to this in four years  
 (10) that beach will be completely recovered right?  
 (11) A That's correct  
 (12) Q Now what those charts are telling you is what Mr Mundy  
 (13) the plaintiffs appraiser told you would be what he wanted as  
 (14) the point in time for recovery In other words he defined  
 (15) recovery for you is that right?  
 (16) A You'll have to rephrase that I think you indicated that  
 (17) he defined the amount of time  
 (18) Q No no he told you what the condition was that he wanted  
 (19) you to treat as quote unquote recovered?  
 (20) A Well generally speaking that's correct We discussed a  
 (21) number of issues regarding this on several occasions and  
 (22) reached collectively probably mostly through - through his  
 (23) input and his associates a number of criteria which were  
 (24) given to us and we attempted to construct curves to meet those  
 (25) criteria that's correct

Vol 16 2577

- (1) Q And I think you testified yesterday this doesn't have  
 (2) anything to do with - with long term biologic recovery  
 (3) necessarily?  
 (4) A Well there are some aspects of biological recovery It is  
 (5) a component of this work but we haven't incorporated some of  
 (6) the more far reaching or some of the more exotic aspects of  
 (7) that recovery There are certain aspects of it such as  
 (8) population dynamics returning to the same age group class for  
 (9) a certain species recovery of the birds for example in some  
 (10) areas which has been projected to be for example 60 years  
 (11) certain species of fish which we have not included in these  
 (12) curves  
 (13) Q So for example all of those things that you've just  
 (14) mentioned for purposes of this lawsuit and Mr Mundy's  
 (15) opinion  
 (16) in connection with this particular curve would be 80 to 85  
 (17) percent cured within a year and in three years completely  
 (18) cured?  
 (19) A No all of the things except what I mentioned  
 (20) Q Oh so all the things you mentioned have nothing to do with  
 (21) where those curves stop where recovery occurs for purposes of  
 (22) Mr Mundy's opinion  
 (23) A We've excluded -  
 (24) Q Excluded all that?  
 (25) A - those more long term and isolated cases  
 (26) Q Long term for example any - anything beyond three years

Vol 16 2578

- (1) in this particular slope?  
 (2) A Well in this particular case  
 (3) Q Okay  
 (4) A I - I think you're mischaracterizing a little bit what I'm  
 (5) saying here  
 (6) Q I don't want to do that so tell me  
 (7) A There are certain biological recovery - components of  
 (8) biological recovery that are not included in these curves I  
 (9) guess a simple way to put it  
 (10) Q Can you tell us what they are?  
 (11) A I can't name all of them We didn't research all of them  
 (12) I've given you some of them  
 (13) Q Actually this might be easier Can you tell me only the  
 (14) ones that are included?  
 (15) A Well I couldn't - I couldn't name all of these either  
 (16) can give you an example Whoops  
 (17) Q You can't tell me - are you all right?  
 (18) A I'm fine  
 (19) Q You can't tell me all of the things that are included?  
 (20) A I can give you some of them  
 (21) Q Give me one example  
 (22) A We included the sensitivity of crabs to oil We included  
 (23) clams recovery of clams pretty much to the age class density  
 (24) Q How about pink salmon?  
 (25) A No

Vol 16 2579

- (1) Q How about red salmon?  
 (2) A No  
 (3) Q How about herring?  
 (4) A There was some discussion about herring We did not  
 (5) include them specifically but that condition similar thinking  
 (6) or opinions on this  
 (7) Q Condition your thinking how did you condition your  
 (8) thinking?  
 (9) A We incorporated the notion that that did - in fact  
 (10) because people like some of these lands - did have the value  
 (11) aspects for the land  
 (12) Q People like some of what?  
 (13) A People liked the aspect about land in other words  
 (14) property in areas that allowed them to access herring or  
 (15) herring fisheries or something was a consideration  
 (16) Q That's a consideration that you took into account?  
 (17) A Yes  
 (18) Q You're a marine geologist?  
 (19) A No you meaning the crew and the team and the  
 (20) organization that worked on the curves  
 (21) Q Okay But I'm just asking about these curves that you  
 (22) worked on  
 (23) MR PETUMENOS Objection that's misleading the  
 (24) curves were a product of the entire team  
 (25) MR OPPENHEIMER I'll withdraw the question Your

Vol 16 2580

- (1) Honor I'll withdraw the question  
 (2) THE COURT All right  
 (3) BY MR OPPENHEIMER  
 (4) Q You took into account did you say crabs?  
 (5) A Yes  
 (6) Q And clams?  
 (7) A Yes  
 (8) Q And are that - are those because those are things that you  
 (9) felt were closely associated with the land that people would  
 (10) use?  
 (11) A Yes  
 (12) Q You are not an appraiser?  
 (13) A That's correct  
 (14) Q You have no skills in appraisal?  
 (15) A That is correct  
 (16) Q And in fact you do not have an opinion do you about  
 (17) whether or not the value of land is proportional to the amount  
 (18) of oil on it?  
 (19) A I do not  
 (20) Q Do you know if Mr Mundy does?  
 (21) A I should - I should perhaps back up a little bit on that  
 (22) I have been involved in projects with ICF that - where we do  
 (23) what we call acquisition liability assessment and we do find  
 (24) that the content of hazardous materials on properties do affect  
 (25) their value do affect their marketability do affect their

Vol 16 2581

- (1) liquidity in the market And we have done projects to protect  
 (2) both buyer and seller in that regard So I do have some  
 (3) opinion on that  
 (4) Q Let me ask you this Mr Bush That work - you have an  
 (5) economist at ICF?  
 (6) A I'm sorry?  
 (7) Q In your firm do you have economists?  
 (8) A Yes we do  
 (9) Q Did any of the economists work on this project?  
 (10) A On the project as a whole yes For the curves -  
 (11) Q For the curves no?  
 (12) A - no  
 (13) Q You referred to - did you say acquisition standards?  
 (14) A Acquisition liability yes  
 (15) Q Do you commonly use in - in your assessment of  
 (16) acquisition liability some standards promulgated by Long and  
 (17) Morgan of the NOAA?  
 (18) A Typically most of the work we've done have been standards  
 (19) that were put forth by other agencies in other capacities So  
 (20) the answer is no  
 (21) Q The answer's no Did you use Long and Morgan in any  
 (22) respect in determining when recovery should be found on these  
 (23) curves?  
 (24) A We used them from the standpoint of understanding what  
 (25) would constitute background conditions and what  
 concentrations

Vol 16 2582

- (1) of materials would constitute possible harm to certain  
 (2) species  
 (3) Q NOAA National Oceanographic and Atmospheric  
 (4) Administration?  
 (5) A Administration  
 (6) Q And they are folks who among other things deal with  
 (7) standards of safety for contaminants in the environment  
 (8) they're one agency that does that?  
 (9) A That is correct  
 (10) Q And they were the science advisor were they not to the  
 (11) federal on scene coordinator in connection with this spill?  
 (12) A Yes They were an alternate I believe to the Coast Guard  
 (13) to participate with the SCAT teams  
 (14) Q Your own - your own Mr Thebeau has worked with NOAA  
 has  
 (15) he not?  
 (16) A He has yes  
 (17) Q And he and Mr Bakus believe do they not that NOAA is a  
 (18) reliable - produces reliable scientific information?  
 (19) A In general yes It doesn't mean we agree on every point  
 (20) Q In doing your work on shoreline recovery and deciding for  
 (21) example the particular shoreline would be 85 percent clean in  
 (22) a year and completely clean in three years Did you take into  
 (23) account any of the shoreline assessments made by NOAA in  
 (24) connection with this oil spill?  
 (25) A I'm sorry you were walking away I didn't catch all the

Vol 16 2583

- (1) words  
 (2) Q I apologize  
 (3) A Did we take into account -  
 (4) Q Did - in doing your work on these curves and deciding  
 (5) where they would stop and where you would find recovery did  
 (6) you take into account any of the shoreline assessments that had  
 (7) been made on this spill by the on scene coordinator science  
 (8) advisor NOAA NOAA?  
 (9) A In the capacity that we examined the results of some of the  
 (10) joint survey programs but that's - we did not rely on any  
 (11) policy level descriptions or conclusions that were reached  
 (12) about the environmental conditions  
 (13) MR OPPENHEIMER Counsel it's my intention to ask  
 (14) the witness if he is familiar with and to read from a NOAA  
 (15) report to Rear Admiral Ciancaglini Exhibit DX2761  
 (16) MR PETUMENOS Give us just a moment counsel  
 (17) MR OPPENHEIMER Absolutely and what I'm referring  
 (18) to is Page 4  
 (19) MR OPPENHEIMER I will read portions of the  
 (20) paragraphs under the heading Toxicology - sorry Your Honor  
 (21) we apparently had one mixup in the exhibits  
 (22) MR PETUMENOS May I have just a moment Your Honor?  
 (23) I'm sorry  
 (24) Thank you Judge  
 (25) MR OPPENHEIMER No objection counsel

Vol 16 2584

- (1) MR PETUMENOS No I d like to have the witness  
 (2) informed as to the - what the document is and the author and  
 (3) all that and then I have no objection  
 (4) MR OPPENHEIMER No problem  
 (5) BY MR OPPENHEIMER  
 (6) Q Mr Bush I m going to ask you if you ve taken into account  
 (7) some conclusions reached by NOAA in their review of the status  
 (8) of Prince William Sound shorelines provided to Rear Admiral  
 (9) Ciancaglino on March 15 1991?  
 (10) A On March 15?  
 (11) Q March 15 1991  
 (12) A I do not believe we took those into account  
 (13) Q Let me let me double check that with you Let me read  
 (14) some of the -  
 (15) MR PETUMENOS Excuse me I m a little confused  
 (16) counsel Sorry to belabor this I can t tell from this  
 (17) exhibit who the author was or who the - who the scientist was  
 (18) or - looks like it s an excerpt and I don t think we can get  
 (19) to what - whether this was -  
 (20) MR OPPENHEIMER Few more questions Your Honor see  
 (21) if we can clarify this  
 (22) BY MR OPPENHEIMER  
 (23) Q I m going to give you my copy of Exhibit 2761 Mr Bush  
 (24) and ask if you ve ever seen that before Actually let me give  
 (25) you a clean copy that way you don t have to look at my stick

Vol 16 2585

- (1) drawings  
 (2) A Are they offensive counsel?  
 (3) Q No  
 (4) A I believe this document was produced - oh wait a minute  
 (5) maybe not I thought this was one that was produced during  
 (6) my  
 (7) deposition  
 (8) It looks less familiar as I page through it  
 (9) MR PETUMENOS Judge I believe that there s - under  
 (10) the learned treatise exception which is what I thought we were  
 (11) going here - there s no problem with reading such a document  
 (12) and if he disagrees first we have to know what the learned  
 (13) treatise is and learned fellow is and we can t tell from that  
 (14) document  
 (15) MR OPPENHEIMER Your Honor this is under provision  
 (16) 803 This is a government report and it has been identified  
 (17) It s from NOAA to Rear Admiral Ciancaglino and it s a 1991  
 (18) shoreline survey report  
 (19) MR PETUMENOS Let s just do it and we can take it  
 (20) up later  
 (21) THE COURT Very good choice counsel  
 (22) BY MR OPPENHEIMER  
 (23) Q As of 1991 Mr Bush - and let me draw your attention to  
 (24) this portion right here - do you agree with NOAA s conclusion  
 (25) in March of 91 that the bulk composition of the remaining oil  
 (26) is comprised primarily of the residual or asphaltine fractions

Vol 16 2586

- (1) which have negligible water solubility and little demonstrated  
 (2) toxicity and thus pose little environmental risk to intertidal  
 (3) and water column organisms even if there were routine  
 (4) releases?  
 (5) A I guess I don t agree with that  
 (6) Q Did you take it into account in doing your curves?  
 (7) A The sentence sounds familiar whether I took it from this  
 (8) document or not but I do believe I ve heard that  
 (9) Q Okay the second page Did you take into account the  
 (10) following additional conclusion of NOAA in March of 91 the  
 (11) oil that remains buried after two winter storm seasons is not  
 (12) mobile and the likelihood of a release is small This oil  
 (13) therefore does not present a significant hazard to terrestrial  
 (14) or aquatic organisms as it is not readily available to them  
 (15) Future releases of this buried oil would only occur during a  
 (16) major storm event and the mechanical washing due to high  
 (17) energy wave action during such an event would rapidly  
 (18) disburse  
 (19) any oil that was released  
 (20) A I don t agree with all of that Portions of it yes parts  
 (21) of it no  
 (22) Q And did you take it into account in doing your curves?  
 (23) A This sentence?  
 (24) Q That conclusion  
 (25) A No we did not agree with it  
 (26) Q When you gave Mr Mundy the results of your work did you

Vol 16 2587

- (1) just give him these curves?  
 (2) A Well we did give him the curves I don t recall all of  
 (3) the things we gave him I think we generated some maps and  
 (4) other items and we made some calculations for him in the GIS  
 (5) system  
 (6) Q Made some calculations for him?  
 (7) A Yes  
 (8) Q You combined these curves for him didn t you?  
 (9) A I don t believe so No I -  
 (10) Q Did you produce - and I may be mistaken and if so please  
 (11) tell me - did you produce you or ICF a single persistence  
 (12) number for each parcel that the plaintiffs are claiming in this  
 (13) case?  
 (14) A Oh yes yes We did a weighted damage persistence  
 (15) calculation on a parcel basis that s correct  
 (16) Q Weighted average?  
 (17) A That s correct  
 (18) Q Problem is isn t it that the parcels have different types  
 (19) of shoreline in the same parcel?  
 (20) A Yes  
 (21) Q So you have to do something about that?  
 (22) A We elected to do something about it  
 (23) Q Fair enough  
 (24) MR OPPENHEIMER Can we blow this back out again?  
 (25) BY MR OPPENHEIMER

Vol 16 2588

- (1) Q So if you had a - if you had a beach that had some fine  
 (2) grained sand but it also had one of the other types of beach  
 (3) types you had you have to find a way to combine those things  
 (4) right?  
 (5) A That s correct  
 (6) Q And they might also have different types of oiling on  
 (7) different types of beach?  
 (8) A We combine the effect of the different types We don t  
 (9) actually combine them  
 (10) Q So what would happen is if you had a shoreline that was  
 (11) say half cobble and half fine grain and the fine grain was  
 (12) moderately oiled and the cobble was heavily oiled you d go to  
 (13) your - you d go to these curves you d find the curve for one  
 (14) half the beach that corresponded to the type of beach and the  
 (15) type of oiling and you d get a number three years and you d  
 (16) go to another type you d go to another one of the examples  
 (17) where it corresponded to the other part of the - of the  
 (18) property and you would - you would go to that part of the  
 (19) table that combined the shoreline type with the oiling type and  
 (20) you d take that number right?  
 (21) A That s correct  
 (22) Q And now you ve got two numbers and you have to somehow  
 (23) put  
 (24) them together right?  
 (25) A Yes  
 (26) Q Okay You said you did a weighted average?

Vol 16 2589

- (1) A That s correct  
 (2) Q What is - how does that work? How does a weighted  
 (3) average  
 (4) work?  
 (5) A Well we took the length of oiled shoreline and divided  
 (6) that into the length of oiling per category of shoreline type  
 (7) the product of all those and reached a weighted average  
 (8) Q This is dangerous but I m going to try to draw something  
 (9) here  
 (10) Can you see this Mr Bush?  
 (11) A Yes  
 (12) Q Can you see this?  
 (13) I m going to represent a beach with a line Okay that s  
 (14) our hypothetical beach  
 (15) MR PETUMENOS Excuse me  
 (16) MR OPPENHEIMER No problem  
 (17) BY MR OPPENHEIMER  
 (18) Q And just for a simple example I m going to say that it s  
 (19) 1 000 feet and 500 feet is here and with - divide it right in  
 (20) the middle 500 here And this one is say light and it s  
 (21) fine grain and this one is heavy and it s cobble okay Now  
 (22) let s say this is three years and let s just for lack - well  
 (23) let s say this is five years for the moment and let s say this  
 (24) is ten years okay?  
 (25) This is a pretty easy one using it for an example  
 (26) A Thank you

Vol 16 2590

- (1) Q You have to combine those two I still give you credit I  
 (2) couldn t do it in my head but what is the number that this  
 (3) beach is going to get?  
 (4) A Well it s five times 500 plus ten times 500 divided by  
 (5) 1 000  
 (6) Q 7 5 roughly?  
 (7) A I would imagine yes  
 (8) Q Now we start with curves that use beach types that you  
 (9) agree were very suspect because we have a wide variety of  
 (10) different kinds of beaches out there and the NOAA data are -  
 (11) are old right?  
 (12) A That is correct  
 (13) Q And then you re a little concerned about the oiling data  
 (14) because that s not all that reliable either in your view?  
 (15) A That is correct  
 (16) Q Okay And then we take two of those numbers that are  
 (17) generated including that oiling liability and we combine  
 (18) them right?  
 (19) A That s correct  
 (20) Q Do you think this 7 5 has anything to do with how long it  
 (21) will really take this hypothetical beach to recover?  
 (22) A Yes Actually the variation that you ve described works  
 (23) on - in both directions In places that are - are moderately  
 (24) oiled For example as we talked about earlier you re going  
 (25) to have these sheltered protected spots that are going to

Vol 16 2591

- (1) preserve oil longer on the other hand there are also going to  
 (2) be parts of them that clean up faster  
 (3) Q But the -  
 (4) A The notion is all of it will average out and that this  
 (5) method eliminates extreme bias on the heavy side by diluting it  
 (6) with the lightly oiled and at the same time reduces the bias  
 (7) on the light side by diluting it with the heavily oiled and we  
 (8) do it on a shoreline length basis to prorate that impact across  
 (9) the parcel across the oiled shoreline of the parcel  
 (10) Q It s an average?  
 (11) A Yes  
 (12) Q It doesn t tell you what any specific beach is going to do?  
 (13) A That is -  
 (14) Q Correct?  
 (15) A Correct yes Any specific parcel  
 (16) Q Any specific parcel?  
 (17) A Yes  
 (18) Q The longest persistence period - go back to Bay of Isles  
 (19) Remember Bay of Isles? That s a significant contributor to the  
 (20) longest persistence period in your graphs marsh is the  
 (21) longest?  
 (22) A In terms of the sensitivity in terms of the graphs yes  
 (23) Q Therefore your longest absolutely longest ballpark average  
 (24) is 24 years do you recall that?  
 (25) A Yes

Vol 16 2592

- (1) Q For a piece of property that's less than one percent of the  
 (2) shorelines of the entire Prince William Sound?  
 (3) A It's prorated by its length, yes.  
 (4) Q I understand 20 to 24 years. Can't get any longer than  
 (5) that, right?  
 (6) A Not in our system.  
 (7) Q Let's see, I'm looking for - yes, thank you very much.  
 (8) Pardon me just one second.  
 (9) Can you see that?  
 (10) East Chugach Island?  
 (11) A Yes.  
 (12) Q Pretty good fetch?  
 (13) A Yes.  
 (14) Q Darn good, right? Darn good fetch. Water hitting that  
 (15) island probably pretty hard?  
 (16) A Yes.  
 (17) Q You know what kind of coastline it's got?  
 (18) A I believe there's an embayment on the north end with  
 (19) gravel, and the rest of it is largely rocky, I believe.  
 (20) Q Okay. Do you know what persistence period it was assigned  
 (21) by Mr. Mundy based on your work?  
 (22) A I don't recall all the persistences, weighted average  
 (23) persistences assigned to each parcel. The system we cranked  
 (24) them out.  
 (25) Q Would it surprise you to learn that East Chugach Island was

Vol 16 2594

- (1) Q Based on that information, I'll represent to you that about  
 (2) 10 percent of this shoreline was heavy, okay? And less than  
 (3) one percent was light, and about 30 percent was very light.  
 (4) The rest was totally unoiled - I can't spell - the rest was  
 (5) totally unoiled.  
 (6) Now, do I have it right that when you did your weighted  
 (7) persistence average to come up with one number per parcel for  
 (8) Mr. Mundy, that what you did was to kick out the very light?  
 (9) A That is correct.  
 (10) Q And you weighted light and heavy?  
 (11) A That is correct.  
 (12) Q You didn't want - why did you do that?  
 (13) A Because the very light was too difficult for us to get  
 (14) adequate data on to make any kind of projections on. It's  
 (15) difficult enough within the light, moderate and heavy.  
 (16) Definitions change between programs, probably between field  
 (17) teams.  
 (18) Q Now, heavy here, I'll represent to you, was - obviously  
 (19) had to be - if my facts are right so far, this had to be a  
 (20) long curve, right? If in fact the curve, the percentage  
 (21) period given to this island was this, which I'll represent to  
 (22) you it was, you're not surprised to learn that the heavy was 24  
 (23) years, ten percent had a long persistence period?  
 (24) A That is correct.  
 (25) Q And this little, tiny bit of light got very little

Vol 16 2593

- (1) assigned a persistence period of 23.45 years?  
 (2) A I'm not surprised or unsurprised.  
 (3) Q Let me ask you something else about how your weighted  
 (4) averages work. And I lose track easily here, so if I get off  
 (5) - I'm trying to keep this as simple as I can, so I can follow  
 (6) it.  
 (7) When you do a weighted average for a beach, you don't  
 (8) include light or very light, do you?  
 (9) A That is - very light. We include light, we don't include  
 (10) very light.  
 (11) Q You don't include very light.  
 (12) MR OPPENHEIMER: We may be able to counsel, move  
 (13) this a little faster if I don't have to go back and confirm  
 (14) each number, so if I can try a hypothetical related to this.  
 (15) If you object, I'll stop.  
 (16) MR PETUMENOS: I'll try not to object.  
 (17) MR OPPENHEIMER: I know you will.  
 (18) BY MR OPPENHEIMER:  
 (19) Q East Chugach Island has a shoreline that's about 68,000  
 (20) feet, okay?  
 (21) A Okay.  
 (22) Q And according to - well, you'll recall that your company  
 (23) recently redid a lot of these persistence curves and provided  
 (24) those to Mr. Mundy, do you recall that?  
 (25) A That is correct.

Vol 16 2595

- (1) When you did the persistence number for Mr. Mundy, in  
 (2) effect, what you were giving him was a persistence figure for  
 (3) this part of that hypothetical beach, right?  
 (4) A That is correct.  
 (5) Q If Mr. Mundy had applied that number to this, in other  
 (6) words, if he had included or applied the 23.45 to a very light  
 (7) beach, he would have been misusing your data, wouldn't he?  
 (8) A If he applied it to a very lightly oiled beach?  
 (9) Q Yes, correct.  
 (10) MR PETUMENOS: I'll object to the form of the  
 (11) question as misleading.  
 (12) THE COURT: I'm not sure I understand the question.  
 (13) BY MR OPPENHEIMER:  
 (14) Q If you gave Mr. Mundy the figure of 23.45 East Chugach  
 (15) Island, and about 10 or 11 percent of it was heavy or light  
 (16) and about 30 percent of it was very light, and he took that  
 (17) number and said that 40 percent of the beach should have a  
 (18) persistence of 23.45 years, would he have been misusing your  
 (19) data?  
 (20) A Well, I - I don't think that's what happened. He didn't  
 (21) apply it to the shoreline -  
 (22) Q Let me ask you -  
 (23) A - applied to the parcel.  
 (24) Q If he had done that, would he have been misusing your  
 (25) data?

Vol 16 2596

- (1) MR PETUMENOS Same objection I think the  
 (2) question s misleading I don t understand  
 (3) THE COURT You can answer the question If you have  
 (4) to explain he ll allow you that  
 (5) A Thank you We don t apply this result to a shoreline or  
 (6) we don t - we don t incorporate a portion of the shoreline or  
 (7) not incorporate a portion of the shoreline The weighted  
 (8) average persistence numbers apply to the parcel and he uses  
 a  
 (9) separate factor an impairment factor to account for the fact  
 (10) that only part of the shoreline or part of the parcel is or is  
 (11) not impacted  
 (12) Q Absolutely Do you know if his factor includes the very  
 (13) light?  
 (14) A I don t know how he applies it or how he applies the  
 (15) process  
 (16) Q You haven t seen it?  
 (17) A That s part of his process  
 (18) Q If I were to tell you that the impairment factor he applied  
 (19) to this parcel included very light would that surprise you?  
 (20) A I don t know what you mean by included how you re saying  
 (21) it but -  
 (22) Q Let s assume for present purposes here that what Mr Mundy  
 (23) is going to do as you understand it - correct me if I m wrong  
 (24) - on this 68 000 feet of - this property that has 68 000  
 (25) feet of shoreline you re going to give him a figure of 23 45

Vol 16 2597

- (1) years based upon your analysis of - your averaging of heavy  
 (2) and light right?  
 (3) A Yes  
 (4) Q And then he is going to apply this to some part of the  
 (5) shoreline you understand that?  
 (6) A That is correct  
 (7) Q And is it your understanding that he is going to apply it  
 (8) not to all the shoreline he s not going to apply it to the  
 (9) unoiled part right?  
 (10) A That s correct  
 (11) Q He s not going to say in any way shape or form that the  
 (12) unoiled shoreline is going to take 23 45 years to recover  
 (13) right? My question is as to very light do you know whether he  
 (14) applies it to very light? You know he doesn t - you just said  
 (15) to unoiled Do you know if he does to very light?  
 (16) A I don t know how he applies the impairment factor  
 (17) Q Okay  
 (18) A It s whether or not he applies it to an unoiled shoreline  
 (19) I just -  
 (20) Q Okay Do you recall when you generated your first set of  
 (21) these curves?  
 (22) A I don t remember the first day I know we ve gone through  
 (23) several revisions  
 (24) Q Do you remember in March of 90 communicating with  
 (25) Mr Thebeau who was in Washington D C about these curves

Vol 16 2598

- (1) and getting his input of these curves?  
 (2) A Yes  
 (3) MR PETUMENOS Can I - these were in my chair You  
 (4) were using my chair  
 (5) MR OPPENHEIMER Oh yes sure  
 (6) BY MR OPPENHEIMER  
 (7) Q I d like to show the witness what s been marked as  
 (8) defendants 2734 and ask him if he has seen these documents  
 (9) before  
 (10) A Yes  
 (11) Q And are they in fact - well you tell me what they are  
 (12) if you would  
 (13) A Well they re notes passed back and forth between myself  
 (14) and Larry and the first couple of pages appear to be some  
 (15) calculations of acreage per parcel  
 (16) The second page -  
 (17) Q Maybe just to speed things -  
 (18) A I m not sure I m familiar with the second page  
 (19) Q The third page you recognize as being drafts of these  
 (20) curves which you and your colleague Mr Thebeau were  
 (21) communicating about when you were trying to come up with  
 them?  
 (22) A Yes  
 (23) MR OPPENHEIMER Your Honor I would move for the  
 (24) admission of defendants exhibit 2734  
 (25) (Exhibit 2734 offered)

Vol 16 2599

- (1) MR PETUMENOS May I reserve on that?  
 (2) THE COURT Yes  
 (3) MR OPPENHEIMER May I publish it to the jury Your  
 (4) Honor?  
 (5) THE COURT Can t reserve it for very long then  
 (6) MR PETUMENOS Can t reserve for too long Well may  
 (7) I have a short conference with counsel?  
 (8) THE COURT Yes  
 (9) MR PETUMENOS I have no objection  
 (10) THE COURT Yes You mean by show them on the  
 (11) screen?  
 (12) MR OPPENHEIMER I have a blowup Your Honor  
 (13) BY MR OPPENHEIMER  
 (14) Q Do you recognize this as being one of the pages from  
 (15) your -  
 (16) A It looks like it yes  
 (17) Q So on April of 1990 you did some - started working  
 (18) these - now we should tell the Ladies and Gentlemen of the  
 (19) Jury that the form of the graph has changed Right now  
 (20) recovery s on the bottom Here recovery was on the top But  
 (21) they re the same graphs?  
 (22) A No I - I think there have been changes  
 (23) Q There have been changes but -  
 (24) A But this is an early draft based on early concepts and  
 (25) early data yes

Vol 16 2600

- (1) Q And with two exceptions since this point in time in March  
 (2) of 1990 the only thing that s changed in the curves is that  
 (3) the slopes have changed a little bit and with two exceptions  
 (4) they ve all got shorter right?  
 (5) A With two exceptions they ve all got shorter  
 (6) Q Shorter?  
 (7) A I believe that s correct yes  
 (8) Q So you sent a copy of this to Mr Thebeau is that  
 (9) correct?  
 (10) A Yes  
 (11) Q You wanted - you needed input this is serious business  
 (12) correct?  
 (13) A I beg your pardon?  
 (14) Q You wanted input this is serious business?  
 (15) A Well yes  
 (16) Q Okay Now I m going to ask you next about what you ve  
 (17) testified was the cover letter that went with these curves  
 (18) First of all you recognize this as the cover letter that went  
 (19) with these curves?  
 (20) A Yes  
 (21) Q Okay So this is being sent along with these curves to  
 (22) Mr Thebeau your fellow scientist for his opinion?  
 (23) A That s correct  
 (24) Q Talks about the recovery curves Larry is Larry Thebeau  
 (25) right?

Vol 16 2601

- (1) A That s correct  
 (2) Q And you talk about these are the recovery curves and you  
 (3) say note this is at best SWAG scientific wild ass guess?  
 (4) A That s correct  
 (5) Q Your handwriting?  
 (6) A Yes  
 (7) Q No question And then you identify problems with this  
 (8) approach?  
 (9) A That s correct  
 (10) Q Different for different species and site specific  
 (11) conditions correct?  
 (12) A That s correct  
 (13) Q What we were talking about earlier depending on how  
 (14) viscous the oil was?  
 (15) A That s correct  
 (16) Q You testified earlier as that oil came down the straits as  
 (17) it left the Sound went out past the Kenai Fiords and went down  
 (18) past Kodiak it got more - it changed did it become more  
 (19) viscous?  
 (20) A That s correct  
 (21) Q It did indeed?  
 (22) A Not all of it precisely  
 (23) Q Not all A single 100 year storm could shorten any  
 (24) estimate correct?  
 (25) A That s correct

Vol 16 2602

- (1) Q Okay No clear definition for what constitutes recovery?  
 (2) A That s correct  
 (3) Q Is it also correct but eventually you were given a  
 (4) definition not by a geologist or a biologist but by  
 (5) Mr Mundy correct?  
 (6) A Essentially correct yes  
 (7) Q Last certainly no clear relationship between ecosystem  
 (8) recovery and dollars for suit?  
 (9) A That s correct  
 (10) Q It was not clear to you how these graphs would relate to  
 (11) recovery on a particular parcel?  
 (12) A These were issues that we had to resolve that s correct  
 (13) Q Okay Then at the bottom you say - correct me if I read  
 (14) it incorrectly - this is fun to think about but dam difficult  
 (15) to decide where to put the line on the graph?  
 (16) A That s absolutely correct  
 (17) MR OPPENHEIMER Your Honor no further questions  
 (18) THE COURT You have four minutes counsel  
 (19) MR PETUMENOS Judge please may I have a little  
 (20) more than that? Could I begin the redirect tomorrow?  
 (21) THE COURT Yes - no not tomorrow  
 (22) MR PETUMENOS Not tomorrow Please it sounded like  
 (23) such a wonderful day to hold court  
 (24) MR OPPENHEIMER Your Honor I m sorry we could do  
 (25) this by counsel but we did not move into evidence the

Vol 16 2603

- (1) photographs  
 (2) MR PETUMENOS Judge I have -  
 (3) THE COURT We can do that later or we can do it at  
 (4) the beginning of the next trial day  
 (5) MR OPPENHEIMER If that s -  
 (6) MR PETUMENOS I was going to say I don t want to  
 (7) keep the jury in here either  
 (8) THE COURT I can let the jury go for the day Don t  
 (9) talk about the case with anybody and don t form or express any  
 (10) opinion on it until it s submitted to you for your  
 (11) deliberation Don t come in tomorrow We ll see you here  
 (12) Monday day at 8 30  
 (13) (Jury out at 1 27 p m)  
 (14) THE COURT I ask this question with great  
 (15) trepidation Is there anything to take up on the record?  
 (16) MR DIAMOND Regrettably  
 (17) MR STOLL Hope springs eternal  
 (18) MR DIAMOND The issue of the jury instruction - the  
 (19) issues of the jury instruction and another issue raised by  
 (20) plaintiffs memorandum the degree to which we can impeach  
 (21) by  
 (22) bias showing financial interest on the part of Native witnesses  
 (23) is now fully briefed and ready for argument if you wanted to  
 (24) hear it in decision In terms of timing I assume we will not  
 (25) get a federal verdict today in the fish case so we could take  
 that issue up on Monday at a break if you would want to

Vol 16 2604

- (1) In terms of the next witness who is likely to be
- (2) cross examined on the basis of ownership interest and in the
- (3) Chenega Corporation that probably will not happen until late
- (4) in the day on Monday at the earliest
- (5) MR PETUMENOS I have an issue relating to
- (6) cross examination exhibits Judge and it s the same DM 171
- (7) issue that we addressed the exhibit of this witness the
- (8) letter from counsel to - to the expert but my understanding
- (9) is lawyers for Exxon are reviewing that material to determine
- (10) if they are going to voluntarily withdraw them so it might be
- (11) premature to hold a hearing this afternoon on the other hand
- (12) THE COURT I have to hold a hearing anyway why don t
- (13) you come back here at 3 00 and talk about anything that needs
- (14) to be talked about
- (15) MR DIAMOND Those two issues I mentioned are fully
- (16) briefed
- (17) THE COURT The instruction?
- (18) MR DIAMOND The instruction and the bias question
- (19) MR PETUMENOS The bias question is a jury
- (20) instruction issue at this point
- (21) MR DIAMOND Yes I guess that s true
- (22) THE COURT Good
- (23) MR STOLL Your Honor there s one other thing
- (24) THE COURT Hold on let me ask you a question Were
- (25) separate briefs filed on them? Are they all incorporated in

Vol 16 2605

- (1) the same briefing?
- (2) MR PETUMENOS Will have been two briefs filed We
- (3) filed our brief that covered both the instruction relating to
- (4) the federal court parallel proceedings
- (5) THE COURT I have that brief
- (6) MR PETUMENOS And the second part of that brief
- (7) discusses this issue the one about the number of people who
- (8) own property and they filed - and -
- (9) MR DIAMOND This morning we filed a single brief
- (10) dealing with both issues too
- (11) THE COURT I haven t seen your brief So I ll see it
- (12) by 3 00 Anything else?
- (13) MR STOLL Yes Your Honor I have one other matter
- (14) As long as we re - the - I sort of forgot about this motion
- (15) It was brought to my attention late yesterday afternoon that
- (16) is is that there was a motion filed by the municipalities for
- (17) reconsideration of Order 77 This is a very minor matter and
- (18) I think that as a matter of defacto you have reconsidered it
- (19) because there s been things that have been taken up on an
- (20) issue by issue basis on there and what happened in Order 77
- (21) was that sort of - we hadn t finished briefing if you ll
- (22) recall
- (23) THE COURT Yes I know I remember
- (24) MR STOLL I d just like to get that straightened out
- (25) so we don t have order 77 hanging out there

Vol 16 2606

- (1) THE COURT I bypassed it It seemed self evident to
- (2) me I didn t think it was necessary I thought the trial
- (3) would take care of the issue Does anybody disagree?
- (4) MR STOLL That s fine Your Honor I just wanted
- (5) to -
- (6) MR DIAMOND I don t think anybody at this counsel
- (7) table can remember what the issue is
- (8) THE COURT Good that s good That means Mr Stoll
- (9) wins
- (10) MR DIAMOND I will take it up with Mr Stoll if
- (11) there is an issue
- (12) MR STOLL I m happy I m going to leave now
- (13) THE COURT Now I ve told the jury that - I didn t
- (14) give them the reason but I told them that they won t be in
- (15) session on the 29th We all agreed that the 29th is the day
- (16) Even though somebody s birthday is on the 29th and
- (17) somebody s
- (18) on the 1st and the person on the 1st gets the short stick
- (19) right?
- (20) MR DIAMOND Actually two birthdays Mr Petumenos
- (21) and Ms Smith on the 1st but more importantly Mr Stoll s
- (22) wife s on the 29th
- (23) THE COURT So it s the 29th that we take off
- (24) MR STOLL Thank you Your Honor
- (25) THE CLERK Please rise this court stands in recess
- (26) (Recess at 1 31 p m )

## Vol 17 2612

(1) PROCEEDINGS  
 (2) (Jury in at 8 52 a m )  
 (3) (Call to Order of the Court)  
 (4) THE COURT Go ahead counsel  
 (5) MR PETUMENOS Thank you Judge  
 (6) REDIRECT EXAMINATION OF JAMES G BUSH  
 (7) BY MR PETUMENOS  
 (8) Q Good morning Mr Bush  
 (9) A Good morning  
 (10) Q Bligh Island we talked a little bit on cross-examination  
 (11) about the mapping you did of oil on Bligh Island Could you  
 (12) tell the jury why you mapped the oil that you did in the Bligh  
 (13) Island area and the area around Tatitlek?  
 (14) A Yes We observed videotape and read a report and saw  
 some  
 (15) other information of Paul Costello and that depicted sheen and  
 (16) similar materials around Tatitlek Narrows going through  
 (17) Tatitlek Narrows And we observed mousse being held out  
 from  
 (18) the island by boom and some that had breached the boom and  
 was  
 (19) moving towards the island Excuse me And he also displayed  
 (20) in his video mousse on the island proper  
 (21) Q Now looking at the sheen the way you did and evaluating  
 (22) what it looked like - let me start with a different question  
 (23) before I ask that one  
 (24) When was the first time you were able to arrive  
 (25) physically in that area for your visit and inspections

## Vol 17 2613

(1) yourself?  
 (2) A It was in August of - I believe it was late August of  
 (3) 1989  
 (4) Q So given the fact of the kind of sheen that you saw and the  
 (5) kind of oil in the water that you saw would you have expected  
 (6) to see the oil remaining physically with the naked eye on the  
 (7) beach by that time?  
 (8) A By the time we visited the island and of the that we  
 (9) visited no we did not  
 (10) Q Now is there such a thing as a dissolved plume of oil?  
 (11) A Yes there is  
 (12) Q What is that?  
 (13) A Once the oil touches the water there s certain components  
 (14) that are more soluble than others as I think we discussed  
 (15) earlier and those components can move away from the slick  
 and  
 (16) in response to currents as opposed to the slick itself which  
 (17) follows wind direction  
 (18) Q Does the dissolved plume then exist and you can't see it  
 (19) with the naked eye?  
 (20) A That is correct  
 (21) Q And can it strike beaches?  
 (22) A Yes it can  
 (23) Q Let's talk about those questions they asked you about Port  
 (24) Chatham do you remember those questions?  
 (25) A Well I remember discussing Port Chatham

Vol 17 2614

- (1) Q Well a few of them Port Chatham was a control site for  
 (2) you the place you put in in a storm?  
 (3) A Yes that s the reason we established was for control  
 (4) purposes  
 (5) Q And later you discovered that some of the surveys had had  
 (6) Port Chatham as oiled?  
 (7) A That s correct  
 (8) Q What effect did that have on your control site? Was your  
 (9) control site the transect site that you picked was that part  
 (10) oiled?  
 (11) A No it was not  
 (12) Q Explain to the jury what the situation was at Port  
 (13) Chatham  
 (14) A Well It was light oiling which can be discontinuous along  
 (15) the shorelines While we were there the weather conditions  
 (16) were less than favorable storm quite rainy We established  
 (17) the site inspected the area saw no oiling on either side of  
 (18) it or in that general vicinity and established our transect  
 (19) there  
 (20) Q In talking about the transects remember those questions in  
 (21) cross examination where they talked about 60 percent of your  
 (22) transects had medium or heavy oiling but less - fewer beaches  
 (23) than that were heavily or medium oiled in fact do you  
 (24) remember those questions?  
 (25) A Yes I do

Vol 17 2615

- (1) Q All right Now explain to the jury what the purpose of  
 (2) the transect study was and why it was that you wouldn t have  
 (3) the percentages of transects mirror that of the - of the beach  
 (4) oiling itself  
 (5) A Well Ideally in a transect study such as ours we would  
 (6) have been able to sample every shoreline type that was present  
 (7) in the Sound We attempted that and even more Ideally you d  
 (8) sample every shoreline type with every level of oiling Of  
 (9) course we were unable to do that as well because there was  
 (10) inadequate types and distribution of beaches and shorelines  
 (11) and access and for many other reasons  
 (12) The purpose is to determine the effects behavior and  
 (13) impact fate and persistence of oil on the shorelines It was  
 (14) appropriate to go to shorelines that had been oiled  
 (15) Q Was the purpose of the transect portion of the study to  
 (16) look at how quantities of oil get dissipated or don t get  
 (17) dissipated on beaches?  
 (18) A Exactly It was - the purpose was to determine how it  
 (19) interacts with the shorelines We would have to go to heavily  
 (20) oiled sites in order to do that  
 (21) Q Could I have 1154 please?  
 (22) We discussed something about the other oil spills that you  
 (23) had studied as part of your work and we talked about the  
 (24) Metula oil spill Counsel in his questioning asked you about  
 (25) some of the differences between the Metula oil spill and the

Vol 17 2616

- (1) Exxon Valdez oil spill Are there other oil spills that are on  
 (2) this chart that have certain similarities as well as  
 (3) differences to the Exxon Valdez oil spill that you could have  
 (4) also discussed?  
 (5) A Yes there are  
 (6) Q All right For example he made a point about the Amoco -  
 (7) excuse me about the fact that in the Metula spill there was  
 (8) no cleanup do you remember that?  
 (9) A That s correct  
 (10) Q In the Amoco Cadiz spill was there a cleanup?  
 (11) A Yes there was  
 (12) Q So what you have done with this chart here is to give the  
 (13) jury a whole variety or different number of oil spills and  
 (14) discuss for them the years after the spill that certain things  
 (15) persisted is that what this chart does?  
 (16) A Yes We ve taken a wide sampling of spills with varying  
 (17) degrees of ability or comparability to the Exxon Valdez as I  
 (18) mentioned before in testimony Many spills have not been  
 (19) studied for the entire length of time to do detailed analysis  
 (20) and every spill is different They all have their unique  
 (21) characteristics but there are aspects of them which are  
 (22) informative and which can be used to help understand and  
 (23) make  
 (24) predictions about what s going to happen with the Exxon  
 (25) Valdez  
 (24) spill  
 (25) Q And some of those spills that you have on there show

Vol 17 2617

- (1) persistence for a fairly lengthy period of time do they not?  
 (2) A That Is correct  
 (3) Q And we heard some questions from counsel about some  
 (4) confusion about some asphalt tanks that broke in the 1965  
 (5) earthquake and the fact that remnants of those can still be  
 (6) found Do you remember those questions?  
 (7) A I think the earthquake was in 1964 yes  
 (8) Q 64 And so we were talking about remnants of something  
 (9) that happened 30 years ago?  
 (10) A That s correct The tanks ruptured in the Valdez area and  
 (11) materials from that spill have persisted in the Sound for  
 (12) approximately 30 years  
 (13) Q Now there are also some questions about swash bars and  
 (14) how  
 (15) oil persists because swash bars move and cover things up  
 (16) move  
 (17) back and the oil becomes uncovered again  
 (18) A Yes  
 (19) Q Are swash bars common or uncommon in Prince William  
 (20) Sound  
 (21) the lower Kenai Kodiak?  
 (22) A It depends on the situation Obviously from sand and  
 (23) gravel beaches they re relatively common as are the berms  
 (24) and  
 (25) other sedimentary features that you have on the bars After  
 (26) certain activities where the surface of the beach has been  
 (27) disrupted and fine grain sediments have been released -  
 (28) certain treatment you activities do there for example - their  
 (29) commonness varies because fine grain sand which was not

Vol 17 2618

- (1) available has been made available for movement into swash bars
- (2) and berms
- (3) Q Now we spent a lot of time showing the jury swash bars and
- (4) what they look like and how they move around Are swash bars
- (5) the only way that oil gets buried and remobilized or are there
- (6) other ways?
- (7) A There are other ways
- (8) Q Explain to the jury?
- (9) A One of the photographs we looked at was thin sediment
- (10) veneer over part of the beach which although you can't tell
- (11) precisely in the photograph may not have been related to swash
- (12) bars The berms themselves get built up because of high tide
- (13) Activity during other storms may be washed back down because of
- (14) various reasons and again provide fine grained material to be
- (15) moved around on the shorelines
- (16) Q And part of that - part of that questioning was on
- (17) those - that photograph we showed the jury of the salmon
- (18) stream coming out with the large swash bars on both sides at
- (19) East Chenega Island remember that?
- (20) A That is correct uh huh
- (21) Q And by the way when you - when you testified earlier and
- (22) said that you had been retained by the Chugach Alaska
- (23) Corporation you had also been retained by the Chenega
- (24) Corporation the Port Graham Corporation English Bay Tatitlek
- (25) and Eyak right?

Vol 17 2619

- (1) A Yes We were retained by the regional corporations and the
- (2) Village Corporations as well
- (3) Q Later you were retained by the Kodiak and municipalities?
- (4) A That is correct
- (5) Q On that East Chenega Island location a couple of points
- (6) Is it your opinion that oil is still present at places on East
- (7) Chenega Island?
- (8) A Our transect was at a location where wave energy and grain
- (9) size was such that materials moved promptly and it cleaned up
- (10) quickly It's difficult for us to derive any conclusions about
- (11) how rapidly the rest of the shoreline cleaned up just from that
- (12) particular location As far as we can tell there may or may
- (13) not be oil still in the rest of that shoreline Our transect
- (14) specifically at that site does not give precise information
- (15) about the other portions of the shoreline
- (16) Q Other part of that East Chenega location you heard some
- (17) questions about the biomass being lower because there's fresh
- (18) water coming out into the area but the fact that the biomass
- (19) or the number of different kinds of creatures that might live
- (20) there might be lower because of a lack of fresh water does
- (21) that mean that it's not a significant or sensitive place?
- (22) A No I think that comment was referring to the marine
- (23) community in general the intertidal community or the diversity
- (24) or species abundance in the marine ecosystem If it's an
- (25) anadromous stream the salmon go up and spawn in the stream so

Vol 17 2620

- (1) It's equally sensitive It's just as important
- (2) Q Let's talk a bit about the persistence curves for just a
- (3) bit As I understand the persistence curves if we wanted to
- (4) could we go to a given beach at a given time and find a beach
- (5) that if you studied it specifically would - you would
- (6) conclude that the oil is going to be there longer than your
- (7) persistence curve would predict for a given specific beach?
- (8) A I guess I don't follow the question If we went to a
- (9) beach would we find that that oil persisted longer or are you
- (10) asking me -
- (11) Q Yes Could you find - the way your persistence curves
- (12) work is it possible to find a beach where if we went out there
- (13) the year after what you predicted the oil would persist at
- (14) would we be able to find a beach that would have oil there
- (15) beyond that period of time?
- (16) A We've actually done that yes
- (17) Q And conversely could we find a beach where you would
- (18) have
- (19) expected oil to be there longer and discover that it had
- (20) cleaned up earlier than you predicted?
- (21) A It's possible
- (22) Q So explain to the jury how the persistence curves were
- (23) intended to work over these miles and miles and miles of
- (24) shoreline
- (25) A Well they're averages For example at Beauty Bay I believe our predictions show that oil will - will be gone and

Vol 17 2621

- (1) the area will have been recovered in four years It's a mixed
- (2) light oiling and a mixed sand and gravel shoreline And we
- (3) found oil residues there in 1994
- (4) Similarly for some other sites Taroka Arm would be an
- (5) example actually I can't call them off my head but we have
- (6) gone back to some sites and found residues there longer than
- (7) we
- (8) had predicted in our persistence curves We of course can't
- (9) test all of them because enough time hasn't gone by yet
- (10) Q And then the oiling maps you remember those questions
- (11) where we talked - where Mr Oppenheimer talked about the fact
- (12) that the maps show 1989 oiling not 1992 not 1991 not -
- (13) remember those questions?
- (14) A Yes that's - that's not precisely what was said but
- (15) approximately what was said
- (16) Q You made your persistence curves one of the factors that
- (17) you took into account was how heavily oiled the beach was
- (18) initially?
- (19) A That's correct
- (20) Q And so that's important for the jury to know to understand
- (21) how you derived your persistence curves?
- (22) A That is correct
- (23) Q And these maps that you prepared for the jury will assist
- (24) the jury in knowing where that light medium heavy oil was
- (25) initially in 1989 Was that the purpose for the map?
- (26) A Yes They'll depict the conditions as mapped in 1989 The

Vol 17 2622

- (1) area same areas haven't been mapped the same in subsequent  
 (2) years That's not to say the oil residues in 1989 didn't  
 (3) persist there through time  
 (4) Q And you recall those questions where you were asked  
 whether  
 (5) your persistence curves take into account harm to salmon and  
 (6) other species and herring and things like that and you said  
 (7) no Could you explain to the jury a little bit more about  
 (8) that?  
 (9) A Well other experts have examined other aspects of recovery  
 (10) of impact on the ecosystem of Prince William Sound and have  
 (11) determined that other portions of that are going to take you  
 (12) know lengthy times for recovery Our persistence curves are  
 (13) focused to set a criteria that relate to the land damage  
 (14) analysis and we did not include things - rock fish we didn't  
 (15) even include chitons Very little information was out on  
 (16) chitons and octopi and perhaps we should have included that  
 (17) sort of thing  
 (18) Q The series only address the gross contamination and not  
 (19) other things that may continue into the future?  
 (20) A That's correct  
 (21) Q What about the potential for - have you seen studies -  
 (22) A Perhaps we could correct what you said You said gross  
 (23) contamination It's the elements of recovery that's included  
 (24) That's one of the things that's included about them but yes  
 (25) Q And you have seen studies from other experts that discuss

Vol 17 2623

- (1) the potential for permanent or indefinite harm in the area but  
 (2) your persistence curves don't include - don't include that  
 (3) information is that right?  
 (4) A That is correct  
 (5) MR OPPENHEIMER Your Honor it assumes a fact not in  
 (6) evidence I don't know that there are such studies that deal  
 (7) with what has just been described  
 (8) MR PETUMENOS I believe the jury's heard what I'm  
 (9) talking about  
 (10) THE COURT Objection's overruled  
 (11) BY MR PETUMENOS  
 (12) Q Mussels you saw some mussels in a rather poor condition in  
 (13) 1994 right?  
 (14) A That is correct  
 (15) Q And we heard some questions on cross examination about  
 how  
 (16) they may have been - have gotten sunburns or something Did  
 (17) you see mussels that were in a position to receive more sun  
 (18) than the ones that you saw on the beach that were dead?  
 (19) A Well I don't know that they received more - more but  
 (20) approximately the same amount yes They were in the same  
 (21) general vicinity  
 (22) Q And were those mussels alive?  
 (23) A Yes  
 (24) Q And were those mussels on top of oil?  
 (25) A No they were not

Vol 17 2624

- (1) Q We heard some questions about the Katalla oil field?  
 (2) A Yes  
 (3) Q Could we have the defendant's map exhibit up please?  
 (4) What I'd like you to do is give me a clearer picture of the  
 (5) Katalla oil field Katalla - I won't call it oil field -  
 (6) let's not confuse here - it's not an operating field with  
 (7) people drilling it?  
 (8) A That's correct it is not  
 (9) Q It's just a place where people geologists know that there  
 (10) is some oil deposits there?  
 (11) A I believe there was drilling and exploration work done in  
 (12) the area but it's a recognized oil seep  
 (13) Q For the jury could you give us some idea of what happens  
 (14) at the Katalla oil field where it is first of all? Is it  
 (15) even on this map?  
 (16) A I believe it's off this map Colors are pretty light here  
 (17) but I think it's farther to the southeast  
 (18) Q What happens to the seeps at the Katalla - let me ask you  
 (19) this Does the Katalla oil field in your opinion have  
 (20) anything whatsoever to do with the oil impacts in Prince  
 (21) William Sound from the Exxon Valdez oil spill?  
 (22) A Factually no We're dealing with intertidal impacts and  
 (23) shoreline impacts for the purpose of this examination and  
 (24) investigation and the Katalla information refers to a very  
 (25) small amount of oil that drifts in on silt particles into

Vol 17 2625

- (1) Prince William Sound and settles quietly in the deep basins of  
 (2) the Sound and -  
 (3) Q Show the jury where that happens?  
 (4) A Well it's right where Prince William Sound is written  
 (5) Q You have a light pen there you can -  
 (6) A Okay Generally speaking these materials move in and  
 come  
 (7) in through here and around through here and more or less  
 settle  
 (8) in this area There's some distribution in local areas and  
 (9) then the bulk of the current flow continues out in this  
 (10) direction  
 (11) Q And in what amounts compared to the 11 million gallons  
 (12) spilled by the Exxon Valdez does the Katalla oil field  
 (13) contribute to the system?  
 (14) A Very small amounts The concentrations in the sediments  
 (15) are on the order of parts per billion - million I'm sorry  
 (16) Q Parts per million?  
 (17) A That's correct  
 (18) Q Potter's March and biogenic sheens What effect on what  
 (19) we're discussing here on the damages to the land do biogenic  
 (20) sheens have on the environment in your view?  
 (21) A What damages do they bring about?  
 (22) Q Yes  
 (23) A Well essentially none  
 (24) Q Why?  
 (25) A Well they're a natural product of the environment

Vol 17 2626

- (1) They re released from generally decaying organic matter and  
 (2) they re released at low rates in small quantities and are –  
 (3) are insignificant compared to the materials and the grade of  
 (4) release one sees from you know moderate oiling or heavy  
 (5) oiling on a shoreline  
 (6) Q In your opinion do they have anything to do with this  
 (7) lawsuit?  
 (8) A Not particularly  
 (9) Q There was some discussions about the little midpoint that  
 (10) you put up for us and your persistence curves and the square  
 (11) we ll see in all of your persistence curves?  
 (12) A Yes  
 (13) Q Would you tell the jury the importance of understanding  
 (14) where you started from when – when considering the  
 importance  
 (15) of that midpoint in the curves in other words how large the  
 (16) contaminating event was in the first instance as it would  
 (17) relate to how they should view the midpoint on your curves?  
 (18) A Well this midpoint is an inflexion point That s the  
 (19) point where the curve change slope It s a slope change  
 (20) point I think the curves have two interaction points the  
 (21) point being there s a large amount of contaminated shoreline to  
 (22) begin with Because of the large volume a large volume is  
 (23) often removed very quickly but the question is what about the  
 (24) lost portion That s where the curves change slope taper off  
 (25) and it s more difficult takes much more time to get out the

Vol 17 2627

- (1) last portion of the residues They reflect this notion This  
 (2) portion of the curves reflects the notion that materials –  
 (3) this one has two inflexion points that the materials are  
 (4) preserved and selected wave shadows and places like that in  
 (5) the shorelines and in the subsurface and it takes a greater  
 (6) length of time for those materials to be removed Quickly the  
 (7) shoreline reaches the point of preserving materials in the  
 (8) parts where it s hard to remove and that s essentially as we  
 (9) typically talk about where the curve flattens off  
 (10) Q All right And so the midpoint of a large spill versus a  
 (11) small spill of oil would be different depending upon where you  
 (12) started out Isn t that a point you made?  
 (13) A If I understand your question correctly yes Yes It  
 (14) falls fast but it s the last portion of the fall that counts  
 (15) in terms of overall persistence  
 (16) Q We heard an audio portion of a videotape of someone else  
 (17) other than you talking on the videotape and that person was  
 (18) who?  
 (19) A Dr Jerry Bakus  
 (20) Q All right And we didn t play that portion of the  
 (21) videotape because you re here in court and he s not and  
 (22) you re the one that has to testify is that right?  
 (23) A Actually I didn t play the volume because I was told it  
 (24) was hearsay and it wasn t supposed to be introduced but yes  
 (25) Q Let s discuss what it was that we did play The team that

Vol 17 2628

- (1) went out to the beach on that occasion who was part of that  
 (2) team?  
 (3) A Well it was Dr Bakus of course and I think Larry  
 (4) Thebeau was with him and I believe Jeff Dawson a sampler in  
 (5) our team may have been with him as well  
 (6) Q What do they do for the team what are the expertise –  
 (7) what s their discipline?  
 (8) A They re biologists  
 (9) Q Now you talked about the fact that various teams  
 (10) government teams so forth can go to a beach and can miss  
 (11) finding the oil?  
 (12) A That is correct  
 (13) Q And that includes your own team?  
 (14) A That s correct  
 (15) Q And what happened was you went back to the beach later  
 you  
 (16) went back and what did you find?  
 (17) A We found the oil that they had missed  
 (18) Q Now there s been some discussion about whether or not you  
 (19) have to be a person like Jim Bush or an Exxon scientist or a  
 (20) geologist or a government geologist to find oil And there s  
 (21) been some discussion about whether or not a person who owns the  
 (22) property who just is there can find oil on the beach and I d  
 (23) like you to comment to the jury on those two points as to  
 (24) whether or not just somebody walking down the beach can find  
 it  
 (25) or whether you have to be someone trained to find it Which is

Vol 17 2629

- (1) true or both?  
 (2) A Well there are a number of disciplines that are – In  
 (3) terms of being trained there are a number of different  
 (4) disciplines that work on oil spill teams Typically we have  
 (5) chemists biologists and geologists Geologists aren t good  
 (6) biologists Biologists aren t good chemists biologists aren t  
 (7) good geologists Chemists aren t good geologists nor are they  
 (8) good biologists They all have to talk to each other so the  
 (9) geologist has to know some chemistry A chemist needs to  
 know  
 (10) a little bit of – they have sampling programs and work  
 (11) together The same is true for the biologist Neither is the  
 (12) specialist in the other s discipline but both are reasonably  
 (13) knowledgeable so they can communicate  
 (14) You can get a final work product that s viable and  
 (15) effective In 1992 and 89 we work principally with  
 (16) specialists on our team In 93 and 94 we had included others  
 (17) that were not technical specialists I would estimate and I  
 (18) could count this if I went back through my notes but I would  
 (19) estimate that in 94 half or more than half of the sites we  
 (20) went to were referred to us by nonspecialists people who  
 (21) didn t have special skills in finding oil In beaches  
 (22) Q Like who?  
 (23) A Like the first mate of the ship We were on the Good  
 (24) Times the vessel we went out in Prince William Sound He had  
 (25) the oil spill cleanup experience but was not a specialist on

Vol 17 2630

- (1) what he worked on now opposed to what he worked on in the past
- (2) Q What about property owners?
- (3) A You took the words out of my mouth
- (4) Q So I'll put them back
- (5) A Yes Gail Evanoff referred us to locations and others on
- (6) teams who were not specialists referred us to locations as
- (7) well
- (8) Q And so when we heard the term that you put anecdotal
- (9) evidence on your map is there anything wrong with that?
- (10) A No
- (11) Q Why not?
- (12) A I don't understand why there would be anything wrong with
- (13) it
- (14) Q Well let me ask you this With respect to the beach
- (15) surveys that were done what were they doing when they went
- (16) walking around?
- (17) A Well I guess I'll go back to the question about the
- (18) anecdotal data A lot of the anecdotal data we used for
- (19) example were field notes from clean up crews and it was a
- (20) simple exercise for us to distinguish when they were describing
- (21) mousse wet damp fluid shiny runny oil this sort of thing
- (22) from strictly tar balls which might have been confused with
- (23) block tar Or natural bitumen which we recovered and saw
- (24) that
- (25) It's pretty clear to distinguish that line of anecdotal

Vol 17 2631

- (1) evidence Mousse is clearly obvious and clearly related to the
- (2) Exxon Valdez oil spill in most cases and certainly liquid oil
- (3) is as opposed to these other materials Field teams that were
- (4) put out in the field similarly went through a similar exercise
- (5) and were soon able to distinguish oil from other materials
- (6) MR PETUMENOS I wonder if Your Honor counsel for
- (7) Exxon could assist me with his exhibit of the Eshamy Bay with
- (8) the little red tape on it
- (9) MR OPPENHEIMER Sure You'll notice we were ready
- (10) Sorry we were not
- (11) MR OPPENHEIMER Do you recall the exhibit number?
- (12) MR PETUMENOS No I was hoping you were ready
- (13) MR OPPENHEIMER Just want it up here
- (14) MR PETUMENOS Over here next to the podium will be
- (15) fine Mr Oppenheimer Thank you very much
- (16) Mr Bush can you come on down?
- (17) BY MR PETUMENOS
- (18) Q Mr Bush I want to make sure you don't get trapped here
- (19) There is a red line going from one side to the other where you
- (20) said you saw the asphaltine - what did you call it?
- (21) A Well it's a - residues of an asphalt pavement what's
- (22) left of the asphalt pavement
- (23) Q You kept on using the word in your testimony - I checked
- (24) it - discontinuous -
- (25) A Yes that's correct

Vol 17 2632

- (1) Q - asphalt residues but this red tape is not
- (2) discontinuous is it?
- (3) A No I guess we should make this clear I don't want to
- (4) leave the impression that there's a solid band - actually as I
- (5) look at this this little thing should probably be moved
- (6) MR PETUMENOS Don't write on it yet until we have
- (7) his permission
- (8) MR OPPENHEIMER So stipulated by all means
- (9) A I imagine that direction should be moved around here
- (10) Maybe it's a little bit long Probably got a little aggressive
- (11) how long it is
- (12) BY MR PETUMENOS
- (13) Q I can't remember whether you did the tape or he did the
- (14) tape on this one but anyway let's make sure it's right
- (15) A That's the approximate location and yes there is an
- (16) asphalt residue along that area It's discontinuous under - I
- (17) better make some drawings
- (18) What we've got - what we've got is an area like this the
- (19) tape so to speak And through here somewhere runs a path that
- (20) might look like this that's got asphalt pavement Sometimes
- (21) it'll be totally asphalt pavement sometimes it's pieces
- (22) There might even be some pieces out here And maybe some odd
- (23) shapes and things like this that's - that runs along that
- (24) general trend so it varies in width and shape and so forth
- (25) Excuse me

Vol 17 2633

- (1) Q Is it covered by anything?
- (2) A Generally speaking it's covered by cobble armor There's
- (3) a layer of rocks in that size range yes
- (4) Q And when you went and - went to this beach and you were
- (5) looking at it were you looking at it through the cobble?
- (6) A Yes
- (7) Q And did you do - did you uncover the cobble and do any?
- (8) A Locally uh huh
- (9) Q What do you mean by locally?
- (10) A Well you follow - you can see it between the rocks in
- (11) many places and then you walk along move up some move up
- (12) ahead and observe some It's not a precisely mapped thing In
- (13) 1994 we were in the field doing largely reconnaissance work
- (14) we
- (15) were not out there doing detailed transects we did in 1992 I
- (16) don't want to leave people with the impression that this is a
- (17) precise band of accumulated material
- (18) Q Like the red tape would indicate?
- (19) A Like the red tape would indicate
- (20) Q When you said the band continued there's a photograph of
- (21) a
- (22) bunch of people on the beach that Mr Oppenheimer used on
- (23) down I'll show it to you of course
- (24) A Yes
- (25) Q Do you mean that that asphalt pavement was like a road
- (26) between you and them?
- (27) A No it was not

Vol 17 2634

- (1) Q How long do you think this stuff will persist having  
 (2) looked at it?  
 (3) A Well depends on conditions as we've said It's possible  
 (4) for incredibly unique storm event the correct energy and  
 (5) orientation to impact the shoreline and change everything but  
 (6) it requires those precise events to do that Otherwise it can  
 (7) persist for a very long time tens of years that meaning  
 (8) decades  
 (9) Q Thank you Exhibit 2761 defense exhibit 2761 was a - an  
 (10) exhibit from NOAA relating to the - I think it was anyway I  
 (11) think it was relating to the policy statement by NOAA as to  
 (12) whether to continue with cleanup or not and some things were  
 (13) read to you from that do you remember those questions?  
 (14) A Yes yes yes  
 (15) Q And I think you stated that you did not rely upon that  
 (16) document in doing your work or those statements by NOAA in  
 (17) doing your work Can you tell the jury?  
 (18) A Well yes Within that document there are sentences that  
 (19) are were either inconsistent or a little bit contradictory and  
 (20) I think that document was oriented more at the policy level or  
 (21) a management level whereas we had access to other NOAA  
 (22) documents that were researchers products and we would  
 prefer  
 (23) and did to some extent rely on those We certainly made use of  
 (24) the information that was in them  
 (25) Q Can you tell the jury the information that you relied upon

Vol 17 2635

- (1) some of the studies you relied upon from NOAA that you did  
 rely  
 (2) upon and some of the statements from them that were  
 pertinent  
 (3) you felt to the work that you did?  
 (4) A Yes I can  
 (5) Q Please do so  
 (6) A I brought them with me The document that I was questioned  
 (7) on yesterday is DX2761 and there are a number of different  
 (8) topics that I've selected out of it and a companion document  
 (9) similar document that was prepared The exhibit was in 1991  
 (10) The companion document was 1992 a similar thing And then I  
 (11) have backup data reports from NOAA that were some of the  
 (12) original or earlier research or contemporaneous research that  
 (13) went into the - to lead to the conclusions that we heard in  
 (14) these documents  
 (15) The exhibit was compiled - I guess would be the proper  
 (16) word - three years after the spill and with reference to  
 (17) asphalt pavements it has the statement in it that they can  
 (18) impact habitats if only by physically changing it referring  
 (19) to changing a specific habitat type  
 (20) With respect to the same the same item asphalt pavement  
 (21) the subsequent document for the next year states that with  
 (22) respect to asphalt pavement again that other observations  
 (23) from other spills and I quote indicate that these pavements  
 (24) weather very slowly and are likely to persist for many years  
 (25) parenthesis greater than 20 years in the case of the Arrow

Vol 17 2636

- (1) spill  
 (2) In a September 1992 document there was a report released  
 (3) for NOAA That report is entitled Summary of Results  
 (4) geomorphological shoreline monitoring survey of the Exxon  
 (5) Valdez spill site Prince William Sound Alaska September 1989  
 (6) through August 1992 regarding the same issue asphalt  
 (7) pavement  
 (8) The investigators state and I read the degree of  
 (9) weathering varies greatly depending on the amount of oil  
 (10) saturation Unweathered mousse can fill some crevices  
 whereas  
 (11) adjacent ones have weathered into a semi hard black pavement  
 -  
 (12) correction weathered into semi hard black pavement These  
 oil  
 (13) deposits are likely to persist for long periods up to  
 (14) decades  
 (15) Back to the original exhibit with respect to toxicity  
 (16) these - the summary documents indicate that virtually all of  
 (17) the toxic components are gone or absent yet elsewhere in the  
 (18) same document it indicates that - that the PAHs that do remain  
 (19) in the oil are the sources of nearly all of the acute and  
 (20) chronic toxicity associated with oil However other documents  
 (21) and other information our laboratory has told us that in fact  
 (22) that statement should be confined to what has been well  
 (23) studied The toxic components of the other toxic components  
 of  
 (24) oil simply have not been as well studied so this statement is  
 (25) confined to what's known as opposed to what's not known

Vol 17 2637

- (1) That's further emphasized by a subsequent statement which  
 (2) represents that the asphaltine fractions quote which have  
 (3) negligible water solubility and little demonstrated toxicity  
 (4) Under chemistry and toxicology the same document reads  
 (5) the more toxic and more soluble fractions of the oil are no  
 (6) longer present even in the freshest appearing oil found  
 (7) existing in the subsurface pockets And the next paragraph  
 (8) refers to the mussel studies which show the results - showed  
 (9) some accumulation of PAHs and these two sentences kind of  
 (10) contradict each other If all of the toxic components are  
 (11) absent what's being accumulated in the mussels? Companion  
 (12) document 1992  
 (13) Q When you say companion document what do you mean?  
 (14) A It's a similar document produced by NOAA for the United  
 (15) States Coast Guard but it's constructed a year later In this  
 (16) document under oil chemistry it states a year later only the  
 (17) more persistent aromatic hydrocarbons are still present Those  
 (18) are toxic components  
 (19) Similarly we have under chemistry and toxicology just as  
 (20) in the previous year's document we have the same paradox  
 (21) between soluble and toxic fractions being absent and then with  
 (22) respect to the mussel study -  
 (23) Q Slow down slow down I didn't understand I don't think  
 (24) I understood any part of that  
 (25) A Dissimilar statements the toxins of the oil are no longer

Vol 17 2638

- (1) present even if the freshest oil found in some persistence and  
 (2) subsurface pockets and then some persistence of PAH  
 (3) Q What is PAH?  
 (4) A Poly aromatic hydrocarbons some of the toxins in the oil  
 (5) With respect to environmental concerns subheading is pooled  
 (6) oil high oil residue medium oil residue beaches Under  
 (7) treatment recommendations they state reworking the beach  
 (8) sediments either manually or mechanically may increase the  
 (9) availability and therefore the toxicity of the oil to the  
 (10) surrounding biological community thereby reduced the benefit  
 of  
 (11) treatment When we reviewed these documents at this level  
 had  
 (12) to make predictions and decisions about persistence of oil in  
 (13) the environment we have to be very clear about whether  
 (14) materials of toxic components still remain Toxicity in these  
 (15) compounds has been investigated in depth for only a few of  
 (16) crude oil s components and not with respect to cotoxin the  
 (17) effects of one component of crude oil in the presence of  
 (18) another They ve been looked at primarily Individually  
 (19) Q All right Anything further on the NOAA stuff?  
 (20) A Actually I had eight points I could go through on this  
 (21) but I think - I think perhaps one of the final ones is with  
 (22) respect to recovery of beaches that have been heavily treated  
 (23) have been tilled or have undergone mechanical disruption The  
 (24) results from NOAA in September of 1992 indicate with respect  
 (25) to for example one of the shorelines this beach may never

Vol 17 2639

- (1) return to its original configuration as far as grain size  
 (2) distribution is concerned  
 (3) Nonetheless the resilience shown by this beach to recover  
 (4) to its original topography after such extreme modifications is  
 (5) remarkable What that means is that there are isolated cases  
 (6) that are never going to recover in their estimation at this  
 (7) point in time to the original profiles They expect some of  
 (8) them to eventually recover and it s workable that some don t  
 (9) but nonetheless some don t With respect to bioremediation -  
 (10) Q What is bioremediation please again?  
 (11) A It s one of the projects that we re undertaking - some of  
 (12) the treatment projects that were undertaken in the Sound to  
 (13) help the bugs the microbes and bacteria consume oil in the  
 (14) subsurface  
 (15) MR OPPENHEIMER Your Honor this has been going on  
 (16) quite some time I haven t made an objection yet but I think  
 (17) we re way past this witness expertise in geology  
 (18) MR PETUMENOS I believe the door was opened with the  
 (19) issue that he raised with respect to the NOAA study and all of  
 (20) its conclusions relating to these subjects And the fact that  
 (21) he didn t consider - as the cross attempted to bring out -  
 (22) issues of treatment when in fact he did and he covered these  
 (23) studies makes this redirect entirely proper  
 (24) MR OPPENHEIMER Your Honor I don t think we opened  
 (25) the door to -

Vol 17 2640

- (1) THE COURT I don t think you did either counsel  
 (2) MR OPPENHEIMER As far as expertise  
 (3) THE COURT You re sustained  
 (4) MR PETUMENOS Let me ask you finally on the NOAA  
 (5) studies that you ve been reading to the jury assist the jury  
 (6) for us if you can how is it that one lawyer for Exxon stands  
 (7) up and says I want to read you a NOAA study and then it s my  
 (8) turn and I stand up and I say can you read us some other  
 NOAA  
 (9) studies and every part seems to be favorable to one side or  
 (10) the other Why are these contradictions within the NOAA study  
 (11) itself?  
 (12) A In my experience in large corporations and I haven t  
 (13) worked for NOAA but in other contexts certain documents ,  
 come  
 (14) out on a scheduled basis and a timely basis and they re  
 (15) decision making documents They re either policy level or  
 (16) management level documents and they re based on the  
 research  
 (17) and information that s provided by the research teams There s  
 (18) a time lag between what goes on in the research and what goes  
 (19) on in the management realm Decisions have to be made so  
 they  
 (20) take the information that s available at the time  
 (21) It s clear that in some cases here they there are  
 (22) inconsistencies within the documents and lack of parallelism in ,  
 (23) some cases But I think more important the idea is that they  
 (24) need to make the decision at that time They get the best  
 (25) information that s available at the time There is a lag

Vol 17 2641

- (1) between studies being completed in research framework and  
 when  
 (2) those results are available and how much time it takes to get  
 (3) those results to make a management decision In the  
 meantime  
 (4) for example management may publish a document such as this  
 (5) which does not have the opportunity to include some final  
 (6) results of research  
 (7) Q And when management makes a decision do they try to  
 (8) justify the decision in the management document?  
 (9) A Well of course they try but there s a limited amount -  
 (10) you can only communicate so much information through these  
 (11) chains and compile so much information  
 (12) Q Now the studies that you ve been reading from here and  
 (13) your examination that you relied upon instead of the  
 (14) management studies were those management studies or  
 scientific  
 (15) studies you were reading from?  
 (16) A The first two were management studies or management  
 (17) compilations and the latter three were research reports  
 (18) Q And were some of the research reports completed after the  
 (19) management decision to stop beach treatment was made?  
 (20) A Yes  
 (21) Q And then lastly I want to - do you have - counsel do  
 (22) you have the blowup of those notes the SWAG on it  
 somewhere?  
 (23) I really want to talk about this one Mr Bush What we  
 (24) have before you Exxon has taken the trouble to blow up some  
 (25) notes that you wrote on a pad Is that what happened here?

Vol 17 2642

- (1) A That s correct  
 (2) Q And could you tell the jury when you are - was this a  
 (3) complex problem with lots to think about as you - as you  
 (4) approached it in the beginning?  
 (5) A It was a very complex problem with a lot of - very many  
 (6) things to think about  
 (7) Q And when scientists are trying to figure out how to address  
 (8) a problem do they communicate with one another openly in  
 (9) attempt to come up with hypothesize for how to approach the  
 (10) problem?  
 (11) A They certainly should yes  
 (12) Q Now this - these notes of yours that have now been blown  
 (13) up into bigger than life here when were they created by you?  
 (14) A I believe - well it was in 1990 I think it was April of  
 (15) 1990  
 (16) Q And what were you - had you - what stage of your inquiry  
 (17) were you at in 1990 when you were thinking about what - what  
 (18) approach to take to these problems?  
 (19) A These were the very beginning days Larry Thebeau and I  
 (20) had undertaken this project and had begun to contact other  
 (21) people discuss the issues back and forth probably several  
 (22) days of discussion and consideration discussion and  
 (23) consideration and it was time for somebody to put pen to paper  
 (24) and begin to do something about this There are a couple of  
 (25) purposes for that

Vol 17 2643

- (1) One identify the principal problems and objectives that we  
 (2) had to go with establish sort of a base line what we might  
 (3) call working hypothesis and also to communicate that in a very  
 (4) open way to encourage good exchange and unencumbered  
 (5) exchange  
 (6) of information back and forth  
 (7) Q So at the time when you were writing these notes this  
 (8) was - this was the idea that you had for creating persistence  
 (9) curves?  
 (10) A Yes Well actually at this time the project was in  
 (11) enough of its infancy where actually we didn t even know if we  
 (12) were going the complete this This is an attempt to begin this  
 (13) work to see about feasibility and possibility There s a  
 (14) tremendous amount of data out there but we believe this is one  
 (15) of the first times maybe the first time it had been compiled  
 (16) and brought together in this kind of a format And there are  
 (17) specific problems with it not the least of which is trying to  
 (18) define what recovery really means to people and when we  
 (19) began  
 (20) we had all of these tasks on our side of the fence and it was a  
 (21) very intimidating beginning  
 (22) Q Now you pointed out that it was going to take a lot of  
 (23) work you state and this is - apparently Mr Oppenheimer  
 (24) wanted to highlight this This is fun to think about but damn  
 (25) difficult to decide on where to put the line on the graph It  
 (26) was going to be a difficult project requiring a lot of work  
 (27) right?

Vol 17 2644

- (1) A At - in fact I believe that s written with the notion  
 (2) that is this even really possible I mean this is a tough  
 (3) thing to do and we need to consider clearly is this the way to  
 (4) proceed with this problem And you know we had had some  
 (5) discussions beforehand and came up with some ideas but  
 (6) neither  
 (7) of us were eager to be the first one to start drafting this  
 (8) material out So as project manager I took the lead threw  
 (9) the first shot at it and based on our discussions of course  
 (10) we sort of knew what was coming  
 (11) Q And then you went to work on it for years?  
 (12) A On and off for several years that s correct  
 (13) Q Now tell the jury do you believe that what your  
 (14) endproduct was after you came up with this idea do you  
 (15) believe  
 (16) that this is a scientific wild ass guess anymore?  
 (17) A Oh of course not Of course not  
 (18) MR PETUMENOS I have no further redirect Do you  
 (19) need these any further?  
 (20) MR OPPENHEIMER No What I would like to do is get  
 (21) the Eshamy  
 (22) MR OPPENHEIMER Good morning Mr Bush  
 (23) RE CROSS EXAMINATION OF JAMES G BUSH  
 (24) BY MR OPPENHEIMER  
 (25) Q Mr Bush thank you for your comments about how difficult a  
 (26) task all of this was In fact prior to your attempt to do ,  
 (27) this no one had ever attempted to do this isn t that correct?

Vol 17 2645

- (1) A No it s not  
 (2) Q To do a matrix for all of the beach types and all of the  
 (3) oiling types in one place?  
 (4) A No one had compiled it in one format but individual  
 (5) estimates had been made for various conditions offer oiling and  
 (6) varlous beach types and varlous occurrences  
 (7) Q And for specific spills?  
 (8) A Yes  
 (9) Q But no one had attempted to do this wide ranging matrix  
 (10) which you ve got here today?  
 (11) A To my knowledge no  
 (12) Q And to your knowledge isn t it the case that no one has  
 (13) tried but you to this date no one else has done this?  
 (14) A I m not sure about that I mean we -  
 (15) Q Do you know of anybody who has?  
 (16) A No one is published on it that I m aware of It might be  
 (17) in progress somewhere at this time  
 (18) Q It may be in progress but it hasn t been published as far  
 (19) as you re aware?  
 (20) A That s correct  
 (21) Q This is a one of a time approach?  
 (22) A Not approach One of a time compilation  
 (23) Q Prior to investigating the Exxon Valdez oil spill what  
 (24) experience had you had in producing this kind of matrix in -  
 (25) in earlier context?

Vol 17 2646

- (1) A None in producing this kind of matrix  
 (2) Q What types of spills had you investigated prior to the time  
 (3) you investigated the Exxon Valdez oil spill?  
 (4) A Primarily industrial related oil spills those that relate  
 (5) to the industrial environmental clients that we had with  
 (6) respect to our work for the EPA and other agencies  
 (7) Q How many transect - intertidal transect surveys had you  
 (8) done prior to your work on this case?  
 (9) MR PETUMENOS I m a little confused I m sorry to  
 (10) interrupt counsel but I m confused whether the question is  
 (11) referring to his team his company or him  
 (12) MR OPPENHEIMER Fair enough Your Honor  
 (13) BY MR OPPENHEIMER  
 (14) Q Mr Bush just you how many intertidal transect surveys  
 (15) had you done prior to this case?  
 (16) A A few not very many  
 (17) Q And in what areas?  
 (18) A In South Carolina Let s see where else? Offhand that s  
 (19) all I recall  
 (20) Q South Carolina which is a quite different environmental  
 (21) than the intertidal zones you studied here in Alaska  
 (22) A That s correct substantially different  
 (23) Q If I may I d like to go back to - perhaps just because  
 (24) they re so pretty we keep bringing them out - but you  
 (25) indicated that the tar mat which you were describing in your

Vol 17 2647

- (1) direct testimony at Eshamy Bay and that we talked about on  
 (2) cross examination doesn t cover this whole area How much of  
 (3) the area does it cover?  
 (4) A Well we had approximately 20 minutes to examine that  
 (5) particular aspect of things when we were on the shoreline We  
 (6) didn t follow out it s entire extent I know it continues to  
 (7) the northward direction up into the rocky area the direction  
 (8) of the arrow there and I think when I placed the tape I  
 (9) placed it perhaps a little bit too far to the south  
 (10) Q You re saying it continues into this area toward this -  
 (11) if -  
 (12) A If I have your finger point correct yes  
 (13) Q What about in the other direction how far does it go?  
 (14) A I don t think we tracked it extensively in that direction  
 (15) There are patches that occur on out in that direction I don t  
 (16) know how continuous or how specifically well they can be  
 (17) related to this specific tar mat because of changes potential  
 (18) changes in elevation  
 (19) Q How far did you actually track it though?  
 (20) A We split into two teams and one team went to the south and  
 (21) one team went to the north and offhand I can t give you  
 (22) precise distance numbers  
 (23) Q Okay How wide is it?  
 (24) A Ranges it s very irregular sort of like I drew it in  
 (25) there anywhere from probably - probably a few feet to maybe

Vol 17 2648

- (1) as much as six eight feet or more than that in some places  
 (2) Depends on how you talk about it and how you define the area  
 (3) the band versus a contiguous spot of tar for example  
 (4) Q You indicated that what you saw there was what was left of  
 (5) the tar mat The tar mat s going away isn t it?  
 (6) A Yes it is  
 (7) Q And whatever you think is under there and however big it  
 (8) turns out to be or however small it turns out to be there s no  
 (9) doubt in your mind as it s there it s continuing to  
 (10) biodegrade?  
 (11) A Biodegrade to the extent it biodegrades Now it s  
 (12) probably - there s not much biodegradation that is going on at  
 (13) this point It continues to weather and change to some extent  
 (14) as to all things  
 (15) Q It s becoming inert?  
 (16) A Inert s a big word Obviously it affects the habitat It  
 (17) affects the availability of sediment in that area It is in  
 (18) the upper intertidal zone  
 (19) Q When you say that you mean it s physically there?  
 (20) A That s correct  
 (21) Q There is something could be the size of a quarter or more  
 (22) we don t know but it s physically there but I m now talking  
 (23) about its chemistry Is there any doubt in your mind that it s  
 (24) inert that which is not biodegrading is inert it s not going  
 (25) to do anything?

Vol 17 2649

- (1) A I would disagree with that I don t think it s chemically  
 (2) inert  
 (3) Q Yet?  
 (4) A Yeah  
 (5) Q Any doubt in your mind that it will become so?  
 (6) A If you can precisely define inert we could probably get  
 (7) into some details on this  
 (8) Q You - let me change subjects You mentioned that in  
 (9) addition to looking at the Metula as a comparable spill you  
 (10) looked at some other spills is that right?  
 (11) A That s right  
 (12) Q And you gave - by the way you have held the opinion in  
 (13) the past that the Metula was the most analogous spill Is that  
 (14) correct?  
 (15) A It s one of the best analogies for all components of the  
 (16) spill Yes that s correct  
 (17) Q And you mentioned the Amoco Cadiz?  
 (18) A That s right  
 (19) Q It s your view isn t it that the amount of oil that  
 (20) spilled affects the persistence period of oil is that right?  
 (21) A Not so much the amount of oil that s spilled It s the  
 (22) amount of oil that impacts the shoreline Heavier oil line  
 (23) concentrations - excuse me yes I guess is the general  
 (24) answer but it s not the spill it s what hits the shoreline  
 (25) yes

Vol 17 2650

- (1) Q And that's a point we'll get back to the oil that goes  
 (2) past the shoreline in that slick that doesn't impact the  
 (3) shoreline you're not addressing that in the curves is that  
 (4) right? You're only addressing the oil that gets to the  
 (5) shoreline?  
 (6) A That's correct  
 (7) Q Back to the Amoco Cadiz That was a much larger spill than  
 (8) this spill was at this time?  
 (9) A Approximately four times larger four to five times larger  
 (10) yes that's correct  
 (11) Q Four to five times?  
 (12) A Uh huh  
 (13) Q You mentioned wave shadows A wave shadow is a space  
 (14) behind a rock or outcropping that protects the space on the  
 (15) shore behind it from waves and other tidal action is that  
 (16) right?  
 (17) A That's one example of a wave shadow yes  
 (18) Q That's a place where you can - you can find in your  
 (19) experience some oil you can find it in those protected  
 (20) places?  
 (21) A That's correct  
 (22) Q And in fact a great many of the places that you looked at  
 (23) to find oil were in protected places isn't that true?  
 (24) A I would say that a great many occurrences of oil occur in  
 (25) those places yes

Vol 17 2651

- (1) Q Right And a number of your transects were in wave  
 (2) shadows is that correct?  
 (3) A I wouldn't say directly it was a wave shadow They were  
 (4) protected areas One of the conditions are shoreline types  
 (5) for example sheltered rocky shores yes  
 (6) Q You have some of your transects are located in these areas  
 (7) behind rock outcroppings protected from the tidal actions?  
 (8) A The portion of them go through there yes that's correct  
 (9) There are a wide number of what we call protected niches  
 (10) excuse me and wave shadows are one grouping of those  
 (11) MR OPPENHEIMER May I borrow back from you your  
 (12) map?  
 (13) MR PETUMENOS Which one?  
 (14) MR OPPENHEIMER The one that shows Bligh Island  
 (15) MR PETUMENOS Sure  
 (16) BY MR OPPENHEIMER  
 (17) Q While Mr Petumenos is getting that just a quick question  
 (18) on mussels You mentioned that you had seen some mussels  
 (19) that  
 (20) seemed also to be getting some sun that weren't - weren't  
 (21) dead is that right?  
 (22) A That's correct  
 (23) Q Do you know - do you know how old those mussels were?  
 (24) A Specifically how old they were?  
 (25) Q Uh huh yes  
 (26) A No I don't

Vol 17 2652

- (1) Q Do you know what season they were in relative to the other  
 (2) mussels?  
 (3) A No I don't  
 (4) Q Okay  
 (5) A Well actually I haven't answered your question completely  
 (6) correctly We observed a range in sizes of mussels in other  
 (7) areas so apparently I saw the spectrum It's not to say that  
 (8) we don't have some inclination or some idea about their age  
 (9) Q But you're not telling the jury that you made some sort of  
 (10) analysis of which mussels were surviving and which were not by  
 (11) age?  
 (12) A No no no  
 (13) Q Bligh Island you indicated you're still comfortable with  
 (14) the oiling that is shown on it is that correct?  
 (15) A Actually we have - we have reduced the categories of  
 (16) oiling on the Bligh Island map  
 (17) Q You reduced it from moderate down to light?  
 (18) A That's correct light and very light  
 (19) Q And you reduced it from moderate down to light because in  
 (20) fact you did have some misgivings about the anecdotal  
 (21) information after you went back and for a second time  
 (22) couldn't find oil on Bligh Island isn't that right?  
 (23) A No The reason we reduced the oiling in that area is  
 (24) because we visited the site more thoroughly in 1994 and were  
 (25) able to better assess the makeup of the shorelines

Vol 17 2653

- (1) Q But you originally took Mr Costello's information and  
 (2) decided that the map should depict the oiling as moderate but  
 (3) after going back in '94 you decided that your assessment of  
 (4) what Mr Costello had said ought to be changed down to light?  
 (5) A That's correct  
 (6) Q By the way why would you conclude that Mr Costello was  
 (7) wrong and the oiling was originally light as opposed to  
 (8) moderate rather than concluding that the moderate oil had  
 (9) cleaned up faster than you expected?  
 (10) A We did this based on our ability to view the videotape  
 (11) images and actually go to the location that we saw there and  
 (12) compare what was on the image more clearly with what we saw  
 (13) on  
 (14) the site and what he said in his text and to examine the type  
 (15) of rocks The rocks that are there are very impermeable and  
 (16) well polished and will allow for easy removal of the oil So  
 (17) unless substantial concentrations do in fact hit the area  
 (18) the persistence would be reduced To accommodate that we  
 (19) lowered the levels of oil  
 (20) Q You - you mentioned that there was asphalt as we  
 (21) discussed the other day that had gone into the atmosphere  
 (22) from the 1964 quake into the water atmosphere and some  
 (23) residue  
 (24) could still be found You're not suggesting to this jury that  
 (25) that asphalt which you're aware of is the same thing as Exxon  
 (26) Valdez crude in terms of its persistence are you?  
 (27) A That it's the same thing as Exxon Valdez crude

Vol 17 2654

- (1) Q That asphalt is a product that is destined to exist far  
 (2) far longer than anything on the Exxon Valdez is that correct?  
 (3) A Depending how you define asphalt and look at Exxon Valdez  
 (4) crude Portions of it are equivalent similar to the  
 (5) asphaltic anywhere from 10 to 30 percent depending on  
 (6) definitions and those materials have the potential of being as  
 (7) persistent as what was spilled there  
 (8) Q Nothing aboard the Exxon Valdez that was refined right?  
 (9) A In a cargo hold the material other than additives from the  
 (10) pipeline and lubricity and things like that generally  
 (11) speaking no  
 (12) Q Nothing refined that you re aware of that would have  
 (13) spilled out into the water?  
 (14) A Unless they pumped bilge in the efforts to move it off the  
 (15) beach  
 (16) Q You re not aware that they did that are you?  
 (17) A No I m not  
 (18) Q With respect to Katalla you indicated that the amount of  
 (19) oil getting into the water column from Katalla was very slight  
 (20) and that it was measurable in parts per million Did I hear  
 (21) that correctly?  
 (22) A I believe you did that s correct  
 (23) Q Some of your tests measured Exxon Valdez oil in parts per  
 (24) billion In some of your tests Isn t that correct?  
 (25) A I don t believe very many of them did

Vol 17 2655

- (1) Q But some do don t they?  
 (2) A There may be a few Parts per billion is - perhaps you re  
 (3) referring to components  
 (4) Q I m simply referring to the reports of the tests in your  
 (5) report  
 (6) A Not many  
 (7) Q But some?  
 (8) A (Nods head up and down)  
 (9) Q There was another beach where you found or thought you d  
 (10) found a tar mat Do you remember that from your 94 trip?  
 (11) A Yes  
 (12) Q It was Taroca arm?  
 (13) A Yes  
 (14) Q Would you -  
 (15) A I don t believe we characterize that as a tar mat  
 (16) Q Okay  
 (17) A We found isolated patches of asphaltic pavement residue  
 (18) Q And with respect to both that beach and Eshamy it s still  
 (19) your testimony is it not that they re both improving  
 (20) continuing to improve?  
 (21) A Yes it is  
 (22) Q Lastly you mentioned that in connection with the 94 trip  
 (23) you took out to the Sound that you were - you were informed  
 (24) about the location of oil from people like Gail Evanoff and  
 (25) others You didn t sit down with a group of people and ask

Vol 17 2656

- (1) them to take you to a representative sample of the beaches on  
 (2) the their property did you?  
 (3) A To take me to a representative sample -  
 (4) Q Representative in the sense of having oil and not I mean  
 (5) you asked them to tell you where the oil was?  
 (6) A If they d observed oil on the beaches we wanted to know  
 (7) where it was Our purpose was to investigate the mechanisms  
 (8) and nature of retained oil on the shorelines that s correct  
 (9) Q You didn t go out in 94 to find out how the beaches were  
 (10) in terms of what was clean what was cleaning you were going  
 (11) after the oil sites?  
 (12) A We actually crossed a number of areas and did view a  
 (13) number  
 (14) of shoreline types and different conditions but we were  
 (15) focusing on looking at residual oil that s correct  
 (16) Q You were going to where the oil was?  
 (17) A Yes  
 (18) MR OPPENHEIMER Thank you no further questions  
 (19) THE COURT Counsel do you want to take a break?  
 (20) MR PETUMENOS Please  
 (21) THE CLERK Please rise this court stands in recess  
 (22) (Jury out at 9 56 a m )  
 (23) (Recess from 9 58 a m to 10 13 a m )  
 (24) THE CLERK This court now resumes its session  
 (25) Please be seated  
 MR PETUMENOS I have some exhibits to move into

Vol 17 2657

- (1) evidence Judge and I think we can do this rather simply  
 (2) because after conferring with counsel there are only two  
 (3) objections So what I will do first is read the objections -  
 (4) I mean the exhibits into the record for which there are no  
 (5) objections How s that?  
 (6) Exhibit 553 Exhibit 554 Exhibits 1143 through 1146  
 (7) 1141 1 (sic) 1141 2 (sic) 1141 4 (sic) and 1141 10 through  
 (8) 14 (sic)  
 (9) 1147 55 through 1147 57 and 1147 57 A  
 (10) 1148 and 1149 1153 through 1154 1156 and 1157 1159  
 (11) 1161 1162 1164 through 1166 1271 through 1280 1284 1306  
 (12) 1354 A 1355 1356 1363 and 1368 All admitted without  
 (13) objection  
 (14) (Exhibits 553 554 1143 through 1146 1147 1 1147 2  
 (15) 1147 4 1147 10 through 14 1147 55 through 1147 57  
 1147 57A  
 (16) 1148 1149 1153 1154 1156 1157 1159 1161 1162 1164  
 (17) through 1166 1271 through 1280 1284 1306 1354 A 1355  
 (18) 1356 1368 1363 offered)  
 (19) THE COURT What were the last two counsel?  
 (20) MR PETUMENOS Last three you said?  
 (21) THE COURT Two  
 (22) MR PETUMENOS Is 163 - excuse me 1363 and 1368  
 (23) I also move into evidence Exhibit 1150 and Exhibit 1155  
 (24) for which there is an objection and I ll approach the Court  
 (25) (Exhibits 1150 and 1155 offered)

Vol 17 2658

- (1) THE COURT Okay Thanks Go ahead  
 (2) MR OPPENHEIMER Your Honor I m sorry can I grab a  
 (3) quick glance at those in the titanic shift between witnesses I  
 (4) packed up the wrong papers  
 (5) THE COURT I m going to admit the uncontested  
 (6) exhibits and I ll give the clerk a copy of the list that I ve  
 (7) made  
 (8) (Exhibit 553 554 1143 through 1146 1147 1 1147 2  
 (9) 114704 1147019 through 14 1147 55 through 1147 57  
 1147 57A  
 (10) 1148 1149 1153 1154 1156 1157 1159 1161 1162 1164  
 (11) through 1166 1271 through 1280 1284 1306 1354 A 1355  
 (12) 1356 1368 1363 received)  
 (13) MR OPPENHEIMER Your Honor the Exhibit 1155 is that  
 (14) clean up exhibit which we discussed previously and which we  
 (15) continue to voice an objection to especially with respect to  
 (16) the captioning and again with respect to all of the captions  
 (17) pertaining to biology  
 (18) I think it s clear from the witness testimony that he -  
 (19) he s not in a position to make those observations I  
 (20) understand that there may be testimony later with respect to  
 (21) biology and I m not sure I think there is And it seems to  
 (22) me there s currently not a foundation for that to go in and I  
 (23) also think it s misleading especially to the extent that it  
 (24) talks about typicality  
 (25) I also believe that he does not have a basis for rendering

Vol 17 2659

- (1) a graphic depiction of oil beneath the surface as he has done  
 (2) there because what - it does more than just convey a  
 (3) technique It suggests that there s some particular volume of  
 (4) oil and in all of his testimony - and I think it s been quite  
 (5) clear - he s not able to tell us how much oil is under the  
 (6) surface  
 (7) THE COURT I d like to ask you a question counsel  
 (8) Is there going to be subsequent testimony about this exhibit?  
 (9) MR PETUMENOS We have a biologist that we were going  
 (10) to call that is from the ICF team and if the Court requires  
 (11) additional testimony to admit this document then we ll  
 (12) certainly call him He was on our list of people to  
 (13) potentially exclude from testimony to shorten our - shorten  
 (14) our presentation I disagree with - with the statement that  
 (15) this witness doesn t have the ability to provide the foundation  
 (16) for that exhibit  
 (17) MR OPPENHEIMER Your Honor if -  
 (18) MR PETUMENOS If you re not done counsel I ll -  
 (19) MR OPPENHEIMER I m sorry I stepped on you What I  
 (20) would say perhaps - Mr Petumenos and I have had  
 (21) conferences  
 (22) we skipped one we could have probably had here if the only  
 (23) reason Mr Bakus would be back here is to get that in for the  
 (24) biology portion I would withdraw my objection as to that  
 (25) My other objections stand and they don t have anything to  
 do with Mr Bakus In other words I withdraw the objection as

Vol 17 2660

- (1) to the biology components of the caption if in fact it s  
 (2) going to eliminate the witness The other material I don t  
 (3) think Dr Bakus could testify to so I continue my foundation  
 (4) objection as to it  
 (5) MR PETUMENOS Judge I think he has the ability to  
 (6) create illustrative exhibits for the jury -  
 (7) THE COURT You mean this witness?  
 (8) MR PETUMENOS This witness to show the jury how  
 (9) different treatment methods do and don t remove oil from the  
 (10) system He gave his opinion which he s entitled to do as a  
 (11) geologist this is what remains in the various types of  
 (12) intervention on the beaches Conducted a special investigation  
 (13) in the northeast LaTouche Island area for just this purpose to  
 (14) learn how these interventions affect oil beneath the subsurface  
 (15) and to give the jury some insight into the statement that  
 (16) Dr Peterson made that you have a lose lose proposition with  
 (17) respect to some of these treatment methods The treatment  
 (18) methods have a certain cost on the environment to the  
 (19) shoreline and the oil remaining has a certain cost  
 (20) What this exhibit does show the jury that even with the  
 (21) treatment methods applied some of the oil remains in the  
 (22) subsurface so it s not completely effective That s an  
 (23) important matter for us in our case and it is a geological  
 (24) function in our case because it tells how much oil remains in  
 (25) the subsurface And he is the project manager of a team that

Vol 17 2661

- (1) went out there and included a whole host of shoreline related  
 (2) expertise and I think this is the right way to put the exhibit  
 (3) on with - the right witness is the project manager and the  
 (4) thrust of the exhibit as I think the foundation has been laid  
 (5) THE COURT Are you saying that this witness since  
 (6) he s the project manager has the capability not only to deal  
 (7) with geological issues but to testify to and provide the  
 (8) foundation for an exhibit that has a lot of biological  
 (9) conclusions in it?  
 (10) MR PETUMENOS Yes because he can rely upon - the  
 (11) significance of what oil is in the subsurface is important for  
 (12) a - for a geologist and a geologist does know the sorts of  
 (13) things that grow there For example he s put in little clam  
 (14) shells to show the jury where clam shells might be found and  
 (15) that s perfectly appropriate for a geologist to understand and  
 (16) know And I think that from his testimony he regularly does  
 (17) consider the local biota in determining what - advising  
 (18) clients what measures they should take what measures they  
 (19) shouldn t take and that s something that he in fact did in  
 (20) the Exxon Valdez oil spill He testified that he consulted  
 (21) with the Native corporations on these issues  
 (22) And so Mr Oppenheimer s concerns with this exhibit seems  
 (23) to me clearly to go to the weight and if he wants to prepare  
 (24) a - an exhibit that he thinks more clearly shows what it is  
 (25) that he thinks it ought to show he s entitled to do that but

Vol 17 2662

(1) he s not entitled to keep our version out of the sight of the  
 (2) jury  
 (3) MR OPPENHEIMER Your Honor just one clarification  
 (4) I am prepared to forego the objection to the biological  
 (5) statements if their statements that he has said somebody on his  
 (6) team has given him if in fact it s going to result in our  
 (7) being able to shorten the trial and do away with a testifying  
 (8) witness And so this discussion may be a little off the mark  
 (9) because if that s in fact what s being proposed I think that  
 (10) would be acceptable to us It s the remainder that I continue  
 (11) my objection to because I think as to those things that are -  
 (12) that are not biology I clearly think that without a  
 (13) stipulation of biology s inadmissible by this witness but as  
 (14) to those things where he has an area of expertise to speak to  
 (15) I think what his testimony has shown is that A he can t  
 (16) really graph for us a typical underground oil situation He  
 (17) doesn t - he doesn t know And he has only seen clean up  
 (18) operations on northeast LaTouche at five sites and the graph  
 (19) depicts a typical clean up method or effect throughout you  
 (20) know this large area that we re talking about and I think in  
 (21) that sense it s misleading and does not - it does not convey  
 (22) his testimony  
 (23) THE COURT That objection is overruled Now with  
 (24) that objection having been overruled do the rest of your  
 (25) objections go away?

Vol 17 2663

(1) MR OPPENHEIMER Let me take one second  
 (2) Your Honor we re of one mind here if in fact we can  
 (3) shorten things by not calling Dr Bakus -  
 (4) THE COURT I think that s the decision All right  
 (5) I ll admit 1155  
 (6) (Exhibit 1155 received)  
 (7) THE COURT What about 1150?  
 (8) MR OPPENHEIMER Your Honor - oh 1150 is a - an  
 (9) altered version of the data that appears in an Exxon briefing  
 (10) book or at least that s the caption There s no testimony  
 (11) whatsoever regarding how that chart was derived It is not  
 (12) pulled directly out of the briefing book It is also - well  
 (13) I guess the point -  
 (14) THE COURT How does it change the material in the  
 (15) Exxon briefing book?  
 (16) MR OPPENHEIMER One thing I noticed immediately is  
 (17) that the scales are different The scale on the bottom for  
 (18) example I think on Your Honor s copy if I recall it from  
 (19) memory goes to 15 years something like that The scale in the  
 (20) Exxon book as I recall goes to the hundred years The bars  
 (21) look a little different  
 (22) The other point about it which is very important is there s  
 (23) been no statement that would establish anything about the -  
 (24) the basis of the data or the timing of the data That s all -  
 (25) all very early data that s based on material that this witness

Vol 17 2664

(1) has not been exposed to from other researchers and there s  
 (2) just been no testimony about the - the underlying data  
 (3) THE COURT Counsel?  
 (4) MR PETUMENOS As I understand the objection it s  
 (5) two fold One is that there has been a - somehow a  
 (6) reconfiguration or representation of the data from the briefing  
 (7) book which is unfair but we heard no cross examination  
 (8) despite the fact that this exhibit has been served on the  
 (9) defendants for some period of time and the briefing book  
 (10) itself is available to Exxon They didn t bring the briefing  
 (11) book out to show how it s somehow unfair or misleading and  
 (12) that being - if that cross-examination doesn t exist or  
 (13) there s no evidence in the record to suggest that it s in  
 (14) fact misleading  
 (15) Then the next objection appears to be that he s relying  
 (16) upon something that - data that was early data that  
 (17) accumulates or synthesizes other data that he didn t have  
 (18) access to But this is the Exxon briefing book and is an  
 (19) admission under 801(d) and what the witness said he used it  
 (20) for was to determine and compare what his own findings were  
 (21) coming up with with respect to other data other material that  
 (22) was around in the literature And he found it particularly  
 (23) instructive that in Exxon s own management information tool  
 (24) 801(d) admission the periods of persistence were reasonable  
 (25) in comparison to what he had come up with

Vol 17 2665

(1) So it would clearly be proper for him to put before the  
 (2) jury something that he looked at to determine the  
 (3) reasonableness of his own calculations which is in fact an  
 (4) admission under the Evidence Code and had they been able to  
 (5) come up with something to show that the evidence - that the  
 (6) illustrative presentation here was somehow unfairly  
 (7) characterizing the briefing book They might have something to  
 (8) say but that cross examination never happened So the  
 (9) exhibit s admissible  
 (10) MR OPPENHEIMER Your Honor I don t - I don t think  
 (11) it s our burden to lay the foundation I don t think there is  
 (12) any testimony in the record that establishes the procedure by  
 (13) which that document was produced off the briefing book and  
 (14) it s not the same document as exists in the briefing book We  
 (15) had - I think we had a similar experience where we were on the  
 (16) other side of this where we had some fish tables that were  
 (17) based on ADF&G data and it wasn t a question of  
 (18) cross examining a prima facie foundation to show it wasn t  
 (19) adequate I believe the Court concluded although I was not  
 (20) here that day that there was simply not an adequate foundation  
 (21) for the material That s an objection we can raise at the  
 (22) close of the evidence on the exhibit as we are - we re not  
 (23) obligated to cross-examine in the absence of the foundation  
 (24) having been laid We did - we did I m positive raise the  
 (25) objection at the time it was offered

Vol 17 2666

- (1) THE COURT Hang on just a minute  
 (2) MR OPPENHEIMER Also Your Honor one other point  
 (3) though I don t think it s controlling but it contributes to  
 (4) the analysis is that I don t think this is an admission The  
 (5) scale that we re dealing with I believe says one to ten or  
 (6) some such thing The other thing is - and I apologize but I  
 (7) - also from memory - believe that it relates to a biological  
 (8) time frame I don t think it has anything to do with beach  
 (9) time or oiling time if I m not mistaken  
 (10) THE COURT That appears to be true  
 (11) MR PETUMENOS I can - since I was in court I think  
 (12) the differences between the foundation exhibit on the fishing  
 (13) charts and this one are night and day because those  
 (14) objections were raised with respect to an expert witness who  
 (15) had never seen the report and didn t rely upon it By  
 (16) contrast this witness states that his team did rely upon the  
 (17) Exxon briefing book did look at it and in fact created an  
 (18) understandable illustration of what he relied upon and is  
 (19) familiar with and could have been cross examined had they  
 (20) chose  
 (21) at length as to the accuracy of the illustrative rendition  
 (22) To the extent that we have the same biological objection as  
 (23) before my position would be the same and that is that I think  
 (24) he can rely upon reasonably under these circumstances when  
 (25) studying persistence the input of his team and to the extent  
 (26) that we require foundation from Dr Bakus why we ll put it

Vol 17 2667

- (1) In  
 (2) THE COURT The objection s sustained counsel  
 (3) It s - the admission argument is troublesome but I don t know  
 (4) that - that I can take a book that s been prepared by one  
 (5) party adapted by another party and then the other party  
 (6) testifies to it and it s different in some particulars I  
 (7) don t know that I can - I can take that categorically as an  
 (8) admission of the other party I d have to hear more about it  
 (9) to determine whether or not I should let it in  
 (10) I suppose the ultimate issue is admissibility rather than  
 (11) simply whether it might come under a particular category of the  
 (12) rules I think it s a well taken objection and based on what I  
 (13) heard and what I see in the exhibit  
 (14) MR OPPENHEIMER Your Honor I d like to put in a  
 (15) number of exhibits and as well offer them at this time  
 (16) THE COURT Fine okay  
 (17) MR OPPENHEIMER They are as follows Exhibit 8942  
 (18) 8943 15480 15481 15482 13258 8944 13239 13240 13227  
 (19) 2769 2761 2734  
 (20) (Exhibits 8942 8943 25480 25481 25482 13258 8944  
 (21) 13239 13240 13227 2769 2761 and 2734 offered)  
 (22) MR PETUMENOS Mr Oppenheimer did not go through the  
 (23) process that we went through showing the exhibits and  
 (24) determine  
 (25) if there are any objections I ve written down all of them if  
 (26) I could reserve

Vol 17 2668

- (1) MR OPPENHEIMER Your Honor we can do that at a  
 (2) break Mr Petumenos is right about that  
 (3) THE COURT Okay fine I ll leave it the way it is  
 (4) and we can talk about it later  
 (5) THE COURT Have you got those the exhibits that I  
 (6) did admit right and the one that I didn t?  
 (7) THE CLERK Uh huh  
 (8) THE COURT Who s keeping these? Would you come and  
 (9) get your exhibits so I don t lose them?  
 (10) MR PETUMENOS Sure  
 (11) THE COURT Let s get the jury in  
 (12) MR PETUMENOS May Dr Mundy take the stand?  
 (13) THE COURT Yes  
 (14) (Jury in at 10 32 a m )  
 (15) THE CLERK Sir could you remain standing and raise  
 (16) your right hand  
 (17) (The Witness Is Sworn)  
 (18) THE CLERK Please be seated  
 (19) Sir for the record I need you to state your full name  
 (20) A My full name is Wilbur Henry Mundy M u n d y I go by the  
 (21) nickname of Bill  
 (22) THE CLERK And your occupation?  
 (23) A I m a real estate appraiser  
 (24) THE CLERK Thank you  
 (25) MR PETUMENOS

Vol 17 2669

- (1) Q Before I begin Judge I neglected to tell you but so the  
 (2) jury knows as well Dr Mundy has got some fused disks in his  
 (3) back and he may have trouble sitting for a long period of  
 (4) time If he gets uncomfortable I m going to ask you  
 (5) Dr Mundy to tell us so we can take a break if we need to if  
 (6) that s all right Judge?  
 (7) THE COURT Sure  
 (8) DIRECT EXAMINATION OF WILMER H MUNDY  
 (9) BY MR PETUMENOS  
 (10) Q Dr Mundy could you tell the jury a little bit about  
 (11) yourself and where you grew up and some of that?  
 (12) A Yes I grew up in a small town of Ellensburg Washington  
 (13) which is located in the center of the State of Washington I  
 (14) was raised partially in town one of four boys and when my  
 (15) parents finally decided that four boys in town was too much we  
 (16) moved to the country And I grew up in the country on a farm  
 (17) in Ellensburg  
 (18) Attended Ellensburg High School graduated from Ellensburg  
 (19) High School and went into the Navy Served in the Navy then  
 (20) went back to Ellensburg and began my college education I  
 (21) went  
 (22) through - attended classes at Central Washington University in  
 (23) Ellensburg and also at Washington State University at Pullman  
 (24) Washington I majored in a number of different areas started  
 (25) out in accounting and then went into the hotel and restaurant  
 (26) administration finally got a degree in agriculture

Vol 17 2670

- (1) Q Let me stop you there What is your profession right now?
- (2) A Right now I m a real estate analyst
- (3) Q And what is a real estate analyst?
- (4) A Well a real estate analyst is a person that analyzes real
- (5) estate A person that deals with various factors that
- (6) influence the real estate market the amount of demand for real
- (7) estate how real estate is priced the value of real estate
- (8) such things as that
- (9) Q And how is that different from a real estate appraiser a
- (10) real estate analyst?
- (11) A A real estate appraiser is one that focuses pretty much on
- (12) real estate valuation issues An analyst is one that deals
- (13) with a broader realm of real estate issues They get involved
- (14) in real estate economics in real estate market research and
- (15) market analysis analyzing the demand and supply for different
- (16) kinds of products conducting surveys of people to determine
- (17) what their attitudes are about a product For example
- (18) assisting a home builder in designing housing
- (19) Q Okay Do you work with a company?
- (20) A Yes I do
- (21) Q And what is the name of the company?
- (22) A The company is Mundy - actually the formal name is Mundy
- (23) Jarvis and Associates Inc We go by the name of Mundy and
- (24) Associates
- (25) Q And that s because your name is Mundy?

Vol 17 2671

- (1) A That s correct
- (2) Q And how many people are employed generally in your firm
- (3) and what kinds of expertise do they have?
- (4) A There are 11 people in the firm There s myself and three
- (5) other senior analysts- actually four other senior analysts
- (6) and I classify myself as an analyst too Then we have three
- (7) field research people that assist the senior analysts in doing
- (8) various types of research There is my partner Jean Hager
- (9) She handles what I call the front office the administrative
- (10) matters personnel matters and then we have a word
- (11) processing
- (11) group
- (12) Q What are some of the qualifications of these people that
- (13) you have working for you? What have they studied and what
- (14) kind
- (14) of degrees do they have?
- (15) A They actually have a fairly broad scope to the - their
- (16) background We have - all of the senior analysts have to have
- (17) at least a Master s degree and they have backgrounds in
- (18) geography urban geography business Master s in business
- (19) administration We have one lady who has a Master s in
- (20) business and Master s in urban planning and another that has
- (21) a
- (21) Master s degree in economics
- (22) Q Why is it necessary to have people with those kinds of
- (23) qualifications working in your firm to do the kind of work that
- (24) you do?
- (25) A There s a lot of quantitative analysis that we do so that

Vol 17 2672

- (1) it s important to have a good ability to work with numbers
- (2) There s a lot of depth and discipline that one receives as a
- (3) part of graduate studies and I think that that s important
- (4) adding depth to the analyst s ability
- (5) Also the area of real estate analysis is one that is quite
- (6) specialized and therefore we can obtain these specialties by
- (7) hiring people who have the advanced degrees
- (8) Q So your firm tends to deal in complex real estate problems
- (9) would you say?
- (10) A Yes
- (11) Q Apart from the Exxon Valdez work that you ve done for this
- (12) case can you give the jury some examples of what you mean
- (13) by
- (13) that when you say that there are complex real estate
- (13) assessment
- (14) problems that you get involved in give us some examples
- (15) A Well there s a couple of examples One of the things
- (16) that of course we re dealing with here is contamination A
- (17) contamination study that we just finished was one that involved
- (18) around 25 000 acres in Mississippi This is a tract of land
- (19) that was owned by a timber company or that still is owned by a
- (20) timber company or the majority of it where back in 1960 a
- (21) part of the site was leased by the Atomic Energy Commission
- (22) and in 1964 and 1966 two nuclear warheads were exploded
- (23) under
- (23) the earth in salt caverns and things did not go quite as
- (24) planned and there has resulted a lot of contamination surface
- (25) contamination as well as groundwater contamination and we

Vol 17 2673

- (1) were one member of a team that worked on the analysis of what
- (2) the effects of that incident had been and are today and we
- (3) concentrated in the value area
- (4) Another example is property that we analyzed that deals
- (5) with what we call natural land It s a very unique type of
- (6) property It s located in central Oregon and I m sure that
- (7) you have heard of the spotted owl and the spotted owl
- (8) controversy Well this property is the Opal Creek property
- (9) and it is where the spotted owl controversy began And it s an
- (10) ancient forest old growth natural forest and we appraised
- (11) that for the property owner who donated the property to a
- (12) conservancy organization
- (13) Q All right let s talk about your background a little
- (14) Dr Mundy Could you tell us about your education since high
- (15) school?
- (16) A Yes I mentioned part of it I have a Bachelor of Science
- (17) degree from Washington State University in agriculture And
- (18) then I have a Master s degree in urban economics from the
- (19) University of Washington and I have a Doctor of Philosophy
- (20) degree which is an interdisciplinary degree It s also from
- (21) the University of Washington and I specialize in geography and
- (22) a part of business which dealt with consumer behavior and
- (23) market research
- (24) Q Dr Mundy because I think some of your qualifications
- (25) require us to understand what you were doing at the time you

Vol 17 2674

- (1) were obtaining these degrees I would like to have you describe  
 (2) for the jury some of your work experience as you went through  
 (3) and got - got these - this formal education Why did you get  
 (4) an archeolog - an agricultural degree? What was your  
 (5) interest there?  
 (6) A Well as I mentioned I was raised on a farm and I still  
 (7) am in the agricultural business It's one of these things  
 (8) that I guess kind of grows on you I had a herd of purebred  
 (9) livestock that put me through college and it's - I guess a  
 (10) part of me  
 (11) Q Did you manage any farms?  
 (12) A Yes After I graduated from Washington State University  
 (13) with the agricultural degree I went back to the Midwest and  
 (14) was hired by a firm out of St Louis Missouri and managed  
 (15) farms in the Midwest for two years and actually that's when I  
 (16) started doing appraisal work  
 (17) Q Okay And what was this first appraisal work that you ever  
 (18) did back in the midwest what did that involve?  
 (19) A Well the first appraisal work that I did in the Midwest  
 (20) involved the valuation of farms agricultural property which  
 (21) was an adjunct to the farm management work that I did and  
 (22) after that I relocated to Seattle and sort of getting out of  
 (23) the weather conditions of the Midwest especially St Louis  
 (24) where I had moved to by then  
 (25) And I was hired by a appraisal firm in Seattle who had just

Vol 17 2675

- (1) received a contract from the U S Department of Justice to  
 (2) appraise the Flathead Indian Reservation in Montana and that  
 (3) was principally agricultural land and I was one of the people  
 (4) who was responsible for that valuation effort  
 (5) Q So your first contact with appraising land that involved  
 (6) Native Americans was in what year?  
 (7) A The year that I worked on that appraisal would have been in  
 (8) 1968 The valuation date that is the date that we had to  
 (9) figure out what the value of the reservation was and I'm not  
 (10) clear about the question so I'll provide that to you was  
 (11) 1912 I had to figure out what the value of the reservation  
 (12) was in 1912  
 (13) Q All right Then you obtained your Master's in urban land  
 (14) economics Did you receive any academic awards in  
 (15) connection  
 (16) with that degree?  
 (17) A I received a scholarship as a part of that work from the  
 (18) American Institute of Real Estate Appraisers There's also a  
 (19) business honorary Beta Gamma Sigma which I was admitted to  
 (20) Q After you got your Masters and you were working on your  
 (21) Ph D did you go to work on land issues with any company?  
 (22) A Yes  
 (23) Q Who was that?  
 (24) A That was Weyerhaeuser Company  
 (25) Q They are the Weyerhaeuser lumber - timber company?  
 (26) A That's correct

Vol 17 2676

- (1) Q That caused you to become involved managing or dealing  
 with  
 (2) forest lands?  
 (3) A That's correct  
 (4) Q Briefly what did you do in that regard?  
 (5) A There were two major responsibilities that I had at  
 (6) Weyerhaeuser Company I had the title of land economist and  
 (7) one of the two responsibilities involved assisting Weyerhaeuser  
 (8) in determining the highest and best use or most profitable use  
 (9) to which they could put their lands to They classify land  
 (10) into a number of categories and one of those categories is  
 (11) called high yield forestry and they invest a lot of money in  
 (12) lands that they principally grow trees on Well there are a  
 (13) lot of lands that Weyerhaeuser has They own eight and a half  
 (14) million acres that are located near urban areas and so the  
 (15) question frequently came up on those lands near urban areas  
 (16) And there are also lands that are located not in urban areas  
 (17) but that had spectacular scenic attributes recreational  
 (18) attributes The question comes up should those lands be used  
 (19) for high yield forestry or should they be converted to some  
 (20) other use that would be a more profitable use for the company  
 (21) and one of my responsibilities was doing the analysis and  
 (22) making the determination regarding how those lands should be  
 (23) classified  
 (24) Q And that was done in the early 1970s if I'm right?  
 (25) A That's correct

Vol 17 2677

- (1) Q Now you said you got a degree in geography and what I  
 (2) think of when I think of geography is having to memorize the  
 (3) capitals of all the countries and states but that's not what  
 (4) you did?  
 (5) A That's correct  
 (6) Q What does a Ph D or a doctorate in geography do for the  
 (7) role?  
 (8) A The area that I concentrated on - and there are a lot of  
 (9) different areas in geography that you can concentrate on -  
 (10) physical geography that Mr Petumenos was talking about I  
 (11) concentrated on urban geography and human geography and  
 it's  
 (12) the relationship between people and places and how people  
 (13) happen to locate in one place versus another one and how the  
 (14) urban land form tends to evolve because of where people  
 (15) locate It deals with where might the best location for a  
 (16) shopping center be or the best location for a service station  
 (17) and deals with the transportation issues things like that  
 (18) Q After you obtained your doctorate did you then do post  
 (19) doctorate studies anywhere?  
 (20) A Yes I did  
 (21) Q And where was that?  
 (22) A That was at the Weimer School of Advanced Studies in Real  
 (23) Estate and Land Economics  
 (24) Q Is the Weimer School the leading school for advanced  
 (25) studies of real estate?

Vol 17 2678

Vol 17 2680

- (1) A Yes it is  
 (2) Q And did you receive any scholarships or awards in  
 (3) connection with your postdoctoral studies?  
 (4) A There were - well there s a scholarship that I received  
 (5) as a part of my doctoral studies Again it was an Appraisal  
 (6) Institute scholarship and then as a part of the Weimer  
 (7) School work and research that I did as a part of that I  
 (8) received another honor from the Appraisal Institute the Arthur  
 (9) May Award  
 (10) Q Let me take you to the work you do now at Mundy and  
 (11) Associates You mentioned you did some work on  
 (12) contamination  
 (13) Do you specialize in part on the issue of contamination and  
 (14) real property at your firm?  
 (15) A That s one of the specialties that we have yes  
 (16) Q All right And have you done research and writing in that  
 (17) area?  
 (18) A Yes I have  
 (19) Q And have you appraised contaminated properties before  
 (20) you d  
 (21) ever gotten involved in this case?  
 (22) A Yes  
 (23) Q Have you done so on behalf of the oil industry before?  
 (24) A Yes  
 (25) Q Do you also specialize in wilderness remote properties or  
 (26) natural lands at your firm?  
 (27) A Yes we do

- (1) Q Now I see - the jury will be aware from many of the  
 (2) arrows a lot of these properties are in remote or wilderness  
 (3) areas?  
 (4) A That s correct  
 (5) Q Now does a real estate appraiser have to be licensed in  
 (6) the state of Alaska?  
 (7) A You don t have to be licensed but it s a good idea to be  
 (8) licensed  
 (9) Q Okay And explain that to the jury I mean is that - is  
 (10) that a license like any other professional license that might  
 (11) exist?  
 (12) A I presume it is There - in the State of Alaska an  
 (13) individual can appraise property without having a license but  
 (14) there are a lot of different types of clients that require a  
 (15) license before one can provide services for them  
 (16) Q Do you hold such a license in the state of Alaska?  
 (17) A I do  
 (18) Q And do you hold licenses in other states as well?  
 (19) A Yes I do  
 (20) MR PETUMENOS Your Honor I would tender Dr Mundy  
 (21) as an expert in the fields of real estate valuation of  
 (22) contaminated remote properties  
 (23) MR OPPENHEIMER No objection  
 (24) THE COURT He s qualified to give opinion in that  
 (25) area

Vol 17 2679

Vol 17 2681

- (1) Q And have you done appraisals in that area?  
 (2) A Yes  
 (3) Q All right You say you have your offices in the Seattle  
 (4) Washington area Have you had much experience in Alaska?  
 (5) A Yes I have  
 (6) Q All right And when did that experience with Alaska real  
 (7) estate and our state begin?  
 (8) A It began before I had completed my doctoral work and there  
 (9) was an appraiser in Fairbanks Alaska that had been asked to  
 (10) do a market study and didn t fully understand how to do a  
 (11) market study and asked me if I would collaborate with him on  
 (12) the work And so I went to Fairbanks and worked with this  
 (13) appraiser -  
 (14) Q What year was that?  
 (15) A That was in 1974 I believe is the year  
 (16) Q Now we have prepared an exhibit haven t we to show the  
 (17) jury on the locations and on how many occasions you ve had  
 (18) the  
 (19) opportunity to work in Alaska lands  
 (20) Could we have that up next the number please Showing  
 (21) you what s been marked as Exhibit 1160 - 68 thank you 1168  
 (22) is a map of the state and it has a bunch of red arrows on it?  
 (23) A Yes  
 (24) Q What are those?  
 (25) A Those are locations where I have valued property or  
 (26) performed some form of real estate analysis on a property

- (1) BY MR PETUMENOS  
 (2) Q Dr Mundy did you become retained by the Native  
 (3) corporations in this case specifically Chugach Chenega Port  
 (4) Graham English Bay Tattilek and Eyak?  
 (5) A Yes I did  
 (6) Q And what were you asked to do on their behalf?  
 (7) A The main request was to determine to what extent their  
 (8) lands had been damaged because of the oiling that resulted  
 (9) from  
 (10) the Exxon Valdez spill  
 (11) Q And how did you go about arriving at an approach to this  
 (12) problem as it was presented to you?  
 (13) A There s a rather specific yet general process that  
 (14) appraisers generally go through in valuing property and it  
 (15) begins with defining the problem at hand visiting the  
 (16) property understanding the - the nature of the property  
 (17) understanding the nature of the valuation problem itself and  
 (18) then once the nature of the valuation problem is understood  
 (19) putting together a research design to go about generating the  
 (20) information that is necessary to analyze and establish a  
 (21) opinion regarding what the value effects are  
 (22) Q Now you mentioned that you had gone and visited the  
 (23) properties yourself and physically gone out there Could you  
 (24) describe what you did for the jury?  
 (25) And perhaps we could get the defendants map up to assist  
 (26) us there

Vol 17 2682

- (1) When did you first go in and look at the properties? And  
 (2) give the jury a general idea of where you went?  
 (3) A The - I have visited the property on - or this area on  
 (4) numerous occasions I was familiar with Prince William Sound  
 (5) and the Kenai Fjords before actually beginning this  
 engagement  
 (6) back in 1983 - or 1982 and 83  
 (7) My wife and I took what I call a working sabbatical and we  
 (8) came up and lived in Alaska for a year And part of that  
 (9) period of time I had the occasion to visit on several occasions  
 (10) Prince William Sound both in terms of pleasure and also in  
 (11) doing valuation work so I knew generally what the nature of  
 (12) the area was before the oil spill took place  
 (13) After the oil spill and as a part of this assignment I  
 (14) visited the Sound in 1991 and this includes Kenai Fjords too  
 (15) 1991 1993 and 1994  
 (16) Q Did you visit all of the properties or all of the areas  
 (17) that are covered by the exhibit that s on the screen now in  
 (18) Prince William Sound at one time or another through those  
 (19) years?  
 (20) A Yes I have  
 (21) Q And could we have the next exhibit please the - that  
 (22) included Tattilek Eyak Chugach and Chenega right? In that  
 (23) Prince William Sound?  
 (24) A That s right in the Prince William Sound  
 (25) Q What now we have before you the Kenai Fjords and lower

Vol 17 2683

- (1) Kenai did you go into those areas?  
 (2) A Yes I did  
 (3) Q And about how many times?  
 (4) A Three times as a part of this engagement  
 (5) Q And that was for Port Graham and for English Bay?  
 (6) A That s correct  
 (7) Q Did you create from - were you there as recently as 1994?  
 (8) A Yes  
 (9) Q Did you create a photo notebook for the jury that would  
 (10) assist them in understanding what it is you saw and the amount  
 (11) of contamination and oiling that you saw in 1994?  
 (12) A Yes I did  
 (13) Q Showing you what has been marked as Exhibit 1370 do you  
 (14) recognize 1370?  
 (15) A Yes This is the photo log that I put together as a part  
 (16) of my - photographs that I took myself as well as narrative  
 (17) material that I wrote myself as a part of each photograph  
 (18) describing what the photograph is all about  
 (19) Q And when were these photographs taken?  
 (20) A In May and June of this year  
 (21) MR PETUMENOS Your Honor I move the admission of  
 (22) that exhibit And I understand that we have a few things to  
 (23) work out we probably have no objection to it  
 (24) (Exhibit 1370 offered)  
 (25) MR OPPENHEIMER Your Honor it s acceptable Our

Vol 17 2684

- (1) stipulation is that we re not going to publish the captions at  
 (2) this time to the jury  
 (3) THE COURT Fine  
 (4) THE COURT I ll admit it with that understanding  
 (5) (Exhibit 1370 received)  
 (6) BY MR PETUMENOS  
 (7) Q Now did you create an exhibit that would show the jury to  
 (8) help them understand how you approached the problem of  
 coming  
 (9) up with a damage assessment for this land?  
 (10) A Yes  
 (11) Q Could I see Exhibit 1169 please?  
 (12) Now was the problem that you were presented with a  
 (13) particularly complex one in your view?  
 (14) A Yes it was  
 (15) Q And why is that?  
 (16) A There are a number of reasons One it encompasses a very  
 (17) large geographical area many hundreds of thousands of acres  
 of  
 (18) land The geography is one that is very diverse The natural  
 (19) systems the ecological systems the biological systems that  
 (20) are associated with the geography are very complex The effect  
 (21) that oil has and had on the environment differed substantially  
 (22) by location Some lands were not oiled some lands were  
 Some  
 (23) lands were lightly oiled some lands were heavily oiled The  
 (24) oil is something that is not a permanent thing that will be  
 (25) there forever it s something that has a temporal nature to it

Vol 17 2685

- (1) and will subside with time with the value impacts or as far as  
 (2) how the market perceives it it will subside with time So  
 (3) there were a lot of very complex things that a valuer would  
 (4) have to take into consideration in putting together a research  
 (5) program generating the data and going about doing the  
 (6) analysis  
 (7) Q Were there any things about how the land is owned and what  
 (8) these particular - who these particular owners were that made  
 (9) the problem more complex?  
 (10) A That is another very unique aspect of the property The  
 (11) fact that the nature of the ownership that we have here is not  
 (12) typical It s not like the home that I own maybe the home  
 (13) that you own or a piece of land that somebody has here in  
 (14) Anchorage The nature of the ownership of the Native lands in  
 (15) Prince William Sound and the Kenai Fjords area is - is  
 (16) unique It s unique to the United States and to our type of  
 (17) real estate property ownership pattern  
 (18) Q Is there any other place besides Alaska where you can find  
 (19) entitles like Native corporations that own the land quite the  
 (20) way that the Native corporations in Alaska do?  
 (21) A We have done an awful lot of valuation work for Native -  
 (22) Native groups corporations reservations this type of thing  
 (23) and this is the - this is unique as far as our experience and  
 (24) my research is concerned  
 (25) Q Take the jury through this exhibit and explain to the jury

Vol 17 2686

Vol 17 2688

- (1) how you approached this problem what steps you took and how
- (2) you got to the end an overview if you will
- (3) A The first step was the definition of the problem I
- (4) mentioned just a little bit ago that what we need to do as a
- (5) part of that is to develop an understanding of the - the real
- (6) estate what is this physical commodity that we re dealing
- (7) with? What are the characteristics of it? Both the physical
- (8) characteristics as well as the biological characteristics
- (9) We have to understand the ownership pattern There are a
- (10) number of definitions that are real important as a part of this
- (11) process One of those definitions is the definition of market
- (12) value
- (13) Q Could we have Exhibit 1170 next please?
- (14) What is Exhibit 1170?
- (15) A This is the definition of market value as accepted by the
- (16) judicial system legal system in the state of Alaska
- (17) Q And you have put In addition to the definition fair
- (18) market value is a single unitary figure commonly defined as the
- (19) amount of which property would change hands between a
- (20) willing
- (21) buyer and a willing seller neither being under a compulsion to
- (22) buy or sell and both having a reasonable knowledge of the
- (23) relevant facts
- (24) Then you have a condition here that says unique aspects
- (25) What do you mean to convey with respect to that bullet or
- (26) addition?

- (1) Q Wilderness and pristine lands how is that a unique and -
- (2) unique concern?
- (3) A The - referring to this wilderness and pristine lands
- (4) involves large tracts of land that are virtually untouched
- (5) and have been virtually untouched or unaltered by human beings
- (6) and
- (7) it s a very unique resource that we have that there is in
- (8) Alaska and it s something that is becoming very scarce
- (9) People realize the scarcity with which this land is currently
- (10) becoming and there are various for example conservancy
- (11) organizations that have sprung up to acquire these lands
- (12) There are state and federal agencies who are acquiring these
- (13) lands but it s not a active market It s not like the local
- (14) residential market or not like the local office market And
- (15) there are different factors that give these lands their value
- (16) giving attributes They re different than urban land
- (17) For example generally in an urban area the intensity
- (18) there s a function between the intensity of use and value As
- (19) the intensity of use goes up value goes up For these
- (20) wilderness lands you don t want that intensity of use The
- (21) intensity of use is an adverse relationship to value
- (22) Q It s an undesirable thing if you want to have wilderness
- (23) lands preserved?
- (24) A That s right
- (25) Q So another problem is you have to apply the definition to
- (26) the concept of wilderness or conservation lands is that what

Vol 17 2687

Vol 17 2689

- (1) A These are some unique things that one needs to take into
- (2) consideration as a part of the market value definition They
- (3) are things that are not standard in the typical valuation
- (4) process
- (5) Q Subsistence?
- (6) A Subsistence for example you have a situation where land
- (7) is owned and it is utilized to generate benefits from A farm
- (8) a person would raise a crop sell the crop receive cash for
- (9) the crop and take the cash and go buy the groceries that they
- (10) need this type of thing
- (11) But in Prince William Sound and in the Kenai Fjords area
- (12) that we re dealing with that is not the type of activities
- (13) that are carried on And what is conducted there are
- (14) subsistence activities people generate their livelihood from
- (15) the lands in a noncash basis There is not cash used as a
- (16) medium for exchange there Therefore land is - with very
- (17) very few exceptions it s not rented and the - so there s no
- (18) income stream that one can associate with those properties
- (19) Q Now the definition of market value is a very general
- (20) definition would you say?
- (21) A Yes it is
- (22) Q And so you have to - one of the things that the analyst
- (23) has to do is figure out how to apply this definition to these
- (24) unique concerns?
- (25) A That s correct

- (1) we re getting at here?
- (2) A Yes
- (3) Q And ANCSA what does A N C S A mean?
- (4) A That s the Alaska Native Claims Settlement Act the act
- (5) that became law in 1971 that provided the Natives with the
- (6) right to select lands in Prince William Sound and the Kenai
- (7) Fjords And those - the right that they have to select those
- (8) lands has unique ownership characteristics along with it and
- (9) so the appraisers talk about a bundle of rights that go along
- (10) with property the right to quiet enjoyment as an example And
- (11) the bundle of rights that the Natives received is somewhat
- (12) different than the bundle of rights that we re used to dealing
- (13) with in urban areas
- (14) Q So you had to take that into account as well?
- (15) A Yes
- (16) Q They have certain duties with respect to their land and
- (17) they have certain protections am I right because of ANCSA?
- (18) A That is correct
- (19) Q Could we have 1169 back please?
- (20) Now after you have got the definition of market value in
- (21) mind and the unique problems that this land creates do you
- (22) then do a preliminary analysis as to how you re going to
- (23) make - how you re going to solve the problem that s
- (24) presented?
- (25) A That s correct
- (26) Q And what preliminary analysis did you make in this case?

Vol 17 2690

(1) A The preliminary analysis involved bringing together the  
 (2) necessary information so that we could go about valuing the  
 (3) property So once we knew the nature of the property we had  
 (4) to figure out is it all the same or are there differences And  
 (5) if there are differences how are we going to deal with the  
 (6) fact that a property what property might be a good hunting  
 (7) lodge site and another property is being used for forestry  
 (8) purposes and another one would be great property to preserve  
 (9) So we develop an understanding of the different types of  
 (10) properties that there are and then we have to go about  
 (11) bringing together data that will serve as a basis for attaching  
 (12) a value to these properties And so we have - we go out and  
 (13) we do what we call search for comparable evidence We look  
 (14) for  
 (15) sales of similar types of property We look -  
 (16) Q Now let me stop you there When you say comparable  
 (17) evidence we re going to use the term comparables from time  
 (18) to time in this examination Could you put that in the context  
 (19) of how someone might get an appraisal on a house? Are we  
 (20) doing  
 (21) the same type of thing idea here for obtaining the value of  
 (22) the property?  
 (23) A It s the same basic thing And so for a comparable on a  
 (24) house what the appraiser does is go around the neighborhood  
 (25) and find some homes that have sold Maybe he ll find a dozen  
 (26) homes that have sold and he ll select the two three or four  
 (27) best or most comparable properties to the one that s being

Vol 17 2691

(1) appraised and so those are his comparable sale properties  
 (2) And he uses those comparable sales compares and contrasts  
 (3) them  
 (4) to property and then he arrives at an estimate of value for  
 (5) the subject  
 (6) Q Now no house - in that hypothetical you ve got here no  
 (7) house is exactly the same?  
 (8) A That is the exception the real exception  
 (9) Q May happen sometime?  
 (10) A For some reason people like to have things different  
 (11) Q So when you have these different comparables does the  
 (12) appraiser have to make adjustments based on the differences  
 (13) he  
 (14) sees to determine if the house next door is bigger or littler  
 (15) or different type of roof and things like that?  
 (16) A That s right  
 (17) Q Now when you re doing an analysis like this in this  
 (18) context what are some of the problems that the analyst  
 (19) confronts when he s looking for other houses if you will to  
 (20) compare to what Prince William Sound would be wilderness  
 (21) properties out there what kind of problems does that present?  
 (22) A One of the major problems that we had is that the Prince  
 (23) William Sound area and the Kenai Flord area is an area where  
 (24) there s not an active real estate market There is very very  
 (25) little privately owned land and so there s not much real  
 (26) estate that sells in that area The land is principally all  
 (27) owned by the federal government the state government and the

Vol 17 2692

(1) Native corporations And the Native corporations can t sell  
 (2) the land so there s simply not a market in that area  
 (3) Therefore we had to expand our research beyond the area  
 (4) where the subject property is located and we did actually  
 (5) research Depending on what part of our analysis we were  
 (6) working on and the nature of the property it involved the  
 (7) greater Prince William Sound area let s say It involved the  
 (8) Kenai Borough Kodiak Island Homer area for unique lands  
 (9) We  
 (10) used the entire state of Alaska as a data base there  
 (11) And then in dealing with contaminated property there s  
 (12) very very little of that sells on a nationwide basis simply  
 (13) because people don t want to buy contaminated property And  
 (14) so  
 (15) our research there involved the entire United States  
 (16) Q All right Now let s just get one thing clear The - if  
 (17) a contaminating event happens on property that is not intended  
 (18) for sale does that mean that the property wasn t damaged?  
 (19) A Could you repeat that again please?  
 (20) Q Yes If a contaminating event happens on a piece of  
 (21) property that no one contemplates selling they were going to  
 (22) keep it does that mean the property wasn t damaged?  
 (23) MR OPPENHEIMER Calls for a legal conclusion Your  
 (24) Honor  
 (25) THE COURT Overruled go ahead  
 (26) BY MR PETUMENOS  
 (27) Q You can answer

Vol 17 2693

(1) A No it does not mean that it s not damaged and it s based  
 (2) on market behavior What the appraiser does is studies how the  
 (3) market behaves and so you learn based on that market  
 (4) behavior what will likely happen in other events or situations  
 (5) that are similar  
 (6) Q And then did you also as part of your preliminary  
 (7) analysis have to come up with an appraisal date?  
 (8) A Yes  
 (9) Q Explain to the jury  
 (10) A Well in valuing something as I mentioned earlier we  
 (11) valued the Flathead Indian Reservation in Montana The  
 (12) appraisal date was 1912 You have to have a point in time  
 (13) upon - within which to express this value estimate And so in  
 (14) the case of the valuing of the property for our clients we  
 (15) selected two dates We selected March 23rd 1989 as the date  
 (16) immediately prior to the spill That s when the property had  
 (17) not been affected at all by any type of contamination from the  
 (18) Exxon Valdez  
 (19) The second date that we selected was April 23rd 1989 one  
 (20) month later And the reason that we selected the second date  
 (21) was that over that one month period of time it became  
 (22) well known to people who were knowledgeable in the  
 (23) marketplace  
 (24) - and that s one of these assumptions in terms of the  
 (25) definition of market value a knowledgeable buyer - the  
 (26) marketplace would have found out about the oiling They  
 (27) would

Vol 17 2694

- (1) have known about it and they would have been able to take that
- (2) into consideration regarding whether they would want to buy
- (3) land in Prince William Sound and the Kenai Fjords or not and
- (4) if they wanted to buy it what they would pay for it
- (5) Q Did you – lastly as part of your preliminary analysis do
- (6) you as a real estate analyst or appraiser have to find out
- (7) whether there is a need to consult with other disciplines with
- (8) other experts in the area?
- (9) A That is a standard practice especially in these
- (10) specialized areas that involve for example contamination
- (11) Q And in this instance who did you consult with for the
- (12) science aspect of your work?
- (13) A Jim Bush with ICF
- (14) Q And his staff?
- (15) A Yes
- (16) Q Let's go then to what you call here the highest and best
- (17) use analysis which is the third step in the appraisal
- (18) process
- (19) And could we see 1171 up?
- (20) What do we mean by highest and best use analysis?
- (21) A Well highest and best use analysis as you can see is the
- (22) reasonably probable and legal use of which vacant land or an
- (23) improved property which is physically possible appropriately
- (24) supported financially feasible and that results in the
- (25) highest value

Vol 17 2695

- (1) Now there are some important aspects of this definition
- (2) And so I'd like to just take it apart and spend a little time
- (3) on some of the important phrases
- (4) Q If you need to blow any of this up you have the light pen
- (5) up there and I think you know how to do it if you need to
- (6) In fact I can help you here Just leave it at the podium
- (7) A I can't see what the jury can see but I know what I can
- (8) see here I'm assuming that the jury can see this as well as I
- (9) can
- (10) The reasonably probable use means that there has to be a
- (11) reasonable likelihood that the property can be used for that
- (12) particular type of use For example some of the land in the
- (13) subject area is land that we've classified as forest land and
- (14) so the question is Is there an adequate market to support a
- (15) value for forestland? So there has to be a reasonably probable
- (16) use It can't be something like valuing the property in Prince
- (17) William Sound on a particular island for a McDonald's
- (18) The use has to be legal so it has to – if there is
- (19) zoning it has to fit within the zoning constraints and other
- (20) legal parameters We can deal with vacant land or we can deal
- (21) with improved property either one
- (22) Physically possible that means that for a particular use
- (23) you have to be able to physically use it I don't think that
- (24) there's any doubt in Prince William Sound that some of the uses
- (25) that we've classified them are physically possible

Vol 17 2696

- (1) An example of land use that would not be physically
- (2) possible would be if we classified a property as recreational
- (3) use and had it either on a steep cliff or on a mountaintop
- (4) That wouldn't physically be very possible to do
- (5) Appropriately supported again that means that there has to
- (6) be adequate demand to support that particular land use
- (7) Financially feasible there are a lot of land uses and a
- (8) lot of things that people can do with property and it never
- (9) ceases to amaze me what you see being done homes built on
- (10) cliffs One good example here in Anchorage is the Resolution
- (11) Tower Building or Resolution Building I believe it is – it is
- (12) right at 4th and M where the building was built on the slide
- (13) area that goes down the embankment right above the Alaska
- (14) Railroad It was not physically possible to build on that site,
- (15) until the engineers were able to figure out a special type of
- (16) support system so that if there is an earthquake that building
- (17) will stay put and not go sliding down into the Inlet So it
- (18) was at one time not financially feasible to build there It
- (19) eventually did become financially feasible and the last thing
- (20) is it has to result in the highest value There are a lot of
- (21) alternative uses to which you can put land What you want to
- (22) do is you want to find the one that supports the highest
- (23) value
- (24) Q So that means that for purposes of the highest value if
- (25) there is a piece of property that would be a great intersection

Vol 17 2697

- (1) for having a McDonald's you don't want to use it for some
- (2) other use like a hotel or something like that?
- (3) A Or a residence that would be a good contrast
- (4) Q Now what role does finding the highest and best use play
- (5) in determining how much property is worth? Why do you have
- (6) to
- (7) do that to find out how much it's worth?
- (8) A The reason that you need to determine the highest and best
- (9) use is that that – those are going to represent the most
- (10) valuable uses to which you're going to be able to put the
- (11) property and consequently you go out and find the data that
- (12) can be used to support that value
- (13) So what we do is we go through sort of an evolutionary
- (14) process Mr Bush was talking about it this morning in this
- (15) SWAG thing Appraisers do the same thing We – we postulate
- (16) various theories hypothesize as to what might be the best use
- (17) for property highest and best use but then we go out and
- (18) generate the data We go out and find the information and we
- (19) compare different types of uses In Prince William Sound as
- (20) you'll hear we have two uses One is high amenity for
- (21) recreation to the properties for example one is natural land
- (22) land to be preserved The question is which of those two uses
- (23) is the proper use to put the land so we had to do the research
- (24) so we understood the value of those two uses
- (25) Q So what you did is you went around all of the properties
- (26) that were to be studied in connection with the Exxon Valdez oil

Vol 17 2698

- (1) spill and tried to find out what the highest and best use was  
 (2) for each of the properties is that what you did?  
 (3) A That s correct  
 (4) MR PETUMENOS Judge I d like to go through the  
 (5) properties the property high and best uses one by one but  
 (6) first I d like to take a break if we could  
 (7) THE COURT Sure  
 (8) THE CLERK Please rise This court stands in  
 (9) recess  
 (10) (Jury out at 11 25 a m )  
 (11) (Recess from 11 25 a m to 11 47 a m )  
 (12) (Jury in at 11 47 a m )  
 (13) THE CLERK This court now resumes its session  
 (14) Please be seated  
 (15) MR PETUMENOS Your Honor Mr Diamond apparently  
 (16) wishes to approach the bench  
 (17) THE COURT Sure  
 (18) (Sidebar out of the hearing of the jury )  
 (19) MR DIAMOND This concerns the jury instruction  
 (20) THE COURT Do you want me to read it?  
 (21) MR PETUMENOS I understand the order is that we  
 (22) already litigated this and finished it and you told us to let  
 (23) you know whether you wanted to read  
 (24) THE COURT Yeah that s -  
 (25) MR PETUMENOS I was just making the request

Vol 17 2699

- (1) MR DIAMOND There are two things I wanted to say  
 (2) about this  
 (3) It was represented to us that this was a defendant s  
 (4) proposed jury instruction and I ve talked to the people who  
 (5) negotiated with Mr Fortler about the jury instructions and the  
 (6) fact this was his jury instruction And got put on about our  
 (7) captions because all the instructions that we exchanged back  
 (8) and forth had his -  
 (9) THE COURT I see but it s your instruction in the  
 (10) sense you adopted it  
 (11) MR DIAMOND We never submitted it to you  
 (12) THE COURT Okay  
 (13) MR DIAMOND The problem I have is one of substance  
 (14) This instruction says that site location information is  
 (15) confidential Highly classified information should be held in  
 (16) the strictest confidence Part of my cross examination of the  
 (17) plaintiffs witnesses will be to bring out the fact that the  
 (18) site information is not a matter of secrecy It s the  
 (19) locations of many of these places is generally well known is  
 (20) public If you give this instruction you re basically  
 (21) directing a verdict on that aspect of my cross examination and  
 (22) the Alaska aspects of my case  
 (23) THE COURT So what I thought was going the happen  
 (24) when it came to the bench is not going the happen because the  
 (25) positions of the parties are different than what they were when

Vol 17 2700

- (1) this was argued the last time is that correct?  
 (2) MR DIAMOND Correct  
 (3) THE COURT I m not going the give it That s it  
 (4) (Sidebar concluded )  
 (5) BY MR PETUMENOS  
 (6) Q Dr Mundy what is the first highest and best use that you  
 (7) determined existed on the lands that we are talking about?  
 (8) A Archaeology  
 (9) Q All right And does archaeology include within it  
 (10) historical sites sacred sites things of that nature?  
 (11) A Yes  
 (12) Q Let s show you here from - what has been admitted as  
 (13) Exhibit 1370 an example This - you recognize this  
 (14) photograph?  
 (15) A Yes I do  
 (16) Q What is it?  
 (17) A This is a photograph that I took of a memorial grave marker  
 (18) at the old Chenega Village site  
 (19) Q Could you explain to the jury what the makeup of the  
 (20) highest and best use of archaeology is for purposes of  
 (21) understanding land values? Describe for the jury what you  
 (22) mean  
 (23) by it when you ascribe that highest and best use to a land  
 (24) A The archaeological category is one where there are  
 (25) artifacts that are recognized by archaeologists as being  
 significant in the area There is a size dimension to these

Vol 17 2701

- (1) tracts Some tracts are relatively small for example areas  
 (2) where there were culturally modified trees Others are much  
 (3) larger where there were old village sites  
 (4) We have used a system developed by the Bureau of Land  
 (5) Management that assigns areas to various sites So you may  
 (6) have a burial site that is relatively small in terms of the  
 (7) area that it encompasses itself but the Bureau of Land  
 (8) Management recommends that a buffer area be kept around  
 (9) these  
 (10) sites And so while the burial area may be 100 square feet  
 (11) the site is designated for example one acre to allow for a  
 (12) buffer  
 (13) The other thing I think that s real significant is that  
 (14) where we have classified a site as archaeology and valued it as  
 (15) such we have not valued the artifacts So anything that  
 (16) could - might be exhumed from the site has not been included  
 (17) as a part of our valuation analysis  
 (18) Q Okay Now are there often legal constraints or things  
 (19) that aren t possible to do on land that is archaeological or  
 (20) has some historical value?  
 (21) A Yes that s correct  
 (22) Q And so that there may be certain things you can t do with  
 (23) the land but does land that has this historical function to it  
 (24) also have independent value because of that?  
 (25) A Yes it does Just because you can t for example develop  
 a recreational subdivision in an area where there is a large

Vol 17 2702

- (1) archaeology site does not necessarily mean that the land is  
 (2) worthless There again you have to think about who are the  
 (3) logical users for the property And when you ve got a area  
 (4) that has archaeological significance the valuer has to think  
 (5) who is the logical user for this property And it might not -  
 (6) maybe a potential would be a developer for a recreational  
 (7) subdivision but another one would be for example the Native  
 (8) corporation that wants to see that site preserved or a  
 (9) conservancy organization that wants to see it preserved  
 (10) Q So then you would go about the same process of looking for  
 (11) comparables and so forth in the archaeological area to  
 (12) determine what the value of archaeological land might be?  
 (13) A That s right You would look for similar types of  
 (14) archaeological areas that have sold  
 (15) Q What is the next highest and best use category that you -  
 (16) let me ask you this Approximately what amount of the total  
 (17) land that you looked at for purposes of your analysis was  
 (18) archaeological?  
 (19) A It was less than one half of one percent very small  
 (20) amount  
 (21) Q All right What is the next highest and best use category  
 (22) that you determined existed in the Native corporation land?  
 (23) A That is a category that we termed high amenity  
 (24) Q Okay Could I see Exhibit 1174 please? What is high  
 (25) amenity? What s the definition of that?

Vol 17 2703

- (1) A High amenity land would be land that would be suitable for  
 (2) a recreation subdivision maybe a fishing lodge It s an area  
 (3) where there are good anchorages where you can moor a boat  
 (4) out  
 (5) of a storm where you can fly in a float plane and land in  
 (6) reasonably decent type of weather  
 (7) Q All right What is low amenity land?  
 (8) A Low amenity land is just about the opposite and it s land  
 (9) that is really difficult to figure out what the heck to do  
 (10) with In this particular exhibit we have land that I think  
 (11) does a good - or there s a good instance where you have both  
 (12) types of land  
 (13) And what I ll do is write on the photograph here where you  
 (14) might have the high amenity land which would be in that area  
 (15) The area where there s a good anchorage right in here good  
 (16) mooring area nice beach areas where you can go down and clam  
 (17) and get mussels and things like this but then you ve got land  
 (18) that is behind this That is land that is really quite  
 (19) difficult to do anything with from a development standpoint and  
 (20) that would be the area that - seems that my pen - there we  
 (21) go would be for example this area here where you ve got  
 (22) very steep high mountains It certainly is a value giving  
 (23) attribute to the high amenity land you have beautiful views of  
 (24) the mountain but it s areas where it s virtually difficult or  
 (25) virtually impossible to do anything with  
 (26) Another area would be this area that is timber which I ve

Vol 17 2704

- (1) shown in here and this area a developer would have to  
 ponder  
 (2) do I go in and cut the timber off of this area or do I leave  
 (3) it as it is?  
 (4) Well if you went in and harvested the timber you probably  
 (5) would lose the high amenity nature of this land in here So  
 (6) what you would want to do is preserve this back land area and  
 (7) consequently we have assigned a lower value to these back  
 land  
 (8) areas than to the front areas The area the back land area  
 (9) would be an area that you d want to preserve  
 (10) MR OPPENHEIMER Your Honor procedurally we d like  
 (11) to have a print made of this I believe that requires us to  
 (12) request the operator to do that  
 (13) THE COURT Please go ahead  
 (14) MR OPPENHEIMER Thank you Could you make us a  
 (15) print of that?  
 (16) B : MR PETUMENOS  
 (17) Q What amount of the total land that you ascribed highest and  
 (18) best use to was high amenity versus low amenity?  
 (19) MR PETUMENOS Just for the record I don t know if  
 (20) the jury can see it This caption says Boulder Bay mouth at  
 (21) Bells Butte?  
 (22) A Yes  
 (23) Q Do you know where that is?  
 (24) A That s at Tatitlek s ownership over on the east side of  
 (25) Prince William Sound

Vol 17 2705

- (1) Q What amount of the total land for highest and best use  
 (2) purposes was high amenity and low amenity?  
 (3) A High amenity was 1 4 percent and low amenity 34 2  
 (4) percent  
 (5) Q Are you familiar with the highest and best use category  
 (6) natural lands?  
 (7) A Yes  
 (8) Q Could I see Exhibit 1176 please  
 (9) Could you define for the jury what you mean by natural land  
 (10) as a highest and best use land category?  
 (11) A Natural land is a - again a land use category and it s a  
 (12) type of land that has intact ecological systems For example  
 (13) it s an area that hasn t been logged It has good biological  
 (14) diversity to it that is it s a large intact system that is  
 (15) interactive and pretty much independent in and of itself  
 (16) Q Okay Could I see exhibit - Exhibit 1177 please?  
 (17) And have you written on the issue of natural land as a  
 (18) highest and best use  
 (19) MR OPPENHEIMER I m sorry counsel?  
 (20) A Yes I have  
 (21) MR OPPENHEIMER Oh you have another exhibit coming  
 (22) up?  
 (23) MR PETUMENOS Pardon?  
 (24) A Yes I have  
 (25) BY MR PETUMENOS

Vol 17 2706

- (1) Q Is there a market for natural lands?  
 (2) A Yes there is  
 (3) Q And what is the nature of that market?  
 (4) A The nature of the market is specialized It s relatively  
 (5) limited There are a number of actors that are in the market  
 (6) The federal government for example they acquired a large  
 (7) tract of land in Alaska Gates of the Arctic National Park  
 (8) The State is involved in the natural land market They  
 (9) just - State of Alaska just consummated an acquisition that  
 (10) you may have read about the Kachemak Bay State Park  
 (11) acquisition where they purchased some 23 000 acres from the  
 (12) Seldovia Native Association as an addition to the park The  
 (13) local government the municipality is involved in the  
 (14) marketing  
 (15) There is a park Baxter Park where there is - a large  
 (16) part of that park was acquired to retain in its natural state  
 (17) Several years ago there was quite a controversy here about  
 (18) another area it s a wetland south of the Anchorage Business  
 (19) Park at Cedar and two street - Tudor and C That was  
 (20) acquired The municipality paid business park land prices and  
 (21) just about a dollar a square foot for that land to preserve it  
 (22) as a natural preserve  
 (23) I guess one other real good example was one that recently  
 (24) happened in the Seattle area involved one of the Microsoft  
 (25) employees who is now a multi millionaire and can afford to buy

Vol 17 2707

- (1) his own preserve and he purchased a 640 acre acre tract of  
 (2) state land that s located just a very short distance east of  
 (3) Seattle that was going to be developed into a subdivision It  
 (4) was a forest It was owned by the State And that s his own  
 (5) preserve and he s taken a little corner of it and is building a  
 (6) house there and the rest of it is going to be preserve  
 (7) Q So natural land is something where the highest and best use  
 (8) of the land is to leave it alone?  
 (9) A That s right to leave it in its natural state That s the  
 (10) reason we use the category or the term natural  
 (11) Q Now I notice that when you were describing the market for  
 (12) natural land that a number of the purchasers of natural land  
 (13) were governments states municipalities United States  
 (14) government Is the fact that the government is one of the  
 (15) purchasers does that make any difference in the terms of  
 (16) whether there is a market for this kind of land?  
 (17) A No it does not There s all kinds of different entities  
 (18) that buy real estate The government buys real estate  
 (19) Corporations buy real estate Individuals buy real estate  
 (20) You apply the market as they re reacting to its  
 (21) If they re knowledgeable there s no duress For example  
 (22) you would probably not want to use a transaction involving a  
 (23) government entity if they acquired land under the threat of  
 (24) condemnation if they were taking it But the transaction is  
 (25) negotiated where there s no threat of condemnation The

Vol 17 2708

- (1) federal government is no different than state government local  
 (2) government or corporations or individuals  
 (3) Q What about the allegation that such transactions are -  
 (4) involve politics or are politically motivated? How does the  
 (5) government make its decisions in the marketplace?  
 (6) A Government makes decisions based on what individuals  
 think  
 (7) should happen There is a decision making process that  
 (8) politicians go through There s a decision making process that  
 (9) people go through in working for a company When I was the  
 (10) land economist at Weyerhaeuser Company there were all kinds  
 of  
 (11) politics in the acquisition or disposition of real estate  
 (12) There s politics that go on with a private corporation just  
 (13) like there s politics that go on in a state agency or a federal  
 (14) agency  
 (15) Q And that doesn t take it out of the realm of the market  
 (16) does it?  
 (17) A No  
 (18) Q What amount of the land that you appraised and determined  
 (19) value for of the Native corporations was natural land as a  
 (20) highest and best use?  
 (21) A It was 35 6 percent  
 (22) Q What about a land classification called timber without  
 (23) rights?  
 (24) Could I see Exhibit 1178 please?  
 (25) What is timber without rights?

Vol 17 2709

- (1) A Timberland without rights is timberland where the timber  
 (2) has been sold and there are two categories that we have in the  
 (3) area expanding from Prince William Sound through the Kenai  
 (4) Peninsula where we have timberland without rights  
 (5) One of those is where the rights to the timber have been  
 (6) sold but the timber hasn t been harvested And the second is  
 (7) where the timber rights have been sold and the timber has been  
 (8) harvested And the exhibit that you have before you shows a  
 (9) property where the timber has been harvested  
 (10) So this property in the background you see along the -  
 (11) the beach has some large trees with - well here s an outline  
 (12) of the area that has been - you would think that this pen has  
 (13) cognitive dissidence it s kind of in and out It works times  
 (14) and sometimes it doesn t I don t know if it s doing the same  
 (15) thing on your screen  
 (16) Q Looks pretty good Bill  
 (17) A This area I ve outlined shows where the timber has been  
 (18) harvested and you can see where there are some others where  
 (19) there are trees - I m trying to draw The high tech has got  
 (20) the best of me  
 (21) Q The point we re getting at is the land was used for timber  
 (22) but the rights to it have been given up and the place has been  
 (23) logged over  
 (24) A Yes  
 (25) Q What amount of property is in that highest and best use

Vol 17 2710

- (1) category?  
 (2) A 27 8 percent  
 (3) Q Have we now covered the highest and best use categories  
 (4) that you determined existed for the Native corporations?  
 (5) A No  
 (6) Q Which one am I missing?  
 (7) A Timber with rights Timber with rights is a timberland  
 (8) where the Native corporation still retains all of the rights to  
 (9) the timber  
 (10) Q And those would be areas that you would have determined  
 (11) that they had commercially harvestable potential?  
 (12) A That s correct That was about one percent of the total  
 (13) Q Did you then conduct an appraisal to determine the value by  
 (14) highest and best use of the lands of the Native corporations in  
 (15) Prince William Sound Eyak Tatitlek Chenega Port Graham  
 (16) English Bay and Chugach?  
 (17) A Yes  
 (18) Q And did you form an opinion as to what that value was?  
 (19) A Yes  
 (20) Q As of what date?  
 (21) A As of March 23rd 1989  
 (22) Q Could we see Exhibit 1179 please Exhibit 1179 will  
 (23) assist the jury in understanding what your opinion was as to  
 (24) the value of this land  
 (25) A Yes This exhibit shows the various land use categories

Vol 17 2711

- (1) provides an example of the type of land use that we re talking  
 (2) about for each category And it also shows the value per acre  
 (3) for each one of those categories  
 (4) Q Archaeology?  
 (5) A \$3 500 per acre  
 (6) Q And the kind of things we re talking about are village  
 (7) burial sites archaeological sites as you described it right?  
 (8) A That s right  
 (9) Q And high amenity land?  
 (10) A That would be recreation property fishing lodges \$1 275  
 (11) per acre  
 (12) Q Natural land? Oops let me get it all  
 (13) A \$950 per acre  
 (14) Q Now you talked about intact ecosystem park or wilderness  
 (15) preserve park or wildlife refuge What do you mean by intact  
 (16) ecosystem ?  
 (17) A Well intact ecosystem is where all of the biological  
 (18) pieces are working together where the animals and the plant  
 (19) life are still intact viable and supporting the - the various  
 (20) systems that are all interrelated together If a part of that  
 (21) system fails then the ecosystem is negatively affected and  
 (22) you could have a compounding effect and it can completely  
 (23) alter  
 (24) the ecological system  
 (25) Q Is one of the features of natural land the fact that when  
 people want to keep it in its preserved state that it stay

Vol 17 2712

- (1) preserved and that it stay as part of an overall ecosystem?  
 (2) A That s right I mean if it was not - if the integrity  
 (3) was altered then we would say it s no longer natural land and  
 (4) we would classify it into another category like low amenity  
 (5) land  
 (6) Q Speaking of which low amenity land you arrived at an  
 (7) opinion per acre bases for low amenity land?  
 (8) A \$500 per acre  
 (9) Q And that s described on the exhibits that we just had  
 (10) printed here a moment ago?  
 (11) A Yes  
 (12) Q Forest without rights?  
 (13) A Now this is where the timber has been sold and what you  
 (14) have is just the bare land and that would be \$280 per acre #  
 (15) Q And finally if you haven t sold the timber?  
 (16) A In those cases we took the \$280 per acre times the number  
 (17) of acres and then we added that to the stumpage value that is  
 (18) to the value of the timber itself  
 (19) Q So that will vary depending upon how prolific the forest  
 (20) is how easy it is to extract the timber things like that?  
 (21) A That s correct  
 (22) Q Now we need to explain to the jury how you get these  
 (23) numbers When you did the archaeological analysis and came  
 up  
 (24) with a per acre price or value for archaeological land how did  
 (25) you do that?

Vol 17 2713

- (1) Could we see Exhibit 1180 please?  
 (2) A As I mentioned earlier we as a part of our research  
 (3) process assembled very significant data base on what property  
 (4) is selling for And one part of that data base dealt with  
 (5) archaeological land  
 (6) Q I don t need the screen split I just want the whole  
 (7) screen Okay and what does Exhibit 1180 tell us?  
 (8) A Exhibit 1180 shows a number of bars The - these  
 (9) represent a number of parts of our data base The vast  
 (10) majority of the information that we used to determine the value  
 (11) of archaeological lands was obtained from the archaeological  
 (12) conservancy It s a conservancy organization located in  
 (13) Albuquerque New Mexico and they provided us with their data  
 (14) base which included around 50 acquisition of archaeological  
 (15) property in the United States principally in the southwestern  
 (16) United States And we analyzed that property in a number of  
 (17) different manners The average selling price for the property  
 (18) as a whole was around \$3 000 an acre and that s shown by the  
 (19) first bar  
 (20) The small sites which are shown by the second bar for  
 (21) example around one acre in size and - actually they range to  
 (22) around ten acres - sold for approximately \$4 500 an acre  
 (23) Larger sites that were around 60 acres in size sold for about  
 (24) \$2 000 an acre  
 (25) There s one comparable that we have that s not a

Vol 17 2714

- (1) archaeological conservancy comparable It's a property that  
 (2) was purchased in Utah It was purchased by a person to extract  
 (3) the artifacts from and that property sold for a little bit  
 (4) more than \$3 500 an acre It's represented by the last bar  
 (5) The property that we were valuing is generally smaller  
 (6) sites smaller than 60 acres but most of them are larger than  
 (7) one acre Many of them are larger than ten acres and so we  
 (8) felt that the - one of the best indicators of value was the  
 (9) Utah property quite similar to the subject and then also the  
 (10) average for the properties and we concluded that the value per  
 (11) acre for archaeology was \$3 500 per acre  
 (12) Q For the land in Prince William Sound and lower Kenai and  
 (13) Kenai Fjords?  
 (14) A That's right and the Kenai Peninsula  
 (15) Q Let's turn to the natural lands analysis that you did How  
 (16) did you go about determining the value for natural land as to  
 (17) what it was?  
 (18) A Well for natural land we selected nine properties -  
 (19) actually there's two different methods that we use in  
 (20) analyzing natural land We did what we call an aggregate  
 (21) analysis and the aggregate analysis involved the average  
 (22) selling price or acquisition price of lands by the Fish &  
 (23) Wildlife Service the National Park Service various other  
 (24) organizations involved in preserving lands That data we  
 (25) broke it down into a number of different categories but

Vol 17 2715

- (1) generally it came out to about \$1 000 an acre The vast  
 (2) majority of that land was located down in the Lower 48 so that  
 (3) was the aggregate analysis  
 (4) The second type of analysis involved transactions of land  
 (5) that we would classify as natural land properties similar to  
 (6) what we have in the Prince William Sound Kenai Fjords Kenai  
 (7) Peninsula area and five of those transactions are shown in the  
 (8) exhibit before you  
 (9) Q Okay before we get into this exhibit though I'd like to  
 (10) ask you as between the aggregate study that you did to look at  
 (11) the large number of transactions and the individual analysis  
 (12) how did those two influence your - your conclusion as to how  
 (13) much natural land was worth?  
 (14) A The aggregate analysis tended to set a framework within  
 (15) which we did a more concentrated analysis on individual  
 (16) properties and so the aggregate analysis simply told us that  
 (17) hey land that is natural land is selling for about \$850 an  
 (18) acre to around \$1300 an acre So it gave us a broad range  
 (19) within which this land was selling And then we concentrated  
 (20) our effort on the individual properties and these are what we  
 (21) really based our value conclusion on  
 (22) Q All right And so we have five of them up here and I just  
 (23) wanted you to go through - describe them on the top and then  
 (24) we'll take one of them and go through it so the jury can  
 (25) understand how you arrived at your conclusions

Vol 17 2716

- (1) A Yes The first property is a 4 750-acre property in  
 (2) Southeast Alaska called Goat Pass I'm sorry Goat and South  
 (3) Pass Island  
 (4) Q And the second?  
 (5) A The second is an 8 000 acre tract of land that was acquired  
 (6) by the Fish & Wildlife Service in the Pribilof Islands  
 (7) Q Next two - next three say Kachemak Bay?  
 (8) A These are all acquisition One is a cash acquisition and  
 (9) three and four are exchanges but there were value components  
 (10) attached to them All three of them are acquisitions for the  
 (11) Kachemak Bay State Park  
 (12) Q Showing you 1182 which I think continues on with the  
 (13) others that you've described?  
 (14) A The sixth one is a 9 200 acre acquisition Tazimina Lake  
 (15) Lake Clark National Park The seventh is a transaction that  
 (16) was just consummated on Afognak Island Seal Bay  
 (17) Q Is that just north of Kodiak?  
 (18) A Just to the northwest of Kodiak Island - northeast  
 (19) Q Okay  
 (20) A The eighth one Uganik Passage on Kodiak Island Fish &  
 (21) Wildlife Service acquisition fairly small property 151  
 (22) acres And the last one is the Chilkat Eagle Preserve 320  
 (23) acre parcel another fairly small one acquired by the State of  
 (24) Alaska  
 (25) Q Okay which one would you like to look at to show the

Vol 17 2717

- (1) jury how you went about your work?  
 (2) A Well let's take a recent one and that's transaction  
 (3) number 5 the Kachemak Bay State Park the one that was just  
 (4) acquired  
 (5) Q Let's have 1181 then please Actually I'm a little  
 (6) confused myself here let's take a look at 1183 There we go  
 (7) Kachemak Bay State Park All right tell us about Kachemak  
 (8) Bay State Park What you're doing now for the jury is you're  
 (9) going through the process of what you went through with all of  
 (10) these transactions to describe one to them so they understand?  
 (11) A That's right We'll take one so that you know the process  
 (12) that an appraiser goes through in working from the sale  
 (13) property the property that sold to the subject property the  
 (14) property that's being acquired  
 (15) So in Kachemak Bay State Park which is just on the other  
 (16) side of Homer that property was purchased in September 1993  
 (17) That's a recent acquisition It was 23 802 acres involved  
 (18) with the purchase so that comes to some \$924 per acre Cash  
 (19) was paid for the property If alternatively somebody would  
 (20) take a real estate contract or something like that and  
 (21) sometimes if - depending on the terms you have to adjust the  
 (22) cash price because of terms on a contract so this is  
 (23) reasonable to say it was purchased for cash The seller was  
 (24) the Seldovia Native Association and the buyer was the State Oil  
 (25) Trustee Council so it was the State and the Oil Trustees both

Vol 17 2718

- (1) jointly purchased this property
- (2) The next is the type of access that the property has and
- (3) it's by float plane or boat That's the only way that you can
- (4) get to it so that's quite similar to the properties that we
- (5) were valuing in Prince William Sound in the Kenai Peninsula
- (6) Utilities there's no utilities There are no improvements on
- (7) the property The topography is mixed That is there's some
- (8) that is fairly level other parts of it are quite steep
- (9) The ground cover is also mixed Some areas are mountains
- (10) and mountaintops a lot - there are nearly glaciers and other
- (11) areas are timber some of the timber areas were relatively
- (12) steep some other areas are quite flat There are creeks that
- (13) meander through the property
- (14) The type of water frontage is mountain and water it says
- (15) here or marine That means it's on Kachemak Bay It's a
- (16) maritime property
- (17) The next attribute is view and the view would be of
- (18) mountains and the water from the property The intended use
- (19) that is for an addition to the state park we have that there
- (20) so we understand the motivations of the buyer Why was he
- (21) buying that property? That has a lot to do with how we would
- (22) classify it in terms of highest and best use You wouldn't
- (23) want to use a property that a person had bought for a
- (24) McDonald's or something like that as a part of a natural land
- (25) property So we have - we want to find out what the property

Vol 17 2719

- (1) was used for
- (2) The fee simple indication indicates the State that was
- (3) purchased and this deals with the bundle of rights and this is
- (4) important in our valuation analysis here because the Native
- (5) Village Corporations own the surface estate The regional
- (6) corporation owns the subsurface estate So you've got a split
- (7) estate and what we want to do is to - we want to make sure we
- (8) compare apples and apples So for every sale we want to find
- (9) out are they buying the full fee estate that is the surface
- (10) and subsurface which is called the fee estate or are they
- (11) buying just a part of the estate that is the subsurface or the
- (12) surface
- (13) Q Let me stop you there This particular transaction
- (14) involved a Native corporation right?
- (15) A That's correct
- (16) Q The Seldovia Native Association and that situation with
- (17) the split estate exists in Prince William Sound and lower
- (18) Kenai as well That is the Chugach Alaska Corporation owns
- (19) the subsurface of the State and say the Village of Tatitlek
- (20) owns the surface estate That is the situation in lands we're
- (21) talking about?
- (22) A That's correct
- (23) Q All right
- (24) A But to follow up on that what we have done in our
- (25) valuation analysis for the subject properties is we have valued

Vol 17 2720

- (1) the surface estate separate from the subsurface estate so
- (2) we've done two separate valuation analyses And what you see
- (3) in this particular graphic right here is that there is an
- (4) adjustment that is made in the fee simple area and it shows
- (5) minus 100 per acre And so for our natural land analysis we
- (6) are valuing only the surface estate The data that we're
- (7) talking about here is just for the surface estate and since
- (8) this sale involved the fee estate that is the surface and the
- (9) subsurface we have to separate out the value of the two
- (10) Q Another way of putting it is in this sale the Seldovia
- (11) Native Association got some of the money for the sale and the
- (12) subsurface owner got some as well?
- (13) A That's correct
- (14) Q So two different parties both the regional corporation and
- (15) the village corporation were paid?
- (16) A That's correct
- (17) Q Because they own different parts of the land?
- (18) A Right And as we'll talk about in a bit it's our opinion
- (19) that the value of the subsurface estate is \$100 an acre and so
- (20) we have - we make a \$100-per acre adjustment
- (21) Q And you ended up with in this comparable a value per acre
- (22) of \$840?
- (23) A Well there's - let me just tell you a little bit about
- (24) the material
- (25) Q Quickly

Vol 17 2721

- (1) A Before there - there's a number of different attributes
- (2) that we've compared these sale properties to the subject on
- (3) and the first one is location And we felt that the location
- (4) was superior to the subject so we've got a superior
- (5) identification there
- (6) The next one was access comparable waterfront is
- (7) comparable and size is comparable So the overall compare -
- (8) or the comparison between the sale and the subject we felt was
- (9) comparable It's a good comparable
- (10) Q That's what we talked about before when you look at two
- (11) houses and they're different and some may have a better roof or
- (12) more square footage you have to make adjustments between
- (13) your
- (14) comparables right?
- (15) A That's correct
- (16) Q That's what you're doing here with the superior comparable
- (17) designations?
- (18) A Yes
- (19) Q Now could I have Exhibit 1184 please?
- (20) What is Exhibit 1184?
- (21) A This is a chart that shows all of the nine comparables So
- (22) on the horizontal axis you'll see a one two three four up
- (23) through nine Those are each of the comparables that we just
- (24) talked about For example comparable five is the one that
- (25) we've just finished talking about and it sold for \$840 per

Vol 17 2722

- (1) comparables sold for more For example comparable one sold  
 (2) for right around \$2 000 an acre Some sold for less For  
 (3) example comparable six It s our opinion that this data  
 (4) indicates a value of \$950 an acre which is the amount that is  
 (5) represented by this line right here and this value right here  
 (6) Q All right For the jury s benefit we re not going to go  
 (7) through each one of those like this From now on we re going  
 (8) to go right to the graph for each one of the highest and best  
 (9) use categories so we won t put you through it each time  
 (10) Multi purpose amenity land Exhibit 11 - excuse me 1186  
 (11) please for multiple amenity land you did the same thing you  
 (12) went and found comparables?  
 (13) A That s correct  
 (14) Q You made a graph similar to the one we just saw and came  
 (15) up  
 (16) with a value?  
 (17) A That s right We have six comparables and as you saw  
 (18) earlier our value conclusion is \$500 an acre  
 (19) Q Let s go to forestland with and without rights exhibit -  
 (20) actually with respect to forestland with and without rights  
 (21) somewhat different methodology employed?  
 (22) A We used two different data bases here We used sales of  
 (23) property in Alaska and then sales of property in Washington  
 (24) and  
 (25) Oregon  
 (26) Q And tell the jury how this chart reflects that?  
 (27) A The properties that are designated by a square which are

Vol 17 2723

- (1) the ones that are above the average line this being the  
 (2) average line right here these for example up here are all  
 (3) stumpage properties that have sold within Alaska The amount  
 (4) that these properties sell for is actually quite high ranging  
 (5) from \$2 000 an acre down to a low of about \$500 an acre  
 (6) Based on my experience in dealing with forestland that  
 (7) seemed like an awful high selling price for stumpage land that  
 (8) had been harvested and so we went to the State of Washington  
 (9) and Oregon and brought together data on what stumpage land  
 (10) sells for where forest products companies are making the  
 (11) acquisition and those are shown by the diamonds and those are  
 (12) the amounts that generally run a bit below the average line  
 (13) There was a third thing that we did and that was we said  
 (14) hey in the state of Alaska what happens if a person buys a  
 (15) piece of land let s it heal and sells it 10 years from now  
 (16) what would it be worth today? That came out to \$280 an acre  
 (17) which is right where this line is So we concluded that the  
 (18) value is \$280 an acre somewhat less than what we see in  
 (19) Alaska somewhat more than Washington and Oregon  
 (20) Q All right Then I want to talk to you about one more this  
 (21) was forest without rights We had the forestland with rights  
 (22) is that related to this chart as well?  
 (23) A That s right We just - we used the \$280 an acre with  
 (24) rights and added the stumpage value to it  
 (25) Q All right I want to talk to you about subsurface rights

Vol 17 2724

- (1) You just talked about the Kachemak Bay transaction and how it  
 (2) was that the regional corporation got money when that land was  
 (3) purchased by the government for conservation land How does  
 (4) a  
 (5) subsurface right have value in addition to how it might be  
 (6) mined for gravel or coal or whatever?  
 (7) A Well the land that is owned by the Native corporations is  
 (8) different than what we re used to dealing with when we talk  
 (9) about mineral rights which is generally what you talk about on  
 (10) the subsurface What is the coal worth? What is the oil  
 (11) worth? What is the gravel worth?  
 (12) The Native corporations actually own the subsurface area  
 (13) and if somebody wanted to - if somebody bought the surface  
 (14) and  
 (15) wanted to go in and put a big deep foundation or something  
 (16) like that in the property they would have to go to the  
 (17) regional corporation to get permission to do it to dig down  
 (18) into the subsurface area So the subsurface is actually a type  
 (19) of ownership that is very similar to the surface and it  
 (20) includes much more than just the - the minerals It includes  
 (21) the actual physical area below the surface  
 (22) Q Is that one of the things that you - right in the  
 (23) beginning when you had ANCSA A N C S-A down in the  
 (24) corner of  
 (25) your chart for unique aspects Is that one of the things that  
 (26) some were above \$100 an acre some were a little bit below it  
 (27) you have taken into consideration with respect to valuing this  
 (28) land?  
 (29) A Yes it is

Vol 17 2725

- (1) Q And what methodology then did you use in valuing the  
 (2) subsurface estate which exists underneath all of the Village  
 (3) Corporation land and is owned by Chugach?  
 (4) A We used the same method as I ve just been discussing That  
 (5) is we found sales of properties where the subsurface had  
 (6) sold Where just the subsurface had sold and that came out -  
 (7) some were above \$100 an acre some were a little bit below it  
 (8) but generally they clustered right around the \$100 per acre  
 (9) level  
 (10) Q All right Then as a result of all of this work you did on  
 (11) a per acre basis to determine what the value of the property  
 (12) was before the spill did you then determine on a  
 (13) corporation by corporation basis in the spill affected area the  
 (14) land was worth?  
 (15) A Yes we did  
 (16) Q Can I see Exhibit 1189 the English Bay Corporation what  
 (17) does 1189 depict?  
 (18) A 1189 shows the various land use categories for English  
 (19) Bay The value per acre for each one of those categories the  
 (20) number of acres in each category and then the right hand  
 (21) column is the value so we take a value per acre times the  
 (22) number of acres to get the value And that is summed up to a  
 (23) final amount which is 43 4 million dollars  
 (24) Q 1190 please Oh the Elmo please I guess What is  
 (25) 1190?

Vol 17 2726

- (1) A This is the same thing except for the Port Graham Corporation The number of acres value per acre and my opinion that the value of their land is 68.9 million dollars
- (2) Q And this is the date that you gave us before for all of these just before the spill?
- (3) A March 23rd 1989
- (4) Q Could we have the next exhibit in order please And what is this exhibit?
- (5) A This is for the Chenega Corporation shows the same thing value of 68 million dollars
- (6) Q It's 1191 Is that correct?
- (7) 1192 Now this is the Chugach Alaska Corporation?
- (8) A Yes
- (9) Q And I see that there is a separate entry there for the subsurface estate?
- (10) A That's right The subsurface is 33.3 million dollars You'll notice that the value per acre is \$57 per acre I had indicated earlier it was \$100 an acre That's because on small ownerships small subsurface ownerships we used 8 percent of value rather than \$100 per acre which has brought that value down
- (11) Q All right Could I see the next in order please? 1194 I believe - 93 excuse me
- (12) This is the same thing for the Eyak Corporation?
- (13) A That's correct

Vol 17 2727

- (1) Q 1194?
- (2) A Same thing for Tatitlek 41.7 million dollars
- (3) Q 1195 1195 then for the jury's benefit later on if they want to see it Is your summary putting all those together of what the unimpaired - what you call the unimpaired value or the value before the spill was on these corporations lands?
- (4) A That's correct
- (5) MR PETUMENOS Your Honor next I would like to talk to Dr. Mundy of how contamination affects these values but first I'd like to take a break
- (6) THE COURT Sure
- (7) THE CLERK Please rise This court stands in recess
- (8) (Jury out at 12:37 p.m.)
- (9) (Recess from 12:37 p.m. to 12:55 p.m.)
- (10) (Jury in at 12:55 p.m.)
- (11) THE CLERK This court now resumes its session
- (12) Please be seated
- (13) BY MR PETUMENOS
- (14) Q Dr. Mundy we've now discussed how you came about arriving at a value for a vast amount of land before the oil spill Now I want to talk to you about how contamination a contaminating event affects the value of land what it does to the value of land And as I understand it you have made that a particular area of your study?

Vol 17 2728

- (1) A That's correct
- (2) Q Could we have Exhibit 1196 please?
- (3) And could you tell the jury what the two - or the three heavy bold categories are that we have here in answering how contamination affects value?
- (4) A There are three major things that are listed on this graphic physical oiling stigma and parcel unity And we can start with physical oiling and one is the severity of the oiling that is how bad is it And the severity is also related to persistence That is how long is it going to be around
- (5) Q Let's talk about severity first You had an opportunity to review lots of materials that have been - that are available on the severity of the impact in this particular instance
- (6) What is your opinion about how severe the initial impact was on these lands as it would affect the category of physical oiling?
- (7) THE COURT Don't answer
- (8) BY MR PETUMENOS
- (9) Q - and value?
- (10) MR OPPENHEIMER Foundation Your Honor hearsay
- (11) THE COURT Give it to me again
- (12) MR PETUMENOS I think I can shorten it don't you think?
- (13) THE COURT Yeah Do anything
- (14) BY MR PETUMENOS

Vol 17 2729

- (1) Q Have you had the opportunity to look at videotapes pictures things about the impact of the Exxon Valdez oil spill to draw an opinion on the issue of severity of the physical oiling as it would reflect on value?
- (2) MR OPPENHEIMER Same objections Your Honor
- (3) THE COURT The objection's overruled
- (4) A Yes I have
- (5) MR PETUMENOS All right And could I see the - the exhibit which has already been - a portion of an exhibit which has already been entered into evidence from the LaTouche Island
- (6) (Videotape Played)
- (7) BY MR PETUMENOS
- (8) Q This is a videotape by Mr. Sieber that was introduced into evidence earlier in our - in the case here and admitted
- (9) MR OPPENHEIMER What's the exhibit number?
- (10) MR PETUMENOS 1369 I believe
- (11) MR STOLL 1269
- (12) MR PETUMENOS Get that? 1269
- (13) BY MR PETUMENOS
- (14) Q And in your opinion is the kind of severity of the contaminating event that you see in this film and the other material that you have reviewed how does this compare on the scale? Is this a very severe impact to value or is it low on the scale?
- (15) A It would have to be right up toward the top Severe quite

Vol 17 2730

- (1) severe
- (2) (Videotape concluded)
- (3) Q Could we get Exhibit 1196 back?
- (4) So you look at not just the persistence factor by itself
- (5) but also how severe the impact was at the outset?
- (6) A That is correct
- (7) Q Now the persistence what did you do to determine
- (8) persistence as you would apply it to value in your analysis?
- (9) A The persistence that is the length of time that the oil
- (10) will likely remain be around and affect buyer behavior is
- (11) material that has been developed jointly by ourselves and ICF
- (12) The persistence estimate and the persistence curves were
- (13) developed by ICF but we interacted with them in terms of the
- (14) criteria with which the curves would be developed
- (15) Q And so you took those - used those curves then in
- (16) determining how long you expected the contaminant to exist on
- (17) the land for purposes of determining value?
- (18) A That s correct
- (19) Q Now did you also take a trip in 1994 and do you have some
- (20) slides here to show the jury with respect to how you perceive
- (21) the land not as a scientist but as a person looking at real
- (22) estate would look at it from your trip in 1994?
- (23) A Yes I do
- (24) Q Could we show - and this is I believe part of the photo
- (25) notebook that we marked Could we show those slides please?

Vol 17 2731

- (1) (Slides are shown)
- (2) Q Could you tell the jury what they re seeing here?
- (3) A We have just a few There are a lot of photographs in the
- (4) photo notebook but this is a photo of Chugach Bay It is in
- (5) the south Kenai Peninsula area and it s - in the upper
- (6) right hand corner you can see a boot and that is a person s
- (7) boot and there are two things that are just to the left of
- (8) that boot
- (9) One is a very obvious oil sheen And then from the toe of
- (10) the boot to the left is a rock and just beyond there is
- (11) another area which is part of the oil sheen but it s actually
- (12) brown It s brown oil and there are goblets of oil on top of
- (13) it This was observed just walking along the beach
- (14) Q That s one of the points I wanted to make This was not
- (15) the result of your disturbing anything or turning anything
- (16) over this was just something that you were able to see?
- (17) A That s right yeah
- (18) This is another picture This is in Windy Bay It s
- (19) another area that was completely undisturbed and it shows the
- (20) oil oozing out of the surface This is up toward the high tide
- (21) mark and there s a fair slope to the beach here and the oil
- (22) just oozes out of the rocks and the gravel cobble and runs
- (23) down along the beach Down being down toward the lower end
- (24) of
- (24) the slide
- (25) This is north LaTouche and there s a log in the bottom of

Vol 17 2732

- (1) the picture and then a stick against a log to the right And
- (2) if you look above the log and to the left of the stick there s
- (3) a large dark area there That dark area is oil and here s
- (4) what it looks like This is a closeup of it and it s oil on
- (5) rocks There are spruce needles that are attached to the - to
- (6) the rocks This is at the storm berm line which is above the
- (7) high tide mark
- (8) This is another photograph on north LaTouche It s a tar
- (9) mat that I observed between rocks Nothing is disturbed It s
- (10) very visible
- (11) I did turn over a rock in the upper portion of the slide
- (12) and you can see how the rock is oiled on the bottom of it It
- (13) is shiny and where the top parts of the rocks have been
- (14) somewhat cleaned There s still oil spatter on them from the
- (15) wave action
- (16) Q Now you determined that you wanted to turn over this rock
- (17) after you were able to observe the rest of that tar mat as it
- (18) appears there in the -
- (19) A That s - that s correct yeah
- (20) This slide is of old Chenega Village and this is a
- (21) memorial marker memorializing I believe there were 26 people
- (22) that lost their lives as a part of the 1964 earthquake Old
- (23) Chenega Village is an archaeological site and we have
- (24) classified this as archaeology
- (25) This is the old school building on the site It s on a

Vol 17 2733

- (1) promontory You can see it when you re in the bay
- (2) This is an old house that is on the property set back in
- (3) the woods
- (4) Here is an area where there are quite a number of - of
- (5) graves that also make up a part of the Chenega old Chenega
- (6) town site
- (7) This is an example of a rock area This is also on north
- (8) Chenega Island That shows needles spruce needles that are
- (9) affixed to the rock because of all of the oil that - oil tar
- (10) that still adheres to the rocks
- (11) This is a small little marsh area as I call it You know
- (12) I m not going to say it s a scientific definition but which I
- (13) will call a marsh area on north Chenega Island
- (14) And this is - well there s a - a photo that appears to
- (15) be missing here Maybe they re out of order
- (16) This is a rock at Point Helen on the south part of Knight
- (17) Island It s - you can see it s all black around the rock
- (18) that has the shiny surface to it and the shiny surface is
- (19) actually sort of like a rainbow You can see the different
- (20) colors there and that rock I just kicked that over with my
- (21) foot and took a picture of the - the bottom part of it
- (22) (Slides completed)
- (23) Q Okay Can we have the lights please?
- (24) Now the point that I wanted to make with these slides
- (25) with the exception of the one about old Chenega this is a trip

Vol 17 2734

- (1) you took in 1994 Does - in your opinion does a person who  
 (2) is evaluating real estate and sees the kinds of things that you  
 (3) were able to see as you walked along the property is that  
 (4) person - if he s knowledgeable in the business - going to  
 (5) make inquiries about what he sees?  
 (6) A Most definitely would  
 (7) Q And why is that?  
 (8) A Well it s because what you have here is property that  
 (9) obviously has an environmental impairment to it It s  
 (10) contaminated and when you have property like that there are  
 (11) all kinds of liability issues and value issues that a possible  
 (12) buyer can end up getting into which they don t want to For  
 (13) example if you wanted to build something on it you probably  
 (14) wouldn t be able to obtain a loan  
 (15) Q Now the next thing we see as a factor for purposes of how  
 (16) contamination affects value is stigma Could you tell us  
 (17) please what - what you mean by the term stigma ?  
 (18) A Stigma is a mark or a blemish and it connotes concern it  
 (19) connotes a doubt about something So that when something is  
 (20) stigmatized be it a person or the environment people who  
 (21) associate with that person or environment are uncertain about  
 (22) the nature of the - the object They re uncertain and  
 (23) doubtful about dealing with that particular object  
 (24) Consequently it raises a level of risk in a person s mind  
 (25) Q And do events that take place nearby the property or on the

Vol 17 2735

- (1) water in the case of a waterfront property also have  
 (2) implications on the value of the property with respect to  
 (3) risk?  
 (4) A Yes  
 (5) Q And this jury has heard testimony for example of the  
 (6) return of the herring and how they return and have heard  
 (7) descriptions of it what the fish look like and things like  
 (8) that What impact do things like that have on land values on  
 (9) nearby properties?  
 (10) A Well this is part of that stigmatic effect Stigma  
 (11) generally does not refer to the specific property itself It  
 (12) refers to property that is in close proximity to or adjacent to  
 (13) a property For a property that is contaminated there may be  
 (14) a stigma that is associated with that contaminated property  
 (15) after it is cleaned One is uncertain whether it s really  
 (16) clean or not so it may take a period of time before the market  
 (17) will come back to what one would normally expect  
 (18) The same is true with properties that are adjacent to a  
 (19) property as being that one that is contaminated an adjacent  
 (20) property can have an effect on a value of a property that is  
 (21) not contaminated at all but is just located in a close  
 (22) proximity  
 (23) Q Have there been examples of that phenomenon occurring  
 (24) across the United States?  
 (25) A Yes there are a lot of them

Vol 17 2736

- (1) Q Now does the issue of how - let s go through some of the  
 (2) factors that relate to how much stigma a property or an area  
 (3) surrounding a contaminating event how that might happen  
 You  
 (4) have here disruption What do you mean by disruption ?  
 (5) A This would be how an event would change the normal lives of  
 (6) a person For example the Natives in the Kenai Peninsula or  
 (7) Kenai Fjords and their subsistence activities being able to  
 (8) harvest mussels or clams as an example  
 (9) Q Concealability?  
 (10) A This is kind of an interesting one You are aware of the  
 (11) phrase out of sight out of mind Well years ago when we  
 (12) first got into this business of analyzing contaminated  
 (13) property generally that was a pretty good saying that if the  
 (14) contamination wasn t around you wouldn t have to worry about  
 (15) it Or if you couldn t see it if you couldn t smell it you  
 (16) couldn t hear it  
 (17) But today it s just about the reverse is the case and  
 (18) that is is if you can t see it you can t smell it and you  
 (19) can t hear it but there s a possibility that it s there The  
 (20) market is more reactive than if it is concealable If it s not  
 (21) concealable if it s on the surface so is the uncertainty the  
 (22) unknown with which one deals with  
 (23) Q And the aesthetic effect?  
 (24) A The aesthetic effect would be what we saw in some of the  
 (25) slides the sheen on the water the spruce needles affixed to

Vol 17 2737

- (1) the rock outcroppings marring the natural environment  
 (2) Q Responsibility?  
 (3) A This is also an interesting variable It deals with how  
 (4) the responsibility can be attached to a person or entity For  
 (5) example stigma is much less in a natural disaster where there  
 (6) has been all kinds of problems created than in a disaster  
 (7) where the problem was created by an individual  
 (8) So where you have - where the public can attach  
 (9) responsibility to an individual or a company or whatever you  
 (10) have this responsibility factor taking - or making a big  
 (11) effect  
 (12) Q Does it then result in more scrutiny more publicity more  
 (13) attention to the event?  
 (14) A That s correct  
 (15) Q Prognosis?  
 (16) A Prognosis is sort of like persistence How rapidly is this  
 (17) stigmatic effect going to go away? Is it something that is  
 (18) short lived or is it something that s going to be around for a  
 (19) long while The longer it s going to be around the worse the  
 (20) stigma  
 (21) Q Peril?  
 (22) A Peril deals with the effect that the event can have on  
 (23) persons health their livelihood the health or livelihood of  
 (24) the natural environment  
 (25) Q And fear?

Vol 17 2738

- (1) A Fear is the concern that one has about the event and  
 (2) especially as to how it can affect one's health. So it's  
 (3) related a lot to peril, but something distinctly different than  
 (4) a peril. The fear would involve concern with harvesting clams  
 (5) or mussels and consuming them, for example, for one's self, or  
 (6) fear for one's family, elders.  
 (7) Q In the definition that we saw about market value that we  
 (8) had at the beginning, sort of the touch tone of all this, we  
 (9) saw a phrase in it that talked about a buyer and a seller  
 (10) knowledgeable about the property, or words to that effect, do  
 (11) you remember that?  
 (12) A Yes.  
 (13) Q All right. How does -- how does uncertainty figure into  
 (14) how an event like this can stigmatize a property if you have  
 (15) people disagreeing about what the effects are?  
 (16) A Well, the uncertainty can actually cause the market to just  
 (17) stop. The market won't operate until this cloud or this  
 (18) uncertainty is resolved. People don't know what the  
 (19) implications of buying a property are and, consequently, they  
 (20) just don't buy. They just don't make that decision, and market  
 (21) value is based on the assumption of a transaction taking  
 (22) place.  
 (23) Q Risk?  
 (24) A Risk is the level of risk, the -- I can't think of a -- an  
 (25) analogy to use, but it's financial risk associated with owning

Vol 17 2739

- (1) something where there is uncertainty associated with the final  
 (2) outcome of it.  
 (3) Q Now, did you do -- another factor with respect to stigma  
 (4) you mentioned, is the amount of scrutiny that an event gets,  
 (5) the amount of scrutiny the land gets under these  
 (6) circumstances?  
 (7) A Well, it's -- this scrutiny or what we call risk  
 (8) amplification, and has as the amount of scrutiny increases, the  
 (9) level of stigma increases.  
 (10) Q Did you do a study of the kind of exposure that the Exxon  
 (11) Valdez oil spill created as a result of looking into the media  
 (12) and how much media there was and all that?  
 (13) A Yes. It was part of developing an understanding of what  
 (14) the level of stigma might be that would be associated with the  
 (15) Prince William Sound, Kenai Fjords and Kenai peninsular area.  
 (16) Q Showing you what's been marked as Exhibit 1202, what is  
 (17) Exhibit 1202?  
 (18) A This represents the number of articles by headline that  
 (19) were published from 1989 to 1992 in five major national  
 (20) publications. Those publications are the Wall Street Journal,  
 (21) New York Times, Christian Science Monitor, Washington Post, and  
 (22) the Los Angeles Times.  
 (23) Q So on the vertical axis, as I've blown it up, we have the  
 (24) number of articles nationally?  
 (25) A That's correct.

Vol 17 2740

- (1) Q And then on the horizontal axis, across the bottom, we've  
 (2) got what?  
 (3) A The various incident that took place that generated all the  
 (4) media attention.  
 (5) Q Let's go through them for the jury.  
 (6) A I beg your pardon?  
 (7) Q Let's go through them for the jury.  
 (8) A The first one is nuclear power plants for this three-year  
 (9) period of time, the number of major articles that appeared in  
 (10) these publications dealing with nuclear power plants. The  
 (11) second one is the Exxon Valdez oil spill. The next one is the  
 (12) presidential election that took place in 1992. The next one  
 (13) are articles dealing with Alaska in general, regardless of what  
 (14) the topic. The next one are articles dealing with  
 (15) earthquakes. Next to the last is Hurricane Hugo. And then the  
 (16) final ones are articles dealing with floods during that  
 (17) three-year period of time.  
 (18) Q And Hurricane Hugo was the hurricane in Florida that caused  
 (19) the damage there?  
 (20) A That's correct.  
 (21) Q And what did you find out?  
 (22) A That the amount of coverage for the Exxon Valdez ranked  
 (23) second, not too awfully far behind nuclear power plants and  
 (24) surprisingly, there was more coverage on the Exxon Valdez spill  
 (25) than the presidential election had received. So a lot of -- a

Vol 17 2741

- (1) lot of press coverage on a national basis, 750 articles in this  
 (2) search, something that would indicate to us that the market  
 (3) would certainly be aware of the problem in the area where we  
 (4) have the subject properties.  
 (5) Q Exhibit 1203, please. What is exhibit 1203?  
 (6) A This shows the 750 articles that dealt with the Exxon  
 (7) Valdez, which was on the prior exhibit, but breaks them down  
 (8) on  
 (9) a year-by-year basis so we can see how many articles appeared  
 (10) in 1989 through 1992.  
 (11) Q All right. In addition to looking at the amount of media  
 (12) the nature of -- you looked into the content as well. I assume  
 (13) to determine if it was having an impact or would have an impact  
 (14) on property values?  
 (15) A Yes, we did.  
 (16) Q And in addition to looking at the kind of information that  
 (17) was out there that a person walking along the beach would be  
 (18) constrained to go research, did you look in the market to see  
 (19) if there was actually some market effects like that, that sales  
 (20) were affected?  
 (21) A Yes, we actually went and studied the nature of the real  
 (22) estate market in Prince William Sound, Kenai Fjords, and the  
 (23) Kenai Peninsula area.  
 (24) Q Let me see exhibit 1204, please.  
 (25) What is exhibit 1204?  
 (26) A This exhibit shows the -- what we call absorption of lots

Vol 17 2742

- (1) at a subdivision in Prince William Sound It's Ella Mar  
 (2) subdivision located right close to Cordova It is a  
 (3) subdivision that was not oiled as a part of the Exxon Valdez  
 (4) spill It is located to the east of where the oil was and  
 (5) this shows the number of lots that were sold on a year by year  
 (6) basis at this particular subdivision  
 (7) The vertical line shows Exxon Valdez oil spill That  
 (8) represents March of 1989 when the spill took place You can  
 (9) see that in 1988 there were a fair number of lots about ten  
 (10) lots that were sold and in 1989 the sales dropped down to  
 (11) only one lot  
 (12) And then they picked up very gradually Two were sold - I  
 (13) believe three in 1980 - or 1990 and then around six in 1991  
 (14) Q Now this was again on property that did not receive oil  
 (15) on its shoreline at all?  
 (16) A There was no oil that hit this site  
 (17) Q Could I see Exhibit 1144 please as admitted?  
 (18) Now to put some perspective on where this property is  
 (19) located could you take your pen out and maybe draw an arrow  
 (20) where it would be with respect to the path of the spill?  
 (21) A The property would be located right about in this area  
 (22) right here  
 (23) Q Drawing an arrow so at the bottom of that arrow?  
 (24) A Right at the point of that arrow  
 (25) MR PETUMENOS Your Honor this would be an excellent

Vol 17 2743

- (1) time to break for the day  
 (2) THE COURT Okay  
 (3) MR PETUMENOS Could I have a print of that please?  
 (4) THE COURT I'll let you go and remind you not to talk  
 (5) to anybody about this case including your fellow jurors and  
 (6) not to form or express an opinion on it until it's submitted to  
 (7) you for your deliberation See you tomorrow  
 (8) (Jury out at 1 25 p m )  
 (9) THE COURT All right counsel The jury is not  
 (10) present Is there anything to take up?  
 (11) MR STOLL Your Honor we had the matter of the  
 (12) instructions  
 (13) THE COURT Yes do you want to argue that or do you  
 (14) want me to just draft my own?  
 (15) MR STOLL Well I'd like to discuss it with the  
 (16) Court  
 (17) THE COURT Okay good Go ahead  
 (18) MR STOLL Your Honor I'd also like to get a  
 (19) clarification  
 (20) You indicated last week and Mr Diamond and I talked about  
 (21) this this weekend we couldn't remember exactly what the  
 (22) resolution of it was On the August 16th that the juror you  
 (23) know whether that - there's not going to be any trial that  
 (24) week for sure? It appears apparent that according to what  
 (25) Mr Diamond's told me that they're still going to be putting

Vol 17 2744

- (1) on their case on August 16th  
 (2) THE COURT Yeah I think that's true There's two  
 (3) options on that one She's only going to be gone a week I  
 (4) could recess for a week and - if it's necessary and if I  
 (5) think that that - that we're in jeopardy of going below 12  
 (6) that's exactly what I'll do  
 (7) MR STOLL I see no decision has been made  
 (8) THE COURT No I haven't made a decision The  
 (9) decision I have made is that she's going to get to go to that  
 (10) reunion  
 (11) MR STOLL Now with respect to the other question I  
 (12) had is just I think it might be easier I know if - I don't  
 (13) know if she can see you know if we could move the jurors over  
 (14) a chair  
 (15) THE COURT I can - I can have them - why don't we  
 (16) just compress them tomorrow  
 (17) THE CLERK In the top row?  
 (18) THE COURT Yeah so there's not a blank seat there  
 (19) MR STOLL Now with respect to the instructions  
 (20) Your Honor -  
 (21) MR PETUMENOS I'm sorry can Dr Mundy stand down?  
 (22) THE COURT Absolutely sure  
 (23) MR STOLL I'd like to just explain what I've done  
 (24) and my problems with the proposing of the defendants  
 (25) The first paragraph of the plaintiffs proposed

Vol 17 2745

- (1) instructions the verbatim the one that was so called  
 (2) Exhibit C from our prior one and my concern - if you recall  
 (3) on Friday I said that there was something that I didn't agree  
 (4) with that and that was just the misreading of it when I was  
 (5) standing before the Court in Friday And I agree with that  
 (6) personally agree with that and I think the Court approved that  
 (7) instruction That's the so-called Exhibit C That's verbatim  
 (8) what is the first paragraph of our proposal today  
 (9) THE COURT Okay  
 (10) MR STOLL The second paragraph is pretty  
 (11) straightforward and it's just sort of an explanation as to why  
 (12) they should disregard anything they hear or read about in the  
 (13) federal case  
 (14) The third paragraph Your Honor it really relates to what  
 (15) I call the positive outlook of what is in this case I'm very  
 (16) concerned about getting into an instruction that defendants  
 (17) have proposed that talks about subsistence claims or fishermen  
 (18) claims in other - in other cases We have not put on any  
 (19) quantitative damages as to either subsistence or fishermen  
 (20) claims in this - in this case And I think that if we're  
 (21) going to get into all the explanation of what is in that case  
 (22) it's going to be a much longer instruction than what defendants  
 (23) have proposed So I think the important thing is to focus on  
 (24) what is in this case and that's what I've tried to do with  
 (25) this instruction

Vol 17 2762

- (1) think Exxon s right If it s more than a stipulation issue
- (2) but it reaches a broader issue which is privilege then I m
- (3) not going to decide it off the cuff
- (4) MR OPPENHEIMER I don t think it does Your Honor
- (5) MR McCALLION Your Honor I think there may be a
- (6) broader issue but my primary purpose in raising that is the
- (7) language of DM 171 in dealing with communications with counsel
- (8) it tends to implicate what attorneys generally understand the
- (9) law of attorney client privilege to be
- (10) THE COURT All right So I m going to set the
- (11) discussion for you so you understand what I m doing here I
- (12) think that Exxon is right regarding the stipulation I don t
- (13) think this comes within the terms of the stipulation There s
- (14) also material in here that seems to me to be appropriate for
- (15) cross examination quite a bit of material
- (16) But to the extent that the plaintiffs are making a broader
- (17) argument here I m not deciding that issue If you re going to
- (18) make a broader argument you have to do it explicitly so we can
- (19) all understand your record But on the issue of the
- (20) stipulation I m going to allow this document to be used
- (21) because I don t see that it s within the terms of the
- (22) stipulation Or if it is this is the kind - this is the
- (23) document that I would use as an exception So now you -
- (24) that - the record you ve made is - I m only dealing with the
- (25) stipulation issue - if you re - if you re going to make a

Vol 17 2763

- (1) larger argument you must make it or you waive it
- (2) Anything else?
- (3) MR PETUMENOS Housekeeping matter When I moved in
- (4) the exhibits previously on - in connection with Mr Bush s
- (5) examination I misspoke Everywhere where I said 1141 was
- (6) 1147
- (7) THE COURT Oh okay So all the 1147 documents are
- (8) really 1141 something?
- (9) MR PETUMENOS Other way around All the 1141 dash
- (10) something documents are really 1147
- (11) THE COURT Very good The clerk can straighten it
- (12) out and if they don t they can tell me
- (13) This document is the defendants Exhibit 15195 that
- (14) should be court s exhibit 18
- (15) Anything else?
- (16) MR OPPENHEIMER Tim are you prepared to have those
- (17) exhibits go in?
- (18) MR PETUMENOS I m sorry?
- (19) THE COURT Your exhibits?
- (20) MR OPPENHEIMER Our exhibits
- (21) MR PETUMENOS No I ve been examining the witness
- (22) I haven t had a chance to -
- (23) THE COURT That s fine You can do it over the
- (24) afternoon
- (25) Is there anything else?

Vol 17 2764

- (1) MR STOLL Thank you Your Honor
- (2) THE COURT Thank you
- (3) THE CLERK Please rise This court stands in

Vol 17 2758

- (1) THE COURT This is Court s next in order on that  
 (2) discussion all those documents What is the number?  
 (3) THE CLERK 17  
 (4) THE COURT The documents relating to that discussion  
 (5) we just had are Court s Exhibit 17 for the record I ve put  
 (6) them in the record so that it s clear to the reviewing court  
 (7) what -  
 (8) MR OPPENHEIMER That s Court s Exhibit 17 Your  
 (9) Honor?  
 (10) THE COURT 17 yeah So what is -  
 (11) MR McCALLION Your Honor within that packet was the  
 (12) one other document which was at issue which is DX15195  
 This  
 (13) is an ICF report in August of 1989 discussing the scope of  
 (14) report and relates in part to communications with counsel  
 (15) namely myself at the time relating to the scope of report and  
 (16) inquiry by ICF  
 (17) THE COURT Let me just read it  
 (18) MR OPPENHEIMER Yes Your Honor  
 (19) THE COURT Okay go ahead Tell me what you want  
 (20) MR OPPENHEIMER Your Honor this - first of all at  
 (21) the time Bill Mundy was not even employed by anyone in this  
 (22) case This is a classic document that goes to solicitation and  
 (23) the beginning of the assignment This is not copied to any  
 (24) lawyer It contemplates something in the future maybe but  
 (25) that has nothing to do with this document

Vol 17 2759

- (1) This is a document between two experts not even within the  
 (2) same house on the subject of a proposal to be made It is -  
 (3) it s no different than any other document going to a basis for  
 (4) employment standard asslgnment and in this case it precedes  
 (5) the - it even precedes the employment And I - let me just  
 (6) double check because I say it s not - that s correct It s not  
 (7) even copied to lawyers And in fact it - It is essentially  
 (8) limited to the proposal study of the relationship which is  
 (9) clearly something we intend to go into and clearly appropriate  
 (10) area of inquiry  
 (11) So I don t think this one - we did not volunteer to redact  
 (12) this as I look at this now and I see the address to  
 (13) Mr McCallion I have no objection to taking that out It s  
 (14) not at the core of anything I would ask about but we felt  
 (15) strongly enough about this document we weren t even willing -  
 (16) we didn t think it was an appropriate candidate for redaction  
 (17) and I think it s just outside the scope of the orders  
 (18) MR McCALLION Your Honor I m fairly familiar with  
 (19) this document because at the time in August of 1989 was really  
 (20) at the inception of the formation of the professional team  
 (21) And in fact I did receive - and can represent to the Court  
 (22) did receive a copy of this document because it involved  
 (23) discussions between counsel and ICF which is the scientific  
 (24) team along with Bill Mundy who of course was the  
 (25) appraiser This was very early on in the engagement and I m

Vol 17 2760

- (1) not -  
 (2) THE COURT Early on or before?  
 (3) MR McCALLION Your Honor it s my understanding that  
 (4) the clients had - and Mr Mundy had reached an agreement on  
 an  
 (5) engagement but I cannot definitively represent that I know  
 (6) that it was on or about this time whether it was - it was -  
 (7) it s my recollection that this was at or about the time of  
 (8) engagement of Mr Mundy I know that discussions with  
 (9) Mr Mundy long preceded at least by several months this  
 (10) particular date and I - I know that the clients and Mr Mundy  
 (11) I believe had reached an agreement Whether that had been  
 (12) literally memorialized  
 (13) THE COURT What about ICF? They hadn t reached an  
 (14) agreement with ICF had they?  
 (15) MR OPPENHEIMER Yeah They had Your Honor with  
 (16) ICF It s my understanding at that time ICF was retained  
 (17) MR FORTIER I m sorry Your Honor The clients had  
 (18) reached an agreement with ICF about April of 89  
 (19) THE COURT So they had - the clients had an  
 (20) agreement with ICF In April of 89 They had an agreement with  
 (21) Mundy when?  
 (22) MR FORTIER I believe that contacts were made with  
 (23) Mundy around the first part of June It was somewhere in the  
 (24) area of August that retention was actually formed and I  
 (25) believe it was around August 29

Vol 17 2761

- (1) THE COURT Just tell me if I m wrong about this  
 (2) counsel This letter is - is a refinement of a proposal that  
 (3) would be made to counsel for the plaintiffs regarding ICF s and  
 (4) Mundy s work in this case right?  
 (5) MR McCALLION Your Honor I think what it literally  
 (6) was was a discussion between - with counsel by retained  
 (7) expert as to the - as to the scope of report And if I may  
 (8) add Your Honor I think the case law is fairly clear that  
 (9) conversations with counsel certainly in classic  
 (10) attorney client privilege law that conversations with counsel  
 (11) and contemplation of retention certainly would be - would be  
 (12) privileged as well  
 (13) THE COURT You just expanded the scope of discussion  
 (14) haven t you counsel If we re talking about the stipulation  
 (15) you re probably not a winner from your standpoint If you re  
 (16) talking about law regarding privilege then I m not prepared to  
 (17) discuss it with you all I mean you have to give me the law  
 (18) in writing so that I can go back and check on you to make sure  
 (19) you re right  
 (20) MR OPPENHEIMER Your Honor I would point out  
 (21) there s no issue of attorney client privilege here This  
 (22) doesn t indicate any aspect of attorney-client privilege  
 (23) THE COURT It may not counsel Then again it may  
 (24) All I m saying is you set the discussion by saying it was the  
 (25) stipulation issue If it s a stipulation issue I think - I

Vol 17 2754

(1) communications with counsel from - from the defendants as I  
 (2) had indicated to the Court earlier their production of  
 (3) documents came somewhat later than the plaintiffs were  
 required  
 (4) to produce and I believe - I would certainly think that if  
 (5) the - that the defendants took a broad ruling or a broad  
 (6) interpretation of DM 171 and supplemental and that to the  
 (7) extent a document related to conversations with counsel and  
 (8) involved it or sprung from it such as this document clearly  
 (9) does that - that they did not go through documents and excise  
 (10) paragraph and paragraph to try and produce to us a paragraph  
 (11) which might be unrelated to conversations with counsel  
 (12) In short it's difficult we say impossible to parse the  
 (13) paragraphs or sentence of this document to excise any matters  
 (14) relating to or springing from conversations with counsel which  
 (15) should be excluded from the cross  
 (16) MR OPPENHEIMER Your Honor the -  
 (17) THE COURT Why is it that - I mean I think that  
 (18) they're taking a less radical position than I might take if I  
 (19) were counsel in the case All they're saying is get the  
 (20) references to counsel out of there  
 (21) MR OPPENHEIMER We've done that Your Honor That's  
 (22) why I was wondering whether you have the copy of - though we  
 (23) don't think it's necessary have prepared and submitted a  
 (24) redacted version which does exactly that because that seems  
 (25) like a compromise between computing principals

Vol 17 2755

(1) THE COURT The redacted version do I have that the  
 (2) one page document?  
 (3) MR OPPENHEIMER May I approach the -  
 (4) THE COURT Because I've seen that if that's -  
 (5) MR OPPENHEIMER The redacted version is this page  
 (6) THE COURT Oh okay  
 (7) MR OPPENHEIMER This page right followed by -  
 (8) THE COURT And this page?  
 (9) MR OPPENHEIMER Correct correct and all of these  
 (10) references  
 (11) THE COURT I misunderstood then counsel Why is  
 (12) that not acceptable?  
 (13) MR McCALLION Your Honor this is a document which  
 (14) memorializes a conversation and discussions with Mr  
 Petumenos  
 (15) counsel relating to the scope of inquiry and report of Mundy  
 (16) and Associates the entire caption of this and the reason for  
 (17) this entire document is - is the fact that Bill Mundy - who  
 (18) is the Bill in it - is after speaking with Mr Petumenos on a  
 (19) number of critical issues relating to the scope of the report  
 (20) and inquiry then writes a memo to Vicki Adams communicating to  
 (21) her who was not present during the conversations between Tim  
 (22) Petumenos and Bill Mundy regarding the nature and scope of  
 (23) their discussions with counsel  
 (24) We would think that this is really a classic example of a  
 (25) memorialization of confidential attorney client communications

Vol 17 2756

(1) which is within the scope of DM 171 It was the intent to  
 (2) exclude at least for purposes of cross-examination  
 (3) THE COURT Okay I'll just tell you the way I feel  
 (4) about this and tell you the way I'm going to deal with it  
 (5) The - it's certainly arguably comes within the stipulation  
 (6) Might be part of the - I mean it might even be argued this is  
 (7) a draft expert report because it certainly deals with the kind  
 (8) of refinement that's done in the drafting process And then it  
 (9) can also be argued that this is a communication between the  
 (10) experts and counsel or their agents concerning draft expert  
 (11) reports I mean it seems to me to come legitimately within  
 (12) the stipulation which as it relates to this document may be a  
 (13) little vague it's not as clear as the last example  
 (14) But it's - but it's one document and I know that I can  
 (15) handle it in the course of trial so that what I'm going to  
 (16) tell you counsel is you can't set the stage for your  
 (17) cross examination by referring to this particular piece of  
 (18) work you know by using its own language where it says  
 (19) anything about Mr Petumenos or anything like that  
 (20) I think that you can do - you can get your  
 (21) cross examination in by asking direct questions You may very  
 (22) well be able to get some part of this simply by not setting it  
 (23) in the context of an expert consultation report  
 (24) MR OPPENHEIMER I do not intend to use this or any  
 (25) other document to get into communications with counsel

Vol 17 2757

(1) THE COURT Right  
 (2) MR OPPENHEIMER What I wish to do is examine him on  
 (3) how they - and this has been going on all through the case  
 (4) and I'm sure our experts will be crossed on it too - how you  
 (5) kept some theories or rejected others but has nothing to do  
 (6) with developing a line of questions with respect to counsel  
 (7) THE COURT It seems to me you can probably ask the  
 (8) questions and get the information you want without using this  
 (9) document Now if you had to use it I'm not categorically  
 (10) precluding that I'm doing what I said I would do even with  
 (11) the clearer example don't use it until you tell me you've got  
 (12) to use it and then we'll have a hearing out of the presence of  
 (13) the jury and I'll tell you whether or not you can use it or in  
 (14) what way you can use it But that issue may go right out of  
 (15) the case because you may get the information without having  
 to  
 (16) refer to this document I'd prefer that you do that  
 (17) MR OPPENHEIMER So would I Your Honor If possible  
 (18) THE COURT And if you - if you do that it's to your  
 (19) benefit because I may not let you use it when you tell me it's  
 (20) a terrible emergency So get what you can on the  
 (21) cross examination because it may be all you're going to get  
 (22) MR OPPENHEIMER Understood Your Honor  
 (23) THE COURT What's the next issue?  
 (24) MR McCALLION There was one other document Your  
 (25) Honor which was 15195

Vol 17 2750

- (1) relevance of and try to put it in perspective in a way that I
- (2) thought was quite fair to both sides
- (3) THE COURT Thank you counsel
- (4) Anything else? Okay I'll - I'm going to - I have to
- (5) think about this and I may redraft one or both of your
- (6) instructions but actually you've given me good ground work for
- (7) that I appreciate both of your work These - I think both
- (8) these instructions might be acceptable to certain judges and
- (9) since I'm a picky judge I'll probably change both of them
- (10) MR STOLL Thank you Your Honor
- (11) MR McCALLION Your Honor if I - excuse me if I
- (12) may briefly report this was an issue which was raised earlier
- (13) regarding objections which plaintiffs had to certain
- (14) cross-examination defendants documents relating to Dr
- (15) Mundy
- (16) which might come up tomorrow hopefully or thereafter
- (17) I'm pleased to report that discussions and correspondence
- (18) with - between counsel I think have narrowed the differences
- (19) relating to those documents and we received correspondence
- (20) from - from counsel indicating they were not going to pursue
- (21) on cross with regard to certain intended marked documents
- (22) and
- (23) we withdraw our objection with regard to defendants
- (24) Exhibit 15528 But by my count - and counsel will correct me
- (25) if I'm wrong - that would leave us with I believe two
- (26) defendants exhibits that have been marked for
- (27) cross examination of Dr Mundy One is DX15501 and the other

Vol 17 2752

- (1) tell you candidly they are both important documents in the
- (2) cross examination and there are a variety of reasons why I
- (3) don't think 171 has any purpose in precluding them at this
- (4) point
- (5) The redacted version on 15501 in my view is a - is a
- (6) belt and suspenders kind of approach they've taken We've
- (7) removed any references whatsoever to anything that could
- (8) conceivably be treated as a memorialization of any sort of
- (9) conversation with counsel
- (10) What we have here is a memorandum from Bill and that's a
- (11) reference to Mr Mundy - or Dr Mundy and Vicki and that's
- (12) Vicki Adams and this is an internal communication between the
- (13) two of them within their organization It does not pertain to
- (14) a draft report This is long before it
- (15) This is in an area where we have a category of documents
- (16) that have been examined ad nauseum in the case pertaining to
- (17) the presentation and production of basic ideas and theories
- (18) Extensive discovery has gone on into what the parties have
- (19) rejected or not rejected by way of various theories
- (20) The parties have routinely been allowed to inquire into
- (21) what theories have been kept what theories have been rejected
- (22) This is not a communication with counsel It does not disclose
- (23) communications with counsel It is not in connection with -
- (24) it's not a discussion of a draft report It is a very classic
- (25) expert work paper It's very important to our - our

Vol 17 2751

- (1) is DX15195
- (2) THE COURT Do you have them there?
- (3) MR McCALLION Yes Your Honor And this relates to
- (4) a related matter which came up regarding DM 171 and
- (5) supplemental DM 171 relating to draft reports and
- (6) correspondence with counsel
- (7) THE COURT Right
- (8) MR McCALLION With the Court's permission - or
- (9) counsel's permission with regard to DX15501 I'll give the
- (10) Court both the complete version as well as a proposed
- (11) redacted
- (12) version
- (13) And the other is DX15195 and for ease of consideration
- (14) perhaps I'll leave a copy of supplemental the DM 171 itself
- (15) the order on the supplemental
- (16) THE COURT Okay I remember it but okay
- (17) THE COURT Counsel let's do 15501 first
- (18) MR OPPENHEIMER 15501 okay good
- (19) Your Honor these documents are being discussed and are -
- (20) with all parties being very mindful of ruling 171 so that
- (21) backup is well taken
- (22) And Mr McCallion is right we have engaged - we've gone
- (23) back over in light of the Court's ruling and we have removed
- (24) anything that we thought would run afoul in the Court's
- (25) ruling So some of the exhibits that were earlier designated
- (26) before the motion are gone We're left with these two I'll

Vol 17 2753

- (1) cross examination and simply not - it just does not implicate
- (2) the rulings DM 171 and again it goes back to last year and
- (3) has been the subject of extensive deposition discovery
- (4) THE COURT Thank you counsel
- (5) Mr McCallion how do you respond with the argument that
- (6) this is not part of the stipulation because it's not -
- (7) MR OPPENHEIMER Do you have the redacted version
- (8) Your Honor?
- (9) THE COURT Yeah I have it That the entire document
- (10) is simply communication between the people in the same
- (11) organization
- (12) MR McCALLION Your Honor the caption of the
- (13) complete report is Re Prince William Sound/Tim Petumenos
- (14) and
- (15) then there's a number attached to it And it's our
- (16) understanding that this document which is an internal
- (17) document
- (18) within Mundy and Associates was a memorialization and used
- (19) the
- (20) conversations and discussions with Mr Petumenos as a spring
- (21) board for this particular analysis
- (22) It is part of the process for the preparation of the scope
- (23) of the report and flows from discussions with counsel which
- (24) it's our belief under DM 171 or at least DM 171 supplemental is
- (25) not a proper subject matter for cross examination of an expert
- (26) witness
- (27) I may add that to my knowledge we have received no
- (28) corresponding documents relating to - relating to or involving

Vol 17 2746

- (1) With the - I think that this instruction relates to the  
 (2) one that is - that they call defendants proposed jury  
 (3) instruction regarding one shareholder I don't - that's what  
 (4) it's entitled  
 (5) MR DIAMOND That's a typo Your Honor in the haste  
 (6) of putting it together That was supposed to be other pending  
 (7) actions  
 (8) THE COURT Right right  
 (9) MR STOLL Okay Well anyway just so I - and so  
 (10) I - in their proposed instruction their second paragraph I  
 (11) think goes into all of these other issues - or doesn't go into  
 (12) all of them It goes to certain aspects of the other cases and  
 (13) that's the basis of my objection to that  
 (14) I think that in the following page they've got stuff that  
 (15) goes to evidence and so on I don't think that it's really  
 (16) germane I think if you focus on what is in this case and  
 (17) that's what I've tried to do  
 (18) Now with respect to the proposal that they made regarding  
 (19) the number of shareholders I have some very - I think that  
 (20) the proposal that we made that I thought the Court approved  
 (21) on  
 (22) Friday of Exhibit B with the exception that you modified that  
 (23) in two - two areas  
 (24) One was that you deleted the third complete sentence and  
 (25) then later on you - in the instruction I think it's the  
 (26) last - or second to the last sentence you deleted the word

Vol 17 2747

- (1) limited And I don't have - truthfully I don't have any  
 (2) problem with our first paragraph of their instruction  
 (3) regarding - that's all regarding shareholders  
 (4) The second paragraph I think should be deleted with the  
 (5) exception of the first sentence which I would modify as  
 (6) follows That is I would delete the words for several  
 (7) reasons and add the words I have allowed testimony of a  
 (8) number of shareholders that own stock in some of the plaintiff  
 (9) corporations to assist you in evaluating credibility of those  
 (10) witnesses period  
 (11) Now the rest of this I think is duplicative of that very  
 (12) notion which is what you I believe approved on Friday  
 (13) Later on that same paragraph the second - the end of the  
 (14) first page the end of that instruction this implies I  
 (15) submit that other shareholders will be receiving something in  
 (16) this action In other words when they start about the amount  
 (17) that any individual shareholders might receive from a judgment  
 (18) in favor of the corporation is not something you are to  
 (19) consider It - again I think it puts before the jury that  
 (20) in fact the shareholder may get something and I don't think  
 (21) there's any evidence of that  
 (22) MR DIAMOND Let me start with that instruction  
 (23) first  
 (24) I don't think we're in disagreement as to the first  
 (25) paragraph of defendants proposed jury instruction regarding

Vol 17 2748

- (1) shareholders The - I went back and added the final sentence  
 (2) of the second paragraph I thought to address plaintiffs  
 (3) concern and to make it explicit what the jury was not su  
 (4) to consider If they don't want that sentence I have no  
 (5) desire to have it read I thought we were trying to refocu  
 (6) the jury and that was the purpose of this Certainly it's not  
 (7) in my interest to have this read  
 (8) The only other real change is I began the second paragraph  
 (9) with for several reasons because as you recall on Friday we  
 (10) discussed that arguably the number of shareholders does have  
 (11) bearing on the number of subsistence users and addresses part  
 (12) of the plaintiffs presentation here that these are lands  
 (13) which were acquired for subsistence use And it's relevant  
 (14) whether we're talking about 80 shareholders or 800  
 (15) shareholders  
 (16) or 8000 shareholders so I just began with for several  
 (17) reasons That's not critical If you want to drop that out  
 (18) and if Mr Stoll prefer it get dropped out I have no problem  
 (19) The third sentence of that paragraph simply states why you  
 (20) are allowing in the information about financial stake and what  
 (21) that has to do with anything and I thought that was simply  
 (22) providing the jury with noncontroversial information that they  
 (23) would want to know The instruction is somewhat incomplete  
 (24) about why you were allowing someone's financial stake you  
 (25) should tell them why  
 (26) This one doesn't strike me as particularly controversial

Vol 17 2749

- (1) The mistitled jury instruction which we submitted and - I  
 (2) apologize for that but it was added this morning on my way to  
 (3) court We discussed this as well on Friday the need to  
 (4) provide some explanation to this jury as to why they sat  
 (5) through a week of fish testimony and why they have sat through  
 (6) several witnesses already and more to come dealing with  
 (7) subsistence  
 (8) I think we were in agreement on Friday that some sort of  
 (9) instruction as to where that fits in and where it doesn't is  
 (10) necessary and I tried to make this as nonadversarial  
 (11) nonargumentative as it is within my adversarial accord to do  
 (12) but I think this is fairly - fairly low keyed and fairly  
 (13) factual  
 (14) If you look at the plaintiffs alternative all they say is  
 (15) this is a case in which the Native corporations and  
 (16) municipalities are seeking damages to land but that sort of  
 (17) puts us back in the starting blocks What does that mean and  
 (18) how does this evidence tie into land and why would  
 (19) interference with subsistence use be relevant to that and why  
 (20) would loss of subsistence harvest not be something for this  
 (21) jury to consider  
 (22) So this represents our best effort at trying to set forth  
 (23) context of this material provide the jury with some  
 (24) understanding as to why they've heard certain things that  
 (25) they've heard which they may legitimately question the
