- (1) PROCEEDINGS
 (2) (Jury out at 8 05 a m)
 (3) (Call to Order of the Court)
 (4) THE COURT Good morning, ladies and gentlemen This
 is the continuation of trial in case A89-0095 civil in re the
 (5) Exxon Valdez As you know, counsel we re convened at this
 (6) time to consider any exceptions you may have to jury
 (7) instructions although in this case it's my understanding that
 (8) we have an agreement that you were going to do that in
 (9) writing
 (10) Do I have from the plaintiffs both your exceptions to the
 (11) instructions that I propose to give as well as your exceptions
 (12) to my not giving anything that you ve requested?
 (13) MR O NEILL Yes, sir, you do
 (14) THE COURT Okay Let me ask, I need - I think I
 (15) need to address this to Mr Oesting, probably, but whomever I
 (16) have a separate plaintiffs' objection to instruction 36?
 (17) MR OESTING Yes, Your Honor
 (18) THE COURT I don't remember our discussing that
 (19) MR OESTING We didn't Perfectly candid, at the
 (20) time I read it the first time I had one category of the issues
 (21) in the case When I got the full package Saturday and reviewed
 (22) them again completely, it leapt off the page at me, so I felt I
 (23) needed to make a formal objection there having previously
 (24) argued our objections to you in chambers
 (25)

Vol 23 - 3957

- (1) THE COURT My point is I don't remember that I heard
 (2) this particular one before This jumps out at me as something
 (3) that I m saying, Huh?
 (4) MR OESTING And I m saying you are correct in that
 (5) perception
 (6) THE COURT I am correct, okay
 (7) Well Mr Daum have you seen plaintiffs' objection to our
 (8) instruction 36?
 (9) MR DAUM Yes, I have
 (10) THE COURT Okay How do you suggest that we approach
 (11) this problem? Are you ready to deal with it right now?
 (12) MR DAUM Well, I can deal with it We certainly
 (13) don't agree with the plaintiffs, we think the instruction is
 (14) fine as it is
 (15) THE COURT You re talking at the same time Finish,
 (16) Mr Daum
 (17) MR DAUM I can handle it any way Your Honor wants
 (18) We certainly don't agree with the plaintiffs We think the
 (19) instruction is correct as given and this instruction, or a very
 (20) close variation of it has been in our package since mid
 (21) April
 (22) THE COURT Something close to what we are in fact
 (23) giving, what we have included in the package?
 (24) MR DAUM Yes
 (25) THE COURT All right Well, let me suggest this

Vol 23 3958

- (1) You're going to be talking to the jury for quite a while
 (2) That will give me a chance to look at it and think about it
 (3) some while you're talking to the jury And we'll - we'll take
 (4) another look at number 36 at some break between arguments
 or
 (5) between arguments and my reading of the jury instructions
 (6) Thank you, Mr. Oesting
 (7) Mr. Daum, do I have all of Exxon's exceptions to the
 (8) instructions that I propose to give, as well as any exceptions
 (9) to my not giving instructions that you have requested in
 (10) writing?
 (11) MR. DAUM: Yes, Your Honor. It's a pleading called
 (12) Objections. It includes both our objections to the
 (13) instructions you're giving and our refused instructions, if you
 (14) would.
 (15) THE COURT: Is there anything further that we need to
 (16) do before oral argument?
 (17) MR. O'NEILL: Yes, sir. It's a hyper-technicality,
 (18) but the rules provide that we object to the instructions after
 (19) the arguments but right - after Your Honor instructs but right
 (20) before the jury retires. I -
 (21) THE COURT: I've never done it that way.
 (22) MR. O'NEILL: I haven't either, but because of the
 (23) size and the nature and the magnitude of this case, I assume
 (24) that because we filed these written exceptions that we're
 (25) waiving the timing with regard to that technicality and we're

Vol 23 - 3959

- (1) standing on the instructions that we've filed
 (2) MR. DAUM: Mr. O'Neill, I think, is correct as to the
 (3) Eighth Circuit. I don't think he's correct as to the Ninth
 (4) but I would - if he's right, it's not waivable and the right
 (5) answer is we should deem that the objections in writing are
 (6) made after Your Honor's instructions, except as to changes in
 (7) the instructions as actually given. That's the solution to the
 (8) problem. I think we're safe if it's on the record.
 (9) THE COURT: With that agreement, we'll proceed
 (10) although that rule sounds absolutely silly to me.
 (11) MR. DAUM: It is silly, Your Honor.
 (12) MR. O'NEILL: I got dinged. I got hurt on appeal on it
 (13) once.
 (14) MR. DAUM: It's a rule outside the Ninth Circuit.
 (15) It's a genuine problem there.
 (16) THE COURT: Anything else we need to go through at
 (17) this stage?
 (18) MR. O'NEILL: No, sir.
 (19) THE COURT: Okay, fine.
 (20) Call the jury in, please.
 (21) MR. LYNCH: Your Honor, just for clarity, Mr. -
 (22) Captain Hazelwood had also submitted objections.
 (23) THE COURT: Oh, thank you very much.
 (24) Mr. Chalos, do I have your full set of exceptions also?
 (25) MR. CHALOS: Yes, you do, Your Honor.

Vol 23 3960

- (1) THE COURT: Thank you very much. Sorry for the
 (2) oversight.
 (3) (Jury in at 8:10 a.m.)
 (4) MR. LYNCH: Just wanted to be sure we lived up to the
 (5) Eighth Circuit rule.
 (6) THE COURT: Please be seated.
 (7) Good morning, ladies and gentlemen. As I think you realize
 (8) by now, this is the time in the case when the attorneys are
 (9) entitled to argue their respective views of the evidence to
 (10) you. I don't know whether counsel will do so or not, but you
 (11) should know that counsel already have my jury instructions that
 (12) will be read to you after their arguments. They may or may
 (13) not, as they choose, refer to some of these instructions in the
 (14) course of their arguments. It's entirely proper that they do
 (15) so, if they wish.
 (16) We have an agreement that the time for oral argument will
 (17) be two hours per side. Because the plaintiffs have the burden
 (18) of proof, they are entitled to divide their argument between an
 (19) opening and a closing argument with the defendants' arguments
 (20) in between.
 (21) We will take breaks today about the same way we have been
 (22) doing it before, although we'll do it in a fashion so as not to
 (23) break up anyone's argument.
 (24) Mr. O'Neill.
 (25) CLOSING ARGUMENT BY MR. O'NEILL.

Vol 23 - 3961

- (1) MR. O'NEILL: May it please the Court, counsel Ladies
 (2) and Gentlemen of the Jury. When I started this trial, I vowed
 (3) that I would try to keep whatever anger that I felt about the
 (4) wreck of the Exxon Valdez in check. When Captain Hazelwood
 and
 (5) Mr. Iarossi came in here and in a backhanded way apologized,
 (6) they both said, "I was devastated."
 (7) Those were the words that they used, but they weren't
 (8) devastated. They didn't feel devastated and, in point, people
 (9) that were devastated were over 10,000 fishermen and Natives
 (10) land owners, municipalities and Native corporations, people
 who
 (11) make their living for the most part from the sea with their
 (12) hands - purse seiners, driftnetters, setnetters, their crew,
 (13) their family, the whole fabric of Alaskan life.
 (14) And then on the last day of the trial testimony, Mr. Rouse
 (15) comes in and says Exxon Corporation's policies allow a
 relapsed
 (16) alcoholic to be the captain of a supertanker despite the known
 (17) risks to society and, in this case, the known risks to over
 (18) 10,000 fishermen and Natives who make their living with their
 (19) hands out of the sea.
 (20) What they did in the years leading to the wreck of the
 (21) Exxon Valdez wasn't right, it was wrong. And what they did
 (22) when they came into the courtroom and one after the other
 (23) changed their stories was wrong. The oath in a courtroom, the
 (24) oath in a deposition, is a serious, serious thing. When the
 (25) chairman of the board of Exxon Corporation goes before the

Vol 23 - 3962

- (1) Congress of our country to testify, that is a serious serious
- (2) thing
- (3) In the environment of the courtroom we try to be as polite
- (4) as we can because these are long, long days that we have to
- (5) put
- (6) in and to express outrage every time one of these guys
- (7) changed
- (8) the story would have made the environment in the courtroom
- (9) unbearable for all of us But their respect for the truth
- (10) doesn't exist Their lack of respect for the truth is
- (11) outrageous It's outrageous
- (12) Now you are going to get at the end of today what is
- (13) called a special verdict form, and this is your ballot And
- (14) it'll look just like this except it'll be eight and a half by
- (15) 11 And you're going to answer three questions Do you
- (16) unanimously find from the preponderance of the evidence that
- (17) the defendant Hazelwood was negligent as that term has been
- (18) defined in the instructions and that his negligence was a legal
- (19) cause of the grounding of the Valdez, yes or no This is a
- (20) ballot
- (21) Then the question is asked, Do you unanimously find from a
- (22) preponderance of the evidence that the defendant Hazelwood
- (23) was
- (24) reckless, and that his recklessness was a legal cause of the
- (25) grounding of the Exxon Valdez?
- (26) So for Hazelwood you get negligence and recklessness and?
- (27) then we get to the 64 dollar question Do you unanimously find
- (28) from a preponderance of the evidence that the Exxon
- (29) defendants

Vol 23 - 3963

- (1) were reckless and that their recklessness was a legal cause of
- (2) the grounding of the Exxon Valdez You come to a unanimous
- (3) verdict and whoever is presiding signs it
- (4) So you're going to answer three questions on this form and
- (5) then return the form
- (6) Now what I'm going to talk about is why you should answer
- (7) these questions yes, yes, and yes Makes sense
- (8) Let's take a look at some of the jury instructions if we
- (9) could
- (10) Instruction number 27 - when I got these I didn't know
- (11) what number they were going to be and so you see my good
- (12) handwriting right here
- (13) In this case - before we get to this on the negligence
- (14) instruction Exxon has conceded that they were negligent that
- (15) Captain Hazelwood's leaving the bridge was negligent and that
- (16) it was a legal cause of the grounding of the Valdez and I'll
- (17) show you the stipulation in a couple minutes Exxon's
- (18) conceded
- (19) that it was negligent You need to also address whether
- (20) Hazelwood was negligent and he'll give you a negligence
- (21) instruction
- (22) Now I want to talk about recklessness because that's why
- (23) we're here
- (24) A defendant's conduct before the grounding of the Exxon
- (25) Valdez manifested reckless callous disregard for the rights of
- (26) others and such conduct was a legal grounding of the Exxon

Vol 23 3964

- (1) Valdez
- (2) Two steps Was Exxon's conduct and Hazelwood's conduct
- (3) reckless and was it a legal cause Not the legal cause, a
- (4) legal cause
- (5) Okay Next instruction
- (6) What does it mean to be reckless - and the Court will
- (7) instruct you You're going to have the instructions back
- (8) there, you'll have a package of instructions back there You
- (9) have to be subjectively conscious of a particularly grave
- (10) danger or risk of harm Supertanker accidents, supertanker
- (11) wrecks, supertanker incident supertanker groundings - we
- (12) asked them all and they said that they knew that was a risk
- (13) The risk must have in fact eventuated a grounding The
- (14) defendant must have disregarded the risk in determining how to
- (15) act, disregarded the risk of a relaxed alcoholic in the
- (16) grounding, and, fourth, the conduct must have involved a gross
- (17) deviation from the level of care which an ordinary person would
- (18) use, and that's what I'm going to talk about
- (19) Next instruction - now a corporation is responsible for
- (20) the reckless acts of its employees who are managers and the
- (21) reckless act of a corporate officer is the reckless act of the
- (22) corporation if it's done in the course and scope of his
- (23) duties Corporations can only act through people, okay?
- (24) That's what this is in English
- (25) And what is somebody who's in a managerial capacity?

Vol 23 3965

- (1) Somebody who supervises other employees Makes sense
- (2) We know
- (3) what a manager is and the instructions and our good sense to
- (4) deal with what a manager is, and the last of the -
- (5) How many more do we have one or two more?
- (6) MS WAGNER One
- (7) MR O'NEILL One more instruction to talk about to
- (8) put this in context
- (9) The burden of proof that - we all know that in a criminal
- (10) case you have to prove your case beyond a reasonable doubt
- (11) so
- (12) that the defense in a criminal case tries to cast doubt
- (13) That's in a criminal case okay? That isn't good enough in
- (14) this case In this search for truth, you are to decide this
- (15) civil case on a preponderance of the evidence standard
- (16) Which
- (17) has more convincing force and produces in your mind a belief
- (18) that what is sought to be proved is more true than not true
- (19) 51/49
- (20) It isn't enough to say there may have been a conspiracy to
- (21) sneak into the freezer and change the blood, okay? That's an
- (22) attempt to cast some reasonable doubt That isn't enough
- (23) It's you weigh the evidence, and if the plaintiffs are 51
- (24) percent versus 49 percent for the defendants the plaintiffs
- (25) win That's the burden of proof we're dealing with It is not
- (26) beyond a reasonable doubt it is preponderance of the
- (27) evidence
- (28) okay? And you'll have this instruction back there and this
- (29) instruction is a - is in words a reduction of the truth behind

Vol 23 3966

(1) how we search for the truth Okay? Standard of proof
 (2) There are two ways in which Exxon can be liable for
 (3) recklessness The first is its own acts, the acts of all of
 (4) these people were reckless And the second is if Captain
 (5) Hazelwood is a managing agent of Exxon - and he is - and his
 (6) acts were reckless, that also gets us there
 (7) So there are two theories the acts of these people with
 (8) regard to their treatment of Hazelwood and his alcoholism over
 (9) a number of years, first theory Second theory he himself is
 (10) a managing agent and he, himself, was reckless
 (11) Now let me explain to you the problem that the plaintiffs
 (12) had in this search for the truth
 (13) Of all of the people that we've put on the stand over a
 (14) hundred, they're not our people They don't purse seine They
 (15) don't setnet they don't gill net they don't harvest from the
 (16) sea Those were Exxon Corporation people some of whom
 (17) told the truth and some of whom didn't These were the employees
 (18) of the 26th biggest corporation in America 26th biggest
 (19) institution in the world not the 26th biggest corporation in
 (20) America, the 26th biggest institution in the world And we had
 (21) to find those people at Exxon that would tell the truth before
 (22) Exxon closed ranks which they did Which they did
 (23) So the Steve Days or the Mary Williamsons or the Jim Shaws
 (24) or even the Captain Stalzers of the world we needed to get
 (25) their testimony before the party line was put into place And

Vol 23 - 3967

(1) you see what happens when the party line was put into place,
 (2) because we got to see the president of Exxon Corporation come
 (3) in here and tout the party line, and we compared that to what
 (4) he told the Congress of the United States
 (5) Now the wreck of the Exxon Valdez we had by what they
 (6) claim their most competent captain on the vessel and there had
 (7) been 8800 transits before the spill and the Arco Juneau and the
 (8) other vessel had gone by through the same conditions, there
 (9) had been no groundings on Bligh Reef since the wreck of the
 (10) Columbia 1941 or 1942 and then we get the biggest oil spill
 (11) in America The wreck itself is proof that there must have
 (12) been something seriously wrong and let's see how we get
 (13) there
 (14) The Gulf Coast Mr Tompkins, the fleet manager On
 (15) February 11th of 1985, he has Captain Hazelwood put on notice
 (16) that he is under investigation by Ben Graves Captain Pierce
 (17) who also worked over here gets an anonymous phone call from
 (18) a fellow officer of Hazelwood saying something's wrong there's a
 (19) problem with his job Captain Pierce comes in here and says -
 (20) in order to try to hype the self identification theme of
 (21) theirs - Well I just called him as a friend but we know
 (22) Captain Hazelwood was under investigation He was told he
 (23) was
 (24) under investigation and Captain Pierce on cross-examination
 (25) admits that job problems were discussed with both the captain
 (26) and the anonymous caller
 (27) Pierce goes to Ben Graves and reports this and what does

Vol 23 - 3968

(1) Graves say Is the captain's name H does it begin with H
 (2) They talk or whisper in codes I guess
 (3) And he goes to Tompkins to tell Tompkins that Hazelwood is
 (4) in treatment and Tompkins says Good Why? Graves knows
 (5) that
 (6) there's a problem Tompkins knows there's a problem, Pierce
 (7) knows there's a problem
 (8) Captain Hazelwood got caught He didn't self-identify, he
 (9) got caught What's the easiest way to prove that? Ask Captain
 (10) Hazelwood Captain Hazelwood, did you get caught, you
 (11) didn't
 (12) self identify did you? No no you got a call from Exxon
 (13) Corporation through Captain Pierce who said you have a
 (14) problem
 (15) I think you ought to get some help, and statements at the same
 (16) times Mr Graves was investigating, judging from the date of
 (17) the report, so you didn't self-identify, no Ask him
 (18) What's interesting is he didn't tell us about Tompkins We
 (19) had to wait until the end of the trial Captain Hazelwood gets
 (20) caught
 (21) Now what should happen - let's see the Graves report
 (22) next, too
 (23) Then we have a formal report Now, Captain Hazelwood
 (24) denies all of this like everybody who comes in here, denies
 (25) everything They deny that the boat hit the rock
 (26) I asked Joe if he ever drank aboard ship He did, he came
 (27) back from port drunk on several occasions Firing offenses
 (28) Hazelwood told Tompkins he was in treatment for

Vol 23 - 3969

(1) alcoholism The chairman of the board of Exxon Corporation,
 (2) Larry Rawl, testified if Hazelwood was caught it was a cause
 (3) for termination This is a pretty serious thing
 (4) The conclusion, he was caught and he should have been
 (5) disciplined He wasn't disciplined My question for you is
 (6) is approving his conduct by not disciplining him safe or
 (7) reckless? It's reckless
 (8) Let's go on over his return to duty Could we have the
 (9) IDR? Let's see the next one whatever the next one is
 (10) The Exxon defendants have stipulated - and this
 (11) stipulation has been read to you - senior management knew in
 (12) May of '85 shortly after his discharge, that Captain Hazelwood
 (13) admitted in the past he had consumed alcohol and he had
 (14) returned from a ship - from port drunk several times This is
 (15) the key thing Such conduct constituted a clear violation of
 (16) Exxon Shipping Company's prohibitions against the use of
 (17) alcohol and/or intoxication aboard Exxon vessels They have
 (18) stipulated, and a stipulated fact is binding on you that it was
 (19) a clear violation of their policies They've stipulated to
 (20) this Why wasn't he fired? Safe or reckless? Why wasn't he
 (21) disciplined? Safe or reckless? Reckless
 (22) Now let's look at the IDR and when we look at the IDR, I
 (23) went back - the IDR was filled out by this Dr Vallury I
 (24) went back, Dr Vallury testified here by deposition - and I
 (25) hate to admit it but you may have slept through it, it was a

Vol 23 - 3970

- (1) read deposition
- (2) So it was your view -- this question was asked to Dr
- (3) Vallury Hazelwood's doctor So it was your view then that
- (4) Captain Hazelwood should remain alcohol free for the rest of
- (5) his life on discharge? Yes I am talking generally, that
- (6) again what I generally practice would apply to him logically
- (7) Again specifically, what I said to him at that time I don't
- (8) recall
- (9) What do you generally practice then, a lifetime of
- (10) abstinence from alcohol
- (11) That's what Dr Vallury, who filled out this said about
- (12) it Now this fight over the 30 4 and the order of these two
- (13) things what does Dr Vallury say about that, the guy who
- (14) filled it out -- not everybody else after the fact if I might
- (15) clarify -- to me, in treating a patient it's not that
- (16) significant
- (17) Now, let's just talk about -- this is you know in the
- (18) opening they described what Captain Hazelwood suffered from
- (19) as
- (20) something that the Wall Street Journal describes as the blues
- (21) He was in a psychiatric hospital for 28 days with prescribed
- (22) aftercare and one of these numbers includes the following and
- (23) I'm going to read the same way that I tried to read it with
- (24) that doctor who came in here the one from the National Council
- (25) on Distillers or wherever he was from The need for daily use
- (26) of alcohol for adequate functioning, the inability to cut down

Vol 23 - 3971

- (1) or stop drinking repeated efforts to control or reduce excess
- (2) drinking by going on the wagon occasional consumption of a
- (3) fifth of spirits or its equivalent in wine and beer Amnesic
- (4) period for events occurring while intoxicated Continuation of
- (5) drinking despite a serious psychological disorder Drinking of
- (6) non beverage alcohol That is what the number is associated
- (7) with
- (8) Now in consideration of this document, in this document
- (9) Exxon is put on notice that he has to go to individual therapy
- (10) group therapy marital therapy, Alcoholics Anonymous and
- (11) lectures on alcoholism It's right there in the document
- (12) They're on notice of this, and then they go ahead in
- (13) Exhibit 745 they capture the information again and describe it
- (14) as alcohol treatment ALC treatment and now it's what the Wall
- (15) Street Journal calls the blues
- (16) Dr Montgomery testified -- Dr Montgomery is up here
- (17) testified and I went back and checked the transcript that the
- (18) decisions with regard to Captain Hazelwood were made even
- (19) before he got back to line management And in his words it
- (20) hacked him
- (21) Now Montgomery who everybody relied on -- and I'm moving
- (22) now to the fitness for duty determination -- who everybody
- (23) relied on to make the fitness for duty determination did it on
- (24) the basis of one five minute phone call that he can't
- (25) remember And he knew that alcoholism was a disease for life

Vol 23 3972

- (1) that the 28-day program was a term of art for rehabilitation
- (2) that you needed updated medical records that the nature of the
- (3) occupation of a ship captain did not provide for Alcoholics
- (4) Anonymous, that there was no good reason not to give him a
- (5) shoreside assignment, that rumors of drinking may indicate a
- (6) serious problem
- (7) And Dr Montgomery knew how to monitor somebody because
- (8) I
- (9) asked him, there was a guy who worked for him that he
- (10) monitored who he dealt with directly, who he talked to about
- (11) his problems, who he talked to about his home life, who he
- (12) talked to about his aftercare and follow up
- (13) Dr Montgomery did all of that, but what he didn't do was
- (14) get a complete set of medical records talk to Hazelwood,
- (15) document the fitness-for-duty determination did nothing about
- (16) aftercare, did nothing about AA Dr Montgomery put this man,
- (17) coming back out of an alcohol rehabilitation program, back into
- (18) duty on the basis of a five minute telephone call that he
- (19) didn't record, that he didn't write down, and who does he
- (20) blame? Well, he says, Well, I talked to Dr Vallury so it must
- (21) be Dr Vallury's fault, or Mr Graves never gave me the Graves
- (22) report so it must be his fault And with regard to what
- (23) happens thereafter no one came to him regarding rumors so it
- (24) wasn't his fault No one asked him about monitoring
- (25) Now, Dr Masters who was the only expert to testify in
- (26) this courtroom about what ought to be done testified as

Vol 23 3973

- (1) follows We should have formal return to work procedures
- (2) including contracts, interviews and follow-up Medical
- (3) department should do monitoring afterwards, safety-sensitive
- (4) people present specific problems and there should be
- (5) procedures
- (6) for people in safety-sensitive positions People in
- (7) safety sensitive positions have to participate in aftercare
- (8) There has to be regularly scheduled meetings between the
- (9) supervisor and the rehabilitated employee to talk to them
- (10) honestly and openly about what's going on in his life And
- (11) they ought to discuss aftercare
- (12) Exxon had no policies for any of these things And they
- (13) didn't try to do them
- (14) Now, Exxon will come in and say Well, this Dr Masters was
- (15) talking about the airline industry He wasn't talking about
- (16) the airline industry He was talking about industry in
- (17) general And it's kind of interesting because when Dr
- (18) Montgomery has to supervise somebody by himself that works
- (19) for
- (20) him, how does he do it? He does it like this
- (21) Do you recall we played a deposition of a fellow named
- (22) Jerry Aspland from Arco Marine? Played it early on He's the
- (23) president of Arco Marine His equivalent Jerry Aspland has
- (24) an alcoholic tanker captain who goes through treatment What
- (25) does Jerry Aspland at Arco Marine, their sister company, do?
- (26) Right by the numbers And does he say, I didn't do the
- (27) monitoring, heck I'm the president? He doesn't say that He

Vol 23 3974

(1) rolls up his sleeves he knows a tanker captain is an important
 (2) safety-sensitive position and that safety is important to
 (3) society and this is what Jerry Aspland does Thank you
 (4) Dr Gould, who came and testified rehabilitation is an
 (5) ongoing life situation Alcoholics suffer loss of cognitive
 (6) acts but do not suffer any signs of gross motor impairment
 (7) Abstinence is desired, aftercare is important 305 02 is
 (8) alcoholism Is that our guy? Exxon
 (9) Exxon s Dr Nealy Relapse rate is high, recommends
 (10) abstinence Once alcoholic never back, no social drinking
 (11) Post rehabilitation testing helps You need six months to two
 (12) years of aftercare Dr Nealy was the one that left to set up
 (13) his own clinic or work at another clinic, he had a discussion
 (14) with Dr Montgomery after the grounding where Montgomery
 (15) was concerned about no paper trail, and Dr Nealy did recommend
 (16) an aftercare program in the company and it was squashed by Dr
 (17) Gould as not medical's problem These guys knew what they
 (18) were supposed to do They knew how to do it
 (19) So Captain Hazelwood is certified fit for duty on the basis
 (20) of one five-minute phone call with an awareness of his
 (21) potential risk to the public, and I ask you, is that safe or
 (22) reckless? It s reckless
 (23) Exxon Shipping Company s return to work Tompkins is the
 (24) Gulf Coast fleet manager And he knew - that s Mr Tompkins
 (25) right here - about the February 85 investigation because Ben

Vol 23 - 3975

(1) Graves told him about it, but he did nothing to find out about
 (2) what the substance of it was He knows that Hazelwood was in
 (3) for alcoholism because that's what Hazelwood told him He
 (4) knew that Hazelwood couldn t drink period That s what he
 (5) testified to He knew drinking was a downhill slide He knew
 (6) AA would be a problem and he knew that the medical
 (7) department was available to him, but he never talked to them What does
 (8) he do, Tompkins? Returns him to work, 99-day tour of duty, no
 (9) AA no aftercare
 (10) What he didn't do when he met with him Talk with him
 (11) openly and frankly Like many other Exxon Corporation
 (12) executives, Tompkins had two stories He tries to pawn off
 (13) that he did talk to him but when he s cross-examined and
 (14) confronted with his private testimony, he says I didn't talk
 (15) to him
 (16) Tompkins never spoke to the medical department He never
 (17) followed up on the February investigation He didn't give him
 (18) a shoreside assignment and he didn't set up a monitoring
 (19) program He said he thought about it but he didn t set one
 (20) up
 (21) Sheehy, port captain He knew drinking problems alcoholic
 (22) rehabilitation He knew it was work-related He knew
 (23) follow-up was necessary there is a fair likelihood that
 (24) someone with an alcohol problem would start drinking again
 (25) and this is something to be concerned about He saw the movie,

Vol 23 - 3976

(1) everything looks so normal he knew about masking What he
 (2) did, Captain Sheehy had a beer at the macaroni and-cheese
 (3) bar
 (4) at the hotel
 (5) This is - this man is coming back from alcohol
 (6) rehabilitation This is his first meeting with his company
 (7) coming back from alcohol rehabilitation This isn t anything
 (8) but a cocktail lounge
 (9) Now when I had opened, I said it was a bar because that s
 (10) what these guys had testified to This is worse and let me
 (11) tell you why Alcohol open Let s sit down in front of this
 (12) bar with people sitting around us and have an open sensitive
 (13) discussion about your alcoholism And maybe the people at
 (14) the table next to us can join in
 (15) Thank you
 (16) Sheehy talked to Pierce twice And Pierce told him that if
 (17) he didn't stop drinking he would be fired, that this was his
 (18) last chance, that it interfered with his job performance And
 (19) what did Sheehy not do? Didn't talk to him openly and frankly
 (20) didn t ask about aftercare didn't inquire into the details of
 (21) aftercare, didn't work on accommodating aftercare
 (22) Frank Iarossi, another Exxon executive that can speak out
 (23) of both sides of his mouth His first emotional reaction when
 (24) he finds out about Joe being returned to duty is, Don t put him
 (25) back on the ship, we've got a problem here He had to be
 monitored with regard to falling off the wagon Any return to

Vol 23 3977

(1) drinking presented a problem
 (2) Iarossi knew he couldn't be monitored at sea He admitted
 (3) it The risk of Hazelwood's continued use of alcohol brought
 (4) up the question of safety of the vessel and the environment
 (5) We knew the risks Frank Iarossi
 (6) The treatment was alcohol abuse He knew Hazelwood was in
 (7) AA The company policy was that a request for rehab made
 (8) after
 (9) discovery of the violation, if you get caught that results in
 (10) discipline Hazelwood wasn't disciplined and Iarossi knew
 (11) about the concept of denial What did Iarossi do? With regard
 (12) to the reassignment he did nothing because he wasn't told until
 (13) after the fact Now he claims that he weighed this decision -
 (14) and this is the big, big, big defense, that Frank Iarossi had
 (15) these competing concerns, to promote self-identification,
 (16) didn't want to get sued, versus the public safety The man was
 (17) caught
 (18) Iarossi didn't know about his reassignment to the vessel
 (19) until weeks after the reassignment Frank Iarossi is not being
 (20) frank with us And Frank Iarossi knew the risk to the public
 (21) Frank Iarossi should have known the man was caught It s his
 (22) company
 (23) And he didn t go and look at the IDR and he didn t check
 (24) into whether there was a fitness-for-duty determination in the
 (25) file, and Frank Iarossi is Mr Blame He says, Well, Graves
 gave me this legal advice Well, the very last tape that we

Vol 23 3978

- (1) played in our rebuttal case was Ben Graves saying, I didn't
 (2) give you any legal advice He blames Tompkins and Sheehy
 for
 (3) not telling him at the time of the assignment He says he told
 (4) somebody to make a fitness for duty determination, Tompkins
 or
 (5) Sheehy They never did so Frank's saying it s their fault
 (6) Unfrank Frank Tompkins and Sheehy should have checked to
 make
 (7) sure he was out of the denial stage, and you don't beat around
 (8) the bush
 (9) That s what the plaintiffs have been saying for four
 (10) weeks That s what Iarossi says, but he doesn't check to make
 (11) sure that happens, Tompkins and Sheehy don t do it Iarossi
 (12) lies about self-I D He comes in here and tries to sneak by
 (13) the self-I D thing, but at the time he testified at his
 (14) deposition Frank Iarossi testified he didn t know one way or
 (15) the other he self I D d
 (16) His deposition was taken before the party line was put into
 (17) place Frank Iarossi risked the public because of his
 (18) laziness his laxness, his inattention to detail He risked a
 (19) catastrophic oil spill He knew that that was a result of this
 (20) kind of activity and then he boldly talked about the risk of a
 (21) lawsuit by somebody who got caught versus the public's safety
 (22) The public s safety? Hazelwood testifies that at the time he
 (23) was reassigned on the Gulf Coast, there was a shortage of ^少
 (24) masters I submit to you, that's what happened
 (25) Well, Joe s got a problem but we re short on masters so

Vol 23 - 3979

- (1) let s take the easy way out What do Rawls and Raymond, two
 of
 (2) the most powerful people in the world say about the decision
 (3) what do they say about the decision?
 (4) Mr Rawl how is it that Exxon - which trains its captains
 (5) as you just said - didn't pick up Captain Hazelwood s drinking
 (6) problem? He d gone through a rehabilitation program and his
 (7) mother says that Exxon knew about that
 (8) I think - and I of course am sort of after the-fact, but
 (9) Exxon did know about the rehabilitation and I think we made a
 (10) gross error
 (11) Mr Raymond It was not a good policy to leave a man with
 (12) this substantial record of alcohol abuse in command of a tanker
 (13) filled with oil You don t - you don t need to be a genius to
 (14) figure out that one
 (15) Consciously taking a chance to cause an accident is what
 (16) Mr Lynch described as recklessness in his opening
 (17) The conclusion Graves Rouse and Rawls all say that
 (18) Hazelwood could have been given a shoreside assignment He
 (19) could have had Pierce's job Hazelwood was never told not to
 (20) drink Hazelwood was never properly evaluated Exxon knew
 the
 (21) tremendous risk The decision to return him to a ship was made
 (22) without care, it was a gross error in judgment To use another
 (23) one of Mr Rawl's phrases, it was an error on a going in
 (24) basis
 (25) Safe or reckless?

Vol 23 3980

- (1) Monitoring on the Gulf Coast next topic Iarossi said
 (2) that any return to drinking - it s a different story than we
 (3) get now, but Iarossi said his understanding was any return to
 (4) drinking would result in termination Now it s okay to drink
 (5) but at least Frank says any return to drinking on the Gulf
 (6) Coast would return - would result in termination Hazelwood
 (7) as of '86 returned to drinking and Hazelwood testifies I drank
 (8) openly, didn't hide it from anybody drank at - you know, it
 (9) was no big deal, nobody told me I couldn't drink
 (10) Tompkins thinks he may have visited him one time but he
 (11) isn t sure There was no monitoring plan in place when he
 (12) left
 (13) Sheehy was on notice of the problem, knew that relapse was
 (14) likely Sheehy says no one told him to monitor You know all
 (15) of these people, there is not one person - Borgen Martneau,
 (16) Myers, Graves, Paul, Paul, Tompkins, Leyendecker Tompkins,
 (17) Koops Sheehy - nobody told any of them to monitor How do
 (18) you have a monitoring program if nobody was told to monitor
 (19) They say, Well, I sort of picked it up from on my own, from a
 (20) strange undercurrent Nobody told - all of these guys said,
 (21) Nobody told me to monitor
 (22) There was no monitoring program
 (23) Sheehy knew that relapse was likely Doesn t know about
 (24) anybody else who watched Hazelwood There was never a
 (25) conversation with Koops where Hazelwood was discussed more

Vol 23 - 3981

- (1) closely than anybody else Hazelwood had poor ratings Talk
 (2) about your job performance, and he never talked to Hazelwood
 (3) about aftercare rehabilitation
 (4) Koops who takes over from Tompkins on notice of the
 (5) problem, it was bad news I had a captain with a drinking
 (6) problem If he starts drinking, things will probably go pretty
 (7) fast He knew about denial Koops knew about denial and that
 (8) alcoholics had to admit that they were alcoholics in order to
 (9) be cured He never talked to Hazelwood about any of his
 (10) problems Not in a New York minute No New York frankness
 out
 (11) of Mr Koops, I ll tell you that
 (12) With the exception of one conversation with Sheehy he
 (13) never talked to anyone about whether Hazelwood had resumed
 (14) drinking
 (15) Dan Paul Paul testified that he before 1985, had
 (16) unsuccessfully tried to monitor Hazelwood Paul testified that
 (17) he tried before unsuccessfully Exxon knew that they had a
 (18) problem
 (19) The conclusion with regard to monitoring There was no
 (20) monitoring There was no system there was no paper And
 (21) recalling today what happened back then there was no
 honesty,
 (22) everybody sort of trying to cover their behinds a little bit
 (23) Safe or reckless?
 (24) The Shaw incident Jim Shaw, the port steward Now this
 (25) great confidential secret they're going to come in and talk

Vol 23 - 3982

- (1) about confidentiality Everybody in the fleet knew that he
 (2) went through rehab Everybody in the fleet knew he was
 (3) drinking Jim Shaw, the port steward, comes in he knows
 (4) Hazelwood's been through alcohol rehabilitation
 (5) This is the first of many people they will dump on They
 (6) dump on people who have no reason to lie They'll come in and
 (7) they'll dump on Jim Shaw because Jim Shaw won't help the
 party
 (8) line Shaw had four different incidents including one in which
 (9) there were parties on board the vessel And he reports this to
 (10) Captain Sheehy, Kimberly Case, Ellen Share Sam Pierpoint,
 (11) Koops, Leslie Pennington and he uses words like drunk and
 (12) falling off the wagon Exxon is on notice relapse
 (13) What happens? You can't tell from the testimony, but Shaw
 (14) gets called on the carpet in Koops' office A thing that you
 (15) could conclude from what Mr Koops said is Shaw got called on
 (16) the carpet in Koops' office and pressed about what happened,
 (17) maybe scared not to talk about it
 (18) Shaw is an Exxon employee Two witnesses have called him
 (19) an honest man They're going to try to dismiss him as a
 (20) gossip He had never gossiped about people drinking He had
 (21) four specific incidents Ellen Share called him an honest man
 (22) and what didn't they do?
 (23) Koops said if Mr Sheehy did not talk to the witnesses and
 (24) the participants, he would be remiss in his duties Nobody
 (25) talked to Hazelwood about what went on on the vessel, nobody

Vol 23 3983

- (1) interviewed him or confronted him
 (2) Sheehy didn't - Koops, I asked Mr Koops about confronting
 (3) the individual directly It is both good management and a part
 (4) of being a decent human being They never did that Why?
 (5) Because they didn't want to know
 (6) Sheehy didn't interview the witnesses, he didn't interview
 (7) Hazelwood There's no documentation Then they have
 (8) Mihajlovic come in and testify that he visited Hazelwood on the
 (9) vessel Now that's a very interesting story with regard to
 (10) two aspects of it
 (11) The first aspect of it is Mihajlovic is the only witness
 (12) who came in here and said he wouldn't have been on the
 bridge
 (13) Mihajlovic came in here as a friend of the captain's
 (14) The second thing is Mihajlovic said he visited Hazelwood
 (15) and Hazelwood made light of the problem and blew it off and
 (16) said, Search my room So that was no planned search I mean
 (17) we don't know whether the search took place we know at a
 (18) minimum it wasn't a planned search and we know that
 Hazelwood
 (19) took it lightly He had returned to drinking and took it
 (20) lightly
 (21) The conclusion on the Gulf Coast with regard to monitoring
 (22) is that - with regard to the Shaw incident - is that less
 (23) than one year out of treatment, knowing about relapse, knowing
 (24) they should interview Hazelwood and the witnesses knowing
 the
 (25) risk to the public they botched it or they don't want to find

Vol 23 - 3984

- (1) out and I ask Is that safe or reckless Are all of these
 (2) things together safe or reckless?
 (3) They start to accumulate after a while
 (4) The transfer to the West Coast, over here - here's the
 (5) shadow remember him?
 (6) Andy Martineau testified that Exxon needed pilotage They
 (7) were paying a thousand dollars extra per ship for vessels
 (8) without pilotage Dan Paul's memo said 4500 Martineau
 (9) knew - he was by videotape - that Hazelwood may have had a
 (10) problem with drinking or alcohol and Martineau knew that it
 (11) would be dangerous to assign a master to a vessel where the
 (12) master may have an alcohol problem
 (13) What Martineau didn't do, he did nothing to determine
 (14) whether the rumors were true He didn't know about or follow
 (15) up about rehab He denies what Sheehy told him about going
 (16) through rehab Martineau was under the mistaken impression
 (17) that Hazelwood had high performance ratings and he didn't
 (18) consider transferring somebody else to the Valdez who didn't
 (19) have pilotage because it would cost Exxon extra money
 (20) Martineau tries to put the blame on Sheehy, and Andy
 (21) Martineau in his deposition says something relevant real
 (22) real, interesting The people who knew Hazelwood had a
 problem
 (23) and knew about his rehab were making the final decision
 (24) Somebody else's problem
 (25) Harvey Borgen knew that Hazelwood had a problem and that it

Vol 23 - 3985

- (1) was important that he not drink Borgen doesn't talk to human
 (2) resources, doesn't talk to medical, doesn't talk to somebody
 (3) about monitoring, doesn't talk to someone about aftercare and
 (4) most importantly, doesn't talk to Hazelwood
 (5) Koops does not tell Borgen that Hazelwood had to be
 (6) monitored and Borgen doesn't tell Koops that he was going to
 (7) set up a system
 (8) Sheehy tells Martineau, with regard to the transfer, that
 (9) Hazelwood's performance was above-average, which is untrue
 (10) And that there were no signs of drinking And then Sheehy sort
 (11) of equivocates on the Shaw incident
 (12) Big Frank finds out after the fact and is shocked Frank
 (13) always finds out after the fact and he's always shocked and
 (14) does nothing
 (15) The conclusion is, to save a thousand bucks a trip, let's
 (16) put a relapsed alcoholic on the bridge of a supertanker Safe
 (17) or reckless?
 (18) West Coast monitoring Myers had bad vibes, Myers had bad
 (19) vibes, Shaw had bad vibes, and Pierce had bad vibes - bad
 (20) vibes Went to Borgen and Borgen whispered - in the typical
 (21) Exxon Corporation way, he whispered alcohol dependent
 Myers
 (22) knew he doesn't drink, that he had emotional problems that he
 (23) had to abstain, that a drinking alcoholic captain presented a
 (24) risk to the vessel and the environment around it And Myers
 (25) says, The only people that I knew that were monitoring

Vol 23 3986

- (1) Hazelwood -- nobody told us to do it -- were me and Borgen
- (2) Shearer and Larson s name don t pop up
- (3) What he didn t do -- there s no documentation about
- (4) Hazelwood and this transfer He never talked to Hazelwood
- (5) about drinking, AA follow up During the whole two years
- (6) Borgen never talked to him Martineau never talked to him
- (7) Myers equivocates whether he talks to him Never talked to Ron
- (8) Lund from Alamar
- (9) Remember Ron Lund? Hazelwood had a reputation among Alamar
- (10) as a person sailor who liked to drink He had a reputation
- (11) among the fleet
- (12) They never went over to human resources or the medical
- (13) department to set up a monitoring program Borgen says he was
- (14) never told by Frank Iarossi, doesn't mention it one way or the
- (15) other
- (16) There's no discussion concerning Hazelwood s past, no
- (17) question concerning setting up a program no structure of a
- (18) program no writing of a program What conclusion do you
- (19) draw?
- (20) So Myers and Borgen know that he shouldn t drink know that
- (21) there should be a system set up, don t talk to Hazelwood about
- (22) anything, don t talk to anybody about anything and then we
- (23) have Larson and Shearer at the bottom of the totem pole and
- (24) come in and say they monitored his paperwork They ^{is} monitored
- (25) his paperwork When he came back we made sure that his

Vol 23 - 3987

- (1) paperwork was neat and his paper work was superior
- (2) Well his ratings for his paperwork say it was at any
- (3) time superior but you don't help an alcoholic by checking his
- (4) paperwork
- (5) Iarossi I don t supervise monitoring, I'm the president
- (6) The Portland Shipyard incident Now, the people who report
- (7) these things and who are now liars are all at the bottom of the
- (8) totem pole This is sort of the Exxon reaction Let s dump on
- (9) the guys at the bottom of the totem pole because they don't toe
- (10) the party line
- (11) In Portland Hazelwood drank with Stalzer Donald Kimtis,
- (12) Carr and Cousins On the vessels in a restaurant and in his
- (13) apartment And he drank beer, wine and hard liquor
- (14) Hazelwood admits that he talked over the walkie talkie and
- (15) he admits drinking beer, wine and vodka and he also says I
- (16) told Herb Leyendecker from Mecca And he also said, I told
- (17) Paul Myers that I was drinking
- (18) Now Hazelwood had four different versions of this Four
- (19) different versions of this
- (20) Steve Day He sees Henry s bottles in two different
- (21) locations which confirms what Nate Carr says We were drinking
- (22) on the vessel
- (23) Here s the walkie talkie Carr says I drank on the vessel
- (24) with Hazelwood Cousins says I drank back in Joe s room
- (25) Stalzer says Hazelwood had two vodkas while waiting for the

Vol 23 - 3988

- (1) luggage Waiting for the luggage ought to take less time than
- (2) 25 minutes The amount of time that they were in the Harbor
- (3) Club He has two vodkas waiting for the luggage
- (4) Stalzer s alternate captain Day reports this to Myers
- (5) twice Now, what does Myers do? He goes to see Borgen and
- (6) he's shocked Everybody here is shocked but nobody here does
- (7) anything Goes to see Borgen and Borgen says Well, I talked
- (8) to Leyendecker about it over the telephone
- (9) Borgen s entire follow-up on this thing is what he says
- (10) Leyendecker told him He doesn t talk to Joe he doesn't
- (11) investigate This is the boss This is the boss
- (12) I asked Mr Koops -- and this is always an interesting
- (13) thing to do -- what Mr Koops would have done with regard to
- (14) the hypothetical of the Portland Shipyard Talk to the suspect
- (15) direct and forthright, talk to the witnesses and those on the
- (16) ship
- (17) The Mary Williamson incident, coming over on the launch
- (18) Hazelwood appeared drunk She reports it to Day despite the
- (19) fear of unofficial retaliation Day reports it to Myers
- (20) something is going on with Joe, Myers needs to be aware
- (21) This incident takes place a week or so before the
- (22) grounding Last clear chance on notice we have a problem
- (23) And Myers denies it because this would put him in complicity
- (24) with what went on But what does Myers say about it if it
- (25) would have happened?

Vol 23 - 3989

- (1) If it would have happened and he didn't act on it that
- (2) would be reckless, wouldn t it? Well yeah I would be a bad
- (3) boy
- (4) Reckless? No question
- (5) My question for you Is safe or reckless?
- (6) Now, if I was -- if a reasonable person was in charge of
- (7) monitoring Hazelwood on the West Coast and you wanted to get
- (8) him so you didn t have to go to Long Island or New York or
- (9) where he was living what are the two most obvious places that
- (10) he would drink The Yankee Whaler in Long Beach and Valdez
- (11) And you wouldn t have had to do anything difficult other than
- (12) come up and ask your agent in Valdez at Alamar about the
- (13) captain or go have a couple beers with the guys over at the
- (14) Yankee Whaler and find out
- (15) The conclusion We have covered the hierarchy of the
- (16) company They all knew that there was a problem and none of
- (17) them did anything
- (18) Why is Davis up here, the attorney? Davis got the Graves
- (19) report All of these people knew, notice of his drinking, his
- (20) drinking problem at the highest levels Is it safe or reckless
- (21) to ignore a problem waiting to happen?
- (22) Now while the so-called monitoring was going on -- and
- (23) there wasn't any monitoring going on if there was Exxon
- (24) Corporation would have it written down and we would have
- (25) seen it

Vol 23 3990

- (1) Hazelwood admits that he had a drinking problem, that he
 (2) had four or five doubles before dinner wine, couple after He
 (3) wasn't blotted Drinking pattern of an alcoholic He lied to
 (4) his wife and others He had a faulty memory He drank too
 (5) much but continued drinking He got caught He claims he was
 (6) never told what his diagnosis was
 (7) Gould O Connor, Nealy and Vallury all say he shouldn't
 (8) drink four doctors There was a recommendation that he not
 (9) drink He quits aftercare, he's in AA for 90 days Alcoholics
 (10) who are binge drinkers are very dangerous Dr Nealy
 (11) testified
 (12) He leads a double life At home he goes to AA and his wife
 (13) goes to Al-Anon He doesn't drink But he resumes drinking on
 (14) the road He has an AA sponsor that he talks with he has a
 (15) bar list in his room On the road he admits to drinking with
 (16) St Pierre, Dengel, Kunkel Sturgis, Carr, Cousins,
 (17) Masciarelli, Hogan, Roberson, Deckert, Kimtis Enright and
 (18) others, with Captain Enright in 1988 he has eight to ten drinks
 (19) and drives
 (20) Shaw sees him drinking four times There's the Portland
 (21) Shipyard incident, Mary Williamson incident Captain Stalzer
 (22) testifies there were parties in the quarters Enright saw him
 (23) in the quarters appeared he had been drinking Carr, they
 (24) drank aboard the boat
 (25) He drinks with Cousins he drinks with Kunkel Alamar

Vol 23 - 3991

- (1) drops him off and picks him up at bars These are all people
 (2) that are here because they drank with him And it goes on and
 (3) on and on
 (4) Could I see that next board? So your policy of knowing the
 (5) risk to the public of the catastrophic potential results of a
 (6) supertanker accident allow a relapsed alcoholic to command a
 (7) supertanker
 (8) Yes sir that's possible under our policy
 (9) Safe or reckless? In light of what we know safe or
 (10) reckless?
 (11) Is he a manager? I don't want to talk long about it
 (12) because I've got other things to talk about What does the
 (13) Exxon expert say about Captain Hazelwood and whether he is a
 (14) manager? A captain's job or ship master's job is perhaps one
 (15) of the most unusual in the United States You could say he has
 (16) to be the chief executive officer or the chairman of his own
 (17) company We asked a lot of people about this topic, and I'd go
 (18) over to the ship and say this is a business and the captain
 (19) manages it do you recall that? This summarizes it out of
 (20) Mr Bolton's mouth
 (21) Fatigue Dr Dinges came in and testified about fatigue
 (22) and the sleep guys acknowledged that Dinges was an expert in
 (23) the area and there were a series of Exxon policies that Exxon
 (24) says contributed to fatigue - or Dinges says contributed to
 (25) fatigue, including this series which he testified to and

Vol 23 3992

- (1) this, and there was that huge board - remember that huge
 board
 (2) in two pieces that Dick Gerry and Dinges went over where they
 (3) analyzed all the mates and whether they were in compliance
 with
 (4) the six on/six-off rule and they compared it to their
 (5) deposition testimony and their trial testimony These factors,
 (6) these policies of Exxon's DESCRIBED a situation in which all of
 (7) the Exxon Valdez mates who were available that night, the night
 (8) of the 23rd, were fatigued And all of them were in violation
 (9) of the federal six-on/six-off, which was the statute passed by
 (10) the Congress in about 1911 for the sole purpose of making sure
 (11) that we didn't have tired mates on watch on American vessels
 (12) And Carr and Masciarelli testified in a way in which one
 (13) could conclude that Exxon routinely sailed in violation of
 (14) 8104 six-on/six-off, and there were no policies in place to
 (15) ensure compliance with six-on/six-off Fatigue on the evening
 (16) of the 23rd caused Cousins, when he was up there alone, to
 (17) return to doing what he knew how to do, which was to go back
 (18) into the chart room and plot rather than pilot
 (19) Hazelwood's alcohol consumption on March 23rd of 1989 -
 (20) now once again, we have Lisa Harrison, Janice Delozier, Erma
 (21) Lee Roberson and Glowacki who all testify about what
 happened
 (22) and Exxon, as it's prone to do will dump on the three who are
 (23) not Exxon employees but in fact who were the three who have
 no
 (24) reason to lie
 (25) The size of the drinks, Lisa Harrison testified they were

Vol 23 - 3993

- (1) doubles and when Glowacki was on the stand we got from him
 (2) the testimony that he was drinking gin and-tonics in the same
 (3) size glass as Hazelwood was drinking vodka Do you
 remember
 (4) that? Gin and tonics, vodka? So where the tonic was, in
 (5) Hazelwood's glass there was vodka They were big drinks
 (6) Lisa Harrison testifies that sometime in the early
 (7) afternoon Hazelwood was in the Pipeline Club and has a
 (8) double No reason to lie From 2 15 to four, Lisa Harrison
 (9) and Janet Delozier testified that he was in the Pipeline Club
 (10) drinking
 (11) Now this time they have come up with no other excuse for
 (12) He buys the flowers, the flowers are bought right across the
 (13) street from the Pipeline Now, this is also interesting
 (14) because we have two eyewitnesses that see him in there When
 (15) does he tell the Coast Guard in his interview that he is at the
 (16) Pipeline Club? 3 00
 (17) He admits to three drinks here This is where Erma Lee
 (18) puts him in there about seven and we know the taxi is back
 (19) there then, and at the Harbor Club where they have 25 minutes
 (20) and Hazelwood testifies Well, I only had time to drink half of
 (21) it in the 25 minutes or I may not have drunk it, sitting there
 (22) for 25 minutes 25 minutes is almost a TV program He has at
 (23) least one and his companion says could have been more
 (24) That's 14, maybe 15, maybe 16, because there's testimony
 (25) here that it was at least three

Vol 23 3994

- (1) Now in point of fact I don't think we'll ever be able to
 (2) run up an accurate number like an accountant could do on an
 (3) adding machine because alcoholics minimize how much they
 (4) drink
 (5) and corporations that are caught minimize what's happened
 (6) But
 (7) there was an awful lot of booze that went into that man that
 (8) afternoon an awful lot of booze
 (9) Thank you
 (10) Why did Hazelwood lie to the Coast Guard about his alcohol
 (11) consumption the afternoon of the 23rd? That's a good
 (12) question Was it reckless or safe for the Exxon Valdez to
 (13) leave the dock for the managing agent, Hazelwood, to have the
 (14) Exxon Valdez leave the dock when the mates were in violation
 (15) of
 (16) the six on/six off, when he was in violation of the four hour
 (17) drinking rule and when he'd been drinking all afternoon?
 (18) Reckless or safe?
 (19) What does Hazelwood - do we have what Hazelwood told the
 (20) Coast Guard? Lied He doesn't get any of it right
 (21) The most important job of a captain is the safety of the
 (22) vessel The vessel hit a rock
 (23) Hazelwood doesn't inform the VTC when he actually leaves
 (24) the TSS He gives the VTC incorrect information about his
 (25) speed On the VTC tape he slips and starts to say Baton
 (26) Rouge He leaves the bridge two minutes before the turn He
 (27) violated Exxon policies with regard to Watch Condition C He's
 (28) lost after the grounding, he doesn't know where he is he says

Vol 23 3995

- (1) north of Goose Island He lies to Myers and Delozier and
 (2) others about his post-grounding maneuvers or he's actually
 (3) trying to get the vessel off a rock There's confusion
 (4) regarding where the ice is and where the turn is He smokes
 (5) after the grounding He vomits about midnight
 (6) All of the Exxon people who see him claim that he was
 (7) okay But let's take a look at the people who aren't under
 (8) Exxon control
 (9) Murphy smells alcohol twice, Falkenstein smells stale
 (10) alcohol Delozier smells alcohol Lawn smells alcohol He lies
 (11) to Delozier regarding his alcohol consumption
 (12) I want to talk about the voyage Can we bring that board
 (13) up? Do we have the Cushing board? I'll use that one
 (14) This one if you could just hold this here for a minute and
 (15) bring it back I don't need it for long -
 (16) But at the time Hazelwood left the bridge - there was
 (17) confusion and this is how you know that This is Hazelwood's
 (18) version of the leading edge of the ice this is Cousins
 (19) version of the leading edge of the ice (indicating) Two
 (20) different versions Why? Because there's confusion
 (21) This is where Hazelwood and Cousins now say the turn was
 (22) supposed to be made Cousins and Hazelwood when they
 (23) were
 (24) interviewed by Delozier say it was made here It was to be
 (25) made here Why? Confusion
 (26) Thank you

Vol 23 3996

- (1) Leaving the bridge two minutes before the turn in dangerous
 (2) conditions and eight minutes before you were going to clear the
 (3) ice There's confusion there's ice Watch Condition C
 (4) Pilotage, Cousins says he's never done it before Greg
 (5) Cousins says, I've never done it before Hazelwood says, I got
 (6) the call at two minutes Cousins doesn't say that, Cousins
 (7) says, I called him when I started the turn Way down here
 (8) Stalzer Martineau, Sheehy Duncan and Bolton all say they
 (9) would have been on the bridge Kunkel Cousins, Jarossi, Rawl
 (10) and LeGrange all say it was wrong for him to have left the
 (11) bridge They're going to say - this is real interesting
 (12) They're going to say it wasn't Hazelwood's fault because, if
 (13) Cousins would have made the turn at the time, the grounding
 (14) wouldn't have happened, okay?
 (15) What's wrong with that? The law allows there to be two
 (16) causes or three causes, and if Hazelwood would have been on
 (17) the
 (18) bridge drunk or sober as he admitted or a sober captain would
 (19) have been on the bridge, the grounding wouldn't have
 (20) happened
 (21) That's clear If he would have been on the bridge, the
 (22) grounding wouldn't have happened
 (23) Drinking an alcoholic drinking all afternoon equals
 (24) sleepiness and poor judgment which equals leaving the
 (25) bridge
 (26) An alcoholic drinking all afternoon equals sleepiness and poor
 (27) judgment which equals leaving the bridge That makes sense
 (28) It accords with obvious our obvious common experience

Vol 23 3997

- (1) They're in the danger zone He could have waited two minutes
 (2) he could have waited eight minutes, he could have waited ten
 (3) minutes He has an interesting story about why - his story
 (4) about why he goes below changes, and it even changed when
 (5) he
 (6) wasn't on the stand but originally it was to do paperwork
 (7) And then it changes We need to come up with a better
 (8) explanation because paperwork sounds lame, so it was a
 (9) weather
 (10) report And then Bolton comes in and he testifies, Well, he
 (11) needed to make a decision to go to Knowles Head or something
 (12) like that Nobody ever testified before Bolton about Knowles
 (13) Head They made this story up as the trial went
 (14) Drinking equals poor judgment and tiredness, equals leaving
 (15) the bridge
 (16) Thank you
 (17) Could I see the next one? The Arco Brooklyn and the Arco
 (18) Juneau - this looks like a drunken stagger compared to theirs
 (19) but there's a couple of different things Their captains were
 (20) on the bridge They didn't go in the red zone, they didn't hit
 (21) Bligh Reef, but their captains were on the bridge
 (22) And from the time he left the bridge until all the way down
 (23) here - remember all those other track lines? - he could have
 (24) avoided it Remember all those other track lines? He could
 (25) have avoided it, if he would have been on the bridge Poor
 (26) judgment equals leaving the bridge
 (27) Here are, in summary form, different evidences of the fact

Vol 23 - 3998

- (1) that the captain was not operating at a hundred percent We've
 (2) gone over them a million times You want me to go over them
 (3) again? I mean we've been over them a million times The big
 (4) one, though is he turned the con over to Cousins in violation
 (5) of Watch Condition C and in violation of the pilotage
 (6) requirement
 (7) But there are a bunch of them here They try to explain
 (8) them all away One of the more interesting ones to explain
 (9) away is why does he tell everybody that he was trying to get it
 (10) off the reef when he was trying to keep it on the reef?
 (11) Now, you can have that either way If he was trying to get
 (12) it off the reef, that shows that he wasn't all there If he
 (13) was trying to keep it on the reef, both in the hours after the
 (14) grounding and in the interview with the Coast Guard and with
 (15) Mr. Myers and his telephone call to him he says, I was trying
 (16) to get it off the reef Something's wrong one way or the
 (17) other
 (18) And then after the grounding, Hazelwood tells Myers, it's
 (19) my fault, and Hazelwood tells Fox You're looking at it
 (20) And now let's go through their excuses
 (21) Thank you
 (22) We had to give him his job back, but they didn't have to
 (23) give him his job back He was caught and they didn't have to
 (24) put him back in the same job and they fired over 35 people for
 (25) drinking

Vol 23 - 3999

- (1) They couldn't monitor him because of confidentiality Give
 (2) me a break The statement is stupid It is a stupid statement
 (3) to say, I can't talk to you about your alcoholism problem
 (4) because of confidentiality There's nothing non-confidential
 (5) about talking to somebody about it, is there? Isn't that what
 (6) you do somebody comes back to work from alcohol treatment
 (7) and
 (8) you say Let's talk about it I mean, our common experience
 (9) tells us that's the first thing we would do
 (10) Montgomery monitored in a direct and open way Dr. Masters
 (11) has testified about it Jerry Aspland testified about it,
 (12) their policy allows it And the guidelines for masters
 (13) captains, managers and supervisors, on the second page there
 (14) is
 (15) a statement If the employee refuses to rehabilitation or fails
 (16) to respond to treatment the company will take appropriate
 (17) disciplinary action
 (18) How do you know if he's failing to respond to treatment?
 (19) By sneaking around? No, you know it by talking to him by
 (20) treating with him honestly and decently Their policies allow
 (21) them to monitor Iarossi says he should have been talked to
 (22) directly openly, frankly They whisper it and refer to it by
 (23) code name H Everybody in the fleet knew he had been
 (24) through
 (25) rehab and everybody in the fleet knew he was drinking
 (26) We monitored job performance The regulations, their rules
 (27) say, We monitor rehabilitation and thus we monitor job
 (28) performance in the case of safety-sensitive positions is an

Vol 23 4000

- (1) interesting concept, because you know what it means? Let's
 (2) wait until the airplane crashes or the boat runs aground and
 (3) then we have bad job performance and then we can fire him
 (4) and
 (5) the public be damned This is a company whose view is the
 (6) public be damned He's not an alcoholic That's absolutely
 (7) incredible He didn't have to be on the bridge, everybody says
 (8) he had to be on the bridge
 (9) There was no pilotage There was a pilotage requirement
 (10) Mr. Lynch in his opening said it was required Mr. Lynch in
 (11) his opening statement said pilotage was required and now a
 (12) couple of minutes - I started at 8:15 and in five minutes
 (13) wherever I am, I'm going to play you a tape, because the tape's
 (14) ten minutes long And in the tape, the first guy that you'll
 (15) see in the tape is Ulysses LeGrange All five of the people in
 (16) the tape are high Exxon corporate officials
 (17) You remember the first day we played Exhibit 2, the
 (18) videotape? And a lot of it went by me and may have gone by
 (19) you We're going to play it again now in three and a half
 (20) minutes to remind you of what these people said earlier and so
 (21) you can compare it to what they said in the courtroom In
 (22) fact we'll play it right before they argue
 (23) Blame it on Cousins, which is sort of like blame it on Mary
 (24) Williamson, blame it on Steve Day, blame it on Jim Shaw Now
 (25) let's blame it on Cousins Cousins admits he was out of his
 (26) element there was confusion on the bridge And leaving the

Vol 23 - 4001

- (1) bridge do we have a - yeah, Exxon admits that his leaving the
 (2) bridge was the cause of the spill This is a stipulated fact
 (3) You're bound by this stipulation You're also bound by
 (4) common
 (5) sense and the evidence, which goes into the stipulation The
 (6) Exxon defendants admit that the captain was negligent He was
 (7) also reckless That such negligence was a proximate cause of
 (8) the spill His leaving the bridge was a proximate cause of the
 (9) spill Causal connection You can't argue around it Okay?
 (10) And the judge will instruct you that something can have two
 (11) causes, so it could be Cousins' fault but it is certainly
 (12) Hazelwood's fault and it is certainly Exxon Corporation's
 (13) fault
 (14) The blood test I haven't talked about the blood test but
 (15) there's a real easy answer to the blood test
 (16) Can I have the Elmo?
 (17) All of this talk about whether it was one size or another
 (18) size seven versus ten and all of that, remember all of that?
 (19) First of all the only person to actually come in and testify
 (20) about the chain of custody was Dr. Smith and he said it was
 (21) fine, because there was no tube tampering But this is real
 (22) interesting
 (23) See all the initials on that? All the labels on it,
 (24) everybody's signature on it? It was never tampered with And
 (25) the instructions - Conner says he got the test tubes out of
 (26) the Exxon kit The instructions tell you what size the test

Vol 23 4002

- (1) tubes are Two sterile ten milliliter Vacutainer brand tubes
 (2) each containing preservative so we know that these are the
 (3) same tubes that got to the lab They got initials on them
 (4) You see right there where it says vacuum, where my finger is?
 (5) Becton Dickinson, same as the old paper off of the boat And
 (6) that they're ten milliliter test tubes is, interestingly
 (7) enough, right above the captain's signature
 (8) And I want to play the tape and I'm right in the middle of
 (9) what I was saying, but I'm going to stop and we'll play the
 (10) tape and then I'll visit with you in about two hours Okay,
 (11) would you play the tape?
 (12) (Videotape played, following)
 (13) MR RAWL Two critical regulations that you need to
 (14) know about Regulations require a local pilot on board the
 (15) vessel from the time she leaves the dock until she gets through
 (16) the Valdez Narrows and enters Prince William Sound Another
 (17) regulation requires that we have a pilot aboard the vessel
 (18) while she's transiting Prince William Sound Industry practice
 (19) has become we qualify our ship captain to be that pilot while
 (20) we transiting Prince William Sound So the master of the
 (21) vessel has a pilot's license for this portion of the journey
 (22) From time to time, someone will say that - not necessarily
 (23) the master, but someone has a drinking problem, and you'll
 (24) follow up on it and some amount of time there's some fire under
 (25) that smoke In this case we didn't have -

Vol 23 - 4003

- (1) (Change of setting still video)
 (2) You had no reports?
 (3) We had no reports on this, to my knowledge
 (4) The other question people are asking about Exxon is how in
 (5) the world could a captain with the record of this captain be in
 (6) charge of a tanker in these environmentally sensitive waters
 (7) and why was he not on the bridge at the time of this accident?
 (8) Well the last part is apparent He was drunk according
 (9) to his own - the indication certainly of the test Now in
 (10) terms of how that happened every tragedy that you and I ever
 (11) hear about there's two very unfortunate circumstances that the
 (12) odds would say wouldn't happen that happen This man
 (13) should
 (14) not have been back on the bridge after this treatment We do
 (15) have a policy however, that says if employees have a
 (16) problem - and I suppose every industry or most large
 (17) companies
 (18) have it - you try to get them into therapy, to recover but
 (19) certainly do not intend - and this policy doesn't say put them
 (20) back in critical skills jobs and we have not only ship
 (21) captains we have airplane pilots we have people that run
 (22) refineries and so forth This unfortunately should not have
 (23) happened
 (24) (Different setting, still video)
 (25) Q Was it good policy to leave a man with a substantial record
 (26) of alcohol abuse in command of a tanker loaded with oil?
 (27) A No, it was not a good policy When somebody comes
 (28) out of

Vol 23 4004

- (1) alcoholic rehabilitation he obviously is still a risk that we
 (2) all know, percentage-wise, there's a risk that he will not
 (3) recover and, under pressure, certain things can happen I
 (4) would guess that that's what happened here
 (5) (Different setting, still video)
 (6) Q Let's stipulate drunks shouldn't drive tankers and let's
 (7) get on to another question
 (8) A That's right.
 (9) This is something else Tests made sometime after the
 (10) grounding show the captain's alcohol limit was above limits
 (11) established by the Coast Guard That's clear, there are still
 (12) many unanswered questions as to what occurred during
 (13) this
 (14) period of time The Prince William Sound area is unusual,
 (15) that
 (16) most of the three mates plus the captain is licensed to pilot
 (17) this ship in many areas In Prince William Sound, as it's
 (18) been
 (19) said many times this morning, you have the state pilot takes
 (20) it
 (21) to a certain point and then the - can you hear me? I'm not -
 (22) in this case, the pilot - the pilot was also the captain
 (23) Obviously we had no knowledge of - or of how he was
 (24) impaired
 (25) I think it's possible, however - or as I understand the law
 (26) there, it's possible to have two mates on the bridge at the
 (27) same time in a case like this to where you could in fact do
 (28) what needs to be done when you have ice in one channel
 (29) and
 (30) there was a great deal of concern about the ice and so forth
 (31) I am not trying to make any excuses on this, but the facts
 (32) are

Vol 23 - 4005

- (1) there are ways to do that if in fact, as you suggested in
 (2) earlier conversation with Secretary Skinner, that if one had
 (3) a
 (4) heart attack or something - it just seemed kind of
 (5) ridiculous,
 (6) so there are other options available
 (7) Now the same impairment, apparently, that created the spill
 (8) to begin with created a situation where maybe the master
 (9) could
 (10) have said, Bring another mate up and have - they had -
 (11) they're actually, when the skipper was on the bridge, there
 (12) were four people There was a lookout on one of the wings,
 (13) there was a person that was in charge which then was the
 (14) captain There was the third mate who it was his shift and
 (15) there was also the man that was steering the vessel or the
 (16) person steering the vessel So that was the situation
 (17) Had when he went down, as I understood it, he could have
 (18) sent up another mate and be legally responsive Whether
 (19) or not
 (20) that ship would have hit the reef or not, I would expect it
 (21) would have had a much better chance of getting through
 (22) there
 (23) I've had a lot of difficulty understanding this accident
 (24) myself, I can assure you that
 (25) The judgment to put him back on the ship is a judgment
 (26) made
 (27) at a - at an operating level Obviously it was a bad
 (28) judgment, could have been a bad judgment in a lot of
 (29) people's
 (30) eyes on a going in basis, mine being one
 (31) But in any event, I just wanted to make that clear - in
 (32) case you hadn't heard of that, I didn't want you feeling like I

Vol 23 4006

- (1) didn't level with you when I was up here talking to you
When
- (2) we found out, however, there was alcohol involved and the
other
- (3) circumstances, we found out he violated a lot of policies, he
(4) was terminated
- (5) (Different setting, still video)
- (6) My own view is that that occurrence 200 000 barrels in
(7) Prince William Sound was viewed, quote, so highly unlikely
(8) that the consequences of it, which have occurred pretty well as
(9) much as envisioned were viewed as acceptable by today a
(10) retrospective view that is not the case That may be
(11) incomprehensible
- (12) Q Well it is -
- (13) A Senator, we have been in the past investigating the
(14) drinking habits of people, particularly individuals who have
(15) been through a rehab program
- (16) Q This man had been with you?
- (17) A Yes
- (18) Q How could you not know that he was a problem drinker if
(19) you put him through rehab program?
- (20) A Our policy, which is admittedly a two-edged sword, if you
(21) will, is to promote self identification, and rehab is the
(22) cornerstone, according to the experts The practice and the
(23) policy were followed in this instance What is required to
(24) make that work, I'll allow United Airlines practice if you
(25) will, is close follow-up after the individual returns

Vol 23 - 4007

- (1) DIFFERENT SPEAKER Frank would you comment on that?
- (2) A From the time that Captain Hazelwood returned from
(3) rehabilitation, he was the most closely scrutinized
individual
- (4) in our company
- (5) Q How is it Exxon - which trains its captains, you just
(6) said - didn't pick up Captain Hazelwood's drinking problem?
(7) He'd gone through a rehabilitation program and his mother
says
- (8) Exxon knew about that?
- (9) A I think, and I'm sort of after the-fact, but Exxon did know
(10) about rehabilitation and I think we made a gross error -
which
- (11) I'll guarantee you won't be repeated with that kind of
(12) rehabilitation We've got a program which says we'll give
(13) people a job It doesn't say we put them back to flying
(14) airplanes or piloting tankers or whatever other kinds of
really
- (15) risky kinds of activities we have, and there are a lot of them
(16) in any large business, but I frankly wish I had known or I
wish
- (17) some of the senior management in Exxon USA had known
- (18) (Different setting still video)
- (19) Q And that program did not detect his use of alcohol?
- (20) A No
- (21) Q Why do you think that was?
- (22) A I couldn't respond
- (23) Q After Captain Hazelwood's rehabilitation, the - the fleet
(24) operation manager and the ship group coordinator were
assigned
- (25) to make visits, and I believe you said about two visits a month

Vol 23 4008

- (1) when he was in port to observe him, I believe also to discuss
(2) his problems with him?
- (3) A Yes, and I think he felt he was the most scrutinized
(4) employee in our company I think he felt a little
(5) uncomfortable with it
- (6) (Different setting, still video)
- (7) Q I just want to be sure - and I don't know that one can get
(8) that assurance in a reasonable fashion in this setting at this
(9) time - that we're not going to find a week or a month or six
(10) months or a year down the road when the immediate glare of
(11) headlights and cameras and the inevitable short attention span
(12) of the American people and their media has relegated this
(13) somewhere to the background, that somewhere in some court a
(14) lawyer representing Exxon is going to suggest that the Coast
(15) Guard did not do all that they could or should have done and
(16) therefore at least some of the legal liability should fall on
(17) the government and the taxpayers of the United States rather
(18) than on the corporation
- (19) A Now, we - let me just put it this way in operational
(20) terms We - I'm sure, we've been in and out of there, there
(21) was something like 8800 voyages with tankers in and out of
that
- (22) harbor, we had a large percentage of them 20 percent of
them
- (23) or less, I guess We probably had bigger ships A large
(24) number of those times, we didn't expect any radar help and
we
- (25) didn't get any radar help, if that's what you're getting to

Vol 23 - 4009

- (1) right now, and, therefore, when we put that ship in there the
(2) last time and unfortunately didn't get it out of there, as far
(3) as the people that were running that company, Exxon
Shipping
- (4) Company, they didn't expect to have to rely on the Coast
Guard
- (5) to get them out of that harbor I said earlier, I think before
(6) you came in, that the weather was good and so on and so
forth
- (7) So if you're talking about that particular part of it, but
(8) you know, I feel a little uncomfortable just generalizations
on
- (9) this kind of thinking, but you - I'm trying to get across my
(10) intention, our corporate intention and the intention of the
company in Houston that's dealing with these ships
- (11) (End of video)
- (12) MR O NEILL That's all judge
- (13) THE COURT Ladies and gentlemen let's take our
(14) initial recess at this point so we won't have to divide up the
(15) other argument We'll be in recess for 15 minutes as soon as I
(16) hear from Mr Neal, I guess but you may leave
- (17) (Jury out at 9 45 a m)
- (18) (Side bar)
- (19) (Recess at 9 47 a m)
- (20) (Jury in at 10 01 a m)
- (21) MR NEAL Your Honor -
- (22) CLOSING ARGUMENT BY MR CHALOS
- (23) MR CHALOS Wait until I start Good morning
- (24) May it please the Court, counsel, Ladies and Gentlemen of

Vol 23 - 4010

- (1) the Jury If I were a member of the jury in this case the
- (2) primary question that I would want discussed is was Captain
- (3) Hazelwood impaired by alcohol on the night of the grounding
- (4) Everyone seems to acknowledge that this is the paramount
- issue
- (5) in this case Because I represent Captain Hazelwood and
- (6) because both he and I deeply resent the unsupported
- allegations
- (7) that have been made that he was impaired on the night of the
- (8) grounding, I've asked to go first
- (9) I want to - I wanted the opportunity to address you on
- (10) this issue and go through the evidence because, if he was not
- (11) impaired if he was not impaired on that night, it doesn't
- (12) matter whether Captain Hazelwood may have had an
- occasional
- (13) drink, social drink with his shipmates at the Yankee Whaler or
- (14) whatever the place was called or at some other place at some
- (15) other time It doesn't matter if Exxon's alcohol policy was
- (16) perfect or imperfect It doesn't matter whether Exxon should
- (17) have returned Captain Hazelwood immediately to a ship or
- given
- (18) him some shore leave and then returned him, and it doesn't
- (19) matter whether Exxon's monitoring was good or bad, perfect or
- (20) not perfect
- (21) I told you in my opening statement that there are two myths
- (22) in this case The first myth is that Captain Hazelwood was a
- (23) recovering alcoholic He was not The second myth was that
- he
- (24) was impaired on the night of the grounding He was not
- (25) In other words you remember the words of Commander
- McCall

Vol 23 - 4011

- (1) he was the highest ranking Coast Guard official in Valdez after
- (2) the grounding He said the allegation that Captain Hazelwood
- (3) had been drinking as far as being a cause of the grounding, is
- (4) just smoke That's all it is smoke I intend to take you
- (5) through the evidence and demonstrate to you that Commander
- (6) McCall was right when he said that five years ago and is right
- (7) today
- (8) Before I do that though, I want to blow up the first myth
- (9) that Captain Hazelwood was a recovering alcoholic
- (10) Mr O'Neill has preached to us now for a month he said
- (11) You cannot change the written word You heard him He said it
- (12) ten times if he said it once Well, ladies and gentlemen here
- (13) is the written word This is the IDR
- (14) Would you blow up the - you've got to do it on here?
- (15) This is Captain Hazelwood's diagnosis This diagnosis was
- (16) made by a well known and respected doctor in this field It
- (17) was not made by an attorney for the plaintiffs who has a stake
- (18) in this case This doctor diagnosed Captain Hazelwood as
- (19) suffering from dysthymia which is a mild form of depression
- (20) and secondarily from alcohol abuse episodic What that means
- (21) is prior to his treatment, Captain Hazelwood would on occasion
- (22) become depressed and he would abuse alcohol This is not a
- (23) diagnosis of alcoholism This is not a diagnosis of
- (24) alcoholism All the doctors that have come in here including
- (25) the plaintiffs' doctors had said - and they were reluctant

Vol 23 - 4012

- (1) but they said it this is not a diagnosis of alcoholism
- (2) Mr O'Neill and his colleagues getting up here and a
- (3) thousand times saying a thousand ways that Captain
- Hazelwood
- (4) was an alcoholic doesn't make him an alcoholic He was not
- (5) diagnosed an alcoholic and he's not an alcoholic
- (6) Plaintiffs' counsel tell you that anyone who ever goes
- (7) through medical treatment that involves some sort of alcohol
- (8) treatment with it can never drink again They say if he does,
- (9) what happens is he becomes an out of control, binge alcoholic
- (10) drinker who is going to pass out if he does it That's what
- (11) they told you And for sure they can never take on a
- (12) safety-sensitive job
- (13) But you know what? Their experts don't agree to that
- (14) They don't agree with either proposition They told you that
- (15) Captain Hazelwood was never told that he could not drink
- (16) again nor did he ever believe he could not drink again
- (17) Plaintiffs say after he came out of rehab that he drank here,
- (18) he drank there, and it goes on and on and on and on It
- (19) doesn't go on and on and on The evidence in this case is that
- (20) there were 13, 13 to 15 occasions where he had a beer - two
- (21) glasses of wine, he had two vodkas in Portland that's true,
- (22) and the same night he had wine So that's really one day, one
- (23) occasion
- (24) He had three beers in Portland watching a hockey game in
- (25) his apartment with his friend Kimtis

Vol 23 - 4013

- (1) He had three vodkas on the night of the - on the afternoon
- (2) of the grounding and he had one incident in 1988 where his
- (3) buddy Kimtis - same age, good friends family friends -
- (4) passed away suddenly He was bereaving then so he drank
- eight
- (5) drinks
- (6) But he had 13 to 15 incidents in four years Do you know
- (7) how many days there are in four years? I figured this out 14
- (8) hundred and 60 days
- (9) You know what this means? It means that he drank one time
- (10) every 100 days That's three and a third months One time
- (11) every three and a third months One beer two glasses of
- (12) wine
- (13) Ladies and gentlemen, if that isn't modest social drinking
- (14) at its best I got to tell you, we're all alcoholics That's
- (15) modest social drinking and that's exactly what he was doing
- (16) There's no evidence here that when Captain Hazelwood had
- (17) one beer he had to have four beers or ten beers or 20 beers
- (18) and he drank until he passed out There's no evidence like
- (19) that because it didn't happen Captain Hazelwood was not a
- (20) recovering alcoholic
- (21) Folks, it's all nonsense You've seen Captain Hazelwood
- (22) You heard him testify on the stand You've observed him
- (23) You've observed him here for a month He's a good, decent
- (24) responsible man who's being unfairly trashed and un- - and
- (25) unjustifiably deprived of his dignity by plaintiffs' counsel

Vol 23 4014

- (1) For what? For what? So they can come in here and bolster
- (2) their case so they can give you a better argument They
- (3) should be ashamed of themselves and you shouldn't buy into it
- (4) I want to talk about impairment I want to put up a
- (5) chart Ladies and gentlemen, these are 20 witnesses who saw
- (6) Captain Hazelwood on the afternoon of March 23rd, the
- (7) evening
- (8) of March 23rd, the early morning hours of March 24th and the
- (9) late morning hours of March 24th 20 witnesses - some Exxon
- (10) employees, but a lot of people who are not Exxon employees
- (11) There isn't a single witness in these 20 who said Captain
- (12) Hazelwood was impaired not a single witness
- (13) Who said he was impaired? Nobody Nobody came into this
- (14) courtroom and said they saw Captain Hazelwood on the 23rd or
- (15) 24th and found him to be impaired The only one that says he's
- (16) impaired is Mr O Neill and he didn't see him
- (17) I want to talk about some of these witnesses, because
- (18) they're interesting 16 and 17, Delozier and Falkenstein, they
- (19) were the on-scene Coast Guard investigators who boarded the
- (20) vessel at 3 45 a m on the morning of the 24th Now, you
- (21) remember Falkenstein he said that Delozier told him that he
- (22) smelled alcohol on the captain's breath and he concurred But
- (23) he also said that based on what he saw, he wouldn't have never
- (24) ordered the blood test to be taken because he didn't see any
- (25) signs at all of impairment and so did Delozier
- (26) Why is that significant? When these guys came on they

Vol 23 - 4015

- (1) believed the ship was in a perilous state They didn't know
- (2) what was going to happen They didn't know if the ship was
- (3) going to break up they didn't know if it was going to
- (4) capsizе They were scared witless okay and they were acutely
- (5) aware of the impairment issue Why? Because they smelled
- (6) alcohol on his breath so they had to be looking for signs of
- (7) impairment Their lives depended on it, the lives of the crew
- (8) depended on it
- (9) So what do they say? They said Well, other than this
- (10) perceived smell of alcohol - which could have been the
- (11) nonalcoholic beer Moussy - we didn't see any signs of
- (12) impairment They had the right, if they felt that Captain
- (13) Hazelwood was impaired to remove him from command They
- (14) not
- (15) only had the right but if they felt he was impaired it was
- (16) their lives Did they remove him? No, they didn't remove him
- (17) at all They said he was fine He looked fine, he acted fine
- (18) he was in control he was - he was in charge of the
- (19) situation
- (20) Are these guys Exxon witnesses that came in here and lied?
- (21) Of course they're not The other guy that's interesting is
- (22) this guy here, Kunkel He was the chief mate If you
- (23) remember, he came up to the bridge about 12 30 and he said
- (24) just like Chicken Little almost he thought the world had come
- (25) to an end He wasn't going to see his wife again this was his
- (26) last day on earth You remember that?

Vol 23 - 4016

- (1) And he said, I talked to the captain and I looked him right
- (2) in the eye, I looked him right in the eye and the captain
- (3) started giving me orders and they were so precise so
- (4) competent that my fear dissipated You think if Captain
- (5) Hazelwood was impaired as Mr O Neill suggests that he would
- (6) have had that kind of effect on a guy that was already starting
- (7) to panic? No way
- (8) The third guy that's interesting here is the pilot William
- (9) Murphy Captain Murphy - he's not an Exxon employee - said
- (10) that he interacted with the captain in the afternoon, they had
- (11) lunch together, then he interacted with him when he came on
- (12) board that evening and he was with him for a couple hours
- (13) before he left He said, I smelled what I thought was
- (14) alcohol, but he wasn't impaired He said Captain Hazelwood
- (15) wasn't impaired He acted professionally he acted like he
- (16) always acted, in charge, in command
- (17) Now, I want to show you something, because this is
- (18) important for later on Can I have the trip tickets?
- (19) Okay, this is the pilot tickets Let me start with the
- (20) 22nd, this is Captain Hazelwood's signature
- (21) Here's his signature on the 23rd This is the - the
- (22) evening that Pilot Murphy got off - they're exactly the same,
- (23) ladies and gentlemen If this man was impaired you think he'd
- (24) be able to sign the way he did right on the line straight as
- (25) an arrow? No way

Vol 23 - 4017

- (1) Another thing that's important here is Mr O Neill showed
- (2) you a picture of a vial of blood, told you there's all kind of
- (3) initials and stuff on there He didn't tell you they were
- (4) Captain Hazelwood's initials They weren't and I'm going to
- (5) get to the blood test because Mr O Neill gave you the
- (6) quick-over on that one
- (7) So what is - what is the so-called evidence that the
- (8) plaintiffs have that Captain Hazelwood was impaired? It's the
- (9) blood alcohol test result of 061 They say that comes from
- (10) Captain Hazelwood's blood sample that was taken from him the
- (11) morning of the grounding
- (12) You remember in my opening statement, I promised you a
- (13) story of incredible bungling or purposeful tampering? You
- (14) remember that? Everything I told you about the blood test
- (15) came
- (16) to be Every piece of evidence that I told you would be
- (17) presented was presented
- (18) This blood test, ladies and gentlemen, was completely
- (19) botched There's a serious question as to whether it's even
- (20) Captain Hazelwood's blood Judge Holland is going to instruct
- (21) you about - can I have Judge Holland's instruction?
- (22) He's going to instruct you, first of all, that the
- (23) plaintiffs must prove by a preponderance of the evidence that
- (24) the test was reliable and that the samples remained unchanged
- (25) at all times You're the sole judges of that The chain of
- (26) custody regulations that we're talking about are intended to

Vol 23 4018

- (1) protect the integrity of the samples, to prevent tampering and
- (2) to ensure what is tested is what is removed from the subject
- (3) They're also intended to preserve and prevent the blood from
- (4) self-generating or becoming contaminated and giving a false
- (5) positive reading
- (6) Now, Judge Holland is going to give you this instruction and
- (7) he is going to say to you if you find that the chain of custody
- (8) was breached in any way, you can disregard that test. That is
- (9) what this instruction is about. If you find that these federal
- (10) regulations were not complied with, you may completely
- (11) disregard the blood test or you may give it as much weight as
- (12) you think it deserves. These are federal regulations, ladies
- (13) and gentlemen. Every single one of these regulations was
- (14) violated. Every single one when it comes to Captain
- (15) Hazelwood's blood.
- (16) Let us go quickly about what happened. I don't want to
- (17) belabor the point.
- (18) Mr. Conner said he took blood from Captain Hazelwood, and
- (19) what's important here is he said he put an orange tag, you
- (20) remember - an orange tape up the side, across the top and
- (21) down
- (22) the side and then he crimped it. He didn't put any white
- (23) stuff on it. He put an orange tape, that is what he said. He
- (24) put it in a Styrofoam box, sealed it and went ashore.
- (25) Now, instead of putting it into a locked refrigerator as
- (26) he should have done - that's what the regulations call for.

Vol 23 4019

- (1) he took it and put it on the window sill, told you that
- (2) That's a violation.
- (3) He then took it - instead of again putting it into a
- (4) locked refrigerator - put it in the general galley, next to
- (5) the tomatoes and the lettuce, you remember that left it there
- (6) unattended overnight. Accessible to any number of people.
- (7) That's a violation.
- (8) He then took it on his lap, got on a plane, went to
- (9) Anchorage and instead of taking it to Lieutenant Stock, who
- (10) was his commanding officer, he took it home and put it in his
- (11) refrigerator. That's a violation.
- (12) Stock, who didn't know anything about handling of
- (13) samples - you remember that? Stock said he had to call
- (14) somebody in the DA's office or trooper's office because he
- (15) didn't know what to do, breaks the seals and takes the samples
- (16) out and starts looking at them.
- (17) That's an incredible violation. That is what the chain of
- (18) custody is all about. You don't break the seals and start
- (19) looking at the samples, they're not supposed to be handled.
- (20) That was an incredible violation, I'm telling you.
- (21) He then takes them and sends them to some unattended
- (22) remote
- (23) warehouse here in Anchorage. That's a violation. Then he puts
- (24) them in a Federal Express envelope and - unrefrigerated and
- (25) sends them to CompuChem down in Sacramento. That's a
- (26) major
- (27) violation.

Vol 23 - 4020

- (1) So what happens? CompuChem gets the samples. Karen
- (2) Metcalf, she testified, was told by Dr. Peat, Be very careful
- (3) this is a very important case, this was the grounding of the Exxon
- (4) Valdez, make sure that you log these things in right.
- (5) And she did, she logged them in. And she said she didn't
- (6) make any mistakes and you know what, she didn't make any
- (7) mistakes at all because everybody else is she got right. What
- (8) the plaintiffs are suggesting is that she got Hazelwood's
- (9) wrong.
- (10) She didn't get Hazelwood's wrong, she got it right. She
- (11) got three ten milliliter red stoppered tubes of blood. That is
- (12) what she got when they first came in.
- (13) Why is that significant? Red-stoppered tubes do not
- (14) contain preventatives and they're not used for blood alcohol
- (15) testing. You got to have the gray stoppered tubes, that is what
- (16) Conner said he used. But that is not what she said she
- (17) received. Conner knows the significance, but that is what she
- (18) got.
- (19) So what happens? The evidence is that, when you put it in
- (20) red stoppered tubes, the blood can ferment, it can become
- (21) contaminated, then you're going to get a false positive
- (22) reading.
- (23) That is what happened here. That is exactly what happened.
- (24) You hear Cousins' blood was contaminated. That is because it
- (25) wasn't refrigerated. That is what was happening. You also

Vol 23 - 4021

- (1) heard that Captain Hazelwood's blood underwent this process
- (2) of
- (3) hemolysis, you remember that red blood cells burst? Well,
- (4) their expert, Dr. Smith, said when that happens, the test
- (5) result is unreliable.
- (6) I mean, just for those reasons alone, you can disregard the
- (7) test, but throw in this violation of the chain of custody and
- (8) this test should be completely disregarded by you.
- (9) But you know what? I want to talk about this, because it is
- (10) interesting. The fiasco didn't end there. You remember?
- (11) Mrs. Peat, Dr. Peat's wife, without explanation - but there
- (12) really is an explanation - on May 1st, can we see - on May
- (13) 1st she hadn't been involved in these samples at all up to that
- (14) point. She went in, took the samples out, went over - by the
- (15) way, look at all the people that handled the samples before
- (16) that and not one of them ever noticed any problems because
- (17) there were no problems, but here she comes, right here, she
- (18) takes them out of storage and goes over to Ms. Metcalf and she
- (19) says, You've made a mistake, change the records. And that is
- (20) when she changed it to this, to conform with what Conner said.
- (21) Now Ms. Metcalf wasn't shown the samples. She was shown a
- (22) tube, real quick and said, This is where you made a mistake, go
- (23) ahead and change the records. Ms. Metcalf said I didn't make
- (24) a mistake, but she told me I did so, she's my boss, I had to
- (25) listen to her.
- (26) You remember what Dr. Peat said. He had gotten a call, he

Vol 23 4022

- (1) kind of tried to fudge it but he had to admit he got a call
- (2) from the NTSB before this date and they told him that his
- (3) records didn't conform with what Conner was saying so that s
- (4) why they changed it
- (5) But you know you remember the letter of May 1st that the
- (6) NTSB sent to Peat? He said to him We don't think there s
- (7) anything wrong, but do us a favor will you send a
- (8) gray-stoppered tube to another lab so we can confirm that your
- (9) readings of Captain Hazelwood s blood is correct
- (10) Did he do that? No
- (11) You know why he didn't do that? Because there was no
- (12) gray-stoppered tubes
- (13) What he did was - he was very sneaky, this guy He took a
- (14) sample of the same tube that he had tested remember that?
- (15) Sample of the same tube and he sent it on to another
- (16) laboratory What kind of confirmation is that? They re
- (17) testing the same thing Confirmation means you send another
- (18) tube so they can look at the other tube and see if they get the
- (19) same reading He didn't do that because you know why he
- (20) knew
- (21) he wasn't going to get the same reading
- (22) What s really interesting in this whole thing though is
- (23) the government s involvement
- (24) You remember Conner testified that he was hauled into
- (25) Cleveland into an FBI office and he was leaned on by a guy
- (26) named Lensin from the DLJ and he was intimidated He told
- (27) you

Vol 23 4023

- (1) he was intimidated
- (2) Then the NTSB gets involved and they change the records
- (3) Then a year and a half later in July Lensin is back again and
- (4) that s when they get you remember Metcalf to write an
- (5) affidavit So my question If everything s so great about
- (6) this chain of custody why is the government going through all
- (7) this trouble to change the records? You know why? Because it
- (8) isn't great This chain of custodies was all fouled up from
- (9) day one
- (10) Now who says who says that the chain of custody was
- (11) wonderful? Dr Smith You remember Dr Smith Dr Smith
- (12) said I didn't speak to Mr Conner, I didn't speak to
- (13) Lieutenant Stock I didn't speak to Ms Metcalf I didn't speak
- (14) to Mrs Peat I didn't speak to Dr Peat before I came to my
- (15) opinion I did speak to Dr Peat two weeks before I came here
- (16) to testify and he said everything was okay
- (17) Well everything wasn't okay I mean, if that s what he's
- (18) going to base it on then what I have to ask is I wonder how
- (19) Dr Smith would feel if this was his blood and he was sitting
- (20) in that defendant s chair, would he think it s wonderful? You
- (21) can rest assured he wouldn't
- (22) Let me see that picture we have a picture of the blood -
- (23) okay, let s put it up
- (24) Now, ladies and gentlemen this is a picture like
- (25) Mr O'Neill s picture that was taken a year and a half after

Vol 23 4024

- (1) the fact by Dr Peat Remember the samples were sent out
- (2) East? And that s when he took the picture
- (3) Mr Conner said he put this orange tape over the top
- (4) That s all he said he did Ms Metcalf and Lieutenant Stock
- (5) said there was a thin white seal over the top There was
- (6) nothing else on it, just a thin white seal and a red evidence
- (7) tape around that - like this okay?
- (8) Does this look - does any of this look like anything these
- (9) people described? Does it look like that? Where did this
- (10) white thing come from? That s not a thin white seal Where is
- (11) Conner's orange tape that was by itself?
- (12) Ladies and gentlemen these samples were doctored They
- (13) were doctored and somebody writing Joe Hazelwood s name
- (14) on
- (15) there and saying this is Joe Hazelwood s samples is nonsense
- (16) Joe Hazelwood didn't sign those samples those weren't his
- (17) samples It s that clear
- (18) I want to talk about the events of the afternoon and
- (19) evening of March 23rd Mr O'Neill says that Captain
- (20) Hazelwood
- (21) had six to 16 drinks He has no proof of that The proof is
- (22) Captain Hazelwood said, I had three vodkas That s confirmed
- (23) by his crew mates Question is, did he have a fourth He says
- (24) he didn't His crew members say I don't know we ordered the
- (25) drink I don't know if he started it drank some of it or
- (26) finished the whole thing That s the evidence Okay?
- (27) Now, Mr O'Neill says oh but wait a minute how about

Vol 23 4025

- (1) Lisa Harrison? Let me tell you what Lisa Harrison says She
- (2) says that he came in alone between 11 30 and 12 He ordered
- (3) a
- (4) double vodka, he stayed 20 to 30 minutes was wearing a white
- (5) or gray sailor s hat Then she says the same man came back at
- (6) two p m and ordered another double vodka and he stayed for
- (7) 15
- (8) to 20 minutes and left
- (9) The other - the bar patron Janice Delozier says - by
- (10) the way, she's the wife of the investigating officer, I told
- (11) you that - that he came in at 1 40 - sorry 1 45 with two
- (12) other men and he was wearing a golf hat with a snap in front
- (13) Said he was five foot-nine Captain Hazelwood is not five
- (14) foot-nine
- (15) That he was 50 to 55 That's an insult That he had olive
- (16) skin - sorry Judge, I mean as far as Captain Hazelwood is
- (17) concerned
- (18) And that he had a beard only up here to his chin Well
- (19) that s not Captain Hazelwood
- (20) She says that he drank two single vodkas and he was there
- (21) when she left at 2 45 Okay, no one has said that they saw
- (22) Captain Hazelwood in the Pipeline Club from 2 00 till 4 00 as
- (23) Mr O'Neill suggests That s the evidence that Harrison and
- (24) Delozier talk about
- (25) Now, Erma Lee, she was the bartender later on She said
- (26) that the man she identifies as Hazelwood came in at 7 00 had
- (27) one drink, stayed 15 to 20 minutes and left - he was alone

Vol 23 4026

(1) left Her description of Hazelwood is yet different than the
 (2) other two
 (3) Ladies and gentlemen, what you have here is three ladies
 (4) who are friends who hang around a bar together who got to
 (5) talking It s a small town and they all wanted to be part of
 (6) the action That s all it is to it None of these ladies saw
 (7) Captain Hazelwood that day
 (8) What really happened? You heard the evidence Captain
 (9) Hazelwood and his two crew members, along with Pilot Bradley
 (10) got into a car and left the Alyeska Terminal at 10 59 They
 (11) went directly to the Alamar office and got there about 11 30
 (12) They stayed at the Alamar office altogether for an hour from
 (13) 11 30 to 12 30 Nobody left They were all within each
 (14) other s sight
 (15) At 12 30 they were picked up by Pilot Murphy and driven
 (16) over to the Pizza Palace where they had lunch from 12 30 to
 (17) almost 2 00 You heard testimony on that They stayed
 (18) together the whole time Captain Hazelwood didn't drink then
 (19) They were driven by Mr Murphy, Captain Murphy over to the
 (20) Hobby Hut just before two Mr Roberson and Captain
 Hazelwood
 (21) went into the Hobby Hut and, in the Hobby Hut Captain
 (22) Hazelwood ordered flowers for his wife
 (23) Now we showed you - do we have that?
 (24) We showed you the telephone records where his charge was
 (25) verified at 2 02 Do you remember that? Can you zoom it in?

Vol 23 - 4027

(1) I trained him
 (2) At 2 02 That s what that says And Mrs Kaiser said that
 (3) he stayed in her shop from 2 00 for 45 minutes to an hour
 (4) That s what she said
 (5) Mrs Kaiser doesn t work for Exxon Why would Mrs Kaiser
 (6) lie? She doesn t know Joe Hazelwood, but she knew she saw
 him
 (7) that day, he bought flowers from her he was standing right
 (8) next to her She said he was cold-stone sober, didn't smell
 (9) any alcohol on him
 (10) So if Captain Hazelwood is with Captain Murphy until two
 (11) and is in the flower shop from two to almost 3 00 he couldn t
 (12) be in the Pipeline Club, and if he s at the Alamar office from
 (13) 11 30 to 12 30, he couldn t be in the Pipeline Club when Ms
 (14) Harrison said she saw him
 (15) Now Captain Hazelwood has told you that he left the Hobby
 (16) Hut and walked around town for about an hour hour and a half
 (17) he went into some other shops then he went back to the Alamar
 (18) office and he arrived at the Pipeline Club at 4 30 That proof
 (19) is uncontroverted Uncontroverted That s when he got there
 (20) And he told you, while he was there, he had three single
 (21) vodkas So Mr O Neill comes in with these innuendos and
 (22) suggestions well the glass was this and the barmaid might
 (23) have poured doubles and blah blah blah-blah-blah The
 evidence
 (24) says he had three single vodkas and he didn t have three
 (25) single vodkas like this (indicating)

Vol 23 4028

(1) They sat there for two and a half hours and they were just
 (2) talking as friends do drinking socially And they stayed
 (3) together the whole time As soon as Roberson got there little
 (4) bit before five, they were together the whole time They left
 (5) the Pipeline Club together and they walked - you remember,
 (6) they were going to go back to the ship at that point but
 (7) Mr Glowacki said, Wait a minute I got to get pizza for the
 (8) crew
 (9) So they went to the Pizza Palace They had no intention of
 (10) going to another bar at that point they were going to go
 (11) home If you remember - I want you to keep this in mind -
 (12) when they were leaving the Pipeline Club about seven o'clock
 (13) they believed that the ship was going to sail at 10 00 That s
 (14) what they believed, or later That s the testimony
 (15) When they got over to the Pizza Palace it was crowded, and
 (16) instead of standing out where it was raining and snowing, they
 (17) ducked into the Club Valdez next door Captain Hazelwood
 has
 (18) told you they ordered a drink because they didn't want to just
 (19) stand there in the guy s bar, but he didn t drink it The
 (20) other two guys say they don t know if he did or not That's
 (21) the evidence that we have on that
 (22) Then they came out, got into a cab, went back to the
 (23) Pipeline Club to pick up a fourth passenger They didn't get
 (24) out of that taxi Ms Lee couldn t have seen them there when
 (25) she said she saw them They didn t get out of the taxi and

Vol 23 - 4029

(1) went directly to the Alyeska gate
 (2) Now Mr O'Neill says that Captain Hazelwood violated the
 (3) four hour rule That's true There s a technical violation of
 (4) that four hour rule because the ship sailed an hour earlier
 (5) than they expected, at least an hour earlier However, the
 (6) judge is going to instruct you that you can ignore that
 (7) technical violation if you find that he was not impaired, and
 (8) that that violation was not a proximate cause or a legal cause
 (9) of the grounding, you can ignore that violation
 (10) Okay They come back to the Alyeska gate about 8 24
 (11) Mr O Neill told you in his opening statement that Captain
 (12) Hazelwood was impaired Certainly if you believe his 16-drink
 (13) count he wouldn't have been impaired he would have been
 (14) dead
 (15) But anyway, he said he was impaired Well, Michael Craig
 (16) he doesn t work for Exxon He came in here, he's the gate
 (17) guard He says their job is to make sure - what are you
 (18) doing - yeah, is to make sure - he's taking over [sic] Is to
 (19) make sure that these people are not impaired when they come
 (20) on That's what they re looking for, signs of impairment
 (21) If you believe Smith s - Dr Smith s account at the time
 (22) that he came back to the vessel - and this is - Smith had the
 (23) lower average rate, you see this, zero one five, he would have
 (24) been a 271 he would have been nausea and vomiting
 (25) diplopia - that's double vision, I looked it up Marked

Vol 23 4030

- (1) ataxia which is marked stumbling falling down - and that s
 (2) using the lower numbers
 (3) If you use Dr Mendelson s numbers - which Dr Mendelson
 (4) did this, assuming that - that he's an alcoholic as plaintiff
 (5) suggests, okay, at nine clock he would have been at 481
 (6) 9 00
 (7) 481 look at that coma death I mean, I don t know what
 (8) Mr Craig was thinking about but he had a dead guy that he
 (9) said wasn't impaired
 (10) It s nonsense It s all nonsense
 (11) Okay, you heard that when he came through the gate, he did
 (12) that long walk down the jetty, up the steep gangway - was
 (13) snowing, down the steep gangway Did it with one hand No
 (14) problem Seen by some crew members, fine, he looked fine
 (15) He
 (16) wasn't impaired Where is that one witness that said he was
 (17) impaired? There is no such witness You got 20 eyewitnesses
 (18) who came in and said he wasn't impaired The man was not
 (19) impaired
 (20) I want to talk about Captain Hazelwood s actions during the
 (21) voyage Plaintiffs' theory on this is that Captain Hazelwood
 (22) was so impaired that he was doing screwy things, that his
 (23) actions during the voyage really show someone who was under
 (24) an
 (25) impaired state
 (26) First of all, they don t have any witnesses that say that
 (27) There s not one single eyewitness that says he was impaired

Vol 23 4031

- (1) but that s their theory Remember and what s they rely on
 (2) then is Captain Clark
 (3) You remember Captain Clark? He s the guy that came in here
 (4) after five years and in the comfort of this courtroom and said
 (5) that Captain Hazelwood's actions before the grounding
 (6) exhibited
 (7) poor judgment But you remember Captain Clark don t you?
 (8) He
 (9) was the guy who had his opinion written by one of plaintiffs
 (10) lawyers remember? It got sent to him and he retyped it and
 (11) sent it back That s the guy He s also the guy in 20 years
 (12) at sea never ever made a mistake How about that 20 years
 (13) never made a mistake never came close to an accident He s
 (14) the guy that s passing judgment on Captain Hazelwood
 (15) Now he made a big deal about Captain Hazelwood being off
 (16) the bridge in the Narrows, but on cross-examination, he - you
 (17) know he told you about the tugs and the one way zone and the
 (18) six miles per hour and there s no regulations requiring the
 (19) captain to be on the bridge He said, you re right the
 (20) transit was uneventful and it played no role in the grounding
 (21) That s the bottom line
 (22) Then he had criticism of Captain Hazelwood s communications
 (23) with the VTC He said well he should have reported that
 (24) course change of 180 He didn t do that
 (25) I put up a chart for you you remember throughout these
 (26) proceedings, where I compared what the Arco Juneau did and
 (27) the
 (28) Brooklyn did and what they reported and what Captain
 (29) Hazelwood

Vol 23 4032

- (1) reported Captain Hazelwood gave a heck of a lot more
 (2) information than the other two guys He was giving speed and
 (3) courses in full compliance with the regulation Not only that
 (4) but he told the VTC, I m leaving the lanes I m leaving the
 (5) TSS They understood that They testified they understood
 (6) that They knew exactly what he was doing
 (7) Now Mr O'Neill says the Arco Juneau and the Brooklyn
 (8) didn t go on Bligh Reef because their captains were on the
 (9) bridge Where's the evidence? There s no evidence on that
 (10) We don t know who was on the bridge and who wasn t
 (11) Now they then say, Well he should have used the
 (12) autopilot You remember the autopilot That was on for about
 (13) five to eight minutes, and Captain Hazelwood explained to you
 (14) that the reason he put on that autopilot was so he could get a
 (15) clear picture of the ice He was standing over the radar
 (16) looking at the ice He wanted a clear picture so he wanted a
 (17) steady course That's what he wanted a steady course and he
 (18) didn t want to have to watch the helmsman because they were
 (19) changing watch at that moment Perfectly logical reason for
 (20) putting the autopilot on
 (21) Captain Bolton said yes that was an excellent reason for
 (22) doing it And you know what there are no regulations that
 (23) prohibit the use of the autopilot Both Clark and Bolton used
 (24) it often they said in Prince William Sound There's nothing
 (25) wrong with that

Vol 23 - 4033

- (1) And they both agree, the autopilot played no role in the
 (2) grounding
 (3) I want to jump ahead for a second to after the grounding
 (4) Mr O'Neill through these proceedings played for you Captain
 (5) Hazelwood's call to the VTC, you remember that? And he said
 (6) Oh look this guy sounds drunk Well ladies and gentlemen
 (7) this man just had a major calamity He was in shock He was
 (8) under tremendous stress, he was on the verge of tears That s
 (9) what comes through, not that he was drunk
 (10) At 1 07 he calls back You heard his voice perfectly
 (11) fine I wonder how we would feel if we were on the bridge that
 (12) night and that happened? I tell you what, I would be crying
 (13) Now after the grounding what the plaintiffs say is that
 (14) Captain Hazelwood tried to get the vessel off the reef and what
 (15) they base that on is his call to the Coast Guard at 1 07 He
 (16) spoke to Commander McCall, but you heard all the experts that
 (17) came in here, including Julius Herman Leitz
 (18) You remember Julius? He said No, no, all the actions, all
 (19) the maneuvers that he made were intended to keep that vessel
 (20) on
 (21) the reef They were intended to ascertain where he was in
 (22) relation to the reef and that's what he was trying to do
 (23) That s what Captain Hazelwood told you he was doing
 (24) That s what Kunkel said he was doing and that s what he did
 (25) He never used anything more than 26 percent of the power
 (26) available to him All he had to do was press a button if he

Vol 23 - 4034

- (1) wanted he would have gotten full ahead or full astern
 (2) Never put the engines in reverse, never used any more than
 (3) five to ten degrees of rudder He was ascertaining Those are
 (4) the actions of a man who knows what he's doing, not a
 (5) incompetent mariner, not somebody who's impaired as the
 (6) plaintiffs suggest They said, Wait a minute, if he's doing
 (7) all this why is he telling the Coast Guard something else?
 (8) Well he's telling the Coast Guard Mr Leitz told you
 (9) because at this point, he's in shock he's traumatized These
 (10) are wishful thoughts of a mariner who wants to be anywhere
 else
 (11) than Bligh Reef That's what he's telling the Coast Guard, and
 (12) you know what, Commander McCall, the guy who heard this
 the
 (13) call was made to Commander McCall, said I didn't think he was
 (14) trying to get off the reef What I understood him to be doing
 (15) was ascertaining his position to see if he was merely aground
 (16) or hard aground, and, you know what, if I were in that
 (17) position, he said, I would want the engines on, I'd want to
 (18) have my hand on the stick That's precisely what Captain
 (19) Hazelwood did
 (20) Mr Leitz told you - plaintiffs suggest that by using the
 (21) rudder and the engine that he might have caused some
 additional
 (22) damage You heard there was no additional damage as a result
 (23) of that
 (24) The only relevant period that we're talking about here,
 (25) ladies and gentlemen, in respect to Captain Hazelwood's
 actions

Vol 23 4035

- (1) starts at the moment that he's standing over the radar with
 (2) Mr Cousins and they're looking at the ice They're
 (3) ascertaining They're thinking about the maneuver they're
 (4) going to make and they're both there, and Captain Hazelwood
 (5) isn't there dictating to Cousins, he's asking Cousins for input
 (6) and Cousins is giving him input and they're talking about it
 (7) At some point Captain Hazelwood says, Greg look I need to
 go
 (8) down below do you think you can handle it? He says Yes
 (9) Captain I'm comfortable with the situation Not once but
 (10) twice
 (11) You heard the testimony on this It's clear visibility,
 (12) eight to ten miles they could see Busby Island light they
 (13) could see the buoy Captain Hazelwood - could I see my ice
 (14) chart here? This is Exhibit 1729
 (15) Captain Hazelwood said that when he was standing at the
 (16) radar with Cousins he saw the ice as such Cousins says he
 (17) saw it as such That's exactly the same, there is very little
 (18) difference Either way they've got more than two miles to the
 (19) buoy Captain Hazelwood brings the vessel and puts it right
 (20) dead center in the fairway If I could hit a golf shot like
 (21) that I'd be on the tour Right in the middle of the fairway
 (22) And all he wants Cousins to do is a simple maneuver Tells
 (23) him When you get abeam and he's got it on 180 All Cousins
 (24) has to do is look out the window, look out the door That's
 (25) all he has to do, when the light comes into view start his

Vol 23 4036

- (1) turn That's all he had to do He had them lined up perfect
 (2) to come down the middle of the fairway
 (3) Mr O'Neill says Well, he left two minutes before the
 (4) turn He should have stayed on the turn - should have stayed
 (5) on the bridge Ladies and gentlemen, when Captain
 Hazelwood
 (6) left that bridge in his mind his job was done He had that
 (7) ship lined up All Cousins had to do was make a simple
 (8) maneuver, well within his capabilities Captain Hazelwood was
 (9) on to the next task, which was figuring out the weather
 (10) Mr O'Neill suggests that this is a concocted story It's
 (11) not a concocted story That's been Captain Hazelwood's story
 (12) from day one He was looking at a low pressure that was
 (13) developing in the Aleutians He wanted to know - he had slack
 (14) tanks he told you, where the tanks weren't filled out He was
 (15) concerned you're going to get a beating out there You're
 (16) going to get 40 to 50 foot seas sometimes because of these
 (17) things He's concerned, he's trying to figure it out
 (18) Did he make that up? You heard what Mr Leitz said Two
 (19) days later, the storm came through Prince William Sound with
 70
 (20) mile an hour winds Where did that storm come from, heaven?
 (21) Well I guess it did initially, but it came up through the
 (22) Aleutians That's what he's looking at That's not a made up
 (23) story
 (24) Captain Hazelwood at this point in time - I mean, he's too
 (25) good of a sailor to walk off two minutes if he has any doubts

Vol 23 4037

- (1) He knows the thing is set up All Cousins has to do is make a
 (2) simple maneuver, well within his capabilities
 (3) Now one of the things that Captain Hazelwood - that's
 (4) been brought out is that Captain Hazelwood had pilotage You
 (5) remember the testimony on that And Captain Holland, should
 (6) say Admiral Holland - the Judge will instruct you that there
 (7) was a regulation in place but that regulation could be varied
 (8) and changed by the Coast Guard in this case, the captain of
 (9) the port And that regulation was in fact changed because not
 (10) only Captain Hazelwood but Captain Bolton Captain Mihajlovic
 (11) and Captain Clark, their expert said when they read that Alamar
 (12) letter of September 19, 1986, they believed that pilotage had
 (13) been waived That's the - that's the assumption and
 (14) perception that Captain Hazelwood was operating Pilotage
 was
 (15) not needed below Rocky Point as of September 16th - 19th,
 (16) 1986 If you find that that regulation was varied, you can
 (17) ignore that, that particular federal statutes
 (18) I want to talk a little bit about the Coast Guard here
 (19) The VTC system was set up there to prevent collisions and
 (20) groundings Their only job is to keep an eye on these ships on
 (21) radar all the way down to Bligh Reef This ship was well
 (22) within radar range Matter of fact when Captain Hazelwood
 (23) called in and said, I'm aground Blandford switched it to 12
 (24) miles and there it was bright as day He should have been
 (25) watching that ship should have been watching that ship, and

Vol 23 - 4038

- (1) his job was to warn them if they stood into danger Captain
 (2) Hazelwood knew that when he left the bridge that he would get
 (3) a warning if the VTC was doing their job
 (4) Unfortunately, they weren't doing their job so when they
 (5) say, Well this grounding might not have happened if Captain
 (6) Hazelwood was on the bridge, well, it might not have happened
 (7) if the VTC was doing their job, too
 (8) We can all speculate and the fact that any number of
 (9) captains will come in now and say, Well if I was in a similar
 (10) circumstance I would have stayed on the bridge Well, of
 (11) course that's what they're going to say five years after the
 (12) fact - what are you going to say when you know there's been a
 (13) grounding Oh no I would have done the same thing? Of
 (14) course
 (15) you're not going to say that Captain Hazelwood told you that
 (16) if he knew then what he knows now he would have never left
 (17) the
 (18) bridge
 (19) Captain Hazelwood, when he left the bridge, was ten seconds
 (20) away If he believed at any time that Mr Cousins was
 (21) uncomfortable wasn't going to carry out his orders, he would
 (22) have been up on the bridge immediately But what happened?
 (23) He
 (24) got a call from Mr Cousins and as he instructed him to do, he
 (25) told him call me as soon as you start your turn Called him
 (26) And said to Mr Cousins What rudder are you using? Said ten
 (27) degrees That's fine any problem with the ice? Said Well
 (28) we might get into the leading edge

Vol 23 - 4039

- (1) By the way, keep in mind what the ice is It's not a
 (2) sheet it's pieces of ice You saw the Dan lawn video That's
 (3) what the ice looks like
 (4) Said We might get into a couple of pieces in the leading
 (5) edge Captain Hazelwood said Is that going to present a
 (6) problem? And he said No it's not going to present a
 (7) problem
 (8) He was calm when he was saying this he didn't indicate any
 (9) discomfort at all He didn't indicate anything was amiss
 (10) because if he had Captain Hazelwood would have been back
 (11) up
 (12) on the bridge He lulled him into a false sense of security
 (13) and Captain Bolton told you that's probably as big a cause for
 (14) this grounding as anything else that happened
 (15) Now I want to talk very quickly about the concepts of
 (16) recklessness
 (17) How am I doing?
 (18) THE COURT About six minutes
 (19) MR CHALOS Okay Judge Holland will instruct you on
 (20) what recklessness is You should listen to his instruction
 (21) But I want to put it into the context of this grounding If
 (22) Captain Hazelwood walked off the bridge as the plaintiffs
 (23) suggest with the ship headed right for Bligh Reef with the
 (24) pedal to the metal as they say, knowing that this thing was
 (25) going to run aground and there's nothing Cousins could do
 (26) about
 (27) it he would have been reckless If he walked off the bridge

Vol 23 4040

- (1) with Mr Cousins hanging onto his leg saying Please Captain
 (2) don't leave, I don't know what I'm doing here he would have
 (3) been reckless If he left the bridge and said I don't care
 (4) what happens, don't bother me, he would have been reckless
 (5) But you don't have anything that approaches even a little
 (6) bit of that nothing He talked to Mr Cousins, they had a
 (7) plan together He had the ship lined up perfectly they had
 (8) two miles they had a big window to shoot through He was ten
 (9) seconds away He told Cousins to call him When Cousins
 (10) called him, he questioned him closely Are those the actions
 (11) of a reckless man? No way No way was he reckless when he
 (12) left the bridge
 (13) THE COURT This is your five-minute warning
 (14) MR CHALOS Okay
 (15) Now Exxon has conceded negligence in this case Judge
 (16) Holland - and they said Captain Hazelwood leaving the bridge
 (17) was a legal cause of the grounding Judge Holland is going to
 (18) tell you that that is not binding on Captain Hazelwood You
 (19) need to judge Captain Hazelwood's actions by what he did and
 (20) what you heard in terms of what Captain Hazelwood did not by
 (21) what Exxon has conceded
 (22) Basically, our differences with Exxon revolve around which
 (23) watch condition applied They say C which required two
 (24) officers on the bridge We say A that required only one
 (25) officer I showed you - I showed you what A and C say C

Vol 23 - 4041

- (1) says entering and leaving port They had already left port
 (2) That watch condition didn't apply A was the right watch
 (3) condition
 (4) Now we've been - I want to say something about Captain
 (5) Hazelwood He didn't know why this accident happened He
 (6) doesn't know He wasn't up on the bridge that's true and he
 (7) doesn't know but he has not in five years that I've known him
 (8) and that you heard him ever tried to assess blame on
 (9) Mr Cousins As a matter of fact, the first call that he made
 (10) he got from his company, he says I'm taking the
 (11) responsibility it was my fault Does that mean that he's
 (12) saying I was negligent? It doesn't mean that What it means
 (13) is you've got a man of tremendous integrity and character and
 (14) responsibility that's accepting it He knew there would be
 (15) severe and painful repercussions when he took on that
 (16) responsibility He knew that I wonder how many of us faced
 (17) with a similar situation would have that kind of courage? I
 (18) bet not a whole lot of us
 (19) Now we've spent five years in litigation here trying to
 (20) figure out what happened And Mr O'Neill suggests that the
 (21) proof that we put on is a bunch of lies everybody came in here
 (22) is lying, the only people that weren't lying with are the
 (23) people that support his position Everybody else is lying
 (24) Well, he hasn't suggested that the Coast Guard lied He
 (25) hasn't said that and certainly he hasn't suggested that the

Vol 23 - 4042

- (1) commandant of the Coast Guard lied Let's see what he says
- (2) Coast Guard is charged with the responsibility for trying
- (3) to find out what happened They're in charge of this type of
- (4) thing Here s the commandant, Admiral Paul Yost says the
- (5) primary cause of the grounding was a perfectly qualified third
- (6) mate on the bridge of a ship that through a period of a few
- (7) minutes of inattention to duty or lack of knowledge of exactly
- (8) where he was, ran the ship aground on a clear night with all
- (9) the navigational aids watching him That s true he knew where
- (10) that light was
- (11) A person who has received a license properly issued by the
- (12) Coast Guard as a third mate on a vessel like the Exxon Valdez
- (13) should have no difficulty navigating a vessel in the area
- (14) around Bligh Reef That s what Captain Hazelwood believed
- (15) when
- (16) he left the bridge
- (17) Commander McCall - he was the man, captain of the port at
- (18) Valdez - says the biggest mistake Captain Hazelwood made
- (19) was
- (20) having too much confidence in his third mate and leaving the
- (21) bridge when he thought the third mate could steer it out of
- (22) port The allegation that Captain Hazelwood had been
- (23) drinking,
- (24) as far as being a cause of the grounding, is just smoke
- (25) Ladies and gentlemen this evidence is uncontroverted
- (26) There hasn't been one witness that came in here and said these
- (27) guys are wrong Not one witness
- (28) When you go back into the jury room to judge the actions of

Vol 23 - 4043

- (1) Captain Hazelwood on the night of the grounding his character
- (2) and his competency please keep in mind that the Coast Guard
- (3) who thoroughly evaluated the situation concluded that this was
- (4) an accident
- (5) This was an accident Captain Hazelwood was not negligent
- (6) and he was not reckless Captain Hazelwood as he sits here
- (7) today maintains his license as a master of any tonnage any
- (8) ocean He can go on any ship he wants, and that license was
- (9) given to him - was renewed for him by the Coast Guard who
- (10) investigated this whole thing after the grounding Keep that
- (11) in mind please And thank you very much
- (12) MR NEAL Should have had more faith Your Honor
- (13) MR CHALOS You didn t think I could finish in 50
- (14) minutes? Thank you
- (15) CLOSING ARGUMENT BY MR SANDERS
- (16) MR SANDERS Your Honor, I hope you re not counting
- (17) set up time But I ll be quick any way
- (18) May it please the Court -
- (19) THE COURT Mr Sanders
- (20) MR SANDERS - counsel Ladies and Gentlemen of the
- (21) Jury, I don t have much time and I want to get straight to it
- (22) I want to go to what I think is the key issue in this case
- (23) what actually happened This may overshadow Mr Chalos'
- (24) paramount issue It is an issue that the plaintiffs have
- (25) relegated to the very end of everything They didn t even put

Vol 23 4044

- (1) on Mr Cousin until the last two days of the case They never
- (2) called Ms Higgins We had to call her
- (3) And I sat over here and waited during Mr O Neill s closing
- (4) argument and I waited for over an hour and ten minutes before
- (5) we ever got to what actually happened then he gave you 30
- (6) seconds on it and tried to dismiss it away
- (7) One might think they re trying to avoid what actually
- (8) happened This is what happened It's 11 53 on March the
- (9) 23rd 1989 Captain Hazelwood leaves the bridge, Mr Cousins
- (10) says he tells Mr Kagan, Prepare for a course change, let s
- (11) take it off gyro
- (12) Here's what you have to do to take it off gyro, you punch
- (13) that button In about a second it s off gyro So much for
- (14) automatic pilot
- (15) Next, Mr Cousins goes, takes the time to go all the way
- (16) out on the port bridge wing and he takes a fix on the bridge
- (17) wing when he's abeam Busby Island light He does that
- (18) because
- (19) his instructions are turn when you come abeam Busby Island
- (20) light He didn t have to do that, all he had to do was look
- (21) out the window punch the button, look out the window, tell the
- (22) man to turn ten degrees But he goes out there and he does
- (23) that Comes back in, takes a range off the radar
- (24) Remember Captain Hazelwood s testimony I set him up, he's
- (25) going to be halfway between the apex of the ice and Busby
- (26) Island but he went on and took a range anyway

Vol 23 4045

- (1) What is the next thing that happens? He takes the time to
- (2) go around the corner into the chart room gets on the chart and
- (3) physically draws the fix in on the map with the time 11 55
- (4) That s why we know this time is correct He takes the time to
- (5) do that
- (6) Now, what's happening during the taking of the plot do you
- (7) remember Ms Higgins' testimony? She came in, she saw the
- (8) Bligh Reef buoy light flashing, she comes in and while he s
- (9) plotting this fix, Ms Jones comes in and says, Red light
- (10) flashing, every five seconds, broad on the starboard bow
- (11) Remember that for a minute, now, broad on the starboard
- (12) bow
- (13) This report probably took up some extra time that wasn't
- (14) necessary He already knew where the Bligh Reef buoy light
- (15) was Remember he said he d seen it on radar He didn't need
- (16) that report He knew he was outside the lanes at 11 55 because
- (17) when he plotted it he was outside the lanes Didn t need to
- (18) know that, but that report was made, probably took up some
- (19) time She goes back out on the bridge wing and she realizes
- (20) she's miscounted, the flashing of the light It s four instead
- (21) of five
- (22) Now in hindsight of course, that doesn t make any
- (23) difference at all Maybe she was trying to tell him it's time
- (24) to do something, so she goes back in and she tells him and they
- (25) both agree on this it happened at the same time, while he

Vol 23 4046

(1) is - he says When I am coming around I m getting ready to
 (2) order the ten degree right turn and Ms Jones comes in and -
 (3) Ms Jones testified - comes in and corrects her report Ms
 (4) Higgins Ms Jones, says When I went in to give him the second
 (5) report he was right beside the port radar So they re exactly
 (6) right
 (7) Now the question is what time is that What time is it?
 (8) Well we know that How do we know that? We know two ways
 (9) First we know because they're together on that Ms Higgins
 (10) Mr Cousins testimony is together This is happening at the
 (11) same time He testifies I was getting ready to give the
 (12) ten degree right order
 (13) Well we know from the physical evidence - don t have to
 (14) worry about anybody s memory don t have to worry about
 (15) anybody
 (16) lying like Mr Neal [sic] says everybody's doing Look at the
 (17) course recorder We know the turn began at ten degree right at
 (18) 12 02 right? That's the evidence uncontroverted
 (19) The machinery of the ship and Mr Cushing tells us that it
 (20) takes 30 seconds for the ship to react to a helm order so that
 (21) puts it back at 12 01 and 30 seconds
 (22) Now I asked you to remember broad on the starboard bow
 (23) What is that? Broad on the starboard bow is you look straight
 (24) ahead and you look out here, 90 degrees to your right, broad
 (25) on
 (26) the starboard bow is halfway in between those points or 45
 (27) degrees We asked Mr Cushing remember, when was the
 (28) ship,

Vol 23 4047

(1) according to the course recorder broad on the starboard bow
 (2) and he gave you the same answer that you get from the
 (3) testimony
 (4) of the people at 12 01 30 Seven minutes seven minutes past
 (5) the time the captain instructed him to make the turn
 (6) Seven minutes went by before he made the turn he was told
 (7) to make and then, second big mistake right on the heels of
 (8) that if you re here you re seven minutes late If you d made
 (9) a 20-degree turn or maybe even a 15-degree turn certainly a
 (10) hard right turn if you d made a bigger turn, everyone at
 (11) 12 02 then there would have been no tragedy And of course
 (12) the rest of what happens is almost inconsequential because, if
 (13) you do a ten-degree right at this time it s too late
 (14) Now the only piece that we have missing in this sequence
 (15) of events is when did Captain Hazelwood call Where do we
 (16) put
 (17) this? When did Mr Cousins call Captain Hazelwood? Where
 (18) do
 (19) we put this?
 (20) Mr Cousins you remember testified he did it way down
 (21) here after the turn began but Mr Cousins also testified during
 (22) his deposition that he really had a lot of problem with the
 (23) sequence and order of things and the time things took to
 (24) happen
 (25) and he wasn t sure of that Captain Hazelwood told you it was
 (26) right up here within a couple of minutes of the time that he
 (27) went below and it was within the realm of what he thought
 (28) would
 (29) be right
 (30) So I tell you the preponderance of the evidence says the

Vol 23 4048

(1) call was up here One what is going on between here and here
 (2) all this time? There has to be something in here It had to
 (3) be that If the call had been way down here you have any
 (4) doubt about Captain Hazelwood coming up? If it had been this
 (5) late and if it had been this late when he asked him is
 (6) everything all right the answer would not have been everything
 (7) was all right because it wasn t all right They were in
 (8) terrible shape by that time So that s when the turn was
 (9) made
 (10) Now one other thing you need to know The proof from the
 (11) experts proof from the track line and everything else, is that
 (12) when this right turn began, it stayed on ten-degree right from
 (13) then until the time it hit the pinnacle to the time that the
 (14) 10-degree right was ordered
 (15) In other words, it was a constant, consistent ten-degree
 (16) right turn during all this period of time
 (17) This is what happened and more particularly, this is what
 (18) did not happen In doing things that did not need to be done
 (19) Mr Cousins simply gave the order too late for the turn of
 (20) ten degrees right
 (21) But I don t want you to take my word for that Let s see
 (22) what Mr Cousins said You remember the question they asked
 (23) him What would you have done differently? And he answered
 (24) I
 (25) would never have bothered to go out and take a visual bearing
 (26) from a repeater I would not have left the three centimeter

Vol 23 - 4049

(1) radar I would not even have bothered to go back into the
 (2) chart room I already knew where I was I would have not left
 (3) the helmsman unattended as I did I would have taken a visual
 (4) bearing but I wouldn t have - I would not have walked out to
 (5) the repeater and sighted it It was not necessary
 (6) Why did you do it that evening? I can t answer that
 (7) Then he was asked, right after that question in a very
 (8) emotional moment, if you'll remember from the testimony You
 (9) would have stayed at the radar? Answer I would have
 (10) maintained the radar watch right there where I can do what I m
 (11) supposed to do et cetera et cetera
 (12) I am not going to read the whole thing because I don t have
 (13) the time But he told you exactly what he thought he did
 (14) wrong and finally he concluded I didn t have to, I did not
 (15) have to do what I did Or in walking out, taking visual
 (16) bearing, it was not necessary It really was not necessary
 (17) As a matter of fact, it was - considering the number of people
 (18) on the bridge, it was poor practice
 (19) This was an accident Greg Cousins was trying too hard to
 (20) do too many things that he did not need to do, and this is why
 (21) the plaintiffs have not talked about the main event in this
 (22) case The evidence in this case shows you that the legal cause
 (23) of this accident, this tragedy, was simple negligence not
 (24) reckless conduct
 (25) Now, Mr O Neill has stood up here today - and he must

Vol 23 - 4050

(1) have said it ten times - he asked you to choose between safe
 (2) or reckless That's a lawyer's trick He wants you to think
 (3) those are only two choices, but you know better than that
 (4) Your common sense tells you there's a long way between safe
 and
 (5) reckless and you don't have to depend on just that The
 (6) Court's going to tell you there's a long way between safe and
 (7) reckless and in between there somewhere is accident simple
 (8) negligence, human error He wants you to think the only choice
 (9) is between safe and reckless That's not what the Court is
 (10) going to tell you that's not what's involved here
 (11) Now, why do they want to do that? They want you to
 (12) concentrate on something else, ask you to go from millions
 (13) actual damages, to billions, punitive damages Mr O'Neill
 (14) asked each and every one of you that question can you go to a
 (15) billion, can you go over a billion That's the goal Money
 (16) money over and above actual damages
 (17) Now, you remember I told you that I thought this issue
 (18) might overshadow Mr Chalos issue Why is that? Well, the
 (19) evidence proves it's an accident and the proof further tells
 (20) us, teaches us if Captain Hazelwood, with all his skill and
 (21) experience, had been on the bridge that night at midnight, this
 (22) would not have happened Now, in defense of Captain
 Hazelwood
 (23) the proof shows that he could not conceive and you and I
 (24) couldn't have conceived either, I don't think, that when he
 (25) left that bridge that this very simple instruction would not

Vol 23 4051

(1) have been carried out Push a button look out the window
 (2) tell the man to turn
 (3) He couldn't conceive of that He couldn't conceive of the
 (4) fact that the Coast Guard one time wouldn't be watching to warn
 (5) if the ship was standing into danger He thought it was
 (6) reasonable He thought it was reasonable to turn from that
 (7) problem which he thought he had solved to a new one and
 more
 (8) complicated problem the brewing storm tides, how am I going
 (9) to do this what's the next step? Run ahead to the next
 (10) problem
 (11) It was nevertheless a mistake to have left the bridge
 (12) That's why we - we Exxon stipulated that that was
 (13) negligence That's why we accept responsibility to pay actual
 (14) damages not punitive damages, but actual damages That's
 why
 (15) we stipulated to that
 (16) Now punitive is a different question And when you look
 (17) at that question I want you to remember that there was a
 (18) policy Mr Chalos is fond of telling you that the issue is
 (19) Watch Condition C Well, there's another part of the manual I
 (20) wish you'd look at and that's section 2 1 5 Our policy was
 (21) clear The master should be on the bridge in situations like
 (22) this and it's clear that we enforce that policy that there was
 (23) an awful lot of discussion with the masters - remember the
 (24) one man error conversations? It was a policy, it was enforced
 (25) it was meant to be followed

Vol 23 4052

(1) We also had a policy of upholding the Coast Guard
 (2) regulations, and of course the four hour rule would come within
 (3) that although I'm sure that Captain Hazelwood's violation of
 (4) that, as he told you was clearly inadvertent he didn't mean
 (5) to He was relying on the sailing time that was posted up
 (6) there
 (7) But this mistake of leaving the bridge this negligence and
 (8) the final analysis and even in hindsight is a far, far cry
 (9) from reckless conduct What if the evidence were in this case
 (10) that Captain Hazelwood went below because he had stomach
 cramps
 (11) or a migraine headache? We would already be in phase two
 (12) wouldn't we?
 (13) Let me steal a page from Mr O'Neill's book Let me state
 (14) a proposition for you To connect alcohol to this grounding
 (15) which is the main effort that they've tried in this case, there
 (16) must be proof that Captain Hazelwood went below because of
 (17) alcohol Doesn't that make sense? Of course it does If
 (18) you're going to connect it up, you better put some proof on
 (19) What's the proof?
 (20) Well, Captain Hazelwood testified that he went below in
 (21) order to plan his next problem he had to figure on where to
 (22) take the storm, he had to figure on how he was going to arrive
 (23) in Long Beach There's some corroboration of that
 (24) Mr Delozier remember, said he found some papers on
 (25) Captain Hazelwood's desk, and you also remember the
 testimony

Vol 23 4053

(1) that Mr Chalos just mentioned from Mr Lertz about the storm
 (2) that came two days later
 (3) That's pretty solid proof, corroborated
 (4) Then you have the plaintiffs' expert Dr Smith Dr Smith
 (5) said that in doing his analysis he assumed that there was no
 (6) drinking by Captain Hazelwood from the time that he got on that
 (7) vessel until the time that his alcohol - his blood alcohol was
 (8) taken at 10 00 in the morning No drinking Now, what do they
 (9) have against that? They have Scott Conner Scott Conner
 (10) testified - this is the only proof they've got Scott Conner
 (11) testified that sometime around 10 00 in the morning, after the
 (12) grounding he saw a half drunk bottle of Jack Daniels sitting
 (13) out there in plain sight
 (14) Now, no matter that it's out there in plain sight where ten
 (15) or more people have been all morning long, three of whom are
 (16) law - two of whom are law enforcement officers who have been
 (17) searching diligently for signs of alcohol and all the rest of
 (18) the people in there looking at this wide open space where
 (19) Mr Conner says he saw a bottle of Jack Daniels Mr Conner is
 (20) a strange young man and he has a strange memory
 (21) But the plaintiffs' theory of course so therefore
 (22) obviously there's no proof whatsoever Captain Hazelwood went
 (23) below to drink Their theory, though, is more general than
 (24) that They want to gloss over those facts and they want to say
 (25) simply that he was an alcoholic, that he was impaired and

Vol 23 4054

- (1) that a why he went below He's not a alcoholic he wasn't
 (2) impaired
 (3) Captain Hazelwood believed he had resolved the problem of
 (4) getting the turn executed and he went below to work on a more
 (5) complicated problem involving the storm, the tides distance
 (6) time and speed That is not the type of choice nor the type of
 (7) thought process that a person impaired by alcohol makes Just
 (8) the opposite That's the evidence
 (9) Now, I want to briefly cover three more things with you
 (10) then I'll sit down
 (11) First of those is Mr O Neill says we try to blame
 (12) Cousins Well, remember, the very first thing Mr Lynch told
 (13) you in the opening was we are responsible, we will pay for the
 (14) mistakes you will determine how much in phase two We
 (15) accept
 (16) that blame he was our employee he was where he was
 (17) supposed
 (18) to be and he was doing the duties he assigned This is not
 (19) shifting the blame Who took the blame? Mr Cousins did and
 (20) that whole business about everybody from Exxon lies doesn't
 (21) work on Mr Cousins because Mr Cousins, when he testified
 (22) was not an Exxon employee, hadn't been an Exxon employee
 (23) since
 (24) 1990
 (25) Two other quick things - I hear you - Mr O Neill told
 (26) you in opening that Mr Kagan had trouble hearing, seeing and
 (27) steering That's a lawyer's human error No proof of hearing,
 (28) no proof of sight, and the steering issue, you heard the proof

Vol 23 - 4055

- (1) on that and the obvious proof from the record from the course
 (2) recorder Kagan did his job that night
 (3) Finally they gave you this theory about fatigue That's a
 (4) good one They take the absolute uncontradicted evidence of
 (5) the people involved that he was not tired, he said he was not
 (6) tired the observer said he wasn't tired, they bring in this
 (7) expert he's never seen these people wasn't there, says, I
 (8) know more than they do he was tired Then you find out that
 (9) the basis for that was he assumed that Mr Cousins had a sleep
 (10) debt although he had to admit he didn't know how Mr Cousins
 (11) had slept the week previous to that
 (12) I will not waste anymore time on this analysis and
 (13) Wonderland theory of fatigue With that and a sincere thank
 (14) you for the time care and attention you have given all three
 (15) sides, I will sit down and let you hear from Mr Neal
 (16) **CLOSING ARGUMENT BY MR NEAL**
 (17) **MR NEAL** May it please the Court, counsel Ladies
 (18) and Gentlemen of the Jury
 (19) I do have some areas to cover, but before I do that I want
 (20) to address two things that Mr O Neill brought to your
 (21) attention One involved the video you have seen, principally
 (22) of Mr Rawl
 (23) Mr Rawl is now retired from Exxon and, shortly after the
 (24) grounding he's being hounded by Congress he's being
 (25) hounded
 (26) by the media to give them answers He doesn't have the

Vol 23 4056

- (1) answers We're talking about - we're talking at a few days
 (2) after the grounding Plaintiffs have been in this case now for
 (3) five years We have been in this case for five years We
 (4) still don't know all the facts What Mr Rawl tried to do was
 (5) to give him the information he had a few days after the
 (6) grounding and he did He didn't know there was something
 (7) wrong
 (8) with this blood alcohol test and he didn't know a lot of other
 (9) things at that time He gave them what he had at that time,
 (10) and he had the courage to come up here - we couldn't have
 (11) brought him up He had the courage to come up here and say
 (12) to
 (13) you, members of the jury, I was talking when I didn't really
 (14) know what I was talking about I didn't really have the facts
 (15) that have now been developed
 (16) The plaintiffs would try to say that he's lying I think
 (17) you saw Mr Rawl on the stand I don't think you say he's
 (18) lying I think he had courage to come to do that and I
 (19) personally appreciate it
 (20) While I'm into that, I've been in this trial lawyer
 (21) business a long time, longer by far than Mr O Neill and it
 (22) pains me a little bit to have a lawyer stand up and say, Oh,
 (23) all of these people on that side are lying All of these
 (24) people on that side are shaving the truth except - except
 (25) and here's what he relies on he relies on Dr Montgomery, Dr
 (26) Nealy, Dr Gould, Captain Duncan Mr Day, Captain Stalzer
 (27) Mr Kunkel and a host of others who are also Exxon employees

Vol 23 4057

- (1) now those employees aren't lying He likes what they have to
 (2) say
 (3) The people at Exxon he accused of being liars are the
 (4) people who say things he don't like Well, truth of the matter
 (5) is in my business, very few people come in here and lie to
 (6) you They could be mistaken We started talking about this
 (7) event after the grounding, they have to go back five and six
 (8) years to remember that incident That's very hard to do I
 (9) don't think the people on Mr O Neill's side came in here and
 (10) lied to you And I don't think the people he accused of lying
 (11) and shaving the truth were lying That's not been my
 (12) experience
 (13) Even Mr Shaw - and I'll get to Mr Shaw in a minute
 (14) Even Mr Shaw, I can demonstrate to you, and I will, that
 (15) Mr Shaw is mistaken That what he's told you was not
 (16) accurate
 (17) I don't believe he's lying I believe he's - I believe
 (18) he's mistaken, I believe he's got something in his mind, I
 (19) don't know why, but I don't think he's getting on - taking the
 (20) oath in the Court of United States and lying to you, just lying
 (21) to you People just don't do that We don't do it and I
 (22) wouldn't accuse his witnesses of doing it
 (23) Now, having said that, I want to tell you something about
 (24) the law in this country Exxon, at the time of the grounding,
 (25) was a corporation that had a hundred thousand employees A

Vol 23 - 4058

- (1) hundred thousand That's a big city, at least for a country
- (2) boy like me Exxon is responsible for every one of those
- (3) employees If any one employee commits an act of simple
- (4) negligence and that act of simple negligence causes damages
- (5) Exxon is responsible for paying those damages for the whole
- (6) hundred thousand employees
- (7) And let me tell you this that is what this case is about
- (8) One or two of those hundred thousand Exxon employees committed
- (9) simple acts of negligence and that led to this grounding
- (10) Plaintiffs have been trying now for five years to turn this
- (11) into a case for punishment a case for punitive damages To do
- (12) that, they've got to show that we acted recklessly and with
- (13) calloused disregard of the rights of others
- (14) Ladies and gentlemen we didn't build \$130 million
- (15) state-of-the-art tanker put \$16 million worth of crude oil on
- (16) it and recklessly and callously turn it over to a drunk
- (17) They've called us everything in the world in this case except
- (18) stupid, and we ain't that stupid We can make mistakes but we
- (19) ain't that stupid
- (20) Now I'm not that lawyer talking about in the video or
- (21) asking about we don't want a lawyer getting up here and denying
- (22) responsibility We do not deny our responsibility We accept
- (23) responsibility We accept responsibility for each and every
- (24) dollar of actual damages which you will determine in phase two
- (25) was caused by our negligent acts But we don't accept that we

Vol 23 4059

- (1) were reckless and we don't accept that we acted in callous
- (2) disregard of others
- (3) Now let me go to the points I want to cover
- (4) Mr. - The plaintiffs not only after going through the
- (5) voyage and saying that Captain Hazelwood was impaired and his
- (6) impairment led to the grounding and all that they then swing
- (7) back and say, And Exxon had a reckless alcohol policy Exxon
- (8) was reckless in returning Captain Hazelwood to duty and Exxon
- (9) was reckless in monitoring
- (10) The truth of the matter is if you eliminate the tumult and
- (11) the shouting and you eliminate questions which, in this case in
- (12) large part have substituted for the testimony of witnesses I
- (13) suggest to you, number one, that the alcohol policy of Exxon
- (14) was the norm in the industry, better than - better than most
- (15) and that it was approved on that stand by the plaintiffs' own
- (16) expert Dr. Masters
- (17) Number two the return of Captain Hazelwood to duty was a
- (18) tough thoughtful decision but it was taken in the sincere
- (19) belief that by doing that we would reduce the overall risk
- (20) that's associated with driving people who might have a problem
- (21) of alcohol into the ground
- (22) And number three in regard to monitoring Captain
- (23) Hazelwood was out of this rehab thing for four years before the
- (24) grounding And in regard to that, even though - as you have
- (25) seen from charts presented here you can see them again in

Vol 23 4060

- (1) deliberation - over 500 people had access to Captain Hazelwood
- (2) in those four years, we have three incidents or three events
- (3) that we need to talk about
- (4) Exxon as a corporation recognized in 1977 that alcohol in
- (5) the workplace was a problem, it adopted a policy in 1977 -
- (6) even 10 years later in 1987 - in a business, roundtable
- (7) survey that you heard about here - more than half of a hundred
- (8) and fifty of the major companies in the country didn't even
- (9) have an alcohol policy, and even today even at the time of the
- (10) grounding in this case even at the time of the grounding in
- (11) this case, the United States Coast Guard has no policy
- (12) prohibiting possession or moderate drinking of alcohol on board
- (13) a vessel
- (14) Is this reckless? Is this callous?
- (15) Over the years, we improved our policy We increased
- (16) guidelines for monitoring for our supervisors We added
- (17) testing for applicants for job applicants We added for-cause
- (18) testing of existing employees And we continued, over the
- (19) period of time random searches Now, plaintiffs' experts -
- (20) and you know we've had in this case a lot of experts They're
- (21) paid witnesses The judge will have an instruction on how you
- (22) look at experts What I want to do, because I think it shows
- (23) that you can rely on this, I want to rely not on our experts, I
- (24) want to rely on plaintiffs' experts, because if I as defense
- (25) counsel rely on plaintiffs' experts, that ought to be something

Vol 23 - 4061

- (1) that we can all rely on
- (2) In regard to our alcohol policy Dr. Masters, plaintiffs
- (3) expert, said - but before perhaps I say that, I should tell
- (4) you the five critical elements of our alcohol policy
- (5) One we as far back - and continuing all the way through
- (6) the grounding - far back as 1977 we prohibited the use and
- (7) possession of alcohol on our vessels We did that 11 years
- (8) before the Coast Guard initiated this four-hour rule And even
- (9) at the time of the grounding, the Coast Guard doesn't go as far
- (10) as we do
- (11) Second, we said alcohol problems can be treated
- (12) Third we said you seek help if you have a problem and we
- (13) won't jeopardize you in your job And the reason for that is
- (14) if it's a problem in the workplace, the problem is greater from
- (15) people who don't seek help and hide their problem in the closet
- (16) than it is from those who seek and get help and complete the
- (17) course satisfactorily So in order to - to avoid a risk we
- (18) said seek help and we won't penalize you in your job
- (19) And finally we said - we said We will respect your
- (20) privacy rights, your confidentiality
- (21) Now let me go to Dr. Masters' plaintiff expert Says yes,
- (22) a company should have an alcohol policy Yes alcohol can be
- (23) treated, yes you should encourage self-identification and,
- (24) yes you should have confidentiality The very elements of our
- (25) alcohol policy and regard to confidentiality, he agreed with

Vol 23 - 4062

- (1) us we don't want a Scarlet A put on everybody's forehead
 (2) Now there was a criticism. There was one criticism by
 (3) plaintiffs' counsel that was not - that was not supported by
 (4) any evidence. Plaintiff counsel seemed to suggest you should
 (5) put people on shoreside assignments for a while but no witness
 (6) said this and Dr. Masters - the plaintiffs' expert - whole
 (7) career has been centered on getting pilots back in the air
 (8) right after rehab.
 (9) Now Dr. Masters says his criticism, his one criticism was
 (10) well you don't have a written plan for monitoring, but when we
 (11) confronted him with our plan look what he says. He says -
 (12) and the question is, But you do agree that good monitoring
 (13) program would involve advising the supervisor watch and be
 (14) the eyes and ears of the medical department.
 (15) Yes.
 (16) And they should look for things such as slurred speech or
 (17) absenteeism or frequent injuries or other signs that the
 (18) profession has recognized is indicative of possibility of
 (19) alcoholism is that true?
 (20) Answer, Yes.
 (21) And rather than diagnose it they should refer it to the
 (22) medical department?
 (23) Answer. By all means and here's the key.
 (24) Question. And the writings you saw in Exxon recommended
 (25) that Exxon's supervisors do exactly follow exactly those

Vol 23 4063

- (1) standards isn't that true, sir?
 (2) Answer. Yes.
 (3) And then plaintiffs' counsel got up and tried to resurrect
 (4) him and - and they asked this question.
 (5) Question. There were no guidelines in those papers with
 (6) respect to monitoring, is that correct?
 (7) You know what his answer is? Look at it. The word, I
 (8) could not find the word.
 (9) So apparently the only criticism Dr. Masters had of our
 (10) alcohol policy is that he couldn't find the word monitoring.
 (11) Plaintiffs then got into well you don't have post rehab
 (12) testing. Now we didn't and let's see what Dr. Masters said
 (13) about post rehab testing.
 (14) I won't go over it all but I'll give you a check. I'll
 (15) leave it up there so you can make sure I'm not putting half
 (16) truths up there or anything.
 (17) Question. Okay let me - let me just go into that for a
 (18) second. Your view is that you're opposed to periodic or
 (19) unannounced or random testing, is that correct?
 (20) Answer. That's been my view for years, especially of
 (21) alcohol testing.
 (22) Question. Of alcohol testing in particular?
 (23) Answer. Yes, sir.
 (24) Now in the preceding paragraph he talks about up here
 (25) just above the yellow he talks about a possibility of testing

Vol 23 - 4064

- (1) if there was a reported problem. Well that's what for-cause
 (2) testing is about. And our policy does provide for for-cause
 (3) testing.
 (4) Now let me move to - let me move to quickly, if I can to
 (5) try to put the situation with Captain Hazelwood - I've talked
 (6) generally about our alcohol policy. I've talked generally
 (7) about that. I want to put Captain Hazelwood's situation in the
 (8) context, now, of our alcohol policy.
 (9) In March 1985 late March 1985 Captain Hazelwood - as you
 (10) know in that job you have 60 days on, 60 days off and the 60
 (11) days off you go home. Captain Hazelwood was at home in that
 (12) 60 days off in late March 1985.
 (13) He gets a call from Captain Pierce, his friend, and Captain
 (14) Pierce told you, I called him not as an employer but as a
 (15) friend. Captain Pierce had received an anonymous call from
 (16) somebody who said Captain Hazelwood is moody, more moody
 (17) than
 (18) usual. Mr. Pierce, who said, I didn't know anything about
 (19) drinking, no drinking was mentioned. I called Captain
 (20) Hazelwood and said, Captain, if you've got a problem get
 (21) help. If you don't have a problem we'll handle it.
 (22) Captain Hazelwood then on April 1, 1985 went into South
 (23) Oaks Hospital. On April 28, 1985, he successfully completed
 (24) that course.
 (25) Now this self-identifier business, Captain Hazelwood was
 (26) asked on the stand if he were a self-identifier, and he said

Vol 23 - 4065

- (1) no. You read his entire testimony, however, as I have and you
 (2) see that what he meant, what he thought a self-identifier was
 (3) is that before he goes into South Oaks he has to tell the
 (4) company, I'm going into South Oaks and getting help. That's
 (5) not what a self-identifier in the program is called.
 (6) Self-identifier says to himself, I've got a problem and I'm
 (7) seeking help, and Captain Hazelwood was a self-identifier.
 (8) Now let's - he then goes through, he successfully
 (9) completes the program and let's see what happens then. Well
 (10) the thing that happens then is that - but let me start first
 (11) with the diagnosis because I have to cover that, just a touch
 (12) of that.
 (13) Dr. Vallury, the man at South Oaks who has Hazelwood for
 (14) analysis for 28 days diagnoses Captain Hazelwood as suffering
 (15) primarily from dysthymia, mild depression and, secondarily,
 (16) alcohol abuse episodic but then, you know, a strange thing
 (17) happens then. The plaintiffs bring on a Mr. - a Dr. O'Connor
 (18) as their expert who says Oh, Dr. Vallury is wrong. I don't
 (19) believe that. I believe Captain Hazelwood was an alcoholic.
 (20) Now, they asked him, How do you know? Well, I know because
 (21) I was here a few days in court and I observed Captain
 (22) Hazelwood
 (23) in court.
 (24) Well, Ladies and Gentlemen of the Jury, you've been here
 (25) 30-some days. And you've observed him in court. You make
 (26) your
 (27) diagnosis.

Vol 23 - 4066

- (1) Not only that, not only that plaintiffs expert was not
- (2) in - plaintiffs' expert, Dr Masters when they called Dr
- (3) Masters who does he say is right? He endorses Dr Vallury
- (4) He says - and I'll do this quickly, too - he says I have a
- (5) high opinion of South Oaks Hospital
- (6) That's where you send your tough cases?
- (7) Answer There and a couple of other places
- (8) And then he says, Yes, I met Dr Vallury
- (9) Question And you had reports in the course of your
- (10) monitoring you received from Dr Vallury?
- (11) Oh yes, sir Yes, sir yes, sir
- (12) You relied on those reports correct?
- (13) Yes
- (14) So there's plaintiffs' own doctor saying, I rely on Dr
- (15) Vallury, and you can, too His diagnosis is dysthymia mild
- (16) depression alcohol abuse episodic, not alcoholism And I can
- (17) agree with Mr Chalos, you can say it a thousand times, doesn't
- (18) make it true
- (19) Now, then what happens, Dr Vallury and Dr Montgomery have
- (20) a conversation, and Dr Vallury says to Dr Montgomery - they
- (21) admit one of the employees they say is telling the truth
- (22) Dr Vallury, Dr Montgomery says tells him Captain
- (23) Hazelwood is fit for duty now but I want you to give him a
- (24) leave of absence so he can complete his aftercare And a leave
- (25) of absence was granted

Vol 23 4067

- (1) Now plaintiffs apparently complain that a corporate doctor
- (2) should come in here and say No forget your private physician
- (3) I'm going to make my own diagnosis I don't think anybody
- (4) would agree that a corporate medical department should be
- (5) able
- (6) to overrule your own private physician
- (7) One other thing Mr O Neill has said he has said that we
- (8) should have gotten the medical records from South Oaks Well
- (9) I'm going to ask you to do this I'm going to ask you - I
- (10) think I'll get it here but I think it's the Court's
- (11) instruction number
- (12) MR SANDERS 41
- (13) MR NEAL 41
- (14) I'm asking you - you've taken a lot of notes in this and
- (15) I do appreciate it very much I'm asking you to make one more
- (16) note at least and look at instruction - the Court's
- (17) instruction number 41 regarding getting medical records
- (18) Now then the next thing that happens is that - the
- (19) question is what do we do about Captain Hazelwood He self
- (20) identified - self identified, he has sought help he's
- (21) completed the course successfully his private physician says
- (22) he's fit to go to sea duty Now what happens?
- (23) Well Dr Graves - I mean Mr Graves and Dr - and
- (24) Mr Iarossi have a conversation Now one thing they do in
- (25) this, one thing I need to hit here in this conversation they

Vol 23 4068

- (1) violated our policy in the past, and Mr Graves says Yes but
- (2) that was years before Since then he's self-declared he's
- (3) gone in he's gotten help, and it wouldn't be fair to hold
- (4) those ancient violations against him He fits the policy
- (5) That's what Mr Iarossi has said
- (6) Now then Mr Iarossi still doesn't - has a question about
- (7) putting Hazelwood back as the master of a tanker He says I
- (8) didn't really want to do it And then Mr Graves - then
- (9) Mr Graves says, Frank think about this Three things The
- (10) policy requires it, the law requires it - and I'll get to the
- (11) law in a minute and if you don't return Captain Hazelwood to
- (12) his job, you will never have another officer out there on our
- (13) vessels self-identifying and seeking help You will drive the
- (14) problems into the closet
- (15) Now, alcohol in the workplace is a problem You will drive
- (16) that problem into the closet It was a tough decision, and
- (17) Mr Iarossi said to you, it is a tough decision We're going
- (18) to run a risk either way We are weighing our risks It's a
- (19) tough decision, but I thought on balance that we would run a
- (20) greater risk to society if we didn't return Captain Hazelwood
- (21) than if we did return him
- (22) You may decide in retrospect that's a wrong decision I
- (23) don't know I don't know today, but I submit to you and I
- (24) suggest to you, you can't say it was callous disregard of a
- (25) risk You can't say it was a reckless decision

Vol 23 - 4069

- (1) Now I'm reminded - just occurred to me just then, I'm
- (2) reminded of the words of Admiral Yost in this regard You know
- (3) what he said? It's impossible for you to remember everything
- (4) I know it so I'm going to remind you of this and maybe some of
- (5) you will think about it be able to get it in the jury room
- (6) Admiral Yost says You can't ruin a man's life on facts not
- (7) known at the time Oh if we could all just be plaintiffs
- (8) counsel and look backward from an event, wouldn't we all be -
- (9) wouldn't we all be - wouldn't it be great?
- (10) So the decision was made to return Captain Hazelwood to
- (11) duty At this point I submit we had a proper alcohol policy
- (12) endorsed in this courtroom by plaintiffs' own expert, that we
- (13) made a tough but-sincere decision sincerely believing that we
- (14) reduced the risks, and finally, Captain Hazelwood goes back to
- (15) duty
- (16) He has a meeting with Mr Tompkins - and Mr Tompkins, it
- (17) was a tough meeting Mr Tompkins has his alcohol policy
- (18) there
- (19) and he says to Captain Hazelwood, Look here's the alcohol
- (20) policy You better be on the straight-and-narrow And Captain
- (21) Hazelwood said it was a tough meeting Captain Hazelwood
- (22) said
- (23) as you remember, I knew I was going to be watched
- (24) Captain Hazelwood was then assigned, then assigned to the
- (25) Yorktown as master, back as master of the Yorktown Why did

Vol 23 4070

(1) that right now
 (2) Plaintiffs' counsel suggests that there was some sort of
 (3) economic motive for us to do this He suggests he says the
 (4) record reflects that there was a shortage of people in the
 (5) company with master s license Let s look at the facts
 (6) because that is simply wrong I do not accuse plaintiffs'
 (7) counsel of - I do not accuse plaintiffs' counsel of
 (8) deliberately distorting the facts It s simply wrong Let s
 (9) look what Captain Hazelwood said matter of fact The question
 (10) is would it be fair to say that there was a shortage of
 (11) masters in the fleet
 (12) There was a shortage possibly of promoted masters There
 (13) was plenty of relief masters around And then he goes on to
 (14) describe a situation Plenty of relief masters around And
 (15) you know what happens then of course, they immediately
 (16) change
 (17) the subject as you see on down there
 (18) Now, I suggest to you that we reassigned Captain Hazelwood
 (19) because we thought it was the right thing to do It would have
 (20) been the easiest thing in the world to say, Get lost Captain
 (21) Hazelwood you ve been with us for almost 20 years get lost
 (22) I can find no motive for us doing it, and I suggest to you
 (23) now that we think it was the right thing to do We thought on
 (24) balance it would be a reduction of risk not a creation of one
 (25) Now then then we get to - they say, We were reckless in
 (26) monitoring Captain Hazelwood Well let me submit to you one

Vol 23 4071

(1) thing If I don t leave you with anything else let me - let
 (2) me submit this to you
 (3) We didn t have to - have to monitor Captain Hazelwood at
 (4) all according to plaintiffs own expert Dr Masters Now
 (5) remember remember Captain Hazelwood has been diagnosed
 (6) first
 (7) primarily with dysthymia - I m going to call it mild
 (8) depression from now on because I can't pronounce the word -
 (9) mild depression primarily, and alcohol abuse episodic
 (10) secondary And you have heard, you've seen on the screen
 (11) that
 (12) plaintiffs own expert Dr Masters endorsed the professional
 (13) competence of Dr Vallury Now let's see what happens here
 (14) It is true is it not, Dr - let me read, this is so
 (15) important let me read the whole thing
 (16) So if they made the determination that a pilot was
 (17) suffering from dysthymia primary problem alcohol abuse
 (18) episodic secondary problem then that pilot could continue to
 (19) fly isn t that correct?
 (20) Answer, That requires a lot of assumptions that you haven t
 (21) given me
 (22) Isn't it true - it is true is it not Dr Masters that
 (23) that is - that if the FAA concurred in a diagnosis of
 (24) dysthymia and alcohol abuse episodic that the FAA regulations
 (25) would not cause for the cancellation of the pilot s license?
 (26) Answer If the FAA concurred in that yes
 (27) You know what he s saying there and the rest of it he s

Vol 23 4072

(1) saying if that's all that s wrong with the pilot he wouldn t
 (2) have to be monitored He d be put back immediately in the
 (3) cockpit of a 747
 (4) So the answer is we didn't have to monitor Captain
 (5) Hazelwood at all But Mr Iarossi says watch him so we did
 (6) Now then what happens, what about next? What do we look
 (7) for? Well, the proof in this case is that you look for job
 (8) performance You don t run around and snoop in a man s - go
 (9) up to Long Island where he lives and look in his garbage can
 (10) destroy his life You look at - what do you do?
 (11) Look at your job performance And that s all we really
 (12) could look at because let me tell you about a law - and
 (13) you ll get this, you ll get this from the Court and I m going
 (14) to take the liberty with the Court of putting up one of its
 (15) instructions here, because it says it and I do not want to say
 (16) it -
 (17) When you get to talking about what the Court s going to
 (18) charge, Judge Holland is just like every judge, they get pretty
 (19) doggone - pretty doggone touchy if you get over in their
 (20) territory about the law and I don t want to do that At the
 (21) time that Captain Hazelwood, all the time prior to the
 (22) grounding, there was an act called the Rehabilitation Act of
 (23) 1973 And it said it says under the terms of this act The
 (24) history of alcoholism or alcohol abuse is treated as a handicap
 (25) and a employer covered by the act is not permitted to

Vol 23 - 4073

(1) discriminate against any employee solely on the basis of that
 (2) history If on the other hand, employee's current use of
 (3) alcohol prevents the employee from performing his job from
 (4) performing his job or if current use would constitute a direct
 (5) threat to the property of others, then the employee is not
 (6) covered
 (7) Now, what is that telling us? That s telling us that there
 (8) is a federal statute and there s no question that Exxon was
 (9) bound by that federal statute That federal statute to me -
 (10) and I suggested it should to you - said the way you monitor a
 (11) guy is you look at job performance
 (12) Now then, we ve - we ve said about - we ve said what -
 (13) I m going to skip the next one We ve said what Dr Masters
 (14) said How do you go about - what do you - how do you go
 (15) about
 (16) monitoring? We've shown you on the screen that he says the
 (17) Exxon program was monitoring was correct You look the
 (18) supervisors become the eyes and ears of the medical
 (19) department
 (20) they look for slurring of speech, absenteeism on the job, bad
 (21) performance on the job, and if they see a problem, they take it
 (22) to the medical department
 (23) And Mr Lynch said, Dr Masters, look at these papers
 (24) isn t that exactly what we provide? And he says yes then he
 (25) goes on and says, Except I didn't find the word monitoring
 (26) So I m not going to go over that again
 (27) Now, then Captain Hazelwood is in the Gulf Coast fleet and

Vol 23 4074

- (1) he is assigned to the Yorktown He s there from 1985 to 1987
 (2) Do you know two years - you know there was one report in two
 (3) years of this so-called bumbling drooling alcoholic
 (4) One report to the supervisors, to the people who supervise
 (5) Captain Hazelwood and that was the Shaw report Jim Shaw
 says
 (6) that he smelled alcohol on Captain Hazelwood s breath
 sometime
 (7) in 1986 and he reports that to Mr Sheehy What does
 (8) Mr Sheehy do?
 (9) And here s another place I have a disagreement with
 (10) plaintiffs counsel What does Mr Sheehy do? He goes to Joe
 (11) Hazelwood and he says, Captain Hazelwood have you been
 (12) drinking? And he investigates and he reports back to Mr
 Koops
 (13) that, I can t find any substance to the Shaw report
 (14) But that s not all that is done there Mr Sheehy then
 (15) contacts Captain Mihajlovic, and Captain Mihajlovic is the big
 (16) guy that came in here to testify, and Mr Sheehy says to
 (17) Captain Mihajlovic, Captain, I ve got this thing from Shaw that
 (18) Captain Hazelwood is drinking, would you check it out?
 (19) Mihajlovic down at Chiriqui Grande, their boats are there
 (20) together, he says, I decided to pull a surprise visit to
 (21) Captain - to Captain Hazelwood
 (22) I took a boat I went to his boat I went down there and I
 (23) said Joe, there s this Shaw rumor that you been drinking He
 (24) says Captain Hazelwood got mad he was not expecting him to
 (25) be

Vol 23 - 4075

- (1) Captain Hazelwood got mad, said, There s nothing to it but
 (2) if you don t believe it, search my quarters
 (3) So Captain Mihajlovic then proceeded to ransack his
 (4) stateroom and his office, opening drawers found nothing And
 (5) then he reported back, so you told him that this Shaw report
 (6) rumor - he s talking about going back to Sheehy how, as you
 (7) see whatever you're talking about was a bunch of baloney
 (8) And Captain Mihajlovic says, in those words - I think you
 (9) could judge by what you saw about Captain Mihajlovic here that
 (10) he is not a man that will get on that stand and lie and he s
 (11) sure not a man - he s too big for me to even suggest it so I
 (12) don t think he d take that kindly, either
 (13) Now then, Mr Shaw made some other allegations but he -
 (14) even he admits this was the only one he reported to
 (15) supervisors He said in his other allegations he - he said
 (16) that he was with Mrs Share, Mrs Pennington a man named
 Jesse
 (17) Watts and a man named DeOliveira Mrs Share took that
 witness
 (18) stand nice little girl, Leslie Pennington took that witness
 (19) stand and says those events didn't happen Mr Watts and
 (20) Mr DeOliveira by deposition testified that they didn t
 (21) happen
 (22) Now then, here s where I m really going to ask you to take
 (23) another note save us all time, you can look at it in the jury
 (24) room rather than me going over it I can - I can demonstrate
 (25) to you that these Shaw - other Shaw reports are inaccurate by

Vol 23 4076

- (1) this
 (2) Mr Shaw testified here Mr Sanders asked him he said
 (3) These events occurred in Baytown while the Yorktown, with
 (4) Captain Hazelwood aboard it, he said they occurred in Baytown
 (5) while the Yorktown was there and Captain Hazelwood was
 master
 (6) and he said they occurred seven to 14 days apart each time
 (7) Seven to 14 days apart
 (8) If you will look at exhibit Defendants Exhibit 7020, you
 (9) will see that there was never, ever, ever a time that the
 (10) Yorktown was in Baytown with Captain Hazelwood aboard in
 seven
 (11) to 14 days, not double that Most of the time, it was more
 (12) than 50 to a hundred days
 (13) And finally, the Mr Watts' thing, Mr Shaw said that
 (14) Mr - that the event involving Mr Watts occurred while
 (15) Mr Watts was sailing with Captain Hazelwood on the Yorktown
 (16) If you will look at Exhibit 3467 A Alpha, you will see that
 (17) Mr Watts did not sail with Captain Hazelwood on the Yorktown
 (18) after February 1985 before the rehab
 (19) Now, Captain Hazelwood says to you that he did start
 (20) drinking socially again He said it was May, 86 and, well,
 (21) plaintiffs said he did it openly
 (22) Well I just want you to note in passing that Captain
 (23) Hazelwood told you, I was in a lot of conferences that lasted
 (24) several days with my supervisors all these fleet conferences
 (25) and I'd go out to lunch and dinner with them and I only drank

Vol 23 4077

- (1) Pernier on those occasions To me that means Captain
 (2) Hazelwood knew that he was being watched and knew that the
 (3) company was serious about it
 (4) Then there comes a time when there is a vacancy on the West
 (5) Coast and there's a chance for somebody to move over and
 (6) replace this master who is the alternate master of the Valdez
 (7) Mr Martineau came to Mr Borgen who was the West Coast
 fleet
 (8) manager and says I think we ought - I ve talked to Bill
 (9) Sheehy on the Gulf Coast I think we ought to promote Captain
 (10) Hazelwood He has big ship experience, he knows the Valdez
 (11) trade he has a pilotage endorsement he is a good ship
 (12) handler, he gets along with his crew
 (13) Mr Borgen says, because he knows there s somewhere back
 in
 (14) the past some alcohol problem, he says I ll think about it
 (15) He then calls Mr Koops, says, What about Joe Mr Koops,
 (16) who was the Gulf Coast fleet manager said, Two years he s
 been
 (17) clean he s been clean he s done a great job so Mr Borgen
 (18) accepts him But that s not all that - that's not all that
 (19) happens
 (20) Mr Borgen still wants to watch Captain Hazelwood, so he
 (21) goes to a Mr Larson his agent down in Long Beach - because
 (22) that s where the vessel will stop in the trade - and he says
 (23) to Mr Larsen Joe has had this kind of a problem sometime
 (24) years back in the past but I still would like you to look at
 (25) him, watch him, go on board the vessel talk to him, talk to

Vol 23 4078

(1) others about him and report back to me
 (2) Now Mr Larsen when he testified here was not an Exxon
 (3) employee He was the captain - he was the president of his
 (4) own company He said that every time then that the Valdez
 (5) was in Long Beach he'd board the vessel he'd talk to Joe he'd
 (6) talk to crew he would talk to the pilots and say How's Joe
 (7) doing, and he would look at his performance And he reported
 (8) back to Mr Borgen time and time again everything was fine
 (9) That's not all Mr Borgen did He got Mr Myers, who was
 (10) immediate supervisor beginning in '88, and he asked Mr Myers
 (11) to look at Joe And Mr Myers, you heard went aboard the
 (12) vessels every time spent days on the vessel slept on the
 (13) vessel talked to crew members on the vessel
 (14) Captain Hazelwood - some of us it was kind of amusing time
 (15) because some of you people were young enough that you
 (16) didn't remember it, but Captain Hazelwood said, He was my shadow
 (17) my
 (18) Lamont Cranston who was the man who played - was the
 (19) character was the shadow in the series
 (20) Now, there are two events here I want to tell you about
 (21) one is the Henry's, the ordering Henry's or ordering beer over
 (22) a walkie talkie while the Valdez was up out of the water in
 (23) dry-dock in the Portland Shipyard in 1988
 (24) Mr Leyendecker Mr Day heard Captain Hazelwood ask about
 (25) beer over the walkie talkie, and the next day Mr Leyendecker
 (26) went to the vessel to investigate

Vol 23 4079

(1) And then he calls Mr Borgen and Mr - and he says,
 (2) Mr Borgen we had this incident I've investigated I went to
 (3) the vessel I think everything's fine Joe told me that the
 (4) beer was not for him not to come aboard the vessel it was for
 (5) a crew party ashore that night I can report to you it's
 (6) fine
 (7) He also told - Mr Leyendecker also told Day that - Day
 (8) asked or he told Day about that and he said to Day the same
 (9) thing I've investigated Joe denied he was drinking,
 (10) everything is fine
 (11) This is not reckless conduct What is this if it's not
 (12) monitoring?
 (13) But that's not all Mr Myers then went to the vessel
 (14) The vessels came out of dry-dock and came to San Francisco or
 (15) Long Beach and Mr Myers went to the vessel and he went
 (16) aboard
 (17) the vessel and he's got this Henry's thing in his mind He
 (18) says Hello Joe Then he goes down and talks to the crew
 (19) Has Joe been drinking?
 (20) You heard this it's undisputed in the record Has Joe
 (21) been drinking The person he talked to I think it was the
 (22) chief engineer said no
 (23) Then Mr Myers goes back up, he spends four or five days -
 (24) or four or five hours talking to Captain Hazelwood, and then he
 (25) says to Captain Hazelwood, Joe, Do you have any problem at
 (26) all
 (27) do you have any problem at all?

Vol 23 4080

(1) Now Mr Myers said Joe knew what I meant He knew I
 (2) meant alcohol The plaintiffs have said that we didn't
 (3) question Captain Hazelwood about drinking or alcohol There
 (4) are three times already Sheehy Captain Mihajlovic
 (5) Mr Myers - four times, Mr Leyendecker
 (6) Now then we have the last incident the so-called launch
 (7) incident I tell you I submit to you that with all sincerity
 (8) at my command, my friend and colleague Mr O'Neill is wrong
 (9) when he said, stood up here and said that Mary Williamson said
 (10) Captain Hazelwood was drunk She never said any such thing
 (11) Indeed, I had that problem at the time with him She said
 (12) Captain Hazelwood I smelled alcohol on Captain Hazelwood's
 (13) breath on a launch going back from shore to the vessel and
 (14) Captain Hazelwood told you that that night, earlier on in the
 (15) evening he had had a couple of glasses of wine with dinner but
 (16) that's what Mary Williamson said, I smell alcohol She also
 (17) said that Captain Hazelwood was very, very angry with her
 (18) boss,
 (19) Captain Reeder, and was being - saying very unkind things
 (20) about Captain Reeder She told this to Mr Day
 (21) Mr Day says I went in to Mr Myers and I - we were
 (22) talking about superchargers and, after a long conversation I
 (23) told Mr Myers what Mary Williamson had said to me Mr Myers
 (24) says on the stand here clearly not lying, I was busy but all
 (25) I heard was nothing about Captain Hazelwood it was officer's
 (26) busting Reeder's chops That must be getting mad at
 (27) somebody

Vol 23 - 4081

(1) That didn't bother him because he said the masters were
 (2) jealous of Captain Reeder and didn't like him He stayed in
 (3) San Francisco Bay and they had to go on long voyages so that
 (4) wasn't really - that wasn't really something that got
 (5) Mr Myers' attention
 (6) And then Mr Day said, Mr Day said to you from his
 (7) deposition, you know, I'm not even sure that Mr Myers heard
 (8) me
 (9) when I was telling about Mary Williamson smelling alcohol on
 (10) Captain Hazelwood's breath These are the facts
 (11) So what do we have? I think I've got five minutes to tell
 (12) you what we have okay
 (13) We have - we have two incidents allegedly reported to
 (14) supervisors from '87 to '89, one of which was investigated
 (15) thoroughly and the other Mr Myers didn't hear Therefore
 (16) we've had one episode reported in - from '85 to '87 Two
 (17) episodes tried to be reported '87 to '89 That's it That is
 (18) it
 (19) Assume just a moment - and then I hope to stop in a
 (20) second Assume just a moment that Mr Myers had actually
 (21) learned as a fact - contrary to fact, had learned that Captain
 (22) Hazelwood was having a beer off shore, beer off duty, wine off
 (23) duty What could he have done? If you will look at this
 (24) instruction again that I put on the screen, what's the -
 (25) what's the number? I don't have the number of the
 (26) instruction It's the instruction about the - about the

Vol 23 - 4082

- (1) federal rehabilitation act
- (2) MR SANDERS 42
- (3) MR NEAL Look at instruction 42 Even - even if
- (4) Mr Myers had learned that Captain Hazelwood - Captain
- (5) Hazelwood was drinking some beer and some wine off shore
- (6) off
- (7) duty, not in violation of company policy, he could not have
- (8) disciplined him under the Federal Rehabilitation Act of 1973
- (9) unless he concluded that that was affecting his job performance
- (10) and constituted direct threat to the safety of others
- (11) Otherwise, he couldn't even have disciplined
- (12) Was it affecting Captain Hazelwood's job performance? I'll
- (13) tell you one more time Captain Hazelwood was the alt masters
- (14) in Valdez in '87 and '88, and what vessel got the fleet
- (15) manager's award for those two years? The Valdez What is that
- (16) based upon, safety? Safety first, as you've heard, and
- (17) performance That's what you get when you look at Captain
- (18) Hazelwood's performance, and I'll say this
- (19) Mr O'Neill made much of the fact that Mr Rouse said it
- (20) was possible, it was possible, remotely possible for relapsed
- (21) alcoholic to be at the tank [sic] of a - master of a vessel
- (22) Well, absolutely it's possible It's possible, Dr Masters
- (23) testified, under the federal AA plan Their theory is that if
- (24) you're an alcoholic which is not the case here - if you're an
- (25) alcoholic you can't ever drink again if you drink again

Vol 23 4083

- (1) alcoholic
- (2) Look at what Dr Masters said about that Dr Masters'
- (3) experts admitted that under the FAA policy, the one that
- (4) everybody's bragged about, plaintiffs bragged about so much
- (5) that you could be an alcoholic and there's nothing to prevent
- (6) you from drinking again
- (7) Finally let me - let me close here by saying this We
- (8) have - you can take that off
- (9) If we have - there's no way, for example you can prevent
- (10) that We've been here - we've been here a long time I've
- (11) been here a long time I'm going to leave with this thought
- (12) We've all seen mystery stories on television we've read
- (13) mystery stories They say to you Find the motive and you
- (14) solve the case What was our motive in returning Captain
- (15) Hazelwood to duty? Plaintiffs try to suggest we were short of
- (16) masters I've shown you that's not the proof Plaintiffs try
- (17) to suggest that he had a pilotage endorsement and therefore
- (18) we'd save money because he had a pilotage endorsement
- (19) You
- (20) have heard any number of testimony here now that you don't
- (21) need
- (22) a pilotage endorsement for Prince William Sound if you go
- (23) through a different ritual You declare yourself a non pilot
- (24) you do more reporting and so forth
- (25) Matter of fact Captain Hazelwood said in answer to a

Vol 23 4084

- (1) paid a master who had a pilotage endorsement \$350 for a trip to
- (2) Prince William Sound above his hundred thousand dollar
- (3) salary
- (4) So we had no motive to return Captain Hazelwood to duty
- (5) except, except we thought it was right for Joe and we thought
- (6) on balance after prayerful-almost consideration, it would not
- (7) increase a risk, it would reduce a risk because it wouldn't
- (8) drive people, undeclared people with alcohol problems into the
- (9) closet
- (10) And I think the Coast Guard agrees with me because I will
- (11) point out one more time, as Mr Chalos did as we sit here
- (12) today the United States Coast Guard has said that Captain
- (13) Hazelwood, you are fully licensed as a master for any size
- (14) vessel on any ocean, and that is - that is true now as I'm
- (15) talking to you I think if the Coast Guard thought he was a
- (16) risk of danger to others, they wouldn't do that
- (17) Now, I thank you very much I like my partner Jim
- (18) Sanders, thank you for your patients I've tried to stay
- (19) within the time I might be a minute or two more than that,
- (20) but I want to leave you with this thought this is the last time
- (21) I'll talk to you in this phase of the case
- (22) As the Judge says, the plaintiff has the burden of proof,
- (23) so if plaintiff gets to open for an hour and a half, we all get
- (24) through, Mr O'Neill can get back up at you and have one -
- (25) have the last word The last - boy, the last word is so

Vol 23 - 4085

- (1) I want you to know that I don't get to talk to you again
- (2) but if he says something, I want you to know that I'll be over
- (3) there fidgeting because if I had another word, I could answer
- (4) him
- (5) Thank you very much
- (6) THE COURT At this point I would ask everybody
- (7) please stay in place except the jury We'll take - we're
- (8) going to take our second recess now but there's something I
- (9) need to talk to the lawyers about before I do my instructions
- (10) We'll reconvene in about 20 minutes
- (11) (Jury out at 12:08 p.m.)
- (12) THE COURT Actually it turns out I have two things
- (13) Mr Daum we're going to need you up front at this point
- (14) First thing that I want to take up is the plaintiffs
- (15) request that I modify jury instruction number 36 Mr Daum,
- (16) have you had a chance to look at that proposal and do you have
- (17) anything to say about it?
- (18) MR DAUM May it please the Court Yes, we've looked
- (19) at it Your Honor We think their proposal is quite wrong and
- (20) confuses two completely different issues One is the level of
- (21) the employee who must act in order to bring the - in order for
- (22) his acts to be imputed to the corporation Protectus addresses
- (23) that question and says that that employee must be a managerial
- (24) employee rather than some other kind of employee
- (25) The second question to which instruction 36 is addressed is

Vol 23 4086

- (1) the effective corporate policies And whatever level of
 (2) employee you re talking about corporate policies may be taken
 (3) into account and at a certain point if enforced enough and
 (4) adequately and published and so forth do in fact prevent the
 (5) employee from acting within the course and scope of his
 (6) employment and therefore prevent imputation So the
 (7) plaintiffs' proposed instruction confuses two quite different
 (8) concepts
 (9) We think 36 is right and it's entirely consistent with 34
 (10) and 33 Your Honor knows our views on those instructions but
 (11) that s a different question So we do object to a change We
 (12) think it s untimely and we think it s wrong
 (13) THE COURT All right I - I am concerned that
 (14) without this change we have some risk of confusion What I
 (15) propose to do, so that you will know and not be surprised when
 (16) I read the instruction, what I am going to do is essentially
 (17) take the plaintiffs' proposed new instruction 36 but I m going
 (18) to change it just a little bit The proposal inserted the
 (19) words, unless the employee is a managerial agent I m not
 (20) going to stick that clause in but I am going to tie a new
 (21) paragraph onto instruction 36 that will say in substance
 (22) however if the employee was a management - a managerial
 (23) agent, then as stated in instruction 33, the acts et cetera
 (24) which was essentially your proposal So that change is going
 (25) to be made in the instruction

Vol 23 4087

- (1) MR OESTING Thank you Your Honor
 (2) THE COURT I will assume that Exxon takes exception
 (3) to that change for purposes of your exceptions
 (4) MR DAUM We do Your Honor I take it we're on the
 (5) record and that objection will also be deemed made after the
 (6) charge
 (7) MR O NEILL Right
 (8) THE COURT Yes we have an understanding on that
 (9) I also have a second matter that was just brought to my
 (10) attention I have a motion to lift the stay and a motion to
 (11) stay proceedings by Mr Lakosh asking that we do one or the
 (12) other of two things that would prevent him to take some action
 (13) with respect to certain breach-of contract claims that he is
 (14) asserting
 (15) I am not going to stay these proceedings at this time to
 (16) take up other claims We are going to proceed on the plan that
 (17) we started out on and we ll take up his individual contract
 (18) claims at another time
 (19) MR DAUM Your Honor I have merely a question The
 (20) draft instructions seem to contemplate that the jury will work
 (21) from nine to five while deliberating If that was your
 (22) intention we have no problem with it but I didn t know
 (23) whether you really intended to do that
 (24) THE COURT That s something - excuse me for
 (25) interrupting That's something that I have among several

Vol 23 4088

- (1) things that I meant to confer with you all on and perhaps we
 (2) had just as well take that one up right now rather than later
 (3) I m sort of two minds on this thing and I ll take your
 (4) collective additional thoughts on it Normally we have jurors
 (5) deliberate from nine until five This jury has been on an
 (6) eight to two schedule right through this and I m a little
 (7) concerned that some of them may have in substance
 committed
 (8) themselves to that kind of a drill on the assumption that it
 (9) will apply during deliberations also What I propose to do in
 (10) order to cut through that, is to suggest that the jury -
 (11) jurors themselves decide whether they want to do our
 (12) traditional nine to-five or whether they want to run eight to
 (13) two Does anyone have a problem with my giving them that
 (14) choice?
 (15) MR O'NEILL No, sir
 (16) MR SANDERS No
 (17) MR LYNCH No, sir, Your Honor
 (18) THE COURT Everyone seems to be in agreement I'll
 (19) read the instruction just as it is because it s easier to do it
 (20) that way When I get through with that, I will say but I'm
 (21) going to let you have a choice about this I ll let you decide
 (22) which way to do it Whatever happens it - we will inform
 (23) you what their decision is as soon as we find out what it is
 (24) MR O NEILL Thank you
 (25) THE COURT All right We'll take our second recess

Vol 23 - 4089

- (1) for 15 minutes at this point and then we ll finish up
 (2) (Recess)
 (3) (Jury in at 12 30)
 (4) MR O'NEILL Thank you Judge
 (5) THE COURT Mr O Neill
 (6) FINAL CLOSING BY MR O NEILL
 (7) MR O NEILL There is an old damage, and again, I
 (8) don t mean to be ageist when I say this, but there is an old
 (9) damage that s been around the courtroom since - as long as
 Mr
 (10) Neal has practiced law which means a long long time which
 (11) says If you have the facts argue the facts, if you have the
 (12) law argue the law, and if you don t have any law or any facts
 (13) argue the other lawyer But we heard that
 (14) I d like to play the tapes, the VTC tapes, because we do
 (15) have a witness We can be witnesses to what happened by
 (16) listening to the tapes as to what was recorded that evening
 (17) Let s play the audio tape of the VTC we ll listen to it for
 (18) five minutes
 (19) (Audio played- sometimes indiscernible)
 (20) EV Valdez traffic, Exxon Valdez
 (21) VTC Valdez traffic, go ahead
 (22) EV Departed the pilot or disembarked the pilot,
 (23) excuse me, and this time hooking up to sea speed and ETA
 Naked
 (24) Island 0100, over
 (25) VTC Roger that, sir Request an updated ice report

Vol 23 4090

- (1) when you get down through there over
- (2) EV Okay, I was just about to tell you that judging
- (3) by our radar, I will probably divert from the TSS and end up in
- (4) the inbound lane if there's no conflicting traffic over
- (5) VTC No reported traffic I've got the Chevron
- (6) California one hour out then the Arco Alaska is right behind
- (7) them but they're an hour out from Cape Hinchinbrook, out on
- (8) that, over
- (9) EV That would be fine, yeah We may end up over in
- (10) the inbound lane outbound transit We'll notify you when we
- (11) leave the TSS and cross over the separation zone over
- (12) VTC Roger that be waiting your call Traffic out
- (13) EV Exxon Valdez over, standing by 13 and 16
- (14) Valdez traffic, Exxon Valdez, W-H C-B over
- (15) VTC This is Valdez traffic, over
- (16) EV At the present time, I'm going to alter my course
- (17) to 200 and reduce speed to about 12 knots to wend my way
- (18) through the ice and, Naked Island ETA might be a little out of
- (19) whack but once we're clear of the ice out of Columbia Gla--
- (20) we'll give you another shout, over
- (21) Valdez traffic, Exxon Valdez, over
- (22) VTC Exxon Valdez, Valdez traffic
- (23) EV Yeah it's Valdez back We've -- should be on
- (24) your radar there, we've fetched up hard aground north of
- (25) Goose Island off Bligh Reef and evidently leaking some oil and we're

Vol 23 - 4091

- (1) going to be here for a while and if you want so you're
- (2) notified over
- (3) COTP Exxon Valdez, this is the captain of the port
- (4) on channel 13 over
- (5) EV Exxon Valdez back, over
- (6) COTP Exxon Valdez, this is the captain of the port
- (7) Commander McCall, good evening Do you have any more of
- (8) an estimate as to your situation at this time, over
- (9) EV Not at the present Steve Joe Hazelwood here
- (10) A little problem here with the third mate but we're working
- (11) our way off the reef We've -- the vessel's been holed and
- (12) we're ascertaining -- right now, we're trying to just to get
- (13) her off the reef and we'll get back to you as soon as we can,
- (14) over
- (15) COTP Roger on that Yeah, I've got you know --
- (16) we've got all our plan mechanisms in way to give you what
- (17) assistance we can You know, take it -- take it slow and easy
- (18) and you know I'm telling you the obvious, but you know take
- (19) it slow and easy and we're getting help out as fast as we can,
- (20) and I'd appreciate when you get around, if you can give me a
- (21) fairly good -- if you can give me an update whenever as to the
- (22) general location what you suspect it might be and of the
- (23) stability info over
- (24) EV Okay, we're pretty good shape right now
- (25) stability-wise we're just trying to extract her off the shoal

Vol 23 4092

- (1) here and you can probably see me on your radar and once we
- (2) get
- (3) underway I'll let you know do another damage control
- (4) assessment over
- (5) COTP Roger yeah And let me know -- again before
- (6) you make any drastic attempt to get underway, you make sure
- (7) you
- (8) don't you know, start doing any ripping You got a rising
- (9) tide you got about another -- about an hour and a half worth
- (10) of tide in your favor Once you hit that max, I wouldn't
- (11) recommend doing much wiggling, over
- (12) EV Okay, yeah, I think it's -- major damage has kind
- (13) of been done We kind of rock and rolled over it and we're
- (14) just kind of hung up in the stern here We're just -- we'll
- (15) drift over it I'll get back to you We'll be standing by 13
- (16) 16 Exxon Valdez clear
- (17) (End of audio tape)
- (18) MR O NEILL We know two things We know the
- (19) afternoon of the 23rd he drank in town and he admits to those
- (20) occasions where he was drinking with Glowacki and Roberson
- (21) And he minimizes his drinking and he minimized his drinking to
- (22) the Coast Guard, but he was in and out of bars, and we brought
- (23) the bartenders here by videotape to testify
- (24) So we know before those tapes he was drinking And we know
- (25) that the next day he tested 06 for alcohol on a blood alcohol
- (26) test He drank the afternoon we listened to the tapes, and he
- (27) tested 06

Vol 23 - 4093

- (1) Now let's discuss, if we could for a minute, the blood
- (2) test Did Dr Peat, his wife the United States Justice
- (3) Department, Scott Conner, the lieutenant in Anchorage and
- (4) others as yet unknown get together, have a meeting and decide
- (5) to sneak into the cooler down at the Coast Guard station in
- (6) Valdez? It's preposterous It's absolutely preposterous
- (7) This is the sample It's got stickers on it, initials on
- (8) it the top on it no -- nobody's come in here and said
- (9) anything happened to this thing other than the box was opened
- (10) Dr Smith came in and testified that the important thing was
- (11) the integrity of the sample There's been no proof that
- (12) anybody had any motive, any access, any intention to sneak in
- (13) there, Hey, I got a great idea let's get Erma Lee, Janice
- (14) Delozier, the Coast Guard, the Justice Department of the United
- (15) States -- let's all get together and let's see if we can make
- (16) up a test tube that looks like that and then sneak it in It
- (17) is absolutely preposterous It is a lawyer's argument
- (18) The Coast Guard under the circumstances that they had did
- (19) a good job Now, I want to address one other thing about this
- (20) blood alcohol issue
- (21) Did the test tubes have a preservative in them or not
- (22) okay? Were they ten milliliter test tubes or not? I put this
- (23) up quickly before but let's put it up for a minute This is
- (24) the -- the actual form that was taken out of the Exxon Valdez
- (25) kit and as you can see it has all of the signatures and

Vol 23 4094

- (1) everything on the bottom but what does it describe? Two
 (2) sterile ten milliliter Vacutainer brand tubes each containing
 (3) 20 milligrams of sodium fluoride and ten milligrams of disodium
 (4) edistate Those are the chemicals that are in gray stoppered
 (5) tubes
 (6) So they take young Conner's confusion over the size of the
 (7) tubes - we now know they're ten milliliter tubes - and they
 (8) take the fact that because of the evidence tape over the top
 (9) they were logged in wrong, both understandable
 happenstances
 (10) and then we get this long elaborate fairy tale about the
 (11) justice department, the United States Coast Guard, and who
 (12) knows what else about the 06 blood samples Which is in
 (13) polite terms, hogwash
 (14) And Dr Smith if you'll recall computed for us what his
 (15) blood-alcohol level would be at midnight and it's 241
 (16) Typical for someone who is intoxicated
 (17) Now, I want to put that together with one other piece
 (18) uncontradicted piece of testimony Exxon's Dr Mendelson said
 (19) that alcoholics can operate physically without showing signs of
 (20) impairment from 2 to 4 And we got that out of his book his
 (21) physical book
 (22) So we know he drank the afternoon He was seen by three
 (23) bartenders - or two bartenders and a patron - and his
 (24) companions and they were drinking big drinks We know he
 (25) tested .06 the next morning, and we can hear his speech Now

Vol 23 4095

- (1) you can play all the lawyers' games you want but you can't
 (2) change that
 (3) Now, just so we remember Dr Smith also testified about
 (4) how alcoholics can function between 2 and 4 if you recall
 (5) him drawing this, but judgment goes first Judgment goes first
 (6) and motor skills go second
 (7) Now I want to talk a little bit about the diagnosis Talk
 (8) about what we can't change All the lawyers' arguments
 (9) notwithstanding, what can't we change? The testimony of his
 (10) treating physician
 (11) So it was your view then that Captain Hazelwood should
 (12) remain alcohol-free for the rest of his life on discharge?
 (13) Yes
 (14) And we can't change what is in the DSM with regard to what
 (15) alcohol abuse is The need for the daily use of alcohol for
 (16) adequate functioning, the inability to cut down or stop
 (17) drinking, repeated efforts to go on the wagon, binges,
 (18) occasional consumption of a fifth of spirits or its equivalent
 (19) in wine or beer amnesia continuation of drinking despite
 (20) serious physical disorder drinking of non beverage alcohol -
 (21) serious things
 (22) Dr Vallury his treating physician said he can't drink
 (23) again - That was the prescription
 (24) There is no evidence that these three people from Valdez
 (25) Alaska decided to get together and lie about something that

Vol 23 - 4096

- (1) they had no interest lying in lying about They saw him going
 (2) in and out of the bar and from 2:15 to four where was he? He
 (3) said he was in his Coast Guard interview over at the Pipeline
 (4) Club at three He was drinking all afternoon Who knows how
 (5) much but he tested .06
 (6) His actions during the voyage, there were a variety of
 (7) actions during the voyage that may not have caused the
 (8) grounding, but are evidence that something was seriously
 (9) wrong,
 (10) and let's go through a couple of those
 (11) He leaves the bridge when they're going through the
 (12) Narrows Didn't cause the accident but is not a good
 (13) practice Why? Tired and woozy from drinking all afternoon
 (14) He reports to the VTC that he was reducing vessel speed but
 (15) he
 (16) wasn't reducing vessel speed Why? He leaves the bridge
 (17) Why?
 (18) Now, after the grounding, when he phones in he says we're
 (19) at Goose Island Now, he's only been off the bridge ten or
 (20) eleven minutes Goose Island is more than an hour and a half
 (21) away from there Why? Because he's impaired by alcohol His
 (22) cognitive functions are impaired by alcohol
 (23) Thank you
 (24) Now I want to talk - I agree totally with Mr Sanders
 (25) board I think this is a very good exhibit I think this is a
 wonderful exhibit This is what happened no doubt about it
 (25) And what I find most interesting is the top entry Hazelwood

Vol 23 - 4097

- (1) leaves the bridge And then this confusion or chaos reigns
 (2) Now Cousins says he called him when he started the turn
 (3) Greg Cousins does say that Which puts it down here
 (4) Hazelwood wants to say that he called up here or up here
 (5) because it takes him off the hook But when Cousins said the
 (6) call was about the turn it comes down here
 (7) Now the other interesting thing about this is, what
 (8) happens for these five or six minutes? He Z's out
 (9) And what is the easiest explanation? There's a logical
 (10) principle called Ockham's Razor that says, when faced with a
 (11) bunch of circumstances the easiest explanation gives you
 (12) more
 (13) often than not, the right answer
 (14) What is the most logical explanation for Greg Cousins Z'ing
 (15) out on the bridge? Fatigue
 (16) But in any event, if the good captain would have been here
 (17) as he was supposed to none of this would have happened So
 (18) his not being on the bridge was a legal cause
 (19) Now these policies that they talk about being so great
 (20) aren't so great And the law in effect in 1985 didn't require
 (21) this kind of stupidity The ordinary person faced with this
 (22) policy or prospect or statement would say That is one of the
 (23) stupidest things I've ever heard in my life And it is And
 (24) the law doesn't require it
 (25) And let's take - I don't want to - the Rehabilitation Act
 of 1973 which was in effect - and you'll get this jury

Vol 23 4098

- (1) instruction which says if on the other hand an employee's
- (2) current use of alcohol prevents the employee from performing
- (3) the duties of the employee's job or if because of the
- (4) employee's current use continued employment constitutes a
- (5) direct threat to the property or safety - and when Neal read
- (6) this the first time, he left out or safety of others then
- (7) the employee is not covered by the act Either one
- (8) Now I would submit to you that in a safety sensitive
- (9) position the fact that somebody is drinking again - and
- (10) you're only going to find out about his relapse at the time of
- (11) the accident is covered by the first half of this but more
- (12) importantly after all the testimony we have heard about what a
- (13) critical job this is, the current use of alcohol by a
- (14) supertanker captain presents a direct threat to the safety of
- (15) others and the law does not protect it
- (16) And to say it does and to say that this is what the law
- (17) requires means that Exxon Corporation has not learned its
- (18) lesson
- (19) And the fact that they have some policies - and I told you
- (20) at the beginning they'd have policies - isn't enough to get
- (21) them off of the hook In this case their policies are the
- (22) problem You know, the policies that allow this kind of risk
- (23) to the public are the problem, but if they had good policies,
- (24) that doesn't even take them off of the hook because they have
- (25) to take diligent measures to enforce the policy

Vol 23 4099

- (1) For example if you have a tanker captain that is drinking,
- (2) you do something about it
- (3) We don't need to say any more about the Coast Guard because
- (4) we watched Mr Rawls testify before the Congress but in the
- (5) manual, as we've gone over it's Exxon and the vessel master's
- (6) responsibility and it isn't the Coast Guard's responsibility
- (7) And as to whether his leaving the bridge was a cause or not
- (8) logic you know give me a break He's supposed to be on the
- (9) bridge, four eyes instead of two, remember that? And these
- (10) kinds of waters the - the reason we have two people on the
- (11) bridge is to make sure one catches the error of the other
- (12) That's the only reason It isn't done so that everybody can
- (13) have a job It isn't done for fun it isn't done because one
- (14) guy wants to do sight seeing when the other guy is not there
- (15) It's to have two people on the bridge, four eyes instead of
- (16) two
- (17) And Exxon concedes in fact it stipulates that his leaving
- (18) the bridge was a proximate cause of the spill And to say at
- (19) this point that it wasn't and that it was poor Greg Cousins
- (20) fault is to play games in this arena with you
- (21) And with regard to self identification that's also a big
- (22) game Exxon has stipulated in the course of this proceeding
- (23) that his conduct that the Graves report detailed such conduct
- (24) constituted a clear violation of Exxon Shipping Company's
- (25) prohibitions against the use of alcohol or intoxication aboard

Vol 23 4100

- (1) Exxon vessels They could have fired him
- (2) Now you get this heart-rendering story of anguish over the
- (3) decision by Frank Iarossi I want you to remember that Iarossi
- (4) was not told about this until two weeks after the decision was
- (5) made And then Iarossi and Mr Graves have very, very
- (6) different versions as to what was said And you want a motive
- (7) for all of this? You want a motive? This company doesn't give
- (8) a damn
- (9) It isn't that they're trying to be mean It isn't that
- (10) they're trying to run a vessel on a rock It's that they are
- (11) indifferent to the rights and safety of others That from 1985
- (12) or before until 1989, they didn't care whether they had
- (13) alcoholic captains, drinking captains, drinking on board
- (14) vessels, so long as they could cover their tails with
- (15) policies
- (16) And we see that They don't do anything to Hazelwood, they
- (17) never talk to Hazelwood It was all the argument in the - and
- (18) the evidence over a hundred witnesses did we have somebody
- (19) come in and say I called Joe in, I sat down and I asked
- (20) Joe, How is your drinking, how is your recovery, how is your
- (21) AA, how is your family, how is any of that? "
- (22) Did one person do that? Where is it?
- (23) I mean isn't that how we treat each other? They didn't do
- (24) the man any favor He is in the history books now They
- (25) didn't do him any favor He is now in the history books as the

Vol 23 - 4101

- (1) captain who left the bridge prior to one of the great maritime
- (2) accidents in the history of the world They did this man a
- (3) favor by not being - by not being decent to him? They did
- (4) this man a favor by not treating him the same way that we
- (5) expect to be treated? They didn't do him any favors
- (6) And I want to mention one more thing Could I have the
- (7) Elmo please?
- (8) This is the agreement between Exxon and Captain Hazelwood
- (9) The parties agree that neither shall use in any manner
- (10) deposition or trial testimony or any evidence derived therefrom
- (11) given by either party in the Valdez litigation in connection
- (12) with the mediation or arbitration provided for herein
- (13) That's what that says That means that each one of them
- (14) can come in here and say what they want to say and they can't
- (15) use it in the fight between them
- (16) Now why would anybody agree to that? So that they can
- (17) come in here and tell whatever story they want to tell
- (18) Exxon Corporation is so big, so powerful has had its way
- (19) for over a hundred years, that it thinks it can do whatever it
- (20) wants to do in and out of the courtroom, today, 1985 1989, and
- (21) Ladies and Gentlemen of the Jury, you are the only people that
- (22) can stop that Thank you
- (23) JURY INSTRUCTIONS
- (24) THE COURT Members of the Jury We have now
- (25) completed phase one of this trial Now that you have heard the

Vol 23 4102

- (1) evidence and the arguments it becomes my duty to give you the
- (2) instructions as to the law applicable to this part of this
- (3) case
- (4) Two copies of these instructions will be available for you
- (5) in the jury room for further review I urge you to review
- (6) these instructions from time to time as you progress with your
- (7) deliberations
- (8) It is your duty as jurors to follow the law as stated in
- (9) these instructions as to apply that law to the facts as you
- (10) find them from the evidence in this case You are not to
- (11) single out one instruction alone as stating the law but must
- (12) consider the instructions as a whole Neither are you to be
- (13) concerned with the wisdom of any rule of law stated by the
- (14) Court Regardless of any opinion you may have as to what the
- (15) law ought to be, it would be a violation of your sworn duty to
- (16) base a verdict upon any other view of the law than that given
- (17) in the instructions of the Court
- (18) Similarly it would be a violation of your sworn duty as
- (19) judges of the facts to base a verdict upon anything but the
- (20) evidence in the case presented here in open court Nothing I
- (21) say in these instructions is to be taken as an indication that
- (22) I have an opinion as to the facts of the case or what that
- (23) opinion is It is not my function to determine the facts but
- (24) rather yours
- (25) Justice through trial by jury must always depend upon the

Vol 23 4103

- (1) willingness of each individual juror to seek the truth as to
- (2) the facts only from the same evidence presented to all the
- (3) jurors and to arrive at a verdict by applying the same rules of
- (4) law as given in the instructions of the Court
- (5) You have been chosen and sworn as jurors in this case to
- (6) try the issues of fact presented by the plaintiffs and the
- (7) defendants You are to perform this duty without bias or
- (8) prejudice as to any party Our system of law does not permit
- (9) jurors to be governed by sympathy prejudice or public opinion
- (10) as to either party The law requires, and both parties and the
- (11) public expect that you will carefully and impartially consider
- (12) all the evidence in the case follow the law as stated by the
- (13) Court and reach a just verdict regardless of the
- (14) consequences
- (15) Unless otherwise stated the jury should consider each
- (16) instruction given to apply to all the plaintiffs and to all the
- (17) defendants in the case
- (18) This case should be considered and decided by you as an
- (19) action between persons of equal standing in the same
- (20) community
- (21) of equal worth and holding the same or similar stations in
- (22) life In your decisions on the issues of fact a corporation
- (23) is entitled to the same fair trial at your hands as a private
- (24) individual All persons including corporations partnerships
- (25) unincorporated associations and other organizations stand

Vol 23 4104

- (1) jury as equals in a court of justice
- (2) For purposes of this trial the parties will refer to Exxon
- (3) Shipping Company and Exxon Corporation as the Exxon
- (4) defendants
- (5) and you should consider all evidence arguments and
- (6) questions
- (7) submitted to you for decision as though the Exxon defendants
- (8) were one party
- (9) An act or failure to act of Exxon Shipping Company or any
- (10) knowledge or information known or available to Exxon Shipping
- (11) Company shall be considered to be equally the act or
- (12) knowledge
- (13) of Exxon Corporation Any act or failure to act by Exxon
- (14) Corporation or any knowledge or information known or
- (15) available
- (16) to Exxon Corporation shall be considered the act or failure to
- (17) act of or the knowledge of Exxon Shipping Company
- (18) There are many parties and many lawyers in this lawsuit
- (19) Early in this litigation, I asked the lawyers for the parties
- (20) who are generally on the same side to work together as much
- (21) as
- (22) possible so as to reduce expenses for everyone and to reduce
- (23) the burden on my staff and the Court system I asked counsel
- (24) for the plaintiffs to work together and I asked counsel for
- (25) defendants to work together All counsel have done what I
- (26) asked Accordingly you should draw no inference for or
- (27) against any party as a result of the fact that their counsel
- (28) have worked closely together with counsel for other parties
- (29) In doing that, they were doing what I asked them to do
- (30) There are, generally speaking two types of evidence from

Vol 23 - 4105

- (1) which a jury may properly find the truth as to the facts of the
- (2) case One is direct evidence such as the testimony of an
- (3) eyewitness The other is indirect or circumstantial evidence
- (4) The proof of a chain of circumstances pointing to the existence
- (5) or nonexistence of certain facts As a general rule the law
- (6) makes no distinction between direct or circumstantial evidence
- (7) but simply requires that the jury find the facts in accordance
- (8) with the preponderance of all the evidence in the case both
- (9) direct and circumstantial
- (10) The evidence from which you are to decide what the facts
- (11) are consist of, one the sworn testimony of witnesses both on
- (12) direct and cross-examination, regardless of who called the
- (13) witness, two, the exhibits which have been received into
- (14) evidence, and, three, any facts to which all the lawyers have
- (15) agreed or stipulated
- (16) Plaintiffs and the defendants have agreed or stipulated to
- (17) certain facts You should treat those facts as having been
- (18) proved
- (19) Certain things are not evidence and you may not consider
- (20) these things except insofar as they are supported by the
- (21) evidence These things include, one, arguments and
- (22) statements
- (23) by lawyers are not evidence the lawyers are not witnesses
- (24) What they say in their opening statements closing arguments
- (25) and at other times is intended to help you interpret the
- (26) evidence, but it is not evidence If the facts as you remember

Vol 23 - 4106

- (1) them differ from the way the lawyers have stated them your
- (2) memory of them controls
- (3) Two objections by lawyers are not evidence Attorneys
- (4) have a duty to their clients to object when they believe a
- (5) question is improper under the rules of evidence You should
- (6) not be influenced by the objection or by the Court a ruling on
- (7) it
- (8) Three, testimony that has been excluded or stricken or that
- (9) you've been instructed to disregard is not evidence and must
- (10) not be considered
- (11) Four evidence admitted for a limited purpose is not
- (12) evidence for any other purpose Thus when I have admitted
- (13) some
- (14) evidence for a limited purpose it would be improper to
- (15) consider that evidence for any other purpose
- (16) Five, anything you may have seen or heard when the Court
- (17) was not in session is not evidence You are to decide the case
- (18) solely on the evidence received during trial
- (19) Six, some of you have taken notes during the trial Such
- (20) notes are not evidence and are only for the personal use of the
- (21) person who took them
- (22) Certain charts and summaries have been shown to you in
- (23) order to help explain the facts disclosed by the books records
- (24) and other documents which are in evidence in the case
- (25) However such charts or summaries are not in and of themselves
- (26) evidence or proof of any facts If such charts or summaries do

Vol 23 4107

- (1) not correctly reflect facts or figures shown by the evidence in
- (2) the case you should disregard them In other words such
- (3) charts or summaries are used only as a matter of convenience
- (4) so if and to the extent that you find they are not in truth
- (5) summaries of facts or figures shown by the evidence in the
- (6) case you are to disregard them entirely
- (7) You are to consider only the evidence in the case, but in
- (8) your consideration of the evidence you are not limited to the
- (9) bald statements of the witnesses In other words you are not
- (10) limited solely to what you see and hear as the witnesses
- (11) testify or what appears on the face of exhibits You are
- (12) permitted to draw on facts which you find have been proved by
- (13) the evidence in this face of the trial such reasonable
- (14) inferences as seem justified in the light of your experience
- (15) Inferences are deductions or conclusions which reason and
- (16) common sense lead the jury to draw from the facts which have
- (17) been established by the evidence in the case
- (18) You are not bound to decide any issue of fact in accordance
- (19) with the testimony of any number of witnesses which does not
- (20) produce in your minds belief in the likelihood of truth as
- (21) against the testimony of a lesser number of witnesses or other
- (22) evidence which does not produce such belief in your minds The
- (23) test is not which side brings the greater number of witnesses
- (24) or presents the greater quantity of evidence but which witness
- (25) and which evidence appeals to your minds as being most
- (26) accurate

Vol 23 4108

- (1) and otherwise trustworthy
- (2) The testimony of a single witness who produces in your
- (3) minds belief in the likelihood of truth is sufficient for the
- (4) proof of any fact and would justify a verdict in accordance
- (5) with such testimony, even though a number of witnesses may
- (6) have
- (7) testified to the contrary, if after consideration of all the
- (8) evidence in the case you hold greater belief in the accuracy
- (9) and reliability of the one witness
- (10) During this part of the trial, certain depositions were
- (11) read or played to you These consist of sworn, recorded
- (12) answers to questions asked of the witness in advance of the
- (13) trial by one or more of the attorneys for the parties to the
- (14) case Such testimony is entitled to the same consideration and
- (15) is to be judged as to credibility and weighed and otherwise
- (16) considered by the jury insofar as possible in the same way as
- (17) if the witness had been present and had testified from the
- (18) witness stand
- (19) The rules of evidence ordinarily do not permit witnesses to
- (20) testify as to opinions or conclusions An exception to this
- (21) rule exists for those whom we call expert witnesses Witnesses
- (22) who by education or experience have become expert in some
- (23) art,
- (24) science, profession or calling, may state their opinions as to
- (25) relevant and material matters in which they profess to be
- (26) expert and may also state their reasons for the opinion
- (27) You should consider each expert opinion received in

Vol 23 - 4109

- (1) evidence in this case and give it such weight as you think it
- (2) deserves If you should decide that the opinion of an expert
- (3) witness is not based upon sufficient education and experience
- (4) or if you should conclude that the reasons given in support of
- (5) the opinion are not sound or if you feel that it is outweighed
- (6) by other evidence, you may disregard the opinion entirely
- (7) The burden is on the plaintiffs in a civil action such as
- (8) this to prove every essential element of their claims by a
- (9) preponderance of the evidence If the proof should fail to
- (10) establish any essential element of a claim by a preponderance
- (11) of the evidence in the case the jury should find for the
- (12) defendant as to that claim
- (13) To, quote establish by a preponderance of the evidence,
- (14) end quote, means to prove that something is more likely so than
- (15) not so In other words, a preponderance of the evidence in the
- (16) case means such evidence as, when considered and compared
- (17) with
- (18) that opposed to it, has more convincing force and produces in
- (19) your minds belief that what is sought to be proved is more
- (20) likely true than not true
- (21) This rule does not of course, require proof to an absolute
- (22) certainty, since proof to an absolute certainty is seldom
- (23) possible in any case
- (24) In determining whether any fact in issue has been proved by
- (25) a preponderance of the evidence in the case the jury may
- (26) unless otherwise instructed consider the testimony of all

Vol 23 4110

- (1) witnesses regardless of who may have called them and all
- (2) exhibits received in evidence regardless of who may have
- (3) produced them
- (4) When I say in these instructions that the party has the
- (5) burden of proof on any proposition or use the expression
- (6) quote if you find end quote, or quote, if you side end
- (7) quote I mean you must be persuaded considering all the
- (8) evidence
- (9) in the case that the proposition is more probably true than not
- (10) true
- (11) In deciding whether plaintiffs have proved a fact or an
- (12) element of a claim by a preponderance of the evidence you
- (13) must
- (14) evaluate all the evidence in doing this you must decide which
- (15) testimony to believe and which testimony not to believe You
- (16) may believe all or any part or none of any witness testimony
- (17) In making that decision, you may take into account a number of
- (18) factors including the following
- (19) One Was the witness able to see or hear or know the things
- (20) about which that witness testified,
- (21) Two, How well was the witness able to recall and describe
- (22) those things,
- (23) Three What was the witness manner while testifying
- (24) Four, Did the witness have an interest in the outcome of
- (25) this case or any bias or prejudice concerning any party or any
- (26) matter involved in the case,
- (27) Five How reasonable was the witness testimony considered

Vol 23 4111

- (1) in the light of all of the evidence in the case
- (2) Six Was the witness testimony contradicted by what that
- (3) witness has said or done at another time or by the testimony of
- (4) other witnesses or by other evidence
- (5) In deciding whether or not to believe a witness keep in
- (6) mind that people sometimes forget things You need to
- (7) consider therefore whether a contradiction is an innocent
- (8) lapse of memory or an intentional falsehood And that may
- (9) depend on whether it has to do with an important fact or with
- (10) only a small detail
- (11) A witness may be discredited or impeached by contradictory
- (12) evidence or by evidence that at some other time the witness has
- (13) said or thing something or has failed to say or do something
- (14) which is inconsistent with the witness' present testimony If
- (15) you believe any witness has been impeached and thus
- (16) discredited it is your exclusive province to give the
- (17) testimony of that witness such credibility if any as you may
- (18) think it deserves
- (19) If a witness is shown knowingly to have testified falsely
- (20) concerning any material matter, you have a right to distrust
- (21) such witness testimony in other particulars and you may
- (22) reject all the testimony of that witness or give it such
- (23) credibility as you may think it deserves
- (24) Plaintiffs claim the defendant Hazelwood negligently caused
- (25) the grounding of the Exxon Valdez on March 24, 1989 The

Vol 23 4112

- (1) burden is on the plaintiffs to establish by a preponderance of
- (2) the evidence in the case the essential elements of a cause of
- (3) action for negligence These elements are first that
- (4) defendant Hazelwood was negligent and second that
- (5) defendant
- (6) Hazelwood's negligence was a legal cause of the grounding of
- (7) the Exxon Valdez
- (8) Negligence is the failure to use reasonable care
- (9) Reasonable care is that amount of care that a reasonably
- (10) prudent person would use under similar circumstances
- (11) Negligence may consist of doing something which a reasonably
- (12) prudent person would not do or it may consist of failing to do
- (13) something which a reasonably prudent person would do A
- (14) reasonably prudent person is not the exceptionally cautious or
- (15) skillful individual, but a person of reasonable and ordinary
- (16) carefulness
- (17) In this case you must decide whether defendant Hazelwood
- (18) used reasonable care under the circumstances
- (19) I will now define the meaning of legal cause A legal
- (20) cause of an occurrence is an act or failure to act which is a
- (21) substantial factor in bringing about the occurrence In order
- (22) to determine that particular conduct was a substantial factor
- (23) in bringing about the grounding of the Exxon Valdez you must
- (24) find by a preponderance of the evidence that it was more likely
- (25) true than not true that, one, the grounding would not have
- (26) occurred but for that conduct, and two, the conduct was so

Vol 23 - 4113

- (1) important in bringing about the grounding that a reasonable
- (2) person would regard it as a cause and attach responsibility to
- (3) it
- (4) This does not mean that the law recognizes only one legal
- (5) cause of an occurrence consisting of only one factor or thing
- (6) or the conduct of only one person On the contrary many
- (7) factors or things or the conduct of two or more persons may
- (8) operate at the same time either independently or together to
- (9) cause an occurrence And in such a case each may be a legal
- (10) cause
- (11) If you find by a preponderance of the evidence in the case
- (12) that Captain Hazelwood by some act or failure to act violated
- (13) the provisions of a statute or regulation such conduct in
- (14) violation of the law is presumed negligent
- (15) In this case, plaintiffs allege violations of several
- (16) provisions of federal law The so-called six-hour rule is a
- (17) federal law which provides that the owner or master of a vessel
- (18) may permit an officer to take charge of the deck watch on a
- (19) vessel when leaving or immediately after leaving port only if
- (20) the officer has been off duty for at least six hours within the
- (21) 12 hours immediately before the time of leaving
- (22) The so called four hour rule is a federal regulation which
- (23) provides that a master or crew member of a vessel shall not
- (24) perform or attempt to perform any scheduled duties within four
- (25) hours of consuming any alcohol

Vol 23 4114

- (1) The so-called pilotage requirement is a federal statute
- (2) that requires unless waived by the Coast Guard, that a person
- (3) licensed by the Coast Guard as a pilot be in command of vessels
- (4) between Rocky Point and Cape Hinchinbrook
- (5) The presumption of negligence arising from violation of law
- (6) is not conclusive but may be overcome or outweighed by evidence
- (7) in the case which satisfies your minds that, notwithstanding
- (8) any failure to comply with the provisions of the statute or
- (9) regulation in question Captain Hazelwood acted as a reasonably
- (10) prudent person would have acted under all the surrounding
- (11) circumstances shown by the evidence in the case
- (12) And you must bear in mind that a finding of negligence
- (13) which is based upon a violation of a statute or regulation will
- (14) not justify a verdict against Captain Hazelwood unless the
- (15) violation of the law was a legal cause of the grounding of the
- (16) Exxon Valdez
- (17) Some of the foregoing matters are amplified in some
- (18) additional specific instructions applicable to all of
- (19) plaintiffs claims are to be found in instructions 37 through
- (20) number 45 which I have not read yet
- (21) For purposes of this litigation the Exxon defendants have
- (22) stipulated that Captain Hazelwood was negligent in leaving the
- (23) bridge of the Exxon Valdez at 11 53 p m on the night of the
- (24) grounding This stipulation is binding only as to the Exxon
- (25) defendants Captain Hazelwood disputes that he was negligent

Vol 23 4115

- (1) in leaving the bridge Therefore in considering any of the
- (2) plaintiffs claims against Captain Hazelwood you must entirely
- (3) disregard the Exxon defendants stipulation
- (4) Plaintiffs claim that the conduct of the Exxon defendants
- (5) and Captain Hazelwood was such as to render them liable for
- (6) punitive damages In this phase of the trial you are asked to
- (7) determine whether defendants conduct was such that punitive
- (8) damages may be awarded If you find that the defendants
- (9) conduct was such that punitive damages may be awarded you
- (10) will
- (11) be asked in a subsequent phase of the case to determine the
- (12) amount if any of punitive damages that should be awarded
- (13) There will be a phase two of this trial in which you will
- (14) be asked to determine the amount of damages if any
- (15) necessary
- (16) to compensate the plaintiffs for any actual injuries which they
- (17) may have sustained as a result of the grounding of the Exxon
- (18) Valdez
- (19) Punitive damages are not favored in the law and are never
- (20) awarded as a right, no matter how egregious a defendant's
- (21) conduct but may be imposed for conduct that manifests
- (22) reckless
- (23) or callous disregard for the rights of others Punitive
- (24) damages serve the purpose of punishing a defendant of
- (25) teaching
- (26) a defendant not to do it again and of deterring others from
- (27) repeating harmful conduct Punitive damages are not awarded
- (28) for the purpose of compensating a plaintiff for injury
- (29) Punitive damages are in addition to all damages the law awards

Vol 23 4116

- (1) to compensate plaintiffs for injuries they have suffered
- (2) The burden is on the plaintiffs to establish by a
- (3) preponderance of the evidence in the case the essential
- (4) elements of their claims for punitive damages In this case,
- (5) the essential elements are, first that a defendant's conduct
- (6) before the grounding of the Exxon Valdez manifested reckless
- (7) or
- (8) callous disregard for the rights of others, and second, that
- (9) such conduct by a defendant was a legal cause of the
- (10) grounding
- (11) of the Exxon Valdez
- (12) In order for conduct to be considered reckless or callous
- (13) disregard for others, four factors must be present
- (14) First, a defendant must be subjectively conscious of a
- (15) particular grave danger or risk of harm and the danger or risk
- (16) must be a foreseeable and probable effect of the conduct
- (17) Second, the particular danger or risk of which the
- (18) defendant was subjectively conscious must in fact have
- (19) eventuated,
- (20) Third, a defendant must have disregarded the risk in
- (21) determining how to act
- (22) Fourth a defendant's conduct in ignoring the danger or
- (23) risk must have involved a gross deviation from the level of
- (24) care which an ordinary person would use having due regard to
- (25) all the circumstances
- (26) Reckless conduct is not the same as negligence Negligence
- (27) is the failure to use such care as a reasonable prudent and

Vol 23 4117

- (1) careful person would use under similar circumstances
- (2) **Reckless**
- (3) conduct differs from negligence in that it requires a conscious
- (4) choice of action either with knowledge of serious danger to
- (5) others or with knowledge of facts which would disclose the
- (6) danger to any reasonable person
- (7) A legal cause of an occurrence is an act or failure to act
- (8) which is a substantial factor in bringing about the
- (9) occurrence In order to determine whether particular reckless
- (10) conduct was a legal cause of the grounding of the Exxon
- (11) Valdez
- (12) you must find by a preponderance of the evidence that, one, the
- (13) grounding would not have occurred but for that conduct, and,
- (14) two that the conduct was so important in bringing about the
- (15) grounding that a reasonable person would regard it as a cause
- (16) and attach responsibility to it
- (17) This does not mean that the law recognizes only one legal
- (18) cause of an occurrence consisting of only one factor or thing
- (19) or the conduct of only one person In the contrary, many
- (20) factors or many things or the conduct of two or more persons
- (21) may operate at the same time either independently or together,
- (22) to cause an occurrence and, in such a case, each may be a
- (23) legal
- (24) cause
- (25) You must consider the conduct of each of the defendants –
- (26) Captain Hazelwood on the one hand and the Exxon defendants
- (27) on
- (28) the other hand – separately Unless you find by a
- (29) preponderance of the evidence that the conduct of a particular

Vol 23 4118

(1) defendant was reckless and that that conduct was the legal
 (2) cause of the grounding of the Exxon Valdez, your verdict should
 (3) be for that defendant and against the plaintiffs
 (4) If you find by a preponderance of the evidence that the
 (5) conduct of a particular defendant was reckless and was a legal
 (6) cause of the grounding your verdict should be for the
 (7) plaintiffs as to their claims against that defendant
 (8) Whether the United States Coast Guard does or does not have
 (9) any responsibility in this matter is not an issue in this
 (10) case You are to focus on the rights and responsibilities as
 (11) between the plaintiffs and the defendants Nevertheless I
 (12) have allowed evidence about the Coast Guard and the Vessel
 (13) Traffic System operated by the Coast Guard to be presented to
 (14) you In evaluating whether the defendants acted recklessly,
 (15) you may take into account all the information available to the
 (16) defendants at the time they acted including any understanding
 (17) or belief that they may have had with respect to the Coast
 (18) Guard's monitoring of vessel traffic
 (19) The Exxon defendants are corporations and certain rules –
 (20) and certain legal rules which it will be your duty to apply
 (21) affect the liability of corporations The Exxon defendants as
 (22) corporations may act only through natural persons and
 (23) especially through their officers and employees A corporation
 (24) is not responsible for the reckless acts of all of its
 (25) employees A corporation is responsible for the reckless act

Vol 23 4119

(1) of those employees who are employed in a managerial capacity
 (2) while acting in the scope of their employment The reckless
 (3) act or omission of a managerial officer or employee of a
 (4) corporation in the course and scope of the performance of his
 (5) duties is held in law to be the reckless act or omission of a
 (6) corporation
 (7) An employee of a corporation is employed in a managerial
 (8) capacity if the employee – the employee supervises other
 (9) employees and has responsibility for and authority over a
 (10) particular aspect of the corporation's business
 (11) In order for a corporation to be charged with subjective
 (12) knowledge of the consequences of a reckless act or omission of
 (13) one of its employees it must be shown that the persons who
 (14) engaged in such actions on behalf of the Exxon defendants
 (15) were
 (16) actually aware of the facts that indicated the highly dangerous
 (17) nature of the conduct Mere opportunity to learn facts is not
 (18) sufficient even if it was negligent not to learn about the
 (19) existence of such facts
 (20) To establish a basis for a finding of reckless conduct, it
 (21) must be shown that any failure to learn the facts was in
 (22) itself reckless
 (23) Since plaintiffs in this case seek punitive damages against
 (24) corporations you must consider whether the actions of the
 (25) employees were in violation of direct instructions or policies
 of the defendant corporations Merely stating or publishing

Vol 23 4120

(1) instructions or policies without taking diligent measures to
 (2) enforce them is not enough to excuse the employer for reckless
 (3) actions of the employee that are contrary to the employer's
 (4) policy or instructions
 (5) It is a question of fact whether a corporation has taken
 (6) adequate measures to enforce corporate policy in a given area
 (7) If you find that adequate measures were taken to establish and
 (8) enforce the policies or directions then an employee's acts
 (9) contrary to such policies or instructions are not attributable
 (10) to the employer and you should find that the employer's
 (11) conduct
 (12) was not reckless
 (13) However if the employee was a managerial agent then as
 (14) stated in instruction number 33 the acts of the employee are
 (15) attributable to the employer, whether or not those acts are
 (16) contrary to the employer's policy or instructions
 (17) I will now instruct you on – I will now instruct you as to
 (18) some specific matters that are relevant to plaintiffs' claims
 (19) that the actions of defendants involved reckless conduct or
 (20) that Captain Hazelwood's conduct involved negligence
 (21) You have heard certain evidence with respect to Captain
 (22) Hazelwood's activities following the grounding of the Exxon
 (23) Valdez You may not find that any conduct after the grounding
 (24) constituted reckless conduct by any defendant or negligence
 (25) by
 Captain Hazelwood But you may consider this evidence as to
 the issue of whether Captain Hazelwood was impaired by alcohol

Vol 23 - 4121

(1) at the time of the grounding
 (2) At the time of the grounding, federal law required that a
 (3) person licensed by the Coast Guard as a pilot be in command
 (4) of
 (5) vessels between Rocky Point and Cape Hinchinbrook Also at
 (6) that time, federal law provided that pilotage requirements
 (7) could be waived or modified by the United States Coast Guard
 (8) There is in this case evidence which you may evaluate
 (9) concerning the extent to which the pilotage requirement was not
 (10) enforced by the United States Coast Guard as of March 24,
 (11) 1989 You may consider the regulation and all the evidence
 (12) presented on this subject in evaluating plaintiffs' claims
 (13) You have also heard evidence about the certain provisions
 (14) of federal law and regulations, the so-called four hour rule
 (15) and the so called six-hour rule I've already discussed for
 (16) you what these provide
 (17) If you should find by a preponderance of the evidence that
 (18) defendants violated a law or regulation you may consider that
 (19) violation in evaluating plaintiffs' charge that defendants
 (20) conduct was reckless and that such conduct was a legal cause
 (21) of
 (22) the grounding of the Exxon Valdez Violation of a law or
 (23) regulation however, may or may not be reckless conduct In
 (24) order to find reckless conduct you must find by a
 (25) preponderance of the evidence that the conduct meets the
 definition of reckless conduct that I have previously given
 you whether or not the conduct involved violation of a law or

Vol 23 - 4122

- (1) regulation And in any event you may not find the violation
- (2) of a statute or regulation justifies a verdict against any
- (3) defendant unless the violation was a legal cause of the
- (4) grounding of the Exxon Valdez
- (5) Finally, if you find that any of the defendants believed
- (6) that they were in compliance with the six hour rule or the
- (7) four hour rule, you may consider the defendants beliefs along
- (8) with all the other evidence in the case in evaluating whether
- (9) defendants acted recklessly
- (10) You have heard evidence about the fact that Captain
- (11) Hazelwood was - was treated at South Oaks Hospital in 1985
- (12) Under federal law South Oaks Hospital was prohibited from
- (13) disclosing records to anyone, including the Exxon defendants,
- (14) pertaining to the treatment of Captain Hazelwood without
- (15) Captain Hazelwood's free and knowing consent
- (16) You have heard testimony concerning the Federal
- (17) Rehabilitation Act of 1973 Under the terms of this act, a
- (18) history of alcoholism or alcohol abuse is treated as a handicap
- (19) and an employer covered by the act is not permitted to
- (20) discriminate against any employee solely on the basis of that
- (21) history If, on the other hand, an employee's current use of
- (22) alcohol prevents the employee from performing the duties of
- (23) the employee's job or if, because of the employee's current use of
- (24) alcohol, continued employment of such employee would
- (25) constitute a direct threat to the property or safety of others then the

Vol 23 4123

- (1) employee is not covered by this provision of the act
- (2) Quote current end quote is to be determined in the light
- (3) of whether the employee's alcohol abuse problem is severe and
- (4) recent enough so that the employer is justified in believing
- (5) that the employee is unable to perform the essential duties of
- (6) his job
- (7) It is for the jury to decide whether any use of alcohol by
- (8) Captain Hazelwood was such as to prevent him from performing
- (9) the duties of his job or whether such use of alcohol if
- (10) proved would constitute a direct threat to the property or
- (11) safety of others
- (12) An employee like all citizens has a legally and
- (13) constitutionally protected right of privacy In formulating
- (14) policies for the management of its business an employer
- (15) should balance the employee's right of privacy against other equally
- (16) important concerns such as safety
- (17) Plaintiffs have introduced evidence of the results of
- (18) certain blood tests that were administered to certain crew
- (19) members of the Exxon Valdez Plaintiffs must prove by a
- (20) preponderance of the evidence that the test is reliable and
- (21) that the samples remain in an unchanged condition from the
- (22) time of collection until the time the samples were tested Although
- (23) this evidence has been admitted, you are the sole judges of
- (24) whether plaintiffs have proved such facts by a preponderance
- (25) of the evidence and whether the blood tests are reliable

Vol 23 4124

- (1) In considering whether the blood test is reliable
 - (2) moreover, you may consider all the other evidence introduced,
 - (3) including evidence with respect to the presence or absence of
 - (4) observable symptoms of intoxication
 - (5) In order to ensure the integrity and identity of blood
 - (6) samples, federal regulations governing the procedures for the
 - (7) administering of blood tests following a marine accident
 - (8) require the following one, a proper chain of custody must be
 - (9) maintained for each specimen from the time of collection
 - (10) through the time of testing and through the authorized
 - (11) disposition of the specimen,
 - (12) Two Blood specimens must be shipped to the laboratory in a
 - (13) cooled condition by any means adequate to ensure delivery
 - (14) within 24 hours of the receipt by the carrier,
 - (15) Three, No unauthorized personnel shall be permitted in any
 - (16) part of a collection site when specimens are collected, nor
 - (17) shall unauthorized personnel be allowed access to stored
 - (18) specimens,
 - (19) Four If a specimen is not immediately prepared for
 - (20) shipment it shall be safeguarded during temporary storage,
 - (21) Five, Every effort shall be made to minimize the number of
 - (22) persons handling the specimen,
 - (23) Six Chain-of-custody forms shall be at a minimum - got an
 - (24) extra word in there Change-of-custody forms shall at a
 - (25) minimum, include an entry documenting the date and the
- purpose

Vol 23 - 4125

- (1) each time a specimen is handled and identify each person in
- (2) the chain of custody,
- (3) Seven, The specimens shall be placed in containers designed
- (4) to minimize the possibility of damage during shipment and
- (5) those containers shall be securely sealed to eliminate the
- (6) possibility of undetected tampering
- (7) If you find that these federal regulations were not
- (8) complied with you may completely disregard the blood test or
- (9) you may give it such weight as you may think it deserves
- (10) The verdict must represent the considered judgment of each
- (11) juror In order to return a verdict, it is necessary that each
- (12) juror agree thereto Your verdict must be unanimous It is
- (13) your duty as jurors to consult with one another and to
- (14) deliberate with a view to reaching an agreement if you can do
- (15) so without violence to individual judgment
- (16) Each of you must decide the case for yourself but only
- (17) after an impartial consideration of the evidence in the case
- (18) with your fellow jurors In the course of your deliberations,
- (19) do not hesitate to re-examine your own views and change your
- (20) opinion, if convinced it is erroneous But do not surrender
- (21) your honest conviction as to the weight or effective evidence
- (22) solely because of the opinion of your fellow jurors or for the
- (23) mere purpose of returning a verdict Remember, at all times
- (24) that you are not partisans you are judges judges of the
- (25) facts Your sole interest is to seek truth from the evidence

Vol 23 - 4126

- (1) in the case
- (2) It is proper to add the caution that nothing said in these
- (3) instructions and nothing in any form of verdict prepared for
- (4) your convenience is meant to suggest or convey in any way or
- (5) manner any intimation as to what verdict I think you should
- (6) find What the verdict shall be is your sole and exclusive
- (7) duty and responsibility
- (8) Upon returning to the jury room, you will select one of your
- (9) number to act as your presiding juror The presiding juror
- (10) will preside over your deliberations and will be your spokesman
- (11) here in court A special verdict form has been prepared for
- (12) your convenience The special verdict form contains a number
- (13) of interrogatories The answer to each interrogatory must be
- (14) the unanimous answer of the jury
- (15) Your presiding juror will write the unanimous answer of the
- (16) jury in the space provided under each interrogatory When you
- (17) have finished answering the interrogatories you will have your
- (18) presiding juror date and sign the form and then return with
- (19) your verdict to the courtroom
- (20) If you should agree upon your verdict before five p m
- (21) tonight your presiding juror should date and sign the
- (22) verdict This will indicate that all of you have agreed to the
- (23) verdict You should return your verdict immediately into open
- (24) court in the presence of the entire jury together with the
- (25) exhibits and these instructions

Vol 23 4127

- (1) If you do not agree upon your verdict before five p m
- (2) tonight you may return to your homes You must not talk about
- (3) the case or your deliberations outside the jury room
- (4) Before you go home the presiding juror should lock the
- (5) jury room so that the exhibits instructions and unsigned
- (6) verdicts will remain undisturbed None of these materials
- (7) should be removed from the jury room until you reach a
- (8) verdict You should return to your jury room at 9 00 a m
- (9) tomorrow to continue your deliberations Deliberations should
- (10) not commence until all jurors are present in the jury room
- (11) If it becomes necessary during your deliberations to
- (12) communicate with the Court you may send a note by a bailiff
- (13) signed by your presiding juror or by one or more members of
- (14) the jury Any note to the Court should include the date and time
- (15) the note was signed, no member of the jury should ever attempt
- (16) to communicate with the Court by any means other than a
- (17) signed writing and the Court will never communicate with any member
- (18) of the jury on any subject touching the merits of the case
- (19) otherwise than in writing or orally here in open court
- (20) Bailiffs as well as all other persons, are forbidden to
- (21) communicate in any way or manner with any member of the jury
- (22) on any subject touching the merits of the case
- (23) Bear in mind also that you are never to reveal to any
- (24) person not even to the Court how the jury stands numerically
- (25) or otherwise on the questions before you until after you have

Vol 23 4128

- (1) reached a unanimous verdict
- (2) That completes the reading of the instructions You will
- (3) notice that I spoke of deliberating until five o clock and
- (4) starting at 9 00 That s the way we usually do it in this
- (5) court After consulting with counsel we have agreed that you
- (6) will decide whether you will deliberate from nine until five or
- (7) whether you ll stay on the same schedule that you ve been on
- (8) during the trial eight to two It will be your choice I
- (9) would suggest that you make that decision about the first thing
- (10) you do in the jury room and let us know what you re going to
- (11) do so that we ll know how to plan for it
- (12) Counsel will be working with me for the next few minutes to
- (13) pull together all of the exhibits but there are a lot of them
- (14) and it'll take a little bit of time to get that accomplished
- (15) and get it to you But I judge from what I ve seen this
- (16) morning that most of the work has probably been done and that
- (17) it will - while it ll take a few minutes, it s not going to
- (18) take a whole lot of time
- (19) We will also get you a second set of the jury instructions
- (20) so that you can make use of them
- (21) Let's see I ve covered one out of the two questions that
- (22) someone asked The other had to do with the - the heat
- (23) I ll be very frank with you I ve purposefully had people
- (24) keep the temperature down in here for two reasons This
- (25) machinery develops an awful lot of heat and people stay awake

Vol 23 - 4129

- (1) better when it s cool I take it from what has been said that
- (2) it may be a little bit cool in the jury room We'll try and
- (3) work on that and let us know how we're doing If you're
- (4) uncomfortable in there, let us know and we ll see what we can
- (5) do to accommodate you
- (6) Anything else before I send the jury off?
- (7) MR O NEILL No, sir there isn t
- (8) MR NEAL Not from us, Your Honor
- (9) MR CHALOS Nothing from us, Your Honor except our
- (10) thanks
- (11) THE COURT You re welcome
- (12) MR NEAL To everyone
- (13) THE COURT Ladies and gentlemen, if you would go to
- (14) the jury room now, we will get the materials to you just as
- (15) quickly as we can
- (16) (Jury out at 1 55 p m)
- (17) MR O'NEILL Did you swear the bailiff?
- (18) THE COURT He s already been sworn I think but as a
- (19) precaution, I'll ask him to make sure Would you when
- (20) everybody gets out have him simply step back in here and let s
- (21) make sure that he s taken the oath? Presumably that s -
- (22) MR O NEILL I don t care, I just -
- (23) THE COURT Some places it s the practice to swear
- (24) them over again every time We don t do that, but -
- (25) MR O NEILL That s fine

Vol 23 4130

- (1) THE COURT But I just want to make sure that this
 (2) particular bailiff has taken the oath someplace sometime so
 (3) that there isn't a question about it later
 (4) THE COURT While we're waiting, am I correct in
 (5) assuming that you've got the exhibits assembled at this point?
 (6) MR O'NEILL We're minutes away
 (7) THE COURT Have each of you checked the other's
 (8) work?
 (9) MR NEAL Yes, we have, Your Honor. It's my
 (10) understanding Mr. Jamin is - where is Mr. Jamin?
 (11) MR JAMIN We're comfortable. Your Honor, with the
 (12) issue
 (13) MR LYNCH Not confident but comfortable
 (14) MR JAMIN We've spent the last three days working on
 (15) it
 (16) THE COURT I'll take you at your word on this and
 (17) we're relying on your work to affirm that only those things
 (18) which have been admitted are going to go to the jury room
 (19) Mr. Bailiff, have you been sworn to act as a bailiff in
 (20) this court?
 (21) THE BAILIFF Yes, I have, Your Honor
 (22) THE COURT Thank you
 (23) The - couple of other things. Folks may be seated
 (24) please, unless you're tired of sitting in which case you can
 (25) stand

Vol 23 4131

- (1) It's inevitable. I think that we'll get some questions
 (2) from the jury. I don't know that we've ever talked about how I
 (3) typically handle questions from the jury so let me tell you
 (4) how I normally do that, tell me if you have any problem with
 (5) it. Tell me if you have any suggestions.
 (6) What I normally do is as soon as I get a note I contact
 (7) counsel on the telephone. Tell you that I've got an inquiry
 (8) tell you what it is. Given that all of the machinery that I
 (9) know all of you have got if you will provide Mr. Murtashaw
 (10) with the fax number that we should use for this purpose. I
 (11) will as soon as I get a note fax a copy of it to whomever you
 (12) tell me to fax it to.
 (13) After you've had time to get it and look at it I will get
 (14) you on the telephone and we will discuss the note. If we are
 (15) able to agree what response I should give to the note it will
 (16) be done. If we are not able to agree I will resolve the
 (17) disagreement.
 (18) If in the course of that kind of discussion anyone feels
 (19) that we are at a point where something needs to be put on the
 (20) record you need only say so and we will assemble and do it.
 (21) Often what we do is I make a decision and we put the matter
 (22) on the record a little later if that's agreeable to everybody
 (23) but you know we'll take that as it comes somewhat.
 (24) Does anyone have a problem with that approach?
 (25) MR O NEILL No sir

Vol 23 4132

- (1) MR NEAL I guess that implies that we don't need to
 (2) stay around the courthouse, as long as we give the Court a
 (3) number a phone number and a fax number
 (4) THE COURT That's part of what this is all about, so
 (5) that people don't have to camp on my doorstep. The one thing
 (6) that we insist on is that we know who it is we're supposed to
 (7) contact and that we have the number where we can reach the
 (8) person who you have designated and, if you want to change
 (9) from
 (9) time to time, that's your business so long as we know in
 (10) advance who the person is and where he or she is going to be
 (11) so
 (11) that we can contact
 (12) MR NEAL During the - during the hours of the
 (13) jury's deliberation - I understand that Mr. O'Neill goes down
 (14) to the Alaskan Bush Company some and we wouldn't want to
 (15) embarrass him by having him give you that number
 (16) THE COURT And where does he find you if he needs
 (17) to?
 (18) MR O'NEILL At the next table
 (19) MR NEAL I wouldn't want to say that
 (20) MR O NEILL At the next table, I think
 (21) THE COURT All right
 (22) Are we - are we of one mind on that? Mr. Chalos okay?
 (23) MR CHALOS Yes. No problem, Your Honor. I don't
 (24) endorse the Alaska Bush Company by the way. I know your
 (25) wife's in the audience

Vol 23 - 4133

- (1) MR O NEILL Thanks, Mike
 (2) MR NEAL I didn't know that. I take that back. I'm
 (3) sorry I let you down.
 (4) THE COURT We might just as well think for just a
 (5) moment about the possibility that we'll be asked for
 (6) play backs. If I get that kind of note, I'll of course follow
 (7) the drill that I've outlined to you about handling questions
 (8) from the jury. I hope that isn't going to get started because
 (9) if it does, it draws the deliberations out something ferocious
 (10) but we'll take those requests as they come.
 (11) Think with me for a moment though about how we're going
 (12) to do it if we get a request that we think we have to grant.
 (13) Am I correct that we have a - a transcript that we could use
 (14) to read back to the jury if need be?
 (15) MR NEAL Yes
 (16) MR O NEILL We have a complete transcript. I think
 (17) we ought to squash it to the extent we can squash it but if
 (18) worse comes to worst then we ought to just read it from the
 (19) transcript.
 (20) MR NEAL Well, I think we'd be - I agree, quash
 (21) them if we can because that can get you in a quagmire of
 (22) whether you're balancing the testimony on a particular point or
 (23) not so I agree with being reluctant to do that. But if it
 (24) happens if the Court decides it's going to then I guess you
 (25) read it from the transcript

Vol 23 - 4134

- (1) THE COURT Anything that anyone thinks of that we should be thinking about at this stage of things?
- (2) MR NEAL I think the Marshal has a note over there
- (3) THE COURT You have a note already
- (4) MR NEAL Ask him to read all the transcript again
- (5) THE COURT They've picked a foreman already It s -
- (6) it's Mr Murray and they're going to work from eight a m to
- (7) two p m Why am I not surprised
- (8) Anything else folks?
- (9) THE BAILIFF Your Honor, are we going to release them
- (10) now it s now 2 00?
- (11) THE COURT If they want to go now they're -
- (12) MR NEAL Thank you Your Honor
- (13) THE COURT Adjourned subject to call
- (14) (Recess at 2 05 p m)

Vol 23 4136

- (1) STATE OF ALASKA)

Vol 24 4139

(1) PROCEEDINGS
 (2) (Jury in at 10 02 a m
 (3) (Call to Order of the Court)
 (4) THE COURT Mr Murray I understand you have a
 (5) verdict
 (6) THE FOREMAN We have a verdict Your Honor
 (7) THE COURT Would you pass it to the bailiff, please?
 (8) THE FOREMAN (Indicating)
 (9) THE COURT I'm going to read the verdict
 (10) Special verdict for phase one of trial interrogatory
 (11) number one Do you unanimously find on a preponderance of
 (12) the
 (13) evidence the defendant Hazelwood was negligent as that term
 (14) has
 (15) been defined in the instructions and that his negligence was a
 (16) legal cause of the grounding of the Exxon Valdez on March 24
 (17) 1989? Answer Yes
 (18) Interrogatory number two Do you unanimously find from a
 (19) preponderance of the evidence that defendant Hazelwood was
 (20) reckless as that term has been defined in the instruction, that
 (21) is his recklessness was a legal cause of the grounding of the
 (22) Exxon Valdez? Answer Yes
 (23) Interrogatory number three Do you unanimously find from a
 (24) preponderance of the evidence that the Exxon defendants were
 (25) reckless as that term has been defined in the instructions and
 (26) that their recklessness was a legal cause of the grounding of
 (27) the Exxon Valdez? Answer Yes

Vol 24 4140

(1) (Audience outburst)
 (2) THE COURT Knock it off
 (3) If you find - if you have completed all the answers to the
 (4) questions required of you by this verdict please have your
 (5) presiding juror sign this verdict and date it return it to the
 (6) Court Done at Anchorage Alaska this 13th day of June, 1994
 (7) Signed Kenneth Murray presiding juror
 (8) I m going to poll the jury ladies and gentlemen
 (9) Counsel is it your preference that I poll the jury as to
 (10) each interrogatory or should I do it en masse jointly as to
 (11) all three questions?
 (12) MR LYNCH Please poll as to each interrogatory, Your
 (13) Honor
 (14) THE COURT Ladies and gentlemen, polling the jury
 (15) means that I will simply ask each one of you whether the
 (16) verdict that I have just read is your true and correct
 (17) verdict If you concur in each of the interrogatories, you
 (18) should answer yes if not you should answer no
 (19) Ms Smith is interrogatory number one concerning the
 (20) negligence of defendant Hazelwood your verdict?
 (21) MS SMITH Yes
 (22) THE COURT Ms Hood?
 (23) MS HOOD Yes
 (24) THE COURT Ms Martin?
 (25) MS MARTIN Yes

- (5) MR DEAN Yes
- (6) THE COURT Ms Provost
- (7) MS PROVOST Yes
- (8) THE COURT Mr Graham
- (9) MR GRAHAM Yes
- (10) THE COURT Ms Moor
- (11) MS MOOR Yes
- (12) THE COURT Ms Spann
- (13) MS SPANN Yes
- (14) THE COURT Ms Wilson
- (15) MS WILSON Yes
- (16) THE COURT Ms Garrison
- (17) MS GARRISON Yes
- (18) THE COURT Ms Johnson
- (19) MS JOHNSON Yes
- (20) THE COURT Mr Murray
- (21) MR MURRAY Yes
- (22) THE COURT Counsel, the jury has been polled they
- (23) have all answered in the affirmative You have a verdict The
- (24) clerk will not enter judgment at this time because of the
- (25) nature of the verdict that has been returned but the verdict

Vol 24 - 4144

- (1) will be filed at this time
- (2) We have a couple of administrative things that we need to
- (3) take care of at this point ladies and gentlemen First off
- (4) because of the logistics of going on with the trial and my
- (5) necessity of being out of the district on Wednesday Thursday
- (6) Friday this week we decided on Friday I guess that it did
- (7) not make sense to try and crank up for phase two this week As
- (8) a consequence you will have a sort of a furlough until Monday
- (9) the 20th We will start up again with phase two at eight a m
- (10) on the 20th and which will begin much as the first phase
- (11) began
- (12) Second thing You understand, I m sure - and I know
- (13) counsel and the press understand - that it is inappropriate
- (14) for any of them to contact you about this case now because
- (15) you re not through The general public though may not
- (16) understand that You may have friends, relatives whatever
- (17) who will try and contact you to - wanting to discuss what s
- (18) going on and you just can't do that at this point
- (19) Probably for the next few days it would be a real good idea
- (20) to have somebody screen your phone calls Be especially
- (21) careful for the next few days so that you don t wind up in any
- (22) kind of conversations in person or on the phone with anybody
- (23) about your deliberations because it all has to remain
- (24) confidential at this point because you re not through
- (25) Please remember my instructions that you not read or listen

Vol 24 4145

- (1) to any media reports about the case because there may very well
- (2) be speculation about what went on and what is to come And you
- (3) need to insulate yourself from all discussion of the case of
- (4) any form until the case is finished
- (5) Counsel, is there anything else that we need to do on the
- (6) this point?
- (7) MR O NEILL I don t believe there is Your Honor
- (8) MR LYNCH Nothing Your Honor
- (9) MR RUSSO No Your Honor
- (10) THE COURT Okay Ladies and gentlemen thank you
- (11) very much We will see you at eight a m on a week from
- (12) today Court will be in recess now subject to call
- (13) (Jury out at 10 11 a m)

 (5) THE COURT Good morning ladies and gentlemen
 (6) MR O NEILL Good morning
 (7) MR NEAL Good morning
 (8) THE COURT This is the continuation of Case A89 0095
 (9) in re the Exxon Valdez We are beginning Phase II A this
 (10) morning
 (11) Ladies and gentlemen I have some further preliminary
 (12) instructions that I will read to you at this time We will now
 (13) begin Phase II of the trial in the case arising from the Exxon
 (14) Valdez oil spill In this phase of the trial plaintiffs will
 (15) present evidence in support of their claims for actual damages
 (16) what they say were legally caused by the Exxon Valdez oil
 (17) spill
 (18) The Exxon defendants have admitted that they are legally
 (19) responsible to compensate plaintiffs for any actual losses
 (20) proven to be proximately caused by the oil spill
 (21) In Phase I you determined that Defendant Hazelwood was also
 (22) legally responsible to compensate plaintiffs for any actual
 (23) losses proven to be proximately caused by the oil spill This
 (24) phase of the trial will be presented in two parts The first
 (25) part of Phase II of the trial which we will call Phase II A

Vol 25 4150

(1) will concern actual damages claimed by commercial fishermen
 and
 (2) their crews
 (3) The second part Phase II B will concern the actual
 (4) damages claimed by Alaska natives We are only concerned
 with
 (5) Phase II A at this time
 (6) In Phase II A plaintiffs who engaged in commercial fishing
 (7) and/or harvesting of salmon and herring and their crews will
 (8) present claims for actual losses that they claim resulted for
 (9) lost harvests of salmon in various years from Prince William
 (10) Sound Cook Inlet Kodiak and Chignik and from lost harvest
 (11) from herring in various years from Prince William Sound Kodiak
 (12) and Lower Cook Inlet When I say lost harvests I mean that
 (13) plaintiffs claim that they were unable to catch fish or as many
 (14) fish as a legal consequence of the oil spill
 (15) Plaintiffs further claim that the oil spill caused buyers
 (16) to lower the prices they paid to commercial fishermen for
 (17) salmon and herring Defendants deny that the commercial
 (18) fishing plaintiffs suffered losses claimed and also deny that
 (19) certain of the losses claimed were legally caused by the
 (20) spill
 (21) As in Phase I plaintiffs will begin by making an opening
 (22) statement outlining their case The defendants will also make
 (23) an opening statement outlining their case at the end of the
 (24) plaintiffs statement At the conclusion of this phase of the
 (25) trial each of the plaintiffs will present closing arguments as

Vol 25 4151

(1) to what they consider the evidence to have shown and to the
 (2) inference you should contend should be drawn from the
 evidence
 (3) presented I will give you additional instructions on the law
 (4) then you will be asked to retire and deliberate on the
 (5) questions presented and return a special verdict dealing with
 (6) the claims for actual damages which are made
 (7) I will now say a little bit about the standards applicable
 (8) to the claims you will be considering in Phase II A
 (9) The law provides that the plaintiffs are to be fairly
 (10) compensated for all damages if any to their businesses or
 (11) property which were legally caused by the spill For the oil
 (12) spill to be a legal cause in beginning about damage the
 (13) evidence must prove it is more likely true than not true that
 (14) one the oil spill was so important in beginning about the
 (15) damage that a reasonable person would regard it as a cause
 and
 (16) attach responsibility to it And two the damage would not
 (17) have occurred but for the oil spill
 (18) In arriving at the amount of award you should include any
 (19) damages suffered by the plaintiffs because of lost income that
 (20) is to say income which the plaintiffs would have made but for
 (21) the effect of the oil spill on their fishing business
 (22) Plaintiffs should be fairly compensated for their losses but
 (23) they should not profit from the oil spill On the other hand
 (24) plaintiffs are not to be awarded purely speculative damages
 (25) An allowance for lost income may be included in the award for

Vol 25 4152

(1) damages only when there is some reasonable basis for
 (2) determining that plaintiffs have in fact suffered a loss of
 (3) income even though the amount of such loss is difficult to
 (4) ascertain
 (5) In arriving at the amount of any loss of income sustained
 (6) by plaintiffs you are entitled to consider any past
 (7) performance of the plaintiffs fishing businesses as well as
 (8) any other evidence in the case bearing upon the issue
 (9) Payments that Exxon has made to fishermen need not be
 (10) considered The court will resolve any matters relating to
 (11) those payments in a later proceeding
 (12) I will now repeat certain of the general instructions which
 (13) I gave you at the beginning of Phase I of the trial Though
 (14) this may be repetitive it is important that you keep in mind
 (15) as you hear the evidence presented in each of the parts of
 (16) Phase II of the trial
 (17) Your function as jurors is to find and determine the facts
 (18) of the case Under our system of criminal procedure you are
 (19) the sole judges of the facts If at any time I should make a
 (20) comment regarding the facts you are at liberty to disregard
 (21) it It is especially important that you perform your duty of
 (22) determining the facts diligently and conscientiously for
 (23) ordinarily there is no means of correcting an erroneous
 (24) determination of fact by a jury On the other hand and with
 (25) equal emphasis I will instruct you about the law given by the

Vol 25 4153

(1) court constitutes the only law given to your guidance and it
 (2) is your only duty to accept it and follow it It is your duty
 (3) to follow the law as I give it to you even though you may
 (4) disagree with my statement of the law
 (5) As in Phase I the burden is on the plaintiffs to prove
 (6) every essential element of their claims by the preponderance of
 (7) the evidence If the proof should fail to establish an
 (8) essential element of plaintiffs claim by a preponderance of
 (9) evidence in the case the jury should find for the defendants as
 (10) to that claim
 (11) To establish - to quote establish by a preponderance of
 (12) evidence end quote means to prove that something is more
 (13) likely so than not so In other words a preponderance of
 (14) evidence in the case means such evidence as when compared -
 (15) when considered and compared with that opposed to it has
 more
 (16) convincing force and produces in your minds belief what is
 (17) sought to be proved is more likely true than not true This
 (18) rule does not of course require proof to an absolute
 (19) certainty since proof to an absolute certainty is seldom
 (20) possible in any case
 (21) The evidence in the case consists of all the testimony
 (22) exhibits and other evidence that has been admitted in Phase I
 (23) of this trial This evidence will be supplemented by the sworn
 (24) testimony of witnesses called in this next phase regardless of
 (25) who may call them and all exhibits received in evidence

Vol 25 4154

(1) regardless of who introduced them
 (2) Evidence may also consist of facts to which the lawyers
 (3) have agreed or stipulated Depositions may also be received in
 (4) evidence Deposition testimony may be accepted by you
 subject
 (5) to the same instructions which apply to witnesses testifying in
 (6) open court Many of the exhibits will be presented to you on
 (7) television screens exhibits thus presented are entitled to the
 (8) same consideration by you as physical exhibits in the form of
 (9) papers or objects received into evidence
 (10) Statements and arguments of counsel are not evidence in the
 (11) case unless identified by the court as an admission or
 (12) stipulation of fact or the attorneys on both sides stipulate or
 (13) agree to the existence of a fact You must unless otherwise
 (14) instructed accept the stipulation as evidence and regard the
 (15) fact as proof in this trial
 (16) Any evidence as to which an objection has been sustained by
 (17) the court and any evidence ordered stricken by the court must
 (18) be entirely disregarded Anything you may have seen or heard
 (19) outside the courtroom is not evidence and must be entirely
 (20) disregarded Some evidence is admitted for a limited purpose
 (21) only When I instruct you that an item of evidence has been
 (22) admitted for a limited purpose you may consider it for that
 (23) limited purpose and for no other You are to consider only the
 (24) evidence in the case but in your consideration of the evidence
 (25) you are not limited to the baled statements of the witnesses

Vol 25 4155

- (1) In other words you are not limited solely to what you see and
- (2) hear as the witnesses testify You are permitted to draw from
- (3) the facts which you find have been proved by the evidence
- (4) introduced at trial such reasonable inferences as you feel are
- (5) justified in the light of your experience
- (6) At the end of the trial of Phase II A you will be - you
- (7) will have to make your decision based on what you recall of the
- (8) evidence You will not have a written transcript to consult
- (9) and it is difficult and time consuming for the reporter to read
- (10) back lengthy testimony I urge you to pay close attention to
- (11) the testimony as it is given
- (12) As in Phase I if you wish you may take notes to help you
- (13) remember what witnesses say If you do take notes please
- (14) keep
- (15) them to yourself until you and your fellow jurors go to the
- (16) jury room to decide this phase of the case and do not let your
- (17) note taking distract you so that you do not hear other answers
- (18) by witnesses When you leave for the - when you leave at
- (19) night leave your notes in the jury room If you do not take
- (20) notes you should rely on your own memory of what was said
- (21) Surely if the notes of other jurors do not conform with your
- (22) memory of what evidence was offered at trial you should rely
- (23) on your memory of such evidence
- (24) In deciding the facts of this case you will have to decide
- (25) what witnesses to believe and what witnesses not to believe

Vol 25 4156

- (1) or none of it In deciding what to believe you may consider a
- (2) number of factors including the following One the witness
- (3) ability to see or hear or know the things the witness testified
- (4) to Two the quality of the witness memory Three the
- (5) witness manner while testifying Four whether the witness
- (6) had an interest in the outcome of the case or any motive bias
- (7) or prejudice Five whether the witness was contradicted by
- (8) anything the witness said or wrote before trial or by other
- (9) evidence And six how reasonable was the witness testimony
- (10) when considered in the light of other evidence which you
- (11) believe
- (12) A witness may be discredited or impeached by contradictory
- (13) evidence or by evidence that something the witness has said or
- (14) done or has failed to say or do something which is
- (15) inconsistent with the witness present testimony If you
- (16) believe any witness has been impeached and thus discredited
- (17) it
- (18) is your exclusive province to give the testimony of that
- (19) witness such credibility if any that you think it deserves
- (20) If a witness is showing knowingly to have testified falsely
- (21) concerning any material matter you have a right to distrust
- (22) such witness testimony in other particulars and you may reject
- (23) all the testimony of that witness or give it such credibility
- (24) as you may think it deserves in determining whether any fact in
- (25) issue has been proved by a preponderance of evidence in the

Vol 25 4157

- (1) The jury may unless otherwise instructed consider the
- (2) testimony of all witnesses regardless of who called them and
- (3) all exhibits received in evidence regardless of who may have
- (4) produced them The rules of evidence ordinarily do not permit
- (5) witnesses to testify as to opinions or conclusions An
- (6) exception to this rule exists as to those who we call expert
- (7) witnesses Witnesses who by education and experience have
- (8) become expert in some art science profession or calling may
- (9) state an opinion as to relevant and material matters in which
- (10) they profess to be expert and may also state their reasons for
- (11) the opinion You should consider each expert opinion received
- (12) in evidence and give it such weight as you may think it
- (13) deserves
- (14) If you should decide that opinion of an expert witness is
- (15) not based upon sufficient education and experience or if you
- (16) should conclude that the reasons given in support of the
- (17) opinion are not sound or if you feel that it is outweighed by
- (18) other evidence you may disregard the opinion entirely
- (19) Any statement ruling remark or comment which I may make
- (20) during the course of the trial is not to indicate any opinion
- (21) or should influence you in any way in your determination of the
- (22) facts
- (23) At times I may ask questions of witnesses If I do so it
- (24) is for the purpose of bringing out matters which I feel should
- (25) be brought out and not in any way to indicate matters about the

Vol 25 4158

- (1) facts or the weight you should give the testimony of the
- (2) witness
- (3) Attorneys representing the parties in this trial have a
- (4) right and duty to object to questions or argument offered by
- (5) the opposing side if such attorneys believe in good faith that
- (6) such offered evidence questions or argument are
- (7) objectionable
- (8) under our rules of evidence or procedure At times the
- (9) attorneys may request the opportunity to discuss matters out of
- (10) your hearing We will endeavor to keep this kind of conference
- (11) to an absolute minimum We will defer matters requiring
- (12) discussion until the end of the day so your period in court
- (13) should be done exclusively to the taking of testimony
- (14) You should not be critical of any lawyer or client because
- (15) objections are made regardless of whether I sustain or
- (16) overrule those objections and you should draw no inference
- (17) from or against any party because objections were made
- (18) because
- (19) matters were discussed out of your hearing or because I
- (20) sustained or overruled such objections
- (21) It is the duty of the court to admonish any lawyer because
- (22) out of the zeal for his client does something which is not in
- (23) keeping with the rules of evidence or procedure You are to
- (24) draw no inference against the side to whom admonishing of the
- (25) court may be addressed during the trial in this case

Vol 25 4159

(1) trial Statements contained in the media accounts are not
 (2) evidence You must lay aside and completely disregard
 anything
 (3) you may have read or heard about the case outside the
 (4) courtroom and your verdict must be based solely and
 (5) exclusively on the evidence presented in court in accordance
 (6) with the court s instructions to you at the close of each phase
 (7) about which you will apply the evidence If you read or hear
 (8) anything about this case outside the courtroom you should
 (9) bring such facts to my attention at once
 (10) Let me repeat a few words about your conduct as jurors
 (11) now Do not talk to each other about the case or about anyone
 (12) who has anything to do with it until the end of this phase of
 (13) the case when you go to the jury room to decide your verdict
 (14) Do not talk with anyone else about this case or about anyone
 (15) who has anything to do with it until all phases of the trial
 (16) have ended and you have been discharged as jurors Anyone
 (17) else end quote includes members of your family and friends
 (18) You may tell them that you are a juror in the case but don t
 (19) tell them anything else about it until you have been discharged
 (20) by me Do not let anyone talk to you about the case or about
 (21) anyone who has anything to do with it If someone should try
 (22) to talk to you you should report it to me immediately Do not
 (23) read any news stories or articles or listen to any radio or TV
 (24) reports about the case or about anyone who has anything to do
 (25) with it Do not do any research or make any investigation

Vol 25 4160

(1) about the case on your own
 (2) If at any time and until you are discharged by me at the
 (3) end of the trial any information about this case should happen
 (4) to be seen or heard by you inadvertently by any source other
 (5) than here in the courtroom you should promptly make a note of
 (6) what happened what you saw or heard You should pass the
 note
 (7) to Mr Murtiashaw my in court clerk or one of the jury
 (8) clerks They will pass the note to me and I will take the
 (9) necessary action
 (10) Do not make up your mind about what the verdict should be
 (11) until after I have given you my instructions on the law and you
 (12) have gone to the jury room to decide this phase of the case
 (13) Even then do not make up your mind until you and your fellow
 (14) jurors have discussed the evidence
 (15) As with Phase I we will conduct this trial from 8 a m to
 (16) 2 p m We will take two evenly spaced 15 minute breaks during
 (17) this time Each morning of the trial you should first report
 (18) to the jury assembly room The jury clerk will take role and
 (19) escort you to the jury room behind the courtroom As a
 (20) courtesy to the court counsel and your fellow jurors please
 (21) arrange to be in the courthouse and in the jury assembly room
 (22) at least 15 minutes before 8 a m It s my desire to start
 (23) promptly at 8 a m and we will adjourn promptly at 2 p m
 (24) Finally should any juror find it necessary to communicate
 (25) with the court for any reason during the trial that

Vol 25 4161

(1) communication should be in writing and should be
 accomplished
 (2) by giving your note either to a jury clerk or to my in court
 (3) clerk usually Mr Murtiashaw
 (4) This completes my preliminary instructions
 (5) We didn t talk about how long for opening statements on
 (6) this phase Have you all talked about it?
 (7) MR LYNCH Yes
 (8) MR O NEILL Yes
 (9) THE COURT Do you have an agreement?
 (10) MR O NEILL Yes
 (11) THE COURT What is it?
 (12) MR O NEILL I will go no longer than an hour and 15
 (13) minutes and Mr Lynch will go no longer than an hour and a
 (14) half and it s my hope we will not be longer than that
 (15) MR RUSSO I have five minutes
 (16) MR LYNCH That s counted in the hour and a half
 (17) THE COURT Let s go
 (18) MR O NEILL Thank you Judge May it please the
 (19) court counsel ladies and gentlemen
 (20) The batting order that you re going to see from the
 (21) plaintiffs is slightly different for Phase II I will have
 (22) with me Lynn Sarko who represents Prince William Sound
 (23) fishermen and my partner Steve Schroer in addition to Lori
 (24) Wagner and Matt Jamin who you saw in Phase I but when they
 (25) stand up that s who they are

Vol 25 4162

(1) Crude oil and fish don t mix You can t manage an oiled
 (2) fishery you can t effectively fish an oiled fishery You
 (3) can t sell fish from an oiled fishery Fish don t thrive in an
 (4) oiled fishery and if you own a fishing permit you can t sell
 (5) a fishing permit from an oiled fishery Crude oil and fish
 (6) don t mix And fishermen and women fishers can t make a
 living
 (7) for their families in oiled fisheries
 (8) Now in this phase of the trial we re going to talk about
 (9) that and we re going to talk about plaintiffs compensatory
 (10) damages We re leaving the subject of recklessness and we re
 (11) not yet to the subject of punitive damages so we re going to
 (12) talk about compensatory damages What actual monetary
 damages
 (13) are due the plaintiffs as a result of the Exxon Valdez oil
 (14) spill And in two ways as the Judge instructed you we re
 (15) going to talk about commercial fishermen We ll have an
 (16) opening we ll put on our proof Exxon will put on its proof
 (17) we will have a closing and you ll go back and you ll
 (18) deliberate
 (19) Now in Phase II A we re going to deal with biology and
 (20) economics and I m going to - my one sort of pro pointer for
 (21) the day there is going to be all kinds of economic charts that
 (22) look like this and they will deal with fish run sizes and four
 (23) or five different fisheries and fisheries economics and they
 (24) will be put on the TV screen And you will drive yourselves
 (25) crazy if you try to write down all the numbers and you won t

Vol 25 4163

- (1) listen to the substance behind the numbers if you try to write
- (2) down all the numbers
- (3) In my closing argument the one thing that I will do is I
- (4) will put up a verdict form a big board of the verdict form and
- (5) I will tie these exhibits to the verdict questions So if
- (6) there is a specific special verdict question that deals with
- (7) Upper Cook Inlet in 1989 and the lost harvest in the closing
- (8) argument I'll say when you get to that special verdict
- (9) question look at Exhibit 289 And at that point in time we
- (10) can inventory the exhibits compare them to the verdict form
- (11) but that ought to solve the problem of sitting here This is
- (12) just one small chart that has 50 numbers on it and it ought to
- (13) solve the problems of scribbling down the numbers And the
- (14) numbers represent truths and we ought to be concentrating on
- (15) the truths that underlie the numbers and then we will match
- (16) the numbers up at the end
- (17) Now the specific categories of damages that we're going to
- (18) talk about - before I get to that I want to go back to both
- (19) the opening that we had in the courtroom next door and the
- (20) opening that we had in this courtroom And Exxon Corporation
- (21) in its openings admitted that it was a terrible oil spill it
- (22) undoubtedly had harmful effects on the fishermen plaintiffs and
- (23) the native plaintiffs That the plaintiffs are entitled to
- (24) compensation and Exxon Corporation should pay them
- (25) compensation And Exxon Corporation fully expects you will

Vol 25 4164

- (1) decide what they should pay and Exxon said to you the court
 - (2) and the plaintiffs that the plaintiffs natives and fishermen
 - (3) are entitled to full compensation for their loss Now that's
 - (4) what Exxon said when we started this trial that the
 - (5) plaintiffs the fishermen and the natives are entitled to full
 - (6) compensation for their loss Now I will bet you dollars to
 - (7) doughnuts that over the course of the next two weeks we're
 - (8) going to hear a different story from Exxon Corporation
 - (9) Now the categories of losses that we're going to talk
 - (10) about fall into fish that weren't caught the year of the
 - (11) spill If a fishery was closed or there were restrictions on
 - (12) the fishery the fishermen didn't catch fish the year of the
 - (13) spill that's the first category
 - (14) The second category of loss is fish price People don't
 - (15) buy fish from oiled fisheries People in the Lower 48 or in
 - (16) France or in Japan when they read about the Exxon Valdez oil
 - (17) spill happening in one of the richest salmon fisheries in the
 - (18) world are less interested in buying fish from that salmon
 - (19) fishery You don't want to eat fish that comes from an unsafe
 - (20) place that's the second category
 - (21) The third category of loss that we're going to talk about
 - (22) is harvest after 1989 There were certain fisheries Prince
 - (23) William Sound Kodiak Upper Cook Inlet where the oil either
 - (24) impacted the land water margin where the fish thrive or
 - (25) impacted the management of the fishery in such a way that
- there

Vol 25 4165

- (1) are long term damages to the fisheries That's the third
 - (2) category
 - (3) And the fourth category is that there are about 200 plus
 - (4) fishermen who had permits and who have sold their permits
- since
- (5) the time of the spill and their fishing permits are worth a
 - (6) heck of a lot less than they were at the time of the spill
 - (7) Who wants to buy a permit in damaged fisheries
 - (8) Those are the four '89 harvest losses fish price years
 - (9) after 1989 and permits And we'll have biologists and
 - (10) fisheries economists take us through that
 - (11) Now I want to talk a little bit about fishing businesses
 - (12) Commercial fishermen are like farmers Corporations cannot
- own
- (13) a fishing permit in Alaska you have to be an individual and
 - (14) you get a fishing permit for a specific area They are called
 - (15) limited entry permits And let's take Upper Cook Inlet as an
 - (16) example In Upper Cook Inlet for drift boats there are only
 - (17) 586 So we have a limited resource 586 people get to fish
 - (18) that resource out of drift boats Now fishing businesses are
 - (19) family businesses for the most part It is not uncommon for a
 - (20) fisherman to fish with his wife or a woman to crew They are
 - (21) family businesses and like farm family businesses you have
 - (22) to - the expression you have to make hay while the sun
 - (23) shines is a fact of life in fishing And in deed both with
 - (24) regard to harvest levels and fish prices they were static in
 - (25) the early 80s through 1985 1986 87 88 the sun was

Vol 25 4166

- (1) shining And then you get an oil spill in 1989 and bad things
 - (2) happen But fishing is like farming and you do have to make
 - (3) hay while the sun shines and that's where that expression
 - (4) comes from
 - (5) Commercial fishing is like many other outdoor occupations
 - (6) hard work not for the lazy not for the fainthearted people
 - (7) die fishing Fishing is backbreaking work and while fishermen
 - (8) only fish for that one July month when the fish are in the
 - (9) inlet or that one April or May period when herring are in
 - (10) Prince William Sound or in late June or early July when the
 - (11) pinks are in Prince William Sound there is a lot that goes
 - (12) into that fishing period Months of preparation A fisherman
 - (13) cannot afford to have his equipment down for one day when the
 - (14) fish are out there it will kill him
 - (15) So there are months of preparation that go into a fishing
 - (16) season and there are years of learning how to fish that go
 - (17) into a fishing season And fishermen have two primary assets
 - (18) Other than themselves and their families they have two primary
 - (19) assets They have their permit and their boat And a fishing
 - (20) permit at the height of the Alaska wild salmon fisheries in
 - (21) 1988 fishing permits could cost as much as \$250,000 Boats
 - (22) could cost anywhere from \$40,000 to \$600,000 And most of
- the
- (23) fishermen like other small businessmen they are in addition
 - (24) to being fishermen
 - (25) Small businessmen can't afford to come up with that kind of

Vol 25 4167

(1) cash to get into the business so they borrow money from one of
 (2) many institutions to pay for the boat and the permit and they
 (3) rely on the fishing income to make the boat and permit
 (4) payments Makes sense that s how we run small businesses
 (5) But there is an awful lot of preparation that goes into a
 (6) fishing season from the buying of the permit and the boat to
 (7) the preparation for the season to a lifetime of preparation
 (8) for being a fishermen to the selection of being a fishermen
 (9) Fishermen are - when we went through the voir dire
 (10) process I asked each of you why you live in Alaska The
 (11) reason I asked that question was for today They live in
 (12) Alaska because they like to make a living outdoors with their
 (13) hands on the sea they like the work they like the risk they
 (14) were born to fish the same way you and I were born to do what
 (15) we do That s why fishermen live in Alaska And most
 (16) fishermen do live in Alaska
 (17) Now I want to show you an exhibit from Phase I which is
 (18) the NOAA hindcast map which shows where the oil went the first
 (19) couple days after the spill and if we could run that it s the
 (20) one on the yellow
 (21) This is Prince William Sound in the black area and it
 (22) shows up a little bit better on the TV monitors as the oil in
 (23) the hours and the few days after the spill Now most of that
 (24) area where that oil is going through is a prime fishery The
 (25) area where the Prince William Sound pink salmon go through

Vol 25 4168

(1) thrive and the oil is now - much of it stays where it is but
 (2) a lot of it is moving around the bottom of the Kenai
 (3) Peninsula You wait and think it s never going to get down
 (4) there but it does
 (5) This is here the bottom of the peninsula Cook Inlet and
 (6) Anchorage is up and we ll look at another map in a minute
 (7) But the oil eventually gets down to the bottom of the Kenai
 (8) Peninsula gets to Kodiak gets to the Alaska Peninsula and
 (9) the Upper Cook Inlet tidal rips are the second strongest bodies
 (10) of water in the world you can watch them there that s the
 (11) tide going in and out The oil extends itself to Kodiak
 (12) extends down to Chignik down to the Alaska Peninsula goes
 (13) up
 (14) the inlet So it devastates Prince William Sound first and
 (15) then it brings its disaster with it as it moves around and
 (16) these are the people that it affected
 (17) The first is and I m going to show you just some short
 (18) videotapes you ll see longer versions of these videotapes but
 (19) this is Oliver Holm who is a Kodiak herring fisherman This
 (20) will give you a little bit of an idea what a herring set up is
 (21) like That s him and that boat little skiff was pulling out
 (22) the seine rig That s what his vessel looks like
 (23) Here is Mary Jacobs who is a Kodiak salmon seiner Those
 (24) are salmon And Les Meredith who is an Upper Cook Inlet
 (25) drifter A drift rig is a little bit different kind of rig
 (26) than a seining rig Those splashes that s fish hitting the

Vol 25 4169

(1) net Linden O Toole is a Prince William Sound salmon fisher
 (2) and this is a picture of her vessel and this is her over to
 (3) the - right here working on the boat This is the picture of
 (4) her vessel and the last picture of her vessel
 (5) So these are the people who fish They fish outside they
 (6) work hard And interestingly enough on the night of the
 (7) spill they were if they were herring fishermen getting ready
 (8) to go fishing in Prince William Sound And if they were salmon
 (9) fishermen they were starting to prepare for the fishing
 (10) season
 (11) Now I have here a map of Alaska and the primary areas
 (12) that we re going to be talking about are Prince William Sound
 (13) which is primarily a pink fishery pink salmon fishery and
 (14) we re going to talk a little bit about salmon types in a
 (15) minute Although there is a red fishery up the Copper River
 (16) Kodiak which is a red fishery and Kodiak fishermen fish in
 (17) this general area Chignik and Cook Inlet Those are the four
 (18) principal areas we re going to talk about and we re going to
 (19) break them down
 (20) Now each of these four principal areas has a different
 (21) management regiment different rules of the game and in
 (22) regulating a fishery you have two ways to regulate the
 (23) fishery You have the number of people you let fish there the
 (24) number of permits and when you let them fish that is time
 (25) And the fisheries in these areas are managed as sustainable

Vol 25 4170

(1) harvest fisheries So there are three elements to the run
 (2) when the fish run comes First there is the overall size of
 (3) the run The second is there is the take which is commercial
 (4) fishermen and subsistence fishermen they take out of the size
 (5) of the run And then the third is you want enough what they
 (6) call escapement so the fish continue to thrive in future
 (7) years So we re worried both about the catch for that year and
 (8) about enough fish either getting up stream or up into the lakes
 (9) so we have fish for future years
 (10) Now I want to talk a little bit about fish because fish
 (11) have different life signs We can leave this up and just use
 (12) the TVs There are five different kind of Pacific salmon and
 (13) one kind of Atlantic salmon And the five different kind of
 (14) Pacific salmon are king salmon sockeye or red salmon pink
 (15) salmon chum salmon and coho silvers
 (16) And this is the sockeye life style (indicating) Now
 (17) sockeye and pinks are the two that I m going to talk about
 (18) today By the way sockeye is a five year fish Sockeye are
 (19) the only fish that spawn in lakes and they spawn for example
 (20) in this little part of Alaska up the Kenai in Skilak and Kenai
 (21) lakes and if they go up the Kasilof they spawn in Tustumena
 (22) Lake And then they spend the first year or two up the lake in
 (23) fresh water growing And after spending the first year or two
 (24) up in the lake growing they go out to sea so they live in
 (25) both the fresh water and salt water Then they come back after

Page 4171

(1) a life of about five years to go back oddly enough to go
 (2) back to the same streams that they were - or lakes that they
 (3) were born on and how they find them is one of the great
 (4) mysteries of science
 (5) And we catch some on the way back and some go back to
 make
 (6) sure there is a future run and when they get back up sockeye
 (7) when they get back up to streams into the lakes which they
 (8) spawn they lay eggs and the cycle starts all over again
 (9) Sockeye are on the market the biggest highest priced
 (10) fish And I'll talk a little bit about fish markets in a
 (11) minute but sockeye salmon are sold out of these fisheries to
 (12) the Japanese primarily as fresh frozen
 (13) Now we have pink salmon who have a two year life cycle
 (14) And you can see on this one that the egg incubation happens in
 (15) the fall and they spend the winter and spring and the next
 (16) summer getting ready to go out to sea Now the pinks are a
 (17) little bit different than the reds because the pink salmon are
 (18) dependent upon the shoreline in Prince William Sound for their
 (19) early growth The reds are up in the lake but the pink salmon
 (20) depend on that land water margin in Prince William Sound for
 (21) their early growth So if you destroy the land water margin
 (22) or you hurt the land water margin or you poison the land water
 (23) margin you hurt the pink salmon
 (24) Now the third fish that we're going to talk about that
 (25) were affected are herring Now herring don't spawn in fresh

Page 4172

(1) water like pinks and the reds do they spawn again in areas
 (2) close to the land water margin so their health is again
 (3) dependent on the land water margin in Prince William Sound
 and
 (4) they have again a complicated multiple year life cycle So
 (5) these organisms these fish are a very very complicated very
 (6) very sensitive living creature who depend on clean water for
 (7) their biological health And the thing about Alaska is Alaska
 (8) is the last great wild salmon fishery in the world
 (9) Much of the salmon - there are five kinds of Pacific
 (10) salmon but much of the salmon that is now sold in the world
 (11) and it's more so and more so in part because of the spill is
 (12) farmed Atlantic salmon And farmed Atlantic salmon at least
 (13) to an Alaska fishermen is a cheap substitute for Alaska wild
 (14) salmon It doesn't have the glamour the allure the purity of
 (15) the Alaska salmon and the Japanese perceive it that way
 Now
 (16) that's sort of the life cycle of these fish
 (17) In Prince William Sound we're going to focus primarily on
 (18) pinks In Upper Cook Inlet Kodiak and Chignik we're going to
 (19) focus primarily on reds and for all three of the fisheries
 (20) we'll talk some about herring
 (21) Now in 1989 there were fishery closures There were
 (22) fishery closures in all of these areas and indeed for Upper
 (23) Cook Inlet drifters they didn't fish at all that season Now
 (24) what we have to do here in the courtroom is figure out what
 (25) would have been caught but for the spill and we will never

Page 4173

(1) know with certainty what would have been caught but for the
 (2) spill because it didn't happen We've got to use scientific
 (3) tools to go back and figure it out And those scientific
 (4) tools despite science are not as precise as we would like
 (5) them to be
 (6) The reason that we don't know how many fish would have been
 (7) caught is because of the oil spill The reason we don't know
 (8) the exact numbers is Exxon's fault Now the Alaska
 Department
 (9) of Fish & Game keeps statistics on fish numbers and we're
 (10) going to use their rough statistics and we're going to use
 (11) those statistics and give those statistics to a couple fish
 (12) experts Don Rogers is one Greg Ruggerone is another and
 (13) we're going to ask them using scientific methods to tell us
 (14) what those fish run sizes would have been but for the spill
 (15) First element of damage
 (16) The people that we will have come and testify about that
 (17) include Ken Parker who was the director of commercial
 (18) fisheries at the time the spill happened and a fellow named
 (19) Phil Mundy who is a renowned fish scientist Rogers and
 (20) others And we'll reconstruct the runs that's what they call
 (21) it run reconstruction and we'll do that and come up with
 (22) these numbers
 (23) Now I want to talk a little bit about these pinks and reds
 (24) that are sold Sockeye salmon are sold to the Japanese 90
 (25) percent of the sockeye salmon harvested in the State of Alaska

Page 4174

(1) goes to the Japanese Pinks primarily are canned and are sold
 (2) throughout the United States and Europe so they go off in two
 (3) different directions Herring is harvested for its eggs and
 (4) those are sold to the Japanese So those are the three
 (5) different markets that we have
 (6) Now the spill in 1989 was one of the most notorious events
 (7) of that year and you knew about it whether you lived in Japan
 (8) or Paris France or in the United States and the price of fish
 (9) collapsed in 1989 The price of Alaska fish collapsed in
 (10) 1989 For example in 1988 a fishermen got \$2 50 a pound for
 (11) his fish off the vessel ex vessel In 1989 he got a buck 50 a
 (12) pound \$2 50 before the spill a buck 50 after the spill
 (13) The same thing happens with regard to pinks and herring
 (14) Every fish price in Alaska collapsed between 1988 and 1989
 (15) Pinks went from 80 to 40 sac roe went from 50 cents to 21
 (16) cents a pound Before the spill good healthy prices after the
 (17) spill they were poor prices Why? The spill People don't
 (18) like to buy fish from oiled fisheries that's the first thing
 (19) The second thing is from a business perspective If we take -
 (20) let me explain to you a little bit about the chain of command
 (21) for selling fish Fishermen goes out and catches the fish
 (22) brings the fish into a fish processor what we used to call a
 (23) cannery The cannery buys the fish from the fishermen and in
 (24) turn sells them to Japanese buyers or stateside buyers A
 (25) Japanese buyer when he buys that fish takes a tremendous

Page 4175

(1) risk His risk is can he sell it in Japan If it s oiled fish
 (2) coming out of an oiled fishery he has a risk whether he ll get
 (3) it into Japan If one salmon is oiled they will embargo the
 (4) whole pack The Japanese consumers read about Alaska oil
 (5) spills and they have a choice of a lot of other different
 (6) kinds of salmon from a lot of other kinds of places they have
 (7) a choice of tuna they quit buying salmon and the prices
 (8) collapses price also collapsed because of herring
 (9) We re going to put on two economists to do two very
 (10) different things with regard to this The first is Dr Jim
 (11) Crutchfield who is the first and foremost fish economist in
 (12) the world He s going to explain how the system works and why
 (13) the prices collapsed The second is Rob Mendelsohn from Yale
 (14) who is a economatrician who does mathematical modeling
 He s
 (15) going to show us what the prices would have been but for the
 (16) oil spill
 (17) Now Exxon with regard to every item of damage we re going
 (18) to try to prove is going to try to get away from it This
 (19) promise with regard to full compensation will not mean a heck
 (20) of a lot in the next two weeks With regard to fish price
 (21) they are going to say the fish price collapsed before and after
 (22) the spill because of farmed salmon from Europe and we re
 going
 (23) to hear a lot about that But the fish price didn t collapse
 (24) because of farmed salmon from Europe it collapsed because of
 (25) the obvious reason of the oil spill And in 1989 when the

Page 4176

(1) price did collapse farmed salmon from Europe was not a major
 (2) player in the Japanese market where most of the red salmon
 (3) went But it is an excuse and we ll hear the excuse
 (4) So fish price is a big part of the case what the
 (5) fishermen - and fish price goes to these families If the
 (6) difference - if you re catching fish at 2 50 2 60 2 70 and
 (7) all of a sudden you re getting a buck for it you can t make
 (8) your boat payment permit payment it s tough to pay for the
 (9) groceries So while it s economics that translates into an
 (10) individual fisherman s pocket fish price is the most important
 (11) thing that we re going to look at over the next two weeks
 (12) So we ve talked about 1989 harvests and we ve talked about
 (13) fish price And the third thing I want to talk about is
 (14) long term damage to the fisheries And there are two
 (15) mechanisms that play The first is in Prince William Sound
 (16) The oil was spilled but didn t just go away You don t put
 (17) things into the environment and then they just disappear Exxon
 (18) notwithstanding And what happens in Prince William Sound is
 (19) not only do we get disruption in 89 but there are fishery
 (20) closures in 1990 too But most importantly the oil stays in
 (21) the ecosystem it stays on the beaches it stays under rocks
 (22) it stays in mussel beds And the land water margin where this
 (23) oil is is where pink salmon thrive And there are good salmon
 (24) harvests in 90 and 91 but then the biology the complicated
 (25) biology of that salmon and that oil catches up and the pink

Page 4177

(1) salmon fisheries collapse in 92 and 93 And herring who
 (2) spawn and thrive in this land water margin come back in 1994
 (3) diseased and lesioned and there is no herring season in 1994
 (4) So the first mechanism that we re going to look at is the
 (5) effect of crude oil on the land water margin and how things
 (6) looked fine for a year or two and then everything is shot
 (7) And that again if you re a fishing family who has a herring
 (8) permit and you can t fish for those few days in April when you
 (9) make your money your investment in your boat your
 investment
 (10) in your permit your investment in your life all goes down the
 (11) tubes That s the first mechanism
 (12) The second mechanism is Chignik Kodiak and Cook Inlet
 (13) they regulate the escapement up the rivers You want just so
 (14) many fish up the river If you have too many fish up the
 (15) river with too much spawning the fish overgraze and in
 (16) subsequent years there isn t enough little bugs little plants
 (17) for the fish to eat If you have too few fish you don t get
 (18) enough eggs so Alaska Fish & Game regulates these fisheries
 so
 (19) they get the right number of fish and these are called
 (20) escapement levels and you want the escapement levels to be
 in
 (21) the proper range for the long term health of the fishery
 (22) If there is an oil spill and you don t know whether the
 (23) fleet is going to fish on one day or the next day or at all it
 (24) becomes impossible to regulate the escapement and in
 Chignik
 (25) Kodiak and Cook Inlet they had overescapement too many fish

Page 4178

(1) got up the river they didn t have the commercial fish boats to
 (2) catch the fish they couldn t allow the commercial fish boats
 (3) to fish for oil salmon too many fish get up the river they
 (4) overgraze and we are seeing this year a collapse with regard
 (5) to the red salmon fisheries in Chignik Kodiak and Upper Cook
 (6) Inlet
 (7) Now after the salmon are coming back after five years
 (8) running up here why didn t they let the commercial fishermen
 (9) fish in 1989 Because of what is called a zero tolerance
 (10) policy People are so concerned about one fish one oiled fish
 (11) getting on the market that the State of Alaska the fishermen
 (12) the fish processors and Exxon all supported what was called
 the
 (13) zero tolerance policy If there was a chance we were going to
 (14) catch an oiled fish we are not going to fish
 (15) Now is there any history behind that? Yeah in the early
 (16) 80s 1983 there was one can of tuna that had botulism in it
 (17) that made its way to Europe one can And the price fell out
 (18) of the bottom of the Alaska fish market So that fear of taint
 (19) in the fish is so great and what it can do to all these
 (20) livelihoods There are 3300 permit holders for salmon and
 (21) herring 3300 permit holders that fear of taint and putting
 (22) these families out of business we didn t fish if there is a
 (23) potential for catching an oiled fish
 (24) Well I m sure Exxon will take the position well it
 (25) wasn t their fault the state was the one that imposed the zero

Vol 25 4179

(1) tolerance policy but it was Exxon's oil and Exxon agreed to
 (2) the zero tolerance policy and the zero tolerance policy made
 (3) good sense at the time and it makes good sense today You
 (4) don't fish one oiled fish gets through to Japan and the entire
 (5) fish market collapse we've talked about 89 harvests fish
 (6) price future harvests fish permits is the fourth thing that
 (7) we're going to talk about
 (8) A fishing permit a good fishing permit in one of these
 (9) areas in 1988 sold for \$250,000 There is a market for them
 (10) they are traded openly and freely A good fishing permit in
 (11) one of these areas today sells for 60 or \$70,000 and that's
 (12) because of the oil spill and the long term impacts of the oil
 (13) on the health of these fisheries and if you're a fisherman and
 (14) that permit and boat are your principal assets and you bought
 (15) it at a price of 250,000 and now it's worth 70,000 you've got
 (16) big problems And we have over 200 fishermen that bought
 (17) and sold low one of them was Linden O Toole who was the
 (18) fisher
 (19) that we looked at in pictures and that's another element of
 (20) damage
 (21) Now I said there were 3300 permits there are 3300 fishing
 (22) permits and each of these permits normally has one two or
 (23) three deckhands that fish with a permit holder Many times
 (24) family members many times friends so we get about 10,000
 (25) 10,000 fishermen in an area that encompasses a size of many
 (26) many states and this area is in fact the last great wild

Vol 25 4180

(1) salmon fishery in the world and it supports an awful lot of
 (2) families and those families were devastated by the spill and
 (3) we are here to ask you to hold Exxon to the promise they made
 (4) They made the promise to you to them and the promise was to
 (5) fully compensate these fishermen
 (6) Now His Honor instructed you that damages cannot be
 (7) speculative and that's right that's right because that's what
 (8) he instructed you sort of a self-proving kind of thing And
 (9) he went onto say - they call that the 600 pound gorilla
 (10) rule moving right along and then he followed up that
 (11) particular sentence and I wrote it down that there needs to
 (12) be some reasonable basis for determining the fact of the loss
 (13) of income and the law recognizes also that in going back and
 (14) trying to figure out exactly what would have happened because
 (15) of the spill we need to use some approximations and that's what
 (16) we are going to do
 (17) I am not going to come in here and precisely tell you what
 (18) the price was and what the exact numbers of fish were because
 (19) nobody can do that because we don't know because of the
 (20) spill
 (21) but we will show you that the damage occurred and we will
 (22) provide you with the tools to estimate the amount of that
 (23) damage and the damages include salmon harvests in Prince
 (24) William Sound for five years
 (25) There was a five year impact in Prince William Sound and
 (26) the number will be 86 million dollars Upper Cook Inlet

Vol 25 4181

(1) impacts for three years 166 million dollars Kodiak impacts
 (2) for three years 62 million dollars Chignik impacts for three
 (3) years 22 million dollars Herring for all of these areas 41
 (4) million dollars Fish price to all species for 1989 134
 (5) million dollars To all species in 1990 174 million dollars
 (6) To all species in 1991 244 million dollars Lost herring
 (7) harvests of 26 million dollars Damages to permits of 23
 (8) million dollars for a total of 978 million dollars 978
 (9) million dollars almost a billion dollars But keep in mind
 (10) that there is 10,000 fishermen in an area the size of a number
 (11) of states and the last great wild salmon fishery in the world
 (12) and that these numbers and you'll see and we'll build the
 (13) numbers block by block just like we proved Phase I brick by
 (14) brick block by block
 (15) Sit there pay attention to the concepts behind the numbers
 (16) and you'll see that these numbers are the best estimates that
 (17) any of us could bring to these problems
 (18) Now Exxon will come in despite the promise it made at the
 (19) beginning of the case and they will say it is a coincidence
 (20) that salmon prices dropped after the spill It is a
 (21) coincidence that herring prices dropped after the spill It is
 (22) a coincidence that permits dropped after the spill It is a
 (23) coincidence that herring come back with lesions on them after
 (24) the spill It is a coincidence that Kodiak and Chignik and
 (25) Upper Cook Inlet reds collapsed five years the life cycle of

Vol 25 4182

(1) red salmon five years after the spill It is a coincidence in
 (2) 1992 and 1993 - 93 and 94 pink salmon collapsed in Prince
 (3) William Sound after the spill This whole complicated
 (4) personal economic biological unit every aspect of it that is
 (5) important to those people every single aspect of it that is
 (6) important to those people have collapsed and in 1988 this was
 (7) economically and biologically the healthiest fishery in the
 (8) world No holds barred Happy families a lot of fish good
 (9) prices good future good markets and in 1989 the spill
 (10) happens and as we sit here today we've lost fish we've lost
 (11) price we've lost permit value we've lost the economic
 (12) vitality of these 3300 small businesses we've impacted the
 (13) livelihoods of 10,000 fishers men and women people who
 (14) chose
 (15) this place in the world and this particular life style to get
 (16) away from the Exxon's in the world
 (17) But we'll hear - for every item of damage we'll hear an
 (18) excuse But I would submit this proposition to you and I'm
 (19) going to finish early I would submit this proposition to you
 (20) oil and fish don't mix That's where I started and that's
 (21) where I'm going to end You cannot manage a fishery that's got
 (22) oil in it You shouldn't harvest fish from an oiled fishery
 (23) and put them into a market You can't raise a family on a
 (24) fishing income in an oiled fishery Fish don't thrive in an
 (25) oiled fishery You can't sell a permit from an oiled fishery
 (26) We're going to prove those things just like we proved Phase I

Vol 25 4183

(1) brick by brick block by block with what we think are some of
 (2) the finest biologists and economists in the world Thank you
 (3) THE COURT Mr Lynch
 (4) MR LYNCH Ladies and gentlemen of the jury my job
 (5) here a month and a half later is to do again what I tried to do
 (6) at the beginning of Phase I and that s to give you a preview
 (7) of the evidence that Exxon will be presenting in this phase of
 (8) the case
 (9) It s a lot more foreboding challenge this time than it was
 (10) last time because naturally you can imagine that it is not easy
 (11) to stand before you after you returned a verdict a week ago
 (12) against us which I m sure you can appreciate was a very
 (13) disappointing outcome for us and you can see that it would
 (14) naturally raise a concern that you would be less receptive to
 (15) what we have to say in this phase of the case having determined
 (16) that you didn t agree with our evidence in the first phase of
 (17) the case and that s I guess the first psychological
 (18) challenge that we have to face in this trial
 (19) This is not a unique experience because every lawyer in the
 (20) trial of every case has almost always situations in which the
 (21) judge rules against us on some point and we have to come
 (22) back
 (23) into court on the same case before the same judge and argue
 (24) the
 (25) next point and we have to learn to believe and trust and
 (26) generally speaking our belief and trust is justify that judges
 (27) will keep an open mind will decide each issue on the evidence

Vol 25 4184

(1) and the merits of that issue and will not allow one feelings
 (2) or reactions to one to spill over into the next
 (3) You as the judges of the fact have ruled against us to our
 (4) disappointment but that is your verdict and that s the way the
 (5) system works and now we are onto a very very different subject
 (6) now And on this subject matter as we said on the first day
 (7) of the trial and as we will say again today we agree with the
 (8) plaintiffs that the Exxon Valdez oil spill was a tragic event
 (9) and that it was bound to have adverse effect on Mr O Neill s
 (10) clients the fishermen of Prince William Sound Cook Inlet
 (11) Chignik and Kodiak
 (12) Exxon regardless of the question of fault regardless of
 (13) what we think the story of that accident is Exxon has always
 (14) recognized that it was our ship and our oil and we should be
 (15) responsible to pay the damages that result from that spill
 (16) we ve always recognized that The fact that we didn t agree
 (17) with the plaintiffs on the extent of fault does not mean that
 (18) anyone at Exxon was any less sorry that some aspect of its
 (19) business caused injury to people who are trying to work and
 (20) make their living in another part of Alaska where Exxon also
 (21) goes
 (22) Exxon people were devastated by the spill Mr O Neill
 (23) makes fun of that use that they were upset in their home in
 (24) their own family life that that spill came back and affected
 (25) them but nothing like it affected the fishermen of Prince

Vol 25 4185

(1) William Sound and western Alaska Exxon reacted to that fact
 (2) immediately by publicly accepting the responsibility and acting
 (3) on that acceptance of the responsibility
 (4) Mr O Neill made reference to permit payments and costs
 (5) daily costs of living and Exxon stepped into that breach
 (6) recognizing that there was bound to be an impact on the fishery
 (7) and set up a claims program that made money available to Mr
 (8) O Neill s clients in 1989 when the fisheries were disrupted so
 (9) that boat payments could be met permit payments could be
 (10) met
 (11) so that people s financial plans would not be disrupted and
 (12) there was as I think anyone in Alaska knows the enormous
 (13) economic activity associated with the unprecedented clean up
 (14) effort in Prince William Sound so that for fishermen and
 (15) people that worked for fishermen there were employment
 (16) opportunities to substitute for fishing which also contributed
 (17) to some sort of an economic band aid
 (18) No one is trying to minimize the impact of the spill no
 (19) one is here to say that fishermen are not entitled to their day
 (20) in court but as Your Honor instructed you the questions which
 (21) you ll be asked to decide the questions which Mr O Neill
 (22) brought out to you the questions are what fish run size would
 (23) have been and what the price would have been And the
 (24) question of whether the net of that is a balance for the
 (25) fishermen or not for the fishermen in 1989 that will be taken
 (26) care of the court because the claims payments have been
 (27) made

Vol 25 4186

(1) and you will determine what the right amount was and whether
 (2) the claims program hit that on the head or short or whether
 (3) it s over that s between the court and the fishermen and
 (4) Exxon that s not an issue that you as judges of the fact will
 (5) be asked to decide
 (6) The question you will be asked to decide as Mr O Neill
 (7) said and I agree relate to questions of fish management
 (8) questions of biology questions of chemistry and the effort
 (9) will be on both sides of the equation to reconstruct what
 (10) would have happened if there would have been no oil spill
 (11) Now let me say that if you start from the premise which Mr
 (12) O Neill seems to have started from that because Exxon
 (13) accepted
 (14) responsibility for the spill then any figure that Mr O Neill
 (15) or his clients believe is appropriate is something that Exxon
 (16) should pay no questions asked Then we are - we have a
 (17) difference of opinion that s really why this trial is coming
 (18) about because Exxon looked at this situation and felt that the
 (19) fishermen should be fully compensated but as Judge Holland
 (20) also said and I m sure Mr O Neill would agree as well as he
 (21) agreed with the other self fulfilling rules from the court the
 (22) fishermen are entitled to be fully compensated but they are
 (23) not entitled to make a profit from the oil spill They are not
 (24) entitled to be better off than they would have been had there
 (25) been no oil spill
 (26) Mr O Neill referred to the fact that the sun was shining

Vol 25 4187

(1) in 1988 but the plaintiffs case in this trial the plaintiffs
 (2) would ask you to conclude that 1989 would have been an even
 (3) significantly better year and that if you looked at the
 (4) average of the income that fishermen in Prince William Sound
 (5) and Cook Inlet were making if you look at the average that
 (6) these fishermen were making five years prior to the spill in
 (7) 1989 they would have made two and a half times as much as
 they
 (8) had previously been making they would not only be able to
 make
 (9) their boat payments and permit payments and whatever else
 but
 (10) they would have become very very wealthy on those
 investments
 (11) because they would have been doing far far better than they
 (12) had ever done in the past even in years which according to
 (13) plaintiffs was years when the sun was shining
 (14) Exxon s approach to the question of making the fishermen
 (15) whole has been to take the numbers that the Alaska Department
 (16) of Fish & Game in its regular every day business activities
 (17) carries out as a part of its duty under Alaska law to determine
 (18) the health of the fisheries it s taken the run size numbers
 (19) that the Alaska Department of Fish & Game has generated
 hasn t
 (20) argued with those numbers hasn t tried to juggle them hasn t
 (21) tried to recast them and it s taken the price that the market
 (22) has paid for the fish in 1989 and thereafter and it s
 (23) multiplied those things together to determine in its view
 (24) what Alaska fishermen would have made if there had been no
 oil
 (25) spill that s really the part of the difference between us and

Vol 25 4188

(1) the plaintiffs
 (2) Now Mr O Neill said to you and in this respect we totally
 (3) agree that this - this map and this map are really one and
 (4) the same The map on the screen shows you the boundaries of
 (5) the ADF&G fishing areas that we will be talking about in this
 (6) Phase II of the trial That it is not overlaid on the larger
 (7) map that the plaintiffs used but we re talking about the same
 (8) geographic area
 (9) Mr O Neill said of this area crude oil and fish don t
 (10) mix and we agree they don t and they didn t And the reason
 (11) is that by and large fish and particularly these fish live
 (12) under water and oil floats on top of water and the oil which
 (13) you saw in the plaintiff s video that was spread over this
 (14) water by this accident and that caused there is no question
 (15) enormous disruption in the 1988 fishing season
 (16) That oil is carried by the natural currents of Prince
 (17) William Sound the natural currents in the Gulf of Alaska out
 (18) into the Pacific Ocean a significant part of that oil is
 (19) flushed out of the Sound the Sound empties refills and
 (20) empties every three weeks So the oil that was on top of the
 (21) water floated away Much of it a portion of it landed on
 (22) beaches as you know and I m sure you ve all seen pictures of
 (23) the beaches being cleaned Some of you may have been down
 (24) there some of you may have known people that were down
 there
 (25) Not all of the oil went out to sea some of it landed on

Vol 25 4189

(1) beaches but even there the effect of the oil from this spill
 (2) on the water was not a polluting event The impact of crude
 (3) oil on the water is measurable but the measurements of
 (4) chemicals coming out of the crude from the Exxon Valdez into
 (5) the water where the fish live which were made extensively in
 (6) hundreds and hundreds of samples taken not only by Exxon
 but
 (7) taken by the federal government and by the state government
 (8) those measurements never showed petrochemicals in
 quantities
 (9) that could hurt fish
 (10) Now I say never I ve got to correct myself Yes you can
 (11) find isolated examples out of thousands of tests there were
 (12) one or two examples or several examples in various places for
 (13) a short time where chemical levels peak a little bit above
 (14) what s considered safe but across the board in this huge body
 (15) of water which Mr O Neill mentioned to you covers an area of
 (16) several states they could not find concentration of chemicals
 (17) from the oil that would be harmful to fish So the water where
 (18) the fish live that water remained pure thank goodness that s
 (19) just one of the aspects of nature and the aspects of science
 (20) that made this spill a little less worse than you might think
 (21) it would have been if you just see the pictures of the oil on
 (22) top of the water That - millions of fish who live beneath
 (23) that water were not exposed to the oil
 (24) Now along the shorelines which Mr O Neill made reference
 (25) to what he called the - the sea land margin I think what

Vol 25 4190

(1) scientists call the intertidal zone oil did go ashore it did
 (2) go ashore following the path that the plaintiffs indicated to
 (3) you generally along this area in the south and west of Prince
 (4) William Sound and then in much smaller quantities down along
 (5) the Kenai Peninsula Kodiak and into Chignik
 (6) However as a part of its acceptance of responsibility for
 (7) this spill Exxon undertook the most extensive and most
 (8) expensive clean up anywhere in history to clean up and
 remove
 (9) as much oil as could be removed in as short a time
 (10) This is a picture of oil on Green Island Green Island
 (11) you can barely see it on this map You can t even see it on
 (12) this map but it s a little island right up in here and it was
 (13) one of the most heavily oiled sites in the month following the
 (14) spill What you see is a beach facing up toward Bligh Reef
 (15) and there is crude oil all over that beach pools of crude oil
 (16) and that is a significantly impacted beach not every beach was
 (17) like that if you looked at a percentage of the entire
 (18) shoreline of Prince William Sound that would be an unusual
 (19) situation That s about as bad as it got
 (20) Now by 1991 this same beach looked like this That s a
 (21) picture of the same beach taken from basically the same
 (22) position as the last picture but in the meantime Exxon has
 (23) cleaned that beach and even more significantly nature has
 (24) helped to clean that beach Storms that naturally occur cause
 (25) the oil that had stranded on the shore to be washed out Exxon

Vol 25 4191

(1) cleaned off the beach and siphoned up the oil so that by 1991
 (2) two years after the spill this beach is essentially restored
 (3) to the condition that existed before the spill
 (4) Now if you look at this picture very closely you can see
 (5) little black splotches and the natural reaction if you were
 (6) just a hiker walking along Green Island now you might say
 (7) that's a remnant of the Exxon Valdez oil spill that must be
 (8) crude oil stuck to the rocks and you can be right and you
 (9) could be wrong because the little bugs and plants that Mr
 (10) O Neill was talking about include lichen kind of a mix between
 (11) fungus and plants that grow on the rocks and many times only
 (12) an expert can tell whether the black marks on the rock are
 (13) natural lichen or whether it's crude oil But if it's crude
 (14) oil it's in a state which is totally unavailable to biology
 (15) unless you're a crude oil eating microbe but it doesn't affect
 (16) fish deer higher living things It may be biodegrading in
 (17) the natural process because one of the things that you'll hear
 (18) in the trial crude oil is a natural substance We go see
 (19) organically grown vegetables and something called natural
 (20) always seems to be a good idea but crude oil comes out of the
 (21) ground it's a natural substance it has to come out in paying
 (22) quantities for people to actually drill for it and collect it
 (23) it comes out of the ground in nonpaying quantities in a lot of
 (24) the places in the world including Prince William Sound There
 (25) are seeps of natural crude oil into Prince William Sound and

Vol 25 4192

(1) into streams in Prince William Sound and there are seeps of
 (2) natural crude oil that have been going on for hundreds of year
 (3) for all anyone can tell in which - I can find a picture
 (4) salmon have been breeding for years with oil floating on top of
 (5) the water It is not impossible for living things to coexist
 (6) with modest quantities of crude oil 11 million gallons
 (7) that's not supposed to happen 11 million gallons that's
 (8) something you have to react to you have to get in there and
 (9) clean it up but trace amounts of crude oil are not something
 (10) that nature has never seen except for an oil spill it doesn't
 (11) have an adverse effect on fish populations
 (12) Part of the story that crude oil and fish don't mix is they
 (13) didn't have to mix Fish were in the water column as if you
 (14) drilled a core down and pulled out a circular piece of water
 (15) and they measured that water column and they determined that
 (16) it
 (17) remained pure The oil when it was there was on the top tiny
 (18) minute traces of the chemical may have dissolved tiny droplets
 (19) may have dispersed but none of those were in quantities or
 (20) concentrations sufficient to cause any extensive fish damage
 (21) And by the way this is not something that in the quote
 (22) excuse that Exxon came up with this isn't the first oil spill
 (23) in history There were oil spills before the Exxon Valdez
 (24) there have been oil spills since I'm sure you all know during
 (25) World War II people on both sides were purposely blowing up
 tankers in the ocean particularly along the east coast of the

Vol 25 4193

(1) United States millions and millions of gallons of oil spilled
 (2) by tankers that had been torpedoed
 (3) Nowhere in the world has an oil spill resulted in a large
 (4) fish kill as a result of oil getting down into the water and
 (5) poisoning the fish and this spill was no different So Exxon
 (6) was fortunate if you will that nature doesn't make it tough
 (7) for fish in an oil spill It's tough for other kinds of life
 (8) but fish are below the exposure Exxon reacted to minimize to
 (9) the greatest extent humanly possible the impact on nature of
 (10) oil stranding in the land water margin the intertidal area by
 (11) engaging in a clean up and nature helped because the
 (12) environment of Prince William Sound is one which helped to
 (13) promote the clean up Exxon could only help nature along but
 (14) nature did most of the work
 (15) So the fact is that when you look at these fisheries which
 (16) are important and just I think as Mr O Neill described them
 (17) noteworthy natural salmon and herring and other kind of
 (18) fisheries The impact of the spill we believe the evidence
 (19) will show and we will submit to you as judges of the fact the
 (20) impact of the spill was primarily in 1989 when the oil was on
 (21) top of the water and in the way of fishing not because it was
 (22) hurting the fish but because it would hurt fish nets and the
 (23) fishing equipment to try to fish through that curtain of oil
 (24) that fishing had to be disrupted
 (25) Now Exxon as I said recognized that that need was there

Vol 25 4194

(1) stepped in immediately to try to make funds available to assure
 (2) that in the short run that on a monthly payment basis fishermen
 (3) were not going to be put in a position where they couldn't meet
 (4) their payments where they were suffering a financial problem
 (5) because we had to reconstruct what the fishing would have
 (6) been
 (7) in 1989 and the income that went into that fishing community
 (8) in 1989 was greater than it had been in earlier years
 (9) The cash flow situation there was no immediate financial
 (10) disaster Then the process of trying to determine what would
 (11) have happened went forward and as I said Exxon's position
 (12) was
 (13) that the best way to know what would have happened was to
 (14) look
 (15) at what had happened in the past These were the same
 (16) fisheries these were the same fish stocks these were the same
 (17) fishermen by and large and fisher women so Exxon thought
 (18) let's look at what's been happening over time because that
 (19) would be a pretty good indication of what's happened in the
 (20) past The representatives of the fishing interests they said
 (21) no you're understating although the ADF&G says this would
 (22) have been the run size actually ADF&G is wrong they didn't
 (23) count the fish right or their method of counting the fish is
 (24) inaccurate there was fish there that they didn't see that they
 (25) should have seen
 That was the source of the difference of opinion that we
 bring to you today as judges of the fact and I say to you as
 I said on the first day you are the judges of the fact on this

Vol 25 4195

(1) issue Exxon Corporation the people at Exxon management
 (2) employees shareholders believe they have been fair believe
 (3) they have taken a fair approach they submit that question to
 (4) this jury and all we ask you to do whatever you thought about
 (5) Phase I is listen to our evidence not take the approach that
 (6) because we've accepted responsibility we're not even entitled
 (7) to a hearing not take the approach because we've accepted
 (8) responsibility anything the fishermen say is necessarily true
 (9) or right not take the approach that because there was an oil
 (10) spill everything that happened to the fishery must be traceable
 (11) to the oil spill automatically not jump to that conclusion
 (12) I think if I weren't working on this case I would probably
 (13) approach it myself I see there is a big oil spill big high
 (14) profile events then events occur afterwards and you say
 (15) well that must be because the oil it wasn't happening before
 (16) must be because of the oil and Mr O'Neill spoke about
 (17) science and that's what science has brought to all of us is
 (18) the thought that you don't jump to the obvious conclusion
 (19) without looking at it carefully and asking yourself and asking
 (20) by experiments and testing and looking into the subject is it
 (21) really true what I guessed at
 (22) For some thousands of years we have all thought the sun
 (23) revolved around the earth and some famous people were put
 (24) to death for claiming otherwise but we know that's not true if I
 (25) told you today that the sun revolved around the earth you

Vol 25 4196

(1) would say I was crazy Something that science has brought to
 (2) bare on us
 (3) Now looking into this subject both sides have gone to
 (4) scientists and I think it's fair to say that both sides have
 (5) tried to get the opinions of reputable scientists and there
 (6) are difference of opinions among the scientists One of the
 (7) things that you as the judges of the facts will be confronted
 (8) with is how this concept that the law has about the
 (9) preponderance of evidence how that concept is applicable to a
 (10) situation where scientists who have spent their life studying a
 (11) subject can't agree and even a scientist who has an opinion
 (12) can say that's my opinion but it hasn't been proven yet It's
 (13) like - if you studied it in high school or college the
 (14) scientific method you start with a hypothesis and you say I
 (15) think that maybe X is causing Y I think maybe the oil spill is
 (16) causing something to happen Let me set up some
 (17) experiments
 (18) let me set up some tests to see if that in fact is the case
 (19) And you will hear in this phase of the trial about tests and
 (20) about experiments that have been conducted on both sides
 (21) and I
 (22) think you'll conclude when you go away to deliberate that no
 (23) scientist who will come here and testify can say they know to a
 (24) certainty or they have established the level of confidence
 (25) that scientists typically require that they can prove these
 (26) conclusions that have been suggested
 (27) Now let me if I can address one by one the elements of

Vol 25 4197

(1) damage which we will be talking about Let me say in
 (2) discussing these what I've said already That is that the way
 (3) this phase of the trial has been structured you are asked to
 (4) decide this question on an almost theoretical basis you are
 (5) being asked to decide what would the total number of fish have
 (6) been you're not going to take into account what was paid or
 (7) who was paid you're not really being asked to determine how
 (8) these fishermen were damaged because you're not going to be
 (9) provided and you don't know what they have been paid before
 (10) they came in here today what other income opportunities they
 (11) had What you're being asked to determine just as an abstract
 (12) matter what would have happened had there been no oil spill
 (13) and what would have happened in 1990 and what would have
 (14) happened in '91 and '92
 (15) Now in 1989 after the oil spill and properly and
 (16) understandably so the Alaska Department of Fish & Game
 (17) closed
 (18) these areas which are shown on the screen in Prince William
 (19) Sound And the reason they were closed fundamentally was
 (20) there
 (21) was enough oil in the water that there was a risk that in
 (22) pulling the fish up out of the water and on to the boat they
 (23) would come in contact with crude oil fish would be tainted
 (24) and that could cause a health problem and it could also cause a
 (25) marketing problem if the reputation of Alaska fish was injured
 (26) so the Alaska Department of Fish & Game closed those fisheries
 (27) and there was no commercial fishing allowed in those areas

Vol 25 4198

(1) Now you would say to yourself well obviously then there
 (2) must have been a lot fewer fish caught in 1989 the fishermen
 (3) must have been at a disadvantage in 1989 as compared to
 (4) earlier
 (5) years because they couldn't fish This is a chart of those
 (6) same areas as they existed in 1988 and the red area means
 (7) exactly the same thing It means that the Alaska Department of
 (8) Fish & Game in 1988 closed those areas of Prince William
 (9) Sound
 (10) to commercial fishing
 (11) Now if you look at the two maps side by side what you'll
 (12) see is there was more of Prince William Sound closed to pink
 (13) salmon fish in 1988 then was closed in 1989 Now there was no
 (14) oil spill in 1988 Why did they close those fisheries in 1988
 (15) and what does that mean about 1989?
 (16) Mr O'Neill made reference to the fact that the Alaska
 (17) Department of Fish & Game is charged by the people of Alaska
 (18) with the job of maintaining healthy fishing stocks for the
 (19) commercial fishermen for the recreational fishermen and for
 (20) our children Part of that job is to assure that an adequate
 (21) number of adult fish are allowed to lay eggs every year so that
 (22) the fish can return and repopulate
 (23) Now long prior to the Exxon Valdez oil spill in Prince
 (24) William Sound we were tinkering with nature because the fish
 (25) population of - pink salmon population I should say of
 (26) Prince William Sound is not predominantly a natural
 (27) population It is predominantly a population of hatchery fish

Vol 25 4199

(1) which the fish were caught their eggs are scientifically
 (2) removed so almost every egg hatches into a young fish They
 (3) are raised until they are viable living fish then they are
 (4) released at a rate of about 600 million fish a year into Prince
 (5) William Sound And by 1988 hatchery pink salmon represented
 (6) about 75 percent of the total returning population of pink
 (7) salmon and that was a hugely larger population than had
 (8) existed before the hatcheries opened up in the 70s As a
 (9) result of the hatchery process the pink salmon fishery had
 (10) grown enormously the number of pink salmon that could be
 (11) caught by everybody had grown enormously But one
 consequence
 (12) they talk down in Seattle about Californians moving up and
 (13) driving up real estate prices well all the hatchery fish were
 (14) coming in and eating the bugs and the plants and getting
 caught
 (15) by the 3 300 fishermen that were out there with their drift
 (16) nets and seine nets Now the 25 percent of pink salmon that
 (17) were natural the ones that go into the mouths of the 800 or so
 (18) streams that surround Prince William Sound those fish were
 (19) being caught too
 (20) Because they were the minority in that population the
 (21) Alaska Department of Fish & Game was concerned that the
 natural
 (22) fish were going to be wiped out that there wouldn't be enough
 (23) of those fish getting away to get to the streams and keep a
 (24) natural pink salmon population alive so in 1988 the man in
 (25) charge of Prince William Sound closed all of these areas to

Vol 25 4200

(1) commercial fishing and the reason that he made those closures
 (2) was that he wanted more natural fish to get away to the streams
 (3) all around Prince William Sound so that they could naturally
 (4) lay their eggs the natural stock would survive and instead
 (5) what he did he allowed the commercial fishermen to engage in
 a
 (6) terminal fishery that means they were allowed to fish right
 (7) near the hatchery
 (8) You remember Mr O Neill told you one of the great
 (9) mysteries of science is that the salmon return to the very
 (10) waters where they were born where they were spawned and
 the
 (11) hatchery fish are exactly like that they come right back to
 (12) the front door of the hatchery so the fishermen can wait right
 (13) there by the door that's not their preferred way to fish but
 (14) the overwhelming majority of the fish that arrive at the
 (15) hatchery are going to be hatchery fish and hopefully the
 (16) natural fish will have gotten off at the off ramps and headed
 (17) back to their condos or houses or wherever they were headed
 and
 (18) repopulate naturally
 (19) That's what Mr Brady who was in charge of fishing in 1988
 (20) did The fishing was done at terminal fisheries at hatcheries
 (21) and the catch was measured by what they would catch at the
 (22) hatcheries and Mr Brady will say was because the weak run of
 (23) natural salmon that occurred in 1989 he would have done the
 (24) same thing so the result was that there was an oil spill out
 (25) there and although fishing was closed no doubt about it

Vol 25 4201

(1) because of oil the same thing would have happened
 (2) Now remember what Mr O Neill said you were here as judges
 (3) of the facts what would have happened had there been no oil
 (4) spill and the man who had that decision to make he says what
 (5) would have happened is there would have been the same
 closures
 (6) and fishing would have occurred in the same places and
 fishing
 (7) did occur and fishermen did harvest pink salmon and so the
 (8) fact is that the fishing that was actually done in 1989 was
 (9) very very very close to the but for world so that's part
 (10) of our difference of opinion with the plaintiffs because the
 (11) plaintiffs would have someone that's going to come in that was
 (12) not part of the decision and say no I don't think that would
 (13) have happened The man whose responsibility was to make
 that
 (14) decision that's what he said and will say
 (15) Now let's talk about the fishery for reds or sockeye salmon
 (16) in Cook Inlet that's another case where the fishery - where
 (17) we disagree with the plaintiffs about the number of fish and
 (18) our disagreement is a little over 1 million fish That dispute
 (19) relates to a claim made after the oil spill that the way that
 (20) ADF&G I say ADF&G the way that ADF&G counts the fish and
 had
 (21) been counting the fish years beforehand that was wrong they
 (22) were missing fish there were actually fish swimming up the
 (23) river that ADF&G didn't know about part of the overescapement
 (24) argument So they are saying the numbers should have been 1
 (25) million higher And you'll hear people say that were involved

Vol 25 4202

(1) in that program from ADF&G and they will tell you that they
 (2) believe because of the particular characteristics of the river
 (3) that we're talking about the Kenai River that the counter is
 (4) accurate That this additional 1 million fish did not escape
 (5) Now there is a twist on this one because there is no
 (6) dispute on Exxon's side that some additional fish would have
 (7) been caught if there had been no oil spill there was minor
 (8) amounts of oil in Upper Cook Inlet but because of the zero
 (9) tolerance policy and we indeed do not disagree with that
 (10) policy drift net fishermen were not allowed to fish in the
 (11) middle of Upper Cook Inlet out near the Kenai River You saw
 (12) the picture of the drift net fishermen they are like the six
 (13) pack things the fish swim along and the net is hanging down
 (14) and the fish get stuck call them gillnets the fish get stuck
 (15) and are pulled in Driftnet fishermen were not allowed to fish
 (16) in Upper Cook Inlet and they didn't catch the amount of fish
 (17) that they would have normally caught and that's attributable to
 (18) the oil spill no doubt Setnetters also fish and they stick
 (19) their nets away from the shore and the fish as they swim along
 (20) the banks get their gills stuck in the net Setnetters had
 (21) bonanza they caught most of the fish that in a normal year the
 (22) drifters would have caught They didn't get shortchanged at
 (23) all they caught many many more fish if there hadn't been an
 (24) oil spill So the people that owned set net permits in Upper
 (25) Cook Inlet by happenstance in 1989 the oil spill was a great

Vol 25 4203

(1) benefit
 (2) Now you will have to determine what the run would have
 (3) been and perhaps the jury verdict form will ask you to split
 (4) it between driftnet and set net fishermen but as you move
 (5) forward into the other claims that the setnetters are making
 (6) that s a benefit that they got from the oil spill they did a
 (7) lot better I think the plaintiffs experts will have to agree
 (8) they did a lot better than if there was no oil spill in 1989
 (9) Now the next aspect of the 1989 story is price but for
 (10) world had there been no oil spill Now Mr O Neill has said
 (11) and this is a very reasonable hypothesis to start with Mr
 (12) O Neill has said if there is crude oil in the water of a well
 (13) known fishery and it s a worldwide news event and it
 (14) certainly was believe me no one knew that better than Exxon
 (15) then people would be afraid to buy the fish You probably all
 (16) remember the Alar thing with the red apples maybe you don t
 (17) shop at Jack in the Box as much as you used to but at Exxon
 (18) we
 (19) did not start with the premise that that was a crazy or unfair
 (20) or unreasonable suggestion we tried to look at it
 (21) scientifically We said that s a very reasonable hypothesis
 (22) but does it prove out let s go look at it see if it s true
 (23) and we hired the person we think is the leading expert in the
 (24) field of salmon marketing Dr Anderson University of Rhode
 (25) Island and a number of other people who are involved in
 marketing salmon around the world

Vol 25 4204

(1) I d like to spend just a few seconds maybe more than a few
 (2) seconds I d like to spend some time talking to you a little
 (3) bit about salmon marketing because it s been a revelation to
 (4) me I ve got to concede that I m not a big fish eater to start
 (5) with but I ve always thought of salmon as special treat kind
 (6) of fish you know the kind of fish that you have to splurge to
 (7) buy at the market And then I learn as we get into this case
 (8) that of course salmon from Alaska are sold in different places
 (9) to different consumers pink salmon which range in price have
 (10) ranged in price from 15 cents to 30 35 cents a pound that
 (11) goes predominantly into cans and I ve been looking around
 (12) Anchorage to find a pink salmon sandwich and no one will sell
 (13) me one We in Alaska don t think pink salmon is worth eating
 (14) so that goes to the Lower 48 and England and Western Europe
 (15) where they make salmon burgers I have a can in my briefcase
 (16) that has a recipe for salmon burgers and it s an inexpensive
 (17) fish goes to like canned tuna that almost always involves a
 (18) low price end use It involves a different kind of taste than
 (19) some of us in the United States think of when you think of
 (20) salmon because I at least in my part of the country tuna is
 (21) the canned fish that most people use the southeast and south
 (22) that canned salmon sells predominantly and England it s a big
 (23) seller
 (24) Sockeye salmon red salmon is the easy salmon to buy in
 (25) Anchorage and when you buy it you get it grilled in either a

Vol 25 4205

(1) steak or a fillet and it is a premium special fish but as Mr
 (2) O Neill told you the sockeye salmon that supports the
 (3) fishermen who are the plaintiffs here the big sales the sales
 (4) that count those are sales in Japan and I was surprised to
 (5) learn that in Japan sockeye salmon isn t quite on the status
 (6) that pink salmon is in Alaska but it s not thought of as the
 (7) big succulent special Sunday dinner fish it s the every day
 (8) sort of Spam of fish it s the fish that people in Japan eat
 (9) for breakfast lunch and if they are going to have special
 (10) company for dinner they don t look at salmon at least they
 (11) haven t historically if it s going to be a special treat they
 (12) look at farmed Atlantic salmon as something special because
 (13) they aren t used to it Salmon in Alaska is sold salted fresh
 (14) is not as big a deal in Japan as it is in the United States so
 (15) the market that these fish go to is a little different than
 (16) we re talking about here it s a little different than the
 (17) market you might think of when you think about the news of the
 (18) oil spill causing people to shy away from fresh fish When I
 (19) first heard about this that s my image fish on ice
 (20) concurrently with the oil spill people saying maybe I won t
 (21) buy salmon
 (22) Our expert looked into this and he found some surprising
 (23) thing things that didn t fit the hypothesis one of the things
 (24) he found was Alaska salmon sales rose didn t fall at the time
 (25) of the oil spill That s not what you would expect to happen

Vol 25 4206

(1) and people shying away When people were concerned about
 (2) red
 (3) apples with Alar they weren t moving green apples were
 (4) moving but salmon from Alaska sold better not worse and
 (5) when
 (6) you looked into the market particularly in Japan and asked
 (7) people and checked into it and said why is there this
 (8) concern they couldn t find any evidence that buyers were
 (9) steering away from Alaska salmon because of taint or fear that
 (10) there was oil And since as we know salmon is a staple
 (11) something that people like to expect to eat all the time
 (12) Now you would say if there is question about Alaska salmon
 (13) then this must be a good time to be selling Canadian salmon or
 (14) Chilean or Japanese go to your customer and say not to worry
 (15) this salmon didn t come from a place where the oil spill
 (16) occurred but when you look at those salmon fisheries and
 (17) those
 (18) salmon markets they didn t have a bonanza either they had a
 (19) year of falling prices and if you look further into this you
 (20) see even in Alaska experts who were studying the market were
 (21) saying that the salmon market has peaked the salmon market
 (22) is
 (23) bound to decline because prices have gotten unrealistically
 (24) high and there is a lot more salmon available than there used
 (25) to be not only farmed salmon farmed salmon is an important
 factor hatchery raised pink salmon are an important factor in
 the supply of pink salmon but they re having huge harvests of
 salmon in other parts of the world and if you look more deeply
 into it you see the people who bought sockeye salmon at 2 50 a

Vol 25 4207

- (1) pound were sort of stuck with it in the beginning of 1989
 (2) remember salted not fresh they had supplies of salmon on
 (3) their hands that they had paid a high price for and the market
 (4) price was falling down so they were anxious to sell off their
 (5) inventory they weren't as anxious as they might be in a time
 (6) of short supply to go out and buy replacement salmon so
 (7) everybody's price for salmon was falling in 1989 not just
 (8) these fishermen the fishermen in British Columbia the
 (9) fishermen in Washington State the people who raise salmon in
 (10) Columbia - rather in Chile and Western Europe salmon prices
 (11) were falling across the board not just salmon but tuna
 (12) remember Mr O Neill said maybe they will buy tuna tuna was
 (13) falling fish prices were falling at that time
 (14) Your Honor would this be a good time?
 (15) THE COURT Take our first recess reconvene in 15
 (16) minutes
 (17) (Jury out at 10 00 a m)
 (18) (Recess at 10 00 a m)
 (19) (Jury in at 10 15 a m)
 (20) THE CLERK All rise
 (21) MR LYNCH At the break I asked what I had forgotten
 (22) and first thing I was told I forgot was to introduce Bert
 (23) Cooper who like at the plaintiffs table will be helping us
 (24) He likes fish and he is a commercial fisherman and he knows a
 (25) lot about the fishing issues

Vol 25 4208

- (1) I have up to now covered basically in a very general way
 (2) the story of 1989 as we believe the evidence will convey it to
 (3) you as judges of the fact I want to say again we believe
 (4) that the consequences of the oil spill are not as great as the
 (5) plaintiffs say they were
 (6) We believe that if you listen to the evidence you will be
 (7) convinced that is true more probably true than not but one of
 (8) the good things one of the few good things about this spill is
 (9) that it was Exxon's oil and they are able to make good on the
 (10) statement that we mean to pay what is fair here Fair to the
 (11) plaintiffs fair to Exxon what the right number is as best
 (12) you can come to it If you disagree with us on this point or
 (13) if you come down somewhere in the middle whatever that's the
 (14) issue we are asking you to decide when we ask you to give us a
 (15) fair chance to hear our evidence we try to be fair about this
 (16) subject we mean to be fair about this subject and you as the
 (17) jurors judges of the facts if you could just listen to our
 (18) evidence and have an open mind about it we believe it's
 (19) convincing
 (20) Now like Mr O Neill I have focused on the biggest
 (21) elements of 1989 There are actually five areas there are as
 (22) many as six species in those areas so that's 30 potential
 (23) run - I think the real number is 22 potential run size and
 (24) price issues that you'll be called upon to decide I haven't
 (25) summarized all that evidence nor has counsel you'll be

Vol 25 4209

- (1) hearing a lot more about it than I have summarized But moving
 (2) past 1989 the first subject I'd like to deal with is price in
 (3) 1990 and 1991 what the evidence will show on that subject
 (4) We've discussed price in 1989 we've discussed this
 (5) question of taint and what the evidence we believe shows about
 (6) the perhaps surprising factor because of the nature of the
 (7) market because of the things that the State of Alaska did
 (8) because of the kind of demand that exists elsewhere in the
 (9) world for salmon and the way it's sold the concern that you
 (10) would expect or might expect to happen didn't materialize and
 (11) that actually Alaska salmon prices behaved very much like fish
 (12) prices all around the world but what you wouldn't expect if
 (13) there was a taint problem you wouldn't expect the fear of the
 (14) fish to grow more the year after the spill than it had been the
 (15) year of the spill and even more the second year after the
 (16) spill than it had been the year of the spill and that's really
 (17) what the plaintiffs' prize witness has to conclude because he
 (18) shows price rising while everybody else is falling in 1990 and
 (19) '91 if there had been no oil spill He postulates a world in
 (20) which the price of Alaska fish from these fisheries and only
 (21) these fisheries would have been rising when the price for
 (22) comparable competitive fish was falling all over the world and
 (23) he said that's because people were afraid of Alaska salmon
 (24) even
 (25) though by 1990 the clean up had been completed or at least the
 first major phase of the clean up had been completed the news

Vol 25 4210

- (1) had died down the sense that there was a major oil spill out
 (2) there had died down and we believed that just isn't reasonable
 (3) and it doesn't bare up
 (4) Actually turns out to be the case is that this mathematical
 (5) model that you heard about I don't know if any of you play
 (6) computer games but there are computer simulation games like
 (7) Sim City (ph) and so forth and you get to take a position and
 (8) try to build a perfect world or fly a spaceship or in my case
 (9) fight the battle of Gettysburg And if you play it right the
 (10) south can win the battle of Gettysburg you can create a
 (11) simulation to show those results The simulation that shows
 (12) those prices rising is based on a premise that the more farmed
 (13) salmon that is sold the bigger the impact of farmed salmon
 (14) then the higher the prices of salmon will rise just go to your
 (15) market and at the start of the season when grapes or peaches
 (16) are coming in you see that the prices are high but at the
 (17) peak of the crop arriving and there are a lot of grapes and a
 (18) lot of peaches they fall sometimes very low become
 (19) bargains
 (20) As farmed salmon became more involved in the market in '90
 (21) and '91 you would expect the prices to fall but this
 (22) simulation shows them rising and we believe that's not
 (23) reasonable ask - and while Exxon has committed to pay what's
 (24) fair we don't believe a price claim based on that premise is
 (25) fair we don't believe if there wouldn't have been an oil spill

Vol 25 4211

(1) prices would have behaved that way we can't see the connection
 (2) between the claims. When we go beyond the price claims in 1990
 (3) and 1991 we get into what Mr. O'Neill has talked about at
 (4) least he wasn't using it in this context. The great mysteries
 (5) of science. We are talking about speculation on the part of
 (6) scientists to find some tenuous connection to connect an oil
 (7) spill in 1989 with problems that show up in fisheries one, two
 (8) sometimes three generations later. The fish that were in
 (9) Prince William Sound in 1989 especially the pink salmon came
 (10) back in record numbers. Healthy strong fish runs. Then in
 (11) 1993 a problem showed up and there is no denying that that
 (12) was
 (13) a problem and there is no denying in our view that that was -
 (14) that that is bound to have an impact on the people who fish for
 (15) a living in Prince William Sound fish for pink salmon bound
 (16) to have an impact on people who fish for herring. There is no
 (17) question here that people who are suing have been hit by
 (18) problems in their fishery.
 (19) Mr. O'Neill referred to the fact like farms you take
 (20) certain risks with nature when you're in the business of
 (21) fishing. The risk that the fish won't come back you take
 (22) certain risks with the marketplace. Somebody else's fish will
 (23) come in big numbers and the prices will fall.
 (24) The biology part of the case the attempt to stretch the
 (25) effects of the oil spill beyond 1989 beyond 1990 beyond 1991
 into '92 '93 and '94 and even later those involve scientific

Vol 25 4212

(1) speculation. You remember that the instruction that Mr.
 (2) O'Neill focused on said damages can't be speculative
 (3) damages
 (4) can't be based on speculation. Because of the nature of
 (5) science we don't say scientists don't say this is impossible
 (6) unless empirical experimental evidence has shown that. Any
 (7) hypothesis is entitled to some consideration as a possibility
 (8) as an idea but that isn't a proven fact.
 (9) Now in order to connect the undeniable problems that exist
 (10) in Prince William Sound with the oil spill plaintiffs will
 (11) present to you evidence that attempts to relate the contact of
 (12) fish eggs or young fish with oil to problems that show up one
 (13) or two generations later. Now think about that that isn't a
 (14) hypothesis that immediately sounds like it couldn't happen. We
 (15) are all acquainted with the fact that sometimes subtle effects
 (16) take awhile to show up and then problems develop that's
 (17) happened. It's been proven to happen with various kinds of
 (18) biological processes but let's go back to that pink salmon
 (19) population of Prince William Sound. 75 percent of it was
 (20) raised in hatcheries. 75 percent of it was raised in areas
 (21) which never saw oil from the Exxon Valdez spill. Those areas
 (22) were boomed off and oil could not get in there. Those fish
 (23) were raised until they were ready to be released and they were
 (24) released by the hatcheries at a time when they were not at
 (25) risk. That was the bulk of the - overwhelming bulk of the
 pink salmon in Prince William Sound. So it's hard to imagine

Vol 25 4213

(1) that oil could have had an impact on those millions and
 (2) millions of fish. Then we had you remember the wild pink
 (3) salmon stock which breed right where the fresh water begins to
 (4) turn blackish right at the very ends of the streams there are
 (5) 800 streams right around Prince William Sound. The oil spill
 (6) occurred down here.
 (7) This part of the Sound up here never saw oil. Fish that
 (8) bred up in those areas and had represented again of the 25
 (9) percent of the fish that were wild the overwhelming majority
 (10) went to streams and spawned in streams that had no oil at or
 (11) near them. Only a small small percentage of the pink salmon
 (12) ever saw or their eggs ever saw or were near oil. And so the
 (13) contention that oil could have caused major population wide
 (14) consequences is a hard one to connect up. It's a hard one to
 (15) take that hypothesis and establish - to try to do that. Our
 (16) experts have done experiments and they have produced some
 (17) results interesting results showing that fish that were raised
 (18) in oiled areas or eggs that were laid in oiled areas die
 (19) sooner than eggs that weren't raised in oiled areas that more
 (20) of them die before they produce viable living fish.
 (21) But what those experiments go onto show if you follow them
 (22) through is that the total number of fish in oiled areas that
 (23) go out to sea is not reduced because there are a lot of things
 (24) that happen in nature. Many more eggs are laid that don't end
 (25) up being fish otherwise we would have an overpopulation of

Vol 25 4214

(1) pink salmon. So it doesn't produce lower numbers of fish going
 (2) out into the ocean.
 (3) Similarly with herring which also have problems the
 (4) contention will be that somehow survey a small number of the
 (5) herring that were raised or that were - eggs that were laid
 (6) and became herring in 1989 caused the whole population
 (7) millions of fish they measure herring by tons of biomass
 (8) because they can't count the individual fish expected to be
 (9) 134 million tons of herring swimming around in 1993. Now
 (10) herring are unusual fish they live for seven years or more
 (11) about seven years. They produce eggs from the fourth to the
 (12) seven or eighth year unlike salmon which produce eggs and
 (13) then
 (14) die. Herring lay eggs year in and year out. Maybe I'm the only
 (15) person old enough to remember the Vic Tanny commercials
 (16) where
 (17) the guy is kicking sand in the skinny guy's eyes and if you
 (18) send in money you can get the product every fourth year there
 (19) is a class of big bullies and they represent the heart of the
 (20) herring population those are the guys who for their life
 (21) span are the principal contributors to the herring
 (22) population.
 (23) I've been told not to go so long on this but I do get
 (24) interested in it it's a fault I have but the big guys in the
 (25) herring population in Prince William Sound there will be no
 dispute about it were the year class of 1984 and then four
 years later the year class of 1988 those were the herring

Vol 25 4215

(1) members of this 134 ton biomass that were going to be mainly
 (2) responsible for the next generations of herring and of course
 (3) the 84 class was born long before there was an oil spill and
 (4) the 88 class was born the year before the oil spill and
 (5) that's where the large impacts on the herring population could
 (6) occur. The 1989 class was going to get the sand kicked in
 (7) their face they were going to be a small contributor five
 (8) percent to the herring population. So it's very hard
 (9) biologically to make a scientific connection to the oil to a
 (10) large drop in herring population.
 (11) Now what could have caused these undeniable things what
 (12) other hypotheses need to be looked at. Well the evidence will
 (13) be that the trustees who are trying to understand the biology
 (14) in Prince William Sound have asked people to study this have
 (15) offered people to study this and come up with answers to this
 (16) but one of the things that we do know is that men had been
 (17) fooling around with mother nature in Prince William Sound well
 (18) before the spill in that they were putting out millions and
 (19) millions of artificially raised and artificially protected pink
 (20) salmon and all those millions of little pink salmon were
 (21) eating their share of the little guys the little phytols and
 (22) as they got out into the ocean eating their share of the food
 (23) that's available out in the ocean on which these populations of
 (24) fish lived and you know if you follow any kind of population
 (25) even human beings that if you have overpopulation for a - or

Vol 25 4216

(1) a limited supply of food that what happens is starvation
 (2) starts to occur and with starvation animals in that herd
 (3) school of fish whatever can die out
 (4) So one of the things that the evidence will show is some
 (5) pretty strong suggestions maybe that's what happened here is
 (6) that the fishery was driven too hard. There were too many fish
 (7) allowed into that fishery as a result of the farming or not
 (8) farming ranging of pink salmon the growth of pink salmon
 (9) eggs
 (10) and the release of large numbers of pink salmon. What we do
 (11) know when we get all down to it it's very hard to make a
 (12) scientifically supportable connection of oil to impact on more
 (13) than a small small percentage of fish whether it be pink
 (14) salmon whether it be herring that were in Prince William
 (15) Sound
 (16) Now when we go to the reds or the sockeye in Upper Cook
 (17) Inlet we have a different problem and the question is we
 (18) don't know there is going to be a failure of that fishery
 (19) There is some people who speculate that will happen and what
 (20) they think happened is this. They think that in 1989 when
 (21) they didn't let the driftnet fishermen fish but did let the
 (22) set net fishermen fish too many fish swam up to the lakes and
 (23) that as a result just like what I was talking about in Prince
 (24) William Sound too many little junior sockeye were born and
 (25) during the two years they were in the lake they basically ate
 more than the lake could support they ate more food than they

Vol 25 4217

(1) could support large family on a short budget everybody gets
 (2) smaller portions grow up not as big and strong go out to the
 (3) ocean. They may not survive that's the contention
 (4) Now that contention has not been proven and there are a
 (5) lot of scientific questions about that. Hasn't - no one is
 (6) able to say what the problem is that has led to - if it's
 (7) happened to fewer sockeye salmon coming down the Kenai
 River
 (8) little sockeye salmon but one thing we do know is that the
 (9) ADF&G that's its job to determine what's the right number of
 (10) salmon to go up that river. Exxon can't no matter how much it
 (11) might like to can't make that decision. Exxon could do
 (12) whatever it wanted after the spill but ADF&G was charged by
 (13) law with the responsibility to maximize that fishery for the
 (14) benefit of commercial fishermen recreational fishermen and the
 (15) future. They decide what's the right spread and in 1989 their
 (16) decision was to let fish escape up that river in part because
 (17) there were other kinds of salmon remember that Mr. Brady's
 (18) in Prince William Sound that closed the salmon fishery to let
 (19) the wild pink salmon get back to their streams
 (20) Well in 1989 on the Kenai River the man in charge there
 (21) was concerned that if he intercepted sockeye salmon coming
 up
 (22) the river he might reduce the king salmon and recreational
 (23) salmon fishermen are interested in catching big king salmon
 (24) So there was a decision made by government that they should
 let
 (25) these fish go up the river. They were doing an experiment

Vol 25 4218

(1) they were going to see how well these lakes systems and river
 (2) could support a larger escapement. So those government
 (3) decisions those trade offs that government made with the
 (4) recreational interests being sure there were a lot of kings or
 (5) the commercial being sure there were a lot of sockeye we
 (6) believe that that choice was not caused by the oil spill. The
 (7) situation that made it possible that extra fish would swim up
 (8) the river that was created by the oil spill no doubt about
 (9) it. But everyone knew how to stop those fish there were ways
 (10) to cut back on the escapement
 (11) Government made the decision this was the right way to do
 (12) it. They made a policy decision which we couldn't control as
 (13) to how that should be done
 (14) So to sum that up it really isn't clear that there was a
 (15) problem and if there was a problem what caused it but if it
 (16) came from too many fish swimming up the Kenai River in 1989
 (17) that was a decision that the Department of Fish & Game made
 (18) not Exxon and it was a decision that they made knowing about
 (19) and plenty of chance to cause that not to happen and you
 (20) know that again will be a decision for you to decide whether
 (21) that's fairly attributable to the Exxon Valdez oil spill or
 (22) whether it was attributable to a choice that the people in
 (23) ADF&G made thinking in all good faith that it was in the best
 (24) interests of everybody to do that thinking that this gave them
 (25) a chance to perhaps improve the system

Vol 25 4219

(1) Now Mr O Neill closed on the subject of boat permits and
 (2) said in words or substance you can't sell a permit from an
 (3) oiled fishery Well the evidence on the permits that you'll
 (4) hear that will be a little different than the fishing because
 (5) we've got to talk about permit by permit each fishermen who
 (6) sold his permit has his own set of facts If you sell your
 (7) house somebody over the next town sells their house and
 (8) somebody up here in Anchorage sells their house each of
 those
 (9) transactions has its own particular set of reasons
 (10) motivations trade offs, that cause you to bargain for the
 (11) transaction that you made but at the heart of it is the claim
 (12) that these declines in permit value are attributable to the
 (13) fact that there was an oil spill in 1989
 (14) Well you would expect if that were true that in 1990
 (15) right after the oil spill that would be the worst time to sell
 (16) a fishing permit because that would be the time when if
 (17) anybody buying a fishing permit would have been aware and
 (18) concerned about the effect of the oil spill right during and
 (19) after the spill but that's not when the prices got hurt
 (20) that's actually when prices rose of fishing permits after the
 (21) oil spill
 (22) So the plaintiffs who are claiming that they sold their
 (23) permits for less than they should have received they are
 (24) claiming that the decline in prices that occurred in 1992 and
 (25) 1993 those declines related back to an oil spill that occurred

Vol 25 4220

(1) two three four years earlier and during that time as you
 (2) will hear from the other evidence fishing around the world
 (3) the fishing business and fishermen around the world have
 been
 (4) on hard times the sun has not been shining Fisheries all
 (5) over the world have been confronted with lowering prices
 (6) declining prices They have been confronted with more supply
 (7) than they would like to have natural supply and farm supply
 (8) and it's going to be your task as finders of the fact to
 (9) determine if these declines in prices that occurred long after
 (10) the oil spill if those declines are really the result of the
 (11) oil spill or if it isn't the fact that when you're in a
 (12) business that has falling prices which has oversupply all over
 (13) the world if in that business you won't expect problems to
 (14) occur And no doubt about it that the biological problems
 (15) that are showing up in Prince William Sound those have got to
 (16) have an adverse effect on permits the question is can you
 (17) really find a basis to conclude more probably than not that
 (18) those came from the oil spill or are they a result of the
 (19) biological risks that are inherent in nature and may be caused
 (20) a little bit more by the decisions that people made to try to
 (21) improve on mother nature either by raising pink salmon or
 (22) trying to see if maybe you can get a few more salmon out of the
 (23) Kenai River by making management decisions
 (24) I'm going to conclude and I think that the message that I
 (25) leave with you is what I started with We stand by our

Vol 25 4221

(1) commitment which we made before We had no idea what the
 (2) result would be in Phase I
 (3) We want to submit to you our side of the story about what
 (4) would have happened if there had been no Exxon Valdez oil
 (5) spill and your judgment on that will resolve a commitment that
 (6) we made that Exxon made in 1989 and that it has never
 backed
 (7) away from and it does not now back away from It does not
 mean
 (8) that we accept every statement that the plaintiffs make about
 (9) how the oil spill hurt them it does not mean that we do not
 (10) dispute what is fair we do dispute that We will present you
 (11) in good faith what we think the true facts are and you will
 (12) have to make that decision but the decision you make is one
 (13) that - you know Mr O Neill made the statement the Judge
 (14) said it so it must be true because he's the 800 pound gorilla
 (15) but when you make the decision you're the 900 pound gorilla
 (16) When you make a decision on fact we have no other place to
 go
 (17) it's a very rare and narrow case when we challenge a finding of
 (18) fact from the jury
 (19) We will present that evidence to you we ask you to be fair
 (20) to the fishermen because we want to be fair to the fishermen
 (21) We ask you also to be fair to Exxon and we appreciate your
 (22) continued service on the case
 (23) THE COURT Mr Russo
 (24) MR RUSSO Thank you Judge ladies and gentlemen
 (25) Good morning I just want to remind you that my name is Tom

Vol 25 4222

(1) Russo and as you know together with Mike Chalos we
 represent
 (2) Joseph Hazelwood in this case
 (3) As Judge Holland has told you as a result of your verdict
 (4) Captain Hazelwood is still an individual defendant in this
 (5) case and he is still going to be affected by your decisions in
 (6) the remaining phases of this case Needless to say Captain
 (7) Hazelwood does not have 978 million dollars Maybe that's
 why
 (8) I only have 5 minutes in this opening but despite the fact
 (9) that he's not a rich man but he still is an individual who is
 (10) liable by law for the damages in this particular matter
 (11) It's important to us that you understand that he's not a
 (12) corporation he's not a group of individuals he's one man a
 (13) human being who has a life who has a family who has
 (14) responsibilities who sleeps at night maybe stays awake at
 (15) night gets up and will be affected for the rest of his life
 (16) by your previous verdict and your verdicts in the next phasing
 (17) of this case It's important for you to know that because I
 (18) think that gets lost in the immensity of this case and the
 (19) fact that Exxon our co-defendant being a corporation but this
 (20) is one man who stands alone and you're going to affect his
 (21) life for the rest of his life
 (22) Now Exxon has said that they will pay the actual damages
 (23) in this phase of the trial the compensatory phase of the
 (24) trial that's good I'm glad to hear that so the only thing
 (25) that you have to decide and maybe I shouldn't say only after

Vol 25 4223

(1) hearing the two openings is what are the actual damages and I
 (2) submit to you that because of the complexity of the theories
 (3) involved here it's probably going to be a lot of work for you
 (4) to sort through that and figure out what actual damages are
 (5) I on behalf of Captain Hazelwood ask you a couple things
 (6) I'd like you to be fair to both sides the defendants Captain
 (7) Hazelwood being included in the defendants and the
 (8) plaintiffs And I want you to understand that it's your job to
 (9) make a distinction between the actual damages and the what
 (10) for a better word we could call the imaginary or speculative
 (11) or inflated damages The plaintiffs are absolutely entitled to
 (12) every cent of their actual damages and Captain Hazelwood
 (13) wants
 (14) you to award them their actual damages and that's your duty
 (15) and responsibility to do that but it's also your duty and
 (16) responsibility not to award them any more than that and I hope
 (17) that you take that duty and responsibility very seriously and
 (18) see to it that you go through the evidence and that you limit
 (19) your award to what the actual damages are and call out the
 (20) inflated damages wishful thinking damages and give the
 (21) plaintiffs only what they are entitled to that's all we ask
 (22) In conjunction with that because of the complexity of this
 (23) case I ask you to do this and I think you can wait until all
 (24) the evidence is in before you make up your mind The
 (25) plaintiffs are going to call a lot of people to the witness
 stand some experts that are going to give you figures and

Vol 25 4224

(1) theories as to what happened in Prince William Sound after the
 (2) spill The defendants are also going to have an opportunity to
 (3) call some people who are going to tell you what happened
 (4) Wait
 (5) until you hear all the evidence before you individually in your
 (6) mind form an opinion or make up your mind as to what
 (7) happened
 (8) and what the actual damages are That's only the fair thing to
 (9) do and I think you all can do that
 (10) Another thing I would like you to do is when people testify
 (11) in this case I want you to look at their credibility in terms
 (12) of what is their interest Are they claimants in this case
 (13) plaintiffs friends or relatives of people that have claims in
 (14) this case how do they know what they are saying what is their
 (15) background what is their source of information do they have
 (16) personal knowledge or did somebody tell them something
 (17) These
 (18) are the types of common sense things that every jury has to use
 (19) when they are deciding the facts I'm confident that after you
 (20) hear all the evidence in the case that you're going to be able
 (21) to make that distinction between the actual damages and the
 (22) imaginary damages and I'll tell you something if you can do
 (23) that you will have the potential for the first time and
 (24) probably the last time in this case of not disappointing
 (25) anybody
 I'll be honest with you I was very disappointed with the
 verdict in Phase I Mr Lynch said he was disappointed as
 well but I can tell you this that if you do your job and you

Vol 25 4225

(1) award the plaintiffs no more or no less than their actual
 (2) damages I won't be disappointed Mr Lynch won't be
 (3) disappointed and the plaintiffs won't be disappointed Thanks
 (4) THE COURT Mr O'Neill you may call your first
 (5) witness
 (6) MR O NEILL We have some preadmitted documents Your
 (7) Honor We also have a podium that we need to get back in
 (8) service
 (9) THE COURT You need that gorilla to move it
 (10) MR O NEILL This is going to be a lengthy list The
 (11) plaintiffs offer the following documents which we believe we
 (12) have an agreement on preadmission Plaintiffs Exhibits 226
 (13) 245 246 253 261 265 270 271 272 274 275 276 277
 (14) 278 279 280 281 282 283 284 285 286 287 288 289
 (15) 292 293 294 295 296 297 298 299 300 301 302 303
 (16) 304 304 A 305 306 307 308 309 310 311 312 313 314
 (17) 339 360 362 363 364 365 366 367 370 372 373 374

 (9) Defendants Exhibit 7124 offered)
 (10) MR LYNCH May I call on Ms Robinson?
 (11) MS ROBINSON That's correct
 (12) MR LYNCH Your Honor for the record I think it
 (13) would be helpful if we could ask the reporter to indicate with
 (14) the exception of DX7142 all of the numbers that Mr O'Neill
 (15) read should be identified as PX numbers
 (16) MR O NEILL They were all PX
 (17) MR NEAL DX7124
 (18) MR LYNCH 42?
 (19) MR O NEILL 7124 I offer those exhibits
 (20) THE COURT I'm still confused about only one of them
 (21) and that's the last one Defendants 7142 or 24?
 (22) MR O NEILL I believe it's 24
 (23) MR LYNCH My paper says 42
 (24) THE COURT Let's get it straight right now
 (25) MR LYNCH 24 it is Your Honor

Vol 25 4227

- (1) MR O NEILL It is 24
- (2) MR LYNCH That s the only DX
- (3) THE COURT Thank you The list of plaintiffs
- (4) exhibits and the single defendant s exhibit announced by Mr
- (5) O Neill are all admitted without objection
- (6) (Exhibit 226 245 246 253 261 265 270 271 272 274
- (7) 275 276 277 278 279 280 281 282 283 284 285 286
- (8) 287 288 289 292 293 294 295 296 297 298 299 300
- (9) 301 302 303 304 304 A 305 306 307 308 309 310 311
- (10) 312 313 314 339 360 362 363 364 365 366 367 370
- (11) 372 373 374 375 376 377 378 379 380 381 382 383
- (12) 384 385 386 387 388 A 388 B 389 390 391 392 393 394
- (13) 395 398 471 472 473 474 475 477 478 479 480 481
- (14) 488 492 501 508 510 543 637 738 752 769 794 823
- (15) 3704 6011 6012 6018 6020 6021 6023 6024 6025 6026
- (16) Defendants Exhibit 7124 received)
- (17) MR O NEILL Thank you Your Honor
- (18) MS HANSON Good morning Your Honor Plaintiffs
- (19) call their first witness Natalie Fobes And if we could have
- (20) the Court s indulgence we need to set up She s going to show
- (21) some slides
- (22) (The Witness Is Sworn)
- (23) THE CLERK Please be seated For the record state
- (24) your full name address and spell your last name
- (25) THE WITNESS My name is Natalie Fobes F O B E S and

Vol 25 4228

- (1) I live in Seattle Washington
- (2) THE CLERK Thank you
- (3) DIRECT EXAMINATION OF NATALIE FOBES (Live)
- (4) BY MS HANSON
- (5) Q Good morning Ms Fobes we had the opportunity to meet
- (6) you
- (7) in Phase I but would you remind the jury who you are and what
- (8) you do?
- (9) A Yes I m a free lance photographer and I m based out of
- (10) Seattle Washington and I do work for National Geographic and
- (11) NewsWeek News and a number of small companies too
- (12) Q Can you tell me what this is please?
- (13) A This is a chart showing Prince William Sound
- (14) Q And what do these orange areas indicate?
- (15) A The orange areas are places that I did photographs for the
- (16) story about the oil spill
- (17) Q And is this a fair and accurate representation of where you
- (18) took photographs in Prince William Sound when you were on
- (19) assignment for National Geographic?
- (20) A Yes it is
- (21) MS HANSON Your Honor plaintiffs offer Plaintiffs
- (22) Exhibit 775 A
- (23) (Exhibit 775 A offered)
- (24) MR SANDERS No objection Your Honor
- (25) THE COURT Plaintiffs 775 A is admitted
- (26) (Exhibit 775 A received)

Vol 25 4229

- (1) BY MS HANSON
- (2) Q Do you know what this is Ms Fobes?
- (3) A This is a chart showing Kodiak Island and the Alaska
- (4) Peninsula
- (5) Q And again the orange areas indicate?
- (6) A The orange areas are the places that I photographed the oil
- (7) spill story
- (8) Q And this is a fair and accurate representation of where you
- (9) took photographs on Kodiak Island and the Alaska Peninsula
- (10) on
- (11) assignment for National Geographic?
- (12) A Yes it is
- (13) MS HANSON Your Honor plaintiffs offer 775 B
- (14) (Exhibit 775 B offered)
- (15) THE COURT Mr Sanders?
- (16) MR SANDERS No objection Your Honor
- (17) THE COURT Plaintiffs 775 B is admitted
- (18) (Exhibit 775 B received)
- (19) MS HANSON Thank you Your Honor
- (20) BY MS HANSON
- (21) Q Just to refresh our memory for a moment could you tell us
- (22) about how long you spent in Alaska on assignment for National
- (23) geographic and where you went and how long you were here?
- (24) A For the oil spill story?
- (25) Q Yes
- (26) A I was here for about three months starting the day after

Vol 25 4230

- (1) the spill
- (2) MS HANSON Great Without any objection I would
- (3) like to offer Plaintiffs Exhibit 245 consisting of photographs
- (4) taken by Ms Fobes and have her tell the jury what the
- (5) photographs are
- (6) (Exhibit 245 offered)
- (7) THE COURT Is 245 the group of exhibits that I
- (8) previewed?
- (9) MS HANSON Yes
- (10) MR SANDERS Yes sir
- (11) THE COURT Go ahead
- (12) THE WITNESS This photograph was taken near Bligh
- (13) Reef where the tanker was the day after the spill on the 25th
- (14) of 1989 of March 1989 You can see the oil on top of the
- (15) water and then the clear water wakes of the boats going
- (16) through
- (17) it
- (18) BY MS HANSON
- (19) Q This is in that same area and again the clear water wakes
- (20) going through the water on top of the water and a boat in the
- (21) photograph?
- (22) MR SANDERS Can we get a date on these photographs
- (23) as we go through them? Same day?
- (24) THE WITNESS Same day March 25th 1989
- (25) This is also taken March 25th 1989 in that same
- (26) location You can see the oil on top of the water and again

Vol 25 4231

- (1) the clear water wakes and there is a boom stretched out from
 (2) some sort of service vessel and you can see the oil on both
 (3) sides of the boom
 (4) This next series of photographs were taken on the 29th of
 (5) March This photograph shows some oil in the water booms in
 (6) the water and the oil on the hull of the boat and this was
 (7) taken near Disk and Block islands This is in the same area
 (8) same day boats pulling boom and the oil is on the water
 (9) Also see the oil on the shoreline in the background
 (10) This is in Eleanor Island and it s taken on the same day
 (11) March 29th You can see the oil on the beach and going up to
 (12) the high tide line and oil in the water also This is a
 (13) detailed photograph from that same bay You can see the oiled
 (14) rocks and the fucus the seaweed and some of the barnacles
 on
 (15) the rocks and the oil is in the water
 (16) This is from that same beach or that same bay that same
 (17) day Oil in the water and going up the sides of the rocks and
 (18) it ends right here
 (19) This is on the 29th of March also and it was taken right
 (20) around the point Eleanor in a bay on Eleanor Island and this
 (21) bay is just full of thick oil on top of the water You don t
 (22) see any clean water in this photograph at all
 (23) This again is from that same area You can see the oil on
 (24) both sides of the boom and as far as you know in that
 (25) photograph it s all oil

Vol 25 4232

- (1) The same bay showing again a little more of the oil from
 (2) here all the way across
 (3) BY MS HANSON
 (4) Q Is that the same date Ms Fobes?
 (5) A Yes it s the same day All of these photographs were
 (6) taken on the 29th of March
 (7) MR SANDERS If you could just tell us when you get
 (8) to the end of the 29th of March save a lot of time
 (9) THE WITNESS Okay Here you can see a little more of
 (10) the beach and oil on the beach
 (11) This is a detail of the oil on top of the water in that
 (12) same bay and also you can see the oil on the rocks on the
 beach
 (13) in the background
 (14) This is looking out from that same bay You can see the
 (15) oil in the water and you can see the oil on the boom The oil
 (16) is on both sides of the boom
 (17) This was taken on the 30th of March and it s between Disk
 (18) and Block Island You can see the oil in the water here and a
 (19) boom with oil on it and these are called pom poms
 (20) This is an aerial photograph taken the 1st of April looking
 (21) toward Montague Island kind of toward where Sawmill Bay is
 (22) You can see the oil on the water
 (23) These photographs were taken from the next - the next
 (24) series were taken from airplanes on the 2nd of April in 1989
 (25) and they were all of Knight Island and then islands around

Vol 25 4233

- (1) there I mean Knight Island bays
 (2) This shows oil in the water This is looking directly down
 (3) at a service vessel with oil inside of a boom and you could
 (4) also see the different kinds of thickness of oil around it and
 (5) see how it s going toward the beach also
 (6) You can see the boom held between two boats and the oil is
 (7) on top of the surface of the water and you could see how the
 (8) boom has left clear water wakes behind it
 (9) This is oil on the water and to give you some idea about
 (10) how big this oil is or this particular photograph shows the
 (11) territory it covers right up here you can see two fishing
 (12) boats with a boom stretched between them
 (13) This is one of the bays on Knight Island and the oil in the
 (14) water
 (15) You ll see the oil is up on the shores
 (16) This is in Herring Bay It shows the water covered with
 (17) oil
 (18) MR SANDERS Are we on the same date?
 (19) THE WITNESS I have it on the same date yeah And
 (20) again this is all oil
 (21) Again Herring Bay same date This is all the oil in the
 (22) water in Herring Bay
 (23) Now these photographs the next two or three I believe
 (24) were taken on the 4th of April and this shows boats with boom
 (25) between them and oil on the water This is Northwest Bay I m

Vol 25 4234

- (1) sorry this is a detail photograph showing oil on a beach on
 (2) Smith Island
 (3) MR SANDERS Same date?
 (4) THE WITNESS I m looking for that sir I have that
 (5) on the 8th of April
 (6) This is also on the 8th of April and it shows the oil
 (7) this is a detailed shot of oil on the water and the fucus or
 (8) that seaweed is there
 (9) This photograph was taken on the 16th of April and this
 (10) shows oil on the water in Prince William Sound
 (11) This photograph was also taken on the 16th and you can see
 (12) the oil coming off of the beach of this island in Prince
 (13) William Sound
 (14) Now I do want to mention that this little reflection here
 (15) is my float coat in the window But you can see from this
 (16) photograph that it s - that is the oil coming off the beach
 (17) This was a detail of a beach on Eleanor Island you can see
 (18) the oil on the fucus on the beach
 (19) BY MS HANSON
 (20) Q Do you have a date?
 (21) A Yes that s the 16th of April
 (22) Now this next series of photographs were all taken on the
 (23) 5th of April and this shows oiled fucus or the seaweed and the
 (24) barnacles on an oiled rock and that s on Seal Island
 (25) This is looking straight down at the beach from just my

Vol 25 4235

- (1) height and you can see the oiled grass seaweed of some sort
- (2) and the fucus and mussels and barnacles
- (3) This is a close up of the barnacles on a rock and the oil
- (4) This is a detail of the water and the oil and the water
- (5) and the oil on the seaweed or sea stuff
- (6) Now the last few photographs were all taken in this
- (7) general area so I backed up to show kind of the general scene
- (8) and this is it you can see the barnacles and some of it is
- (9) behind me also but this is a general beach as far as that
- (10) This is on Hallo Bay in the Katmai National Park on the
- (11) Alaska Peninsula and this photograph was taken on the 10th of
- (12) May 1989 You can see the oil on the beach there here this
- (13) reflection is oil
- (14) This is taken the same location same day a detail showing
- (15) the oil on the beach and fucus or seaweed Same beach same
- (16) day
- (17) This again is Hallo Bay on the Alaska Peninsula and you
- (18) can see the oil on the beach leading back up
- (19) This was also taken on that same beach and this was taken
- (20) on the 18th of May This shows a fisherman scooping oil
- (21) soaked
- (22) sand from underneath the water so all of this is oil sand
- (23) And I'm photographing under water
- (24) This is taken at Wide Bay on the Alaska Peninsula and it
- (25) was on the 11th of May and it's an oiled bird carcass that the
- (26) worker is picking up

Vol 25 4236

- (1) This shows some of the oil splattered on the grass on the
- (2) Alaska Peninsula Dry Bay and that photograph was taken on
- (3) the
- (4) 11th of May
- (5) This shows the oiled grass at Dry Bay also on the 11th
- (6) A detail of the oil on the beach
- (7) This photograph was taken on the 13th of May It's a bay
- (8) over on the Alaska Peninsula and you can see the oil in the
- (9) bay
- (10) Again also on that same day oil in the water in the bay
- (11) This is the native village of Larsen Bay on Kodiak Island
- (12) This is a crab that I photographed on one of the beaches
- (13) right in front of the village You can see that the crab has
- (14) oil on its back and little legs then oil on the rocks also
- (15) MR SANDERS Date on that please?
- (16) THE WITNESS 14th of May
- (17) MR SANDERS Is that true for the previous one also?
- (18) THE WITNESS The previous one was the 5th of May
- (19) I'm sorry forgot
- (20) MR SANDERS That's all right
- (21) THE WITNESS These are aerials of Northwest Bay and
- (22) some of the boats and the oil on the water and booming
- (23) activity
- (24) And these were taken on the 22nd the last one and this
- (25) one were taken on the 22nd of May This is Northwest Bay
- (26) again

Vol 25 4237

- (1) This is Green Island You can see the booms and the oil on
- (2) the beach This was taken on the 22nd also
- (3) This was in Herring Bay And you can see the oil on the
- (4) water and on the fucus and on the boom This was taken on the
- (5) 30th of May
- (6) Now the next series of photographs were taken on the 28th
- (7) of May and they show Herring Bay and this is an oiled beach
- (8) in Herring Bay You can see the oiled fucus or seaweed and the
- (9) oiled rocks
- (10) You can see the oiled fucus seaweed and the mussels
- (11) This shows a tide pool on one of the beaches in Herring Bay
- (12) the oiled fucus
- (13) This is a stream in Herring Bay This is the mouth of the
- (14) stream as it enters into the bay And you can see the oil on
- (15) the surface of the stream water
- (16) This photograph was taken on the 27th of May and this is
- (17) Disk Island There is a lagoon in the middle of Disk Island
- (18) You can see the oil in the water
- (19) The next series of photographs were taken on the 25th of
- (20) May This is on Block Island You can see the oily waves and
- (21) the oily fucus or seaweed that are in the water
- (22) This is oil this is a detail of that same beach this is
- (23) oil and then you can see the oil on the beach This is the
- (24) water
- (25) Another detail of the same beach with more of the fucus and

Vol 25 4238

- (1) the oil
- (2) This photograph I believe was taken on the same day I
- (3) can look through my notes to determine that It shows a chiton
- (4) with oil and this is kind of a shellfish that sticks to the
- (5) side of rocks and the oil stringing down And that was taken
- (6) on the 25th of May and that was Block Island sorry
- (7) This is a little starfish that I photographed on Naked
- (8) Island on the 27th of May You can see the oil on it
- (9) This is an aerial photograph of some herring spawn and the
- (10) white stuff underneath the water is the spawn of herring This
- (11) was taken on the 13th of March
- (12) Now you can see that same herring spawn here in a bay that
- (13) has oil on the beaches and there is oil floating in the water
- (14) That was taken the same day
- (15) This shows the float pens the net pens at the AFK hatchery
- (16) in Sawmill Bay Some boom around it
- (17) The next few photographs were taken on the 11th of May
- (18) That was over on the Alaska Peninsula Dry Bay This shows a
- (19) bear paw print in oil on the beach
- (20) This is another paw print from a bear on the beach This
- (21) was a blob of oil and he walked right in it
- (22) This is a photograph of a bear in Wide Bay and you can see
- (23) the oil on his back and on his haunches
- (24) MR SANDERS What day?
- (25) THE WITNESS The 11th also

Vol 25 4239

- (1) This is a different angle of this very same bear You can
 (2) see the oil on his head and his paws and his back and his
 (3) haunches also
 (4) These photographs were taken on the 16th of May and they
 (5) are all from Hallo Bay You can see a bear on the beach and
 (6) oiled logs on the beach at Hallo Bay
 (7) And he s scavenging for food at that point
 (8) And he grabbed something and ate it something from the
 (9) beach You can see the oil splashed on the logs here
 (10) These are harbor seals this photograph was taken at Katmai
 (11) National Park on the Alaska Peninsula and you can see they
 (12) have oil rubbed on them in some area This is the color they
 (13) are supposed to be a creamy white with some dots on them
 The
 (14) 16th of May also
 (15) Now the next series of photographs were taken on the 29th
 (16) of May and these are all in Herring Bay and these show harbor
 (17) seals hauled out on the rocks on the oiled rocks and they
 (18) are as you can see dark Now see the circles around the one
 (19) guy s eyes that s more the color they are supposed to be and
 (20) this one is more the color they are supposed to be although he
 (21) has oil on them These guys are totally blackened with the
 (22) oil
 (23) This is a seal mom and pup on a haul out in Herring Bay and
 (24) they are totally oiled
 (25) MS HANSON Thank you Ms Fobes

Vol 25 4240

- (1) Nothing further Your Honor
 (2) THE COURT Mr Sanders anything?
 (3) MR SANDERS Just a couple questions I won t need
 (4) the screen we can take that down and that might save some
 time
 (5) CROSS EXAMINATION OF NATALIE FOBES
 (6) BY MR SANDERS
 (7) Q If I may I may proceed while that s going on I don t have
 (8) anything earth shattering to say
 (9) Ms Fobes you were assigned to come up and take these
 (10) photographs?
 (11) A Yes I was
 (12) Q And those photographs later became part of a story or a
 (13) presentation or feature in National Geographic correct?
 (14) A Yes
 (15) Q And the name of the story or the feature was?
 (16) A Well you know I don t know - Can the Wilderness
 (17) Survive Do you have it here I m sorry
 (18) Q Didn t you get a prize for these photographs?
 (19) A I did
 (20) Q Somewhere in this stack I ve got I think the name of it
 (21) with the prize - where did you get the prize from?
 (22) A I got the award from the World Press Association and it
 (23) was a second place award for photo story
 (24) Q Let me see if I can refresh your recollection Alaska s
 (25) Big Spill does that sound right?

Vol 25 4241

- (1) A That may be what I called it I d really like to look at
 (2) the National Geographic to see what the name of it is in that
 (3) one
 (4) Q I can only show you the listing of the award winners?
 (5) A Okay That s what is listed on here
 (6) Q That may or may not be what it was called in National
 (7) Geographic?
 (8) A I m sorry sir I don t know
 (9) Q That s all right
 (10) A And there were two stories that ran also so
 (11) Q And you got the award for this one?
 (12) A I got the award for a combination of the photographs from
 (13) the first and the second
 (14) Q And it was a presentation or at least your photographs
 (15) were a presentation of oil as a result of the spill?
 (16) A It was a presentation of the photographs I took during the
 (17) oil spill yes
 (18) Q Now I tried to keep up with the dates and the places in my
 (19) own perhaps inept way but if I took this down correctly and
 (20) understood you correctly you took some photographs of
 Prince
 (21) William Sound in kind of a broad aerial shot on the 16th of
 (22) April and that was in the early section And then from then
 (23) on with perhaps one exception all of your pictures were on
 (24) beaches or in bays or lagoons is that a correct statement
 (25) when you get into the later April and May period?

Vol 25 4242

- (1) A If I can have a moment I ll look back through the log
 (2) Q And that one exception would be some photographs on
 Block
 (3) Island I believe The rest of them I believe were in places
 (4) like Hallo Bay Herring Bay Sawmill Bay Herring Bay a lagoon
 (5) on Disk Island is that right?
 (6) A And the question again? I m sorry
 (7) Q Is that correct is that after the one long shot I believe
 (8) on April 16th of Prince William Sound the oil on the water
 (9) the other shots of oil and water are in bays with the possible
 (10) exception of the Block Island picture and I wasn t clear on
 (11) where that was from?
 (12) A The photographs that I showed here?
 (13) Q Yes that s what I m talking about
 (14) A Right
 (15) MR SANDERS I have no further questions Your Honor
 (16) MS HANSON Nothing further
 (17) THE COURT Thank you You may step down
 (18) THE COURT She doesn t play cards
 (19) MR O NEILL How many lawyers does it take to fold up
 (20) a card table?
 (21) MR JAMIN Your Honor plaintiffs call Charles
 (22) Peterson as an expert witness in the science of ecology
 (23) THE CLERK Raise your right hand
 (24) (The Witness Is Sworn)
 (25) THE CLERK For the record sir state your name your

Vol 25 4243

- (1) address and spell your last name
 (2) THE WITNESS My name is Charles Henry Peterson the
 (3) last name is spelled P E T E R S O N And my address is 232
 (4) Oak Leaf Drive Pinedale Shores North Carolina
 (5) DIRECT EXAMINATION OF CHARLES PETERSON (Live)
 (6) BY MR JAMIN
 (7) Q How are you currently employed?
 (8) A I am employed now as a professor at the University of North
 (9) Carolina at Chapel Hill where I have duties that involve
 (10) teaching and research and I am employed secondarily as a
 (11) fisheries manager by the state of North Carolina and as an
 (12) environmental manager and third I work as a scientific
 (13) advisor and peer reviewer for the Exxon Valdez oil spill
 (14) trustees
 (15) Q Can you give us an estimate of what percentage of time you
 (16) spend on the three roles you ve described?
 (17) A Yes I would say about 70 percent of the time I devote to
 (18) the first part of being professor in other words about nine
 (19) months or so of the year and something like ten to 15 percent
 (20) in my role as fisheries manager and environmental manager
 (21) and
 (22) another ten to 15 percent in my role as an advisor to the Exxon
 (23) Valdez oil spill trustees
 (24) Q Thank you sir Can you tell us a bit about your post high
 (25) school education?
 A Yes When I left high school I went to college and got my

Vol 25 4244

- (1) bachelor s degree from Princeton University in New Jersey that
 (2) was in 1968 I received a masters in 1970 and then a Ph D in
 (3) 1972 from the University of California at its Santa Barbara
 (4) campus
 (5) Q At Princeton what did you study sir?
 (6) A I got my degree in biological sciences
 (7) Q As you went on to the University of California at Santa
 (8) Barbara what was your area of concentration?
 (9) A At UC Santa Barbara I received my master s degree in
 (10) zoology and my Ph D in biological sciences
 (11) Q Did you receive academic awards sir as an undergraduate?
 (12) A Yes I did
 (13) Q What were they?
 (14) A I received awards from the National Science Foundation that
 (15) allowed me to pursue research under the mentorship of some
 (16) professors I also received awards at the end of my career I
 (17) was named to Phi Beta Kappa which is an honor which
 (18) acknowledges your academic performance as an
 (19) undergraduate and
 (20) I also received fellowships for graduate and postgraduate
 (21) studies from the National Science Foundation from the
 (22) Woodrow
 (23) Wilson Foundation and the Ford Foundation
 (24) Q Before we go forward sir and talk about your post
 (25) education experience let me ask you how did you first get
 involved or interested in biology?
 A Well I guess like a lot of people I spent summers on the

Vol 25 4245

- (1) beach and I became interested in the sorts of things that
 (2) washed up on the shore and simply had all these questions
 (3) about where they came from and why they were there and it
 (4) just
 (5) started making me interested in nature and fortunately I ve
 (6) been able to follow that interest with a career
 (7) Q Since graduating from the University of California at Santa
 (8) Barbara how have you been employed?
 (9) A When I left graduate school my first job was at the
 (10) University of Maryland Baltimore County where I was an
 (11) assistant professor the first step in sort of the academic
 (12) rungs I was an assistant professor there for four years
 (13) leaving in 1976 and that s when I went to the University of
 (14) North Carolina where I took a job there as an associate
 (15) professor and then was subsequently promoted to full
 (16) professor
 (17) in 1983 and that s the rank that I remain at there is none
 (18) higher in our system
 (19) Q Do you have your full professorship in any particular
 (20) discipline or area?
 (21) A Yes actually multiple ones My full professorship is a
 (22) professorship of marine sciences which doesn t relate to the
 (23) military but means oceanography and in biology and in
 (24) ecology
 (25) so I m actually a full professor in three different programs at
 the university
 Q And is there a series of courses sir that you teach to
 graduates and undergraduates at Chapel Hill?

Vol 25 4246

- (1) A Yes I do teach
 (2) Q What are they?
 (3) A I regularly teach courses in marine ecology in biological
 (4) oceanography and in coastal barriers ecology And I teach
 (5) other courses irregularly notably graduate seminars in areas
 (6) where there is interest in a particular discipline that I have
 (7) expertise in
 (8) Q All right Now you ve mentioned the word ecology a couple
 (9) times can you give us a general description of its content?
 (10) A Yes ecology is the study science of understanding what
 (11) controls the distributions and abundances of plants and
 (12) animals
 (13) in nature and it involves of course understanding the
 (14) impacts of the chemical physical and biological environment
 (15) on living organisms
 (16) Q When you say living organisms over what range are you
 (17) talking about in the field of ecology?
 (18) A Well ecology covers all organisms from the microbes that
 (19) you need a microscope to see to the largest to the whales and
 (20) humans at the top so it s the full range of organisms through
 (21) the entire food chain
 (22) Q Where do you yourself work in that range as an ecologist?
 (23) A I work at basically all levels in that range That is to
 (24) say the work that I do is designed to understand the broader
 (25) ecosystem I focus most of my attention at things that exist
 at the plants the invertebrates the fish and higher levels

Vol 25 4247

- (1) but I work throughout the range of organisms
- (2) Q Have you written articles sir for peer review journals in your field?
- (3) your field?
- (4) A Yes I have
- (5) Q Do you have some idea how many there have been?
- (6) A Yes it's in the ballpark of 85 articles that I've written
- (7) and had published
- (8) Q What fields have you written in?
- (9) A Well I've written in marine ecology I've written in biological oceanography I've written in fisheries ecology in paleontology I'm trying to think environmental management and a few others Well all notably biostatistics I've written
- (10) papers in as well
- (11) Q Have you yourself also peer reviewed other scientists work?
- (12) A Yes I do that with unfortunate frequency
- (13) Q How many different journals or publications have you worked
- (14) for in that role sir?
- (15) A I would say certainly more than 40 and probably more than 50 journals and publishers I've worked for as a peer reviewer
- (16) Q Can you give us some idea roughly about how many articles you've peer reviewed?
- (17) A Well I think it exceeds a thousand I may have approached 3 000 I would say 2 000 is probably a reasonable estimate
- (18) Q Apart from being a peer reviewer have you been an editor of journals in your field?

Vol 25 4248

- (1) A Yes
- (2) Q Which are?
- (3) A Well I've previously edited but no longer I've previously edited a journal named Estuaries another that is a pair of journals handled by the same editorial journal called Ecology Ecological Monographs and Paleocology (ph) I still serve as an editor for Marine Progress Series and I'm editor in chief for a journal named Oecologia which is a journal for the International Ecological Society
- (4) Q Now in addition to your work as a teacher and your work with peer reviewing and editing in your field did you also work sir for government agencies?
- (5) A Yes I do
- (6) Q What sorts of work do you do for government agencies?
- (7) A Well I do have right sort of diverse variety of work and I guess I could begin to categorize it I work on problem solving panels where the agency identifies the problem I have worked to review the functioning of agencies and how well they are pursuing their mandates I have worked to review grants and projects submitted to agencies and as well I have worked on scientific steering committees where agencies create a committee of a group of scientists to develop a research area that they think needs exploring
- (8) Q Let's take those briefly one at a time With respect to the problem solving panel role what's involved in that

Vol 25 4249

- (1) function?
- (2) A What one does in these problem solving panels is as follows The agency identifies a problem often a dispute often an issue over which there is some debate and for which resolution is needed for the agency to pursue its proper mandate and then the agency identifies a group of experts appropriate to come together and then review all the available evidence to argue it out see where we come down on the issue and to write a report that gives the best possible overview of the problem at hand sometimes as well we identify areas that need further research so that the problem could be solved but in the case when enough evidence is available we would write the report in a way that identifies what we might conclude
- (3) Q Have you worked on any such panels here in Alaska sir?
- (4) A Yes I have
- (5) Q And can you give us an example?
- (6) A Yes In fact I continue work on a panel that has been established by the National Research Council of the National Academy of Sciences called the Bering Sea Ecosystem Panel and our task on this panel is to try to understand and present for the state department who is ultimately the agency interested in this work and who commissioned it in a way our task is to understand what has happened to the ecosystem to make for long term declines in some of the sea birds and marine mammals
- (7) in the Bering Sea

Vol 25 4250

- (1) Q You also mentioned a function in your governmental activity wherein you review research grants could you describe that briefly as well?
- (2) A Yes This is part of what we in academia call the peer review process What we do is as follows I would receive a proposal sent to me by one of these agencies and request that I sit down read it cover to cover word for word and evaluate the quality of the science that's being proposed in that proposal and then I would write a review this would be an anonymous peer review my name whether I wanted it to or not the agencies would not associate my name and that is the hope that my comments would be more open than they might otherwise be and I wouldn't be inhibited I would write these comments down as a formal review I would identify the strengths and the weaknesses of the proposal as I viewed them and then send that review back to the agency to help them make decisions about how to allocate their research funds and which proposals to fund and which proposals not to fund
- (3) Q Very well Can you give us a sampling of some of the agencies in the United States and internationally that you have done this review research grant process with?
- (4) A Yes I reviewed for the National Science Foundation NSF for the Environmental Protection Agency EPA for ONR which stands for the Office of Naval Research For NOAA the National Oceanographic and Atmospheric Admission and in fact

Vol 25 4251

- (1) within NOAA there are multiple components that I have worked
 (2) and reviewed for notably the National Marine Fisheries
 (3) Service the Sea Grant College Program the National
 Underwater
 (4) Research Program and the NOAA Global Change Program I
 have
 (5) reviewed for all four of those
 (6) Internationally I have reviewed for the Australian
 (7) government in a program that s called the Australian Research
 (8) Council I reviewed in Canada for their NSERC program which
 (9) stands for Natural Sciences and Environmental Research
 Council
 (10) and that s the equivalent of our National Science Foundation
 (11) And I ve similarly reviewed for the British program that is the
 (12) same thing it s the government program to fund basic science
 (13) I do additionally reviewing work for the Canadian government
 (14) for a research program that is called OPEN O P E N and that
 (15) stands for Ocean Production Enhancement Network and is a
 large
 (16) program that combines industry and academia to develop ways
 to
 (17) enhance the production of codfish and sea scallops on the
 (18) eastern coast of Canada
 (19) Q For the National Marine Fisheries Service one of the
 (20) governmental groups that you ve mentioned what sorts of work
 (21) have you done in this grant proposal area?
 (22) A Well I ve reviewed grant proposals on fisheries ecology
 (23) on fisheries management on habitat development for fisheries
 (24) on restoration for fisheries and a variety of other areas
 (25) Q And can you estimate for us how many different research

Vol 25 4252

- (1) grant projects for these various agencies both nationally and
 (2) internationally you ve reviewed in your career?
 (3) A That s another depressing number which I - my estimate
 (4) again is in the same ballpark probably 2 000 maybe as many
 as
 (5) 3 000 reviews of proposals over these years
 (6) Q Switching to the third governmental role that you
 (7) articulated you mentioned agency program where you would
 (8) review the effectiveness of the agency can you briefly
 (9) describe that?
 (10) A Yes although I might best describe it with an example
 (11) The issue here is that governments believe it or not
 (12) occasionally ask the question of whether they are doing a good
 (13) job in pursuing their mandate whatever they may be and then
 (14) bring in usually people from outside to review their programs
 (15) and to address how well they are functioning and I have done
 (16) those sorts of reviews for a variety of programs The one in
 (17) Australia that I mentioned a moment ago the Australian
 (18) Research Council is one I reviewed and I went there and
 (19) reviewed how well they were doing for funding of ecology I ve
 (20) done that same thing for our national government program in
 (21) oceanography and done a review and this is a group of people
 (22) who come together and look at the mandate of the program
 look
 (23) at the process whereby they make decisions and look at the
 (24) answerability how effective that money has been spent and
 (25) I ve done a review of that sort for example for the EPA for

Vol 25 4253

- (1) their environmental research programs in Oregon that are
 (2) devoted to understanding the toxicology of sediments in the
 (3) marine environment and I twice participated in a review of
 (4) that program
 (5) Q Very well With respect to the fourth role where you serve
 (6) on scientific steering committees what are you doing in that
 (7) area sir?
 (8) A Well in that area we are trying - the group usually a
 (9) government agency sometimes multiple agencies sometimes
 state
 (10) agencies have a particular mandate that they have to pursue
 (11) such as fisheries for the National Marine Fisheries Service and
 (12) management with understanding of fisheries They may decide
 at
 (13) some point in time that they need to develop a new thrust a
 (14) new research program to fill some sort of void in our
 (15) understanding and when they do they will often identify
 (16) experts to sit on these advisory panels or steering committees
 (17) they are often called to try to develop the structure the
 (18) scope and just what that program ought to look like and
 (19) that s the function that these affinities play
 (20) Q Can you give us an example of an agency in that area?
 (21) A Yes a program one of those that I ve worked on and in
 (22) fact I was the first chairman of is a program with the acronym
 (23) like they all seem to have of GLOBEC and that stands not for
 (24) a stock exchange but for Global Ocean Ecosystems Dynamics
 and
 (25) the words seem hard but it s straightforward the program was

Vol 25 4254

- (1) designed and still on at a rate of 20 million dollars a year
 (2) studies what the impacts of global climate change would be on
 (3) the production of marine fisheries as created by affecting the
 (4) ecosystem in which these fisheries are found and this is a
 (5) program that began in the U S with our steering committee I
 (6) served as chairman of that group for the first three years and
 (7) now it s become an international problem so there are GLOBEC
 (8) steering committees in multiple countries and now it s being
 (9) run by some of the international corporations What should be
 (10) international a global change program
 (11) Q Have you been appointed to fishery management boards at
 (12) all?
 (13) A Yes twice as a matter of fact I m in my second term
 (14) serving as a commissioner managing marine fisheries in North
 (15) Carolina on our marine fisheries commission
 (16) Q Have you served or been appointed at all to represent the
 (17) United States Government in an international fisheries
 (18) organization?
 (19) A Yes I served a period of - I believe it was about seven
 (20) years as an expert to the shell fisheries committee of ICES
 (21) another international organization standing for the
 (22) International Council for Exploration of the Sea and this is
 (23) an international body composed of all the bodies above the
 (24) north Atlantic rim so they can meet periodically resolve
 (25) problems in fisheries biology and resolve disputes over

Vol 25 4255

(1) management of fisheries and has continuing importance but
 (2) some years ago was interesting because it was the only body
 (3) outside the U N that the then Soviet Union and the U S had
 (4) joint membership in so there were some interesting political
 (5) interactions in the old days
 (6) Q Very well Let s take a moment to look at your own
 (7) research I assume that you do some research as well?
 (8) A You bet
 (9) Q Can you give us an idea of your particular areas of
 (10) interest?
 (11) A Yes I suspect the best way to answer that is to just give
 (12) you the idea of some of the projects I m working on now and
 (13) that s rather reflective of what I do
 (14) I have one project that s designed to look at how oyster
 (15) reef habitats and sea grass habitats serve the production of
 (16) marine fishes both shellfishes and finfishes and how to
 (17) restore those habitats how we can use as academic ecologists
 (18) have learned about the ecosystem this habitat to produce
 (19) something productive mainly fish That s my biggest project
 (20) at the moment I m working on a project over some years that
 (21) compares the lagoons in the Pacific Indian Atlantic and the
 (22) Southern ocean and looks at the bi valves bi valves are clams
 (23) and in fact I look at the clams we eat in those systems quite
 (24) explicitly I have a program that s just begun in which I use
 (25) the Navy submarine Alvin to go down to the deep seafloor in

Vol 25 4256

(1) deep sea vents and examine the community composition of
 those
 (2) things and how they function
 (3) I have a program to look at floating sargassum in the
 (4) sargasso sea and in the gulf stream which is a plant around
 (5) which is built a whole variety of animals which like the
 (6) sargassum and predators of those animals And the program
 (7) there is to understand the ecosystem around the sargassum
 and
 (8) I ve got another active program at the moment which is trying
 (9) to understand how bottom feeding fishes change the behavior
 of
 (10) the prey organisms that they prey upon to get a better feel for
 (11) the interactions that go back and forth between the predator
 (12) and prey
 (13) MR JAMIN I ve got two or three more minutes with
 (14) qualifications
 (15) MR O NEILL Just offer him
 (16) BY MR JAMIN
 (17) Q Let me take a moment because of my co counsel s
 assistance
 (18) here Tell us a bit how you got involved with the Exxon Valdez
 (19) oil spill and the trustees?
 (20) A I was sitting at home in the office minding my own business
 (21) in between going out in the field and having to teach a lecture
 (22) the next day that I wasn t quite prepared for when I had a
 (23) phone call asking if I would serve as an expert to help the
 (24) trustees to evaluate the damages caused by the Exxon Valdez
 oil
 (25) spill and then contribute to looking into restoring the system

Vol 25 4257

(1) at some later date After some subsequent discussion I agreed
 (2) Q Have you been involved with that sir for the last five
 (3) years then?
 (4) A Yes I have from a period of summer 1989 began my
 (5) involvement
 (6) Q Does your involvement continue today?
 (7) A Yes I continued actively to work for the trustee council
 (8) Q With reference to the full range of your activity whether
 (9) it s your research peer reviewing your work for governments
 (10) work for the United States your work for other countries can
 (11) you give us some idea what percentage of your work has
 involved
 (12) fisheries and fish production issues?
 (13) A Well I can certainly say that it exceeds 50 percent I
 (14) mean very clearly over half my time is devoted to fish
 (15) explicitly and to the ecosystem and how it produces fish
 (16) MR JAMIN Your Honor as Mr O Neill says in the
 (17) interest of the shortness of life plaintiffs would request
 (18) that the court recognize Dr Peterson in ecology with
 (19) particular emphasis in marine ecosystems and the role of fish
 (20) in the ecosystem
 (21) MR SANDERS I m sorry Your Honor but I have some
 (22) voir dire that I would like to request Seems to me the scope
 (23) of the offer is beyond the scope of the previous questioning
 (24) THE COURT Let s take our break We ll recess for 15
 (25) minutes

Vol 25 4258

(1) (Jury out at 12 05 p m)
 (2) (Recess at 12 05)
 (3) (Jury in at 12 18 p m)
 (4) THE CLERK All rise
 (5) THE COURT Mr Sanders
 (6) MR SANDERS May I proceed Your Honor?
 (7) THE COURT You may
 (8) VOIR DIRE OF CHARLES PETERSON
 (9) BY MR SANDERS
 (10) Q Dr Peterson my name is Jim Sanders I don t think we ve
 (11) ever met Good afternoon to you
 (12) A Hi
 (13) Q Let me ask you a couple questions about your expertise and
 (14) what it covers and specifically I ll just tell you up front
 (15) I m going to ask you what it doesn t cover As I understand it
 (16) you don t have any expertise or don t purport to be an expert
 (17) as a salmon biologist correct?
 (18) A I think it is appropriate for me to answer that by saying
 (19) that I would not define myself as a salmon biologist or a
 (20) fisheries population dynamicist but I do consider myself an
 (21) ecologist of fish and their role in the ecosystem
 (22) Q Well have you ever done any scientific research regarding
 (23) salmon?
 (24) A What I have done regarding salmon is to work extensively
 (25) now for five years for the Exxon Valdez oil spill trustee

Vol 25 4259

- (1) council in evaluating how the ecosystem of Prince William Sound
- (2) and northern Gulf of Alaska works and explicitly how salmon
- (3) fit into that I have worked similarly with a group which now
- (4) has a large project in the field on salmon and herring ecology
- (5) and biology as they relate to the ecosystem in Prince William
- (6) Sound where I was the principal peer reviewer in setting up
- (7) that program and putting it to work as well salmon are a key
- (8) and very important part of the Bering Sea ecosystem that I am
- (9) working on as we speak although not this moment trying to
- (10) address how various components of that affect salmon and other
- (11) parts of the ecosystem That work is quite extensive
- (12) Q Let me try it again Have you personally conducted any
- (13) scientific research regarding salmon yes or no?
- (14) A If by scientific research you mean a published paper the
- (15) answer is no but that is not the full scope of scientific
- (16) research
- (17) Q In the course of your work with the trustees there were
- (18) various salmon studies that were done by the trustees correct?
- (19) A That s correct
- (20) Q And isn t it a fact that you formally didn t peer review
- (21) any of those?
- (22) A I served as a larger group that responded to the peer
- (23) reviews of others and integrated the work on salmon with the
- (24) other components of the ecosystem Furthermore at the
- (25) moment I have been a peer reviewer so your comment is not true for the

Vol 25 4260

- (1) program which is the SEA the sound ecosystem program now
- (2) designed to understand salmon and herring in the ecosystem
- (3) So
- (4) the answer to your question is no it was false
- (5) Q So now you have been a peer reviewer recently on this
- (6) whatever program you just described?
- (7) A Yes I ve been a peer reviewer and I was the keynote
- (8) speaker to start off the scientific meeting of agency
- (9) scientists and other peer reviewers in Cordova that began the
- (10) evolution of the SEA program as it now exists
- (11) Q Let me ask you the same question with respect to herring
- (12) Have you ever conducted any scientific research regarding
- (13) herring?
- (14) A Again the answer is a similar one I have not published a
- (15) paper that has dealt with herring explicitly but I have
- (16) pursued the role of herring the ecology of herring in the
- (17) context of the ecosystem for the trustees and now for the
- (18) National Academy of Sciences And I should add for the
- (19) National Academy of Sciences our ultimate product will be a
- (20) book that we publish and in that book I can tell you already
- (21) because we ve begun to write herring and salmon will play a
- (22) large role
- (23) Q Did the trustee group or the trustees publish any studies
- (24) on herring?
- (25) A There have been numerous reports written but the trustees
- (26) per se are not a group that does publish but rather a group

Vol 25 4261

- (1) that manages the whole process of evaluating the impacts of
- (2) the
- (3) oil spill on the ecosystem and in that regard has a mandate
- (4) for reviewing the projects that they fund for deciding what to
- (5) fund and for public dissemination of the results
- (6) Now the scientists who have been involved have indeed
- (7) written reports on both herring and salmon and some of those
- (8) have been published
- (9) Q And is it not a fact that you were not a formal peer
- (10) reviewer on any of those such studies on herring?
- (11) A That is true
- (12) Q Now are you an expert on fisheries population dynamicist?
- (13) A No I would not call myself a fishery population dynamicist
- (14) in the sense that that term is commonly used which means a
- (15) mathematical modeler of population trends but instead I am
- (16) indeed a fisheries ecologist and understand and work on the
- (17) role that the fish play in the ecosystem
- (18) Q In the long list of articles that you referred to and
- (19) counsel referred to during the first part of your direction
- (20) examination have you written any articles on salmon or
- (21) herring?
- (22) A None of those articles explicitly deal with salmon or
- (23) herring
- (24) Q Your primary focus is as a benthic geologist is that
- (25) correct?
- (26) A I guess I get to correct you I m not a geologist

Vol 25 4262

- (1) Q I meant ecologist I m sorry
- (2) A My most focused work that is to say the area that I
- (3) specialize in more than any is the benthos the animals and
- (4) plants of the seafloor but it is by no means the exclusive
- (5) area in which I do research or have expertise
- (6) For example the GLOBEC program that I talked about a
- (7) moment ago to look at global production of fish in the
- (8) ecosystem is fundamentally a waterfowl program and doesn t
- (9) deal with the seafloor except in a very narrow way
- (10) Q In fact as a participant in the - as a peer reviewer for
- (11) the trustees in dealing with the salmon questions
- (12) particularly as to the interaction between the number of
- (13) spawners the number of recruits and how that affects the
- (14) salmon population you ve had to rely or you have relied upon
- (15) other peer reviewers who are more expert in those areas isn t
- (16) that a fact?
- (17) A I certainly take vantage of expertise when I trust the
- (18) experts and I have worked together with the peer reviewers for
- (19) fish for birds for mammals for the air and water resources
- (20) as well as other peer reviewers for the benthic ecology
- (21) resources that you referred to
- (22) I would say I rely on what I consider to be expert opinion
- (23) when I find it and have done so for herring and salmon as
- (24) well
- (25) Q Let me ask you may I approach the witness Your Honor?

Vol 25 4263

- (1) THE COURT You may
 (2) BY MR SANDERS
 (3) Q Look at the questions and answers on starting at page 314
 (4) going over to 315
 (5) A Thank you
 (6) Q And I will concede to you that the statements are in the
 (7) context of another question involving disagreements or
 (8) differences that you might have with Dr Spies and just so the
 (9) jury understands who is Dr Spies?
 (10) A Dr Spies is the chief scientist so called that s his
 (11) position for the trustee council He previously was an
 (12) academic at the Lawrence Livermore Laboratory at the
 (13) University
 (14) of California
 (15) Q Let me ask you if you gave this answer and I ll read the
 (16) whole part of it down to about line 25 so that the context is
 (17) in there but let me ask you if you gave this answer at page
 (18) 314 beginning at line 23 and then extending down over to page
 (19) 315
 (20) Yes not only between me and Dr Spies but probably more
 (21) importantly between the fisheries scientists who are peer
 (22) reviewers and Dr Spies That I think is based upon a concern
 (23) for the way in which – well let me step back
 (24) Dr Spies and I have similar background which is a
 (25) background as benthic ecologists dealing mostly with the
 seafloor and animals and plants that live and interact with

Vol 25 4264

- (1) the seafloor Neither of us is fundamentally a fisheries
 (2) population dynamicist Yet we both read that literature and
 (3) are aware that one of the basic fundamental analyses of
 (4) fisheries population dynamics is an attempt to look at stock
 (5) recruit and recruit spawn or recruit relationships That is to
 (6) say relationships between the numbers of spawners and the
 (7) number of recruits that you get in the next generation and the
 (8) number of recruits that you have in that population and how
 (9) many will grow up to be adults so as to model those
 (10) populations Neither of us is experienced in that sort of
 (11) modeling and I have a feeling that Dr Spies is more suspicious
 (12) of the results of those modeling efforts than I am And that
 (13) in part is based upon my reliance on the peer reviewers such
 (14) as people like Brian Rothschild and Phil Mundy and Ray
 Hilborn
 (15) who have been involved with evaluating these salmon
 questions
 (16) from the beginning and who are some of the most top notch
 (17) fisheries population dynamics modelers in the business You
 (18) give that answer in part at your deposition?
 (19) A Yes I ve been following that along and it conforms with
 (20) my memory as well
 (21) Q Now also do you profess any expertise as a hydrocarbon
 (22) chemist?
 (23) A No I do not
 (24) Q Do you profess any expert see – well let me ask it this
 (25) way

Vol 25 4265

- (1) Do you profess any expertise on specific petroleum
 (2) toxicology mammals birds animals or is it mammals or birds?
 (3) A I don t know that I understand What do you mean by
 (4) specific petroleum toxicology
 (5) Q Well do you profess any expertise on the petroleum
 (6) toxicology on mammals birds algae or as a matter of fact
 (7) marine invertebrates?
 (8) A I m not a toxicologist but I serve in many ways as the
 (9) vice chairman of our environmental management commission
 that
 (10) has as one of its mandates to understand toxic emissions into
 (11) the environment I ve been the ad hoc chair of the biotoxicity
 (12) monitoring committee established by that commission to
 address
 (13) toxicity I ve also served as I mentioned I think earlier
 (14) served to review the environmental toxicology programs of EPA
 (15) the marine benthic environmental programs of the EPA I
 (16) understand toxicology and look at it in the context of the
 (17) broader ecosystem and in that sense I have familiarity with
 (18) petroleum and its toxicological effects
 (19) MR SANDERS May I approach again Your Honor I
 (20) apologize I didn t realize we would get so deep into this at
 (21) this juncture
 (22) BY MR SANDERS
 (23) Q This is another volume of your deposition look at page
 (24) 488 beginning with line 1 I m going to skip over the
 (25) objection that s made to the question I m going to read the

Vol 25 4266

- (1) question and answer beginning at 488 line one
 (2) Question What are the types of hydrocarbons that are most
 (3) toxic according to the literature
 (4) Answer I don t profess an expertise on the specific
 (5) petroleum toxicology on mammals birds algae or as a matter
 (6) of fact marine invertebrates except to the degree that I read
 (7) broadly the toxicological literature relative to oil as they
 (8) apply to the marine invertebrates that I also study
 (9) Was that question asked and answered given under oath?
 (10) A Yes I think that s what I was trying to say except maybe
 (11) I was trying to say it more clearly here
 (12) Q My choice is the former I didn t understand the other part
 (13) you gave
 (14) Do you have any personal experience firsthand experience
 (15) in studying oil spills?
 (16) A Yes I do At this point five years of studying oil
 (17) spills One oil spill in particular with a month and a half to
 (18) two months of my life devoted to that study
 (19) Q That was in Santa Barbara?
 (20) A No I was referring to the last five years from the Exxon
 (21) Valdez oil spill
 (22) Q Well how many days did you actually spend in Prince
 (23) William Sound or the Alaska Peninsula?
 (24) A I ve spent approximately eight days in the field in that
 (25) system

Vol 25 4267

- (1) Q In five years?
 (2) A That s correct
 (3) Q Have you made any comparison of the recovery in Prince
 (4) William Sound rigorously compared to other spills?
 (5) A I have definitely read the literature as it has been
 (6) produced from other spills by rigorous comparison I don t
 (7) fully know what you mean but it s part of what a number of us
 (8) do is to examine this spill in the context of what we have
 (9) known from previous events
 (10) Q Dr Peterson would you look at page 382 of your
 (11) deposition Again line 1 Was the following question asked
 (12) and the following answer given by you
 (13) Question Have you personally made a comparison of the
 (14) recovery in Prince William Sound rigorously compared to other
 (15) spills
 (16) Answer I have not taken the data or been involved in a
 (17) study which took the data and then compared that information
 (18) to similarly collected information on similar components from the
 (19) results of other spills no
 (20) Was that question asked and the answer given by you?
 (21) A Give me a moment to try to find it
 (22) Q I m sorry I thought you had found it or I wouldn t have
 (23) started reading it to you
 (24) A 382
 (25) Q Can I help you?

Vol 25 4268

- (1) A Got it thanks
 (2) MR SANDERS Shall I read it again Your Honor?
 (3) THE COURT Let s see
 (4) THE WITNESS Yes I have found that and that
 (5) conforms with my recollection
 (6) BY MR SANDERS
 (7) Q That s your answer?
 (8) A Yes although I take opportunity as I have here to point
 (9) out exactly what I have done both prior to then and since then
 (10) which is put what we have learned from our five years of work
 (11) on the Exxon Valdez oil spill into a context of what we know
 (12) from previous oil spills
 (13) Q Now going back to your seven or eight days I think you
 (14) said eight days in Prince William Sound you actually took two
 (15) trips correct?
 (16) A That s correct I was able to visit the Sound and the
 (17) system twice
 (18) Q Once in 91 July correct?
 (19) A Yes I think that s correct
 (20) Q And that was for four or five days?
 (21) A I think I was able to spend the bulk of three days on that
 (22) trip in the Sound but I would have to check my notes
 (23) Q And then the next time was two years later in September of
 (24) 1993?
 (25) A That s correct

Vol 25 4269

- (1) Q And you did that you suggested that you ought to do that
 (2) to one of the plaintiffs lawyers Mr Rossbach is that
 (3) correct?
 (4) A That s part of the reason why I took that trip
 (5) Q Now going back to your - to your involvement in the
 (6) trustee studies as a peer reviewer - let me ask you this
 (7) clarification question Dr Peterson
 (8) In the trustees studies or in any project like this there
 (9) are primary investigators correct and then there are peer
 (10) reviewers and then there is a whole chain of people who are
 (11) involved in a project like this correct?
 (12) A Yes I think we tend to call them principal investigators
 (13) but I think you probably have the same meaning that I would
 (14) have
 (15) Q I take your correction thank you Principal
 (16) investigators And those people are people who do scientific
 (17) studies correct?
 (18) A That s correct Those are the folks who are funded to go
 (19) out and do that research
 (20) Q And they do the field studies and the field analysis
 (21) correct?
 (22) A That s one characteristic of the research that they do
 (23) There are in addition laboratory studies that make up part of
 (24) the program and there are intellectual studies whereby science
 (25) is funded for people to sit in their office to look at data

Vol 25 4270

- (1) that have come from field and lab and to understand exactly
 (2) how those data fit together
 (3) Q And at least in the trustees studies that we ve been
 (4) discussing and that you discussed earlier with your counsel
 (5) you have been a peer reviewer and not a principal investigator
 (6) is that right?
 (7) A That s correct The role of peer reviewer is one whereby
 (8) we are asked to come in and examine these programs examine
 (9) the
 (10) quality of the work whether it s done well whether it s
 (11) complete but not be funded by the work so that we don t have a
 (12) bias based upon the fact that we might be getting money for the
 (13) project that we re working to look at So there is a
 (14) separation between the peer reviewers and the principal
 (15) investigators based upon that avoidance of a conflict of
 (16) interest
 (17) Q And prior to your involvement in the Exxon Valdez oil
 (18) spill your only experience in an oil spill direct experience
 (19) of doing anything in connection with an oil spill was in Santa
 (20) Barbara in 1969 correct?
 (21) A That is correct if you restrict it to oil spills if you
 (22) are asking a question about understanding the impacts of oil on
 (23) ecosystems there is much much more
 (24) Q Well tell me about what you did in Santa Barbara in 1969?
 (25) A Santa Barbara in 1969 I had just left college and had
 begun to do my research I had a research site and a problem

Vol 25 4271

- (1) picked out when the blowout occurred some miles off the coast
 (2) The oil came in and actually entered the estuary I was working
 (3) in and where my research was being conducted As a
 consequence
 (4) there was actually some manipulation to close that estuary off
 (5) and the project that I had initiated there was no longer
 (6) feasible because of the impact of the spill and the oil on the
 (7) system that I was looking at initially I could have done a
 (8) different one but not the one I started Then I actually took
 (9) part in some of the recovery of oiled birds notably Grebe and
 (10) took them to the recovery center I flew over the spill in
 (11) some of its initial stages with the context in mind of looking
 (12) at the transport and the physical dynamics that were moving the
 (13) oil on the sea surface and then I subsequently worked to help
 (14) review some of the science studies notably by Dr Dale Strong
 (15) who had worked to evaluate the impacts of the spill through
 (16) field work following it
 (17) Q Did you become familiar with his work concerning - that s
 (18) a her isn t it?
 (19) A Yes it s a lady
 (20) Q Did you take part in any of the assessment with respect to
 (21) the recovery of fish after the Santa Barbara blowout?
 (22) A No I did not
 (23) Q Did you do any rigorous scientific study to assess the
 (24) biological damage to fish resulting from that direct or
 (25) indirect?

Vol 25 4272

- (1) A I have trouble answering because of what seems a
 (2) misunderstanding Scientific study does not merely mean the
 (3) hands on work in the field but rather it means taking
 (4) information that is available and evaluating that That part
 (5) of it I was involved in The actual hands on work in the
 (6) field I was involved in to the extent of as I mentioned of
 (7) recovery of oiled birds but not the science portion that I
 (8) then subsequently was a reviewer of
 (9) Q Your job as a - were you serving on the board of the
 (10) fisheries in North Carolina?
 (11) A North Carolina manages its fishery the way many states do
 (12) and that is to say there are boards appointed largely by the
 (13) governor although there are other mechanisms whereby
 (14) people
 (15) become appointed to these boards my appointments have
 (16) been by
 (17) the governor and I served a past term on that board and I
 (18) serve presently on that board and our charge is to manage all
 (19) the marine fisheries of the state
 (20) Q And what marine fisheries what species of fish are
 (21) involved in North Carolina fisheries?
 (22) A It s a long list
 (23) Q Do any of them include salmon?
 (24) A No we do not have salmonets in North Carolina
 (25) Q And they don t include herring?
 (26) A No we do not have herring in North Carolina
 (27) MR SANDERS Your Honor that concludes my voir

Vol 25 4273

- (1) dire Given the breadth I think in the field that has been
 (2) previously discussed with the court and somewhat perhaps
 (3) clarified by the voir dire this gentleman is certainly
 (4) entitled to testify in his area of focus as a benthic
 (5) ecologist Beyond that I don t think there is anything in the
 (6) examination other than generalities which would give us a
 (7) handle frankly don t know whether he s qualified to go beyond
 (8) that and I don t think the offer gives us that information
 (9) too general
 (10) THE COURT I will accept the qualifications of the
 (11) witness as a marine ecologist
 (12) MR JAMIN Thank you very much
 (13) THE COURT If another problem develops in terms of
 (14) what you re suggesting Mr Sanders call it to our attention
 (15) MR SANDERS I ll try to Your Honor
 (16) MR JAMIN Thank you Your Honor
 (17) CONTINUED DIRECT EXAMINATION OF CHARLES
 PETERSON
 (18) BY MR JAMIN
 (19) Q Dr Peterson let s get on to the substance as quickly as
 (20) we can
 (21) I d like you to use your teaching skills a little bit and
 (22) I want you to be sensitive to the courtroom We have to do
 (23) things in a question and answer sequence but I d like you to
 (24) give the jury an idea of the general nature of the near shore
 (25) ecosystem in Prince William Sound and the northern Gulf of

Vol 25 4274

- (1) Alaska and in connection with that have you asked us to
 (2) develop a demonstrative exhibit which represents a portion of
 (3) the coastal shoreline in Prince William Sound?
 (4) A Yes I thought that would be a good teaching aid
 (5) Q Let me just show you this for identification first is
 (6) this that exhibit sir?
 (7) A Yes it is
 (8) MR JAMIN Your Honor I d like permission to show
 (9) this to the jury and Dr Peterson
 (10) BY MR JAMIN
 (11) Q And sir in the interest of not confusing counsel or
 (12) members of the jury I m going to give you a pad and as we
 (13) come to words that you think might be problematical please
 (14) feel free to write them down although I m probably going to
 (15) interfere with the person who needs to have the spellings the
 (16) most our court reporter
 (17) Now let me get an idea first of the general nature of the
 (18) ecosystem Can you describe it for us?
 (19) A Yes I think the generality that I would like to make to
 (20) begin this and then I will flesh it out with the specifics as
 (21) I go along I think it s appropriate to generalize that the
 (22) Prince William Sound and Northern Gulf of Alaska coastal
 (23) ecosystem is an unusually highly productive ecosystem with
 (24) especially - special significance for the amount of that
 (25) productivity that makes its way into the higher level predators

(1) and consumers in the ecosystem mainly the fish birds and
 (2) mammals
 (3) Q In describing the ecosystem is it appropriate to divide it
 (4) at all geographically?
 (5) A I d like to walk around so I don t mind where you put it
 (6) Q It s going to be like a large classroom discussion
 (7) A It will
 (8) Q With respect to the division is there an appropriate
 (9) division to make for ease of explanation?
 (10) A Yes I think that the typical way that scientists would
 (11) partition this system so as to talk about it is to talk about
 (12) the intertidal zone the subtidal zone and the water column
 (13) or the pelagic zone and I ve used a word already so I think I
 (14) might have to leap up and write it down
 (15) MR JAMIN With the court s permission I m going to
 (16) ask if Dr Peterson may use the exhibit and the board
 (17) THE COURT Let s try it
 (18) MR JAMIN Very well Thank you Your Honor
 (19) THE WITNESS I mentioned a word and I ll spell it
 (20) pelagic which basically means the water column I ll use a
 (21) few more as I go along and I will apologize once and not again
 (22) in that there is some terminology that I think I need to use
 (23) and I ll keep it to a minimum
 (24) BY MR JAMIN
 (25) Q You mentioned an intertidal zone can you explain to us

(1) adaptable I first need to define these
 (2) Intertidal is spelled up here Inter meaning between the
 (3) tides and the intertidal zone is that part of the shoreline
 (4) that we usually call the beach It runs from the top of the
 (5) tide mark where the tides reach the stop of the shore to the
 (6) bottom of the shore and that zone is the intertidal zone So
 (7) I start first with that explanation
 (8) The intertidal zone is an exceptionally productive zone
 (9) because it falls at the interface of three major sorts of
 (10) systems the air the ground and the water In other words
 (11) the intertidal is where all three of these come together and
 (12) as an interface like many biological interfaces where systems
 (13) come together it s very highly productive
 (14) Q Let me ask you what role does the land element have in
 (15) this system?
 (16) A The land provides space for the organisms to attach to
 (17) And these organisms are both plants and here up front we see
 (18) a
 (19) long line of fucus which is that plant which is the basic
 (20) seaweed of the intertidal zone rockweed or popweed We have
 (21) a
 (22) long zone of fucus and for animals so both plants and animals
 (23) attach to space in the intertidal zone and space is actually
 (24) limited in many areas at many times in that zone so they
 (25) compete for space There is not infinite amount of it and
 they compete for space especially at the mid and lower zones
 of the tide The land also serves another function and that

(1) with reference to the chart what that is sir?
 (2) A Yes I will and I will and let me say first while I
 (3) think it s appropriate and customary to divide the environment
 (4) up into these three pieces the coastal ecosystem really works
 (5) as a whole and so after I ve talked about the three pieces
 (6) and how they differ and the processes that go on in them after
 (7) I do that I ll pull it all back together and tell you how it
 (8) works together So I begin by that
 (9) MR SANDERS Your Honor I m going to object to this
 (10) narrative form of doing things If counsel can ask him
 (11) questions and he can answer I can keep up and know whether
 (12) I m
 (13) supposed to object For him to get a question and give a
 (14) speech I think is going to be hard
 (15) MR JAMIN I m sensitive
 (16) THE COURT We re all right so far but please do it
 (17) in a question and answer format
 (18) THE WITNESS Can you repeat your question?
 (19) BY MR JAMIN
 (20) Q I will do that Let s do this let s get an idea of how
 (21) this first part of the ecosystem functions the intertidal
 (22) area and sensitive to Mr Sanders concern and Your Honor
 (23) let s not go more than a minute or a minute and a half with
 (24) regard to that
 (25) A Thank you and I won t be sensitive if I m told to break it
 up it s different from how I normally do it but I m

(1) is the land is the source of run off carrying nutrients by
 (2) nutrient the phosphates the nitrates that grows plants and
 (3) the land serves as a source of those nutrients which run off
 (4) through rivers glacial ice melt and other water sources into
 (5) this zone and fertilize the plants that you find in the zone
 (6) Q What role does the water play in the intertidal zone?
 (7) A The water plays the role of bringing those nutrients into
 (8) shore and for the animals that live in these intertidal zones
 (9) the small plants the plankton of the sea And I ve used
 (10) another word which I ll write down plankton These are small
 (11) plants and animals transported by currents so these are so
 (12) small that they can t swim against the currents and there are
 (13) two types both of which will come up soon so it s appropriate
 (14) to tell you phytoplankton has that prefix phyto and those
 (15) are the plant plankton they are single celled algae And the
 (16) other type of plankton is the animal plankton or the
 (17) zooplankton Call them small animals I ll talk more about
 (18) that in a moment
 (19) The answer to your question involves not only the plants
 (20) that live here which require the nutrients to be brought into
 (21) them by the water but the animals that are feeding on
 (22) phytoplankton which require those phytoplankton to be
 (23) brought
 (24) in by water So the answer to your question is the rise and
 (25) fall of the tides in combination with the currents provides
 an energy subsidy into this zone for both the plants and

Page 4279

- (1) animals that you find attached there to grow and so that rise
 (2) and fall and in this zone we have tides of ten to 15 feet
 (3) substantial tides That water and those tides and the physics
 (4) of those tides brings energy into this zone
 (5) Q What role does the third element the air play in this
 (6) intertidal zone?
 (7) A The air is the medium for the passage of sunlight and
 (8) sunlight is the source of energy for the plants to grow on
 (9) which ultimately means for the animals to grow on when they
 (10) eat
 (11) the plants
 (12) Q You've mentioned fucus what are the most important plants
 (13) in this zone?
 (14) A Fucus is without question the most important plant and by
 (15) importance it's important in the sense of the biomass of how
 (16) much plant it's producing and growing Fucus is the plant that
 (17) contributes the bulk of the biomass that's being grown in this
 (18) zone but fucus has several other roles besides the production
 (19) of plant material that ultimately animals can eat It forms a
 (20) habitat in and of itself and if I might show one of the
 (21) pictures if that's possible to bring up I can give you an
 (22) idea of the way that fucus creates three dimensional structure
 (23) off of otherwise what would be a rock surface
 (24) Q Dr Peterson I'm going to try to have this brought up on
 (25) the television I think it's available now
 (26) A Thank you If you could take a glance at the screen I

Page 4280

- (1) think really that there is little I need to do here to augment
 (2) what you see
 (3) What you see is in the foreground a large extent of fucus
 (4) that I think illustrates nicely it's three dimensional not to
 (5) mention also its abundance and the coverage of the zone but
 (6) the three dimensional comes nicely off the picture and that
 (7) was the purpose of showing you this
 (8) Q Now you were going on to explain some of the importance of
 (9) fucus in the intertidal zone?
 (10) A I was First of all there is an importance to the
 (11) production of fucus that would fuel the food chain provide
 (12) food and that is important The fucus is eaten directly by
 (13) grazers these are plant eaters or herbivores and that
 (14) probably is the next term that I can't escape the herbivores
 (15) are the plant eaters the rabbits if you will of the seas The
 (16) fucus helps fuel that and interestingly the fucus does that
 (17) largely by what is called the detritus food chain that means
 (18) that the plant is shed the word is detritus and that equals
 (19) dead plant and animal matter and most of it being plant but
 (20) there is more plant to cast out the fucus sheds these leaves
 (21) the leaves go offshore and settle to the seafloor where they
 (22) fuel the production of animals so that's the one function that
 (23) the fucus plays The function of the fucus as habitat is
 (24) manifold The fucus first of all provides habitat for laying
 (25) of herring eggs Herring lay their eggs on fucus as well as on

Page 4281

- (1) other plants in the subtidal zones The intertidal zones
 (2) the fucus is an important source for herring to lay their eggs
 (3) it's a bed for herring eggs for about three weeks while they
 (4) are developing That's one type of habitat role that fucus
 (5) plays Then fucus plays a role in creating these three
 (6) dimensional spaces in which animals live and those spaces are
 (7) important because they provide shelter and they provide shelter
 (8) of two types Shelter from a rigorous environment and shelter
 (9) from potential enemies from predators that might eat you and
 (10) in that mode this system is a system that we call the nursery
 (11) environment for a variety of marine invertebrates and fishes
 (12) including pink salmon and herring Now I've got to - another
 (13) word I used was invertebrates Invertebrates means animals
 (14) with no backbone basically things like snails and worms and
 (15) so forth
 (16) The intertidal habitat is where at high tide the water is
 (17) up here low tide down here and these plants and animals that
 (18) occupy the intertidal zone are effectively marine so that when
 (19) they are hung out here to dry at high tide it's a rigorous
 (20) environment they are waiting for water coverage to produce
 (21) again and become comfortable putting it in an
 (22) anthropomorphic
 (23) terminology so fucus plays an important role because it
 (24) retains moisture and consequently it shelters these animals
 (25) that live among it from desiccation from drying out when they
 (26) are exposed to the wind and the sun so that's an important

Page 4282

- (1) role and it provides structure and interference with larger
 (2) predators so the nursery function can condition These fish
 (3) can live among it and not be eaten by the consumers the
 (4) enemies that they face I think that is the complete answer
 (5) Q We've focused on the vegetable part of it let's go to the
 (6) animal part a little bit and get a sense of what important
 (7) animal groups exist in this intertidal zone?
 (8) A This picture from some distance and I should say this is a
 (9) protected rocky shore on Eleanor Island that's the context
 (10) here this picture from some distance doesn't give you a good
 (11) feeling for all the animals that are occupying this shore and
 (12) as a consequence I've got another slide that gives you insight
 (13) into the animals that you would see if we had a close up
 (14) Q That should be coming up on the television momentarily
 (15) Doctor Is that it?
 (16) A That's exactly what I had in mind
 (17) Q If you would like to use that to demonstrate some of the
 (18) animals that live in the intertidal environment?
 (19) A Thank you This is going to be helpful so I can give you
 (20) images to put with names of things and the first of those I
 (21) think had better be a barnacle and let me circle a barnacle
 (22) I've successfully done it You can see there are a lot of
 (23) them I could have circled several barnacles A barnacle is a
 (24) suspension feeder looks like a little volcano and it sticks
 (25) something up and grabs the phytoplankton as they come by
 (26) and

Vol 25 4283

(1) that s how it makes a living
 (2) Let me circle a mussel next A mussel is very similar it
 (3) too attaches to the surface and waits for the tide to come in
 (4) and then filters out of the water the phytoplankton that come
 (5) by the same as the barnacle Here we have a single mussel
 (6) but mussels can live in large beds and assemblages as well
 (7) Now this picture we also have a snail that s a bit bigger
 (8) than those mussels and barnacles this snail I ve marked right
 (9) here and it s a predator called a drill and that s because it
 (10) does drill a hole through the shells of the barnacle or mussel
 (11) that it eats and that s two of tis most popular items So
 (12) here is one of the predators of the system
 (13) Another species of importance in this environment and I
 (14) won t name all of these but it s the periwinkle snail and
 (15) interestingly enough it s riding the back of one of the
 (16) drills The periwinkle is a grazer it falls into the rabbits
 (17) of the sea eating the plants and it s actually grazing the
 (18) small plants that are growing on the back of that snail in this
 (19) particular picture That s a periwinkle
 (20) Now there is one other sort of organism that is not well
 (21) illustrated in this picture but happens to be in it that s of
 (22) value for its abundance in the system one additional animal
 (23) I ve made a mess but there is a limpet up in that corner
 (24) limpets are also like little volcanos but moving little
 (25) volcanos they move through the shore and they too graze the

Vol 25 4284

(1) small algae just like the periwinkle so the limpet and the
 (2) periwinkle are snails they are snails and moves through that
 (3) system and grazes algae off of it So that and the periwinkle
 (4) are similar the barnacle and the mussel are similar in
 (5) catching phytoplankton food and the drill is a predator that
 (6) moves through that system These are the most important of
 (7) the
 (8) animals that you find in that intertidal environment there are
 (9) a lot of others but numerically in abundance those are the
 (10) most important and they too compete for space Space is the
 (11) limiting resource in that system and they compete for it in
 (12) that environment
 (13) Q Besides the animals that you have demonstrated to us from
 (14) the picture are there other important animals in that
 (15) intertidal zone?
 (16) A Yes there are I have taken the opportunity to have drawn
 (17) a schematic of this system up here that helps me put this into
 (18) some perspective and the intertidal zone serves as another
 (19) important habitat for eggs and that is the habitat for the
 (20) eggs of the pink salmon And this is meant to be an
 (21) anadromous
 (22) fish stream Anadromous fishes - I ll spell that one out
 (23) Anadromous fishes are those that are fish at sea as adults but
 (24) then come back to fresh water to spawn Marine fishes
 (25) spawning in fresh water and in Prince William Sound
 something
 (26) like 75 percent of the eggs of pink salmon are laid in gravel
 (27) at the mouth and intertidal gravel so in the intertidal zone

Vol 25 4285

(1) at the mouths of anadromous streams so that also is a key
 (2) piece for the bed of the salmon eggs like the fucus largely
 (3) in this zone is the bed for the herring eggs
 (4) Q Let s build now for the jury an idea of the second element
 (5) of the large system that you described the subtidal zone and
 (6) could you first define it for us?
 (7) A The subtidal and here I ve got it spelled out with its
 (8) prefix sub and tidal It s meant to be the seafloor from the
 (9) low water mark on down And if I can work it I ve actually
 (10) got a way to give you some insight into the subtidal zone and
 (11) what it looks like So it would start initiate at the bottom
 (12) of the intertidal zone and then the subtidal is from that
 (13) point on out into the sea
 (14) Q Can you explain how the subtidal ecology functions for us?
 (15) A Yes I can The subtidal zone has some limitations and
 (16) those are limitations in light in how much light reaches the
 (17) bottom Note the intense algae cover here on shore as well as
 (18) it goes through the sea water it attenuates so as you get
 (19) deeper and deeper in water there is less light reaching and in
 (20) fact the light that plants use to photosynthesize that light is
 (21) filtered as you get deeper so there is a narrow fringe of the
 (22) bottom of the seafloor where plants can grow so that s a
 (23) system where we ve got sunlight being turned into plant
 (24) energy Beneath that is the zone of the seafloor of the
 (25) subtidal system where there are not actually living plants but

Vol 25 4286

(1) there are animals the animals living off the detritus come
 (2) from the intertidal and this zone carried out deposited on
 (3) the floor where now they can be utilized to grow animals So
 (4) this system is typically divided into that shallow zone that
 (5) can grow plants and the deeper zone that cannot The width of
 (6) those zones depends upon the slope of the shoreline if it s
 (7) slowly he can get a big zone but if it s steep it s a narrow
 (8) one The plants that we find in that environment depend upon
 (9) the substrate type that we have there By substrate I mean the
 (10) bottom the bottom type I suppose I better write that one
 (11) since I said it
 (12) There are two basic types of substrate in this system that
 (13) make all the difference as to what sort of organisms plants
 (14) and animals you have One is sediments that means soils
 (15) effectively sands and muds the other is rock hard continuous
 (16) things and so we have soils and rock on the seafloor Where
 (17) we have soils in protected areas in Prince William Sound and in
 (18) this Northern Gulf of Alaska system there is a plant called
 (19) eel grass and I ve attempted to illustrate that with eel grass
 (20) and the seafloor to give an indication of the sedimentary
 (21) nature of it We have a plant called eel grass that grows up
 (22) in those environments Where we have rocky bottoms to the
 (23) coastline in the Prince William Sound and northern gulf system
 (24) in the zone where light can penetrate we have large sea weeds
 (25) growing up sea weeds that we call kelps there are three

Vol 25 4287

- (1) different major kinds of kelps that I won't bore you with but
 (2) they live in slightly different habitats intermingled but
 (3) they like the fucus like the sea grass the eelgrass here
 (4) serve multiple roles in the ecosystem
 (5) Q What are those roles Doctor?
 (6) A The roles are very similar they produce the green plant
 (7) material that then fuels the larger detritus based system in
 (8) the seafloor and around in the coastal zone and the production
 (9) of these plants is in fact the major mechanism by which we get
 (10) plants into this zone and animals growing It is a very
 (11) significant combination and is a major mechanism of driving
 (12) this system Secondly these plants provide the bed for
 (13) herring to lay their eggs on This is the bed for the eggs in
 (14) the subtidal So herring not only lay their eggs on the fucus
 (15) in the intertidals and intertidal algae but back here you can
 (16) see that there are other algae on the seafloor in the
 (17) intertidal zone and these include red algae greens and browns
 (18) but herring also lay their eggs on eelgrass and the kelps so
 (19) they provide the bed for those eggs to lay on then the nursery
 (20) habitat the same function of providing a structure rising off
 (21) the seafloor with spaces and a habitat that would not exist in
 (22) the absence of those plants is created in that environment by
 (23) all these plants That habitat is the nursery habitat for a
 (24) variety of fishes including early stages of the pink salmon
 (25) after they re emerge from the streams and of the herring It

Vol 25 4288

- (1) also is a habitat where there are special plant related
 (2) organisms that live among it
 (3) Q What are they?
 (4) A These plant related organisms tend to be - these plant
 (5) related organisms are dominated by crustaceans Crustaceans
 (6) are the group that includes crabs and shrimp These are the
 (7) things that are kind of like the bugs of the sea Insects of
 (8) the sea if you want bugs of the sea you'll know what I mean
 (9) and in particular these include amphipods amphipods are tiny
 (10) little things with a lot of little legs there is a whole
 (11) variety of groups of those They include isopods they include
 (12) a group and this is a double name called harpacticoid
 (13) copepods and harpacticoid copepods I won't draw any
 (14) differently but if we were sitting by a microscope I would
 (15) These are invertebrates that are attached to the plants and
 (16) live on the plants and are there because of the plant
 (17) environment and so we call them phyto or plant associated As
 (18) well there are fishes that live in that habitat typically
 (19) these are juvenile fishes using it as the nursery this is the
 (20) home for those fishes It's a home because it has prey
 (21) including these animals that are being grown and because it
 (22) has protection from predators in that system So this is the
 (23) home and the nursery for a variety of fishes and that includes
 (24) especially at the early stages of pink salmon and herring
 (25) Q All right Let's take a moment to get an idea of that

Vol 25 4289

- (1) third element that you described of this nearshore ecosystem
 (2) the water column zone And first do ecologists divide the
 (3) water column separately into different sub parts or zones?
 (4) A Yes
 (5) Q What are they?
 (6) A Let me just point out that on this diagram I have attempted
 (7) to illustrate the water column by pointing out where it sits
 (8) over here The water column can be and traditionally is by
 (9) ecologists divided up into three different zones First there
 (10) is a very narrow surface layer exceedingly narrow surface
 (11) layer and that is the neuston zone That is a habitat where
 (12) water tension is high It's a habitat where there are numerous
 (13) microbial organisms and small very small animals including
 (14) the eggs floating eggs of some fishes such as the cod and
 (15) including the larvae an early organisms after - I guess I've
 (16) used a new term haven't I we know what larvae are it's a
 (17) developmental stage that comes after the egg and a lot of
 (18) invertebrates and fishes have larvae in common so it applies
 (19) to both things like a barnacle interestingly and it applies
 (20) to things like herring they both have larvae The neuston is
 (21) a zone where numerous larvae of marine organisms are found
 (22) especially the newly hatched shrimps and crabs are commonly
 (23) a
 (24) member of the neuston so that is the narrow surface film zone
 (25) of the sea
 (26) Then we identify a second zone and this won't come as a

Vol 25 4290

- (1) surprise the zone where the light penetrates because in this
 (2) system the phytoplankton cells as well can only grow where
 (3) light penetrates so we define an upper ocean as the a zone
 (4) where the plants can grow and then there is a subsequent zone
 (5) of the water column that is deeper where light doesn't
 (6) penetrate for plant growth but it's not one that has no
 (7) animals because there is this rain of particles that are good
 (8) to eat if you're so inclined there is this rain of particles
 (9) that's coming down from this lighted zone so there are animals
 (10) that live in the third zone as well
 (11) Q Now Doctor you've explained how in the intertidal zone
 (12) and the subtidals there is particular importance to salmon and
 (13) herring Is there anything significance in the neuston or the
 (14) lower part of the water column which is of importance to those
 (15) species?
 (16) A Yes there is Pardon for a minute There is The small
 (17) algae are quite productive these phytoplankton these single
 (18) celled algae They reproduce quite rapidly in this zone and
 (19) they form the food for the zooplankton Zooplankton is the
 (20) animal plankton that eat and feed on the phyto so the phyto
 (21) and zooplankton are coupled - to get a good amount of
 (22) zooplankton you need to have phyto and they turn over
 (23) quickly
 (24) they form the food stuffs for the larval fish so the water
 (25) column is a system where we have phytoplankton eaten by the
 (26) zooplankton and then eaten by larvae fish and filter fish in

Vol 25 4291

- (1) some cases whales but that's a different story
 (2) Q I think we have a fairly good system and for some of us
 (3) more than we ever wanted to know about the near shore
 (4) environment but let's try to build on what we've learned so
 (5) far Doctor and get an idea and I think you've mentioned the
 (6) word of the interrelated food web which we find in this
 (7) environment and would it be of assistance to have a clean
 (8) board for that as if it were a blackboard?
 (9) A Yes if I were to draw it on the paper I think it would be
 (10) too small Thank you
 (11) Q All right
 (12) A What I've been speaking of until now is these habitats the
 (13) intertidals the subtidals and then the water the three
 (14) different systems and I've talked about how they work a bit
 (15) differently and the role they play for fish production in the
 (16) nearshore ecosystem A traditional way that ecologists tell
 (17) you more and tell you who eats whom and gives you an idea of
 (18) the system is to make what we call a food web and you'll see
 (19) why I call it a web soon
 (20) A food web is comprised of several food chains where the
 (21) chain is the link between the prey the food and the thing that
 (22) eats it and so that's really what I'm going to do I'm going
 (23) to draw you a rather general food web north Prince William
 (24) Sound Northern Gulf of Alaska coastal ecosystem I'm not
 (25) going to do anything like putting all the plants and animals in

Vol 25 4292

- (1) it There are for example something like 140 different
 (2) species of sea weeds that I might be able to enter into this
 (3) system and I'm not going to do that but I'll characterize
 (4) things and group them together to give you an idea of the major
 (5) groups and the major species and the relationships that they
 (6) play to their food and to their enemies to their consumers
 (7) and that's what a food web is all about It starts with the
 (8) sun as the source of the energy for the system And we
 (9) typically do this by having the lower levels be the sun the
 (10) next level being the plants the next level being the plant
 (11) eaters or herbivores the next level being the predators that
 (12) eat those herbivores and so on But the sun is what begins
 (13) it There is the energy to which are added plant nutrients
 (14) which are the fertilizers for plant growth so that's what
 (15) begins it Now I'm going to categorize the plants into four
 (16) different types realizing that I'm putting many plants
 (17) together in doing that
 (18) The first one is going to be macro algae and by macro
 (19) algae what I mean is fucus in the intertidals as we've talked
 (20) about or rockweed or popweed as an example Sea weeds of
 (21) all sorts Kelps of which we've got an example there and sea
 (22) grass These are one type of plant in the system Now I've
 (23) got to apologize for those of you who know more biology than I
 (24) do sea grass is actually a flowering plant and we don't
 (25) usually call it an algae but I've lumped it here because it's

Vol 25 4293

- (1) a big plant that performs the same role it's a flowering plant
 (2) that's invaded from land Then there is the phytoplankton of
 (3) which I've spoken already There are numerous numerous
 (4) species of single celled algae Then I'm going to put plant
 (5) detritus as a separate category knowing that that comes largely
 (6) from this
 (7) Now I'm using a convention here that I need to explain and
 (8) that is when I draw an arrow it means that energy is flowing
 (9) from one of these compartments boxes circles to another one
 (10) So in this case the arrow means not that energy is flowing but
 (11) these are the producers of the materials which forms the
 (12) detritus on which so many things will depend and then finally
 (13) there is a smaller box for what I'm calling benthic micro
 (14) algae that required me to use another term which you've heard
 (15) earlier but hasn't been defined Benthic means on the bottom
 (16) Q So these four then are that first layer?
 (17) A These four are the first layer of the thing that takes
 (18) sunlight and turn it into energy better known as plants
 (19) Q What's the next layer up in the food web?
 (20) A The next layer up are the herbivores
 (21) Q Those are the plant eaters?
 (22) A Yeah and I think you might want to know those as plant
 (23) eaters And again I'm not going to go through and detail every
 (24) herbivore in the system but I'll name the most significant
 (25) ones and group them together in some meaningful fashion that

Vol 25 4294

- (1) gives you a feel for this There are those ones you have seen
 (2) on the CD ROM limpets periwinkle snails I'll draw a box for
 (3) them These make a living by grazing these macro algae often
 (4) by grazing them before they get big Once they get big it's
 (5) hard for one of these little things to graze through although
 (6) they can do a job in some cases but they graze on the macro
 (7) algae before they have gotten macro and they as well consume
 (8) the benthic micro algae These I forget to describe Benthic
 (9) means they are on the bottom and micro single cell just like
 (10) the phytoplankton but unlike the phyto they don't live on the
 (11) bottom they stay (indicating) So that's where the limpets
 (12) and periwinkles make a living
 (13) You saw a picture of a very invertebrate the barnacles
 (14) They are fed by phytoplankton You saw another the mussels
 (15) those too are phytoplankton eaters so they are quite similar
 (16) There is another important group sea urchins Sea urchins
 (17) concern these macro algae There is another group of some
 (18) importance in this system as herbivores I'm going to call them
 (19) suspension feeding clams and as examples going to tell you
 (20) that these include all the clams on which there are fisheries
 (21) little neck butter razor several others Now those animals
 (22) as well are herbivores largely feeding from the
 (23) phytoplankton
 (24) I've talked already about zooplankton so you can
 (25) anticipate my next box and you anticipate where its energy

Vol 25 4295

(1) comes from which is energy from the phytoplankton Also then
 (2) are these phytol invertebrates that I mentioned which include
 (3) such things as some amphipods isopods and others These
 (4) phytol invertebrates are fed in part by the macro algae that
 (5) they live among The macro algae mostly form their home their
 (6) habitat but there is some consumption of macro algae by these
 (7) groups and there is some consumption of plant detritus and
 (8) benthic micro algae by those groups and finally we have the
 (9) soft sediment this means in the muds and sands soft sediment
 (10) invertebrates These include things like poly eat worms (ph)
 (11) soil s a place where you expect to find worms even in a marine
 (12) system Some soft shelled clams Other amphipods and a
 (13) great deal of other tacits fall in this group This is a group that
 (14) I will call the depositors as a label for what they are and
 (15) that s because these are eating the plant detritus and the
 (16) benthic micro algae which are deposited on the seafloor they
 (17) are on the seafloor That distinguishes it and those groups
 (18) from the suspension feeding clams barnacles and mussels
 (19) and barnacles and mussels are going hungry - no they have their
 (20) do here That distinguishes it from others but these are
 (21) all feeding on the phytoplankton in the water column so they
 (22) are filtering Whereas this group of deposit feeders that I ve
 (23) indicated here is feeding upon material on the seafloor
 (24) Q All right Now they re a part of the food web Doctor
 (25) that s above the herbivores and to some extent the -

Vol 25 4296

(1) A Yes
 (2) Q What are they?
 (3) A They are what we typically call primary or I ll use that
 (4) to indicate it predators The predators being those animals
 (5) that are eating the plant eaters and I ll indicate a number of
 (6) those that are most important in this system and again I ll
 (7) group them together so we don t have an infinite number of
 (8) these but rather just a few
 (9) One that you ve seen already and is of some importance so
 (10) it s appropriate to draw is the drills They drill barnacles
 (11) and mussels largely Another that I might put up here would be
 (12) the dungeness crabs Dungeness crabs are feeding on
 (13) on suspension feeding clams and on these soft sediment
 (14) invertebrates in large measure Then I m going to add up here
 (15) larval and juvenile herring Larval and juvenile herring feed
 (16) on zooplankton and the small zooplankton these are such
 (17) small animals after they have just hatched from the egg they can t
 (18) take a large zooplankton they take a small zooplankton There
 (19) are a group of plant associated fishes juvenile cod that you
 (20) find in this system as abundant predators They are being fed
 (21) by the phytol invertebrates amphipods and isopods
 (22) Finally let s put larval and juvenile pink salmon into
 (23) this puzzle to show you where they fall Larval pinks
 (24) juvenile pinks are mostly eating the zooplankton also eating
 (25) the amphipod isopods that come from the phytol group and this

Vol 25 4297

(1) phytol group includes another I should mention by name which
 (2) unfortunately is another long word the harpacticoid copepods
 (3) It s a group of bugs it s a little bit different from the
 (4) other group of bugs that s probably the best way to treat them
 (5) for our purposes Where do we have this And then the
 (6) amphipods from this soft sediment environment are also prey
 (7) for
 (8) the larval and juvenile pinks
 (9) Q Now once again is there a higher level and beginning to
 (10) focus more on salmon and herring in higher stages that is
 (11) important in this food web sir?
 (12) A Yes there is And now we get to where the adult fishes
 (13) come in Before I deal with the fish let me call these upper
 (14) level which is secondary predators as a type and these will
 (15) include such things as the sea otter Sea otter eats mussels
 (16) dungeness crabs sea urchins and clams in the Prince William
 (17) Sound and our spill affected region
 (18) Then we ve got adult herring to place in this puzzle
 (19) Adult herring likewise feed on zooplankton like the juveniles
 (20) but they feed on bigger ones as they get bigger it s a bigger
 (21) prey standard ecological pattern So adult herring fall into
 (22) that range I should add into this puzzle another box at the
 (23) previous level that I ll call other forage fishes Forage
 (24) means something that you eat so these are fishes that really
 (25) get chomped on they are part of a fish based ecosystem that is
 feeding a lot of birds and mammals and other fishes

Vol 25 4298

(1) And by other the herring is part of this these other
 (2) forage fishes these types that we are talking about here are
 (3) capelin and sandlance predominantly and these are
 (4) zooplankton
 (5) feeders Now I ve got my adult herring in the puzzle I don t
 (6) yet have adult pink salmon Should add one other line here
 (7) too and that is adult herring feed upon the juveniles there
 (8) is cannibalism in that species and we need a line that
 (9) connects those The adult pink salmon up here are eating
 (10) juvenile herring other forage fishes plant associated fishes
 (11) as well Interestingly these plant associated fishes have a
 (12) line that connects them to larval juvenile pink salmon so that
 (13) this complexity is enhanced and you might look at that and
 (14) think it looks like a mess but that is in fact a food web and
 (15) the purpose of drawing it was twofold One to tell you who ate
 (16) whom in the largest groups that we ve been talking about here
 (17) so you will you ll be able to put it in a context of the
 (18) broader coastal ecosystem and to see that it is a web with
 (19) arrows going from several boxes to several others
 (20) Q Now Doctor if there is a significant effect caused by any
 (21) number of things on one part of this system does that have
 (22) ramifications or one element of this system does that have
 (23) ramifications for the rest of the system?
 (24) A Yes Part of the reason for drawing a food web is to
 (25) understand how different species are interconnected in an
 ecosystem How they are not independent of one another
 Now

Page 4299

(1) it's pretty straightforward you will be dependent on the prey
 (2) if food you're eating dependent on predators that are eating
 (3) you those are what we call direct interactions in food webs
 (4) and food chains and they exist in this system and are quite
 (5) important but in addition there are indirect interactions
 (6) These are one that are separated by one or two arrows away
 As
 (7) an event moves through the system and we call this cascading
 (8) of effects And cascading of these effects is best known in
 (9) the marine environment in this northern Gulf of Alaska
 (10) ecosystem that we're dealing with The example that describes
 (11) it best is one involving the sea otter and other components
 (12) here The sea otter is called a Keystone species Keystone
 (13) meaning it plays such a large role has effects that carry
 (14) through the whole salmon
 (15) MR SANDERS Your Honor let me interpose I think
 (16) we're getting far afield with sea otters
 (17) MR JAMIN We're going to connect it right up with
 (18) the next sentence
 (19) THE COURT I'm concerned that sea otters is not one
 (20) of the species that your plaintiffs deal with in this segment
 (21) of the case so -
 (22) MR JAMIN May I take just a second I think Dr
 (23) Peterson will explain how the sea otters are going to consume
 (24) sea urchins which create barrens at the lower levels and
 (25) effects the species to explain the notion of cascading it's

Page 4300

(1) not my intent to go into sea otters as a damage element but
 (2) simply use it as a demonstration of the cascade
 (3) THE COURT Is it not possible to use an example that
 (4) deals with something that we're more interested with?
 (5) MR JAMIN I think you're - as soon as it goes back
 (6) up we're going to be very interested in everything that is from
 (7) the environment in which the fucus is found and in which the
 (8) seaweeds are found because they are both the home and the
 food
 (9) source for the species we're interested in
 (10) MR SANDERS I don't think that's the way he's going
 (11) to explain it but I'll withdraw the objection
 (12) MR JAMIN Thank you Your Honor
 (13) BY MR JAMIN
 (14) Q Please proceed
 (15) A We know the effect and the way that these effects cascade
 (16) through the ecosystem from sea otters because we've had
 (17) actually a huge experiment that we have done and followed
 (18) scientifically its outcome We as a society very nearly
 (19) exterminated the sea otter from the northern on south from
 (20) hunting and gathering pelts we over hunted it And around
 (21) 1912 we have put protections on and have now watched the sea
 or
 (22) the population return And we've had a unique opportunity to
 (23) look at these systems with and without sea otters The sea
 (24) otters has as its preferred prey the sea urchin in the
 (25) absence of the sea otter the urchin population grows it

Page 4301

(1) doesn't happen overnight but sea urchins grow and they
 (2) overgraze their food and what they are grazing on are these
 (3) kelps and seaweeds in the shallow subtidal zone they
 (4) overgraze and create what scientists call urchin barrens these
 (5) would have been lush but are now so bare of algae that they
 (6) are all urchin barrens in the absence of otters to crawl
 (7) them When that happens the phytoplankton invertebrates that live in
 (8) that habitat and the plant associated fishes decline
 (9) significantly in abundance So there are changes that work
 (10) their way cascading through the ecosystem to different
 (11) components of the system finally affecting these plant
 (12) associated fishes in the near shore zone as well as affecting
 (13) the plant habitat that is an important one for herring egg
 (14) deposition that is the cascade that is the relevance of fish
 (15) in this system There is an additional effect that occurs
 (16) too This is a system where we as ecologists understand as
 (17) posing strong biological interaction that's system where there
 (18) are strong connections between species and when these
 urchin
 (19) barrens develop by removal of the kelps and the seaweeds or
 (20) grazing them down to low numbers it turns out that mussels and
 (21) barnacles among others over here benefit You might say how
 (22) do they benefit That's because they are competing for space
 (23) and so when this space is freed up by having the urchins graze
 (24) off the algae it's taken up by animals which compete with the
 (25) algae So there is a connection from here to here that's not

Page 4302

(1) illustrated on this diagram because it's not an eating
 (2) connection it's a competition connection but it still falls
 (3) in the category of strong biological interactions which we
 (4) know as coastal scientists are important determinants of the
 (5) way this ecosystem works
 (6) Q Dr Peterson is it your opinion that this ecosystem that
 (7) you've described is susceptible to floating pollutants?
 (8) A Yes it is
 (9) Q How does that work?
 (10) A The floating pollutants affect this system by much the same
 (11) way that I described how it works If we have a floating
 (12) pollutant and let's take for relevance oil spilled in this
 (13) system it floats initially So there is an initial phase
 (14) whereby that oil is in contact with that neuston zone that
 (15) very thin film on top of the ocean surface in which we find
 (16) larvae and eggs of some fishes larvae of a variety of marine
 (17) organisms it also in that case encounters the vertebrates
 (18) they need to breathe and feed the birds and the mammals so
 (19) that's a phase of chronic mortality Then the same ocean waves
 (20) and currents that bring in the food to this shore bring in that
 (21) oil or that nutrient that's floating on the surface and have
 (22) the effect of distributing and applying the pollutant from the
 (23) top of the intertidal zone down to the bottom So that
 (24) pollutant is then laid across on the surface of the intertidal
 (25) zone as well later on as the tide rises and falls the

Page 4303

- (1) pollutant its oil can be remobilized and float out for some
 (2) long time later as part of that neustonic zone so that can
 (3) live as an effect that curse after the initial acute phase and
 (4) during this later chronic phase when the environment is then
 (5) covered in pollutant or oil
 (6) Q Doctor you may be seated if you wish I want to ask you
 (7) about some of the work you ve done with the trustees
 (8) specifically about the Exxon Valdez oil spill but before I do
 (9) let us just clarify who are the trustees?
 (10) A The trustees are representatives of three federal and three
 (11) state agencies who have responsibility for evaluating the
 (12) impact of the spill on the natural ecosystems and the humans
 (13) that use them They are therefore the secretaries at the
 (14) federal level of the department of commerce the department of
 (15) interior and the department of agriculture or their destinies
 (16) and at the state level the secretary or head of the ADF&G
 (17) Fish & Game the division of natural resources and the
 (18) department of law
 (19) Q All right And calling upon your experience which I think
 (20) you told us was about a month and a half a year for the last
 (21) five years with the trustees is it your opinion that the
 (22) habitats of the coastal ecosystem that you ve described and the
 (23) prey base for herring and salmon was damaged by the Exxon
 (24) Valdez oil spill?
 (25) MR SANDERS Objection getting into this

Page 4304

- (1) summarization problem
 (2) MR JAMIN I m going to ask him why in a moment I
 (3) think I have a right to ask
 (4) THE COURT That really isn t why the objection is
 (5) being made
 (6) (At side bar off the Record)
 (7) MR SANDERS I withdraw the objection based on the
 (8) statements of counsel
 (9) THE COURT You may proceed
 (10) BY MR JAMIN
 (11) Q Doctor let me repeat the question if I may Calling upon
 (12) again your experience with the trustees science studies and
 (13) with reference to this nearshore system is it your opinion
 (14) that the habitats of the coastal ecosystem and the prey base
 (15) for herring and salmon were damaged by the Exxon Valdez oil
 (16) spill?
 (17) A Yes it is
 (18) Q And what sir is the basis for that opinion?
 (19) A The basis for that opinion comes from several of the
 (20) natural resource damage assessment studies that have been
 (21) conducted and completed by the trustee counsel
 (22) Q Can you describe those studies generally sir?
 (23) A Yes I can One study demonstrated that there was damage
 (24) to fucus Damage means the abundance and biomass of fucus
 (25) declined in the intertidals zone by on average from ten to over

Page 4305

- (1) 80 percent It declined in all three areas of the spill
 (2) geographically Prince William Sound the Kenai Peninsula and
 (3) Lower Cook Inlet and finally the Kodiak archipelago and the
 (4) Alaska Peninsula The declines did not show recovery by 1992
 (5) the last time there are data for that system and they apply in
 (6) all the different habitats the exposed rocky the sheltered
 (7) rocky the coarse textured boulder cobbled shores and the fine
 (8) textured sand muddy shores In addition additional studies in
 (9) the natural resource damage assessment demonstrated that
 there
 (10) was a decline in the abundance of the stocks and flowering
 (11) stock of the eelgrass of the sea grass and that was in Prince
 (12) William Sound and detected as a 30 percent decline by 1990
 (13) summer of 1990 in the second year second summer after the
 (14) spill
 (15) In addition there was a study of the kelps in all the kelp
 (16) habitats and the kelps also assessed in Prince William Sound
 (17) in year 1990 the second summer after the spill demonstrated
 (18) that in oiled areas there was a significantly lower amount of
 (19) large kelp compared to small kelp indicative of the oil having
 (20) killed the larger kelps in 1989 the year before As well
 (21) there was a study which demonstrated that in those eelgrass
 (22) habitats the abundance of amphipods food for the pink
 salmon
 (23) juveniles the abundance of amphipods declined by 60 percent
 as
 (24) measured in again the summer of 1990 and finally a coastal
 (25) habitat study demonstrated that the abundance of intertidal

Page 4306

- (1) fishes as a group had declined by 75 percent in the summer of
 (2) 1990 and that the recovery in the biomass was not yet complete
 (3) in 1991
 (4) Q Doctor were the studies that you have just relied on in
 (5) stating your conclusion those that you were directly involved
 (6) in as a peer reviewer and as a person involved in planning and
 (7) designing the science?
 (8) A Yes I was
 (9) MR JAMIN Your Honor I have no further questions
 (10) MR SANDERS I don t think I can finish in two
 (11) minutes
 (12) THE COURT I m disappointed
 (13) MR SANDERS So am I
 (14) THE COURT Ladies and gentlemen we will adjourn for
 (15) the day at this time Please remember my instructions that you
 (16) not listen to or read anything about our case during our
 (17) recess We will reconvene at 8 00 tomorrow morning and we
 will
 (18) be in recess until that time
 (19) (Proceedings recessed at 2 00 p m)

(1) PROCEEDINGS
 (2) (Jury in at 8 00 a m)
 (3) THE CLERK All rise
 (4) (Call to Order of the Court)
 (5) THE COURT Good morning ladies and gentlemen This
 (6) is the continuation of trial in Case A89-0095 Civil
 (7) Mr Sanders
 (8) MR SANDERS Good morning Your Honor
 (9) THE COURT Dr Peterson you understand you re still
 (10) under oath?
 (11) THE WITNESS Yes sir
 (12) THE COURT You may proceed
 (13) MR SANDERS Thank you Your Honor
 (14) CROSS EXAMINATION OF DR CHARLES PETERSON
 (15) BY MR SANDERS
 (16) Q Mr Peterson I want to start with the testimony that you
 (17) gave yesterday concerning the sea urchins As I understand
 (18) what you were telling us was that if there is a significant or
 (19) substantial decline or even extinction of a population like sea
 (20) urchins then that would cause or would result in an increase
 (21) in the number of sea urchins that would be present in the
 (22) Sound and if that should occur that would result in barrens
 (23) or the lack of plant life in the areas because of the increase
 (24) in the number of sea urchins is that roughly it?
 (25) A Yes that s roughly it although my remarks are specific to

Vol 26 4314

(1) this particular northern Gulf of Alaska ecosystem where this
 (2) phenomenon has been studied and it s specific to the otter
 (3) which is the keystone predator which has the capacity to
 (4) control the abundance of the urchin
 (5) Q And the relevance for us in a case involving fish I assume
 (6) that if you have these barrens then that is another lack of
 (7) habitat for food that fish eat is that correct?
 (8) A That is one of the areas in which that is relevant
 (9) Q So that s how that has to do with this case right?
 (10) A That s one of the ways in which it has to do with this
 (11) case
 (12) Q In your report that you made in October you mentioned that
 (13) there was a sea urchin explosion didn t you?
 (14) A Yes I mentioned that the sea urchins had reappeared in
 (15) western Prince William Sound
 (16) Q Well now isn't it a fact you used the word explosion in
 (17) your report?
 (18) A I would like to see that I may well have if I might
 (19) take a look
 (20) Q I ll be right there in a minute I believe it s on page
 (21) 3 Well let me double check here
 (22) I apologize Your Honor I thought he would remember
 (23) this
 (24) Well I ll ask somebody to check on this and I ll come
 (25) back to this Let me go on with what - I ll find the exact

Vol 26 4315

- (1) right page in your report
 (2) Whether you called it an explosion or not and I'll
 (3) represent to you that you did and I'll show it to you in a
 (4) minute the basis for whatever it was you said was what
 (5) Dr Peterson?
 (6) A The basis was a discussion with a Mr Stephen Jewett
 (7) Q That was on the telephone wasn't it?
 (8) A Well I didn't finish Mr Stephen Jewett and a Mr Dean
 (9) who were both people who participated in the study of subtidal
 (10) areas where the urchins are found The discussion with Mr
 (11) Jewett was on the phone the discussion with Mr Dean was in
 (12) person at some length
 (13) Q I found it May I approach? If you'll look at the bottom
 (14) of page 5?
 (15) A Yes
 (16) Q You used the word explosion didn't you?
 (17) A Yes
 (18) Q May I have that back?
 (19) A Thank you
 (20) Q Now this what you call an explosion is based on a
 (21) telephone call with Dr Jewett from - he's from the University
 (22) of Alaska?
 (23) A That's correct
 (24) Q And a later conversation with Dr Dean?
 (25) A That's correct

Vol 26 4316

- (1) Q And both of those gentlemen were and are principal
 (2) investigators with the - in the Trustee study correct?
 (3) A That's correct
 (4) Q And when you talked to Dr Jewett did he tell you where
 (5) these urchins were found?
 (6) A He did not tell me the specific localities of the six that
 (7) he studied My recollection is that he said that urchins were
 (8) abundant at at least four of the six localities where they
 (9) visited
 (10) Q And did Dr Dean tell you where these locations were?
 (11) A If he did I don't recall that information
 (12) Q Did either of these gentlemen tell you how big these
 (13) urchins were?
 (14) A Yes they did
 (15) Q And didn't he in fact tell you that they were of the size
 (16) that sea otters don't usually mess with they are too small?
 (17) A Actually he didn't He said they were small but he said
 (18) the urchins out in Prince William Sound may well have some
 (19) attention by sea otters As a rule otters focus their
 (20) predation on the larger urchins and ignore the small ones but
 (21) they are a preferred prey so it can happen that otters take
 (22) the small ones And in their experience this was a size that
 (23) they had seen otters taking in the past in Prince William
 (24) Sound but there certainly is an issue that these urchins were
 (25) still small at the time

Vol 26 4317

- (1) Q They needed to grow some before they would be eaten by
 sea
 (2) otters right?
 (3) A No that doesn't follow from what I was saying It's
 (4) likely that the predation rate upon them was not great but
 (5) it's likely that there is some predation rate upon urchins of
 (6) that size
 (7) Q Now since you don't know where these sea urchins were
 (8) found in these six locations four of which were I guess
 (9) relatively abundant you don't know what relation they had to
 (10) where the sea otters had declined as a result of the oil spill
 (11) or whether they hadn't declined right?
 (12) A All of these six locations were in the western part of
 (13) Prince William Sound which is the area that the oil had had an
 (14) impact on the otters The otters live in that area as well as
 (15) the east but they were all in the western part of Prince
 (16) William Sound which is the impact area
 (17) Q But all areas weren't impacted in the western area
 (18) correct?
 (19) A All areas were not impacted and the impact on any given
 (20) species in that system depends upon its mobility and how it
 (21) moves around among those areas So for species that are
 (22) mobile effects are averaged over a large area For species
 (23) that are sessile and stay in one place then effects can be
 (24) more localized Otters fall in a grouping that would be
 (25) considered mobile in that context

Vol 26 4318

- (1) Q But since you don't know where these locations were
 (2) specifically nor how that relates to where the sea otters were
 (3) or not then it's hard to draw those two facts together is it
 (4) not?
 (5) A Could you clarify what two facts you're referring to?
 (6) Q I'll just move along Dr Jewett - Dr Peterson didn't
 (7) Dr Jewett tell you that a most likely explanation for the
 (8) finding of these sea urchins in these six locations was that he
 (9) had more divers out that year than in previous years?
 (10) A No he definitely did not say that In fact he said just
 (11) the opposite He spent a lot of time in this system over the
 (12) years and had a good feel for the abundance of urchins from a
 (13) time period of the early 70s throughout the Sound in places
 (14) where he had worked up until recent
 (15) Q He didn't call it an explosion did he?
 (16) A I certainly couldn't tell you whether he called it an
 (17) explosion or not
 (18) Q When he talked to you he didn't call it an explosion did
 (19) he?
 (20) A I do not know whether he used that word and he described
 (21) the situation which is what I'm attempting to do
 (22) Q And you describe it as an explosion?
 (23) A Yes I do and I do that because it occurs from a basis of
 (24) effectively zero In fact there was a natural resource
 (25) assessment program to look at urchins in the Sound It was a

Vol 26 4319

- (1) multi - tens of thousands of dollars research program set up
 (2) by the Trustees and they simply could not find urchins They
 (3) went in the Sound they looked very carefully It wasn't
 (4) random sampling at some sites but it was an attempt to look at
 (5) sea urchins to study and they ultimately had to give the money
 (6) back to the Trustees and say they couldn't do it because there
 (7) were no urchins there
 (8) Q And in years prior to that there were urchins though
 (9) weren't there? And isn't that the natural cycle they spike
 (10) up heavy recruitment they go down and spike up and then they
 (11) go down?
 (12) A There were urchins relatively consistently in the early
 (13) 70s The decline in urchins coincided with the otters
 (14) increase in the system but I would agree with you that urchins
 (15) have sporadic recruitment success as a rule that there is some
 (16) variability from year to year in the numbers of young urchins
 (17) that settle out.
 (18) Q Now you mentioned when you were testifying yesterday that
 (19) around the turn of the century sea otters were virtually
 (20) extinct and that things had to be done to make sure that the
 (21) entire population from this area wasn't just completely wiped
 (22) out isn't that right?
 (23) A Yes I would say that the effects of hunting for the pelts
 (24) had reduced the range of sea otters so that you could call them
 (25) locally extinct through northern California and other portions

Vol 26 4320

- (1) of the coastline including a large fraction including the
 (2) northern Gulf of Alaska The population it wasn't entirely
 (3) extinct because otters still remain and that's how they
 (4) recovered
 (5) Q And the level or population of otters in this region
 (6) Prince William Sound Alaska coast in the turn of the century
 (7) was certainly less than it is now wasn't it?
 (8) A Yes that's true
 (9) Q And in those years those early years when there had to be
 (10) some protection for them was there evidence of lots of
 (11) barrens?
 (12) A We don't have data from 1901 or 1902 to be able to address
 (13) that or at least no data that I have been acquainted with
 (14) Q Any evidence - well when did the sea otters start coming
 (15) back?
 (16) A The population began recovering soon after the hunting
 (17) pressure was released They have the potential to increase at
 (18) three or four percent a year and begin that increase as soon
 (19) as the hunting pressure stops removing excess otters if you
 (20) will
 (21) Q When did they come back in sufficient numbers to control
 (22) these exploding sea urchins?
 (23) A Well in the range of somewhere between the mid 70s and
 (24) probably 1985 I think is my understanding of the time frame
 (25) in which urchins effectively disappeared from the Sound and the

Vol 26 4321

- (1) otters were growing rapidly in that time
 (2) Q And during the years prior to the 70s was there a great
 (3) shortage of salmon and herring as a result of these barrens
 (4) caused by the explosion of these sea urchins?
 (5) A The salmon landings have increased since those times until
 (6) just very recently but there was certainly not an absence of
 (7) salmon or herring that was associated with that time period
 (8) Q And I guess in the time period of the 70s and the 60s and
 (9) the 50s there is likewise no evidence of great barrens?
 (10) A Again I do not know of any evidence that addresses the
 (11) full extent of that vegetated nursery habitat in that time
 (12) period The evidence that began to become collected was that
 (13) I'm aware of extensive later than that
 (14) Q So you don't know if the theory that you told us about
 (15) yesterday worked in the 40s and the 50s and the '60s in
 (16) Prince William Sound with respect to sea urchins otters and
 (17) barrens do you?
 (18) A Let me answer that by saying that we know that this worked
 (19) in earlier times in the northern Gulf of Alaska by virtue of an
 (20) ability to dig up Indian that is to say - let me rephrase
 (21) that. Alutiq kitchen middens which are deposits of materials
 (22) that had been eaten by those peoples and go back some time
 (23) in
 (24) doing that - and that is Aleutian area
 (25) In doing that it was quite clear that the relationship
 (26) that I talked about between otters urchins and fish held over

Vol 26 - 4322

- (1) a long period of history going back over a thousand years
 (2) That particular study was not conducted in Prince William
 (3) Sound but the system is sufficiently similar that there is
 (4) every reason to believe that those results would hold there as
 (5) well
 (6) Q But Doctor my question to you is if those results would
 (7) hold then you would expect to see some dramatic change in
 (8) the
 (9) salmon population in Prince William Sound in the years when
 (10) you
 (11) had the shortage of otters as a result of these barrens and
 (12) you don't have that sort of information increases In fact
 (13) the information is to the contrary isn't it?
 (14) A I have not done an analysis to look at that information
 (15) and I cannot say it is to the contrary
 (16) Q You just don't know then?
 (17) A I have not looked historically to make that relationship
 (18) no
 (19) Q So you don't know whether this theory from this study that
 (20) you're referring to actually works?
 (21) A I believe that -
 (22) Q It works in the Aleutians it worked in that study but you
 (23) don't know whether it works with respect to history in the 40s
 (24) and the 50s or the 60s or now?
 (25) A Science works by not repeating every test of every question
 (26) in every place you go and an understanding of the processes
 (27) and how the system works that might be developed in one
 (28) place

Vol 26 4323

- (1) is well transportable to others unless there are fundamental
 (2) reasons to make that system different I don't have any reason
 (3) to believe that the Prince William Sound system is different in
 (4) a significant environmental way to make those interactions any
 (5) different
 (6) Q As a hypothesis you can defend it but whether it actually
 (7) applies here and now to this situation you don't know?
 (8) A I can defend it as well and I do it on the grounds that I
 (9) just argued and that is that science works by creating an
 (10) understanding of the system the way things interact one with
 (11) another and while we may not have done that experiment in
 (12) every place we wish to have that understanding the
 (13) understanding allows us to draw reasonable and confident
 (14) conclusions
 (15) Q When did Dr Jewett report this to you September of 93
 (16) wasn't it?
 (17) A Sometime after the summer of 1993 September I believe
 (18) Q And have you done experiments to determine whether this
 (19) phenomenon does work since then since getting this
 (20) information?
 (21) A No What I have done is to ensure that the Trustees are
 (22) aware of this phenomenon and that they would fund a
 continuing
 (23) project by Mr Jewett to go out and follow the consequences of
 (24) this and that is what I've done in the meantime In other
 (25) words I -

Vol 26 4324

- (1) Q In other words you want to see if it's going to work?
 (2) A In other words I want to see how much of it is going to
 (3) happen In other words the extent of this is an issue that is
 (4) a reasonable issue One can use science to reach reasonable
 (5) and well established confident conclusions about process
 about
 (6) factors making substantial contributions to other species
 (7) populations but the actual magnitude in estimating those
 (8) actual magnitudes is something that's not as easy to do and
 (9) that is an important issue an important enough one to justify
 (10) wanting to go out in the Sound in this system so that the
 (11) magnitude of any effect like this could be ascertained and
 (12) that's the motivation I think for wanting to continue this
 (13) Q Let me turn to what you said at the end of yesterday You
 (14) gave an opinion that - and I'm through with sea urchins
 (15) You gave an opinion that the habitat in Prince William
 (16) Sound and the habitat is the one you described at some length
 (17) yesterday was damaged by the oil spill and then you said -
 (18) and I want to make sure that I've got this right - you said
 (19) that you based that opinion on at least three or four studies
 (20) four studies and then I think a corollary or an added part to
 (21) one of those studies and one of those was that there had been
 (22) damage with respect to the abundance and biomass of fucus
 and
 (23) that decline had been between 10 and 80 percent correct?
 (24) A I qualified that and said much more If there were a
 (25) court reporter record I could repeat it but I could attempt

Vol 26 4325

- (1) to do it right now
 (2) Q I'll just read it to you
 (3) A If you'd like me to qualify with additional comments I
 (4) Q I'm on the page 4304
 (5) Can you describe those studies generally sir?
 (6) Answer Yes I can One study demonstrated that there was
 (7) damage to fucus Damage means the abundance and biomass
 of
 (8) fucus declined in the intertidal zone by on average of 10 to
 (9) over 80 percent It declined in all three areas of the spill
 (10) geographically Prince William Sound the Kenai Peninsula and
 (11) Lower Cook Inlet and finally the Kodiak archipelago and the
 (12) Alaska Peninsula The declines did not show recovery by 1992
 (13) the last time there was data for that system and they apply in
 (14) all the different habitats the exposed rocky the sheltered
 (15) rocky the coarse textured boulder cobbled and the fine
 (16) textured sand muddy shores
 (17) A Yes that is the way in which I clarified that
 (18) Q You call that a clarification?
 (19) A Well that -
 (20) Q That's a description of how wide the range was right?
 (21) A The point is that the coverage of where those - where that
 (22) information was drawn from
 (23) Q Then you said in addition there were studies showing a
 (24) decline in the abundance of the stalks and flowering stalks of
 (25) eelgrass of the sea grass and that was in Prince William

Vol 26 4326

- (1) Sound and detected as 30 percent decline by 1990 summer of
 (2) 1990 in the second year second summer after the spill
 (3) correct?
 (4) A Yes
 (5) Q Then you said that there had been a significantly - there
 (6) were studies showing a significantly lowering amount of large
 (7) kelp as opposed to small kelp indicative of having killed the
 (8) larger kelps in 1989 the year before and that was a 1990
 (9) study?
 (10) A That's correct
 (11) Q And then you said that there was a study showing that there
 (12) had been a decline in amphipods?
 (13) A Yes
 (14) Q And that was in 1990 correct?
 (15) A Yes That was the 1990 information that I referred to
 (16) Q And that decline was how much?
 (17) A The decline in amphipods was in the ballpark of 60 percent
 (18) in the eelgrass habitats and the lower fringe of the eelgrass
 (19) habitats
 (20) Q And my copy of the transcript gets hard for me to read for
 (21) some reason The last study had to do with intertidal fishes
 (22) and my recollection is that you said that there was a 75
 (23) percent decline of intertidal fishes in 1990?
 (24) A My recollection was 70 but 75 is in the same ballpark
 (25) That's the ballpark of the decline in abundance of intertidal

Vol 26 4327

- (1) fishes observed in 1990
 (2) **Q** And you said there was no recovery of that in 91?
 (3) **A** No I said it had not yet recovered by 91 There was a
 (4) progress towards recovery but the biomass difference on
 (5) average remained in 1991 - in other words both the numbers of
 (6) fish were counted and also they were weighed So there was a
 (7) measure of how much there was in terms of biomass
 (8) **Q** Now the habitat you ve explained yesterday is where the
 (9) food - where the food for some of the fishes including salmon
 (10) and herring larvae and juveniles live and are sheltered and
 (11) grow right?
 (12) **A** Yes
 (13) **Q** That s what we re talking about food for fish?
 (14) **A** Yes
 (15) **Q** And you re talking about a habitat effect based on these
 (16) studies or demonstrated maybe by these studies that you
 (17) referred to in 1990?
 (18) **A** Yes in other words I ve spoken to the plant which forms
 (19) the structural basis of the habitat and acts in so many ways
 (20) that I discussed as the bed for laying of herring eggs as the
 (21) habitat for numerous organisms that especially pink salmon eat
 (22) during their two month stage in their life cycle when they
 (23) emerge from the streams and I ve spoken about amphipods
 (24) which
 (25) form one of the prey items for pink salmon during that two
 (26) month period after they have emerged from streams And

Vol 26 4328

- (1) similarly I ve spoken of the intertidal fishes which include
 (2) prey for adult salmon as they return back into the Sound as
 (3) well represent a group that is living in that environment So
 (4) one can use that as an indication of how the environment is
 (5) functioning to grow those fishes and produce those fishes that
 (6) are sharing that habitat
 (7) **Q** Now I m glad you mentioned pink salmon They are part of
 (8) this food web that you ve described for us here You of
 (9) course recognize they have a two year life cycle?
 (10) **A** Yes
 (11) **Q** And the salmon that were growing feeding in the Prince
 (12) William Sound and these other affected areas when the oil was
 (13) there in the spring and the summer and the fall of 1989 are the
 (14) group that returned to spawn in 1990 right?
 (15) **A** The juveniles that had emerged in 1989 are the ones that
 (16) return as adults in 1990
 (17) **Q** And they are the ones that eat this food that you re
 (18) talking about?
 (19) **A** They are the ones that ate it in 1989
 (20) **Q** Right they ate it when the oil was there right
 (21) presumably if they could?
 (22) **A** One presumes yes
 (23) **Q** Right And it s that class that year of fish that would
 (24) return if they lived and survived in 1990 where they would
 (25) come in and they would spawn and then they would die or they

Vol 26 4329

- (1) would be caught by fishermen right?
 (2) **A** Yes You re going through the first year of life history
 (3) of the salmon that were exposed as juveniles when they
 (4) emerged
 (5) from the streams or alternatively from the hatcheries that s
 (6) the first year of history
 (7) **Q** Right And isn t it a fact that the 1990 - well let me
 (8) take one other step here with you These ones that are
 (9) returning to spawn in 1990 those are the ones that constitute
 (10) the run size they measure for the fishermen right, the ones
 (11) coming back to spawn that are the ones that the fishermen
 (12) catch?
 (13) **A** Yes That s the way we define the run strength or run size
 (14) is how many have returned to spawn or alternatively to be
 (15) intercepted by the fishery before they spawn
 (16) **Q** And then in 1990 these fish that had fed and swum out of
 (17) the Sound when the oil was there was the largest record catch
 (18) in history right?
 (19) **A** That is my understanding
 (20) **Q** Then the fish the pink salmon that fed as larvae and
 (21) juveniles in 1990 the time you had these studies here when
 (22) they fed and then left They returned in 1991 correct to be
 (23) caught or to spawn and die?
 (24) **A** The ones that emerged in 1990 are the ones that returned as
 (25) adults in 1991
 (26) **Q** And that was the second record - second highest year in

Vol 26 4330

- (1) history?
 (2) **A** That may be but what you are not knowing how many fish -
 (3) **Q** Just say yes or no
 (4) **MR JAMIN** Your Honor may the witness answer the
 (5) question?
 (6) **THE COURT** The witness tends to extend his answer
 (7) You re entitled to yes or no and you re entitled to get a yes
 (8) or no on that answer
 (9) **THE WITNESS** May I have the question repeated?
 (10) **BY MR SANDERS**
 (11) **Q** Isn t it a fact that the run size of pink salmon in Prince
 (12) William Sound in 1991 was the second highest in history?
 (13) **A** That s my understanding
 (14) **Q** The salmon let s talk about that in relation to the
 (15) habitat you were describing
 (16) Do you know in 1989 and 1990 what percentage of the salmon
 (17) pink salmon came from hatcheries as opposed to wild stock?
 (18) **A** Not exactly but it s in the ballpark of 75 percent
 (19) **Q** So by far a substantial majority of the salmon that
 (20) constitute the run the fish catch come from hatcheries
 (21) right?
 (22) **A** Yes that s true
 (23) **Q** And the other 25 percent or whatever that less than 50
 (24) percent number is come from the wild pink salmon that go up
 (25) these freshwater streams to spawn and they live in those

Vol 26 4331

- (1) freshwater streams after spawning excuse me and the eggs
 (2) then after spawning the eggs develop grow they live in
 (3) those freshwater streams and come out and feed and they have
 (4) the two year life cycle that's the wild stock right?
 (5) A Yes
 (6) Q Now how many pink salmon hatcheries were in the areas
 (7) affected - well let me strike it and ask it a clearer way for
 (8) you
 (9) How many pink salmon fish hatcheries were there?
 (10) A There are four I believe
 (11) Q How many of those were in areas where the oil came?
 (12) A Well that depends on how you define that because there
 (13) are fish that move out of that region so the fish go through
 (14) regions where the oil has been independent of the source
 (15) Q Doctor the question is how many hatcheries were in areas
 (16) where there was an - where the oil was spilled where the oil
 (17) came right one out of four?
 (18) A I guess what you're meaning is how many hatcheries are
 (19) ones
 (20) where the shorelines adjacent to them were oiled?
 (21) Q Exactly
 (22) A And one is my understanding
 (23) Q And are you aware that that one was boomed so that oil
 (24) didn't get into the hatchery? As a matter of fact they were
 (25) all boomed but only one of them was boomed where there was
 oil right?

Vol 26 4332

- (1) A I knew there was booming I don't know anything about the
 (2) success of it really
 (3) Q And let's talk about the wild stock Of the wild stock
 (4) what percent of the pink salmon wild stock returned to streams
 (5) in areas affected by the oil?
 (6) A About 50 percent is my understanding of the streams
 (7) streams that were oiled versus unoled
 (8) Q 50 percent?
 (9) A I believe so I could have that wrong
 (10) Q You could be about 30 percent off couldn't you? 20
 (11) percent sound better 15?
 (12) A To be honest I don't know You asked a question on which
 (13) I don't have a specific answer My recollection is it was
 (14) about half
 (15) Q Well if you don't know tell us you don't know
 (16) A I don't know the specific number I know it was a
 (17) substantial number
 (18) Q Substantial What do you mean by substantial? If you
 (19) know just tell us Doctor you don't know That will help us
 (20) if you tell us when you don't know Do you know?
 (21) A I answered I don't know the specific number I know that
 (22) it's a substantial number
 (23) Q Now relating your testimony about the habitat to these
 (24) numbers that we've been talking about the salmon generally
 (25) because of these - this mystery of science not only come back

Vol 26 4333

- (1) to spawn to the place where they were born they also tend to
 (2) feed close to as juveniles and fry They feed close to where
 (3) they were born before they leave right?
 (4) A There is some period of time during which they remain in
 (5) the near shore Exactly how far they move we hope to
 (6) understand but basically that's an accurate description
 (7) Q Now there was a study was there not by the Trustees by
 (8) principal investigators about the zooplankton levels in the
 (9) Sound in 1989 and 1990 correct?
 (10) A There was indeed a study that combined the zooplankton
 (11) sampling with an examination of the pink salmon in the
 (12) near shore
 (13) Q And that was done by a Mr or Dr Wortheimer (ph)?
 (14) A That's correct
 (15) Q What did that study show?
 (16) A That study showed that the pink salmon coming from the
 (17) hatchery where there was an oiled shoreline grew substantially
 (18) less than the pink salmon that came from hatchery where the
 (19) shoreline was unoled It also had zooplankton sampling where
 (20) they were unable to detect a difference in the abundance of
 (21) zooplankton in the shorelines of the oiled and unoled sites
 (22) Q Dr Peterson it's the last part I want to ask you about
 (23) Zooplankton were in your food web there right?
 (24) A That's correct
 (25) Q That's food for pink salmon?

Vol 26 4334

- (1) A That's correct
 (2) Q Juvenile fry larvae?
 (3) A It's one of their foods and a principal one
 (4) Q And that study in 1989 and 1990 showed that there was no
 (5) reduction in the zooplankton level in the areas studied
 (6) correct? Food didn't change?
 (7) A I have to qualify that Zooplankton are very mobile
 (8) organisms They are transported by the water masses that they
 (9) are in That's partly why they are called plankton and so it
 (10) is very difficult to detect effects on a small scale of any
 (11) kind of large change in their abundance even if that change
 (12) occurred And what that means is if there were one it could
 (13) be averaged over a fairly large area
 (14) So the zooplankton sampling that was conducted as part of
 (15) that study is simply not adequate sorts of sampling to address
 (16) the hypothesis that there may have been an effect of oil on
 (17) zooplankton over a large area So the data in that simply
 (18) can't be used to test the notion if you had it and indeed many
 (19) did that zooplankton may have suffered from the oiling effect
 (20) Q Stated another way those studies in 89 and 90 certainly
 (21) didn't support the proposition that there had been a reduction
 (22) in that type of food for salmon and herring in the spill areas?
 (23) A Those studies demonstrated more to the point that the
 (24) salmon grew less in the shoreline that was oiled than they did
 (25) in the shoreline that wasn't oiled and the growth of pink

Vol 26 4335

- (1) salmon during that stage of their life history relates directly
 (2) to the probability that they will return as adults to the
 (3) fishery if they don't grow large during that period the
 (4) probability is low that they will return as adults because of
 (5) predation that affects them during their life history
 (6) It does not say that the source of that difference was
 (7) zooplankton However it says more importantly that there
 (8) was an impact of the oiling on the growth rates of the fish
 (9) which is directly related to their probability of return
 (10) Q Dr Peterson we've already talked about that The ones
 (11) that were going out in '89 are the ones that came in in 1990
 (12) and set a record and the ones that were going out in '90 came
 (13) back in 1991 and was the second highest catch in history isn't
 (14) that a fact?
 (15) A Yes
 (16) Q All right Let's go to these other reports that you
 (17) mentioned
 (18) Can I have the bar code please?
 (19) Now make sure that I have - Your Honor I have neglected
 (20) I think to take one exhibit up I have the stack up there
 (21) but I left out one may I approach?
 (22) Doctor I want to make sure that you and I are talking
 (23) about the same reports here and I want to make sure the jury
 (24) understands which report you're talking about When you
 talked
 (25) about the eelgrass you were basing that on a report that

Vol 26 4336

- (1) appears in the Exxon Valdez Oil Spill Symposium at page 94
 and
 (2) it was an article done by Dean and I may mispronounce this
 (3) Stekolil and Steve Jewett?
 (4) A Is that a question?
 (5) Q Yes that's a question
 (6) A That is a summary of the information that's presented in
 (7) that abstract but there is a broader report on the subtitle
 (8) Habitat that's several pages long that I have shared with you
 (9) and that includes much more detail It's summarized here in
 (10) the abstracts
 (11) Q But that's the same report You've got a longer more
 (12) wordy version of it but this is an abstract of it?
 (13) A Yes I think they are in agreement but elaborated further
 (14) in the longer more wordy version
 (15) Q And then the next one about the amphipods that appears in
 (16) a report done by Jewett and Dean starting at page 97 We're
 (17) talking about the same report there that's where you got the
 (18) information you gave us yesterday about the amphipods?
 (19) A Again that information is drawn from the actual larger
 (20) source and it's described also as a summary here
 (21) Q Okay
 (22) A I haven't confirmed that those were the proper summaries
 (23) but I'll take it that they are
 (24) Q I'm looking for my glasses This next one is so small I
 (25) can't read it

Vol 26 4337

- (1) I'm confused about where - well I'm not confused but I'm
 (2) not sure where you got this 70 percent or 75 percent
 (3) intertidal fish business Can you tell us?
 (4) A Yes I'd be happy to That too comes from the Purlin
 (5) report in this case from the intertidal program the so-called
 (6) longer wordy version and that was reported both in their
 (7) annual report in 1992 and a more recent one of 1993 that I've
 (8) shared with counsel
 (9) Q I've handed Defendants Exhibit 9252 That's that smaller
 (10) one I just brought up Is that where this intertidal fish
 (11) business comes from have I guessed that right or the people
 (12) that were helping me guessed that right? Is that the right
 (13) one?
 (14) A This is a very incomplete and preliminary study of the
 (15) information which in later reports is provided in more detail
 (16) and more fully described But this is an attempt to make what
 (17) was the earliest looks like 1991 description of that in the
 (18) preliminary report. Subsequently there were final reports
 (19) produced in 1992 and - well another - preliminary one in '92
 (20) but a final report in and around December of 1993, that present
 (21) this information in the detail that that is available
 (22) Q But at least I'm in the right ballpark here? This is the
 (23) report? It may not be the longer version of it but it is -
 (24) we're on the right page of the song book right?
 (25) A We're on the wrong song book

Vol 26 4338

- (1) Q We are? Is it the right report or the wrong report?
 (2) A This is the wrong report for the detailed information
 (3) It's a preliminary report referring to their initial
 (4) presentation of some of that information The final report has
 (5) the full set and the full set of analyses of this data rather
 (6) than summary statements
 (7) Q Well put that one aside then Let's talk about the
 (8) amphipods
 (9) Can I have - excuse me just a minute Your Honor
 (10) Is this the title of the report?
 (11) A Yes of the abstract in the Exxon Valdez Oil Spill
 (12) Symposium Abstract Volume
 (13) Q Ask you to turn to the next page?
 (14) A What is this page if I might ask?
 (15) Q This is page 97 first page of that abstract Did you find
 (16) it?
 (17) A I'm sorry Looking to the yellow marks?
 (18) Q First I wanted to know have you found the abstract at page
 (19) 97?
 (20) A Yes I'm on 97
 (21) Q That is the abstract we were talking about earlier?
 (22) A Yes
 (23) Q Now would you turn to the second page please or you can
 (24) look up on the screen? First you said that in 1990 the
 (25) amphipods had been reduced by 60 percent right?

Vol 26 4339

- (1) A That s correct
 (2) Q Would you read for the jury - let me see if I can bring this up a little bit Can you read for the jury the first section that is highlighted in yellow?
 (3) A Perhaps the greatest single indication of initial oil effects followed by recovery was the recolonization of oiled sites by sensitive burrowing amphipods In 1990 at 6 to 20 meter depths the abundance of all amphipods was significantly greater at unoiled (unoiled mean equals 47 individuals/ 0/1 meter squared
 (4) Q Stop right there That s what you told us yesterday?
 (5) A That s the information on which I based my comment yesterday
 (6) Q Would you read the next sentence that you didn t tell us yesterday?
 (7) A However at this depth in 1991 no difference in total amphipod abundance or biomass was detected between oiled and unoiled sites
 (8) Q Let me take you down to the last highlighted portion could you read that for us?
 (9) A Yes I d be happy to Within Prince William Sound these crustaceans had reoccupied the oiled sites in significant densities by 1991 just two years since being oiled
 (10) Q These crustaceans were the amphipods?
 (11) A Yes that s correct

Vol 26 4340

- (1) Q Let me ask you to back up - first before I do that take this off for a second
 (2) You mentioned the fucus and I ll refer you back to that report Do you recall reporting on the fucus toward the end of your October report and saying that there hadn t been a complete recovery of the fucus?
 (3) A Yes I don t recall the exact words but that is my understanding and that s what the data indicate
 (4) Q If the Court will permit me I ve got a marked up tabbed copy of your report I want to make sure we re talking about the same thing Here have I found the right place?
 (5) A Yes and this is the most recent report where I mentioned fucus
 (6) Q Let s talk about what you mean by not complete recovery of fucus
 (7) A What I mean is -
 (8) Q Let me ask you the question
 (9) A I thought that was a question sorry
 (10) Q Now Your basis for saying that fucus had not been completely recovered is information from I think a Houghton and Lees report that said that on certain south facing beaches that a half a meter had still not grown back in the intertidal zone correct?
 (11) A That s partially correct The Houghton and Lees was the one that did talk about the south and north facing area There

Vol 26 4341

- (1) was additionally a study done by the Chia group (ph) which includes Highsmith and Stekolli that are following fucus recovery as well
 (2) Q Well I m talking about this Houghton and Lees report and your reference to it in your report of October of 1993?
 (3) A Yes I m trying to say that there are additional sources of information on that
 (4) Q Well but let s stick to what we ve got here We ve got here that fucus on south facing shores haven t grown back to prespill levels and the amount of that is a half a meter correct?
 (5) A I don t quite understand If you could clarify what you mean by -
 (6) Q Well let s make sure -
 (7) A - half a meter as an amount?
 (8) Q This intertidal zone that you explained to the jury yesterday is a - do you want some more water?
 (9) A Dry pants might be better but no I m fine
 (10) Q Speaking of water this intertidal zone that you described yesterday is a zone between the high tide and the low tide right?
 (11) A That s correct
 (12) Q And in Prince William Sound and other areas contiguous to it some of the highest tides in the world exist right?
 (13) A Yes

Vol 26 4342

- (1) Q So that intertidal zone is relatively huge compared to other places in the world?
 (2) A Yes it s a good size
 (3) Q And depending on what your shoreline surface is that can be a huge area?
 (4) A Indeed if the slope is gradual you can have a large area
 (5) Q And so there could be if it s - like if you got a shoreline that goes at a 45 degree slant back you ve got one area of coverage If it goes back gradually for a long way you ve got a totally different area of coverage and if you ve got a sheer cliff you have got still another amount of coverage?
 (6) A Right
 (7) Q And fucus grow from the I assume from at or near the low tide level up to close to the high tide level?
 (8) A Yes that s right The fucus plant occurs throughout that zone to almost the highest levels
 (9) Q And at the highest levels of course that s the part that has the least moisture the most amount of the time?
 (10) A That s correct
 (11) Q That s the drier part of the habitat?
 (12) A Right that s the part where desiccation can be most significant for both the plant and the animals that are sheltered by the plant

Vol 26 4343

- (1) Q And that is the area where there are probably relatively
 (2) fewer microorganisms less food less critters than at lower
 (3) down where there is more moisture right?
 (4) A That depends on the beach but as a rule the abundances
 (5) would be less higher on shore than lower on shore
 (6) Q To use Mr O Neill's word makes sense doesn't it?
 (7) A Once we understand how the system works I think so
 (8) Q Now what you're saying in this report is of this stretch
 (9) depending on whatever area we're talking about here that lack
 (10) of recovery was shown by the fact that the fucus were a half a
 (11) meter below prespill levels on the south facing shores right?
 (12) A Yes I would have to refer - review the time frame but
 (13) that was I believe in 1993
 (14) Q That's the date of your report?
 (15) A No I understand it's the date of the report but what I'm
 (16) trying to point out is some of these studies ended in 1990
 (17) 1991 at various time frames and that represents the last
 (18) information that I or others had available and I was trying to
 (19) refresh my memory of whether this was 1992 or 1993
 (20) information
 (21) that - on which this comment was made 1992 is the answer
 (22) Q And you're saying that in this report that as of whatever
 (23) the date of this study was or the date of your report there
 (24) is still not complete recovery of the fucus because you say
 (25) that on south facing beaches it's a half a meter below in this
 (26) higher zone prespill levels correct?

Vol 26 4344

- (1) A Yes that was the remaining damage that was illustrated by
 (2) 1992
 (3) Q I have one final thing to ask you about Doctor You told
 (4) us yesterday that density of eelgrass in 1990 was 30 percent
 (5) below levels and that's your example of habitat damage right
 (6) an example of habitat damage?
 (7) A That's correct That was one of the three plant habitats
 (8) that suffered damage and that information was 1990
 (9) Q Can I have page 94 please? Would you please turn to page
 (10) 94? Is this the report or an abstract of the report on which
 (11) you based that statement yesterday?
 (12) A Yes it is
 (13) Q Would you read the first sentence please of the
 (14) highlighted portion on the screen?
 (15) A Sure The density of eelgrass tunons was approximately 30
 (16) percent greater at control sites than at oiled sites in 1990
 (17) (P = 0.08) and there were significantly fewer flowered plants
 (18) at oil sites (P = 0.08)
 (19) Q Stop there just a minute These comparisons that we're
 (20) talking about both with the amphipods and the fucus and the
 (21) eelgrass is where these scientists went out these principal
 (22) investigators went out and they made studies and they
 (23) compared
 (24) various things at what they called control sites versus oil
 (25) sites correct?
 (26) A Yes that's exactly the design

Vol 26 4345

- (1) Q And the control sites were sites where there was no oil and
 (2) had been no oil as a result of the Exxon Valdez oil spill
 (3) correct?
 (4) A Not fully correct In that design the control sites
 (5) included some slightly oiled sites The design was one that
 (6) included heavily oiled and moderately oiled sites for the
 (7) so-called oiled sites and for the unoled sites there were
 (8) lightly oiled as well as unoled as well referring to the
 (9) initial oiling not to any subsequent reintroduction that might
 (10) have occurred on sediment particles or sheens later on but so
 (11) long as we understand that was the basis on which they were
 (12) established
 (13) Q Well whatever that qualification you put on it was it
 (14) didn't keep you - them from saying and you from saying to this
 (15) jury yesterday that the oil had caused a 30 percent reduction
 (16) in eelgrass in 1990?
 (17) A Yes that is what was exhibited in 1990 I didn't comment
 (18) on what the reduction may have been earlier because the data
 (19) were not there
 (20) Q And you didn't comment on what it was the next year did
 (21) you?
 (22) A No sir I did not continue to talk about all the bulk of
 (23) additional information or to talk about the time frames on
 (24) recovery for the various components
 (25) Q Well for my last request to you Doctor would you do that

Vol 26 - 4346

- (1) now read the second sentence?
 (2) A By 1991 eelgrass had apparently recovered as there were no
 (3) differences noted among sites with respect to either tunon
 (4) density (P = 0.52) or flower density (P = 0.62)
 (5) MR SANDERS I have no further questions Your
 (6) Honor
 (7) REDIRECT EXAMINATION OF DR CHARLES PETERSON
 (8) BY MR JAMIN
 (9) Q Dr Peterson Mr Sanders asked you some questions just
 (10) most recently about damage which occurred through 1990 or
 (11) through 1991 or through 1992 or through 1993, and then was
 (12) getting better or perhaps even had recovered With reference
 (13) to the life cycle of pink salmon and herring in Prince William
 (14) Sound and the other areas of the oil spill are effects of that
 (15) duration from a year to four years significant?
 (16) A Yes they are tremendously significant
 (17) Q Why is that sir?
 (18) A Well let me answer with the two species separately When
 (19) we see for example a 30 percent decline in eelgrass habitat
 (20) as measured in 1990 it is highly likely that there was a
 (21) decline of that same magnitude or greater in 1989 when the oil
 (22) actually struck but when there was no field program to
 (23) measure
 (24) it
 (25) Assuming the case then by taking 1989 and 1990 you hit
 (26) both the even year class and the odd year class of pink salmon

Vol 26 4347

- (1) and pink salmon only live two years so you get the entire life
 (2) cycle You get the species that are the even year one year
 (3) that are affected The even [sic] year the next year and the
 (4) abundances that affect the one generation will affect the
 (5) abundances in the next
 (6) For the herring the herring live a long time and
 (7) typically herring have a big year class every say four years
 (8) and that year class lives as much as nine years and on it feed
 (9) numerous other fishes including pink salmon So when you
 have
 (10) a multi year effect affecting habitat of herring and that
 (11) affects the abundance of herring subsequently then those
 (12) effects extend over all the years that the herring now dead
 (13) should have been there and should have helped feed pink
 salmon
 (14) and other fish in the ecosystem So there was a memory in the
 (15) form of missing fish that occurs from events that happened
 (16) those two years to the habitat
 (17) Q Just one other area Doctor Mr Sanders asked you to
 (18) affirm that the 1990 pink run had been the highest in history
 (19) and the 1991 pink run had been the second highest in history
 (20) and you did that
 (21) Do you have an opinion as to whether the 1990 or 1991
 (22) salmon runs would have been different but for the spill?
 (23) MR SANDERS Objection Your Honor I think this is
 (24) beyond his area of qualifications I asked him these questions
 (25) as a matter of fact if he knew them I don't think he s

Vol 26 4348

- (1) qualified to testify as to what these runs mean
 (2) THE COURT I have some doubts about that question
 (3) given the background that I heard and the qualifications that I
 (4) heard I'll sustain the objection
 (5) BY MR JAMIN
 (6) Q With respect to the habitat sir do the effects to the
 (7) habitat that you've described in 1989 have carry over effects
 (8) for pink salmon beyond 1989?
 (9) MR SANDERS Same objection Your Honor
 (10) MR JAMIN This is a habitat question
 (11) MR SANDERS No it's an effect question
 (12) THE COURT Give me a second I'll allow that one
 (13) MR JAMIN You can answer
 (14) THE WITNESS Could I have the question repeated?
 (15) MR JAMIN I'll ask the reporter to read it back
 (16) (The question was read by the court reporter)
 (17) THE WITNESS Yes they do I mentioned earlier how
 (18) the -
 (19) MR SANDERS Object It was a yes or no question
 (20) and since we're kind of on the border here Your Honor let me
 (21) ask that Counsel ask the next question so we can tell where
 (22) we're going to go next
 (23) THE COURT Go ahead ask the next question
 (24) BY MR JAMIN
 (25) Q Explain the reason for your response sir

Vol 26 4349

- (1) A The reason for my response is that the salmon live two
 (2) years and as a consequence of that habitat effect they have
 (3) been affected in one year and their abundance will be delayed
 (4) in the next The number of eggs they produce will be reduced
 (5) because the fish are reduced and to the degree that the pink
 (6) salmon eat herring the herring effect has occurred and is
 (7) continuing by lower abundances of herring lower than would
 (8) have been the case in the absence of the damage to their
 (9) rearing habitat and their spawning habitat so that these
 (10) effects have a memory through the ecosystem and a memory
 that
 (11) interaction through other species and elements through the
 (12) ecosystem beyond the pink salmon and the herring but have the
 the
 (13) ability to come back and effect pink salmon and herring through
 (14) indirect effects in the ecosystem
 (15) These indirect effects can be slow in showing up and
 (16) delayed but they are potentially real
 (17) MR JAMIN Dr Peterson thank you very much Your
 (18) Honor thank you
 (19) THE COURT You may step down sir Call your next
 (20) witness
 (21) MR JAMIN Your Honor plaintiffs call James Bush to
 (22) the stand
 (23) MR NEAL Your Honor we might shorten things with
 (24) the benefit of a side bar at this point
 (25) (At side bar off the record)

Vol 26 - 4350

- (1) THE CLERK Stand and raise your right hand sir
 (2) (The Witness Is Sworn)
 (3) THE CLERK Please be seated For the record state
 (4) sir state your full name your address and spell your last
 (5) name
 (6) THE WITNESS My full name is James Gilbert Bush
 (7) B u s h I live at 3915 Ironton Drive West Richland
 (8) Washington
 (9) MR JAMIN Your Honor one technical matter I'd like
 (10) to clarify before the beginning of Mr Bush's testimony and
 (11) that is plaintiffs with withdraw 3754 which was offered
 (12) yesterday
 (13) THE COURT I understand there is no disagreement to
 (14) that?
 (15) MR NEAL That's right
 (16) THE COURT Plaintiffs 3754 is withdrawn at this
 (17) time
 (18) (Exhibit PX3754 withdrawn)
 (19) MR JAMIN Thank you
 (20) DIRECT EXAMINATION OF JAMES G BUSH
 (21) BY MR JAMIN
 (22) Q Mr Bush how are you currently employed?
 (23) A I'm a senior scientist and a geologist for ICF Kaiser
 (24) Engineers and a project manager
 (25) Q How long have you been employed in that position?

Vol 26 4351

- (1) A I've been with ICF since 1987
 (2) Q What is ICF Kaiser Engineers?
 (3) A It's an international consulting firm specializing in
 (4) engineering and construction and environmental investigations
 (5) Q Do you work with any particular group at ICF?
 (6) A Yes I work with the environmental group
 (7) Q What does the environmental group do?
 (8) A The environmental group focuses on environmental issues
 (9) We do site restoration site assessment clean up activities
 (10) that sort of thing
 (11) Q Do you have any technical specialties within the ICF
 (12) framework?
 (13) A Yes ICF specialist ICF specialist in sedimentary geology
 (14) stratigraphy
 (15) Q Does your work ever take you out to particular field sites
 (16) in various states?
 (17) A Well yes I worked in a number of states Worked in
 (18) Alaska California Oregon Washington Virginia Tennessee
 (19) variety of places
 (20) Q After high school what is your educational background?
 (21) A I received my bachelors from Ohio State University in
 (22) 1972 I received my masters from South Dakota Schools of
 (23) Mines
 (24) in 1978
 (24) Q And at Ohio State what did you study?
 (25) A I studied marine - well geology I specialized in marine

Vol 26 4352

- (1) geology and geophysics
 (2) Q How about at South Dakota?
 (3) A Economic geology
 (4) Q How would you define the study of geology?
 (5) A Well geology basically is the study of the history of the
 (6) earth The portion that I deal with is that which deals with
 (7) soft rocks sedimentary rocks sediments sand and gravel
 (8) beach interaction that sort of thing
 (9) Q And marine geology specifically would you define that for
 (10) us?
 (11) A Well that is a study that relates to the what we'll call
 (12) the lithosphere or rock or solid parts of the earth or ocean
 (13) Q And have you asked that I prepare an exhibit which shows
 (14) some of your experience working in Alaska?
 (15) A Yes I have
 (16) Q And is Exhibit 6027 that document?
 (17) A Yes it is
 (18) Q I'm going to use the Elmo to show that so we can move
 (19) quickly through your qualifications I'm not sure I'm going to
 (20) get all of Alaska on the screen at one time Let's start with
 (21) the northern part of the state
 (22) With reference to 6027 Mr Bush can you explain what the
 (23) dots mean and very briefly what your experience has been in
 (24) various locations within the state?
 (25) A Yes the dots that are located on the northern part of the

Vol 26 4353

- (1) state represent Air Force bases that I investigated in the past
 (2) few years primarily dew line sites They are indicated by
 (3) number 1 The numbers 2 3 and 4 represent specific areas that
 (4) I investigated while I worked with Atlantic Richfield I dealt
 (5) primarily there with beach interaction shoreline processes and
 (6) using the modern environment to interpret the ancient rocks
 (7) that are buried in the subsurface
 (8) The dots on the left are the Seward Peninsula in the
 (9) vicinity of Nome Number 7 and 6 represent investigations I
 (10) conducted for detailed stratigraphic investigations actually
 (11) for precious metals specifically horizons and sediments that
 (12) are preserved with respect to their value We determined the
 (13) value of properties in those areas
 (14) Numbers 5 and 8 represent similar investigations in the
 (15) interior of the state where we focused on stream deposits
 (16) primarily in those areas
 (17) Numbers 9 and 12 refer to coastal investigations done with
 (18) respect to precious metal preservations again looking at
 (19) specific stratigraphic horizons
 (20) And 10 and 11 refer to investigations done for the oil
 (21) spill
 (22) Q What period did you work for Atlantic Richfield that you
 (23) described - 2 3 and 4 sort of on the North Slope?
 (24) A That's correct. Approximately 1982 I believe until 1985
 (25) Q And the dew line investigations that you described was it

Vol 26 4354

- (1) for the Air Force?
 (2) A That's correct Those investigations were done for AFCEE
 (3) which is the Air Force Center for Environmental Excellence We
 (4) were asked to investigate those sites They were largely
 (5) coastal investigations and they have concomitant releases as
 (6) well as landfills and similar things releasing into the
 (7) environment
 (8) Q Besides the Air Force has other governmental agencies
 (9) asked for your assistance in other projects where your geology
 (10) background has been used?
 (11) A Yes we've been retained by - well perhaps the largest
 (12) volume of our work has been for the EPA the government
 (13) agency
 (14) the EPA Environmental Protection Agency In addition to that
 (15) we've been retained by the Department of Energy the
 (16) Department
 (17) of Defense National Laboratories Hanford Los Alamos
 (18) Q And has this work involved the investigation of property
 (19) impacted by oil or similar pollutants?
 (20) A Yes The investigations deal with hazardous waste in
 (21) total but by and large most sites are contaminated with
 (22) petroleum based materials
 (23) Q Can you estimate how many sites you've been involved
 (24) where
 (25) petroleum based materials were the contaminant?
 (26) A Well the range of contaminants varies widely from heavy
 (27) metals to fuels but virtually every site has some component of
 (28) petroleum based materials

Vol 26 4355

- (1) Q Does your investigation include investigation of sites
 (2) where there are impacts to the marine near shore environment?
 (3) A Yes
 (4) Q Can you briefly describe that as well?
 (5) A Well I can think of three offhand Let s see I was
 (6) involved in an EPA project that looked at a large number of
 (7) refineries a number of those were coastal installations with
 (8) their waste disposal facilities virtually on or very near the
 (9) tidal zone
 (10) I investigated a chemical industrial facility in Puget
 (11) Sound that was releasing caustic materials directly into the
 (12) intertidal zone The impact was so severe we were instructed
 (13) by direct order from the court to install a steel barrier to
 (14) extend into the ground for a leach agent for the tidal zone
 (15) Q You mentioned down at the bottom of the exhibit that you
 (16) had done some investigations in connection with the Exxon
 (17) Valdez oil spill?
 (18) A That s correct
 (19) Q And over what period have you worked on looking at some of
 (20) the sites affected by the spill sir?
 (21) A Well we started in 1989 The areas indicated by number 10
 (22) were investigated in 1989 In addition to that we conducted
 (23) investigations in 1992 1993 and 1994
 (24) Q And would those be in the areas numbers 10 and 11 on the
 (25) map?

Vol 26 4356

- (1) A Yes In 1992 we extended our investigations to include
 (2) both 10 and 11
 (3) Q And did you prepare various reports for the entities that
 (4) asked you for the investigations in the Exxon Valdez oil spill
 (5) area?
 (6) A Yes we did
 (7) Q In addition to your own investigative work with respect to
 (8) pollutants and the marine near shore environment and
 (9) specifically that with the Exxon Valdez oil spill have you
 (10) also reviewed the activities of others who have done work
 (11) looking at the fate and persistence of the Exxon Valdez oil?
 (12) A Yes we have
 (13) Q And whose work have you studied?
 (14) A Well I don t know that I can recall everyone s work at
 (15) this moment We have examined the natural resource damage
 (16) assessment studies beach treatment data that were released
 (17) by
 (18) Exxon managed by VECO Alaska Department of Fish & Game
 (19) Alaska Department of Environmental Conservation the joint
 (20) agency field programs and work done by ADEC exclusively
 (21) Q Is ADEC the Alaska Department of Environmental
 (22) Conservation?
 (23) A I m sorry that s correct
 (24) Q When you said that you looked at the Trustees work was
 (25) that the same group that Dr Peterson described the
 (26) governmental studies of the oil spill?

Vol 26 4357

- (1) A Yes natural resource damage assessment that s correct
 (2) MR JAMIN Your Honor without further ado I m going
 (3) to ask that Mr Bush be recognized as an expert in marine
 (4) biology
 (5) MR NEAL Any questions I have I ll save for later
 (6) for He s been offered as a marine geologist?
 (7) THE COURT That s correct and the Court will accept
 (8) his qualifications as a marine geologist
 (9) BY MR JAMIN
 (10) Q Before we go any further I want to get the definition
 (11) out I used the term fate and persistence in questions about
 (12) what you looked at What do you mean by fate and persistence
 (13) when you use them in the oil context?
 (14) A Well they become terms of art so to speak in the
 (15) environmental investigative field Fate deals with the
 (16) ultimate destination or outcome of a contaminant which
 (17) typically referred to as a spill or release Persistence
 (18) refers to how long that contaminant persists in an area
 (19) remains in an area or interacts with the environment It may
 (20) not necessarily remain in one place but how long it interacts
 (21) with the environment.
 (22) Q When you re confronting a site that has spilled
 (23) contaminants in a marine near shore environment what are the
 (24) main factors that you consider in looking at that and trying to
 (25) assess it sir?

Vol 26 4358

- (1) A For spilled contaminant in a marine environment?
 (2) Q Yes sir
 (3) A Well I guess really there are a large number of things
 (4) but to condense a long story into a short answer you would
 (5) look at three things The nature of the contaminant the
 (6) nature of the environment and then you try to unravel how the
 (7) two interact
 (8) Q Let s get an idea of the kind of environments that we re
 (9) dealing with and to some extent that you ve studied in Prince
 (10) William Sound Before we go into the specifics are the
 (11) beaches in Prince William Sound and the northern Gulf of
 (12) Alaska are they uniform sir uniform composition?
 (13) A No they are not.
 (14) Q What are the important types of differences that you
 (15) experience?
 (16) A Well there are a large number of differences The beach
 (17) is very tremendous I guess to again simplify a complicated
 (18) answer a large number of them are dominated by rocks sheer
 (19) cliffs very resistance materials not subject to wave erosion
 (20) and we have large and sandy grain These occur in different
 (21) amounts in different locations and then there is every
 (22) spectrum in between So it s important to recognize the
 (23) difference between for example large sheer cliffs and
 (24) shorelines that are made of large blocks or pieces that have
 (25) fallen off and incorporated sand or gravel with those ones

Vol 26 4359

- (1) that are dominantly smaller particles cobbles gravel pebble
 (2) that sort of things coarse sands fine sands and then sands
 (3) Q Have you asked that I make available pictures for what you
 (4) just made a word picture of?
 (5) A Yes
 (6) Q Here is 2125 125 If you could explain what we re seeing
 (7) here?
 (8) A Yes this is a photograph of what we ll call a bedrock
 (9) dominated beach and I ll - I know most people think of a
 (10) beach the idea of California and Florida comes to mind but in
 (11) fact this is a type of a beach and we re showing this picture
 (12) particularly to illustrate that not all solid rock beaches are
 (13) vertical Some of them have nice general slopes like this one
 (14) Q Let me show you next another one of the photographs that
 (15) we ve seen before and if you could focus on the beach here?
 (16) A Yes This one illustrates a number of things You could
 (17) see we re beginning to make the transition here from a solid
 (18) rock to one that has large blocks The lower portion of the
 (19) illustration you can see the fractures and the large boulders
 (20) Volkswagen size boulders
 (21) Q Are those to the right of the bear?
 (22) A Yes based on the size of the bear And logs and material
 (23) that has washed up on shore indicating something about
 (24) energy
 (25) or tide level And higher in the illustration you can see
 (26) beginning textural mix where we have both medium size
 (27) boulders

Vol 26 4360

- (1) Q Is this up here?
 (2) A Yes and some sand and gravelly type materials I can t
 (3) tell for certain from the illustration but we have a variety
 (4) of grain sizes
 (5) Q So that gives you a heterogeneity look at the beach then?
 (6) A Absolutely correct
 (7) Q Let me ask to you look at the next one and if you can
 (8) take us through that one
 (9) A This is one of our transect sites on Point Helen which is
 (10) the tip of Knight Island You can gain clearly an idea of the
 (11) sizes of the boulders medium to large boulders using the
 (12) cooler for scale there What s interesting with this
 (13) particular photograph is beneath the boulders we see in the
 (14) pit in the area that s been excavated from the pit pebbly
 (15) size material sand and gravel This particular beach has one
 (16) characteristic one beneath it finer grain
 (17) Q And finally sir our last beach composition picture let s
 (18) see if I can get a portion in that actually shows the beach
 (19) and let me try and focus a little better Go ahead
 (20) A In this illustration we ve made the leap from boulders to
 (21) sandy environment obviously pebble sized environment in
 (22) between which we don t have but this will illustrate a sandy
 (23) environment wide expansive very long you can see from the
 (24) illustration and the finer grain sizes indicated by the
 (25) smaller ripples we have on the surface

Vol 26 4361

- (1) Q Now besides the composition of the beach which you ve
 (2) described for us is the exposure of the beach an important
 (3) issue?
 (4) A Yes To classify shorelines with respect to how they will
 (5) respond to impact of contaminant or for a variety of other
 (6) purposes exposure is a major major item and broadly
 (7) speaking most shorelines can be characterized two ways
 (8) those
 (9) well-exposed and subject to high energy large wave action
 (10) severe storm action versus those that are not So you have
 (11) protected or sheltered environments versus those that are
 (12) exposed to high energy
 (13) Q And again have you asked that I get a series of pictures to
 (14) explain that?
 (15) A Yes
 (16) Q Let s take a look first at this one and if you could
 (17) explain what that is?
 (18) A Yes this one illustrates a couple of things First off
 (19) you can see we have a mixed clastic environment. By class -
 (20) clastic sedimentary rock sand and gravels, so that s a
 (21) clastic environment.
 (22) Above that we can see as we move into the upland area it
 (23) shows you the impact of storms or higher tide action that can
 (24) produce particular structures that parallel or give you this
 (25) contour like surface of a shoreline They represent the
 (26) different water levels at the time of high tide one feature

Vol 26 4362

- (1) being the logs that we can see across the top Although this
 (2) picture doesn t represent it clearly they can be arranged at a
 (3) wrack line that s w r a-c k line and that refers to an
 (4) elevation where the highest point of the tide interacts with
 (5) the tide and demarcates the tide level
 (6) Q And another one of the photographs and what does that
 (7) depict sir?
 (8) A This is a shot of an area interior in Prince William Sound
 (9) and gives you some examples of the heterogeneity the
 (10) variations along the shorelines We can see many small
 (11) pockets
 (12) or beaches small embankments So in terms of exposure we
 (13) have a different - different parts of it exposed to the large
 (14) size body of water totally other parts are sheltered or
 (15) protected from that quieter variety
 (16) In response to this difference in exposure you find
 (17) bedrock or rocky shorelines contaminated by rocks depends
 (18) which might be pockets of gravel and sand which may be able
 (19) to
 (20) absorb contaminant into the shoreline
 (21) Q And the third picture in this area what was the
 (22) significance of this picture for you sir?
 (23) A Well there are a number of significant features
 (24) illustrated here In terms of exposure if we look at the
 (25) direction of the currents the winds and the waves in this
 (26) case we can see the upper end in the photograph of the island
 (27) is fairly exposed also quite rocky

Vol 26 4363

- (1) Q Right here sir?
- (2) A Yes that s correct
- (3) Q Okay
- (4) A In other words that area maybe more subject or subject
- (5) more frequently to storm action So it s resistance the
- (6) material that can survive that is bedrock hard strong
- (7) dominant material but on the leeward or on the down side -
- (8) Q Is this here where I m pointing with the pen?
- (9) A No further Right there
- (10) Q Okay
- (11) A Even though we re still on the windy side of the island
- (12) just on the backside of those rocks the areas immediately
- (13) protected from the wave action so within those little
- (14) embankments the uppermost one that you see there there is in
- (15) fact a small pocket beach of cobbles of gravel something like
- (16) that Moving down the island you ll see the end of the
- (17) island where counsel initially pointed is largely gravelly
- (18) and sandy or clastic material as opposed to the rocky
- (19) So here in a small island we see a variety of environments
- (20) all respond differently to oil You can see that the oil is
- (21) being released in the island after having been oiled already
- (22) So we can see that oil released from the upper portion of the
- (23) photograph actually can move down some cases and interact
- (24) with
- (24) the sand and gravelly environment on the southerly or down
- (25) side
- (25) of the photograph

Vol 26 4364

- (1) So oil released from one oil spot precontaminates the
- (2) southern portion This particular photograph is a shot in
- (3) time The tidal range in that location may be 12 10 15
- (4) feet So the effect that you see is smeared up and down the
- (5) shoreline of the - over the entire tidal range just not at
- (6) that location It happens vertically throughout the range
- (7) Q When you look at a particular beach at a particular time of
- (8) the tide can you tell what sort of beach it is?
- (9) A At a particular time of tide some beaches some
- (10) environments you can be fairly certain that on an immediate
- (11) investigation you can tell but there are many environments
- (12) where you can be grossly misled
- (13) Q And does this picture help you to explain this phenomena?
- (14) A Absolutely yes
- (15) Q In what way?
- (16) A Well the lower portion of the picture is - the shoreline
- (17) in the lower portion of the picture is dominated by very coarse
- (18) rocks gravel boulders and that sort of thing but the upper
- (19) half of the photograph is a sheer cliff If you approach this
- (20) shoreline during mid to high tide phases you would see a
- (21) bedrock dominated cliff However if you came back during
- (22) lower tide you would see it s a mixed environment the lower
- (23) portion being largely a clastic environment sand and boulders
- (24) clastic and mixed This is an example that s particularly
- (25) problematic for the way the shorelines have been mapped and

Vol 26 4365

- (1) interpreted in Prince William Sound because all of the mapping
- (2) done to date has defined the shoreline types along their
- (3) length In other words moving from one point down the shore
- (4) along the shore to another point and classified it as a
- (5) particular type rocky fine sand and gravel this sort of
- (6) thing
- (7) This particular shoreline vanes up and down so any
- (8) description of the type of shoreline along this length has to
- (9) display two types of shoreline for the segment It s
- (10) complicated and it s complicated to work with and complicates
- (11) the analysis
- (12) Q Besides the beaches and the exposure that you ve told us
- (13) about so far are there other factors that are important as you
- (14) categorize beaches in Prince William Sound and the northern
- (15) Gulf of Alaska?
- (16) A Well certainly There are tremendous number of factors
- (17) that impact how one would classify shorelines I think to
- (18) discuss some of the main ones the slope of the beach is a
- (19) major factor Very steep beaches over a tidal range of say 10
- (20) to 15 feet may have only a slight amount more of shoreline
- (21) that s exposed to the tidal range because they are very steep
- (22) the tidal range is something like this relatively close to the
- (23) tidal range 20 feet Very low slope beaches have a tremendous
- (24) amount of beach exposed over that same tidal range
- (25) So if as though you re flooding a street a low flat street

Vol 26 4366

- (1) floods easily and it s contained in the curbs but once it gets
- (2) outside the curbs it spreads all over the place These
- (3) shorelines behave the same way And they have a tremendous
- (4) amount of surface area that is exposed to this tide range
- (5) steep ones much less
- (6) The orientation of the beach is another factor If in
- (7) Prince William Sound major storms come out of the northwest
- (8) north northeast for shorelines that are exposed to the south
- (9) or on the southern side of these things like the island that
- (10) we looked at earlier that orientation would be subject to a
- (11) different set of storm and wave activities So its stability
- (12) will be different from those of the dominant directions
- (13) Orientation low tidal range how those interact other
- (14) factors but that gives you an example of how it can complicate
- (15) beach analysis
- (16) Q Having gotten a sense of the structure and the important
- (17) characteristics of the beaches that we can take a look at
- (18) together let s talk for a moment about oil and I want you to
- (19) assume for the moment that there is a large release of oil in
- (20) Prince William Sound and I want to get an idea of what the
- (21) factors are which affect the oil as it leaves the vessel?
- (22) A Well referring to the Exxon Valdez spill?
- (23) Q That s a fine example for us here
- (24) A Well initially you have a buildup right around the vessel
- (25) where it s being spilled at the spill point It pours out at a

Vol 26 4367

(1) certain rate and ends up around the vessel and spread
 (2) laterally This is a fairly typical occurrence in the case
 (3) of flat water or calm environments it builds up around the
 (4) spill point and spreads out laterally on the surface
 (5) In the case of an aerial view one would see color
 (6) variations on the surface that would show a thicker a darker
 (7) mix of oil around the point of spill and release versus thinner
 (8) occurrences on the edges In time and with reduced rate of
 (9) relays this material is spread out as a thin film on the
 (10) surface
 (11) As the water begins to agitate the oil maybe incorporated
 (12) into the water and the water maybe incorporated into the oil
 (13) Under severe agitation or strong agitation we will have an
 (14) emulsion or a form that s referred to as mousse It s
 (15) brownish It s named after chocolate mousse because of its
 (16) consistency and appearance It has the consistency of
 (17) mayonnaise and consists of 50 to 60 percent water perhaps as
 (18) low as 30 in some cases mixed in with oil in droplets
 (19) Another emulsion that occurs is where water is dominant
 (20) oil being the lesser and gives it a milky appearance There
 (21) are other changes that occur We have evaporation for
 (22) example within the oil slick after it s released In the case
 (23) of this particular spill approximately 20 to 25 percent of
 (24) material is thought to have evaporated There is a gradient
 (25) within that evaporation however The material that is out on

Vol 26 4368

(1) the thin edges of the slick is more easily accessible to wear
 (2) and more volatile it can be released whereas there is some
 (3) dissolution of volatility in this particular portion of the
 (4) slick You have dissolved this portion of the slick
 (5) Anakolades (ph) and other portions of the slick are more
 (6) suitable more or less and these can dissolve and occur in the
 (7) water phase
 (8) As the wind picks up the slick - all these processes go
 (9) on at the same time more or less As the wind picks up the
 (10) slick will actually move across the surface of the water in a
 (11) variety of ways The water surface itself moves There is
 (12) always sheer between the slick and the water surface And the
 (13) speed of the slick itself may not be the speed of the water
 (14) movement The dissolved phases or suspended phases of
 (15) emulsions that are in the water may move in response to current
 (16) differently than the slick itself moves So you ve got a real
 (17) mixture of events going on here some abeyed current paths
 (18) some abeyed wind directions and there is a response to how
 (19) each of those responds to both of those
 (20) Q Does a portion of 228 which we ve seen previously explain
 (21) some of the concepts you ve described?
 (22) A Yes it does
 (23) Q In what way sir?
 (24) A Well we can look at a number of things here To give you
 (25) some idea of the differentiation in the movement between the

Vol 26 4369

(1) Slick itself and the water surface these windrows the long
 (2) streamers that come off generally represent portions where the
 (3) oil itself is flowing in response to a windrow in a phase or in
 (4) a mechanism that dominates water movement. In other words
 it
 (5) overrdes the water movement it follows windrows basically
 (6) The different colors represent different thicknesses The
 (7) rainbows represent thinner thicknesses versus the solid brown
 (8) or darker portions which represents thicker portions
 (9) Q Now we ve already seen from some of the photographs that
 (10) eventually some of this oil hits the shoreline and I want to
 (11) take a second Have you identified some photographs to show
 to
 (12) the jury to explain that process sir?
 (13) A Yes
 (14) Q Let me start with the first You ve seen this before from
 (15) Miss Fobes can you explain that?
 (16) A Yes this is an excellent example of a mousse wrack, give
 (17) you some idea of the size of the mousse It s a surface layer
 (18) the dark stuff with the brown ripples It s the water/oil
 (19) emulsion I talked about where water is the dominant phase and
 (20) moving adjacent to the shoreline in this example
 (21) Q And the next one sir?
 (22) A This also represents mousse on the water surface You can
 (23) begin to see the mousse retains a viscosity or a thickness and
 (24) consistency like mayonnaise It floats on the surface little
 (25) bit of relief that you can see

Vol 26 4370

(1) Q Let me try and work with the focus
 (2) A In the darker area there you can see there is actually
 (3) relief between the top of the mousse and the water surface a
 (4) fraction of an inch or so
 (5) Q And this is the difference between this section and this
 (6) section for example?
 (7) A That s correct
 (8) Q Now as the mousse or the other forms of the oil comes in
 (9) contact with the shore does some of it get deposited on the
 (10) shore?
 (11) A Yes
 (12) Q Can you take a few minutes to explain how the crude oil is
 (13) deposited on the shore for us?
 (14) A Yes I can
 (15) Q All right
 (16) A Can we refer to one of the exhibits?
 (17) Q Yes we can Have you prepared an exhibit to explain this
 (18) process?
 (19) A Yes we have
 (20) Q Then we ll get an easel up
 (21) Is this that exhibit sir?
 (22) A Yes it is
 (23) Q If you d like to come down from the stand with the Judge s
 (24) permission to explain the exhibit - it may be that we need
 (25) two of these

Vol 26 4371

- (1) A If you want to hold them
 (2) Q Why don't I hold it for you and then we'll be fine
 (3) A You could just hold it -
 (4) Q Provide a stiff backboard for you Does that work?
 (5) A So far
 (6) Q Go ahead
 (7) A This exhibit is a four part exhibit and will give you the
 (8) basic understanding of what happens as oil impacts shorelines
 (9) If you remember in my discussion earlier about the different
 (10) shoreline types and it's more complicated than I've led you to
 (11) believe so far this illustration indicates a variety of those
 (12) aspects This will be a cliff like area of exposed bedrock
 (13) You can relate the shape of this to what we saw in the little
 (14) photograph of the island and the top of the photograph where
 (15) those ridges were extending out into the photograph be
 (16) something like this This will be another piece of bedrock
 (17) sticking up here This might be a large block that's calved
 (18) off from a fracture and fallen into the shoreline
 (19) This here is strewn with cobbles and boulders a mixed
 (20) variety of sizes This cobbly and bouldery picture represents
 (21) a stable surface on which we have a link called intertidal
 (22) swash bar Just imagine that as being a sand dune moves just
 (23) like a sand dune only under water from wave action It
 (24) typically will be finer grain with respect to the material that
 (25) makes up this surface So that this surface is relatively

Vol 26 4372

- (1) stable in comparison to the movement of this body So this
 (2) little sand dune or swash bar can move along the surface in
 (3) wave energies that will affect the surface directly
 (4) These shaded areas in the upper reaches represent those
 (5) wrack lines I talked about earlier So when the tide comes up
 (6) on a certain elevation this might be the location last
 (7) highest tide for example and then material that was floating
 (8) on the water with the wind blowing toward shore will be caught
 (9) at this point and leave a line that marks that high tide
 (10) point
 (11) Previous in the month we may have had a spring tide
 (12) exceptionally high tide and that would be denoted by this
 (13) (indicating) and similarly strong wind or storm material
 (14) deposited at this higher elevation So these depict
 (15) historical maybe yesterday maybe six hours ago maybe a
 (16) week ago So in this case think back to the photograph we saw
 (17) earlier with the mousse wrack floating
 (18) Q Is this what you meant?
 (19) A Yes maybe something similar to what we see here liquid
 (20) oil or a combination of the two In this illustration I've
 (21) drawn this scenario with the rising tide Similar things can
 (22) happen with regard to the tide cycle and did I'll move this
 (23) way
 (24) Here we see step two in the process We see that the patch
 (25) of oil has moved closer to the shoreline that it's in the wave

Vol 26 4373

- (1) active zone that the waves now are breaking up against the
 (2) shoreline and we can see with this swash zone and that's the
 (3) point after the broken wave where the water actually washes up
 (4) the surface of the beach and carries the oil to these areas
 (5) These areas would represent splash material This is a piece
 (6) of bedrock here that's sticking up higher the tip of it has
 (7) already been oiled with splash action pretty straightforward
 (8) The next step we can see we've reached high tide the high
 (9) tide reached this level and that is the point oil was splashed
 (10) up in a higher place represented by the splash marks and we
 (11) can see as the tide comes in the oil is deposited here
 (12) hydrostatic pressure develops by the weight of the water some
 (13) of it is driven into the shore as the water percolates into the
 (14) sediment At the same time some of the oil is floated back up
 (15) in the surface only to be caught into the wave action and be
 (16) caught in the shoreline So we have a system here that's
 (17) recycling the oil into the beach and further up into the beach
 (18) this happens as the oil impacts the beach
 (19) Now in this section we're seeing it later in time as the
 (20) tide has fallen We still have the same waves not depicted
 (21) here as clearly these guys are still there We have the swash
 (22) that washes up on the beach but it has an opportunity now to
 (23) percolate down on the beach as the ground water drains from the
 (24) beach during the falling tide So this is the time when the
 (25) oil has the greatest opportunity to penetrate into the

Vol 26 4374

- (1) sediments that make up the beach Now bearing in mind we're
 (2) showing here penetration into the sands Obviously something
 (3) as hard and impermeable as bedrock the same thing cannot
 (4) occur except we have cracks and fractures and that sort of
 (5) thing I think that takes care of it
 (6) Q Thank you You can resume your seat again
 (7) Have we identified some photographs to demonstrate some of
 (8) the processes that you've described?
 (9) A Yes we have
 (10) MR NEAL What was the last exhibit number?
 (11) MR JAMIN The exhibit number was 253 I believe
 (12) Mr Neal It is 253 and actually I can move for its
 (13) admission Your Honor
 (14) (Exhibit 253 offered)
 (15) THE COURT Objection?
 (16) MR NEAL No objection
 (17) THE COURT Exhibit 253 is admitted
 (18) (Exhibit 253 received)
 (19) BY MR JAMIN
 (20) Q Now I think the last picture we saw was the mousse coming
 (21) in Can you explain to us what we're seeing from a geologist's
 (22) view rather than a National Geographic photographer's view?
 (23) A Yes This indicates a situation where the oil has come in
 (24) perhaps on a rising tide and the wrack lines that I referred
 (25) to earlier on the beach or the lines that demarcated the

Vol 26 4375

- (1) highest elevation of the tide are actually quite straight
 (2) quite precise and as you can see in this illustration during
 (3) the time of calm water we had a very nice sharp line
 (4) delineating the oil band where the oil rose with the highest
 (5) tide to that elevation You can see laterally on the edges of
 (6) the photograph some large rock outcrop where penetration
 would
 (7) be confined principally to cracks and whatever permeability
 was
 (8) available to the rock itself
 (9) But to the rest of that in the view of the photograph you
 (10) see we have a gravelly cobbly boulder environment where we
 (11) can have more penetration into the sediments and a larger
 (12) volume of oil will be retained in that environment as opposed
 (13) to the rock part
 (14) Q And the next photograph sir?
 (15) A This is an illustration of oil pooled behind the cobbles
 (16) and perhaps there is some small boulders in this but the key
 (17) point is that puddles of oil are trapped in this matrix of
 (18) framework and have an opportunity to percolate down if it's
 (19) mixed with sand and finer grain it's reduced To the extent
 (20) it's gravel and cobbly the porosity is larger - a large
 (21) amount of oil can penetrate into it.
 (22) Q Finally how about this one from the view of a geologist?
 (23) A Similarly we see the case of sandy and looks like a
 (24) coarse grain sand pearl The oil has drained into this coarser
 (25) material

Vol 26 4376

- (1) Q Now you've indicated I think in your testimony that some
 (2) of the oil drains down into the lower material Do you have
 (3) some photographs to show that a little better as well?
 (4) A Yes
 (5) Q Let me show you the first of those
 (6) Counsel this is previously admitted 6020
 (7) A Yes this is a particularly interesting photograph This
 (8) is a photograph we took I believe it's either - I think it's
 (9) a 1994 photograph I believe of one of our transect areas of
 (10) Eshamy Bay in Prince William Sound From the standpoint of
 oil
 (11) percolation and how the oil gets in the beach we see this
 (12) layer of cobbles and boulders fairly well round If you look
 (13) in the hole where we see the sheen the margins are made up of
 (14) fine grain sand This is an excellent example of what you
 (15) referred to earlier in the illustration We saw this bouldery
 (16) cobbly surface with finer grain material this surface
 (17) (indicating) this shields this sandy material from wave action
 (18) and adds stability to the beach So the oil that's penetrated
 (19) in the environment little difficult to see here because we're
 (20) in 1994 But if you look in areas around the - is there a way
 (21) I can point to -
 (22) Q Actually if you'd like to come up and use the large
 (23) screen I think the jurors can see that and that might be the
 (24) best way if you have your pointer
 (25) A Sure Well this is the rock that was exhumed from the

Vol 26 4377

- (1) hole this is the hole the rock came from this is the sandy
 (2) material around the margins we've observed to be fairly
 (3) consistent through 1989 around this beach But in addition to
 (4) that the areas in here and here this smaller pebbles smaller
 (5) classes are all bound to be pregated because the sediment
 was
 (6) pregated with oil So in 1989 when the site was oiled the
 (7) oil percolated through the armor into the sandy and smaller
 (8) class environment and now is serving as a glue to help bind
 (9) things together and adds further stability to the beach
 (10) Q Let me show you the next photograph and at the - for
 (11) Counsel's preparation identify it at 6022 which has been
 (12) preadmitted
 (13) Is this also from 1994?
 (14) A Yes
 (15) Q Can you explain what we're seeing here?
 (16) A This photograph is taken I think on the - this one was
 (17) taken - well we visited this site two times on the - about
 (18) the 25th or 26th of May this year and then again on the 2nd of
 (19) June of this year I think this one was taken on the 2nd of
 (20) June I can't read the indication at the bottom of the
 (21) photograph of this screen
 (22) Q I believe it's 6/2/94?
 (23) A 2nd of June The rock that you're looking at is a boulder
 (24) that we turned up earlier about approximately a week prior to
 (25) that and the bottom side of that rock is covered with mousse

Vol 26 4378

- (1) If you think back about the wrack of mousse that we saw earlier
 (2) in those photographs same kind of material remains on the
 (3) bottom side of this boulder
 (4) The rocks in this area although they appear to be clean on
 (5) the surface are in fact bound and saturated beneath the
 (6) immediate surface with oil residues and this material at the
 (7) bottom of the rock has been exposed to wave action It's
 (8) mayonnaise consistency that sort of thing for approximately
 (9) six days since it was turned up and it still persists there on
 (10) the bottom side of the rock with little to no protection
 (11) So the material beneath these rocks and beneath this
 (12) armored surface has the ability to persist there for a much
 (13) longer period of time
 (14) Q Let me show you 6023 and is this also from 1994 sir?
 (15) A Yes it is
 (16) Q And can you explain to us what we're seeing here?
 (17) A Yes this is a photograph which was taken from a site on
 (18) the northeast end of LaTouche Island and again the rocks look
 (19) fairly clean on the surface We see in the center portion of
 (20) the picture a small puddle of water with sheen on it That
 (21) sheen was natural It occurred there in an undisturbed
 (22) manner We did not disturb the area It was there when we got
 (23) there on the site The reason the water is there because the
 (24) sediments around there are saturated with oil residues and
 made
 (25) impermeable

Vol 26 4379

- (1) Q Finally Exhibit 6025 which has been preadmitted is this
 (2) from 1994 as well sir?
 (3) A Yes it is
 (4) Q Where is this and what are we seeing?
 (5) A This is a photograph of a pit that we dug at our Point
 (6) Helen transect on the southern end of Knight Island and that s
 (7) approximately I would estimate 40 centimeters by
 (8) recollection and the brown spots that you see on the water are
 (9) oily material that are exuded from the sediments and are now
 (10) floating on the surface of the water
 (11) At this time the tide level is approximately 6 to 8 feet
 (12) by recollection below that water level So that s actual
 (13) ground water that s in the beach
 (14) Q Now you ve shown us some evidence of persistence of the
 (15) oil on the beaches that we ve described Is there as well some
 (16) natural cleaning which occurs?
 (17) A Well certainly there is To the extent that the
 (18) shorelines are subjected to wave action and high energy and
 (19) abrasive action of fine grain material there is natural
 (20) cleaning We were in fact very pleased to see some later
 (21) sites that the surface had been cleaned up Largely it s been
 (22) combined to surface aging
 (23) Q Can you explain to us how the cleaning occurs as a natural
 (24) process?
 (25) A I m not sure I follow the question completely As a

Vol 26 4380

- (1) natural process there is an interaction of wave action and
 (2) agitation of the sediments and it s this agitation or movement
 (3) that allows the oil to abrade and be removed from the rocks
 (4) There are biodegradation activities exposure to sunlight
 (5) photo interactions that cause degradation to the oil materials
 (6) and other things
 (7) Q And does this this natural cleansing of the beaches or
 (8) the surface of the beaches dies that lead to the
 (9) re integration or recycling or recircling of the oil back into
 (10) the water environment?
 (11) A Well in some cases that s correct yes For example as
 (12) we ve seen some of these heavily impregnated areas If a
 (13) severe storm or a particularly oriented or unique storm would
 (14) disrupt some of these or disrupt that it could be broken loose
 (15) and transport almost as particulate matter in the Sound or
 (16) small globules of the mousse either to flow out into the
 (17) environment or move down shore to the beach where it s been
 (18) replaced in the first place
 (19) Q That picture that we saw a little while ago of the island
 (20) where the oil seemed to be streaming off is that evidence of
 (21) the recirculation? Let me show that to you once again
 (22) A Yeah it s an example of it as I mentioned earlier The
 (23) oil that s being released from the top portion of the
 (24) photograph on the right hand is a great opportunity to come
 (25) down and intersect the clastic shorelines on the bottom here

Vol 26 4381

- (1) Stuff which is released from the end of the island that moves
 (2) onto deep water or into other shorelines
 (3) MR JAMIN Your Honor we re ready to start a new
 (4) visual
 (5) THE COURT Take our first recess now Ladies and
 (6) gentlemen we ll be in recess for 15 minutes
 (7) (Jury out at 10 03 a m)
 (8) (Recess at 10 03 a m)
 (9) (Jury in at 10 15 a m)
 (10) THE CLERK All rise
 (11) THE COURT Okay
 (12) MR JAMIN I need a witness
 (13) MR SANDERS He was leaving as I was coming
 (14) MR JAMIN This is before the cross-examination
 (15) BY MR JAMIN
 (16) Q Mr Bush before the break we were describing this process
 (17) that by which some of the oil was recirculated or recycled back
 (18) into the environment Is that something that occurs just with
 (19) storms?
 (20) A No it is not
 (21) Q How else does it occur sir?
 (22) A Well for example in 1994 we were on site and some of the
 (23) photographs as you saw earlier indicated that there were small
 (24) amounts of sheen and small puddling of sheen these can be
 (25) released on a tidal cycle basis whether or not a storm has

Vol 26 4382

- (1) impacted the area
 (2) Q Let me ask you to if you have prepared an exhibit to
 (3) explain to the ladies and gentlemen of the jury how the oil
 (4) ends up persisting on some of the beaches?
 (5) A Yes
 (6) Q I guess we ll get our backboard The number on this one is
 (7) 6012 Counsel
 (8) If you d like to come down from the stand to explain this
 (9) exhibit
 (10) A Yes This exhibit is again similar to the other exhibit
 (11) with the block diagrams similar environment it presents to
 (12) you something that we ve already discussed
 (13) Q Could everyone see this?
 (14) A That s the notion of the arming or the strengthening of
 (15) the surface of the beaches Actually how this comes about is a
 (16) bit of a complicated process but we re going to start you mid
 (17) stream here in an imaginary situation and assume that we have
 (18) a
 (19) mixed sandy beach this beach just appeared It consists of
 (20) large rocks intermediate and small rocks and sandy material
 (21) which you can t see in the depiction Let s say this is a
 (22) fairly typical environment for Prince William Sound in terms of
 (23) wave energy and wave interaction on the shorelines
 (24) As time passes we see that some of the finer grain
 (25) material easily moved is removed from the setting As that
 happens and it can be transported alongshore moved
 offshore

Page 4383

(1) a variety of ways as this happens the volume of the beach is
 (2) reduced this being - the dash line here being the original
 (3) surface A substantial portion is removed and now the new
 (4) surface is lower than it was before What has been removed
 has
 (5) been the finer grain material not the large rocks So the
 (6) cobbles and the boulders maybe even the pebbles in some
 (7) situations are retained on this surface as the sand is
 (8) whittled away from around them So the large stable rocks
 move
 (9) downward stratigraphically in my nomenclature move
 downward
 (10) So eventually we develop a fairly stable and strong surface
 (11) Now the material underneath has changed little it still
 (12) consists of the mixed sands and gravels just this surface
 (13) that s been created by the natural whittling process that goes
 (14) on This process goes on essentially all the time When you
 (15) hose sand off on your driveways the big ones hold back the
 (16) little ones wash away Same idea in this process The result
 (17) is that you have an armored or strengthened surface
 (18) You think back to the photograph where one of the rocks had
 (19) been turned out and there was a hole out there We had the
 (20) sandy material beneath the cobble/boulder layer so you get a
 (21) stabilizing feature to the shoreline In Prince William Sound
 (22) perhaps the largest number of waves that hit this will have
 (23) very little effect it s strong relative to this wave energy
 (24) Perhaps storm waves most storm waves also the surface will
 (25) become fairly stable with respect to most storm waves It will

Page 4384

(1) take very high energy very large waves to actually completely
 (2) break up the surface and disrupt it It s a natural process
 (3) it s a natural event Mother Nature tries to achieve some
 (4) level of quasi stability near stability It s not perfect
 (5) it doesn t happen perfectly everywhere It s not perfectly
 (6) stable Sometimes we wind up with agitation and the surface
 (7) may always be at some intermediate stage in attempting to
 reach
 (8) the more stable surface but by and large this process
 (9) operates continuously all over the Sound
 (10) Now I want to be clear about one thing in this
 (11) illustration These pictures don t represent the size of the
 (12) waves just to give you some idea of the energy of the waves
 (13) Be misleading to think it required a wave this big relative to
 (14) these (indicating) to disrupt that beach What I m trying to
 (15) do is illustrate the differences of power or the energy of the
 (16) waves I think that s it
 (17) Q So this then gives us an idea how the beach can stabilize
 (18) with some of the oil retained below the surface?
 (19) A That s correct
 (20) Q Now you mentioned the photograph before actually when
 (21) you were making reference to the exhibit Is this the one to
 (22) which you were referring?
 (23) A Yes
 (24) Q And can you explain again with reference to the exhibit
 (25) what the purpose of the photograph is?

Page 4385

(1) A Yes We can see the red ruler which is about six inches at
 (2) the base of the hole where the boulder on the right is in the
 (3) photograph it s the hole the boulder was pulled from Beneath
 (4) this armored surface is a variety of fine grain material
 (5) largely sandy material and it s a shade of a brown and you can
 (6) see it around the sheen where it s on the pool of the water
 (7) So the boulder represents the armor that keeps the finer grain
 (8) less stable materials in place
 (9) Q Let me take a few moments with you sir and ask whether
 (10) you in connection with your research and the review that you
 (11) described of others work with respect to the fate and
 (12) persistence of the crude oil you are able to describe to the
 (13) ladies and gentlemen on the jury the general path of the oil
 (14) from the Exxon Valdez over time?
 (15) A Yes
 (16) Q And what tools do you rely on to tell us about that what
 (17) have you reviewed?
 (18) A Well there was a variety of data but the hindcast study
 (19) for example work by Gault and others we ve looked at a
 (20) variety of data As I mentioned earlier across the Sound both
 (21) anecdotal people who have worked on cleanup crews as well
 as
 (22) ADEC data Alaska Department of Environmental Conservation
 and
 (23) Alaska Department of Fish & Game also provided both
 observation
 (24) data NOAA over flight data similar information
 (25) MR NEAL Excuse me just a moment Your Honor

Page 4386

(1) aren t we getting beyond the area of Mr Bush s expertise? I
 (2) think he was offered as a marine biologist had to do with the
 (3) nature of the bottom of the ocean and substantial bodies of
 (4) water I think he s now talking about the path of the oil from
 (5) the Valdez
 (6) MR JAMIN Your Honor we re getting - my next
 (7) question is - he was offered as a marine geologist and he s
 (8) indicated how he studied the beaches and various areas I
 (9) think it s perfectly within his expertise
 (10) THE COURT I ll listen a little bit more before we
 (11) make a decision on this
 (12) BY MR JAMIN
 (13) Q Mr Bush what I d like to do is show a series of stills
 (14) from the HAZMAT video and if you could as we go through
 (15) explain the principal features of the land and to some extent
 (16) where you were involved in your research The first of which
 (17) I believe is a day after the spill?
 (18) A Yes if you look at the illustration this particular
 (19) method of depicting a spill illustrates the spill as a bunch of
 (20) small dots on the screen so that what we see here is a cluster
 (21) of many small dots in one place indicating a short time after
 (22) the spill and the oil is still relatively close or contained
 (23) in the vicinity of the Valdez
 (24) Q Let s have the next still This is 226 which has been
 (25) preadmitted sir This is the second day if you could

Page 4387

- (1) describe that?
- (2) A Well two days into the spill now we can see that the slick
- (3) itself is beginning to become more diffuse among the edges
- and
- (4) is moving landward I e spreading out moving both to the
- (5) west and the small portions may in fact move eastward There
- (6) is no real direction or advent with wind or anything
- (7) particularly to mobilize -
- (8) THE COURT May I see Counsel please?
- (9) (At side bar off the record)
- (10) BY MR JAMIN
- (11) Q Mr Bush in the interest of the shortness of time and
- (12) life His Honor asked that we just identify a couple of the
- (13) frames along the way
- (14) Let me ask you this is in early April is it not? Can you
- (15) identify come down here off the stand and identify for us with
- (16) reference to the oiling that shows on the HAZMAT video where
- (17) some of the work that you did was in Prince William Sound sir?
- (18) A Yes This is Prince William Sound Bligh Island area
- (19) Bligh Reef where the impact happened We've investigated this
- (20) area in 1989 92 93 and 94 and the sites of investigation
- (21) that we had ranged from the north approximately Applegate
- (22) Island area through the Naked Island Knight Island the
- (23) islands to the north of this and Green Island LaTouche Island
- (24) and the collection of islands Edmonds Eleanor and others in
- (25) this vicinity all the way around These islands Montague

Page 4388

- (1) Hinchinbrook sort of the barriers of the gulf to the Prince
- (2) William Sound were not particularly investigated in the spill
- (3) and to our knowledge were not heavily impacted
- (4) The principal areas we focused on were these areas where
- (5) the bulk of the spill passed through (indicating)
- (6) Q Now if you'd stay right there let's try to identify one of
- (7) the pictures out of the Sound If you just go forward That's
- (8) perfect Now this is still in early April is it not?
- (9) A Yes it is
- (10) Q And can you explain where you did some of your field
- (11) research with reference to this diagram?
- (12) A Yes this photograph the areas depicted in this
- (13) illustration Prince William Sound is up here We moved to the
- (14) southwest from Prince William Sound this being the Kenai
- (15) Fjords This represents the portions of the slick that are
- (16) moving in this area We've investigated several sites down in
- (17) here Morning Cove Bench Cove (ph) Taroka Arm Windy Bay
- (18) Rocky Bay Port Chatham
- (19) Q In subsequent years did you investigate into the Kodiak
- (20) archipelago and the Alaska Peninsula?
- (21) A Yes Cape Douglas and the Alaska Peninsula and a variety
- (22) of sites that occur off the illustration to the southwest as
- (23) well as portions of the Kodiak group here Kodiak Shuyak and
- (24) Afognak
- (25) Q Just one more question on this and we'll move all this

Page 4389

- (1) exhibit Have you looked at the entire HAZMAT exhibit the
- (2) entire video?
- (3) A Yes I have
- (4) Q Does it show with the dots the locations of all the oil
- (5) that you found sir?
- (6) A No it does not It's usable as a broad indication of the
- (7) oil spill path Gives you some indication of the series of
- (8) events that happened after the release I don't think it's
- (9) purpose was to depict entirely the full introduction of the oil
- (10) where it went
- (11) Q If you would like to take the stand again and I just have
- (12) one another area Mr Bush that I would like to go into with
- (13) you
- (14) You mentioned that you had been out in the field in 1994
- (15) and you had a chance to explain some of the photographs that
- (16) you or those with you took Did you have an opportunity to
- (17) determine whether oil could still be found at some of those
- (18) sites?
- (19) A Yes we did
- (20) Q Was part of your intent when you were out there to
- (21) determine what shape the oil was in what form it was in?
- (22) A Yes if I understand your question correctly by what shape
- (23) or what form it was in
- (24) Q How it was persisting?
- (25) A Yes Actually our focus of what we did in '94 was to turn

Page 4390

- (1) to sites where people had reported oil and try to determine
- (2) what kinds of conditions or what mechanisms were in place that
- (3) were preserving the oil on the shorelines
- (4) Q How many sites did you go to sir?
- (5) A Well depends on how you define a site and for what
- (6) purpose Approximately 40 to 45 sites
- (7) Q And how many did you find oil at?
- (8) A All those sites but I would say four we found oil
- (9) Q And did you bring with you today some of the examples of
- (10) the oiled residue that you found at those sites?
- (11) A Yes
- (12) Q If you could come down off the stand to your cooler sir
- (13) Did you bring four examples with you?
- (14) A Yes
- (15) Q And if you could take those out one at a time and explain
- (16) what those are to us?
- (17) A Can I put these up?
- (18) Q Why don't you take it up Face the jury and explain them
- (19) one by one?
- (20) A I'll take these out first Not able to bring my pocket
- (21) knife into the courtroom
- (22) Q Why don't you go ahead and explain the other three are and
- (23) I'll get this ready
- (24) A This sample is a sample of the water surface that was
- (25) illustrated in one of the photographs that we prepared earlier

Vol 26 4391

- (1) and that you've looked at earlier. It was collected from a pit
 (2) that we dug in Point Helen. But the lid is loose if you wish
 (3) to pick it up and inspect it.
 (4) Q Is Point Helen in Prince William Sound?
 (5) A Yes, it's at the tip of Knight Island, approximately at
 (6) this location. In the photograph, the photograph was taken
 (7) awhile after this sample was collected.
 (8) Q If you could go on to the second, sir?
 (9) A This one was collected in Morning Cove.
 (10) MR NEAL: Could he speak up a little bit from back
 (11) here I can't hear.
 (12) BY MR JAMIN:
 (13) Q He's asked that you speak up.
 (14) A This next sample was taken at Morning Cove, located in the
 (15) Kenai Fjords, pretty difficult from this location, but this
 (16) location (indicating).
 (17) Q Let's get the numbers for the records that's circulating in
 (18) the jury. This is 6015, the first, and the second one is 6014?
 (19) A The larger jar that you're looking at now consists of
 (20) material that was removed from the boulder that we
 (21) photographed
 (22) earlier at Morning Cove, that boulder, and we came back six
 (23) days later. These pebbles are oiled pebbles that were
 (24) collected from storm berm on the outside of LaTouche, the
 (25) outside meaning the east side of LaTouche Island on the
 northeast end of LaTouche.

Vol 26 4392

- (1) Q Let me get that number, 6016.
 (2) Mr. O'Neill was able to get through security with his
 (3) keys. And the number on this one, Mr. Bush?
 (4) A Well, I have a sample number. I can't give you an exhibit
 (5) number. Do you want the sample number?
 (6) Q We're going to mark it as 6017. I think is the next one in
 (7) sequence?
 (8) A Would you like the sample number?
 (9) Q For identification, let's do that, sir?
 (10) A 94FB 01 S01.
 (11) Q Thank you. Can you explain where that came from?
 (12) A This sample was collected from the Foul Bay Location. It's
 (13) about in this location of this area of Kodiak Island.
 (14) Q Now, sir, I know that when you made reference before to the
 (15) photographs that you've described, you indicated that they
 (16) were
 (17) taken in 1994. Have these, the samples that you've shown to
 (18) the jury, are they from 1994?
 (19) A Yes, they are.
 (20) Q Excuse me a moment.
 (21) Let me ask you finally, sir. Has your team made an effort
 (22) to determine whether or not this is oil from the North Slope?
 (23) A Yes, we have.
 (24) Q And is it your opinion that this is oil from the Exxon
 (25) Valdez?
 A Yes, it is.

Vol 26 4393

- (1) Q Thank you. I'm not quite done. I wanted to make sure that
 (2) all the samples had come back.
 (3) THE COURT: While we're finishing that, I'm not sure
 (4) that I got the number of all the exhibits that you're dealing
 (5) with, 6014, 15, 16, and 17.
 (6) MR JAMIN: That's correct, Your Honor, and those are
 (7) the four oil samples.
 (8) THE COURT: Is there any objection to the admission of
 (9) those four exhibits?
 (10) MR NEAL: I'd like to ask about one of them, Your
 (11) Honor.
 (12) MR JAMIN: Which is that?
 (13) MR NEAL: The one you told me about this morning, I
 (14) don't know which number it is.
 (15) MR JAMIN: I'll move for the admission of all four
 (16) subject to Mr. Neal's examination. I just want to make sure we
 (17) get all four back here. Bear with me, Mr. Neal, I know you're
 (18) chafing at the bit.
 (19) MR NEAL: I got all day until 2:00, I guess.
 (20) BY MR JAMIN:
 (21) Q Mr. Bush, how did your team determine that this was oil
 (22) from the North Slope?
 (23) A There are a variety of ways that we look at that problem.
 (24) Aside from sheer analytical methodologies, when you return to
 (25) a site repeatedly from 1989, '92, '93, and '94, you're tracking

Vol 26 4394

- (1) the same material in time. And it's fairly straightforward
 (2) that if there aren't any major differences in appearance from
 (3) year to year, you're looking at the same material. In addition,
 (4) there are analytical methodologies we applied using different
 (5) techniques that we know it's Exxon Valdez oil. I don't know
 (6) that any one item is absolutely definitive and exclusive, but
 (7) the collective weight of all the evidence is very convincing.
 (8) Q Is one of the techniques that you use or your team uses a
 (9) chemical process called fingerprinting?
 (10) A Yes.
 (11) Q Were some of these samples fingerprinted as North Slope
 (12) crude?
 (13) A Yes, they were.
 (14) MR JAMIN: Mr. Neal.
 (15) CROSS EXAMINATION OF JAMES BUSH
 (16) BY MR NEAL:
 (17) Q Picking up right there - is it Dr. Bush or Mr. Bush?
 (18) A It is Mr. Bush.
 (19) Q Picking up right there, I have heard, and I'll just ask you
 (20) to confirm. If there had never been the grounding of the Exxon
 (21) Valdez and the oil spill, there would have been oil in Prince
 (22) William Sound?
 (23) A Are you going to quantify that in terms of amount or any -
 (24) Q I mean it just exists, doesn't it?
 (25) A As itself, crude oil specifically?

Vol 26 4395

- (1) Q Yes
 (2) A Yes it does
 (3) Q And that's the reason that you would have to go through
 (4) this process because there is oil out there that may very well
 (5) not be Exxon Valdez oil so you went through this process
 (6) fairly enough with these samples?
 (7) A Which process are you referring to?
 (8) Q The process you just described the finger printing and so
 (9) forth?
 (10) A The finger printing is used principally to be more specific
 (11) about which crude it is The observational process is specific
 (12) to the event
 (13) Q Well let me ask you about that What you determined was
 (14) that this is - that these samples here I gather if I'm
 (15) wrong correct me because I guess I was coming up here and I
 (16) didn't quite hear it all I gathered that you determined that
 (17) this was North Slope crude?
 (18) A That's correct
 (19) Q Not Exxon Valdez oil from your process you went through?
 (20) A Not precisely correct approximately
 (21) Q Let's be precisely It was my understanding that you
 (22) determined it was North Slope?
 (23) A The finger printing methodology determine it was North
 (24) Slope The observational methodology is much more
 (25) convincing
 (25) because of the time frame and the level of concentration in

Vol 26 4396

- (1) these sediments is much more convincing that it's Exxon Valdez
 (2) crude
 (3) Q That's not a scientific process that's your observations
 (4) you've been there in '89 '92 '94 et cetera right?
 (5) A No I would disagree The science of geology is very
 (6) observational and there are strict observation methods that we
 (7) follow to help make these determinations and I would say
 (8) that's a scientific process
 (9) Q Am I mistaken that you were unable to determine whether
 (10) one of these was North Slope crude or whether one of these was
 (11) questionable whether it came from the Exxon Valdez?
 (12) A Yes One of the samples the pebbles that were in the
 (13) Ziplock bag that was passed around the analytical results for
 (14) those samples eliminated a number of possibilities plant
 (15) material diesel fuel that sort of thing but because of the
 (16) state of weathering on the pebbles it's difficult to say with
 (17) certainty whether or not the material on them was weathered
 (18) tar motor oil or crude oil
 (19) Q In regard to there being oil in Prince William Sound
 (20) whether there had been a spill or not does some of that just
 (21) seep up through the ground or come in from other portions
 (22) places in Alaska?
 (23) A There has been work documenting and interpreting a large
 (24) amount of data that suggests that oil seeps outside of Prince
 (25) William Sound do contribute very minute amounts of oil on

Vol 26 4397

- (1) particular matter which moves along with the Alaska coastal
 (2) current and up into the Sound in very low concentrations and
 (3) very small amounts that's correct
 (4) Q And seeps up through the ground am I correct about that?
 (5) A Within the Sound?
 (6) Q Yes
 (7) A Not to my knowledge
 (8) Q But comes into the Sound from other sources?
 (9) A That's correct
 (10) Q And as a matter of fact oil can get in Prince William
 (11) Sound from events such as earthquakes can't it earthquakes
 (12) rupturing tanks you know what I'm talking about?
 (13) A I thought you meant through a natural event seeping up
 (14) through a fracture or crevasse that doesn't happen
 (15) THE COURT Have you not heard of the Katalla area
 (16) THE WITNESS Yes I have we discussed the Katalla
 (17) We discussed that with the movement throughout the Sound
 (18) that's the theory it gets on small particulate matters and
 (19) moves with the coastal currents You're referring to the
 (20) rupture tanks of the Valdez
 (21) BY MR NEAL
 (22) Q You made a map and showed oil in something called Sawmill
 (23) Bay do you remember that?
 (24) A I probably did I don't recall specifically which
 (25) illustration you're talking about

Vol 26 4398

- (1) Q I can show you if you wish but that would involve a
 (2) hatchery that was boomed and it turned out that the oil that
 (3) you showed as being oil or somebody showed I'm not sure
 (4) you
 (4) did it but in one of your composite maps you showed oiling
 (5) areas you showed oil I picked it up on your composite map as
 (6) oiled from the Exxon Valdez and it turned out that it was oil
 (7) that came from tanks ruptured during the 1964 earthquake
 (8) that's true isn't it?
 (9) A I'm not familiar with the specific exam I'm familiar that
 (10) Sawmill Bay had been boomed and we observed oily materials
 (11) outside the boom
 (12) Q Didn't you show oil on the beach inside Sawmill Bay and
 (13) wasn't it determined - we can get to this later if you want
 (14) to but you're not aware that that was determined to be oil
 (15) coming from tanks ruptured during the 1964 earthquake?
 (16) A No that's not correct I'm aware that oil in the Sound
 (17) has been identified tarry residues specifically that are
 (18) associated with that event What I'm not aware of is the
 (19) amount of material you're referring to oiled shoreline that
 (20) occurs within Sawmill Bay
 (21) Q You're not aware that there was allegedly oiled shoreline
 (22) in Sawmill Bay?
 (23) A That's what I'm confused about
 (24) Q We'll get to that You're not aware one way or the other
 (25) the question I'm asking right now?

Vol 26 4399

- (1) A I m aware of the issue of the 64 earthquake and the tar
 (2) released as a result of that event
 (3) Q You re not aware of what I m talking about the oiled
 (4) shoreline in Sawmill Bay being imputed to the Exxon Valdez
 (5) spill but later being determined to have come from tanks
 (6) ruptured in the 1964 earthquake?
 (7) A That s correct
 (8) Q You re not familiar with that?
 (9) A That s correct
 (10) Q You talked about - by the way the one that you could not
 (11) determine as Exxon Valdez oil or North Slope oil could you
 (12) give me the exhibit number on that? Do we have the exhibit
 (13) number? I don t know the exhibit number offhand It s the
 (14) ziplock bag
 (15) Well let s don t take the jury s time now if we could do
 (16) that later You will help me find that later and identify the
 (17) exhibit number?
 (18) A Certainly be happy to
 (19) Q Now you talked about dissolving oil in the water and I
 (20) believe you said very little oil dissolves in water?
 (21) A In a relative sense a small portion of the slick actually
 (22) dissolved correct
 (23) Q A lot of it is eaten by bacteria?
 (24) A Beg pardon? Well in time
 (25) Q A lot of it is flushed out into the ocean?

Vol 26 4400

- (1) A A portion of it is that s correct
 (2) Q By the way you re aware that Prince William Sound
 (3) completely flushes out every two or three weeks are you not?
 (4) A That statistic refers to broad general areas and broad
 (5) current flow There are a number of bays in isolated areas
 (6) that do not flush regularly and are not dominated by the
 (7) currents that you re referring to so as a general statement
 (8) for a large body of water and water within the Sound is
 (9) correct On a specific basis there are many exceptions to it
 (10) Q There s one picture you showed here Plaintiffs Exhibit
 (11) 245 48 that had the allegation of oil flowing off the beach do
 (12) you remember that?
 (13) A Yes
 (14) Q Do you see that?
 (15) A Yes
 (16) Q I m a little confused and I certainly want to clear this up
 (17) while I m on it Some pictures you took and brought in here
 (18) were taken in 1994?
 (19) A That s correct
 (20) Q This is not one of them is it?
 (21) A That s correct
 (22) Q This is taken when?
 (23) A In 1989
 (24) Q About the time of the spill?
 (25) A That s correct

Vol 26 4401

- (1) Q And you didn t want to leave - I m sure that nobody wanted
 (2) to leave the impression that this was one of the pictures taken
 (3) in 1994?
 (4) A Absolutely not I know of no case -
 (5) Q I m not suggesting you would but I thought that ought to
 (6) be brought out
 (7) Now you said that oil because of the energy of wave motion
 (8) and so forth sometimes recycles back into the environment
 (9) Well when it s on the beach it s in the environment I
 (10) gather?
 (11) A The discussion was referring to the aqueous environment
 (12) that is correct
 (13) Q And some of it is taken back out to the ocean again is it
 (14) not?
 (15) A That s correct
 (16) Q Or taken not again but goes back out into the ocean?
 (17) A Both statements are true that s correct
 (18) Q I think we went - you went through a chart here
 (19) demonstrating about the percolation of oil that had been
 (20) deposited on the beach do you remember that?
 (21) A Yes
 (22) Q And you said I believe you said that wouldn t happen if it
 (23) were bedrock?
 (24) A It would not same to the same degree that s correct
 (25) Q To a much lesser degree?

Vol 26 4402

- (1) A Yeah with the exception of the porosity within the rock
 (2) itself and fractures and crevices and things like that
 (3) Q Do you have at your fingertips how much of Prince William
 (4) Sound beaches is in fact bedrock?
 (5) A Not at my fingertips We have that on our GIS system and
 (6) we use our computer system to do that it is a difficult
 (7) question to address because not only is it difficult to define
 (8) what you mean by Prince William Sound but because of
 (9) heterogeneity shorelines areas that had been mapped and
 (10) classified and classified as one shoreline type are in fact
 (11) multiple shoreline types
 (12) Q Would you think or have any reason to disagree that
 (13) approximately 56 6 percent of the shoreline of Prince William
 (14) Sound is sheltered bedrock?
 (15) A Sheltered bedrock?
 (16) Q Yeah
 (17) A Seems a little high for sheltered bedrock although the
 (18) data are so imprecise that and the definition is imprecise
 (19) that it s difficult to say with certainty Clearly I believe
 (20) that a high percentage of the shorelines are bedrock dominated
 (21) and a substantial portion of those are in sheltered or semi
 (22) protected environments
 (23) Q As a matter of fact would you - what do you say about the
 (24) proposition that some 74 percent of shoreline of Prince William
 (25) Sound is bedrock whether sheltered or not and that 56 percent

Vol 26 4403

- (1) of that is sheltered bedrock?
 (2) A If I had the opportunity to review the data and review the
 (3) source of the data I would be happy to confirm or disagree
 (4) with that
 (5) Q You don't have that at your fingertips?
 (6) A I do not have it at my fingertips
 (7) Q Would you agree with me that well over a majority of the
 (8) shoreline of Prince William Sound is bedrock?
 (9) A Well I don't know over a majority but certainly a
 (10) substantial portion is
 (11) Q When you're talking about event of oil or oil spill on
 (12) beaches would you agree that and I think you said that one of
 (13) the elements to consider is exposure versus sheltered beach
 (14) right?
 (15) A That's correct
 (16) Q And I think you said or intended to say that if it's a
 (17) sheltered beach there is less possibility of damage?
 (18) A If it's a sheltered beach when you say damage you mean
 (19) oil impact or do you mean -
 (20) Q Yeah less impact
 (21) A For a sheltered environment the opposite is the case The
 (22) oil tends to persist there longer
 (23) Q So an exposure - exposed has less tendency to remain or
 (24) persist?
 (25) A That's correct

Vol 26 4404

- (1) Q Mr. Bush you went out to - I think one of the points you
 (2) make here or came to make was that there still is oil in Prince
 (3) William Sound?
 (4) A That is correct
 (5) Q And you do that through your statement that there is some
 (6) oil persisting in Prince William Sound that is all from the
 (7) Exxon Valdez?
 (8) A That is correct
 (9) Q Now you went to certain spots in Prince William Sound in
 (10) 1989 did you not?
 (11) A Yes
 (12) Q And indeed at some of these spots it was just eyeballing
 (13) and some of them it was really some where you to use your
 (14) term you did some transecting?
 (15) A That's correct
 (16) Q And I take that to mean you went to the intertidal basin
 (17) that this Dr. Peterson entertained us so long yesterday
 (18) about - were you here?
 (19) A As well as other locations yes
 (20) Q By the way other than and I don't want to you think I'm
 (21) quarreling with you on this but it's one of my jobs here
 (22) prior to the Exxon Valdez - work you've done on the Exxon
 (23) Valdez did you ever participate in an intertidal survey?
 (24) A Prior to the Exxon Valdez work?
 (25) Q Yes

Vol 26 4405

- (1) A I don't recall the precise dates I believe some of the
 (2) work I did for AtoChem North America (ph) was prior to the
 (3) Exxon Valdez but I'm not positive
 (4) Q You're not positive?
 (5) A In fact some of the work we did for the EPA regarding the
 (6) refineries may have been pre Valdez I don't recall precisely
 (7) the dates of the projects
 (8) Q Now you went to some of these spots in 1989 and did what
 (9) you call transecting?
 (10) A That's correct
 (11) Q And I take that to mean I've read your work to indicate
 (12) that that is you actually dig down you actually go down lay
 (13) out a grid of some sort in the intertidal zone and you take
 (14) samples?
 (15) A Yes and more but that is part of what we do yes
 (16) Q And you do more And you also determine at that time
 (17) whether there is oil and what should I say the degree of
 (18) oiling?
 (19) A Yes
 (20) Q And then you went back to many of these spots in 1992 to
 (21) have another look?
 (22) A Yes
 (23) Q I guess you didn't transect again but you had another look?
 (24) A No in 1992 we had three components of our field program
 (25) We returned to the transect sites and retransected in our

Vol 26 4406

- (1) current nomenclature retransected those sites We did an
 (2) area wide sampling program in which we did visit a larger
 (3) number of sites approximately 70 and examined what we
 (4) thought
 (5) to be known occurrences of oil or unusual histories in
 (6) documents that have indicated shoreline recovery and
 (7) anything
 (8) unusual in the shoreline recovery history
 (9) We also conducted what we referred to -
 (10) Q All I asked you was did you transect again or did you -
 (11) A I thought you asked what we did
 (12) Q Well I don't want to cut you off but I do have some
 (13) things I want to ask and maybe we can move along
 (14) A Certainly
 (15) Q In 1989 in these transects you determined whether there
 (16) is oil deposited or oil there and you determined the degree of
 (17) oiling is that fair?
 (18) A That's approximately correct
 (19) Q That's part of what you did?
 (20) A Yes
 (21) Q And then when you went back in 1992 you determined if
 (22) there
 (23) was oil there and the degree of oiling right?
 (24) A Yes
 (25) Q And when you went back in 1994 as part of your work you
 (26) did the same thing didn't you?
 (27) A 1994 not exactly We did not visit the transect sites
 (28) with equipment and with an investigative team at the same level

Vol 26 4407

- (1) of detail as we did in the previous field programs in 94 it
 (2) was a much more rapid survey
 (3) Q Much more rapid?
 (4) A Yes
 (5) Q How long were you there in 94?
 (6) A Approximately eight to ten days Nine days I believe
 (7) Q But you according to your deposition did reach some
 (8) determinations about the degree of oiling even in 1994?
 (9) A That s correct
 (10) Q Now let me go through some of those and some of them
 (11) you ve mentioned here Let s take I m not sure I m going to
 (12) pronounce this right Eshamy?
 (13) A Eshamy
 (14) Q You put up an exhibit 4020 that talked about Eshamy Bay?
 (15) A That s correct
 (16) Q You went to Eshamy Bay in 1989 and according to your work
 (17) you found that there was a moderate oiling?
 (18) A That is correct to my recollection I believe it was
 (19) moderately oiled
 (20) Q I ll be happy to show you - if you don t have a
 (21) recollection I think I can refresh you
 (22) A I think that s right
 (23) Q And when you went back in 1992 you found that that
 (24) moderate had changed to light?
 (25) A That s correct

Vol 26 4408

- (1) Q You also talked about Morning Cove and that was your
 (2) Exhibit 6020 Could we have that? Morning Cove is - I have
 (3) it down here as 6022
 (4) MR JAMIN Eshamy Bay is 6020
 (5) MR NEAL Is this 6022?
 (6) BY MR NEAL
 (7) Q This is Morning Cove?
 (8) A That s correct
 (9) Q Now when you went there in 1989 you said that the oil -
 (10) there was heavy oiling correct?
 (11) A That s correct
 (12) Q When you went back there in 1992 however you described
 (13) the oiling as light?
 (14) A That is correct
 (15) Q With respect to Point Helen do you remember that that s
 (16) an exhibit you brought out 6025?
 (17) A Yes
 (18) Q You went there in 1989?
 (19) A Yes
 (20) Q And you said the oiling was heavy?
 (21) A That is correct
 (22) Q When you went back in 1992 you determined that the oiling
 (23) had changed to moderate?
 (24) A I believe that s correct yes
 (25) Q And when you went back in 1994 you could find practically

Vol 26 4409

- (1) no oil or little oil?
 (2) A That is not correct
 (3) Q Not correct okay Did you find very little surface oiling
 (4) and improvement in subsurface maybe that s the way to say it?
 (5) A Difficult to quantify the improvement at subsurface but
 (6) the surface is definitely cleaner that s correct
 (7) Q So it went from heavy to moderate to even improvement from
 (8) moderate?
 (9) A Yes
 (10) Q In 1989 you went to East LaTouche Island?
 (11) A Yes
 (12) Q And there in 89 you determined there was light degree of
 (13) oiling?
 (14) A I believe that s correct
 (15) Q In 92 that changed to very light?
 (16) A Yes
 (17) Q And in 1994 you reported quote practically no visible
 (18) oil?
 (19) A I believe there was no visible evidence of oil that s
 (20) correct
 (21) Q Maybe you re right I ll read it I think we observed
 (22) practically no visible oil Okay?
 (23) A Okay
 (24) Q So that had changed then from light to very light to we
 (25) observed practically no visible oil?

Vol 26 4410

- (1) A That s correct
 (2) Q There were others I gather that have the same improvement
 (3) Without me going through all of them would you agree that s a
 (4) fair statement - or had improvement I won t say the same?
 (5) A Yes that is true
 (6) Q I won t go through all of those Improved from 89 to 92
 (7) and from 92 to 94?
 (8) A Yes that s correct
 (9) Q In that regard in picking out these places where you made
 (10) your transects how did you determine where to go to make
 (11) them?
 (12) A Well there were a number of things that we did to
 (13) determine the location of transects We flew reconnaissance
 (14) flights for approximately three days and this is in 1989 we re
 (15) talking about We flew reconnaissance flights over the area to
 (16) identify areas of client lands We were retained by Chugach
 (17) Corporation and their respective native villages to inspect
 (18) these lands and we flew them with aircraft fixed wing wheel
 (19) craft well float too and examined them in 1989 to identify
 (20) major areas large areas that had been impacted And then we
 (21) returned to those general areas in vessel shortly thereafter
 (22) and did a more detailed or closer reconnaissance to the areas
 (23) after which we selected particular more narrow selections of
 (24) shoreline to investigate and then we departed from the major
 (25) vessel on a small skiff and selected the specific transect
 sites

Vol 26 4411

- (1) Prior to doing this we examined oiling maps that were
 (2) released I believe - I don't recall now if they were released
 (3) by the Alaska Department of Environmental Conservation or if
 (4) they were released by Exxon the oiling maps of the area to try
 (5) to gain some idea where the oil was We gathered some
 (6) additional anecdotal information and we inquired of the clients
 (7) themselves if they had areas of sites of particular interest
 (8) archeological sites cultural sites that they wanted us to be
 (9) sure and investigate for any particular reason I believe that
 (10) comprises the process
 (11) Q In the main - and in order to do your work is it fair to
 (12) say that in the main you looked for places that were oiled to
 (13) see what was happening?
 (14) A It's fair to say that we were there to investigate oil
 (15) sites and by virtue of that we tried to identify where oil
 (16) was yes
 (17) MR NEAL I just want at this point may it please
 (18) the Court exhibits that I've been asked to offer into
 (19) evidence I think there is no controversy about this May it
 (20) please the Court we offer into evidence Exhibits 2695 2697
 (21) 2719 through 2728 through 2728 2731 2763 through 2765
 (22) 2775 9209 9223 9224 9227
 (23) (Exhibits 2695 2697 2719 through 2728 2731 2763 through
 (24) 2765 2775 9209 9223 9224 9227 offered)
 (25) MR O NEILL We have no objection to those exhibits

Vol 26 4412

- (1) THE COURT These are all defendants exhibits?
 (2) MR O NEILL Yes sir they are
 (3) THE COURT Admitted without objection
 (4) (Exhibits 2695 2697 2719 through 2728 2731 2763 through
 (5) 2765 2775 9209 9223 9224 9227 received)
 (6) MR NEAL Thank you Mr Bush Excuse me just a
 (7) moment Thank you Mr Bush
 (8) MR JAMIN First I offered 6014 to 6017 I didn't
 (9) hear objection to it
 (10) THE COURT We didn't resolve the package of the
 (11) ziplock bag of rocks
 (12) MR NEAL I only object to one of them and I don't
 (13) know which one to attach that objection
 (14) REDIRECT EXAMINATION OF JAMES G BUSH
 (15) BY MR JAMIN
 (16) Q The bag of ziplock rocks is 6016 and let me go ahead and
 (17) ask you a couple more questions about that
 (18) First of all sir is this the one the fingerprinting
 (19) analysis could assure it was from the North Slope?
 (20) A That's correct
 (21) Q And is that in part because the analysis indicated it was
 (22) particularly weathered material?
 (23) A That's correct
 (24) Q Were there other indicators that led you to believe that it
 (25) was North Slope crude and specifically from the Exxon Valdez?

Vol 26 4413

- (1) A Yes
 (2) Q What were they?
 (3) A We obtained this sample from the same location that we
 (4) sampled and visited previously and we have a history a
 (5) photographic so to speak or a visual history of contamination
 (6) in that area
 (7) In addition to that there had been substantial treatment
 (8) activities on that beach which indicated that the area had
 (9) been oiled in the past
 (10) Q And when you say treatment you mean part of the cleanup
 of
 (11) the oil spill?
 (12) A Yes
 (13) MR JAMIN Move for the admission of 6014 to 6017
 (14) (Exhibits 6014 6015 6016 and 6017 offered)
 (15) THE COURT With respect to the bag of rocks was the
 (16) chemical fingerprinting ever done of that area where those
 (17) particular rocks were picked up?
 (18) THE WITNESS The fingerprinting was not done from the
 (19) specific location the sample was collected
 (20) BY MR JAMIN
 (21) Q Was it done from areas near by?
 (22) A Yes it was
 (23) THE COURT I'll allow 6014 6015 6016 and 6017
 (24) (Exhibits 6014 6015 6016 and 6017 received)
 (25) MR JAMIN Thank you

Vol 26 4414

- (1) BY MR JAMIN
 (2) Q Mr Bush I just have one other question Mr Neal was
 (3) discussing with you how the oil would go out into the water
 (4) from certain beaches over time and when this - as part of the
 (5) cleaning process When the oil is released from the beach are
 (6) you able to see that?
 (7) A In what context? Do you mean can we see the process that
 (8) takes place?
 (9) Q Yes
 (10) A Or can we see the oil specifically?
 (11) Q Let's ask first can you see the process?
 (12) A Yes you can see the process
 (13) Q How do you see it?
 (14) A It's wave action and agitation on the beaches in the
 (15) immediate sense In a longer term sense by measuring
 (16) transects and I probably should take a moment to explain how
 (17) that's done
 (18) Q Sure
 (19) A The transects that we've installed on these sites are an
 (20) exercise in measuring the contour of the beach You place a
 (21) stake in the upland area out of the intertidal zone and
 (22) horizontal it down stair step our way down the face of the
 (23) beach By comparing the shape of the beach from year to year
 (24) season to season one can determine change in the beach To
 (25) the extent that a subsequent profile is higher materials of an

Vol 26 4415

(25) MR SCHROER We now call Les Meredith

- (1) earlier date have been buried at some point in their history
 (2) To the extent the profile is lower they have been eroded
 (3) away So by returning to this repeatedly one can gain a sense
 (4) as to what kind of wave action or what kind of erosion natural
 (5) action or deposition has taken place along that profile So
 (6) for a longer term perspective on whether or not the material is
 (7) present or has been removed one can compare profiles that is
 (8) the cross section of the beach along the same transect over
 (9) time In a short time perspective one simply watches the
 (10) storm events and returns to the site
 (11) Q And as the beach goes from heavily oiled to moderately or
 (12) from moderately to lightly and the beach is losing some of its
 (13) oil where is that oil going?
 (14) A There are a variety of locations The oil can move farther
 (15) up on the beach subtidally below the zone laterally move out
 (16) as floating or suspended particulate matter and recur on a
 (17) subsequent shoreline later or out into the open ocean and float
 (18) out into the Pacific Depends on the current waves and
 (19) particular situation
 (20) MR JAMIN Thank you very much sir
 (21) THE COURT Thank you sir You may step down Call
 (22) your next witness
 (23) MR SCHROER Plaintiffs call Les Meredith
 (24) THE WITNESS Your Honor should I leave these here?
 (25) THE COURT You can have the cooler but not the

Vol 26 4416

- (1) things that were in it
 (2) MR LYNCH Your Honor before Mr Meredith testifies
 (3) by agreement of Mr O Neill we have a group of DXs we would
 (4) like to offer and which I understand there is no objection
 (5) MR LYNCH Mrs Robinson has worked that arrangement
 (6) out
 (7) MS ROBINSON Marianne Robinson on behalf of Exxon
 (8) We have additional preadmitted exhibits DX425 DX966

Vol 26 4417

- (1) THE CLERK Raise your right hand
 (2) (The Witness Is Sworn)
 (3) THE CLERK Please be seated For the record sir
 (4) state your full name your address and spell your last name
 (5) THE WITNESS My name is Les R Meredith
 (6) M e r e d i t h I live at 10423 Marine View Drive Mulkitteo
 (7) Washington
 (8) DIRECT EXAMINATION OF LES R MEREDITH
 (9) BY MR SCHROER
 (10) Q Mr Meredith what do you do for a living?
 (11) A I m a commercial fishermen in the Upper Cook Inlet
 (12) Q Do you have any other jobs?
 (13) A I also teach high school biology at Noterdale High School
 (14) in Lynchwood Washington
 (15) Q How long are you sir?
 (16) A I m 53
 (17) Q Do you have a family?
 (18) A Yes sir My wife Colleen and two daughters Michelle is
 (19) 24 and Lori is 21
 (20) Q How long have you been a commercial fisherman?
 (21) A I started commercial fishing in 1972
 (22) Q Was that in Alaska?
 (23) A No sir that was in Washington state
 (24) Q When did you first become a commercial fisherman in
 Alaska?
 (25) A I purchased a limited entry permit in the winter of 1982

Vol 26 4418

- (1) and was able to fish it for the first time in 1983
 (2) Q Let s take just a minute to talk about your purchase of
 (3) that A limited entry permit could you just tell the jury
 (4) what that is generally?
 (5) A It is a document that gives us the right to fish in a
 (6) designated area within the State of Alaska and there are a
 (7) limited number of those permits
 (8) Q And apart from buying a permit do you need other things in
 (9) order to be able to fish commercially?
 (10) A To be a drift gillnetter you need a boat and at the same
 (11) time I purchased a boat and the equipment that go along with
 (12) it
 (13) Q And I take it you need some nets and other equipment to go
 (14) along with that?
 (15) A That is correct
 (16) Q How big an investment did you have to make to become a
 (17) fisherman in Upper Cook Inlet?
 (18) A Somewhere between 100 and 105 thousand dollars into the
 (19) operation
 (20) Q Now did you at that time have that amount of money in the
 (21) bank to pay cash?
 (22) A No sir I did not
 (23) Q Where did you get the money?
 (24) A I was able to obtain a second mortgage on my residence I
 (25) owned a commercial fishing boat in Washington free and clear

Vol 26 4419

- (1) I remortgaged that We owned some private recreational
 (2) property and I mortgaged that and that became the collateral
 (3) for the loan
 (4) Q Out of the you said 105 000 how much did you have to
 (5) pay - how much did you borrow?
 (6) A 95 000
 (7) Q We ve just had drawn up on a screen a exhibit that s been
 (8) preadmitted Exhibit 304 Can you tell us what that
 (9) represents?
 (10) A This is an indication that s referred to as the Upper Cook
 (11) Inlet drift area and this is the area I commercial fish
 (12) Q And just in terms of our orientation this is Cook Inlet
 (13) right?
 (14) A That is correct
 (15) Q And toward the upper right hand part of that map that s
 (16) where Anchorage would be?
 (17) A That s correct
 (18) Q And then down in the bottom in the center that s where
 (19) Homer would be?
 (20) A That is also correct
 (21) Q Are there are boundary lines in Upper Cook Inlet that tell
 (22) you where you can fish and where you can t fish?
 (23) A On the map you can see there is a line drawn across about
 (24) mid screen and that s referred to as the forelands and that
 (25) is the north end of our area and at the lower part of the

Vol 26 4420

- (1) screen you can see possibly it says Anchor Point and that is
 (2) called the Anchor Point line and that is a latitude line that
 (3) is the south end
 (4) Q Have you fished in this area every year except 1983?
 (5) A With the exception of 1989
 (6) Q Let s talk about fishing in Upper Cook Inlet Is there a
 (7) typical time of year when you re permitted to fish?
 (8) A To the best of my recollection we open at the first Monday
 (9) or Friday that follows the 25th of June
 (10) Q How long does the season stay open in Upper Cook Inlet?
 (11) A For all intents and purposes it ends the first week in
 (12) August The season is not officially closed but the fish are
 (13) basically gone at that time
 (14) Q Within the season do you fish every day?
 (15) A No sir We begin the season usually with a Monday and
 (16) Friday opening As the season progresses depending upon
 the
 (17) strength of the run decisions that are made by Alaska Fish &
 (18) Game we may get additional time It s not uncommon for us to
 (19) get a Wednesday within two to three weeks of the start and
 (20) then later in July sometimes we ll get additional time
 (21) Q When you do get an opener do you fish 24 hours in a whole
 (22) day?
 (23) A No sir The time frame within Cook Inlet is 7 00 in the
 (24) morning until 7 00 at night
 (25) Q You indicated that the season generally starts about the

Vol 26 4421

- (1) end of June?
 (2) **A** That s correct
 (3) **Q** Did you make any preparations before the fishing season
 (4) starts?
 (5) **A** My boat is winterized and dry docked at Wards Cove Packing
 (6) in Kenai and we try to get up here as soon as possible to
 (7) begin the reverse process of making sure that everything from
 (8) the year before is still operational we don t have stuck
 (9) valves the steering still steers and the throttle still
 (10) throttles and things turn and wiggle the way they are supposed
 (11) to
 (12) **Q** In a typical year assuming the season is going to start
 (13) shortly after the 25th when do you leave Washington to come
 (14) up
 (15) to Alaska?
 (16) **A** I teach school as I said in the Edmonds school district
 (17) and it s not uncommon for me to have a plane ticket for 5 00 on
 (18) the afternoon that school closes
 (19) **Q** Now let s talk about a typical fishing day We ve had
 (20) prepared a video that shows some of your operation?
 (21) **A** That is correct
 (22) **Q** At this time with the Court s permission I would like to
 (23) play preadmitted Exhibit 270 a video of Mr Meredith s
 (24) operation and as this is playing would you just look at the
 (25) screen next to you and describe to the jury in the about
 (26) 4 and a half minutes what s going on?

Vol 26 4422

- (1) **A** Yes sir I will This is 3 30 in the morning on July
 (2) 16th 1990 We are leaving the Kenai River in route to our
 (3) fishing grounds Legal fishing begins at 7 00 It is not
 (4) uncommon for us to be out this area - welcome to Cook Inlet
 (5) It s not uncommon for us to be out this early looking for sign
 (6) that fish are present
 (7) 7 00 Alaska Fish & Game allows us to put the equipment in
 (8) the water at seven This large roller that you see next to me
 (9) is called a power reel it helps to pull the net off of the
 (10) reel The large drum that you see there in the foreground is
 (11) indeed a hydraulic drum that we wind the net on It s 900 feet
 (12) long
 (13) I m looking at this time to see if we ve got a clear shot
 (14) I m hoping that no one is blocking me off Sometimes speed
 (15) the
 (16) boat up slow it down so it doesn t backlash and here is our
 (17) first evidence that we have picked a place that there seems to
 (18) be red salmon at this point As a commercial fisherman that s
 (19) a very exciting site and those are splashers here Breakfast
 (20) in a cup that was breakfast and you can see there is fish in
 (21) the net I m now communicating with other friends of mine that
 (22) we have a fishing group to find out if I m in the place or if
 (23) they are in the place
 (24) I m now releasing the net probably going to the other end
 (25) probably because of a change in wind or tide So I m reversing
 (26) the end that I connect the boat to

Vol 26 4423

- (1) This is 8 10 in the morning We re now going to begin to
 (2) pick the net This the my daughter Lori who is my crew
 (3) member try to swing the fish over the net and hang below the
 (4) net so they are hanging by their gills and try to clear the
 (5) net as rapidly as possible The net only makes money when it s
 (6) in the water And we re clearing the fish as quickly as
 (7) possible They have a real affinity for getting themselves
 (8) tangled up See I spin it over and try to drop it in This
 (9) is a shot underneath the reel This is a shot into the hold as
 (10) the fish are going in there
 (11) I have probably got a call from somebody else that says
 (12) somewhere else is a little better This shot here is 3 00 in
 (13) the afternoon The weather improved Love to see it that way
 (14) every day little editorial But 3 00 in the afternoon very
 (15) clear nice day Very near the mouth of the Kenai River The
 (16) move was advantageous I had gotten word from my friends
 (17) that
 (18) they were - I m eating again You can actually sometimes you
 (19) can actually feel the fish hit the net if I m hanging on to the
 (20) lead line there
 (21) Now I m setting up probably to pick this up Yes I am
 (22) it s late in the afternoon As a matter of fact it s 6 30
 (23) The net all the gear has to be on the boat by 7 00 You re
 (24) liable for a very severe fine if you did not have all the gear
 (25) and equipment on the boat The fish do not necessarily have to
 (26) be out of the net but there can be no fishing equipment in the

Vol 26 4424

- (1) water after 7 00
 (2) More fish coming over and again you can see we try to
 (3) spin them out of there get them out of there as quickly as
 (4) possible If we re unable to get them clear of the net by
 (5) 7 00 at approximately ten minutes to seven I have a pedal in
 (6) the back that activities that big drum I just step on that
 (7) thing everything comes in in a big mess and we can worry
 (8) about cleaning it out later but I never have that thing out
 (9) after 7 00
 (10) This is returning to the mouth of the Kenai River This is
 (11) one of the other boats here This is the fleet returning Now
 (12) I have brailer bags these are those big bags and this is the
 (13) operator He s pulling the brailer bag out That s one of the
 (14) brailers in my boat They turn this upside down in this tote
 (15) bin and put a label that indicates it came from my boat and
 (16) each one of those brailers is dumped in there They will label
 (17) it and then it will go across the sorting table be weighed
 (18) electrically and the fish I caught that day will be credited to
 (19) my account
 (20) We were very lucky We are close to the river This is
 (21) only 10 40 20 minutes to 11 Not uncommon for us to be
 (22) returning at midnight 1 00 if we were way down in the lower
 (23) part of the inlet This particular day we were close to the
 (24) river
 (25) **Q** That was quick?

Vol 26 4425

- (1) A Yes it was
 (2) Q Let me ask you just a couple followups on what we just
 (3) saw First question what kind of fish were we looking at
 (4) there?
 (5) A These are primarily reds or sockeye salmon
 (6) Q Is that the predominant species that you catch in Upper
 (7) Cook Inlet?
 (8) A Yes it is
 (9) Q Now you mentioned in the course of that there was a point
 (10) where you said you were calling your friends on the radio?
 (11) A Yes
 (12) Q Do you fish in something called a fishing group?
 (13) A That s correct We have several people that have gone
 (14) together for mutual benefit The inlet is a very large area
 (15) and there are times that the fish will be congregated in one
 (16) area more than others and we spread out in the morning one of
 (17) us tries to find where they are If we do find them we call
 (18) the group in and for mutual benefit I might be the one today
 (19) it might be somebody else tomorrow
 (20) Q You have fished in Cook Inlet since 1983 and you just
 (21) described fishing with a group Of what you just saw on the
 (22) video would you say that s a fairly typical Upper Cook Inlet
 (23) drift operation?
 (24) A Very typical
 (25) Q Now you ve used the phrase drift gillnetting and I want to

Vol 26 4426

- (1) talk a little bit about the type There are other kinds of
 (2) fishing for salmon are there not?
 (3) A That s correct
 (4) Q And one of those is called setnetting?
 (5) A That is also correct
 (6) Q And you can also seine in areas?
 (7) A You can seine in the Lower Cook Inlet but it s not allowed
 (8) in Upper Cook Inlet
 (9) Q In a very general way would you describe for the jury s
 (10) benefit describe what you do drift gillnetting as compared to
 (11) setnetting and seine?
 (12) A When I drift the net it s a line a curtain that attaches
 (13) on the back of the boat and sets in the water And we drift
 (14) with the whims of the currents within the inlet We drift down
 (15) and the tide turns and we drift back
 (16) A setnet gillnet is one that s attached to the beach and an
 (17) individual owns a permit for a certain distance of that beach
 (18) and he s allowed to anchor nets to the bottom and they stay
 (19) fixed in one place They don t drift as ours do
 (20) Q Is one of the differences between you and a setnetter that
 (21) they stay close to the beach but your boat is allowed to roam
 (22) over the entire Upper Cook Inlet?
 (23) A That is correct
 (24) Q And you said you don t have seiners in Upper Cook Inlet?
 (25) A That s also correct

Vol 26 4427

- (1) Q Let s move onto 1989 You indicated that in a normal year
 (2) you made some preparations and came up shortly before the
 first
 (3) opener in late June?
 (4) A That s correct
 (5) Q Did you make any other preparations following the 1988
 (6) season and let s just say leading up to the oil spill which
 (7) I ll tell you was in late March of 89?
 (8) A At the end of the season of 1988 I contracted with a
 (9) Lindal Boat Company in Stanwood Washington to build a new
 37
 (10) by 12 gillnet boat that had over double the capacity of the
 (11) vessel that I had been fishing up through 1988 During the
 (12) winter of 1988 myself and an associate we if you will we
 (13) built the boat I bought it like an overgrown set of -
 (14) erector set and I put it together The Lindal Boat Company
 (15) supplied me with all the materials and then I put it together
 (16) Q When did you start working on your new boat?
 (17) A December 1st 1988
 (18) Q Did I understand you you did this physically with your own
 (19) hands?
 (20) A That is correct
 (21) Q You didn t hire a company to do this for you?
 (22) A Well I should qualify that There were certain things
 (23) that I was not capable of doing For example I don t know how
 (24) to especially bed an engine and align the shaft I don t know
 (25) how to do heavy fiberglass work for example mating the hull to

Vol 26 4428

- (1) the house I did not have enough expertise to do that
 (2) Q Were you teaching school during this period?
 (3) A Yes sir
 (4) Q When did you have time to work on building your boat?
 (5) A From 2 30 in the afternoon until 2 30 in the morning and
 (6) weekends
 (7) Q How much did your new boat cost you?
 (8) A I have 105 000 in cash in it If I were to have purchased
 (9) the boat from the company complete it would have cost me 130
 (10) plus
 (11) Q Now when you set out to build that new boat did you have
 (12) 105 000 in cash to pay for it?
 (13) A No Again what I had done is I had taken all of my
 (14) profits from the 1988 season and plowed them back into the
 (15) boat and then I again approached my cannery Wards Cove
 (16) Packing and asked them if they would back me for the
 remaining
 (17) part which they did
 (18) Q This may be an obvious question but if you were going to
 (19) put this kind of money in and borrow money were you
 expecting
 (20) a good fishing season in 1989?
 (21) A Yes The capacity of the boat that I had built had twice
 (22) the hauling capacity as the one that I had before
 (23) Q Now you talked about using some of your profits from 88
 (24) Did you have a good season in 88?
 (25) A Yes sir I did

Vol 26 4429

- (1) Q Do you recall about how much money you made from your
 (2) commercial fishing operation in Upper Cook Inlet in '88? And
 (3) by that I mean the amount of money your processor paid you for
 (4) your fish?
 (5) A I don't remember the exact dollar amount but it was very
 (6) close to 105 to 107 thousand dollars
 (7) Q Let me stop right there and ask for just a second about how
 (8) it is you make money as a fisherman We saw your video At
 (9) the end of the day you go to the processor or the cannery
 (10) right?
 (11) A That is correct
 (12) Q How do they go about deciding how much money they are
 (13) going
 (14) to pay you for your fish?
 (15) A When we arrive in Alaska or to our fishing area usually
 (16) the cannery has posted a starting price and that is posted
 (17) conspicuously around the area
 (18) Q Let me interrupt you I didn't ask a very good question
 (19) Does the processor pay you by the fish or pound or how
 (20) does that work?
 (21) A We are paid by the pound
 (22) Q And are you paid the same amount for every kind of fish you
 (23) might get?
 (24) A No sir
 (25) Q In addition to sockeye and red do you catch some other
 (26) species?

Vol 26 4430

- (1) A Very rarely I've caught a few silvers In the years that
 (2) I've been fishing probably eight king salmon and then we do
 (3) also catch a few chum salmon
 (4) Q So is it right to say that they pay you for the amount of
 (5) pounds you catch and they pay you at a certain per pound rate?
 (6) A That is correct
 (7) Q And it makes sense that if you catch fewer pounds your
 (8) income goes down?
 (9) A Yes
 (10) Q And if the price per pound goes down you also get less
 (11) income right?
 (12) A That is also correct
 (13) Q Now let's get back into 1989 You started building your
 (14) boat you said the first of December of 1988?
 (15) A That is correct
 (16) Q And let's move into the end of March of 1989 When did you
 (17) first hear about the oil spill?
 (18) A I was installing the control system in my boat and it was
 (19) not uncommon for us to have a portable radio in there to add a
 (20) little bit of company and we heard the first announcement that
 (21) there had been a grounding of a vessel in Prince William
 (22) Sound
 (23) Q Did that give you any immediate concern about your own
 (24) fishing?
 (25) A Actually it didn't because in my opinion Prince William
 (26) Sound was a long ways from where I was

Vol 26 4431

- (1) Q Did you then continue making your own preparations to fish
 (2) in Cook Inlet?
 (3) A Yes we continued to finish the boat
 (4) Q Did you make any inquiries of anybody up here to see
 (5) whether in fact there might be any effect on Upper Cook Inlet?
 (6) A I called the cannery the next morning as soon as I was at
 (7) work and I called the cannery the next morning and asked
 (8) them
 (9) what their opinion was and at that time their opinion
 (10) concurred with mine
 (11) Q Now did you then continue to work on your boat?
 (12) A Oh definitely
 (13) Q When did you finish it?
 (14) A It was finished by the first of April
 (15) Q Do the fishermen christen their boats?
 (16) A Yes sir they do
 (17) Q Do you like break a bottle of champagne on it?
 (18) A Yes we did
 (19) Q Do you name your boats?
 (20) A It's My Colleen
 (21) Q And your wife's name is Colleen is that a coincidence?
 (22) A It better be better be the right name
 (23) Q After you finished the boat right around the first of
 (24) April did you continue making plans to go up to Alaska?
 (25) A Let me clarify that first of April It went in the water
 (26) the first of April We christened it the first of April It

Vol 26 4432

- (1) wasn't done for at least another month after that It was in
 (2) the water but it still needed considerable amount of work
 (3) I'm sorry
 (4) Q And then my question is what I'm interested in is after
 (5) that time around the first of April leading up to the late
 (6) June period when you hoped to fish what did you do to keep
 (7) yourself apprised of anything of what was going on up here?
 (8) A I wouldn't say daily but I called our cannery at least
 (9) maybe once twice a week to see if they had any updates on
 (10) whether the oil spill in Prince William Sound was going to have
 (11) any effect on us in Cook Inlet
 (12) Q And what were you told?
 (13) A At the present time we were told to assume that the fishing
 (14) season would occur as scheduled
 (15) Q Did you then complete your preparations to come up to
 (16) Alaska?
 (17) A Yes sir
 (18) Q And when did you leave to come up to Alaska?
 (19) A If I'm not mistaken the end of school that year was around
 (20) the 17th or 18th of June possibly a day or two earlier and we
 (21) left that day
 (22) Q Now one thing we didn't talk about in connection with your
 (23) general fishing is who you fish with that is who is on your
 (24) boat Obviously you're on the boat In the video we saw at
 (25) least one other person?

Vol 26 4433

- (1) A Yes sir that s my daughter Lori
 (2) Q Does your daughter Lori serve as crew for you?
 (3) A Yes sir she does
 (4) Q Did you have crew lined up to work with you in 1989?
 (5) A In '89 in anticipation of a big year I hired an additional
 (6) crew member that year
 (7) Q So for your 1989 fishing it was going to be you as the
 (8) skipper and your daughter and then another crew person?
 (9) A That is correct
 (10) Q When did you get up to Alaska?
 (11) A Again I m not sure of the exact date but I do know that I
 (12) was here before the first scheduled opening We came in in
 (13) Alaska daylight which could have been anytime but it was in
 (14) late June and we were here before the first scheduled opening
 (15) Q Tell the jury what happened after that
 (16) A We sat and waited on a daily basis for an announcement as
 (17) to whether there would or would not be a fishery in Upper Cook
 (18) Inlet for the 1989 season
 (19) Q How did you get information on that subject?
 (20) A It was made available to us from the cannery office on a
 (21) daily basis
 (22) Q Does the Fish & Game Department down in Soldotna Kenai
 (23) have a tape recording that you could call on a daily basis to
 (24) get information?
 (25) A Yes and that s where the cannery was getting it and we

Vol 26 4434

- (1) could get it also over the radio There is a program called
 (2) Fisherman s Corner that runs every afternoon and tells what s
 (3) happening as far as if there is going to be openings or
 (4) strength of the run
 (5) Q When did you finally get fishing?
 (6) A We didn t
 (7) Q Well did a time come when you learned you weren t going to
 (8) be able to fish at all?
 (9) A To the best of my recollection I think it was on the 16th
 (10) of July there was a statement made by the Alaska Department
 (11) of
 (12) Fish & Game that there would be no drift gillnet fishery in
 (13) Upper Cook Inlet in 1989
 (14) Q So you caught no fish at all in 1989?
 (15) A That is correct
 (16) Q I take it that was not good for your business?
 (17) A Not at all
 (18) Q Just a very narrow question on a couple of things If you
 (19) didn t fish at all that year were you able to save any money
 (20) that you otherwise would have spent on your fishing business?
 (21) A We changed the oil twice a season and the engine was
 (22) hardly run at all so that didn t occur And I usually go
 (23) through anywhere from eight to a thousand dollars worth of
 (24) diesel fuel and I didn t burn that but other than that
 (25) everything else was basically the same
 (26) Q What s the cost of an oil change?

Vol 26 4435

- (1) A \$50
 (2) Q So you saved maybe \$900 by not fishing?
 (3) A Somewhere very close to that number
 (4) Q And you had no fishing income in '89?
 (5) A That is correct
 (6) Q As we sit here today it s the 21st of June are you ready
 (7) to fish in Upper Cook Inlet starting next week?
 (8) A I will be after today I will be heading for Kenai
 (9) Q Do you know whether you re going to be able to fish?
 (10) A No sir I do not
 (11) Q Why not?
 (12) A There is a possibility that the Alaska Fish & Game may
 (13) determine that run strength is not strong enough to open on
 (14) Monday the 25th or whatever that Monday is after the 25th
 (15) Q But if they open up you ll be ready to go?
 (16) A I ll be ready to go
 (17) MR LYNCH May we approach the side bar?
 (18) (At side bar off the Record)
 (19) CROSS EXAMINATION OF LES R MEREDITH
 (20) BY MR LYNCH
 (21) Q One question Mr Meredith Did you participate in the
 (22) Exxon Claims Program in 1989?
 (23) A Yes sir I did
 (24) MR LYNCH Thank you no further questions Your
 (25) Honor

Vol 26 4436

- (1) THE COURT Any redirect?
 (2) MR SCHROER No redirect
 (3) THE COURT Thank you sir You may step down You
 (4) may call your next witness
 (5) MR O NEILL Plaintiffs call Oliver Holm
 (6) THE CLERK Raise your right hand
 (7) (The Witness Is Sworn)
 (8) THE CLERK Please be seated For the record sir
 (9) state your full name your address and spell your last name
 (10) please
 (11) THE WITNESS My name is Oliver Nobel Holm My last
 (12) name is spelled H o l m My address is 3338 Kona Lane
 (13) Kodiak
 (14) Alaska
 (15) DIRECT EXAMINATION OF OLIVER N HOLM
 (16) BY MR O NEILL
 (17) Q Sir what do you do for a living?
 (18) A I m a commercial fisherman
 (19) Q What do you fish for?
 (20) A I fish for herring salmon some halibut and crab in the
 (21) Kodiak Island area
 (22) Q Where do you live?
 (23) A Kodiak Alaska
 (24) Q I ve got a map here Is that Kodiak Alaska right down
 (25) there?
 (26) A Yes

Vol 26 4437

- (1) Q How long have you lived in Kodiak Alaska?
 (2) A Since 1962
 (3) Q Are you married?
 (4) A Yes I m married to Eva Holm for 25 years
 (5) Q And do you have any kids?
 (6) A Yes we have three children
 (7) Q Does your wife fish?
 (8) A Yes she also fishes She s a setnetter in the Kodiak
 (9) area
 (10) Q Do your kids fish?
 (11) A Kids all fish with us Our youngest is only six
 (12) Q Does he or she fish?
 (13) A He goes out to the fish camp but he doesn t work very hard
 (14) at it
 (15) Q He goofos off at the fish camp is that a fair statement?
 (16) A Yes
 (17) Q You admit that your kid goofos off?
 (18) How old are the other two?
 (19) A The oldest daughter is 21 she fishes with me and the other
 (20) is 15
 (21) Q And are you involved in any fisheries organizations?
 (22) A Yes I m the President of the Board of Directors of the
 (23) Kodiak Regional Aquaculture Association I m the vice chair of
 (24) the Kodiak Fish & Game Advisory and a board member of the
 Area
 (25) K Seiners Association

Vol 26 4438

- (1) Q How long have you been a commercial fishermen?
 (2) A All my working life I guess I started back in the early
 (3) 60s fishing with my father
 (4) Q When did you get your first paying fishing job?
 (5) A First money I made from fishing was I guess selling halibut
 (6) in 1960 when I was about 12 And my father started paying me
 (7) regularly when I worked with him in 1963 I believe
 (8) Q Is fishing a family thing? Does it go back in your family?
 (9) A Yes it does My grandfather immigrated from Norway to
 (10) Petersburg in 1906 and he fished there and my father fished
 (11) commercially and so I m the third generation that s fished
 (12) Q What did you fish for?
 (13) A Primarily herring and salmon but I also fish for halibut
 (14) and crab in the Kodiak area
 (15) Q And how long have you fished for herring?
 (16) A I fished for herring in the Kodiak area since 1964
 (17) Q How long have you fished for salmon?
 (18) A Since 1964
 (19) Q What gear types do you fish?
 (20) A I currently seine for salmon and seine for herring
 (21) Q Do you use the same boat?
 (22) A Yes I do
 (23) Q And your wife is a setnetter?
 (24) A Yes she setnets She started setnetting with me when I
 (25) was a setnetter back in the 60s

Vol 26 4439

- (1) Q Would you tell us about your boat?
 (2) A It s a - was a 44 foot fiberglass seiner I finished the
 (3) hull myself in 1979
 (4) Q When you say you finished the hull yourself what does that
 (5) mean? You built the hull?
 (6) A I got a prebuilt fiberglass hull with the engine embedded
 (7) built the cabin decks did all the rigging and made the
 (8) connections to make it work
 (9) Q Let s talk a little bit about herring How long have you
 (10) seined for herring since when?
 (11) A Well I seined with my father in 1964 and then I started
 (12) seining as the operator in 1978
 (13) Q Do you own a fishing permit a herring permit?
 (14) A Yes I do I qualified for one of the original issued
 (15) herring permits
 (16) Q Let s get into that just by way of historical interest
 (17) Nowadays if you want to get a permit you buy the permit
 (18) that s a correct statement?
 (19) A That s correct
 (20) Q But that system had to be set up at some point in time
 (21) Were you there when they set the system up?
 (22) A Yes I was I was already fishing prior to that
 (23) Q And at that point in time did you qualify for the permit?
 (24) A Yes I qualified
 (25) Q And would you tell us what you needed to do to qualify for

Vol 26 4440

- (1) the permit?
 (2) A You had to participate as a vessel operator for a number of
 (3) years and it was a point system in the case of herring and I
 (4) believe you needed two years to get a herring seine permit
 (5) Q I have put an exhibit number - I put an exhibit which is
 (6) numbered 305 and has been admitted up on the screen Do
 you
 (7) recognize what it is a depiction of?
 (8) A Yes this depicts the Kodiak herring management area
 (9) Q Where do you fish?
 (10) A Well I fish over a good deal of the island I could show
 (11) you
 (12) Q Do you want a pointer Now go ahead and try it with the
 (13) pen and you should have an arrow?
 (14) A Start off the season in the west side of Afognak in these
 (15) bays up here in the north end Technically move down into the
 (16) Uganik system these bays
 (17) Q Raise your voice please
 (18) A Over around Uyak around the town fish the east side and
 (19) Uyak Bay Beluga move into the Uyak Bay Zachar and Uyak
 (20) Occasionally I fish down in the south end of the Alitak area
 (21) There is a lot of fishing that goes on around Old Harbor but I
 (22) don t participate in that usually And then there is
 (23) fisheries on the mainland but I only get over there
 (24) occasionally
 (25) Q When did you fish for herring?

Vol 26 4441

- (1) A The season starts April 15th at noon every year
 (2) Q And when does it generally go until?
 (3) A It opens at noon on odd numbered days through June 30th
 and
 (4) as the quota or guideline harvest numbers are met those
 (5) particular areas close So there is usually always some area
 (6) to fish in but the areas with most fish the quotas are taken
 (7) and you get down to a reduced area at the end of the season
 (8) Q We made a video of your fishing operation which you ve
 (9) seen before and with the Court s permission I would like to
 (10) show it to the jury and have you explain your fishing operation
 (11) and your boat and your gear type?
 (12) THE COURT Before or after we take our break?
 (13) MR O NEILL Let s go have a sandwich
 (14) THE COURT Take our second recess break at this time
 (15) be in recess for 15 minutes
 (16) (Jury out at 12 00)
 (17) (Recess from 12 00 to 12 15 p m)
 (18) (Jury in at 12 15)
 (19) BY MR O NEILL
 (20) Q Before we put on the videotape let me ask you a couple
 (21) more background questions Have you had a job other than
 (22) fishing in your life?
 (23) A Not since I was in college washing dishes
 (24) Q When you fish for herring or when you - when you fish for
 (25) herring did you use a spotter plane ever?

Vol 26 4442

- (1) A Yes we do
 (2) Q Would you explain to the jury what a spotter plane is so
 (3) when we see the plane in the tape we know what it s role is?
 (4) A The spotter plane is a small aircraft that the pilot looks
 (5) for herring You can see herring from looking down into the
 (6) water You can see better from the air than the boat and
 (7) he ll direct you where the herring are to make the set
 (8) Q Now I m requesting to play the tape and you re very
 (9) soft spoken so instead of looking on that screen I ll suggest
 (10) you look over here so we force you to talk into the
 (11) microphone If you d just tell the jury what is happening on
 (12) the tape?
 (13) A This is my seine boat ready to fish herring That s my
 (14) daughter she s crewing on the boat That s me on the flying
 (15) bridge waiting for instructions from the spotter pilot
 (16) That s the spotter pilot taking off to look for herring in the
 (17) Uyak Bay area We were cruising around trying to get in
 (18) position He s seeing some herring try to get us in position
 (19) to set on them I like to get them in shallow water near the
 (20) shore There it is ready to let loose Got the word The
 (21) skiff pulls out the end of the seine and we start to let out
 (22) fine mesh net inch and a quarter mesh The skiff holds it in
 (23) near the beach so the herring can t get around that end set
 (24) fairly rapidly before they can swim away
 (25) Then the skiff starts towing his end towards the boat come

Vol 26 4443

- (1) back around in a circle coming back up to the skiff The fish
 (2) are trapped between the shore and the net now Pull the ends
 (3) together we join up with the skiff The skiff man now passes
 (4) off a line to the end of the seine to my daughter attach that
 (5) end to the boat The skiff goes on outside the net now We
 (6) have got the ends attached to the boat and the next stage will
 (7) be to get the purse line running through the rings at the
 (8) bottom of the net draw the bottom part the weighted all
 (9) right Will trap the herring so they can t dive out the
 (10) bottom You can see the purse lines being hauled in I m
 (11) purse Sue is picking up the breast line It takes several
 (12) minutes to get the bottom of the net pursed up
 (13) Now we re just about done pursing and get the net back on
 (14) the boat and the skiff holds the net There we have the ring
 (15) all towed up Now the herring can t get out of the net They
 (16) are trapped in there now Then we have to pull the purse line
 (17) back through the rings so we can stack the net
 (18) Q Why is your daughter doing all the work?
 (19) A Because I m the skipper See here I do work On a
 (20) three man crew like I usually fish I help stack the seine but
 (21) she has to stack the led line the heavy part The net is 600
 (22) feet long weighs several thousand pounds
 (23) The fish keep getting confined in a smaller and smaller
 (24) area Here we have them bagged up alongside the boat With
 (25) herring we take a sample If the fish don t have ripe eggs in

Vol 26 4444

- (1) them we let them go If they were spawned out or not enough
 (2) eggs we wouldn t keep them We take a 20 pound sample of
 (3) herring and we break them open and see how many males
 there
 (4) are how many females and how many have good eggs that the
 (5) Japanese will buy
 (6) There we have good roe coming out of the herring
 (7) Q Everybody is closing their eyes
 (8) A These fish are ready to spawn probably in a few hours
 (9) That s the spotter plane He s coming down to see what we
 (10) got We have a little over two pounds out of a 20 pound
 (11) sample 12 percent that s good herring We will keep that
 (12) That s a fairly small set We will lift them aboard and put
 (13) them down in the ice hold and ice and water These fish will
 (14) run to Kodiak 80 mile 90 mile run and sell them to the
 (15) cannery Going down in the fish hold to an ice and water
 (16) bath This was filmed late in the season and sometimes we get
 (17) bigger sets than that We are all done waiting for another
 (18) set
 (19) Q You said you take your fish to the processor and what
 (20) happens physically when you take your fish to the processor?
 (21) A We will - they will be pumped out of the boat with a fish
 (22) pump put in totes and they will do another sample at the
 (23) cannery and we will get paid based on the roe percentage of
 (24) that sample and we would get paid on the frozen weight when
 (25) they freeze them and box them

Vol 26 4445

- (1) Q Now I want to talk about the 1989 Kodiak herring season
 (2) Did the oil spill impact your herring season?
 (3) A Yes it did
 (4) Q And in what way?
 (5) A There were a number of areas where I usually fished that
 (6) were closed because of the presence of oil before we got a
 (7) chance to fish in them We did get to fish in some areas but
 (8) many of the areas we couldn't fish in
 (9) Q With regard to the areas that you were able to fish in was
 (10) there any extra crowding extra boats as a result of there
 (11) being closures in other places?
 (12) A Yes there was All the boats got crowded down into an
 (13) increasingly number of smaller areas that were open
 (14) Q Did that result in less fish for you?
 (15) A Yes it did
 (16) Q Did you see oil in your fishing grounds in 1989?
 (17) A Yes I did in numerous places The ones that stick
 (18) vividly is in Marmot Bay We ran through oil for about six
 (19) miles and the west side of Kodiak from out late cape to Uyak
 (20) Bay 40 miles of sheen and mousse patties in the middle of
 (21) May
 (22) Q Now I want to talk briefly about salmon fishing and the
 (23) Exxon Valdez oil spill Did the Exxon Valdez oil spill impact
 (24) your family salmon fishing in 1989?
 (25) A Yes it did Neither my wife or myself or any of our

Vol 26 4446

- (1) family members were able to fish in 1989 for salmon
 (2) Q So Kodiak salmon was closed in 1989?
 (3) A Clearly all of it One setnet area on the south end was
 (4) open
 (5) Q And that isn't your wife's setnet?
 (6) A No she was fishing the northwest Kodiak district That
 (7) was closed
 (8) Q How about seining?
 (9) A It was closed for the entire year with one minor
 (10) exception
 (11) Q And are you prepared to fish this year?
 (12) A Yes I am
 (13) Q And do you have any doubts as to whether you're going to
 (14) be able to fish this year?
 (15) A No I don't believe so I guess we have doubts that we
 (16) could fish in Red River
 (17) Q Red River hasn't opened yet?
 (18) A The Ayakulik
 (19) Q And that's a red salmon fishing area in the Kodiak
 (20) fisheries management area?
 (21) A Right It's an area I don't usually fish in much myself
 (22) but if the boats will fish or can't fish there they will end
 (23) up fishing on the north end where I fish
 (24) MR O NEILL Thank you
 (25) BY MR O NEILL

Vol 26 4447

- (1) Q Did you participate in the Exxon claims program in 1989?
 (2) A Yes I did
 (3) CROSS EXAMINATION OF OLIVER N HOLM
 (4) BY MR SANDERS
 (5) Q Mr Holm I just have a couple questions to ask you My
 (6) name is Jim Sanders I represent the Exxon defendants and I
 (7) don't believe we've ever met correct?
 (8) A Correct
 (9) Q Let me start approximately where Mr O Neill left off As
 (10) president of the Kodiak Association do you or that association
 (11) run or operate a hatchery?
 (12) A Yes the Kodiak Regional Aquaculture Association operates a
 (13) state owned hatchery at Kitoi Bay and also at Billy Creek
 (14) that's state owned
 (15) Q And the Kitoi hatchery if I could just call it that the
 (16) short form the Kitoi hatchery sold fish in 1989 is that
 (17) correct?
 (18) A That's correct
 (19) Q And what kind of fish did the hatchery sell?
 (20) A Almost entirely pink salmon
 (21) Q And the - were you involved in that or as president were
 (22) you knowledgeable of how that was done?
 (23) A Yes I was involved in setting up the bidding process and
 (24) getting the fish sold at the beginning I wasn't there through
 (25) the whole process though

Vol 26 4448

- (1) Q But you were there in setting up the bidding process?
 (2) A Yes
 (3) Q And in doing that did you receive bids from other
 (4) processors?
 (5) A We got bids from a number of processors because there was
 (6) no other - virtually no other salmon coming into Kodiak then
 (7) Q So the bids you got I take it were pretty good bids?
 (8) A Yes they were at the beginning
 (9) Q Because the supply of those fish for those processors was
 (10) so restricted that they were willing to pay more money?
 (11) A I presume that would be why They were willing to pay a
 (12) good price at the beginning let's put it that way
 (13) Q And to give us just an idea what was the range of that
 (14) good price at the beginning?
 (15) A At the beginning I think the bids ran from around 60 to
 (16) 70 as high as 70 some cents There was a variation from lot
 (17) to lot We sold them in separate lots So even in the same
 (18) day different lots went for different prices
 (19) Q I'm talking about a range and you don't mean to suggest
 (20) there was one price paid at the beginning but it ranged as
 (21) high as 70 or so?
 (22) A If my memory is correct I believe it was a little over 70
 (23) Q And then later on down as life always is the price would
 (24) come down some toward the end so 70 wasn't the average
 (25) price that you got for pink salmon throughout the bidding or the sale

Vol 26 4449

- (1) process correct?
 (2) A Correct I believe the average was closer to 55 cents
 (3) Q And as a result of those sales the Kitoi hatchery as
 (4) distinct from you fishermen sold fish in the neighborhood of
 (5) what ten million dollars?
 (6) A Correct
 (7) Q And then that money wasn't dispersed out to you all it had
 (8) to stay in the hatchery I think by law is that correct?
 (9) A That's correct
 (10) Q So let's talk just a second if you don't mind what does a
 (11) hatchery do? As I understand it you and your fellows operate
 (12) the hatchery to improve the fishing for future generations
 (13) correct?
 (14) A Yes we operate the hatchery to produce fish
 (15) Q And the Kitoi hatchery hatches pink salmon correct?
 (16) A Yes
 (17) Q Are there any other fishes or stocks that the hatchery
 (18) produces?
 (19) A We do produce some chum salmon and some coho salmon
 and
 (20) some red salmon
 (21) Q And the money that is put into the hatchery is used to
 (22) first maintain the hatchery I guess?
 (23) A You mean what is the budget operational budget? We have
 (24) to maintain the hatchery we have some capital items we have to
 (25) purchase we have salaries and fish food

Vol 26 4450

- (1) Q Fish food?
 (2) A Yes
 (3) Q You have to kind of fertilize the hatchery to give the fish
 (4) nourishment so they will grow and do what they are supposed
 to
 (5) do in the hatchery right?
 (6) A After they hatch we get better survivals if we feed the
 (7) fish before they are released
 (8) Q So now this money that the hatchery uses is to maintain the
 (9) fish hatchery and do those other things that you described
 (10) including salaries and feeding the fish and those other things
 (11) correct?
 (12) A Yes
 (13) Q And as a result of having this 10 million dollars which by
 (14) law has to stay with the hatchery the kind of the overhead for
 (15) the hatchery for the next several years is kind of taken care
 (16) of right?
 (17) A It will pay the operational costs for the hatchery for
 (18) quite awhile
 (19) Q After the year 2000?
 (20) A Yes should
 (21) Q And as president are you a salaried person?
 (22) A No I get no salary whatsoever
 (23) Q And you obviously don't have from your answer to
 (24) Mr O'Neill's question you don't have a second job?
 (25) A That's correct

Vol 26 4451

- (1) Q Let me ask you a couple questions about the fishing
 (2) business and you'll have to pardon my ignorance I don't know
 (3) nearly as much about it as you do
 (4) The fishing business itself goes in cycles doesn't it?
 (5) A Yes it goes up and down some That's why I'm diversified
 (6) Q And by diversification you mean you have different kinds
 (7) of permits and you do different kinds of fishing?
 (8) A Yes I catch four different species of - four different
 (9) types of fish
 (10) Q That's herring salmon -
 (11) A Halibut and crab crab sometimes
 (12) Q And it has been the life of fisherpersons in Kodiak and
 (13) Prince William Sound and Upper Cook Inlet back to the time
 (14) that you were fishing as a youngster that there are good years
 (15) and bad years depending on which species and other
 conditions
 (16) some of which are not even known right?
 (17) A Yes there is fluctuations
 (18) Q And as was pointed out with the previous witness and I
 (19) would like to make the point with you sir how much money you
 (20) make in a given year setting overhead aside for a second how
 (21) much money you make is dependent upon basically two things
 how
 (22) many fish you catch and what price you get for that per
 (23) pound?
 (24) A Right in the end There is quite a few factors that go
 (25) into those two things

Vol 26 4452

- (1) Q I'm sorry?
 (2) A There is quite a few factors that go into determining how
 (3) much you catch
 (4) Q Right I understand that But the way you get paid for
 (5) example on pink salmon is by the pound right?
 (6) A Yes
 (7) Q And so the number of pounds times the price per pound I
 (8) guess averaging it out over lots is the income the money that
 (9) comes in to you?
 (10) A Correct Sometimes there is a difference in price for
 (11) lower quality pinks though
 (12) Q And I take it that all things else being equal the higher
 (13) quality gets a bigger price and the lower quality gets a lower
 (14) price?
 (15) A Generally Hopefully most of the fish we catch are high
 (16) quality only occasionally we catch lower fish to get the lower
 (17) price
 (18) Q Part of the skill is trying to get the higher quality fish
 (19) or the right times to get the higher quality fish is that
 (20) right or is that just luck?
 (21) A Well partly it's Fish & Game management to try to endeavor
 (22) to not let us - to conduct the fishery so that we don't get
 (23) water marked fish
 (24) Q And water marking is fish that are old and about to spawn
 (25) and die correct?

Vol 26 4453

- (1) A Correct As they enter fresh water get closer to spawning
 (2) time they deteriorate
 (3) Q And that s lower quality?
 (4) A Right
 (5) Q Now in these cycles I take it that let s take salmon for
 (6) example when you are salmon seining you are catching what
 (7) mainly pinks?
 (8) A Most years the biggest weight would be pinks 1992 I
 (9) believe I had more reds than pinks or very closely the same
 (10) but mainly more pinks Dollar value it s split between reds
 (11) and pinks
 (12) Q Because reds are a lot more valuable per pound than the
 (13) pinks?
 (14) A Correct
 (15) Q So sometimes you had to catch twice as many pinks to have
 (16) the same income as what you get from the reds?
 (17) A Right
 (18) Q Roughly?
 (19) A Roughly
 (20) Q Now did you have a real good year in 1988 in salmon?
 (21) A Yes I did
 (22) Q Can you - I don t want to get into your personal business
 (23) but could you give the jury an idea of how much your income
 was
 (24) from your salmon operation in 1988?
 (25) A It was over \$300 000 for my crew and myself

Vol 26 4454

- (1) Q And then of course you got overhead and you ve got other
 (2) people to pay but that s a good year?
 (3) A Best year I ve ever had
 (4) Q And then if you back that off into 1982 or 3 how would
 (5) you compare that so the ladies and gentlemen of the jury can
 (6) get the range?
 (7) A It was lower I don t remember specifically what those
 (8) figures are for 82 or 83
 (9) Q 84 85? It s not a memory test but can you give us -
 (10) A I ve seen those recently but I couldn t tell you exactly
 (11) what they are
 (12) Q And then of course as you mentioned you re diverse so
 (13) you would add to that the money you made in the herring catch
 (14) that year?
 (15) A Correct
 (16) Q After you ve taken out your overhead and everything else
 (17) and then your crab and then your halibut?
 (18) A Right
 (19) Q Now you mentioned your boat and I wasn t quite clear on
 (20) whether you still have that boat - it sounded kind of like you
 (21) used to have that boat?
 (22) A Maybe because it used to be 44 feet long and now it s 48
 (23) feet long Same boat though
 (24) Q When did you buy the boat?
 (25) A 1979 78 that winter

Vol 26 4455

- (1) Q And you then lengthened it?
 (2) A Yes I just did that this winter
 (3) Q When you - I take it from the success that you indicated
 (4) in your business that the boat was paid for prior to your
 (5) lengthening it?
 (6) A Yes it was
 (7) Q And as a result of lengthening it have you gone into debt
 (8) for that or were you able to pay for that out of cash?
 (9) A I was able to pay for that out of cash
 (10) Q Do you have more than one boat?
 (11) A No I don t I do have - we do have skiffs for my wife s
 (12) setnet operation and the skiff that s on the video and another
 (13) skiff
 (14) Q And you have to have a permit do you not for your salmon
 (15) seining operation and your herring seining operation?
 (16) A Correct
 (17) Q And Mr O Neill asked you about your herring permit that
 (18) was one you got because you were qualified back in 1970
 (19) something?
 (20) A Right The last qualifying year was 1980
 (21) Q And did you have to pay anything for that other than just a
 (22) license fee?
 (23) A No We were fishing before it was necessary to have one
 (24) Q So you didn t have to go into debt or pay out any cash to
 (25) get your herring seine permit?

Vol 26 4456

- (1) A No I ve been doing it for 30 years so I didn t have to
 (2) Q And salmon is the same true for your salmon permit?
 (3) A No I qualified for setnet salmon permit in Kodiak in
 (4) 1972 They didn t issue the permits until actually 1974 and I
 (5) built a boat myself to go seining and I couldn t use the setnet
 (6) permit and I traded to my father my setnet permit for the seine
 (7) permit that he had qualified for originally and that s the
 (8) permit I m still fishing
 (9) Q So did he require you to give any booty on that trade or
 (10) was that a swap without money?
 (11) A It was a swap without money
 (12) MR SANDERS I think that s all I have Thank you
 (13) Mr Holm
 (14) MR O NEILL Everybody tells me I have no questions
 (15) THE COURT Thank you sir You may step down You
 (16) may call your next witness
 (17) MR JAMIN Thank you Your Honor The plaintiffs
 (18) call Mary Jacobs
 (19) THE CLERK Raise your right hand
 (20) (The Witness is Sworn)
 (21) THE CLERK Please be seated For the record state
 (22) your full name your address and spell your last name please
 (23) THE WITNESS My name the Mary Jacob My address is
 (24) Box 3080 Kodiak Alaska My last name is spelled
 (25) J a c o b s

Vol 26 4457

- (1) DIRECT EXAMINATION OF MARY JACOBS
 (2) BY MR JAMIN
 (3) Q Good morning - good afternoon now How are you employed?
 (4) A I m employed commercial fishing
 (5) Q What resources do you fish?
 (6) A Primarily I fish salmon and herring I do some halibut
 (7) but mostly in the Kodiak Island area
 (8) Q Have you fished in other fisheries as well?
 (9) A Yes
 (10) Q What are they?
 (11) A Oh I fished in quite a few fisheries back in the 70s
 (12) I ve done shrimp and crab but in the past 10 15 years it s
 (13) been primarily salmon and herring
 (14) Q Are you married?
 (15) A Yes I m married to Tom Dooley
 (16) Q Do you have children?
 (17) A I have three children My oldest son is 23 years old his
 (18) name is Locke He s fished with us since he was a baby I
 (19) have a daughter that s 18 Felika (ph) She s currently
 (20) fishing with my husband as is Locke She s just graduated
 (21) from high school valedictorian and she s going to be paying
 (22) for her living expenses room and board at college with her
 (23) fishing income
 (24) Q Do you have a third child?
 (25) A Yeah I have a third child Anuila Dooley (ph) and she s

Vol 26 4458

- (1) just five and she s going to start on the boat with me this
 (2) summer
 (3) Q How long have you been fishing salmon on Kodiak?
 (4) A The first year I fished salmon on Kodiak would have been
 (5) 1971
 (6) Q Was that about 23 years?
 (7) A 23 years
 (8) Q And did you start off as a operator of a vessel?
 (9) A No I started off on the deck I didn t know much of
 (10) anything in those days and I progressed to where I was working
 (11) in the skiff and then 1979 would have been the first year I
 (12) operated my own boat
 (13) Q And how big a vessel was that 1979?
 (14) A That boat was 29 6 feet long It was built in the 20s a
 (15) wood boat They called it a Karluk dory and it was pretty
 (16) crude but it was a way to start
 (17) Q Do you still have that 29 6 footer?
 (18) A No I don t I m on my fourth boat I ve upgraded
 (19) Q Could you describe briefly what the vessel is now that you
 (20) use?
 (21) A The vessel I use now is 51 foot fiberglass with a top house
 (22) with auxiliary engine to run an RSW which is refrgerated sea
 (23) water so I can fish fairly comfortably in fairly rough weather
 (24) and deliver high quality product
 (25) Q Let s get a little idea where it is that you fish Could I

Vol 26 4459

- (1) pull up 305? You can take a look at the screen next to you
 (2) whatever is easier for you or you can look far away
 (3) A I ll look over there
 (4) Q What is this a picture of?
 (5) A This is the Kodiak management area for salmon and so we
 (6) fish this entire district from Cape Douglas off the top down to
 (7) Cape Igvak and Kilokak Rocks on the mainland
 (8) Q When you say Cape Douglas to Igvak that on the peninsula?
 (9) A Yes
 (10) Q Where else do you fish?
 (11) A All the way around Kodiak and Afognak and Shuyak Island
 (12) Do you want me to point these out?
 (13) Q And you can get that and work that that s great
 (14) A No I better not touch it
 (15) Q Maybe the pointer is working now Just don t touch the
 (16) screen and you re going to be okay
 (17) A Here is the bottom of the district
 (18) Q You re going to have to speak up loud when you re away
 (19) from the microphone?
 (20) A And then we fish all the way around the islands this is
 (21) Afognak this is Shuyak -
 (22) Q Do you want to come down and use the screen? Mr Sanders
 (23) suggested it might be a good idea Don t usually have
 (24) Mr Sanders quite as helpful with my witnesses
 (25) A This is Cape Douglas We fish from here down to Kilokak

Vol 26 4460

- (1) Rocks on this area and all the way around Kodiak Island
 (2) Trinity Islands around here This is Afognak within three
 (3) miles of the coastline Do you want me to stay here?
 (4) Q That s okay you can go back now Let s get an idea Ms
 (5) Jacobs as to the duration of the period you re actually
 (6) fishing in this Kodiak fishery?
 (7) A The first opening is June 9th and the season lasts through
 (8) the month of September Ordinarily there is openings and
 (9) closures according to escapement at the different streams So
 (10) very often some areas are open for weeks at a time and we
 (11) move
 (12) around between the open areas and you know if one area is
 (13) closed we will move to an open area We do a lot of
 (14) traveling We ordinarily will fish 60 to 75 days out of that
 (15) three and a half month period but we very infrequently go back
 (16) to town during that three and a half month period
 (17) Q Before the season starts before June 9th are there any
 (18) activities associated with your commercial fishing operation?
 (19) A Well I fish herring in April and May so the month of
 (20) March is devoted to getting the boat ready getting the nets
 (21) ready There is also a lot of work to do to the boat There
 (22) is usually one net to hang which means tying the net the web
 (23) to the cork line and to the led line It s about a week or ten
 (24) day process putting a net together with the whole crew and
 (25) myself working on it
 (25) Q When you talk about the cork line is that the part of the

Vol 26 4461

- (1) net that s on top of the water?
 (2) **A** Right the corks float the top of the net and the leads
 (3) sink the bottom of the net
 (4) **Q** Now have you had a video prepared of your operation?
 (5) **A** Yes
 (6) **Q** Let s take four minutes together with the Court s
 (7) permission I ll have you narrate that?
 (8) **A** This is my boat Renaissance I m going down Shelikof
 (9) Straits going to an opening that s happening at noon in June
 (10) first opening This is Seven Mile Beach There is several
 (11) other boats around there waiting for the opening
 (12) That s Billy Smith He s my skiff man He s been fishing
 (13) with Tom or I for 12 years I m looking at the bottom depth to
 (14) see to plan where I m going to put my net The net draws
 (15) about 75 feet of water and it costs about \$30 000 I don t
 (16) want to put it anywhere
 (17) That s Billy pulling off the end of the net and while he s
 (18) doing that I have forward momentum to set the whole net This
 (19) net is a quarter mile long You can barely see the skiff back
 (20) there at the other end of the net We ve got the net out
 (21) we - they call it holding hook you have it in a hook shape
 (22) formation for about 30 minutes and while the fish are swimming
 (23) down the beach into the net and they meander the cork line of
 (24) the net for about those 30 minutes until we close the ends
 (25) together what we have to do is make bubbles at both ends of

Vol 26 4462

- (1) the net with a plunger pole to keep the fishing from coming out
 (2) by the boat end or skiff end
 (3) After the 30 minutes we come together put the two ends
 (4) together Pulling the purse line over to the winch there to
 (5) pull up the bottom of the net At the same time we re pulling
 (6) in some of the lead end of the net they call this So we pull
 (7) the net the skiff holds the boat in position so the hole is
 (8) small so the fish don t go out and we have a person stacking
 (9) the cork line and a person stacking the led line So it s
 (10) stacked up neat so it s ready to go back out again This
 (11) process takes about a half hour to bring the net in so the
 (12) process is about an hour
 (13) I m pursing pulling up the bottom of the net at the same
 (14) time Now we re pursed the rings are up and now the fish are
 (15) entrapped in the net We still have a lot of net but they
 (16) don t ordinarily get away There is a few jumpers in there
 (17) got a few reds They are exciting to catch because they will
 (18) jump around in the net
 (19) Now as we pull the net we ve got a few flounder so we stop
 (20) and pull them out of the web and throw them back overboard
 (21) alive Just feeding the purse line and just keeping an eye on
 (22) things The reds are jumping around in the net They are
 (23) getting spun up in the net We have a few to pick out and
 (24) gently put them into the refrigerated water while they are
 (25) still alive There is a few more reds As you can see I ve

Vol 26 4463

- (1) got a full fish hold full of water and it s at 30 degrees
 (2) There is another boat sitting there behind us As we
 (3) continue to pull the net a few more fish few more flounders
 (4) few more red salmon They call this the monkey bag This is
 (5) where most of our fish will lay We ll pull them aboard
 (6) That s probably 150 possibly 200 reds and we try to get them
 (7) up in the middle of the boat so they don t spill on the deck
 (8) and have to be handled so they go directly into the fish hold
 (9) We ll do this process 8 to 12 times a day and deliver at
 (10) night We have to get the end of the net over the block tie
 (11) it down bring the skiff back up on the stern and tie it up and
 (12) then we re all ready to go again Clean up the deck so it s
 (13) not slippery It s mechanical after awhile Here we are
 (14) ready to go again
 (15) **Q** Okay After you get the fish on board the vessel and
 (16) you ve gone through these 8 or 10 or 12 sets during the day
 (17) where are you delivering the fish?
 (18) **A** The cannery or the processor sends out tenders and we
 (19) have
 (20) to run to wherever they are anchored in some protected water
 (21) Sometimes they are close by sometimes they are a couple
 (22) hours
 (23) away but we go to them at night and pitch the fish off one by
 (24) one into brailers that weigh about a thousand pounds weigh the
 (25) bags of fish then we get a fish ticket for whatever we deliver
 (26) and they the fish go on to the tender into their refrigerated
 (27) sea water and then they haul them to the processor

Vol 26 4464

- (1) **Q** At the conclusion of the season when the salmon season is
 (2) done do you have post season fishing activity?
 (3) **A** Yes we sure do
 (4) **Q** What s that?
 (5) **A** After - at the end of the season I ve been more or less
 (6) at sea for six months and I have a lot of things to catch up
 (7) with on the business end of the boat and book work I have
 (8) settlements to be done with my crew because they get a
 (9) percentage of the take and I have the boat to winterize and
 (10) ordinarily things that have to be repaired zinks that have to
 (11) be replaced that ensure there is not electrolysis on the boat
 (12) I m pretty much a month at the end of the season just doing the
 (13) finalizing of the season
 (14) **Q** Now did you fish in 1989?
 (15) **A** I didn t fish in the Kodiak area at all in 1989
 (16) **Q** What happened to your permit in 1989 with Kodiak?
 (17) **A** 1989 was the year my daughter Anulia (ph) was born so I
 (18) had intended on taking the year off I did a medical transfer
 (19) with my permit to another person that did not own a permit and
 (20) then I - so that was the only way I could get a little bit of
 (21) income because I was medically unable to fish the season
 (22) **Q** Did the medical transfer allow you to retain an interest in
 (23) the permit so you would have made some income?
 (24) **A** Ownership stays with me although he has control of it
 (25) during the time I have the medical transfer and so I can get a

Vol 26 4465

- (1) percentage of his take and not have to be out there myself and
 (2) the Entry Commission allows this to be done for up to a
 (3) two year period for people that have medical disabilities
 (4) Q Was your permit fished in 1989 to permit you to get a
 (5) percentage of the gross?
 (6) A No there was no salmon fishing on Kodiak Island for seine
 (7) fishing that year
 (8) Q Have you fished your permit since the 89 season?
 (9) A Yes I have
 (10) Q And do you intend to go fish in Kodiak again this season?
 (11) A Yes I do
 (12) Q If you weren t here testifying today would you be involved
 (13) in the fishery?
 (14) A The fishery is open right now and has been since the 9th
 (15) and I should be there
 (16) Q I think the cross examination will end before two so you ll
 (17) probably be able to get out tonight
 (18) Besides fishing Ms Jacobs do you have any other source
 (19) of income at all?
 (20) A No I don t
 (21) MR JAMIN Thank you
 (22) MR SERDAHELY Your Honor we have no
 (23) cross examination of this witness Thank you
 (24) THE COURT Thank you You can go fish
 (25) MR JAMIN Judge thank you on behalf of us and

Vol 26 4466

- (1) Ms Jacobs
 (2) THE COURT Call your next witness
 (3) MR JAMIN Your Honor plaintiffs call Tom Dooley to
 (4) the stand
 (5) THE CLERK Please raise your right hand
 (6) (The Witness Is Sworn)
 (7) THE CLERK Please be seated For the record sir
 (8) state your full name your address and spell your last name
 (9) please
 (10) THE WITNESS My name is Larry Tom Dooley I go by
 (11) Tom Dooley My address is 1089 Sawmill Circle in Kodiak and
 (12) my last name is spelled D-o-o-l-e-y
 (13) DIRECT EXAMINATION OF L TOM DOOLEY
 (14) BY MR JAMIN
 (15) Q Sir how are you employed?
 (16) A I m a commercial fisherman
 (17) Q Are you an Alaska resident?
 (18) A Yes sir
 (19) Q How long have you been here?
 (20) A Since 1963
 (21) Q What sort of formal education do you have?
 (22) A I ve got a high school GED equivalent that I got in the
 (23) Navy
 (24) Q I m going to try to create a little suspense but it s not
 (25) going to last Are you married?

Vol 26 4467

- (1) A 24 and a half years happily married
 (2) Q Who are you married to?
 (3) A Mary Jacobs She said at 25 years she s going to take my
 (4) last name
 (5) Q She s the woman who was just on the stand before you?
 (6) A Yes sir
 (7) Q Now I want to talk a little bit about your fishing
 (8) history When did you first get involved in fishing?
 (9) A I started commercial fishing in 1965
 (10) Q What were the circumstances?
 (11) A I started crab fishing for Wild Bill Winecope on the crab
 (12) boat Sabatas (ph)
 (13) Q When you were working with Mr Winecope was that as a
 (14) crewman?
 (15) A Yes
 (16) Q What fishery?
 (17) A King crab fishing in the Kodiak area and then salmon
 (18) fishing in the Kodiak area up through 1969
 (19) Q Did there come a time when you were able to purchase a
 (20) vessel on your own?
 (21) A Yes sir I bought my first boat a skiff 24 foot jitney
 (22) and named it after Alise my first daughter
 (23) Q What was it like to fish on the Alise?
 (24) A Pretty rugged No hydraulics no power of any kind except
 (25) an outboard motor to propel it through water And we used a

Vol 26 4468

- (1) hundred fathom seine 600 feet lighter led line than what
 (2) you ve been seeing in the video but we pulled it in by hand
 (3) no hydraulics strictly set the seine and you pull it back
 (4) sometimes as high as 14 15 times in one day but I was a lot
 (5) younger then
 (6) Q So when we saw your wife s video and Mr Holms they had a
 (7) big power block?
 (8) A Yes sir
 (9) Q And you don t have one of those?
 (10) A I was the power block
 (11) Q Did you ever get a chance to buy a more advanced or
 (12) somewhat bigger vessel sir?
 (13) A Yes sir I went through a series of open jitneys that
 (14) you know you had to be careful the weather you were running
 (15) in
 (16) and traveled in and you were a lot more restricted in the
 (17) weather you could work but I made the big jump in 1968 the
 (18) fall of 68 is when I made that down payment on it and
 (19) actually no it was 78 I m sorry I don t know I m
 (20) confused 1978 is when I contracted it and 1979 was the first
 (21) year I fished that boat It was a 38 foot decked over
 (22) fiberglass seiner and it was a real step forward for me in my
 (23) fisheries
 (24) Q And currently sir what size vessel do you use?
 (25) A I ve got a 51 foot fiberglass seiner looks almost
 identical to my wife s except it s two years older and two foot

Vol 26 4469

- (1) narrower
- (2) Q Now as of the time of the Exxon Valdez oil spill in March
- (3) of 89 what permits did you own sir?
- (4) A I owned a Prince William Sound herring permit and I had a
- (5) Kodiak salmon permit and a Kodiak herring permit seine
- (6) permit
- (7) Q What had been your pattern with respect to fishing prior to
- (8) the spill?
- (9) A My normal pattern was go to Prince William Sound I would
- (10) run from Kodiak to Prince William Sound It's about 360 miles
- (11) I always figured from Kodiak to Cordova where I'd usually wait
- (12) for the fishery and then fish that and then I would return
- (13) from Prince William Sound back to Kodiak and then if the timing
- (14) was right I'd get maybe two or three days of fishing in the
- (15) Kodiak area for herring there but I bet a little bit more
- (16) money heading on to Kodiak down through the chain through
- (17) False Pass and back up the Bering Sea
- (18) Q Is that down the Alaska Peninsula and back up?
- (19) A Yes and back up to the Togiak area for herring fishing
- (20) there That's about 900 miles And then after the season was
- (21) over there I would come back through False Pass back to
- (22) Kodiak and the timing was right and if there were still a few
- (23) areas open that would look like it would pay me I would go
- (24) ahead and fish herring in Kodiak
- (25) And a lot of it had depended on when the halibut openings

Vol 26 4470

- (1) were If a halibut opening went I would go halibut fishing
- (2) and then quick as that we would change gear go halibut
- (3) fishing come back in and change gear and go salmon fishing in
- (4) the Kodiak area
- (5) Q So then you would fish on Kodiak Island for salmon?
- (6) A Correct the same general area that Mary pointed out
- (7) Q That your wife talked about?
- (8) A Right
- (9) Q Now sir in 1989 was your normal pattern in place you
- (10) were going to go up to Prince William Sound to go herring
- (11) fishing?
- (12) A No sir it wasn't The oil spill happened and it kind of
- (13) threw a monkey wrench in my whole year That was the year I
- (14) built my boat that I own now new it was coming out of the
- (15) shipyard that spring and so it was a pretty devastating year
- (16) to me all in all
- (17) Q Were you able to fish herring in Prince William Sound at
- (18) all?
- (19) A No sir
- (20) Q Now did you get a chance to go over to Togiak over by
- (21) Bristol Bay?
- (22) A Yes sir I did
- (23) Q Was that a normal herring season over there?
- (24) A It was a normal herring season and I had an exceptional
- (25) good year that year

Vol 26 4471

- (1) Q Did you come back to Kodiak after Togiak and get a chance
- (2) to salmon fish that year?
- (3) A Yes sir I did I come back and got all the gear aboard
- (4) and was set up ready to go salmon fishing and we didn't know
- (5) from one day to the next if we were going to get to fish or
- (6) not We attended a lot of meetings and a lot of discussion
- (7) and it was up in the air for quite awhile We didn't know
- (8) whether we were going to get to work or not but feelings run
- (9) pretty high and somewhere along if my memory serves me
- (10) correctly somewhere around the 20th of June I had a guy call
- (11) me and offer me a contract for tendering in Bristol Bay and I
- (12) didn't know if we were going to fish in Kodiak or what was
- (13) going to happen total confusion but I felt like that I had to
- (14) do something make sure that I had money to get through the
- (15) winter with and by taking that Bristol Bay contract it would
- (16) have guaranteed me some income for the winter coming on
- (17) and it
- (18) was getting late in the season and so I did that
- (19) Q Now after the Bristol Bay tendering contract did you come
- (20) back to Kodiak?
- (21) A Yes I did I come back to Kodiak and just kind of stood
- (22) by and I think there was a reference earlier to some of the
- (23) boats fishing in Kitor Bay area and I put my name in for that
- (24) but was not one of the ones that got lucky
- (25) Q So you didn't get a chance to fish salmon at all in 89?
- (26) A No sir not at all

Vol 26 4472

- (1) Q Now I want to ask you about your herring fishing up in
- (2) Prince William Sound since 89
- (3) Did you go up in 1990?
- (4) A Yes sir I did And 1990 was the first year after the oil
- (5) spill and I personally had a real good season As a matter of
- (6) fact I made the front page on the Anchorage Times
- (7) Q Now how was the season in 93?
- (8) A 93 wasn't good for me and I actually remembered now is
- (9) the year - I haven't had a good year since 1990
- (10) Q Did you get any fish in 93 sir up in Prince William
- (11) Sound?
- (12) A We didn't fish at all in 93 or we didn't fish at all this
- (13) year but we were ready to fish We were there
- (14) MR JAMIN Thank you Exxon lawyers may have some
- (15) questions
- (16) BY MR JAMIN
- (17) Q I'm going to ask one more question at the request of
- (18) Exxon Did you participate in the claims program in 1989?
- (19) A Yes sir I did
- (20) CROSS EXAMINATION OF L TOM DOOLEY
- (21) BY MR NEAL
- (22) Q I do have one question I guess Your herring fishing in
- (23) Prince William Sound in 1990 was terrific I guess
- (24) extraordinarily good in 1990?
- (25) A It was real good I wouldn't say terrific because I've had

Vol 26 4473

- (1) better but it was a real good year
 (2) Q How about 91 were you fishing there in 91?
 (3) A Yes sir
 (4) Q Wasn't the run really good size that year?
 (5) A I think it was fairly strong but what I'm referring to is
 (6) me personally Personally no sir I didn't do very well
 (7) Q Pardon me?
 (8) A For me personally I didn't do very well
 (9) Q But it had nothing to do with the run in 91?
 (10) A Well maybe it's the luck of my Irish or whatever
 (11) MR NEAL Thank you Mr Dooley - one more question
 (12) BY MR NEAL
 (13) Q How do you and your wife - do you all compete to see who
 (14) gets the largest number of fish?
 (15) A Yes sir we do but she usually wins
 (16) Q Ever a little lying done about that like it is where I go
 (17) fishing?
 (18) A Well she won't let me do that
 (19) MR JAMIN Despite the cross no redirect Your
 (20) Honor
 (21) THE COURT Thank you sir
 (22) MR GERRY If it please the Court the plaintiff will
 (23) call David Larson
 (24) THE CLERK Raise your right hand
 (25) (The Witness is Sworn)

Vol 26 4474

- (1) THE CLERK Please be seated For the record sir
 (2) state your full name your address and spell your last name
 (3) THE WITNESS My name is David C Larson
 (4) L a r s o n My address is 8076 Chinook Way in Blaine
 (5) Washington
 (6) DIRECT EXAMINATION OF DAVID C LARSON
 (7) BY MR GERRY
 (8) Q What do you do for a living Mr Larson?
 (9) A I'm a salmon seiner in Prince William Sound
 (10) Q How long have you been a fisherman?
 (11) A 38 years
 (12) Q When you started who did you start with?
 (13) A I started with my father I apologize He died last week
 (14) Q Did you come from -
 (15) A I apologize
 (16) Q You come from Montana sir?
 (17) A Yes sir I was born in Butte Montana
 (18) Q When did your dad start fishing?
 (19) A He began in the late 30s
 (20) Q In what area?
 (21) A He went to Cordova late 30s and Prince William Sound
 (22) Q You went there in 1956 then?
 (23) A Yes My father took me there in 1956
 (24) Q What kind of boat did he fish when you joined him?
 (25) A He fished in a small double ender in the Copper River Flats

Vol 26 4475

- (1) to begin with Had a one lung -
 (2) Q When did you get your own boat sir?
 (3) A I apologize again I got my first boat in the 70s
 (4) Q What kind of boat was it?
 (5) A It was about a 38 foot seiner
 (6) Q And how long did you have that particular boat?
 (7) A I had that one probably up into the late 70s
 (8) Q Did you replace it with another boat?
 (9) A Yes I did I bought a cannery boat
 (10) Q What's a cannery boat?
 (11) A Well they - in the old days the canneries owned most of
 (12) the boats and when they got - started to get rid of them I
 (13) bought one of them although I only had that boat for about a
 (14) year I sank it
 (15) Q What did you get then?
 (16) A Then I bought what they call a limit seiner a 58 foot
 (17) steel vessel I owned that for 9 years In 86 I also sank
 (18) that one
 (19) Q That one sank in 86?
 (20) A Yes
 (21) Q When you bought that boat did you pay cash for that?
 (22) A The first one?
 (23) Q No let's start with the limit seiner?
 (24) A No I didn't I financed that through Sea First
 (25) Q And when it sank had you paid off the loan?

Vol 26 4476

- (1) A Yes the insurance paid it off but I didn't make anything
 (2) on it Covered the boat
 (3) Q You replaced it with another boat?
 (4) A Yes I did 1987
 (5) Q What kind of boat did you get?
 (6) A Another limit seiner only this was an older wooden boat
 (7) Q Why is it called a limit seiner?
 (8) A Well in Alaska you're only allowed 58 feet for salmon
 (9) seining
 (10) Q That's the longest boat you can use for that purpose?
 (11) A Yes it is
 (12) Q Where during the course of your fishing have you fished?
 (13) Always in Prince William Sound?
 (14) A Always in Prince William Sound
 (15) Q When did you get your first limited entry permit?
 (16) A I earned it when they came out with former experience
 (17) Q This is a map of Prince William Sound?
 (18) A Chart
 (19) Q Chart I'm sorry I haven't gone to sea for a long time so
 (20) I get confused When you fished there the last - what area of
 (21) the sound did you fish in?
 (22) A I've spent probably 99 percent of my fishing career was
 (23) done in the southwest district
 (24) Q Is that that area down here?
 (25) A Yes it is Yes it is right inside that circle

Vol 26 4477

- (1) Q Were you fishing there in the 80s?
- (2) A Yes
- (3) Q You were fishing the limit seiner there?
- (4) A Yes I was
- (5) Q Where did you stand in the fishery as far as ranking of the fish?
- (6) A Well among individual processors you know among the overall picture the fishermen generally lie a little bit about that so you can't go by that but in the processors I was probably number one or number two of their fishermen
- (7) Q Which processor was that?
- (8) A Throughout the 80s it was Sea Hawk Seafoods in Valdez
- (9) Q And were your years of fishing improving or going downhill or were you making more money or less money in the 80s?
- (10) A Throughout the 80s we were doing better every year
- (11) Q Then 1989 the spill came along is that right?
- (12) A Yes it did
- (13) Q Did the spill oil most of the area that you had been fishing in?
- (14) A Yes
- (15) Q Were you able to fish that year?
- (16) A No we weren't
- (17) Q Did you however fish during that year?
- (18) A In 89?
- (19) Q Yes

Vol 26 4478

- (1) A Yes we did fish but we were just allowed a small portion of the northern district which I'd never fished before
- (2) Q Northern district is the district up here in these lines?
- (3) A No up higher That island to the right of your finger
- (4) Q Esther Island?
- (5) A No keep going right in the middle of the chart That's Glacier Island Behind that was the approximate area where they allowed us to fish
- (6) Q All right As a result of the fact that the boats coming out of the area that you had fished and other oiled areas were there a lot of fish?
- (7) A (Indicating)
- (8) Q Were there a lot of boats?
- (9) A There was an awful lot of boats there probably a hundred of them
- (10) Q Did you ever fish there before?
- (11) A No
- (12) Q Were you familiar with that area at all?
- (13) A I've run through there but I never spent much time fishing that area
- (14) Q How did you do there?
- (15) A Not very well
- (16) Q After the 1989 season did you continue to fish in Prince William Sound?
- (17) A Yes did I

Vol 26 4479

- (1) Q Where did you fish?
- (2) A We were allowed to fish some of the southwest districts and they had other openings but the areas that were open were what they call hatchery terminal areas
- (3) Q What's the difference between a hatchery terminal area and the other fishing area where you had been fishing?
- (4) A Well aside from the small area that it's contained in all you do is intercept fish that are headed for the hatchery it's a very small area three or four five six points where all boats have to fish and they are generally in line with anywhere from 15 to 30 boats taking turns
- (5) Q Does that then concentrate the fish all to one area around the hatchery?
- (6) A Yes
- (7) Q Did it result in catching fish that were lesser quality than the fish you were catching before?
- (8) A Yeah the nearer you get to a stream or hatchery the worse the quality is
- (9) Q So what do you call a fish that you catch out in the deep water bright?
- (10) A Yeah ocean run fish are bright That's the ideal fish
- (11) Q As they get closer they got poorer qualities?
- (12) A Longer they spend on the inside water or the closer they get to fresh water they deteriorate Actually they are deteriorating the minute they come in from the ocean

Vol 26 4480

- (1) Q However you caught fish in 90 and 91 didn't you?
- (2) A Yes I did
- (3) Q Caught quite a few fish?
- (4) A Yes
- (5) Q Was that a good year for you?
- (6) A Monetarily wise no very poor
- (7) Q Then you fished 92?
- (8) A Yes
- (9) Q Good year or bad?
- (10) A Poor
- (11) Q How about 93?
- (12) A Worse
- (13) Q Are you going to fish this year?
- (14) A I'm not The way it looks the herring have already failed and they are not sure about the hatchery fish so it would probably be just like last year a complete failure So I doubt if I'll fish
- (15) Q Did you make money or lose money?
- (16) A No I went in the hole
- (17) MR GERRY Thank you
- (18) CROSS EXAMINATION OF DAVID C LARSON
- (19) BY MR SERDAHELY
- (20) Q Good afternoon Mr Larson I'm Doug Serdahely with the Exxon defendants Just one question in 1989 did you participate in the Exxon claims program?

Vol 26 4481

- (1) A Yes I did
 (2) MR GERRY Nothing further Your Honor
 (3) THE COURT Thank you sir You may step down
 (4) MR O NEILL Plaintiffs call Ken Parker
 (5) THE CLERK Raise your right hand please
 (6) (The Witness Is Sworn)
 (7) THE CLERK Please be seated For the record sir
 (8) state your full name your address and spell your last name
 (9) please
 (10) THE WITNESS Kenneth Paul Parker I live at 4440
 (11) Columbia Boulevard in Juneau Alaska And my last name is
 (12) P a r k - e r
 (13) DIRECT EXAMINATION OF KENNETH P PARKER
 (14) BY MR O NEILL
 (15) Q How old are you sir?
 (16) A 50
 (17) Q And are you married?
 (18) A Yes I am
 (19) Q To whom?
 (20) A Lynette
 (21) Q And do you have any kids?
 (22) A Yes I have three
 (23) Q And where do you reside?
 (24) A In Juneau Alaska
 (25) Q How long have you lived in Juneau?

Vol 26 4482

- (1) A 14 years now
 (2) Q When did you come to Alaska?
 (3) A I came up here originally with my mother in 1960 and I
 (4) lived here off and on for a while and started college up at the
 (5) University of Alaska
 (6) Q And at some point in time did you finish college?
 (7) A Yes I did
 (8) Q Where did you finish college?
 (9) A Down in Southern California at the University of - San
 (10) Diego State University
 (11) Q What was your degree in?
 (12) A It was - I have two degrees bachelor of science in
 (13) zoology and a masters in science and biology
 (14) Q And where did you get the masters in biology?
 (15) A At San Diego State University
 (16) Q When did you receive that degree?
 (17) A In 72
 (18) Q And what courses did you take?
 (19) A I took courses in general biology ichthyology statistics
 (20) marine ecology and other general biological courses
 (21) Q And at some point in time did you decide to go to work and
 (22) make an honest living or one or the other or both?
 (23) A People around me forced me to do that I came back
 (24) returned to Alaska after I graduated from college
 (25) Q What job did you take?

Vol 26 4483

- (1) A Well I started off I got a temporary job with the State
 (2) of Alaska Department of Fish & Game
 (3) Q Doing what?
 (4) A I was a temporary biologist research biologist
 (5) Q And if you could go through your job history after that for
 (6) us and bring us up to date what kind of things did you do
 (7) what jobs did you have?
 (8) A Well I started off in a temporary position and worked
 (9) that for just a few months then I was promoted into a
 (10) permanent full time position and I worked in that position for
 (11) two years then I was promoted into the research project leader
 (12) for Bristol Bay at a research position I was involved in the
 (13) season management activities assessment of run strength to the
 (14) Bristol Bay sockeye fisheries I ran field camps and collected
 (15) data and had to analyze the data and determine the size of the
 (16) runs I was also responsible for post season compilation of
 (17) catch and escapement for Bristol Bay and another
 (18) responsibility to generate the annual preseason forecast for
 (19) the Bristol Bay salmon fisheries
 (20) Q Then what did you do?
 (21) A Subsequent to my six years in Bristol Bay research I moved
 (22) into deputy director position in Juneau for the Division of
 (23) Commercial Fisheries and held that position for six years and
 (24) then I was later promoted into the director position for the
 (25) division and I retained that for six years and then I retired

Vol 26 4484

- (1) in 19 - in October 31st 1990
 (2) Q You were both a deputy director and the director of
 (3) Commercial Fisheries for who?
 (4) A For the State of Alaska
 (5) Q And that s the Alaska Department of Fish & Game?
 (6) A Yes that s correct
 (7) Q Have you ever done any service with regard to the North
 (8) Pacific Fisheries Commission?
 (9) A Yes I served on the North Pacific Fisheries Commission as
 (10) a - you mean North Pacific Fisheries Management Council?
 (11) Q Yes
 (12) A I served as the alternate commissioner
 (13) Q In your years as the director and deputy director of Fish &
 (14) Game did you have any responsibility for implementation of
 (15) Fish & Game s regulatory management s programs?
 (16) A Yes as both deputy and director I was responsible for the
 (17) inseason management program throughout the state on all
 (18) species
 (19) that the State of Alaska had regulatory authority for The
 (20) responsibility is kind of cyclic in nature In season we would
 (21) spend a lot of time out in the fisheries Preseason we would
 (22) be involved in planning activities In the winter we would be
 (23) working with the Alaska Board of Fisheries to develop a
 (24) regulatory framework that would be used to manage these
 (25) fisheries
 (25) Q In your years with Fish & Game have you ever been involved

Vol 26 4485

(1) in forecasting harvest strategies methods of fish counting and
 (2) run reconstruction?
 (3) A Yeah pretty much throughout my career I lived and breathed
 (4) fisheries and we had - I had direct responsibilities when I
 (5) was in Bristol Bay for forecasts and then reconstruction and
 (6) then later as deputy and director I was involved in working
 (7) with the staff at all levels on anywhere from a daily basis to
 (8) a weekly basis involved in figuring out what s going on with
 (9) the salmon and trying to figure out how we could do a better
 (10) job of forecasting and putting the numbers back together
 (11) Q Have you ever had any field experience with regard to the
 (12) collection and analyzing of any field data on run size catch
 (13) escapement of salmon?
 (14) A Yes During my years in Bristol Bay I had direct
 (15) responsibilities for that sort of thing and as deputy during
 (16) the field season I was out working with our area biologists in
 (17) the field periodically Not all the time but periodically
 (18) and oversaw data collection activities and analysis and
 (19) interacted with my biologists to see what they were doing
 (20) MR O NEILL We would offer Mr Parker as an expert
 (21) witness on the subjects of Alaska commercial salmon fisheries
 (22) and run size estimation with regard to commercial salmon
 (23) fisheries in the State of Alaska
 (24) MR LYNCH I have no problem with the second of the
 (25) two subjects The first is awfully broad and seems to -

Vol 26 4486

(1) anything I know about but assuming it s in the same frame
 (2) we re talking about I have no problem with it
 (3) THE COURT Court will accept Mr Parker s
 (4) qualifications as someone expert in reconstructing runs and
 (5) forecasting
 (6) MR O NEILL Thank you Judge
 (7) BY MR O NEILL
 (8) Q You were the director of commercial fisheries the year of
 (9) the oil spill?
 (10) A Yes that s correct
 (11) Q I m going to go through a series of exhibits and for the
 (12) record they have all been preadmitted and I ll read them off
 (13) but I m only going to use preadmitted exhibits
 (14) The first one is Exhibit 282
 (15) MR LYNCH Could you use PX for the record?
 (16) BY MR O NEILL
 (17) Q PX 282 what is PX 282?
 (18) A This exhibit shows the State of Alaska with the
 (19) administrative and management regions that the Alaska
 (20) Department of Fish & Game uses for the state s fisheries My
 (21) pointer doesn t seem to be working
 (22) Q It should You got to get close to the screen but not on
 (23) the screen
 (24) A Got you We have four regions We have the state divided
 (25) into essentially four regions The southeast and Yakutat

Vol 26 4487

(1) region is referred to as our region one and of course it
 (2) involves the fisheries from Yakutat to Juneau on up to - from
 (3) Yakutat Juneau to Ketchikan The central region includes the
 (4) Prince William Sound Upper and Lower Cook Inlet and Bristol
 (5) Bay Westward region includes the fisheries around the Kodiak
 (6) Island on the south side of the Alaska Peninsula Chignik and
 (7) the Alaska Peninsula Aleutian Island fisheries and the
 (8) westward region includes management regions for the shellfish
 (9) fisheries for the Bering Sea The last region is the Arctic
 (10) Yukon Kuskokwim called AYK for short involves the fisheries
 (11) of the Kuskokwim region the Yukon Delta and River Norton
 (12) Sound and Kotzebue Sound fisheries
 (13) Q I m going to ask what may be a dumb question but that s
 (14) not stopped me before Why do you have these regions?
 (15) A Well it just provides administrative breakdown for one
 (16) thing and also we have regional staff in each region that
 (17) concentrate on management of the fisheries within that region
 (18) as opposed to having one of us be responsible for the entire
 (19) state We have a very diverse selection of fisheries in our
 (20) state and you would be asking quite a bit to have one office
 (21) control everything
 (22) Q And this is by way of background but if you would explain
 (23) to us briefly how do you manage a commercial fishery?
 (24) A Well of course it depends on the species that you re
 (25) managing

Vol 26 4488

(1) Q Let s take a salmon fishery
 (2) A Salmon fishery basically what you re trying to do is a
 (3) balancing act between your harvest and what you need for your
 (4) broad stock your escapement the fish that are allowed to go
 (5) up into the stream to spawn and for most salmon streams we
 (6) have found there is an optimum number of spawners that do the
 (7) best in a particular stream if you get too many you don t do
 (8) quite as well the fish stocks may decline a little bit
 (9) Likewise if you have too few the same thing can happen so
 (10) it s a balancing act
 (11) We have these areas divided up into districts and you ve
 (12) already seen some of that information in earlier presentations
 (13) and the manager within that management area like Prince
 (14) William
 (15) Sound has to allow harvests to occur kind of in a balanced
 (16) format within those districts such that he can balance what
 (17) he s getting in the commercial catch or harvest along with
 (18) what gets into the streams for spawning escapement
 (19) Q Let s take you want enough fish to get up stream to have
 (20) fish in the future and that s the first priority and the
 (21) second priority to the extent you can do that you want to
 (22) have a commercial catch so you have a healthy commercial
 (23) fishery?
 (24) A That s correct We have management plans that are
 (25) provided
 (26) by the Alaska Board of Fisheries It s a lay group appointed
 (27) by the governor that makes decisions on allocation of these

Vol 26 4489

- (1) fish resources for competing groups sportfishermen
 (2) setnetters drift gillnetters seiners all kinds of
 (3) divisions So the managers have this game plan that they have
 (4) to abide by in most situations that provides guidance on
 (5) allocation of the surplus once they have identified it to these
 (6) various competing users
 (7) Now this whole exercise would be pretty good if salmon were
 (8) cattle and you could stand up on a hillside and count them
 (9) visually but you can't The only time you get to see them is
 (10) when they get in a stream or in a commercial catch
 (11) Q With regard to a manager of a fishery Upper Cook Inlet
 (12) fishery Prince William Sound Kodiak Chignik fishery during
 (13) the course of a season what kind of information does the
 (14) manager have available to him or her to manage that fishery?
 (15) A The information kind of starts even before the season when
 (16) a forecast is prepared The manager looks at that forecast and
 (17) he's intimidated by that he sees - he expects a few fish or
 (18) normal or very large run so that kind of sets the stage
 (19) Then he's going to be looking in season he's going to be
 (20) using his commercial catch as a gauge you know how well the
 (21) fishery is doing relative to the amount of time they are
 (22) fishing and he's always got his escapement enumeration
 (23) projects and they may vary from a test fish program at the
 (24) mouth of a major river system they may be a sonar program
 (25) within the river or it may be aerial surveys over the stream

Vol 26 4490

- (1) beds where a biologist actually tries to count the salmon that
 (2) are spawning
 (3) Q What fisheries and everybody knows this but nobody has
 (4) been asked this what fisheries were impacted by the 1989
 Exxon
 (5) Valdez oil spill?
 (6) A Well there was a number of fisheries in the central region
 (7) and westward region that were impacted We have some
 exhibits
 (8) that list those You might want to -
 (9) Q Well let's go through the maps if we could I'm going to
 (10) bring up Plaintiffs Exhibit 303 and what is Plaintiffs
 (11) Exhibit 303?
 (12) A This is an illustration of the Prince William Sound
 (13) management area with the 11 districts within the management
 (14) area indicated and of course we did have a number of fishery
 (15) closures within Prince William Sound The major portion of the
 (16) Montague district was closed the entire southwestern district
 (17) was closed The Eshamy district was closed and portions of
 (18) the northern district were closed and the entire district was
 (19) closed for 11 days during the peak of the run later on in the
 (20) summer
 (21) Q And why was the district closed why were these portions of
 (22) the district closed?
 (23) A Due to problems with oil from the Exxon Valdez
 (24) Now I've been referring to just salmon fisheries
 (25) Q How about herring fisheries?

Vol 26 4491

- (1) A There were closures on our spring herring fisheries and
 (2) they take place in various locations throughout the Sound but
 (3) basically all the herring fisheries there are four they were
 (4) closed The sac roe fishery it's a fishery on the herring
 (5) eggs They harvest the herring so you can extract the egg We
 (6) have fisheries on roe on kelp both in pounds which are net
 (7) enclosures that float in the water and then we have the wild
 (8) kelp fisheries where divers go out into the fisheries where
 (9) kelp has the eggs deposited on the blades and then we also
 (10) have a gillnet fishery that harvests sac roe So we have both
 (11) gillnet and purse seine harvesting sac roe
 (12) Q With regard to the four different types of herring that
 (13) were harvested in Prince William Sound were all four of those
 (14) types closed?
 (15) A Yes they were
 (16) Q Who would eat fish eggs on kelp?
 (17) A I do after it's been processed
 (18) Q I might pass on that
 (19) I'd like to if I could go to Plaintiff's Exhibit 305
 (20) What is Plaintiff's Exhibit 305?
 (21) A This illustrates the Kodiak area management The Kodiak
 (22) management area with the district surrounding the Kodiak
 Island
 (23) including the mainland district along the Alaska Peninsula
 (24) Q Were there closures in Kodiak as a result of the 1989 Exxon
 (25) Valdez oil spill?

Vol 26 4492

- (1) A Yes there was
 (2) Q And generally where were they?
 (3) A Well there was major closures in the sac roe fishery in
 (4) the spring I think most of the management areas management
 (5) districts were closed There was some openings The salmon
 (6) fishery was pretty much limited to a setnet fishery in the
 (7) Alitak Bay region There was some short openings for the
 (8) seiners in Karluk this area but for the most part the rest
 (9) of the island was closed to the salmon fisheries
 (10) Q And why were the fisheries closed?
 (11) A It was due to the presence of oil
 (12) Q I'm going to bring up Plaintiffs Exhibit PX 304 What is
 (13) PX 304?
 (14) A This is a map a chart of the Upper Cook Inlet management
 (15) area showing the central district along in through here and
 (16) then the northern district of Upper Cook Inlet
 (17) Q In 1989 were there any fishing closures in the Upper Cook
 (18) Inlet salmon district?
 (19) A Yes in the salmon fishery we ended up having to close
 (20) down the drift fishery that is prosecuted in the upper
 (21) subdistrict of the central district and we had a 12 hour
 (22) closure on the east side setnet beach south of the Kasilof
 (23) River right in this area here
 (24) Q I'm going to bring up Plaintiffs Exhibit 306 PX 306 and
 (25) ask you what it is?

Vol 26 4493

- (1) A This is a chart again of the Chignik management area
 (2) showing the districts within that management area Perryville
 (3) western central and eastern and then the Chignik Bay
 (4) district in here and this is the - this pointer doesn't want
 (5) to cooperate anyway It also shows Chignik Lake right here
 (6) and Black Lake which are the major sockeye producers for that
 (7) area
 (8) Q Were there oil spill related closures with regard to the
 (9) Chignik fishery?
 (10) A Yes there was I believe without looking at the detailed
 (11) documents most of it was on the outside and restricted fishing
 (12) on the outside coast
 (13) Q What is Plaintiffs Exhibit 304 A when it comes on the
 (14) screen?
 (15) A This shows the Lower Cook Inlet management area Again
 (16) here is Anchorage - I mean Homer for reference and this is
 (17) the dividing line here between Lower Cook Inlet and the Upper
 (18) Cook Inlet management area that we saw before and the
 (19) management area includes the eastern outer districts the
 (20) Barren Island and southern districts and Kamishak districts
 (21) Q Were there any oil impacts with regard to the Lower Cook
 (22) Inlet management area?
 (23) A Yes there was closures in the outer and eastern districts
 (24) and within the Kamishak district
 (25) Q I'd like to if we could go to Prince William Sound and

Vol 26 4494

- (1) talk for a minute about the timing of the spill versus the
 (2) opening of the 1989 herring season Could you tell us about
 (3) that?
 (4) A You know the spill of course occurred in late April and
 (5) our herring fisheries -
 (6) Q Late March?
 (7) A I'm sorry late March and our herring fisheries in Prince
 (8) William Sound are run anywhere from early April through late
 (9) April So we were of course facing the beginning of our
 (10) herring fisheries almost immediately after the spill had begun
 (11) Q Did the herring fisheries open?
 (12) A No We summarily closed all of them
 (13) Q Now I want to talk generally about something called the
 (14) zero tolerance policy and a memorandum of understanding
 (15) concerning the zero tolerance policy and I'm going to place in
 (16) front of you Plaintiffs Exhibits 274 and 279 which are in
 (17) evidence What was the zero tolerance policy?
 (18) A Well the zero tolerance was a term that was coined during
 (19) the early development of this memorandum of understanding
 (20) and it related to how the department was going to manage the
 (21) fisheries in view of the oil potentially interfering with it
 (22) the normal prosecution of fisheries The final product out of
 (23) discussions at the area level and at headquarters and at
 (24) throughout the state with our managers and people in the
 (25) industry was that we developed this memorandum of

Vol 26 4495

- (1) understanding which is an agreement essentially between two
 (2) state agencies the DEC and the Alaska Department of Fish &
 (3) Game and it basically lines out who is going to be responsible
 (4) for what kind of actions and how we're going to proceed It
 (5) was a document that also provided information to the industry
 (6) on what to expect from the state
 (7) Q What was the problem that presented itself? Why did you
 (8) need to have a memorandum of understanding? As a practical
 (9) matter what issue are we addressing?
 (10) A Well we had a tremendous problem facing management with
 (11) the presence of the oil and there was no way in some
 (12) situations that we could prosecute a normal fishery so
 (13) something had to be done We needed guidance out there for
 (14) our
 (15) area managers to follow so that they would know when to close
 (16) you know how to close how to proceed
 (17) Q Now is that referred to as the zero tolerance policy? Did
 (18) it stay a zero tolerance policy?
 (19) A No not really It was a name that caught on and it's
 (20) often referred to as the zero tolerance but actually the
 (21) important point is that this document spelled out when the
 (22) department would close fisheries would react to oil and
 (23) within the document we have the terminology appreciable
 (24) likelihood and that is used in the document to kind of guide
 (25) when the departments would take action When we perceived
 that
 there is a likelihood that gear will be fouled fish harvested

Vol 26 4496

- (1) adulterated by the oil or the conduct of an orderly fishery
 (2) could not take place basically what we're saying is if we
 (3) perceive a problem a likelihood to measure a likelihood of
 (4) something happening we would have to react to close these
 (5) fisheries down and that was the basically the concept in the
 (6) MOU
 (7) Q So if there was an intersection between oil and fish and
 (8) that created a likelihood of a problem with oiled fish or oiled
 (9) gear then the department had to take some regulatory action?
 (10) A That's correct
 (11) Q In the development of this policy was Exxon Corporation or
 (12) their representatives invited to participate in that
 (13) development?
 (14) A Yeah there was a number of meetings that occurred in the
 (15) Cordova area and it's my understanding that they were invited
 (16) to participate in those proceedings
 (17) Q And Exxon has stated in its opening here that it agrees
 (18) generally with the zero tolerance policy Were there any
 (19) criticisms of the zero tolerance policy by Exxon to you as the
 (20) director of the fisheries?
 (21) A No not that I can recall
 (22) Q Now we talked generally with the closures using the maps
 (23) I am now going to ask you some more detailed questions about
 (24) the closures using Plaintiffs Exhibit 283 it's PX 283 What
 (25) is - let's get it so we can read it

Vol 26 4497

- (1) What is PX 283?
- (2) **A** This is a listing of the specific closures that occurred as a result of the 1989 season from the spill
- (3) **Q** Would you generally go over the first page of PX 283?
- (4) **A** Certainly This lists the closures that took place in Prince William Sound and the first one is the pacific herring fisheries and we did close the gillnet and purse seine sac roe fisheries along with the pound wild roe on kelp April 3
- (5) The next fishery was the shrimp fishery It was in progress at the time We closed that down April 3rd and we had also a trawl shrimp fishery we closed April 9th And this lists also the closures that occurred in 90 in 1990 and we had a small spot shrimp harvest that usually occurs around Knight and Eleanors and we closed that for the 1990 season
- (6) We had blackfish I mean sablefish fishery that closed April 1st and it did reopen later with the halibut opening
- (7) Dungeness crab we closed April 30th for the season King crab we also closed October 1st and groundfish and closed April 30th and re opened along with the halibut opening in mid June We had miscellaneous shellfish we closed on April 24th and we basically didn't issue any permits in that fishery And the pink chum and sockeye fisheries we closed as I indicated before the Eshamy district portions of the northern district and all the northern district for 11 days
- (8) We closed the southwestern district and parts of the

Vol 26 4498

- (1) Montague Island district In 1990 we had some area right around Eshamy Bay that were closed for just a few days and then re opened and there was portions on the LaTouche Island around
- (2) Eleanor and Ingot that were closed to fishing for that season
- (3) **Q** Would you do the same drill with regard to page two of Plaintiffs 283?
- (4) **A** Certainly This lists the Upper Cook Inlet fishery and of course we have the sockeye salmon fishery
- (5) **Q** Sir could you just hold on for a minute? Sorry to interrupt you Let me get this so we can read it
- (6) MR LYNCH Thank you
- (7) BY MR O NEILL
- (8) **Q** Start at the top again
- (9) **A** Have the Upper Cook Inlet fishery and that's the sockeye fishery I was referring to before We closed the central district drift fleet and a portion of the beach on the south of the Kasilof River for a 12 hour period The rest of the central district drift fishery was closed
- (10) In Lower Cook Inlet we had a shrimp fishery that was closed April 30 and opened it July 7th We had miscellaneous shellfish fishery that closed on the 24th of April and the outer and eastern districts and the groundfish fishery that we also closed in the outer and eastern districts and they were closed April 30th The fishery did reopen for all species except sablefish on June 12th in conjunction with the halibut

Vol 26 4499

- (1) opening
- (2) Smelt remained closed with groundfish in the outer and eastern districts beginning April 30th Pacific herring we had the sac roe fishing in the outer and eastern districts closed
- (3) April 15th prior to the regular opening date Pink salmon fishery we had the same fishery in Kamishak Bay that opened and
- (4) closed by emergency order We did have some areas that remained open in the Kamishak district and the Tutka Bay subdistrict north of a particular point probably get into this when you get into Lower Cook Inlet They were closed to seining on July 10th
- (5) **Q** What do we have on the third page of Plaintiffs Exhibit 283?
- (6) **A** This is the same general information for the Kodiak fisheries We have the pacific herring fisheries and approximately 34 of the 56 management units were closed for the duration of the sac roe season
- (7) **Q** I'm going to try to pull it up again
- (8) **A** That's better The sockeye and pink fishery As we indicated the setnet fishery in the Alitak district was open but that was pretty much it The other fisheries were very limited We did have a two-day seine opening in the Kariuk Lagoon on the west side of Kodiak Island in mid September but the rest of the Kodiak management area was closed to commercial
- (9) salmon fishing

Vol 26 4500

- (1) Chignik is indicated here and it's a sockeye fishery and the fishery - the outer portions the eastern were closed due to the presence of oil and we did have some closures in the Chignik Bay district for a little bit of time and the fishery was restricted to the inner parts of Chignik Bay
- (2) **Q** And with regard to all of the closures in PX 283 why did these closures occur?
- (3) **A** They were implemented in response to our MOU that spelled out you know how we would handle the presence of oil in our salmon fisheries and well all of our fisheries and how we would react
- (4) **Q** And that MOU was a result of the Exxon Valdez oil spill?
- (5) **A** Yes
- (6) **Q** Did you visit Prince William Sound after the spill?
- (7) **A** Yes I did
- (8) **Q** And when was that?
- (9) **A** That was one week after the beginning of the spill
- (10) **Q** And tell me about it?
- (11) **A** Well I flew into work with our managers and assess what was going on and see for myself firsthand the magnitude of the problem and begin activities to design research activities that we would implement to assess the spill's impact on our fisheries
- (12) **Q** What did you see?
- (13) **A** Well I flew over Prince William Sound and inspected the

Vol 26 4501

- (1) Exxon Valdez on Bligh Reef and then I flew towards the
 (2) southwest corner over the spill area. Pretty much spread all
 (3) the way to the outlet of Prince William Sound in that corner
 (4) We don't have a map. Maybe put up that map of Prince William
 (5) Sound.
 (6) Q Sure. I'm going to put up on the screen Plaintiffs
 (7) Exhibit 303. Now using the map, tell us what you saw?
 (8) A Well, I flew into Cordova, then took a light airplane to
 (9) survey the situation. We flew up here to Bligh Reef and around
 (10) the Exxon Valdez and I observed oil moving throughout this
 (11) area and down through here. We flew in a southwesterly
 (12) fashion
 (13) through this area (indicating) and through these - I observed
 (14) the oil existing through these passes and we flew over to the
 (15) AFK hatchery that's located on San Juan Island and
 (16) observed the booms and the activities there and then we
 (17) swung
 (18) back up here and took a look at this area by Eshamy and then
 (19) back to Cordova.
 (20) Q Where are the principal salmon spawning streams in Prince
 (21) William Sound?
 (22) A Well, we have 1100 spawning streams within Prince William
 (23) Sound and they are pretty much spread throughout the
 (24) periphery
 (25) of the Sound and the larger islands and you know fairly well
 (26) distributed
 (27) Q Distributed throughout the Sound?
 (28) A Yes

Vol 26 4502

- (1) MR O NEILL I'm going to change subjects. Judge is
 (2) that close enough?
 (3) THE COURT Yes, sir. We'll adjourn now, ladies and
 (4) gentlemen. Please remember my instructions about not
 (5) listening
 (6) to or reading anything about our case. We will reconvene at
 (7) 8:00 in the morning. We're adjourned until that time.
 (8) MR O NEILL Thank you, Judge.
 (9) (Proceedings recessed at 2:00 p.m.)

(1) PROCEEDINGS
 (2) (Jury in at 8 00 a m)
 (3) THE CLERK All rise
 (4) (Call to Order of the Court)
 (5) THE COURT Good morning ladies and gentlemen This
 (6) is the continuation of trial in Case A89-0095 civil in re the
 (7) Exxon Valdez Let s see where are we?
 (8) Mr Parker you understand you re still under oath?
 (9) THE WITNESS Yes Your Honor
 (10) THE COURT Mr O Neill you may continue
 (11) MR O NEILL Thank you
 (12) CONTINUED DIRECT EXAMINATION OF KENNETH P
 PARKER
 (13) BY MR O NEILL
 (14) Q How are you sir?
 (15) A Just fine
 (16) Q I have in front of you plaintiffs Exhibit 303 which is
 (17) the map of the Prince William Sound management area It s on
 (18) the screen And if you would would you show us the path that
 (19) the pink salmon in the Sound normally take when they return to
 (20) their spawning streams?
 (21) A Certainly Well the pink salmon pink and chum salmon
 (22) rear in the Gulf of Alaska and the north Pacific and then on
 (23) their adult - when they begin to mature as adults they start
 (24) their annual migration back to the stream of origin and what
 (25) they do during this migration of course is pick up the scent

Vol 27 4510

(1) of their home stream or the general area where they were
 (2) born So we know that the general /ES sick (ck) pattern of
 (3) currents out of Prince William Sound is through the
 (4) southwestern corner so the vast majorities of the fish as
 (5) they return from the open ocean come in through these passes
 (6) come through the southwestern district and portions of the
 (7) Montague district on their way - eventually on up into the
 (8) individual bays and streams and fjords where they were
 (9) originally from
 (10) Q You mentioned the zero tolerance policy yesterday Was the
 (11) zero tolerance policy also in effect in 1990?
 (12) A Yes It was changed It was a different policy but
 (13) basically the same provisions held that perceivable or
 (14) appreciable likelihood clause was still in there that language
 (15) held
 (16) The policy did recognize that time had passed since the
 (17) original spill and there were some certain changes that were
 (18) likely to occur during that season but for the most part, the
 (19) policy still said that there s an appreciable likelihood of oil
 (20) fouling gear or contaminating fish that the fishery should be
 (21) closed
 (22) Q Would you describe for us if you would using Exhibit -
 (23) Plaintiffs Exhibit 289 the commercial catch by species in
 (24) Prince William Sound Alaska?
 (25) A Certainly This histogram illustrates the commercial catch

Vol 27 4511

- (1) by species for the years 1979 through 1992 and the axis here
 (2) is the actual commercial catch in actually thousands so this
 (3) first indication would be five million The average catch of
 (4) all species combined for this period up to 1988 was about 22
 (5) and a half million salmon
 (6) You can see from inspection of this chart that the vast
 (7) majority and I think it's about 93 percent of the harvest is
 (8) actually pink salmon That's followed by chum salmon and
 that
 (9) represents a little bit less than five percent of the total
 (10) harvest during this time period
 (11) Okay That's followed by sockeye which is slightly under
 (12) two percent of the total catch and that's followed by coho
 (13) which is less than one percent and then the chinook catch is
 (14) less than about one-tenth of a percent So that will give you
 (15) a relative idea of the magnitude of the species as they occur
 (16) in the commercial catch
 (17) Q Would it be fair to say that the Prince William Sound
 (18) fishery is primarily a pink salmon fishery?
 (19) A Yes that's correct Although for certain gear types
 (20) these other species are very important particularly sockeye
 (21) Q I'd like you to explain to us if you could the whys and
 (22) hows of Fish & Game's management of the Prince William
 Sound
 (23) salmon fishery
 (24) A Well of course what we're attempting to do in any salmon
 (25) fishery is to balance the need for a certain level of

Vol 27 4512

- (1) escapement in these individual streams versus the need to crop
 (2) off the surplus to harvest them to let them either go into
 (3) the common property fishery or into the hatchery sales
 (4) harvest And of course the hatcheries also need a certain
 (5) level of escapement to continue their operations so the
 (6) manager is faced with a difficult situation of having to
 (7) balance harvest versus catch (ck) And he has certain
 (8) techniques available to him to accomplish this
 (9) One of course is the commercial catch It's very
 (10) important to the manager He has to be able to send that fleet
 (11) out It's the best way to sample a district, to find out
 (12) what's there to allow that fleet to go out there and have a
 (13) short period see what they catch
 (14) We've got an extensive data base over the years that's been
 (15) collected for all our fisheries in Alaska that lays out for the
 (16) manager the historical catch patterns by district and even
 (17) subdistrict so that you can look at a catch that happens that
 (18) time of year and compare it to past years and get a relative
 (19) idea of the strength Okay
 (20) In addition to the catch he's got escapement to give him
 (21) kind of a - some feeling for how that escapement is developing
 (22) and also the run But as we know the escapement is an index
 (23) program We don't have the - we've never had the funds in
 (24) Alaska to survey all of our streams so we have to divide and
 (25) conquer if you will We have a certain number of streams that

Vol 27 4513

- (1) we set up that we look at every year and we look at it as
 (2) frequently as we can afford to look at them and that gives us
 (3) a relative index that we can compare year to year on how well
 (4) those streams are - the escapements in those streams are
 (5) developing
 (6) Q Did the oil spill in 1989 have any impact on the management
 (7) of the Prince William Sound fishery?
 (8) A Well the - probably the most major impact was the
 (9) elimination of the ability to fish in the southwestern
 (10) district - well essentially the southwestern corner of
 (11) Prince William Sound where all these fish are migrating into
 (12) Prince William Sound The Montague district and the
 (13) southwestern district are down in that corner along with the
 (14) Eshamy district They were closed for the season Even up in
 (15) the northern part of Prince William Sound or where the
 (16) northern district is a portion of that was closed to protect
 (17) it from potential oil/fish interaction So essentially this
 (18) upper part was the portion that was open and furthermore
 (19) during the peak of the season from I believe it is the end of
 (20) July to about the end of the first week of August this whole
 (21) district was closed due to an oil incident
 (22) So to back up here this part was closed so the managers
 (23) were forced into a situation where they had to rely on how the
 (24) escapements were developing in these areas to assess the run
 (25) They didn't have the ability to put that fleet out there and

Vol 27 - 4514

- (1) see what the catch per unit effort might have been during an
 (2) opening
 (3) In normal years in normal years this district
 (4) southwestern district -
 (5) Q We'll bring it back up for you
 (6) A - accounts for over half of the commercial salmon pink
 (7) salmon catch in the purse seine fishery over half So that
 (8) opportunity was gone
 (9) Q Now how do you count fish?
 (10) A Well in most pink and chum fisheries throughout the state
 (11) we use a program of aerial surveys It's the backbone of the
 (12) Prince William Sound program as well That's where our
 (13) biologist flies in a small single engine airplane with a
 (14) pilot and they fly over these streams and visually count the
 (15) number of salmon that they can see within the stream And as
 (16) you can expect the success is variable depending upon the
 (17) light conditions that you have the wind conditions the tree
 (18) coverage over the - you know the forest canopy that may
 (19) interfere with seeing parts of that stream So the backbone is
 (20) really the aerial survey And the plane is flying along
 (21) anywhere from 75 miles per hour to 110 miles per hour
 (22) Now we often use ground surveys in addition to the aerial
 (23) surveys That's where if a surveyor was questioned what the
 (24) species composition was of the fish that he was seeing in the
 (25) stream they will oftentimes land get out walk the banks of

Vol 27 4515

- (1) the stream and visually try to get a - a better feeling about
 (2) the species composition because you do have pink and chums
 (3) that are using the same stream beds for spawning So they get
 (4) out and get an idea about that to help them develop these
 (5) estimates of the number of spawners in the stream
 (6) Q What is Plaintiffs Exhibit Number 3017
 (7) A Well this is just a summary of what aerial surveys do
 (8) provide And in the case of Prince William Sound we see that
 (9) we re indexing We have index streams Those are the ones
 (10) that are surveyed every year in a very regular basis and
 (11) actually in Prince William Sound they survey them once a week
 (12) is the normal program It takes four days to accomplish the
 (13) survey of all these 209 streams with one observer and one
 (14) pilot
 (15) So we re actually looking at 209 streams out of the 1100
 (16) streams so these observations these surveys provide
 (17) observations of select groups of pink/chum salmon spawning
 (18) streams thought to be representative of the area called index
 (19) streams
 (20) Counts seen by the observers they look at the bays first
 (21) to see the build up of fish in the bays They look at the
 (22) mouth of the stream and then last they look at the fish that
 (23) are actually in the stream Of course the fish that are in the
 (24) stream is actually the ones that they use for the index
 (25) program

Vol 27 4516

- (1) The observer count gives the manager a general sense of the
 (2) run magnitude and a comparative information base on which to
 (3) judge escapements by week through the season and from
 (4) season to season
 (5) Q Now I ve placed in front of you Exhibit - Plaintiffs
 (6) Exhibit 302 What is the information contained in Plaintiffs
 (7) Exhibit 302?
 (8) A Well this just addresses the shortcomings of aerial
 (9) surveys and that is that they fall a little short in providing
 (10) an accurate actual count of all spawners within the stream
 (11) They fall a little bit short in providing consistent
 (12) observations throughout the spawning period and
 (13) observations
 (14) are periodic and do not usually cover the entire season
 (15) Usually budget considerations enter in and you can t send
 (16) these - these - can t often afford to continue the program
 (17) through the duration of the entire salmon run so we try to get
 (18) the main portion of it in our survey program throughout the
 (19) state
 (20) Consistent observations can be a problem because of
 (21) weather can blow you out the counting The counting
 (22) situations - the counting situations could not be desirable
 (23) may have problems getting a good accurate count in a certain
 (24) week It s not a given that you re going to be able to
 (25) consistently observe that thing from week to week
 (26) Accurate observation counts by species in some situations

Vol 27 4517

- (1) when you get pink and chums mixed in a stream and you have
 (2) one
 (3) species that s very dominant it s very difficult to estimate
 (4) the one that isn t quite as dominant
 (5) Q And on the bottom half of the same exhibit there s a
 (6) section entitled aerial survey error studies Would you
 (7) explain what that is to us?
 (8) A Yes Well anybody that s been experienced
 (9) in aerial surveys recognizes that it s a difficult thing to
 (10) accomplish on a regular basis There s a lot of things that
 (11) can cause problems There have been some studies in the
 (12) state
 (13) of Alaska undertaken by the Alaska Department of Fish &
 (14) Game
 (15) that have laid out that and examine this error factor And
 (16) one the first study that was undertaken was accomplished in
 (17) Southeast Alaska and in that study they showed that the
 (18) surveys had an overall error of around half And you know
 (19) essentially they re counting less than half of the fish that
 (20) are actually present in the stream
 (21) In Prince William Sound at the beginning of the oil spill
 (22) there was a special program research initiated to evaluate the
 (23) potential damage to natural resources and part of that program
 (24) was a study to examine the aerial survey program and
 (25) determine
 (26) what the error might be
 (27) So the Alaska Department of Fish & Game undertook this
 (28) study in 90 and 91 to evaluate in Prince William Sound the
 (29) potential error of the survey program In 90 which is an

Vol 27 4518

- (1) even year they found that there was a 41 percent overall error
 (2) in the index program In 91 an odd year like 1989 the year
 (3) of the oil spill there was a 75 percent overall error So
 (4) it s quite significant.
 (5) Q Sir what is Plaintiffs Exhibit 312?
 (6) A This is a comparison of the 91 Prince William Sound aerial
 (7) survey escapement estimates as derived by the index program
 (8) the program that the State uses to assess escapements to the
 (9) actual escapement as measured by a weir What they did in the
 (10) study was placed weirs in front of the mouths of ten of these
 (11) streams in Prince William Sound to get an actual count of the
 (12) number of fish that were swimming into the stream
 (13) THE COURT What s a weir?
 (14) THE WITNESS Weir is a fence device Your Honor -
 (15) BY MR O NEILL
 (16) Q Tell them
 (17) A Yeah That - it s like a picket fence placed in the
 (18) stream bed and prevents the fish from passing up into the
 (19) stream and what they have is a gate in the middle of this
 (20) fence with a platform above it It s usually a small gate
 (21) with - they put a light colored panel on the stream bed so
 (22) that they can sit on this - on this platform and visually
 (23) count the fish that swim over this light colored panel so you
 (24) get an accurate count of the fish that are moving through
 (25) Q So you have - you know exactly how many fish are moving

Vol 27 4519

- (1) through because you actually sit there and count them at the
 (2) weir and then you compare that to the aerial survey and you get
 (3) some wisdom out of that?
 (4) A Yes This histogram illustrates that the information that
 (5) results from that Fish & Game study you can see that there s
 (6) ten streams indicated here and for each one of these ten
 (7) streams we have three vertical bars
 (8) The first bar is the actual total escapement as measured by
 (9) the weirs The second bar - let me see here Come on -
 (10) well it doesn t want to do it
 (11) Anyway the second bar illustrates what was seen in the
 (12) aerial survey Now this is season total counts So you can
 (13) see that the survey program was substantially undercounting
 (14) the
 (14) actual number of fish that passed into that - into that river
 (15) into that stream
 (16) The third bar is just the difference between the two
 (17) That s the amount of error that occurred So you can see
 (18) through all these streams we ve got a significant amount of
 (19) error as indicated by I guess it s a gray bar on this
 (20) particular illustration
 (21) Q We re talking about Plaintiffs Exhibit 312 for the
 (22) record Now what if - and this one is a beauty Plaintiffs
 (23) Exhibit 310 We re getting into what is called a regression
 (24) analysis Before we talk about 310 why don t you tell us what
 (25) the heck a regression analysis is because the jury is going to

Vol 27 4520

- (1) hear more regression analyses in the next three days than they
 (2) ever ever cared to hear
 (3) A Probably A regression is simply a comparison of two sets
 (4) of data two variables to see if one variable has any
 (5) interaction or any influence on the second variable It s a
 (6) comparison of two sets of data and it s really a common sense
 (7) kind of thing where you re looking at - in this case we re
 (8) looking at aerial survey estimates versus the weir counts And
 (9) each one of these dots represents the results from a particular
 (10) stream Remember those ten streams that I had in the
 (11) illustration before? There s ten dots up here
 (12) So at this particular dot that the pointer s pointing at
 (13) you can see that the aerial survey estimate provided an
 (14) estimate of about 10 000 fish That s from - that s what the
 (15) index program through these aerial surveys ended up with for
 (16) that particular stream for that season And this is 1991
 (17) Now if you come up here and then read across, you see that
 (18) that 10 000 observed in the aerial survey actually represented
 (19) a weir count of 40 000
 (20) Now we fit a line through a statistical process called
 (21) regression and you could fit a line just by eyeballing it,
 (22) taking a straight edge and moving it around and try to minimize
 (23) the distances between the observation and where this line is
 (24) and try to minimize all the distances between all these points
 (25) in this line and that s the regression process It s a

Vol 27 4521

- (1) mathematical procedure
 (2) What it does it allows you to make interpretations from
 (3) this when you know that given a certain level of escapement as
 (4) observed by the - by the survey would indicate another level
 (5) in the total escapement and what we have here is a four fold
 (6) increase in the - what they see through the aerial survey
 (7) versus what was actually counted in the stream And this holds
 (8) throughout the range of the data
 (9) Q So we re able to take the aerial survey information and
 (10) apply a formula to it and come up with a number of fish?
 (11) A That s correct And essentially the formula is presented
 (12) up here where you have to take this formula and just plug in
 (13) the aerial survey Pointer s going wild
 (14) Q Where s the formula? Let s see if I can get that
 (15) A Well I didn t really want to look at that but let s
 (16) see -
 (17) Q You re supposed to I m kidding
 (18) A No I need the whole -
 (19) Q You need the whole thing?
 (20) A The whole thing down yeah I guess the point is that if
 (21) you had - you know anywhere along this line you re looking at
 (22) a four fold increase between the aerial survey and a weir count
 (23) and you can use this information to correct an aerial survey
 (24) adjust that and turn it into an actual total escapement
 (25) Q Now this data with regard to the study that was done after

Vol 27 4522

- (1) the spill that s called a - that study was done by Sam
 (2) Sharr?
 (3) A Yes
 (4) Q He is with Fish & Game or at the time was with Fish &
 (5) Game is that right?
 (6) A Yes he still is He s the research project leader for
 (7) Prince William Sound and this is -
 (8) Q So it would fit -
 (9) A This is the data that they produced and I used this in my
 (10) development of an estimate of what the harvest would have
 (11) been
 (11) had there not been a spill
 (12) Q And that s where we re going that s the subject we re
 (13) going to go to right now What would the harvest have been if
 (14) there wasn t a spill? Took us a while to get there but we re
 (15) there And if we could look at Exhibit - Plaintiffs Exhibit
 (16) 288 What is Plaintiffs Exhibit 288?
 (17) A Maybe you could just enlarge the 1 through 4 areas That
 (18) might be helpful could read it a little better
 (19) These are the steps involved in taking the information that
 (20) we ve gained from that research Fish & Game research and
 (21) what
 (21) we know about the 1989 run from the catch information and put
 (22) it together and come up with - the bottom line is what we want
 (23) to come up with is what the commercial fishery would have
 (24) harvested That s the common property harvest
 (25) So we start with the index escapement estimate and we have

Vol 27 4523

- (1) to multiply that times an error factor for the stream surveys
 (2) And stream surveys actually include two components the
 (3) observer error and the stream life factor that was also a
 (4) problem Okay That equals an index escapement corrected
 (5) We take that corrected index escapement figure and we have
 (6) to expand it because the index only covers 209 of those 1100
 (7) streams So we have to expand to make up for all the rest of
 (8) the streams to come up with an estimate of total escapement for
 (9) all of the streams in Prince William Sound
 (10) Okay We obtain that estimate then we add what actually
 (11) was removed in 1989 during the fishery in 1989 The fishery
 (12) removals include the commercial catch the common property
 (13) harvest that's what's taken by the fishermen The hatchery
 (14) cost recovery those are the fish sales that the hatchery has
 (15) to pay for their operations and the hatchery brood stock
 (16) which is the escapement that they need to put the eggs back
 (17) into the hatchery to make subsequent runs That gives us an
 (18) estimate of the total run for 1989 and it's corrected for this
 (19) survey problem
 (20) Okay We can turn that process around now We've got a
 (21) total run estimate for 1989 We subtract out what we believe
 (22) is the total escapement needed That's the total escapement
 (23) goal and we have to do some - some calculations to derive
 (24) that We have to then again remove what - what we think the
 (25) hatchery cost recovery should have been in a normal season
 and

Vol 27 4524

- (1) we remove what the hatcheries need for brood stocks and we
 end
 (2) up with an estimate what's left for the common property
 (3) fishery the catch that will go to the commercial fishermen
 (4) Q We're going to try this one more time And I'm going to -
 (5) escapement is the number of fish that gets up the streams?
 (6) A That's correct
 (7) Q And we went through the regression analysis so that we
 (8) could take the aerial counts that existed in 1989 and figure
 (9) out how many fish in fact went upstream?
 (10) A That's correct
 (11) Q And then we need to figure - we need to apply that data to
 (12) the streams that you didn't have aerial counts for?
 (13) A The unmonitored streams
 (14) Q And then now we know how many fish got upstream and in
 (15) order to figure out the total run size we add in what was
 (16) actually caught what the hatcheries recovered and the
 hatchery
 (17) brood stock?
 (18) A That's correct. That gives you a total picture of what
 (19) you know in terms of total fish that actually came back to
 (20) Prince William Sound in 1989
 (21) Q So now that we know what the total number of fish is we
 (22) can pull out what was actually caught what was actually
 (23) recovered by the hatcheries?
 (24) A Hatcheries
 (25) Q And what is left is -

Vol 27 4525

- (1) A What's left for the commercial fishery
 (2) Q Okay I put up on the screen Plaintiffs Exhibit 308 and
 (3) what is Plaintiffs Exhibit 308?
 (4) A This is a histogram It illustrates Prince William Sound
 (5) odd year pink salmon runs for the period 1973 to - to 1993
 (6) and it has a fitted - a trend line to trend line to the data
 (7) from 73 to 91 And this is done just to illustrate how my
 (8) estimate in the green column stacks up to what the recent past
 (9) has been recent past performance of the fishery in terms of
 (10) total run
 (11) And we see by this trend line that we projected - if you
 (12) use that trend line to project the harvest I mean a total run
 (13) for 1989 it would have equaled 36 million My estimate is
 (14) 31.4 million Okay
 (15) Just by another piece of information the Department of
 (16) Fish & Game forecasted a 44 million - or no 48 million total
 (17) run for 1989 That was the preseason forecast So that gives
 (18) you terms of reference I'm not trying to do any forecasting
 (19) with this trend line but merely offer it to put things in
 (20) perspective to see what has happened in the recent past
 (21) Q Okay I have two specific questions You said odd year
 (22) Why do you use odd year and even year with pink salmon?
 (23) A The pink salmon in Prince William Sound the runs are
 (24) actually broken into two components You have adult returns
 (25) that come back in even years and adult returns that come back

Vol 27 - 4526

- (1) in odd years Those two stocks don't really intermingle
 (2) because pink salmon have a two-year life cycle so there's no
 (3) exchange of - of reproduction between those two cycles As a
 (4) result those two cycles just show different patterns of
 (5) behavior within the spawning streams
 (6) The even year cycle pink salmon usually spawn to a greater
 (7) degree much greater degree in the intertidal areas the lower
 (8) reaches of the streams The odd year pink salmon utilize the
 (9) upstream areas more to a much greater degree so you've got
 (10) instream differences between these two There's also some
 (11) differences between the distribution within the districts So
 (12) if you want to compare 1989 to other years you're best to look
 (13) at odd years and not even years because it's the same group of
 (14) fish it's the general cycle (ck)
 (15) Q Now the next exhibit we're going to look at is Exhibit
 (16) 300 and it is a doozy (ck)?
 (17) A Yeah I apologize for this
 (18) Q You better
 (19) A Numbers
 (20) Q Let's see if we can -
 (21) A Let me try this
 (22) Q Okay
 (23) A Let's just look at the first part of this first
 (24) Q Go
 (25) A Okay This is the harvest estimates that I derived from my

Vol 27 4527

(1) study and if I call your attention to this common property
 (2) total down here it'll make the rest of these numbers kind of a
 (3) little easier to follow. But this is the total harvest that I
 (4) estimated going through the process that we described very
 (5) briefly for each species. So this is pink, the next one is
 (6) chum, followed by sockeye, coho and chinook. And down
 here I
 (7) have a common property total that I derived for pink salmon
 (8) in the case of pink salmon it's 19,286,000
 (9) I also - in my paper I also broke that into two
 (10) components. One was the Eshamy set gillnet harvest which
 (11) occurs in a very specific location in Prince William Sound
 (12) versus the seine and drift gillnet total. I didn't divide
 (13) those down at this particular stage so I have two components
 (14) of the catch to total the common property fishery total. These
 (15) are my estimates that I derived from my research.
 (16) Okay. Next I compared that to what was actually reported
 (17) from the commercial - from the fishery in Prince William Sound
 (18) in 1989 and illustrated here again is the common property
 (19) totals that were documented, recorded during the 1989 season
 by
 (20) Fish & Game
 (21) So the process was to come up with a harvest foregone, the
 (22) number of fish that would have been caught had there not been
 a
 (23) spill. You take - I took my estimate of common property
 (24) harvest, subtracted out what the department documented, and
 (25) then that provided the number of fish that were not harvested

Vol 27 4528

(1) that I believe could have been harvested during that season
 (2) And I have that illustrated by species on this last row of
 (3) figures on this illustration
 (4) Q Is it your opinion that the Exxon Valdez oil spill
 (5) prevented the commercial fishery fleet from catching these
 (6) fish?
 (7) A Absolutely. I believe very sincerely in this estimate. I
 (8) think that had we had a normal season, the management
 process
 (9) would have had the opportunity to test that run by the
 (10) commercial fishery and see that there was actually more fish
 (11) present than what the index escapement program indicated in
 (12) season (ck)
 (13) Q Okay. That last point, if there would have been a normal
 (14) commercial fishery in the southwest portion of the fishery, the
 (15) managers would have had more information with regard to the
 (16) size of the run?
 (17) A Well, yes. You kind of have to look at the mindset of the
 (18) manager also. He was staring a very significant forecast in
 (19) the face. Was a 48 million total run that was being forecasted
 (20) a record run. It was like a 41 million catch so they
 (21) probably in my judgment would have been very aggressive
 very
 (22) nervous about getting out there in front of that run and
 (23) testing it with the commercial fishery. They were precluded
 (24) from doing that because of the spill
 (25) The oil was in the way. Those districts had to be shut

Vol 27 4529

(1) down under the terms of the MOU developed by the State of
 (2) Alaska and as a consequence they didn't have that tool. They
 (3) had to rely totally on this index program for run assessment
 (4) for all those stocks within those - those streams and other
 (5) locations within Prince William Sound which was never
 designed
 (6) to accurately count every last salmon
 (7) There was a subsample process that's very valuable - I
 (8) don't want to discount - it's very valuable to the manager
 (9) It's an important tool for him, but you talk to most managers
 (10) they're going to say what I really want to look at is the
 (11) performance of the commercial fishery
 (12) Q And in the next set of exhibits we've quantified the
 (13) losses in dollars. Is that correct?
 (14) A Yes, that's correct.
 (15) Q Let's take a look at Plaintiffs Exhibit 292 and what is
 (16) Plaintiffs Exhibit 292?
 (17) A This illustrates what happens if you take the numbers that
 (18) I came up with, my estimates of lost harvest, foregone harvest
 (19) by gear type and applied an average weight that was recorded
 by
 (20) Fish & Game to come up with the total lost weight by gear
 (21) type again. Take that total lost weight times the average
 (22) price paid during 1989 as documented by Fish & Game, come
 up
 (23) with the lost harvest damage by gear type and then a total
 (24) This is for pink salmon. And I might add this is excluding
 (25) Copper River and Bereng River

Vol 27 - 4530

(1) Q What is Exhibit 296?
 (2) A This is the same information that's provided for chum
 (3) salmon for the lost chum salmon harvest and it's basically
 (4) the same exercise. We take lost harvest times average weight
 (5) come up with total pounds lost times an average price paid
 (6) and that provides the estimated lost harvest damage for chums
 (7) Q And Exhibit 287?
 (8) A It's the same illustration for sockeye for the lost
 (9) sockeye harvest documented that I estimated for in 1989, same
 (10) process
 (11) Q And Exhibit 298?
 (12) A This is the - the same information for coho harvest lost
 (13) in 1989
 (14) Q And did you summarize these in Exhibit 299 if I can get
 (15) it?
 (16) A Yes, it is. This is a summary of the 1989 Prince William
 (17) Sound foregone harvest value by species with the total
 (18) indicated
 (19) Q There we go. So Exhibit 299 is the summary of all the work
 (20) we've talked about up to this point?
 (21) A That's correct.
 (22) Q And it includes the estimates of the total run size, what
 (23) was actually caught, subtracted out to arrive at a lost fish
 (24) number and puts the dollar value on those fish?
 (25) A Based on what was actually paid during the 1980 season -

Vol 27 4531

- (1) 89 season
 (2) Q And this dollar figure of \$9 046 722 is the amount of money
 (3) that the fleet lost for the fish it didn't catch in 1989?
 (4) A That's my estimate yes
 (5) MR O NEILL I have no further questions
 (6) MR LYNCH Bring back some happy memories of your
 (7) deposition
 (8) CROSS EXAMINATION OF KENNETH P PARKER
 (9) BY MR LYNCH
 (10) Q Mr Parker my name is Pat Lynch and this is called
 (11) cross-examination I'm really interested in trying to clarify
 (12) some points on all of the subjects that you've talked about
 (13) both yesterday and today with a view to giving the jury all
 (14) the information that they would like to possess to evaluate
 (15) this estimate and other estimates
 (16) You'll agree won't you that this is - the numbers that
 (17) you've just presented is an attempt to estimate the number of
 (18) fish that were out there in 1989?
 (19) A That's correct.
 (20) Q And that depends in part for example on the accuracy or
 (21) the validity of data that you collected in 1990 and 91 or
 (22) that Sharr collected in 1990 or 91 and its applicability to
 (23) 89 You have to engage in some degree of judgmental
 (24) exercise is that correct?
 (25) A That's correct

Vol 27 4532

- (1) Q Now let's take first of all the subject you were
 (2) discussing yesterday afternoon the zero tolerance policy and
 (3) the memorandum of understanding How long were you with
 (4) the
 (5) Department of Fish & Game?
 (6) A For 18 years
 (7) Q Okay And during the time that you were with the
 (8) department was there ever a time in your experience when
 (9) there
 (10) was such an extensive set of closures of commercial fisheries?
 (11) A I don't recall anything of the magnitude that occurred in
 (12) 1989 occurring before
 (13) Q That was - that was the most extensive closure that you
 (14) ever saw was it not?
 (15) A Yes I believe so
 (16) Q And the goal behind that was to assure that the reputation
 (17) of the fishery the reputation of Alaska fisheries would be
 (18) protected for future years?
 (19) A The goal was to balance the need to ensure that tainted
 (20) product wouldn't reach the market and at the same time
 (21) provide
 (22) an opportunity for the commercial fisheries to harvest surplus
 (23) so it was a balancing technique
 (24) Q But the zero tolerance concept of it was that if it came to
 (25) a question of taking a risk of having one single tainted fish
 (26) reach the market the policy was to protect the market from a
 (27) single tainted fish isn't that correct?
 (28) A I don't know if I agree with that I think first off it

Vol 27 4533

- (1) wasn't a zero tolerance policy That was a term used in some
 (2) of the early drafts It was a memorandum of understanding that
 (3) involved the concept of appreciable likelihood So although it
 (4) was called commonly during the 89 season and 90 season a
 (5) zero tolerance there was not a zero tolerance There was no
 (6) guarantee that a single fish wouldn't enter the market
 (7) The State used its resources as best it could to ensure
 (8) that wouldn't happen but at the same time there wasn't a
 (9) guarantee
 (10) Q Well you're not saying are you Mr - or you're not
 (11) really saying that there was tolerance of fish with oil
 (12) reaching the market?
 (13) A No I'm not saying that
 (14) Q There was zero tolerance of that?
 (15) A No I'm trying to be realistic There's no guarantees in
 (16) life
 (17) Q Could you - there was zero tolerance of letting fish with
 (18) oil reach the market?
 (19) A Premeditated
 (20) Q And to the best of your knowledge no fish with oil in any
 (21) way associated with it ever did reach the market?
 (22) A That's correct
 (23) Q And beyond the aspects of the policy that involved
 (24) closures the memorandum of understanding involved
 (25) inspection
 (26) of the product when it reached the processor isn't that

Vol 27 4534

- (1) correct?
 (2) A That's correct
 (3) Q And destruction of the fish?
 (4) A That's correct
 (5) Q And replacement of any gear that was fouled?
 (6) A Yes
 (7) Q So it - the policy was not merely limited to closure when
 (8) there was an appreciable likelihood Beyond that if an
 (9) opening was allowed there were follow ups to have - to assure
 (10) that no fish reached the market is that correct?
 (11) A That was the plan that was indicated in the written
 (12) policy
 (13) Q And if there was oil in the water the manager was
 (14) instructed to close the fishery and not take the risk isn't
 (15) that correct?
 (16) A That's where the appreciable likelihood concept kicks in
 (17) Not if there is a drop of oil in the water
 (18) Q Not if there's a drop of oil in the water?
 (19) A That's correct
 (20) Q The fisheries were closed where tar balls or small amounts
 (21) of oil were observed and there was no way to be certain that
 (22) that wouldn't foul gear or fish isn't that true sir?
 (23) A When it was perceived likely that there would be a problem
 (24) the fishery was closed
 (25) Q Now in connection with those judgments those were made
 (26) by

Vol 27 4535

- (1) the area managing biologists is that the correct title?
 (2) A They were - they were off the emergency order actions
 (3) Let me explain emergency order It's a process that we use in
 (4) the Department of Fish & Game to open and close fisheries
 (5) They are initiated at the area level and it's our policy on
 (6) very controversial opening and closures for those orders to be
 (7) cleared through headquarters particularly my office and even
 (8) sometimes the office of the commissioner before they're
 (9) released So there's a review but the area biologist is the
 (10) one that initiates that action
 (11) Q In 1989 did you in your office ever call the decision of
 (12) the area managers to close a fishery in any case?
 (13) A I can't remember reversing any proposed action but what
 (14) usually transpired is we had conversations with the area
 (15) personnel and went over the action prior to its release and if
 (16) there was concerns you know we discussed those and
 (17) sometimes
 (18) they'd get changed
 (19) I had a deputy director that was assigned principally to
 (20) work on this issue and of course when he wasn't around I had
 (21) to do it myself
 (22) Q Now you testified yesterday that one of the major roles of
 (23) the Department of Fish & Game is to attempt to balance the
 (24) needs of the commercial fishery and recreational fishery and
 (25) replacement of the stock is that correct sir?
 (26) A That's correct

Vol 27 4536

- (1) Q And among those three concerns protecting the resource is
 (2) always number one isn't it?
 (3) A That's correct Conservation objective is probably
 (4) paramount among the other directives that the department has
 (5) to
 (6) operate under
 (7) Q And when we say protecting the resource we mean
 (8) protecting
 (9) the ability of the stock to reproduce and come back in future
 (10) years?
 (11) A That's correct
 (12) Q And that goal or that objective is something that guides
 (13) the operation of the Department of Fish & Game from year to
 (14) year to year correct?
 (15) A Yes
 (16) Q Whether there's an oil spill or whether it's a great year
 (17) is that correct?
 (18) A It is normally written into our management plans that
 (19) are - if we have allocated management plans they're written
 (20) into that. They're adopted by the board of fisheries (ck)
 (21) which is a public input process
 (22) Q And my question - I don't think you've quite answered my
 (23) question The point is that that goal concern to maintain the
 (24) stock is something that you're constantly monitoring It's
 (25) not something that you do only in emergency situations?
 (26) A That's correct
 (27) Q And that is the basis for the process that I think you've

Vol 27 4537

- (1) described in part this morning of having techniques to know on
 (2) an ongoing basis what escapements are?
 (3) A We have - the managers depending upon the fisheries that
 (4) they're managing the amount of financial resources that are
 (5) available to them they have certain tools in their bag and as
 (6) I mentioned before they apply those tools in balancing the
 (7) harvest to escapement
 (8) Q Again they apply those tools to balancing harvest to
 (9) escapement to protect the resource That was my question
 (10) A That's correct
 (11) Q And around the state - you reviewed with Mr O'Neill
 (12) yesterday all of the districts and explained to him the
 (13) subdistricts that you have around the state Around the state
 (14) you have different systems for determining what escapement is
 (15) occurring is that correct?
 (16) A That's correct.
 (17) Q Some of them are more precise than others?
 (18) A Depending upon the situation that the tool is used in and
 (19) the amount of resources that are available to that manager to
 (20) implement the programs yes
 (21) Q And I presume the physical characteristics of the place
 (22) where you're trying to monitor?
 (23) A Yes
 (24) Q Because I assume that - for example you described to
 (25) Judge Holland a weir this morning I assume - maybe I'm

Vol 27 4538

- (1) wrong - that you can't use a weir everywhere?
 (2) A No
 (3) Q And so you have to use different systems in different
 (4) places?
 (5) A Yes
 (6) Q Now in the areas that you've talked about yesterday where
 (7) this oil spill was involved what systems are used?
 (8) A It depends on the species For pink and chum the backbone
 (9) of the escapement assessment process is the aerial survey
 (10) backed up with foot surveys when that can be accomplished
 (11) And
 (12) then for other species such as sockeye we have weirs in place
 (13) on a couple of the major systems within Prince William Sound
 (14) Q What about in Cook Inlet and Chignik and Kodiak?
 (15) A Well in Cook Inlet we have sonar programs that allow us
 (16) to estimate escapements in major river systems We also have
 (17) some weirs in some of the smaller river systems to - to
 (18) monitor escapements In Chignik we have a weir on the
 (19) Chignik
 (20) River that has been in place since the days of federal
 (21) management
 (22) Q Do you have towers to count fish in any of those
 (23) locations?
 (24) A Towers in - I don't recall any tower operations in Upper
 (25) Cook Inlet or in Chignik The towers are pretty much used -
 (26) they're counting towers and they're - they're mechanical
 (27) structures that the biologist would climb up and sit on this

Vol 27 4539

- (1) elevated platform and look directly back down into the river
 (2) and count the salmon as they swim right along the riverbank
 (3) And there would be a light - a light colored panel placed on
 (4) the substrate of the river and this is a principal technique
 (5) in Bristol Bay for counting sockeye because you have
 absolutely
 (6) clear water and that's where it works best
 (7) Q To the best of your knowledge though those aren't used in
 (8) the areas that we're talking about?
 (9) A Not to my knowledge not in Upper Cook Inlet - you
 (10) mentioned Upper Cook Inlet and Chignik?
 (11) Q I think the five districts you talked about areas you
 (12) talked about Prince William Sound Upper and Lower Cook
 Inlet
 (13) Kodiak and Chignik?
 (14) A You didn't mention Kodiak at first Kodiak has some
 (15) counting tower situations if I recall right
 (16) Q Now of the various types that you've described is
 (17) there - are there different levels of precision in the
 (18) accuracy of the counts and the use that the ADF&G makes of
 (19) those counts?
 (20) A Yes
 (21) Q What is the most accurate in your experience?
 (22) A I think the weirs are probably the most accurate in
 (23) situations where the physical structure of the river and the
 (24) current is such that the weir is fairly secure that you don't
 (25) incur washouts which periodically happens in some systems

Vol 27 - 4540

- (1) where the river drainage receives an excessive amount of
 (2) rainfall and you have the weir wash out which is not uncommon
 (3) on occasion
 (4) But some weirs are - have those - some river systems
 (5) exhibit that kind of a problem and others don't It depends on
 (6) the drainage
 (7) Q What about counting towers? How do they - are they
 second
 (8) or third or -
 (9) A Well counting towers are subsampling escapements They
 (10) can't count around the clock can't keep the employees awake
 (11) that long so they subsample They count ten minutes out of
 (12) each hour So it's a subsample but in Bristol Bay where that
 (13) occurs with the very clear water it's a fairly accurate
 (14) program
 (15) Q What about sonar?
 (16) A Sonar is used to enumerate adult salmon escapements and
 (17) predominantly in Cook Inlet and it also provides an assessment
 (18) of escapement and is a very valuable tool as well
 (19) Q Does sonar work 24 hours a day?
 (20) A Yes it does
 (21) Q In ADF&G do you treat the sonar count as an index or do
 (22) you treat it as a - I think you used subsample or do you use
 (23) it as a pretty valid count?
 (24) A I think it's - in most situations my recollection is it's
 (25) used as a total count as they have a certain amount of water

Vol 27 4541

- (1) column that is insonified (ck) by that transducer The
 (2) transducer is the electronic unit placed in the water right
 (3) next to the riverbank's edge and the beam shoots out
 (4) horizontally into the water column And it can only go so far
 (5) because eventually it either hits the top of the water column
 (6) or it hits - it runs into the substrate on the bottom of the
 (7) river So the beam can only go out so far so they have to
 (8) interpolate for the rest of the river that isn't insonified
 (9) (ck)
 (10) Q And in your tenure as the director of the commercial
 (11) fisheries division was that the counting technique that you
 (12) relied on where you had sonar employed?
 (13) A Yes
 (14) Q Did you consider it accurate and reliable?
 (15) A We considered it reliable and accurate
 (16) Q Did you self criticisms that sonar tended to undercount as
 (17) you've said index streams did (ck)?
 (18) A Yes I received - when I was director I received
 (19) criticism on everything and one of which was the fact that
 (20) potentially that the sonar was not giving a correct count and
 (21) that's the way it was
 (22) Q And did you look into those? Did your staff look into
 (23) those?
 (24) A Yes We - we had staff that were principally assigned to
 (25) the sonar program to ensure that the equipment was working

Vol 27 4542

- (1) correctly and that the field crews were adequately trained and
 (2) that the technology was reviewed periodically We had annual
 (3) workshops to evaluate sonar counters see how they were (ck)
 (4) working
 (5) Q As director were you satisfied that they were a proper
 (6) basis for you to make your escapement account?
 (7) A I think they were a very valuable tool It's what we could
 (8) afford at that point in time I'm sure if you had unlimited
 (9) funds you could probably improve the technology but as it
 (10) was we felt we had a pretty good tool and we used it
 (11) Q Now we've covered towers weirs sonar and the last was
 (12) aerial surveys and stream walks?
 (13) A Yes
 (14) Q Have we covered all those techniques which were used in the
 (15) area you talked about yesterday?
 (16) A In some situations we used to judge the amount of salmon
 (17) escaping in the river In Bristol Bay we operate test fish
 (18) sights We use commercial gillnet gear right in the river and
 (19) test it in a certain location on each trying to get a sample
 (20) of the number of fish that are moving into the river In the
 (21) case of the Kvichak River in Bristol Bay that's been done for
 (22) a number of years and they can use the amount of catch that's
 (23) obtained in that test fishery to estimate the movement of fish
 (24) into the river So it is a way of gauging escapement that we
 (25) use in a number of systems around the state

Vol 27 4543

- (1) Q Did you use that in Prince William Sound Cook Inlet
 (2) Kodiak and Chignik?
 (3) A Well we're scratching some old tapes here but as I
 (4) recall we have used test fish procedures in Prince William
 (5) Sound I believe it was in '90 and '91 if I recall
 (6) correctly
 (7) Q Not prior to the spill that we're talking about here that
 (8) you recall?
 (9) A I'm not certain that it hadn't been used before but -
 (10) Q It wasn't a norm?
 (11) A It wasn't the norm
 (12) Q It wasn't what you used on a day in day-out basis to
 (13) determine how to protect the resource?
 (14) A Right
 (15) Q Now in each of these places where you used a different
 (16) method I take it that you in the Department of Fish & Game
 (17) tried to relate the method you were using to the objective of
 (18) protecting the resource? In other words you knew when you
 (19) were looking at aerial counts that they weren't as accurate as
 (20) weirs right?
 (21) A Uh huh
 (22) Q You knew that even before 1990 and '91?
 (23) A We knew that from other research that's been conducted on
 (24) examining the accuracy of aerial surveys there was a variable
 (25) depending upon a lot of factors including forest canopy

Vol 27 4544

- (1) available light color of the substrate a number of factors
 (2) that come into play on the accuracy of aerial surveys
 (3) Q Now the other aspect that you'd have to take into account
 (4) would you not is what the system that the fish were going to
 (5) could support is that true?
 (6) A Yes
 (7) Q In other words there's - it's not written on a stone
 (8) somewhere what the escapement can be up a given river or into
 (9) a given bay is that true?
 (10) A That's correct
 (11) Q And so you biologists would try to make an analysis of what
 (12) that given system whether it's a river system or a lake
 (13) system could support?
 (14) A That's correct.
 (15) Q Knowing what you know about the life practices of the fish
 (16) that you're concerned about, correct?
 (17) A That's correct
 (18) Q And in part you had this problem which I think you
 (19) mentioned to Mr. O'Neill that the fish don't - they aren't
 (20) nice enough to come along - all pinks come along and do their
 (21) thing and all the chums come along and do their thing they're
 (22) swimming together and so you have to balance the
 (23) requirements
 (24) for the various species that are swimming together?
 (25) A That's correct
 (26) Q So in each of these areas that we're talking about the -

Vol 27 4545

- (1) is it correct that the department had an escapement target or
 (2) objective or range that matched your view of the counting
 (3) technique against your view of what the system could support?
 (4) A We would develop estimates of optimum escapement given
 (5) the
 (6) extent of our data base and our ability to assess that and it
 (7) was quite variable from system to system throughout the state
 (8) species to species Probably one of the better programs for
 (9) doing that was in Bristol Bay and it varied throughout the
 (10) state
 (11) Q When you evaluate - do they call that the carrying
 (12) capacity of the system? Is that the right term?
 (13) A Well it depends on what you're - what species you're
 (14) talking about Some species don't require a lake to rear in
 (15) the stream and then they're immediately out into saltwater
 (16) Q What term would you use for that second situation?
 (17) A Well it's the optimum spawning capacity of the stream
 (18) Q Okay So carrying capacity spawning capacity depending
 (19) on which we're talking about right?
 (20) A Yeah
 (21) Q And I think you've already said this but just to be sure
 (22) there can be a great deal of variation in the carrying capacity
 (23) or the spawning capacity is that correct?
 (24) A Yes
 (25) Q And from your deposition I understand one thing that at

Vol 27 4546

- (1) least in lake systems will affect the capacity of the system to
 (2) support young fish is the number of fish that go up the stream
 (3) and die because when they die they supply nutrients into the
 (4) system that help create new food for their offspring is that
 (5) accurate?
 (6) A I think in my deposition we wrote a thesis on all the
 (7) factors that can contribute to the success of young salmon in a
 (8) river system
 (9) Q It was very helpful to me And in that thesis that was
 (10) one of the points you made?
 (11) A Yes
 (12) Q And in the bottom line of that thesis was that at least in
 (13) your experience the variation can - the carrying capacity of
 (14) a lake system might vary by as much as a factor of ten from
 (15) year to year?
 (16) A Yeah That was something I had pulled out of my head
 (17) during the deposition and it had been a while since I looked
 (18) at that research and I - you know that's what I said And
 (19) it's probably a reasonable estimate but you know it's been a
 (20) while since I've looked at that data
 (21) Q Well all agree that's an approximation We're all talking
 (22) about approximations here right?
 (23) A Yes
 (24) Q But there is a wide range of variation correct?
 (25) A Yes

Vol 27 4547

- (1) Q And so if you happen - in your fitting of the escapement goals to carrying capacity goals or spawning capacity goals (2) you have to try to match those two variables to hit somewhere (3) which is - makes common sense is that right? (4) A That s correct (5) Q And sometimes sometimes you re off? (6) A That s correct (7) Q You try to be conservative make sure you protect the (8) resource but you re also trying to maximize the utility of the (9) resource is that true? (10) A Yeah (11) Q And you had found over your career in some systems (12) including the Kenai River system that we ll be talking about (13) here that you would find that you had an escapement goal that (14) you thought was optimum and you learned that if you went above (15) that goal the system actually did better? (16) A That s correct. (17) Q And then you would raise the goal up? (18) A That s correct. (19) Q And over the 70s and into the 80s you were doing that (20) you did that a fair number of times in the Kenai River as to (21) sockeye salmon isn t that correct? (22) A That s true (23) Q And you really didn t know what - the point at which it (24) would be undesirable or damaging to the system to let more (25) fish

Vol 27 4548

- (1) go up You hadn t really found where the ceiling was is that (2) true? (3) A Well we - we thought we knew where the ceiling was and (4) by accident we d get an escapement that exceeded our (5) objective and you know not through any direct action by the (6) department but it was an accident and we d see that the (7) system could benefit from that level of escapement and if the (8) data supported that we would respond by elevating the (9) escapement objective for that system (10) Q So that over the five or six years prior to this oil spill (11) you d gone from a goal of about 300 000 sockeye escaping a (12) year up to somewhere in the 4- to 700 000 range is that correct? (13) A I think that s approximately correct (14) Q And in the year 1987 you d had a million and a half sockeye (15) escape which was more than double your goal is that correct? (16) A That s correct (17) Q And in 88 you had a million escape which was about (18) 300 000 more than your goal? (19) A That s correct in the Kenai River (20) Q In the Kenai River And talking about sockeye salmon (21) nght? (22) A Yes (23) Q Because you never have enough kings escape up - (24) A Not if you like king salmon fishing sport fishing (25) Q I mean from the standpoint of your constituents

Vol 27 4549

- (1) A True (2) Q Now when you reached this conclusion that it was in the (3) best interest of the Alaska fishery to have what people called (4) a zero tolerance policy you recognize that one effect of that (5) might be that fish would go uncaught and would overuse (6) systems (7) isn t that correct? (8) A That s correct (9) Q And so your managing biologists your area managers one (10) of (11) the things - the responsibilities they had under the zero (12) tolerance policy was to try to keep an eye keep a (ck) weather (13) eye on not having all the fish swim up the streams or up the (14) rivers or into the lakes is that correct? (15) A Well I m not sure that I understand the - your question (16) Our biologists were obligated to abide by the memorandum of (17) understanding and if we saw that - that closure of the (18) fishery was required under the terms of that MOU we d have to (19) close the fishery down and suffer the consequences (20) Q Well let me show you PX280 here which is labeled draft (21) and it s a policy on overescapement as it pertains to (22) management of fisheries impacted by presence of - of oil in (23) harvest area fisheries This document was generated was it (24) not as in response to the memorandum of understanding? (25) A No Let me see the heading on that document please (26) Q Sure (27) A Okay That document was a straw dog that was developed (28) by

Vol 27 4550

- (1) my staff at my request to initiate discussion within our (2) biologists on what options might be available to us to utilize (3) surplus fish that may be - may occur as a result of the oil (4) spill And this - this was a draft that was never approved by (5) the department it was not approved by my office and it was a (6) source of a lot of discussion in our - in the division of (7) commercial fisheries which I head - headed at that point (8) And you know as you ll probably show there was further (9) discussion that it became very obvious that this was (10) unrealistic and not something that would benefit the public or (11) the resource (12) Q Well I think my question to you was was this document (13) generated as a result of the memorandum of understanding? (14) Are (15) you saying this document was not generated as a result of the (16) understanding that you would be doing closures under the (17) memorandum of understanding? (18) A I m not sure what the sequence was Immediately when we (19) saw the oil spill we were concerned that there might be a (20) situation and I think we were looking at Kodiak actually at (21) that point in time that we d have a very large surplus of (22) salmon going up the stream and we were concerned about (23) potential of overescapement so we started this discussion (24) within my staff And I m not - I don t agree or I can t agree (25) that this was a result of zero tolerance - of the MOU I (26) think -

Vol 27 4551

- (1) Q Okay
- (2) A - this may have actually occurred before the MOU was signed
- (3) signed
- (4) Q Fine This was a result of your expectation that there would be closures however that happened correct?
- (5) would be closures however that happened correct?
- (6) A That s correct
- (7) Q And it was a result of your recognition that if there were closures there d be a lot of fish going uncaught that might have a natural instinct smelling their Native stream there in the water might have a natural instinct to swim up the stream and eat more of their share of the resource up there right?
- (8) closures there d be a lot of fish going uncaught that might have a natural instinct smelling their Native stream there in the water might have a natural instinct to swim up the stream and eat more of their share of the resource up there right?
- (9) and eat more of their share of the resource up there right?
- (10) the water might have a natural instinct to swim up the stream and eat more of their share of the resource up there right?
- (11) and eat more of their share of the resource up there right?
- (12) A That s correct
- (13) Q Or actually eat their share which would be more than -
- (14) A Was available
- (15) Q Put everybody on a starvation diet right?
- (16) A Right
- (17) Q As a biologist charged with protecting the resource first and foremost you focused on the fact that you should be prepared to do something about it is that correct?
- (18) and foremost you focused on the fact that you should be prepared to do something about it is that correct?
- (19) prepared to do something about it is that correct?
- (20) A Well I think it wasn t that we had to implement something right away it was more that this is something that we should have some dialogue on and see if there are any possible solutions And as it turned out there wasn t
- (21) right away it was more that this is something that we should have some dialogue on and see if there are any possible solutions And as it turned out there wasn t
- (22) have some dialogue on and see if there are any possible solutions And as it turned out there wasn t
- (23) solutions And as it turned out there wasn t
- (24) Q So you should have some dialogue on the question of whether
- (25) there - at least in some cases the State should take

Vol 27 4552

- (1) emergency steps is that right?
- (2) A Yes
- (3) Q To catch fish even if they weren t going to be harvested commercially?
- (4) commercially?
- (5) A That s correct
- (6) Q In order to thin out the number of fish escaping up into rivers streams bays wherever the spawning was going to occur?
- (7) rivers streams bays wherever the spawning was going to occur?
- (8) occur?
- (9) A That s correct
- (10) Q And you tell us now that you ultimately concluded that it wasn t realistic to do that?
- (11) wasn t realistic to do that?
- (12) A That s correct
- (13) Q Why is that?
- (14) A There are both socioeconomic concerns that became real apparent to us in terms of the State going in there and harvesting these fish there was also biological concerns with us directing a fishery either right in the mouth of the river system or up in the river system
- (15) apparent to us in terms of the State going in there and harvesting these fish there was also biological concerns with us directing a fishery either right in the mouth of the river system or up in the river system
- (16) harvesting these fish there was also biological concerns with us directing a fishery either right in the mouth of the river system or up in the river system
- (17) us directing a fishery either right in the mouth of the river system or up in the river system
- (18) system or up in the river system
- (19) And as an example - well you can just envision what it would be like to send a drift gillnet fleet up into the Kenai River to harvest the surplus sockeye
- (20) would be like to send a drift gillnet fleet up into the Kenai River to harvest the surplus sockeye
- (21) River to harvest the surplus sockeye
- (22) So these things kind of immediately came - became very apparent to us and it just was unreasonable It would violate the terms of management plans allocated management plans developed by the board of fisheries the Alaska Board of
- (23) apparent to us and it just was unreasonable It would violate the terms of management plans allocated management plans developed by the board of fisheries the Alaska Board of
- (24) the terms of management plans allocated management plans developed by the board of fisheries the Alaska Board of
- (25) developed by the board of fisheries the Alaska Board of

Vol 27 4553

- (1) Fisheries that is charged with allocating resources between competing users
- (2) competing users
- (3) Q Are you saying Mr Parker that you got to the - you came to the conclusion that if you as biologists felt that allowing escapement to occur would jeopardize the viability of the resource you had no way to pull those fish out of the stream?
- (4) to the conclusion that if you as biologists felt that allowing escapement to occur would jeopardize the viability of the resource you had no way to pull those fish out of the stream?
- (5) escapement to occur would jeopardize the viability of the resource you had no way to pull those fish out of the stream?
- (6) resource you had no way to pull those fish out of the stream?
- (7) A What I m saying is that we - we had to deal with a realistic biological realism of - I m not putting these words together right
- (8) realistic biological realism of - I m not putting these words together right
- (9) together right
- (10) We had to deal with the consequences of going in with a directed harvest that had - in a very confined space within a river that would have very significant biological consequences on other species such as freshwater fishes that reside in that area of the river It would also violate certain management plans that were developed allocated management plans that were developed by the board of fisheries and it just wasn t the providence of the Department of Fish & Game the State of Alaska to get involved in this
- (11) directed harvest that had - in a very confined space within a river that would have very significant biological consequences on other species such as freshwater fishes that reside in that area of the river It would also violate certain management plans that were developed allocated management plans that were developed by the board of fisheries and it just wasn t the providence of the Department of Fish & Game the State of Alaska to get involved in this
- (12) river that would have very significant biological consequences on other species such as freshwater fishes that reside in that area of the river It would also violate certain management plans that were developed allocated management plans that were developed by the board of fisheries and it just wasn t the providence of the Department of Fish & Game the State of Alaska to get involved in this

- (17) providence of the Department of Fish & Game the State of Alaska to get involved in this
- (18) Alaska to get involved in this
- (19) Q You also felt did you not that you weren t certain that it wasn t to the benefit of the fishery in any case that you knew about to have the escapement occur?
- (20) it wasn t to the benefit of the fishery in any case that you knew about to have the escapement occur?
- (21) knew about to have the escapement occur?
- (22) A That s correct
- (23) Q And you thought that this provided a low cost or no cost chance to find out more about the carrying capacity of places where - or escapement might be about to happen?
- (24) chance to find out more about the carrying capacity of places where - or escapement might be about to happen?
- (25) where - or escapement might be about to happen?

Vol 27 4554

- (1) A I don t think I follow that question Maybe try it again
- (2) Q Wasn t it a part of your thinking when you were kicking these things around that since the - normally you would not want to have escapement because you want to be sure that fishermen can catch the commercially harvestable fish right?
- (3) these things around that since the - normally you would not want to have escapement because you want to be sure that fishermen can catch the commercially harvestable fish right?
- (4) want to have escapement because you want to be sure that fishermen can catch the commercially harvestable fish right?
- (5) fishermen can catch the commercially harvestable fish right?
- (6) A Uh huh
- (7) Q And as you put it in your deposition you re concerned about saving Alaska jobs and income correct?
- (8) about saving Alaska jobs and income correct?
- (9) A That s obviously something the State has to be concerned about
- (10) about
- (11) Q Absolutely I didn t mean any suggestion of criticism but that s a cost you d have to pay if you let too many fish go up the river correct?
- (12) that s a cost you d have to pay if you let too many fish go up the river correct?
- (13) the river correct?
- (14) A True
- (15) Q In this case the fish weren t going to be caught anyway?
- (16) A That s correct
- (17) Q And so you felt that it was a low cost or no cost opportunity to determine if the - if the rivers streams spawning places had more - more capacity you thought there was valuable information to be learned from that experience?
- (18) opportunity to determine if the - if the rivers streams spawning places had more - more capacity you thought there was valuable information to be learned from that experience?
- (19) spawning places had more - more capacity you thought there was valuable information to be learned from that experience?
- (20) was valuable information to be learned from that experience?
- (21) A You re saying that we felt it would be valuable to go ahead and let the overescapement occur so that we could evaluate the results of a larger escapement? Is that your question?
- (22) and let the overescapement occur so that we could evaluate the results of a larger escapement? Is that your question?
- (23) results of a larger escapement? Is that your question?
- (24) Q I m asking if that wasn t the view of some of the people in your department when you were deciding what the proper action
- (25) your department when you were deciding what the proper action

Vol 27 4555

- (1) what the best course to take was in terms of protecting the resource?
 (2) A Oh yeah I had lots of different views in my staff about
 (3) this issue and that was certainly one of them
 (4) Q Now with reference to your - the estimates you gave this
 (5) morning about Prince William Sound - first of all what -
 (6) what as you recall it was the split as of 1989 between
 (7) hatchery reared adults or hatchery started adults hatchery
 (8) born returning fish and wild stock?
 (9) A Well the hatchery stocks were dominating the return of
 (10) adult pink salmon in Prince William Sound in 89 and in the
 (11) prior years immediately preceding 89 There s no question
 (12) about the dominance of hatchery production in those returns
 (13) Q Would you agree that they represented about 75 percent of
 (14) the returning fish?
 (15) A It was that high
 (16) Q And each year what were the hatcheries releasing into the
 (17) Sound in terms of numbers of fry or juvenile fish?
 (18) A I don't really recall off the top of my head
 (19) Q 200- 300 000 correct?
 (20) A It was a major -
 (21) Q Sorry 2 to 300 million?
 (22) A Yeah that s more like it
 (23) Q Well these numbers are too big for me
 (24) Were you here when we had the videos yesterday of the purse
 (25)

Vol 27 4556

- (1) seining and how pink salmon are caught?
 (2) A Yes
 (3) Q Of course those probably looked very familiar to you
 (4) because you ve seen a lot of that but I couldn't tell when I
 (5) looked at those fish coming up which ones were the hatchery
 (6) fish and which ones were the wild ones Could you?
 (7) A They re the ones with the H on the side
 (8) Q Can we rerun the tape so you can point that out to me?
 (9) A No you can t You can t tell by looking at the fish
 (10) whether it s hatchery run or wild stock
 (11) Q Now earlier today you were talking with Mr O Neill about
 (12) these migration corridors out there I guess southwest end of
 (13) the Sound Let me see if I can find that 203?
 (14) MR SANDERS 303
 (15) MR LYNCH PX303 let s see if that s it I think
 (16) it s 203
 (17) MR O NEILL It s 303 Pat You want to bring it
 (18) up?
 (19) MR LYNCH Which is it going to be?
 (20) BY MR LYNCH
 (21) Q Now you - you know the light pen Mr Parker But you
 (22) were referring to the spaces in between Montague Island and
 (23) the other islands that - LaTouche Island and the other islands
 (24) here Could you just point to that?
 (25) A This area right here passes - major passes into Prince

Vol 27 4557

- (1) William Sound are right through here
 (2) Q Okay Now you said that in an average year or a normal
 (3) year 50 percent of the pink salmon catch occurs down there is
 (4) that correct?
 (5) A I think that s a long term average In more recent years
 (6) since the spill it s - every one s been higher than that
 (7) Q What was it in 1988?
 (8) A 1988 it was - I was just looking at that I believe it
 (9) was like 50 percent 51 percent
 (10) Q Isn t it the case that in 1988 most of the fishery was a
 (11) terminal fishery?
 (12) A Well I m not sure how you could say it was terminal
 (13) fishery if you had 51 percent of the harvest that occurred in
 (14) the southwestern district
 (15) Q It s your testimony that 51 percent of the harvest that
 (16) occurred -
 (17) A There was - there was a commercial opening in the
 (18) southwestern district I think it was primarily aimed at
 (19) harvesting chum salmon during that year but there was -
 (20) Q Go ahead
 (21) A - harvest from that district dominating the catch That s
 (22) why I reviewed the 1988 annual management report just
 (23) yesterday and that s the number that comes back to my mind
 (24) Q And were those - was that catch in front of the AFK
 (25) hatchery?

Vol 27 4558

- (1) A It depends on what you call in front of
 (2) Q In the special terminal fishery area that was established
 (3) A I didn t have an opportunity to look at the emergency order
 (4) that was issued for that opening It listed the number the
 (5) emergency order number but I didn t have an opportunity to
 (6) look at that I was curious about the same issue but there
 (7) was - I m not sure of the boundaries of that opening
 (8) Q All right Let s go back at this and get back to 1988
 (9) in the 70s there was little or no harvest hatchery
 (10) production of pink salmon in Prince William Sound Is that
 (11) correct?
 (12) A That s correct
 (13) Q And it built up over the 80s to the point where
 (14) in 88/ 89 hatchery fish were about 75 percent of the total
 (15) number of fish coming back to be harvested?
 (16) A In 88 I don t agree with the 89 figures obviously
 (17) because I ve come up with my own estimates of wild stock
 (18) Q But do you believe that your estimate of wild stock would
 (19) have been equally applicable to 88?
 (20) A Oh I do The situation was - well no I - let me back
 (21) up You had survey error differences between even and odd
 (22) years so you can t reasonably apply the magnitude of the
 (23) survey error that was observed in 91 an odd year to an even
 (24) year
 (25) Q Let s talk about that for a second When you say there was

Vol 27 4559

- (1) survey error differences from even to odd years you re
 (2) referring to the two studies that Mr Sharr did at his weir?
 (3) A Mr Sharr investigated this and we have to be careful that
 (4) we re not - and I try - I think I brought this up when I
 (5) discussed it earlier It s not just observer error It s the
 (6) index program which includes two components the observer
 error
 (7) and the stream life factor which was - it s a measurement
 (8) that s used in the calculation of total spawners within that
 (9) stream So there s two components there
 (10) Q Just for sake of calibration do you know off the top of
 (11) your head how big the observer error is and how big the stream
 (12) life adjustment is in your calculation?
 (13) A In the 90 results the observer error was not even near
 (14) the level that it was in 91 The major error in 90 was
 (15) attributed to stream life
 (16) Q I think my question was in the adjustment that you made
 (17) how much of the adjustment you made - you used 1991 figures
 (18) correct?
 (19) A Uh huh
 (20) Q How much of that was attributable to observer error and how
 (21) much was attributable to stream life differences?
 (22) A In my estimations I did not separate that because I did not
 (23) have access to the data at the time and so what I ended up
 (24) doing is addressing that issue by looking at the final results
 (25) comparing the escapement index through the traditional
 program

Vol 27 4560

- (1) to what was actually monitored in the weir And that would
 (2) bring together the two components to that index program error
 (3) Q Okay Now this is Exhibit 288 PX288
 (4) A Yes
 (5) Q This is the document you showed us that explained how
 (6) you - how you went about making these adjustments?
 (7) A That s correct.
 (8) Q And I see you saying that you ve got aerial survey error
 (9) plus in boldface stream life factor Is that - that didn t
 (10) happen?
 (11) A What that is meant to mean is both of those factors
 (12) There s one factor that includes survey error and stream life
 (13) so it s - and I didn t indicate that it was two separate
 (14) adjustments I have multiplied my aerial survey error and
 (15) stream life factor not factors
 (16) Q I guess what I m asking you is are you able to split those
 (17) two out or did you have to -
 (18) A I didn t. I didn t split those two out.
 (19) Q So you don t know how much of your - you adjusted by a
 (20) factor of four is that correct?
 (21) A Yes
 (22) Q And what that means is that in your opinion for every fish
 (23) that the people in the airplanes saw and counted there were
 (24) actually four fish in the water?
 (25) A That s what the Department of Fish & Game data indicated

Vol 27 4561

- (1) when you look at the - comparing the final season count as
 (2) developed by the index program to what actually went into that
 (3) stream as measured through the weir
 (4) Q Well let s - let s try to be precise It s what Mr
 (5) Sharr working for the Department of Fish & Game found when
 he
 (6) looked at the weir in 1991 correct?
 (7) A Mr Sharr yes
 (8) Q Mr Sharr That wasn t done in 1989?
 (9) A It was not done in 89
 (10) Q And there is no ADF&G document which has these numbers
 that
 (11) you re talking about for 1989 correct?
 (12) A I m sorry?
 (13) Q There isn t any ADF&G document which purports to say this
 (14) is an actual count based on 1989 data?
 (15) A The department has gone back and reestimated the
 (16) escapement the total escapement for all prior years
 (17) Q But that s not what you used in this calculation?
 (18) A No I did not
 (19) Q All right I m talking about what you used in this
 (20) calculation and you multiplied the - the numbers that the
 (21) department had by four right?
 (22) A That s correct.
 (23) Q And that - that four time factor is a combination of the
 (24) aerial survey error plus the stream life factor because you
 (25) couldn t split them out?

Vol 27 4562

- (1) A I didn t have access to the data -
 (2) Q Right
 (3) A - to split it out at that point in time
 (4) Q That s the best you could do right?
 (5) A That s correct.
 (6) Q And what you found was that according to what Schure or
 (7) Sharr measured in - sounds like a fish Now I can stay with
 (8) it.
 (9) What he measured in 1991 was that the aerial surveyor in
 (10) 1991 every time he saw a fish Sharr counted four fish in his
 (11) weir?
 (12) A The survey program?
 (13) Q Right
 (14) A It wasn t one individual surveyor
 (15) Q Well he was comparing aerial survey though to -
 (16) A What was actually counted in the stream
 (17) Q What he was counting at his weir right?
 (18) A Yes
 (19) Q Okay Now the other work that you mentioned in one of
 (20) your exhibits here PX302 we talk about the work of Dangel and
 (21) Jones in 1988 They work for ADF&G, too correct?
 (22) A Yes
 (23) Q And they found that observer error in southeast - that s
 (24) down by Juneau?
 (25) A Yes

Vol 27 4563

- (1) Q That the observer error showed consistent average errors
 (2) ranging between 77 percent and 38 percent?
 (3) A That s correct Well that was individual observer error
 (4) Q Individual observer meaning that s one -
 (5) A For that observer
 (6) Q One surveyor could be better than the other?
 (7) A That s correct
 (8) Q And in fact in putting together your estimate you used
 (9) numbers starting in 1987 correct the escapement index
 (10) starting in 1987?
 (11) A Yes
 (12) Q And running through 1991 is that true? Is that correct?
 (13) You have to answer -
 (14) A It depends on what portion of the analysis I guess that
 (15) you re referring to
 (16) Q In looking at the - in looking at the reported aerial
 (17) survey data for Prince William Sound the index stream data
 (18) you used the data set from 1987 to 1991?
 (19) A I used those base years in some of the calculations yes
 (20) Q And the reason you chose 1987 to 1991 was because you
 (21) believed that during that period they had a single predominant
 (22) maybe not exclusive but the principal surveyor was James
 (23) Brady?
 (24) A We had a team of surveyors that conducted surveys and in
 (25) early years it was left to one individual and then in 89 it

Vol 27 4565

- (1) A That s correct
 (2) Q And it s true though if you did what the department did
 (3) and adjusted all the way back that would reduce your estimate
 (4) if you used a consistent factor going back to 82 for example?
 (5) A I think it would reduce it in the run less escapement goal
 (6) approach (ck)
 (7) Q Which is what -
 (8) A And I d have to think about that or - no it wouldn t
 (9) reduce it in the run less (ck) escapement run goal approach
 (10) but it might have had a minor impact on the mean harvest rate
 (11) approach and you obviously know what I m talking about but
 (12) unfortunately the jury doesn t (ck)
 (13) Q You recall testifying at your deposition by excluding the
 (14) 82 to 85 period you increased the estimated lost harvest?
 (15) A I don t recall that specific statement but if you say it I
 (16) don t disbelieve you
 (17) Q You want to look at page 700?
 (18) A I -
 (19) Q I ll represent to you it s there and we can all save some
 (20) time
 (21) A I m sure it probably is
 (22) Q Now in 1990 Mr Brady who had been there since 1987 was
 (23) reassigned and went elsewhere is that correct?
 (24) A He was still involved in that fishery He was elevated in
 (25) his position

Vol 27 4564

- (1) was developed into a team approach mainly because of the
 (2) spill and the responsibilities for that program were shared
 (3) Q Okay But your reason for choosing 1987 to 91 was that
 (4) you believed that that represented the observations of a single
 (5) consistent observer isn t that true?
 (6) A I felt basically that the farther you get away from 1991
 (7) when the research was actually conducted perhaps the weaker
 (8) the relationship exists and I - I don t really have a - you
 (9) know a quantitative basis for that I know that the
 (10) department has gone back and used the 1991 data to correct
 (11) past
 (12) odd years They didn t stop at 87 They went all the way
 (13) back to the data base and they - in the same way they took
 (14) the 1990 -
 (15) Q Did they use -
 (16) A - study results -
 (17) Q And did they use multiplier four?
 (18) A - and went back through the even years in the historical
 (19) data base so they ve taken the studied years and applied them
 (20) back I felt uncomfortable because I didn t have access to
 (21) the raw information the data that Sharr had collected the sew
 (22) /SAO (ck) what variation might have been due to - or between
 (23) observers
 (24) Q So that all boils down to you felt you had a more
 (25) consistent set of observers when you used 1987 to 91 is that
 correct?

Vol 27 4566

- (1) Q He wasn't the person -
 (2) A He went to the regional
 (3) Q He wasn't continuing to fly in the airplane as he had been
 (4) from 87 to 90 and count the fish?
 (5) A That s correct
 (6) Q The closest connection you can get on that is you think he
 (7) had something to do with training his successor?
 (8) A Well it actually goes further than that. There was three
 (9) observers in 1989 and two of those three were still there in
 (10) 90
 (11) Q Right
 (12) A Okay and there was a new one added
 (13) Q Right And in 1991?
 (14) A There was - there was a cadre of four individuals
 (15) surveying in 90 and three of those individuals were there in
 (16) 91 One was replaced with another individual
 (17) Q And that was Brady the one who was replaced?
 (18) A Brady
 (19) Q And Brady had had the primary responsibility in '89 isn t
 (20) that correct?
 (21) A He had the primary responsibility but in reality he was
 (22) so overwhelmed by oil related activities including meetings in
 (23) Valdez that others had to take the dominant role on surveys in
 (24) 89
 (25) Q We ll ask him about that In any case the people who were

Vol 27 4567

- (1) watching the fish in 1990 were not the people who were watching
- (2) the fish in 1989?
- (3) A They were to some degree
- (4) Q To the degree that one of the three was still there?
- (5) A Okay rephrase - let me have that again
- (6) Q People who were watching the fish from the airplanes in
- (7) 1991 were not the same people who watched the fish in 1989?
- (8) A At least two of them were
- (9) Q At least two of them were different?
- (10) A Were the same
- (11) Q In 1991?
- (12) A In 91 yes
- (13) Q There were three people in 89 I think we established that?
- (14) A Yes
- (15) Q And one of them left in 90 and the other one left in 91 doesn't that leave one?
- (16) A I can't recall off the top of my head exactly I'd have to get out my records but I did go through this issue and there was continuity that was maintained between 89 90 and 91
- (17) Q Okay now in - in your assumption because of what Sharr learned in 91 you concluded that the biologists in 89 were only seeing 25 percent of the fish that were swimming up the streams is that correct?
- (18) A That's correct

Vol 27 4568

- (1) Q Now it's true is it not that in the years leading up to
- (2) 1989 the biologists your colleagues were concerned in Prince
- (3) William Sound that the wild stock the resource was declining?
- (4) A That's correct
- (5) Q And it's true that as a result of that they had developed
- (6) a concept of - of conducting terminal fisheries in Prince
- (7) William Sound to protect the wild stock isn't that so?
- (8) A That's correct.
- (9) Q Now could you explain what a terminal fishery is and why
- (10) that would protect the wild stock?
- (11) A Well in an ideal situation what you want to do is have
- (12) your commercial fishery right in front of the mouth of the
- (13) stream so that your harvest is impacting specifically that
- (14) stream and not other streams but the reality of the situation
- (15) is that the product quality is very poor in these terminal
- (16) areas and if you jam that fleet right up against the mouth of
- (17) the stream you're going to end up with colored fish, dark fish
- (18) and off product quality and just isn't desirable
- (19) So from the - from the market standpoint from the fish
- (20) condition standpoint it's more optimal to harvest those fish
- (21) as they enter Prince William Sound Does that answer -
- (22) Q I don't believe it does but I'll take another shot at it.
- (23) A Let's try again
- (24) Q What is a terminal fishery and how does it protect the wild
- (25) stock?

Vol 27 4569

- (1) A Okay a terminal fishery can be just about anything It
- (2) can - a terminal fishery can be classified you know
- (3) depending upon what you mean by terminal as a fishery in
- (4) Prince William Sound as opposed to a fishery off the entrance
- (5) of Prince William Sound See it's a matter of degree
- (6) We call our fisheries in - in the northern district
- (7) terminal fisheries because they're on the inside portion of
- (8) Prince William Sound the northern portion but there's fish
- (9) from other districts that are swimming through there It's not
- (10) exactly a terminal fishery It's a term that's very difficult
- (11) to interpret unless you know specifically what you're - I
- (12) don't know if I'm clear on this but -
- (13) Q Let me ask let me try to lead you a little Isn't it a
- (14) fact that as a part of the management of fishing in Prince
- (15) William Sound that ADF&G assigned certain areas in the
- (16) vicinity of hatcheries where commercial openings were
- (17) allowed?
- (18) A Yes
- (19) Q And isn't it a fact that in 1988 for example ADF&G closed
- (20) other areas in the migration corridors so that the commercial
- (21) fishery would not intercept the wild stock that was trying to
- (22) make its way through those corridors and back up to the
- (23) entrances to streams in other parts of the Prince William
- (24) Sound?
- (25) A During the 88 season they did
- (26) Q Okay

Vol 27 4570

- (1) A But that was done later on in the season initially they
- (2) did have just full district openings in some cases to harvest a
- (3) very abundant chum run that was developing in 1988
- (4) Q But just - all we're talking now is the definition of
- (5) terminal fishery Wasn't it common to refer to the specially
- (6) assigned areas in the vicinity of the hatcheries as a terminal
- (7) fishery?
- (8) A There is a zone that has been identified in front of these
- (9) hatcheries that's called the terminal - special - the
- (10) hatchery terminal harvest area and that is a specific area
- (11) and that is essentially envisioned and meant to be a terminal
- (12) fishery Now the whole district out in front of that isn't
- (13) necessarily a terminal fishery and that's the kind of word
- (14) problem that we're in here
- (15) Q Let's just try to clear it up There is a zone called the
- (16) special terminal fishery area?
- (17) A Yes something like that.
- (18) Q Zone and the concept is that by the time you get that
- (19) close to the hatchery statistically it's more likely than not
- (20) that even though they don't have the He emblazoned on their
- (21) side, that these fish are fish that are trying to make their
- (22) way back to the hatchery is that correct?
- (23) A That's correct.
- (24) Q And there may be a few wild stock in there but on balance
- (25) you're hoping that the wild stock took the off ramp somewhere

Vol 27 4571

- (1) along the way before they got there and headed elsewhere in the
- (2) Sound to their home base is that correct?
- (3) A That s correct
- (4) Q And the idea is that on the one hand the commercial
- (5) fishermen can get the majority of the hatchery stock which is
- (6) not threatened correct?
- (7) A That s correct.
- (8) Q And at the same time the biologists are protecting the
- (9) resource by letting the wild stock escape?
- (10) A That s correct
- (11) Q Now based on these aerial surveys which according to your
- (12) hypothesis we re only counting one quarter of the fish and
- (13) have been doing that for 20 years right? Had been using
- (14) aerial surveys?
- (15) A Oh they have been using aerial surveys this process that
- (16) I explained since the early 60s That s when it was
- (17) initially developed
- (18) Q And at least according to your - the data that you
- (19) developed for this program you assumed that they were
- (20) basically consistent from 87 to 91 right?
- (21) A Yes that s true
- (22) Q And during that period of time they were seeing the wild
- (23) stocks decline even though they were letting three times as
- (24) many fish or four times as many fish get up the streams as they
- (25) thought were letting get up the streams?

Vol 27 4572

- (1) A Well you classified the wild stock as declining if you
- (2) look at the odd year returns as presented in Donaldson - in
- (3) the 1991 or 90 annual management report the stocks had
- (4) bounced around There s no clear pattern that they ve been
- (5) reducing And if you eliminate 89 which I contest so I m
- (6) not of the mind that I totally agree that we ve got a dramatic
- (7) decline if that s the picture that - that you re trying to
- (8) present -
- (9) Q Let me ask you this question When you - before you
- (10) retired before you had scientific studies done in 1990 back
- (11) in 1988 and 1989 when you were trying to manage the State
- (12) wide
- (13) commercial fishery for the benefit of everybody one of the
- (14) problems that your department had was the belief that the wild
- (15) stock was being jeopardized by the hatchery catch is that
- (16) correct?
- (17) A That s correct
- (18) Q And Mr Brady who really had the monkey on his back to try
- (19) to protect that resource was concerned that there weren t
- (20) enough wild fish getting back to keep that resource coming
- (21) back
- (22) year after year?
- (23) A That s correct
- (24) Q And whether - he may have been mistaken about that but
- (25) that s what he believed at the time is that true?
- (26) A That s correct
- (27) Q And that s what you believed at the time?

Vol 27 4573

- (1) A Uh huh
- (2) Q And what I was saying is that the - that process had
- (3) developed using this system of aerial surveys so that whatever
- (4) the actual number of fish that were getting up the stream the
- (5) feeling of the biologist was it wasn t enough?
- (6) A I don t think that is - is accurate I think that what we
- (7) were concerned about was that the wild stock were just not
- (8) enjoying good manne survival and some other things were
- (9) going
- (10) on not the level of escapements We were achieving what the
- (11) program had identified as an optimum escapement just you
- (12) know
- (13) based on the - the escapement goals were derived from ground
- (14) surveys originally
- (15) Q Right.
- (16) A And then the index program was kind of masked - matched
- (17) to
- (18) that and so we felt through those years that we were providing
- (19) an adequate number of spawners so it wasn t a lack of
- (20) spawners
- (21) that - that was causing the problem
- (22) Q Isn t it true Mr Parker that the reason they closed the
- (23) commercial fishery and migration corridors in 1988 was to make
- (24) sure that enough fish got up the stream?
- (25) A Oh absolutely
- (26) Q Isn t it?
- (27) A We were faced with a very weak forecast for 88 and it
- (28) turned out that way and the hatchery returns were weak There
- (29) was good reasons to restrict that fishery

Vol 27 4574

- (1) Q And that was because they didn t think they were getting
- (2) enough spawners?
- (3) A And they didn t They got 900 000
- (4) Q They didn t make it right?
- (5) A Right
- (6) Q And in going into 89 they were concerned Mr Brady was
- (7) concerned to make sure that he herded to the extent you can
- (8) herd fish that he made sure that enough fish got back there to
- (9) meet the goals which your department set to protect the
- (10) resource?
- (11) A In 89 we were looking at a 48 million return in our
- (12) forecast a 41 million harvest In 88 we were looking at a
- (13) 16 and a half million return to Prince William Sound You ve
- (14) got a world of difference here between 88 and 89
- (15) Q I grant you that your - that your forecasts start going
- (16) into the season was bullish but you still - did that make you
- (17) any less concerned that you wanted the fish to get back there
- (18) to spawn?
- (19) A No but what you re - what you re saying is that - you re
- (20) characterizing 1989 as a normal fishery
- (21) Q No sir I haven t characterized -
- (22) A And you re reacting to the run as it was developing and
- (23) making a terminal fishery In 89 that was not the case We
- (24) simply had that area closed the entrance areas closed to
- (25) commercial fishery and we had to rely on the inner areas to

Vol 27 4575

- (1) assess that run along with the escapement object - escapement
- (2) program which is not designed to enumerate every last salmon
- (3) that enters the systems
- (4) Q All I was asking you had nothing to do yet - I m going to
- (5) ask you about the 89 season because right now that s not where
- (6) I m going I m just trying to find out if it isn t true that
- (7) if your 1991 data is correct that the escapement goals that
- (8) you had been using in Prince William Sound over a period of 20
- (9) years were based on the number of fish that result from the
- (10) survey count whatever that number turns out to be isn t that
- (11) true?
- (12) A The escapement objective was originally developed from
- (13) ground surveys of the spawning beds to an assessment to
- (14) understand how many fish could be held within that spawning
- (15) bed
- (16) Q And then for 20 years you used aerial surveys and index
- (17) streams to set a target correct?
- (18) A Yes
- (19) Q And that target was if I can use a term of art
- (20) somewhat - was it about 300 000? What was the escapement
- (21) goal do you remember?
- (22) A It s 1 350 000
- (23) Q 1 350 000 per survey per aerial survey fish correct?
- (24) A Oh no that s - I m sorry that is the total index for
- (25) all of the index streams

Vol 27 4576

- (1) Q Right
- (2) A That s the desired amount of fish
- (3) Q Mr Brady was looking for his surveys to total up to that
- (4) number was he not?
- (5) A That s correct
- (6) Q Okay and -
- (7) A At the end of the season
- (8) Q And in 1989 we learned that that number really wasn t 1 3
- (9) million according to you it was five million right?
- (10) A (Nods head up and down)
- (11) Q But that same undercounting was occurring in 88 87
- (12) right?
- (13) A Yes
- (14) Q And those fish were going -
- (15) A Well no not in 88
- (16) Q Because you think it varied by even and odd year
- (17) A That's what the research indicated and that s what they
- (18) believed
- (19) Q But you do agree that the observers were different in 91
- (20) than they were in 88?
- (21) A Some of them
- (22) Q And you do agree that your own research indicates that
- (23) observer - the difference between individuals can range from
- (24) 38 to 77 percent?
- (25) A In the study that was conducted in Prince William - in

Vol 27 4577

- (1) Southeast Alaska that was the indication
- (2) Q Now at least in odd years that would have been the case
- (3) even by your algorithm?
- (4) A I m not sure what you mean by that statement
- (5) Q That if the 1991 overcounting data is correct then the
- (6) same overcounting was occurring in years prior It wasn t only
- (7) in 1989 that this error allegedly occurred?
- (8) A That s correct That s the belief of the Department of
- (9) Fish & Game when they went back and corrected their historical
- (10) data base on escapements
- (11) Q Now your view as to what would have happened in 1989 if
- (12) there had been no oil spill is that there would have been
- (13) commercial openings down in those corridors correct?
- (14) A Yes
- (15) Q And that when those commercial openings occurred
- (16) somehow
- (17) Mr Brady would have been - received the confidence to - to
- (18) not close to protect the wild runs not pull back as he did in
- (19) 1988?
- (20) A I think it s more probable than not that had Mr Brady been
- (21) given the opportunity to test the strength of that run with a
- (22) commercial fishery that he would have and the department
- (23) would
- (24) have realized that run was stronger and they would have
- (25) harvested the surplus
- (1) Q Now isn t it the case Mr Parker that even in hindsight
- (2) it turns out that the department was quite wrong in its

Vol 27 4578

- (1) forecast?
- (2) A That s correct.
- (3) Q The - even your reconstruction after the fact falls far
- (4) below what the department was forecasting?
- (5) A That s correct.
- (6) Q So this test fishery probably would have shown them
- (7) something about the fact that the run wasn t as strong as they
- (8) thought it was correct?
- (9) A That s correct
- (10) Q And they were according to your reconstruction even more
- (11) wrong in their estimate of the wild escapement?
- (12) A I believe so I believe so
- (13) Q And in using the best tools that they had available to them
- (14) at the time that is the aerial surveys the aerial surveys
- (15) indicated a weak wild stock return in 1989 isn t that true?
- (16) A Indicated where?
- (17) Q Weak wild stock returns in the index streams?
- (18) A They - they ended up with - with between 40 and 60
- (19) percent above their escapement objectives in the southwestern
- (20) Montague and Eshamy districts so they ended up with
- (21) escapements above their objectives in 1989
- (22) Q Doesn t your report indicate that the managers became
- (23) concerned by initial weak run wild run returns?
- (24) A Where they were fishing which was in the eastern and
- (25) southeastern districts which is the early run component up

Vol 27 4579

- (1) towards Valdez the upper corner of Prince William Sound
 (2) Q And in the places where they - in the places where they
 (3) exceeded their escapement goal there was no fishing at all
 (4) correct?
 (5) A That s correct
 (6) Q And so there was absolutely no interception of wild stock
 (7) there?
 (8) A That s correct
 (9) Q So if there had been these test fisheries or this initial
 (10) fishing the only possible effect that that could have had is
 (11) to reduce the number of fish wild fish that could get back to
 (12) the wild streams from which they originated isn t that true?
 (13) A A portion of the mixed stock would have included fish from
 (14) the northern portion of Prince William Sound
 (15) Q The answer is yes?
 (16) A That was my answer
 (17) Q Yes?
 (18) A Well my statement is the mixed stock fishery that would
 (19) have occurred in the southwestern district would have included
 (20) components from the northern and southeastern and eastern
 (21) districts likely Some component I m not sure what the
 (22) proportion is You have to get into the tagging data from
 (23) recent years to really break that down
 (24) Q Mr Parker what I m trying to get at is if you take fish
 (25) and put them into one of these big nets that we saw yesterday

Vol 27 4580

- (1) take a thousand or 2 000 fish and you put them into one of
 (2) those nets by and large they re not going to return either to
 (3) the hatchery or to the wild stream right?
 (4) A Not unless you let them go again
 (5) Q There s nothing about catching fish that will increase the
 (6) number of fish that get back to the streams for spawning
 (7) purposes is that correct?
 (8) A A dead fish is a dead fish
 (9) Q Right So if they had sat on those fish as you said in
 (10) the migrating corridors the only effect that would have is to
 (11) reduce the escapement to wild streams?
 (12) A Potentially
 (13) Q Now if in Mr Brady s judgment the aerial survey data that
 (14) he was seeing in 1989 required him to confine the fishery to
 (15) the special terminal catching areas by the hatcheries it was
 (16) his duty to do that was it not?
 (17) A He was responsible to implement the management plan and
 (18) if
 (19) he saw a situation that he thought the fishery had to be
 (20) totally restricted given a normal situation normal fishery
 (21) without any influence from oil and the resulting management
 (22) actions that were necessary from the MOU and he judged that
 (23) that resource needed protection he would restrict the fishery
 (24) to areas where he felt it would - would harvest the surplus
 (25) and let the escapement the other fish escape the fishery if
 (26) it was - if he could do that

Vol 27 4581

- (1) Q He had that responsibility?
 (2) A Yes
 (3) Q And the technique or strategy that you had used in
 (4) developing your department for doing that was to restrict the
 (5) pink salmon fishery to areas near the hatcheries?
 (6) A Again we get into semantics Restrict the fishery to
 (7) areas near the fish - near the hatchery that can be anything
 (8) from shoving the fishery into a very confined space in the
 (9) terminal harvest area versus using a subdistrict to
 (10) concentrate harvest in areas adjacent to hatchery So you see
 (11) the problem I m having is semantics You know you can take
 (12) that terminal fishery phrase it means different things It s
 (13) not a simple simple phrase to apply
 (14) Q I didn t use that phrase I just asked if it isn t the
 (15) case that your department had evolved the strategy over the
 (16) mid
 (17) 80s of creating these special harvesting areas near the
 (18) hatcheries in order to protect the wild hatchery - stock I
 (19) mean?
 (20) A The wild stock
 (21) Q The pink salmon stock?
 (22) A Right I understand
 (23) Q And that s what Mr Brady had done in the 1988 season
 (24) correct?
 (25) A Yes
 (26) Q After this initial chum fishery correct?

Vol 27 4582

- (1) A Yes
 (2) Q And in 1989 if in his judgment the aerial survey data
 (3) indicated that again the run was weaker than your guidelines
 (4) indicated his responsibility as official of ADF&G was to
 (5) protect the resource?
 (6) A If he - if he felt that that was required he d have to
 (7) take that action
 (8) Q And that basically in the figures that you ve given the
 (9) jury reconstructing what you think the 1989 run would have
 (10) been - correct - you re making the assumption are you not
 (11) that somehow Mr Brady would have been able to foretell in
 (12) 1989
 (13) that his aerial survey data were overcounting - undercounting?
 (14) A No I m not
 (15) Q Are you making the -
 (16) A What I m saying is that if he had been given the
 (17) opportunity to harvest fish in that southwestern corner of the
 (18) Sound there would have been an indication a run much
 (19) stronger
 (20) than what was being indicated in the index program and those
 (21) fish would have been for commercial catch
 (22) Q And the indication - he wouldn t have any way to know from
 (23) that whether the fish pulled up were hatchery fish 90 percent
 (24) hatchery fish 99 percent hatchery fish or the opposite
 (25) correct?
 (26) A If memory serves me correctly I think we had the hatchery
 (27) production tagged and I know we did in 88 and I m trying to

Vol 27 4583

- (1) recall if we did in 89 I think we did
 (2) Q Isn't it your testimony that there's no way to use tagged
 (3) data on an inseason basis?
 (4) A It's difficult. You'd have to do that post season.
 (5) Q He couldn't have done anything with a tag information?
 (6) A No, he'd have to rely on the commercial catch.
 (7) Q All he'd know from the commercial is fish were being
 (8) caught?
 (9) A That's correct.
 (10) Q He wouldn't know whether they were hatchery fish or wild
 (11) fish?
 (12) A They also use the information about where the fish are
 (13) being caught. They have harvest patterns that are repeated
 (14) year after year in certain districts and subdistricts, and they
 (15) kind of get a feeling for whether they're hammering wild stocks
 (16) or hatchery stocks. It's kind of a - you know something
 (17) that's developed after years of managing the same fishery.
 (18) Q But your - go back to the question I started to ask.
 (19) MR LYNCH I'm a little past 10. Your Honor, should I
 (20) finish?
 (21) THE COURT How close are you to finished?
 (22) MR LYNCH Depends on -
 (23) THE WITNESS What my answers are.
 (24) MR LYNCH I think I'm pretty close. Your Honor.
 (25) THE COURT Let's finish it up.

Vol 27 4584

- (1) BY MR LYNCH
 (2) Q Your reconstruction of the harvest adds four fish for the
 (3) one fish of the aerial counting. Is that correct?
 (4) A That's correct.
 (5) Q It's assumed that those fish would have been caught by the
 (6) commercial fisherman rather than escaping?
 (7) A That's my assumption.
 (8) Q Because once the fish gets into the stream to be counted by
 (9) that aerial survey, it can't be caught anymore any way?
 (10) A That's correct (check (ck) that for me I think I need a
 (11) /TPHEG /TEUF not a positive back there).
 (12) Q So your escapement that was seen in the wild stock would
 (13) have been - the biologist would have been willing to accept a
 (14) substantially lower - about a 25 percent escapement per aerial
 (15) survey?
 (16) A Well, I'm not sure that - that they would have seen the
 (17) difference. See that's the problem with this error. You get
 (18) into a situation in season - if you've got a tremendous amount
 (19) of fish in there, it's very difficult to estimate what's there
 (20) and that's the problem with this upstream distribution of
 (21) spawners in odd years. You just can't tell for sure.
 (22) Q Can't tell, and so you have -
 (23) A Cannot tell to the - down to the last fish.
 (24) Q And when in doubt, you protect the resource?
 (25) A Yeah.

Vol 27 4585

- (1) Q And the tools that you do (ck) about were the aerial
 (2) counts?
 (3) A Yeah.
 (4) MR LYNCH No further questions, Your Honor.
 (5) THE COURT We'll take our recess at this point.
 (6) Ladies and gentlemen, We will be in recess for 15 minutes.
 (7) (Jury out at 10:04)
 (8) (Recess from 10:04 to 10:17 a.m.)
 (9) (Jury in at 10:19 a.m.)
 (10) THE COURT Mr. O'Neill?
 (11) REDIRECT EXAMINATION OF KENNETH P. PARKER
 (12) BY MR. O'NEILL.
 (13) Q Why are we placed in a situation in which we have to do a
 (14) forecast?
 (15) A Why are we placed in a situation where we have to -
 (16) preseason - where we have to go back?
 (17) Q No, no, let me - why are we placed today in a situation to
 (18) where we have to go back and reconstruct the run size?
 (19) A Very simply because the fishery was interfered to a very
 (20) major degree and we were not allowed to harvest in our
 (21) dominant
 (22) harvest area in Prince William Sound and as a consequence
 (23) the
 (24) accurate counting of the - of what was entering into the
 (25) Prince William Sound was to a very large degree left to the
 (26) index program, which is never envisioned to accurately
 (27) enumerate every salmon in those streams.

Vol 27 - 4586

- (1) Q What interfered with the conduct of the fishery in 1989
 (2) that requires us to go through this process?
 (3) A It was the oil from the Exxon Valdez that kicked in the MOU
 (4) and required the department to - to summarize close those
 (5) districts.
 (6) Q Now, the MOU reflects attention between overescapement
 (7) and
 (8) the need not to have oiled fish get on the market?
 (9) A Now, the - the MOU could in some situations result in
 (10) escapements exceeding desired levels. That was just a product
 (11) of having to react to the oil and restrict fisheries which
 (12) would normally intercept these runs and whittle them down.
 (13) Q So the -
 (14) A But in some situations that didn't occur, so you get masses
 (15) of fish entering the streams and potentially causing harm.
 (16) Q But we normally don't have an MOU?
 (17) A That's correct.
 (18) Q And why did we have an MOU?
 (19) A Only because of the Exxon Valdez oil spill.
 (20) Q Mr. Lynch asked a question as to whether anybody on your
 (21) staff gave the opinion that this was an opportunity to view at
 (22) low or no cost an experiment with regard to overescapement or
 (23) words to that effect. Do you recall the questions?
 (24) A Yes, I do.
 (25) Q Was that the department's policy?
 (26) A Absolutely not.

Vol 27 4587

- (1) Q With regard to Sam Scharr's research that you relied on to
 (2) make your run size estimates who did Mr. Scharr do that work
 (3) for?
 (4) A He was the research project leader for Bristol Bay and he
 (5) undertook those studies with fund - State of Alaska funds
 (6) He's a State of Alaska Department of Fish & Game research
 (7) biologist so he accomplished it for the State of Alaska
 (8) Q And as a result of Scharr's work the State of Alaska
 (9) Department of Fish & Game has gone back and readjusted their
 (10) historical data using Mr. Scharr's work?
 (11) A They have I have seen a preliminary version They have
 (12) not published that yet
 (13) Q I want to talk a little bit if we could about the
 (14) progress of the fishery in 1989 and I'm going to use as an
 (15) example the Upper Cook Inlet fishery With regard to the Upper
 (16) Cook Inlet management area the people who manage that
 fishery
 (17) were they able to say on July 1 or on the first day of the
 (18) fishery this is what the situation is going to be with regard
 (19) to the fish and the oil and here's what our plan is or is it
 (20) an evolving process?
 (21) A No I think the oil that entered the upper subdistrict of
 (22) the central district of Upper Cook Inlet was never
 (23) anticipated We did not think at the beginning of the season
 (24) that we were going to have a problem in Upper Cook Inlet with
 (25) oil So we kept the fleet on call pretty much down to the last

Vol 27 4588

- (1) minute to because we didn't know that - how long it was
 (2) going to stay or even if it was going to show up
 (3) Q And as the season evolved through June 25th on to the end
 (4) of July that was in point of fact reevaluated on a day-to-day
 (5) basis wasn't it?
 (6) A Yes it was We had test fish vessels commercial fishing
 (7) vessels out in the central district looking at the rips
 (8) testing the rips to see what was happening with the mousse
 (9) patties that were floating into Upper Cook Inlet
 (10) Q You're going to have to tell them what the rips are
 (11) A Yeah in Upper Cook Inlet of course we have tremendous
 (12) tides I think in the Anchorage area the maximum is like 32
 (13) feet It's pretty amazing Anyway there are areas where
 (14) tides tidal currents are moving in opposition to one another
 (15) and debris and floating detritus everything tends to
 (16) accumulate on the two rips where everything is passing one
 (17) another so they form long trails of junk Of course that's
 (18) where the oil tended to accumulate also but it's also the
 (19) preferred place to fish You get off to the side of one of the
 (20) rips and set because that's also where the fish seem to be
 (21) abundant when you're commercial fishing
 (22) Q And in point of fact throughout the summer of 1989 the
 (23) department sent out boats to see if in fact you could fish?
 (24) A That's correct Under the terms of the MOU the department
 (25) was responsible to send out vessels and test the fishery to see

Vol 27 4589

- (1) if there was a potential for opening the fishery
 (2) Q So the department did its best to see if you could have a
 (3) commercial fishery?
 (4) A That's correct
 (5) MR O NEILL I have nothing further Thank you
 (6) sir
 (7) THE COURT Thank you Mr. Parker
 (8) MR O NEILL Plaintiffs call Don Rogers
 (9) MR LYNCH Brian - Your Honor may we come to the
 (10) side bar?
 (11) (At side bar off the record)
 (12) THE COURT I thought that had something to do with
 (13) you and it doesn't
 (14) DR ROGERS It doesn't? Good I'm relieved
 (15) THE CLERK. Would you stand sir and raise your right
 (16) hand?
 (17) (The Witness Is Sworn)
 (18) THE CLERK Please be seated For the record sir
 (19) state your full name your address and spell your last name
 (20) please
 (21) THE WITNESS Donald E Rogers R-o-g-e-r-s and I
 (22) live at 8039 23rd Northwest Seattle Washington
 (23) DIRECT EXAMINATION OF DR DONALD E ROGERS
 (24) BY MR O NEILL
 (25) Q Dr Rogers what do you do for a living?

Vol 27 4590

- (1) A I'm a professor at the University of Washington School of
 (2) Fisheries
 (3) Q What do you teach?
 (4) A I do mostly research but I've taught courses on sampling
 (5) gear fishing gear I'll be teaching a course of Alaska salmon
 (6) management research this coming fall
 (7) Q And how do you spend your year? Where do you live during
 (8) the course of an average year?
 (9) A I spend nine months in Seattle and three months in Alaska
 (10) mostly in Bristol Bay
 (11) Q And for how long have you spent those three months in
 (12) Alaska?
 (13) A 35 years
 (14) Q Are you married?
 (15) A Yes My wife works with me and is also a fisheries
 (16) biologist.
 (17) Q So you guys can like sort of sit around and talk fish?
 (18) A Kind of She's a bad employee I'll tell you
 (19) Q And what degrees do you have and where did you get them?
 (20) A I got a bachelors degree at Cal Poly in San Luis Obispo in
 (21) California and Ph D at University of Washington
 (22) Q What subject matters are your degrees in?
 (23) A Bachelors degree in biology and the masters and Ph D in
 (24) fisheries
 (25) Q Have you ever been qualified to testify as an expert

Vol 27 4591

- (1) witness in a courtroom before?
 (2) A Yes
 (3) Q And on what subject?
 (4) A The same subject
 (5) Q Same fishery?
 (6) A Well this time it's two fisheries Before it was just
 (7) Cook Inlet
 (8) Q Have you done any research with regard to Alaska salmon?
 (9) A Yes
 (10) Q And what research have you done?
 (11) A I've studied salmon and salmon fisheries in every major
 (12) fishery in the State except Prince William Sound
 (13) Q And does that include Cook Inlet and Kodiak?
 (14) A Yes
 (15) Q What is the Point Moller test fishery in Bristol Bay?
 (16) A That's a test fishery to predict the Bristol Bay salmon run
 (17) about one week in advance of its arrival it's going on right
 (18) now
 (19) Q And do you run the test fishery?
 (20) A Yes
 (21) Q For how long have you run the test fishery?
 (22) A Since 1987
 (23) Q And have you done any work with the Alaska Department of
 (24) Fish & Game?
 (25) A Yes on several occasions

Vol 27 4592

- (1) Q What kind of work do you do with the Alaska Department of
 (2) Fish & Game?
 (3) A Well in the past during the 70s I conducted lake
 (4) fertilization studies for the department stock separation
 (5) studies on Yukon and high sea salmon I'm involved at the
 (6) Department of Fish & Game studying a statement of goals and
 (7) management policy in Bristol Bay and False Pass
 (8) Q Do you participate in board of fisheries meetings?
 (9) A Annually since 1986
 (10) Q What do you do in the board meetings when you participate?
 (11) A I testify
 (12) Q On what subjects?
 (13) A It's been False Pass every year since 86
 (14) Q So you're the problem?
 (15) A I guess so
 (16) Q You're not part of the solution Do you do fisheries
 (17) research yourself hands-on fisheries research?
 (18) A Yes
 (19) Q Would you explain the kinds of fisheries research hands-on
 (20) fisheries research that you've been involved in let's - with
 (21) regard to salmon?
 (22) A All phases of salmon I've been involved with studies from
 (23) spawning, fry smolt migrations high seas distribution and
 (24) migrations the whole thing
 (25) Q Have you used standard fishing gear in your career?

Vol 27 4593

- (1) A Yes
 (2) Q And would you tell us in what roles you've used it?
 (3) A Well we - we use beach staining as a sampling tool in
 (4) lakes I've done all sampling for salmon I've done purse
 (5) seining gillnetting beach seining I've not done dipnetting
 (6) but that's not used commercially
 (7) Q Have you done any work on the Nushagak River?
 (8) A Yes
 (9) Q Would you explain to us the work you've done on the
 (10) Nushagak River?
 (11) A Relative to this situation here I made a study of the
 (12) estimation of escapements in the Nushagak River by sonar
 (13) compared to tower counts
 (14) Q And have you done any work on the Susitna River?
 (15) A Yes I examined reports on estimation of sockeye and
 (16) chinook salmon escapements in the Susitna River
 (17) Q Have you done any work for the National Marine Fisheries
 (18) Service?
 (19) A Yes in the past years in the 70s I was involved with
 (20) them in negotiations with the Japanese on high seas fishing
 (21) Presently the only work I do with them is they sponsor
 (22) research that we conduct or I conduct at Chignik Chignik's on
 (23) the Alaska peninsula
 (24) Q Have you done any work concerning the outer continental
 (25) shelf and fisheries and the environmental impact of oil

Vol 27 4594

- (1) development?
 (2) A Yes in the late 70s I had a project that lasted three
 (3) years on extensive sampling around Kodiak Island because
 (4) they
 (5) were - potentially going to drill for oil there so it was a
 (6) part of environmental impact statement and then in 84 and 85
 (7) similar studies on the abundance and distribution of fish on
 (8) the north side of the Alaska peninsula where they also and I
 (9) guess still are considering oil development
 (10) Q With regard to the Point Moller test fishery which you run
 (11) who funds that work?
 (12) A Salmon processors I think it's about nine companies now
 (13) Q Have you done any work estimating stock abundance?
 (14) A Yes every year
 (15) Q And counting fish?
 (16) A Yes
 (17) Q Have you ever done an aerial survey?
 (18) A Yes
 (19) Q Have you ever done a tower count?
 (20) A Yes
 (21) Q Have you ever done a foot survey?
 (22) A Many
 (23) Q Have you ever worked with a weir?
 (24) A I've visited weirs I've never counted at a weir
 (25) MR O NEILL. We would offer Dr Rogers as an expert
 on Alaska salmon fisheries and on stock abundance and on the

Vol 27 4595

- (1) subject of fisheries management
 (2) MR NEAL No questions Your Honor at this time
 (3) THE COURT Court accepts Dr Rogers qualifications
 (4) on those subjects
 (5) MR O NEILL Thank you Judge
 (6) BY MR O NEILL
 (7) Q Would you give us if you could very briefly some
 (8) historical background on the management of Alaska salmon
 (9) fisheries?
 (10) A Yes during federal times during the 20s 30s 40s and
 (11) early 50s salmon runs were managed with the objective of
 (12) taking about half of the fish one for the can one for the
 (13) spawning grounds That was the rule in fact during the 20s
 (14) and 30s and essentially that carried on into the 50s
 (15) although that wasn't what they said they were doing
 (16) Since about the early or mid 60s when we started
 (17) developing data bases on salmon runs catch plus escapement
 (18) since that time to the present most of the important salmon
 (19) runs are managed now on the basis of spawn to return
 (20) relationships we plot the number of fish that return from
 (21) given escapement numbers establish relationship between
 those
 (22) two things look for a place on that what becomes a curve
 (23) where you would get the most fish on the average that
 (24) escapement that you would get the most fish on the average all
 (25) right Maximum sustained yield is what it's called a fancy

Vol 27 4596

- (1) term
 (2) Then that's called an escapement goal and for most of the
 (3) major fisheries in the State since 1960s 1970s the department
 (4) has established these escapement goals and therefore as a
 (5) salmon run comes in they try to judge the abundance of that
 (6) run and they try to harvest all the fish in excess of that
 (7) escapement goal and get that escapement goal up the river to
 (8) produce future runs
 (9) Q And what is the limited entry permit system?
 (10) A Limited entry permit system was the - came to Alaska in
 (11) the early 1970s and the reason was is that it's typical with
 (12) all fisheries if a fishery is doing real well it attracts
 (13) other fishermen So if you start with a fishery and fishermen
 (14) making money they start with a hundred next thing you know
 (15) there's a thousand and everybody's broke Not just true of
 (16) salmon true of other fisheries So money attracts people
 (17) So what the State did in the early 70s very wise move
 (18) they froze the number of boats or number of permits call
 (19) them You had to have a permit So if you had been fishing
 (20) for several years in Bristol Bay or Cook Inlet you were
 (21) eligible to get a permit whatever year it was 72 73
 (22) something like that
 (23) Now today those permits have value because you can't - I
 (24) can't just go out or none of you can just go fish in Cook
 (25) Inlet You have to have a permit Therefore you have to buy

Vol 27 4597

- (1) that permit from somebody who has them It's a fixed number
 of
 (2) boats 500 thousand whatever it is in each fishery That's
 (3) limited entry and it's worked very well
 (4) Q Would you briefly describe for us - I did it in the
 (5) opening very inarticulately but could you tell us briefly what
 (6) the life cycle of the red salmon is and what the life cycle of
 (7) the pink salmon is?
 (8) A I think Ken Parker talked about the pink salmon That's
 (9) simple They - all salmon spawn in the fall start with the
 (10) spawning That's August September some October here in
 (11) central and southwest Alaska All right and they all - the
 (12) eggs incubate during the winter and hatch in late winter
 (13) February March something like that. But the alevin that's
 (14) what we call the fish that hatch out have the yolk sacs on
 (15) them and they stay in the gravel until spring and the timing is
 (16) all - they've worked it out almost perfect so they emerge from
 (17) the gravel after the ice goes out and there's food to eat.
 (18) Something that fools them we have a late spring that's
 (19) bad news They're on a time clock so to speak They come out
 (20) and if the ice is still there they're in trouble Late
 (21) springs are uncommon We had one in 1971, late spring
 (22) By and large, that works pretty fine From that point on
 (23) the life history of the various species - five species of
 (24) salmon differ Pink salmon go right to sea Don't spend much
 (25) time in fresh water Most spawn near saltwater in tributary

Vol 27 4598

- (1) streams That's what they're adapted for They go right to
 (2) sea
 (3) Chum salmon also go right to sea Difference between those
 (4) two pink salmon have a very fast growth rate come back after
 (5) a year and a half at sea or two years after their parents
 (6) Chum salmon spend two three four or even five years at sea
 (7) before they return That's those two
 (8) The sockeye salmon is the salmon most associated with
 (9) lakes although there are sockeye in river systems in the
 (10) sloughs in the river They're the salmon most associated with
 (11) lakes also the salmon that spend the most time in fresh water
 (12) and typically you have - there's a variety of age
 (13) combinations but the prominent four are fish that spend one
 (14) year in fresh water two or three years at sea that gives two
 (15) groups and then two years in fresh water or then two and three
 (16) years at sea So we have those four possible age classes that
 (17) come back Each salmon - how much more -
 (18) Q Go ahead
 (19) A Is that enough?
 (20) Q Well they go out to the ocean They haven't come back
 (21) yet?
 (22) A Oh I see Okay after the one to two years at sea they
 (23) go to sea they go to sea in spring very precise time each
 (24) stock timing of the spring migration For example the Lake
 (25) Illiamna which is the largest sockeye population in the world

Vol 27 4599

- (1) those smolts go to sea in a two week period numbers up to four
 (2) to five sometimes five hundred million two weeks river s just
 (3) black with fish They can boom out The reason for that is to
 (4) overwhelm the predators you see You ve got essentially a
 (5) gauntlet of predators these fish have to go through fish
 (6) birds seals the whole thing and by going out in mass the
 (7) predators can only eat so much in a day and that s why we
 (8) believe salmon migrate that way
 (9) This also applies to adults I ll say that that they tend
 (10) to come back in a very short time
 (11) So the fish go to sea the sockeye go to sea and when they
 (12) go to sea they re about four inches long typically hundred
 (13) millimeters about four inches long Once they go to sea they
 (14) have a - each stock the Bristol Bay stock Cook Inlet stocks
 (15) Kodiak have a particular unique ocean distribution
 (16) The for example Kodiak and Cook Inlet sockeye salmon rear
 (17) in the Gulf of Alaska Very few get out to the ocean area
 (18) Bristol Bay stocks extend from off Yakutat all the way over to
 (19) the - almost the extreme part of the end of the ocean near
 (20) Amchitka because there s so many of them We have runs of 40
 (21) million 50 million sockeye in Bristol Bay They have a very
 (22) broad ocean distribution
 (23) Now what happens the fish make annual - when they re at
 (24) sea they make annual migration in a kind of counterclockwise
 (25) movement and also when they re at sea in the winter they drop

Vol 27 4600

- (1) south off the shelf So you usually don't see many salmon in
 (2) the Bering Sea or on the coast south side around Kodiak
 (3) They re south in warmer water in the winter
 (4) In the spring they start moving north When they move
 (5) north they move north in the definite progression of the older
 (6) and larger first and younger and smaller fish bringing up the
 (7) tail end When the fish has matured after it s spent say two
 (8) years at sea and it s old enough and large enough to mature
 (9) then as it moves south in that spring it continues on and
 (10) comes home in a very unbelievable migration in a way I mean
 (11) you figure a fish can be off Yakutat and make its way back to
 (12) some Bristol Bay river in a matter of a month
 (13) Q In managing a fishery what temporal tools does a fisheries
 (14) manager have available to him or her?
 (15) A Salmon fisheries are managed first by setting out
 (16) geographical boundanes to the fishing what we call fishing
 (17) districts and the objective here is - you heard about
 (18) terminal fisheries Well the objective is to try to have the
 (19) fishery as close to where a group of fish are going, the river
 (20) for example as practical and so in a place like Chignik where
 (21) there s a river and there s a lagoon the fishery can be right
 (22) in the lagoon right off the mouth of the river That s where
 (23) they have the fishery don t have it out in the Gulf of
 (24) Alaska
 (25) In the case of Bristol Bay there s the Kvichak Bay and

Vol 27 4601

- (1) Nushagak Bay and those become fishing districts but multiple
 (2) stocks in those districts They try to - that s the objective
 (3) first the geographic Cook Inlet there s no bay Kenai River
 (4) those empty in there s no bay or anything have a broad
 (5) fishing district there
 (6) After establishing the fishing districts - that s one
 (7) tool and you can move the fleet around from one district to
 (8) another The main thing that s used is openings and closings
 (9) of the fishery Fisher s allowed to fish for 12 hours one day
 (10) and close for two weeks or whatever depending on the size of
 (11) the run Size of the run is an important thing So first you
 (12) have - we make preseason forecasts I make preseason
 (13) forecasts in October for the next year s run and these are
 (14) lousy by and large
 (15) The next thing we have though and important is inseason
 (16) forecast and that s - you mentioned Point Moller We used
 (17) that for Bristol Bay In Cook Inlet, there is a test fishery
 (18) called Anchor Point line and that - the management uses that
 (19) test fishery They go out and fish with the same gear
 (20) hopefully in the same way every year every day prior as the
 (21) fish are coming in and they look at the catch average catch
 (22) essentially They call it catch per unit effort but the
 (23) average catch and that gives the manager a guide does this
 (24) look high low whatever as far as the number of fish coming
 (25) in

Vol 27 - 4602

- (1) The next thing that the manager uses and by far the best
 (2) thing is the first fishing period when you have the whole
 (3) fleet out there what their average catch is and then the
 (4) manager compares that catch for example what will happen
 (5) this
 (6) year look at the first opening look at the catch say they
 (7) caught 200 000 look back he s got a record of past years
 (8) there was a catch in the first period one year was 400 000 we
 (9) had a run of ten million There was a catch of 50 000 we got
 (10) a run of two million So they simply do matching up very
 (11) simple thing but very valuable tool is when the whole fleet
 (12) fishes
 (13) Q Are there any other tools that the -
 (14) A Oh yes Then as we proceed - very early that s what
 (15) they have Then as we go on and the fish have been in the
 (16) fishing district and some start going up the rivers that s
 (17) another thing they start watching They make counts of the
 (18) fish as they re going up the rivers and they compare those
 (19) counts to past years same date so forth That gives them
 (20) some more information but that s as you get a little further
 (21) along in the run
 (22) Q How about the commercial catch through the season does
 (23) that help?
 (24) A That helps right on Further along you are the more you
 (25) know of course
 (26) Q I m going to want you to talk about two specific

Vol 27 4603

- (1) fisheries Mr Parker talked about Prince William Sound
 (2) Let's have you talk about the Upper Cook Inlet fishery And
 (3) I'm going to pull up Plaintiffs Exhibit 304 which is in
 (4) evidence With regard to this exhibit could you just describe
 (5) for us from a fisheries perspective what we see on this map?
 (6) A All right These dashed lines that we see here are the
 (7) division lines between fishing districts within Cook Inlet
 (8) Upper Cook Inlet That test fish that I talked about at Anchor
 (9) Point is right along here just as the fish entered the lower
 (10) fishing district of Upper Cook Inlet
 (11) All right so this means that the manager can say well
 (12) I - the lower district is closed but you can fish over here
 (13) and so forth That's why talking about these districts the
 (14) manager can push the fleet around Now the fleet I'm talking
 (15) about that can move around is the drift gillnet That's the
 (16) fishermen fishing gillnets from a boat and they can move the
 (17) boat around and fish with a boat. Drift gillnet fishermen in
 (18) Upper Cook Inlet can fish only from - from here up to here
 (19) They can - they can fish in here This upper district here is
 (20) only - has setnets and that's the other type of gear used in
 (21) Upper Cook Inlet
 (22) Typically setnets are - they're fixed They can't move
 (23) around They own the site and usually they're right off the
 (24) shore but in Cook Inlet they have some further off than just
 (25) right off the beach

Vol 27 4604

- (1) Q And what are the major river systems in Cook Inlet?
 (2) A Cook Inlet has four major sockeye systems Kaslof Kenai
 (3) Susitna River up here and Crescent River up here Of those
 (4) the Kenai River has by far the largest runs in recent years
 (5) Q How are the fish counted in Upper Cook Inlet?
 (6) A They're counted by sonar counter in each of those four
 (7) river systems in the trunk streams Well in the trunk stream
 (8) in three of them and in the Susitna River the sonar is located
 (9) on a tributary only of the whole river
 (10) Q Now what I'd like you to do using Plaintiffs Exhibit 305
 (11) the same thing for the Kodiak management area
 (12) A All right Again you see these dashed lines separate out
 (13) major fishing districts around Kodiak Kodiak has two types of
 (14) fishing gear purse seines and set gillnets No drift
 (15) gillnets The set gillnet fishery is mainly for sockeye
 (16) mainly located near Alitak Bay in Alitak district and setnets
 (17) located inside Purse seiners in Kodiak fish all around and
 (18) usually on the capes and they catch - their fishery for
 (19) sockeye in the sockeye systems here Alitak Bay Frazer Lake
 (20) Red River right here is a major one and the Kariuk River So
 (21) there's an upper station about four major sockeye systems but
 (22) by far Red River Kariuk and Frazer Lake are the big ones So
 (23) the seiners catch fish sockeye bound for those systems fishing
 (24) outside off the capes I think they're fishing Alitak Bay but
 (25) not up inside

Vol 27 4605

- (1) The other major fishery though big fishery at Kodiak are
 (2) pink salmon fisheries and here I can't put any stream on
 (3) There's almost 400 streams that have pink salmon in Kodiak
 So
 (4) there the fishery term the management is by regions common
 (5) fisheries returning and number of small streams in regions and
 (6) that occurs the larger pink salmon fisheries on the inside
 (7) and smaller ones on the Shelikof Strait
 (8) There's also in recent years I don't know which one is
 (9) Kroi Bay Kroi Bay Afognak Island is a hatchery that
 (10) produces pink salmon and recent years it's had some
 remarkable
 (11) success
 (12) Q We had a description about the different methods of
 (13) counting fish through Mr Parker so we won't go through that
 (14) I do want to ask you though why do you count the fish?
 (15) A Well it's absolutely necessary I said that the basis of
 (16) management is this relationship between number of fish that
 (17) spawn and the number of fish that they produced So we have
 to
 (18) know how many fish spawned if we're going to have a basis for
 (19) management That's from the standpoint of the - of the
 (20) managers or the Alaska Department of Fish & Game
 (21) In the case of a situation where fishermen can't fish as
 (22) what happened with this oil spill then the escapement becomes
 (23) important to estimate how much fish they would have caught
 (24) Q And that's what we're going to do here for Kodiak and Upper
 (25) Cook Inlet?

Vol 27 4606

- (1) A Right
 (2) Q Now I want you to go through if you would the different
 (3) methods of counting fish We don't need to describe them
 (4) again but go through the errors and the reason for the errors
 (5) associated with the different fish counting methods
 (6) A Okay Beginning with what we generally believe are the
 (7) most accurate methods that's the tower or weir and in both of
 (8) these methods you visually count the fish In neither one do
 (9) you count fish constantly including the weir The fish are
 (10) counted for 10 or 15 minutes then the fish go and then you
 (11) count again because if you kept somebody counting all the
 time
 (12) they'd go bonkers So all of them are given a sample counting
 (13) but this has been tested many times and it's very accurate
 (14) After the tower counting and the weirs we have sonar
 (15) counters which are used when you can't see the fish And
 (16) following that are the aerial surveys that Ken Parker talked
 (17) about
 (18) Now the problem - you want to know the problems with
 (19) these each one - I think each of these methods has a problem
 (20) with very large numbers including the tower and the weir If
 (21) you have solid fish moving through it's difficult to count
 (22) them and you tend to undercount but the undercounting as
 (23) we'll get into here is more severe I think with sonar by far
 (24) than it is with any tower or weir
 (25) Aerial surveys as Ken Parker talked about the problems

Vol 27 4607

- (1) there the difference from one observer to the other and the
 (2) fact that usually you are lucky to see half the fish if that
 (3) Q I want to talk about sonar counters because sonar counters
 (4) are used in Upper Cook Inlet Let me see if I can bring that
 (5) map back up Where are the - the sonar counters are on the
 (6) four major river systems?
 (7) A Right Well - here we go Crescent Kaslof Kenai and
 (8) then we have here the Susitna River this large river It has
 (9) a tributary the Yentna and there's a sonar on that
 (10) Q Now I'm going to talk about sonar and the first question
 (11) I'm going to ask you is what is the Nushagak study?
 (12) A The Nushagak River is in Bristol Bay In that river the
 (13) lower part of the river hundred miles or so water is muddy so
 (14) you can't see the fish It has a sockeye run other fish pink
 (15) salmon runs and chinook Main interest is sockeye and pink
 (16) salmon runs Problem is you can't count the fish until about a
 (17) week after they've been in the fishing district before they
 (18) reach clear water over a hundred miles upstream before the
 (19) water is clear
 (20) So there the Department of Fish & Game installed a sonar at
 (21) about 50 miles from the fishing district in muddy water and
 (22) this is originally put in in 1978 after some experimentation
 (23) and was to count the fish and had the advantage that it
 (24) would - it was only about a day from the fishing district and
 (25) gave them more - better information All right?

Vol 27 4608

- (1) Now it turned out that when they installed this the first
 (2) time in 1978 that they continued their tower counting that
 (3) they had been doing for years upriver into clear water So
 (4) this gave us two methods two estimates then one the tower
 (5) estimate which we felt to be accurate plus the sonar count
 (6) Fortunately they repeated this every year through 1988 so
 (7) this is the only test of the sonar as a method of estimating an
 (8) escapement up the river All right? Since we had each of
 (9) those years we had counted the sockeye from the tower
 compared
 (10) with what the sonar was counting and they were independent
 (11) And they did this for each of - for each of those years with
 (12) sockeye Pinks are only run in that river in even numbered
 (13) years so we have fewer number of years with pinks
 (14) Q This is an Exhibit Number 379 Plaintiffs' Exhibit Number
 (15) 379 and I want you to explain Exhibit 379
 (16) A All right You saw a regression before This is the same
 (17) thing The only difference is that the regression here is for
 (18) the curve to this rather than a straight line and that's
 (19) because that appears to be what's happening with these data
 (20) points They don't appear to increase linearly They appear
 (21) to increase curvilinearly
 (22) At the bottom is sonar escapement count. Each point is a
 (23) year Bottom is sonar for each year and up here the tower
 (24) count for the true escapement
 (25) For example in one year we had trying to line something

Vol 27 4609

- (1) up Here we go the sonar escapement was - these are in
 (2) thousands of fish so that's two million That year the true
 (3) escapement was really three million See that? Here's another
 (4) one true escapement was about three and a quarter million
 (5) where the sonar estimated only about between 1200 - I mean
 1 2
 (6) million
 (7) One thing we see here in the river when the escapements are
 (8) in this neighborhood about 500 000 up to a million the sonar's
 (9) fairly good It's undercounting but not by a whole lot The
 (10) serious problem is when the escapements that are very large
 the
 (11) sonar is underestimating the escapement by a considerable
 (12) amount and if there was - if the sonar was accurate these
 (13) points would all fall along this line or plus or minus around
 (14) this line then we'd be able to say the sonar and the tower
 (15) count are doing the same thing
 (16) Q Now the tower count, you see the fish?
 (17) A Right.
 (18) Q And the reason that you use sonar is you use sonar in those
 (19) water bodies where you cannot see the fish?
 (20) A That's right
 (21) Q And the predominant reason in Alaska for not being able to
 (22) see the fish is what?
 (23) A Turbidity of the water
 (24) Q Glacial silt?
 (25) A Right

Vol 27 4810

- (1) Q So for example in that big mud pond Upper Cook Inlet the
 (2) Kenai the Kaslof the Crescent the Susitna you can't use
 (3) tower counts on those rivers because you can't see down
 through
 (4) the water?
 (5) A Can't see the fish right
 (6) Q And would you basically describe for us if you could
 (7) briefly what the sonar set-up looks like? What does the sonar
 (8) do?
 (9) A Well it looks - you hardly see anything It's all
 (10) underwater What sonar does is - used to call it echo
 (11) sounding Essentially it's sending out pulses of sound in the
 (12) water and as a sound wave goes out into the water if it
 (13) encounters something, call it a target. If it encounters a
 (14) fish it sends back an echo We know the speed of sound is
 (15) nearly constant in water so we get the echo's back, say this
 (16) echo is so far away and that's - in the early days it gave
 (17) you a chart it made marks on the chart from the echoes
 (18) Today these are all done by computer So the echo comes
 (19) back the echo's recorded it takes so many echoes to equal a
 (20) fish It's all done on a computer and here's how many fish are
 (21) out there or how many echoes
 (22) Q Each of the dots on Exhibit Number 379 represents one
 (23) year's worth of data?
 (24) A That's right not a day or an hour it's the year total
 (25) It represents a time period probably three weeks

Vol 27 4611

- (1) Q So it does it on a year by year basis and it compares what
 (2) the sonar counter says with regard to what fish are in fact
 (3) observed and that s the result that you get?
 (4) A Correct
 (5) Q Now with regard to this regression over to the left here
 (6) you have a formula which is what?
 (7) A That is the equation for that curve that you saw on the
 (8) graph That s all it is So in this equation that s here the
 (9) X over here you would plug in the number of fish from the -
 (10) number of fish estimated from the sonar counter and this is -
 (11) forget what happens here You plug in that number and the Y
 (12) the number you get is the estimate of what the true escapement
 (13) is It s called an exponential It s done by logarithm but
 (14) that s essentially what you do It s the mathematical equation
 (15) to convert or adjust the sonar count from the true number of
 (16) fish in the escapement
 (17) Q And the formula reflects this curve?
 (18) A Exactly If you didn t have that formula and you just had
 (19) this graph and somebody told me well the sonar escapement
 (20) in
 (21) such and such a year was one million I wouldn t need the
 (22) formula I d come up this line at one million this curve and
 (23) come across here and 1 2 million would be the estimate of the
 (24) total escapement That s the easiest way to do it without
 (25) going through the math
 (26) Q I m all for that Now with regard to the Nushagak study

Vol 27 4612

- (1) and this Nushagak data do you believe that that has any
 (2) application to the Upper Cook Inlet sonar counting system?
 (3) A Yes
 (4) Q Why?
 (5) A Direct application
 (6) Q Why?
 (7) A Because it is the best test it is the only test of the
 (8) sonar as a method of estimating escapement and if I were to
 (9) say well just ignore this and - it would be like a crime
 (10) Q With regard to the Upper Cook Inlet sonar counters are
 (11) there other evidences that support the Nushagak analysis that
 (12) we see in the exhibit?
 (13) A In Upper Cook Inlet?
 (14) Q Yeah
 (15) A Yes there are some other lines of evidence
 (16) Q And would you tell us what those are?
 (17) A For one thing a study was done by the department of Fish &
 (18) Game people in the 1980s where they looked at return per
 (19) spawner ratios in Upper Cook Inlet What this is taking the
 (20) route tables the escapement how many fish spawned how
 (21) much
 (22) fish produced dividing how many fish produced by the
 (23) escapement
 (24) Typically the sockeyes they produce two to three fish for
 (25) every fish in escapement That s typical Two three fish
 (26) return for every fish in escapement When they did the

Vol 27 4613

- (1) studies they got high ratios in Upper Cook Inlet Seemed
 (2) unreasonable One of the reasons they put was they were
 (3) underestimating the escapement That s one thing that caught
 (4) my eye
 (5) Another thing is that typically for sockeye systems on the
 (6) long run you can take about half the fish 40 50 60 percent
 (7) in long term and have good production Look at Upper Cook
 (8) Inlet and using the escapements that the department has the
 (9) average exploitation rate the percentage they took is 70
 (10) percent This seems to me unreasonable on a long term In
 (11) one
 (12) year two years that s reasonable but not on the long haul
 (13) Then finally the third thing was it had to do with aerial
 (14) surveys You heard about aerial surveys and I talked about
 (15) aerial surveys how that you never see all the fish You re
 (16) lucky to see half of them
 (17) in the Kasilof system in Cook Inlet rather unusual
 (18) situation -
 (19) Q Let me bring up the exhibit on -
 (20) A Oh okay before we look at the Kasilof Here s an
 (21) example
 (22) Q Which one do you want?
 (23) A I want the bottom one only
 (24) Q Which one do you want?
 (25) A This bottom graph
 (26) Q I ll - just a second I m going to have to bring that up

Vol 27 4614

- (1) again
 (2) A This isn t the - this isn t the Kasilof
 (3) Q You want the Kasilof or -
 (4) A No I want the one you had up there but we don t need
 (5) to - I want to focus on this one
 (6) Q Okay I ll bring it up for you just a second
 (7) A Okay good All right this is from the -
 (8) Q This is from - Doctor this is from Plaintiffs s Exhibit
 (9) 383 which is in evidence just so the court reporter has it
 (10) Go ahead
 (11) A This is a set of data from the Wood River system clear
 (12) water you can see the fish very well there All right and
 (13) there s a tower So we have pretty accurate counts of the
 (14) escapements each year there Each data point here is a year
 (15) On the bottom part we have the known escapement to the lake
 (16) system
 (17) Up here we ve conducted every year aerial and ground
 (18) surveys of the spawning grounds in that system All right so
 (19) each year we plotted what the aerial and ground survey count
 (20) was against the true escapement This green line if the
 (21) survey was seeing the exactly same number as the
 (22) escapement
 (23) you can see here what s happening I don t have any line
 (24) drawn
 (25) here but it s pretty obvious Oops what did I do?
 (26) Q I don t know but you re in big trouble
 (27) A Oh I got to touch the screen with this thing

Vol 27 4615

- (1) Q There you go
- (2) A All right. You can see here what happens I'll eyeball
- (3) this That's not too bad What happens is is that the
- (4) escapements get larger and larger There's a much greater
- (5) difference from the true - from the aerial survey counts are
- (6) much more underestimating the escapement See what I
- (7) mean?
- (8) Down here if it was 500 000 true escapement you're seeing
- (9) about half of them 250 000
- (10) Look what happens you get to two million - well that's
- (11) off the graph At a million and a half we have here - should
- (12) have opened this up - oh 750 - you're only seeing about half
- (13) of the absolute number The absolute number you're missing is
- (14) very much larger not 250 000 it's whatever - it's 750 000
- (15) Q You want to look at the Kasilof?
- (16) A All right Now this is what one would expect There's
- (17) other sets of data like this that relate aerial survey counts
- (18) and in fact Ken Parker showed some for some individual
- (19) streams
- (20) but these are for a large number of spawning grounds and one
- (21) thing that happened in the survey is the type of large lake
- (22) system is that you don't even see all of the spawners There's
- (23) some that are spawning in places you don't survey or don't see
- (24) and in the example he was showing they were closer because
- (25) he
- (26) was looking at counts in single stream versus the weir count of
- (27) that single stream So here we're looking at lake system big
- (28) surveys

Vol 27 4616

- (1) Now the same sort of situation in the Kasilof River
- (2) system
- (3) Q Now on the Kasilof the Kasilof is one of the Cook Inlet
- (4) river systems?
- (5) A One of the Cook Inlet river systems
- (6) Q They have a sonar counter?
- (7) A They have sonar so on that graph we can see here right
- (8) here enlarge this one
- (9) Q You want the bottom or the top?
- (10) A The bottom The top graphs we're not talking about here
- (11) are just the ratios and it's not necessary to go into that
- (12) Here's the stream situation Before remember this is the
- (13) survey counts ground and aerial survey and some weir counts
- (14) in
- (15) here too survey counts on each year on the Kasilof system and
- (16) down below here though instead of the escapement, count we
- (17) have sonar escapement. Here's a remarkable thing in two
- (18) years they actually saw more fish in the surveys than the
- (19) sonar counted That's virtually - that is impossible
- (20) in two years they saw as many fish as the sonar saw
- (21) Again I say that's impossible and in these other years it's
- (22) remarkable except for this year out here that they saw such a
- (23) high percentage of the fish That leads me again to believe
- (24) that - that's another small piece of evidence that the sonar
- (25) counters are undercounting the escapement
- (26) Q What is the Susitna tagging study?

Vol 27 4617

- (1) A All right in the - as I mentioned before in the Susitna
- (2) River they had a sonar just on a tributary part of the river
- (3) system What the department does is they take that sonar count
- (4) and they double it as an estimate of the total Susitna drainage
- (5) escapement In 1984 and 1985 as part of the Susitna hydro project
- (6) when they were talking about putting hydroelectric in there
- (7) big research project biologists tagged fish at the flag horn
- (8) station near the mouth of the Susitna about 50 miles
- (9) upstream They tagged fish and went to the spawning grounds
- (10) and recovered and from that they made a tag marked
- (11) recapture
- (12) of population estimate Estimated the number of fish in the
- (13) escapement from tagging recapturing marked unmarked fish
- (14) This is a common procedure used for salmon in British
- (15) Columbia
- (16) for example
- (17) When they made those estimates they came up with in those
- (18) two years escapement estimates for sockeye that were four
- (19) times greater than the Yentna or sonar station and I believe
- (20) that those - those estimates better reflect the true
- (21) escapement in the Susitna River and therefore I used the - I
- (22) took the Yentna sonar count and multiplied by four rather than
- (23) two to estimate the total escapement in the Susitna River
- (24) Q So you're using the Nushagak curve for the Kenai and the
- (25) Kasilof and the Crescent and you're using the Susitna tagging
- (26) study data for the Susitna?
- (27) A Exactly

Vol 27 4618

- (1) Q Now we have asked you for Upper Cook Inlet to calculate
- (2) the lost drift catch for 1989 because the drift fishermen did
- (3) not fish in 1989?
- (4) A That's correct
- (5) Q We asked you to do that?
- (6) A Yes
- (7) Q And what did you do to prepare for that?
- (8) A I assembled all the pertinent statistics That was the
- (9) first thing Catches escapements all of the available
- (10) information
- (11) Q How about the ADF&G management reports?
- (12) A Those too That's where most of the information is
- (13) Q And then you did this Nushagak work?
- (14) A No I'd actually done Nushagak work before
- (15) Q And did you have any colleagues work with you on this
- (16) project?
- (17) A Yes I did
- (18) Q Who were they?
- (19) A Mr Jeff June and Dr Greg Ruggerone
- (20) Q Would you tell us from your investigation what happened in
- (21) 1989 with regard to the Upper Cook Inlet drift fleet?
- (22) A The Upper Cook Inlet drift fleet did not fish period
- (23) Q And as a result of that was there any overescapement with
- (24) regard to the Kenai River?
- (25) A Well yes there was

Vol 27 4619

- (1) Q And I am going to put on the Elmo Plaintiffs Exhibit 363
 (2) and what is Plaintiffs Exhibit 363 which is in evidence?
 (3) A It's pretty simple. It just has two bars. One bar height
 (4) of that bar represents the escapement goal and the little green
 (5) bar is the range goes from 400 000 to 700 000. That's the
 (6) management range 400 000 to 700 000. The department would
 like
 (7) to get numbers of fish and in the Kenai system and in 1989
 (8) the sonar count alone was 1.6 million.
 (9) Q What is Exhibit 387 which is Plaintiffs Exhibit 387 which
 (10) is in evidence?
 (11) A This shows in the first column here ADF&G estimates of the
 (12) escapements in 1989 in Upper Cook Inlet by river and in the
 (13) second column had a revised estimate of the estimates I made
 (14) what I believed were the true escapements in those rivers in
 (15) 1989.
 (16) Q Okay let's take them if we can river by river.
 (17) A All right sir. In the Kenai River I'm just going to
 (18) round these off and talk about millions so I don't have the
 (19) numbers here. In the Kenai River ADF&G was about 1.6 million
 (20) and using that relationship you saw took that 1.6 million on
 (21) the bottom came up to that line and came across and that was
 (22) about 2.7 million if I'm reading this right. Yes.
 (23) Now -
 (24) Q What do you do on the Kaslof?
 (25) A In the Kaslof River the escapement was so small, the

Vol 27 4620

- (1) sonar count was 158 000. If you went back and looked at that
 (2) relationship that we had that curvilinear relationship when
 (3) you get down to numbers that small it's kind of unreliable and
 (4) actually we predict a much greater increase than this
 (5) 200 000. So I thought that was kind of unreasonable and so
 (6) what we did is we increased this 158 000 by just the average
 (7) percentage undercount. So it's being very conservative. So
 (8) that increased 158 000 to 209 000.
 (9) And the same procedure was followed in Crescent River with
 (10) only 71 000 just increased that by 24 percent made it
 (11) 94 000.
 (12) And then in the Susitna River what we can see here is the
 (13) Fish and Game's sonar. The Yentna sonar was 96 000. They
 (14) doubled it and came up with 200 000. I took the 96 000 and
 (15) multiplied by 4.07 and got 300 000.
 (16) Q Where did you get the 4.07?
 (17) A That came from the two years when they estimated the actual
 (18) total river escapement.
 (19) Q Then you have on the bottom of this -
 (20) A All right in these two small systems Fish Creek and
 (21) Packers Creek they have weirs there so there's no adjustment
 (22) to the count. The weir is an accurate count of escapement.
 (23) One has 67 000. The other one had - Packers Lake 22 000.
 So
 (24) those are the - then at the bottom there of that have these 2
 (25) million and 3.5 million that's the total then for those

Vol 27 4621

- (1) sockeye systems where there's a count of one type or another
 (2) Now in addition around Cook Inlet in this large area
 (3) there's several small systems maybe a thousand fish 5 000
 (4) fish a few hundred whatever. Fish & Game estimates
 (5) routinely estimates that those additional systems combined
 (6) represent about 15 percent of the total escapement in the
 (7) counted systems. So we have to add on - in this case it was
 (8) 302 000. I used that same figure. I didn't take 15 percent of
 (9) the revised one. I took 15 percent of their figure and added
 (10) that on.
 (11) So then you come down here then although their - their
 (12) recorded escapement was 2.3 million we believe it was 3.8
 (13) million as the true escapement in 1989.
 (14) Q So that's 3.8 million that got upstream?
 (15) A In addition there were five million fish caught by the
 (16) setnet. So the total run was almost nine million. So that's
 (17) the first figure we're after. What was the total number of fish
 (18) entered Cook Inlet in 1989 and there was almost nine million.
 (19) Q What is Exhibit Number 395 which is in evidence
 (20) Plaintiffs 395?
 (21) A All right if you recall I said the total the total run
 (22) was estimated to be about nine million in 1989. Next problem
 (23) was to estimate if there hadn't been an oil spill and it was a
 (24) nine million run what would the fleet have caught of that nine
 (25) million fish?

Vol 27 4622

- (1) All right we did this - we made two estimates of this
 (2) One we assumed that Fish & Game was perfect and therefore
 we
 (3) took and subtracted from this nine million or almost nine
 (4) million what the escapement goals were. Said all right they
 (5) managed the run correctly if there had been no spill and they
 (6) got the escapement goals and the rest would have been caught
 (7) and that gave us the figure here of about 7.3 million total
 (8) projected salmon harvest.
 (9) Then we took a second method said well maybe they're not
 (10) going to be perfect. What's a good estimate of what the
 (11) fishermen would have caught with the available information and
 (12) that was what percentage the fishermen caught in 1988. In
 1988
 (13) there was no problem in Bristol Bay - in Cook Inlet with oil
 (14) it was a normal fishery and it was a large run. So that was a
 (15) good year to see what - estimate what proportion of the run
 (16) the fishermen would catch.
 (17) So we took that number and I think it was like 70 percent
 (18) whatever it was that proportion that gave us an estimate of
 (19) about 6.7 million. These two numbers actually aren't very far
 (20) apart. Roughly they would have caught about seven million
 (21) fish the total fleet. The actual catch was five million so
 (22) the loss here was about two million.
 (23) Most importantly we tried to estimate what the drift fleet
 (24) would have caught had there been a normal fishery. To do this
 (25) we took the seven million fish took the two estimates here

Vol 27 4623

- (1) coming down to the bottom right here the drift fleet on the
 (2) average takes 60 percent of the - 60 percent of the catch in
 (3) Cook Inlet so applied the 60 percent to those two numbers and
 (4) that gave us the number we're after. The total projected drift
 (5) gillnet harvest would have been 4 to 4.4 million in 1989 had
 (6) there not been disruption in the fishery
 (7) Q I wanted to discuss a couple aspects of this one of which
 (8) is admittedly a complicating factor and I'll get to that in a
 (9) minute but historically the drift fleet catches 60 percent of
 (10) the run and the Cook Inlet setnetters catch about 40 percent of
 (11) the run?
 (12) A That's correct
 (13) Q And in 1989 the setnet fleet did in fact fish?
 (14) A Right
 (15) Q And they had a very good year?
 (16) A Bonanza
 (17) Q Because there were no drifters out there to intercept the
 (18) fish before they got to the setnetters?
 (19) A Exactly
 (20) Q But the fact that the setnetters had a good year doesn't
 (21) mean that the drifters were any less hurt does it?
 (22) A No it's immaterial to the driftnetters. They got zero
 (23) Q The driftnetter gets zero so it makes no difference to him
 (24) whether that fish goes to a setnetter or up the stream?
 (25) A None

Vol 27 4624

- (1) Q At this four million dollar drift gillnet harvest number -
 (2) A Four million fish
 (3) Q Four million fish and the average weight of a fish we'll
 (4) get to that in a minute but this four million fish number is
 (5) your view of what the number of fish the drift gillnetters
 (6) would have caught but for the oil spill?
 (7) A Exactly
 (8) Q Now let's translate that using Exhibit 370 which is in
 (9) evidence Plaintiffs Exhibit 370 which is dark get it -
 (10) that's hard to see I think that's the best we're going to
 (11) do. Let me - maybe I'll try it on the - let me try it on the
 (12) Elmo I think that's much better. Is that better?
 (13) THE COURT Yeah that's much better
 (14) MR O NEILL Actually had a back-up system that
 (15) worked
 (16) BY MR O NEILL
 (17) Q Using the Exhibit Number 370 tell us what you do on
 (18) Exhibit 370?
 (19) A I lost my little -
 (20) Q Won't work on this
 (21) A Okay
 (22) Q In fact because it won't work on it maybe with the
 (23) Court's permission if he could come down and point on it. The
 (24) little wand will not work so why don't you just -
 (25) A If everyone can see this I can describe this

Vol 27 4625

- (1) Q Go
 (2) A We just - on the last table we saw the bottom line there
 (3) were those two numbers 4 and 4.4 million. That's the second
 (4) pair of numbers on this under sockeye here. The foregone
 (5) harvest isn't important here. All right so we have the two
 (6) estimates that the drift fishermen didn't catch 4 million fish
 (7) they would have caught. We want to come up with a dollar
 (8) amount so it's very straightforward. All we need is the
 (9) average weight of a fish because fishermen aren't paid by the
 (10) fish they're paid by the pound. That's why we got to get pound
 (11) damage then we got to get what they're paid per pound
 (12) So Alaska Fish & Game reports their average weight of
 (13) sockeye in Cook Inlet in 1989 was 6.6 pounds. We multiply 6.6
 (14) by the two estimates gives us - two estimates gives us the
 (15) harvest in pounds damage about 26.5 million pounds and 28.8
 (16) million pounds and the price per pound. Fish and Game reports
 (17) Cook Inlet 1989 was a dollar seventy at that point. We
 (18) multiply the dollar seventy by pounds we come up 45 million
 (19) dollars for one estimate and 49 million for the other. So
 (20) somewhere 45 to 49 million
 (21) Q What are the differences between the two estimates again?
 (22) You went through this before but just to bring it into context?
 (23) A One assumed Fish & Game had perfect management that
 (24) year
 (25) and the fleet caught everything except escapement goals
 Other
 (25) thing says 1989 would have been the same just like it was in

Vol 27 - 4626

- (1) 88 and the fleet would catch the same proportion of the run
 (2) That's my personal favorite
 (3) Q And what are the columns with regard to chinook coho pink
 (4) and chum?
 (5) A We don't have escapement any escapement counts for the
 (6) other species and you can see the numbers here are minor
 (7) compared to the sockeye in numbers and in value. And so for
 (8) those for those others we used the historical averages to
 (9) estimate what the catch would have been in 1989
 (10) Q And the total losses are \$54,006,774?
 (11) A That's correct.
 (12) Q And is that your best work with regard to what the Upper
 (13) Cook Inlet salmon foregone harvest value would have been but
 (14) for the Exxon Valdez oil spill?
 (15) A That's correct.
 (16) Q I want to move to Kodiak I don't want to move to Kodiak
 (17) I want to move to the subject of Kodiak I may want to move to
 (18) Kodiak
 (19) How did you estimate the 1989 Kodiak foregone harvest but
 (20) for the Exxon Valdez oil spill? Well first of all what did
 (21) you do to get ready to do this?
 (22) A Just as in the case of Cook Inlet assembled all of the
 (23) relevant statistics on past runs catches escapements and
 (24) including 1989
 (25) Q And were there fishery closures in Kodiak?

Vol 27 4627

- (1) A Yes
 (2) Q And what fisheries were closed in Kodiak?
 (3) A Well the only fisheries that occurred in Kodiak that s
 (4) easier was a very limited fishery They caught a lot of fish
 (5) but very limited fishery just off the Kitoi Bay hatchery Some
 (6) fishermen were selected to fish there Wasn t open to
 (7) everybody And a setnet fishery in Alitak Bay The remainder
 (8) of the island was closed
 (9) Q What is Plaintiffs Exhibit 385 which will be on the screen
 (10) in just a second? Let me use the Elmo again Would you
 (11) explain Exhibit 385 to the jury?
 (12) A Yes this is just like the table we just saw for Cook
 (13) Inlet The difference here is that we didn t generate these
 (14) numbers for Kodiak The Alaska Department of Fish & Game
 (15) did a
 (16) report and they estimated this top these numbers at the top
 (17) So we used their numbers There was no need for us to go
 (18) through and do this all - we looked at the report could find
 (19) no serious disagreement with it and so we used their numbers
 (20) They did no report like this in Cook Inlet so we had to
 (21) make our own estimates there
 (22) Q And the Kodiak salmon foregone value as a result of your
 (23) analysis and using the ADF&G numbers comes to \$50 638 499?
 (24) A That s correct You see most of it is in pink salmon and
 (25) sockeye
 (26) Q And as a result of your work is this your best work as to

Vol 27 4628

- (1) what the Kodiak salmon foregone value would have been?
 (2) A It is
 (3) Q With regard to both the Kodiak salmon foregone value and -
 (4) with regard to both the Kodiak salmon foregone value and the
 (5) Upper Cook Inlet salmon foregone value that we ve looked at
 (6) today is it your opinion that those are what the commercial
 (7) harvest would have been to those fishermen but for the Exxon
 (8) Valdez oil spill?
 (9) A Yes it S
 (10) MR O NEILL And I have no further questions
 (11) THE COURT You may cross-examine
 (12) MR NEAL Yes Your Honor just give me a moment here
 (13) to collect a couple of things
 (14) CROSS EXAMINATION OF DR DONALD ROGERS
 (15) BY MR NEAL
 (16) Q Mr Rogers I had - it s Dr Rogers I believe?
 (17) A Yes
 (18) Q Dr Rogers I had the pleasure of meeting you just a few
 (19) moments ago outside You ve been accepted as an expert and
 (20) I m
 (21) not so bear with me
 (22) I want to explore some differences of opinion here and I
 (23) gather you ll agree that even qualified experts do disagree
 (24) sometimes?
 (25) A Certainly
 (26) Q Or a lot of the time maybe?

Vol 27 4629

- (1) A Most of the time
 (2) Q Just like lawyers The - you disagree with the Alaska
 (3) Department of Fish & Game with respect to the run size in the
 (4) Upper Cook Inlet in 1989?
 (5) A That s correct
 (6) Q Could I - and a lot of this is just educating me so will
 (7) you bear with me a minute? I m going to put something up here
 (8) and see if I can get to the heart of the disagreement I ve
 (9) already written something on this board here that -
 (10) MR SANDERS You didn t write that
 (11) MR NEAL I didn t write it I had it written you re
 (12) right They re going to see the difference in just a moment,
 (13) Jimmy
 (14) BY MR NEAL
 (15) Q What we re talking about here is run size on the rivers of
 (16) Upper Cook Inlet, correct from 1989?
 (17) MR O NEILL I object to the handwriting
 (18) THE COURT Looks reasonably good compared to mine
 (19) BY MR NEAL
 (20) Q That s what we re talking about isn t it Doctor?
 (21) A I guess
 (22) Q And your calculations are that - well let me back up and
 (23) say to satisfy myself here when we re simply speaking and
 (24) get it simple enough for me run size - by the way these are
 (25) in - these are in the thousands over here but just for

Vol 27 4630

- (1) lack - just to save space that s 3 768 000
 (2) A I know
 (3) Q I know but I - and that s 5 011 000 rounding off with a
 (4) few fish thrown aside there In order to get - simply to get
 (5) a run size for a year which is what we re talking about and
 (6) what you ultimately get to with your dollar figures you really
 (7) have to estimate based on the tools that Mr O Neill talked
 (8) about estimate the escapement and add to it the catch and you
 (9) come up with what I ve called run size is that a fairly simple
 (10) way to do it but fairly accurate?
 (11) A Yes
 (12) Q Okay You say that the escapement up in the Upper Cook
 (13) Inlet was 3 768 000 and the Alaska Department of Fish & Game
 (14) came up with 2 317 000 correct?
 (15) A Yes
 (16) Q Or about - you differ by about a million and a half fish?
 (17) A Yes
 (18) Q Now you were here when Mr Parker testified that based on
 (19) his studies the ADF&G was in the process or had changed their
 (20) count in Prince William Sound for 1989? Did you hear that?
 (21) A I probably heard it but it - I mean are you asking me
 (22) now about Prince William Sound? Because I don t -
 (23) Q Did you hear Mr Parker say that?
 (24) A I heard Mr Parker testifying but don t ask me what - what
 (25) he said

Vol 27 4631

- (1) Q In any event - in any event the ADF&G notwithstanding
 (2) your difference of opinion has not changed its count for 1989?
 (3) A In recent years is that what you're getting at?
 (4) Q Pardon me?
 (5) A You're getting - in recent years they haven't changed the
 (6) count
 (7) Q They haven't gone back and said oh no -
 (8) A That's right.
 (9) Q - Dr Rogers is correct I'm going to go back and change
 (10) this?
 (11) A No they haven't
 (12) Q They still stick with this that this is their opinion?
 (13) A As far as I know
 (14) Q A major way you get this I hate to use this word I
 (15) recently learned it but a major way you get this is based on
 (16) your study of what you say is the difference between the sonar
 (17) count of sockeye salmon count on the Nushagak River as
 (18) contrasted with the tower count on that river?
 (19) A Correct
 (20) Q Using this word you transpose or extrapolate from that
 (21) because it is your opinion that you can use that difference in
 (22) count or your formula of difference in count and say okay
 (23) based on the difference in count between the sonar and tower
 (24) on
 (24) the Nushagak River I'm going to apply that and say that would
 (25) apply and that kind of - that kind of difference would be

Vol 27 4632

- (1) applicable to the Upper Cook Inlet rivers correct?
 (2) A Correct
 (3) Q All right Now without getting - without taking all the
 (4) time to go through all of the different species chum all of
 (5) that, and go through the different rivers, I think maybe I can
 (6) explore the differences of opinion here between you and
 ADF&G
 (7) by simply taking the Kenai River?
 (8) A Okay
 (9) Q Because most of that - matter of fact, as I read your
 (10) report or deposition of that 1 451 000 difference between -
 (11) in run size between you and the Department of Fish & Game
 (12) approximately 1 1 million of that was your difference of
 (13) opinion as to the Kenai?
 (14) A Correct.
 (15) Q Now, let me take up some - so I don't have to bother this
 (16) again - I've read - may I approach Your Honor with the
 (17) deposition? That's your depositions in case you have to
 (18) refer I know, but you probably won't have to fool with that
 (19) very much
 (20) I've read your deposition Dr Rogers and talking about
 (21) your differences of opinion now okay this - what you're
 (22) doing here and what ADF&G was doing here you're using
 (23) different ideas was really estimating Nobody knows the exact
 (24) run size for 1989 do they?
 (25) A Exact to what kind of exact? Ballpark we know it I

Vol 27 4633

- (1) would say the run was about nine million and they estimated
 (2) about seven so it's somewhere in that neighborhood of seven
 to
 (3) nine or maybe -
 (4) Q But nobody has an exact number of this?
 (5) A No nobody knows the exact number of fish anywhere
 (6) Q All of you are estimating?
 (7) A That's right
 (8) Q Is that a fair statement?
 (9) A (Nods head up and down)
 (10) Q And you've already told me that reasonable people can have
 (11) difference of opinion even experts?
 (12) A That's correct
 (13) Q Have you ever done any work with the ADF&G in what's
 (14) referred to and you referred to as the Upper Cook Inlet
 (15) management area?
 (16) A Have I worked with them in management in the area? No
 (17) Q Okay is it a fair statement Dr Rogers that the ADF&G
 (18) people who work in the Upper Cook Inlet know more about
 sockeye
 (19) salmon than you do?
 (20) A What was that? They know more about sockeye salmon than
 I
 (21) do?
 (22) Q Yes
 (23) A No
 (24) Q They don't?
 (25) A No no way Now if you mean do they know more about the

Vol 27 4634

- (1) sockeye salmon stocks in Upper Cook Inlet?
 (2) Q That's what I meant
 (3) A You didn't say that You said know more about sockeye
 (4) salmon
 (5) Q Doctor I can see now why they gave me you to
 (6) cross-examine Okay? If I misstate it I don't think I'll
 (7) have to tell you this I know you'll tell me Okay?
 (8) What my question I think should have been do they know
 (9) more about the sockeye salmon in the Upper Cook Inlet
 (10) management area than you do?
 (11) A There's probably a couple of individuals that do yes
 (12) Q Now your work principally had been done on the Nushagak
 -
 (13) Nushagak River?
 (14) A No Bristol Bay
 (15) Q Bristol Bay?
 (16) A Whole Bristol Bay yeah
 (17) Q There are in these different rivers now - as I say you're
 (18) taking your study from the Nushagak -
 (19) A Could I correct something here? I did an analysis of the
 (20) Nushagak data that was collected by the Alaska Department of
 (21) Fish & Game They choose to ignore this and call this their
 (22) sonar escapements true escapement in the Nushagak All
 (23) right? But I analyzed their data I didn't go out and make
 (24) the tower counts on Nushagak River
 (25) Q They haven't tried to extrapolate that from the Nushagak to

Vol 27 4635

- (1) the Kenai have they?
- (2) A No They haven't used it anywhere They just ignore it
- (3) Q Have you ever - there are sites by the way on these
- (4) various rivers the Nushagak - I'm always afraid I'm going to
- (5) continue to mispronounce that the Nushagak River and the Kenai
- (6) River correct counting sites for sonar?
- (7) A Oh for sonar
- (8) Q And in the Nushagak there will be counting sites for sonar
- (9) and for the tower?
- (10) A They don't have a tower on the Kenai
- (11) Q For Nushagak?
- (12) A Right
- (13) Q Have you ever been to the counting sites for the sonar on
- (14) the Kenai River?
- (15) A Only looked at it from the air
- (16) Q Only from the air?
- (17) A Right
- (18) Q Those are - the rivers are different aren't they Dr
- (19) Rogers?
- (20) A They're different in size yes
- (21) Q Do you know the width of the Nushagak River?
- (22) A It's like three feet - I think it's about 900 feet
- (23) something like that It's pretty wide
- (24) Q Do you know the depth of that river?
- (25) A Approximately where the sonar is I think it's around 10

Vol 27 4636

- (1) feet
- (2) Q What about the current or velocity of the Nushagak River?
- (3) A You got me there
- (4) Q Okay Do you know anything about the comparison of the
- (5) velocity of the waters of the Nushagak as compared to the Kenai
- (6) at the sonar sites?
- (7) A No I haven't made a study of that
- (8) Q Could this comparative velocity of the water and the width
- (9) of the rivers the various rivers the two rivers we're talking
- (10) about could that affect fish behavior in these two locations?
- (11) A Yes it could
- (12) Q Do you have any knowledge how that fish behavior would be
- (13) affected?
- (14) A I don't know what the behavior is
- (15) Q All right But it could be affected by things I've just
- (16) mentioned?
- (17) A Yes
- (18) Q Have you ever investigated that when you're extrapolating
- (19) these figures from the Nushagak to the Kenai River?
- (20) A No
- (21) Q Do you have an opinion Dr Rogers whether the Kenai River
- (22) site is more suitable for counting sockeye than the Nushagak
- (23) River site at Portage Creek?
- (24) A That it's more suitable
- (25) Q More suitable Do you have an opinion as to one is more

Vol 27 4637

- (1) suitable than the other?
- (2) A I would say they are similar because sockeye migrate along
- (3) the banks so it's irrelevant how wide the river is
- (4) Q Let's talk about that for a minute
- (5) A Okay
- (6) Q The sockeye salmon basically are bank-oriented fish?
- (7) A Sockeye and pink salmon yes
- (8) Q I'm going to limit myself to sockeye for a minute So
- (9) they'll go up the banks but quite clearly if the river's
- (10) wide some of them will go up the middle or away from the
- (11) banks will they not?
- (12) A It would be unusual
- (13) Q Unusual?
- (14) A Uh-huh
- (15) Q Would that have anything to do with the water velocity or
- (16) the current of the river?
- (17) A Yes That's why they migrate along the bank because that's
- (18) the place of least resistance when they're moving against the
- (19) current
- (20) Q Let's see if you had a wide river with less water
- (21) velocity you might get more salmon sockeye salmon going up
- (22) away from the bank than you would if you had a narrower
- (23) swifter
- (24) river isn't that true?
- (25) A It's true that you might I wouldn't expect it but you might

Vol 27 4638

- (1) MR NEAL Let's look at these two rivers that you're
- (2) using in your testimony here today And I offer in evidence
- (3) Defense Exhibit 5665
- (4) MR O NEILL No objection
- (5) THE COURT Defendants exhibit 56 - is it 65?
- (6) MR NEAL 5665 Your Honor
- (7) THE COURT Defendants 5665 is admitted
- (8) MR NEAL Sorry Your Honor that's Defendants
- (9) Exhibit 5665-Able
- (10) (Exhibit 5665-A offered)
- (11) THE COURT Any problem with the A version?
- (12) MR O NEILL No sir or the B version
- (13) THE COURT We're going to admit 5665-A
- (14) (Exhibit 5665-A received)
- (15) BY MR NEAL
- (16) Q Do you recognize that Dr Rogers as being the comparative
- (17) width and depths of those two rivers the top one being the
- (18) Nushagak and the bottom one being the Kenai?
- (19) A I see this this is the first time I've seen this but I
- (20) have no idea I'll accept these are correct figures
- (21) Q Now I want to run this on out up here if I may You've
- (22) got your numbers here going down to the dollars I think in
- (23) this manner Check me if I'm right This is the run size
- (24) correct?
- (25) A That's correct

Vol 27 4639

- (1) Q All right and you said - moving on down you said there
 (2) is something called the exploitation rate?
 (3) A The proportion that was caught
 (4) Q You say it's your opinion that in - this would be the run
 (5) size based on your extrapolation from the Nushagak to the -
 (6) to the Upper Cook Inlet rivers right? This would be the run
 (7) size?
 (8) A Yes but that's only part of it I won't say the whole
 (9) thing is based on the extrapolation You're not talking about
 (10) Kenai you're talking about the whole Upper Cook Inlet
 (11) Q I'm basically dealing with Kenai but the other two or
 (12) three rivers too but to move beyond that, you said the
 (13) fishermen had they been allowed to fish all of them both the
 (14) driftnet and the setnetters they would have captured 76.3
 (15) percent of that run size?
 (16) A If - I don't remember the number that exactly but it was
 (17) 70-something percent right
 (18) Q That leaves you then I think you'll recognize this
 (19) (indicating), am I correct?
 (20) A Yes sir
 (21) Q Now of course if the ADF&G's figure up here is right your
 (22) dollar figure is substantially off?
 (23) A Of course
 (24) Q And if this exploitation rate which is a - which is based
 (25) on what?

Vol 27 4640

- (1) A That was the exploitation rate in 1988 which is the year
 (2) most similar in characteristics to the 1989 run
 (3) Q Okay but if that - if that - and I'll just put it out
 (4) here If that were 70 percent that would affect - that would
 (5) reduce the dollars would it not?
 (6) A Of course and if it were 90 percent it would increase it
 (7) Q Increase it I understand I'm not arguing with you Dr
 (8) Rogers but you did testify this morning that the average
 (9) exploitation range that is the percentage of the - percentage
 (10) of the run size that the fishermen would catch the average was
 (11) 70 percent do you remember that?
 (12) A Yes
 (13) Q Over a period of years?
 (14) A Yes
 (15) Q So back again then - and don't get mad at me now
 (16) Doctor I'm not arguing with you I'm just trying to say that
 (17) there may be - people can differ That's the reason I started
 (18) this Not that you're doing anything but telling your honest
 (19) opinion I've read your deposition Your deposition says kind
 (20) of this is my opinion take it or leave it. So I'm just going
 (21) to say that there's some other areas
 (22) If this is 70 percent exploitation rate then your dollar
 (23) amount would be lower correct?
 (24) A Correct
 (25) Q All right Now then to go on from that you say that of

Vol 27 4641

- (1) this amount number of fish caught had they been allowed to
 (2) fish the driftnetters would have caught 60 percent of that
 (3) correct?
 (4) A Correct
 (5) Q And that gets you to your figure - actually it gets you
 (6) to your preferred figure according to your deposition of this
 (7) (indicating) rather than the alternative larger number you
 (8) said isn't that correct Dr Rogers?
 (9) A That's correct
 (10) Q All right And then you take a pound at 66 Now by the
 (11) way while I'm on that 40 percent of this figure is a whole
 (12) lot less than what the setnetters got in 89 wasn't it?
 (13) A Yes it was
 (14) Q They got a windfall?
 (15) A That's correct
 (16) Q They got - matter of fact this was all setnetters right
 (17) here?
 (18) A That's correct
 (19) Q Had that been 40 percent it would be something like 25 -
 (20) half of that wouldn't it?
 (21) A Yes
 (22) Q And you take the pounds per fish then and you come up
 (23) with 26 525 000 pounds
 (24) A Yes
 (25) Q And then you took a dollar and seventy cents a pound and

Vol 27 4642

- (1) you come up with 45 093 180 for the sockeye Now there's
 some
 (2) others that you've got in the exhibit in evidence but for
 (3) comparison purposes that's what you come up with as the - as
 (4) the loss if we give you - if you assume all these figures
 (5) correct that's what you come up with as a loss of the
 (6) driftnetters for 1989?
 (7) A Correct
 (8) Q Now then over here if you take on the other hand if you
 (9) take the same things you come up and do it the same way of
 (10) 76.3 and I'll run through this quickly the ADF&G says -
 (11) A ADF&G never did this You're doing it for the first time
 (12) incidentally
 (13) Q I'm doing it for the first time I could have stopped
 (14) right here as far as the ADF&G's concerned couldn't I?
 (15) A That's right
 (16) Q But in order to see where the differences are I'm going to
 (17) say that I'm taking your figures for the rest of the way out
 (18) just to show the difference
 (19) A Okay
 (20) Q And then 66 comes up if I've done this right or
 (21) somebody's done it right for me Mr Sanders -
 (22) MR SANDERS It's not the first time you've done it
 (23) either
 (24) MR NEAL You know you take a kid out of the
 (25) country

Vol 27 4643

- (1) BY MR NEAL
 (2) Q And we come up then with 37 640 383 These are amounts
 (3) that I can assure you that boggle my mind but that's where
 (4) they are That's a fair - that's a fair difference between
 (5) you and the ADF&G if you accept these figures that you've put
 (6) in rather than what they put in correct?
 (7) A It's the difference between my calculation and yours
 (8) Q Well this is not my calculation up here up here
 (9) A No that's just the run size right
 (10) Q Down here I am merely using what you used over there fair
 (11) enough?
 (12) A Okay
 (13) Q And that -
 (14) A That's using what I used with ADF&G's run size
 (15) Q Pardon me?
 (16) A That's what you've done You've taken the percentages and
 (17) the poundages and the dollars that I used and you started with
 (18) ADF&G size right.
 (19) Q I believe you and I both want to say it our own way
 (20) because that's exactly what I thought I said I take the ADF&G
 (21) run size and I applied your figures over here fair enough?
 (22) A Fair
 (23) Q I want to go back a minute - I'll take this down for the
 (24) moment This Defendants Exhibit 9307 which I offer in
 (25) evidence it's kind of a mobile - it's your Exhibit Number

Vol 27 4644

- (1) 379 I'll put that on here As I understood it in order to
 (2) come up with your opinion as to the run size or overescapement
 (3) on the Kenai and the other rivers you looked at the Nushagak
 (4) where it has a - both a sonar method of counting fish and a
 (5) tower method of counting fish correct?
 (6) A That's correct
 (7) Q And by the way you may have said this this morning but
 (8) you can't on the Kenai River you can't have both can you?
 (9) A No
 (10) Q And you said in substance okay if there's this - if
 (11) there is an overescapement - if the tower count on the
 (12) Nushagak is higher than the sonar count on the Nushagak I
 (13) believe it would be the same way on the Kenai that's your
 (14) position correct?
 (15) A Correct
 (16) Q All right and I believe you also said that the difference
 (17) would be greater between tower and sonar as the run size got
 (18) larger?
 (19) A As the escapement got larger
 (20) Q As the escapement got larger right which is part of the
 (21) run size?
 (22) A That's correct
 (23) Q And you came up then with your Exhibit Number 379 your
 (24) curvilinear graph?
 (25) A Yes

Vol 27 4645

- (1) Q Now to do that you took the counts in certain years
 (2) correct?
 (3) A All the available data
 (4) Q All the available data to prepare your chart Now I
 (5) believe you've testified that this is - by the way you
 (6) counted both sockeye and pink -
 (7) A No I didn't count The Department of Fish & Game counted
 (8) both sockeye and pinks
 (9) Q The Department of Fish & Game counted both sockeye and
 (10) pink correct?
 (11) A That's correct
 (12) Q Now this is a sockeye count in 1980 you familiar with
 (13) that?
 (14) A Yes
 (15) Q And you've agreed in your deposition I believe that that
 (16) was an aberration, that you were suspicious of that count?
 (17) A I don't think I said in my deposition I was suspicious of
 (18) the count I said they started in 1979 and I said it was - it
 (19) was reasonable that if you - to throw out 79 and 80 and
 (20) that's the 1980 count because it does seem to be higher than
 (21) the other points
 (22) Q I believe you used the word I'm suspicious of that?
 (23) A I could have
 (24) Q You're right but you said they did only start in 1979 and
 (25) I'm suspicious of both 79 and 80?

Vol 27 4646

- (1) A Okay
 (2) Q If you - if you bear with me a minute because I want to
 (3) make a point I'm going to take that off then I'm suspicious
 (4) of it too
 (5) Now have you made a - this is a pink right? This is a
 (6) pink count?
 (7) A You've made it pink so I guess it is
 (8) Q Well no I've done that because I understand that -
 (9) A I don't remember what each of those dots are But I would
 (10) say it's probably a pink salmon count that's right
 (11) Q It is a pink salmon count as a matter of fact, in the same
 (12) year as the sockeye I just removed 1980 Did you make a
 (13) mistake? Should that be over here somewhere?
 (14) A No I don't think so
 (15) Q But it is pink not sockeye correct?
 (16) A Yeah
 (17) Q I'm going to take that off
 (18) A Okay
 (19) Q I'm going to see if I can make a point Dr Rogers whether
 (20) you agree with it or not
 (21) A Oh all right
 (22) Q And this is a pink correct?
 (23) A That's correct
 (24) Q Because we're dealing with sockeye on the upper - the
 (25) major problem I said here the difference was sockeye?

Vol 27 4647

- (1) A I see what you re getting at yeah
 (2) Q All right so I m going to remove that pink Now this is
 (3) a pink also isn t it?
 (4) A Yes
 (5) Q And I m going to remove that Now when you remove that
 (6) what you have is a good grouping along here of a linear
 (7) progression right?
 (8) A All statisticians would roll over in their grave for what
 (9) you ve just done to state a point
 (10) Q I m not responsible for any statisticians
 (11) A But that s correct right if you remove all that you get
 (12) an entirely different picture
 (13) Q And if you do this and you leave only the - only the
 (14) sockeye salmon which I came up here and told you I was going
 (15) to talk about right?
 (16) A Right
 (17) Q If you remove all those - by the way are you a
 (18) statistician?
 (19) A I know enough to use statistics
 (20) Q I thought you had some particular empathy for the
 (21) sockeye - for the statisticians If you remove all those
 (22) however what you really have and leave only the sockeye
 (23) count
 (24) on your exhibit what you have here is a close correlation
 (25) between the sonar count and the tower count correct?
 (26) A Well you had a close correlation before before you

Vol 27 4648

- (1) removed all those points In fact I don t think it s any
 (2) closer now As far as the correlation goes that s just how
 (3) close the points are to the line
 (4) Q Well they do follow that - the linear progression rather
 (5) than your curvilinear don t they?
 (6) A Exactly Now it would be a linear relationship, that s
 (7) right
 (8) Q Now one other - one other thing I m going to ask you
 (9) about a and that is your estimate you made of the Kodiak
 (10) salmon Actually I don t think you made that You used -
 (11) you used ADF&G figures correct?
 (12) A Correct
 (13) THE COURT Mr Neal time out time out. You re
 (14) going to another subject and let s sort of stay on schedule
 (15) MR NEAL Yes sir and that s fine That s great
 (16) THE COURT We ll take our second break
 (17) MR NEAL. I ain t going to stay on the subject very
 (18) long Your Honor
 (19) THE COURT We ll take our second break for 15
 (20) minutes
 (21) (Jury out at 12 03 p m)
 (22) (Recess from 12 03 p m to 12 18 p m)
 (23) (Jury in at 12 18 p m)
 (24) THE COURT Mr Neal?
 (25) MR NEAL. May I proceed Your Honor?

Vol 27 4649

- (1) THE COURT You may
 (2) MR NEAL I want to offer at this time my handiwork
 (3) over here The number I ve given it and we ll put a sticker
 (4) on it is Deference Exhibit 5801 Alpha
 (5) THE COURT 5801 -
 (6) MR NEAL Able
 (7) THE COURT Why is the A there?
 (8) MR NEAL Why is the A there?
 (9) THE COURT Uh huh
 (10) MR NEAL. Because that s what somebody told me was
 (11) the next defendants exhibit number
 (12) THE COURT Don t ask silly questions I guess
 (13) (Exhibit 5810-A offered)
 (14) THE COURT Is there objection to Exhibit 5801 A
 (15) MR O NEILL. None
 (16) THE COURT All right 5801 is admitted
 (17) (Exhibit 5801 A received)
 (18) MR NEAL. And I think I offered 5665-Alpha and it has
 (19) been admitted
 (20) THE COURT It has
 (21) BY MR NEAL
 (22) Q I have one question Dr Rogers In your Kodiak - in the
 (23) chart that you presented with respect to the Kodiak lost
 (24) harvest for 89 - you with me?
 (25) A Yes

Vol 27 4650

- (1) Q I don t know unless you say something Doctor
 (2) A Oh okay
 (3) Q I think that assumes a perfect management?
 (4) A That s right
 (5) Q If the management was not in fact perfect that number
 (6) for loss would be less would it not?
 (7) A Yes
 (8) MR NEAL. Doctor, was a pleasure Thank you sir
 (9) THE COURT Before you sit down sir was your
 (10) Defendants Exhibit 9307 -
 (11) MR NEAL. That was really a take-off from their -
 (12) from their exhibit and I m not offering it.
 (13) THE COURT Okay thank you
 (14) REDIRECT EXAMINATION OF DR DONALD ROGERS
 (15) BY MR O NEILL.
 (16) Q I want to talk about this version Defendants Exhibit 9307
 (17) for identification for a moment. Now with regard to this
 (18) relationship you tested this relationship for Upper Cook Inlet
 (19) against other data, didn t you? Exploration rates -
 (20) A Oh okay I see what you mean now Yes I mean it
 (21) wasn t - the situation up at Cook Inlet with regard to
 (22) undercounting the escapement didn t just depend on this
 (23) relationship As I said, if this was the only thing we had I
 (24) wouldn t be so certain that we have a problem of
 (25) underescapement but there were these other things I talked

Vol 27 4651

- (1) about high exploitation rate high return of spawners
- (2) unreasonable aerial survey estimates if sonar was correct -
- (3) there were other things besides this
- (4) Q And the sum and substance of those leads you to what
- (5) conclusion?
- (6) A That the escapements for total of Upper Cook Inlet are
- (7) underestimated
- (8) Q This provides a fair guideline for estimating?
- (9) A Right
- (10) Q And the point was made about the pinks?
- (11) A Yes
- (12) Q And you said that a statistician would roll over in his
- (13) grave Why do you think it is fair to use the data points that
- (14) were used?
- (15) A Because the pink salmon actually are almost better data
- (16) points than the sockeye I don't want to go into it but pink
- (17) salmon migrate up the river after the sockeye and when they
- (18) migrate up the river that is practically the only species in
- (19) the river They migrate up the banks just as the sockeye do
- (20) They tend to be large numbers That was convenient We
- (21) needed
- (22) some observations of large numbers
- (23) Q With regard to the observations you didn't throw out any
- (24) data at all did you?
- (25) A No
- (26) Q Now with regard to the Nushagak and the Kenai and the

Vol 27 4652

- (1) attempted - the comparison between the Nushagak and the
- (2) Kenai
- (3) you used the phrase that the salmon were bank seeking?
- (4) A Bank-oriented They migrate along the bank because that is
- (5) the lowest velocity of water and they're going upstream
- (6) Q What relevance does that have to comparing the Nushagak
- (7) and
- (8) the Kenai with regard to sonar counters?
- (9) A If they migrate up the bank it doesn't make any difference
- (10) how wide the river is
- (11) Q With regard to the bank orientation of the salmon that is
- (12) a very well established fact with regard to fish?
- (13) A Pinks and sockeye right
- (14) MR O NEILL I have nothing further Thank you
- (15) Doctor
- (16) THE COURT Thank you Doctor
- (17) THE WITNESS Thank you good to see you
- (18) THE COURT Yes indeed Call your next witness
- (19) MR SARKO Your Honor Dr Gregory Ruggerone
- (20) THE CLERK Would you raise your right hand please
- (21) sir?
- (22) (The Witness is Sworn)
- (23) THE CLERK Please be seated For the record sir
- (24) state your full name your address and spell your last name
- (25) please
- (26) THE WITNESS My name is Gregory Ruggerone last name
- (27) is spelled R u g g e r o n e My address is 6148 Northeast

Vol 27 4653

- (1) 194th Place Seattle Washington
- (2) MR SARKO Your Honor and the jury we haven't met
- (3) Your Honor but I am Lynn Sarko one of the Plaintiffs
- (4) counsel
- (5) DIRECT EXAMINATION OF DR GREGORY RUGGERONE
- (6) BY MR SARKO
- (7) Q Doctor can we start and tell me what you do right now?
- (8) A I'm a fisheries scientist with Natural Resources
- (9) Consultants
- (10) Q That is in Seattle?
- (11) A Yes
- (12) Q Are you married?
- (13) A Yes I am
- (14) Q Do you have children?
- (15) A Yes one daughter
- (16) Q I'd like to go into your background and I might - the jury
- (17) will find out you do know Dr Rogers correct?
- (18) A Yes
- (19) Q And let me start with telling us where you got your
- (20) bachelors degree?
- (21) A Bachelor of science degree in biology was at the University
- (22) of California Irvine 1978
- (23) Q Did you later get a masters?
- (24) A Yes I did I received a masters of science in fisheries
- (25) at the University of Washington in 1981

Vol 27 4654

- (1) Q And what was your masters thesis in?
- (2) A My research project involved arctic char predation on
- (3) sockeye salmon smolts in a Bristol Bay rivers
- (4) Q Did you later earn a Ph D ?
- (5) A Yes I did I also received a Ph D in 1989 at the
- (6) University of Washington
- (7) Q What was your doctoral studies on?
- (8) A My doctoral research was coho salmon predation on juvenile
- (9) sockeye salmon in the Chignik lakes
- (10) Q In Chignik lakes?
- (11) A Yes
- (12) Q Let me ask you a question since you received your doctor's
- (13) degree where do you spend most of your time during the year?
- (14) You spend some of your time in Alaska?
- (15) A Yes I do I spend considerable time in Alaska The past
- (16) several years approximately three months each year in Alaska
- (17) and about nine months in Seattle analyzing data
- (18) Q And when you spend your time in Alaska how do you spend
- (19) it?
- (20) A Primarily most of my time is spent in the Chignik Lake's
- (21) drainage but I've spent other time in the Bristol Bay
- (22) drainage
- (23) Q You spend time there doing research?
- (24) A Yes
- (25) Q What type of research?

Vol 27 4655

- (1) A Variety of research In general our program is to determine survival of salmon and to develop techniques to improve salmon management or to improve habitat conditions
- (2) improve salmon management or to improve habitat conditions
- (3) Q I noted it might be a coincidence but your wife also is a biologist is that correct?
- (4) A That s correct
- (5) Q And does she participate in any of the research you do?
- (6) A We discuss it obviously She has a Ph D in fisheries She s a limnologist aquatic toxicologist She also worked in Alaska with salmon
- (7) Q Let me go back to upon you receiving your Ph D and sort of bring us forward in the experience you have that is relevant to what you re doing today and that is you did work as a project leader for the Fisheries Research Institute correct?
- (8) A That s correct
- (9) Q Could you describe your work beginning in 1989?
- (10) A 1989 I was project leader for the Alaska salmon program as a whole which primarily involved research in Bristol Bay but also Chignik One of my primary responsibilities was conducting and directing research in Chignik Lakes where we conducted a variety of studies I also supervised the research of several undergraduate students along with Dr Rogers
- (11) Q Have you also done some research on biology relating to fisheries in other areas of Alaska and out of state?
- (12) A That s correct I ve also conducted studies in the Kodiak

Vol 27 4656

- (1) management area Cook Inlet management area British Columbia
- (2) Washington and California
- (3) Q And in your work have you had experience doing work on run size reconstruction and estimation?
- (4) A That is correct
- (5) Q And could you tell us about what type of work you ve done?
- (6) A For the past ten years I ve developed forecasts of the Black Lake and Chignik Lake runs to the Chignik Lake system
- (7) For several years I also forecasted sockeye salmon to Bristol Bay and have been involved with run size estimation types of projects and involved in both Kodiak and Cook Inlet
- (8) Q Doctor have you published articles in this field?
- (9) A Yes I have
- (10) Q Could you give us not going through each one but a general overview of your work?
- (11) A A number of my studies have involved predator/prey interactions because in general we believe predation to be one of the major factors influencing salmon survival I ve also conducted studies involving salmon growth using scale patterns
- (12) to study growth in fresh water and the marine environment
- (13) conducted studies to separate stocks or identify stocks of adult salmon migrating back through the management areas through fisheries such as the Chignik area as well as the Kodiak management area
- (14) Q Let me ask you a question about professional societies that

Vol 27 4657

- (1) you ve had Again trying to be brief have you held any positions in any professional societies that would be relevant?
- (2) A Yes I m presently the northwest district director of the American Institute of Fisheries Research Biologists
- (3) MR SARKO Your Honor I m going to skip and ask that Dr Ruggerone be accepted as an expert on salmon fisheries including salmon biology and salmon run size estimation
- (4) MR LYNCH Your Honor I have questions on that subject but I don t object to acknowledgment of Dr Ruggerone in that field I d note for the record that Mr Sarko has not offered him on economics
- (5) THE COURT The Court will accept Dr Ruggerone s qualifications as a fisheries biologist
- (6) BY MR SARKO
- (7) Q Can we start with Plaintiffs Exhibit 306?
- (8) Doctor I m going to start by asking you we ve gone through several of the management areas starting with Prince William Sound to Upper and Lower Cook Inlet and Kodiak and I m going to ask you to continue down through the - the oil impacted region
- (9) There we go Sir can we start and can you identify Exhibit 306?
- (10) A Excuse me?
- (11) Q This is a Chignik management area correct?

Vol 27 4658

- (1) A Yes This the Chignik management area shown here It s on the south side of the Alaska Peninsula just west of the Kodiak Island area and it s outlined You can see the management area is shown here from this area all along here It s approximately 200 miles or so it s a very extensive management area where fishermen can harvest salmon
- (2) There are five different districts as shown here The outside areas are called cape fisheries and then there s also a fishery conducted here in the small area Chignik Lagoon
- (3) The primary species returning to this area at least the greatest economic importance is sockeye salmon Primarily two stocks of salmon returning There s an early run that goes to Black Lake here and a later run which overlaps with the Black Lake stock It returns to Chignik Lake down below it
- (4) Q Doctor let me ask you in addition to sockeye salmon what other species do fishermen catch in this area?
- (5) A Fishermen also catch coho salmon pink salmon chum salmon and king salmon The pink salmon and chum salmon are almost exclusively caught along the cape areas which I ve outlined here Coho salmon approximately 50 percent of those on average are caught along the cape areas the other 50 percent within this smaller lagoon area The lagoon area represents coho that are primarily returning to the lakes or there s an incidental catch of king salmon in both the lagoon and cape areas

Vol 27 4659

- (1) As I mentioned also 40 percent of the sockeye salmon that
 (2) are harvested in the whole Chignik management area are
 captured
 (3) along the cape area. Approximately 60 percent are captured in
 (4) the lagoon area
 (5) Q Let me stop you there and ask just a couple of things. One
 (6) is when you turn towards the picture unfortunately the
 (7) microphone doesn't pick you up so you need to speak up. But
 (8) let me clear the screen for a minute of your writing and let
 (9) me ask you - a lot of people haven't been there but the
 (10) entire management area on the outside that you described is
 (11) quite some distance isn't it?
 (12) A Right over 200 miles
 (13) Q Over 200 miles I want to direct your attention to 1989
 (14) the year of the spill and ask you to describe for the jury
 (15) what effect the Exxon Valdez oil spill had on the fisheries in
 (16) the Chignik management area
 (17) A In 1989 the oil spill had a major effect on the fishery
 (18) because oil drifted from the eastern portion of the management
 (19) area throughout the entire cape area
 (20) Q I think you need to - there you go
 (21) A Essentially covered the entire cape region of the Chignik
 (22) management area essentially eliminating fishing from the
 (23) capes so that the fishery was almost entirely limited to a
 (24) relatively small shallow Chignik Lagoon area. So
 (25) essentially we have about a hundred boats within this,

Vol 27 4660

- (1) management area
 (2) Q Doctor can you just for point of fact draw a circle where
 (3) the Chignik Lagoon area - the only area that was open for
 (4) fishing?
 (5) So in other words the circle represents the only area in
 (6) all of Chignik that was - fishing was allowed in 1989?
 (7) A For the most part
 (8) Q And what effect did that have on - on the fishermen's
 (9) harvest in 1989?
 (10) A Well obviously it greatly reduced their harvest of all
 (11) the different salmon species. There are a hundred purse seine
 (12) vessels within the Chignik management area. Many of these
 (13) vessels are deep draft approximately ten to 15 boats have deep
 (14) drafts also deeper seines. They typically fish the cape
 (15) areas and because - they do not go into the lagoon so those
 (16) fishermen were excluded from fishing during the 1989 period
 (17) These fishermen are also - tend to be better fishermen
 (18) what we also call high liners
 (19) Q And in fact you prepared Exhibit 350 which itemizes some
 (20) of those problems correct?
 (21) A That's correct
 (22) Q Can you go on? What other problems were there relating to
 (23) that fishery?
 (24) A The oil in addition to closing the cape region of the
 (25) Alaska Peninsula from fishing was - also caused the fishery

Vol 27 4661

- (1) within the lagoon to be closed six different times. Also
 (2) because the cape area was closed to fishing many of the
 (3) non local sockeye salmon which migrate through this area
 were
 (4) not allowed to be captured
 (5) Now in other years non local salmon that is fish
 (6) migrating outside - or heading towards areas outside the
 (7) Chignik management area are intercepted by Chignik
 fishermen
 (8) When Fish & Game develops their statistics for the Chignik
 (9) management area that is harvested within that management
 area
 (10) they essentially assume that those are - those non-local fish
 (11) are counted as part of the Chignik run in our historical data
 (12) base. But in 1989 because the fishermen were not allowed to
 (13) fish outside they could not take advantage of these non-local
 (14) sockeye salmon
 (15) That is I think very important because in 1989 the
 (16) Bristol Bay sockeye run which is one of the - the largest
 (17) salmon run in the world was having an exceptional year. The
 (18) run size to Bristol Bay was about 44 million sockeye salmon
 (19) Additionally as you know as Dr Rogers just testified
 (20) the Cook Inlet run was very large and these fish also migrate
 (21) through the cape area.
 (22) Q Let me stop you there and bring up this Exhibit 366 again
 (23) just to make sure I understand. Basically in Chignik there
 (24) are - it's a smaller fishery in number of boats in that there
 (25) are approximately how many?

Vol 27 4662

- (1) A Approximately one hundred
 (2) Q Approximately one hundred boats so what you're saying is
 (3) that the hundred boats which normally fish in the lagoon and
 (4) within the 200-mile limit all crowded into the lagoon and in
 (5) fact some of them were too deep and that they couldn't fish
 (6) at all?
 (7) A That's correct
 (8) Q And the second point I believe if I understood - if I
 (9) understood you right was that the fish that are normally
 (10) caught in the outside the 40 percent or whatever couldn't be
 (11) harvested because that area was closed?
 (12) A That's correct
 (13) Q And did that have particular effects for the pink salmon
 (14) harvest in Chignik?
 (15) A Obviously because essentially all of the pink salmon are
 (16) harvested along the capes and the fishermen were not allowed
 to
 (17) take advantage of those fish
 (18) Q Did you do some work to try to form an opinion and an
 (19) estimate of the amount of salmon that couldn't be harvested by
 (20) the fishermen because of the oil spill?
 (21) A Yes I did
 (22) Q And let me show you Exhibit 353. Maybe we can blow that
 up
 (23) a little but using this exhibit can you describe for the jury
 (24) what work you did to - to finally reach that opinion?
 (25) A Basically for this to estimate the - what the catch of

Vol 27 4663

- (1) the various salmon species would have been had there not been
- (2) an oil spill I used historical data dating back to 1978 I
- (3) used various methodologies depending on which method I thought
- (4) was most appropriate depending on the different species
- (5) involved here and made an estimate of sockeye salmon harvest
- (6) had there not been an oil spill for the two lakes the Chignik
- (7) Lake and Black Lake system because they are managed
- (8) separately as well as for coho salmon pink salmon chum and
- (9) chinook
- (10) The column on the left shows the actual catch observed in
- (11) 1989 as reported by the Alaska Department of Fish & Game
- The
- (12) middle column shows the estimated catch for each of the
- species
- (13) as shown there and then the column on the right shows the
- (14) difference between the two
- (15) Q And the difference column reflects in your opinion, the
- (16) number of each of the species that could not be caught due to
- (17) the closures in Chignik correct?
- (18) A That is correct. Can I answer that?
- (19) Q Sure
- (20) A I want to also mention that this estimate for sockeye
- (21) salmon is a conservative estimate in that it's low and that
- (22) the fishermen - this estimate does not include non local
- (23) sockeye salmon that would have been available to Chignik
- (24) fishermen had they been allowed to fish the cape region
- (25) Q In the interest of time I'm not going to go through all of

Vol 27 4664

- (1) these unless there are questions about them but you in fact
- (2) used individual models and looked at each of the species?
- (3) A That's correct
- (4) Q And you have - this is - for example Exhibit 359 you
- (5) have specific analysis on each of those species that you
- (6) performed?
- (7) A That's correct
- (8) Q Did you after you determined the number of fish that were
- (9) not caught translate that into a dollar figure?
- (10) A I did
- (11) MR LYNCH Your Honor this is the subject matter
- (12) that I think it seems Dr Ruggerone's qualification - I don't
- (13) have any problem if this is done as a mathematical projection
- (14) but I don't think there's any foundation for the price
- (15) MR SARKO Your Honor two points One this is
- (16) exactly the same analysis that Dr Rogers did that was done in
- (17) Prince William Sound In fact it's an identical exhibit and I
- (18) can lay a foundation for it
- (19) THE COURT I'll allow you to proceed but Mr Lynch
- (20) if you think it goes beyond the - the use of
- (21) uncontroversial -
- (22) MR LYNCH My only point is I don't have any
- (23) difficulty with Dr Ruggerone using prices that are actual real
- (24) world prices but I don't think he has been qualified to
- (25) project prices

Vol 27 4665

- (1) THE COURT That's exactly what I had in mind If you
- (2) feel it's getting off into the area of projections let us
- (3) know
- (4) MR O NEILL Could we - it'll solve a future problem
- (5) if we could talk about this right now It doesn't have to do
- (6) with this particular exhibit and I have a proposed solution
- (7) (At side bar off the record)
- (8) MR SARKO Thank you Doctor Thank you Your
- (9) Honor
- (10) BY MR SARKO
- (11) Q Let's go back to Exhibit 369 and could you tell us going
- (12) from Exhibit 353 which is your counting of fish do I
- (13) understand that 369 was the actual prices paid in 1989 and
- (14) translating those into dollars?
- (15) A That's correct
- (16) Q Take us through this quickly to show us how you got to your
- (17) final opinion
- (18) A Sure The top row in terms of foregone numbers came from
- (19) the previous table I just showed you that was additional fish
- (20) they could have caught if there wasn't a spill for each one of
- (21) the species
- (22) I used as average weight per fish the observed average
- (23) weight reported by Fish & Game presented in their annual
- (24) management report for 1989 The third row the foregone
- (25) harvest in terms of pounds is simply multiplying the average

Vol 27 - 4666

- (1) weight times the foregone harvest numbers and then finally
- (2) the fourth row shows the average price per pound for each one
- (3) of the species as reported in 1989 by the Fish & Game
- (4) management report again for each one of the species
- (5) The foregone value for each species is simply multiplying
- (6) the number of pounds times the average price per pound for
- that
- (7) species that's shown in the bottom row
- (8) Q Now is it your opinion that due to the closures caused by
- (9) the Exxon Valdez oil spill in the Chignik management area that
- (10) the fishing fleet was - their foregone harvest was not able to
- (11) catch fish with a value of \$5,944,172 valued in 1989 prices at
- (12) that time?
- (13) A That's correct.
- (14) MR SARKO Your Honor I'd like to offer Exhibit
- (15) 369
- (16) (Exhibit 369 offered)
- (17) THE COURT Is that not a -
- (18) MR LYNCH Your Honor I think we have an agreement
- (19) to hold off on this
- (20) MR O NEILL. On this one?
- (21) MR LYNCH I thought we were going to arrive at a
- (22) set
- (23) MR SARKO I don't think this one is a problem
- (24) MR O NEILL. The others have gone in
- (25) MR LYNCH All right

Vol 27 4667

- (1) MR O NEILL. Just for the sake of the record Your Honor what we had intended to do and what we have agreed to do
- (2) is put these exhibits in but we re going to try to winnow down the number of these exhibits that we send back to the jury room to something that is usable for the jury So while these exhibits are all being admitted we re going to try to come to some kind of mutual agreement on a core set of exhibits to go back to the jury room so we don t waste a lot of time and effort going through pieces of paper
- (3) Is that a fair statement Pat?
- (4) MR LYNCH It s a fair statement Some of the foundation standings alone might be subject to objection but I think we can work that out Your Honor
- (5) THE COURT Where does that leave us with 369?
- (6) MR O NEILL. It s offered
- (7) MR LYNCH And I withdraw my objection
- (8) THE COURT All right Plaintiffs 369 is admitted (Exhibit 369 received)
- (9) BY MR SARKO
- (10) Q Dr Ruggerone we have one more management area we have to talk about and then I think we re done and that is the Balboa Stepovak management area Let me ask you to use the Chignik management area map which is back there and if you can get your nifty ditty white pen out and explain to the jury what is Stepovak What is the Balboa Stepovak?

Vol 27 4668

- (1) A Balboa Stepovak area is the area I just outlined It s not within the Chignik management area it s in a separate adjacent management area you can see here And prior to July 25th fishermen were allowed to catch non local salmon primarily sockeye salmon And the management within this area is dependent on harvest escapements within Chignik management area somewhat different than most management plans in the state of Alaska
- (2) The criteria that they use to open close the fishery within the Balboa Stepovak area is dependent upon the harvest in the Chignik management area For example by July 25th the Chignik fishermen have to be on target to reach a harvest of 600 000 sockeye salmon plus escapements need to be on target within the Chignik management area the Chignik Lakes
- (3) Q So in other words the Balboa Stepovak catch or management decisions are linked to the Chignik management area?
- (4) A That s correct
- (5) Q And did the closures from the Exxon Valdez oil spill and the oil floating down there cause any change in 1989 in the Balboa Stepovak area and did it cause closures?
- (6) A Yes it did As I mentioned briefly the oil prevented the Chignik fishermen from fishing along the capes The cape area represents an area where they would catch non local sockeye salmon plus the fishermen would have caught salmon at an earlier date

Vol 27 4669

- (1) In addition it greatly hindered the management of the Chignik management biologists in terms of opening and closing the fishery and that is - what I mean by that is that the fishermen - or the manager when he opens fisheries in the outside areas he looks at the catch per effort that is the number of sockeye salmon caught per vessel And when he looks at that data if he can see that those boats on the outside areas are catching large numbers of fish that indicates to him that a large number of sockeye salmon are coming back towards the Chignik management area and it reassures him that he can keep the fishery open for a longer period of time while still achieving his escapement goals
- (2) Q Doctor did you reach an opinion as to the number of sockeye salmon that the fleet in Balboa Stepovak or the fishermen there could not catch due to the oil spill?
- (3) A Yes, I did
- (4) Q Did you prepare an exhibit Exhibit 368?
- (5) A Yes I did
- (6) Q See if this - it s on gray It might not show very well Can you please explain how you went about calculating this and what your conclusion is?
- (7) A I made an estimate of how many sockeye salmon the Balboa Stepovak fishermen could have caught based on a relationship between catch historical catch between the Balboa Stepovak area and the run size of sockeye salmon within the Chignik

Vol 27 4670

- (1) management area through July 25th And I used the observed - this is important - the observed run size through July 25th to make this estimate Therefore in a sense because the sockeye or the fishermen were not allowed to fish along the capes and catch non local sockeye these estimates are conservative estimates
- (2) I should also mention that Balboa Stepovak fishermen have had a fishery in every year since 1975
- (3) MR SARKO Your Honor I would - let me go back
- (4) BY MR SARKO
- (5) Q And is it your opinion that the Balboa Stepovak fishermen s - the value of their catch expressed in 1989 dollars prices at that time were \$317 842?
- (6) A That is correct
- (7) MR SARKO Your Honor we d like to -
- (8) BY MR SARKO
- (9) Q The damage just to make it clear that is the number that is the value of the fish that the fishermen there could not catch because of the oil spill that is their damage correct?
- (10) A That is correct
- (11) MR SARKO I d like to offer 368 Your Honor (Exhibit 368 offered)
- (12) THE COURT Is there an objection?
- (13) MR LYNCH No Your Honor
- (14) THE COURT Plaintiffs Exhibit 368 is admitted

Vol 27 4671

- (1) (Exhibit 368 received)
 (2) BY MR SARKO
 (3) Q Doctor I d like to now move onto a different subject and
 (4) that is that we ve been talking about 1989 In this case we
 (5) also – the jury has heard some evidence and will hear in the
 (6) coming days evidence relating to 1994 and 1995 Since you re
 (7) on the stand at this time though I want to ask you questions
 (8) about that
 (9) Were you asked to look at several fisheries which the
 (10) Plaintiffs will offer evidence that they believe are in
 (11) jeopardy and were you asked to develop an estimate of the
 (12) harvest of those fisheries in 1994 and 1995 but for the oil
 (13) spill
 (14) A Yes I was
 (15) MR LYNCH Your Honor may we approach the side bar
 (16) on this?
 (17) (At side bar off the record)
 (18) BY MR SARKO
 (19) Q Doctor let me start with the Upper Cook Inlet sockeye
 (20) fishery Just to be clear dealing with 1994 and 195 were you
 (21) asked to provide opinion – an opinion as to what the
 (22) harvest – what the harvest to the fishermen in Upper Cook
 (23) Inlet in 94 and 95 would be but for the oil spill? That is
 (24) not saying about what is going to happen but what that harvest
 (25) there in 94 and 95 what your prediction would be if there

Vol 27 4672

- (1) hadn't been an oil spill?
 (2) A That s correct
 (3) Q Let me try it again Were you asked to assume in 1994 and
 (4) 1995 if there hadn't been a season what the harvest would be
 (5) in Upper Cook Inlet?
 (6) A That s correct
 (7) Q Let me ask you how you went about your analysis what you
 (8) looked at?
 (9) A My analysis was quite straightforward I used this
 (10) approach because the uncertainty generated by the oil spill in
 (11) 1989 My analysis basically relied on historical years
 (12) primarily the past five years which included prespill and post
 (13) spill estimates of run size harvest average weight average
 (14) value
 (15) Q Let me – let me stop you there and say that as we
 (16) discussed at the side bar you re one of a number of witnesses
 (17) and I'm going to ask you to take us and the jury through your
 (18) analysis as far as you get with number of fish harvest and
 (19) weight and we ll leave value for another day
 (20) A Okay This table shows harvest of – future of harvest
 (21) damages to Upper Cook Inlet sockeye salmon The run size
 (22) estimates here show 1988 through 1993 are those published by
 (23) the Alaska Department of Fish & Game The average weight are
 (24) also Department of Fish & Game data. I simply took the
 (25) average
 (25) of these values as an estimate of future harvest damages in

Vol 27 4673

- (1) Upper Cook Inlet assuming that there would be no fishery in
 (2) 1994 and 1995
 (3) Q And you simply applied a straightforward average?
 (4) A That s correct
 (5) Q And did you perform a similar analysis for Kodiak?
 (6) A I did
 (7) Q And in Kodiak I think we have to have you explain you
 (8) looked at specifically only the runs relating to two of the
 (9) lakes in Kodiak correct?
 (10) A That s correct These are two lakes that have been
 (11) identified to have been affected by overescapement And
 (12) again I used the years 1988 through 1993 These are Fish &
 (13) Game data which I received directly from fisheries biologists
 (14) Bruce Barrett and Charlie Swanton The estimates of average
 (15) weight were available from the Alaska Fish & Game
 (16) management
 (16) reports
 (17) Q And the figures relating to run harvest and average weight
 (18) relating to Plaintiffs Exhibit 3820 are your estimate of what
 (19) the harvest would be for those lakes assuming that there would
 (20) be a closure?
 (21) A That s correct
 (22) Q Let me take you to one last area and that is Prince William
 (23) Sound Did you also do an analysis in Prince William Sound
 (24) relating to pink salmon?
 (25) A Yes I did

Vol 27 - 4674

- (1) Q And is that analysis shown on Plaintiffs Exhibit 3652?
 (2) A Yes it is Again my approach was the same as before
 (3) except this – with the pink salmon I separated out even year
 (4) and odd year estimates because pink salmon have a two-year
 (5) life
 (5) history The data here came from CFEC the Commercial
 (6) Fisheries Entry Commission and the data are reported in terms
 (7) of harvest pounds and average value
 (8) Q Doctor finally to sum this up the data shown in
 (9) Plaintiffs Exhibit 3652 relating to pink salmon in Prince
 (10) William Sound 3820 relating to Kodiak sockeye and the two
 (11) lakes you mentioned and 3653 relating to Upper Cook Inlet
 (12) sockeye the figures that you determined are those your
 (13) opinion as to the lost harvest for 94 and 95 assuming there
 (14) are closures?
 (15) A It is
 (16) MR SARKO I have no further questions
 (17) THE COURT You may cross-examine
 (18) CROSS EXAMINATION OF GREGORY RUGGERONE
 (19) BY MR LYNCH
 (20) Q Let me start with the last set of exhibits that you talked
 (21) about, Dr Ruggerone If I mispronounce your name don't
 (22) hesitate to correct me I m sure you ll correct me in any
 (23) other respect without prompting
 (24) The figures that you calculated and that Mr Sarko showed
 (25) the jury those represent your taking the total catch figures

Vol 27 4675

- (1) of ADF&G for certain years for certain species is that
- (2) correct?
- (3) A That s correct
- (4) Q And averaging those?
- (5) A That s correct
- (6) Q Is that basically what you ve done?
- (7) A That s correct
- (8) Q And the poundage likewise?
- (9) A That s correct
- (10) Q Except that in the case of pink salmon you didn t average
- (11) all the years together you averaged even years together and
- (12) odd years together?
- (13) A That s correct
- (14) Q And you selected different sets of years for the different
- (15) types of - of fish that you were talking about is that
- (16) correct?
- (17) A For the sockeye I selected 1988 through 93 For pinks
- (18) 1984 through 1991
- (19) Q And now with respect to the assumption that there would be
- (20) no season at all in 1994 and 95 I think you told us when you
- (21) were - your qualifications were being developed that you have
- (22) for a number of years actually done the forecasting or
- (23) forecasting in the Chignik area is that correct?
- (24) A That s correct
- (25) Q And you have done a projection for 1994 have you not?

Vol 27 4676

- (1) A That s correct
- (2) Q And you re projecting that there will be a catch of about a
- (3) million fish?
- (4) A Approximately that
- (5) Q And in -
- (6) A Actually I think the projection was a forecast harvest of
- (7) 750 000
- (8) Q A run of a million harvest of 750 000?
- (9) A Yes
- (10) Q And ADF&G agrees with that forecast broadly speaking, is
- (11) that correct?
- (12) A Yes
- (13) Q You re not really thinking that there will be no season in
- (14) 1994 you yourself?
- (15) A That s correct
- (16) Q It is not your opinion that there will be no fish caught in
- (17) Chignik this year is that -
- (18) A That s correct
- (19) Q Now let me go then to the Balboa Stepovak - Stepovak
- (20) or vik?
- (21) A vak
- (22) Q Stepovak fishery The way that fishery works as I
- (23) understand it is that the fish that pass by that area are
- (24) headed elsewhere?
- (25) A That s correct They re primarily non local

Vol 27 4677

- (1) Q Meaning they re not going to come in there to spawn is
- (2) that correct?
- (3) A That s correct There s a small sockeye lake there but
- (4) they attempt to manage that separately
- (5) Q And the primary concern from a management standpoint
- (6) that
- (7) they have in Balboa Stepovak are the fish that are headed for
- (8) your territory the Chignik area is that correct?
- (9) A There are fish that are heading from the Balboa Stepovak
- (10) area to the Chignik but as well as other areas
- (11) Q But in terms of a management criterion do they look at
- (12) whether the Balboa Stepovak fishery will interfere with the
- (13) returns of fish to Chignik?
- (14) A The Department of Fish & Game assumes for management
- (15) purposes that 80 percent of the sockeye harvested in the
- (16) Balboa
- (17) Stepovak area are headed for the Chignik system
- (18) Q And I think you testified when you were talking to
- (19) Mr Sarko that there are two runs two separate runs in the
- (20) Chignik area an early run and a late run is that correct?
- (21) A That s correct.
- (22) Q Now, in projecting the fact or the contention that there
- (23) was a lost harvest in 1989 you made the assumption that
- (24) fishing would be open in Balboa Stepovak is that correct?
- (25) A That s correct.
- (26) Q And you reached that did you not by looking at the total
- (27) escapement for the year and averaging it out?

Vol 27 4678

- (1) A Excuse me?
- (2) Q Did you - did you take the season long escapement to
- (3) Chignik and Black Lakes?
- (4) A Uh huh
- (5) Q And average that to determine what the - whether the
- (6) escapement goals for Balboa Stepovak would have been met in
- (7) 1989?
- (8) A You re - they don t have escapement goals for Balboa
- (9) Stepovak
- (10) Q Isn t it the case that in order to open Balboa Stepovak
- (11) they have to believe that the escapement goals at Black Lake
- (12) and Chignik Lake are going to be met?
- (13) A That s correct
- (14) Q And you had to satisfy yourself in trying to look back in
- (15) time and see what would have happened in '89 that those
- (16) goals
- (17) would have been met right?
- (18) A That s correct
- (19) Q And you did that by figuring the average escapement to both
- (20) lakes correct?
- (21) A No I don t -
- (22) Q Okay Well let me ask the question this way Isn t it a
- (23) fact that the run to Black Lake is early?
- (24) A Yes
- (25) Q Isn t it a fact that the run to Black Lake in 1989 was
- (26) weak?

Vol 27 4679

- (1) A To Black Lake was below average
 (2) Q And even without commercial fishing Black Lake did not meet its escapement goal for 1989 isn't that correct?
 (3) A That's not correct
 (4) Q Isn't it true that they had a goal of 400 000 and they only got 384 000?
 (5) A That's a post season analysis in season which is what the area manager is using obviously the values that he has in season they exceeded the escapement goal of 400 000 by 17 000
 (6) fish
 (7) Q You mean he miscounted during the season?
 (8) A Obviously there's variations There's a different analysis that takes place in a post season that's different than in season
 (9) Q So you think the right way to go about this if you're trying to figure out what would have happened in 1989 you're trying to reconstruct the judgments of those biologists would make you look at the information they had available to them at the time?
 (10) A That's correct
 (11) Q So in your point of view looking at a post season analysis of the escapement to Black Lake wouldn't tell you what the biologist would have done at the time is that correct?
 (12) A That's correct in terms of evaluating Balboa Stepovak
 (13) Q How would you feel about an analysis that came along two

Vol 27 4680

- (1) years later same principal?
 (2) A I don't understand what you're saying
 (3) Q Okay So your belief is that the - that the biologist in Chignik would have believed that they were getting enough fish back to Black Lake even though in fact they were having a weak run is that correct?
 (4) A In 1989 they were meeting their escapement threshold guidelines for the Black Lake run throughout the fishery
 (5) Q Now you're aware that ADF&G has analyzed that question Mr Barrett at ADF&G?
 (6) A I'm not aware that Mr Bruce Barrett conducted any analyses on this issue
 (7) Q You're aware that he conducted analysis of what the run would have been in Balboa Stepovak in 1989?
 (8) A I'm not aware that he's conducted an analysis
 (9) Q Are you aware he's published on the subject?
 (10) A I'm aware of the letter that Bruce Barrett said his opinion I guess that he did not think there would be a fishery in Balboa Stepovak
 (11) Q What was the basis of his opinion?
 (12) A He didn't provide any analysis I don't know
 (13) Q You didn't understand that his analysis was based on an opinion that there weren't enough fish getting to Black Lake to justify the Balboa Stepovak fishery?
 (14) A Again he just made a simple statement without giving any

Vol 27 4681

- (1) analysis
 (2) Q Let me ask you a couple of questions moving on from that about the - I didn't quite understand your answers about non local fish and whether you did or didn't count them in your re-creation Was your answer that you didn't count non local fish in your sockeye estimate?
 (3) A That's correct
 (4) Q But you did count them in the others?
 (5) A For coho salmon we would have
 (6) Q You used the historical data and regressed is that it?
 (7) A That's correct
 (8) Q My children do that We usually consider that a bad sign but -
 (9) A This is a different type of regression
 (10) Q This is a good regression Maybe I'll try that on them So you did contain the - you did count the non local fish based on historical records is that correct?
 (11) A Captured within the Chignik management area
 (12) Q Right Now in the case of your chum estimate your report the report you gave the plaintiffs lawyers indicated that your estimate was probably high is that correct?
 (13) A That's correct.
 (14) Q And that was - that was because using the regression technique you came up with kind of an outline?
 (15) A I didn't use a regression technique for chum salmon

Vol 27 4682

- (1) Q What did you use?
 (2) A I used the average and that is because in 1989 the Alaska Department of Fish & Game uses aerial surveys to estimate escapement of pink salmon and chum salmon along the capes
 (3) This technique as you've heard from other experts is not very accurate In other previous years the majority or 50 percent of the run is catch which is a good accurate estimate
 (4) In 1989 essentially all the fish escaped and estimates of run size in 1989 therefore were in my opinion highly inaccurate because the entire estimate of run was based on aerial counts
 (5) Furthermore in 1989 there was a severe flood that greatly affected Fish & Game's estimates of escapement into the streams
 (6) for both pink salmon and chum salmon
 (7) Q So when you wrote in your report to the plaintiffs lawyers that your estimate was probably high you didn't mean it?
 (8) A Yes I did
 (9) Q Oh okay
 (10) A Again my estimate for chum salmon was - was based on the average historical catch for that species
 (11) Q And that estimate was probably high?
 (12) A Right.
 (13) Q Okay Now the - in your coho estimate you estimated based - I'm a little lost here in my note Let me just take a second to read this

Vol 27 4683

- (1) You estimated on the historical driftnet to set net ratio?
- (2) A For which?
- (3) Q Your estimate of the lost coho catch in Upper Cook Inlet
- (4) I m sorry I m in the wrong -
- (5) A Wrong system
- (6) Q I m in the wrong system North Shelikof did you estimate
- (7) for that?
- (8) A I didn t make those estimates no You re in Kodiak
- (9) Q I m in someone else s territory
- (10) MR LYNCH I don t believe I have any other
- (11) questions Your Honor
- (12) MR SARKO I have nothing Your Honor
- (13) THE COURT Thank you sir You may step down You
- (14) may call your next witness
- (15) MR O NEILL If we could talk to Your Honor for a
- (16) second on the next witness
- (17) (At side bar off the record)
- (18) MR LYNCH The transcripts -
- (19) MR O'NEILL He stole your transcripts
- (20) MR JAMIN Your Honor plaintiffs call Dr Richard
- (21) Kocan
- (22) MR JAMIN There it is
- (23) THE CLERK Would you raise your right hand please
- (24) sir?
- (25) (The Witness Is Sworn)

Vol 27 4685

- (1) disciplines do you deal with cell culture and virus
- (2) identification?
- (3) A Yes I do
- (4) Q Do you deal with invitro methods for virus indication?
- (5) A Yes that s basically the same thing
- (6) Q With physiological effects of water pollutants?
- (7) A Yes in my own course
- (8) Q With medical effects of chemical pollutants?
- (9) A Yes That would be veterinarian and human health effects
- (10) Q And have you taught seminars on fish cell cytogenetics?
- (11) A Yes I ve given several seminars on the subject
- (12) Q Do you lecture in the department of pathology on
- (13) chromosomal injury?
- (14) A In the department of pathology and the school of public
- (15) health in the toxicology department
- (16) Q Do you teach principals of epidemiology?
- (17) A In my course yes
- (18) Q Have you taught seminars on the diseases of marine fish
- (19) resulting from exposure to environmental contaminants?
- (20) A Yes
- (21) Q And have you taught a seminar on the biological effects of
- (22) contaminated sea surface microlayer on developing herring
- (23) and
- (24) cod from North Sea and the Baltic Sea?
- (25) A Yes I ve given several seminars on that subject
- (26) Q How old are you sir?

Vol 27 4684

- (1) THE CLERK Please be seated For the record sir
- (2) state your full name your address and spell your last name
- (3) please
- (4) THE WITNESS Richard Michael Kocan That s spelled
- (5) K O C A N and my address is 7323 Pebble Beach Road
- (6) Suquamish
- (7) Washington
- (8) MR JAMIN
- (9) DIRECT EXAMINATION OF DR RICHARD KOCAN
- (10) BY MR JAMIN
- (11) Q Dr Kocan how are you employed?
- (12) A I m on the faculty of the University of Washington School
- (13) of Fishery
- (14) Q And in connection with your appointment do you teach?
- (15) A Yes I do
- (16) Q What do you teach?
- (17) A The course I m specifically responsible for is aquatic
- (18) toxicology and I also lecture in other people s courses
- (19) Q And in connection with the aquatic toxicology course do
- (20) you deal with issues of genetic toxicology?
- (21) A Yes I do
- (22) Q Do you deal with issues of cell culture and virus
- (23) identification?
- (24) A I do that in guest lectures to other courses
- (25) Q And either in connection with the course that you teach
- (26) directly or other courses where you teach in other people s

Vol 27 4686

- (1) A 53
- (2) Q And where did you get your bachelor s degree?
- (3) A Hiram College in Hiram Ohio
- (4) Q What did you study there?
- (5) A My major was general science and chemistry
- (6) Q And did you get a master s degree after that?
- (7) A Yes I did
- (8) Q Where was that?
- (9) A My master s degree was from Michigan State University in
- (10) East Lansing
- (11) Q What did you study there?
- (12) A Microbiology and public health
- (13) Q Did you go on to get a doctor s degree?
- (14) A Yes I did
- (15) Q Where was that?
- (16) A That was again at Michigan State University at East
- (17) Lansing
- (18) Q And the subject matter area sir?
- (19) A I m sorry?
- (20) Q The course that you studied in your - for your Ph D your
- (21) area of expertise?
- (22) A Oh well I took many courses covering many different
- (23) subjects in the department bacteriology, virology
- (24) parasitology immunology epidemiology
- (25) Q All right Did you have a particular subject matter for

Vol 27 4687

- (1) your dissertation for your Ph D ?
 (2) A Yes I did
 (3) Q What was that?
 (4) A It involved abnormal immune system development following infection
 (5) infection
 (6) Q That was immune systems?
 (7) A Immune system yes
 (8) Q Now since your doctoral degree have you done special course work?
 (9) course work?
 (10) A Yes I have
 (11) Q In what field?
 (12) A I took special course work training at the Public Health Service in Bethesda Maryland on medical mycology
 (13) Service in Bethesda Maryland on medical mycology
 (14) Q What is mycology sir?
 (15) A That s fungal study of fungi but in this case it would be pathogenic fungi
 (16) pathogenic fungi
 (17) Q And pathogenic means?
 (18) A Disease causing
 (19) Q And besides the course work at the United States Public Health Service have you done other special course work after your Ph D ?
 (20) Health Service have you done other special course work after your Ph D ?
 (21) your Ph D ?
 (22) A Yes I trained for several weeks at the Eastern Fish Disease Laboratory in Kearneysville or Lee Town West Virginia part of the U S Fish & Wildlife Service and the subject of that was fish subculture and virus isolation and

Vol 27 4689

- (1) doing or planning to do on the genetic damage resulting from the environmental contaminants
 (2) the environmental contaminants
 (3) Q Sir do you have any special experience regarding herring as a species of fish?
 (4) as a species of fish?
 (5) A I did a sabbatical in 1985 where I went to Germany and studied at the Biologische Amstalt Helgoland
 (6) studied at the Biologische Amstalt Helgoland
 (7) Q I won t ask you any more about that Doctor The judge told me not to ask you more about that
 (8) told me not to ask you more about that
 (9) THE COURT The reporter just closed her eyes
 (10) BY MR JAMIN
 (11) Q Go ahead sir
 (12) A There I studied with Doctors Rosenthal and Von Westernhagen who are the herring biologists for that institute
 (13) Westernhagen who are the herring biologists for that institute
 (14) institute
 (15) Q All right What sorts of things did you study while you were there?
 (16) were there?
 (17) A Dr Herald Rosenthal is an expert and rather well known specialist on the culture of embryonic and larval herring
 (18) specialist on the culture of embryonic and larval herring
 (19) He s written many papers with North American College primarily in Canada and I studied - I worked with him to learn his techniques and tried to adapt them to the type of work I was doing
 (20) in Canada and I studied - I worked with him to learn his techniques and tried to adapt them to the type of work I was doing
 (21) techniques and tried to adapt them to the type of work I was doing
 (22) doing
 (23) Q Was your own work in the field of herring at that time?
 (24) A I was - no it wasn t with herring at that time but it was being - it was in fisheries and contaminant research on

Vol 27 4688

- (1) identification
 (2) Q And have you had postdoctoral fellowships sir?
 (3) A Yes I ve had one postdoctoral fellowship
 (4) Q What was that in?
 (5) A That was in environmental pathology in medical school at the University of Washington
 (6) the University of Washington
 (7) Q And did you have particular areas that you focused on within environmental pathology when you were at the University of Washington Medical School?
 (8) within environmental pathology when you were at the University of Washington Medical School?
 (9) of Washington Medical School?
 (10) A Yes It was geneotoxic damage to cells as a result of exposure to environmental contaminants
 (11) exposure to environmental contaminants
 (12) Q And geneotoxic means?
 (13) A Damage to the genetic material of the cells
 (14) Q And how long a period were you involved with that postdoctoral fellowship?
 (15) postdoctoral fellowship?
 (16) A I was a postdoctoral fellow in that department for two years
 (17) years
 (18) Q And what does a postdoctoral fellow do or what did you - what did you do during that two-year period?
 (19) what did you do during that two-year period?
 (20) A During that time I worked with several of the faculty members in the department of pathology and with some faculty members in the physiology department - I m sorry pharmacology
 (21) members in the department of pathology and with some faculty members in the physiology department - I m sorry pharmacology
 (22) members in the physiology department - I m sorry pharmacology
 (23) department and I trained in their laboratones and learned techniques and protocols used by them in their research And these were protocols that would assist me in the research I was

Vol 27 4690

- (1) larval fish or embryonic fish
 (2) Q And have you since applied some of the techniques that you learned with the two German gentlemen in the herring field?
 (3) learned with the two German gentlemen in the herring field?
 (4) A Yes I ve used it quite extensively since that time
 (5) Q You have publications in that area?
 (6) A Yes I have
 (7) Q All right And with respect to your experience in aquatic toxicology can you advise us as to whether or not you ve done any research in that area?
 (8) toxicology can you advise us as to whether or not you ve done any research in that area?
 (9) any research in that area?
 (10) A Yes My primary research emphasis over the past, oh ten years has been in aquatic toxicology primarily marine toxicology, but I ve had some experience also with fresh water toxicology
 (11) years has been in aquatic toxicology primarily marine toxicology, but I ve had some experience also with fresh water toxicology
 (12) toxicology, but I ve had some experience also with fresh water toxicology
 (13) toxicology
 (14) Q And where have you received grants from to do that work sir?
 (15) sir?
 (16) A My research has been funded by the Environmental Protection Agency, the National Institutes of Health National Institute of Environmental Health Sciences the National Oceanic and Atmospheric Administration and the National Cancer Institute
 (17) Agency, the National Institutes of Health National Institute of Environmental Health Sciences the National Oceanic and Atmospheric Administration and the National Cancer Institute
 (18) of Environmental Health Sciences the National Oceanic and Atmospheric Administration and the National Cancer Institute
 (19) Atmospheric Administration and the National Cancer Institute
 (20) Q And do you have publications in the area of aquatic toxicology as well as herring?
 (21) toxicology as well as herring?
 (22) A I have - yes I have publications that are in aquatic toxicology and on herring that involve aquatic toxins
 (23) toxicology and on herring that involve aquatic toxins
 (24) Q And do some of those publications deal with the effects of contaminants and hydrocarbons on fish embryos and fish

Vol 27 4691

- (1) chromosomes?
 (2) A Yes they do
 (3) Q Does that include publications not only in the United States but also in foreign countries as well?
 (4) A Yes I've published my work that I did in Germany and I've done some work with Canadians and I published that also
 (5) Q And have you done or have you published in the area of the sea surface microlayer sir?
 (6) A Yes That was the primary focus of my research while I was in Germany
 (7) Q Just for a moment, what is the sea surface microlayer?
 (8) A The sea surface microlayer is a very small thin layer on the surface of the sea, just a few microns thick microscopic for all practical purposes and it's composed of a concentration of chemical compounds or biological compounds
 (9) that are derived from the breakdown of animal and plant organisms from the sea.
 (10) Q All right. Now in your course on aquatic toxicology, do you deal with issues involving the fate and transport into the marine environment of petroleum compounds?
 (11) A Yes, petroleum and other chemicals
 (12) Q Does the course include instruction on the various components of crude oil and how they impact the marine environment?
 (13) A Yes It covers various toxic components of petroleum and

Vol 27 - 4692

- (1) petro chemicals
 (2) Q Does the course you teach include the principal processes by which oil is integrated into the marine ecosystem?
 (3) A Yes it does
 (4) Q And have you given testimony before in federal courts in the area of aquatic toxicology?
 (5) A Yes I testified in the federal district court in Boise Idaho
 (6) Q What did that involve sir?
 (7) A That case involved a spill of an agricultural chemical into the Little Salmon River and the subsequent sterilization of that river for 25 miles downstream
 (8) Q Let me ask you finally about your experience in the area of genotoxicity, and have you done research in that area, sir?
 (9) A Yes The majority of my aquatic toxicology work is emphasized genetic damage or genotoxicity
 (10) Q And did you have any work in the area of genotoxicity that you did at the University of Washington's medical school?
 (11) A Yes I did - the two-year post doc. I did involved human chromosome damage in people exposed to a variety of different types of environmental contaminants or mutagens and carcinogens
 (12) Q And after your work of the effects of toxic substances and carcinogens on humans did you go on to apply that in the area of herring?

Vol 27 4693

- (1) A Yes I - following my postdoctoral fellowship and my tenure as a - on the faculty at the medical school I directed my work toward aquatic studies or application of these techniques and methods I used to aquatic toxicology and aquatic contamination problems
 (2) Q Sir do you have publications in the area of genotoxicity as well?
 (3) A Yes I do
 (4) MR JAMIN Your Honor I would offer Dr Kocan as an expert in the field of the biology of herring in aquatic toxicology and in genotoxicity
 (5) MR COOPER Your Honor the man behind the bar gets to speak. Your Honor, I have no problem with that, but there is one matter that I think we could - might probably take up briefly at the side bar
 (6) (At side bar off record)
 (7) THE COURT The Court accepts the witness' qualifications in the area of aquatic toxicology, genotoxicity and what was the third one?
 (8) MR JAMIN The biology of herring Your Honor
 (9) THE COURT Biology of herring I lost the simple one
 (10) MR JAMIN Your Honor I'm not sure any of them are simple but we'll find out over the next hour or so
 (11) THE COURT I'll rephrase that the one that was easy

Vol 27 4694

- (1) to say
 (2) MR JAMIN And our job sir is to try and make them as simple as we can Let's give it a start.
 (3) BY MR JAMIN
 (4) Q Before we get into your own science in this case, can you explain to the ladies and gentlemen of the jury how a scientist such as you goes about reaching opinions?
 (5) A Well, there are three basic methods that scientists can use to reach an opinion The first is to make observations and on the basis of the observations to draw conclusions
 (6) The second method is to ask questions or form hypotheses and then perform experiments to answer these questions and analyze the data from the experiments and use these data to answer the questions.
 (7) And the third is to synthesize the data that's already available that has been produced by other investigators and other scientists And on the basis of all of the known facts and known and available data, draw conclusions on some scientific matters
 (8) Q Can you give us an example of that first area of science that you described, the objects variable area?
 (9) A Okay If - if a scientist were to be working in the field say an ornithologist, and he observed a particular species of bird laying its eggs in another bird's nest, and he saw that the second species the bird whose nest the eggs were

Vol 27 - 4695

- (1) laid in incubated those eggs hatched the eggs raised them
 (2) and they successfully hatched and fledged the scientist could
 (3) come to the conclusion that the first bird was a parasitic
 (4) species that is it parasitized the nest of another species
 (5) and he did this by observation and drawing conclusions based
 on
 (6) what he had seen
 (7) In the second situation observations are made and on the
 (8) basis of the observations the scientist asks questions and
 (9) these questions are the basis for a hypothesis and he then
 (10) designs experiments that give him data that he uses to answer
 (11) the questions that he s asked and on the basis of the data or
 (12) the answers he s gotten he draws conclusions regarding the
 (13) initial question he s asked
 (14) And in the third method scientists synthesize the data of
 (15) other investigators other scientists information that s known
 (16) from the past and that s being generated in the present They
 (17) put all this information together and they come to conclusions
 (18) draw conclusions based on this other type of information
 (19) A classic example of this would be Watson Crick s discovery
 (20) of the chemical nature of the helical structure of the DNA
 (21) molecule They did no experimentation on their own but draw
 (22) entirely on the data and information generated by other
 (23) investigators
 (24) Q And did they receive the Nobel prize for that sir?
 (25) A Yes I think they shared the Nobel prize for that

Vol 27 4696

- (1) observation
 (2) Q Are all three types of science that you described good
 (3) science?
 (4) A Yes All three of these sciences these methods are
 (5) acceptable and they re used in varying degrees in different
 (6) fields of science
 (7) Q All right Now sir did you - did you do some work for
 (8) the - a natural resource damage assessment for the Trustees
 (9) that is the federal and state government after the oil spill?
 (10) A Yes I did
 (11) Q By whom were you hired?
 (12) A I was initially hired it was through Department of
 (13) Justice but I believe I worked for the State at that time to
 (14) review projects and review data that was generated by the
 (15) initial studies following the Exxon Valdez spill
 (16) Q And did you have a particular area that you were called on
 (17) by the Trustees in which to do research?
 (18) A Subsequent to that particular assignment I was asked to
 (19) participate in a study on the effects of petroleum and effects
 (20) of the oil spill on herring in Prince William Sound
 (21) Q All right And in connection with your - your work in
 (22) that particular area did you become familiar as well with the
 (23) work that other scientists were doing for the natural resource
 (24) damage assessment process in the area of herring?
 (25) A Yes Initially I was reviewing other people s projects

Vol 27 4697

- (1) and results and subsequent to that when I was doing my own
 (2) project or I was the principal investigator of my own project
 (3) I had to integrate my work with that of several other
 (4) investigators that were also working with herring at that time
 (5) and some had been working since 1989 I entered the program
 in
 (6) 1991
 (7) Q All right And can you - can you name some of the
 (8) investigators because we re going to - we re going to come
 (9) back and talk about their work a bit who were involved in
 (10) herring investigations besides yourself?
 (11) A The project leader for the whole herring project was Ms
 (12) Evelyn Biggs who s a herring biologist for the department
 (13) of - the Alaska Department of Fish & Game Dr Gary Marty is
 (14) a veterinary histopathologist at the University of California
 (15) Davis Dr Brendan Norcross University of Alaska at
 (16) Anchorage, is an oceanographer and she was involved in
 studies
 (17) on herring larvae and Dr Mike McGurk of Triton I don't
 (18) recall - Triton is the name of a company consulting firm He
 (19) works for British Columbia He also worked on the early stages
 (20) of the study And Dr JoEllen Hose of Occidental College in
 (21) California worked on the cytogenic and deformity studies in
 (22) the herring
 (23) Q Now with respect to your own research rather than work
 (24) with the other scientists but your own particular focus did
 (25) you do a laboratory study in 1991?

Vol 27 4698

- (1) A Yes In 1991 I conducted a laboratory study
 (2) Q And what in a very general way what did that involve
 (3) sir?
 (4) A The study was designed to evaluate the effect of Exxon
 (5) Valdez crude oil on developing herring embryos under
 controlled
 (6) laboratory conditions
 (7) Q And did you subsequent - and we ll come back to that
 (8) Doctor as you might imagine but did you subsequently do
 (9) another study in - later on?
 (10) A Yes I was - I did several studies That same year I
 (11) also did a study in the field
 (12) Q What did that involve? Again very generally
 (13) A That involved artificially spawning herring and putting the
 (14) newly fertilized eggs in the field at previously oiled and
 (15) unoiled sites and then retrieving them after ten to twelve
 (16) days and determining whether or not there were any differences
 (17) in the development or survival of these embryos from the
 (18) different sites they were exposed at.
 (19) Q Some were oiled sites and some were unoiled sites?
 (20) A Right Half at oiled sites and half were at unoiled sites
 (21) Q And in 1992 were you also involved in a subsequent study?
 (22) A Yes In 1992 I did a study in conjunction with ADF&G
 (23) again and this involved reproductive impairment, and we
 looked
 (24) at individual herring collected in oiled previously oiled and
 (25) previously unoiled sites and attempted to determine whether or

Vol 27 4699

- (1) not there was a difference in the survival rate of their
 (2) offspring dependent on which site we collected them at.
 (3) Q All right. Now was your work published sir?
 (4) A There was - the work that I did on the herring in Prince
 (5) William Sound?
 (6) Q Yes sir
 (7) A The - there is a final report that covers all of the work
 (8) that I completed that has been submitted to the Trustee Council
 (9) and two of the three projects have been accepted for
 (10) publication in the Canadian Journal of Fisheries and Aquatic
 (11) Sciences. And the third one has been written but is still
 (12) waiting one component by Dr. Marty, who hasn't yet completed
 (13) his phase and it's being submitted.
 (14) Q All right. Did your involvement with the plaintiffs in
 (15) this courtroom begin after your work with the Trustees?
 (16) A I was approached by the plaintiffs following the completion
 (17) of my work and after it was all presented at the Exxon Valdez
 (18) symposium that occurred in Anchorage in January or February
 (19) of
 (20) 1993.
 (21) Q Now sir let me get on to some of the substance and let us
 (22) learn a little bit about herring maybe more than we ever
 (23) wanted to know about herring.
 (24) As a starting place I'd like to call upon your expertise
 (25) in the area of the biology of herring, and I'd like to start,
 (26) if we can to have you explain in a generalized way the herring

Vol 27 4700

- (1) life cycle
 (2) A Is this my magic wand?
 (3) Q There should be a magic wand there, sir. With reference to
 (4) Plaintiffs Exhibit 482 can you explain generally the herring
 (5) life cycle?
 (6) A Yes. Can you all hear me if I speak like this?
 (7) This figure represents a schematic diagram of what herring
 (8) do over a period.
 (9) Q Perhaps a little louder Doctor.
 (10) A This represents a diagram. This diagram represents what
 (11) herring do during the course of their normal life cycle. And
 (12) here the upper portion of the figure you see representation
 (13) of kelp. This could be fucus or eelgrass or any of the other
 (14) large kelps that are present in Prince William Sound. And this
 (15) is a substrate on which herring lay their - frequently lay
 (16) their eggs and the eggs that incubate on this material for up
 (17) to 21 days and then hatch.
 (18) Once they hatch then we have a stage that is known as
 (19) larvae and the earliest stages of the larvae still have the
 (20) yolk attached to them. It's called a yolk sac and they live
 (21) off this yolk material while it's being absorbed and they also
 (22) grow. During the first ten to twelve days following hatching
 (23) they live right at the surface of the sea, right at the
 (24) air/water interface and they actually orient themselves in a
 (25) vertical position and try to maintain that position. And the

Vol 27 4701

- (1) only time they're removed is if there's some churning of the
 (2) water and the forces of the water push them down.
 (3) As they get older and older they begin to distribute more
 (4) and more widely through the water column and the water
 (5) column.
 (6) meaning that part of the water between the surface and the
 (7) bottom. And by the time they're about 45 days old they have
 (8) distributed themselves pretty well throughout the water column
 (9) and are able to swim against current.
 (10) Up until that time they've been subject to drifting with
 (11) the currents because they weren't able to - they weren't
 (12) strong enough or able to swim against these currents, do
 (13) wherever they happen to be at the time of the metamorphosis
 (14) that is became strong enough to swim against the current.
 (15) That's where they settled out and became - or began their life
 (16) as a juvenile fish.
 (17) Now as the juveniles one and two year old fish they tend
 (18) to stay segregated from the rest of the spawning population.
 (19) They do mix to some extent, but by and large they don't
 (20) integrate with the spawning population until they reach three
 (21) years old. And at three years old 30 some percent, on
 (22) average, begin to integrate with the spawning population but
 (23) don't actually begin spawning at that time. Now this can
 (24) range anywhere from zero to perhaps 50 to 60 percent,
 (25) depending
 (26) on the size of the class. This is quite variable.
 (27) By four years old however the fish have begun to

Vol 27 - 4702

- (1) integrate and mix with and become a part of the spawning
 (2) herring population and they are actively spawning. And at
 (3) this time ordinarily one would expect over 60 percent of
 (4) the - that year class that is those that were hatched from
 (5) this group of eggs, to be incorporated into the spawning
 (6) population. That's at four years old.
 (7) And then five years old they're 80-plus percent
 (8) incorporated, and then virtually all of them are in the
 (9) spawning population until they die. And herring live in Prince
 (10) William Sound, they can live as long as 13 years, but generally
 (11) by eight to nine years they've - the transition rate has
 (12) taken them out, and so there's virtually none left in the
 (13) population after nine years old.
 (14) Q All right. Sir, given - given these numbers, when would
 (15) you expect herring that were embryonic, that would have been
 (16) the subject of spawning in 1989, to first start coming back as
 (17) spawning fish themselves?
 (18) A Traditionally you would expect to see the first ones
 (19) entering at three years old so that would be in 1992.
 (20) Q Then would a substantially larger group come in in 1993?
 (21) A 1993 a much larger group would enter the population and
 (22) that's the first year you would expect to see them actively
 (23) spawning or participating in the spawning with the rest of the
 (24) population.
 (25) Q And by 1994 would the group be fully recruited?

Vol 27 4703

- (1) A By 1994 they would be over 80 percent recruited
 (2) Q All right Now you described a phase and I think it was
 (3) early on where the larvae were floating on the - or were on
 (4) the surface or near the surface During that phase are the
 (5) larvae subject to the movement of the water?
 (6) A Yes They re - until they metamorphose that is until
 (7) they reach the stage where they are capable of swimming
 against
 (8) the currents which is about 45 days I believe they are
 (9) subject to drift wherever the currents take them
 (10) Q All right Now in this - this normal herring pattern
 (11) are there some particular years or year classes that are larger
 (12) than others?
 (13) A Yes Classically there s one large year class that
 (14) dominates all of the spawning population and this occurs this
 (15) cycle is about every four years a new group of fish comes into
 (16) the spawning population and becomes the dominant class
 That
 (17) means that the majority of the spawning fish are made up of
 (18) that one-year class
 (19) Q Is the life cycle that you've described using the exhibit
 (20) that we have in front of us pretty much the same way that
 (21) herring works in areas of Alaska other than Prince William
 (22) Sound?
 (23) A Yes Most of the Alaskan - the herring in Alaskan waters
 (24) from Southeast up to the Alaska Peninsula have this four year
 (25) life cycle - or have this initial four-year life cycle and

Vol 27 4704

- (1) respond pretty much the way I ve described
 (2) Q All right Now do you have a series of photographs that
 (3) you ve asked me to put together to demonstrate some of the
 (4) phases along the way here sir?
 (5) A Yes
 (6) Q Try and pull up the first which is 471
 (7) Can you explain to us what s going on in this 471 sir?
 (8) A Yes I ll give it a shot This - this picture represents
 (9) the developmental stages of the herring from fertilization
 (10) until just prior to hatching or until it s a fully developed
 (11) larva inside the egg And this can be broken down into two
 (12) broad categories The first broad demarcation would occur at
 (13) about this point
 (14) Q It may be too dark to be able to use the pen
 (15) A Doesn t seem to put anything on there
 (16) Q The background may be just too dark If you d like to
 (17) sir and with the Court s permission I could have you stand
 (18) down and just point on this one exhibit - there you go You
 (19) got a green color that works?
 (20) A We ll settle for what we have here
 (21) All of the stages from fertilization through this stage
 (22) that s got the multiple green marks on it, are stages of the
 (23) embryo that precede the differentiation of the cells That
 (24) means that all of the cells during this period of time are
 (25) virtually identical

Vol 27 4705

- (1) We don t have brain cells and liver cells and kidney
 (2) cells We have embryonic cells and these cells are
 (3) represented if you look in here by see a single cell that
 (4) becomes fertilized then you have two cells That s one cell
 (5) division and cell divisions go on doubling These cells have
 (6) four eight sixteen et cetera We end up with hundreds and
 (7) thousands of cells making up this early embryo but like I
 (8) said up to this point up to here all of these cells are
 (9) virtually identical They look one like another and you can t
 (10) tell which is going to be kidney or spleen or liver or gonad or
 (11) brain
 (12) After this point the cells begin to differentiate and the
 (13) tissues begin to form and as the tissues begin to form you
 (14) start to see an embryo forming and one of the first things you
 (15) see is an eye starting to show up You can see it right there
 (16) in that embryo And as we proceed through more and more
 and
 (17) more hours you see that the embryo grows larger fins begin to
 (18) develop muscles develop the eye becomes colored the ears
 (19) develop the lenses in the eye You can see the heart beating
 (20) inside of this organism if you look at it under a microscope
 (21) and from this point on then you start to have differentiated
 (22) tissue or tissue that is becoming what it s supposed to be and
 (23) beginning to function the way it s supposed to
 (24) The critical thing here and the business that I attend to
 (25) and that is toxicology is that these two sides the two sides

Vol 27 - 4706

- (1) of this line respond differently when exposed to the same type
 (2) of toxic substance If the very earliest stages where there
 (3) are just a few cells are exposed to a toxic substance
 (4) generally the organism dies and it never develops but once it
 (5) starts to develop several hundred or several thousand cells
 (6) then damage occurs That s usually seen as a deformed
 organism
 (7) or birth defect when the thing finally hatches
 (8) If the damage occurs or if the exposure occurs after this
 (9) time when the tissues begin to develop and start to function
 (10) as normal tissue cells the types of damage that result are
 (11) quite different. Then they begin to be more long term types of
 (12) damage
 (13) Classical one that I've done some work on is very well
 (14) represented in literature If you expose older embryos to
 (15) petroleum hydrocarbons or a number of other types of toxins
 (16) when they grow up and become adults they develop tumors or
 (17) cancer
 (18) MR COOPER Excuse me Your Honor I'm a little
 (19) concerned we re getting into a long narrative here and I m not
 (20) sure I ll have the opportunity to make an objection should one
 (21) arise
 (22) THE COURT See if we can tighten down just a little
 (23) bit to question and answer form just a little bit
 (24) BY MR JAMIN
 (25) Q Why don t you complete your point Doctor and I'll move on

Vol 27 4707

- (1) to another question
 (2) A Okay What I m saying is physiological changes occur more
 (3) often in the older embryos in the older embryo than the
 (4) earlier embryo The earlier embryos develop some type of birth
 (5) defect.
 (6) Q All right. Now let me ask you if you can identify the
 (7) next photograph and tell us what this is
 (8) A Yes This is a photograph of actual live herring embryos
 (9) and this - they represent the earlier stages If you look
 (10) right here you can't see - maybe I can -
 (11) Q Can you make reference to the particular segment or the
 (12) quadrant of the diagram and that may help us?
 (13) A Can you see the pointer?
 (14) Q The pointer we can see now
 (15) A Can you see my pointer?
 (16) Q Yes
 (17) A Right there where that little red dot is that dark colored
 (18) arrow or that white area is cap of cells, several thousand
 (19) cells growing around the yolk. And the yolk is that sort of
 (20) clear area on the inside of the larger bubble and the larger
 (21) bubble that you see there is the chorion or the egg shell of
 (22) the embryo
 (23) Q And do we have a somewhat subsequent stage with 4737
 (24) A Yes Here in 473 you can see the embryo This is the
 (25) outline of the egg shell right here This is the embryo's eye

Vol 27 4709

- (1) Those are the types of animals you see hatching Then as
 (2) they get older and older they begin to look more and more like
 (3) a herring, and the metamorphosed herring, the one that is able
 (4) to swim on its own is represented by this group down here and
 (5) they're about 45 days old And the ones that I've worked with
 (6) almost exclusively in my work has been those just post
 (7) hatching so I've been looking at what has happened to them as
 (8) a consequence of what they were exposed to as embryos in the
 (9) egg
 (10) Q All right. Switching just a moment, Doctor, to your
 (11) expertise in the area of aquatic toxicology, can you explain to
 (12) the ladies and gentlemen what affect petroleum release has on
 (13) herring? And have you asked that I create some exhibits to
 (14) deal with that as well?
 (15) A Yes
 (16) Q Let's call up the first of them then sir Explain
 (17) please to the ladies and gentlemen what's going on with
 (18) number
 (19) 484
 (20) A Okay This is a slide that I use in my class lectures to
 (21) explain what happens in general to petroleum when it goes into
 (22) the marine environment. And as you can see there's an oil
 (23) slick leaking from the tanker the ship at the very top, and
 (24) this is what most people see and it's the most obvious
 (25) component of oil but what happens immediately after the oil is
 released is that the very lighter molecules - petroleum being

Vol 27 4708

- (1) this is the embryo's head and you can see the body twisting
 (2) around like so That's a developing embryo He's gone on to
 (3) the stage where the tissues have begun to develop and you
 (4) can
 (5) see actual organs starting to form inside the animal
 (6) Q And sir with 474 do we have a later stage that you can
 (7) describe to the jury?
 (8) A Yes This - this is a slide of herring embryos just prior
 (9) to hatching You can see the eyes are pigmented These two
 (10) dark objects - doesn't seem to be writing, but the two dark
 (11) objects in each of those eggs are the eyes You can see the
 (12) ears developing They're the kind of clear organs just behind
 (13) the eyes And you can see that the little beast is wrapped all
 (14) around the yolk and just waiting to pop out of the shell when
 (15) the time comes
 (16) Q All right. And with Exhibit 510 do we have a depiction of
 (17) the subsequent stages of herring larval development?
 (18) A Yes Once they hatch then the larvae go through a series
 (19) of growth changes and metamorphosis The very top figures
 (20) here the very top embryo or larvae that you see these three
 (21) at the very top are what one ordinarily sees immediately
 (22) following hatching They still have their yolk sacs attached
 (23) They can be more or less developed They may have to go
 (24) through a little bit more development yet Sometimes the
 (25) mouth
 (26) is not fully developed sometimes it is depending on the types
 (27) of conditions they incubate in

Vol 27 - 4710

- (1) made up of thousands of different chemicals the very lighter
 (2) chemicals begin to evaporate These go into the atmosphere
 (3) and
 (4) are lost.
 (5) Other components are mixed with oil - or mixed with water
 (6) rather and you can have oil and water emulsions or water and
 (7) oil emulsions basically the same sort of thing you get when
 (8) you shake up oil and vinegar salad dressing The oil and
 (9) vinegar mixes together for a short time then they begin to
 (10) separate again You get this kind of mixing Some cases you
 (11) have water and oil emulsions and others oil and water
 (12) emulsions And what's left -
 (13) Okay From those two some of the molecules then that are
 (14) still the very smallest molecules dissolve into the water In
 (15) addition to those that dissolve into the water there's also
 (16) small droplets ranging in size from microscopic to visible
 (17) that are also mixed in like your oil and vinegar dressing into
 (18) the water and these become bound with particulate materials in
 (19) the water column and are frequently sedimented out to the
 (20) bottom And there they come in contact with whatever
 (21) vegetation or plant or animal life that's there or they're
 (22) bound or mixed with the sediment material
 (23) I lost my picture
 (24) Q You got it back again?
 (25) A I didn't want it back
 (26) Q Are you trying to get a particular section sir?

Vol 27 4711

- (1) A I m trying to blow up a section
 (2) Q Is it the lower left hand quadrant?
 (3) A Solution okay This is the component that I ve dealt with
 (4) most in my studies that is that part or component of
 (5) petroleum that goes into the water The rest of it I let other
 (6) people work with
 (7) Okay And there s two phases as I mentioned One phase
 (8) is solution That is where the components the light
 (9) components are actually dissolved into the water such as salt
 (10) or sugar would dissolve into water and these components are
 (11) called the gasoline and diesel range hydrocarbons
 (12) The second component that doesn t really go into solution
 (13) but makes more of an emulsion is whole oil and this whole oil
 (14) is present in the form of droplets ranging in size from
 (15) microscopic to visible with the naked eye And this material
 (16) is distributed throughout the water column into the sediment
 (17) and is - interacts with the various components of the manne
 (18) environment following its introduction
 (19) MR JAMIN I think this may be a good time to break
 (20) THE COURT Ladies and gentlemen we ll adjourn at
 (21) this time Please remember my instructions about not listening
 (22) to or watching any media broadcast about our case We will
 (23) reconvene at 8 00 tomorrow morning
 (24) Do I need to see counsel about things today?
 (25) MR O NEILL. I wanted to give you a progress report

Vol 27 4712

- (1) and that s all
 (2) THE COURT Fine The jury is excused and counsel
 (3) will remain for just a moment please
 (4) (Recess at 2 00 p m)

Vol 28 4720

(1) BY MR JAMIN
 (2) Q Dr Kocan yesterday when we ended the testimony we had
 (3) talked about the dissolution of petroleum into the water column
 (4) and the churning when the petroleum entered the water
 column
 (5) I want to move now to ask you whether petroleum components
 (6) those that you ve described which enter the ecosystem this
 (7) way have any toxic effects on fish found in that ecosystem?
 (8) A Yes they do
 (9) Q And let me call up 465 and in reference to this exhibit
 (10) sir could you explain to the ladies and gentlemen of the jury
 (11) what sorts of effects there are?
 (12) A Yes This is a list of classical toxic end points that
 (13) I ve prepared and it describes three basic types, that is
 (14) acute subchronic and chronic effects Acute means it happens
 (15) relatively quickly chronic means that it takes a longer period
 (16) of time and subchronic meaning that it s someplace in
 (17) between And under acute I have lethality irritability and
 (18) necrosis which means death irritability which means that the
 (19) organism is uncomfortable and behaves irrationally and
 (20) necrosis which is cell death birth defects and
 (21) reconstructive changes are categorized and then carcinogenic
 (22) And the life span of the animal and tissue degeneration over a
 (23) long time is listed under chronic and these are the types of
 (24) end points - some of the many end points that toxicologists
 (25) look for when organisms are exposed or suspected of being

Vol 28 4721

- (1) exposed to some toxic agents
 (2) Q Now how do these toxic end points occur?
 (3) A I m sorry?
 (4) Q What is the process by which the oil leads to these toxic end points?
 (5) A Well I have to speak in broad generalities because the mechanisms vary with each of the types of response but generally the organism must be exposed to some component or components of the oil and these must then enter the animal s body and interact in some way either with the structure or function with this animal to produce these effects
 (12) Q Now in addition to the toxic end points set out in Exhibit 465 are there other toxic responses below which any of these sorts of responses may occur?
 (15) A Well there is an additional toxic response that s known as geneotoxic response or toxicity to the genetic components of an organism
 (18) Q With reference to 466 can you explain geneotoxicity?
 (19) A As it states geneotoxicity is directed towards the hereditary components of the living species I might add that in the way of definition geneotoxicity is generally accepted to occur at concentrations below which all of these previous concentrations of toxicity - below which all of those previous end points are observed so this can occur in the absence of those end points

Vol 28 4722

- (1) Q Sir can you explain to us what causes geneotoxicity and again this is with reference to Plaintiffs 467?
 (3) A Again in generalities geneotoxicity results from the interaction of chemical or physical agents with the genetic components or the DNA of the living organism and thereby altering it so that it is no longer in the same form that it was originally And if we can put this in terms that are possibly understandable it alters the genes or those components of the genetic material that term heredity of the next cell or the next generation
 (11) Q Now is the concept of mutation used in this area?
 (12) A Mutations are one form of geneotoxicity
 (13) Q Have you prepared a chart to explain that to the ladies and gentlemen of the jury?
 (15) A I believe I have
 (16) Q Is 468 that chart sir?
 (17) A Yes that s correct
 (18) Q What are the consequences then, of mutations?
 (19) A Mutations can occur in two types of cells in the living organism one is the somatic cell and the other is the germ cell In the way of a brief explanation somatic cells are those cells of our body that will make up skin and liver and spleen and muscle all of these components The germ cells are the cells that produce gametes that is ovaries and sperm and eggs

Vol 28 4723

- (1) Now the same types of mutation of genetic alterations can occur in both types of cells it just depends on which cell is exposed to the toxic agents Somatic mutations are mutations that occur in the somatic cells generally result in neoplasm or cancer in the cell doesn t die first and terata or birth defects again if the developing embryo doesn t die first
 (7) Now these birth defects are not transmitted from the parent or embryo or offspring They are direct effects on the developing embryo by chemical or physical agents independent of the female s exposure Now the germ cell mutations result in recessive mutations that is recessions or mutation in the cell that we can t see they don t express themselves
 (13) Can I give an example?
 (14) Q Sure
 (15) A A couple of examples that are probably recognizable by most people would be - albinism is one A parent can be carrying an albino gene and transmit this and as long as the other parent doesn t transmit the gene the offspring is normal But if they both transmit albino genes and the offspring receives this combination they are born without pigment
 (21) Sickle cell anemia is another form of recessive gene in which some individuals may carry this recessive gene and show no signs of disease where if they got both of the genes then they suffer severe problems with the blood cell destruction
 (25) So that s what a recessive gene is It may not express itself

Vol 28 - 4724

- (1) until it s donated to the offspring by both parents
 (2) In addition to that the germ cell may produce a lethal mutation that is if the offspring or embryo receives this abnormal gene or chromosome it can ultimately die It may die very early in gestation or it may die after birth or some suffer some type of physiological or biochemical modification that causes it to die some time later in its life
 (8) Q Now Dr Kocan is there a way to try to determine whether or not these mutations exist before they manifest themselves in the sorts of gross ways that you ve talked about?
 (11) A Yes There are a number of tests that have been developed for trying to screen for mutations or chromosome damage and they range all the way from fairly gross methods of visually looking at the damage to measuring actual mutations And I believe here in this next chart -
 (16) Q Which is 469 Please go ahead and use that if it helps?
 (17) A I hope you all can read these Here I ve got the mutations broken into two categories micro and macro lesions meaning large and small The small ones are so small you can t see them You have to test for them indirectly and they are actually chemical modifications of the DNA molecule that result in a mutation that s inherited in the next cell
 (23) Q See if that helps at all
 (24) A Macro lesions in the upper right of the screen can consist either of numerical changes in the number of

Vol 28 4725

- (1) chromosomes or structural changes Now we all have a specific
- (2) number of chromosomes in every one of our cells and if we are
- (3) exposed to the proper types of agents we can develop a
- (4) situation where we have either too many or too few
- (5) chromosomes If there is too few generally the cell or
- (6) organism dies If there is too many generally there is some
- (7) sort of functional or structural problem
- (8) Structural changes in the chromosomes now is where the
- (9) chromosomes is actually broken or rearranged or damaged in some
- (10) way And you can see this under the microscope this
- (11) right hand column You can stain the cells look at the
- (12) chromosomes with a special technique and photograph them You
- (13) can see this type of damage and this is the type of damage
- (14) that's much easier to detect although it can be related to the
- (15) micro lesions, which are a bit more difficult to see because it
- (16) requires actually looking for the mutation as it develops in
- (17) the surviving cells
- (18) Q Sir with respect to these recessive characteristics have
- (19) you prepared an exhibit to help explain that as well?
- (20) A Yes I have
- (21) Q Try and get that up hopefully it will be a little bit more
- (22) colorful than the preceding group Let me see if I blow this
- (23) up just a little bit
- (24) A Could we just sort of -
- (25) Q Take just the top

Vol 28 4726

- (1) A Before we change this I'd like to just progress from the
- (2) top to the bottom of this scheme here and show here how a
- (3) recessive mutation in a single individual could be amplified
- (4) within a population even after no more mutations or no more
- (5) exposures to the cause as an active agent occurs
- (6) So if we start with the top we can see it better and then
- (7) we'll move down
- (8) Q All right.
- (9) A Okay These are color coded Unfortunately as we go down
- (10) the list the colors change a little bit and might be
- (11) confusing but if you look for pluses and minuses - here we
- (12) go There you see two minuses and in the left hand box you
- (13) see a plus/minus Throughout this presentation just bear in
- (14) mind that the plus means the presence of an abnormal or
- (15) mutant
- (16) gene and we're going to track how this mutant gene can be
- (17) passed on to subsequent generations
- (18) Now these two boxes at the top represent a male on the
- (19) left female on the right and they produce four offspring and
- (20) this is a number that's chosen because the introduction of
- (21) these genes falls in kind of groups of four
- (22) You see that as you cross the male and the female one of
- (23) these pluses or minuses is derived from each partner and it
- (24) goes into each offspring And here on the left you see that
- (25) this offspring has received a plus from this parent and a minus
- (26) from that parent The second green oval has received two

Vol 28 4727

- (1) minuses one minus unaffected gene from each parent
- (2) This blue oval has received an unaffected gene from the
- (3) carrier parent - I mean the affected gene from the carrier
- (4) parent and an unaffected gene from the non-carrier Sorry
- (5) about that.
- (6) And here on the right hand side this square represents a
- (7) perfectly normal individual that's inherited neither of these
- (8) So we have two carrier offspring and two normal offspring being
- (9) produced by a set of parents and one parent carries one
- (10) recessive gene
- (11) We can go to the next one Now let's say this is not a
- (12) human population
- (13) Q Would you have me blow up the middle section?
- (14) A Can you all read the middle section? They would like that
- (15) blown up
- (16) Q I'll get that.
- (17) A This doesn't normally happen in human populations where
- (18) brothers and sisters mate with each other but - not that it's
- (19) unheard of but in animal populations there is a lot of
- (20) animals all in the same area at the same time They don't know
- (21) who their brothers and sisters are so it's possible that a
- (22) brother/sister pair could mate That's not a contention I'm
- (23) making here
- (24) But for purposes of demonstration let's say the brother
- (25) and sister are here You see each carry a plus and a minus

Vol 28 - 4728

- (1) derived from that - from across - from the parents where one
- (2) was a carrier Now if a plus/minus plus/minus both of them
- (3) are carriers here, both of these are carriers (indicating)
- (4) Now when these cross just to simplify since you know what
- (5) the drill is now they will produce one offspring that carries
- (6) both recessive genes like the albino who has two recessive
- (7) albino genes We now have two carriers and we have one
- (8) normal
- (9) individual So we've increased from that population of one
- (10) carrier We've now got two more carriers and a fully affected
- (11) individual
- (12) Could I have the next one? And in this next one we're
- (13) going to cross a fully affected individual with a carrier I
- (14) see you're changing the mode here
- (15) Q All right sir
- (16) A Now same drill We have here a male that's a carrier and
- (17) a female that's a fully affected individual Colors are
- (18) changed but you see we have an affected cross with a carrier
- (19) and these then produce a fully affected individual a second
- (20) fully affected individual and two carriers All of the
- (21) offspring now are affected either as carriers or fully affected
- (22) individuals and we started with just a single mutation in the
- (23) population
- (24) Q All right
- (25) A This is also done I have to emphasize in the absence of
- (26) any further exposure to any genotoxic agents

Vol 28 4729

- (1) Q Now we're going to be building on this understanding in
 (2) just a little bit but let me ask you whether the petroleum
 (3) components you've described and explained to us some of the
 (4) potential difficulties for the fish whether they - when they
 (5) enter the ecosystem do they have any toxic effects on the
 (6) species on which the fish rely on for food as well?
 (7) A The individual chemicals and the combinations of chemicals
 (8) have been found to affect virtually all organisms the same
 (9) There are some quantitative or qualitative differences but
 (10) these substances are generally toxic to one degree or another
 (11) for most living organisms
 (12) Q And is the mode of developing the problems much the same
 (13) for the species on which the fish rely -
 (14) A Yes it is
 (15) Q Now were you called upon by the Exxon Valdez Trustees to
 (16) do some research in this area following the spill and relying
 (17) on the experience that you had?
 (18) A Yes I was
 (19) Q And were you called upon to do studies on the effects of
 (20) the Exxon Valdez oil on developing eggs and larvae of herring?
 (21) A Yes
 (22) Q What were you asked to do Dr Kocan?
 (23) A My I guess general assignment was to determine the
 (24) effects if any, of Exxon Valdez crude on developing herring
 (25) embryos and the larvae that subsequently developed from
 them

Vol 28 - 4730

- (1) and to relate this to any types of toxic abnormalities or
 (2) problems that were observed in Prince William Sound following
 (3) the spill
 (4) Q Did you develop a series of questions to answer as a part
 (5) of your work?
 (6) A Yes I developed an overview of how the studies should
 (7) progress in order to come to the - to try to come to
 (8) conclusions that I was working toward
 (9) Q All right sir And using what we've marked as Exhibit
 (10) 476 can you explain the questions that you set out to address?
 (11) A Yes These three questions consist of first does the
 (12) Exxon Valdez oil have an effect on Prince William Sound
 (13) herring? Obviously if the answer is no that's the end of the
 (14) study and the project. If the answer is yes then a second
 (15) question must be addressed and that question is what do
 (16) these effects look like You had to then describe these effects so
 (17) that we could define them specifically and know how to tell -
 (18) how to identify them in regard to exposure to the oil
 (19) And then third and I think it's a very important component
 (20) of this is to relate it or relate those types of injuries or
 (21) those types of effects to what was actually seen in Prince
 (22) William Sound in herring following the Exxon Valdez spill
 (23) Q Now Dr Kocan how did you go about answering question
 (24) number one?
 (25) A The first question was addressed by exposing developing

Vol 28 4731

- (1) embryos herring embryos obtained from herring in Prince
 (2) William Sound to Exxon Valdez crude oil which has been taken
 (3) off of the Exxon Valdez tanker at the time of the spill These
 (4) were embryos that I had spawned artificially spawned in the
 (5) laboratory from Prince William Sound herring and then reared
 (6) completely in the laboratory under artificial conditions And
 (7) the variable that I was looking at there was the presence or
 (8) absence and the concentration of Valdez crude oil
 (9) Q Let me just show you what's been marked 483 Can you
 (10) explain what this is sir?
 (11) A Yes This is a piece of laboratory apparatus known as a
 (12) separatory funnel Basically it's a glass bottle that's wide at
 (13) the top and narrow at the bottom has a stopper hole where
 (14) materials can be poured in and it's a stopper And at the
 (15) bottom there is a gadget called a stop cock or basically just
 (16) a valve that you can open and drain off the material at the
 (17) bottom And this was used to prepare all the contaminated
 (18) solutions that I used to expose the herring embryos
 (19) Q Let's begin to look at the findings from your research in
 (20) the lab And do you have a series of slides that show the
 (21) ladies and gentlemen of the jury what you found?
 (22) A Yes
 (23) Q Let me call up the first of those sir
 (24) A Following exposure to a range of concentrations of
 (25) hydrocarbons ranging from zero to about ten parts per million

Vol 28 4732

- (1) I believe I observed the development of the embryos until they
 (2) hatched and then I collected the newly hatched larvae and
 (3) analyzed these larvae for a variety of deformities or whatever
 (4) differences there were relating to the exposed and unexposed
 (5) and the various concentrations
 (6) And the first observation I made first was that the oil
 (7) killed virtually none of the developing embryos They made it
 (8) all the way to hatching regardless whether they were exposed
 (9) or not and in the same numbers in all of the exposure groups
 (10) but at the time of hatching I began to notice a subtle
 (11) difference And in the top panel of this graph you'll
 (12) notice -
 (13) Q Would it be helpful to blow that up?
 (14) A I think it probably would be better - this is for - you
 (15) don't need to know the numbers I can tell you what they are
 (16) On the top graph that represents the number of individuals
 (17) that hatched each day over a period of time following
 (18) fertilization and the horizontal axis or the axis that runs
 (19) this way is the dependant variable that is the number of
 (20) days And the vertical axis or the ones that run upright
 (21) tells you the individuals that hatched each day
 (22) So if you look at a particular day you can see how many
 (23) individuals hatched And the two lines mean that there were
 (24) two groups of fishes that were - or embryos that were used in
 (25) this experiment And basically what that says is that in 19 to

Vol 28 4733

- (1) 20 days following the fertilization the majority of the
 (2) embryos hatched and they hatched alive When I say hatch I
 (3) mean alive they weren't dead and fell out of the egg
 (4) Now in the second panel in the middle those represent
 (5) three of the lowest concentrations of hydrocarbons that were
 (6) present in the exposures that I did and you see there that
 (7) there is a little bit of variability in the days that some of
 (8) the groups hatched There is three groups here represented in
 (9) this middle panel but again about 19 days you see that the
 (10) majority of the embryos hatched
 (11) In the bottom panel however you see at the higher
 (12) concentrations that hatching was premature instead of
 (13) hatching on day 19 they hatched around beginning day 14 and
 (14) were virtually finished by day 15 16 So the trend here is
 (15) that exposure to increasing concentrations of oil or an oil
 (16) component causes premature hatching to occur in herring
 (17) embryos and this is something that's been observed in a
 number
 (18) of different species and a number of different laboratories for
 (19) petroleum hydrocarbons
 (20) Q Now in your research did you also look at the larvae
 (21) themselves sir?
 (22) A Yes We examined - following this hatching the larvae
 (23) were collected on the day that they hatched each day Then
 (24) they were taken out and they were preserved and these were
 (25) then examined for their relative I say normalness were there

Vol 28 4734

- (1) any birth defects present or abnormalities
 (2) This slide represents just three normal herring embryos
 (3) It's presented just so you get a feeling for what they look
 (4) like
 (5) The middle embryo has a small defect which we'll get into
 (6) a little later but basically the impression is that they are
 (7) separate their heads are separate their eyes are where they
 (8) belong Not an awful lot wrong with them They would be
 (9) considered for impression purposes normal embryos This
 (10) wasn't the Exxon Valdez study, but it was a petroleum related
 (11) study
 (12) The embryos that were exposed to petroleum hydrocarbons
 (13) looked like the following slide Now again for impression
 (14) purposes it's obvious they were not normal they are deformed
 (15) bent spines eyes are not right These are organisms that are
 (16) not likely to survive Well these are organisms that are not
 (17) going to survive no question about that
 (18) Q Now do we have some pictures from your own larvae from
 (19) your own study with respect to the Exxon Valdez?
 (20) A Yes we do
 (21) Q Let me pull up 481
 (22) A Okay Here are represented three larvae The anterior or
 (23) middle of the body toward the head were exposed in my
 (24) laboratory to Exxon Valdez crude
 (25) The center larvae that's a normal individual the jaws are

Vol 28 4735

- (1) normal the eyes are where they belong The yolk sac which is
 (2) this little gadget right here and carries all the nutrients
 (3) this little fish will live off of for about the first ten days
 (4) to two weeks of its life It's normal all the muscle
 (5) structure in the body you can see all the segments appear
 (6) normal
 (7) Now at the very top of the screen you see the yolk sac is
 (8) very much smaller the yolk is smaller there is a lot of space
 (9) in that sac And in the bottom one the pericardial region
 (10) that means the region around the heart just below that second
 (11) dot is filled with fluid and this is a condition called
 (12) pericardial edema or fluid filled sac around the heart.
 (13) These are some conditions I found in the larvae that I
 (14) worked with Go ahead
 (15) Q Let me show you the next one you asked me to have
 (16) available 479
 (17) A This is a close up to give you a better view of the head
 (18) and how the development occurs The larvae at the top is a
 (19) newly hatched normal larvae Its jaws are developed in such a
 (20) way that they will meet each other when they close The spine
 (21) is straight, the yolk sac is relatively normal no problems
 (22) The larvae to the left you see the upper jaw is mostly
 (23) missing because the eye is hanging or protruding below the
 (24) level of where the upper jaw should be and the entire jaw
 (25) line as you can see extends clear back behind the eye which

Vol 28 - 4736

- (1) is abnormal if you compare it to the fish on the right-hand
 (2) side And just behind the head there is a kink in the spine
 (3) Subtle differences but still differences that are going to
 (4) affect the survival of these individuals
 (5) Q Call up the next one you asked that I show you sir
 (6) A This individual goes without explanation I think it's
 (7) fairly obvious there is no way this individual is going to
 (8) hatch
 (9) Now in the higher concentrations that I used in the
 (10) laboratory studies 100 percent of the larvae that hatched were
 (11) this type of configuration They were just totally deformed
 (12) and totally incapable of survival on their own
 (13) Q Next I have 480
 (14) A This is again another individual You see the yolk sac is
 (15) very small The yolk sac there is much smaller than it should
 (16) be The tail is obviously deformed and the upper jaw is
 (17) truncated that is it has grown out as far as it should so it
 (18) properly meets with the lower jaw And the gill region just
 (19) behind the lower jaw is obviously swollen and deformed it
 (20) would be right there the entire body structure of this animal
 (21) is not right as you saw in the picture
 (22) Q Let me show you 485
 (23) A This shows herring larva that obviously has a bent spine
 (24) the yolk is fairly normal proper sides and location There is
 (25) no problems anterior to the yolk sac but the eyes are

Vol 28 4737

- (1) protruding from the side of the head and the lenses are
 (2) protruding from the eyeballs Obviously there is a gross
 (3) deformity and no chance of survival
 (4) Q Next one
 (5) A This fella is upside down it has no lower jaw and you can
 (6) see there is no lower portion to the face which would be
 (7) facing up in this case That's where the lower jaw should be
 (8) The top of the head is here where that unusual bump is and
 (9) the eyes are hanging down into what would be the roof of the
 (10) mouth
 (11) Q Finally 487 sir
 (12) A This one has a grossly deformed spine and it has no facial
 (13) features no mouth no eyes no ears They have overlaid ear
 (14) bones not capable of surviving on its own
 (15) Q Now sir in your research was there a relationship in the
 (16) sorts of deformities which we've seen and the concentration of
 (17) Exxon Valdez oil to which the eggs were exposed?
 (18) A Yes there was a relationship between the two
 (19) Q Did you prepare a chart to explain that?
 (20) A Yes I did
 (21) Q Let's look at 511 Please go ahead and explain
 (22) A This chart represents the number or the percent of normal
 (23) larvae that hatched at each of the concentrations to which I
 (24) exposed them Now the concentrations are listed on the
 (25) bottom
 (25) in parts per million You'll hear that term come up many times

Vol 28 - 4738

- (1) during this trial And on the left the concentration is zero
 (2) That would be the control And as we move to the right the
 (3) concentrations increase until at the far right they reach 9 67
 (4) or for purposes of discussion we'll just say ten parts per
 (5) million
 (6) And you can see when the concentration exceeds 9 or less
 (7) than one part per million that there are no normal larvae
 (8) Now this is - I need to back up a little bit here and explain
 (9) it to you These concentrations represent only dissolved
 (10) hydrocarbons Remember yesterday we discussed the
 (11) dissolved
 (12) and the droplet types of mixtures with the water? There is no
 (13) whole oil in these This is purely dissolved hydrocarbons and
 (14) these measurements are made just on the diesel range The
 (15) gasoline range hydrocarbons are very volatile and when you
 (16) put
 (17) them into the container where the embryos are they very
 (18) quickly evaporate In less than 24 hours most of them are
 (19) gone The most stable component is the diesel range
 (20) So in my experiments you wouldn't see all the details I
 (21) measured the concentrations of gasoline and the
 (22) concentrations
 (23) of diesel and I know what they are but I present them here in
 (24) diesel range just for purposes of stability because it would be
 (25) constant all the way along If the others are needed they can
 (26) be calculated So these are diesel range hydrocarbons and it
 (27) represents what's dissolved in the artificial seawater
 (28) Now what scientists usually do when they are doing

Vol 28 4739

- (1) toxicological studies look for LD 50 which is - because
 (2) statistically it's the easiest number to play with least
 (3) variability That means the lethal dose or in some cases the
 (4) effective dose In this case they didn't die so it's 50/50
 (5) percent of the individuals are affected and 50 percent are
 (6) not
 (7) And in this particular study without going into more
 (8) elaborate details the LD-50 is approximately slightly less
 (9) than a half of a part per million right there Okay? And the
 (10) reason I say that that's the concentration because you'll see
 (11) that there are only even in the controls about 60 percent of
 (12) the larvae that hatch are normal This is not unusual
 (13) In any situation where there are huge numbers of offspring
 (14) produced many of them will not be normal many will not
 (15) live but you need to compare the unexposed to the exposed
 (16) here
 (17) in order to see differences between them
 (18) So you see here where - at the control concentration of
 (19) zero there are approximately 60 percent normal larvae and at
 (20) the 48 concentration there are approximately 30 percent
 (21) larvae And when this is worked out mathematically it comes
 (22) out to be the effective concentration 50 percent
 (23) Q Sir do the concentrations that you chose to use in the lab
 (24) reflect the sorts of concentrations one might expect to have
 (25) found in the areas where herring were spawning in Prince
 (26) William Sound in 1989?

Vol 28 - 4740

- (1) MR COOPER Objection Your Honor I haven't heard
 (2) any foundation Your Honor to establish the witness as having
 (3) any expertise or having done any work in the field of
 (4) concentrations
 (5) MR JAMIN In the foundation - Your Honor I can get
 (6) into it some more but he was in the field in '91 and '92 I
 (7) think we brought that out
 (8) MR COOPER The key point -
 (9) THE COURT I'm sorry I'm one step behind you
 (10) Either ask the question again or read it back one way or the
 (11) other
 (12) MR JAMIN Let me ask you to read it back
 (13) (Record read)
 (14) THE COURT I'll sustain the objection without some
 (15) more foundation
 (16) MR JAMIN I'll develop more foundation
 (17) BY MR JAMIN
 (18) Q In connection with the research you did in the lab and the
 (19) research you did in the field did you become aware of the
 (20) concentrations of oil in the environment where the herring
 (21) spawned?
 (22) A I was aware of the concentrations based on the studies done
 (23) by other individuals
 (24) Q Were those other individuals part of the Trustee process?
 (25) A Yes some of them were and some of them were Exxon's

Vol 28 4741

- (1) scientists
 (2) MR JAMIN May I go ahead Your Honor?
 (3) THE COURT I think so
 (4) BY MR JAMIN
 (5) Q Sir do the concentrations that you chose to use in the lab
 (6) reflect the sorts of concentrations that might have been found
 (7) in the areas where herring spawned were deposited in 1989?
 (8) A The concentrations that occur in the field situation
 (9) following an oil spill are quite variable and they range from
 (10) pure oil to no oil so - and they also depend on how much
 (11) mixing has occurred and how recently after the spill it has
 (12) occurred and a number of factors It's possible that these
 (13) concentrations were present in the field in oiled locations
 (14) following the spill but a direct comparison between the field
 (15) and the laboratory is not really possible because you can't
 (16) exactly replicate all the conditions that occur in the field in
 (17) a laboratory situation
 (18) The experiment was designed to demonstrate that in the
 (19) presence of oil there was an adverse effect on these embryos
 (20) Q Let's go right on to the field then Was there research
 (21) done in the field which reflects the effects of the oil on the
 (22) herring and which overlaps what you did in the lab?
 (23) A Yes There were field studies conducted from 1989 through
 (24) 1992 in the field in Prince William Sound
 (25) Q Did you participate in some of those?

Vol 28 4742

- (1) A I participated in studies from 1991 and 1992 but had
 (2) access to the data that had been developed prior to that time
 (3) Q Can you explain to us what the mode of research was in the
 (4) field?
 (5) A The field studies involved - in 1989 they involved the
 (6) collection of herring embryos from sites that had been oiled
 (7) and from sites that had not been oiled and these embryos were
 (8) brought to the laboratory and in the laboratory they were
 (9) incubated in seawater and allowed to hatch And then the same
 (10) types of abnormalities - or the same types of observations
 (11) were made to determine whether or not there were
 (12) abnormalities
 (13) or mortalities occurring in these larvae that had hatched from
 (14) oil or - on the oiled or presumably unoiled embryos
 (15) Q Let's look at 514 Does that reflect some of the evidence
 (16) from the field sir?
 (17) A Yes This graph represents three years of field data
 (18) collected by other members of the Trustee team working just
 (19) prior to and up to the time I became involved in the study
 (20) and - that's what they represent
 (21) Q What does - does it show certain areas that were oiled and
 (22) certain areas that were not oiled?
 (23) A Yes it does There are three bars represented for each
 (24) year If you see along the bottom of the years 1989 90
 (25) 1991 are represented The blue bar or the bar on the left for
 each of these years is from Fairmount Bay It's in the north

Vol 28 4743

- (1) end of the Sound and was reported to have been not directly hit
 (2) by the oil plume That's Fairmount Bay
 (3) Now the other two bars represent Rocky Bay which is on
 (4) the north end of Montague Island and is a herring spawning
 area
 (5) and was reported variably to be oiled or lightly oiled by
 (6) different investigators And the third bar represents Naked
 (7) Island which was completely surrounded by the trajectory of
 (8) the spill in 1989 and was also a spawning area for herring at
 (9) that time
 (10) And what this graph shows for 1989 is that the two oiled
 (11) areas the two bars on the right produced significantly more
 (12) physical embryos with more physical deformities than did the
 (13) site that had embryos from the unoiled site So embryos from
 (14) an unoiled site had more normal and less abnormal larvae than
 (15) did the embryos that were collected from the two oiled sites
 (16) Now in 1990 all of the physical deformities or physical
 (17) deformities in all of the sites was very dramatically reduced
 (18) the year following the spill But again if you look at 1990
 (19) you'll see the same trend and that is that the Fairmount Bay
 (20) or the blue bar represents the very smallest number of
 (21) abnormal larvae and the two oiled sites or the two bars on
 (22) the right represent larger numbers And in this case the
 (23) difference is - I'd say it's about a hundred percent doubling
 (24) or a hundred percent increase between Fairmount Bay and
 Naked
 (25) Island

Vol 28 - 4744

- (1) Here in 1991 there didn't seem to be any effects that were
 (2) significant between the one oiled site and - or the unoiled
 (3) site and Rocky Bay and there was no spawn collected at all
 (4) from Naked Island They didn't spawn there so they couldn't
 (5) be compared
 (6) So basically what we see for each site during - comparing
 (7) 1989 and 1990 there is overall fewer deformed larvae in 1990
 (8) but in both years the oiled sites produced more abnormal larvae
 (9) than the unoiled sites
 (10) Q Now sir the initial figure for the unoiled area about 70
 (11) percent if I recall is somewhat higher than the results from
 (12) the lab where there was no oil where it was about 50 percent
 (13) or so Can you explain how even for an unoiled area or why
 (14) we're seeing a higher rate than you saw in the lab that 70 as
 (15) opposed to 50?
 (16) A Well could you repeat the question?
 (17) Q All right As I understand it from your laboratory work
 (18) we might expect abnormalities in the range of 50 percent when
 (19) there is no oil and in this area we have 70 percent and it's
 (20) from an area where there was no direct exposure to oiling
 (21) Were there any other factors sir which might have been
 (22) present to explain the difference between the 70 percent and
 (23) the 50 percent we saw in the lab?
 (24) A Well the end points you're looking at here is just the
 (25) abnormalities that are present in the larvae that resulted from

Vol 28 4745

- (1) these eggs However being that it s a complex field
 (2) situation we have no way of tracking all of the history that
 (3) proceeded the deposition of these eggs and the ultimate
 (4) incubation and hatching which means that the adult fish
 coming
 (5) into Prince William Sound in 1989 were swimming through the
 (6) oiled plume when they were entering the spawning grounds
 They
 (7) were also exposed to contaminated food items on their way to
 (8) the spawning grounds as there was oil in the Sound in various
 (9) locations in Prince William Sound
 (10) So my opinion is that in 1989 there was a generalized
 (11) exposure of most components - most of the ecosystem in
 Prince
 (12) William Sound and that these elevated levels relative to the
 (13) subsequent years are due to an overall contamination of the
 (14) Sound
 (15) Q So are you saying that even before the eggs are released
 (16) into the environment that there was some exposure to the
 (17) herring as adults coming in?
 (18) A Yes As I understand it the adults began swimming into
 (19) Prince William Sound throughout the southwest Montague
 channel
 (20) during late March and early April which coincides with the
 (21) time that the oil spill occurred And based on trajectory maps
 (22) and actual measurements of hydrocarbons in the water and in
 the
 (23) mussels that were on the bottom the sea bottom that they
 swam
 (24) through the trajectory coming in and that several of the groups
 (25) spawned within the oiled areas

Vol 28 4746

- (1) Q How would the oil affect the female coming in with her
 (2) eggs sir?
 (3) A Well when an organism is exposed to hydrocarbons the
 (4) route of entry can be by several means natural means One
 (5) the hydrocarbons are taken up directly through the skin or
 (6) gills and enter the body and dissolve into lipid materials
 (7) And even if we are lean and mean brain tissue even has a lot
 (8) of lipids - there is a lot of lipids in our body
 (9) They can also eat contaminated prey in which the
 (10) hydrocarbons are absorbed into the blood stream through the
 (11) intestinal tract and dissolved into lipids and gotten into the
 (12) body
 (13) One mechanism that animals have to get rid of toxic is to
 (14) get rid of that part of body that contains most of the toxins
 (15) In shellfish - they contain high amounts of metals When they
 (16) molt their shell there is high concentrations of metals
 (17) in their shells When they molt the shells they get rid of a
 (18) heavy burden of the toxins that are in the shell
 (19) Organisms that lay eggs that is there is a lot of fat in
 (20) the yolk the lipid solubles or fat solubles are deposited into
 (21) the lipid depos of the yolk and they rid their body of all of
 (22) these - or a high proportion of these contaminants by
 (23) releasing the eggs
 (24) Granted this is potentially sacrificing the offspring but
 (25) it s allowing the individual female to go on and spawn at a

Vol 28 4747

- (1) later time
 (2) Q Let s go back to the lab for a moment and could you
 (3) compare controlled larvae weights to exposed larvae weights?
 (4) A Yeah This graph represents the weight of the larvae at
 (5) the time they hatched I use weights because as you can see
 (6) from the - we saw on the previous pictures it would be
 (7) difficult to measure some of these And I saw that the actual
 (8) biomass the amount of tissue that s there is more
 (9) significant Where they re long and skinny or short and
 (10) skinny these tend to be variable but biomass and weight I
 (11) find more reliable
 (12) So I weighed them got the dry weight immediately after
 (13) they hatched and what I found was in the left hand bar you
 (14) see the weight of the larvae that were not exposed to oil is
 (15) over double or about double that of the weight of the
 (16) individuals that were exposed to oil
 (17) And interestingly enough it doesn t matter what
 (18) concentration if they are exposed to oil their weights were
 (19) lower And these are just the normal larvae These are the
 (20) ones that did not appear to be abnormal These are the ones
 (21) that appeared to be perfectly normal straight no spinal
 (22) defects No spinal defects no jaw defects The normal life
 (23) individuals exposed to oil were considerably significantly
 (24) smaller at birth than the unexposed embryos
 (25) Q Does weight affect survival in herring?

Vol 28 - 4748

- (1) A Yes Weight and age seems to be a good indicator of
 (2) survival and that these individuals have to compete with other
 (3) individuals on the same age and when they are smaller they
 (4) are more prone to predation because they can t escape as well
 (5) They can t compete for food as well with the larger
 (6) individuals and in general their potential for survival is
 (7) reduced
 (8) Q Did the Trustees look at larval size in the field as well?
 (9) A Yes There were two separate studies in the field that
 (10) dealt with larval size
 (11) Q Let me call up -
 (12) A Larval weight
 (13) Q I m sorry?
 (14) A Larval weight.
 (15) Q Let me call up 497 The previous exhibit was 496 Go
 (16) ahead sir
 (17) A This graph is data that I generated from larvae that I had
 (18) exposed in the field at oiled and unoiled sites as embryos I
 (19) had explained to you earlier that I artificially spawned these
 (20) fish and collected their eggs and I developed a small cassette
 (21) made of PVC pipe that I put in the water at different locations
 (22) and put the embryos there and let them incubate and bring
 them
 (23) back in the laboratory and allow them to hatch and I observed
 (24) them
 (25) Now this is 1991 two years after the spill I exposed

Vol 28 4749

(1) embryos at several oiled sites and several unoiled sites and
 (2) retrieved them for the laboratory and one of the findings that
 (3) I had found again those individuals that incubated at unoiled
 (4) sites or sites that had not been oiled in 1989 were
 (5) significantly larger than those that were incubated at sites
 (6) that had been oiled in 1989
 (7) Now I don't have a figure to show this but another study
 (8) was performed by other members of the Trustee team prior to
 my
 (9) coming on the scene in 1989 and they found that the weights of
 (10) larvae that came from oiled sites in 1989 were also
 (11) significantly smaller than the weights of larvae that had been
 (12) collected or incubated at - naturally spawned I should say
 (13) at unoiled sites So in 1989 there was a difference between
 (14) oiled and unoiled sites the oil having significantly smaller
 (15) larvae
 (16) In 1991 there was a difference between the two sites This
 (17) was under experimental conditions where I controlled
 (18) everything except the location and the history of the site and
 (19) in the laboratory exposure to oil verified that the exposed
 (20) individuals would be lighter
 (21) Q Having dealt with deformities and larval size let's go
 (22) back to the lab for a moment where your next findings there
 (23) related to chromosome damage and I'm going to call up 499
 (24) A Yes This represents a group of figures based on exposure
 (25) rates similar to those that I used in the original slide of

Vol 28 4750

(1) data that I showed you where there were physical deformities
 (2) I simplified this a bit by not putting in every single data
 (3) point but I gave you - on the left the blue bar is zero or
 (4) no exposure controls On the far right 24 micrograms or
 (5) parts per million Now that represents one-half of the EC 50
 (6) we described
 (7) If you remember the original graph we showed at that
 (8) concentration you cannot detect the difference in physical
 (9) deformity So what I'm saying when we looked at physical
 (10) deformities these concentrations showed no difference in the
 (11) number of physical deformities but when we looked at the
 same
 (12) individual chromosomes we found a significant increase in the
 (13) number of damaged chromosomes The concentration of oil
 (14) increased until we got up to about 27 percent abnormal
 (15) chromosomes in just a quarter of a part per million
 (16) Q Now were similar analyses done from field herring?
 (17) A That's correct
 (18) Q Let me call up next 500 Does this demonstrate the range
 (19) for field herring?
 (20) A Here again we're dealing with oiled and unoiled sites and
 (21) the bar on the left again represents the control or unoiled
 (22) sites Fairmount Bay That's the control site And the two
 (23) bars on the right represent again Rocky Bay and Naked
 Island
 (24) two of the experimental previously oiled sites
 (25) And you can see that there is quite a significant increase

Vol 28 4751

(1) in the number of damaged chromosomes that were obtained
 from
 (2) larvae that had incubated at those two sites as embryos in
 (3) 1989 And this pattern is exactly the same you see as
 (4) concentrations increase under controlled laboratory conditions
 (5) Q Sir have you selected a couple of slides to show us what
 (6) the chromosome damage looked like that you were measuring?
 (7) A Yes
 (8) Q Look at 492 What does this represent sir?
 (9) A This is a normal fish cell that is undergoing mitosis
 (10) mitosis being cell division or the dividing of one cell into
 (11) two cells And what this shows is the outside of the cell the
 (12) cell wall out here and the chromosome bundles are these two
 (13) dark bands which are - chromosomes are like a bunch of
 (14) spaghetti they get all lined up So in the middle of a cell
 (15) and when it's time to divide they pull apart like this And
 (16) that's what's happening These bundles of chromosomes are
 (17) pulling apart and soon there will be a cell wall laid down
 (18) between the two groups and you will have two cells
 (19) Prior to this event occurring the number of chromosomes in
 (20) that cell doubled This is a normal process and then when the
 (21) cell divides in half each one gets a normal number of cells
 (22) So this is a normal process called anaphase or mitosis And
 (23) this particular stage is called anaphase and the test we used
 (24) to determine whether there was chromosome damage which is
 sort
 (25) of a broad spectrum shotgun approach to measuring as many
 as we

Vol 28 4752

(1) can is an anaphase aberration test
 (2) Q Next one is 493
 (3) A Now I think that big screen in the front shows it at least
 (4) better than I see it on this screen
 (5) Q Do you want me to blow it up?
 (6) A No that's fine If the jury can see this large screen
 (7) that's perfect.
 (8) This again is a fish cell that's been exposed to a single
 (9) component of petroleum hydrocarbons and that's a chemical
 (10) known as benzoid pyrene common laboratory term for
 (11) polyaromatic hydrocarbon extensive research
 (12) Now these were cells that were exposed to just this
 (13) chemical and I believe this was a tenth of a part per million
 (14) I believe It may have been more but a tenth of a part per
 (15) million concentration And what you can see here once again
 (16) the outline of the dividing cell but in this case if you look
 (17) closely between those two bundles here is one bundle there is
 (18) the other bundle you see bits and pieces and fragments of
 (19) chromosomes that are not where they belong You see
 bridges
 (20) Doesn't want to work But you see bridges where
 (21) chromosomes are stuck between the two poles and they don't
 want
 (22) to come apart You see whole chromosomes off on the side
 and
 (23) what's going to happen here now when this cell ultimately
 (24) finishes dividing and produces two - you can't even make the
 (25) cell divide When it divides the probability that each

Vol 28 4753

- (1) daughter cell receives the appropriate number of chromosomes
 (2) is
 (3) very unlikely because they are not where they belong So one
 (4) of them is going to receive too few and one of them is going to
 (5) receive too many and one of them will die and the other will
 (6) develop some sort of structural or functional defect
 (7) If this is in a somatic cell it could result in cell death
 (8) or necrosis or cancer ultimately If it's in a germ cell dead
 (9) germ cell dead sperm or egg or it could result in a defect in
 (10) the hereditary components the genes which are then passed
 (11) on
 (12) to the next individual that receives the gamete produced by
 (13) that cell
 (14) Q Let's go back to the lab for a moment and did you look at
 (15) cytogenetic damage in the lab?
 (16) A Yes we did
 (17) Q What is that sir?
 (18) A Cytogenetic really means damage, visible damage to -
 (19) damage to the visible components of the cell visible genetic
 (20) components of the cell
 (21) Q Did you find in the lab a relation between the amount of
 (22) oil exposure and the amount of cytogenetic damage?
 (23) A Yes Under the laboratory conditions as oil exposure
 (24) increased so did the frequency of cytogenetic damage
 (25) Q Was the phenomena looked at in the field?
 (26) A Yes That was looked at in the field just as was the
 (27) abnormalities and the chromosome damage

Vol 28 4754

- (1) Q Were there similar findings in the field?
 (2) A Yes they were similar
 (3) Q Let's go back into the lab again for your next finding
 (4) Did you look at cell damage independent of chromosome
 (5) damage?
 (6) A Yes we did
 (7) Q What did you find?
 (8) A Cell damage here would be defined as dead cells cells with
 (9) abnormally shaped nuclei cells that had not completely
 (10) undergone cell division may have two nuclei instead of one a
 (11) number of things but basically what we found was that as
 (12) hydrocarbon concentration increased so did the cell damage
 (13) Q That was the lab finding?
 (14) A Yes
 (15) Q Was the phenomena looked at in the field?
 (16) A Yes
 (17) Q Did oiled sites show increased cell damage in the field?
 (18) A Yes they did
 (19) Q Let's go back to your field work for your next finding
 (20) Did you look at hatching success as an indicator of damage?
 (21) A Yes I did
 (22) Q In what year did you study that sir?
 (23) A In 1992 we designed and began studies on reproductive
 (24) success for various - for herring in Prince William Sound and
 (25) we based that on production and successful hatching of viable
 (26) eggs

Vol 28 4755

- (1) Q What did you find?
 (2) A On the basis of that study we found that those female
 (3) herring that were collected from oiled sites produced fewer
 (4) live larvae at hatching then did the females collected from
 (5) unoiled sites I don't know if I got that backwards
 (6) Q You can say it again and clear it up
 (7) A In case I got it wrong fewer of the eggs hatched from the
 (8) females that were collected from oiled sites than from females
 (9) that were collected at unoiled sites The unoiled females were
 (10) more successful than those from the oiled sites
 (11) Q Now up until now sir we've shown some pictures of
 (12) herring from the lab I'll show you 503 and ask you to tell us
 (13) what that is
 (14) A These are three herring that were obtained from Prince
 (15) William Sound or were hatched from hatchery spawned eggs in
 (16) Prince William Sound in 1989 The top larvae is a newly
 (17) hatched normal larvae The larvae on the left and on the lower
 (18) right and lower left are both abnormal They have bent spines
 (19) eyes deformed snouts of a variety of different types of
 (20) damage These were collected - the larvae on the top was
 (21) derived from eggs that had been collected from an unoiled site
 (22) and the two at the bottom were collected from oiled sites
 (23) Q Let me show you next what's been marked 504
 (24) A This is again a similar representation There are three
 (25) larvae here with varying degrees of abnormalities again all

Vol 28 - 4756

- (1) collected from Prince William Sound and used to demonstrate
 (2) that the types of abnormalities that you've seen in the
 (3) laboratory are similar to those that we found in the Sound in
 (4) 1989
 (5) Q Now sir having made the comparisons that you did between
 (6) your laboratory work field work that you did and the field
 (7) work that others did do you have any conclusions to present to
 (8) the jury about the relation between Exxon Valdez crude oil and
 (9) herring following the spill?
 (10) A Yes
 (11) Q Have you collected those in 1994?
 (12) A Sure The conclusions that I came to following the studies
 (13) I did with Exxon Valdez oil were that if herring embryos are
 (14) exposed to crude oil in the laboratory that you can get, and
 (15) you do get premature hatching of the embryos of the larvae
 (16) You also get an increased number of abnormal larvae and this
 (17) is dependent on the concentration of oil that's present You
 (18) get lower weights in even the normal appearing larvae that had
 (19) been exposed to oil relative to those that had not been exposed
 (20) to oil and there is increased cytogenetic or heretical damage
 (21) in the exposed individuals compared to the unexposed
 (22) Q Do you also have a series of conclusions to share with us
 (23) from the work in the field?
 (24) A That's correct.
 (25) Q Call up 495

Vol 28 4757

- (1) A The field conclusions cover studies that were done by
 (2) myself and other individuals whose data I have had opportunity
 (3) to see and use And in 1989 the conclusions were that there
 (4) was increased embryo mortality Now this is based on studies
 (5) that were done by the Trustees prior to my becoming involved
 (6) There were increased abnormalities at oiled sites in the
 (7) larvae and there was an increase in the amount of genetic
 (8) damage in the larvae from oiled sites
 (9) In 1991 - I might put in here too an additional - that
 (10) the weights of larvae collected from oiled sites were also
 (11) lower in 1989 It s not represented up there but I described
 (12) that just a few minutes ago The weights were lower in 1989
 (13) In the study I did in 1991 where I put embryos in the
 (14) field and incubated them and brought them back again we saw
 (15) reduced birth weights at the oiled sites relative to unoiled
 (16) We saw increased numbers of abnormalities in those
 (17) individuals And in 1992 in the one study we did we saw that
 (18) there was a lower hatching rate in females that were collected
 (19) from oiled sites relative to those collected from the unoiled
 (20) sites
 (21) Q All right sir Now I want to apply some of these findings
 (22) to the various year classes that we talked about Do you have
 (23) an opinion as to the effect of the Exxon Valdez oil on the 89
 (24) herring year class?
 (25) A On just the 89?

Vol 28 - 4758

- (1) Q Just the 89 for now
 (2) A Yes My opinion is that that was probably the most
 (3) severely affected year class and that s based on the fact that
 (4) they were the youngest That s the most susceptible stage
 (5) The parents had an opportunity to become exposed prior to
 (6) laying the eggs and they had to rear - their nursery area was
 (7) Prince William Sound the spring and summer following the
 (8) hatching So at the time the majority of the oil was present
 (9) the 89 year class was at its most susceptible stage so
 (10) probably sustained most of the damage
 (11) Q When would that year class start coming back to the Sound
 (12) to spawn?
 (13) A As I explained yesterday normally you could expect to see
 (14) the first returns entering the spawning population but not yet
 (15) spawning as three year olds so that would have been in 1992
 (16) But my experience when we were collecting fish in 1992 was
 (17) that of thousands that we collected we found virtually no
 (18) three year olds at the time They were very few of them
 (19) returning
 (20) Q Would a larger percent of that 1989 year class be coming
 (21) back in 1993 and 1994?
 (22) A In 1993 a larger percentage would be expected to return
 (23) Normally and traditionally or historically one would expect an
 (24) average return of 60 percent or so of the total - four year
 (25) old population in 1993

Vol 28 4759

- (1) Q And a larger percentage in 94 then?
 (2) A Yes They would again increase in 94 when they were five
 (3) years old
 (4) Q Do you have an opinion sir as to whether the effect of
 (5) Exxon Valdez oil on the 1990 herring year class was
 (6) substantial?
 (7) A Well here again my opinion is based on the fact that
 (8) historically - well first the 19 - I m sorry would you
 (9) repeat that question I missed the year again
 (10) Q We ve talked about the 1989 year class Now I want to
 (11) focus on the 1990 herring year class Do you have an opinion
 (12) as to whether the effect of the Exxon Valdez oil on the 1990
 (13) year class was substantial?
 (14) A Well the 1990 year class of course would be the one -
 (15) the year following the spill and their exposure would be not
 (16) directly to oil that had been spilled in the previous year but
 (17) to the subsequent effects or any residual oil or resuspension
 (18) of oil that might be occurring the following year The damage
 (19) would be less extensive and possibly of different types than
 (20) occurred in 1989
 (21) Q Do you have an opinion as to whether there was an effect of
 (22) Exxon Valdez oil on the 1991 year class?
 (23) A 1991 year class? Again if we get further from the spill
 (24) the direct effects that is the effects that resulted in
 (25) direct contamination by oil would be less than would be -

Vol 28 4760

- (1) than they would have been if they were there and present
 during
 (2) the time of the actual spill
 (3) Q So the most severe effect from the spill focuses on this
 (4) 89 year class and that s the class that is returning for
 (5) spawning in 93 and 94?
 (6) A That s correct
 (7) Q Now were the opinions that you ve shared so far with the
 (8) jury today formed prior to your having been retained by
 (9) Plaintiffs in this case?
 (10) A Yes Those were based on data that was available at the
 (11) time were formed prior to being retained
 (12) Q And that was when you were with the Trustees?
 (13) A That s correct
 (14) Q Based upon the field work and lab work you and others had
 (15) done with herring did you form an opinion in 1992 that the
 (16) herring returning in 1993 would be more susceptible to disease
 (17) than normal because they were exposed to Exxon Valdez oil?
 (18) A Yes The conclusions of the synthesis committee that met
 (19) following the completion of all the studies was as I recall
 (20) I ll try to paraphrase it that all year classes that were
 (21) present in 1989 had been affected to some degree by exposure to
 (22) oil, and that all of them would very likely have been - have
 (23) suffered some form of damage to their immune system And I
 (24) believe we predicated an increase in disease frequency
 (25) following that

Vol 28 4761

- (1) Q And was your prediction realized sir?
- (2) A Well in 1993 there was appearance of large numbers of
- (3) lesions in Prince William Sound herring in the spawners and
- (4) these lesions at the time appeared to be related to the
- (5) presence of a virus known as VHS or viral hemorrhagic
- (6) septicemia
- (7) Q Let me break that down First what is a virus?
- (8) A It's a submicroscopic organism that invades or requires a
- (9) living cell for its own existence and it lives in and depends
- (10) on that cell for its reproduction Some viruses are not known
- (11) to cause any problems and others are known to be quite severe
- (12) pathogens
- (13) Q Can viruses have both a latent and an active stage?
- (14) A Yes This is very common in viruses Latent stage merely
- (15) means that it lives within the cell either not reproducing or
- (16) reproducing at such a low rate that its effects or presence is
- (17) not noted The reason viruses cause disease is that they
- (18) replicate very very fast by taking over the machinery if you
- (19) would of the living cell and making replicas of themselves
- (20) and in order to get out of that cell they rupture the cell
- (21) wall and are released by the billions and re infect other
- (22) cells So a latent infection is one which lives harmlessly and
- (23) replicating very slowly and not being shed or released from the
- (24) cell
- (25) Q Could you say again that VHS word?

Vol 28 4762

- (1) A Viral hemorrhagic septicemia
- (2) Q What does hemorrhagic mean?
- (3) A Bleeding
- (4) Q Last word?
- (5) A Septicemia
- (6) Q What does that mean?
- (7) A Combination of Latin a blood infection that's spread
- (8) throughout the body by infected blood
- (9) Q What does the VHS virus do in herring when it's in a latent
- (10) state?
- (11) A What?
- (12) Q Yes
- (13) A Does nothing that I'm aware of
- (14) Q When it's in an active state?
- (15) A Fully active it causes a state of disease I think this
- (16) is a good distinction to make at this time Infection and
- (17) disease are not synonymous As unpleasant as it may seem
- (18) we
- (19) are all infected with things but we aren't all diseased When
- (20) it's an organism an infectious organism begins to cause
- (21) damage
- (22) to our physical or biochemical process and that disease begins
- (23) to show
- (24) Q In the active stage of VHS is it contagious?
- (25) A Yes in the active stage it's very contagious because it's
- (26) being released from the diseased organism or infected
- (27) organism

Vol 28 - 4763

- (1) Q How is it transferred to other organisms?
- (2) A Excuse me When the infection is running its full course
- (3) and there are lesions present for instance on the skin the
- (4) virus is being released from the dying cells on the skin so
- (5) this would be released into the water in the case of herring
- (6) were affected Internal organs are also affected the kidney
- (7) being one of the most common organs but other organs are
- (8) also
- (9) affected
- (10) And in the case of the virus that's replicating within the
- (11) bodies of the animals these viruses are released in body
- (12) fluids specifically they could be released in urine or they
- (13) could be released at the time of spawning in ovarian fluid or
- (14) in the milk that contains the sperm from the males
- (15) Q Now had there been outbreak of the disease noted other
- (16) than in Prince William Sound in herring?
- (17) A There has been one other outbreak of the disease that I'm
- (18) aware of in free ranging herring
- (19) Q Where was that sir?
- (20) A Prince Rupert British Columbia
- (21) Q When was that?
- (22) A It was September approximately of 1993
- (23) Q Was there - or had there been a hydrocarbon or petroleum
- (24) release at that time?
- (25) A Two or three weeks - or sometime in August there was a
- (26) diesel spill in this same location where the disease outbreak

Vol 28 - 4764

- (1) occurred
- (2) Q Sir is it your opinion that the outbreak of the disease
- (3) the VHS disease that we described that was observed in herring
- (4) that returned in 1993 to Prince William Sound was related to
- (5) the Exxon Valdez oil spill?
- (6) A Yes
- (7) Q Why sir?
- (8) A Based on information that is known about VHS virus in the
- (9) European strain of the virus - I should point out this strain
- (10) that we're talking about in herring was only recognized a
- (11) little over a year ago in herring It was first discovered
- (12) quite to the surprise of most virologists in North America just
- (13) in 1989 and then not even in a disease outbreak but during
- (14) routine virus isolations in coho salmon in Washington so the
- (15) Northern America strain of the virus has been here for a
- (16) relatively short period of time and the recognition of it in
- (17) herring just over a year
- (18) To get back to the question my conclusion is based on the
- (19) information that I know about the European strain of VHS virus
- (20) and the large body of literature that's available on it, and
- (21) it's - this virus is very contagious to susceptible or
- (22) non immune individuals So if the virus is introduced to
- (23) non immune individuals it spreads quick and has a very high
- (24) mortality rate
- (25) In addition to that, it's known that environmental stress

Vol 28 - 4765

- (1) can cause a population that's carrying this latent stage of the
 (2) virus that is the inapparent or non-disease stage
 (3) environmental stress can suppress the immune system and
 thereby
 (4) cause this latent infection to become active and the disease
 (5) begins to develop and the virus is released potentially
 (6) causing more harm to individuals
 (7) So based on that information and the fact that the
 (8) hydrocarbons either as individuals or as groups of
 (9) hydrocarbons derived from petroleum are known to suppress
 the
 (10) immune system in mammals birds and fishes I concluded that
 the
 (11) spill very probably contributed to this disease and die-off in
 (12) 1993
 (13) Q Was the disease that was found in Prince William Sound in
 (14) 1993 found as well as in 1994?
 (15) A Yes it was
 (16) Q Was the disease that was found in Prince William Sound
 (17) found in other areas of Alaska such as Sitka or Togiak or
 (18) other areas of British Columbia besides the Prince Rupert area?
 (19) A At this point in time there have been no reports of this
 (20) disease in any of the other areas although the virus has been
 (21) identified at present as a latent phase or a latent stage in
 (22) all of these areas including British Columbia
 (23) Q So the virus is there in other areas but the infection is,
 (24) not there?
 (25) A No The infection is there but the disease is not

Vol 28 - 4766

- (1) Q Thank you for clarifying that And it's your opinion that
 (2) the causative agent to connect the decrease in the immune
 (3) system in herring is the Exxon Valdez oil?
 (4) A That's correct
 (5) MR JAMIN Thank you I have nothing further
 (6) THE COURT Cross-examine
 (7) CROSS EXAMINATION OF RICHARD KOCAN
 (8) BY MR COOPER
 (9) Q Good morning Dr Kocan
 (10) A Good morning Mr Cooper
 (11) Q We've seen one another before?
 (12) A I believe we have
 (13) Q On a few occasions?
 (14) A Yes
 (15) Q One quick question Dr Kocan before I forget you were
 (16) talking about your opinion about the oil spill and this
 (17) contagion that you were describing When did you form the
 (18) opinion that it was the virus in the lesions that caused the
 (19) 93 low run size?
 (20) A I first heard about this disease situation in 1993
 (21) following the - its discovery in the spring herring run
 (22) Q In the spring of 93?
 (23) A That's correct
 (24) Q So you formed that opinion fairly soon thereafter?
 (25) A I was of the opinion that the disease that was seen and

Vol 28 4767

- (1) associated with the - the disease that was observed and that
 (2) the VHS virus that was isolated were indeed cause and effect
 (3) in that the decline in the population was more probably than
 (4) not the result of the disease
 (5) Q All I'm trying to do is find out when you came to that
 (6) conclusion
 (7) A Those were my initial conclusions based on the data
 (8) available at that time
 (9) Q Spring of 93 or thereabouts?
 (10) A Sometimes after
 (11) Q Now I took your deposition on a number of occasions
 (12) didn't I?
 (13) A Many
 (14) Q And let's see let me ask you if I could have - let's see
 (15) it would be page 568
 (16) MR JAMIN Your Honor I object to the use of the
 (17) deposition unless there is some foundation to it The witness
 (18) hasn't testified yet
 (19) MR COOPER I thought he just had when he formed an
 (20) opinion but I'll be happy to ask the next question
 (21) THE COURT Let's set it up so we know why we're
 (22) looking at the deposition
 (23) MR JAMIN Thank you
 (24) BY MR COOPER
 (25) Q Isn't it a fact as of late January of this year you hadn't

Vol 28 4768

- (1) formed an opinion as to why the lesions were the cause of the
 (2) late returns -
 (3) A I believe in my deposition in sometime in 93 I did make
 (4) that.
 (5) Q Well let me see if I can refresh your memory with your
 (6) deposition
 (7) Dr Kocan if I may Your Honor you want to look at page
 (8) 568 there? That's the deposition that I took on January 19 of
 (9) 1994 right?
 (10) A Yes that's what it states here
 (11) Q And you gave that testimony?
 (12) A Is this the date 1/19/94?
 (13) Q Yes
 (14) A This looks like my testimony
 (15) Q May I?
 (16) A Yes
 (17) Q I'll have to call for help here Your Honor
 (18) Now Dr Kocan I asked you did I not do you know
 (19) whether - you don't have an opinion one way or the other
 (20) whether the source and the virus were responsible for the low
 (21) returns in 1993 Answer no I have no opinion on that
 (22) A Yes I see that
 (23) Q Now I want to come back to this question of the contagion
 (24) but what I want to do first is go back to some of the other
 (25) material in your testimony

Vol 28 4769

- (1) If I understand your testimony correctly kind of the
 (2) keystone was that you did some laboratory studies accurate so
 (3) far?
 (4) A So far that s correct
 (5) Q And other people and yourself did some field studies out in
 (6) the field?
 (7) A That s also correct
 (8) Q And what you say you found was that your laboratory
 (9) studies which dealt with exposure of herring to Exxon Valdez
 (10) crude oil correlated what was found in the field?
 (11) A Right The types of end points or the types of
 (12) pathological conditions were similar in the two situations
 (13) Q And that s very important in reaching your conclusions
 (14) isn t it that there was those similarities?
 (15) A That s correct
 (16) Q Now let me start with your laboratory study Now you
 (17) showed us the exhibit - or you had the beaker there with the
 (18) I guess it was artificial seawater?
 (19) A That was artificial seawater
 (20) Q And oil Exxon Valdez crude?
 (21) A That s correct.
 (22) Q Fresh Exxon Valdez crude?
 (23) A That wasn t artificial
 (24) Q Did you try to get as much crude - was the way you went
 (25) about preparing that crude oil mixture with the seawater that

Vol 28 4771

- (1) tell you what the concentrations were that I ultimately ended
 (2) up with
 (3) Q Well you ultimately ended up with some kind of a
 (4) concentration and you proceeded to dilute that?
 (5) A That s correct Once I made the stock solution I diluted
 (6) it with uncontaminated artificial seawater
 (7) Q Now in doing that you didn t set out to try to put into
 (8) that solution - or put into the solution in your artificial
 (9) seawater quantities of crude oil that you believed reflected
 (10) exactly or close to what was out in the field what was
 (11) actually in Prince William Sound?
 (12) A At the time I did that, I had no idea what was in the
 (13) field and it wasn t my intent to do that My intent was to
 (14) get a consistent amount of oil in the water so I could have
 (15) control over that portion of the experiment
 (16) Q And in fact what I need to do is just find out some
 (17) information from you about this exposure regime or the
 (18) quantities that were involved in your laboratory experiment
 (19) If I understood it correctly, you said during your
 (20) testimony that there were and I may be confusing what you told
 (21) me earlier in your deposition but basically there were two
 (22) types of components in this crude oil that you used in your
 (23) laboratory study one of those is high molecular weight is
 (24) that the right phrase?
 (25) A That s correct that would be the diesel range

Vol 28 4770

- (1) you essentially let that seawater absorb if I m using the
 (2) right word as much crude oil as it would take as the first
 (3) step?
 (4) A The first step was to mix the two in the vessel together
 (5) and this was shaken for about five minutes by the clock and
 (6) then it was allowed to separate overnight for at least 18 hours
 (7) before it was used And the purpose of that was that we wanted
 (8) to be sure that the oil and water were mixed in a way that
 (9) might have occurred you know under an environmental
 (10) condition
 (11) where waves and currents stirred the stuff up
 (12) Q Nobody picked up the Sound and shook it?
 (13) A No but - we weren t prepared to completely duplicate the
 (14) Sound but we tried in a specific manner to get oil to mix with
 (15) seawater so that we could use it in some sort of an exposure
 (16) Q You ll - I was trying to drive at, the way you went about
 (17) doing that was to simply allow that sample of seawater that you
 (18) were using to take into the solution as much oil as it could?
 (19) A That s correct
 (20) Q The maximum amount?
 (21) A Well whatever it was capable of doing I don t know what
 (22) the maximum amount is
 (23) Q You can only get so much crude oil into a solution in a
 (24) given amount of seawater right?
 (25) A I suspect that s true but I don t know if I actually
 saturated this water I couldn t tell you that. I can only

Vol 28 4772

- (1) hydrocarbons
 (2) Q And the other was low molecular weight?
 (3) A The gasoline range that s correct
 (4) Q Now in your exposure regime - maybe if I got the flip
 (5) chart out here I could do a very crude drawing and we might
 (6) get the idea I m just going to draw a couple of axes on here
 (7) Dr Kocan and I warn you I brought a cheat sheet with me
 (8) because if I don t have a little bit of a preview what I m
 (9) going to draw I probably wouldn t be able to come close to
 (10) it
 (11) Let s assume we have time along here in days one two
 (12) three four et cetera and I believe that you were - these
 (13) experiments that you were conducting these lab experiments
 (14) went on for - was it 18 days or so the exposures with
 (15) varying - well why don t you explain it?
 (16) A Two weeks at least, yes, something like that.
 (17) Q And you made up this stock solution of crude oil in the
 (18) seawater and then you would - starting on day one I guess
 (19) you would start the exposure of the herring embryos or
 (20) whatever to different solutions?
 (21) A Yes that s correct.
 (22) Q Now your lowest solution was what ten percent?
 (23) A One of the lowest was zero
 (24) Q That s with no crude oil?
 (25) A That s correct.

Vol 28 4773

- (1) Q But the next one up?
- (2) A I believe it was a tenth of a percent of hydrocarbon -
- (3) total of a percent of the initial extract
- (4) Q Of the initial extract And that had it in low molecular
- (5) weight as well as high molecular weight hydrocarbons?
- (6) A Right that s correct both should have been in there
- (7) Q Let s take the high molecular weight hydrocarbons in your
- (8) lowest concentration not the control but the lowest
- (9) concentration with crude oil that concentration ended up
- (10) putting about how many - can you put it in parts per billion
- (11) of crude oil of this high molecular weight compound?
- (12) A I believe it was 01 parts per billion which would be ten
- (13) parts per million
- (14) Q I ll put that down here and this will be ten parts per
- (15) billion Now you also had these light ends or the light
- (16) molecular weight -
- (17) A Low molecular weight that s correct
- (18) Q And those evaporate off over a period of time?
- (19) A Very quickly yes
- (20) Q Now about how many of those did you have in the solution
- (21) when you used it again at the lowest concentration ten
- (22) percent one?
- (23) A I may be able to calculate that in my head I believe at
- (24) the stock concentration it was about 64 parts per million so
- (25) you would dilute it by 100 times to give you the lowest

Vol 28 4774

- (1) concentration
- (2) Q Well I thought the way that we had calculated it before
- (3) and I may be wrong but I thought it worked out to be about 70?
- (4) A 70
- (5) Q Parts per billion?
- (6) A Per billion I m sorry I was talking in parts per
- (7) million It could be 70 parts per billion
- (8) Well it couldn t be because 64 was the original
- (9) concentration if you take ten fold dilutions down to a tenth
- (10) it would be some multiple of 64
- (11) Q So about 60 parts per billion and that starts off and for
- (12) some period of time that s in there and then it disappears
- (13) because those evaporate off?
- (14) A Uh huh
- (15) Q Does it ever disappear completely or do you end up with
- (16) some component of those light molecular hydrocarbons that
- (17) stays
- (18) in there?
- (19) A Well it ultimately reaches a point where it s
- (20) undetectable so if it s there I don t know about it
- (21) Q But in any event you renewed your solution every two days?
- (22) A Every 48 hours
- (23) Q Every 48 hours you poured a new mixture into whatever
- (24) vessels you had the herring in?
- (25) A Yes that s correct
- (26) Q So on day one you have this spike up here and then on day

Vol 28 4775

- (1) three you get another spike like that more or less?
- (2) A That would be a correct representation
- (3) Q And then on day five you get another spike?
- (4) A That s correct
- (5) Q So that basically the concentrations that you re exposing
- (6) these herring to you ve always got at least ten parts per
- (7) billion of the heavy molecular weight hydrocarbons plus a
- (8) varying shot of the lower molecular weight hydrocarbons?
- (9) A That would be a correct analysis
- (10) Q And we re talking somewhere - they are getting in
- (11) somewhere between about a total of about 70 to down to 10
- (12) parts
- (13) per billion exposure?
- (14) A That would be a close estimation yes
- (15) Q Now I believe you used a term that kind of caught my ear
- (16) when you said it but I think at one point Mr Jamn asked you
- (17) if your exposure in the lab reflected I think may have been
- (18) his term what the exposures were actually out in Prince
- (19) William Sound And I think the word you used at least as I
- (20) caught it you said well It s possible and then you talked
- (21) about how difficult it is to measure things out in the Sound
- (22) Did I remember that right?
- (23) A That s essentially correct
- (24) Q And I guess you say it s possible but you don t - you
- (25) didn t really go out yourself and measure what was in the
- (26) Sound
- (27) to know if these various concentrations reflected what was

Vol 28 4776

- (1) happening out there with the Exxon Valdez crude in this what
- (2) you call I think very complex situation?
- (3) A No I didn t personally do that
- (4) Q There are some people who did that correct?
- (5) A Yes there are
- (6) Q And those include Mr Shortenrounds (ph) from NOAA?
- (7) A I believe so
- (8) Q And Dr Jerry Neff somebody that Exxon hired to go look at
- (9) that question?
- (10) A Yes that s correct
- (11) Q And we ll obviously be hearing from Dr Neff and maybe
- (12) about what some of those other people found but let me see if
- (13) I understand the point the fundamental point here I guess
- (14) that substances can harm you at certain concentrations At
- (15) other concentrations or lower concentrations they may not We
- (16) can probably agree on that?
- (17) A That s roughly correct but it s not - it would require
- (18) some definitions It s not quite that straightforward
- (19) Q Well I guess what I m thinking of and maybe this makes
- (20) the point too simply but if I get a headache and I take some
- (21) aspirins it probably would do me some good if I took 10 000
- (22) it would hurt me?
- (23) A That s correct
- (24) Q So I assume what you would have to do is figure out or
- (25) conduct whatever experiments you re going to conduct at some

Vol 28 4777

- (1) level of exposure that's going to reflect what in fact is
 (2) going to happen out there in the field where the people are
 (3) taking the aspirin?
 (4) A This is generally true if you're dealing with drug type
 (5) exposure experiments that is where humans are going to be
 (6) involved with actually taking these drugs but in the field of
 (7) toxicology where we don't always have the luxury of waiting a
 (8) lifetime of a human being or the short life of an animal
 (9) experiments are done and tests are done using concentrations
 (10) that would produce a realistic response in the amount of
 (11) time - in a reasonable amount of time so that you could
 (12) determine whether or not these compounds were actually toxic
 (13) and you could determine what the outcome of this toxicity was
 (14) that is what you would expect to see what type of damage was
 (15) done how long it would take under those conditions And from
 (16) that you draw a conclusion as to the toxicity of the material
 (17) rather than the concentration
 (18) You would then have to do a bioassay to determine how much
 (19) of this material is actually needed to produce a particular
 (20) response and then this of course is dependent on the time of
 (21) exposure how long it's been exposed to a particular
 (22) concentration and in this case I think more importantly
 (23) what stages of the organisms are being exposed because of
 (24) differential susceptibility particularly in developing
 (25) embryos

Vol 28 4778

- (1) So it's not a straightforward situation where a specific
 (2) dose over a 24 hour period or whatever gives you all the
 (3) answers that you want
 (4) Q If I picked up on one part of that answer I guess
 (5) obviously if you're dealing with young children and how many
 (6) aspirin it might take to harm them it's going to be a
 (7) different number than adults That's one thing you're saying?
 (8) A Yes that's basically true but that wasn't the point I was
 (9) trying to make We weren't talking about aspirins either
 (10) Q Let me ask you one thing before I fall and break my neck on
 (11) the electrical cords On these spikes that we were talking
 (12) about those are there because you were using basically fresh
 (13) crude oil every time you renewed - well, when you mixed your
 (14) stock solution and then when you renewed it?
 (15) A The stock solution was fresh that's true I guess from
 (16) a - to be precise the oil I was using had been taken off of
 (17) the Exxon Valdez at least two years prior to that time, and it
 (18) was the same oil that I used throughout this experiment to make
 (19) each of my stock solutions So it wasn't quite as fresh as it
 (20) was when I left the deck - well the tanks of the decks - the
 (21) solution I used was fresh each time
 (22) Q Did you try to take some steps to make it about as fresh as
 (23) what was on the Exxon Valdez at the time of the spill?
 (24) A Yes The bottles were sealed and kept cool I didn't let
 (25) them open so that things would evaporate I tried to keep it

Vol 28 4779

- (1) as constant as possible throughout the course of the
 (2) experiment standard laboratory practice
 (3) Q So if the - if you had to go - were to go out in the
 (4) field and try to find some exposure regime that corresponded to
 (5) this basically you would need to find one where you had this
 (6) every couple of days this fresh shot of basically fresh crude
 (7) oil in these concentrations down there in the water column
 (8) over I guess a two-week 18-day period?
 (9) A If you wish to replicate that scenario yes you would have
 (10) to do that. But I should also point out that in the situation
 (11) that occurs in Prince William Sound you're not dealing with
 (12) sterile seawater under laboratory conditions You're dealing
 (13) with seawater that's filled with all sorts of particulate
 (14) matter and animal components and plant debris and sediments
 (15) being resuspended that's been previously contaminated whole
 (16) oil at the surface and at the bottom
 (17) They're very complex There is no way you're going to go
 (18) into the field and replicate what I did in the laboratory any
 (19) more than I can replicate Prince William Sound in the
 (20) laboratory The true experiment to determine what would
 (21) happen
 (22) in Prince William Sound or what the effect of oil was in Prince
 (23) William Sound is to have a parallel universe with another
 (24) Prince William Sound where a spill did not occur And that's
 (25) the ultimate experiment. That's not practical only in Star
 Trek

Vol 28 4780

- (1) Q I don't think we can figure out how to do that.
 (2) A They do on Star Trek
 (3) Q But I think you said what I was driving at This doesn't
 (4) replicate what was going on in the Sound?
 (5) A No This was designed to demonstrate the effects of crude
 (6) oil on herring embryos
 (7) Q Let me just ask you one other thing about that study Did
 (8) you try to avoid having any droplets in the water any droplets
 (9) of water in the solution that you were exposing these herring
 (10) to?
 (11) A Are you talking about whole oil droplets droplets of the
 (12) crude as opposed to the soluble -
 (13) Q Yes
 (14) A Yes I went to great pains to avoid that as much as
 (15) possible
 (16) Q Do you think you did?
 (17) A Based on the tracings I got back from the analytical
 (18) laboratory they showed me that they consisted of either the
 (19) gasoline range and diesel range hydrocarbons but not whole
 (20) petroleum which I would expect to have seen if I had
 (21) droplets And the way this was done was to let the oil and
 (22) water separate over a long enough period of time so all the
 (23) whole oil floated back to the surface so I could drain the
 (24) uncontaminated water off the bottom
 (25) Q There was one piece of paper I saw Do we have 1978?

Vol 28 4781

- (1) We ve got it here I ll ask you about it
- (2) Let me show you a copy of - do you remember we asked you
- (3) for your lab notebooks and the material you got back from the
- (4) laboratory that analyzed your solutions?
- (5) A Yes
- (6) Q And this is what you provided us in connection with that
- (7) You re welcome to take a look at that.
- (8) MR JAMIN Which page were you referring to?
- (9) MR COOPER Do we have a page number on that?
- (10) THE WITNESS 00150
- (11) MR COOPER Production number 00150
- (12) MR JAMIN I think you need one more digit
- (13) BY MR COOPER
- (14) Q I guess you ve had a chance to look at that?
- (15) A Yes I recognize this This is mine and it s what I
- (16) supplied to you
- (17) Q What interested me obviously as I m sure you guessed was
- (18) the comment in the margin there Can you read that?
- (19) A The handwritten comment?
- (20) Q Yes
- (21) A The handwritten comment in the margin refers to value of
- (22) hydrocarbon concentration And it says error droplets of oil
- (23) present
- (24) Q Does that mean that there were some droplets that were
- (25) present - apparently were in the solution that you were using?

Vol 28 - 4782

- (1) A In - yes in that particular sample there were droplets
- (2) I think if you have a copy of your own on the left hand
- (3) column - or the far left of the columns there is a
- (4) hand written comment that says separation time and then it
- (5) section X 20 hours X 20 hours X 5 hours and X 20 hours That
- (6) represents the time the oil and water were allowed to separate
- (7) before I took the water off the bottom and the error is marked
- (8) after the 5 hour column which is why we didn t use the samples
- (9) until they were at least 18 hours or more old because oil
- (10) droplets were present and did contain whole oil We knew that
- (11) whole oil was there
- (12) Q So the reason that s there is because you were trying to be
- (13) careful to make sure you had no droplets in the oil?
- (14) A Yes that s correct
- (15) Q Or in the solution?
- (16) A In the solution yes
- (17) Q And the reason that you wanted to make sure you had no
- (18) droplets in there was because you really - that would throw
- (19) off your calculations of the concentrations and the amounts
- (20) It would just kind of put a wild card in there so you couldn t
- (21) interpret the results very well?
- (22) A The reason we didn t want that in there is because it s
- (23) pretty much of an uncontrolled variable and this was intended
- (24) to be a controlled experiment where we had no variables that
- (25) weren t under our direct control and oil droplets are not

Vol 28 4783

- (1) something that are very stable and they aren t uniformly sized
- (2) and they don t make this - they make it very difficult to
- (3) maintain the concentrations or determine the concentrations
- (4) you
- (5) want so we eliminated that one variable
- (6) Q Now if you saw hydrocarbons in your - chromatograms?
- (7) A Yes
- (8) Q If you saw hydrocarbon in your chromatograms that were
- (9) insoluble in water would that indicate you had droplets in
- (10) there?
- (11) A If it didn t come from that particular sample if it came
- (12) from the sample that I had used in my experiment right.
- (13) Q Do you know what the solubility in water would be of a C-20
- (14) alkanes? Would that be soluble?
- (15) A Relatively insoluble
- (16) Q And the same for C-16 and C 12 alkanes?
- (17) A The smaller they get the more soluble
- (18) Q They aren t all equally soluble in water?
- (19) A No Each of the molecules has a different solubility
- (20) Q Let me leave the subject of your laboratory test at least
- (21) for a while We may want to touch on it some more but let me
- (22) go back to some of these field studies that you referred to in
- (23) the course of your examination
- (24) THE COURT Sounds like we re changing subjects
- (25) Let s take our first break at this point We ll be in recess

Vol 28 4784

- (1) (Jury out at 10 00)
- (2) (Recess at 10 00)
- (3) (Jury in at 10 17)
- (4) BY MR COOPER
- (5) Q Dr Kocan I think we were about to move - talk about
- (6) some not all but at least some of the field studies that you
- (7) referred to One of those if I recall correctly you referred
- (8) to studies that showed that there was increased embryo
- (9) mortality this 1989 year class?
- (10) A Excuse me The 1989 year class we re talking about?
- (11) Q Yes
- (12) A The increased embryo mortality - actually that was
- (13) increased larval mortality from egg deposition to yolk sac
- (14) absorption That was a study done in 1989 and the overall
- (15) range of that was oh from the time the eggs were deposited by
- (16) the females until approximately the time the yolk sac was
- (17) resorbed
- (18) Q There was a study you did I think you referred to as your
- (19) in situ -
- (20) A In situ
- (21) Q Probably not the first scientific term I ll get wrong
- (22) A I may be wrong
- (23) Q That was the one where you basically referred was it eggs
- (24) and sperm from spawners and then artificially incubated or
- (25) artificially fertilized those and then put the embryos into

Vol 28 4785

- (1) the canisters in streams that had been oiled in 89 or areas
 (2) that had been oiled and areas that had not been?
 (3) A That's generally correct yes
 (4) Q Now you purported to find that there was in effect
 (5) abnormalities or different mortality rates in the ones - the
 (6) canisters that had been placed in the oiled versus the unoiled
 (7) areas?
 (8) A The major effect that was most dramatic was the weight
 (9) differences between the two sites. There was also a difference
 (10) in the number of - I believe it was the number of viable
 (11) offspring. I would have to see the data exactly but there was
 (12) a difference between abnormalities or viability of the larvae
 (13) but there was no difference in the hatching rate that I'm aware
 (14) of.
 (15) Well I'd have to back up on that. There is some variation
 (16) here that I can't recall from every one of these studies but
 (17) there are some differences by 1991 that aren't particularly
 (18) clear-cut in my studies.
 (19) Q Would you agree that there is a major difficulty with
 (20) respect to the data from that study as well as perhaps others
 (21) and that's the lack of background data which this kind of data
 (22) can be compared?
 (23) A I'm not sure what you mean by background data. Could you
 (24) clarify?
 (25) Q Well how about the ability to distinguish effects of the

Vol 28 4786

- (1) oil from just natural - or effects of just natural variation
 (2) differences between the streams for instance - not the
 (3) streams but the areas where you deployed the eggs?
 (4) A There is also some difficulty when one works in the field
 (5) with trying to interpret data because every aspect of your
 (6) experiment or your study is not under your control. The ideal
 (7) experiment is one where there is only one variable everything
 (8) else is constant and you have control over that variable.
 (9) Anytime one gets involved in a field study there are some
 (10) variables that are beyond your control such as different sites
 (11) are in different places that's why they are different and
 (12) they may have different kinds of gravel on the bottom or
 (13) something.
 (14) But one does try to the best to their ability to interpret
 (15) the data in light of those things that could cause an effect.
 (16) I mean some things just have no effect they are irrelevant
 (17) and others may have an effect. And if that's the case, you can
 (18) design your experiment to account for those.
 (19) But that more or less answers the question. It's not a
 (20) perfectly controlled experiment.
 (21) Q Didn't you yourself conclude that the major difficulty with
 (22) interpreting the extensive data collected was the lack of
 (23) background data to which it compared and the ability to
 (24) distinguish effects from natural biological -
 (25) A That comment was not made just to my specific experiments

Vol 28 4787

- (1) That comment was made to background data in general on
 species
 (2) and populations in Prince William Sound
 (3) Q That comment is your - that reflects your belief doesn't
 (4) it?
 (5) A My belief is that there is everywhere a lot of background
 (6) data that is not available to us and this makes the designing
 (7) of these experiments more complicated or complex in that we
 (8) have to create the background data at the time we do the
 (9) studies rather than have something to compare it to. A dilemma
 (10) we have to deal with.
 (11) Q It's just dealing with it at the time you create the
 (12) studies. Doesn't that lack of background data present a major
 (13) difficulty with interpreting it with interpreting the results
 (14) of these studies?
 (15) A It does present difficulties but they are not
 (16) insurmountable and in some cases they are surmountable.
 You -
 (17) can make that interpretation and I expect there are other
 (18) occasions where you're going to have more difficulty making
 (19) those interpretations. I've made every attempt to eliminate
 (20) this as much as possible within the confines of the studies I
 (21) did.
 (22) Q Let me just ask you you can answer yes or no is it your
 (23) belief that the major difficulty with interpreting the
 (24) extensive data is the lack of background data to which it can
 (25) be compared and your inability to distinguish effects from

Vol 28 - 4788

- (1) natural biological evaluation?
 (2) A I would have to deal with it on a case-by-case basis
 (3) because background data is available in some cases and not in
 (4) others and not as much as I would like. You have to give me a
 (5) specific set of data and a specific set of circumstances before
 (6) I can say I can't do that. In general there is not the amount
 (7) of data that I would like there to be.
 (8) Q Let me just ask you this question. Did you make that
 (9) statement that I just repeated or did you not?
 (10) A I may have made it but I certainly didn't make it in the
 (11) context of a specific set of data.
 (12) Q It was with reference to extensive data that had been
 (13) collected since March of 1989?
 (14) A It was a generalized statement more or less a statement of
 (15) frustration in that I would like the things to be better than
 (16) they were.
 (17) Q Now you showed us a number of slides of defective larvae
 (18) and malformed larvae and so forth?
 (19) A Correct.
 (20) Q Is it true Dr Kocan that skeletal deformity can
 (21) represent or does represent a non-specific response to physical
 (22) as well as chemical insults?
 (23) A Yes. There are a number of different types of agents or
 (24) conditions that could cause spinal deformities.
 (25) Q Do these things include - well what kinds of things can

Vol 28 4789

- (1) affect that? Temperature?
 (2) A Well in some fish species temperature can be a factor
 (3) however the temperature has to change very quickly over a
 (4) short period of time in usually just the very earliest stages
 (5) of development when there are two four 16 18 cells
 (6) present Once it goes beyond that most species are
 (7) generally
 (8) Q Salinity can that have an effect on that sort of thing?
 (9) A Again very short time
 (10) Q But it can have an effect?
 (11) A Yes
 (12) Q You get differences of salinity coming in from different
 (13) locations?
 (14) A Gradual not instantaneous
 (15) Q Abrupt you get the snow melt in the springtime more than
 (16) in the middle of winter?
 (17) A They occur more rapidly I think we need to frame this in
 (18) terms of what I'm describing as a short time and what you're
 (19) describing I'm talking several degrees change over a few
 (20) minutes not several degrees change over the course of a few
 (21) days or weeks
 (22) We routinely transport eggs from one temperature to another
 (23) or move from one temperature to another by allowing them to
 (24) float in their aquarium or their bag of water to float in the
 (25) tank or the body of water that has the temperature that we want

Vol 28 4791

- (1) was not one to determine the concentrations that were there
 (2) relative to what I saw The experiment was designed to
 (3) determine whether or not those sites had any residual effect on
 (4) development of these embryos regardless of what caused that
 (5) effect and that's how the studies were designed and the
 (6) results were interpreted in light of that
 (7) Q Well do you remember writing Dr Kocan in an article on
 (8) the use of herring for in situ and in vitro monitoring of
 (9) marine pollution do you remember writing in substance this
 (10) Unfortunately mortality in skeletal deformity represent
 (11) non specific responses to physical and chemical insults in
 (12) order to implicate specific substances as the cause of such
 (13) damages or such changes it would be necessary to conduct
 (14) more
 (14) extensive analyses of water and sediment and to conduct
 (15) laboratory studies?
 (16) A That sounds - well the title of the paper you read
 (17) definitely sounds like one I wrote and I will concede that I
 (18) probably wrote that but I think I need to clarify something
 (19) here And that is that I know of personally dozens of
 (20) chemicals that can cause the types of problems that I
 (21) described some of which have nothing to do with petroleum
 (22) hydrocarbons X rays and gamma rays can also do this
 (23) Q Ultraviolet rays?
 (24) A I'm not sure about ultraviolet rays particularly under
 (25) water What I do know about this situation is that none of

Vol 28 4790

- (1) them to equilibrate to And it may take them an hour or two
 (2) and there is no adverse effect
 (3) Q Well coming back for a moment to the in situ study isn't
 (4) it the case that in order to implicate a substance like the
 (5) Exxon Valdez crude oil as the cause of the changes that you
 (6) believe you saw in that study that it's necessary to conduct
 (7) some extensive analyses of the water and sediment chemistry?
 (8) A I think there was more in there than what I caught - could
 (9) we go through that again?
 (10) Q Well you discovered or you believed that you found that
 (11) there were some things defective some things wrong with the
 (12) herring that you incubated or raised in the oil streams as
 (13) compared to the ones in the unoled streams in your in situ
 (14) study?
 (15) A Yes I found differences between the two
 (16) Q When you did that study you didn't go out to the places
 (17) where you deployed those canisters and try to take any
 (18) chemistry measurements to see how much Exxon Valdez crude
 (19) oil
 (19) if any had been there?
 (20) A No That wasn't part of the question I was addressing
 (21) Q When you did that study you weren't interested to know
 (22) whether or not there was in fact Exxon Valdez crude oil at the
 (23) location where you were - where you ultimately ascribed an
 (24) effect to that crude oil?
 (25) A Well I was interested but again the design of the study

Vol 28 4792

- (1) those compounds - or nobody has demonstrated that anything
 (2) other than petroleum hydrocarbons in huge amounts as present
 (3) in
 (3) Prince William Sound in those sites This is the most possible
 (4) source of any problems because it was there it was seen
 (5) there I saw videos of it washed and covering the submerged
 (6) vegetation I saw the rocks covered with it I saw videotapes
 (7) of the surface being coated with it I saw the data indicated
 (8) that it was washed to the bottom and taken up by mussels that
 (9) filter feed from the water column
 (10) So my conclusion is based on the presence of oil that also
 (11) has the components that are capable of producing those effects
 (12) being there at the time that the embryos were there Whether I
 (13) measured it or not at this point is not important.
 (14) Q It would make no difference to you if in fact where you
 (15) deployed those canisters with the herring embryos if the
 (16) waters and the sediments there had no hydrocarbons at all from
 (17) the Exxon Valdez spill?
 (18) A Well I know for a fact that's not true The water column
 (19) may have been clean but the water column -
 (20) Q But Dr Kocan we're talking about the places where you
 (21) put these canisters?
 (22) A That's correct.
 (23) Q You didn't take any chemistry measurements to see if there
 (24) was any oil from the Exxon Valdez or any other source in those
 (25) locations where you put their canisters?

Vol 28 4793

- (1) A No I didn't take measurements but the oil had been there
 (2) the oil was reported from there
 (3) Q Maybe it was there before you ever put those canisters
 (4) there but you took no measurements when those canisters
 were
 (5) there to see if there was any oil there did you?
 (6) A No not at that time I didn't that is correct
 (7) Q Now you mentioned a reproductive success study Do you
 (8) recall that one?
 (9) A Yes
 (10) Q And that's the study where you gathered some spawning fish
 (11) from areas in what year 1992?
 (12) A 1992
 (13) Q So we're three years after the oil spill?
 (14) A That's correct
 (15) Q And you gathered some spawners and some spawning
 herring
 (16) from areas that had been oiled three years before?
 (17) A Correct.
 (18) Q And then you gathered some from areas that had not been
 (19) oiled three years before?
 (20) A That's also correct
 (21) Q And you basically artificially spawned them am I right?
 (22) A That's correct
 (23) Q And then looked to see how the offspring did?
 (24) A Yes I reared the eggs from each individual fish There
 (25) were three groups of 25 in this case I reared them

Vol 28 - 4794

- (1) individually and determined the number of viable offspring that
 (2) each fish produced from each of the collection sites
 (3) Q Now you didn't definitely know if the spawning fish that
 (4) you collected were fish that had in fact, been spawning in
 (5) that location at the time of the spill three years earlier?
 (6) A That's correct
 (7) Q So for all you know they may have spawned in some area in
 (8) the northern part of the Sound where oil from the spill had
 (9) never reached?
 (10) A They could have spawned in another part of the Sound
 (11) that's correct
 (12) Q And because it's not definitely known if the spawning fish
 (13) were exposed to petroleum hydrocarbons as one year olds, or
 (14) that they even spawned in the same areas where they reared, it
 (15) wasn't possible was it for you to determine if the observed
 (16) effects resulted from the oiling or from some site specific
 (17) differences?
 (18) A In regard to that study I'd like to clarify that. The
 (19) study was designed to look at specific spawning - herring from
 (20) specific spawning sites
 (21) Q Excuse me Dr Kocan I'm not sure you're answering the
 (22) question What I just - the question that I just asked you
 (23) is that true or is it not true?
 (24) A Repeat the question minus all the narrative
 (25) Q Well I don't want to make it a big secret, the narrative

Vol 28 4795

- (1) is there because you wrote it
 (2) A I'd like to concentrate on the question so I can get that
 (3) clear
 (4) Q Because it's not definitely known if the spawning fish were
 (5) exposed to petroleum hydrocarbons as yearlings or if they
 (6) spawned in the same area where they were reared during the
 (7) spill it was not possible to determine if observed effects
 (8) resulted from some site specific effect or if the spawning
 (9) fish were carrying some sublethal damage incurred during the
 (10) previous years
 (11) A That's correct I can't tell you if they had been
 (12) previously exposed or if it was a site specific effect All I
 (13) know is that the result showed that those fish from oiled sites
 (14) had lower offspring survival rate than fish from unoiled
 (15) sites Other than that I can't make any other statement
 (16) Q Now incidentally with respect to that study what you saw
 (17) in that study cannot account for the disappointingly low runs
 (18) in 1993 and 94 can it that is to say less viable offspring
 (19) from those 1988 year class fish?
 (20) A Well I can't really make a prediction on that on whether
 (21) or not that spawning difference had an effect on subsequent
 (22) year classes because I haven't really studied that and the
 (23) decline in 1993 was not a result of new fish not coming into
 (24) the population but my understanding it was a result of a
 (25) large number of fish that were already there disappearing

Vol 28 - 4796

- (1) Q Well I guess what I'm saying is the offspring that you
 (2) looked at in that study were fish that would not recruit into
 (3) the spawning population in any event until when about 1995
 (4) 1996?
 (5) A The '92 year class would have first recruited as three
 (6) years olds in 1995 and four year olds in 1996 correct
 (7) Q Precisely So it wasn't their failure to appear that
 (8) somehow accounted for the run failure in 1993 and 1994?
 (9) A No There is no way to know that
 (10) Q Let me turn to a little different subject here You talked
 (11) about genetic effects of the crude oil I'm sure you remember
 (12) that subject?
 (13) A Correct. Yes I did
 (14) Q And you told us about somatic cells and germ cells?
 (15) A Yes that's correct also
 (16) Q Now let me see if I understand this correctly You also
 (17) showed us these pictures of anaphase aberration if I've got
 (18) the right term?
 (19) A That's correct
 (20) Q Where something in the division of the cell goes haywire -
 (21) A That's correct.
 (22) Q - to use a scientific term
 (23) I'll tell you what let's use an example Use me as an
 (24) example I've got a lot of cells in my body I assume at
 (25) least I hope I do Do you know how many cells there are in a

Vol 28 4797

- (1) herring?
 (2) A I would estimate millions
 (3) Q Millions of them?
 (4) A Yes
 (5) Q And let s assume that - well what you did is you looked
 (6) at herring that had been killed and dead tissue samples and
 you
 (7) examined them for for instance these genetic or cytogenetic
 (8) aberrations?
 (9) A That s correct We looked at cells from newly hatched
 (10) larvae
 (11) Q Now chromosome defects occur naturally sometimes in
 some
 (12) pretty large numbers don t they?
 (13) A Well not naturally in large numbers but they do occur
 (14) naturally in the normal course of cell division that s
 (15) correct
 (16) Q Now if I ve got a chromosome - or a cell that s got a
 (17) chromosome in it that cell then splits up divides up and in
 (18) order to work all right it s got to have a duplicate of the
 (19) chromosome in each - in the daughter cell is that what you
 (20) call it?
 (21) A Yeah
 (22) Q And if there is one of these anaphase aberrations like you
 (23) were talking about one possibility is it not that the - as
 (24) part of that cell division process there is a proofreading
 (25) process that the body has?

Vol 28 4798

- (1) A Yes that s correct The body has a DNA repair mechanism
 (2) to fix any mistakes - fix mistakes during normal cell
 (3) division
 (4) Q So it s possible if there was some foul up in cell
 (5) division it s possible that the proofreading process will see
 (6) that and fix it?
 (7) A Within reason
 (8) Q Within reason?
 (9) A Yes
 (10) Q Another possibility is that the cell that doesn t work and
 (11) simply immediately dies?
 (12) A That s ultimately what happens that s correct.
 (13) Q That s generally what happens isn t it? Most instances
 (14) that s what happens?
 (15) A Yes Damage to - fixed damage to a cell or to DNA
 (16) components of the cell results in death of the cell right.
 (17) Q That can happen simply as another cell death that we have
 (18) going on all the time and there may be no permanent effect of
 (19) that?
 (20) A Well it depends on how extensive it is Yes we have
 (21) cells dying all the time If we have massive amounts of cells
 (22) dying it would be a serious effect yes
 (23) Q But if it dies whatever is wrong with these genes or these
 (24) chromosomes it never gets passed on to any more cells the
 (25) process stops right there?

Vol 28 4799

- (1) A In that particular cell that s correct
 (2) Q Now for a defect in these cells or in the chromosome in
 (3) the cells to have an impact it must impact - well the gene
 (4) could be one of how many genes that are affected? How many
 (5) genes are there in a herring?
 (6) A I don t know I think we re just starting to find that out
 (7) in a human
 (8) Q In a human how many are there?
 (9) A Genes?
 (10) Q Yes
 (11) A Thousands
 (12) Q Some of them control important things some of them may
 (13) control unimportant things?
 (14) A I guess it s what part of you that it s controlling that
 (15) you consider important
 (16) Q They will be wide-ranging effects?
 (17) A Yes all parts of your physical and functional person
 (18) Q And there may be some that are just historical baggage that
 (19) nobody has figured out what they control?
 (20) A I hesitate to use the term "baggage" I would be more
 (21) prone to say we may not know what their function is
 (22) Q Well in the studies that you did where you discovered
 (23) cytogenetic damage of one kind or another -
 (24) A Yes
 (25) Q - did you do any studies to find out what genes were

Vol 28 4800

- (1) impacted and what those genes that were impacted did for the
 (2) organism?
 (3) A No
 (4) Q So you don t have any idea what those genes may affect if
 (5) anything?
 (6) A No The type of test the anaphase aberration represents is
 (7) pretty much a broad spectrum It represents that damage is
 (8) occurring and it s occurring at many different levels within
 (9) the genome and to determine every one of them would take
 many
 (10) people many lifetimes
 (11) Q If you just visually detect cytogenetic - which is what
 (12) you were doing?
 (13) A Yes
 (14) Q That doesn t let you determine if the damaged cells are
 (15) viable right so far?
 (16) A Right
 (17) Q Doesn t allow you to determine if they are capable of
 (18) replication?
 (19) A That s correct
 (20) Q And incapable of replication?
 (21) A That s correct
 (22) Q And it doesn t allow you to tell whether alteration in
 (23) those chromosome components are transmitted to subsequent
 (24) generations?
 (25) A That s correct. We just know that there is damage

Vol 28 4801

- (1) occurring or there is excessive amount of damage occurring
 (2) Q And I noticed in your testimony if I heard it right you
 (3) didn't try to say because of this cell damage we know that X
 (4) amount of herring were killed or impaired or whatever you
 (5) don't really know that do you?
 (6) A No As I said the result of this type of genetic damage
 (7) are multiple effects ranging from death to relatively minor
 (8) inconsequences
 (9) Q Observing the cytogenetic damage that you did doesn't tell
 (10) you what on that range of consequences may have happened?
 (11) A It doesn't tell you basically but the entire range is
 (12) covered and you can't quantitate by that type of test but you
 (13) can know that it's in the expected normal level of damage
 (14) Q You did talk about inheritance You showed us the charts
 (15) of the recessive genes and talked about a word that I can't
 (16) repeat but I think it was albinism?
 (17) A Yes
 (18) Q Did it get it right?
 (19) A Yes
 (20) Q Now in order for a genetic damage to get passed on to
 (21) future generations that genetic damage - let me back up
 (22) if I've got a cell in the tissue of my arm that has its
 (23) genes fouled up that doesn't mean that my offspring are going
 (24) to inherit the same thing does it?
 (25) A If that cell were damaged in your body in your arm no it

Vol 28 4802

- (1) wouldn't but if you inherited that from one of your parents
 (2) it could be
 (3) Q I was going to get there but I wanted to work it
 (4) downstream instead of upstream don't want to cast any
 (5) aspersions on my ancestors
 (6) In order for me to pass on to my offspring some kind of a
 (7) genetic defect and here is where I begin to wish I hadn't made
 (8) this personal analogy - for a critter in order to pass
 (9) along a genetic defect to its offspring it has to have that
 (10) genetic effect to occur in either a sperm cell or an egg cell
 (11) is that right?
 (12) A That's correct
 (13) Q So if it's just something that occurs in any of the other
 (14) cells that we've got it won't get passed on genetically?
 (15) A That's also correct
 (16) Q And about - do you know about how many sperm cells a
 (17) herring has?
 (18) A Millions maybe billions
 (19) Q How about egg cells?
 (20) A I think the average and this is an average it's a wide
 (21) range on both sides depending on the size of the herring it's
 (22) about 20,000 eggs
 (23) Q So -
 (24) A Per year
 (25) Q So for the genetic defect to get passed on number one it

Vol 28 4803

- (1) has to end up in a sperm or an egg the bad gene has to be
 (2) there?
 (3) A That's correct
 (4) Q Whatever this hydrocarbon or whatever the genotoxin was
 (5) that got into the body it's got to work its way down into a
 (6) sperm cell or an egg cell?
 (7) A The damage had to have occurred in one of the germ cell
 (8) lines that's right
 (9) Q And then if it happens to be in a sperm or an egg that
 (10) never gets fertilized kind of no harm no foul?
 (11) A That's true
 (12) Q So it has to be - do you have any idea in a herring about
 (13) how many of the sperm let's say actually end up fertilizing
 (14) an egg?
 (15) A I can't give you an exact number but I can say that the
 (16) number of sperm probably approximate the number of fertile
 (17) eggs
 (18) Q Just takes one?
 (19) A Yes but if there is two eggs that are fertilized then
 (20) sperm -
 (21) Q I guess the point -
 (22) A I don't have an exact number
 (23) Q The point I'm driving at there is going to be a lot of
 (24) sperm that never fertilize an egg and if there is a genetic
 (25) defect it doesn't account for anything?

Vol 28 - 4804

- (1) A That's correct if they are not used they have no effect
 (2) Q Let me go to another subject that you discussed toward the
 (3) end of your direct testimony and that's this question of the
 (4) VHS virus
 (5) A Yes
 (6) Q Now you kind of - you explained what this theory is that
 (7) you have as to how the VHS virus may account for the low runs
 (8) in 1993 and 1994?
 (9) A Yes
 (10) Q And in order for that theory to work - well maybe you
 (11) should explain this or at least one element of it for me
 (12) Your theory is that the 89 year class fish were somehow
 (13) compromised in their immune systems is that the starting
 (14) point?
 (15) A Well my opinion is that the 89 year class was the most
 (16) susceptible to the type of damage - to damage the immune
 (17) system but all your classes were at risk
 (18) Q What you're suggesting is that the hydrocarbons may have
 (19) injured the immune systems of the 89 year class era?
 (20) A Yes
 (21) Q Is this a genetic thing or just an injury to an immune
 (22) system that you're talking about?
 (23) A It can take two different routes As an individual any of
 (24) us our immune system can be damaged directly by exposure
 (25) to hydrocarbons and in that case during the period that they

Vol 28 4805

- (1) are - that the immune system is compromised we would be
 (2) susceptible to infection by diseases and invasive organisms
 (3) and we could recover from that and the immune system may
 repair
 (4) itself
 (5) On the other hand if a developing embryo were exposed the
 (6) embryonic cells that I showed in my presentation yesterday
 (7) prior to the time they became lymphocytes and T-cells and
 (8) betalymphocytes and whatnot and start producing antibodies
 the
 (9) precursors to those cells if they were damaged then they
 (10) would never function normally and then the animal could
 (11) conceivably live its entire life without a functional immune
 (12) system So there are two ways could be genetic or direct
 (13) function on the system
 (14) Q Are there ways that scientists and biologists who do the
 (15) kind of things you do can conduct tests to determine if an
 (16) immune system has been compromised?
 (17) A Yes there are tests to measure this type of damage
 (18) Q What do you call those tests?
 (19) A Immuno competence tests comes to mind
 (20) Q Now were any immuno competence tests done on any of the
 (21) herring here?
 (22) A No that kind of test was not carried out
 (23) Q So when you talk about compromised to the immune
 systems
 (24) you re not talking about any immuno competency testing that s
 (25) been done to establish that hasn t happened?

Vol 28 4807

- (1) set up there I ll try to cure that in the future but if I
 (2) may walk this up to him
 (3) BY MR COOPER
 (4) Q This is one of the periodic publications by the Trustee
 (5) Council?
 (6) A That s correct
 (7) Q If you look on the - well you ve probably seen this one
 (8) before haven t you?
 (9) A Yes It was sent to me
 (10) Q If you look on page - well page 2 there is a piece there
 (11) entitled Study to Investigate Causes of Pacific Herring
 (12) Decline
 (13) A Yes I see that
 (14) Q Do you see the sentence fisheries biologists are unsure
 (15) if virus is causing the decline in herring returns or if it is
 (16) even the cause of the lesions?
 (17) A Yes I see that sentence
 (18) Q The theory that you propose establishes or proposes which
 (19) state that, in fact the virus is causing the decline in
 (20) herring isn t that right?
 (21) A That s the conclusion I ve come to that s right
 (22) Q A conclusion which at least as of May 1994 apparently
 (23) the Trustee Council for whom you ve been doing this work
 (24) doesn t agree?
 (25) A But I m a fish disease specialist and I have expertise in

Vol 28 4806

- (1) A No I m talking about immuno competency tests that had
 (2) been performed in fish including hydrocarbons that shows it
 (3) can be damaged following exposure
 (4) Q So there are tests that can be done but they haven t been
 (5) done in this case of Prince William Sound herring?
 (6) A Prince William Sound herring haven t specifically been
 (7) tested no
 (8) Q Have you explained this theory of yours to the Trustees
 (9) the Trustee Council?
 (10) A This theory that I have has been explained or discussed
 (11) amongst the herring group that I have worked with but not
 (12) specifically the Trustees
 (13) Q Isn t it in fact the case that the Trustees rather than
 (14) concluding that this theory that you have suggested is in
 (15) fact the case and that the oil spill is likely to blame for
 (16) the problems with the herring isn t it the fact that they have
 (17) concluded that they need more information and more studies in
 (18) order to figure out what happened to cause these low herring
 (19) runs in 1993 and 1994?
 (20) A I think more accurately that might be stated that they are
 (21) proposing to fund studies to confirm that the VHS virus has
 (22) indeed been responsible for the disease and the mortality in
 (23) the 93 and 94 run
 (24) Q Let me show you a document if I may DX9290
 (25) MR COOPER Your Honor I m sorry I don t have this

Vol 28 4808

- (1) this and they don t and the work they are doing is to confirm
 (2) what the cause is
 (3) Q Well let s talk about that for a minute Is there
 (4) something called an expression of interest?
 (5) A Yes
 (6) Q What is it?
 (7) A Depends on who expresses it
 (8) Q How about if the Trustee Council expresses it?
 (9) A Yes I m aware of what you re talking about
 (10) Q That s a document that basically is the Trustee Council
 (11) soliciting proposals from scientists to study something?
 (12) A That s correct
 (13) Q In fact they are not even soliciting a proposal with an
 (14) expression of interest what they are doing is soliciting
 (15) scientists to come back to them and say they have an interest
 (16) in developing a project to answer some questions?
 (17) A That s generally correct yes
 (18) Q Let me show you DX9276
 (19) This is the expression of interest that you thought I was
 (20) talking about isn t it?
 (21) A That s correct
 (22) Q This is something - you probably received this from the
 (23) Trustee Council?
 (24) A Yes
 (25) Q Did you have a hand in drafting it?

Vol 28 4809

- (1) A No
- (2) Q Have you responded with an expression of interest?
- (3) A I ve considered it but the response date is still at the end of this month and I ve been rather busy
- (4) Q I can t imagine on what
- (5) Q I can t imagine on what
- (6) But you recognize this as the expression of interest that came from the Trustee Council?
- (7) A Yes
- (8) Q Let s get the date on this When is - I don t know if this has a date on it but you received it fairly recently didn t you?
- (9) A Within the last month yes
- (10) Q And it asks for a response by I think - is it June 30th?
- (11) A I think that s correct
- (12) Q Oil Spill Trustee Council Expression of Interest it says Notice is hereby given that unpriced expressions of interest are being solicited by the Alaska Department of Fish & Game on behalf of the Exxon Valdez Oil Spill Trustee Council as the first step of a two step sealed proposal process to investigate why the pacific herring runs in Prince William Sound Alaska have failed for two years in a row
- (13) Now maybe I was wrong when I characterized this as a Trustee document Maybe it s both It s also from the Alaska Department of Fish & Game correct?
- (14) A Yes that states that in the first paragraph

Vol 28 - 4810

- (1) Q What they are doing is inviting scientists to come up with proposals of how they would go about trying to figure out what happened to cause the run to decline?
- (2) A That s correct
- (3) Q And they say in here it is not known whether VHSV was a primary or secondary pathogen Can you explain what a secondary pathogen is?
- (4) A Yes I can Secondary pathogen is one that takes advantage of an already diseased situation or a diseased individual in order to invade and grow and viruses don t do that ever
- (5) Viruses are primary pathogens
- (6) Q Then it goes onto say VHSV was also isolated from some adult herring in 1994 but the role of this virus remains uncertain
- (7) A That s what s stated
- (8) Q What they are saying they are not even certain if it s the virus that s causing the run decline?
- (9) A As it s stated there it sounds that way but what they - what I read is it s not been confirmed that the VHS virus has caused the -
- (10) Q Then they say -
- (11) A Wait I m not finished The role of the virus remains unclear What they are saying is it s not confirmed that the virus has caused the disease but based on all the available evidence from the VHS virus in Europe and from other fish

Vol 28 4811

- (1) species and from what I ve known to have this virus transpired since 1993 the possibility of it being the cause of this disease is extremely high
- (2) Q Well you re kind of ahead of the Fish & Game and the Trustee Council on that one aren t you?
- (3) A I may be
- (4) Q Because they are still uncertain?
- (5) A That s correct.
- (6) Q Even though they have had the benefit of your views?
- (7) A I haven t given them -
- (8) Q I thought you talked about this with the synthesis -
- (9) A This is with the synthesis committee on what may have caused the disease outbreak in 1993 and the decline of the fish populations but whether or not I talked to them about the things that have happened in the last three months or six months as a matter of fact we discussed this before the last three to six months
- (10) Q Well in any event, you re willing to tell the jury here and the rest of us that you think it s confirmed although the Trustee Council doesn t think so?
- (11) A No no I m saying the Trustee Council is asking for scientific confirmation from what appears to be a fairly obvious conclusion
- (12) Q Now they go on to say in here that No attempt has been made to test Koch s postulates for VHSV - and I m sure that

Vol 28 - 4812

- (1) all of us in this room know what Koch s postulates are but let me try and ask you this That s a way in which one can test to see if a virus is the cause of a disease Is that fair?
- (2) A In general Actually Koch s postulates were developed before anybody even realized viruses existed but if I may clarify
- (3) Q All right go ahead
- (4) A Basically a scientist a hundred or so years ago named Koch tried to devise a way to confirm that a particular microorganism was responsible for an observed disease like cholera or diphtheria and in order to do this he designed a series of protocols or stems one can take to confirm it.
- (5) And the first is you have to isolate this organism from the diseased animal and then you have to grow it in pure culture
- (6) And in his time since there were no viruses pure culture meant some sort of broth or blood or whatever they drew fungi or parasites in at the time Then it had to be isolated from that pure culture, just a single organism, I don t mean a single individual organism but a single species put it into a non-immune not previously affected animal and produce the very same disease that it had been isolated from but with none of the other associated organisms
- (7) Then it had to be reisolated again in pure culture
- (8) Now the slight variation to this theme in viruses is virus is dependent on living cells for their survival and growth So

Vol 28 4813

- (1) you can't grow them in pure culture. There has to be another
 (2) living cell. So Koch's postulate we've bent a tad to allow it
 (3) to go on in cell cultures.
 (4) Now if virus had been isolated from the disease or the
 (5) lesions of Prince William Sound herring and incidentally not
 (6) from adjacent skin that had no lesions but it was isolated
 (7) from the lesions it was put into cell culture and in the cell
 (8) culture it produced cell death, cell necrosis, indicative of
 (9) an infection of the cells by the virus and the cells did die.
 (10) The virus was taken back out of that cell culture and
 (11) introduced into non-immune fish and in these non-immune fish
 (12) it grew and multiplied and it was reisolated.
 (13) Q Doctor, are you talking about the Pacific herring VHSV?
 (14) A Yes, I am, and this was done at the U.S. Fish & Wildlife
 (15) Service in Seattle.
 (16) Q Talking about Myers?
 (17) A No, Jim Witson (ph), Fish & Wildlife virologist who
 (18) identified the indication of this virus.
 (19) Q Did Dr. Myers have a problem?
 (20) A Can you clarify what you mean?
 (21) Q A problem that prevented him from completing the Koch's
 (22) postulate test?
 (23) A There is one small glitch at this point in time and that
 (24) is that the species that the virus was reproduced following its
 (25) re-isolation was not a herring, it was a salmonid. I forgot what

0 15

Vol 28 - 4814

- (1) species and the reason for that is there at this time are no
 (2) known sources of VHS free or known non-exposed or herring
 (3) that have never been exposed to VHS so they couldn't
 (4) reintroduce it into the same species.
 (5) So consequently they used another species. This salmonid
 (6) species cannot develop that disease just as the European
 (7) doesn't produce the disease of the Northern America fish.
 (8) Q In any event, the Trustee Council wants, do they not a
 (9) proposal that will investigate anthropogenic and microbiology
 (10) causes of diseases affecting - anthropogenic means?
 (11) A Caused by humans.
 (12) Q And environmental?
 (13) A Things that would occur newly in the environment or
 (14) associated with the environment.
 (15) Q And microbial?
 (16) A That would be referring to microorganisms.
 (17) Q And nowhere in here you'll agree with me, I trust, does
 (18) the Trustee Council and ADF&G say, don't worry, we don't need
 (19) any of this stuff, we know it's the hydrocarbons that caused
 (20) the disease and the outbreak?
 (21) A No, That would be irresponsible on their part.
 (22) Q Why would that be irresponsible of them?
 (23) A Because strict confirmation has not been established and
 (24) that is what they are looking for. They want strict
 (25) confirmation in what's going on in Prince William Sound.

Vol 28 4815

- (1) Q That's because that's a requirement of science isn't it
 (2) Dr. Kocan?
 (3) A Yes, if you want an absolute answer that is a requirement
 (4) of science.
 (5) Q Well, if you want an answer that complies with the
 (6) standards of science?
 (7) A Yes.
 (8) Q Is that right?
 (9) A Yes, they are looking for confirmation. I agree to that
 (10) and I think they should.
 (11) Q And you're telling the jury here today that in fact the
 (12) hydrocarbons - you know the cause, it's the hydrocarbons
 (13) even though this scientific confirmation is lacking?
 (14) A I'm saying based on the information I have.
 (15) Q Can you answer that, yes or no?
 (16) A Yes, I'm saying that.
 (17) MR COOPER: I have no further questions, Your Honor.
 (18) THE COURT: Redirect?
 (19) REDIRECT EXAMINATION OF DR. RICHARD KOCAN
 (20) BY MR. JAMIN
 (21) Q Dr. Kocan, there is only a couple small things I want to
 (22) clarify. Let me just confirm, because when Mr. Cooper was
 (23) asking about your deposition - do you recall back in June of
 (24) 1993 being asked the question, do you have an opinion to a
 (25) reasonable degree of scientific certainty whether or not the

Vol 28 4816

- (1) Exxon Valdez oil spill and exposure to oil from that spill is
 (2) more probable than not an explanation for what occurred to the
 (3) herring population in Prince William Sound in 1993.
 (4) And giving the answer, based on all the studies I've
 (5) covered and my own studies and the available data and the
 (6) declining population, yes, I think there is a very good
 (7) possibility that the Valdez spill affected this and caused that
 (8) decline.
 (9) A Could you tell me from where you're reading that?
 (10) Q Your deposition in June 11 of 1993. Would you like to take
 (11) a look at it?
 (12) A Yes, please.
 (13) Yes, those are my words.
 (14) Q Do you understand that you support the Trustees' study to
 (15) look into confirmation of your opinion?
 (16) A Absolutely.
 (17) Q And are you able to give an opinion here in court today
 (18) that it is more probable than not that the virus is a function
 (19) of the Exxon Valdez oil spill?
 (20) A I would say that the ultimate disease resulting from that
 (21) virus is - has resulted from exposure - previous exposure to
 (22) oil.
 (23) Q So it's the disease itself?
 (24) A The disease, yes.
 (25) Q And what the Trustees are after then, through confirmation

Vol 28 4817

- (1) is a higher standard of proof than more probable than not is
 (2) that true?
 (3) A That s correct
 (4) Q Now one area of clarification There was some questions
 (5) regarding the effect on the different age classes and I wanted
 (6) to clarify that
 (7) Is it your view sir that when the 89s who were affected
 (8) by the virus and ultimately the disease when they came back
 (9) that they affected the 88 class?
 (10) A Would you restate that?
 (11) Q Certainly There was some questions about when the fish
 (12) came back in 1993 and then again in 1994 and you had
 (13) indicated
 (14) that the 89 year class was particularly susceptible to the
 (15) virus And I wanted to ask you whether the 88 year class
 (16) could have been affected by that process as well?
 (17) A By the process of exposure previous exposure to oil or by
 (18) exposure to the virus?
 (19) Q Let s take both Let s ask about previous exposure to the
 (20) oil first
 (21) A Well the 88 year class was present in Prince William
 (22) Sound at the time of the oil spill so their potential for
 (23) exposure to the oil was very high
 (24) Q And how would that 88 year class have been exposed to the
 (25) oil?
 (26) A They would have been exposed through ingestion of

Vol 28 4818

- (1) contaminated prey direct exposure to the oil were they have
 (2) been to be swimming in the area of the plume as the oil exited
 (3) the Sound They could have been exposed through exposure
 (4) to
 (5) contaminated particles when they were suspended from the
 (6) bottom Several variations of exposure
 (7) Q Where were those 88s living roughly a year after their
 (8) spawn?
 (9) A You mean when they are one year old?
 (10) Q Yes
 (11) A Well they are distributed all over Prince William Sound to
 (12) some degree There is a tendency for them to concentrate in
 (13) higher numbers in the southwest that would be Montague
 (14) channel
 (15) and down toward the Kenai Peninsula
 (16) Q Was that directly in the path of the spill sir?
 (17) A As I understand it that s correct
 (18) Q Now you raised another issue that I wanted to ask the
 (19) final question about When the 89s come back in I think you
 (20) first said they came back in a little bit in 92 more so in
 (21) 93 and more so in 94
 (22) Is there any mechanism by which the 88 year class is
 (23) affected by the diseased 89s at that stage, sir?
 (24) A Well they would already be a part of the spawning
 (25) population by the time the 89 year class entered the spawning
 (26) population and if they were involved in that initial spread of
 (27) the disease they would be contaminated or infected by the

Vol 28 - 4819

- (1) newly released viral particles and become infected
 (2) Q In addition to the newly released viral particles would
 (3) they be affected in which the biomass milk and ovarian fluids
 (4) would be released?
 (5) A That would be the route of exposure The spawning
 (6) activities is basically comprised of thousands of fish spawning
 (7) pretty much spontaneously and the body fluid release is all
 (8) around them and you can see that so they are contaminated
 (9) fluids
 (10) Q So that biomass is composed of a number of different age
 (11) class years?
 (12) A That s correct All of the spawning age classes are
 (13) present in that biomass
 (14) Q And when the virus is released from those diseased fish is
 (15) it specific to the age classes that it affects?
 (16) A It s specific - no it would more likely to infect those
 (17) fish that were previously unexposed and did not already carry
 (18) the virus
 (19) Q Would that have included the 88 in 1993?
 (20) A It could have been yes
 (21) THE COURT Thank you Dr Kocan You may step down
 (22) MR O NEILL Some more documents to admit
 (23) Plaintiffs offer 773 319 320 -
 (24) MR COOPER Excuse me Your Honor Are they
 (25) preadmits?

Vol 28 - 4820

- (1) MR O NEILL They are and they were agreed
 (2) MS ROBINSON There is one on the list that was not
 (3) agreed and that s 3652
 (4) MR O NEILL I m not that far yet but why don t you
 (5) come up here and you can look over my shoulder
 (6) I m sorry Plaintiffs offer the following exhibits and I
 (7) started with 773 319 320 321 322 323 324 325 326 327
 (8) 328 329 330 331 332 333, 334 337 775 338-A 338-B 339
 (9) 340 341 342 818 354 3650 3651 3654 3655 and 361 And
 (10) Plaintiffs Exhibits 399 400 401 402 403 404 3739 6029
 (11) 6030 6031 and Plaintiffs Exhibits 412 413 739 421 422
 (12) 423 425 426 427 428 429 and 430
 (13) MS ROBINSON Defendants have no objection
 (14) (Exhibits 773 319 320 321 322 323 324 325 326 327
 (15) 328 329 330 331 332 333 334 337 775 338-A 338-B 339
 (16) 340 341 342 818 354 3650, 3651 3654 3655 and 361 And
 (17) Plaintiffs Exhibits 399 400 401 402 403 404 3739 6029
 (18) 6030 6031 and Plaintiffs' Exhibits 412 413 739 421 422
 (19) 423 425 426 427 428 429 and 430 offered)
 (20) THE COURT Thank you The Plaintiffs exhibits
 (21) announced by Mr O'Neill are admitted
 (22) (Exhibits 773 319 320 321 322 323 324 325 326 327

 (3) MR JAMIN Your Honor the next witness was Mr
 (4) Rosenthal Should we approach the bench?
 (5) (At side bar off the Record)
 (6) MR JAMIN Your Honor Plaintiffs call as their next
 (7) witness Mr Richard Rosenthal
 (8) THE CLERK Raise your right hand
 (9) (The Witness is Sworn)
 (10) THE CLERK Please be seated For the record sir
 (11) state your full name your address and spell your last name
 (12) THE WITNESS Yes I m Richard Rosenthal and the
 (13) last name is R O S E N T H A L and I live on Whitby Island in
 (14) the town of Langley Washington
 (15) DIRECT EXAMINATION OF RICHARD ROSENTHAL
 (16) BY MR JAMIN
 (17) Q Sir how are you employed?
 (18) A I m a marine biologist and a wildlife nature
 (19) cinematographer
 (20) Q Do you have a bachelor s and master s degree in
 (21) marine biology?
 (22) A Yes
 (23) Q Do you have your course work done for your Ph D ?
 (24) A Yes
 (25) Q Shortly after the oil spill did you have a chance to come

Vol 28 4822

- (1) to Prince William Sound?
 (2) A Yes I did
 (3) Q Did you do some filming at that time?
 (4) A Yes I was filming for three different groups that were
 (5) interested in the spill in Prince William Sound
 (6) Q What were those groups sir?
 (7) A That was for the PBS the Nova series and for the BBC for
 (8) a David Attenboro (ph) special called Trials of Life and it
 (9) was also for the State of Alaska Department of Fish & Game
 (10) Q Now do you have a short segment of the film that you took
 (11) today?
 (12) A Yes I do
 (13) Q Now I m going to ask you to put to the side your career as
 (14) a biologist and I think it was Jack Webb used to say just the
 (15) facts as you narrate and we re going to show the film to the
 (16) jury Give us some of the ideas of the place and time Those
 (17) are some of the facts that are relevant
 (18) A This is preExxon Valdez grounding 1982 83 working on a
 (19) series called Sea School for the State of Alaska This is
 (20) herring during 1990 as they aggregate prior to spawning And
 (21) this is an example of what the eggs look like when they are
 (22) deposited on the sea vegetation and on the seafloor like snow
 (23) is falling
 (24) This is an example from the air off of Montague Island in
 (25) Rocky Bay Port Chalmers showing the milk and the extent of it

Vol 28 4823

- (1) on the shoreline where millions of fish have aggregated to lay
 (2) their eggs
 (3) Q Take a moment for the next segment
 (4) A This is in Herring Bay in early May when I joined the
 (5) Alaska Department of Fish & Game team and we re 20 feet
 (6) underwater here on a high tide working on the seaweeds and
 (7) rocky surface And the dive partner there is employed by Fish
 (8) & Game as a diver and we re here filming oil that had been
 (9) deposited on the seaweed and on the rocks weeks after the
 (10) spill
 (11) Q The third segment?
 (12) A The third segment is the herring aggregated and laying
 (13) their eggs on the seaweeds and some of the other creatures
 (14) that are coming in to feed on them Fish & Game research led
 (15) by Evelyn Biggs Brown and state biologist Dennis
 (16) Blakenbeckler
 (17) surveying the amount of egg deposition
 (18) In this shot you can see how fragile the eggs are coming
 (19) off the seaweeds during a storm or a tidal change and eggs get
 (20) washed on the beach And at Rocky Bay we found oil on the
 (21) eggs
 (22) MR JAMIN All right, sir I would move for the
 (23) admission of Plaintiffs' 269
 (24) (Exhibit PX269 offered)
 (25) THE COURT This has been subject to an objection that
 I have ruled on and it may be admitted

Vol 28 4824

- (1) (Exhibit PX269 received)
 (2) MR JAMIN Thank you Mr Rosenthal The defense
 (3) counsel may have questions for you
 (4) CROSS EXAMINATION OF RICHARD ROSENTHAL
 (5) BY MR LYNCH
 (6) Q Mr Rosenthal I have two questions This film was in
 (7) three segments more or less The segment that showed the
 (8) oiled kelp?
 (9) A Yes with the diver
 (10) Q Yes You said you were at high tide about 20 feet down?
 (11) A Right
 (12) Q Is that an area that s exposed at lower tides?
 (13) A It s exposed at lower tides like all Prince William Sound
 (14) intertidals every six hours
 (15) Q Not all of Prince William Sound goes dry every time the
 (16) tide changes?
 (17) A It depends on the elevation
 (18) Q What I m trying to get is that an area that s exposed to
 (19) the air?
 (20) A Yes it is
 (21) Q And what was the date of the last segment?
 (22) A Which segment was that?
 (23) Q There were three segments one you were laying down a
 (24) transect and looking at it
 (25) A That s the first two weeks in May 1989 with the Alaska

Vol 28 4825

- (1) Department of Fish & Game research
 (2) MR LYNCH Thank you
 (3) MR JAMIN No redirect Mr Rosenthal Thank you very much
 (4) THE COURT Thank you Mr Rosenthal You may step down
 (5) MR O NEILL Plaintiffs call Steve Hughes
 (6) THE CLERK Raise your right hand
 (7) (The Witness Is Sworn)
 (8) THE CLERK Please be seated For the record sir
 (9) state your full name your address and spell your last name
 (10) THE WITNESS Steven Edward Hughes 4055 21st Avenue
 (11) West Seattle And my last name is spelled H U G H E S
 (12) DIRECT EXAMINATION OF STEVEN HUGHES
 (13) BY MR O NEILL
 (14) Q How old are you Mr Hughes?
 (15) A 49
 (16) Q What do you do for a living?
 (17) A I'm fisheries biologist and owner/vice-president of a
 (18) private fisheries company called Natural Resource Consultants
 (19) Q What college degrees do you have?
 (20) A Bachelor of science and master of science degrees in
 (21) biology and postgraduate work in fisheries population
 (22) dynamics
 (23) Q Have you ever fished?
 (24) A Yes I fished commercially to get through high school and

Vol 28 4827

- (1) composition and size composition?
 (2) A Yes along with a number of other species
 (3) Q In 1981 did you change job positions?
 (4) A That's correct
 (5) Q What did you begin doing in 1981?
 (6) A Well in 1981 I had an opportunity to quit the federal
 (7) service and go to work for the private industry and I elected
 (8) to do that and joined this private fisheries research firm
 (9) called Natural Resource Consultants in 1981 as a partner
 (10) Q And with Natural Resource Consultants have you consulted
 (11) on any fisheries projects?
 (12) A Yes That's my business
 (13) Q What kinds of things do you do?
 (14) A Most of my work is directly with fishing companies
 (15) processing companies individual fishermen individual
 (16) processors I work with a large number of financial institutes
 (17) that are lending money in the fishing business and I do a
 (18) substantial amount of work through fishing trade associations
 (19) with the management councils in Alaska and also the
 (20) management
 (21) councils off the west coast So I work quite a lot with state
 (22) and federal agencies in my scientific capacity
 (23) Q Have you done any work for Sea First Bank?
 (24) A Yes We typically do annual reports for Sea First Bank
 (25) which evaluate the status of Alaska fisheries their economics
 (26) their growth potential and areas where investment should be

Vol 28 4828

- (1) college during the late 50s and early 60s
 (2) Q And what was your first non-fishing job?
 (3) A When I completed my master's degree I was hired by the
 (4) Borough of Commercial Fisheries U S government
 (5) Department of
 (6) Interior as a fishery biologist in Seattle and I worked there
 (7) for 13 years
 (8) Q And what did you do there?
 (9) A I was - during that period I was primarily in charge of
 (10) groundfish and shellfish research in Alaska mostly the Bering
 (11) Sea and Gulf of Alaska regions During that period I spent an
 (12) average of about 135 days at sea per year I was the leader of
 (13) most of the federal research that was done in the offshore Gulf
 (14) of Alaska and Bering Sea regions
 (15) Q Have you ever been on fishery research voyages?
 (16) A Many times
 (17) Q While you were with the Borough of Commercial Fisheries
 (18) which became the National Marine Fisheries Service, did you do
 (19) any report work for them?
 (20) A Yes
 (21) Q Would you tell us about it?
 (22) A Like other scientists I was expected to publish scientific
 (23) results and I had I believe - I had 27 formal publications
 (24) during the 13 years I was there and these dealt primarily with
 (25) resources off Alaska and their management.
 (26) Q Have you done any work with regard to herring catch catch

Vol 28 4828

- (1) supported
 (2) Q And you're not an economist?
 (3) A That's correct
 (4) Q But in your work from 1981 to the present you do
 (5) investigative work with regard to what prices fish are actually
 (6) selling at?
 (7) A Absolutely
 (8) Q So you couldn't do forecasting but if you have to do
 (9) research into the area of what did fish sell at in '89 or where
 (10) did fish sell at in '89 what kind of prices that's research
 (11) you've regularly done?
 (12) A That's standard procedure in our business
 (13) Q Have you done any herring resource analysis or forecasting
 (14) for Sea First Bank or the National Bank of Alaska?
 (15) A Yes both We also do all the fisheries technical work for
 (16) the National Bank of Alaska, and of course that has included
 (17) herring
 (18) Q Have you ever done any work with the North Pacific Fishery
 (19) Management Council?
 (20) A Yes since their formation in 1977 I believe it was
 (21) Q Have you done any work outside the United States?
 (22) A Yes
 (23) Q Who have you done work for outside the United States?
 (24) A The main project I was involved on was with the World Bank
 (25) spent nine trips to north Africa, worked in the north Indian

Vol 28 4829

- (1) Ocean the Gulf of Adenoff (ph) the country of Somal doing
 (2) fishery resource and assessment work
 (3) Q You ve mentioned you have authored 27 scientific articles
 (4) What generally subject was that?
 (5) A They fall in the areas of fisheries resource assessment
 (6) how much is there in time and space and the yields that is
 (7) how much of each one of those resources could be taken in a
 (8) commercial fishery and sustain a population at a constant level
 (9) or near constant level Those are the basics that have gone
 (10) into my more scientific work and I would say that equal to
 (11) that, the other part of my work has been gear development
 (12) commercial fishing gear development and a whole series of
 (13) studies that have basically Americanized the fisheries in the
 (14) Bering Sea the Gulf of Alaska those that used to be foreign
 (15) caught are all American caught, and this has occurred during
 my
 (16) work and career
 (17) Q I want to ask you about some of your work for Natural
 (18) Resource Consultants In the course of your duties with
 (19) Natural Resource Consultants over the last 13 years have you
 (20) had an opportunity to analyze fishery losses?
 (21) A Yes on many occasions More than 200
 (22) Q And that includes both attempting to estimate what the lost
 (23) fish were and what their value would have been looking at
 (24) comparable fishery prices?
 (25) A That s exactly right

Vol 28 4830

- (1) Q Have you ever been qualified as an expert witness in a
 (2) federal or state court with regard to the subjects of foregone
 (3) harvest and foregone harvest values?
 (4) A Yes
 (5) Q How many times?
 (6) A I would say between 15 and 20 and that includes Seattle,
 (7) Portland Eugene, Honolulu and Alaska.
 (8) MR O NEILL We would offer Mr Hughes as an expert
 (9) in calculating foregone fishing harvest values and foregone -
 (10) foregone fish harvest and foregone fishing harvest values
 (11) MR COOPER No objection
 (12) THE COURT Thank you The witness is qualified
 (13) MR O NEILL Thank you Judge I was going to sit
 (14) down
 (15) BY MR O NEILL
 (16) Q You weren t here to testify - so we can focus on herring
 (17) is that correct?
 (18) A That s correct.
 (19) Q What did you do to prepare yourself to come in here and
 (20) testify about herring?
 (21) A We evaluated Alaska Department of Fish & Game records for
 (22) many years from all the commercial fishing areas in Alaska for
 (23) herring We evaluated past years catches past years harvest
 (24) guidelines which is Alaska Department of Fish & Game s
 (25) projection of how much fish can be caught in the coming

Vol 28 4831

- (1) season We evaluated the catch composition of herring from
 (2) different fisheries that are broken down into age classes
 (3) which tells us the strength of the different year classes of
 (4) herring that support the fisheries We looked at how they
 (5) grow how they die We looked at information that supplements
 (6) my own experience on herring distributions where they occur
 (7) whether it be off shore in the Gulf of Alaska or Bering Sea or
 (8) in shore at different times of their lives We evaluated
 (9) prices that were paid to fishermen for herring in 1989 as well
 (10) as 1993 and 1994 I think that generally covers it.
 (11) Q Would you give us a little bit of background if you would
 (12) on the history and geographical extent of herring fisheries in
 (13) Alaska?
 (14) A Yes The commercial fisheries for herring typically start
 (15) in the Kah Shakes area That s down in southeast Alaska They
 (16) extend into several inland areas of southeast Alaska, not on
 (17) the coast but inside waters The next region to the north -
 (18) I ve got to get this right here Is this the marking pen?
 (19) Q Yeah I m just trying to see if I can -
 (20) THE COURT It s a black thing
 (21) THE WITNESS I can explain
 (22) The commercial fisheries start in southeast Alaska in the
 (23) Kah Shakes area in March and they progress to the north as
 (24) winter turns to spring and the water warms This is a
 (25) time-dependent temperature-dependent succession We call
 this

Vol 28 4832

- (1) the herring circuit.
 (2) So we proceed from southeast Alaska to Prince William
 (3) Sound Next to Cook Inlet. Next to Kodiak Following that
 (4) is on the south side of the Alaska Peninsula, including the
 (5) Chignik area There is a food and bait fishery to the west in
 (6) the Dutch Harbor area That s at the end of Unalaska Island
 (7) and in Unimak Pass area
 (8) There is an area fishery at Port Moller which is on the
 (9) north side of the Alaska Peninsula about halfway into Bristol
 (10) Bay There is a large herring fishery in Togiak which is in
 (11) the northern part of Bristol Bay There are several smaller
 (12) ones in Goodnews Bay Security Cove and working up in
 passed
 (13) the Kuskokwim area to Norton Sound
 (14) In all there is more than 30 commercial herring fisheries
 (15) by area and gear type
 (16) Q I want to go for a minute to the Alaska Department of Fish
 (17) & Game management or the so-called sustained yield concept
 or
 (18) basis
 (19) A Yes
 (20) Q Would you tell them about that?
 (21) A This is a basic simple principle in fish management that we
 (22) all try to achieve and Fish & Game adopted this awhile ago
 (23) What it s based on is determining a population size they call
 (24) it a biomass Usually that biomass pertains to adults that
 (25) were recruited to the fishery that are likely to be caught

Vol 28 4833

- (1) They do through different techniques an assessment of that
 (2) population to determine the magnitude of that measured in
 (3) tons
 (4) In the case of herring that is done as the first - the
 (5) first time it's done in the cycle is after the fish spawn and
 (6) they do an egg deposition survey and there is a quantitative
 (7) relationship between egg density and number of females that
 (8) have spawned and from that they calculate a biomass estimate
 (9) for the total stock males and females That occurs in the
 (10) Prince William Sound and other areas affected here basically
 (11) during April
 (12) After that the fish move off shore and when they come
 (13) back the next year Alaska Department of Fish & Game has an
 (14) opportunity to aerial survey this returning stock and again
 (15) obtain a separate estimate by aerial survey to determine how
 (16) large that source is compared to what they project it to be
 (17) The projections are also influenced by the age of the
 (18) herring As I mentioned they have information on how fast
 (19) four year olds grow and how fast they die and how fast five
 (20) year olds grow and how fast they die It's a difference it's
 (21) a dynamic process They add these up make a projection what
 (22) the biomass is going to be
 (23) Alaska Department of Fish & Game has a very strict and
 (24) simple management formula For herring in Prince William
 (25) Sound if there is more than 8400 tons of biomass available

Vol 28 4834

- (1) they can allow a fishery And if there is more than 42 500
 (2) tons assessed to be there they only harvest at a rate of 20
 (3) percent That's their goal 20 percent
 (4) So between 8400 tons and 42 500 tons there is a sliding
 (5) scale of zero to 20 percent but as long as it's over 42 000
 (6) tons they harvest at a rate of 20 percent So essentially if
 (7) they know what their biomass is they then establish what they
 (8) call this final guideline harvest based on a percentage of
 (9) that and that becomes the catch quota what the fishermen are
 (10) likely to take
 (11) Q Now Mr Parker came in here and testified about the 1989
 (12) closures herring closures that were a result of the oil
 (13) spill and Dr Kocan came in here and - there were herring
 (14) failures in 1993 and 1994?
 (15) A There were failures in herring biomass and the fishery
 (16) Q And he testified about causation the relationship of the
 (17) spill to the 1993 and 1994 herring failures
 (18) A Yes
 (19) Q You're here today to put a number on the foregone harvest
 (20) for 1989 and 1993 and 1994 for herring?
 (21) A That's exactly what I'm here for
 (22) Q I just wanted to put your testimony into relationship with
 (23) everybody else so we know what you're testifying about and
 (24) what you're not
 (25) A Thank you

Vol 28 4835

- (1) Q Now in 1989 the testimony has been that all of the 1989
 (2) sac-roe fisheries in Prince William Sound were closed for the
 (3) season Are you aware of that?
 (4) A That's correct
 (5) Q Now let's see if we can do some lost harvest calculations
 (6) for each of the Prince William Sound herring fisheries and I'm
 (7) going to bring up Exhibit 399 which is in evidence and ask
 (8) you if that helps
 (9) Do you want to use any particular part of it? We can bring
 (10) up parts make it a little easier to read
 (11) A Yes I think what we should do is pull up the top half
 (12) please
 (13) In Prince William Sound in 1989 there were four commercial
 (14) fisheries that were impacted by the oil spill These are the
 (15) purse seine sac-roe fishery the gillnet sac-roe fishery the
 (16) pound fishery and the wild roe on kelp fishery And what I
 (17) would like to do is share with you how we went through and
 (18) evaluated each one of these and the decisions we made on
 (19) what
 (20) the forgone harvests were
 (21) So in the case of the purse - excuse me the purse seine
 (22) fishery you should realize this is a very very intense
 (23) fishery It's very intense it's very short There is a lot
 (24) of vessels seeking herring in a short period of time Alaska
 (25) Department of Fish & Game always tries to achieve their
 guideline harvest level which is that area right here

Vol 28 - 4836

- (1) Q You've got the color on up there?
 (2) A Let's see color on got it
 (3) Q Now if you don't goof it up we'll do okay
 (4) Good work
 (5) A Between 1984 and 1991 we've put this information together
 (6) for you which documents first of all for these years the
 (7) forecasted biomass for herring the guideline harvest for
 (8) herring the actual harvest that occurred and what percentage
 (9) the harvest was of the forecasted biomass
 (10) Q When we talk about biomass instead of talking about fish
 (11) we're just talking about tons?
 (12) A That's correct, tons of herring What I want to emphasize
 (13) to you is that our job to be fair and objective to try and
 (14) figure out what the loss was required that we choose from past
 (15) years or pick a year that are most representative of the
 (16) fishery that would have occurred in 1989 And so in
 (17) forecasting what the loss of harvest was for 1989 Prince
 (18) William Sound purse seine fishery we used the average of the
 (19) 1984 to 1990 experience and the reason is that those forecast
 (20) biomasses were most closely representative to the 54 899 tons
 (21) that was forecasted for 1989
 (22) Q What we're doing is we're going to average 1984 to 1990 and
 (23) figure out what the average mass of fish was?
 (24) A That's correct. So the bottom line is that for 1984
 (25) through 1990 the purse seine fishery accounted for 16 67

Vol 28 4837

- (1) percent of the forecasted biomass We then applied that with
 (2) the - to the forecasted biomass for 1989 Prince William Sound
 (3) resulting in a projected harvest of 9 150 tons
 (4) Now I mentioned to you earlier that in ADF&G's attempt to
 (5) hit a guideline harvest they often overrun that in the actual
 (6) harvest. That's not a problem because they are only
 (7) exploiting at a 20 percent rate which is very conservative
 (8) So I want you to understand that while they don't hit the
 (9) guideline harvest they exceed that by a certain amount We
 (10) took that history into account and said it's going to be the
 (11) same for 1989 as it has been in the past years
 (12) Q So in simple terms the 1989 projection for this particular
 (13) gear type purse seiners and we saw one you did two averages
 (14) and came up with a projection that is based on two averages
 (15) that span the years from 1984 to 1990?
 (16) A That's very close and we settled on 16.67 percent of the
 (17) forecast biomasses being most representative of what would
 (18) have
 (19) occurred had there not been an oil spill in Prince William
 (20) Sound in 1989
 (21) Q And then you applied that percentage to what the forecasted
 (22) biomass was and you came up with 9 150 tons?
 (23) A For the purse seine fishery that's correct.
 (24) Q Now I want to go to the next gear type There are purse
 (25) seiners and then there are also gillnetters That's another
 (26) collection of fishermen?

Vol 28 - 4838

- (1) A That's correct So if we pull the bottom half of the
 (2) screen-
 (3) Q I didn't do it very well Give me another try And the
 (4) color should be on for you
 (5) A Thank you We went through exactly the same process here
 (6) with the gillnetters The same years were considered Here is
 (7) the same forecasted biomass numbers The gillnet experience
 (8) in
 (9) this fishery during 1984 to 1990 was 1.01 percent so a much
 (10) smaller component of the operation but the experience was
 (11) they
 (12) accounted for just over one percent So again going through
 (13) the calculations had they been able to fish as anticipated, we
 (14) projected they would have caught 556 tons of herring This is
 (15) the bottom line right here Okay?
 (16) Q Now I want to go to the other two types of herring fishers
 (17) in Prince William Sound and they are on Exhibit Plaintiffs
 (18) 400 which has been admitted and let me bring up the top half
 (19) of Plaintiffs 400
 (20) Tell me about it
 (21) A Again this is the wild roe on kelp fishery and here it
 (22) was necessary for you to change the years that were
 (23) considered
 (24) in the average Here again for you we have the forecasted
 (25) biomass that we talked about earlier for the period 1984
 (26) through 1991 but the fact of the matter is that this fishery
 (27) called wild roe on kelp has been subject to several types of
 (28) changes during the 1984 to 1991 period We had to be
 (29) sensitive

Vol 28 4839

- (1) to those changes and we had to pick years that most carefully
 (2) matched the management regimes and what was going to
 (3) occur in
 (4) 1989
 (5) Those years in this instance were 1987 through 1990
 (6) This fishery accounted for 1.89 percent of the total herring
 (7) catch - of the total forecasted biomass rather and that is
 (8) equivalent to 130 tons of roe on kelp Okay?
 (9) Q And with regard to the last type of herring fisher in
 (10) Prince William Sound?
 (11) A This is called the pound roe on kelp fishery This is the
 (12) fourth fishery that occurred in the Sound and suffered losses
 (13) This is kind of an interesting fishery What happens here is
 (14) the same purse seine vessels that may be involved in the seine
 (15) roe fishery capture herring They very carefully transfer
 (16) those herring into a floating pen called a transfer pound
 (17) That pound is moved to the permanent pound and the herring
 (18) are
 (19) transferred to the permanent pound and they are held there and
 (20) they spawn on kelp that is laid in that pound
 (21) After the spawning occurs and the herring are released
 (22) over time those kelp fronds are harvested And so once again
 (23) we're going through exactly the same process
 (24) I should tell you that Alaska Department of Fish & Game has
 (25) changed their management of this fishery during the late 1980s
 (26) and early 1990s to better control the harvest The problem
 (27) here was that in many years they overshot the harvest that they

Vol 28 - 4840

- (1) were allocated and in other years they undershot it.
 (2) ADF&G instituted policy changes that occurred during this
 (3) period to try to achieve the guideline harvest that were
 (4) projected more closely Those years that most closely
 (5) approximated what would have occurred in 1989 was the period
 (6) 1988 and 1990 We took the average of those years They
 (7) represented just over 3 percent of the forecasted biomass and
 (8) the projection of loss was 134 tons of pound roe on kelp
 (9) Q So now we've estimated at least by ton what the foregone
 (10) harvest was for Prince William Sound in 1989?
 (11) A That's correct.
 (12) Q Now I want to go to Lower Cook Inlet, and I'm going to use
 (13) Plaintiffs' Exhibit 401 which is in evidence
 (14) Now in Lower Cook Inlet the testimony has been that the
 (15) outer and eastern districts were closed and that they were -
 (16) they are normally managed as an exploratory fishery during
 (17) normal years Is that your understanding?
 (18) A That's - in general terms that's correct.
 (19) Q With regard to Exhibit 401 which is in evidence will you
 (20) tell us what you did to estimate the impact of the Exxon Valdez
 (21) oil spill on the Lower Cook Inlet herring fishery?
 (22) A This one is going to be more difficult to read I'd like
 (23) to tell you that in Lower Cook Inlet it's a much smaller
 (24) fishery and Alaska Department of Fish & Game does not
 (25) conduct
 (26) the research in this area that they do in Prince William Sound

Vol 28 4841

- (1) so there is more limited information to deal with
 (2) So what we did in this area was we basically looked at the
 (3) guideline harvest levels that have been assigned to this region
 (4) for many years and you can see those are consistent at 350
 (5) tons for both the eastern district and the outer district and
 (6) here we have -
 (7) Q Do you want a colored pen? Let me bring it up again just
 (8) a second
 (9) A This area is divided into two subdistricts so we had to
 (10) treat each subdistrict separately but we looked at the history
 (11) of the guideline harvest levels looked at the performance of
 (12) the fishery took the average for the most representative
 (13) years and the bottom line losses were calculated at 239 tons
 (14) in round numbers for the eastern district and at 75 tons in
 (15) round numbers for the outer district
 (16) So this was our conclusion of the foregone harvest of
 (17) herring in this small fishery just to the north of Prince
 (18) William Sound
 (19) Q Now in addition to Lower Cook Inlet the Exxon Valdez had
 (20) an impact on the Kodiak herring fishery Would you describe
 (21) that to us?
 (22) A Yes The Kodiak area is a large area There is herring
 (23) that occur in more than 50 separate bays in Kodiak and Alaska
 (24) Department of Fish & Game considers each one of these to be a
 (25) separate stock of herring So each one of these bays is a

Vol 28 4842

- (1) sign - a guideline harvest level if they have that
 (2) information
 (3) Now the Kodiak fishery was interrupted in some areas and
 (4) not interrupted in others So what we did was we went through
 (5) each one of these 50 years We looked at the histories that
 (6) have occurred in these areas We calculated what the catch
 (7) would have been relative to the experience in these areas and
 (8) the guideline harvest levels for 1989 we subtracted out the
 (9) areas that actually had catches and we arrived at a bottom
 (10) line loss of harvest for 1989 for two gear types sac-roe purse
 (11) seine and sac roe gillnet They do not have the wild roe on
 (12) kelp nor the pound fishery
 (13) So from the standpoint of losses it was simpler We only
 (14) had two gear types to deal with
 (15) Q And I put on the Elmo Exhibit 402 and with your help tell
 (16) me - can we deal with this section first?
 (17) A The Kodiak area has what's called guideline harvest areas
 (18) where they have made a forecast of what the harvest will be
 (19) and they also have exploratory areas which are open that do
 (20) not have a set quota So for the 1989 guideline harvest areas the
 (21) spawning biomass was forecasted to be about 9500 tons
 (22) There
 (23) was a preseason guideline harvest set of just over 2400 tons
 (24) The inseason guideline harvest that was available to the
 (25) fishery and that comes from the areas that were open totaled
 1897 tons and the actual harvest rather than being the 2400

Vol 28 4843

- (1) ton guideline was actually 2113 tons
 (2) Now in that year the history in Kodiak was that they
 (3) slightly exceeded the guideline harvest levels which is not
 (4) uncommon They took about 111 percent So we applied that
 to
 (5) the areas that were lost and projected a foregone harvest that
 (6) totaled 577 tons And that then was split between purse seine
 (7) vessels and gillnet vessels based on their traditional
 (8) participation in that fishery
 (9) Then we have the exploratory areas below These are areas
 (10) where there is not actually a guideline harvest predetermined
 (11) but they are open for fishing and some of these areas were
 (12) affected by oil and some were not And we calculated that
 (13) those areas affected by oil resulted in a loss of catch of 120
 (14) tons all in the same process that we went through in the other
 (15) bays And then again we divided that between purse seine and
 (16) gillnet assigning 108 tons to purse seine and 12 to gillnet
 (17) Q And then on the bottom of Exhibit 403 there is a summary?
 (18) A There is a summary For the Kodiak area both the
 (19) exploratory and guideline harvest together we calculated the
 (20) loss at 697 tons and below that it's divided between the gear
 (21) types
 (22) Q And we've now calculated the tons and on Exhibit 404 we
 (23) have a summary of the 1989 foregone herring losses for Prince
 (24) William Sound Kodiak Lower Cook Inlet and - what is the
 (25) outer district purse seine sac-roe?

Vol 28 - 4844

- (1) A That's part of Lower Cook Inlet
 (2) Q So we've gone through these four fishing areas and these
 (3) are the summaries of the foregone harvests in the next to the
 (4) right column on Exhibit Number 404 is that correct?
 (5) A Yes This is simply a summary of what we've just gone
 (6) through for the different fisheries and the different areas
 (7) Q And did you attempt to place a value on all of this herring
 (8) that wasn't caught?
 (9) A We did
 (10) Q And how did you do that?
 (11) A For 1989 for Kodiak where there was some fishing that
 (12) took place and for Cook Inlet where there was also some
 (13) fishing that took place we used the average grounds price
 (14) That was price that was paid by processors to fishermen for
 (15) catches that actually occurred that year in those areas And
 (16) for Prince William Sound where there was no fishery we used
 (17) the Exxon Valdez grounds price
 (18) Q The Exxon claims payment grounds price?
 (19) A That's correct. The grounds price that was established by
 (20) the Exxon payment office
 (21) Q And does Exhibit 405-A reflect both the foregone harvest
 (22) tons and the 1989 prices that you are using to estimate the
 (23) foregone harvest value and summarize those?
 (24) A Yes
 (25) MR O NEILL. We would offer 405 Alpha

Vol 28 4845

- (1) (Exhibit 405-A offered)
 (2) MR COOPER No objection
 (3) THE COURT Plaintiffs Exhibit 405-A is admitted
 (4) (Exhibit 405 A received)
 (5) BY MR O NEILL
 (6) Q Is it your opinion with regard to Prince William Sound
 (7) Kodiak and Cook Inlet that the fishermen because of those
 (8) areas - because of the spill lost \$16 670 700?
 (9) A That s my opinion
 (10) Q I want to if we could go to the year 1993 -
 (11) MR O NEILL. It s noon time
 (12) THE COURT We ll take our second recess We ll be in
 (13) recess for 15 minutes
 (14) (Jury out at 12 00)
 (15) (Recess at 12 00)
 (16) (Jury in at 12 20)
 (17) THE CLERK. All rise
 (18) BY MR O NEILL
 (19) Q I want to move to 1993 and 1994 but just by way of
 (20) clarification before I do that with regard to the reasons for
 (21) the 1993 and 1994 failure Dr Kocan testified to those?
 (22) A That is correct
 (23) Q And you re here and were asked to do a calculation as to
 (24) what the harvest would have been had there been seasons in
 (25) 1993
 (25) and 94?

Vol 28 4846

- (1) A That s correct
 (2) Q Plaintiffs Exhibit - well what did you take a look at
 (3) with regard to the foregone harvest estimate for 1993 for
 (4) Prince William Sound?
 (5) A We basically went through the same process we went
 through
 (6) in 1989 looked at all the same information Looked at Alaska
 (7) Department of Fish & Game s forecasted spawning biomass for
 (8) 1993 In round numbers that was about 134 000 tons of
 (9) herring It was projected to be a big year
 (10) Q Plaintiffs Exhibit 6029 which has been admitted into
 (11) evidence is 6029 your calculation of lost biomass for 1993?
 (12) A It is for two gear types purse seine and gillnet.
 (13) Q I ll bring up the second page in a minute Let s do the
 (14) purse seine first Would you tell us what you did in Exhibit
 (15) 6029 with regard to calculating the foregone harvest of purse
 (16) seine herring biomass in Prince William Sound for 1993?
 (17) A Yes I mentioned to you earlier that Alaska Department of
 (18) Fish & Game had made some changes in some of their
 management
 (19) techniques but in 1993 we still lived under two important
 (20) principles The 8400 threshold biomass was still in place and
 (21) the 42 000 threshold biomass was still in place So everyone
 (22) expected that Prince William Sound would be harvested in 1993
 (23) at the 20 percent exploitation rate That was what was
 (24) forecasted
 (25) What we did in the way of background because the harvest

Vol 28 4847

- (1) for 1993 was projected to be a large harvest very close to
 (2) what it was in 1991 and 1992 and because of the intensity of
 (3) the fishery I mentioned that Alaska Department of Fish & Game
 (4) has a tougher time managing fisheries when the harvest is
 (5) small because they have the same number of boats as when
 the
 (6) harvest is larger so we used the two most similar years which
 (7) was 1991 and 1992 That s why we used those years they
 mostly
 (8) represented what we expected to happen in 1993
 (9) The bottom line is that there was a very substantial
 (10) reduction in biomass that showed up Instead of 134 000 metric
 (11) tons that was expected there was about 30 000 tons that
 showed
 (12) up Nearly a hundred thousand tons was missing As a result
 (13) the largest fishery, the sac-roe purse seine fishery was not
 (14) allowed to operate Using the same procedures I explained
 (15) before, we calculated that loss at 17 400 metric tons in round
 (16) numbers and that was what we did for purse seine
 (17) The gillnet fishery was allowed to operate We had
 (18) operated in 1991 and 1992 just as the seiners had They had
 (19) the same experience The bottom line was their loss we figured
 (20) was negligible We assigned no loss to that gear type for
 (21) 1993
 (22) Q I want to bring you to the next page of Plaintiffs 6029
 (23) which has been admitted and what is the second page of the
 (24) second page of Plaintiffs 6029?
 (25) A This is the foregone harvest calculations for the other two

Vol 28 - 4848

- (1) fisheries the wild roe on kelp fisheries and the pound
 (2) fisheries and we will go through these
 (3) Q Yes sir
 (4) A The wild spawn on kelp fishery also operated but it
 (5) operated in a constrained manner because the biomass was not
 (6) there to support the fishery as expected So in this case we
 (7) have a - an experience where Alaska Department of Fish &
 Game
 (8) had basically tightened up their regulations and they were
 (9) effectively managing this fishery to achieve a guideline
 (10) harvest. We assumed that had there not been a problem with
 the
 (11) biomass in 1993 they would have achieved what Alaska
 (12) Department of Fish & Game had allocated them That guideline
 (13) harvest was 268 tons
 (14) Q And they didn t catch that much?
 (15) A That s correct They actually took 163 tons of product
 (16) We simply subtracted what they were allocated less what they
 (17) did take and calculated the foregone harvest to be 105 000
 (18) tons of product. That concluded the wild spawn on kelp
 (19) fishery
 (20) Q What did you do with regard to pound roe on kelp?
 (21) A Now the other thing that occurred was that in actually
 (22) 1991 and later in 1992 for this fishery ADF&G was continuing
 (23) to change some of the regulations on how this fishery was
 (24) managed They were having problems measuring how much
 herring
 (25) was actually put into these pounds because you can t take the

Vol 28 4849

- (1) herring out of the water and weigh them and then put them in
 (2) the pounds because the herring die So when a seiner comes
 up
 (3) alongside a pound and he s going to transfer the contents of
 (4) his net into the pound it s at best an estimate of how much
 (5) fish has gone into that pound
 (6) And that was creating some of the problems that ADF&G was
 (7) having in managing this fishery and it accounts for a lot of
 (8) the variation why they didn t achieve a guideline harvest or
 (9) got too much
 (10) So what they did and this applied in 1993 they changed
 (11) this to be a regulation that was based on the number of kelp
 (12) leaves or fronds that are put into these pounds They simply
 (13) said we re not going to allow more 1950 leaves per pound
 (14) We checked with Prince William Sound processors those
 (15) people that account for about 80 percent of the purchase of
 (16) this product They were expecting a yield of 3 pounds per
 (17) leaf That s the weight of the leaf plus the roe that s on the
 (18) leaf And from that and knowing that there were 126 pounds
 (19) that were in place that year to operate we calculated what the
 (20) harvest would have been had there been fish there to support
 as
 (21) planned We subtracted the actual catch which was 98 tons
 (22) and the difference was 207 tons of product that was lost That
 (23) was our method
 (24) Q So using these four methods you were able to come up with
 (25) the lost biomass the biomass that was not harvested because
 of

Vol 28 4850

- (1) the failure of the 1993 season?
 (2) A I wouldn t say it quite that way We were I believe to
 (3) come up with the products that should have been caught or the
 (4) herring or the roe with kelp that should have been harvested
 (5) but was not because of the failure in a very substantial part
 (6) of that biomass to return support to the fishery as planned
 (7) Q Did you attempt to put a dollar value on that?
 (8) A We did
 (9) Q What dollar values did you look at with regard to the 1993
 (10) season?
 (11) A For the 1993 seasons in Prince William Sound we - as I
 (12) indicated earlier we checked with pounders We talked to
 (13) other processors that purchased wild roe on kelp and we
 (14) talked
 (15) to fishermen that had planned to seine and had agreed on
 prices
 (16) or what they were to receive for herring We also checked
 (17) with - I m sorry We also checked with Alaska Department of
 (18) Fish & Game and we got prices for the adjacent areas for the
 (19) sac-roe seine fishery from Sitka and from - I think it was
 Cook Inlet
 (20) So we did basically everything we could to check adjacent
 (21) area prices same fish same roe content We used actual
 (22) prices where we could and we applied those to the foregone
 (23) loss
 (24) Q And I have in front of you Exhibit Number 3738 Plaintiffs
 (25) 3738 Is that a summary both of the foregone harvest in tons

Vol 28 4851

- (1) and the prices that you looked at?
 (2) A Yes I think if we blow that up -
 (3) MR O NEILL Before we do I ll offer Exhibit 3738
 (4) (Exhibit 3738 offered)
 (5) MR COOPER No objection
 (6) THE COURT Plaintiffs 3738 is admitted
 (7) (Exhibit 3738 received)
 (8) BY MR O NEILL
 (9) Q Will you tell us what is contained in Exhibit 3738?
 (10) A Again this is for Prince William Sound 1993 foregone
 (11) harvest or identified in short tons by the three fisheries that
 (12) were impacted I mentioned that we assigned no loss to the
 (13) gillnet fishery so we only have three fisheries here The
 (14) price per ton that was assigned to those products is indicated
 (15) in the second column and the lost values are a simple matter
 (16) of multiplication which are in the 1993 lost value category
 (17) totaling just over 15 million dollars
 (18) Q Does Exhibit 3738 which is in evidence reflect your best
 (19) estimate of the lost herring harvest and value in 1993 in
 (20) Prince William Sound?
 (21) A It does
 (22) Q I d like to go to 1994 and I ll sit down this is
 (23) testimony is a little tedious
 (24) Let me ask you a question Do people actually eat those
 (25) kelp - do you eat the kelp with the fish eggs on it? Have you

Vol 28 4852

- (1) ever eaten it?
 (2) A Yes
 (3) Q You did?
 (4) A Of course
 (5) Q I don t believe you
 (6) A That s my attorney
 (7) Q I just can t believe it.
 (8) Let s go to Plaintiffs Exhibit 6030 which is in
 (9) evidence And what is 6030 sir?
 (10) A 6030 is a summary of our analysis of the 1994 loss in
 (11) Prince William Sound
 (12) Q Tell us how you did it
 (13) A This is a little bit more complicated but not very much
 (14) What we were faced with in projecting the loss for 1994 was the
 (15) fact that Alaska Department of Fish & Game in 1993 was not
 able
 (16) to do a spawn survey deposition so we didn t have the base
 (17) line of biomass that occurred in the - after spawning in the
 (18) spring of 1993 to project what was likely to be there for
 (19) 1994
 (20) So what we had to do was two things First of all we had
 (21) to go back to the spawn deposition survey that last occurred
 (22) That was after spawning in 1992 That was the spawn
 deposition
 (23) survey that was used to forecast the 134 000 tons of herring
 (24) that was projected to arrive in 1993 We took that number and
 (25) then we assumed that the natural mortality losses of herring

Vol 28 4853

- (1) which Dr Kocan has discussed with you would be offset between
- (2) 1993 and 1994 by the growth of the year classes that would occur in this fishery
- (3) I want you to appreciate that in 1994 that fishery would have been supported to a very large extent by the 1988 year class of fish These fish have now grown to the point that they are six years old They were supporting this fishery in 1994 to the tune of about 80 percent of the total harvest
- (4) Eight out of ten of those fish taken in the 1994 fishery had there been one would have been projected to have been from that 1988 important year class
- (5) And I think you understand that in Prince William Sound for more than 20 years now there has been a predominant year class every four years so the big year classes have been in the 80s 1980 1984 1988 The next one would be the 1992 year class which is not there yet to support the fishery
- (6) So we knowing the growth rates of that year class and the natural mortality rates assume that losses due to natural mortality would offset growth of that fish and that's a valid assumption
- (7) What we then did was we said in 1993 there was projected to be a spawning biomass of 134 133 tons and if I have the color on that's right here Now we know that in 1993 we didn't have the full harvest that we expected but we assumed that if you would have had the full harvest there would have

Vol 28 4854

- (1) been more fish taken out of the system than what there really was And the full harvest had there not been a problem is 21 600 tons So we subtracted that and we said that if 1993 would have been normal and 1994 would have been normal we would have had a forecasted biomass of herring in Prince William Sound that's 112 500 pounds in round numbers
- (2) In 1994 Alaska Department of Fish & Game made one more change in management They changed the threshold biomass levels They said we're going to change this if there is more than 20 000 tons of herring that shows up in 1994 - I'm sorry They said if there is more than 22 000 tons of herring that shows up in 1994 we're going to allow a commercial fishery at a 20 percent exploitation rate
- (3) Well when the date came and the herring came in and the surveys were done there was a maximum of 20 000 tons of herring that showed up There was no commercial fishery allowed
- (4) Q Not enough fish for a commercial fishery?
- (5) A None So that year was a loss and it was a loss largely because of the failure of that 1988 and successive year classes
- (6) Q And did you go through the same drill with regard to the four types of gear types to compute a foregone harvest of the year 1994 for Prince William Sound?
- (7) A We did we went through the same drill

Vol 28 4855

- (1) Q And I have in front of you Plaintiffs Exhibit 6031 which is in evidence and I'll pull up the top half of the page of 6031 And would you explain to us very very briefly what you did?
- (2) A We did the same thing we did here for 1993 You'll probably recall that the purse seiners were accounting for 13 percent of the forecasted biomass in 1991 1992 and we used that same number for 1993 We again applied that same number for 1994 and projected 14 624 tons of foregone harvest
- (3) Q Let's be merciful to all of us Did you go ahead and apply the same kinds of processes that you used for 1993 to the 1994 numbers for the other three gear types?
- (4) A Exactly the same
- (5) Q As a result of that did you come up with a total foregone harvest?
- (6) A We did
- (7) Q And did you take a look at what the 1994 prices were in comparable areas and other price information for 1994?
- (8) A We run through the same drill we went through for 1993 We talked to processors fishermen Alaska Department of Fish & Game looked at prices in adjacent areas and made our decisions based on what we considered to be the best information
- (9) Q And I have placed in front of you Plaintiffs Exhibit 3777 for identification That a summary of that information for

Vol 28 4856

- (1) 1994?
- (2) A Yes it is
- (3) MR O NEILL Offer Plaintiffs' 3777
- (4) (Exhibit 3777 offered)
- (5) MR COOPER No objection
- (6) THE COURT Plaintiffs 3777 is admitted
- (7) (Exhibit 3777 received)
- (8) BY MR O NEILL
- (9) Q And taking a look at Plaintiffs 3777 the middle part of Plaintiffs 3777 7777* could you tell us what you got there?
- (10) A Well we assigned prices for the purse seine sac-roe That's what you're referring to the middle part
- (11) Q Is a summary of the -
- (12) A Yes It's done by the four gear types totals \$21 7 million
- (13) Q Would you tell us where you got the prices for 1994?
- (14) A Yes Again the same We checked with Prince William Sound processors fishermen and adjacent area prices that were actually realized
- (15) Q With regard to the 1989 foregone harvest exhibit the 1993 foregone harvest value exhibit which is Plaintiffs 3738 and the 1994 foregone herring harvest exhibit which is Plaintiffs 3777 is it your opinion that that's what those fishermen would have caught but for either the closures or the failures and the harvest for those years that we've talked about?

Vol 28 4857

- (1) **A Exactly**
 (2) **MR O NEILL** I have no further questions
 (3) **THE COURT** You may cross-examine
 (4) **CROSS EXAMINATION OF STEVEN HUGHES**
 (5) **BY MR COOPER**
 (6) **Q Mr Hughes** my name is Bert Cooper I don t think we ve
 (7) met before
 (8) **A Glad to meet you**
 (9) **Q How are you?**
 (10) **A Good**
 (11) **Q You ve been in court a few times other courts?**
 (12) **A I have**
 (13) **Q If I remember right - you have testified in about how many**
 (14) **cases?**
 (15) **A I think I stated earlier today between 15 or 20**
 (16) **Q Let s see I thought - did I see you reading something**
 (17) **when we were back waiting to come on?**
 (18) **A Probably**
 (19) **Q What was that?**
 (20) **A I said probably**
 (21) **Q I m sorry what was it that you were reading?**
 (22) **A I was reading a summary of the exhibits that we just went**
 (23) **through**
 (24) **Q Did you leave that up here?**
 (25) **A I did**

Vol 28 4858

- (1) **Q I wonder if I might have a quick look at it?**
 (2) **A It s with counsel**
 (3) **Q While I m doing that let me ask you one question On the**
 (4) **1993 harvest estimate that you did foregone harvest estimate**
 (5) **that was - you kind of took off from the ADF&G estimate if I**
 (6) **understand it right?**
 (7) **A Yes I think that s accurate We started with their**
 (8) **forecasted biomass for 1993**
 (9) **Q And if there were any revisions to that you would want to**
 (10) **include those revisions?**
 (11) **A We didn t incorporate any revisions to that forecast that**
 (12) **were made after the stock returned and it was realized that**
 (13) **there was a substantial reduction compared to what was**
 (14) **expected And the reason was that we wanted to calculate what**
 (15) **the catch would have been had there been no adverse impact**
 (16) **So**
 (17) **we measured what it would have been as a forecast compared**
 (18) **to**
 (19) **what actually occurred**
 (20) **Q If I may approach Your Honor is this what you were**
 (21) **talking about Not quite what I had in mind but maybe that s**
 (22) **what you had in mind**
 (23) **A I think this was in there but this is not the only thing**
 (24) **that was there**
 (25) **Q What else was in there?**
 (26) **A There were these same exhibits that we d just gone through**
 (27) **Q Anything else?**

Vol 28 4859

- (1) **A There is a narrative**
 (2) **Q A narrative Do you know where the narrative is?**
 (3) **A It was in that same material to the best of my knowledge**
 (4) **Q Maybe I could ask for the narrative Your Honor if it s**
 (5) **here Let me ask to show you this Is this the narrative you**
 (6) **were referring to?**
 (7) **A Yes this appears to be it**
 (8) **Q That s a narrative of the testimony that you gave?**
 (9) **A Well that s not my narrative That s the attorney s**
 (10) **narrative**
 (11) **Q Could I see that again?**
 (12) **So the attorneys gave you this?**
 (13) **A Did they give that to me?**
 (14) **Q Yes**
 (15) **A Yes they did**
 (16) **Q This is what you were studying for your testimony?**
 (17) **A Well I was looking at it to see what questions they were**
 (18) **going to ask me that s right**
 (19) **Q Well it s got questions and what the answers are doesn t**
 (20) **it?**
 (21) **A It s got my answers if there are any answers there**
 (22) **Q Who actually wrote this?**
 (23) **A I believe that was put together from answers from my**
 (24) **depositions that were earlier taken and I believe from the**
 (25) **documents that we prepared**

Vol 28 - 4860

- (1) **Q But who put it together I guess is what I really want to**
 (2) **know**
 (3) **A I can t tell you that**
 (4) **Q You didn t do it?**
 (5) **A No**
 (6) **MR COOPER** Maybe Your Honor with your permission
 (7) **we could have this marked as an exhibit?**
 (8) **THE COURT** Yeah you can mark it as an exhibit
 (9) **MR O NEILL** I object I don t know what is the
 (10) **relevance**
 (11) **THE COURT** He wants it marked he can mark it
 (12) **MR COOPER** We ll take care of that later
 (13) **BY MR COOPER**
 (14) **Q I ve just got a few questions on prices**
 (15) **A Go ahead**
 (16) **Q Let s see The 1989 numbers that you came up with for**
 (17) **prices if I remember correctly those changed yesterday?**
 (18) **A My prices haven t changed**
 (19) **Q I thought you had previously provided an exhibit that had**
 (20) **different prices than one that we received yesterday or the day**
 (21) **before yesterday that had some new price on there Does that**
 (22) **ring a bell?**
 (23) **A Not for me it didn t**
 (24) **Q The prices that you use currently for 1989 numbers are**
 (25) **prices that you got from where?**

Vol 28 4861

- (1) A Yeah 89 was actually pretty simple We had fisheries
 (2) that occurred at Kodiak and Cook Inlet We used those same
 (3) prices that were paid to the fishermen And for Prince William
 (4) Sound where there was no fishery we used the prices that
 were
 (5) identified by the Exxon claims office as the grounds prices so
 (6) we used perhaps fair to say your prices
 (7) Q You took the Exxon claims prices and you thought those
 were
 (8) fair prices?
 (9) A We looked at those and decided that they were based on a
 (10) substantial amount of information and we used those
 (11) Q And you thought they were fair prices?
 (12) A I think for the most part they were fair prices
 (13) Q Let me ask you a couple questions on 1994 damages your
 (14) calculations for this year
 (15) A Yes
 (16) Q You've got some price assumptions in there correct?
 (17) A That's right.
 (18) Q You mentioned I think if I heard you right I think you
 (19) said we talked to processors and ADF&G I believe?
 (20) A Yes
 (21) Q Who is the we?
 (22) A Who is the "we"? I was actually in Anchorage during the
 (23) period when it became apparent that the 1994 Prince William
 (24) Sound oil spill was not going to come in and I met with people
 (25) from Prince William Sound pound fisheries and wild roe on kelp

Vol 28 4862

- (1) fisheries here in Anchorage and talked with them about what
 (2) those prices were going to be for that year had there been a
 (3) fishery
 (4) There was a gentleman by the name of Paul Reed and he had
 (5) one or two of his employees with him That was part of the
 (6) information and there was also conversations with the seiners
 (7) association
 (8) Q These were conversations that you had?
 (9) A Some were conversations that I had some were
 conversations
 (10) that other people in my office had because I wasn't there
 (11) Q Do you know who they spoke with at ADF&G?
 (12) A There are some notes that were prepared on that and those
 (13) people I believe are identified in those notes I don't
 (14) remember all the names off the top of my head
 (15) MR COOPER Your Honor I don't have any further
 (16) questions of the witness
 (17) MR O NEILL No -
 (18) THE COURT You are through?
 (19) MR O NEILL I have no questions
 (20) THE WITNESS Thank you I appreciate that
 (21) THE COURT I didn't get the signal
 (22) MS WAGNER Plaintiffs call Margaret Louise Parker by
 (23) deposition designation
 (24) THE CLERK Raise your right hand
 (25) (The Witness Is Sworn)

Vol 28 4863

- (1) THE CLERK Please take the witness stand For the
 (2) record please state your full name your address and spell your
 (3) last name?
 (4) A Susan C E T P I S O N 4089 Carmel Brooks San Diego
 (5) California
 (6) MS WAGNER You might want to pull the silver
 (7) microphone a little closer to you
 (8) DIRECT EXAMINATION OF MARGARET PARKER (read)
 (9) BY MS WAGNER
 (10) Q Would you please state your full name for the record and
 (11) spell your last?
 (12) A My full name is Margaret Louise Parker P A R K E R
 (13) Q Your occupation?
 (14) A Self-employed
 (15) Q And you say you're currently self-employed do you have
 any
 (16) specific employment at this particular moment?
 (17) A I'm working on a couple projects but specifically no I
 (18) was dismissed from Alaska Seafood Marketing Institute about a
 (19) month ago and I'm starting to work on projects that involve
 (20) some of the things I did in previous jobs
 (21) Q Well what were the circumstances of your leaving Alaska
 (22) Seafood Marketing Institute or ASMI?
 (23) A I was dismissed
 (24) Q What was your position at the time you left ASMI?
 (25) A Export program manager

Vol 28 4864

- (1) Q How long had you held that position?
 (2) A Two years
 (3) Q Could you tell me what your educational background is Miss
 (4) Parker?
 (5) A Two years at the University of Washington
 (6) Q And when was that?
 (7) A 1971 to three
 (8) Q What was your course of study during those years?
 (9) A Russian language and literature
 (10) Q And what did you do in 1974?
 (11) A I moved to Cordova Alaska
 (12) Q And what employment did you have in Cordova?
 (13) A I was unemployed for most of the summer with the exception
 (14) of working itinerantly on commercial fishing boats as a crew
 (15) Q What was your first serious employment if I can put it
 (16) that way after you moved to Cordova?
 (17) A Let's see I think it was as a reporter for the Cordova
 (18) Times
 (19) Q When was that?
 (20) A It would have been the fall of '74
 (21) Q How long did you hold that position?
 (22) A Approximately three - four years
 (23) Q Was that a full time job?
 (24) A Yes
 (25) Q What was your next full time employment after being a

Vol 28 4865

- (1) reporter on the Cordova Times?
 (2) A I worked for the Marine Advisory Program University of
 (3) Alaska
 (4) Q And could you tell me generally the type of projects you
 (5) worked on with that entity?
 (6) A The agent was a business major and he devised the
 (7) break even formula for fishermen so we organized seminars
 that
 (8) disseminated that kind of information to fishermen And I
 (9) helped him write and in some cases wrote a weekly column for
 (10) the
 (11) newspaper about what the SEA Grant program was doing We
 ran
 (12) seminars on fishing safety He was involved with other agents
 (13) in the state putting together a safety manual with a video and
 (14) a work booklet for fishermen so I worked on that project And
 (15) he worked with Cordova Aquatic Marketing Association
 (16) Q And how long did you work as a part of that program?
 (17) A As I said I think it was two years
 (18) Q So what are we up to around 1980 now when you left that
 (19) program?
 (20) A Probably 79 or 80
 (21) Q What was your next position?
 (22) A As I recall the next position was as manager of the Copper
 (23) River Fishermen s Co op
 (24) Q How many years did you work as manager of the Co op?
 (25) A One

Vol 28 - 4866

- (1) Q And what did you do the following year?
 (2) A The following year I worked for Cordova Aquatic Marketing
 (3) Association/Cordova District Fishermen United
 (4) Q And what did you do for those entities?
 (5) A I worked as an administrative assistant for the president
 (6) Q What was your next position after that?
 (7) A As Pacific Editor for Seafood Business Magazine in Seattle
 (8) Q And were you based in Seattle while you were working for
 (9) Seafood Business magazine?
 (10) A Yes
 (11) Q What years did you work for that magazine?
 (12) A From 1984 to 1989
 (13) Q What did you do in 1989 I take it you left the magazine
 (14) at that - in that year?
 (15) A Yes I began working for National Fisheries Institute
 (16) Q And what is the National Fisheries Institute?
 (17) A It s the largest seafood trade association in the country
 (18) Q And what was your position with the National Fisheries
 (19) Institute?
 (20) A I was a public affairs representative
 (21) Q What were your job responsibilities?
 (22) A To act as a liaison between the industry and the press
 (23) Q And where were you based?
 (24) A Washington D C
 (25) Q And then when was it that you went to work for the Alaska

Vol 28 4867

- (1) Seafood Marketing Institute?
 (2) A In May of 89 I was loaned to ASMI by NFI to work on a
 (3) temporary basis to handle the press calls that were coming in
 (4) as a result of the Spill
 (5) Q And when you say you were loaned what does that mean
 (6) exactly?
 (7) A ASMI reimbursed NFI for my salary I stayed officially an
 (8) employee of NFI throughout the whole time
 (9) Q How long did you stay with ASMI on this basis?
 (10) A Approximately five months
 (11) Q So May through the end of September?
 (12) A Right
 (13) Q Do you recall when in May you joined ASMI?
 (14) A Approximately the first week as I recall
 (15) Q How did that arrangement come about do you know?
 (16) A What arrangement?
 (17) Q The arrangement whereby you were loaned by NFI to ASMI?
 (18) A The executive director of ASMI telephoned my boss the
 (19) executive director of NFI and asked if he- if they could
 (20) borrow me
 (21) Q And that was - Mary Tuten was the executive director of
 (22) ASMI?
 (23) A Yes her name is pronounced Tuten
 (24) Q And then in October of 1989 did you go back full time with
 (25) the Institute?

Vol 28 4868

- (1) A Yes
 (2) Q How long did you continue to work there?
 (3) A Until February of 90 I m sorry it might have been March
 (4) of 90
 (5) Q And what happened then?
 (6) A I was offered a job in Seattle so I left NFI and came to
 (7) Seattle
 (8) Q And what was the job in Seattle?
 (9) A Export program director for ASMI
 (10) Q Was your experience in 1989 that traders in fact were
 (11) concerned about possible effects of the oil spill on the
 (12) marketing of Alaskan salmon?
 (13) A Absolutely
 (14) Q Can you elaborate please?
 (15) A My observation of members of the industry during that time
 (16) was that they were extremely uncertain of what the season
 would
 (17) bring for them And under normal circumstances the
 uncertainty
 (18) of the upcoming season makes everyone involved in
 negotiating
 (19) and involved in making contracts for future sales very prudent
 (20) very cautious very unwilling to take any more of a risk than
 (21) it is inherently necessary to take in the salmon business The
 (22) variables are huge they exceed the number and the magnitude
 of
 (23) most other seafood seasons So under normal conditions the
 (24) trade would have been extremely cautious anyway in terms of
 (25) setting up ex vessel prices or other costs to their

Vol 28 4869

- (1) operations When the Spill occurred everyone was completely
 (2) overwhelmed by the uncertainty of what this meant for their
 (3) businesses so the level of panic and anxiety and uncertainty
 (4) was higher than I've ever seen it
 (5) Q Is it frequently during the preseason that is before the
 (6) salmon fishing begins that processors and fishermen set the
 (7) ex vessel price?
 (8) A It's traditional that that's the period when negotiations
 (9) begin and end
 (10) Q And in 1989 did you have occasion to be present at meetings
 (11) where processors and fishermen were present preseason that
 (12) is
 (12) before the salmon fishing began?
 (13) A Yes
 (14) Q During those meetings was concern expressed by
 (15) processors
 (15) and fishermen and the like regarding the impact of the oil
 (16) spill on the marketing of salmon?
 (17) A Yes it was expressed more than just by processors and
 (18) fishermen
 (19) Q Who else expressed the concern?
 (20) A Resource managers members of information agencies
 (21) specifically not the press but SEA Grant Manne advisors for
 (22) instance or observers from UAA or the government state
 (23) government
 (24) Q And during this preseason period at these meetings what
 (25) were some of the concerns being expressed regarding the
 impact

Vol 28 - 4870

- (1) of the Exxon Valdez oil spill on the marketing of salmon?
 (2) A The concerns that I recall observing and hearing during
 (3) those meetings or during conversations about the atmosphere
 (4) in
 (4) different communities that were affected or were expecting to
 (5) be affected by the oil spill ranged from whether this meant
 (6) that there would be any business conducted this season
 whether
 (7) there would be any fish return No one knew the fundamental -
 (8) whether or not the fundamental aspects of this business would
 (9) even exist or unfold People were very very confused didn't
 (10) know where to go for answers there was speculation that the
 (11) salmon wouldn't return at all
 (12) Q Was your impression based on sitting through these
 (13) meetings hearing all these concerns being
 (14) expressed then that traders and processors were approaching
 (15) the '89 season in a very cautious manner?
 (16) A I would say that's a fairly accurate description to say
 (17) that they were approaching it in a cautious manner
 (18) Q Now these concerns that the traders and the processors
 (19) were expressing first of all is it a fair statement that the
 (20) environment preseason was one that almost bordered on
 (21) hysteria or how would you describe it?
 (22) A There were specific behaviors that I witnessed that I would
 (23) say bordered on hysteria I don't know that I would use that
 (24) word to categorize as a whole all of the attitudes or
 (25) approaches that were exhibited following the Oil Spill through

Vol 28 4871

- (1) the season of 1989
 (2) Q What were some of the specific instances?
 (3) A When there were meetings meetings that included fishermen
 (4) and processors in front of cameras or individual or smaller
 (5) group interviews by the press that specifically targeted on
 (6) the affected individuals perceived loss or the affected
 (7) individuals perceived impact on him or her or their life-style
 (8) or their business as a result of the oil spill There was a
 (9) meeting in Kodiak that I attended of fishermen that was
 (10) publicized and I recall an individual fishermen holding forth
 (11) quite dramatically about this meant the end of his way of life
 (12) as he knew it and in the community and the Kodiak's way of
 (13) life
 (14) Q Now you referred yesterday to this concern among traders
 (15) and buyers of a self-fulfilling prophecy and that's also
 (16) referenced to in the Burson Marsteller survey that we just
 (17) talked about What is- or what was the concern about this
 (18) self-fulfilling prophecy amongst the traders and buyers of
 (19) Alaska salmon?
 (20) A Well the best analogy I could give to someone that hasn't
 (21) lived through this is to fishermen or processors or anyone in
 (22) Alaska that was in front of a camera or in any other way
 (23) influenced by the press by telling them our salmon was not
 (24) contaminated did nothing but raise the specter of contaminated
 (25) salmon in the viewers' mind So if we saw or heard that

Vol 28 4872

- (1) individuals or groups were going to express their fear to the
 (2) public at large or to a camera or microphone that they were
 (3) afraid that their livelihood would be contaminated by oil we
 (4) were very careful and very quick to explain the ramifications
 (5) of that sort of public statement that it could then bring to
 (6) mind in consumers' eyes a real concern that hadn't been there
 (7) before
 (8) Q Would it then be in the interest of anyone in the industry
 (9) wherever they are along the chain of distribution to keep
 (10) references and mentions out of the trade literature regarding
 (11) the oil spill -
 (12) A My view during the time that I worked for ASMI for that
 (13) very purpose to make decisions like this was that yes it
 (14) absolutely would be in their interest to avoid connection with
 (15) that
 (16) Q And in fact were those suggestions or recommendations
 (17) that you were making to people in the industry as you know
 (18) don't draw attention to it and don't write about it the trade
 (19) journals and the like?
 (20) A Yes
 (21) Q So at least to the extent then of reviewing the trade
 (22) literature we don't see specific references to the Exxon
 (23) Valdez oil spill and its impacts on the marketing of salmon to
 (24) that extent at least people were following suggestions of ASMI
 (25) in not publicizing and not playing that up?

Vol 28 4873

- (1) A To some extent we were successful at that and I can say
 (2) that the majority of members of the trade took our advise but
 (3) not everyone did
 (4) Q Who did not take your advice can you think of some
 (5) instances?
 (6) A I cannot bring to mind anything specific but it seems to
 (7) me that there were a few less than four instances that were
 (8) brought to the attention of the General Office during that
 (9) summer of retailers in the Lower 48 specifically posting signs
 (10) that said Alaska salmon not caught in oiled area or not caught
 (11) in the oil spill area It was very discouraging to see
 (12) Q Could you look at Exhibit 3377 for a minute please?
 (13) Have you found that page Miss Parker?
 (14) A Yes
 (15) Q The first sentence - well the first two sentences of have
 (16) document say Throughout the summer our staff of five
 (17) responded to oil spill related calls from the marketplace at a
 (18) rate of about 200 a day The questions ranged from how do I
 (19) tell if my seafood is contaminated to are Alaska products safe
 (20) to eat and how will the spill affect my retail seafood store in
 (21) Ohio In fact is that a true statement that there were
 (22) numerous phone calls throughout the course of the summer by
 (23) various people in the Alaskan salmon trade business inquiring
 (24) about the oil spill and oil spill related matters?
 (25) A Yes To the best of my understanding that s an accurate

Vol 28 4874

- (1) two sentences
 (2) Q And it was your observation and experience that traders
 (3) continued to be concerned about the marketability of Alaskan
 (4) salmon throughout the course of the summer?
 (5) A I think to some degree that s safe to say It s impossible
 (6) for me to speculate whether everyone had that level of concern
 (7) throughout that period
 (8) Q No I didn t mean to imply that everybody had that But
 (9) in general traders - a large number of traders expressed
 (10) concern in questions to you throughout the course of the
 (11) summer
 (12) regarding the marketability of Alaskan salmon because of the
 (13) oil spill?
 (14) A Yes and beyond that
 (15) Q Can you elaborate please?
 (16) A Their concerns that I was aware of exceeded the ending of
 (17) the season I left ASMI in late September but my
 (18) understanding is that there was some concern which translated
 (19) into telephone calls to the Juneau office that happened after
 (20) that and into the early part of 1990
 (21) Q Do you know did ASMI keep any sort of telephone log
 (22) regarding these - it sounds like thousands and thousands of
 (23) phone calls from nervous people in the - from the trading
 (24) segment of the industry?
 (25) Well is it fair to say there were thousands of calls?
 (26) A The arithmetic would add up to over a thousand calls, yes

Vol 28 4875

- (1) Referring to your question about phone logs I think each
 (2) individual employee kept separate phone logs so yes there
 (3) would be
 (4) Q And was there a concern expressed by some traders that
 (5) should any contaminated fish find its way to let s say Japan
 (6) that the entire pack may be seized or at least part of the pack
 (7) will be seized?
 (8) A Not that I was aware I didn t hear any concerns
 (9) specifically about that that I can recall
 (10) Q What were the concerns that you were hearing were they
 (11) related more to some sort of consumer resistance to buy the
 (12) fish because of the spill?
 (13) A The concerns that I recall hearing and as I said I can t
 (14) specifically recall all of them but my memory is that they
 (15) were more immediate how will this affect our immediate need
 (16) for salmon This is a fishery that s gone on for a hundred
 (17) years people who have been in the business have expected to
 (18) have a certain amount of Copper River sockeye in the first week
 (19) in June how will this oil spill affect those kinds of issues
 (20) Q Were there any - was there any publicity about people
 (21) speculating about what the long term affects may be or health
 (22) risks associated with the oil spill?
 (23) A I recall some articles in national publications that may
 (24) have speculated about the long term affects publications such
 (25) the New York Times or the Washington Post

Vol 28 4876

- (1) Q Did that help the marketing of Alaskan salmon?
 (2) A I don t think that helped reassure members of the trade
 (3) Q And if fact isn t that specifically one of the things you
 (4) were trying to prevent is that sort of publicity from being
 (5) disseminated to the marketplace?
 (6) A Vis-a vis Alaska seafood yes
 (7) Q Do you know how widely disseminated this NOAA study
 (8) was?
 (9) Apparently Mr Pratt from the Chicago Tribune had a copy of it
 (10) or at least had information regarding it Do you know how
 (11) widely disseminated either the report was or the information
 (12) was regarding these bad affects of manne organisms ingesting
 (13) crude oil?
 (14) A I don t have any idea I remember specifically asking the
 (15) author if she knew and she was very adamant in telling me that
 (16) she would provide it to whoever asked and did not elaborate in
 (17) terms of numbers or individuals
 (18) Q Were you concerned that this type of information could
 (19) potentially become a food scare type of a situation?
 (20) A Yes
 (21) Q Could you elaborate please?
 (22) A This was a crisis the magnitude of which the seafood
 (23) industry had not ever seen We weren t certain we being the
 (24) seafood industry were not certain how it would be played out
 (25) It was often compared to the botulism incident of the early
 (26) 80s where a man died in Europe and sale prices and
 (27) movements

Vol 28 4877

- (1) were effected for several years following that In a situation
 (2) like this where there is such a high level of uncertainty the
 (3) things that we were afraid of were a much longer list of the
 (4) things that we knew for sure would not occur and we did not
 (5) have to be afraid of So in trying to responsibly deal with
 (6) the damage control and the misperceptions that could have
 (7) occurred we needed to expect the worst and be prepared for
 (8) that So to that end we were very concerned that there could
 (9) be a snowball affect on the seafood industry with the
 (10) preponderance of press stories about the spill being connected
 (11) in consumers or trade members minds as contaminating the
 (12) seafood from Alaska that season
 (13) MS WAGNER Thank you Nothing further
 (14) MS STEWART Brief cross examination
 (15) CROSS EXAMINATION OF MARGARET LOUISE PARKER
 (read)
 (16) BY MS STEWART
 (17) Q Do you have your script?
 (18) A Yes
 (19) Q Miss Parker in your deposition the court reporter asked
 (20) what is your mailing address
 (21) A 1016 8th Avenue North Number 302 Seattle Washington
 (22) 98109
 (23) Q Your occupation?
 (24) A Self employed
 (25) Q Could you tell me when you were born please?

Vol 28 - 4878

- (1) A June 16th 1952
 (2) Q And where?
 (3) A Spokane Washington
 (4) Q Why don t you tell me when you first took the job who you
 (5) reported to and then if it changed over the course of the two
 (6) years tell me what changed?
 (7) A I always reported to the executive director and that
 (8) position changed three times in the two years I worked there
 (9) Q And when you first came on was it Lennie Gorsuch?
 (10) A No it was Eric Eckholm
 (11) Q And then who was next?
 (12) A Lennie Gorsuch
 (13) Q And who was the third?
 (14) A Kim Elton
 (15) Q Do you recall any of the names of any of the skippers you
 (16) crewed for on vessels?
 (17) A Let s see Because that summer was so much more a
 (18) vacation
 (19) than it was making money I don t recall I crewed for
 (20) probably half a dozen people and half of them were more for
 (21) fun
 (22) than for income
 (23) Q I m going to skip to the next page page 28 line 3
 (24) Who is executive director of NFI?
 (25) A Lee Weddig W E D D I G
 (1) Q Regarding you job starting there in spring of 1990 as
 (2) export program director for ASMI or ASMI who offered you that

Vol 28 4879

- (1) job?
 (2) A Eric Eckholm
 (3) Q You indicated earlier in the summer of 1974 you crewed on
 (4) some boats I guess partly for recreation and partly to help
 (5) out fishermen Other than that crew experience have you ever
 (6) fished commercially in the State of Alaska?
 (7) A Yes
 (8) Q Could you tell me where and when?
 (9) A In Prince William Sound and the Copper River and it was
 (10) during the summers of 1977 78 perhaps 79
 (11) Q And what was that - was that as a crew member?
 (12) A Yes
 (13) Q Who did you crew for?
 (14) A I don t recall The longest period was with my then
 (15) husband Paul Swartzbart but there were others
 (16) Q I m going to show you what s been marked in your
 (17) deposition
 (18) as Exhibit 3375 and in this trial DX2935 for identification
 (19) Miss Parker and it s been - it s headed draft and then says
 (20) ASMI s response unique in oil spill saga This was a document
 (21) that was produced to us by ASMI Have you seen this before?
 (22) A Yes
 (23) Q And do you know who prepared this?
 (24) A I think this was prepared by a group of us in Juneau
 (25) probably including Mary Tuten myself and Kevin O Sullivan
 (1) Q Do you know roughly when it was prepared?

Vol 28 4880

- (1) A When it was prepared?
 (2) Q Uh huh
 (3) A Judging from the references in the body of this document
 (4) I d say in July or August of 1989
 (5) Q It appears to me from reviewing that it summarizes
 (6) chronologically effects that ASMI was involved with following
 (7) the Valdez Oil Spill is that generally accurate?
 (8) A Yes
 (9) Q Turn if you would to the second page and at the bottom
 (10) the last paragraph reads three days after the spill members
 (11) of the ASMI s board and marketing committee met in Seattle
 (12) with
 (13) executive director Mary Tuten They agreed to develop a fact
 (14) sheet to provide information about the spill and it s effects
 (15) on the seafood industry
 (16) A week later, quote ten facts you should know about the
 (17) recent oil spill in Alaska end quote was mailed to 20 000
 (18) seafoods buyers across the country
 (19) Do you know whether or not that s accurate that a fact
 (20) sheet of that type was sent out shortly after the oil spill by
 (21) ASMI?
 (22) A As far as I know that s accurate
 (23) Q Have you ever seen a copy of that fact sheet?
 (24) A Yes
 (25) Q Then the next paragraph says four days after the spill
 (1) ASMI conducted a soft poll market survey in ten U S cities

Vol 28 4881

- (1) Questions were submitted to Tokyo London and Paris also
The
- (2) results everyone knew about the spill but no one is changing
(3) their buying habits because of it This early intelligence was
(4) enormously important in determining ASMI s initial response to
(5) the spill
(6) Do you know whether or not those statements are accurate?
(7) A Are you referring to the phrase following the results
(8) quote?
(9) Q Yes excuse me well maybe we can start with did you -
(10) was it your understanding that a so-called soft poll was
(11) conducted within a few days after the oil spill by ASMI?
(12) A Yes that s my understanding
(13) Q Did you understand that the results of that soft poll as
(14) ASMI interpreted them were that everyone knew about the spill
(15) but no one was changing their buying habits because of it?
(16) A I have no reason to believe that that s inaccurate
(17) Q Did you ever discuss that topic with Mary Tuten?
(18) A I don t recall a specific conversation with her regarding
(19) that but we may have
(20) Q Did she ever describe to you the results of the soft poll
(21) that was conducted by ASMI?
(22) A She may have I don t recall specifically
(23) Q Is this description consistent with what she described to
(24) you?
(25) A My memory of it would have been that it is yes

Vol 28 4882

- (1) Q Still referring to DX2953 the next paragraph says from
(2) the beginning advertising and public relations agencies
(3) advised ASMI to launch a high profile reassurance campaign
(4) Quote everyone wanted us to run out there and tell the world
(5) that Alaska seafood was uncontaminated but we were
concerned
(6) about creating a perception problem when none existed
(7) Are the statements in that paragraph accurate?
(8) A As far as I know
(9) Q Did you think there was a risk that if ASMI launched a high
(10) profile public relations campaign to assure the world that
(11) Alaska seafood was safe that people might begin to draw a
(12) connection that they hadn t previously drawn?
(13) A Yes that was a possibility
(14) Q At least in the spring of 1989, a few days after the spill
(15) when that soft poll was conducted, that seemed to indicate that
(16) people were not making the connection at least as of that
(17) point correct?
(18) A Almost immediately following the spill correct
(19) Q And then down below the paragraph we just read the
(20) statement is made in the end the cautious approach prevailed
(21) the wisdom of that this was underscored in subsequent market
(22) survey results Do you know what that s referring to?
(23) A I m assuming that would be the Burson Marsteller studies
(24) Q In the deposition I m showing you what has been marked as
(25) Exhibit 3376 at the deposition Miss Parker and it was a

Vol 28 4883

- (1) document entitled news flash dated June 1989 Do you recall
(2) having seen this document before?
(3) A Yes
(4) Q In your position with ASMI in the spring and summer of
(5) 1989 did you have responsibility for issuing news releases
(6) like this one?
(7) A Yes
(8) Q Did you in fact prepare this document?
(9) A Yes
(10) Q In the second paragraph of the document that I m showing
(11) you in your deposition where the heading oil spill response
(12) occurs the statements are made five days after the grounding
(13) of the tanker preliminary market surveys were conducted in the
(14) U S France Japan and the UK Was your reference there to
(15) the so called soft poll that was described in the previous
(16) exhibit that we looked at?
(17) A I think so
(18) Q And then the next sentence in this document I m showing
(19) says consumers had not made the connection between the
seafood
(20) products and the Spill but the trade was concerned about
(21) pricing and availability Was that a true statement at the
(22) time you prepared this document?
(23) A Absolutely correct
(24) Q And when you say that the trade was concerned about
pricing
(25) and availability did you mean that buyers or processors of

Vol 28 4884

- (1) seafood was concerned that there might be an impact on the
(2) supply of seafood as a result of the spill related closures?
(3) A The concern that I observed among the trade was very very
(4) broad and it included those things that you mentioned as well
(5) as others Some cases buyers were concerned in a way that
(6) they couldn t articulate No one had ever dealt with this kind
(7) of tragedy before and no one knew what to expect
(8) Q But among their concerns was that the supplies might be
(9) constricted because of spill related closures?
(10) A Yes
(11) Q Was there also a concern that prices might be bid up if
(12) prices were limited?
(13) A There may have been a concern about that
(14) Q Well do you recall buyers or processors expressing the
(15) concern that salmon prices grounds prices might be higher
(16) because of a limitation in the supply as a result of spill
(17) related closures?
(18) A My memory of the conversation and observations I made
(19) during that period may have included those comments and
(20) observations from members of the trade but as I said the
(21) concern was very broad and very likely included other
concerns
(22) Q Yes I understand that My question is were there people
(23) processors buyers who expressed the concern that prices
might
(24) be higher because of the limitation on the supply? Do you
(25) recall that concern being expressed?

Vol 28 4885

- (1) A I think i have answered that to say that that was part of
 (2) what I observed and heard
 (3) Q Do you recall any other concerns about pricing being
 (4) expressed other than what you ve described?
 (5) A People were concerned about everything regarding their
 (6) business and the success of their business They truly did not
 (7) know what to expect The dynamics involved in this business
 (8) are very difficult to predict and no one knew what the results
 (9) or the ramifications of the spill would be No one knew the
 (10) spent extent of the spill in May It was still growing it was
 (11) still traveling
 (12) Q I understand but do you recall a name date place when
 (13) any person expressed to you any other concern about the price
 (14) other than what you ve talked about?
 (15) A Grounds price or other pricing issues
 (16) Q That s my line
 (17) The grounds price or any other pricing issue?
 (18) A Specifically in those terms no
 (19) Q At your deposition Miss Parker I m going to be showing
 (20) you what s marked as 3377 and is entitled ASMI program/oil
 (21) speech have you seen this document before?
 (22) A Yes
 (23) Q Over on the second page the second paragraph says Five
 (24) to six days after the grounding we initiated a worldwide soft
 (25) poll of our contacts to see how the consumers and food service

Vol 28 4886

- (1) trade were reacting to the spill on Alaska seafood We found
 (2) that in general the consumer was more concerned with the
 (3) environmental impacts and was not making a connection
 (4) between
 (5) oiled birds and otters and the possibility of Alaska seafood
 (6) being contaminated Is that an accurate description of the
 (7) soft poll?
 (8) A I have no reason to believe that what I m reading here
 (9) isn t an accurate description
 (10) Q Over on page 4 this same document that I m showing you in
 (11) your deposition again in the last paragraph there is a
 (12) description of during the time the survey data was being
 (13) collected and I assume that means that the Burson Marsteller
 (14) survey data ASMI was being pressured to put on a public
 (15) relations campaign and then in the last sentence of the
 (16) paragraph the statement is made besides we don t believe it
 (17) was really appropriate to spend a whole lot of money
 (18) convincing
 (19) the general consumer that the seafood they were eating wasn t
 (20) contaminated when our initial soft poll research informed us
 (21) that they hadn t made the connection to he possibility of it
 (22) being contaminated with the oiled birds and the sea otters they
 (23) were seeing daily on national TV
 (24) Was that Merry Tuten s view between the soft poll and the
 (25) receipt of the Burson Marsteller survey results?
 (26) A As far as I know yes
 (27) Q Did you agree with her view in that regard?

Vol 28 4887

- (1) A To the extent of what we were trying to accomplish yes I
 (2) did
 (3) Q I also wanted to ask you do you still have family members
 (4) or friends who fish in the Cordova area?
 (5) A Friends yes
 (6) Q A number of friends who fish in Cordova?
 (7) A Yes
 (8) Q Do you think that that zero tolerance policy was successful
 (9) in assuring the quality of Alaska seafood that summer?
 (10) A I can t really say We certainly hoped that it would have
 (11) been In order to accurately answer that question I guess I
 (12) would have to know what impulses motivated buyers to make
 (13) their
 (14) purchase both from the wholesale segment all the way down to
 (15) the final consumer
 (16) Q Just from the standpoint of preventing contaminated seafood
 (17) from entering the market stream do you believe the policy was
 (18) successful in accomplishing that?
 (19) A I never heard of any contaminated seafood making it into
 (20) the market
 (21) Q Do you believe that was the result of the tough zero
 (22) tolerance policy that was imposed?
 (23) A It probably had a lot to do with it yes
 (24) Q I m showing you in your deposition what s been marked as
 (25) Exhibit 3382 Is that an article that you authored in or about
 (26) October of 1989?

Vol 28 4888

- (1) A Yes
 (2) Q On the first page at the bottom of the first column you
 (3) talk about various people and PR experts counseling the Alaska
 (4) seafood processors to take action and in the last sentence of
 (5) the paragraph the top of the second column you say Why not
 (6) ride the tail end of the news comment and get the seafood
 (7) message out before the oil spill story loses its sizzle And
 (8) then you go onto say There are two reasons why not One
 (9) it s not the story the press is writing about Two the story
 (10) they are writing about is extremely bad news why connect
 (11) yourself to it Was that your belief in the summer of 1989
 (12) with respect to mounting a major public relations campaign
 (13) about the quality of the Alaska seafood?
 (14) A With respect to the message we were directing towards the
 (15) trade yes
 (16) Q In retrospect do you still believe that that was the best
 (17) reaction to take to the spill and the surrounding situation?
 (18) A Given no changes in any other circumstances?
 (19) Q Yes
 (20) A Yes
 (21) Q When you say it s not the story the press is writing about
 (22) you mean the press is not writing about quality impacts on
 (23) Alaska seafood?
 (24) A The story was not writing about the quality issue of
 (25) salmon yes

Vol 28 4889

- (1) Q What were they writing about?
- (2) A The press was writing about the oil spill
- (3) Q And then you go onto say in this exhibit that we re looking
- (4) at in your deposition two the story that they are writing
- (5) about is extremely bad news why connect yourself to it Was
- (6) it your advice and counsel when you were at ASMI to try to
- (7) avoid connecting the seafood quality issue to what the press
- (8) was writing about?
- (9) A Unnecessarily so yes and irresponsibly so yes There
- (10) were some cases where we couldn t avoid it
- (11) Q Do you think that by and large you were successful in
- (12) avoiding that connection?
- (13) A Yes
- (14) Q Over on the second page of the column in this exhibit that
- (15) we re still looking at in your deposition in the next to the
- (16) last paragraph about two thirds of the way down you say
- (17) shortly after the Exxon Valdez spill the seafood trade was
- (18) much more concerned about a public perception problem than
- (19) the public was Their concern could have become a self fulfilling
- (20) prophecy prompting worries that consumers otherwise wouldn t
- (21) have Was it your belief in the spring and summer in 1989 that
- (22) the seafood traders and processors were more concerned
- (23) about a public perception problem than the public was?
- (24) A Yes for a specific time in certain areas I would say yes
- (25) Q You say it could have become a self fulfilling prophecy and

Vol 28 4890

- (1) I think you mentioned that possibility also this morning Is
- (2) it correct that it did not in fact become a self fulfilling
- (3) prophecy?
- (4) A Again I think the short term narrowly focused hope was
- (5) that the focus of the press attention would not singularly look
- (6) at seafood quality in connection with the Spill and in that
- (7) sense we were successful I can t say that consumers or trade
- (8) had no further concerns about the wholesomeness of Alaska
- (9) seafood following the spill up until the current time
- (10) Q But in terms of an immediate media focus that did not
- (11) occur correct?
- (12) A I was not aware of that in most major media coverage
- (13) Q I m going to show you what at the deposition was Exhibit
- (14) 3385 and trial is DX3051 for identification which appears to
- (15) be an ASMI news release for July 14 1989 Is this a document
- (16) you ve seen before?
- (17) A Yes
- (18) Q Did you draft this document?
- (19) A Yes
- (20) Q Was anybody else involved in drafting the document?
- (21) A Mary Tuten may have been involved in it
- (22) Q The opening sentence of this news release says Juneau
- (23) ongoing results from market surveys commissioned by the
- (24) Alaska Seafood Marketing Institute indicate that awareness of the
- (25) Exxon Valdez oil spill among consumers has not affected

Vol 28 4891

- (1) purchases of seafood from Alaska Was that an accurate
- (2) statement at the time you wrote it?
- (3) A Yes
- (4) Q Was it based on the Burson Marsteller survey work that been
- (5) conducted between April of 1989 and July 14 of 1989?
- (6) A Yes
- (7) MS STEWART Thank you
- (8) MS WAGNER Your Honor plaintiffs call Lloyd Kirban
- (9) by video deposition
- (10) DIRECT EXAMINATION OF LLOYD KIRBAN (video)
- (11) BY VIDEO EXAMINER
- (12) Q Could you state your full name and address for the record?
- (13) A Lloyd Kirban I live at 32 Pinoak Drive Lawrenceville
- (14) New Jersey ZIP code is 08648
- (15) Q Mr Kirban what s your occupation?
- (16) A Research director
- (17) Q Where?
- (18) A Burson Marsteller
- (19) Q Could you tell us what Burson-Marsteller is?
- (20) A Burson Marsteller is a public affairs public relations
- (21) firm
- (22) Q In the public affairs/public relations field is it one of
- (23) the prominent firms in the country?
- (24) A Burson Marsteller is the largest public affairs public
- (25) relations firm in the world

Vol 28 4892

- (1) Q Following the Exxon Valdez oil spill which was in March of
- (2) 1989 does Burson Marsteller do some research work for the
- (3) Alaska Seafood Marketing Institute?
- (4) A Yes we did
- (5) Q Were you personally involved in that research?
- (6) A Yes
- (7) Q What was the nature of your involvement?
- (8) A As head of the research department I generally supervised
- (9) projects that are being conducted at least out of the New York
- (10) office which is where I m located So in the general
- (11) supervisory capacity I oversaw the conduct of the research and
- (12) played a major role in the writing of the report
- (13) Q Now the oil spill occurred in late March of 1989 Do you
- (14) recall when it was vis a-vis that date that Burson Marsteller
- (15) was retained?
- (16) A I don t know the specific time that it was retained I do
- (17) have an awareness of when we started to conduct the research
- (18) Q Okay When was that?
- (19) A Probably it was in April
- (20) Q What exactly did the Alaska Seafood Marketing Institute or
- (21) Mary Tuten ask you to do?
- (22) A The objective of the research was to assess both at the
- (23) consumer and retail level awareness of the incident purchasing
- (24) behavior which might have been affected by the incident and
- (25) this was conducted in four countries

Vol 28 4893

- (1) Q And just for the record what were the four countries?
 (2) A The United States Japan the United Kingdom and France
 (3) Q Do you believe that the results of this survey work that you
 (4) did are accurate?
 (5) A Yes sir
 (6) Q What s your basis for believing that?
 (7) A As far as I can recall we had no major problems which
 (8) would in my mind have jeopardized both the design and
 (9) implementation and in using diagnostic research we were
 using
 (10) a vendor who has experience in multi national studies So it s
 (11) my best judgment that the research was done with professional
 (12) ngor and concern about its quality
 (13) Q Showing you Mr Kirban what has been marked as Kirban
 (14) Exhibit 47927 through 47930 respectively are these the final
 (15) reports prepared by you and Burson Marsteller with respect to
 (16) the research work we ve just discussed in Japan France -
 (17) MS STEWART Your Honor objection we had several
 (18) rule 106 counter designations that aren t being inserted into
 (19) this video
 (20) THE COURT Is the problem resolved
 (21) MR O NEILL I think we ve resolved the problem
 (22) we ll continue with the tape
 (23) MS STEWART Yes we have
 (24) THE COURT Thank you
 (25) BY VIDEO EXAMINER

Vol 28 4894

- (1) Q Okay respectfully
 (2) A Yes sir looks like it
 (3) Q Now the timing of these surveys we talked about them being
 (4) done in May and June of 1989 was that ASMI s determination
 (5) when they came to you when you were contacted they wanted
 the
 (6) surveys done either immediately or as soon as possible?
 (7) A That was my understanding
 (8) Q I d like to visit with you for a little bit regarding some
 (9) of the surveys and could we start with the American survey?
 (10) A Yes sir
 (11) Q Who was the charge of the work that Burson Marsteller did
 (12) for the Alaska Seafood Marketing Institute?
 (13) A The research?
 (14) Q Yeah
 (15) A At the time I had two colleagues at levels below me one
 (16) was a Mr Sid Hecher and the other one was a Ms Deborah
 Amlen
 (17) Q So they reported to you?
 (18) A Yes
 (19) Q And you were ultimately in charge of the research?
 (20) A Yes
 (21) Q Who was involved in designing the survey that you
 (22) conducted?
 (23) A I was involved as was Mr Hecher
 (24) Q How did you go about that how did you decide how to
 design
 (25) survey?

Vol 28 4895

- (1) A Given the information objectives of the clients we
 (2) developed a questionnaire which we believed reflected those
 (3) information goals
 (4) Q Did you follow recognized survey methodology or
 techniques?
 (5) A Yes sir
 (6) Q And even in what respects how did you go about doing?
 (7) A There are aspect of questionnaire design that are sort of
 (8) standard formulations For example when we designed the
 (9) questionnaire we asked questions about purchasing behavior
 (10) before we asked questions about awareness of the incident in
 (11) order to prevent any biasing of the incident questions
 (12) affecting what the respondent might think would be a rational
 (13) response with regard to the purchasing information
 (14) Q You talked earlier about including for reliability
 (15) purposes including in the questionnaire first questions about
 (16) purchasing behavior period and then additional questions
 (17) Could you elaborate on why you designed the survey that way?
 (18) A There is in the dynamics of a question and answer process
 (19) in an interview the opportunity or the risk of the
 (20) interviewer through the questionnaire either leading the
 (21) respondent to a series of answers or in some way because of
 (22) the structure of the question order influencing the respondent
 (23) to answer in what he or she feels would be a rational or
 (24) socially acceptable way
 (25) Our concern was that if we highlighted the incident first

Vol 28 4896

- (1) it could very well have affected the subsequent questions on
 (2) the purchase of seafood in order for the individual to seem
 (3) rational and informed and whatever other feelings that the
 (4) respondent is trying to exhibit to the interviewer So the
 (5) purpose of putting the purchasing information first was to get
 (6) as unbiased an estimate of purchasing behavior as possible
 (7) before we introduced the questions dealing with their
 knowledge
 (8) of the presumed effect of the incident on them
 (9) Q Is that a standard survey technique?
 (10) A Yes it is
 (11) Q You indicated that you prepared the reports that summarized
 (12) the research that was done does that include both the what
 (13) are called the top line reports that is the initial short
 (14) summary of the work as well as the ultimate final report?
 (15) A I m not sure I think one of my associates Miss Amlen
 (16) may have submitted some top line results to Alaska Seafood
 (17) Marketing Institute
 (18) Q Start on page 1 Just so for the record doctor if
 (19) you ll bear with me I m going to have you read some of the
 (20) stuff so we know what we re talking about in terms of the
 (21) record all right Would you read the second paragraph
 (22) please Would you read it out loud so we know on the record
 (23) what we re talking about?
 (24) A All Alaskan Seafood currently in the international
 (25) marketplace were caught before the spill occurred or are from

Vol 28 4897

- (1) areas known to be not contaminated Nonetheless the Alaska
 (2) Seafood Marketing Institute ASMI has received information
 about
 (3) the trades reluctance to receive food products from Alaska
 ASMI
 (4) is concerned about current perceptions among consumers of
 trade
 (5) regarding the extent of the spill and the degree to which those
 perceptions are affecting seafood sales and consumption
 (7) Q And that s information that ASMI reported to your company I
 (8) take it?
 (9) A Yes sir
 (10) Q Then on Roman numeral two you re setting out in effect
 (11) the parameters of the survey where you re saying in part your
 (12) targeting consumers who will purchase seafood likely to have
 (13) come from Alaska in the past two months for home
 consumption or
 (14) who have eaten these products in a restaurant?
 (15) A Yes sir
 (16) Q Doctor turn to Roman numeral seven where it has the
 (17) summary?
 (18) A Yes sir
 (19) Q And the summary in the United States was that there was
 (20) widespread awareness of the spill among the consumers?
 (21) A Yes sir
 (22) Q 95 percent of the people were aware of the Exxon Valdez oil
 (23) spill?
 (24) A Aware of the spill I don t know the specific question that
 (25) they were responding to I would have to look at the

Vol 28 4898

- (1) questionnaire
 (2) Q And one of your conclusions was that the survey indicated
 (3) there was reluctance to eat seafood from Alaska because of
 (4) health concerns associated with the Spill?
 (5) A Yes sir
 (6) Q And 37 percent of the consumers indicated that in the
 (7) survey?
 (8) A Yes sir
 (9) Q And 29 percent almost 30 percent said outright that they
 (10) didn t believe Alaskan seafood was safe to eat?
 (11) A Yes sir
 (12) Q Then well over 50 percent of the American consumers
 (13) surveyed indicated that they either weren t sure or they were
 (14) skeptical whether the Alaskan seafood industry would provide
 (15) safe seafood?
 (16) A As it s referred to in the last paragraph yes sir
 (17) Q Now on page 9 and this will be a summary of some of the
 (18) conclusions regarding the survey amongst the trade in the
 (19) United States and again the survey indicated that almost all
 (20) of the trade was aware of the Exxon Valdez oil spill?
 (21) A Yes sir
 (22) Q And then you have a conclusion at the bottom doctor where
 (23) it says as many in the trade think the spill will affect
 (24) consumers purchases consumption as think will not?
 (25) A We re reporting some results yes sir

Vol 28 4899

- (1) Q Is that what you were referring to earlier this morning as
 (2) when you took the surveys in the countries that there was at
 (3) the time the surveys were taken preseason here well before
 (4) the salmon seasons there was concern in the trade that the oil
 (5) spill will affect consumers?
 (6) A At the time we conducted the survey these were the results
 (7) we had with regard to the trade
 (8) Q Now you said that the purpose of the surveys to each of
 (9) the four surveys I believe you said was two-fold One was to
 (10) determine awareness both at the consumer and the trader
 (11) level -
 (12) A Yes sir
 (13) Q And the second purpose was to determine any changes in
 (14) consumption or buying behavior had someone stopped
 purchasing
 (15) or not?
 (16) A Yes sir
 (17) Q Now under this conclusion that the traders think the spill
 (18) will affect consumers purchases you noted that 43 percent of
 (19) the United States traders almost half of them thought that the
 (20) oil spill would eventually affect consumers purchases and
 (21) consumption?
 (22) A Yes
 (23) Q And you noted that of that 43 percent there was a belief
 (24) that consumers fears about safety of eating these products
 (25) will reduced demand for them?

Vol 28 4900

- (1) A Right
 (2) Q In your reports you make reference to something referred to
 (3) a self fulfilling prophecy will you tell us what that is
 (4) doctor?
 (5) A As I recall as it applied to this particular survey the
 (6) concept would be that if there was an expectation that
 (7) consumption - consumers would reduce demand the trade
 might
 (8) anticipate that in order to not have over stockage of product
 (9) which could sell so therefore they cut their demand at the
 (10) trade level
 (11) Q Now on page Roman numeral ten of the United States
 survey
 (12) you found that 41 percent of those involved in the trade
 (13) believed the spill has affected seafood from certain parts of
 (14) the state and only 14 percent said it had not affected any
 (15) Alaskan seafood?
 (16) A Yes sir
 (17) Q If you would turn to page Roman numeral 14 doctor there
 (18) is a little more I think detail regarding your conclusions
 (19) regarding the trade and would you read the first sentence and
 (20) then the paragraph after it please?
 (21) A The head line?
 (22) Q Yes sir
 (23) A The trades fear that the spill will reduce consumer demand
 (24) because of consumers health concerns can become a self
 (25) fulfilling prophecy If the trade becomes sufficiently worried

Vol 28 4901

- (1) this is or will happen as a precaution they may reduce their
 (2) purchases on economic grounds for example overstocks
 excessive
 (3) returns et cetera or litigation fears
 (4) Q How do you determine in the surveying profession if
 (5) someone had told you go out and conduct a survey at the end
 of
 (6) 1989 to determine how many of the traders who in effect
 (7) acted upon the self fulfilling prophecy and somehow glean
 from
 (8) them why in effect they either cut purchases or prices how
 (9) would you conduct a survey to determine do that?
 (10) A I wouldn't necessarily even do a survey
 (11) Q What would you do in a situation like that?
 (12) A I'd just monitor the movement of product
 (13) Q If you would turn to arabic number 19 please just so it's
 (14) clear we know what we're talking about we're talking about the
 (15) survey results of consumers the break down of those results
 (16) with respect to questions 6 and 6A on that page?
 (17) A Yes sir
 (18) Q In connection with that question 72 percent of the
 (19) American consumers surveyed in May of 1989 said yes that the
 (20) oil spill has affected seafood from Alaska?
 (21) A Yes
 (22) Q And then you break that down in question 6A that of those
 (23) 72 percent 22 percent believe that seafood all over Alaska had
 (24) been affected?
 (25) A Yes sir

Vol 28 4902

- (1) Q And 38 percent thought only certain parts of Alaska had
 (2) been affected?
 (3) A Yes sir
 (4) Q And 12 percent knew it was affected but they didn't know
 (5) which areas were affected?
 (6) A Yes sir
 (7) Q In going to the top of page 26 your conclusion there was
 (8) reassurance by the industry that Alaska seafood is safe to eat
 (9) does not evoke great confidence among most consumers and your
 (10) finding was that only 20 percent of those consumers surveyed
 (11) were very confident about industries reassurances?
 (12) A It really should be 26 percent
 (13) Q So 26 percent or just a little over one quarter of those
 (14) surveyed were very confident about the industries reassurances
 (15) as to the safety of Alaskan seafood?
 (16) A Yes
 (17) Q Then if we turn to page 57 please now we're into the
 (18) analysis of survey answers amongst the trade in the United
 (19) States?
 (20) A Yes
 (21) Q And survey question number 5 you were asking those in the
 (22) trade has the oil spill affected seafood from all over Alaska
 (23) only certain parts or not affected seafood from any part of
 (24) the state?
 (25) A Yes

Vol 28 4903

- (1) Q And only 14 percent of those surveyed in the trade of the
 (2) United States said it has not affected any part of Alaska?
 (3) A That's correct
 (4) Q 16 percent it affected - concluded that it affected
 (5) seafood from all over Alaska?
 (6) A Yes
 (7) Q And 41 percent said it had affected only certain parts from
 (8) Alaska?
 (9) A That's correct sir
 (10) Q And then 19 percent simply didn't know one way or another?
 (11) A Right
 (12) Q We're through with the American survey we can put that
 (13) aside please Let's talk about the Japanese survey if you
 (14) can find that one please Going to page Roman numeral 5 the
 (15) summary of your findings doctor you found that 83 percent of
 (16) those Japanese consumers surveyed were aware of the spill?
 (17) A That's correct
 (18) Q And 50 percent were not eating as much seafood as before?
 (19) A That's correct
 (20) Q And you further found that 58 percent of the Japanese
 (21) consumers surveyed would avoid eating Alaska seafood?
 (22) A That's the finding yes sir
 (23) Q And then 40 percent said outright that they do not believe
 (24) Alaska seafood is safe to eat and another three percent were
 (25) not at all confident that the products were safe?

Vol 28 4904

- (1) A That's what we reported
 (2) Q Then on page 6 Japanese consumers you concluded that
 the
 (3) assurance by the Alaska seafood industry that its products are
 (4) safe was viewed pessimistically by 48 percent of the Japanese
 (5) consumers while an additional 12 percent weren't sure?
 (6) A That's correct
 (7) Q And then you further found in your survey that the majority
 (8) of Japanese consumers those who were not at all confident
 that
 (9) safe Alaskan seafood would reach the market believed that the
 (10) spill had not been cleaned up to a sufficient degree and the
 (11) profit oriented seafood industry could not be trusted to keep
 (12) consumers interests the upper most?
 (13) A That's what we reported
 (14) Q If you would turn to page Roman numeral eight of the
 (15) Japanese survey There you found that most of the Japanese
 (16) trade was aware of the oil spill?
 (17) A Yes sir
 (18) Q 87 percent of them were aware of the oil spill?
 (19) A Yes sir
 (20) Q And 15 percent had reported they had decreased their
 (21) purchases of seafood?
 (22) A Yes
 (23) VIDEO SPEAKER (inaudible)
 (24) Q Turning to page Roman numeral 9 there your conclusion
 that
 (25) the Japanese trade is split on whether or not the spill will

Vol 28 4905

- (1) affect consumers purchase consumption of Alaskan seafood products?
 (2) products?
 (3) A Yes
 (4) Q 43 percent of them believe that the spill will affect the consumers is what you found?
 (5) consumers is what you found?
 (6) A Yes
 (7) Q And then you further state that among those who believe that it will impact on consumers purchase consumption more say
 (8) that consumers concerns about safety than anything else will reduce the demand for these products?
 (9) that consumers concerns about safety than anything else will reduce the demand for these products?
 (10) reduce the demand for these products?
 (11) A That s what we reported
 (12) Q Going back to page Roman numeral nine of the Japanese survey you note at the bottom that 63 percent of the Japanese traders believe the spill has affected seafood in certain parts of Alaska and another one percent said it had not affected any of Alaska seafood products?
 (13) survey you note at the bottom that 63 percent of the Japanese traders believe the spill has affected seafood in certain parts of Alaska and another one percent said it had not affected any of Alaska seafood products?
 (14) traders believe the spill has affected seafood in certain parts of Alaska and another one percent said it had not affected any of Alaska seafood products?
 (15) of Alaska seafood products?
 (16) A That s right
 (17) A That s right
 (18) Q So as of June of 1989 only one percent of the Japanese traders surveyed believed that the Spill had not affected any of Alaska seafood products?
 (19) traders surveyed believed that the Spill had not affected any of Alaska seafood products?
 (20) of Alaska seafood products?
 (21) A Just what we ve reported from the survey
 (22) Q And you believe that to be accurate as of June of 1989 is that a fair statement?
 (23) that a fair statement?
 (24) A I believe the survey generated a result that one percent said it had - or they believed it had not affected any of
 (25) said it had - or they believed it had not affected any of

Vol 28 4906

- (1) Alaska seafood
 (2) Q Go to page 15 I m sorry Roman numeral 15 and would you read under the word trade would you read your conclusion there
 (3) read under the word trade would you read your conclusion there
 (4) and then the paragraph that s indented please?
 (5) A The trades fear that the spill will reduce consumers demand because health concerns can become a self fulfilling prophecy if the trade becomes sufficiently worried this is or will happen and at the present time nearly half believe that it will as a precaution they may reduce their purchases on economic grounds for example overstocks excessive returns et
 (6) cetera or litigation fears
 (7) et
 (8) A That s correct
 (9) Q I think we re clear now you concluded again that the extent of concern amongst Japanese traders in June of 1989 could lead to a self fulfilling prophecy is that a fair statement?
 (10) extent of concern amongst Japanese traders in June of 1989 could lead to a self fulfilling prophecy is that a fair statement?
 (11) statement?
 (12) A That s correct
 (13) A That s correct
 (14) Q Now going to the text of the survey Arabic number 11 with respect to question three of Japanese consumers the findings were that 50 percent of those consumers surveyed indicated that
 (15) that
 (16) they had either decreased or stopped eating certain types of seafood
 (17) seafood
 (18) A That s correct
 (19) A That s correct
 (20) Q And page 14 the conclusion at the top in contrast six consumers in ten 58 percent in parenthesis these are Japanese
 (21) consumers in ten 58 percent in parenthesis these are Japanese
 (22) consumers say that they or other members of their family would
 (23) consumers say that they or other members of their family would
 (24) consumers say that they or other members of their family would
 (25) consumers say that they or other members of their family would

Vol 28 4907

- (1) not eat seafood from Alaska at the present time?
 (2) A That s what we reported yeah
 (3) A That s what we reported yeah
 (4) Q Now going down to the middle of the page there is a statement that Japanese consumers are unaware of where their
 (5) where the seafood they eat comes from and were not motivated to find out and thus avoid these products Who told you that?
 (6) to find out and thus avoid these products Who told you that?
 (7) A I don t recall
 (8) A I don t recall
 (9) Q And then on page 15 you ll see that only 16 percent of the consumers surveyed indicated that they would eat Alaska seafood?
 (10) consumers surveyed indicated that they would eat Alaska seafood?
 (11) seafood?
 (12) A That s what s reported yes
 (13) A That s what s reported yes
 (14) Q On page 20 page 21 you see that of the consumers surveyed only 13 percent believe that Alaska seafood was safe to eat?
 (15) to eat?
 (16) A That s right
 (17) A That s right
 (18) Q On page 38 of the Japanese survey now we re into questions from the trade the Japanese traders?
 (19) from the trade the Japanese traders?
 (20) A Yes
 (21) A Yes
 (22) Q And you found that 95 percent of the wholesalers were aware of the spill?
 (23) of the spill?
 (24) A Yes sir
 (25) A Yes sir
 (26) Q In terms of breaking down the trade between retailers and wholesalers more Japanese wholesalers were aware of the spill than retailers?
 (27) wholesalers more Japanese wholesalers were aware of the spill than retailers?
 (28) than retailers?
 (29) A That s what we reported
 (30) A That s what we reported
