(1) DX3336 DX3337 DX5120 DX5755 received)
 (2) CONTINUED DIRECT EXAMINATION OF LLOYD KIRBAN
 (3) BY VIDEO EXAMINER
 (4) Q This is the question to the Japanese traders regarding
 (5) their opinions whether the oil spill will have any impact on
 (6) consumers purchase and consumption of Alaska seafood Or
 you
 (7) see that?
 (8) A Yes
 (9) Q And we find that a higher percentage of wholesalers 46
 (10) percent as compared to 41 percent of the retailers believed
 (11) that Japanese consumers purchases and consumption would
 in
 (12) fact decrease or could decrease because of the oil spill?
 (13) A It s what s been reported
 (14) Q Then turning to page 55 this is the question to the
 (15) Japanese traders whether in their opinion has the oil spill
 (16) affected seafood from all over Alaska only certain parts of
 (17) Alaska or not affected any seafood from any part of Alaska
 (18) that s the question and the survey amongst the Japanese
 (19) traders was only one percent of the Japanese traders believed
 (20) that the oil spill had not affected any part of Alaska?
 (21) A That s correct
 (22) Q Doctor if we can visit a little bit about the French
 (23) survey if you would turn please to Roman numeral two It
 (24) indicates that 175 trade interviews were conducted?
 (25) A Yes

Vol 29 4918

- (1) Q On page Roman numeral three it indicates that the French
- (2) survey was conducted by telephone between May 24th and
- (3) June 9th
- (4) of 1989
- (4) A Yes sir
- (5) Q Turning to page Roman numeral seven that would be the
- (6) summary of your findings?
- (7) A Yes
- (8) Q And you state there under consumers that you found that
- (9) 89 percent of the French consumers were aware of the spill?
- (10) A Yes
- (11) Q And 19 percent indicated they weren't eating as much
- (12) seafood as before?
- (13) A That's correct sir
- (14) Q And you further found that 31 percent of the French
- (15) consumers indicated they would avoid eating Alaska seafood?
- (16) A That's correct
- (17) Q 22 percent said outright that they didn't believe Alaska
- (18) seafood is safe to eat another two percent weren't confident?
- (19) A That's what we reported
- (20) Q Turning to page Roman numeral ten your survey of French
- (21) traders found that virtually all the trade was aware of the oil
- (22) spill?
- (23) A Yes sir
- (24) Q And furthermore with respect to the French 47 percent
- (25) almost half believed that the spill would affect consumers

Vol 29 4919

- (1) purchases and consumption of seafood referring to the bottom
- (2) paragraph there sir?
- (3) A Yes that's correct
- (4) Q And among those 47 percent who believed that the spill
- (5) would affect consumer purchases there was a belief amongst
- (6) those French traders that the consumers fears about safety and
- (7) eating the seafood products would reduce demand for them?
- (8) A That's what we report
- (9) Q And in the trade the French trade only three percent
- (10) referring you to page Roman numeral 11 believed that the
- (11) Exxon
- (12) Valdez spill had not affected any of Alaska seafood products?
- (13) A That's correct sir
- (14) Q And again you were concerned as you were reporting to
- (15) ASMI was that the French traders concerns that French
- (16) consumers would curtail consumption could in effect become
- (17) another self fulfilling prophecy?
- (18) A That's correct
- (19) Q And your concern was that the French traders may curtail
- (20) their purchases of Alaska seafood in anticipation that French
- (21) consumers would curtail consumption?
- (22) A That's what we reported
- (23) Q We're through with the French survey We can go to the
- (24) survey done in England please This is the last of the four
- (25) surveys right?
- (26) A Yes sir

Vol 29 4920

- (1) Q And turning to page Roman numeral two it indicates that
- (2) with respect to the trade survey a total of 190 trade
- (3) interviews were conducted?
- (4) A That's correct
- (5) Q And on page Roman numeral three the survey was done
- (6) between May 23rd and June 8th of 1989?
- (7) A That's right
- (8) Q On page Roman numeral five your survey found that 81
- (9) percent of consumers in England were aware of the spill?
- (10) A That's correct
- (11) Q And 11 percent indicated they weren't eating as much
- (12) seafood as before?
- (13) A That's correct
- (14) Q 42 percent indicated they would avoid eating any Alaska
- (15) seafood?
- (16) A That's right
- (17) Q And 31 percent said that they do not believe the Alaskan
- (18) seafood is safe to eat?
- (19) A That's right
- (20) Q On page 1 Roman numeral eight your survey found that 99
- (21) percent of the English trade was aware of the Exxon Valdez
- (22) spill?
- (23) A That's correct
- (24) Q And going to the next page Roman numeral nine your
- (25) survey
- (26) found that more than half 56 percent believed that the spill

Vol 29 4921

- (1) would affect consumers?
- (2) A That's what we reported
- (3) Q Referring to page Roman numeral 15 there is a discussion
- (4) regarding some of the survey results of the British trade?
- (5) A Yes sir
- (6) Q And there again in this survey as in the Japanese
- (7) American and French surveys you were concerned given the
- (8) large number large percentage of respondents in the trade
- (9) who
- (10) indicated that they believed that the spill would impact
- (11) consumers consumption again you were concerned that this
- (12) would
- (13) be another self fulfilling prophecy?
- (14) A Not on the basis of numbers It's just that the trade
- (15) becomes sufficiently worried
- (16) Q And your findings at that time were that 56 percent of the
- (17) trade in Great Britain were worried?
- (18) A If that's the number I'd have to check it
- (19) Q Just so we're clear I was taking that number from page
- (20) Roman numeral nine
- (21) A Roman numeral nine?
- (22) Q Page Roman numeral nine where it says 56 percent?
- (23) VIDEO ATTORNEY Believe that the spill would affect
- (24) consumers
- (25) BY VIDEO ATTORNEY
- (26) Q Yes
- (27) A Can I draw a distinction?

Vol 29 4922

Vol 29 4924

- (1) Q Yes
 (2) A 56 percent believed that the spill is not the same thing as
 (3) saying that they are sufficiently worried It simply says that
 (4) 56 percent believe that consumers might but I can't measure
 (5) the intensity with which they are worried about that occurring
 (6) Q But of the traders surveyed 56 percent told the surveyor
 (7) that they believed the spill would impact consumers purchases
 (8) or consumption?
 (9) A That's correct
 (10) Q And what you were telling ASMI then based on the
 (11) percentages found amongst traders in all four of the surveys
 (12) was that it could become a self fulfilling prophecy?
 (13) A It could become a self fulfilling prophecy
 (14) Q And by that what you meant was that buyers believing that
 (15) there may likely be a problem with consumers that the buyers
 (16) would take it upon themselves to reduce their purchases of
 (17) Alaska seafood?
 (18) A That was the interpretation we were drawing
 (19) Q Going to page 15 that's Arabic number 15 Doctor that is
 (20) a breakdown of what looks like question nine of the survey?
 (21) A Yes
 (22) Q Asking the British consumers at the present time that is
 (23) May and June when the surveys were done if seafood were
 (24) identified in some ways coming from Alaska would they refrain
 (25) from eating them?

- (1) seafood do you see that?
 (2) A Yes sir
 (3) Q And 56 percent of the traders believed that it would?
 (4) A Yes
 (5) Q And the breakdown between wholesalers and retailers is
 (6) fairly close 56 percent of the wholesalers versus 57 percent
 (7) of the retailers?
 (8) A That's correct
 (9) Q Going to page 55 the question is posed to the British
 (10) traders whether the oil spill affected seafood from all over
 (11) Alaska only certain parts of Alaska or not affected seafood
 (12) from any part of Alaska?
 (13) A That's right
 (14) Q And only nine percent of the British traders surveyed said
 (15) that it had not affected any part of Alaska?
 (16) A That's what we reported
 (17) MS WAGNER Your Honor that's the end of the
 (18) videotape For the record and to clarify the four reports
 (19) that Doctor Kirban refers to in his deposition are Plaintiffs
 (20) Exhibits 433 434 435 and 436 and all are in evidence
 (21) MS STEWART Your Honor we do have a 17 minute cross
 (22) we need to set up These are excerpts of 2939 which will be
 (23) referred to throughout the cross examination and are pages
 (24) from the summary report that summarizes the survey that Mr
 (25) Kirban was talking about extensively

Vol 29 4923

Vol 29 4925

- (1) A And the rest of their household
 (2) Q And the rest of their household?
 (3) A Yes sir
 (4) Q And in connection with that question only 31 percent of
 (5) those surveyed indicated that they would eat Alaska seafood?
 (6) A 31 percent would eat it
 (7) Q 42 percent would not?
 (8) A That's correct
 (9) Q Going to page 19 the breakdown in response to the question
 (10) to consumers again British consumers in your opinion has the
 (11) oil spill affected seafood from Alaska do you see that
 (12) Doctor?
 (13) A Yes sir
 (14) Q And only four percent of the British consumers respond to
 (15) that question that no they didn't believe the Exxon Valdez
 (16) spill had affected seafood from Alaska?
 (17) A The oil spill?
 (18) Q The oil spill
 (19) A Yes
 (20) Q Only four percent of those surveyed indicated that it had
 (21) not?
 (22) A Yes sir
 (23) Q Going to page 49 Doctor this is the question whether in
 (24) the opinion of the traders surveyed will the oil spill have
 (25) any impact on consumers purchase or consumption of Alaska

- (1) CROSS EXAMINATION OF LLOYD KIRBAN
 (2) BY VIDEO EXAMINER
 (3) Q I'm going to show you what was marked as Exhibit 3386 in
 (4) prior deposition Mr Kirban and I'll tell you that this is a
 (5) series of four letters from Ms Amlen to Merry Tuten of the
 (6) Alaska Seafood Marketing Institute dated in June and July of
 (7) 1989 and each was identified by Ms Tuten as being a top line
 (8) survey for the four countries that you've mentioned where
 (9) research work was done
 (10) Are these the letters you were just referring to?
 (11) A Yes sir
 (12) Q And I see that you were cc'd on these letters Did you
 (13) review these letters prior to the time they were sent out to
 (14) Ms Tuten?
 (15) A I also was involved in the writing of -
 (16) Q 6 these letters?
 (17) A Yeah
 (18) Q Was the primary conclusion of your survey work that is
 (19) Burson Marsteller's survey work Mr Kirban that the Valdez
 (20) Oil Spill had not affected seafood purchases in these four
 (21) countries?
 (22) A Yes
 (23) Q And do you believe that that's an accurate conclusion as of
 (24) that time?
 (25) A Yes

Vol 29 4926

- (1) Q And it s for the reasons you just identified with respect
 (2) to the way that the survey was designed and conducted?
 (3) A Yes
 (4) Q Did you also find that as part of your survey work that in
 (5) spite of purchase behavior not being affected that consumers
 (6) did express concern about the Exxon Valdez oil spill and its
 (7) possible impact on the safety of seafood?
 (8) A Yes
 (9) Q How do you explain the apparent disparity between that
 (10) concern and the fact that there was no impact on purchase
 (11) behavior?
 (12) A There are - there are two explanations The one that I
 (13) suspected and we ve included was that inasmuch as Alaska
 (14) seafood was not prominently identified as Alaska seafood the
 (15) consumer would buy seafood not knowing where it s from and
 (16) at
 (17) the same time articulate concern about buying Alaska seafood
 (18) Q You said there were two explanations
 (19) A Yeah The second one is in fact respondents sometimes
 (20) articulate what they think is a socially acceptable response
 (21) and I would imagine that the people we interviewed would
 (22) manifest some concern about eating or feeding their families
 (23) what might possibly be tainted seafood
 (24) Q Have you observed that phenomenon about respondents
 (25) articulating socially acceptable responses in other contexts
 (26) other work that you ve done?

Vol 29 4927

- (1) A Other work that we ve done and work that s been published
 (2) yes
 (3) Q Could you give some examples?
 (4) A Well I guess the most relevant one currently is the rather
 (5) significant amount of public apparent interest and willingness
 (6) to buy products that are environmentally sound and yet there
 (7) has been significant findings that products that are promoted
 (8) specifically that way don t necessarily have significant market
 (9) success The notion for example of disposable diapers which
 (10) has been raised as a major source of landfill doesn t prevent
 (11) however the disposable diapers being used by parents rather
 (12) than other forms of diapers
 (13) Q So even though people might express concerns about
 (14) landfills and the need to use recyclable things they continue
 (15) to use disposable diapers?
 (16) A Yes
 (17) Q Did you explain these reasons that occurred to you to
 (18) Alaska Seafood Marketing Institute at the time this work was
 (19) done?
 (20) A Yes sir We focused on the first explanation which we
 (21) felt was the strong - reflective of the marketplace realities
 (22) Q Now did you also find that on the retailer or wholesaler
 (23) side that the survey indicated that at least in the four
 (24) countries where you did it that these people had not reduced
 (25) their purchases because of the oil spill?

Vol 29 4928

- (1) A Yes sir
 (2) Q And how did you explain that - well those retailers and
 (3) wholesalers also expressed concerns about possible spill
 (4) impacts did they not?
 (5) A Yes sir
 (6) Q How did you explain that disparity in the retail or
 (7) wholesale category?
 (8) A Well at the time they were reporting that they themselves
 (9) had not cut their buying behavior The report did indicate
 (10) they were worried that consumers would at some point in time
 (11) perhaps not buy as much Alaska seafood so it was more an
 (12) anticipatory kind of - kind of response on the wholesalers and
 (13) retailers
 (14) Q So it was a concern about something that might happen?
 (15) A Yes sir
 (16) Q Do you know whether in fact there ever came a time when
 (17) consumers reduced or ceased purchasing Alaska seafood?
 (18) A I don t
 (19) Q Did you understand at the time you were doing this research
 (20) work that ASMI the Alaska Seafood Marketing people were
 (21) considering launching if it was necessary launching a major
 (22) multi million dollar public relations campaign to try to
 (23) bolster the image of Alaska seafood?
 (24) A I do recollect some discussion about that
 (25) Q Did you counsel them at all in connection with the decision

Vol 29 4929

- (1) whether to proceed with a major campaign like that?
 (2) A The only thing we counseled them based on the research
 (3) was not to label at retail the seafood as Alaskan seafood
 (4) Q Why was that?
 (5) A The research indicated that there was no change
 (6) significant change in purchase behavior for the types of
 (7) seafood that Alaska shipped and we were - notwithstanding
 (8) the
 (9) concern that was being voiced by the respondents about the
 (10) possibility of purchasing seafood from Alaska so we counseled
 (11) them to not highlight the fact that the seafood in the retail
 (12) store was from Alaska based on the presumption they didn t
 (13) know where it was and there was really more to be lost than we
 (14) thought to be gained in terms of purchase sensitivity by
 (15) identifying it as Alaska seafood
 (16) Q After you advised them of your research results were you
 (17) aware that ASMI issued press releases stating that consumer
 (18) awareness of the oil spill had not affected purchase behavior
 (19) of seafood?
 (20) A Yes I would only make the statement as of the time we
 (21) did the survey work
 (22) Q Which was May and June?
 (23) A Yes
 (24) Q And as of that time it was correct to say was it not that
 (25) awareness of the oil spill had not negatively affected
 (26) purchases of Alaska seafood in these four countries?

Vol 29 4930

- (1) A That was our conclusion yes
 (2) Q I m going to turn to Exhibit 3386 The top page is the
 (3) summary related to the U S survey work correct?
 (4) A Yes
 (5) Q And I see in a bold statement in Arabic one towards the
 (6) top of the page -
 (7) A Yes
 (8) Q - where the statement is made on a strictly personal
 (9) behavioral basis that is the American consumer seafood
 (10) purchases patterns it appears that health and safety issues as
 (11) they relate to the Exxon oil spill are not impacting the
 (12) consumers purchase decision
 (13) Was that your primary finding with respect to the U S
 (14) survey work?
 (15) A Yes
 (16) Q And then turning to the second letter which relates to the
 (17) Japan survey work again the number one statement is while
 (18) there is a greater reduction in purchase consumption among
 (19) Japanese consumers than among American French and British
 (20) consumers it is not associated with the Exxon Valdez oil
 (21) spill
 (22) Was that your primary finding with respect to the Japanese
 (23) survey work?
 (24) A Yes
 (25) Q And then turning to the third letter which relates to the

Vol 29 4931

- (1) British survey work the statement at number one is Concerns
 (2) about health and safety issues related to the Exxon Valdez oil
 (3) spill are not impacting British consumers purchase decision
 (4) Was that your primary findings with respect to the British
 (5) research?
 (6) A Yes sir
 (7) Q And then finally the fourth letter related to the French
 (8) research work The statement is made at number one It
 (9) appears that concerns about health and safety issues related to
 (10) the Exxon Valdez oil spill are not impacting French consumers
 (11) purchase decisions
 (12) Was that the primary finding of your French research?
 (13) A Yes
 (14) Q Now the timing of these surveys we talked about them
 (15) being done in May and June of 1989?
 (16) A (Indicating)
 (17) Q Was that ASMI s determination that when they came to you
 (18) you were conducted they wanted the surveys done either
 (19) immediately or as soon as possible?
 (20) A That was my understanding
 (21) Q You indicated earlier I believe that you believed that
 (22) the disparity or inconsistency between the fact that consumers
 (23) were aware of the spill and had concerns about health but
 (24) apparently hadn t curtailed their buying was the fact that
 (25) they hadn t made the link as to where particular seafood was

Vol 29 4932

- (1) caught?
 (2) A That they were seeing at the retail level yes sir
 (3) Q Now the statement that you don t believe that consumers
 (4) made the link that seafood isn t necessarily identified as from
 (5) Alaska what is the factual basis of that statement Doctor?
 (6) A I would based upon the conclusion I would assume we ha
 (7) asked the question of ASMI if it was - if their seafood was
 (8) identified and received a response it wasn t
 (9) Q Mr Kirban Mr Nolting asked you a number of questions
 (10) about the various final survey reports and went into a lot of
 (11) detail about who answered and what percentage answered to
 (12) what
 (12) questions I want to get back to the sort of the bottom line
 (13) of these various reports
 (14) Am I correct that your principal conclusion that you
 (15) reported to ASMI as to each of these four countries that is
 (16) France United Kingdom United States and Japan was that
 (17) purchase behavior of consumers and traders had not been
 (18) affected by the Exxon Valdez oil spill?
 (19) A That s correct as of the time this work was completed
 (20) Q Now I want to ask about how this questionnaire was put
 (21) together What seafoods do you eat in your household and
 (22) what
 (22) seafoods have you eaten in the last couple months Is that
 (23) generally where you started?
 (24) A Yes sir
 (25) Q And then you asked consumers if there was a decrease - y

Vol 29 4933

- (1) then asked them have you increased decreased or stopped
 (2) eating
 (2) completely these type of seafoods?
 (3) A Yes sir
 (4) Q And then after you found out whether or not people had
 (5) decreased you asked them reasons for decreasing their or
 (6) stopping eating their seafood?
 (7) A Yes sir
 (8) Q Let me ask you this The survey on its second page at
 (9) question three reads as follows Now I d like to read you a
 (10) list of seafood again and this time I d like you to tell me if
 (11) you or anyone in your household has increased decreased or
 (12) stopped completely eating the following types of seafood And
 (13) then you go through the list That s the question that was
 (14) asked was it not?
 (15) A Yes sir
 (16) Q And one possible response on the questionnaire form is
 (17) increased correct?
 (18) A That s correct
 (19) Q And am I correct that when people answered increased th
 (20) was recorded on this form by the surveyor?
 (21) A Yes sir
 (22) Q Now you did not ask the reason if somebody answered
 (23) increased?
 (24) A If they said that we didn t follow up
 (25) Q Why not?

Vol 29 4934

- (1) A It wasn't relative to the purpose of the research
- (2) Q ASMI was interested in decreasing or stopping?
- (3) A Yes
- (4) Q So that's what you followed up on?
- (5) A That's correct
- (6) Q And am I correct that essentially all of the people who
- (7) said that they had decreased or stopped eating seafood gave
- (8) reasons other than the oil spill for that?
- (9) A There are other reasons volunteered yes
- (10) Q But your conclusion was that the oil spill was not a
- (11) significant factor?
- (12) A That's correct sir
- (13) Q Then after you went through these neutral questions or
- (14) unaided questions at five you introduced the notion of the oil
- (15) spill correct?
- (16) A Yes sir
- (17) Q Why did you start out with these neutral questions and then
- (18) go into the oil spill afterwards?
- (19) A For the reasons that I mentioned earlier that we were
- (20) concerned that if we had put the questions about the oil spill
- (21) first it might have affected our jargon biased the responses
- (22) by the individuals
- (23) Q Well you indicated in your report did you not that
- (24) origin of seafood and lack of awareness of geographic origin
- (25) was a factor causing people to continue to buy seafood in spite

Vol 29 4935

- (1) of these concerns?
- (2) A My recollection is we made such an observation
- (3) Q Did you believe in fact that's a factor?
- (4) A If we've included it we thought it was a factor
- (5) Q And am I also correct that you also believed there is a
- (6) phenomena at work when consumers answer surveys like this
- (7) of wanting to give politically correct or environmentally
- (8) conscious responses?
- (9) A I would rather use the word socially correct
- (10) Q Socially correct?
- (11) A Yeah
- (12) Q But the gist of it is they want to sound rational and
- (13) sensitive?
- (14) A That's correct
- (15) Q Given all of those questions that Mr Nolting put to you
- (16) about the substantial numbers and percentages of people
- (17) being concerned or lacking confidence or being unwilling to eat
- (18) Alaska seafood does any of that alter your belief as expressed
- (19) earlier this morning that in fact purchase behavior of
- (20) consumers and traders was not affected by the Valdez Oil Spill
- (21) based on your research as of the time these reports were
- (22) prepared?
- (23) A That's correct
- (24) Q None of that alters your belief in that regard is that
- (25) correct?

Vol 29 4936

- (1) A No
- (2) MS STEWART That concludes our cross examination
- (3) MR JAMIN Your Honor Plaintiffs call Dr Phillip
- (4) Mundy to the stand
- (5) THE CLERK Raise your right hand please
- (6) (The Witness Is Sworn)
- (7) THE CLERK Please be seated For the record sir
- (8) state your full name your address and spell your last name
- (9) please
- (10) THE WITNESS My name is Dr Phillip with two L s
- (11) R Mundy M U N D Y I reside at 1015 Share Lane Lake
- (12) Oswego
- (13) Oregon
- (14) DIRECT EXAMINATION OF DR PHILLIP MUNDY
- (15) BY MR JAMIN
- (16) Q Sir are you currently employed as a consultant?
- (17) A Yes I am
- (18) Q And are the two principal issues you're focusing on now the
- (19) recovery of Columbia River basin salmon and the effect of the
- (20) Exxon oil spill on salmon?
- (21) A That's correct
- (22) Q And in the former capacity with respect to Columbia River
- (23) basin salmon are you working with the United States Fish &
- (24) Wildlife Service the Bonneville Power Authority the Yakima
- (25) Indian Nation and the Nez Perce Tribe of Native Americans?

Vol 29 4937

- (1) Q And with respect to the second issue are you working with
- (2) the NRDA Trustees and specifically the Alaska Department of
- (3) Fish & Game?
- (4) A Yes I am
- (5) Q Apart from your work for the Trustees have you done
- (6) research in Alaska fisheries?
- (7) A Yes I have
- (8) Q And has that been every year since 1976 sir?
- (9) A That's right
- (10) Q Let's take a moment to look at your education Did you
- (11) receive a bachelor of science in zoology from the University of
- (12) Maryland?
- (13) A Yes
- (14) Q And a master of science from the University of Alabama
- (15) Tuscaloosa?
- (16) A Yes
- (17) Q And a Ph D from the University of Washington in Seattle?
- (18) A That's right
- (19) Q And was your thesis on the timing and management of the
- (20) Bristol Bay salmon fishery?
- (21) A That's right
- (22) Q Let's get where you worked for ADF&G Did your first work
- (23) in Bristol Bay on sockeye salmon returns?
- (24) A That's correct
- (25) Q Did that include studies of migratory timing and migratory

Vol 29 4938

- (1) behavior?
 (2) A Yes
 (3) Q In 1977 through 1988 continue to work in Bristol Bay and
 (4) work as well in the Upper Cook Inlet?
 (5) A That s right
 (6) Q And was it during this time sir that you continued or
 (7) completed your dissertation?
 (8) A Yes
 (9) Q And was the thesis work that you did later applied in your
 (10) work for the Alaska Department of Fish & Game?
 (11) A Yes that was a big part of my work for ADF&G
 (12) Q After 1980 did you continue to work for the Alaska
 (13) Department of Fish & Game in the Yukon Kuskokwim and more
 (14) in Bristol Bay and Upper Cook Inlet?
 (15) A Yes that s right
 (16) Q And were the concepts you developed in your dissertation
 (17) incorporated into the management plans for the Alaska
 (18) Department of Fish & Game?
 (19) A Yes
 (20) Q In 1985 through 1987 what position did you hold sir?
 (21) A 1985 through 1987 I worked for the State of Alaska as a
 (22) chief fishery scientist for the Division of Commercial
 (23) Fisheries
 (24) Q Was this transition - did you have responsibility for
 (25) science in all the fisheries of the state?

Vol 29 4939

- (1) A That s correct
 (2) Q After 1987 have you continued to work on Alaska fisheries
 (3) including work on Upper Cook Inlet run reconstruction and
 (4) Upper Cook Inlet management?
 (5) A Yes I have
 (6) Q In 1990 were you engaged by the justice department to
 (7) decide what sorts of research should be done in the wake of the
 (8) Exxon Valdez oil spill to determine its effects on fish and
 (9) shellfish?
 (10) A Yes That was in the fall of 1989
 (11) Q Did you work on the design of those studies?
 (12) A Yes
 (13) Q Did you work on peer reviewing those studies?
 (14) A Yes
 (15) Q Did those studies include all of the shellfish and
 (16) groundfish studies including those relating to pink salmon and
 (17) red salmon?
 (18) A Yes that is right
 (19) Q Do the Trustees continue to employ you to this day sir?
 (20) A Yes
 (21) Q When did your work begin for Plaintiffs in this case?
 (22) A I first started working for Plaintiffs I think it was in
 (23) February late February of 1993
 (24) Q Between 1980 and 1982 were you employed as an assistant
 (25) professor of biological oceanography in the Department of

Vol 29 4940

- (1) Oceanography at Old Dominion University?
 (2) A Yes
 (3) Q Between 1982 and 1984 were you employed as associate
 (4) director of fisheries at the Applied Marine Research
 (5) Laboratory?
 (6) A Yes
 (7) Q Between 1984 and 1985 were you an associate professor of
 (8) fisheries at the school of fisheries in Juneau?
 (9) A Yes that s right
 (10) Q During the time you had teaching responsibility did you
 (11) teach both graduates and undergraduates?
 (12) A Yes I taught primarily graduate students but I also
 (13) taught some undergraduate
 (14) Q Focusing on graduates did you teach fisheries management
 (15) and fisheries mathematics?
 (16) A Yes
 (17) Q With respect to the fisheries management course did that
 (18) include topics on the role of the ecosystem on the productivity
 (19) of fisheries?
 (20) A Yes Since it was in the Department of Oceanography they
 (21) wanted me to put emphasis in marine ecology in teaching
 (22) fishery management
 (23) Q With respect to fishery mathematics what is that?
 (24) A Well we try to find mathematical models and statistical
 (25) models that help them make sense out of their fisheries data

Vol 29 4941

- (1) that help them describe a little more precisely the kinds of
 (2) things they are seeing so they can do things like write fishing
 (3) regulations and justify those to the public
 (4) Q And in that course did you call upon your experience with
 (5) salmon to use it as one of the examples?
 (6) A Yes Yes One reason I got the job teaching in the
 (7) Department of Oceanography they wanted somebody with
 (8) hands on
 (9) experience and at that time I had quite a bit of experience in
 (10) managing fisheries and they wanted somebody who could give
 (11) some real life experience to graduate students
 (12) Q And with respect to undergraduates did you also teach
 (13) marine biology?
 (14) A Yes I did
 (15) MR JAMIN Your Honor without further ado I ask
 (16) that Dr Mundy be certified as a specialist in fisheries fish
 (17) population biology management and fish population
 (18) dynamics
 (19) MR COOPER No objection Your Honor
 (20) THE COURT Dr Mundy s qualifications are accepted
 (21) BY MR JAMIN
 (22) Q Dr Kocan told us how science works through observation
 (23) and
 (24) science works through testing hypotheses and science works
 (25) through synthesis of others work Have you done work in all
 (26) three of these areas?
 (27) A Yes
 (28) Q And which of these three types of science has dominated

Vol 29 4942

- (1) your work in the last few years?
- (2) A Well at this point in my career generally agencies are
- (3) interested in putting lots of different kinds of data together
- (4) and synthesizing different kinds of data to solve problems We
- (5) have people out collecting data that - out analyzing data but
- (6) trying to pull that into a big picture is not always easy and
- (7) that's a real important part of an agency's ability to spend
- (8) its money effectively to get the most out of every dollar
- (9) having the big picture
- (10) So I generally work in an area of synthesis where I pull
- (11) together studies that have been done by other people and
- (12) basically try to figure out what the most effective approach is
- (13) for the future
- (14) Q Before we get specifically into the damage to salmon caused
- (15) by the spill I want to lay a little bit of a background into
- (16) the areas of - understanding we need to understand what has
- (17) happened and I want to focus a little bit on some issues that
- (18) Mr Parker raised with us about life cycles of both pink and
- (19) red salmon
- (20) And let me start sir if - is the concept of a spawner
- (21) recruit relationship important in the management of fisheries?
- (22) A Yes I think the concept of a spawner recruit relationship
- (23) is probably one of the most important things that we've learned
- (24) in the last 150 years and it may be the only thing that we
- (25) really have to justify our fishing regulations on

Vol 29 - 4943

- (1) Q Can you explain what the concept is to the jury?
- (2) A Well back in the early days of salmon management back in
- (3) the 1880s we weren't sure that salmon came back to their home
- (4) stream to spawn And there weren't any fishing regulations
- (5) essentially in those days people just kind of fished and when
- (6) they got enough salmon they quit fishing
- (7) Through the years through trial and error we learned that
- (8) salmon do generally come back to their home stream to spawn
- (9) Not always but most of the time And we also learned that
- (10) spawning grounds have a certain capacity to hold salmon If
- (11) you put too much salmon on the spawning grounds they
- (12) interfere
- (13) with one another and you lose production
- (14) We also found that it's not just the spawning grounds that
- (15) count but sometimes the young fish will rear in lakes or
- (16) streams And even if you've got enough spawning capacity if
- (17) you put too many juvenile fish into the lakes or streams you're
- (18) going to lose production as well
- (19) Now where the biology of the term spawner comes into the
- (20) real world as a practical matter it's that return for spawner
- (21) relations that determine how many fish we can let the
- (22) commercial harvesters take each year which is important to
- (23) them in making a living
- (24) So we worked over the years very hard trying to make an
- (25) idea of how many fish we should put on the spawning grounds
- and
- (25) approximately how many adults in the next generation and

Vol 29 4944

- (1) that's usually from two to five years later on we're going to
- (2) get back for putting that many recruits for spawners on the
- (3) spawning ground
- (4) So this is called a return per spawner the fish produced
- (5) in the future So it's called a return per spawner
- (6) relationship
- (7) Q Now the spawner then is the fish that's coming into the
- (8) stream or into the lake to deposit eggs and the recruit is how
- (9) many come back after a life cycle per spawner?
- (10) A That's right
- (11) Q Now how do you decide as a fish manager or as a manager
- (12) of
- (13) fisheries how do you decide how many fish to allow into the
- (14) stream or into the lake?
- (15) A Well as I indicated earlier it was initially based on
- (16) trial and error just to get some rough idea of what - how many
- (17) fish we should put on the spawning grounds We simply kept
- (18) track of the numbers that were going up the river do that by
- (19) various measures and how old they were because it's
- (20) important
- (21) that any fish showing up in any one year could have been born
- (22) two three four five even six years previously So we got
- (23) to keep track of how old they are and how many are going up
- (24) the
- (25) river
- (25) And we simply sit down and match those numbers up We look
- (25) at how many recruits the spawners in 1976 produced how
- (25) many
- (25) recruits the spawners in 1977 produced and we just plot it out

Vol 29 4945

- (1) on a graph and we take a look at how it falls out That's the
- (2) basic idea
- (3) Q Now I think you started to mention that it's possible to
- (4) have too many fish come into a stream or a lake that supports
- (5) the fish?
- (6) A Yes If we get too many fish on the spawning grounds they
- (7) will interfere with one another even if some system or
- (8) capacity is not set by the spawning grounds but also by the
- (9) amount of space and food we have for the juveniles after they
- (10) hatch and come out
- (11) Q Is that concept called overescapement?
- (12) A Yes
- (13) Q Now if there isn't enough food for the young fish what
- (14) does that mean for those fish?
- (15) A Well generally what happens when you don't have enough
- (16) food there is the concept that says that the big get bigger
- (17) and the ones that stay small die Generally the - initially
- (18) you'll find a big difference in size between fish That's a
- (19) first indication because the big fish are getting all the food
- (20) and the small ones aren't and the fish that don't get any food
- (21) die so you wind up with an overall for the population as a
- (22) whole with a lower survival
- (23) Q Now does this concept of overescapement vary from
- (24) species
- (25) to species? And we want to focus on pink and red salmon
- (25) A Yes Salmon have different kinds of life cycles They

Vol 29 4946

(1) have different ways of dealing with the environment just like
 (2) people do and so whether or not their population would be
 (3) sensitive to overescapement depends on the kind of fish they
 (4) are Generally salmon that have a complex life cycle that
 (5) have a lot of different parts to their life cycle would be
 (6) more sensitive to overescapement than salmon that have a
 (7) simpler life cycle
 (8) Probably the simplest is the pink salmon That s the
 (9) easiest one to understand They have got a two year life
 (10) cycle All the adults are just two years old We don t have
 (11) to spend much time trying to figure out how old they are That
 (12) makes it easy for us And they don t seem to be as sensitive
 (13) to overescapement as an animal like the sockeye
 (14) The sockeye these animals mature at four five six
 (15) sometimes seven or eight years old They spawn in streams
 that
 (16) are associated with lakes and the young grow up in lakes and
 (17) they will spend one two and even three years in a lake before
 (18) they go out to sea When they get out to sea they will spend
 (19) from one to three years in the sea and come back to spawn So
 (20) sockeye can suffer from overescapement by having too many
 (21) spawners on the spawning grounds but they can also suffer
 from
 (22) overescapement if there is enough room if you actually
 produce
 (23) too many juveniles and you put too many juveniles in the lakes
 (24) because once the food in the lake is gone the fish start to
 (25) die pretty fast

Vol 29 4947

(1) Q Now for pink salmon what is the importance of the
 (2) near shore ecosystem?
 (3) A Well pink salmon unlike sockeye don t get much of a head
 (4) start when they hit the manne environment When they absorb
 (5) their yolk sac and are ready to pop up out of the gravel they
 (6) head down the stream fairly quickly and combine up in a marine
 (7) area near the stream mouth
 (8) Now this is about the first chance they get to eat much
 (9) and it s real important for them to basically have a good
 (10) breakfast when they hit the sea They have got to get going
 (11) because if they don t grow then they wind up getting eaten by
 (12) everything So the faster they are to grow the less likely
 (13) they are to be eaten
 (14) So a near shore environment for an animal like a pink
 (15) salmon that doesn t have a chance to eat before it hits the sea
 (16) is real important
 (17) Q So for the red salmon once they absorb their yolk they
 (18) are in the lakes and the pink salmon when they consume their
 (19) yolk sac they get into this near shore ecosystem?
 (20) A Right
 (21) Q Now I m going to sir ask you for a series of expert
 (22) opinions today but let me ask you if in conjunction with your
 (23) testimony you ve reviewed a series of the Trustees studies
 (24) with respect to fish?
 (25) A That s correct

Vol 29 4948

(1) Q And have you reviewed a series of ADF&G documents
 relating
 (2) to this area?
 (3) A Yes I have
 (4) Q And have you reviewed specifically some work that a Mr
 (5) Geiger and others have done for the Trustees?
 (6) A Yes
 (7) Q And have you also talked with ADF&G personnel regarding
 the
 (8) impacted fisheries?
 (9) A The impact of the oil spill on fisheries yes
 (10) Q And do you bring the full range of your own experience to
 (11) your opinions?
 (12) A That s right
 (13) Q Let s talk for a bit first about the Upper Cook Inlet
 (14) fishery and can you start by describing to us what the
 (15) Trustees fish and shellfish study number 27 set out to
 (16) determine? And I think I have a document that may help
 (17) This is counsel Exhibit 775 This should come up on the
 (18) screen momentarily
 (19) A Fish and shellfish study 27 was done by a lot of different
 (20) people but the two primary authors were Ken Tarbox and Dan
 (21) Schmidt So I don t like using numbers as well as the people
 (22) who did the work so I ll call this the Tarbox study because
 (23) he was the person who started the study
 (24) Initially when we were considering the problem of
 (25) overescapement in Cook Inlet we were concerned that the

Vol 29 4949

(1) overescapement into the Kenai River system - the adult
 (2) sockeye so many come in where I ve drawn the arrow That s
 (3) Cook Inlet To the north of that arrow is Anchorage and to the
 (4) south of that arrow is the Gulf of Alaska And the adult
 (5) sockeye salmon come into the Kenai River and spawn in a lot o
 (6) different places but mostly in the river system associated
 (7) with Skilak Lake which is the lake that I ve drawn the red
 (8) circle around there
 (9) The studies that were done in fish and shellfish 27 by
 (10) Tarbox basically involved looking at everything that we could
 (11) afford to measure that would tell us whether or not we had put
 (12) too many fish on the spawning grounds or we put too many
 (13) juveniles into the lake as a result of the overescapement in
 (14) 1989 In 1989 the management program wasn t able to use the
 (15) drift fleet because of the fear of oiling of the gear They
 (16) were able however to use the - some of the gear which is
 (17) known as setnets of fishes on the beaches
 (18) The drft fleet in Upper Cook Inlet is probably the most
 (19) powerful tool that the managers have for adequately harvestinc
 (20) the run Generally for most of the systems including the
 (21) Kenai River unless you ve got the drft fleet operating you
 (22) can t adequately harvest the run and generally if you have a
 (23) big run you re going to get a substantial overescapement if
 (24) you don t have all the tools available
 (25) Q Now did Mr Schmidt and Tarbox focus on the deposition of

Vol 29 4950

- (1) eggs and fry at all?
 (2) A Yes They - one of the things that they did was survey
 (3) the areas where the fish spawned and they got an estimate of
 (4) how many eggs were deposited and they looked at the -
 (5) whatever historic data they could find to try to see if they
 (6) had a relationship between how many eggs were going in the
 (7) gravel and how many fry were showing up in the lake and they
 (8) found that they did
 (9) Q Did they study the growth of the fish and fat content
 (10) issues such as that?
 (11) A Yes One of the things that tells you whether or not the
 (12) fry in the lakes are doing well whether they are going to make
 (13) it or not is first of all how well they grow how fast they
 (14) grow but how much fat they have in the fall because in the
 (15) wintertime they are not eating and they have to depend on how
 (16) much fat content they have in their body to make it through the
 (17) winter if they don't have enough food in the summer and they
 (18) go into the fall without enough fat then generally they will
 (19) die
 (20) So they studied both the growth of the fry and the amount
 (21) of fat they had in their bodies
 (22) Q And did the gentlemen use another river system for
 (23) comparison purposes?
 (24) A Yes To the south of the Kenai River fairly nearby is
 (25) another system called the Kasilof and you go over that river

Vol 29 4951

- (1) on the way down to Homer if you were driving and the big
 (2) rearing lake on the Kasilof is the Tustumena and it has
 (3) characteristics that are similar to Skilak It's the same sort
 (4) of a lake
 (5) Now the thing that was convenient for Fish & Game in doing
 (6) this study about Tustumena was the Kasilof fish have a
 (7) different way of coming up in the Cook Inlet than most of the
 (8) other sockeye salmon in that they tend to hug the shore a lot
 (9) more And that's where the sets are so as the Kasilof fish
 (10) came in they were caught a lot more frequently in the setnet
 (11) than were the Kenai fish The Kenai fish stay offshore and
 (12) make a mad dash for the river so they are only on shore where
 (13) the setnets can get at them a very short time
 (14) So the Kasilof didn't experience the kind of overescapement
 (15) that they saw in the Kenai so the scientists like to call this
 (16) thing a control that is we've got one thing that's been
 (17) treated and one thing that hasn't and we try to compare the
 (18) two I think Lake Tustumena is a good comparison for the
 (19) Skilak Lake to compare the effects of normal escapement
 (20) versus
 (21) overescapement in these two sockeye systems
 (22) Q Now what did Mr Schmidt and Tarbox find with respect to
 (23) smolt production from 1989 smolt production escapement in
 (24) this
 (25) Skilak/Kenai Lake system?
 (26) A Basically they found that the number of smolt - and that's
 (27) the life stage where they are making the transition from fresh

Vol 29 4952

- (1) water to salt water A smolt is a different kind of animal
 (2) from a fry because it's changed and it's adapted to take the
 (3) shock of entering the saltwater
 (4) They found that the number of smolts that were produced by
 (5) the very large escapement was over one and a half million
 (6) sockeye in 1989 but was extremely small They had a very low
 (7) production of the smolt however they had produced a lot of
 (8) fry
 (9) Q Let me show you what's been marked Exhibit 332 and that
 (10) should come up momentarily and if that helps you as a
 (11) demonstrative tool sir -
 (12) A If it's okay with the jury perhaps I could just point with
 (13) this pointer
 (14) Q Sure Please do that
 (15) A This is the goal right here They typically would like to
 (16) get 400 000 to 700 000 of sockeye in the Kenai system and
 (17) that's what they shoot for as a rule They don't want the
 (18) escapement to get much above 700 000 and for - to avoid the
 (19) effects of overescapement and they don't want to get much
 (20) below 400 000 So the low end is set by how much they need
 (21) for
 (22) the fishery and the upper end is to avoid damage to the
 (23) system This is the number that actually showed up on the
 (24) spawning grounds right here about 1.6 million so it was a
 (25) good deal higher than the upper end of the goal
 (26) Q Now did Misters Tarbox and Schmidt find any difficulty

Vol 29 4953

- (1) with the fry in the Skilak and Kenai Lake system from the 1989
 (2) overescapement?
 (3) A Well there was no problem with the numbers produced The
 (4) numbers produced were pretty much consistent with the
 (5) spawning
 (6) which you would expect from the spawning so the - apparently
 (7) the spawning grounds in the Kenai system were not limiting
 (8) production but when they examined the growth particularly the
 (9) fat content in the fry the next fall that would have been the
 (10) fall of 1990 they were very concerned about the ability of
 (11) those fry to make it through the winter alive And
 (12) subsequently when they measured these fry in the fall of 1990
 (13) as smolts in the spring of 1991 they got a lot of fry that
 (14) went into that winter but very few smolts came out in the
 (15) spring
 (16) Q Let's take a look at the exhibit which has been marked
 (17) 322 So as I understand it in 1990 there was a very
 (18) substantial escapement as well but there were problems with
 (19) the fry too?
 (20) A Yes In this graphic here this is 1987 but you have to
 (21) notice - let me explain just a little bit about the graphs so
 (22) that you can get the feel for it
 (23) This is the number that escaped in 1987 up here
 (24) Q That's before the spill sir?
 (25) A Yes just as an example So this actually occurred in
 (26) 1987 This green bar here all right is the number of fry

Vol 29 4954

(1) that was produced by that escapement in 1987 Now that green

(2) bar happened in 1988 okay and then this brown bar here is the

(3) number of smolt the next life history stage that came out that

(4) have spawned and that would have been in - two years beyond

(5) 1987 That would have been 1989

(6) So in looking at that graphic you have the solid line that

(7) shows you the escapement and that s the escapement shown on

(8) the X axis and then the green bar that shows the number of

(9) young fish the following year the fry that were produced by

(10) that number of spawners And then the brown bar is ultimately

(11) what went out to sea resulting from that escapement So you

(12) have three years of data summarized in this one column of

(13) figures here

(14) Now you can see that the 1987 escapement produced a pretty

(15) substantial number of smolts also produced a very good run

(16) five years from 1987 1989 you had an escapement that was

(17) above the optimum but still it produced a normal number of fry

(18) and a pretty good level of smolt production Here in 1989 we

(19) had an escapement that was comparable to what we saw in 87

(20) The fry production was pretty good off of that

(21) But this is the problem right here The smolt production

(22) from the 1989 escapement as measured in 1991 was very very

(23) small You can see that the - from one and a half million

(24) spawners here in 1989 we got this number of smolts

(25) (indicating) and that was less than was produced by this

Vol 29 4955

(1) escapement which was much smaller the preceding year in

(2) 1988 So we got a very small production of smolts out to sea

(3) from the 1989 brood year

(4) Q So if I understand this correctly the ratio between the

(5) brown bar and the green bar in 1989 and 1990 is small and

(6) that s the concern that you re talking about?

(7) A That s right The number of smolts that we re producing in

(8) the spring from the fry that go into the winter and the fall

(9) the preceding fall is just not there We just don t have the

(10) production Something has happened in that lake system As a

(11) management biologist I think this is a perfect example of why

(12) we have escapement goals and why we can justify telling the

(13) fleet that it s time to stop fishing they can t make any more

(14) money we have the put the fish up the river and how we can

(15) justify to say that the fleet can take fish this natural

(16) resource belongs to everybody Because by using escapement

(17) goals and management we can moderate the production from the

(18) system so that everybody gets some benefit out of it

(19) Q Now do I understand correctly that Mr Schmidt and Mr

(20) Tarbox have found that the fry or the fry production is a

(21) function of too much fish in the environment in those lakes?

(22) A Well they also in addition to studying the condition of

(23) the fry and the number of spawners and so forth in the

(24) spawning grounds they have done quite a bit of work that s called

(25) limnology And limnology is basically fresh water

Vol 29 4956

(1) oceanography it s the study of lakes and productivity

(2) And they have looked at the plankton the small animals in

(3) the water column that the young sockeye depend on for food and

(4) they have found some changes in the that zooplankton that th

(5) believe are indicative of the overescapement that indicate that

(6) there are too many juvenile fish in the lake for the - to be

(7) able to support that number of juveniles

(8) Q Let s take a look sir next at Exhibit 319 and see how

(9) the overescapement pattern works over the years

(10) A Again I just want to take a little bit of time so that we

(11) can be sure what we re looking at here These green and blue

(12) bars here are not what happened okay? The green and blue

(13) bars are not what happened They are just there to show you what

(14) the escapement goal was in that particular year okay?

(15) So the blue bar there gives you the range of what they

(16) wanted and you can notice that over the years starting back

(17) in 1970 and progressing forward that goal has been coming t

(18) as we ve learned about the system

(19) Remember I said that setting the escapement goal and return

(20) for spawners is a matter of trial and error? This is something

(21) we learn as we go Also this is something we believe that the

(22) conditions in the marine environment in a lot of areas have

(23) gotten very good since about 1980 and you can see the resul

(24) of that is that we have raised the escapement goals and the

(25) production has gotten pretty good But one thing you have to

Vol 29 4957

(1) be careful about in looking at escapement numbers is that the

(2) escapements don t necessarily correspond to runs although

(3) they

(4) may But the fleet is out there the fleet fishes on these

(5) runs and if they catch a lot of them then you can have a

(6) great big running and a small escapement So how much the

(7) catch determines how much in escapement

(8) So we see this first big peak 1987 was a real big run and

(9) they got a real big escapement off of it and they had some

(10) problems in the management in that year Over here the

(11) following year there is some changes in the management

(12) program

(13) in 1988 and they also had a little bit of a problem

(14) controlling the escapement 1989 as I indicated you can see

(15) they couldn t use the drift fleet so they couldn t control the

(16) escapement so they got another big escapement

(17) Note that this peak over here in 92 doesn t mean that

(18) things are getting better That s just the run that was

(19) produced by 1987 The fish that spawned in 1987 most of the

(20) came back in 1992 They produced really well This big

(21) escapement here doesn t appear to have damaged the lake

(22) because it produced a very big run over here in 1992 and aga

(23) they had a little bit of trouble controlling the escapement

(24) the bigger the run the harder to control the escapement even

(25) if you have all your tools in operation

(1) Q Now Dr Mundy you started to talk about it a bit this

(2) 87 overescapement Is it your opinion that that s what s

Vol 29 4958

(1) creating the problems in 1989 with this lower smolt situation?
 (2) A No I don't think so There are a couple of reasons I
 (3) don't think that the overescapement in 1987 should have been a
 (4) problem if they had been able to return to normal escapements
 (5) if they had their tools First of all if the 1987 fish had
 (6) competed with themselves that is if there wasn't enough food
 (7) there for the fish to eat in 1987 then they wouldn't have
 (8) produced that big run in 1992 okay?
 (9) They produced a lot of smolts okay? We're back to the
 (10) other graph You can see that 1987 run See that 1987 run
 (11) produced a lot of smolts? That brown bar is quite tall They
 (12) were really surprised because that was a big escapement and
 (13) we
 (14) felt that the fish would compete with one another and not do as
 (15) well however apparently things were good in the lake at the
 (16) time those young fish were there They produced a very big run
 (17) in 1992 That's over and we know what happened
 (18) In 1988 we were very concerned because they were again
 (19) above the escapement goal They were on the high side Not
 (20) as
 (21) high as 1987 but we felt that we were by the worst the 1987
 (22) escapement maybe that we had gotten off lucky on that one
 (23) because the 1988 fish had good survival They produced a
 (24) good
 (25) number of fry and they produced a good number of smolts and
 a
 (26) pretty good run
 (27) So the - we felt the worst was past us with that however
 (28) the - when the 1987 fish came in you can see there pretty

Vol 29 4959

(1) graphic what happened
 (2) Q Is that the 1989 fish?
 (3) A I'm sorry 1989 fish I'm sorry The 1989 fish that big
 (4) escapement even a little bit smaller than 1987 produced a
 (5) small number of smolts So apparently the escapement in
 (6) 1989
 (7) the fish did not get enough to eat in the lake system they did
 (8) not make it through the winter and we got a very very low
 (9) production of smolts relative to that number of spawners In
 (10) fact that's a low production of smolts period I mean that
 (11) would be - if we only had an escapement of 700 000 that would
 (12) be a very very small number of smolts produced from even
 (13) 700 000 fish
 (14) Q Now let's get an idea of the consequences of what
 (15) happened
 (16) in 1989 and you've explained how that's different from '87 and
 (17) '88 Is it your opinion that there will be fewer sockeye
 (18) salmon for commercial fishermen to harvest in 1994 and 1995
 (19) because of these low smolt returns from the '89 and '90 runs?
 (20) A Yes that's right
 (21) Q Can you explain how that works sir?
 (22) A The reason that we try to avoid overescapement in sockeye
 (23) systems is that as we saw in 1987 once in a while you can get
 (24) away with big overescapement and it may not be that serious
 (25) but if you get a big a escapement and it knocks the food base
 down and we've studied this in a lot of different lakes in
 (26) Alaska then you have a problem that lasts for a while You've

Vol 29 4960

(1) knocked that food base down You've not only reduced the
 (2) amount of food that's there you've reduced the relative
 (3) abundance of the different kinds of food so that the food
 (4) that's left may not even be the kind of food that the sockeye
 (5) can use So you've changed the zooplankton in the lake and
 (6) you've reduced the availability of it and it takes a while for
 (7) a lake system to come back
 (8) This particular kind of a lake system what they call a
 (9) glacial lake system a lot of glacial melt comes down into
 (10) these systems and are cloudy or milky looking so - and these
 (11) systems are cold and slow and it takes a while for these
 (12) things to come back So that stair step effect that you see
 (13) that stair step effect is a very serious phenomenon because
 (14) we're producing fewer and fewer smolt because conditions in
 (15) the
 (16) lake have deteriorated and the fish are not making it through
 (17) the winter
 (18) While the smolt production from 1989 spawning was poor the
 (19) production from the 1990 spawning was even worse even
 (20) though
 (21) the escapement wasn't out of the ordinary it was
 (22) extraordinarily large So now we're in a situation that we've
 (23) been trying to avoid by managing for our escapement goals
 (24) and
 (25) that is we have apparently damaged this lake system
 (26) Q And when you say damaged the lake system you're talking
 (27) about food among other things sir?
 (28) A Yes

Vol 29 4961

(1) Q Now were there similar problems with the ratio between
 (2) smolt production and the amount of fry that were available in
 (3) both 1992 and '93 as well?
 (4) A Yes The smolt production as measured by Alaska
 (5) Department
 (6) of Fish & Game continues to be low and also we're starting to
 (7) see more two year olds coming out I mentioned that sockeye
 (8) can go to sea when they are one or two or even three years
 (9) old Generally when things are normal in the Kenai they are
 (10) one year olds when they go to sea
 (11) We are seeing not only lower overall production but we're
 (12) seeing a lot more two year olds which means the other lake
 (13) systems other than Skilak which are warmer or different in any
 (14) event from the other lakes may be producing the majority of
 (15) the smolts and Skilak is producing very small which has
 (16) ordinarily been the biggest producing is producing less
 (17) Q Now based upon these discussions of smolt from the '89
 (18) fry from the '90 fry and even on to the '93 fry that
 (19) available smolt data is it your opinion that it is more likely
 (20) than not that the Kenai River system will not produce a
 (21) commercially harvestable surplus in 1994 and 1995?
 (22) A Yes it is
 (23) Q Now would the lack of commercially available surplus for
 (24) Kenai for that river system be important for management of
 (25) the entire Upper Cook Inlet area?
 (26) A Yes The harvest management system in Upper Cook Inlet is

Vol 29 4962

- (1) pretty much driven by the Kenai River system When the Kenai
 (2) is strong the harvests are good and when the Kenai is weak
 (3) the harvests are not so good Kenai is a dominant river system
 (4) in Upper Cook Inlet It's what the fleet depends on to make a
 (5) living most of the time
 (6) The other time it's the Susitna River which is in the
 (7) northern part of the district is not as strong a producer as
 (8) the Kenai usually but those fish are mixed They come in
 (9) about the same time and they are out in the fishing districts
 (10) about the same time So if they are worried about getting
 (11) enough spawners if they are worried about getting up to that
 (12) 400 000 lower level of the escapement then they may have to
 (13) constrain harvest on the Susitna They may have to cut back
 (14) I mentioned earlier it's possible to separate out the
 (15) Kasilof but that again is going to be a matter of making a
 (16) difference between the setnet gear and the drift gear which is
 (17) something Fish & Game doesn't like to do if it doesn't have
 (18) to So the Kenai will drive the harvest management system and
 (19) not having very many Kenai fish is going to cut back on what
 (20) they can catch out of the Susitna
 (21) Q Let's take a look at 775 If I understand you in an
 (22) effort to get an adequate return back into this river system
 (23) because the way the fish congregate and move out in Cook
 Inlet
 (24) you may have to cut back in other areas as well Is that
 (25) right?

Vol 29 4963

- (1) A That's right
 (2) Q Now let's go on and take a look at our next area which is
 (3) on Kodiak Island And does Kodiak Island have a red fishery as
 (4) well?
 (5) A Yes Kodiak Island has quite a few lakes that produce
 (6) sockeye
 (7) Q And is it your opinion - or let me ask first is the Red
 (8) Lake system one of those important sockeye management
 areas for
 (9) Kodiak?
 (10) A Yes The Red Lake system has produced catches of over a
 (11) million sockeye salmon for the fleet in Kodiak in the past
 (12) Q And is it your opinion sir that in the Red Lake system
 (13) sir on Kodiak there will be fewer to harvest because of the
 (14) spill?
 (15) A Yes that's correct
 (16) Q Can you explain to us why that is and if it's helpful to
 (17) refer to Exhibit 333 go ahead and do so
 (18) A Again you've got a graphic here in front of you that's
 (19) basically the same sort of format as the graphic we put up for
 (20) the Kenai River system This is an escapement goal on the left
 (21) and what actually occurred on the right and you can see that
 (22) the bar on the left is real short and the one on the right is
 (23) real tall
 (24) The Red Lake outlet Red River opens out into the sea It
 (25) doesn't come to a bay or anything kind of opens out to the sea

Vol 29 4964

- (1) on the southwest end of Kodiak and that entire harvest area
 (2) was oiled in 1989 and they didn't have a fishery down there at
 (3) all So they caught zero fish not like the case in Upper Cook
 (4) Inlet They didn't have a setnet fishery to figure out how to
 (5) deploy at that time so they just didn't fish they put
 (6) everything up the river
 (7) And again that was a concern So Fish & Game went out and
 (8) studied the lake and looked at the fry looked at what happen
 (9) to the amount of zooplankton in the lake found that the
 (10) species composition and the abundance of zooplankton was
 (11) reduced and the growth of the fry was reduced and these fish
 (12) generally come back as five years olds again the same
 (13) situation we saw in Upper Cook Inlet so the production from
 (14) the 1989 run is depressed
 (15) Q Is it your opinion that the harvest this year will then be
 (16) substantially below what otherwise would have been but for the
 (17) spill?
 (18) A Yes
 (19) Q And what is the current ADF&G prediction for 1994?
 (20) A For harvest?
 (21) Q Yes
 (22) A I think they are forecasting about 175 000 for the Ayakulik
 (23) district which is the district in which these fish are
 (24) harvested
 (25) Q And it's your opinion because of the Exxon Valdez oil

Vol 29 4965

- (1) spill that's why it is as low as it is this year?
 (2) A Yes that's right
 (3) Q Now let's go on sir to the next area that we're going to
 (4) talk about which is Prince William Sound and to re-orient
 (5) ourselves just a bit when we're talking about pink salmon
 (6) what is the duration of the life cycle?
 (7) A Well the pink salmon as we talked about earlier have a
 (8) real simple life cycle All the adults are two years old
 (9) They spawn in the fall put their eggs in the gravel in
 (10) Prince William Sound a lot of the spawning occurs very close to
 (11) the saltwater In fact some of these spawners are called
 (12) intertidal spawners And the young hatch out probably in the
 (13) late winter in February and start to button up along in March
 (14) and then after they button up - generally they are all out by
 (15) the end of May depending on the year
 (16) One more point Then they will stay in the near shore
 (17) areas feeding in the near shore areas until they get the
 (18) growth they need to get out and then they take off and spend
 (19) winter the following winter in the sea and come back that
 (20) following fall to spawn So it's a two year life cycle
 (21) Q Once they leave the gravel area the stream where are they
 (22) looking for food sir?
 (23) A Once they come out of the stream - as I indicated earlier
 (24) they don't eat much in the stream if at all and they depend
 (25) on the near shore environment to get their first meal

Vol 29 4966

- (1) Q What sorts of thing are they looking to eat?
- (2) A Well they eat tiny crustaceans which are generally called
- (3) zooplankton and these could be in the water column or they
- (4) could be in with the - actually down attached to the plants
- (5) that you find in the intertidal zone
- (6) Q Now is it your opinion that the Exxon Valdez oil spill had
- (7) effects on Prince William Sound pink salmon?
- (8) A Yes
- (9) Q Is that in part because of work you did with the justice
- (10) department and the NRDA group and later on with the Trustees?
- (11) A Yes Those are Trustee Council studies
- (12) Q What studies did the NRDA group do in this area?
- (13) A Well they did a broad range of studies in the fall of
- (14) 1989 we basically sat down and tried to imagine as best we
- (15) could what kinds of impacts the oil spill would have near term
- (16) and long term and then we looked at how much money we had
- (17) and went out and measured as many different things as we could
- (18) We were fortunate There were some field crews already out
- (19) in the spring of 89 going out to look at how many pink salmon
- (20) fry were in the gravel That's one way they forecast the
- (21) years They go out and see how many young salmon are in the
- (22) gravel and they use that to tell the fleet how many salmon to
- (23) expect the next year
- (24) Well these people were already on their way so on the
- (25) spot they designed some studies and then that fall we got

Vol 29 4967

- (1) together after the fishing season was over and picked out as
- (2) many different areas as we could - could afford to measure is
- (3) basically what it came down to what we felt was important and
- (4) what we could afford to measure
- (5) Q Was one of the areas that was studied by the Trustees in
- (6) the area of pink salmon embryo mortality?
- (7) A Yes
- (8) Q Let me call up 335 and if you wish to use this as an aid
- (9) you can do so to explain to the jury the results of the work
- (10) sir
- (11) A Again getting oriented on the graphic here up here on the
- (12) side you've got embryo mortality here all right so this would
- (13) be a ten percent loss 90 percent survived This would be a 20
- (14) percent loss 80 percent survived And these two lines here
- (15) the green shows a controlled and then up here on the top
- (16) these are the oiled streams
- (17) And we can see that - this is the 1989 case they also
- (18) measure this in 1990 and 1991 they found similar patterns
- (19) The mortality of the eggs in the oiled streams was on the
- (20) average a good deal higher and you can see how much here
- (21) than
- (22) the mortality of the salmon in the unoled streams This was
- (23) in the southwestern district in the path of the oil spill that
- (24) I measured
- (25) And also one thing that was interesting to me down here on
- (26) this axis we've got basically the distance from the stream

Vol 29 4968

- (1) mouth this would be the stream mouth right here and then you
- (2) move up the stream here and I was somewhat surprised to see
- (3) that we didn't get you know a major trend in this This
- (4) depression in embryo mortality was pretty much uniform in the
- (5) stream but generally statistics worked out really well and
- (6) there is a clear difference in the survival of the eggs in the
- (7) oiled and unoled streams
- (8) Q Were studies done as well to measure fry survival?
- (9) A Yes
- (10) Q What did they show?
- (11) A Well when we looked at the fry survival in the oiled and
- (12) unoled streams - now remember these are not the same fry as
- (13) were measured as these eggs (indicating) okay because they
- (14) take a sample of eggs it's pretty much sacrificed They
- (15) can't put it back in the gravel and let it grow up because
- (16) that also might bias the study because if you've got those
- (17) again in some other sample that would not be the best way to
- (18) do it
- (19) So we measured separate locations within oiled and unoled
- (20) streams slightly different locations so we wouldn't get the
- (21) same group of fish but nearby fish and we couldn't find a
- (22) statistical difference between the oiled and unoled streams
- (23) One reason for this negative result was just simply that you
- (24) have the cause of the mortality you have fewer animals to work
- (25) with There are more eggs than there are fry in a stream

Vol 29 4969

- (1) because some of them die in the interim and the statistics -
- (2) the more numbers you've got the easier it is to see
- (3) differences
- (4) So in my opinion the fact that we didn't see any
- (5) difference between the oiled and unoled streams doesn't prove
- (6) there weren't differences It just proves that we couldn't
- (7) measure differences
- (8) Q Were studies done by the Trustees to observe the condition
- (9) and distribution of these fry that you've just described in
- (10) Prince William Sound?
- (11) A Yes
- (12) Q What did they show sir?
- (13) A Well the studies that were done on - in the near shore
- (14) areas people went around and tried to collect juvenile salmon
- (15) from oiled and unoled areas and they split it into two
- (16) parts The federal government team took the wild fish and the
- (17) state people because they worked slowly with the hatchery
- (18) system took the hatchery fish And they looked at the growth
- (19) of the wild fish and the hatchery fish that they found in oiled
- (20) and unoled areas the idea being that if they found a fish in
- (21) an unoled area if they found it in a clear area that at
- (22) least it spent sometime outside the impact of the oil spill
- (23) And in both cases in the 1989 fish which had been born in
- (24) 19 - gone to gravel in 1988 and were trying to get out to sea
- (25) through these oiled areas in 1989 had depressed growth

Vol 29 4970

- (1) Now I mentioned to you earlier that when a young salmon a
 (2) salmon at that stage grows slow it's more likely to die So
 (3) they found reduced growth in the oiled areas relative to the
 (4) unoiled areas and their opinion was that that meant reduced
 (5) survival for those fish
 (6) Q And what is your opinion about this survival issue that
 (7) the - your opinion about what the study showed with respect to
 (8) survival?
 (9) A It showed that the salmon in the oiled areas that is
 (10) salmon that had spent time in oiled areas had reduced growth
 (11) and in my opinion that means that you get reduced production
 (12) And salmon at that age if they don't get to grow they die at
 (13) a fairly high rate And we know from laboratory studies that
 (14) fish exposed to products from oil from crude oil don't grow
 (15) as well as fish that aren't
 (16) So my opinion is that the survival of those fish was
 (17) reduced because of exposure to the oil
 (18) Q Sir is there any mixing of wild fish and hatchery fish in
 (19) the Prince William Sound pink fishery?
 (20) A Adults we're speaking about adults?
 (21) Q Yes
 (22) A Yes The adults of hatchery and wild fish come into the
 (23) Sound pretty much together and won't completely separate
 (24) until
 (25) after they commit to the spawning areas
 (26) Q Now with respect to the smolt were studies done to detect

Vol 29 4971

- (1) differences between smolt in adult survival between oiled and
 (2) unoiled streams as part of this analysis?
 (3) A Yes
 (4) Q And what did they show?
 (5) A Those studies were negative They tagged juvenile pink
 (6) salmon in the small streams that were oiled and unoiled and
 (7) put a little sliver of stainless steel in their head and
 (8) clipped off a small fin that they have on the back so they
 (9) could get the fish that had the sliver and they sampled the
 (10) fish to see how many of those got back So they knew how
 (11) many
 (12) they released and counted how many they got back and they
 (13) couldn't see a difference between this survival from the
 (14) juvenile to the adult between the oiled and the unoiled
 (15) streams
 (16) Now I mentioned earlier that in statistics when you have
 (17) large numbers you generally can see differences and when you
 (18) have small numbers it's hard to see differences and I think
 (19) what happened here is that these streams only produce a
 (20) certain
 (21) number of fish
 (22) Now in a hatchery we have millions and millions and
 (23) millions and we tag as many as we need to see a difference two
 (24) years from now because we have an idea how many are going
 (25) to
 (26) die so we know how many to tag in order to see them come
 (27) back
 (28) These small streams only produce a small number of smolts
 (29) and you can only catch a certain number of them to tag so the

Vol 29 4972

- (1) fact that they didn't see differences here again in my
 (2) estimation doesn't mean that there aren't differences It
 (3) means we didn't have enough fish to tag to measure them
 (4) properly
 (5) Q Were studies done by the Trustees to determine whether
 (6) there was damage to the salmon ecosystem?
 (7) A The Trustee Council measured a lot of different things in
 (8) the environment in the Sound that could give us some sense of
 (9) the health of the ecosystem
 (10) Q Was one of those the food sources and habitat for the
 (11) salmon?
 (12) A Yes that's correct
 (13) Q And what did the Trustees find?
 (14) A Well there were some pretty obvious effects that we really
 (15) didn't need teams of scientists to see because the habitat was
 (16) oiled and particularly in the intertidal near the mouths of
 (17) these streams so that salmon feeding in that area in addition
 (18) to you know having their growth reduced just by the effects
 (19) of the hydrocarbons themselves are ingesting also things that
 (20) had been exposed to hydrocarbons
 (21) Also the cleanup pretty well - well when you steam clean
 (22) the rocks they are clean they look nice but there is not
 (23) much on them to eat so the obvious gross effects were that the
 (24) near shore habitat the intertidal habitat was severely
 (25) disturbed and as a consequence the young salmon probably

Vol 29 4973

- (1) many cases had oiled food or didn't have enough food
 (2) In addition to this they also measured went around and
 (3) tried to get samples of fish and crabs to tell whether or not
 (4) they had been exposed at all to the oil and found - they
 (5) found that a number of the different kinds of fish had been -
 (6) shown evidence of being exposed to the oil I can't quantify
 (7) exactly what the problems were of that but they just wanted to
 (8) know the extent of the exposure And of course I believe
 (9) somebody else had the job of telling about the herring and
 (10) exposure of the herring and the consequences of that
 (11) So they did all of those kinds of studies that they could
 (12) afford to do
 (13) Q Now with respect - before we come back to herring with
 (14) respect to the other sorts of fish let me ask this first as a
 (15) predicate Do those other sorts of fish that the Trustees
 (16) study looked at do they live in the same environment and eat
 (17) the same sorts of things as the salmon do?
 (18) A Depending on their life history stage They would be in
 (19) the same areas as the salmon at various parts of their life
 (20) history Some of these are flatfish They were down at the
 (21) bottom That's why they surveyed them They wanted to see
 (22) oil was getting to the bottom part of the environment But
 (23) when those flatfish are young they are up right next to the
 (24) surface They are little thread like larvae and they are up in
 (25) the water column So at different parts of their life cycle

Vol 29 4974

- (1) they would be
 (2) Q Did studies include ones on dolly varden and cut throat
 (3) trout?
 (4) A Yes Those are fresh water trout that also go out to sea
 (5) for relatively short periods of time That is short compared
 (6) to what the salmon spend They go - stay in the intertidal
 (7) and subtidal areas in the vicinity of their streams sometimes
 (8) they range farther away and these dolly varden and cut throats
 (9) are feeding in the intertidal the same place that the juvenile
 (10) salmon are feeding
 (11) So the Trustees launched a study on the growth and survival
 (12) of the dolly varden and cut throat trout and they demonstrated
 (13) a reduction in growth and survival for these fish that are
 (14) closely associated with the intertidal area
 (15) Q Did they find - were there significant findings with
 (16) respect to those fish that shared the same intertidal growth
 (17) area as do the salmon?
 (18) A Yes Those results were statistically significant
 (19) Q When you say statistically significant I know - I have
 (20) an idea what you re talking about as a scientist but does that
 (21) mean that there was a negative effect from the
 (22) interrelationship with the oil spill?
 (23) A They found that by their standards of error by their
 (24) standards of proof that the growth and survival had been
 (25) reduced

Vol 29 4975

- (1) Q Now we did have Dr Kocan here yesterday to talk to us
 (2) about herring and I don t want you to repeat what he s told
 (3) us but is there some relationship in the life cycles of these
 (4) fish herring and salmon where they interrelate?
 (5) A Yes In managing fisheries generally we focus on a single
 (6) species would be the one that we spend most of our time
 (7) looking at but we have to be aware of the relations between
 (8) species particularly if we re going to harvest and we re going
 (9) to impact them ourselves The herring are sort of a universal
 (10) prey species in the environment so the fact that there are
 (11) fewer herring would be a concern to a salmon biologist because
 (12) a salmon biologist would worry about the juvenile salmon
 (13) themselves being eaten by predators that don t have any
 (14) herring
 (15) to eat
 (16) So when things change in the environment like the big
 (17) herring populations going for miles and miles of spawn down
 (18) to
 (19) a few hundred yards you d have to be concerned as a salmon
 (20) management biologist about the impact of that on the juvenile
 (21) salmon
 (22) Q Were there egg mortality studies done?
 (23) A Egg mortality studies on?
 (24) Q With respect to salmon
 (25) A With respect to pink salmon?
 (26) Q Yes
 (27) A Yes there were

Vol 29 4976

- (1) Q And what did they show?
 (2) A Well we ve previously discussed and with the graphic that
 (3) we had up here the egg mortality Embryo mortality studies on
 (4) the pink salmon showed that the eggs in the oiled stream had a
 (5) lower overall survival that is they had a higher embryo
 (6) mortality than did the eggs in the unoiled stream And that
 (7) difference again was statistically significant
 (8) Q And as you - I m going to ask you about some specific
 (9) opinions about Prince William Sound pink salmon Did you
 (10) bring
 (11) the various research that the Trustees did with respect to
 (12) dolly varden cut throat trout and herring and the embryos to
 (13) bear on the problem sir?
 (14) A Yes I considered all those factors in forming my opinion
 (15) yes
 (16) Q Now was there any attempt sir made by the Trustees to
 (17) determine how much more pink salmon would have returned to
 (18) Prince William Sound in 1990 but for the spill?
 (19) A Yes
 (20) Q What was the result of the Trustees study?
 (21) A The Trustees study looked at the - just part of the
 (22) problems created by the oil This is fish and shellfish study
 (23) number 28 and this was done by Hal Geiger with help from
 (24) quite
 (25) a few other people I participated in the initial stages of
 (26) the study
 (27) And Geiger using just the reduction in growth of the pink

Vol 29 4977

- (1) salmon that traveled through the oiled areas in 1989 from the
 (2) 1988 brood year estimated that the 1988 brood year produced
 (3) in
 (4) 1990 about - initially estimated about 2.7 million fewer
 (5) salmon adults in 1990 than would have been there but for the
 (6) effects of the oil
 (7) In other words the fish that were out there in 1989
 (8) suffered reduced growth This in turn caused increased
 (9) mortality so fewer of them came back as adults to spawn in
 (10) 1990 and the following year The estimate of 2.7 was
 (11) subsequently in later graphs reduced to about 2.2 million
 (12) because he was using catch data for the other side of the
 (13) equation that is he was taking the difference between what
 (14) should have been there and what actually showed up and the
 (15) catch is part of that
 (16) And fish ticket data is slow to come in sometimes so his
 (17) catch data is getting bigger and bigger on him So the final
 (18) figure of catch data have all been finalized and I think the
 (19) catch data was 2.2 million
 (20) Q Now we heard that 1990 was a record year Do you mean to
 (21) say it would have been an even larger year but for the spill?
 (22) A Yes
 (23) Q Did the Trustees estimate loss in 1991 and 1992 as well?
 (24) A Yes they did
 (25) Q What were the results in those years?
 (26) A Well in those years they also estimated losses but the

Vol 29 4978

- (1) basis for the estimates were different They weren't working
 (2) on the growth data anymore because the growth depression
 wasn't
 (3) measurable the following year That doesn't mean there wasn't
 (4) some kind of a depression of growth in 1990 just that it
 (5) wasn't what our methods allowed us to measure
 (6) So they worked just from the embryo mortality data They
 (7) went and looked at just the reduction in those streams that had
 (8) been oiled the numbers of fish that should have returned to
 (9) those oiled streams that didn't return because of death of the
 (10) eggs in the streams And so these numbers are quite a bit
 (11) smaller since they represent only a small portion of the impact
 (12) of the oil on those brood years
 (13) In my opinion I believe that the number that he estimated
 (14) was that there would have been 70,000 more adults coming
 back
 (15) to Prince William Sound as a result - but for the effects of
 (16) the oil spill because of the embryo mortality in 1991 and
 (17) about 40,000 fewer the following year 1992
 (18) Q Now these numbers in comparison to those that we've
 talked
 (19) about don't seem very big Do they nonetheless have any
 (20) significance for you as a salmon population biologist?
 (21) A Yes These numbers are small but in salmon management
 (22) salmon population biology we spend a lot of time go to a lot
 (23) of time and trouble trying to tell the difference between
 (24) different stocks of salmon We talked earlier about the Kenai
 (25) and the Kaslof different stocks Each stock has its own

Vol 29 4979

- (1) characteristics just like people Some of them are big
 (2) producers and some of them are not big producers and we
 have
 (3) to understand those differences between those stocks in order
 (4) to manage them because we don't want to fish stocks that are
 (5) not big producers hard We want to fish them easy and we can
 (6) fish the big producers hard
 (7) So those are the differences we try to respect when we're
 (8) writing fishing regulations and the fact that we had only -
 (9) that these numbers were only 70,000 and 40,000 these were
 wild
 (10) stock streams these were streams in the southwestern district
 (11) and these fish except for the amount that was harvested taken
 (12) out by the fleet would have been going to those streams to
 (13) spawn and contribute to the next generation
 (14) So even though you can look at all the fish that were gone
 (15) and the millions of fish that were coming back you can't use
 (16) those to justify reductions in a management sense to other
 (17) areas You can't say because we got millions of fish over
 (18) here that it's okay to overharvest or to diminish the fish in
 (19) this area
 (20) So as a salmon population biologist I believe the
 (21) reduction of those returns in terms of the population viability
 (22) could be significant and are certainly something I would take
 (23) into account in managing
 (24) Q All right Now for 1992 did the forecast models that
 (25) ADF&G set up work sir?

Vol 29 4980

- (1) A I'm sorry the year you said was?
 (2) Q 1992
 (3) A No they didn't
 (4) Q And is it your opinion that the Exxon Valdez oil spill in
 (5) 1989 was a significant contributing factor to the very low
 (6) population levels of both hatchery and natural pink salmon in
 (7) Prince William Sound in 1992 and 1993?
 (8) A Yes
 (9) Q And have you prepared a chart with your calculations on the
 (10) effect of the spill on pink salmon in Prince William Sound
 (11) after the spill?
 (12) A Yes
 (13) Q I'm going to show you a portion of what's been marked
 (14) Exhibit 318 and let's focus if we may sir on the first
 (15) line which I'll try and get the right portion on the machine
 (16) We want to save a little bit of the excitement here Thank
 (17) you
 (18) MR COOPER Always happy to see your excitement
 (19) BY MR JAMIN
 (20) Q In 1990 sir can you explain to us what that first line
 (21) reflects?
 (22) A Looks like -
 (23) Q You can't use - you're on the overhead Yeah
 (24) A This number here is a number that I discussed with you
 (25) earlier This is from the fish and shellfish study 28 This

Vol 29 4981

- (1) is the Geiger number produced for harvest - I mean adjusted
 (2) for harvest They have applied a harvest rate to the number
 (3) that he calculated lost - to figure out what portion of those
 (4) fish lost would have been taken by the harvest Same is true
 (5) in 1991 But the numbers in 1992 and 1993 are different
 (6) numbers
 (7) Q In what way sir?
 (8) A Well these numbers up here 91 represent partial impacts
 (9) of the oil spill They estimated what we were able to measure
 (10) in the time available with the resources available These
 (11) numbers down here (indicating) are deviations negative
 (12) deviations from the forecast Each year Fish & Game makes a
 (13) forecast of how much the fleet can expect to harvest so the
 (14) fleet can prepare for the abundance that it's going to
 (15) encounter out there And these harvest forecasts are based on
 (16) the number of fry that they have in the spring of the preceding
 (17) year
 (18) That's - as I told you some of the people were going out
 (19) to actually check on those fry at the time of the Exxon Valdez
 (20) oil spill That's why we had people out in the field at that
 (21) time
 (22) So they forecast the harvest that's going to be available
 (23) based on the abundance of fry in the preceding year and also
 (24) the weather data And forecasters who work with Fish & Game
 (25) they are not Fish & Game people That forecast is based on

Vol 29 4982

- (1) other things as well but this particular forecast that we see
 (2) for 1992 and 1993 the method is based on fry and weather
 (3) data
 (4) And this number is the difference between what Fish & Game
 (5) expected to come back in 1992 and 1993 as harvest that's the
 (6) harvest portion of it and what actually showed up And you
 (7) can see while the numbers for 90 and 91 are small numbers
 (8) these two numbers are really big numbers because the
 forecast
 (9) was totally high was extremely high in 1992 and 1993 They
 (10) expected a lot more fish to come back in 1992 and 1993 than
 (11) actually showed up
 (12) Q Now let's go back to the 1990 fish How would this group
 (13) have been affected by the oil?
 (14) A The 1990 estimate is based on reductions in growth from the
 (15) 88 brood year Now you just - on pink salmon you just
 (16) subtract two to get the brood year So in 1990 1988 would
 (17) have been the brood year so that was the young fish trying to
 (18) get out of the Sound at the time of the Exxon Valdez oil
 (19) spill They swam right into it
 (20) And so - and these were the reductions in growth that were
 (21) measured by the federal studies and the state studies on wild
 (22) fish and hatchery fish translated into survivals and projected
 (23) forward into adult harvest
 (24) Q And the 1991 fish sir?
 (25) A 1991 numbers is a small number because it's based only on

Vol 29 4983

- (1) the embryo mortalities the egg deaths in the oiled streams
 (2) just for the southwestern district Streams that were oiled
 (3) okay? So it's only a portion of a district and based only on
 (4) the egg mortality factor not on any other impact that the oil
 (5) may have had on the 1989 brood year
 (6) Q With respect to 1992 and 1993 were these sorts of
 (7) deviations between the expected harvests from ADF&G and the
 (8) actual returns seen in other areas of the state sir?
 (9) A No That's one of the reasons that these negative
 (10) deviations were so unexpected and are such a cause of serious
 (11) concern for me and for other salmon population biologists The
 (12) other big pink producing areas of the state such as
 (13) southeastern Alaska and Kodiak which grow up in the same
 areas
 (14) in the Gulf of Alaska and experience the same type of offshore
 (15) marine mortality are having record years They are producing
 (16) lots and lots of pink salmon and the survivals are very good
 (17) These forecasts were quite low and that was completely
 (18) unexpected
 (19) Q Sir do you have an opinion as to whether the sorts of
 (20) problems that we've seen in 1992 and 1993 with the pink
 salmon
 (21) in Prince William Sound can be expected to continue in 1994
 and
 (22) 1995?
 (23) A Yes I think the factors that we've seen particularly the
 (24) concerns about the problems with the ecosystem the problems
 (25) with the other species and the fact that these forecasts are so

Vol 29 4984

- (1) lower - I mean these runs are so low relative to the
 (2) forecasts these forecast errors are huge Until we see a
 (3) positive deviation or a run that comes in on the forecast I
 (4) don't see anything that leaves me of the opinion that these
 (5) factors are changed and if anything they may be
 (6) accelerating
 (7) Q All right sir And as part of your responsibilities and
 (8) part of the responsibilities of managers generally who work
 (9) with the Alaska Department of Fish & Game do you routinely
 (10) gather information about prevailing grounds prices and publish
 (11) those in ADF&G reports?
 (12) A Yes That's one of the pieces of information that we
 (13) collect as a service to the public
 (14) Q And did you review relevant reports in the preparation of
 (15) Exhibit 318 for the years 1990 91 92 and 93 to determine
 (16) what the grounds prices were in Prince William Sound for pink
 (17) salmon?
 (18) A Yes
 (19) Q And are these then those prices per pound?
 (20) MR COOPER Objection Your Honor
 (21) MR JAMIN I'll cover it up while we deal with the
 (22) objection
 (23) MR COOPER I don't believe Your Honor I heard the
 (24) witness was qualified with respect to pricing
 (25) THE COURT I don't think he's being asked for an

Vol 29 - 4985

- (1) opinion on prices He's being asked to produce factual
 (2) information
 (3) MR COOPER If that's all he does I don't have a
 (4) problem with that
 (5) MR JAMIN That's precisely it Your Honor
 (6) THE COURT I'll hear from you again if he deviates
 (7) from that
 (8) BY MR JAMIN
 (9) Q And were the numbers then in this column 32 cents 13 19
 (10) and 16 cents derived from the ADFG management reports?
 (11) A In the case of the 1993 numbers that's a management report
 (12) number In the case of 90 through 92 these are from the
 (13) fish ticket data that's collected from the Commercial Fisheries
 (14) Entry Commission So it's essentially the same kinds of data
 (15) because the management biologist works it up from the fish
 (16) ticket and sends it to the entry commission
 (17) The difference between the 90 and the 92 basis and the
 (18) 93 basis is that the Commercial Fisheries Entry Commission
 (19) generally has all the tickets available by the time they make
 (20) their estimates Sometimes the management program will only
 (21) have 99 or 98 percent
 (22) Q And just to clarify for Mr Cooper's benefit it's the
 (23) left hand side of the chart in which we've relied on your
 (24) expertise and the right hand side is just a calculation?
 (25) A That's right And another thing I'd like to point out is

Vol 29 4986

- (1) these numbers are guidelines as I say a service to the public
 (2) in case somebody is interested they want to get into the
 (3) business or they want to know what people pay for salmon but
 (4) those numbers don't include things like bonuses Sometimes
 (5) processors will pay bonuses They just sort of guideline
 (6) minimum sort of estimates of what was paid on the pounds for
 (7) fish
 (8) MR JAMIN Your Honor is this a good time to stop?
 (9) THE COURT We'll take our first recess We will be
 (10) in recess for 15 minutes
 (11) (Jury out at 10:00)
 (12) (Jury in at 10:15)
 (13) THE CLERK All rise
 (14) MR JAMIN Your Honor as Mr O'Neill says in the
 (15) interest of shortness of life I will conclude quickly
 (16) BY MR JAMIN
 (17) Q Let me just take a moment for clarification Can you again
 (18) indicate to us what the sources of the four numbers in the
 (19) average price per pound column are?
 (20) A Okay As I tried to indicate earlier the sources for the
 (21) top three numbers is different from the - that is the 32
 (22) cents the 13 cents the 19 cents excuse me is different from
 (23) the bottom number The top three numbers are based on
 averages
 (24) computed by the Commercial Fisheries Entry Commission The
 (25) bottom number the 16 cents is an ADF&G grounds price

Vol 29 4987

- (1) estimate which except for the addition of lost fish tickets
 (2) should be approximately correct
 (3) MR JAMIN Your Honor I would offer Plaintiffs
 (4) 318
 (5) (Exhibit 318 offered)
 (6) THE COURT Is there an objection?
 (7) MR COOPER No objection
 (8) THE COURT Plaintiffs 318 is admitted
 (9) (Exhibit 318 received)
 (10) BY MR JAMIN
 (11) Q Just one other area Dr Mundy We've talked about sort of
 (12) the long term difficulties with overescapement in the Kenai
 (13) River system Skilak Lake and the Kenai Lake and you
 mentioned
 (14) your opinion about the damage in the Kodiak - in Red Lake for
 (15) one year 1994
 (16) Did the overescapement phenomenon resulting from the zero
 (17) tolerance policy in Kodiak in 1989 have any ramifications for
 (18) the 1995 season in your opinion?
 (19) A Yes it could
 (20) Q What are they sir?
 (21) A Well when I indicated that the Red Lake fish on Kodiak
 (22) come back as five year olds generally when you say these fish
 (23) are five year olds or the fish from that population are six
 (24) year olds what you mean is that the majority of them come back
 (25) as five year olds or the majority of them come back as six year

Vol 29 4988

- (1) olds but they will come back as four five and six year olds
 (2) and sometimes rarely as seven year olds
 (3) So the primary impact of the overescapement in 1989 will be
 (4) felt on Red Lake in '94 but this could contribute to a lesser
 (5) run in at least one a smaller one that would have been there
 (6) the following year because the presence of six year olds from
 (7) the 1989 brood year and also probably contribute some
 (8) uncertainty to the management program because I know the
 (9) managers are concerned with the studies that show that the
 (10) rearing lake has been damaged to some extent
 (11) MR JAMIN Your Honor I have nothing further of the
 (12) witness
 (13) THE COURT Cross examine
 (14) CROSS EXAMINATION OF PHILLIP R MUNDY
 (15) BY MR COOPER
 (16) Q Good morning Dr Mundy How are you?
 (17) A Good morning Mr Cooper How are you?
 (18) Q I see you again
 (19) A Yes sir
 (20) Q Dr Mundy what I'd first like to do is talk a bit about
 (21) Prince William Sound Ms Stewart has a few documents some
 of
 (22) them you may need to or want to refer to
 (23) A Okay
 (24) Q Just don't knock them off of there because we won't be able
 (25) to put them back together again

Vol 29 4989

- (1) A That's a thought
 (2) Q I shouldn't have suggested that
 (3) THE COURT You better hope they don't fall off
 (4) THE WITNESS They won't Your Honor
 (5) BY MR COOPER
 (6) Q Dr Mundy you talked about the near shore environment in
 (7) the case of pink salmon in Prince William Sound Do you
 (8) remember that general subject matter?
 (9) A Yes
 (10) Q And we heard a lot about that when Dr Peterson was up here
 (11) the other day so let's talk a little bit about that If I
 (12) understood your concern correctly you were concerned about
 the
 (13) pink salmon coming out of the streams emerging out of the
 (14) streams after they button up?
 (15) A Yes
 (16) Q Incidentally what does button up mean?
 (17) A Button up means the hole that their yolk sac protruded
 (18) through closes up like a belly button
 (19) Q They don't button it up okay
 (20) When they come out of the streams they feed in the
 (21) near shore environment and you were concerned about what
 (22) effect the oil spill may have had especially in 1989?
 (23) A Yes
 (24) Q Let's put a little perspective on that If we can First
 (25) to the extent that streams weren't oiled or the areas in front

Vol 29 4990

- (1) of the streams in this near shore environment weren't oiled
 (2) then that concern wouldn't be one that would materialize would
 (3) it?
 (4) A Well that depends on what you mean by oiled Part of the
 (5) concern that I have here is our definition of what oiled and
 (6) unoiled is and the - kind of the crude level at which we can
 (7) measure things We're able to see the effects of only the very
 (8) worst If there is lower effects or subtle effects we don't
 (9) measure that
 (10) So I wouldn't say Mr Cooper that I'm unconcerned about
 (11) areas designated as unoiled
 (12) Q I guess we have to work with the tools that we have and
 (13) isn't it basically true though that if there was no oil in a
 (14) near shore environment then this concern about the young
 (15) pink salmon juveniles or fry feeding in that near shore environment
 (16) isn't really that much of a concern?
 (17) A Yes that's right if there were truly no oil it wouldn't
 (18) be a problem
 (19) Q Well we're going to hear a lot from other witnesses to the
 (20) extent of where there was oil and to what extent and the jury
 (21) has already seen some of that but if you back up a little bit
 (22) even before the fry get to the marine water before they flush
 (23) out of the stream into the marine waters - you talked about
 (24) embryo mortality for instance in the streams?
 (25) A Yes

Vol 29 4991

- (1) Q If there were no oil in the particular stream then that
 (2) doesn't become a concern does it?
 (3) A Again with the reservations I've expressed if there truly
 (4) were no oil in the stream and not just a matter if they didn't
 (5) measure any oil there would not be a problem
 (6) Q So we can agree on that if there is no oil measured in the
 (7) stream you don't think embryo mortality is going to be a
 (8) problem?
 (9) A No sir that's not what I said The fact that they didn't
 (10) measure any oil in the stream doesn't mean there wasn't a toxic
 (11) fraction in there or toxic fraction impacting it That's just
 (12) that they couldn't measure it
 (13) Q I guess we have to work with the tools we have and to the
 (14) extent you can measure it?
 (15) A Yes sir
 (16) Q Now let's see do you know how many streams were in fact
 (17) measured as having oil in the streams?
 (18) A I wouldn't want to give you an exact account without
 (19) checking records I generally have a concept of what
 (20) proportion of the production was estimated to have been oiled
 (21) Q Well tell you what let me ask you this question Does
 (22) some of the - some of the pink salmon when they come in to
 (23) spawn deposit their eggs above the intertidal zone?
 (24) A Yes they do
 (25) Q Would you expect to see oil above the intertidal zone?

Vol 29 4992

- (1) A Well I guess that depends on what you mean by oil I
 (2) guess some oil could be carried up there by animals or
 (3) something like that but the nature of the major impact above
 (4) the tidal zone would -
 (5) Q Pretty remote that an animal is going to cart a bunch of
 (6) oil up in the intertidal zone?
 (7) A Doesn't take much to kill a salmon egg
 (8) Q But you wouldn't expect to see much damage there?
 (9) A Well that's not my - based on the embryo mortality
 (10) studies that I've reviewed that's not my expectation
 (11) Q Did those embryo mortality studies show mortality above the
 (12) intertidal zone?
 (13) A Yes
 (14) Q These were done by Mr Bue basically under his
 (15) supervision?
 (16) A The studies themselves were done by a biologist named Sam
 (17) Sharr who did a good deal of the work on salmon in Prince
 (18) William Sound and the statistician was Brian Bue
 (19) Q I'll tell you what since you've seen this oil pretty much
 (20) all over how about an embryo that's raised in a hatchery?
 (21) A Yes
 (22) Q You wouldn't expect to see that oiled in 1989 would you?
 (23) A No
 (24) Q Do you know incidentally about what percentage of the fry
 (25) that are released that were released in 1989 were hatchery
 raised fry pink salmon?

Vol 29 4993

- (1) A The large majority of them Again I don't have - I don't
 (2) want to give you a percentage but the large majority were
 (3) Q I think we heard the number about 75 percent Does that
 (4) sound about right?
 (5) A Yes
 (6) Q Now this near shore ecosystem that you're concerned
 (7) especially in '89 we're talking about fish that were spawned
 (8) or born or whatever the right term is I guess in 1988 is
 (9) that one group?
 (10) A Yes
 (11) Q And that's because the fish that were depositing eggs in
 (12) 1988 those fish were kind of coming after the oil spill - in
 (13) that summer after the oil spill or the spring of the oil spill
 (14) were entering the Sound from the streams?
 (15) A Yes
 (16) Q And then they were in that near shore environment at that
 (17) point in time?
 (18) A Yes
 (19) Q And you also have some concern do you about the salmon
 (20) pink salmon that were deposited as eggs in 1989?
 (21) A Yes
 (22) Q Because in what the following spring they would have been
 (23) coming out in terms of this near shore environment that you
 (24) were concerned about into that environment?
 (25) A That's a concern The other concern is that the salmon

Vol 29 4994

- (1) eggs that were deposited in the oiled streams would have had a
 (2) higher mortality have a measurably higher mortality than the
 (3) salmon eggs that were deposited in unoiled streams
 (4) Q We'll come back to that but what I was interested in was
 (5) this near shore ecosystem concern that you were describing
 (6) A That would have been part of it yes
 (7) Q I thought when you were talking about near shore you were
 (8) talking about what Dr Peterson was talking about the other
 (9) day which is the marine waters right along the shore there?
 (10) A I'm sorry I didn't hear Dr Peterson's testimony
 (11) Q All right Well let's talk about that aspect of it When
 (12) I say near shore I'll be using that the way Dr Peterson was
 (13) that intertidal portion right where the margin of the Sound and
 (14) the land -
 (15) A I'm sure that Dr Peterson and I have the same definition
 (16) of the intertidal
 (17) Q Now the pink salmon that were born in 1988 one of these
 (18) two years that you're most concerned about they came back
 (19) when?
 (20) A They came back as adults plus two years from the time they
 (21) were deposited so that would have been 1990
 (22) Q So they returned in 1990?
 (23) A Yes
 (24) Q And the other year group there that you're especially
 (25) concerned with the 1989 group year the ones that were born in

Vol 29 4995

- (1) 89 they came back in what year?
 (2) A In 1991
 (3) Q Now let me show you a graph here we've got You may
 have
 (4) this in front of you up there but it's DX5759 That should be
 (5) the 1992 I think Prince William Sound area management
 report?
 (6) A DX5759 is that correct?
 (7) Q Yes You'll be relieved to know we're not going to read
 (8) the whole thing This is entitled Prince William Sound
 (9) Management Area 1992 Annual Finfish Management Report Is
 (10) that the one?
 (11) A Yes
 (12) Q I'm really only interested in one page on there at that
 (13) point in time and that's let's see page 105
 (14) A Do you want me to look it up in here?
 (15) Q You're welcome to use the monitor Unless you have some
 (16) reason to look at the rest of that we can just use the monitor
 (17) there
 (18) Now this shows the catch and escapement That means
 (19) basically the run size for the even year and the odd year pink
 (20) salmon in Prince William Sound?
 (21) A Yes that's right
 (22) Q And the first of these years that you were concerned about
 (23) with the pink salmon in the near shore environment those were
 (24) the fish that returned in 1990?
 (25) A That's correct

Vol 29 4996

- (1) Q So those are - they returned according to ADF&G in large
 (2) numbers didn't they?
 (3) A Well the fish that I'm concerned about didn't return at
 (4) all
 (5) Q You mean the fish that you think are missing?
 (6) A That's correct
 (7) Q Well let's talk about the ones that did show up Isn't it
 (8) a fact that that year class that 1988 year class that you were
 (9) concerned about being exposed to the oil came back in 1990
 (10) and basically set a record for the run size in Prince William
 (11) Sound?
 (12) A That's correct
 (13) Q And the fish that came back the next year in 1991 which
 (14) is this other year class that you were especially concerned
 (15) about in the near shore environment they came back and the
 (16) was what the second highest pink salmon run size that the
 (17) Sound had ever had wasn't it?
 (18) A Yes that's correct
 (19) Q Would you agree with me that certainly the hatchery fish
 (20) came back in big numbers in those years is that right?
 (21) A The hatchery fish did return at normal rates in those
 (22) years yes
 (23) Q Well the total numbers they came back in were record
 (24) numbers?
 (25) A They came back in good numbers yes

Vol 29 4997

- (1) Q And in both of those years the wild stock returned in
 (2) substantially larger numbers than their parents had returned
 (3) in correct?
 (4) A Yes
 (5) Q Now the fish as I understand - well you also talked
 (6) about what happened in 1992 and 1993 when the pink salmon
 runs
 (7) were disappointingly low?
 (8) A Yes
 (9) Q But those were not - those fish were not as exposed
 (10) certainly in the near shore environment as exposed -
 (11) potentially exposed to hydrocarbons than these fish that came
 (12) back in record numbers?
 (13) A I'd say that may be the case
 (14) Q Now incidentally if I heard you right you also expressed
 (15) concern about the herring as being impacted the interactions
 (16) between the herring and the salmon?
 (17) A Yes
 (18) Q Do you recall that general subject matter?
 (19) A Yes
 (20) Q Isn't it true also that the herring in the two years after
 (21) the spill 1990 and 1991 returned to the Sound to set records
 (22) record numbers of herring back to the Sound?
 (23) A Yes
 (24) Q Now if I looked at one of those charts correctly I think
 (25) you indicated that the - you were attributing the entire

Vol 29 4998

- (1) shortfall between the forecast run and the actual run in 1992
 (2) and 1993 to the oil spill?
 (3) A No
 (4) Q Is there some portion of that shortfall that you do not
 (5) attribute to the oil spill?
 (6) A I believe that the oil spill was a substantial factor
 (7) contributing to the large negative deviation in the runs from
 (8) the forecast of 92 and 93 That s a - not a quantitative
 (9) estimate that s a qualitative estimate I can t tell you what
 (10) the proportion or percentage of the oil spill had to do with
 (11) that
 (12) Q You ve made no attempt to quantify that?
 (13) A No
 (14) Q You haven t done any regression analyses or anything that
 (15) might shed some light?
 (16) A No I haven t personally done any but I ve looked at some
 (17) Q But you weren t offering any opinions on that during your
 (18) testimony on direct?
 (19) A I m sorry offer opinions on what?
 (20) Q I didn t hear you offer any opinions on that
 (21) A On what sir?
 (22) Q To the extent which the oil spill was a factor or how many
 (23) fish that didn t come back in 92 and 93 may have been
 (24) attributable to the oil spill
 (25) A Yes that s correct

Vol 29 4999

- (1) Q Now you did talk about some work by a biologist named
 (2) Geiger Is it Mr Geiger?
 (3) A Yes
 (4) Q And he is one of the Trustee principal investigators?
 (5) A Yes
 (6) Q His task was to try to synthesize the losses to pink salmon
 (7) in Prince William Sound attributable to the oil spill?
 (8) A His task was to synthesize the work on losses due to the
 (9) oil spill that were measured by the Trustee Council studies
 (10) Q And he came up in the years 1990 through - well what
 (11) years did his numbers refer to that he came up with?
 (12) A 90 91 and 92
 (13) Q And the total number of missing fish as it were because
 (14) of the oil spill were how many?
 (15) A Well again let me emphasize the fact that these were not
 (16) the total number of fish that were missing because of the oil
 (17) spill This was the total number of fish that was missing
 (18) because of the 1988 brood year and embryo mortalities only
 (19) respect to the oiled streams in the southwestern district
 (20) Q What he was trying to come up with was quantify the number
 (21) of pink salmon that were missing as it were because of the
 (22) oil spill on account of the factors - whatever factors the
 (23) Trustee Council scientists had come up with as ones they could
 (24) document?
 (25) A As ones they could afford to measure yes

Vol 29 5000

- (1) Q So what he was dealing with was to the extent that the
 (2) Trustee Council had come up with measurements that they felt
 (3) represented fish that were not there because of the oil spill
 (4) his task was to put the numbers on that?
 (5) A Yes And also remember the time frame during which he
 (6) worked as a state biologist he had a lot of different jobs so
 (7) he was only looking at three years worth of data to come up
 (8) with these estimates and hasn t considered in his estimates
 (9) anything that we ve learned since that three year time period
 (10) Q Well you re not suggesting that he didn t do a thorough
 (11) job with the data that he was working with?
 (12) A With the three years of data that he was working with and
 (13) with respect to the causes of mortality that he identified he
 (14) did a very thorough job
 (15) Q Who is Dr Spies?
 (16) A Bob Spies is the chief scientist for the Trustee Council
 (17) Q So he s kind of the head scientist for the whole group?
 (18) A Yes
 (19) Q And that s about how many scientists?
 (20) A I don t really know
 (21) Q He s somebody - do you deal with Dr Spies?
 (22) A Yes
 (23) Q He s a good scientist?
 (24) A Yes
 (25) Q Presuming he had to do something right in order to achieve

Vol 29 5001

- (1) that position?
 (2) A He s a good scientist
 (3) Q You were at the recent symposium if I ve got the right
 (4) word I think it was a fifth anniversary of the Trustee Council
 (5) symposium or presentation up here in Anchorage?
 (6) A Fifth anniversary of the spill
 (7) Q So it was in March?
 (8) A I think the date s on the jacket of this cover here I
 (9) think it was sometime in March I don t really recall I go
 (10) to a lot of scientific meetings
 (11) Q Well I ll represent to you the spill was in March That s
 (12) probably something you and I can agree on
 (13) A But this was a government operation It doesn t mean that
 (14) they actually held the meeting in March
 (15) Q Maybe we can t agree on that either
 (16) Exhibit 8739 - Irene I gave you the wrong number here
 (17) It should be 5983 You may have that up there Dr Mundy
 (18) 5983
 (19) Dr Spies keeps pretty well abreast does he not on what
 (20) the Trustee scientists are doing?
 (21) A Yes sir that s his job
 (22) I m sorry what was that number again?
 (23) Q 5983 If you don t have it in there let me know and we ll
 (24) find you a copy
 (25) A I ve got it

Vol 29 5002

- (1) Q Let me get a highlighter here
 (2) You've seen this brochure before haven't you?
 (3) A Yes
 (4) Q This is a brochure that was put out in connection with this
 (5) fifth anniversary proceeding?
 (6) A Yes I received a copy of this brochure at the meeting
 (7) Q I can show you page 14
 (8) See if we can't do better than that
 (9) Now this is a piece by Dr Spies is it?
 (10) A I have been told that Dr Spies wrote this however I am
 (11) not - I'm not an authority on that I certainly didn't
 (12) discuss this with him or look at it so I don't really know
 (13) whether he wrote this or not
 (14) Q I guess maybe in the interest of seeing if - if this isn't
 (15) something that you and I might agree upon it says on page 7
 (16) summary of entries by Doctor Robert Spies chief scientist
 (17) A Yes sir that's the representation
 (18) Q Now Dr Spies says on page 14 here if I can get back to
 (19) it That egg mortality might translate into a decline of as
 (20) much as ten percent in the entire adult pink salmon run in
 (21) Prince William Sound if all the other factors which contribute
 (22) to salmon mortality are added together with the oiled stream
 (23) effects
 (24) A Yes
 (25) Q Now you haven't told Dr Spies at any time that you

Vol 29 5003

- (1) disagreed with that statement have you?
 (2) A No nor have I told him that I agreed with it
 (3) MR COOPER Your Honor I would offer into evidence
 (4) that Exhibit 595
 (5) (Exhibit 595 offered)
 (6) MR JAMIN Just the page relating to pink salmon? No
 (7) objection
 (8) THE COURT It's not clear to me whether it's just the
 (9) page or the whole thing
 (10) MR COOPER Your Honor we can do the whole thing as
 (11) far as we're concerned
 (12) MR JAMIN We'll do it then
 (13) MR COOPER Well let me take a look
 (14) MR JAMIN I think he's put his feet in concrete
 (15) Your Honor let's keep it there
 (16) MR COOPER I think there is material in there that
 (17) doesn't relate to the issues in here so let me take a look at
 (18) it
 (19) THE COURT You all get together and see if you can
 (20) work it out
 (21) BY MR COOPER
 (22) Q Now Dr Mundy let's go to the embryo mortality studies
 (23) that you were talking about earlier
 (24) I think you described that what the Trustee report showed
 (25) was that there was a difference in mortality rates of these

Vol 29 5004

- (1) pink salmon eggs in the - in the streams when measured in the
 (2) fall of the year?
 (3) A Yes
 (4) Q This was in what years?
 (5) A 1989 1990 and 1991
 (6) Q And this is where they - some of the scientists or
 (7) biologists went to oiled and unoled streams and they pumped
 (8) in the fall they pumped - this was what a month or two or
 (9) more or less after the spawning event more or less?
 (10) A Yes more or less
 (11) Q And they basically pumped out of the gravel eggs and they
 (12) counted which ones were dead and which ones were alive and
 (13) they
 (13) came up with a mortality rate?
 (14) A That's right
 (15) Q And the study as you understood it indicated that the
 (16) mortality rate in the oiled streams was somewhat higher than
 (17) the mortality rate than in the unoled streams?
 (18) A Mortality rate in the oiled streams was higher
 (19) Q Then those biologists went back in the spring of the next
 (20) year didn't they?
 (21) A Yes
 (22) Q And they at this time what pumped out mostly fry I
 (23) suppose alevins?
 (24) A By that time they are fry
 (25) Q And then they compared those fry that they pumped out with

Vol 29 5005

- (1) the total number of eggs and the same density of eggs that the
 (2) had seen in the fall correct?
 (3) A Well yes but those are not the same eggs because the egg
 (4) that they surveyed in the fall are gone those were sacrificed
 (5) so these are not the same nests but this is a comparison
 (6) Q But they used the same number per square meter of eggs so
 (7) they could have the same density of eggs?
 (8) A That's right
 (9) Q And then they calculated how many or what percentage of
 (10) those eggs that were there in the fall produced live fry?
 (11) A I don't know if that's the way I would put it It's hard
 (12) for me to join that statement
 (13) Q Well I can show you the report if that will help
 (14) A If you're reading from the report can I see the report?
 (15) Q Well I wasn't reading right from it but let's see if we
 (16) can - let's see that will be Exhibit 1994 You don't have
 (17) one up there
 (18) A 1994? I'm sorry
 (19) Q Let me if I may give you this one
 (20) Let's see I think at page - let me see if I could find a
 (21) cite for you there I think actually the way they did it was
 (22) explained in appendix B 3 on page ten of that appendix Or
 (23) page 32 may be the better one
 (24) A I'm sorry I found the B 3 Do you want me on page 32?
 (25) Q Well if that has the information on it that you were

Vol 29 5006

- (1) looking for Which ever page has the information you were
 (2) looking for
 (3) A I wasn't looking for any information I just wanted to
 (4) know what you were referring So what are you referring to?
 (5) Q What I'm referring to is the calculation or the way they
 (6) calculated the spring mortality rate or the survival rate
 (7) A And how are you characterizing that?
 (8) Q Well as I understand it correct me if I'm wrong
 (9) basically what they were looking at was the number of live fry
 (10) that they pumped out in the spring compared to the total
 number
 (11) of eggs that they had found in the fall?
 (12) A Again the reason I'm hesitating here Mr Cooper is that
 (13) this is a mathematical representation and while that may be a
 (14) fair verbal characterization of it it's a - I'll go with
 (15) that but that's not exactly the mathematical characterization
 (16) Q Well isn't it correct though that basically the spring
 (17) egg mortality number took into account the mortality of the
 (18) eggs in the fall?
 (19) A It took into account an estimate of the mortality of the
 (20) eggs in the fall
 (21) Q An estimate I guess nobody can know for sure?
 (22) A I just want to make sure we're not comparing the eggs in
 (23) the nest to the number of fry that were in that nest in the
 (24) spring because that's not what's being compared here
 (25) Q Well is what's being compared the number - well do you

Vol 29 5007

- (1) know what's being compared here?
 (2) A Yeah An estimate of the density of the eggs and the
 (3) density of the fry in roughly the same locality in the spring
 (4) Q If they - didn't they in fact find that by the time that
 (5) you look at these numbers in the spring to see - of the eggs
 (6) that were basically there deposited there using these
 (7) estimates that by the time you look at it in the spring there
 (8) is no difference between the survival or mortality whichever
 (9) way you want to look at it of these spring salmon?
 (10) A They found that there was no measurable difference that's
 (11) correct
 (12) Q Now I believe you indicated if I heard you correctly on
 (13) direct that you quarreled with the statistical power that they
 (14) used with that finding?
 (15) A I don't have any quarrel with it
 (16) Q Now I think another study that you referred to was one
 (17) that dealt with growth rates or length or weight of juveniles
 (18) Do you recall that general subject matter?
 (19) A Yes
 (20) Q Would that have been the Willette or the Wertheimer study?
 (21) A Would have been both
 (22) Q Now the Willette study that found this difference in
 (23) growth rates was looking at fish from which - what year class
 (24) or brood years of fish were they looking at?
 (25) A Willette looked at I believe - I know he looked at 1989

Vol 29 5008

- (1) and 1990 I'm not sure if he looked at other years
 (2) Q Well he found a difference in growth rates between the
 (3) fish that he trawled up or however he collected them from
 (4) oiled versus unoiled areas for the year 1989?
 (5) A Yes
 (6) Q But not for 1990 and 1991?
 (7) A That's correct He didn't measure any differences He
 (8) looked at 89 90 and 91 He found differences between oiled
 (9) and unoiled areas With respect to the effects observed 1989
 (10) he was not able to measure those same differences in unoiled
 (11) areas for 90 and 91
 (12) Q Now those fish that he measured the differences in 89
 (13) the only year that he found a difference those fish were the
 (14) ones that came back in 1990?
 (15) A Yes
 (16) Q Because they were near shore fry or fry in 89?
 (17) A Those were the juveniles that were swimming out throughout
 (18) the oil affected areas during the time of the Exxon Valdez oil
 (19) spill They were the ones trying to make it out through the
 (20) oil spill
 (21) Q And again those were the fish that returned in record
 (22) numbers in the year 1990?
 (23) A As I previously indicated some of them didn't and some of
 (24) them did
 (25) Q Well some of them didn't return in record numbers what

Vol 29 5009

- (1) you mean is there might have been more?
 (2) A But for the effects of the oil spill there would have been
 (3) more
 (4) Q But in any event we do know the ones they found a growth
 (5) difference in and that brood year of fish came back in record
 (6) numbers That we can agree upon I assume?
 (7) A He worked with fish from specific - a specific hatchery or
 (8) from specific hatcheries Without looking at the return rates
 (9) I would say that you're probably generally correct but without
 (10) looking at those exact return rates I can't give you a flat
 (11) yes on that
 (12) Q Now the Wertheimer study was another one that looked at
 (13) growth?
 (14) A Yes
 (15) Q And he looked in what year?
 (16) A He looked in the year of the spill
 (17) Q And the fish that he looked at again were the ones that
 (18) came back in record numbers in 1990?
 (19) A They were part of the 1990 - they returned as adults in
 (20) 1990 yes
 (21) Q And he went out and looked in 1990 this would have been in
 (22) the 1989 brood year class and he couldn't find any difference
 (23) could he?
 (24) A He couldn't measure any difference
 (25) Q If he couldn't measure one he couldn't find one?

Vol 29 5010

- (1) A He couldn't measure any difference
 (2) Q He used the best tools he had and he couldn't find a
 (3) difference?
 (4) A He couldn't measure a difference
 (5) Q Did he also look at chum salmon?
 (6) A He may have. At the moment I just don't recall
 (7) Q Now you think that the impact of oil on pinks was similar
 (8) to the impact of the oil on the chum salmon, don't you?
 (9) A Yes. It may have been because the two share certain parts
 (10) of the life cycle of pink salmon. Chum are quite similar in
 (11) that the chum salmon don't spend much time in fresh water
 after
 (12) they button up. After they absorb their yolk sac, they tend to
 (13) drop right down to the marine environment. But unlike the pink
 (14) salmon, chum salmon don't come back in two years. They are
 (15) more like sockeye salmon in that they can be four or five or
 (16) six years old when they come back.
 (17) So there are some similarities in the life cycle that would
 (18) lead me to suspect that some of the impacts of the oil spill
 (19) may have been the same on the chum salmon as on the pink.
 (20) Q And do you recall that Mr. Wertheimer found in his study
 (21) that in fact in 1989, when he looked at the size of these fish
 (22) including chums, he found that the chums actually had a higher
 (23) apparent growth than did the - the chums from the oiled areas
 (24) had a higher apparent growth than the chums from the unoiled
 (25) areas?

Vol 29 5011

- (1) A Yes. That would be consistent with normal statistical
 (2) sampling error. That indicates to me he was having some
 (3) problems with his measurement techniques and that he was
 (4) getting numbers that were bouncing around a bit on him.
 (5) Q Dr. Mundy, it seems whenever there is a finding of any kind
 (6) in here that suggests that maybe there wasn't the oiling impact
 (7) that you think there might have been, you say maybe because
 he
 (8) wasn't able to measure it accurately.
 (9) Is that the case with everything in here that you think
 (10) reflects lack of an impact that you believe it just didn't
 (11) have - there wasn't enough power or statistical power to
 (12) measure it?
 (13) A No. And in fact I am truly glad that you asked that
 (14) question because I do need to clarify a point.
 (15) Q Why don't you go ahead and clarify it?
 (16) A In science, if you find an effect, okay, then that may
 (17) prove a point. That may prove that your opinion is appropriate
 (18) and correct and you've got support for your opinion, however
 (19) when you go out and you have an effect and - I mean the
 (20) Exxon Valdez oil spill was a very large and serious shock to
 (21) the environment and when you have an effect like this that
 (22) leads you to conclude that you might see some problems out in
 (23) the ecosystem, then it's reasonable to expect that you're going
 (24) to see some effects.
 (25) However, when you go out and you find no effect, that is

Vol 29 5012

- (1) you can't measure something that doesn't prove the negative
 (2) okay? If you don't find it, that doesn't mean that it's not
 (3) there. That just means that you couldn't find it, you couldn't
 (4) measure it.
 (5) So I think that oftentimes in science we - when chemistry
 (6) and physics find no effect, we don't need to jump to the
 (7) conclusion that there is no effect. We should just simply say
 (8) we didn't find anything to report on, and that's that.
 (9) Generally, scientists are really disappointed when they
 (10) find no effect because there isn't anything to write a paper
 (11) on. Sometimes they do anyway just because they spend so
 much
 (12) money.
 (13) Q Does that mean that every time in all these Trustee studies
 (14) that they purport to find no effect, you don't believe that
 (15) there wasn't any effect?
 (16) A That's not what I'm saying.
 (17) Q Well, you're saying that you don't know whether there was
 (18) any effect or not?
 (19) A That's correct.
 (20) Q Certainly there is no proof - where they say they can't
 (21) find an effect, there is no proof that there was an effect, no
 (22) scientific proof?
 (23) A Now we're communicating.
 (24) Q Going back to the Wertheimer study for a moment, there is
 (25) something called a condition factor, isn't there?

Vol 29 5013

- (1) A Yes.
 (2) Q Now, Wertheimer, did he look at weight or length in
 (3) addition to condition factor, which I'll come to in a moment?
 (4) A Well, a condition factor is made by looking at -
 (5) Q Can you just answer that, did he look at length?
 (6) A If he looked at the condition, he must have looked at them
 (7) because it's a function of length and weight.
 (8) Q Let me see if I can try a hand at explaining what condition
 (9) factor is, see if you'll agree. If I grab Mr. Sanders here
 (10) for instance, if he stands up for a minute, I'm a lot taller
 (11) than he is, if you measured our length, I would have more
 (12) length?
 (13) A I think you can get a yes on that.
 (14) Q I'm not going to ask you what happens - well -
 (15) Now just assume for a minute, against all the evidence
 (16) that he is a world class marathoner. The fact that he is -
 (17) MR. JAMIN: We'll stipulate to that. Your Honor.
 (18) BY MR. COOPER:
 (19) Q The fact that he's shorter than I am doesn't mean he's less
 (20) healthy than I am, is that correct?
 (21) A That's correct.
 (22) Q And in fact you could reverse the situation, I suppose, and
 (23) if you had somebody that was longer, or a fish that was longer
 (24) than another fish, it might be more healthy than a fish that
 (25) weighed more?

Vol 29 5014

- (1) A That could be the case yes
- (2) Q So scientists have come up with a way of combining those
- (3) two things length and weight in what they call a condition
- (4) factor sort of an index of the health of the fish?
- (5) A Yes
- (6) Q And Mr Wertheimer looked at the condition factor which is
- (7) the relationship between length and weight did he?
- (8) A Yes
- (9) Q And isn't it true that he found that the condition factor
- (10) for pink salmon from the oiled locations was actually higher
- (11) than the condition factor for the pink salmon from the unoiled
- (12) locations?
- (13) A Again he may have found that Are you reading from a
- (14) report?
- (15) Q Well I can show you the report if you want
- (16) A If you're reading from a report and I can confirm that
- (17) report - I don't at the moment recall That may have been the
- (18) case
- (19) Q Why don't you look at Exhibit 1934 if you have it up
- (20) there
- (21) A Okay I have the document
- (22) Q I've got a reference to a page 2 13 - or section 2 13 It
- (23) may be Are you able to find that section?
- (24) A I'm sorry I can't find 2 13
- (25) Q Well that particular - let me try one other thing If

Vol 29 5015

- (1) you look at the bottom of page 2 -
- (2) A I have -
- (3) Q This may be what I'm looking for although I'm certainly
- (4) not going to guarantee it It says analyses of length weight
- (5) 1990 and 1991 - I'm sorry analysis of length weight
- (6) regression slopes as a measure of condition were inconclusive
- (7) A Yes I see that
- (8) Q So does that indicate they couldn't find any difference in
- (9) the condition factor from the fish in the unoiled and oiled
- (10) conditions?
- (11) A Yes Now I have a chance to look he - they didn't
- (12) measure differences in condition factors
- (13) Q Now let me turn to the subject matter that you addressed
- (14) was disappointingly low 1992 and 1993 run sizes pink salmon
- (15) run sizes in Prince William Sound
- (16) A Yes
- (17) Q Those run sizes were comprised - let's take the 1992 run
- (18) first Those were comprised of fish that were spawned in 1990?
- (19) A Yes
- (20) Q The year after the oil spill?
- (21) A Yes
- (22) Q And the run - the 1993 run size which was comprised of
- (23) the fish that were - well that was comprised of fish that
- (24) were deposited as eggs in - or embryos in 1991 correct?
- (25) A Yes

Vol 29 5016

- (1) Q Let's start with the first one of those the 1990 brood
- (2) year fish that returned in low numbers in '92
- (3) When did they enter the waters of the Sound leave the
- (4) streams and enter the waters of the Sound?
- (5) A They would have been in the waters of the Sound probably in
- (6) late winter and early spring of 1991
- (7) Q So they were - they didn't enter the Sound until really
- (8) two years after the oil spill?
- (9) A That's correct almost exactly two years
- (10) Q And the fish that comprised the poor run in 1993 when did
- (11) they enter the waters of the Sound?
- (12) A The previous year the spring of the previous year
- (13) Q So the spring of 1992?
- (14) A That's correct
- (15) Q So they didn't even come into the Sound until three years
- (16) after the oil spill?
- (17) A That's right
- (18) Q Now let's see you haven't measured have you the
- (19) concentrations of any oil that may have been in the Sound if
- (20) there was even any in 1992 when those fish that failed to come
- (21) back in '93 entered the Prince William Sound have you?
- (22) A Have I measured any?
- (23) Q Yes
- (24) A No I haven't
- (25) Q Or the 1991 levels?

Vol 29 5017

- (1) A No
- (2) Q You concluded if I recall correctly in the damage chart
- (3) that we looked at the entire shortfall between the projection
- (4) for the pink salmon returns in 1993 - or let's say '92 and
- (5) what actually showed up?
- (6) A That's right
- (7) Q So if I understood your calculation correctly you are
- (8) attributing the entire shortfall to the oil spill?
- (9) A No you do not understand me correctly
- (10) Q Well is there some portion of the difference between
- (11) the - some portion of the difference between the forecast and
- (12) what actually showed up that you believe the oil spill was not
- (13) a substantial factor in producing?
- (14) A Mr Cooper as I previously responded -
- (15) Q Can you answer that question?
- (16) A Can I answer which question?
- (17) Q The one I just asked
- (18) A Could you restate it please?
- (19) MR COOPER Could we have the reporter read it back
- (20) (Record read)
- (21) THE WITNESS Okay I understand I can't give you a
- (22) quantitative estimate on what proportion of that number is due
- (23) to the effect of the Exxon oil spill no
- (24) BY MR COOPER
- (25) Q And the same with respect to 1993 you can't give a

Vol 29 5018

- (1) quantitative estimate on that?
 (2) A No
 (3) Q In fact there is underway currently isn't there
 (4) something called the SEA the Sound what is it Ecology
 (5) Assessment?
 (6) A Sound - SEA I believe is Sound Ecosystem Assessment
 (7) Q And one of the purposes of that is to try to figure out why
 (8) the pink salmon among other things have been producing
 (9) disappointing runs in the recent years?
 (10) A I believe that the apparent collapse of the Prince William
 (11) Sound ecosystem in 1992 was a motivating factor for that study
 (12) Q And that effort is just getting underway basically?
 (13) A Yes
 (14) Q Now you believe don't you - and you've been
 (15) participating in that effort?
 (16) A I have participated in that effort in the design phase and
 (17) as a peer reviewer I haven't been involved in it as a -
 (18) collecting any data
 (19) Q And you described for me in one of the depositions - if
 (20) you recall I asked you what you believe may be happening in
 (21) the Sound that might be accounting for these low runs and you
 (22) described some various factors I think you referred to for
 (23) instance some oceanographers Doctor Royer and Doctor
 Cooney
 (24) Do you remember that subject matter?
 (25) A Yes

Vol 29 5019

- (1) Q And your belief as to factors that may be at work here
 (2) include a belief that for some reason perhaps because of
 (3) temperatures if I understood it correctly or temperature
 (4) changes the portion of the Sound or the Sound surface waters
 (5) may be moving differently than it has in the past?
 (6) A No that's not my opinion I believe I do know what you're
 (7) referring to Would you like me to -
 (8) Q Why don't you tell me - you can say it better than I do
 (9) what you told me in the deposition
 (10) A The concept that you're referring to - Doctor Royer and
 (11) Doctor Cooney are oceanographers from the University of
 Alaska
 (12) Fairbanks who work on ecosystem problems in Prince William
 (13) Sound And they have a concept that when certain kinds of
 (14) weather events occur and push the surface waters of Prince
 (15) William Sound offshore that is out of the Sound that that
 (16) takes food away from fish including the juvenile pink salmon
 (17) so their survival would go down
 (18) And when you don't have these weather events the food
 (19) tends to stay in the Sound it doesn't get pushed out and it's
 (20) better for the young fish
 (21) I'll note Doctor Cooney and Doctor Royer don't appreciate
 (22) it but I call this the toilet bowl theory of Prince William
 (23) Sound because basically when the Sound gets flushed the
 food
 (24) goes out and there is nothing for the fish to eat They
 (25) believe that's caused by wind forcing on the surface waters

Vol 29 5020

- (1) And that when that doesn't happen things are better for fish
 (2) Is that the concept?
 (3) Q I think that's what you explained in your deposition And
 (4) you think that's one of the things that may be happening in the
 (5) Sound?
 (6) A I believe that they have a reasonable basis for their
 (7) opinions
 (8) Q Now you also believe that maybe the next most likely
 (9) alternative source of the high levels of marine mortality among
 (10) the pink salmon may be predation?
 (11) A The next most likely in comparison to the flushing
 (12) hypothesis?
 (13) Q Yes I believe so
 (14) A I don't know how to order those in terms of likelihood I
 (15) believe that the flushing hypothesis has a reasonable basis and
 (16) I believe that predation including - the term that they use
 (17) is prey shifting that is predators shifting from one prey
 (18) species to another in response to the loss I believe that's
 (19) also a likely explanation
 (20) Q And you think that either one or both of those maybe
 (21) important factors in what's happening in the Sound?
 (22) A Oh yes
 (23) Q Isn't it true that also that there is concern or at
 (24) least - there is concern among biologists and the scientific
 (25) community that the use of artificial propagation such as the

Vol 29 5021

- (1) hatcheries hatchery salmon production may produce some
 (2) ecological results in an area like the Sound where there is a
 (3) lot of salmon production artificial salmon production?
 (4) A That's an opinion that I've heard I don't believe that
 (5) it's scientifically well founded in the case of Prince William
 (6) Sound The reason that I don't think it's particularly
 (7) well founded is that you have a fairly good track record with
 (8) the hatcheries of producing - you showed a graph yourself he
 (9) and pointed out that the salmon produced at very high levels
 (10) the hatchery have in the past had very high survival levels
 (11) So the fact of competition between hatchery fish and wild fish
 (12) in the past has not diminished the survival either as far as we
 (13) could see
 (14) Now we have a very very knife-edge sharp collapse in the
 (15) productivity of the ecosystem following a similarly sharp shock
 (16) or impact to the ecosystem in 1989 I think it's worth looking
 (17) at but I wouldn't include that at the top of my list as
 (18) problems in the Sound
 (19) Q But the production of the hatcheries - well the
 (20) hatcheries started up when in the late 70s?
 (21) A Well the planning for those -
 (22) Q In the Sound
 (23) A Excuse me?
 (24) Q When they came on stream on line in the Sound
 (25) A Basically they had it locked down and figured out by 1984

Vol 29 5022

- (1) You re correct planning of the construction phase dated from
 (2) the 1970s
 (3) Q And then they got what kind - what kind of numbers are
 (4) they producing now?
 (5) A You mean adults or fry?
 (6) Q Fry
 (7) A I don t They are producing -
 (8) Q Several hundred million?
 (9) A - millions and millions they are producing a lot of fry
 (10) We already talked about the fact that usually the majority of
 (11) the fry coming out of the Sound are from hatcheries
 (12) Q Let me turn now to a different subject that you addressed
 (13) which is sockeye in Upper Cook Inlet Do you remember that
 (14) subject matter I m sure?
 (15) A Yes
 (16) Q And you - if I understand you correctly your concern is
 (17) that the sockeye - there won t be returns of sockeye in Upper
 (18) Cook Inlet in the Kenai system starting when this year?
 (19) A I didn t say that there wouldn t be returns What I said
 (20) was that I didn t believe that there would be a harvestable
 (21) surplus returning to the Kenai River based on smolt production
 (22) you know from the affected brood years
 (23) Q And the affected brood years are not expected to return
 (24) until later this year?
 (25) A Later this year 1994 1995 So far this year I haven t

Vol 29 5023

- (1) seen the numbers to know whether or not the brood year is
 going
 (2) to produce or whether the 1998 production has been affected or
 (3) not
 (4) Q I guess what I m driving at this is not a run failure
 (5) that s materialized this is one that you expected is going to
 (6) materialize?
 (7) A Upper Cook Inlet adults are going to be coming back from
 (8) right now peaking about the 17 of July in the fishing
 (9) districts and about the 21 or 22 up in the rivers where the
 (10) escapements count
 (11) Q We may not know I guess whether in fact there are not
 (12) going - the run is very low or there won t be any harvestable
 (13) surpluses until we finish this phase of the trial?
 (14) A Well at this point in time since survivals can t exceed a
 (15) hundred percent that is we can t make adults where there
 (16) aren t any smolts we have to have some production to start
 (17) with It s clear to me that the harvest based on the Kenai
 (18) from the 1989 brood year is diminished Even if the smolt
 (19) estimates were low lower than what actually came out the
 (20) numbers that were produced were quite low They were very
 (21) very low as we ve already seen here
 (22) So I don t want to wait until I see the adults to know
 (23) there has been a loss It would be easy to quantify a loss
 (24) after you saw the adult returns
 (25) Q Well I think you ve said in there what I was basically

Vol 29 5024

- (1) driving at that the information upon which you base your
 (2) belief that there is not going to be a harvestable surplus this
 (3) year are the counts of the smolt that left the system in
 (4) earlier years?
 (5) A And - yes but not only that
 (6) Q What else besides that?
 (7) A That would be the estimates of fry in the nursery lakes and
 (8) the estimate of the condition in the fry
 (9) Q The number of fry at least in the fall surveys have been
 (10) pretty high haven t they?
 (11) A Yes And it s the ratio that was my point They are
 (12) producing a lot of fry but they weren t surviving the winter
 (13) Q Let s stay with what s in the lake They aren t surviving
 (14) the winter because of the smolt counts?
 (15) A That s correct
 (16) Q So it basically comes back to the smolt counts You re
 (17) assuming that those smolt counts are reasonably accurate?
 (18) A Yes that s right
 (19) Q Now the smolt counts are based upon a pretty small
 (20) percentage aren t they?
 (21) Well let me back up a minute There are smolt traps that
 (22) they use to arrive at these smolt counts?
 (23) A Yes
 (24) Q And they basically use the traps to catch a certain number
 (25) of smolt?

Vol 29 5025

- (1) A Yes
 (2) Q And they think that what they are catching - if I
 (3) understand it right correct me if I m wrong I m sure you
 (4) will They think that what they are catching is about - what
 (5) they actually catch in the traps is one percent or less of the
 (6) total number of smolt that are coming through the river?
 (7) A Yes As an average I think so yes
 (8) Q And in fact the ADF&G is not all that sure about its smolt
 (9) counts being all that accurate is it?
 (10) A There is some concern that they have for the accuracy of
 (11) those counts yes as with all such sampling programs
 (12) Q And in fact in making their forecasts for I believe it s
 (13) this year you recall that they expressed some question as to
 (14) what - how accurate their smolt counts really were?
 (15) A Yes The way that I would interpret what they said they
 (16) know it s going to be low they just can t be sure how low
 (17) Q Let s see do we have - let s just take a look at that
 (18) 2389 You may have it up there Dr Mundy
 (19) Let s see you have it there?
 (20) A Yes
 (21) Q They say in there that there is a strong possibility that
 (22) the traps cannot be used to estimate the number of age two
 (23) smolt?
 (24) A Yes that s correct
 (25) Q And you agree with that?

Vol 29 5026

- (1) A Yes
 (2) Q And then they go on to point out that therefore there is
 (3) the potential for significant error in the Kenai River
 (4) forecast?
 (5) A Yes
 (6) Q And if the smolt data are incorrect the forecast will be
 (7) low by one and a half million fish returning to the Kenai River
 (8) this year?
 (9) A If that s their judgment I would go with it
 (10) Q Now is it correct to say that you don t - well let me
 (11) back up for a minute
 (12) You showed us some charts and some graphs and there were
 (13) three years of high escapements in a row is that right?
 (14) A Yes
 (15) Q 1987 1988 and then 1989?
 (16) A Yes
 (17) Q Now let s stay with 1989 the last of those three years
 (18) for a moment You haven t made any calculation have you as
 (19) to how much of that overescapement if any would have
 (20) occurred
 (21) even if there hadn t been an oil spill?
 (22) A Yes that s correct I haven t made any such calculations
 (23) Q What you were talking about earlier was basically the
 (24) impact of the entire escapement in excess of the goal in 1989?
 (25) A Yes
 (26) Q Now would you agree that the setnetters caught at least

Vol 29 5027

- (1) some of the fish that the driftnetters would have caught if the
 (2) driftnetters would have been allowed to fish?
 (3) A Yes
 (4) Q Let me just see if I can get a number from you here I
 (5) think this is one you gave me in your deposition but you
 (6) believe that a normal harvest rate if the driftnetters would
 (7) have been allowed to fish would have been in the 70 to 75
 (8) percent range?
 (9) A The overall harvest rate for Upper Cook Inlet on sockeye
 (10) with both gear types?
 (11) Q Well whatever you were referring to in your deposition
 (12) when you gave me that number
 (13) A The combined driftnet and setnet operation is capable of
 (14) taking from 50 to 90 percent of the run 70 percent is a good
 (15) average
 (16) Q Well I think the way you put it was that you believed that
 (17) a harvest rate had the driftnetters been able to fish was 70
 (18) to 75 percent?
 (19) A Well if you re referring to part of my deposition I d
 (20) like to see the context of that because all I can tell you on
 (21) that is that 70 percent or 75 percent is a good average They
 (22) can take 90 percent if they are - they are capable of taking
 (23) the 90 percent I think as much as up to 90 percent
 (24) Q Let s see do you have - I think you ve got a copy of your
 (25) deposition Maybe you don t

Vol 29 5028

- (1) A The what?
 (2) Q Do you have a copy of your deposition?
 (3) A What number?
 (4) MS STEWART It s on top
 (5) THE WITNESS I ve been shuffling the deck
 (6) BY MR COOPER
 (7) Q At least you haven t knocked it over yet
 (8) I think that s at 4142
 (9) A Okay I have it
 (10) Q Let s see if I m reading this right it looks to me like
 (11) you said these harvests methods have proven highly effective
 (12) Cook Inlet giving harvests rates on the order of 70 to 80
 (13) percent of the available fish And then you go on to take -
 (14) it s my judgment that had the fleet been able to fish in 1989
 (15) that would have achieved a harvest rate on the order of 70 to
 (16) 75 percent?
 (17) A Right In the context of which that s offered that s my
 (18) judgment of an average an average figure
 (19) Q Well I guess the way to - the question was asked and the
 (20) way you were answering it was - you thought the average
 (21) would
 (22) have been achieved in 1989?
 (23) A Yeah and that s the likely percent based on the historical
 (24) average with no other considerations involved in it
 (25) If I may explain since there were two previous high
 (26) escapements in 1987 and 1988 the manager being worried
 (27) about

Vol 29 5029

- (1) damage to the nursery lakes I m not completely comfortable
 (2) with an average rate in the situation because I think the
 (3) manager would have pulled out all the stops and thrown
 (4) everything at his disposal to stop it So 70 percent is the
 (5) mathematical average of what you could expect the combined
 (6) gillnet fleet and setnets to harvest
 (7) However given the fact - you also - having been a
 (8) fishery manager and harvest manager and written fishing
 (9) regulations I think there is a certain psychology involved
 (10) that the numbers - the manager doesn t get - I m sure the
 (11) manager who is an experienced manager been there since
 (12) 1980
 (13) would have gone after that Kenai run with everything at his
 (14) disposal if he had something at his disposal
 (15) Q Well Dr Mundy are you saying now that you were wrong
 (16) when you said in your deposition that it was your judgment the
 (17) had the fleet been able to fish in 1989 they would have
 (18) achieved a harvest rate on the order of 70 to 75 percent?
 (19) A Well that s the way I saw it at that time but I may not
 (20) have been thinking about the fact that the measuring was
 (21) looking at - let me back up here a little bit
 (22) I may have not have been thinking about the fact that the
 (23) manager would have had to deal with two consecutive large
 (24) escapements and other things like that I was giving you an
 (25) average figure and you asked me what they expected and
 (26) that s
 (27) still my answer today They expected a catch rate and in that

Vol 29 5030

- (1) fishery would have been the average and yes it would but
 (2) I m qualifying my information so the people have an
 (3) understanding how the fishery management works the
 (4) mathematical and numerical average may not be the one that s
 (5) most appropriate
 (6) Q But it was your best estimate at the time?
 (7) A It was and is of the average
 (8) Q Now isn t it true that you believe that there were
 (9) problems that were evident in those lakes Kenai and Skilak
 (10) lakes before the fry from the 1989 escapement ever entered
 (11) them?
 (12) A What do you mean by problems?
 (13) Q Well -
 (14) A Was aware of any problems?
 (15) Q Let s take that one Were you aware of any problems in -
 (16) A No
 (17) Q Is it your belief then that in fact - well do you know
 (18) whether the lakes would have experienced the same drop in
 (19) production that you believe they are experiencing as a result
 (20) of the 87 and 88 escapements without regard to what
 (21) happened
 (22) in 1989?
 (23) A No that s not my opinion
 (24) Q It s your belief that it s the 89 - well let me ask you
 (25) it the other way around
 (26) Do you believe that the 89 overescapement would have

Vol 29 5031

- (1) produced the result that you think is in fact going to happen
 (2) if there had not been an 87 and 88 high escapement?
 (3) A I don t know I don t have any way of knowing
 (4) Q Well in your deposition there on page 77 look at lines
 (5) three - starting at line three through about line 20 Do you
 (6) recall there that I asked you with respect to Kenai and Skilak
 (7) Lake that s the Kenai system that we re talking about if
 (8) you ve tried to reach an opinion whether the ability of those
 (9) lakes to produce smolt would have been damaged to the same
 (10) extent that you think has actually occurred of as a result of
 (11) the 87 and 88 overescapements without regard to what
 (12) happened
 (13) in 89 Do you remember I asked you that question?
 (14) A Yes I see it here
 (15) Q And you answered no And then I said you don t have an
 (16) opinion one way or the other on that and you answered no I
 (17) have no way to say?
 (18) A That s correct
 (19) Q And that was your view last year when I took your
 (20) deposition?
 (21) A Yes
 (22) Q And that s still your view today?
 (23) A No
 (24) Q It s not your view today?
 (25) A No I mean this was May of 1993 and I ve had a chance to
 think about it a little bit

Vol 29 5032

- (1) Q Well let s see I ve taken your deposition on several
 (2) times since May of 93 haven t I?
 (3) A Yes
 (4) Q As late as what about a week or two ago?
 (5) A Yes
 (6) Q And do you recall I asked you a week or two ago if you
 (7) arrived at any different conclusions or if you ve done any new
 (8) work?
 (9) A I don t recall that you asked me this question at that
 (10) time Mr Cooper Perhaps you did
 (11) Q Well in any event in the course of those depositions over
 (12) the last year you never mentioned to me that you had changed
 (13) your mind on this point did you?
 (14) A I can only respond to the questions I m asked during my
 (15) depositions
 (16) Q And you didn t produce any supplemental report on this new
 (17) conclusion that you ve come to?
 (18) A I think it follows from the data that you see up there if
 (19) the 1987 run had seriously - had reduced the amount of food in
 (20) the nursery lakes or whatever problem because I don t really
 (21) have any way of knowing what exactly happened in the nursery
 (22) lakes except something happened that doesn t allow the fry to
 (23) get enough food to make it through the winter if something had
 (24) actually happened then the 1988 fish would have been
 (25) disadvantaged You would have seen a very low smolt
 production

Vol 29 5033

- (1) out of there if the 87 overescapement had done it
 (2) So I m not saying that an overescapement always damages a
 (3) nursery like that That s not the case The chances are
 (4) judged by the managers The chances of damage are high
 (5) enough
 (6) that they don t like to have that happen they try to avoid
 (7) having that happen and sometimes you can get away with an
 (8) overescapement and sometimes you can t
 (9) And the fact that the 88 brood year that I ve had a chance
 (10) to look at and think about it the fact that the 88 brood year
 (11) was able to produce good smolts with relatively small
 (12) escapement leads me to conclude that the 87 escapement
 (13) probably wasn t the primary cause or the most important cause
 (14) of the problems that you re seeing in the lake now
 (15) On the other hand I can t tell you that it had nothing to
 (16) do with it It may have had something to do with it and I
 (17) can t tell you it didn t
 (18) Q Well you mentioned another point in the course of that
 (19) answer that I wanted to ask you about You don t really know
 (20) do you what the mechanism is by which the overescapements
 (21) or
 (22) overescapement whichever ended up causing a food problem
 (23) in
 (24) the lakes?
 (25) A In this specific instance?
 (26) Q Yes
 (27) A That s correct
 (28) Q And you can t - you re not a limnologist right?

Vol 29 5034

- (1) A That s right
 (2) Q A limnologist is somebody who would specialize in the study
 (3) of lakes like these to understand what may be happening in
 (4) them?
 (5) A Right I have worked in oceanography which is a closely
 (6) related field and I use that data but I m not a limnologist
 (7) Q So whatever it may be that s going on in there you don t
 (8) really know how that s working?
 (9) A That s correct
 (10) Q On that point - and I guess one thing that can happen to
 (11) salmon fry is they can get eaten by other critters?
 (12) A Yes
 (13) Q And at least one possibility that may be happening in the
 (14) lake is predation?
 (15) A Yes
 (16) Q The theory that you have that there must be some kind of a
 (17) food problem up there you re aware aren t you that the
 ADF&G
 (18) has in fact looked at the zooplankton abundance in those
 (19) lakes?
 (20) A Let me clarify my opinion about that I think that the -
 (21) that it s likely there is a food problem up there that s the
 (22) most likely explanation as we ve been over a number of times
 (23) I don t know exactly what the problem is
 (24) Q But you re aware that the ADF&G has measured food
 abundance
 (25) in those lakes?

Vol 29 5035

- (1) A Yes I m aware of those studies
 (2) Q And they didn t find any major reduction in zooplankton?
 (3) That s the food these little critters eat?
 (4) A Right they didn t find any major reduction
 (5) Q There was one other lake where they had too many salmon
 fry
 (6) entered the lake and ultimately the system collapsed for at
 (7) least some period of time?
 (8) A There has been a number of studies That one is best
 (9) known
 (10) Q In that one there was a major change in the food production
 (11) there the production of zooplankton associated with that
 (12) wasn t there?
 (13) A Yes
 (14) Q Let me ask you a few questions about the Kodiak lakes I
 (15) think if I recall correctly you addressed was it Ayakulik -
 (16) no I m sorry Red Lake?
 (17) A Yes Red Lake
 (18) Q Just Red Lake?
 (19) A That s correct
 (20) Q Does Red Lake have on it - the river for Red Lake is not
 (21) Red River Is it?
 (22) A It depends I m not sure
 (23) Q Is it the Ayakulik?
 (24) A It may be called that The fishing district that s
 (25) associated with it is called the Ayakulik so it might be a

Vol 29 5036

- (1) good guess
 (2) Q Does the Ayakulik have a weir across it?
 (3) A Yes
 (4) Q When you were with the ADF&G did you do work in the
 Kodiak
 (5) area?
 (6) A I worked in the westward region My experience on Kodiak
 (7) per se in the Kodiak management area is somewhat limited
 (8) I m more familiar with the Chignik management area
 (9) Q But you re familiar enough to know if there was a weir
 (10) across the river?
 (11) A I haven t actually been to the weir but I ve seen
 (12) references to the fact that there is
 (13) Q And I think somebody testified yesterday what a weir was
 (14) but basically that s a device that can be used to shut off the
 (15) river to the fish if somebody had so desired to do that?
 (16) A The Canadians call a weir a fence a fish fence It s like
 (17) putting a fence through the middle of the weir If you close
 (18) the weir and the water levels were low enough that would stop
 (19) the migration that s right
 (20) Q There was a boycott by fishermen in 1991 Do you
 remember
 (21) that?
 (22) A Specifically I don t
 (23) Q Well if you don t remember it then you probably won t be
 (24) able to answer my next question I was going to ask you if it
 (25) wasn t the case that several weirs were closed during 1991 to

Vol 29 5037

- (1) prevent excess fish from entering systems while the fishermer
 (2) were boycotting and refusing to fish?
 (3) A I m not - I m not familiar with it
 (4) Q I think Dr Mundy that that was probably my last question
 (5) for you if you just let me take one quick look at my notes
 (6) I did have one other question for you When you were with
 (7) the ADF&G you learned or maybe even before that you
 learned
 (8) that there was a sonar counting unit on the Kenai River?
 (9) A Yes I m familiar with the sonar counting operations in
 (10) the State of Alaska
 (11) Q That - incidentally now that sonar counting device is
 (12) used to count fish going up the river the adults coming back?
 (13) A That s correct in the Kenai River that s what it s used
 (14) for
 (15) Q That s something different than the smolt traps that are
 (16) used to count the smolt?
 (17) A Sonar is used to count smolts but not in the Kenai River
 (18) They simply use a trap
 (19) Q And the smolts are what s going out of the river and they
 (20) come back as adults and that s when they pass through the
 (21) counter?
 (22) A That s correct
 (23) Q Now when you were working for the ADF&G you never had
 any
 (24) reason to think that the counter on the Kenai was providing
 (25) data that was significantly wrong did you?

Vol 29 5038

- (1) A Statisticians often hesitate The word wrong has a lot of
 (2) different connotations I had no reason to expect that I
 (3) couldn't use that data to manage that fishery which was what
 (4) was important to me
 (5) Q You had no reason to think that the equipment was not
 (6) accurate?
 (7) A I had no specific reason to believe it was inaccurate no
 (8) MR COOPER No further questions Your Honor
 (9) THE COURT Redirect
 (10) REDIRECT EXAMINATION OF PHILLIP MUNDY
 (11) BY MR JAMIN
 (12) Q Let me ask you first Dr Mundy you were asked if you had
 (13) quantified after the spill the effects on the pink salmon
 (14) You're not saying as I understand it that the Exxon Valdez
 (15) oil spill is the exclusive cause of what you've described in
 (16) Exhibit 3183 the one that we had up with 91 92 and 93 of
 (17) all the damage is that right?
 (18) A Well with respect to the 90 and 91 figure I am
 (19) however that's not correct with respect to the 92 and 93
 (20) figure These are four different kinds of numbers and I tried
 (21) to explain how they were calculated but the first two numbers
 (22) are actual damages that in my opinion can be attributed to the
 (23) Exxon Valdez And the last two numbers are negative
 (24) deviations
 (25) Q So as to the first two figures you are saying it's the

Vol 29 5039

- (1) exclusive cause?
 (2) A Yes
 (3) Q And as to the last two figures is it your opinion that the
 (4) Exxon Valdez oil spill is a substantial contributing factor to
 (5) the range of damages that you had on that exhibit?
 (6) A Yes
 (7) Q All right A couple other things for clarification You
 (8) were shown 2389 which was Mr Tarbox's preliminary forecast
 (9) of
 (10) the 1994 run Can you get that back in front of you? If not
 (11) I can come up with the Court's permission
 (12) A I have it
 (13) Q And Mr Cooper asked you if the smolt data are incorrect
 (14) the forecasts might likely be low and did Mr Tarbox go on to
 (15) say in contrast if the smolt data are correct the forecast
 (16) would be 5 million fish too high?
 (17) A Yes that's correct That's on the second page
 (18) Q Now we talked a little bit about Mr Spies Mr Spies is
 (19) not a salmon biologist is that right?
 (20) A No Dr Spies is a - my understanding he's a
 (21) toxicologist and a physiologist
 (22) Q Could you get in front of you 5983 which was the five
 (23) years later report?
 (24) A I have it
 (25) Q Let's go to page 13
 (26) A I have it

Vol 29 5040

- (1) Q Did Mr Spies write at the top As the oil moves through
 (2) Prince William Sound and out into the Gulf of Alaska the
 (3) slicks were also swept into the mouths of streams where salmon
 (4) breed and where the salmon fry were soon to emerge from the
 (5) gravel and find their way to saltwater?
 (6) A Yes
 (7) Q Did he write 75 percent of the wild pink salmon in the
 (8) Sound spawn at the mouth of streams?
 (9) A Yes
 (10) Q Did he say that There was no apparent change in the use
 (11) of this habitat by fish in the summer of 1989 and many salmon
 (12) deposited their eggs in the intertidal portion of oiled
 (13) streams?
 (14) A Yes
 (15) Q Did he say In the autumn of 1989 egg mortality in oiled
 (16) streams averaged about 15 percent compared to about 9
 (17) percent
 (18) in unoiled streams?
 (19) A Yes
 (20) Q Did he go on to say that Since 1989 egg mortality in the
 (21) oiled areas has generally increased?
 (22) A Yes
 (23) Q Did he go on to say that In 1991 and 1992 approximately
 (24) 40 to 50 percent of the salmon eggs in oiled streams did not
 (25) survive as compared to an 18 to 30 percent mortality in unoiled
 (26) streams?

Vol 29 5041

- (1) A Yes
 (2) Q Did he go on to say that In 1993 though the rates of egg
 (3) mortality had dropped to an average of less than 25 percent in
 (4) oiled streams and less than 15 percent in unoiled streams the
 (5) differences still persisted?
 (6) A Yes
 (7) Q Did he say Although the differences between salmon egg
 (8) mortality and oiled and unoiled streams over the first two
 (9) years were likely attributable to the effects of oil scientists
 (10) did not expect these differences to persist as long as four
 (11) years after the spill At first they thought oil was directly
 (12) affecting survival of the pink salmon eggs but as the amount
 (13) of oil on the shorelines decreased other explanations began to
 (14) seem more plausible Perhaps there was a genetic effect which
 (15) young that carried over into adulthood and was inherited by the
 (16) next generation?
 (17) A Yes
 (18) Q Did he say In 1993 the story took another turn
 (19) Returning adult pink salmon were captured as they entered
 (20) oiled
 (21) and unoiled streams their eggs spawned in the laboratory and
 (22) raised under controlled conditions This experiment showed
 (23) that the differences in egg mortality between pink salmon from
 (24) the oiled and unoiled streams when both were raised in the
 (25) laboratory were as great as the differences seen in the wild
 (26) essentially eliminating environmental factors from

Vol 29 5042

- (1) consideration?
- (2) A Yes
- (3) Q Did he go onto say that It now appears there is an
- (4) inheritable difference in egg mortality for fish from oiled
- (5) versus unoiled streams?
- (6) A Yes
- (7) Q Mr Cooper asked you sir about the 89 pink salmon that
- (8) were coming out of the streams in 1989 he asked you some
- (9) questions about opportunities for contact with the oil he was
- (10) asking you about unoiled streams Let me call up 303 if I
- (11) may
- (12) Now as I understand it sir you have an understanding
- (13) that the oil plume started in Bligh Reef and worked its way in
- (14) a generally southwestern direction?
- (15) A That s correct
- (16) Q And Mr Cooper focused on streams for a portion of his
- (17) questioning about the streams in the southwestern area?
- (18) A Yes
- (19) Q Now for the fish emerging from the other areas that were
- (20) in areas that were generally unoiled did they have an
- (21) opportunity later in their lives to come in contact with that
- (22) southwestern area?
- (23) A Yes Generally most biologists who have worked in this
- (24) area have the opinion that the salmon finger links when they
- (25) grow and as they grow they move toward the southwestern
- area

Vol 29 5043

- (1) and exit by the side of Montague Island and in those passes
- (2) Q So they go right out through here don t they sir?
- (3) A Yes
- (4) Q How about those hatchery fish where the hatcheries were
- (5) unoiled?
- (6) A Well I wouldn t expect their patterns of juvenile
- (7) migration to be any different than those of the wild fish
- (8) They would exit through the southwestern district
- (9) Q All right Now you were asked about Cook Inlet reds a
- (10) bit and the suggestion was we don t know about 1994 returns
- in
- (11) Cook Inlet Do we know anything yet about the returns to
- (12) Kodiak into that Red Lake system how does it look down there?
- (13) A I discussed the progress of the Red Lake run with the
- (14) assistant area biologist and as of yesterday they had about
- (15) 96 000 adults through the weir up there which is about on
- (16) target for the forecast He believes that the forecast is
- (17) still valid but is concerned because the harvest level of
- (18) 175 000 that s a very small harvest from this area and they
- (19) can take that very quickly
- (20) So apparently he s going to wait until towards the end of
- (21) the season before he allows any fishing so they can be sure
- (22) they have got their escapement so he s definitely in a holding
- (23) mode and he s got some concern over how that is because the
- (24) problems they found in the nursery lakes
- (25) Q And it s that forecast that you rely on in your damage

Vol 29 5044

- (1) calculation?
- (2) A That s right
- (3) MR JAMIN I d like to move for the admission of
- (4) 5983
- (5) (Exhibit 5983 offered)
- (6) MR COOPER He read most of it in there Your Honor
- (7) I d like to take that up with counsel Your Honor before we
- (8) get your resolution on that
- (9) THE COURT Why shouldn t it be admitted when both of
- (10) you have relied on it?
- (11) MR COOPER There are portions of it that we have
- (12) both relied on There are other portions that have nothing to
- (13) do with the issues in this case That s the only reason
- (14) THE COURT See if you can work it out
- (15) MR JAMIN We will try
- (16) You can step down I ll gather those documents
- (17) MR O NEILL Plaintiffs call James Crutchfield
- (18) THE CLERK Raise your right hand
- (19) (The Witness Is Sworn)
- (20) THE CLERK Please be seated For the record sir
- (21) state your full name your address and spell your last name
- (22) please
- (23) THE WITNESS My name is James Arthur Crutchfield Jr
- (24) C R U T C H F I E L D My address is 5215 East Harbor Drive
- (25) Friday Harbor Washington

Vol 29 5045

- (1) DIRECT EXAMINATION OF JAMES CRUTCHFIELD
- (2) BY MR O NEILL
- (3) Q Just so we know where we re going you re a fishery
- (4) economist?
- (5) A More broadly a natural resource economist with a heavy
- (6) concentration in fisheries
- (7) Q Where did you go to school?
- (8) A I have bachelor s and master s degrees from UCLA and a
- (9) Ph D from the University of California at Berkley
- (10) Q What were your degrees in?
- (11) A Economics for the bachelor s economics and political
- (12) science for the master s and economics for the Ph D
- (13) Q And have you had any experience with regard to teaching in
- (14) colleges or schools?
- (15) A 40 years I taught at Berkley for two years and then moved
- (16) to the University of Washington and was there until I retired
- (17) in 1982 and then was asked to stay on a contract basis until
- (18) 1988
- (19) Q And were you a professor at the University of Washington?
- (20) A Yes assistant associate and then professor
- (21) Q And then a professor at Meredith?
- (22) A Yes
- (23) Q Being a professor at Meredith means you don t have to work
- (24) anymore?
- (25) A Means it s without merit

Vol 29 5046

- (1) THE COURT I didn't hear that
 (2) BY MR O NEILL
 (3) Q And then in 1982 you went into the consulting business?
 (4) A Actually I had started the association with NRC a year
 (5) earlier I was one of the original partners in NRC and have
 (6) remained active on about a half time basis ever since
 (7) Q And NRC is Natural Resource Consultants?
 (8) A That's correct
 (9) Q I want to talk about some special assignments and some of
 (10) your activities over the years Have you ever done anything
 (11) for the United Nations?
 (12) A Yes I did quite a number of assignments for the UN I
 (13) did this in choice rather than take sabbaticals I worked for
 (14) the food and agriculture association of the UN and on a couple
 (15) occasions the United Nations Development Program Most of
 (16) that
 (17) work was centered in Africa Uganda I also did some work for
 (18) FOA in South America and some in southeast Asia
 (19) Q Have you done any work in China?
 (20) A No
 (21) Q Have you done any advising with regard to China?
 (22) A No none at all
 (23) Q I'm sorry Have you done any work with government
 (24) agencies?
 (25) A Yes a considerable amount I was a member of the Stratton
 Commission some years ago and the general program with the

Vol 29 5047

- (1) United States and the sea I've done a considerable number of
 (2) contract research jobs for various agencies of the government
 (3) the Old Borough of Commercial Fisheries the National Marine
 (4) Fisheries Service some work on weather modifications and a
 (5) number of others in the area of water resources
 (6) Q Have you done any work with regard to Ireland?
 (7) A Yes I've had five contracts in Ireland three - actually
 (8) four of which involved salmon fisheries One was an attempt
 (9) to outline a plan for a five-year program of expansion in the
 (10) Irish fisheries which had been held down prior to their
 (11) independence Another was a study of proper management
 (12) measures for salmon in Ireland and a third had to do with the
 (13) impact of aquaculture salmon aquaculture on the economy
 (14) and
 (15) environment in Ireland
 (16) Q Have you done any work with regard to oil spills in the
 (17) past the impacts of oil spills on the price of fish?
 (18) A Yes I did quite a bit of work in the Glacier Bay case in
 (19) 1987 in analyzing and forecasting what the price would have
 (20) been absent the Glacier Bay spill
 (21) Q And the 1987 Glacier Bay oil spill was here in Cook Inlet
 (22) Alaska?
 (23) A Yeah Upper Cook Inlet
 (24) Q And disrupted the 1987 salmon season?
 (25) A Yes It occurred right at the beginning of the season
 I also had an assignment to do the analysis of price

Vol 29 5048

- (1) impacts in the Braer spill the spill that occurred in the
 (2) Shetland Islands just a while ago
 (3) Q What work did you do with regard to the Braer spill
 (4) specifically?
 (5) A We the team that went over tried to determine the impact
 (6) of the oil spill which closed down a considerable number of the
 (7) salmon farms in the Shetlands whether it had any impact on the
 (8) prices of salmon in the areas that remained open and were
 (9) marketed during that period
 (10) We also took a look at whether or not there was any
 (11) lingering impact after the initial shock of the spill
 (12) Q In the course of your work are you familiar -
 (13) MR O NEILL It's 12:00 Judge I'll stop
 (14) mid-question
 (15) THE COURT We can take our second recess We will be
 (16) in recess for 15 minutes please
 (17) (Jury out at 12:00)
 (18) (Jury in at 12:15)
 (19) BY MR O NEILL
 (20) Q Have you written articles on salmon prices?
 (21) A I'm sorry?
 (22) Q Have you written articles on salmon and prices?
 (23) A Yes quite a number of them and early on a book on the
 (24) salmon industry which was published in 1961 I believe
 (25) Q Was it a bestseller?

Vol 29 5049

- (1) A I still have copies available
 (2) Q You were a member the Snake River salmon recovery team
 (3) or
 (4) at least you were until recently?
 (5) A I was until last week I was charged with developing a
 (6) recovery plan for Snake and Columbia River species listed as
 (7) endangered or threatened
 (8) Q To shortcut this you've had experience throughout your
 (9) career in the area of economics?
 (10) A Yes I have
 (11) Q And fish?
 (12) A And fish
 (13) Q And you've looked specifically at the questions of the
 (14) impact of oil spills on fish prices with regard to the 1987
 (15) Glacier Bay spill and the Braer spill?
 (16) A Yes
 (17) Q And you've educated yourself and worked in the area of
 (18) farmed salmon with regard to the Republic of Ireland?
 (19) A Right
 (20) Q And you have knowledge of the Japanese fish market?
 (21) A Yes I do
 (22) Q And as a result of your general studies and your earlier
 (23) investigations with regard to both the 1987 Glacier Bay spill
 (24) and this spill you're familiar with how fish are bought and
 (25) sold red salmon are bought and sold in specifically Cook
 Inlet Alaska?

Vol 29 5050

- (1) A Yes I am
 (2) Q And you have been qualified to testify as an expert witness
 (3) in various federal courts?
 (4) A I have
 (5) Q Including the State of Alaska?
 (6) A Yes
 (7) MR O NEILL I would offer Dr Crutchfield as a
 (8) fisheries economist
 (9) MR LYNCH I have no reason to object to his being
 (10) qualified as an expert Your Honor
 (11) THE COURT Dr Crutchfield s qualifications are
 (12) accepted
 (13) BY MR O NEILL
 (14) Q I want to talk specifically today it s essentially a case
 (15) study on Upper Cook Inlet red salmon and the Exxon oil spill
 (16) A Yes
 (17) Q So the jury knows that s going to be the one species of
 (18) salmon we re going to look at in detail and then we ll value
 (19) that with another expert including pinks but we re going to
 (20) take one specific slice through the pie and look at red salmon
 (21) and Upper Cook Inlet
 (22) A Yes
 (23) Q Where are red salmon Upper Cook Inlet salmon sold?
 (24) A Some small amount are canned and sold mainly in the United
 (25) States and the UK The overwhelming majority of it is frozen

Vol 29 5051

- (1) and sold in Japan Approximately 98 to 99 percent of the
 (2) frozen pack is sold in Japan
 (3) Q Now I m going to have you take a fish off the boat from
 (4) the time the fisherman catches it and I want you to trace that
 (5) fish for us through to the consumer in Japan
 (6) A Well I ll have to shorten it a bit at the Japanese end
 (7) but very briefly the fish are landed in Cook Inlet sold to
 (8) American processors and the processing consists largely just
 (9) of heading gutting and freezing There are some variations of
 (10) that but the bulk of the pack is sold like that The fish are
 (11) transferred sometimes on the basis of a fixed contract price
 (12) sometimes on the basis of a grounds price plus a markup
 (13) sometimes on some variation of these two and at times the
 (14) price is not finalized until well into the season
 (15) The fish are shipped out generally pretty rapidly from the
 (16) American processor to transportation to Japan I say American
 (17) processor although the bulk of these processors do have direct
 (18) contacts with Japanese interests They either have an equity
 (19) interest in the firm or they finance the American firm In any
 (20) case they are the principal buyers of the product the firm
 (21) has
 (22) They are shipped out pretty rapidly because they don t want
 (23) to hold them any longer than they have to it s an expensive
 (24) inventory They then go to Japan via trading firm and there
 (25) are several avenues they can go to thereafter Most of them

Vol 29 5052

- (1) will go through a trading firm to a wholesaler and then out to
 (2) a secondary wholesaler and to retailers restaurants so on
 (3) from there
 (4) There are some 54 of these wholesale markets in Japan in
 (5) which the Tokyo Central Wholesale Market is one of the
 (6) largest There are I think about seven or eight that handle
 (7) the bulk of the catch Some of the fish however may be
 (8) bypassing that avenue and are going directly to large chain
 (9) retailers which are growing rapidly in Japan as most other
 (10) places and so they may bypass the traditional wholesale
 (11) function Or a better way to say it the large buyer performs
 (12) the wholesale functions himself
 (13) There are a lot of variations on that with sales to smaller
 (14) subwholesalers sales to smaller retailers and other areas of
 (15) sales directly to large restaurant groups but those are
 (16) basically the channels
 (17) Q Now you used an expression the grounds price What is
 (18) the grounds price?
 (19) A That s the price paid to fishermen in Upper Cook Inlet for
 (20) reds
 (21) Q On occasion people also use the ex vessel or off the vessel
 (22) price?
 (23) A That tends to be used in exactly the same way same ways
 (24) Q I want to focus on the bottom end of the chain of
 (25) distribution The cannery sets a price for the fishermen The

Vol 29 5053

- (1) cannery besides -
 (2) A You use the word cannery Actually processor
 (3) Q Used to be called cannery The processor deals with the
 (4) fishermen with regard to the purchase of the fish and then the
 (5) processor sells the fish to a buyer often a Japanese buyer?
 (6) A Right
 (7) Q We re talking specifically right now red salmon?
 (8) A Correct
 (9) Q Now would you talk for a minute - you mentioned the Toky
 (10) Central Wholesale Market Would you talk about that for a
 (11) minute Tell us what it is what economic function it plays
 (12) A It s a very large wholesale market Performs a tradtional
 (13) wholesale function of bringing together in one place large
 (14) amounts of fish many varieties of fish many processed forms
 (15) Within the market there are several categories of buyers
 (16) some of whom are able to resell within the market some can
 (17) only buy within the market and then take the fish out There
 (18) are large numbers of sellers well over a thousand and their
 (19) basic economic function really is to integrate the forces of
 (20) supply and demand and set a price for each of the various
 (21) types
 (22) of fish that they handle
 (23) This is the place where most of the market forces come to
 (24) bear on the price of fish in Japan There would be variations
 (25) because there are variations in consumer patterns in different
 parts of the country but generally speaking prices in other

Vol 29 5054

- (1) markets follow very closely those that are determined in the
 (2) Tokyo wholesale market
 (3) Q So it's a good index of sockeye prices?
 (4) A That's correct
 (5) Q What are the major sockeye prices sold in the Tokyo Central
 (6) Wholesale Market?
 (7) A The majority of it is either salted salmon or frozen
 (8) salmon headed and gutted usually
 (9) Q Now who are the traders?
 (10) A Traders would be buyers who take fish directly from the
 (11) American processor and then move it through these various
 (12) channels that I mentioned. May be large Japanese fishing
 (13) companies, large trading companies, large specialized fish
 (14) companies
 (15) Q And what factors do traders look at with regard to
 (16) purchasing fish, hedging risk, that kind of thing?
 (17) A Dealing particularly with the item in question, sockeye
 (18) salmon from Upper Cook Inlet, it's true of most salmon, the
 (19) fish as you know, run only for a very short period of time.
 (20) That Upper Cook Inlet run is perhaps a month or five weeks
 (21) All of the fish that the traders want to take have got to be
 (22) taken at that time. The fish have got to be caught, then they
 (23) have got to be transferred to the processor, what they aren't
 (24) going to keep, and they are processed and frozen for later
 (25) delivery.

Vol 29 5055

- (1) Somebody in the distribution chain, the trader or the
 (2) wholesalers, have to hold that inventory for a full year and
 (3) meter it out over the year in response to demand. Hopefully
 (4) they will end up with that year's pack sold ready for the next
 (5) pack. Obviously somebody is taking a substantial risk during
 (6) that period. You have to be able to guess as best you can what
 (7) next year's prices are going to be, what next year's demand
 (8) conditions are going to be and so on.
 (9) It hasn't - it hasn't varied much with the previous years
 (10) back, but it gives an indication what the bargaining for the
 (11) new pack will be.
 (12) Q When do the Japanese traders begin the negotiations with
 (13) the American fish processors over a year's price?
 (14) A It varies with individual companies, but in general the
 (15) negotiations begin to get underway, let's say in terms of
 (16) formation, positions that people are going to take, in the
 (17) first quarter of the year. The negotiations may go on longer
 (18) than that they may be terminated, price may be agreed on early
 (19) in the year.
 (20) Generally speaking, the prices are negotiated at the time
 (21) the fishing season gets underway at a level which is agreed on
 (22) as a level that may get the people out fishing. Can't afford
 (23) strikes in that kind of a flash fishery because it's gone if
 (24) you don't catch them then. So generally the price is set at a
 (25) level which will be sure to induce fishermen to go fishing.

Vol 29 5056

- (1) Typically the price may go up in steps thereafter during
 (2) the course of the season. On very rare occasions it's gone
 (3) down in the course of a season, but that's roughly the way the
 (4) negotiations take place. Again, some prices may be agreed on
 (5) very quickly, others may not be agreed on until later in the
 (6) season.
 (7) Q Now I want to ask an abstract question and then I'll bring
 (8) the concept to a specific, but with regard to risks in the
 (9) business of trading fish, how does risk relate to price?
 (10) A Let me put it this way. The riskier the situation that the
 (11) trader feels that he's facing, the man who is holding the
 (12) inventory, the greater the tendency he will have to acquire his
 (13) fish, so it's the lowest possible price he can to hedge that
 (14) risk as far as possible.
 (15) There are no ways of evening it out. If you go very wrong
 (16) on the price of the fish you buy and take a big hit that year,
 (17) you don't get to recover it next year, you're gone. So it's a
 (18) very tough bargaining situation, it requires a great deal of
 (19) knowledge on the part of the buyer as to all of the factors
 (20) that are going to impact the price of fish. Competition from
 (21) other types of fish, the level of income in the country,
 (22) variety of things of that sort.
 (23) Q Did the trade cover the Exxon Valdez oil spill?
 (24) A They did indeed. Anybody who is concerned with acquiring
 (25) red fish for his industry had to be concerned with what

Vol 29 5057

- (1) obviously was a major impact on the fishery. It was widely
 (2) known, immediately known and closely followed throughout the
 (3) time.
 (4) Q What kind of impacts as a general proposition do oil spills
 (5) have on the market of salmon?
 (6) A Fortunately we don't have too much experiences to draw on,
 (7) but the ones we've had indicate that the general impact centers
 (8) on uncertainty about the effect on demand, whether or not there
 (9) is going to be a widespread fear on the part of the public of
 (10) tainting or even a risk to life of eating tainted fish.
 (11) More specific, it has an impact on the trade. The consumer
 (12) may not be in a motion to judge very accurately what the impact
 (13) will be on it, but the trader knows, and so a spill is likely
 (14) to have the effect, but increasing the uncertainty of the
 (15) situation he faces, making him a very much tougher bargainer
 (16) about the price at which he acquires his fish.
 (17) Q And if the trader is an uncertain bargainer or a tougher
 (18) bargainer with regard to the uncertainty of the processor, as a
 (19) general proposition does that have an impact on the price paid
 (20) to the fishermen?
 (21) A Yes, it does. The bargaining process in a sense is almost
 (22) a game. There is a gap between what the fishermen is willing
 (23) to accept before he quits fishing and the price that a
 (24) wholesaler can pay or a trader can pay and come out with his
 (25) purchase, and that gap is not fixed, it can be quite wide.

Vol 29 5058

- (1) Who wins the game who gets the price closest to his limit
 (2) depends on what bargaining tools he has at the time And the
 (3) three cases that we've seen seem to indicate that the spill has
 (4) the effect among other things of giving a tremendously strong
 (5) bargaining tool to the buyer and as a result the price tends to
 (6) be as low as he can possibly push it to hedge against the risk
 (7) of uncertain and perhaps disastrous results on his inventory
 (8) and his business
 (9) Q And that eventually affects the price that the fishermen
 (10) gets from the processor?
 (11) A Right Actually it's almost a direct affect because the
 (12) processor feels the Japanese pressure very very quickly and
 (13) he adjusts to that by pricing downward to the fishermen
 (14) Q Now I want to go through the three specific situations that
 (15) you've looked at with regard to oil and salmon and that is the
 (16) 87 Glacier Bay spill the Braer spill and the Exxon Valdez
 (17) spill
 (18) A Yeah
 (19) Q You studied extensively the 1987 spill from the Glacier Bay
 (20) in Cook Inlet?
 (21) A Right
 (22) Q And that was a relatively small oil spill?
 (23) MR LYNCH Your Honor may I - may we have a side
 (24) bar?
 (25) (At side bar off the Record)

Vol 29 5059

- (1) MR SCHROER Brian you're on the mike
 (2) MR O NEILL Did you guys hear? No problem
 (3) JURORS No
 (4) BY MR O NEILL
 (5) Q I want to talk about what you studied with regard to the
 (6) Glacier Bay spill
 (7) A Right We were charged with the responsibility for making
 (8) an estimate of what the price might have been absent the
 (9) spill We took a careful look at all elements of the market
 (10) that we felt would bear on that conditions in the Japanese
 (11) market conditions that we could discern from trade literature
 (12) as to what the market might have been prior to the time the
 (13) spill occurred supply conditions forecasts for supplies from
 (14) all areas of Alaska which would be available by the first
 (15) quarter to try to get a general picture of the market and what
 (16) it would have been had there not been a major perturbing
 (17) incident
 (18) Q Did you conclude as a result of your studies that the
 (19) Glacier Bay oil spill had an adverse impact on the price of red
 (20) salmon paid to fishermen and then up again through the chain
 (21) of distribution?
 (22) A Yes it did have an adverse effect It showed up in a
 (23) sharp drop in the price of fish price paid to fishermen in
 (24) Upper Cook Inlet right in the middle of the season a drop
 (25) which didn't show up in the other so called local areas

Vol 29 5060

- (1) That's all the red areas other than Bristol Bay it didn't show
 (2) up in them at all but it did show up in this area And the
 (3) result was a significant decline in price paid to the
 (4) fishermen about 20 cents a pound which we could not explain
 (5) in terms of the opportunities that appeared in the market or
 (6) the prices being paid elsewhere in the area
 (7) Q As a result of your study of the Glacier Bay spill did you
 (8) come to any conclusions about whether fish buyers were
 (9) concerned enough to pay less for Upper Cook Inlet sockeye
 than
 (10) they would have had there not been an oil spill?
 (11) A We did
 (12) Q What was the conclusion?
 (13) A That was the conclusion that we reached
 (14) Q I want to move to the Braer spill in Scotland Do you
 (15) recall about when that was?
 (16) A It was in the Shetlands
 (17) Q I shouldn't say Scotland because that's an issue
 (18) A Shetlanders wouldn't appreciate it
 (19) Q The Braer ran aground on the southern end of the Shetland
 (20) Islands about when do you recall?
 (21) A I can't recall the date of the spill It was about - I'm
 (22) sorry I can't bring it to mind It was a year or two years
 (23) ago
 (24) Q You and your colleagues were retained to go to the
 (25) Shetlands and study that spill?

Vol 29 5061

- (1) A Right
 (2) Q And particularly to study the impact of that spill on a
 (3) variety of different species of fish including salmon?
 (4) A Exactly
 (5) Q What did you find?
 (6) A I might say first that the salmon involved were not wild
 (7) salmon they were farmed salmon The Shetlands is a fairly
 (8) substantial producer of farmed Atlantic salmon The Shetland
 (9) closed down the farms that were oiled as a result of the spill
 (10) and the only farms that were still in operation were those that
 (11) were completely clear of the spill area And we checked the
 (12) prices that were received by those in the market which they
 (13) normally sell against benchmark prices in Scotland and in
 (14) Norway all of which produced farm Atlantics Norway in
 (15) considerable quantities and Scotland in considerable
 (16) quantities
 (17) And we noticed there was a substantial divergence between
 (18) the price that was paid after the spill for Shetlands fish in
 (19) comparison with Scottish and Norwegian fish although these
 (20) were clear of any possible taint at all
 (21) Q So the oiled farms were closed down and no fish came out
 (22) those?
 (23) A Right
 (24) Q And with regard to the fish that were still in the Shetland
 (25) Islands but were not oiled there was an adverse price effect?

Vol 29 5062

- (1) A There was
 (2) Q How long did that price effect go on?
 (3) A It s hard to tell precisely how long it went on because
 (4) there were other factors involved in altering prices at the
 (5) time but one thing did stand out Prior to the spill
 (6) Shetlands fish which had been promoted as coming from a
 very
 (7) pristine environment they were somewhat larger than the
 (8) Scottish and Norwegian fish They were branded and sold in
 the
 (9) market and they carried a premium typically for that period
 (10) when they were being marketed that way
 (11) After the spill the premium just about disappeared and up
 (12) until the present time Shetiands fish are sold pretty much in a
 (13) package with Norwegian Scottish and the others and that
 (14) constituted a fairly substantial blow to them
 (15) Q So up to the time of the spill Shetland fish got a premium
 (16) price and then from the date of the spill which I know it was
 (17) in 1991 - it was later than that?
 (18) A I think 92
 (19) Q From the date of the spill in 92 to the present day the
 (20) premium has gone?
 (21) A Has largely gone yes
 (22) Q Do you have an opinion as to whether that was as a result
 (23) of the spill?
 (24) A I can t say conclusively that it was a result of the
 (25) spill We felt strongly that that was the most logical

Vol 29 5063

- (1) explanation for a sudden change in a premium product to what
 (2) became just another product on the market
 (3) Q Now in the economic history of the Alaska salmon industry
 (4) there is something that has been historically referred to as
 (5) the botullism incident Are you aware of the so-called botulism
 (6) incident?
 (7) A Yes
 (8) Q Would you tell us about the botulism incident?
 (9) A Well somebody died from eating canned salmon in which
 (10) botulism occurred faulty canning I guess and I understand
 (11) that later on a second person died although it was not
 (12) conclusive that that was from canned salmon it was believed
 (13) to be so The effect of that was to put a real body blow into
 (14) the market of canned salmon and that lasted for a couple
 (15) years
 (16) Q And that salmon was sold in Europe?
 (17) A Yes uh huh
 (18) Q And the price impacts were on salmon from Alaska?
 (19) A Correct
 (20) THE COURT The distraction that everybody -
 (21) MR O NEILL That s my stomach
 (22) THE COURT No It s another naturalization
 (23) ceremony It s the Sweet Alldades singing next door It will
 (24) only go on for a few minutes
 (25) BY MR O NEILL

Vol 29 5064

- (1) Q Doctor is it okay if we wind our way around the music?
 (2) A Okay as long as my hearing aid holds up
 (3) Q I was thinking I had to excuse myself
 (4) You were asked to study whether or not the Exxon Valdez oil
 (5) spill had an impact on Upper Cook Inlet sockeye salmon
 (6) A Right
 (7) Q And would you describe for us how you structured that
 (8) study what were you going to look at with regard to that
 (9) study?
 (10) A Well first thing we wanted to look at was again the
 (11) general state of the market prior to the time the spill
 (12) actually occurred and paying particular attention to the time
 (13) when price negotiations got underway and they were beginning
 to
 (14) take form and that included a variety of things The
 (15) forecasts again for production the general state of the
 (16) economy in Japan trends in consumer consumption of salmon
 in
 (17) Japan in both of the major forms trends in retail and
 (18) wholesale prices in Japan
 (19) In addition we wanted to I shouldn t say substantiate
 (20) that but to go forward simultaneously with that a statistical
 (21) modeling exercise to see if we could determine from statistical
 (22) procedures whether or not our conclusions about the impact of
 (23) the spill from the general market conditions were correct
 (24) This was made a good deal easier than in many exercises of this
 (25) sort because we re talking about one product a couple of

Vol 29 5065

- (1) forms but really one product from one area 98 or 99 percent
 (2) of which is sold into one market But it becomes a much easier
 (3) exercise than the sort of thing when we re dealing with all
 (4) salmon in Alaska or salmon that are sold in many different
 (5) markets
 (6) Q Did you take a look at the consumer and wholesale markets
 (7) in Japan?
 (8) A Yes we did
 (9) Q And what did you find was the status of those markets prior
 (10) to the spill?
 (11) A The markets for some types of salmon have begun to slip in
 (12) late 1988 but sockeye salmon had not Sockeye salmon prices
 (13) at both wholesale and retail were actually increasing held up
 (14) very well during the first quarter of 1989 Retail prices
 (15) actually held through September of 1989 and really beyond that
 (16) time until 1993 Retail prices for sockeye salmon in Japan
 (17) have not gone below about five or six percent below the level
 (18) that they reached in 1989 There was a small dip in retail
 (19) prices after the spill but it s remained almost completely
 (20) stable for a year and a half since then
 (21) Q Was the market up to the time of the spill with regard to
 (22) sockeye UCI sockeye did it have a healthier rosier outlook?
 (23) A It did There were comments in the trade press that the
 (24) expectation for sockeye were strong for the coming back year
 (25) That was buttressed by the fact that the inventories of sockeye

Vol 29 5066

- (1) had declined for three previous years and in 19 - April of
 (2) 1989 they stood at about three quarters of what they had been
 (3) for the average of the preceding years
 (4) It was not a large inventory It was a smaller inventory
 (5) of sockeye which gave some grounds to the argument that the
 (6) market looked good
 (7) Q Did you help design with one of your colleagues and then
 (8) work in the implementation of a price model?
 (9) A Yes My role in it was primarily to ask the questions that
 (10) needed to be answered I am not a modeler myself but one
 (11) member of my firm is a very competent modeler and I wanted
 (12) to know some of the things from him we could do to improve on
 (13) the models that he looked at We looked at a number of them that
 (14) had been done but none of them really addressed the problem
 (15) we had None of them addressed a situation in which you had one
 (16) product from one area sold in one market
 (17) Q So you reviewed a number of salmon price modeling
 (18) markets?
 (19) A Right
 (20) Q And then you - and I think Mr Freeberg?
 (21) A Right
 (22) Q Designed a model you conceptually him mathematically?
 (23) A Correct
 (24) Q And would you tell us what the design of the model was?
 (25) A What we wanted to do in designing the model was to keep it
 as simple as possible The more variables you introduce into a

Vol 29 5067

- (1) mathematical approximation of a fish market the more chances
 (2) of error and particularly the necessity of the modeler
 (3) introducing his own ideas as to what influences the price of
 (4) the thing you re trying to explain
 (5) We felt with all the fish going to one market for
 (6) practical purposes that the market itself would integrate far
 (7) better than we could the factors that were bearing on the
 (8) determination of prices in the Japanese market and the derived
 (9) price that they would have to go to in the ex vessel market or
 (10) the fishermen market as a result of that
 (11) So our model was designed to depend heavily on the
 (12) integration process of the actual market in which Upper Cook
 (13) Inlet reds are sold These are the people who make a living
 (14) buying and selling red salmon These people know more than
 (15) we do about the factors that bearing on the determination of
 (16) prices in any given pack year
 (17) Q I m going to do a calendar
 (18) There we go I made it I put the months across the top
 (19) January February March April May June July August
 (20) September October November December Now the specific
 (21) market we re talking about is the Tokyo Central Wholesale
 (22) Market?
 (23) A Right
 (24) Q And they keep data for the Tokyo Central Wholesale Market
 (25) on a quarterly basis?

Vol 29 5068

- (1) A They do
 (2) Q With regard to this particular study there is a
 (3) coincidence that helps the study in that the oil spill happens
 (4) at the end of the first quarter That s a correct statement
 (5) isn t it?
 (6) A That s correct
 (7) Q Now would you generally - the ex vessel price - both the
 (8) wholesale price and the ex vessel price those negotiations
 (9) occur through this period in time with the price as you
 (10) previously testified that the fishermen get occurring sometime
 (11) in here?
 (12) A Yeah that s correct
 (13) Q Now using this wonderful calendar that I have constructed
 (14) if you could relate the model to the calendar
 (15) A Yes The period that - do I have something to draw with?
 (16) I think I can just discuss it
 (17) Q Just a second
 (18) A The first quarter of the year is the quarter in which the
 (19) first formation in buyers and sellers mind of what that price
 (20) is going to be negotiated at get underway By that time you
 (21) have forecasts of the Alaska runs some of them from the
 (22) Fisheries Research Institute the University of Washington
 (23) from Alaska Department of Fish & Game So you ve got a fair
 (24) idea of what the forecasts are going to look like on a supply
 (25) element that accounts for about 70 percent of the sockeye

Vol 29 5069

- (1) coming into the Japanese market This is also the last quarter
 (2) in which you have only the previous year s fish to deal with
 (3) By the time you get into the second quarter you get a
 (4) mixture of prices because people are trying to dump inventory
 (5) that they hadn t been able to sell in the previous year There
 (6) are likely to be some cats and dogs mixed in with that which
 (7) carry a confusing price and there is likely to be a trickle of
 (8) new fish coming in from high seas Not much but you got a
 (9) mixture of prices that don t really relate to what s going to
 (10) happen in the rest of the season for our acquisition fish
 (11) So we chose - before actually looking at the data we felt
 (12) that the first quarter of the year would be the quarter to pick
 (13) as the independent variable which would determine the price
 (14) paid for fishermen in the subsequent negotiating period
 (15) If you go any farther back of that you re too far back
 (16) into a period when they are still trying to inventory out the
 (17) previous year s pack If you go any farther forward you re
 (18) getting mixed up into a marketing situation which has a mixture
 (19) of confusing prices in it This we felt was the proper place
 (20) to start our modeling exercise and it turned out that this
 (21) gave us the best results
 (22) Q So I m going to simplify this and then we can move on and
 (23) talk about it We re going to take for every year that we
 (24) have it the Tokyo Central Wholesale Market price for the first
 (25) quarter and plot it?

Vol 29 5070

- (1) A Correct
- (2) Q And then we re going to take and plot what the fishermen in
- (3) Upper Cook Inlet get for reds and compare those two to see if
- (4) there is a relationship between the two?
- (5) A Correct
- (6) Q And in this case the Tokyo Central Wholesale Market data
- (7) would be collected essentially almost up to the time of the
- (8) spill?
- (9) A That s right
- (10) Q And if the spill in fact had an effect on the price you
- (11) ought to see that in the relationship between the predicted
- (12) price and the actual price after the spill?
- (13) A That s correct
- (14) Q Did I get it?
- (15) A Yes
- (16) Q What is before I blow it up Plaintiffs Exhibit 431 for
- (17) identification?
- (18) A If you could blow it up I could see it better
- (19) This is a plot of predicted versus actual or observed
- (20) prices for Upper Cook Inlet sockeye based on the use of the
- (21) first quarter Tokyo wholesale prices and if you ll notice the
- (22) very high degree -
- (23) Q We ll talk about it in detail and I ll blow it up in
- (24) detail but this is a result of the study done by conceptually
- (25) you and statistically Mr Freeberg

Vol 29 5071

- (1) MR O NEILL Offer 431
- (2) (Exhibit 431 offered)
- (3) MR LYNCH Just that page?
- (4) MR O NEILL Just this page
- (5) MR LYNCH No objection
- (6) THE COURT Plaintiffs 431 is admitted
- (7) (Exhibit 431 received)
- (8) BY MR O NEILL
- (9) Q Now let s get this up to where we can see it
- (10) And even before we talk about the correlation you ve got
- (11) to make some sense out of it for us if you could do that
- (12) A I m sorry?
- (13) Q Tell us what it is how it works this graph
- (14) A It s a plot of observed against predicted prices to see how
- (15) closely they fit a statistical description of that I ll give
- (16) you in a minute but it shows for all except three years 1983
- (17) 1984 - actually four 1987 - 1983 87 and particularly in
- (18) 89 these are the only three years in which you get
- (19) significant deviations of the predicted price from the observed
- (20) price
- (21) But notice 1983 was the fall of the botulism scare which
- (22) was still being felt and had quite an influence on the
- (23) industry 1987 was the Glacier Bay spill 1989 was the Exxon
- (24) Valdez spill and only in the Exxon Valdez spill did you get
- (25) such an extreme drop between the predicted and actual
- observed

Vol 29 5072

- (1) price
- (2) Q And that s this right here So what this chart does
- (3) beginning in 1976 and going through 1990 it plots the first
- (4) quarter Tokyo wholesale central price?
- (5) A With some adjustments
- (6) Q With some adjustments and tracks that against what the
- (7) fishermen get?
- (8) A That s correct
- (9) Q And the expectation is that for most of your years the
- (10) points will be essentially in the same place?
- (11) A Right And I must add to do that the random model only
- (12) through 1989 because by the time we get to 1990 the spill has
- (13) occurred the impact of the spill on the market will have taken
- (14) place and the model will capture both the effect of the spill
- (15) and any other market forces so that it s really valid only
- (16) through 1989
- (17) Q So using this particular approach all you can do is study
- (18) whether there was a price drop and that price drop only for
- (19) one year?
- (20) A That s correct
- (21) Q Because when you get to the first quarter of 1990 and you
- (22) take a look at the Tokyo wholesale market price the market is
- (23) taking into consideration the spill so the model takes the
- (24) spill into consideration?
- (25) A Exactly It simply answers itself

Vol 29 5073

- (1) Q So the model has a great deal of utilities for studying
- (2) 1989 but by its nature is incapable of studying 1990 or 1991
- (3) and the spill?
- (4) A That s correct What we wanted to see was whether or not
- (5) the model captured the normal market effects that people
- (6) trading in the Tokyo wholesale market would be looking at and
- (7) that this would influence the price they were willing to pay
- (8) for the next year s pack and it does this very closely
- (9) indeed
- (10) We were also interested to see I don t want to say
- (11) breakdowns but shows deviations where you have external
- (12) effects like the botulism and the oil spill the other one and
- (13) it shows that very clearly The coefficient of R squared
- (14) statistic is 96 1 which is very high for a model of this sort
- (15) Q Now I want to ask you a couple questions about the
- (16) exhibit The actual price of salmon beginning in 1984 in fact
- (17) through 1988 for Cook Inlet reds rose?
- (18) A Yes it was increasing steadily in that period
- (19) Q And then between 1988 and 1999 (sic) over the time of the
- (20) oil spill we get a precipitous drop?
- (21) A That s correct
- (22) Q Now let s put this one piece of information aside for the
- (23) time being and we ll come back to it Did you look at other
- (24) aspects of the market other than this model?
- (25) A Yes One of the things we looked at as I mentioned it

Vol 29 5074

- (1) was the inventory situation We kept hearing that inventories
 (2) were outlandishly high and in fact they weren't The
 (3) inventories for all salmon in Japan were ten or 12 percent
 (4) above the average for the previous three or four years which
 (5) is not high
 (6) The picture for inventories appears to be rising sharply
 (7) over a period running from about 1977 '78 on but this simply
 (8) reflects the fact that the Japanese were producing and
 (9) importing larger and larger amounts of salmon With higher
 (10) incomes and a very favorable exchange rate Japanese
 (11) consumption of salmon leaped ahead and if you have larger
 (12) consumption and home production obviously inventory figures
 (13) are going to be higher
 (14) Q I want to take a look at Exhibit 420 in evidence and ask
 (15) what you Plaintiffs Exhibit 425 is?
 (16) A This is an indication of Japanese holding of masu and
 (17) sockeye masu is pig and sockeye is not just sockeye it's
 (18) chinook sockeye coho and chum all others but pink These
 (19) are the figures we could find for Japanese figures These are
 (20) as of the end of 1988 first of 1989 You'll see that the
 (21) inventory in 1989 at this point is not out of line with
 (22) inventories running from 1983 '84 '85 '86 '87 '88 '88
 (23) was low and part of the increase in catch in 1989 went to
 (24) replace inventories that were significantly lower The
 (25) inventory for sockeye behaved rather indifferently

Vol 29 5075

- (1) MR LYNCH Your Honor excuse me On that subject
 (2) could Mr O'Neill give us a little more foundation on the basis
 (3) for the differentiation Dr Crutchfield has testified that
 (4) the only official figures group red salmon he's beginning to
 (5) talk about sockeye individually and I'd like to know what's
 (6) the source
 (7) BY MR O'NEILL
 (8) Q What's the source?
 (9) A It's from the Japanese Fishing Agency I can't give you the
 (10) precise definition of the source but it is an official
 (11) Japanese publication
 (12) MR LYNCH Are we talking about this exhibit?
 (13) BY MR O'NEILL
 (14) Q These -
 (15) A These are all salmon
 (16) Q This is all salmon?
 (17) A Right
 (18) Q Are we moving on now to talk about -
 (19) A Sockeye specifically
 (20) Q Now when talk about sockeye only is there a data source
 (21) for sockeye only?
 (22) A The only data source we had was a private source from Bill
 (23) Atkinson's report which is a summary from his contacts in the
 (24) trade usually regarded as quite accurate
 (25) Q And Bill Atkinson publishes a newsletter to traders out of

Vol 29 5076

- (1) Seattle where he published his data with regard to these
 (2) things?
 (3) A It's nearly comprehensive covers a lot of things and
 (4) salmon is covered quite thoroughly
 (5) Q And people in your business and indeed people in the trade
 (6) rely on what is called the Bill Atkinson newsletter?
 (7) A We do
 (8) Q Although it's now run by Bill Atkinson's son?
 (9) A It's a good accurate report of what he gleans from the
 (10) trade in Japan itself
 (11) Q What does the Atkinson newsletter tell you?
 (12) A That sockeye inventories were behaving rather
 (13) indifferently They declined in the period of 1986 '87 and
 (14) '89 and that '89 inventories as of April 1st were about 75
 (15) percent of what they had been in the previous four years so -
 (16) and the trade journals noted this The expectation of firm
 (17) prices for salmon sockeye salmon rested in part on the fact
 (18) that inventories were low
 (19) Q Now Exhibit 427 Plaintiffs 427 is in evidence Would
 (20) you tell us what Plaintiffs Exhibit 427 is?
 (21) A These are the estimates that we had from Bill Atkinson of
 (22) holds for three different types of salmon The brown are
 (23) sockeye salmon and as you can see from 1986 to '87 to '88 to
 (24) '89 the April 1st inventories were declining fairly
 (25) substantially They were only slightly higher than they were

Vol 29 5077

- (1) back in 1985 The blue figures are inventories of chum salmon
 (2) which is a partial substitute for sockeye that's the purple I
 (3) guess and the blue figures light blue figures are inventory
 (4) figures for coho or silver
 (5) Q Now we have this graph and my question to you is
 (6) relating that to what we're trying to study here why is this
 (7) important?
 (8) A It's important for two reasons One it emphasizes the
 (9) fact that there isn't any such thing as a market for salmon in
 (10) Japan the market in Japan is segmented and the factors that
 (11) bare on the price of sockeye are not the same factors that bare
 (12) with the same weight on prices of chum or silver and so on
 (13) Also I just wanted to emphasize the fact that although
 (14) inventories of all salmon taken together were only slightly
 (15) above the previous level sockeye inventories which is what
 (16) we're talking about were substantially down and had been
 (17) down
 (18) for several years that obviously does have an influence on the
 (19) market
 (20) Q What is Plaintiffs Exhibit 428 which is in evidence?
 (21) A This is an indication of exports from the United States to
 (22) the Japanese market in January February and March of 1989
 (23) three months of the first quarter of sockeye in the middle
 (24) here You'll notice that in January February and March
 (25) exports to Japan from the United States of sockeye rose
 (26) substantially There were also fairly substantial increases in

Vol 29 5078

- (1) the exports of chum during the same period and of coho during
 (2) the same period which is I think a fairly strong indication
 (3) of the fact that somebody in Japan and somebody in the United
 (4) States regarded the market in Japan as being in pretty good
 (5) shape at that point particularly for sockeye and were
 (6) exporting considerable amounts of fish
 (7) I mentioned this simply because it stresses the fact that
 (8) while the traders may have regarded some other species as
 (9) facing downward trends in prices they weren't looking at
 (10) sockeye that way They were importing
 (11) Q Now I placed up on the screen Plaintiffs Exhibit 429
 (12) which is in evidence Would you tell us what 429 is and how it
 (13) helps us in what we're looking at?
 (14) A This is the same quarterly period for 1989 and again
 (15) chum sockeye coho but these are the value of U S exports
 (16) I simply wanted to indicate that these weren't being exported
 (17) at fairly satisfactory prices but these were good prices going
 (18) from January February and March
 (19) Q So would it be fair to say that looking at these factors
 (20) and the other factors that you looked at in the weeks and
 (21) months linked up to the time of the spill the market looked
 (22) healthy?
 (23) A This coupled with the fact that retail prices in Japan
 (24) were very steady during this period showed no signs of any
 (25) collapse at all they were holding firm and large quantities

Vol 29 5079

- (1) of salmon were being sold at retail
 (2) Q Let's talk a little bit if we could about monthly retail
 (3) prices of sockeye salmon in 15 Japanese cities from 1988 to
 (4) 1989 Did you gather that information?
 (5) A Yes That came from an official Japanese publication which
 (6) is published every year
 (7) Q Before we talk about the exhibit I need to get it into
 (8) evidence so we need to -
 (9) A Sorry
 (10) Q Is Exhibit 420 this compilation from official Japanese
 (11) sources about the data that we're talking about?
 (12) A Yes
 (13) Q Is it helpful to you in explaining impact or potential
 (14) impact of the spill on sockeye salmon prices in Cook Inlet?
 (15) MR O NEILL Offer Exhibit 420
 (16) (Exhibit 420 offered)
 (17) THE COURT Does the TV set have an objection?
 (18) MR LYNCH I wonder if we could let that stand rather
 (19) than do voir dire on it I have the same problem I'm not
 (20) quite sure of the sources
 (21) BY MR O NEILL
 (22) Q What are the sources?
 (23) A I'm sorry I have that in the report that we furnished you
 (24) and which they have as well
 (25) Q Is it from official Japanese reporting sources?

Vol 29 5080

- (1) A That's correct we didn't dream this up
 (2) Q And in the detailed report that you provided to me and the
 (3) Exxon people you detailed what the official sources were?
 (4) A Precisely
 (5) MR O NEILL I offer 420
 (6) THE COURT Does this solve the problem Mr Lynch?
 (7) MR LYNCH Your Honor I'll withdraw the objection
 (8) but I'd like to reserve a motion to strike
 (9) THE COURT Very well Exhibit 420 is admitted at
 (10) this time
 (11) (Exhibit 420 received)
 (12) BY MR O NEILL
 (13) Q What is Exhibit 420? Would you tell us how it aids to our
 (14) inquiry here?
 (15) A Yes Before I do let me make a correction if I can
 (16) The way this graph is drawn it starts from 2300 yen per
 (17) kilo and goes up to 3 000 yen per kilo which gives you a
 (18) misleading affect of how fast prices went up and down If you
 (19) run that graph down to zero at the base you can see that the
 (20) changes are really much smaller
 (21) What it shows is that from January through July price
 (22) changes at the retail level were very small indeed in the
 (23) vicinity of 5 percent Even the maximum price drop that
 (24) occurred was less than 10 percent after the spill Thereafter
 (25) although I don't have a graph because I didn't intend to

Vol 29 5081

- (1) present it in evidence my own curiosity got the better of me
 (2) and I asked myself what happened to retail prices thereafter
 (3) And the answers is they remained almost stable through the
 (4) next couple of years through the middle of 1993
 (5) In Japan there is no evidence then - and this is the
 (6) point we wanted to drive home There is certainly no evidence
 (7) that the Japanese market for sockeye salmon was collapsing
 (8) prior to the time of the spill It was healthy and it remained
 (9) healthy thereafter
 (10) Q Did you take a look at the average monthly price of local
 (11) sockeye salmon in the Tokyo wholesale market?
 (12) A Yes we did
 (13) Q And that is Exhibit 419 for identification?
 (14) A Right
 (15) Q And Exhibit 419 for identification is data that you and
 (16) people at NRC took from prices of the Tokyo Central Wholesale
 (17) Market?
 (18) A That's correct
 (19) Q Is it helpful to you to explain what happened to the price
 (20) of reds from the Exxon Valdez oil spill?
 (21) A It is
 (22) MR O NEILL I offer 419
 (23) (Exhibit 419 offered)
 (24) THE COURT Is there an objection to 419?
 (25) MR LYNCH Your Honor my understanding of the

Vol 29 5082

- (1) foundation is that it involves more than simply I picked up
 (2) this data somewhere I would like to ask the question at
 (3) least to identify the source of the data
 (4) THE WITNESS The Tokyo Central Wholesale Market
 (5) publishes these figures monthly and they were taken directly
 (6) from those data
 (7) BY MR O NEILL
 (8) Q Just like the stock market publishes monthly?
 (9) MR O NEILL Renew the offer
 (10) MR LYNCH No objection
 (11) THE COURT Thank you Exhibit 419 is admitted
 (12) (Exhibit 419 received)
 (13) BY MR O NEILL
 (14) Q Now I want you to explain to us Exhibit 419 and how it aids
 (15) in our investigation here
 (16) A Two points I wanted to emphasize One is the fact that
 (17) again through the first quarter of 1989 wholesale prices
 (18) continued to drift upward That I think is the reason why we
 (19) saw the imports of sockeye coming in from the United States
 (20) Both exports in the states and Japanese foresaw a pretty strong
 (21) market otherwise they wouldn't have been seeing this kind of
 (22) price but the price falls out
 (23) The price falls down sharply after the new pack of fish
 (24) begins to be in evidence These are previous years fish
 (25) Japanese traders Japanese retailers Japanese consumers

Vol 29 5083

- (1) generally are aware of the fact that these were fish taken
 (2) prior to the spill After the fish come in subsequent to the
 (3) spill then the wholesale price begins to crumble
 (4) Q As a result of the model that you and Mr Freeberg worked
 (5) on the various market factors that you looked at including
 (6) the ones that we talked about here today - and they weren't
 (7) the only ones that you looked at were they?
 (8) A No
 (9) Q In your experience your knowledge your study of the Braer
 (10) spill your study of the Glacier Bay spill your 40 to 50 years
 (11) as an economist - you shouldn't wince when I say that because
 (12) it happens to all of us
 (13) A Yeah
 (14) Q Have you formed an opinion sir as to whether the 1989
 (15) Exxon Valdez oil spill had an impact one way or another on the
 (16) price paid to fishermen?
 (17) A I have I think it did have such an effect
 (18) Q And what was the effect?
 (19) A The effect was to lower prices paid to fishermen in
 (20) response to a situation which the traders viewed with real
 (21) alarm and uncertainty and which gave them the incentive to use
 (22) the spill as a very strong bargaining weapon in negotiating
 (23) prices for the coming years pack This was an ideal weapon to
 (24) use to get the price down Fishermen had no other place to go
 (25) with their fish and the spill had a very strong influence on

Vol 29 5084

- (1) the bargaining process exactly as it had in the Braer case and
 (2) others
 (3) Q Now I want to have you perform one other task for us while
 (4) you're here if you would and that is we have introduced
 (5) portions of Exhibits 3652 into evidence through other witnesses
 (6) and we haven't introduced this value column And I'm going to
 (7) ask you did you at NRC put together the prices that pinks were
 (8) sold at from 1984 through 1991 and are those reflected in the
 (9) column on the Exhibit 3652?
 (10) A I didn't put them together but NRC staff did
 (11) Q Did you assure they were the correct values and numbers
 (12) and
 (13) question them about the sources?
 (14) A Yes These are ADF&G or CFEC prices
 (15) Q These are not projections these are the actual prices
 (16) paid taken from the Commercial Fisheries Entry Commission
 (17) and
 (18) ADF&G data?
 (19) A Correct
 (20) Q And with regard to the calculation I asked you to give me
 (21) a conservative number using this historical data the most
 (22) conservative number using this historical data we could get in
 (23) order to do a price projection for 1994 and 1995 isn't that
 (24) correct?
 (25) A That's correct
 (26) Q And you told me that the most historical - the most
 (27) conservative number to take in order to do the price projection

Vol 29 5085

- (1) would be to take the lowest number?
 (2) A I did
 (3) Q And we did that and is that a legitimate means as we sit
 (4) here not in fact knowing what prices are going to be for 1994
 (5) and 1995 with regard to projecting a price?
 (6) A Yes Without going through any kind of long formal
 (7) analysis we really have no other option The lowest price in
 (8) the last five years is certainly an extremely conservative
 (9) price
 (10) Q Thank you And with regard to Exhibit 3653 we did the
 (11) same thing with regard to that exhibit that is go get the
 (12) actual price data and again take the most conservative number
 (13) we could the lowest number from the last five years not
 (14) counting the spill year and apply that to the calculation?
 (15) A Correct That is a very conservative number to say the
 (16) least
 (17) Q And the same thing with Plaintiffs 3820 which are reds in
 (18) Kodiak went through the same drill came up with the same
 (19) conservative estimate?
 (20) A That's correct
 (21) MR O NEILL And I would now on the basis of all of
 (22) the testimony on these three exhibits offer - Exhibits 3652
 (23) 3653 and 3820 are offered
 (24) (Exhibits 3652 3653 and 3820 offered)
 (25) MR LYNCH No objection Your Honor

Vol 29 5086

- (1) THE COURT Thank you Those exhibits are admitted
 (2) (Exhibits 3652 3653 and 3820 received)
 (3) MR O NEILL Dr Crutchfield thank you for the help
 (4) you ve given us and I m now going to turn you over for the
 (5) remainder of this fine Friday afternoon to Mr Lynch
 (6) MR LYNCH Is that a favor or not?
 (7) CROSS EXAMINATION OF JAMES CRUTCHFIELD
 (8) BY MR LYNCH
 (9) Q Doctor one personal question before we start Can I
 (10) assume that the great fisheries of Ireland are going to be
 (11) better off now that the Shetlands don t have a premium?
 (12) A I don t know I haven t been over there I only watch the
 (13) football score now
 (14) Q Well I sure hope so
 (15) I ve handed you a book there Doctor in which I ve put the
 (16) exhibits that I expect to be using in hopes that that could
 (17) speed things up I d like if I could to just refer you to
 (18) Exhibit DX2047
 (19) A Right
 (20) Q Is that the Bill Atkinson news report to which you made
 (21) reference in your direct testimony?
 (22) A Yes that is
 (23) Q And that s the source which you used in part to get your -
 (24) it was from his publication that you got your sockeye inventory
 (25) numbers?

Vol 29 5087

- (1) A One source The other source was the official Japanese
 (2) figures This was the source for the April 1st figures that s
 (3) right and the only figure we had for sockeye only
 (4) Q For sockeye because the Japanese figures have two
 (5) categories one is pink and one is called red but it means all
 (6) others is that correct?
 (7) A That s correct
 (8) Q Now I wonder if you would turn with me to the first - I m
 (9) sorry to the October 26th 1988 - if you d like you can
 (10) follow it on the screen with me As of October 1988 it s
 (11) correct that Mr Atkinson was indicating that sales were
 (12) dropping this is before the first quarter of 1989 isn t that
 (13) correct?
 (14) A Yes uh huh
 (15) Q And that the supply of hikato (ph) fall chum were
 (16) exceeding - were coming in at record levels?
 (17) A Correct
 (18) Q Now that was a result of a situation that had existed for
 (19) a couple years prior to that time is it not?
 (20) A Not with respect to sockeye no the sockeye inventories
 (21) were low during that period
 (22) Q Correct In 1987 and 1988 overall salmon supply had been
 (23) down in Japan is that correct?
 (24) A Yes
 (25) Q And overall Alaska salmon exports to Japan had been down?

Vol 29 5088

- (1) A I m sorry I didn t catch that
 (2) Q Overall salmon exports to Japan from Alaska sockeye as
 (3) well as other species had been down?
 (4) A Yes
 (5) Q And that s because the Alaska catch had been down?
 (6) A Yes
 (7) Q And prices had reached a record high?
 (8) A No 1988
 (9) Q That was the all time high priced realized for salmon is
 (10) that correct?
 (11) A That s correct
 (12) Q Now you mentioned in direct that one of the things that
 (13) occurred during this period of time pre 1989 was that the
 (14) exchange rate had been changing is that correct?
 (15) A Yes it had
 (16) Q And the effect of that change was was it not that a yen
 (17) the Japanese yen would translate into a larger number of
 (18) American pennies or nickels or quarters whatever the closest
 (19) denomination would be?
 (20) A That s correct although it was not a uniformed decline
 (21) There was a flat period if my memory serves me about 1984
 (22) through 89 when the yen depreciated slightly against the
 (23) dollar not very much and then the yen appreciated again
 (24) thereafter I can t remember the exact figures but that s
 (25) roughly the way it was

Vol 29 5089

- (1) Q Is it correct according to your general recollection Dr
 (2) Crutchfield that net - taking the whole period of time that
 (3) the buying power - that the translation of increases in prices
 (4) for salmon in Japan was about a 20 percent increase but
 (5) because of the exchange rate it represented about an 50
 (6) percent increase for U S recipients?
 (7) A Yes
 (8) Q So that the 1988 prices didn t cost the Japanese as much as
 (9) it benefited the people who were receiving it in the United
 (10) States?
 (11) A No When the yen appreciates obviously the Japanese get
 (12) imports at lower prices in terms of their own currency
 (13) Q I d like to direct your attention to the sort of last
 (14) sentence of this second paragraph of the October report
 (15) A Uh huh
 (16) Q That indicates that according to Mr Atkinson - and Mr
 (17) Atkinson is reporting what he read in the Japanese trade press?
 (18) A Correct
 (19) Q That although there is an unusual or record supply becoming
 (20) available the market is not expecting that processors will be
 (21) dumping their inventory into the market?
 (22) A I haven t read it
 (23) Q Could you read just that last sentence which I ve
 (24) highlighted?
 (25) A Is it on page 2?

Vol 29 5090

- (1) Q No It s on the second paragraph of the first page
 (2) According to market sources however -
 (3) A Yes I see that
 (4) Q And you would infer from what you know about the Atkinson
 (5) report that that s not Atkinson expressing his opinion but
 (6) Atkinson reporting what people in Japan were saying traders?
 (7) A What he heard
 (8) Q And what he read in the Japanese trade publications?
 (9) A Right
 (10) Q If I could just switch for a second the Atkinson report is
 (11) a summary of articles from the Nikensuson (ph) I leave it to
 (12) the - you and the jury to read those words but those are
 (13) Japanese trade papers sir?
 (14) A I believe they are yes
 (15) Q And what Mr Atkinson does is follow those papers and
 (16) report them to American participants in the fishing industry?
 (17) A He does more than follow papers He is quite close to the
 (18) Japanese trading community and he has contacts He has a
 (19) pipeline into what s going on over there
 (20) Q And he s reporting that although the supply is growing
 (21) greater than expectation traders will be able to hold onto
 (22) their inventones until June or July ever 1989?
 (23) A That they don t have to dump them in a panic
 (24) Q And dump them in a panic means get rid of them at a low
 (25) price sell them maybe at a loss?

Vol 29 5091

- (1) A That s correct
 (2) Q And those inventories that you were talking about with Mr
 (3) O Neill - could I borrow that for a second?
 (4) MR O NEILL Yeah
 (5) BY MR LYNCH
 (6) Q You remember Mr O Neill had a chart up on the screen and
 (7) he talked about filling in inventories He asked you if the
 (8) 1989 -
 (9) A I m sorry I don t know what you re referring to
 (10) Q When you were talking with Mr O Neill you had a chart
 (11) that showed the state of the inventories in 1988 and in 1989
 (12) and there was kind of a trough there and Mr O Neill or maybe
 (13) you drew it a line across talked about filling up the
 (14) inventories?
 (15) A No What I was referring to there was simply - I was
 (16) drawing a line to show roughly the average for the years in
 (17) question and that the inventory picture in 1989 was only
 (18) slightly above the average There are always fluctuations from
 (19) year to year
 (20) Q But we need to understand that this inventory is basically
 (21) a year long product?
 (22) A That s correct
 (23) Q The trader who buys at the end of the fishing season or
 (24) during the fishing season can basically think about holding
 (25) this frozen salmon for about a year and meeting it out is that

Vol 29 5092

- (1) correct?
 (2) A He better not hold it for a year He will sell it at a
 (3) price which he feels will yield him the largest net return and
 (4) he will reduce that inventory over the course of the pack year
 (5) hoping he will come out with the last quarter to meet his terms
 (6) and needs
 (7) Q And optimize his return on the investment in the prior
 (8) year?
 (9) A That s correct
 (10) Q And I think you also said if I understood you correctly
 (11) that it s your understanding and belief that the majority of
 (12) the U S processors who buy the salmon from the fishermen
 (13) it head it and freeze it they are affiliated with someone on
 (14) the Japanese side of the market transaction?
 (15) A In some way yes because the - again the nature of the
 (16) relationship varies Some of them are virtually directly
 (17) owned some of them have a substantial equity share in the
 (18) American firm some of them are loaned money to carry
 (19) inventory and so on and carry initial expenses There are
 (20) very few wholesale operations in Alaska dealing with fish that
 (21) do not have Japanese financial support of some kind or
 (22) another
 (23) Q Is it the case that some of these processors hold the
 (24) frozen fish in the United States and meter it out either to
 (25) Japan or other market opportunities as the year goes by?
 (26) A Some is held here but the majority is not

Vol 29 5093

- (1) Q When you talk about U S Imports in January February and
 (2) March of 1989 -
 (3) A U S exports
 (4) Q U S exports I m sorry Now you know why I didn t do too
 (5) well in economics
 (6) U S exports in January February and March of 1989 those
 (7) would be frozen sockeye?
 (8) A That s correct
 (9) Q And those would have been put in inventory from the prior
 (10) year?
 (11) A Right
 (12) Q And quite possibly would have been owned all along but at
 (13) least in part by some Japanese marketing factor?
 (14) A May well have been yes sir
 (15) Q Now with reference to your - the studies that you had
 (16) previously done of the effect of incidents on the price of
 (17) salmon you indicated the botulism scare or problem that
 (18) occurred in 1983?
 (19) A 82 I believe end of 81 or 82
 (20) Q But you assigned it to the 83 price year on your chart Is
 (21) that correct?
 (22) A Yeah
 (23) Q And did that involve sockeye salmon or pink salmon?
 (24) A I don t recall I m not sure
 (25) Q That involved a situation where someone in Europe actually

Vol 29 5094

- (1) received a tainted product?
 (2) A And ate it
 (3) Q Ate it Became ill and died?
 (4) A Right
 (5) Q And as a consequence of that is it not the case that
 (6) several countries in western Europe excluded any further
 (7) shipments of Alaskan canned salmon?
 (8) A That s correct
 (9) Q Pink as well sockeye is that correct?
 (10) A Right
 (11) Q And that was a highly publicized event that led to an
 (12) exclusion of the product from the market is that correct?
 (13) A Yes
 (14) Q Now in the case of the Glacier Bay situation that you
 (15) looked at that was a case where - by the way that was a
 (16) spill from a ship owned by somebody called Trinidad?
 (17) A I m - trying to determine who owned that ship was beyond
 (18) my capabilities
 (19) Q There was difficulty with that
 (20) THE COURT We had trouble with that
 (21) BY MR LYNCH
 (22) Q And that involved a partial closure for several days is
 (23) that correct?
 (24) A Well it was a series of intermittent closures throughout
 (25) most of the season until the very end because Alaska
 Department

Vol 29 5095

- (1) of Fish & Game was trying as best it could to allow fishermen
 (2) to get out and harvest fish as long as there was no danger of
 (3) them getting into oiled fish and there were spot openings and
 (4) they were very disrupted and the harvest was significantly
 (5) smaller than it would have been had there not been a spill
 (6) Q In that case as I understood your dialogue with Mr
 (7) O Neill one of the things you did was to look at the prices
 (8) that fishermen in Upper Cook Inlet were receiving?
 (9) A Uh huh
 (10) Q And to look for changes that occurred in those prices
 (11) within the season?
 (12) A That s rght uh huh
 (13) Q And part of what you looked for was the price that was
 (14) being paid to fishermen in Bristol Bay and Copper River and
 (15) other places?
 (16) A Yes
 (17) Q And you saw differentials?
 (18) A There is always a differential between Bristol Bay and what
 (19) they call local sockeye sources which are all of the others
 (20) Bristol Bay typically gets a lower price Most of the other
 (21) locals will pretty much hang together with the exception of
 (22) some Copper River fish which carry a premium but these tend
 (23) to be reasonably stable over time
 (24) Q And in this instance you found there was a differentiation
 (25) and part of your conclusion was based on the fact that traders

Vol 29 5096

- (1) were differentiating Upper Cook Inlet fish from other fish
 (2) caught in Alaska?
 (3) A It was more than just looking at that There was a long
 (4) record of conversations between Japanese buyers and
 American
 (5) processors American processors and fishermen and so on to
 the
 (6) effect that heavy pressure was being brought on the American
 (7) processor to cut the price to fishermen that they couldn t
 (8) stand the risk of getting oiled fish in or even the threat of
 (9) getting oiled fish in so there was a very substantial record
 (10) of conversations facts pressure of that sort
 (11) Q But was the premise of my question correct? In addition to
 (12) those things that you ve mentioned was there also evidence
 (13) that you relied on that traders were offering a different price
 (14) to Upper Cook Inlet fishermen than they were offering to
 (15) fisherman in areas that were not affected by the Glacier Bay
 (16) spill?
 (17) A There were differences and the price was cut very
 (18) substantially at a time when normally the progression is for a
 (19) slight upward adjustment in prices as the season goes along if
 (20) it looks like a good market year which it did
 (21) Q But you ve answered my question you noticed differences?
 (22) A Yeah
 (23) Q And in the case of the Shetlands when you looked at it
 (24) you saw there was a differentiation of the price paid to Norway
 (25) and to Scotland as opposed to the Shetlands as a result of what

Vol 29 5097

- (1) you attributed or thought to be probably resulting from the
 (2) spill?
 (3) A That s correct
 (4) Q Now staying with Exhibit DX2047 I d like to ask you next
 (5) to look at the report for November 1988
 (6) A Right
 (7) Q Do you see the entry that says salmon market?
 (8) A The first page?
 (9) Q Yes sir It s the - may I approach Your Honor?
 (10) November 23rd I should have given you the day as well
 (11) You see that in November Mr Atkinson reported that his
 (12) Japanese sources including these trade papers indicated that
 (13) the market for frozen salmon is softening due to the good
 (14) catches of fall chum salmon and the general abundance of
 salmon
 (15) this year inventories of Cook Inlet sockeye are larger than
 (16) product from other fishermen?
 (17) A Yes I see that
 (18) Q Now the situation that you ve described in your direct
 (19) testimony in which someone has taken the risk in 1988
 someone
 (20) took the risk at very high prices correct and they were
 (21) holding and metering out inventory of sockeye and other
 (22) metering?
 (23) A Yes
 (24) Q Chum salmon is sort of the native salmon of Japan is that
 (25) correct?

Vol 29 5098

- (1) A It s a native salmon of a lot of places
 (2) Q But in Japan the sockeye is not native correct?
 (3) A The Japanese high seas fleet has brought in - no it s not
 (4) a native species in that sense
 (5) Q If the - the Japanese market began importing salmon fairly
 (6) recently is that correct?
 (7) A No not really It began importing salmon in the mid 70s
 (8) Q Well I guess it depends on how old you feel
 (9) A Japan became a fish importing country early in the 70s
 (10) It had been an exporter prior to that time but population and
 (11) income rises made it an importing country and that was true of
 (12) salmon as well as other things
 (13) Q With reference to the years before it was an importing
 (14) country the salmon was a traditional natural part of the
 (15) Japanese diet is that correct?
 (16) A That s correct
 (17) Q And the domestically supplied salmon was predominantly
 (18) chum
 (19) salmon?
 (20) A Correct
 (21) Q And am I right Doctor that in Japan the salmon - the
 (22) bulk of the salmon that s used in the household is eaten for
 (23) breakfast and lunch? What we would call breakfast and lunch
 (24) A I couldn t answer that directly I don t know It depends
 (25) on the species of salmon that you re talking about
 Q Well what about sockeye?

Vol 29 5099

- (1) A I can t answer that
 (2) Q Is it your understanding that it s more often than not
 (3) salted?
 (4) A It has been more often salted although that has been
 (5) changing in the last four or five years The proportion sold
 (6) in the household salted compared to fresh and frozen has
 (7) been
 (8) lowering somewhat along with some very general changes in
 (9) the
 (10) Japanese diet The Japanese have been shifting particularly
 (11) younger Japanese from reliance on fish to much more of a
 (12) western market but at the same time they have been shifting
 (13) their demand for fish from lower to higher priced fish items
 (14) so the demand for sockeye has been quite strong so it s
 (15) considered a desirable item
 (16) Q At least the bulk of the sockeye that s sold in Japan today
 (17) reaches the consumer salted?
 (18) A Bulk is a strong term but more of it does yes
 (19) Q More than half of it is sold that way?
 (20) A Yes
 (21) Q And is sliced and eaten in Japanese preparation?
 (22) A Yeah
 (23) Q As opposed to grilled if someone from here if they went
 (24) to Simon & Seafort s or Marx Brothers wherever Mr Jamin
 (25) mentioned?
 A They are not that quite separate because a lot of the
 salted salmon that you see on the market is converted from

Vol 29 5100

- (1) fresh to frozen fish held in inventory so they can go either
 (2) way depending on where the market goes
 (3) Q I understand that that s the holder of the inventory but
 (4) the end user in Japan often eats the fish in a way that we in
 (5) the United States are not very accustomed to using?
 (6) A I can t answer directly no
 (7) Q Salmon is a basic staple of the Japanese daily food
 (8) pattern isn t that true?
 (9) A No There are pronounced seasonal variations of salmon
 (10) around the holiday season around the end of the year I don t
 (11) think it s consumed evenly throughout the year That may be
 (12) true of pinks that s prepared but sockeye have very
 (13) pronounced
 (14) seasonal variations
 (15) Q Is it your opinion that sockeye salmon is not a staple of
 (16) the Japanese diet the sockeye salmon that s sold by Alaskans
 (17) to the Tokyo central market does more than half it go as a
 (18) staple?
 (19) A It is a traditional staple food Whether you would call it
 (20) a staple of the Japanese diet at the prices of sockeye - it s
 (21) not available to lower income Japanese It s not a staple in
 (22) that sense
 (23) Q Now if you would - sir could you turn with me to the -
 (24) I m looking for the June 7th issue of the Atkinson news
 (25) report This is also a part of DX2047
 A Just a second let me look here

Vol 29 5101

- (1) Q And you see that on June 7th Mr Atkinson reports that the
 (2) salmon market in Japan seems to have fallen apart over the
 (3) past
 (4) two months Now on June 7th he would be referring to May
 (5) and
 (6) April of 1989 Is that correct?
 (7) A That s correct
 (8) Q Buyers imported a considerable volume of product during
 (9) March and early April You pointed that out didn t you?
 (10) A Yes
 (11) Q Because of potential delays in the Japanese/Soviet salmon
 (12) negotiations and limited supply free and uncommitted
 (13) inventory
 (14) that seemed to be available unfortunately for the Importers
 (15) the salmon negotiations were settled quickly and a steady
 (16) supply of toki high sea chum began to appear In addition now
 (17) your model would not have taken a count of any of those
 (18) changes
 (19) that occurred in the two months preceding June 7 1989 isn t
 (20) that correct sir?
 (21) A It would have taken a count of March not April May and
 (22) June
 (23) Q And two months without the benefit of Mr O Neill s
 (24) hand drawn calendar April and May?
 (25) A That s correct
 Q Now in terms of the -
 A May I just make a quick correction? When you read that
 sentence buyers import a considerable amount of product
 during
 March and early April this paper comes out usually reporting

Vol 29 5102

- (1) information that s a month or two old
 (2) Q But you don t doubt that he s correctly identifying the
 (3) purchases as March and early April?
 (4) A That s right
 (5) Q And those buyers were taking a risk just as you described
 (6) with Mr O Neill correct?
 (7) A Correct uh huh
 (8) Q And they were betting on the belief according to the best
 (9) information that Mr Atkinson could get that there were going
 (10) to be some delays in the Japanese/Soviet salmon negotiations
 (11) correct?
 (12) A Yes
 (13) Q And they -- so they stocked up on salmon imported that
 (14) frozen salmon that you were talking about because they
 (15) thought
 (16) that the market was going to need that due to the foreseen
 (17) delay and the right of the Japanese to fish in Soviet waters
 (18) isn t that correct sir?
 (19) A The amount involved is very small compared to the total
 (20) Japanese market for salmon The high seas combination for
 (21) Japanese salmon production is relatively small
 (22) Q So you think Mr Atkinson is mistaken in his conclusion
 (23) that the market had fallen apart over the past two months?
 (24) A Well the market changes in fresh and frozen fish as it
 (25) does in fresh and frozen produce almost from day to day as
 (26) events occur not all of which could have been foreseen

Vol 29 5103

- (1) The point you were making is almost the same as the point I
 (2) was making earlier and that is when you get beyond the first
 (3) quarter the market contains some elements of sockeye that it
 (4) wouldn t have had you get a lot of strange things coming on
 (5) And you re making the point that I was and you can t see that
 (6) and prices tend to be hard to predict
 (7) What we did was take over a 14 year period the January
 (8) February March Tokyo wholesale prices and used those as a
 (9) benchmark indicator of what the trader would have been
 (10) thinking
 (11) about at that time when he starts formulating his idea about
 (12) price Now sure those are going to change it can t be
 (13) static
 (14) Q For example based on your own prior work you would have
 (15) believed that if an oil spill occurred in April or May and not
 (16) on March 24th that that would certainly show up in the market
 (17) wouldn t you?
 (18) A I m sorry?
 (19) Q Based on your earlier analytical work you re earlier and
 (20) later analytical work you d be of the belief that if an oil
 (21) spill affected a fishery in April or May or June of a year
 (22) that that change would be something that the market would
 (23) take
 (24) into account correct?
 (25) A It certainly would
 (26) Q And it would send prices down?
 (27) A It would

Vol 29 5104

- (1) Q In fact you drew the conclusion that that would happen
 (2) almost instantaneously? Didn t you say that your finding was
 (3) that traders quickly reacted --
 (4) A Well it depends on when the spill occurs If the spill
 (5) occurs several months before there are any new fish coming
 (6) into
 (7) the market obviously it isn t going to have that much of an
 (8) effect It isn t until you get the new pack that might have
 (9) been affected by the spill that you begin to get worried and
 (10) that s the pack that the wholesalers are going to be stocking
 (11) up on at the lowest possible price they can get That s when
 (12) it s going to show
 (13) Q Wholesalers will always stock up at the least possible
 (14) price?
 (15) A I think so
 (16) Q There is nothing unusual about the wholesaler trying to get
 (17) the lowest price?
 (18) A But there is something about the trader buying a product
 (19) which has to be produced in a very short period of time which
 (20) virtually has no other market where the fishermen cannot
 (21) afford to hold it frozen for them It s got to go That gives
 (22) him a positioning in bargaining that s rare in most
 (23) commodities
 (24) Q Well It s true in all agricultural commodities?
 (25) A Not all Some are storable
 (26) Q All perishable?

Vol 29 5105

- (1) A Not all perishables either because those in many cases
 (2) are handled at least in this country on negotiated marketing
 (3) agreements something the fishermen are not permitted to have
 (4) in Alaska
 (5) Q Now do you see the last sentence of the first paragraph of
 (6) Mr Atkinson s report of June 7th as a result the market for
 (7) almost all species of salmon have declined that s his
 (8) grammatical error declined drastically over the past few
 (9) months is that correct sir?
 (10) A Bill has a habit of using words that are dramatic The
 (11) prices have fallen no question about it
 (12) Q And he goes on to say in the next paragraph speaking of
 (13) toki or high sea chum salmon that even though the price is
 (14) quoted at a certain level if you really want to sell it
 (15) you ll have to sell it as a lower price is that true?
 (16) A I really can t comment other than the fact that in any
 (17) perishable product fish produce or anything else if I call
 (18) you up the price is different than if you call me up And I
 (19) think this is the situation that probably prevailed There was
 (20) some uncertainty as to what was going to happen in the market
 (21) Anybody who was anxious to sell fish was going to take a
 (22) discount on it
 (23) Q What he s saying the price has now dropped to 3 18 down
 (24) from 4 77 but if you really want to sell it you ll probably
 (25) have to let it go at 2 86?

Vol 29 5106

- (1) A Correct
- (2) Q Even though there are inventories of that type of fish?
- (3) A That s not true this is toki chum and inventories of chum
- (4) were not low at the time
- (5) Q You think he s wrong in this statement that there are
- (6) relatively low inventories or you think he s referring to
- (7) sockeye inventories?
- (8) A There may have been relatively low inventories of that
- (9) particular group of chum salmon product but chum inventories
- (10) as a whole were in fairly good shape
- (11) Q Now chum salmon are used in these traditional Japanese
- (12) meals salted are they not?
- (13) A Some of them yes
- (14) Q They are - from the standpoint of those of us who once in
- (15) a while read the recipe book they are a product that can be
- (16) used in lieu of sockeye for those particular recipes?
- (17) A That s again a pretty general statement There are
- (18) different qualities of chum significantly different The
- (19) higher qualities of chum are as you imply substitutes for
- (20) sockeye in the traditional uses Lower prices chums I think go
- (21) into rather different usages
- (22) Q Now Dr Crutchfield broadly as an economist and drawing
- (23) on the 50 years of economics experience there is a word that
- (24) Mr Sanders will probably want to begin using cross
- (25) elasticity?

Vol 29 5107

- (1) A Yes
- (2) Q What does that mean? Does that mean you cross your
- (3) suspenders?
- (4) A One of our buzz words It s a word that says what is the
- (5) response in quantity taken of product A if the price of product
- (6) B changes Cross elasticity refers to the sensitivity for the
- (7) demand of one product to changes in the price and availability
- (8) in another product
- (9) Q So if I have Rice Krispies here and Special K in boxes
- (10) right beside it and I increase the price of Rice Krispies by
- (11) 50 cents how much more Special K is going to be sold?
- (12) A I would have to do a price analysis but it would have a
- (13) very high degree because they are close All it does is
- (14) measure the degree of substitutability
- (15) Q From an economic standpoint it is an economic
- (16) impossibility is it not broadly speaking I know you re going
- (17) to find me an exception but broadly speaking as the price of
- (18) a substitute falls either demand will shift to that substitute
- (19) or the price of the other product must follow it down isn t
- (20) that true?
- (21) A It s true if you assume a completely static state of demand
- (22) for that group of products as a whole It could also be
- (23) possible if demand was going up for the product group as a
- (24) whole that changes in relative prices could occur but both
- (25) could show either increases or decreases in price But

Vol 29 5108

- (1) generally you re quite correct there is generally people more
- (2) willing to substitute cheaper for a more expensive if the
- (3) product is a staple
- (4) Q And cetrus peribus (ph) if the price of toki chum falls
- (5) either the demand for sockeye - some people will shift from
- (6) buying sockeye to buying chum or if there have been pressur
- (7) to reduce the price of sockeye salmon isn t that true?
- (8) A Well that depends on your assumption as to the degree of
- (9) cross elasticity To the extent that sockeye is regarded as a
- (10) different product certainly is marketed as a separate product
- (11) and identified as a separate product from chum then yes it
- (12) may be blunted and you may not get an effect at all
- (13) in the event that the price is the same of low quality
- (14) chum you may not have such effect If it s a chum of high
- (15) quality closely substitutable yes it may effect the demand
- (16) The other point is it depends on quantities involved If
- (17) the product whose price has gone down is a very small quanti
- (18) in relations to the other product the impact on its price may
- (19) be very small
- (20) Q Now as I understood your testimony on direct it was your
- (21) finding that the prices of species of salmon red salmon other
- (22) than sockeye began falling in 1988 in Japan?
- (23) A I m sorry red salmon other than sockeye?
- (24) Q Yes Don t the Japanese refer to chum coho sockeye and
- (25) king if I haven t said it already as red?

Vol 29 5109

- (1) A I m accustomed to think of red meaning sockeye but you re
- (2) right those prices were slipping
- (3) Q Those prices were falling as early as 1988?
- (4) A Late 1988
- (5) Q And they trended down through the first quarter of 1989?
- (6) A We didn t monitor those closely because I was concentratin
- (7) on sockeye in general but I think that s a fair statement
- (8) Q Now let me take you to the bottom paragraph on this page
- (9) MR LYNCH I was just asked how long I m going to
- (10) be I ve got at least another three quarters of an hour
- (11) THE COURT Then we re going to quit
- (12) MR NEAL Judge I think in fairness to my partner
- (13) Mr Sanders I ought to explain why Mr Lynch referred to him
- (14) on that cross elasticities I found this boy from Johnson
- (15) Tennessee talking about counter intuitive up until he got in
- (16) this case he thought that was half back over right tackle I
- (17) can tell you
- (18) THE COURT On that happy note ladies and gentlemen
- (19) have a good weekend and don t read anything about the case
- (20) Would counsel stay for just a minute please?
- (21) (Jury out at 2 04 p m)
- (22) THE COURT On the record I wanted to know kind of
- (23) where we were timewise Are we going to finish up Monday as
- (24) you suggested?
- (25) MR O NEILL Yes I may have to cut out some

Vol 29 5110

Vol 29 5112

- (1) processors
- (2) THE COURT That wouldn t cause a problem I suspect
- (3) MR NEAL No it wouldn t offend me at all Your
- (4) Honor
- (5) MR O NEILL But depending upon the length of the
- (6) cross-examinations I expect to finish on Monday and I ll
- (7) withdraw the processors now We have Dr Crutchfield Moore
- (8) Lohrer
- (9) MR NEAL Karpoff
- (10) MR O NEILL And Mendleson and that s it
- (11) MR NEAL Freeberg he s going to take care of them
- (12) MR O NEILL He took care of Freeberg and to the
- (13) extent Pat doesn t cross crucify him on Freeberg s testimony I
- (14) won t call him
- (15) THE COURT We had talked a few days ago about jury
- (16) instructions When might I expect to see something of your
- (17) product?
- (18) MR LYNCH I instructed Mr Daum that you were
- (19) looking for that He said he thought he would have something
- (20) Monday or Tuesday Is that all right?
- (21) THE COURT That s in the ballpark that s right
- (22) Mr Jamin or whoever are we on track for Monday Tuesday
- (23) for some proposed instructions?
- (24) MR JAMIN We will get them on track Your Honor
- (25) THE COURT Have a good weekend

Vol 29 5111

Vol 29 5113

- (1) MR O NEILL Judge as a matter of focus the one
- (2) thing - the instructions will be relatively easy but just for
- (3) your information as a matter of focus the challenge is going
- (4) to be getting a verdict form that isn t as long as the Bible
- (5) and I think that is - we ll do our best on that
- (6) THE COURT They are very tough to write Let s be
- (7) working on it
- (8) MR LYNCH I think that s the reason it s taking
- (9) until Tuesday I might say in that regard the resolution of
- (10) this stipulation is very important to having a verdict form
- (11) that we know what it s going to mean
- (12) THE COURT We will be in recess subject to call
- (13) (Proceedings recessed at 2 08 p m)

(1) PROCEEDINGS
 (2) (Jury in at 8 00 a m)
 (3) (Call to Order of the Court)
 (4) THE COURT Good morning ladies and gentlemen This
 (5) is the continuation of trial in case A89 0095 civil in re the
 (6) Exxon Valdez Good morning Dr Crutchfield Mr Lynch you
 (7) may continue your cross examination
 (8) Doctor you understand you re still under oath?
 (9) THE WITNESS I m sorry?
 (10) THE COURT You understand you re still under oath
 (11) THE WITNESS I understand sir
 (12) THE COURT Very well
 (13) CONTINUED CROSS EXAMINATION OF DR JAMES
 CRUTCHFIELD
 (14) BY MR LYNCH
 (15) Q Good morning Dr Crutchfield
 (16) A Good morning Mr Lynch
 (17) Q I wonder if you would turn again to 2047 2047 May I
 (18) approach Your Honor?
 (19) There it is right there I ll refer to these page numbers
 (20) just by the last three numbers there and the page I m on is
 (21) 170 170
 (22) A I m sorry?
 (23) Q If you look at the bottom of page 170 - just look at those
 (24) last three numbers
 (25) A Oh I see

Vol 30 5119

(1) Q Dr Crutchfield on Friday we were talking about the
 (2) Atkinson News Report of June 7 1989 and I think we left off
 (3) we hadn t talked about this Mr Atkinson reported on June 7
 (4) that the market is caught in a vicious cycle whereby the low
 (5) prices for product and inventory is causing reduced prices for
 (6) this year s production and lower prices for quote new end
 (7) quote product push the prices for carryover inventory down
 (8) even further
 (9) Now with reference to your previous analysis of salmon
 (10) prices sockeye salmon prices in Upper Cook Inlet you had
 used
 (11) June as the reference point when you evaluated inventories
 (12) isn t that correct sir?
 (13) A No that s not correct We used April 1st
 (14) Q In the Glacier Bay case?
 (15) A Oh in Glacier Bay?
 (16) Q Yes sir That was your previous analysis of sockeye
 (17) prices correct?
 (18) A I can t remember what the Glacier Bay date was - sorry I
 (19) can t bring that date to mind
 (20) Q You have in that booklet there a transcript of your
 (21) testimony in Glacier Bay and with the Court s permission I ll
 (22) bring you another copy so you don t have to lose your place
 (23) If you ll look at page 17 sir -
 (24) A Right
 (25) Q - you see that - if you begin at line 19 you see

Vol 30 5120

- (1) Mr O Neill asked you about P114 which was an exhibit that you
 (2) had prepared?
 (3) A Yes uh huh
 (4) Q And you described that as figures for June holdings of
 (5) frozen salmon products in Japan?
 (6) A Right
 (7) Q And you said you chose June because that s the period
 when
 (8) the last year s pack hopefully is pretty well cleaned out and
 (9) when the new pack is beginning to come correct?
 (10) A Yes
 (11) Q You said it s a good inventory - good indicator of
 (12) inventories held in anticipation of bridging the period until
 (13) new supplies come in?
 (14) A Yes
 (15) Q Then you said the higher the inventory the greater the
 (16) pressure on sellers?
 (17) A Correct
 (18) Q Now the reason that that s so as I believe you testified
 (19) on direct on Friday is that the product life of inventory is
 (20) about nine months is that correct?
 (21) A Well it can go longer but there are losses of quality if
 (22) you carry it longer and it s expensive to carry it
 (23) Q So if a processor has purchased inventory in this case in
 (24) 1988 and he gets into June of the following year he s facing
 (25) two problems or maybe three problems One the quality of the

Vol 30 5121

- (1) product he s holding is getting to the point where it s
 (2) beginning to deteriorate is that correct sir?
 (3) A That may be an extreme statement It is going down
 (4) certainly and he d like to clean that out prior to the time new
 (5) product comes in
 (6) Q And secondly the cost the accumulated cost of keeping it
 (7) frozen is growing and so his total cost is getting higher?
 (8) A That s correct
 (9) Q And particularly in 1989 holdings of inventory had been
 (10) acquired at record high costs is that correct sir?
 (11) A Yes
 (12) Q And thirdly new product is beginning to become available
 (13) to the market so buyers don t - can look forward to having new
 (14) product coming in from the current year s catch is that
 (15) correct sir?
 (16) A Shortly thereafter yes
 (17) Q And all of those things build up pressure on the holders of
 (18) inventory to sell the product that they re holding?
 (19) A Yes
 (20) Q Now we saw last week that - last Friday when we were
 (21) talking that as early as January it was being reported by Mr
 (22) Atkinson that holders of inventory were seeing the price
 (23) decline and were holding onto their inventory in hope that they
 (24) would be able to sell it at a higher price is that correct
 (25) sir?

Vol 30 5122

- (1) A That s correct for sockeye
 (2) Q And that continued - well Mr Atkinson reported that that
 (3) was correct for all salmon species didn t he?
 (4) A Yes
 (5) Q I m sorry I m not sure I heard your answer sir
 (6) A Yes that s correct
 (7) Q And as the - as the 1989 year moved forward past your
 (8) March 31 cutoff date processors continued to hold inventory
 (9) off the market hoping they could eventually get a higher price
 (10) isn t that correct sir?
 (11) A I - I really can t accept that as an accurate description
 (12) of what they were doing in terms of their motivation We saw
 (13) during this period that they were continuing to get relatively
 (14) high prices for sockeye right straight through the first
 (15) quarter of 1989 and into the second quarter At the same time
 (16) Mr Atkinson was saying - and I believe one of your
 (17) deposition - deposition of one of your experts was saying that
 (18) they were trying to liquidate inventory and I find myself hard
 (19) pressed to explain how they could be holding product off the
 (20) market to keep prices up and at the same time liquidating
 (21) inventory and at the same time importing products of the same
 (22) type from the United States
 (23) Q Well the importing the products - we ll get to the
 (24) importing of products but we agreed the importing of products
 (25) was probably products in which the Japanese buyers already had

Vol 30 5123

- (1) some investment?
 (2) A That s not necessarily so I don t know that to be so
 (3) These were - the export figures were reported as U S exports
 (4) which I would assume means that they were held in U S
 (5) ownership
 (6) Q By U S companies partially owned or financed by Japanese
 (7) companies is that correct?
 (8) A That s probably true yes
 (9) Q Now with reference you said we saw they were getting high
 (10) prices Where did we see that?
 (11) A In the wholesale prices that we showed on the exhibit that
 (12) was put up last Friday
 (13) Q And do you recall Mr Atkinson reporting and us discussing
 (14) last Friday that although it was listed at higher prices it
 (15) wouldn t sell at those prices?
 (16) A That - he said that yes I don t know that this was
 (17) necessarily true There s no indication in Mr Atkinson s
 (18) report of any volumes moving at those different prices The
 (19) prices that we showed and for wholesale are prices drawn from
 (20) the TCWM transactions actual transactions that took place so
 (21) I presume those were prices at which real sales were made
 (22) Q May I approach Your Honor?
 (23) I d just like to show you this document It s not an
 (24) exhibit but I believe that you ll recognize it sir as a
 (25) statistical compilation that you used

Vol 30 5124

- (1) A Yes
- (2) Q Now neither you nor I want to spend the time to find every line item in this computer printout but this is basically the source of your information about U S exports of salmon?
- (3) A I believe that is the case The actual gathering of those data was done by computer accessing the export data base in the Department of Commerce
- (4) Q And this is the National Marine Fisheries Service on statistic on U S monthly export of sockeye salmon fresh and frozen?
- (5) A Yes
- (6) Q Now I ll represent to you sir that if you go through here you ll find that there was a 26 percent price decline in those transactions Did you check into that sir?
- (7) A No I did not
- (8) Q And that the decline from the year earlier was - got as high as 30 percent that is for the equivalent month of the earlier year Would that indicate to you that these exports were being made in the face of a falling price?
- (9) A Well they certainly were being made and they were being made voluntarily so I assume they were being made on the assumption that the product could be sold profitably
- (10) Q Let s talk about that We understand you ve taught us that salmon caught in Alaska sockeye salmon or salmon caught somewhere else in the United States is good for about nine

Vol 30 5125

- (1) months to a year in storage its product life correct?
- (2) A Well I don t believe I stated that but that s close enough yes
- (3) Q Okay And so the salmon that we re talking about having been exported that was frozen salmon that had been caught in the prior season and that had to be sold sometime about June no matter where it was - where the freezer was or it would begin to lose its marketability isn t that correct?
- (4) A That s too extreme a statement again Mr Lynch that product can be held and still be in marketable saleable form for longer than nine months That isn t necessarily a limit The nine months really refers to the fact that thereafter new pack is coming in but there have been plenty of occasions where people have held over previous year s pack Not necessarily they wanted to but they did Rather than dump it they felt that they could hold it and do better
- (5) Q But when they hold it over there is a decline in product quality isn t that correct sir?
- (6) A There would be some decline yes
- (7) Q Okay And just as you said in Glacier Bay that the Japanese holders of inventory would begin to feel pressure to sell by the time June of the year ran around that would be just as true of U S holders wouldn t it?
- (8) A Yes
- (9) Q Because as you said the market for sockeye salmon is

Vol 30 5126

- (1) predominantly in Japan right?
- (2) A I m sorry?
- (3) Q The market for U S Alaska caught sockeye salmon is predominantly in Japan?
- (4) A Yes that s correct
- (5) Q So if someone is holding a warehouse full of frozen sockeye salmon he anticipated he better get that to Japan sooner or later if he wants to sell it correct?
- (6) A Yes
- (7) Q If he comes into the first quarter of the following year and he sees falling prices and he s got a warehouse full of sockeye salmon there s some pressure on him to find a market for that salmon over in Japan correct?
- (8) A The statement you made though is not entirely true He would not have been looking at falling prices in the first quarter of 1989 Those prices held up at wholesale through May and it wasn t until then that they began to drop sharply
- (9) Q I ll represent to you again Dr Crutchfield that this computer data base which you used to create that chart and we ll put in the evidence but I ll represent to you for purposes of discussion that the price at which those exports were transferred fell 28 percent over three months You didn t look into that did you?
- (10) A No no I didn t see that
- (11) Q Now let s go on to the next issue if I can find it here

Vol 30 5127

- (1) of Mr Atkinson s report That s on - we ve been looking at June 7 Let s look at June 14 Will you turn to page 174 in Exhibit 2047? I m referring to that machine written number at the bottom of the page
- (2) A Right
- (3) Q You see a week later Mr Atkinson reports that the Japanese market for salmon has been hit with a double punch as the new season begins See that sir?
- (4) A Yes uh huh
- (5) Q And the first punch is that there have been record imports That s what we ve just been talking about correct?
- (6) A Correct
- (7) Q And a growth in the fist three months of 269 percent correct and that led according to Mr Atkinson to aggressive competition to move product is that right?
- (8) A Right
- (9) Q And it resulted in a continuing decline of wholesale prices of all species That s what Mr Atkinson reported correct?
- (10) A Yes
- (11) Q He goes on to say this includes the price of sockeye salmon although the supply is not necessarily excessive That was your point on direct correct sir?
- (12) A Yes
- (13) Q And he goes on to say something we talked about earlier this morning while frozen Bristol sockeye is still quote

Vol 30 5128

- (1) listed end quote at relatively high levels actual sales are
 (2) only made at about a thousand - 1100 yen per kilo is that
 (3) correct sir?
 (4) A Yes
 (5) Q As opposed to the previous year s starting price in Tokyo
 (6) of about 1400 yen per kilo?
 (7) A Yes
 (8) Q And when you take 1100 yen per kilo and work it back to an
 (9) ex vessel or grounds price it comes out a little over a dollar
 (10) a pound doesn t it sir?
 (11) A Yes I might point out sir you re still talking about
 (12) June and our discussion earlier was about January February
 (13) and
 (14) March This was the period we were concerned with as the
 (15) period in which expectations as to next year s supply and
 (16) demand conditions are basically formed
 (17) Q Now let s - let me just take that point try to stay with
 (18) it for a second What you meant by that answer is that in your
 (19) study you only look at January February and March?
 (20) A In the formation of our model yes that s correct
 (21) Q And you assumed that what market - what buyers and sellers
 (22) in Tokyo guessed judged predicted interpreted about the
 (23) market took together all the factors of supply and demand and
 (24) all those factors that go together to make a price is that
 (25) correct sir?
 A That s correct

Vol 30 5129

- (1) Q And your judgment was that they were pretty optimistic in
 (2) those first three months correct?
 (3) A That s correct
 (4) Q And then you run down the curtain and you said anything
 (5) that happened after March 31 that must be attributable to the
 (6) oil spill correct?
 (7) A Not entirely but very substantially yes
 (8) Q Your model and your testimony on direct assigned the
 (9) differential between your predicted fourth quarter price in
 (10) relation to the first quarter price entirely to the oil spill
 (11) is that correct sir?
 (12) A Yes uh huh
 (13) Q But in fact in June according to Mr Atkinson the salmon
 (14) market was hit by a double punch correct?
 (15) A That s what he says yes
 (16) Q And one of those punches was that imports had grown much
 (17) more than people had anticipated and than you had studied in
 (18) your first three months correct?
 (19) A Right
 (20) Q And he reported that as a result of that growth in import
 (21) prices were declining correct?
 (22) A Right
 (23) Q And he goes on to say in this next paragraph down here that
 (24) a further blow has been that it cost the Japanese consumer
 (25) more
 to buy a salmon because the value of the yen relative to the

Vol 30 5130

- (1) dollar has gone down?
 (2) A Well by a very small amount yeah
 (3) Q Well enough of an amount to be described by Mr Atkinson
 (4) in this report as having driven ex vessel prices to about a
 (5) dollar a pound?
 (6) A I - I don t believe that the export - the exchange rate
 (7) change would have had a major influence at that point The
 (8) change was not very substantial Anyone who was really
 (9) concerned about the possibility of changes in exchange rates
 (10) has available to him the option to choose by Japanese firms of
 (11) hedging against any change in exchange rates That was the
 (12) first interruption for some years of a longer term downward
 (13) trend in the value of the dollar which terminated - well
 (14) hasn t terminated at all It s continued right straight
 (15) through since then
 (16) Q Certainly happening right now isn t it?
 (17) A Yes it is that
 (18) Q Dr Crutchfield you ll at least agree with me that as
 (19) knowledgeable as well informed an observer of the Japanese
 (20) market as Mr Atkinson whether you agree with him or not on
 (21) June 14 his perception was that the change in the exchange
 (22) rate
 had been a blow to the Japanese salmon market?
 (23) A That s what he states and I simply don t agree with that
 (24) Q You don t agree with that?
 (25) A No

Vol 30 5131

- (1) Q And he was predicting as of June to readers of his news
 (2) report that the effect of that blow would be to drive salmon
 (3) prices for fishermen ex vessel prices down to a dollar a
 (4) pound?
 (5) A That s what he states yes Let me again reiterate my
 (6) position that we did not use second quarter prices in
 (7) constructing our model for precisely the kinds of reasons
 (8) you re talking about All sorts of odd things happened in the
 (9) second quarter depending on inventory situations and other
 (10) developments that could not have been foreseen prior to that
 (11) time So the prices during that period would not really be
 (12) fully representative
 (13) They re also prices that occur after the spill and tend to
 (14) incorporate any adverse affects that might be anticipated on
 (15) the part of the trade by the spill as we came into the next
 (16) year s pack
 (17) Q Let me go back - let me go on to the next page of this
 (18) report I just want to follow up with you though a little
 (19) bit on that last answer if I may
 (20) You told us when you were being examined by Mr - I can t
 (21) hit the right button - you told us when you were being
 (22) examined by Mr O'Neill that traders in the Tokyo salmon
 (23) market
 (24) are concerned about the risk of committing to purchase a
 (25) product which they have to buy on a short time and hold for a
 long time correct?

Vol 30 5132

- (1) A That s correct
 (2) Q And that they re sophisticated and that they re
 (3) experienced knowledgeable businessmen and that s why you
 used
 (4) the Tokyo market as the apotheosis of market forces correct?
 (5) A That s correct
 (6) Q Now you re not telling this jury are you that Tokyo
 (7) traders after March 31 of the year have their hands tied if
 (8) something happens in the market that shows them that they ve
 (9) got to lower their prices or they re going to lose money?
 (10) A No
 (11) Q So anything that happens in the second quarter of the year
 (12) that is the time from the end of March until the time the fish
 (13) come in is something that they would have to take account of
 (14) isn t it?
 (15) A Yes they d have to take account of it primarily with
 (16) respect to the fish that they got in the previous year It
 (17) does not necessarily refer directly to incoming fish They
 (18) haven t got any incoming fish from the 89 pack yet A
 (19) dribble but no more than that
 (20) Q Right they haven t got any fish but they re talking to
 (21) the people that buy fish in the United States about what
 (22) they re willing to pay correct?
 (23) A That s correct
 (24) Q If the yen doesn t buy as many dollars as it used to buy
 (25) they can t make a commitment to pay the same number of
 dollars

Vol 30 5133

- (1) unless they re able to get an additional number of yen right?
 (2) A Yes although again the change in the exchange rate
 (3) during that period was relatively small
 (4) Q Whether that was so or not you ll agree the market has to
 (5) react to something like that?
 (6) A It has to react to it if it s enough to affect what goes on
 (7) for a full year thereafter and if they feel that the risk of
 (8) exchange rate changes is too great there s a ready mechanism
 (9) available to them to hedge against that
 (10) Q Well that mechanism doesn t - doesn t retroactively
 (11) change a decline that s already occurred That s a hedge that
 (12) can go into the future isn t it sir?
 (13) A That s correct
 (14) Q And if at the time they make the purchase it s their
 (15) judgment that they can t afford to pay more than a dollar a
 (16) pound for the fish in the United States if they want to pay
 (17) for it - if they want to recover a profit in Japan they won t
 (18) pay more than a dollar a pound will they hedge or no
 (19) correct?
 (20) A No that s correct
 (21) Q Now let s go on to Page 2 You see where Mr Atkinson
 (22) reports something about the False Pass sockeye prices Now
 (23) what is False Pass?
 (24) A It s an area in which there is a sockeye run where fish are
 (25) taken

Vol 30 5134

- (1) Q Is it one of the early runs?
 (2) A Yes
 (3) Q And they re concerned about the price that s being paid
 (4) there I think you ll see from the context they re concerned
 (5) that the price that s being paid in the United States is too
 (6) high Mr Atkinson s reporting in substance that Japanese
 (7) buyers are concerned that processors are expecting them to
 pay
 (8) too high a price is that correct?
 (9) A That s what he says uh huh
 (10) Q He cites three reasons does he not?
 (11) A This next page is so blurred I can t read it
 (12) Q Let me see if I can read it He says one the wholesale
 (13) prices for most species of salmon have dropped considerably
 (14) since the start of the year and this puts pressure on the price
 (15) for sockeye?
 (16) A Where are you reading Mr Lynch?
 (17) Q May I approach Your Honor?
 (18) A I m having trouble locating it
 (19) Q It s on the second page sir
 (20) Oh no wonder you re having a problem Let me see if I can
 (21) give you a better copy
 (22) You have any objection to my highlighting? I ll give you
 (23) my sheet here
 (24) You see where I ve highlighted there s a number next to
 (25) it I don t know what it is but it begins the Japanese are

Vol 30 5135

- (1) concerned however about False Pass sockeye prices for
 several
 (2) reasons?
 (3) A Yes I see that
 (4) Q The wholesale prices for most species of salmon have
 (5) dropped considerably since the start of the year and this puts
 (6) pressure on the price for sockeye second the Japanese
 (7) land based high sea salmon fleet is landing a larger percentage
 (8) of sockeye than expected and three - that s another
 (9) unforeseen inventory issue correct sir?
 (10) A I m sorry?
 (11) Q The second point refers to the fact that they were - that
 (12) the inventory of sockeye was going to be larger than had been
 (13) previously anticipated?
 (14) A Well the Japanese catch of sockeye their own catch is a
 (15) very small fraction of the total less than five percent
 (16) Q You think Mr Atkinson s wrong when he says the Japanese
 (17) were concerned about that?
 (18) A They may well have been concerned but the amount
 involved
 (19) is so small that it s hard to see how that would influence
 (20) market expectation in any significant way Total Japanese
 (21) catch is - for the last few years has been about five percent
 (22) or so of the total of imports
 (23) Q But in this year it was greater than expected because they
 (24) were catching more sockeye than the past five years correct?
 (25) A Apparently so

Vol 30 5136

- (1) Q And then three the Japanese yen is continuing to weaken
 (2) reducing the buying power of the Japanese correct?
 (3) A Again I must state that I looked - I haven't - can't
 (4) bring the exact figures to mind although I have them but the
 (5) actual increase in the value of the dollar during this period
 (6) which is a function of the budget deficit that we were running
 (7) at the time very large budget deficit the actual increase in
 (8) the value of the dollar the - if you like the weakening of
 (9) the yen was very small It never exceeded six to nine percent
 (10) Q But small or large a market can become jittery and nervous
 (11) about that kind of situation is that correct sir?
 (12) A It could You have not mentioned the fact though that
 (13) the - that it's mentioned here in Atkinson's report that the
 (14) market was also very jittery about the impact of the oil
 (15) spill This was a major factor
 (16) Q I'm going to - I'm going to mention that trust me I'm
 (17) going to get to that
 (18) A Very good
 (19) Q You see that in this report on June 14 three months after
 (20) you rang down the curtain Mr Atkinson reports the Japanese
 (21) are expected to move slowly this year and buy with caution
 (22) You have any reason to doubt the accuracy of that report by Mr
 (23) Atkinson?
 (24) A No I don't
 (25) Q If you go to the June 21 report - someone recommended to

Vol 30 5138

- (1) about the oil spill and I assume you're referring to the spill
 (2) by the Exxon Valdez That's covered in the next paragraph
 (3) down Alaska salmon information?
 (4) A Yes
 (5) Q You see what Mr Atkinson reports there? Could you read
 (6) that at the start of that paragraph?
 (7) A The effect of the oil spill in Prince William Sound is
 (8) being stressed by the fishermen as they stress for strong
 (9) ex vessel price
 (10) Q Now that report says that the fishermen are stressing the
 (11) oil spill does it not sir?
 (12) A Yes
 (13) Q And what would cause - how could the fishermen possibly
 (14) get some benefit out of this oil spill in dealing with their
 (15) Japanese customers?
 (16) A I don't think that's what they're saying What they're
 (17) saying is that the fishermen are concerned about the likelihood
 (18) that the oil spill will be used as a weapon in negotiating a
 (19) large downward push in prices which in fact happened as it
 (20) had happened before in the Glacier Bay case
 (21) Q You think that's what Mr Atkinson is reporting here?
 (22) A Mr Atkinson is reporting what he learns from the trade
 (23) The trade is not going to tell Mr Atkinson that it is going to
 (24) use the effect of the spill as a bargaining weapon in trying to
 (25) get lower prices It would be foolish for them to make that

Vol 30 5137

- (1) me that I get bifocals and take the glasses off to see the
 (2) paper and I can't read the screen
 (3) THE COURT Doesn't solve all the problems does it?
 (4) MR LYNCH You recommend against them Your Honor?
 (5) THE COURT Oh I don't know
 (6) THE WITNESS You're looking at the report for June
 (7) 28?
 (8) BY MR LYNCH
 (9) Q June 21 sir it's Page 178 at the bottom It's the next
 (10) week after the one we've been talking about begins with high
 (11) seas sockeye
 (12) A Right
 (13) Q And Mr Atkinson reports that the price of high seas
 (14) sockeye continue to fall as medium driftnet fleet prepares to
 (15) end operations?
 (16) A Right
 (17) Q And he says there down in the - toward the bottom of the
 (18) paragraph the decline in beach prices is attributed to one
 (19) the generally soft salmon market and two prices on the
 (20) consumer wholesale markets correct?
 (21) A Yes
 (22) Q Now these were - these were developments that occurred
 (23) after March 31 correct?
 (24) A Right
 (25) Q Now you told me - you took me to task for not talking

Vol 30 5139

- (1) kind of statement to him
 (2) Q If the trade tells Mr Atkinson they're going to use
 (3) exchange values to bargain for a lower price you don't think
 (4) that's significant Or the trade tells Mr Atkinson they're
 (5) going to use the Russian/Japanese negotiations over high seas
 (6) salmon to bargain for a lower price they're going to use the
 (7) chum harvest to bargain for a lower price they're going to use
 (8) the price of foreign trout for lower price but they're not
 (9) going to tell him about this matter?
 (10) A I think those are very different matters Those are
 (11) objective facts which he can bring to bear but I repeat I
 (12) cannot imagine anybody in the wholesale trade either in Japan
 (13) or in the United States saying specifically that fear of real
 (14) disturbance in the market caused by the oil spill is going to
 (15) be used as a weapon to lower prices to fishermen That is not
 (16) something that -
 (17) Q Isn't it a fact that the natural reading of this sentence
 (18) and what any informed reader would take is that the fishermen
 (19) were saying to the Japanese suppliers you better pay us a high
 (20) price for our salmon because supply will be down due to
 (21) closures caused by the oil spill?
 (22) A No that's not I think what they're saying at all
 (23) Mr Lynch What they're saying is that they do not want a
 (24) repeat of what they saw during the Glacier Bay case and of the
 (25) rumors that they were hearing going around about what the

Vol 30 5140

- (1) opening price might be
 (2) Q So that's what you interpret Mr Atkinson to be saying
 (3) here?
 (4) A That's right.
 (5) Q Now let's just go on to the next page of this same report
 (6) where he talks about Kodiak That's page 179
 (7) A I'll do the best I can
 (8) Q Is that another bad page?
 (9) A Yeah
 (10) Q Your Honor may I?
 (11) A I can - well thanks
 (12) Q Now Mr Atkinson reports there there is pressure from
 (13) fishermen for high ex vessel prices for sockeye salmon if and
 (14) when the fishery begins but the Japanese point out that Kodiak
 (15) accounts for only 9 percent of the total sockeye landings The
 (16) effect on the overall market therefore should be limited
 (17) Is there any doubt in your mind that in this instance Mr
 (18) Atkinson is reporting that the fishermen are using the oil
 (19) spill as a weapon in their negotiation with the buyer of their
 (20) salmon?
 (21) A Mr Lynch if you go back and look at the record of
 (22) negotiations between fishermen and the buyers of salmon
 (23) whether it be sockeye or anything else this is exactly the
 (24) position that each group takes At the beginning of the
 (25) negotiation price the fishermen will muster all the reasons

Vol 30 5141

- (1) they can think of why they should get a higher price
 (2) Q Right
 (3) A The processors will muster all the reasons they can think
 (4) of why the price should be lower There's nothing different in
 (5) that than would have occurred in any other year except that
 (6) now we have a major event the impact of which as we heard
 (7) testimony on the other day was unknown but created a great
 (8) deal of uncertainty and concern in both consumer and trader
 (9) minds
 (10) Q Now the reference here though is to concern asserted by
 (11) the fishermen that there wouldn't be enough production?
 (12) A Yes it is
 (13) Q And the argument that because there isn't going to be
 (14) enough production you ought to pay us a higher price?
 (15) A That's what they're asking for
 (16) Q And the Japanese respond to that not by saying anything
 (17) about consumer concern not by saying anything about
 (18) uncertainty but saying you guys account for only nine percent
 (19) of the catch correct?
 (20) A Right
 (21) Q And they say that they're going to wait out - that the
 (22) real concern is reduced - that Prince William Sound will
 (23) result in reduced landings and total elimination of production
 (24) in that district correct?
 (25) A Yes

Vol 30 5142

- (1) Q And that's also a supply concern is it not?
 (2) A That is correct
 (3) Q Now if you'll turn to the report for June 28th is that a
 (4) legible copy?
 (5) A What is the page number?
 (6) Q 184
 (7) A Right
 (8) Q And you see there the prospects for good - this is the
 (9) second paragraph on the subject of Bristol Bay sockeye?
 (10) A Yes
 (11) Q Prospects for good landings are expected to support the
 (12) already softening market in Japan where the wholesale price
 (13) for high seas sockeye continues to drop?
 (14) A Yes
 (15) Q There are reports that some packers are already indicating
 (16) an ex vessel price of one dollar per pound correct sir?
 (17) A Yes
 (18) Q Now that - that report relates again to the anticipated
 (19) impact of higher supplies isn't that correct sir?
 (20) A Yes
 (21) Q Now let's turn to the second page of that same report
 (22) That deals with salmon supplies specifically does it not sir?
 (23) A Yes it does
 (24) Q And in the last sentence of the - second to the last
 (25) sentence - last two sentences of the first paragraph Mr

Vol 30 5143

- (1) Atkinson reports salmon imports are also expected to reach
 (2) 200 000 tons this season a 35 percent increase over the 1988
 (3) season right?
 (4) A Yes
 (5) Q And the increase in imports will be the result of increased
 (6) landings of wild salmon in North America That means they're
 (7) catching more fish in North America correct?
 (8) A They're hoping to or expecting to yes They haven't got
 (9) them yet
 (10) Q They caught some of them because he's already reported
 on
 (11) False Pass and he's already reported on what's going on in
 (12) Bristol Bay?
 (13) A He's talked about False Pass which is a relatively small
 (14) early fishery and the early catch in Bristol Bay well before
 (15) the big part of the run has come through he doesn't know yet
 (16) Q Even then catches were exceeding previous catch?
 (17) A Yes
 (18) Q And the high seas were greater than the - than previous
 (19) catches?
 (20) A Yes but again that's a small part less than five
 (21) percent of the total catch
 (22) Q So increased landings in North America coupled with
 (23) efforts to promote great effort of farmed salmon to Japan and
 (24) world salmon production during the 1989/ 90 season is
 expected
 (25) to jump to 310 000 tons a 73 percent increase over the 1988

Vol 30 5144

- (1) and 89 season therefore the total for the 1989/ 90 season
 (2) could be as much as 400 000 tons is that correct?
 (3) A Yes but let me point out that if you take that total world
 (4) production figure and take out the huge increase in production
 (5) of pink salmon and the very large increase in production of
 (6) Atlantic farm salmon largely from Norway the actual increase
 (7) was something in the neighborhood of 20 to - 20 to 30 000
 (8) tons It was not a spectacular increase and it followed four
 (9) years of declining catches Pinks do not compete directly with
 (10) sockeye in the Japanese market and at that time in 1989 the
 (11) total amount of farmed salmon farmed Atlantic salmon coming
 (12) into the Japanese market was very small
 (13) Q So it s your position that these problems really weren t
 (14) problems at all?
 (15) A What I m saying is that the market for salmon worldwide is
 (16) not a market in which fish flow freely from all producing areas
 (17) to all consuming areas The Japanese market did not take
 (18) large
 (19) amounts - in fact it took very small amounts of farmed
 (20) Atlantic salmon which is by far the largest element in that
 (21) increase in aquaculture output They did take increased
 (22) supplies of coho from Chile but again coho is not a perfect
 (23) substitute or a strong substitute for sockeye
 (24) Actually what I m saying is the large part of the jump in
 (25) world production that you mentioned went to markets that did
 not compete at all with sockeye or competed only in very

Vol 30 5145

- (1) limited degree in Japan that is
 (2) Q Let me just turn to the next page of this same report
 (3) sir Is it - are you changing your view of Mr Atkinson s
 (4) knowledge of the Japanese market and his - the accuracy of his
 (5) sources?
 (6) A No I think all I can say is that what he is reporting is
 (7) what he hears from the Japanese trader groups and this is
 (8) probably being reported very accurately
 (9) Q What he reads in the Japanese trade press correct sir?
 (10) A That s correct I cannot see any possible reason why
 (11) either Japanese traders or the Japanese trade press which
 (12) reflects pretty strongly their views would want to publicize
 (13) any possible negative effects on the market of a big oil spill
 (14) Q But they would want to publicize negative effects of
 (15) everything else that might help them to get a lower price is
 (16) that your interpreting?
 (17) A These are things that could be observed easily in the
 (18) market There was no uncertainty about these and all of them
 (19) taken together are a relatively small part of total supply
 (20) We re talking about a total supply in 1989 of 350 000 metric
 (21) tons and the areas you re talking about are a small fraction
 (22) of that
 (23) Sure he will report these and he s correct in reporting
 (24) them as he is but nothing has been said in anything you ve
 (25) read so far as to the impact on the demand side on the part of

Vol 30 5146

- (1) the traders All of it has been talk about impact on the
 (2) supply side
 (3) Q Look at the first sentence on Page 3 of this report Mr
 (4) Atkinson is talking about salmon supply talking about the -
 (5) the Japanese market not talking about Norway not talking
 (6) about Seattle but the Japanese market says while there are
 (7) various reasons for the rapid decline this year And I m sure
 (8) if you read back you ll see that -
 (9) A Excuse me?
 (10) Q Page 3
 (11) A Oh okay
 (12) Q The large increase in farmed imports just as the new season
 (13) was about to begin parentheses relatively low prices caused
 (14) confusion in the marketplace
 (15) A I cannot agree with Mr Atkinson s interpretation of that
 (16) The total amount in aquaculture that came into Japan in the
 (17) year we re concerned with 1989 was about 16 000 tons The
 (18) total amount of Atlantics which are alleged to be the
 (19) principal competitor of sockeye in this aquaculture component
 (20) came to significantly less than that because a large chunk of
 (21) the imports were coho coming in from Chile
 (22) Total amount for example coming in from Norway in 1989
 (23) was only about 7 000 metric tons Compare that to 350 000
 (24) metric tons of total supply That goes into the market without
 (25) a nipple

Vol 30 5147

- (1) Q Now I promised Mr O Neill that I would try to finish
 (2) within the hour this morning so you could go home and I m
 (3) going to try to do that and I ve got a little bit more material
 (4) I need to cover here
 (5) Let me just ask you a few questions about your model
 (6) First of all your model was designed by you and by your
 (7) colleagues only to evaluate sockeye salmon in Upper Cook
 Inlet
 (8) correct?
 (9) A That s correct and let me make it clear that the actual
 (10) modeling work was done by Mr Mark Freeberg one of the
 (11) partners of NRC I am not myself a modeler I asked some
 (12) questions which I wanted answered Mr Freeberg did the
 design
 (13) and execution of the model
 (14) Q You are not yourself an econometrician as they call it?
 (15) A I m not an econometrician
 (16) Q You couldn t construct this model on your own if you wanted
 (17) to correct?
 (18) A I won t answer that yes or no I think I could have
 (19) managed it but why should I when I had an expert
 (20) Q I see So Mr Freeberg is a number cruncher?
 (21) A Mr Freeberg is a lot more than a number cruncher sir
 (22) Q I m just trying to understand I understood you to say
 (23) that you re not qualified as a modeler That s what you
 (24) testified at your deposition?
 (25) A That s correct uh huh

Vol 30 5148

- (1) Q Now you just said you think you could create a model and
 (2) I'm confused whether Mr. Freeberg is the modeler or you're the
 (3) modeler?
 (4) A What I was - and the answer to your question was I guess
 (5) half serious and half not. The model that was actually
 (6) constructed is a very simple regression. It is not a complex
 (7) multi-variant model which would have required large amounts
 of
 (8) expertise. All I was saying is that while I possibly could
 (9) have constructed that model, I felt no impulse to do so since I
 (10) had a person in the firm for whom that specific
 (11) responsibility -
 (12) Q Well, it is true though that you are not a qualified
 (13) modeler, is that correct?
 (14) A That is certainly true.
 (15) Q And it's a possibility that you could have constructed it
 (16) but that's not what you do, correct?
 (17) A That's correct.
 (18) Q And not what you've done in your career?
 (19) A Right.
 (20) Q Now with reference to this model you mentioned in passing
 (21) when you were talking to Mr. O'Neill that you adjusted the
 (22) Tokyo Central Wholesale Market prices, isn't that correct, sir?
 (23) A Yes, uh, huh.
 (24) Q Now let me ask you if you would look at Exhibit DX1842 for
 (25) identification, which is the first tab I think in your book.

Vol 30 5149

- (1) A Correct.
 (2) Q Do you recognize this as an initial draft of the report
 (3) that you prepared for Mr. O'Neill and his colleagues on your
 (4) study of grounds prices for sockeye salmon in connection with
 (5) the Exxon Valdez matter?
 (6) A That's correct.
 (7) Q Would you turn to Page 24. Now this is not the report
 (8) that you ultimately made, correct, this is a first draft?
 (9) A That's right.
 (10) Q Okay. Now I'd like to address your attention to the last
 (11) paragraph on that page, which says, note that a real price is
 (12) being regressed against a nominal price in this equation. You
 (13) see that, sir?
 (14) A Yes, I do.
 (15) Q Now as an economist, could you tell us what you mean
 when
 (16) you say a real price is being regressed?
 (17) A The real price is the actual or nominal price adjusted to
 (18) remove as far as possible the effects of inflation, to express
 (19) it in constant dollars.
 (20) Q Sometimes we talk about 1989 dollars or 1990 dollars, or
 (21) what would a steak cost in 1900 dollars?
 (22) A That's correct.
 (23) Q What you do is find out if a steak sold for \$1.50 in 1900
 (24) and you take all the inflation to see that it still costs \$19
 (25) today, correct?

Vol 30 5150

- (1) A That's right.
 (2) Q And inflation is a real factor in the way markets work, is
 (3) that correct?
 (4) A Yes, it is.
 (5) Q And is another aspect of this making sure that you have the
 (6) exchange rate correct?
 (7) A Correct.
 (8) Q Now the paragraph goes on to say this approach is
 (9) reasonable since the Japanese buyer should incorporate the
 (10) overall market condition in his buying power and the Japanese
 (11) consumers' purchasing power into his analysis of the
 (12) appropriate price to pay for Alaska salmon. Do you agree with
 (13) that statement, sir?
 (14) A That's correct.
 (15) Q And as such, the market analysis must include the effect of
 (16) inflation and the exchange rate on the offering price, correct?
 (17) A Yes.
 (18) Q What we're just saying one way or the other is that nothing
 (19) more than the fact that what we've talked about earlier, if the
 (20) exchange rate changes, the cost to a Japanese buyer may go
 up
 (21) or down, greater than the advantage to the U.S. fishermen?
 (22) A That's right. May I point out, however, that the exchange
 (23) rate is used in this particular model as an annual average
 (24) exchange rate. We had done some work earlier that I'd asked
 (25) Mark to do, which indicated that short-term changes in the

Vol 30 5151

- (1) exchange rate had very little effect. We couldn't distinguish
 (2) any identifiable effect on prices in the market, so it was
 (3) perfectly logical. You don't respond to month-to-month
 (4) changes, if they run on longer than that, yes, then the effect
 (5) of the exchange rate becomes important. That's why in the
 (6) annual rates that we used, we made that adjustment.
 (7) Q Now in the preceding paragraph you say - or said in this
 (8) draft, the first quarter Tokyo wholesale market price was
 (9) adjusted in two ways: Tokyo prices were adjusted for domestic
 (10) purchasing power, i.e., Japanese inflation, using the Japanese
 (11) consumer price index over the 1973 through 1989 period, is that
 (12) correct?
 (13) A That's correct.
 (14) Q Furthermore, the effect upon price of changes in the yen to
 (15) dollar exchange rate were also incorporated by dividing the
 (16) inflation-adjusted Tokyo price by the real yen to dollar
 (17) exchange rate, correct, sir?
 (18) A That's correct.
 (19) Q And the real yen to dollar exchange rate, like a real
 (20) price, is one that's adjusted for inflation, right?
 (21) A Yes. That was not, however, the final form in which the
 (22) model was used. You're reading from an earlier draft.
 (23) Q Yes, I am, and I'm trying to establish that you didn't do
 (24) this, isn't that correct, sir?
 (25) A Yes.

Vol 30 5152

- (1) Q What you did is instead of using the formula universally
 (2) accepted by economists for carrying out this kind of
 (3) adjustment you inverted the factors did you not sir?
 (4) A That s correct sir
 (5) Q Whereas other economists divide the - the Japanese
 (6) exchange rate by the Japanese inflation factor you divided it
 (7) by the U S inflation factor?
 (8) A That s correct
 (9) Q And you divided the U S dollar by the Japanese inflation
 (10) factor?
 (11) A Yes
 (12) Q Do you know of anyone anywhere who s ever done that
 (13) before?
 (14) A No I don t The - the attempt in adjusting the exchange
 (15) rate was to find a way of recognizing that at the start of our
 (16) period the imports of sockeye from Upper Cook Inlet in fresh
 (17) and frozen form were relatively small Over the course of the
 (18) 14 years that were included in the analysis that proportion
 (19) increased to a very substantial amount We tried to find some
 (20) way of adjusting the exchange rate to reflect the fact that a
 (21) larger and larger proportion of Upper Cook Inlet sockeye were
 (22) going through the Japanese/American exchange rate
 (23) Q During that period of time Japanese cars were being sold
 (24) in larger and larger percentages in the United States isn t
 (25) that correct sir?

Vol 30 5153

- (1) A Yes they were
 (2) Q Did the effect of that higher sale of Japanese cars in the
 (3) United States mean that U S inflation affected the Japanese
 (4) yen that you should calculate what the yen is worth on the
 (5) basis of the U S inflation factor?
 (6) A The exchange rate - I ll give you sort of a bleak answer
 (7) The exchange rate during the period in question was
 responding
 (8) to some highly unusual circumstances Normally we would
 expect
 (9) the exchange rate to reflect the influence of relative rates of
 (10) inflation in the two countries involved In this period the
 (11) United States was running a huge budget deficit which could
 (12) not be financed out of the savings of American consumers or
 (13) business people in all so that a large part of the influence
 (14) on the exchange rate during that period had nothing to do with
 (15) sales of goods and services It was largely a flow of
 (16) financial finance so the exchange rate lost a good deal of its
 (17) direct link to trade during that period
 (18) Q Well if you were buying travelers checks in U S dollars
 (19) and you wanted to go to Japan and get yen you paid the
 (20) exchange rate right?
 (21) A That s true
 (22) Q And you paid the exchange rate based on the Japanese
 (23) inflation rate?
 (24) A In part
 (25) Q You didn t pay it on the basis of the U S inflation rate?

Vol 30 5154

- (1) A Right
 (2) Q You go to Japan you use the Japanese inflation rate?
 (3) A Yes
 (4) Q You go to the United States you use the United States
 (5) inflation rate?
 (6) A Yes
 (7) Q Your formula reverses that?
 (8) A That s right
 (9) Q You know Dr Mendelsohn?
 (10) A Yes
 (11) Q You testified in this case about your perception that there
 (12) was an oil spill impact on price right?
 (13) A Uh huh
 (14) Q And you rely on your model to show the fact of that impact
 (15) correct?
 (16) A Yes
 (17) Q You haven t testified to any numbers correct?
 (18) A I m sorry?
 (19) Q You have not testified to any measurement of the exact
 (20) impact?
 (21) A I did in the report that was submitted to the attorneys and
 (22) the forecast price is included in this analysis yes
 (23) Q But that s not what you ve come here to testify to this
 (24) jury about correct sir?
 (25) A I m not sure exactly the point you re driving at Yes the

Vol 30 5155

- (1) purpose of our study was to provide an estimate of what the
 (2) price would have been absent the spill and that forecast price
 (3) is in our report
 (4) Q In your report but not in the exhibits that you ve offered
 (5) into evidence in this case is it?
 (6) A That s correct
 (7) Q Okay Dr Mendelsohn is going to come and testify about
 (8) that correct?
 (9) A No He may on that but we were prepared to indicate what
 (10) our model indicated the price would have been supported by
 our
 (11) analysis of market conditions during the first three months of
 (12) 89 that we were concerned with and i -
 (13) Q And Dr Mendelsohn - are you familiar with Dr
 (14) Mendelsohn s method of calculating prices?
 (15) A No I did not look at Dr Mendelsohn s study at all
 (16) Q Would it surprise you when he tried to evaluate the impact
 (17) of Japanese yen on purchasing power he used the Japanese
 (18) inflation factor?
 (19) A No
 (20) Q Would it surprise you when he wanted to know about the
 (21) U S dollar and inflation factor he used the factor on the
 (22) U S dollar?
 (23) A No that wouldn t surprise me
 (24) Q Now I have a few final questions I think we ve
 (25) established that going into the sockeye season in Alaska there

Vol 30 5156

- (1) had been runs in other fisheries that exceeded expectations is that correct?
- (2) A In a few very small cases yes We don't really get any clear idea of what the next year is going to look like until
- (3) you are pretty well through the Bristol Bay run That's the biggest single factor in Alaska sockeye production So until
- (4) you know how that's going to go you really don't have any clear picture of what the supply from Alaska is going to be
- (5) just from small runs in False Pass or Chignik
- (6) Q But it is the fact that runs on which the Japanese market relies were greater than expected coming into the Alaska run
- (7) isn't that correct sir?
- (8) A Yes
- (9) Q Whether you think it's important or not that was the case?
- (10) A Well the expectations on which the negotiations take place occur before we know Not only what demand is going to be for the forthcoming year but what supply is going to be The best indication we have while those negotiations are going on are forecasts of Alaska runs in Bristol Bay from the Fisheries Research Institute at the University of Washington and the ADF&G forecasts for Alaska Those are forecasts only and they're subject to wide errors
- (11) So it takes a good deal of uncertainty on both sides
- (12) Supply and demand have to be evaluated in that negotiation
- (13) Q In 1989 the forecasts were strong?

Vol 30 5157

- (1) A Forecast was good
- (2) Q And the forecasts were exceeded?
- (3) A Yes they were exceeded substantially
- (4) Q I'm showing you DX2804 That's a chart you prepared is that not correct sir a chart you used in Glacier Bay?
- (5) A I cannot be sure It may well have been I'm not sure
- (6) Q Does it accurately show according to the best of your recollection that the actual landings of Alaska sockeye North American sockeye in 1989 exceeded all years in the 80s?
- (7) A That's correct
- (8) Q Now last few questions about farmed salmon
- (9) A About what?
- (10) Q Farmed salmon?
- (11) A Yes uh huh
- (12) Q You wrote did you not sir in 1989 you published in 1989 in an article that in aggregate terms it's difficult to avoid the conclusion that farmed salmon must either moderate price increases or actually cut real prices for domestically harvested wild salmon?
- (13) A That's in markets where they are directly affected that's correct In principal - principal area for the United States was in the market for troll caught coho and chinook salmon for which the farmed Atlantic salmon are a pretty fair substitute
- (14) The other market in which there would have been a much greater impact was the European market where the bulk of the

Vol 30 5158

- (1) European farmed salmon went It did not get into the Japanese market
- (2) Q One second sir try to speed this up Let me show you - well you have it up there I believe DX2802 sir
- (3) A DX20 -
- (4) Q 2802
- (5) MR LYNCH Your Honor I think I've got five or so minutes I'm trying to -
- (6) BY MR LYNCH
- (7) Q Do you recognize Exhibit 2802?
- (8) A Yes I do
- (9) Q And that's a report that the general accounting office of the United States prepared on price factors affecting Bristol Bay sockeye salmon?
- (10) A Yes it is
- (11) Q And is it a fact that in studying Bristol Bay prices the general accounting office concluded that it was in part the competitive importance of farmed salmon in the Japanese market
- (12) that explained the decline in prices beginning in 1989?
- (13) A That confirms my opinion that I would have expressed that this was not a very good report It was sort of a quickie job and I think it was not a carefully done study and I would disagree with that conclusion
- (14) I think it simply cannot follow that in 1989 farmed salmon getting in there mostly coho and amounting to something like

Vol 30 5159

- (1) seven or eight percent of the total imports would have had that kind of an impact
- (2) Q Would you turn sir to Exhibit DX2805 that's for identification?
- (3) A Yes
- (4) Q Do you recognize Exhibit 2805 sir?
- (5) A Yes I do
- (6) Q Is that your final report sir in the Glacier Bay case?
- (7) A I believe it is
- (8) Q Would you turn to page 12?
- (9) A Right
- (10) Q Okay You wrote this report in October of 1990 did you not sir?
- (11) A Well it was written yes just prior to that time
- (12) Q So just prior to October of 1990 correct?
- (13) A Yeah
- (14) Q In that report you said the presence of pen reared salmon parenthesis primarily Atlantic salmon in the world market recently has appeared to have significant influence on salmon prices in Japan You see that sir?
- (15) A Yes If you read the next sentence however it modifies that substantially
- (16) Q Yes Well we're not interested in '87
- (17) A No We're interested in 1989
- (18) Q Does the next sentence refer to 1989?

Vol 30 5160

- (1) A No but it -
 (2) Q Okay But sometime between 1987 correct and October of
 (3) 1990 when you wrote this you actually observed that the
 (4) presence of pen reared that is farmed salmon had had
 (5) significant influence on salmon prices in Japan correct?
 (6) A Would you repeat the question? I want to read it in
 (7) connection with what you said before Go ahead
 (8) Q The question is according to your report written in
 (9) October of 1990 farmed salmon did not have a significant
 (10) influence on price in 1987 correct?
 (11) A That s correct
 (12) Q That s the additional phrase to which you called my
 (13) attention correct sir?
 (14) A Right
 (15) Q And at the time you wrote - as of the time you wrote the
 (16) report you yourself had observed that the presence of farmed
 (17) salmon appeared to have significant influence on salmon prices
 (18) in Japan?
 (19) A The report says however during and prior to 1987 farmed
 (20) salmon comprised four percent or less of Japan s total supply
 (21) and consisted almost entirely of coho it did have an
 (22) influence on coho prices It did not in my opinion have a
 (23) general influence on an area which was producing or importing
 (24) over 300 000 tons
 (25) Q So when you said in the first sentence that you thought you

Vol 30 5161

- (1) had seen a recent significant influence you didn t mean that?
 (2) A I meant that it had an influence on certain types of
 (3) product in the Japanese market It did not affect sockeye and
 (4) that s what we re talking about
 (5) Q This is a report on the price of sockeye salmon is it not
 (6) sir?
 (7) A That s correct
 (8) Q 2802 I believe that s the right number - sorry 2805
 (9) that s your report on the price of sockeye salmon in Upper Cook
 (10) Inlet and only that subject correct sir?
 (11) A Yes
 (12) Q Now in any case as an economist you would expect that
 (13) the - whatever the effect is that an increase in the supply
 (14) of farmed salmon and by the way farmed trout would tend to
 (15) reduce prices for salmon correct?
 (16) A Again I can only state again that it depends significantly
 (17) on the quantities you re talking about and on the degree to
 (18) which the imports consist of products that are directly
 (19) competitive with other products Farmed trout to the best of
 (20) my knowledge are not a major factor influencing the price of
 (21) sockeye and the total imports of both farmed salmon and
 (22) farmed trout that were coming in were so small a part of the total
 (23) market in 87 and still in 89 they did not increase
 (24) significantly until 1990 and then again almost all of the
 (25) increase in 1990 was from Chile After 1990 the supply of

Vol 30 5162

- (1) farmed salmon coming in from Norway Sweden and other
 (2) sources
 (3) declined through 1992
 (4) Q But just to stay with this sometime between 1987 right
 (5) and October of 1990 you Dr Crutchfield observed in your
 (6) expert capacity that the presence of pen reared salmon in the
 (7) world market has recently appeared to have a significant impact
 (8) on salmon prices correct?
 (9) A But not on all salmon prices in Japan It s had a
 (10) significant influence on salmon prices elsewhere It s had a
 (11) significant influence perhaps on coho
 (12) Q But you didn t say that in your report about sockeye prices
 (13) that you were filing in another dispute relating to 1987 did
 (14) you sir?
 (15) A No did not
 (16) Q Speaking in 1990 Now I m just asking you this question
 (17) as an economist as the supply goes up of farmed salmon
 (18) would you expect that to be a factor that would cause prices to
 (19) increase for sockeye salmon?
 (20) A No
 (21) Q You would not expect that to happen correct?
 (22) A Again you can t make a flat statement about the impact of
 (23) an increase in the supply of salmon on price without reference
 (24) to what s going on on the demand side
 (25) Q Correct
 (26) A For a number of years when farmed salmon first began to

Vol 30 5163

- (1) increase rapidly demand was also increasing rapidly because
 (2) they were opening what was in effect a new market Prices held
 (3) remarkably stable for quite a while
 (4) Q But just as an economist just simple economic proposition
 (5) if you re looking at one variable in isolation an increase in
 (6) supply in and of itself would not - you would not expect that
 (7) to promote an increase in price would you?
 (8) A Not unless it were accompanied by an increase in demand
 (9) Q Which would be a separate subject a separate variable
 (10) correct?
 (11) A It might although it s possible that one could argue in
 (12) some markets the increase in availability particularly in the
 (13) East Coast of the United States the increase in the
 (14) availability of farmed salmon might have had the effect of
 (15) increasing the demand for all salmon by simply making them a
 (16) more familiar commodity otherwise the supply of wild salmon
 (17) is highly seasonal as you know
 (18) Q Let s cut to the chase In Japan from and after 1989
 (19) based on your knowledge and all of the experience that you ve
 (20) drawn on when you testify here would you expect a significant
 (21) increase in the supply of farmed coho salmon to result in
 (22) increases in the supply of sockeye salmon?
 (23) A Wouldn t have any effect -
 (24) Q I m sorry price of sockeye salmon Let me repeat the
 (25) question

Vol 30 5164

- (1) Drawing on all your economic background and experience and
 (2) looking at the Japanese market from '89 on would you expect
 (3) significant increases in the supply of farmed coho salmon to
 (4) result in increases in the price of sockeye salmon?
 (5) A Let me correct you first sir We - as we agreed to
 (6) repeatedly our study carried only through 1989 the simple
 (7) reason that our model based on first quarter prices in the
 (8) Tokyo Central Wholesale Market in 1990 and thereafter would
 (9) have included the impact of the spill itself which were - we
 (10) were trying to measure so we couldn't go beyond 1989
 (11) Otherwise the model sort of proves itself It captures both
 (12) the spill effect and any other effect that might be in the
 (13) market So we did not analyze prices beyond 1989
 (14) Q I m - I m not asking you about the model Could you
 (15) answer the question I asked you?
 (16) A Could you repeat the question?
 (17) Q Calling on your general expertise as an economist and your
 (18) knowledge of conditions in the Japanese salmon market to
 (19) which
 (20) you testified on direct would you expect that in the years
 (21) from 1989 onward significant increases in the supply of farmed
 (22) coho salmon in Japan would result in increased prices for
 (23) sockeye salmon in Japan?
 (24) A No I would not expect that
 (25) MR LYNCH Thank you sir
 (26) RECROSS EXAMINATION OF DR JAMES CRUTCHFIELD

Vol 30 5165

- (1) BY MR O NEILL
 (2) Q After talking with Mr Lynch have you changed your mind?
 (3) A No
 (4) Q Thanks You talked for a minute about the Japanese buyers
 (5) with him and with me Would you explain to the jury the role
 (6) that the oil spill fills in the negotiations between the
 (7) Japanese buyers and the Alaska fish processors?
 (8) A Yes I believe strongly that the spill which did
 (9) constitute the major out of market impact that could possibly
 (10) have been expected on the salmon market as a whole had the
 (11) effect of tilting the bargaining process very very strongly in
 (12) favor offer the buyer He had a weapon in his hand the market
 (13) was uncertain There was no way of knowing whether or not the
 (14) kind of consumer reaction that had resulted from widespread
 (15) knowledge of the spill would result in a situation in which
 (16) they might be caught with some very expensive inventory that
 (17) would prove to be unsellable or sellable only at reduced
 (18) prices
 (19) These dealers operate on relatively narrow margins
 (20) processor and the trader above him They cannot in holding
 (21) inventory bear the full risk of that degree of uncertainty
 (22) This was the reaction we found in the Glacier Bay case was the
 (23) reaction we found in the Braer case and the Shell case
 (24) Q And in point of fact with regard to sockeye prices in
 (25) Alaska fisheries what happened?

Vol 30 5166

- (1) A We got a sharp decline in prices ex vessel prices to
 (2) fishermen
 (3) Q And that happened in the Bristol Bay sockeye fishery?
 (4) A Yes it did
 (5) Q And it happened indeed in every major Alaska sockeye
 (6) salmon fishery?
 (7) A It did
 (8) Q And with regard to the one that we've been talking about
 (9) specifically the Upper Cook Inlet sockeye man fishery -
 (10) A Yes
 (11) Q - does this depict in fact the average ex vessel prices of
 (12) sockeye salmon in Upper Cook Inlet Plaintiffs Exhibit 739?
 (13) A Yes it does
 (14) Q From 1983 through 1988 the price had gone up
 (15) continuously
 (16) hadn't it?
 (17) A Yes
 (18) Q What happened in 1989?
 (19) A In 1989 it plunged very sharply
 (20) Q And in addition to modeling we took a look at a couple of
 (21) other factors You took a look at a lot of other factors
 (22) didn't you?
 (23) A Yes
 (24) Q And I put up on the screen Plaintiffs Exhibit 420 which
 (25) is in evidence which deals with monthly retail prices of
 (26) sockeye salmon in 15 Japanese cities And what does that
 (27) show

Vol 30 5167

- (1) us?
 (2) A Showed us that prices were continuing to increase during
 (3) the first part of the first quarter of 1989 They dropped
 (4) although again that chart is misleading in the sense that it
 (5) shows only the top of the prices If you extend it down to the
 (6) bottom so that it starts at zero it'll show that the decline
 (7) in prices after the spill at retail was something less than ten
 (8) percent It did not carry through It went on at that level
 (9) for almost three years thereafter The implication we drew
 (10) from that was that there was no collapse in the retail market
 (11) in Japan
 (12) Q Generally?
 (13) A Generally
 (14) Q And we took a look at the Tokyo Central Wholesale Market?
 (15) A Correct And again the importance to us was the fact
 (16) that the Tokyo wholesale market looked good for sockeye and
 (17) was
 (18) reported as such during the first quarter and it wasn't until
 (19) well after that that the price began to drop off sharply
 (20) beginning in May
 (21) Q And it did drop off sharply?
 (22) A It did indeed
 (23) Q And you as a result of your studies of the Glacier Bay
 (24) spill and the Braer spill and 50 years of - 40 to 50 years of
 (25) experience you would have expected that because of the oil
 (26) spill?

Vol 30 5168

- (1) A It was a major factor certainly
- (2) Q And with regard to the model that you designed with
- (3) Mr Freeberg which is seen on Plaintiffs Exhibit 431 and
- (4) this is that model the relationship between the first quarter
- (5) Tokyo wholesale market price and the ex vessel price the
- (6) fisherman price for sockeye salmon it is a tight fit
- (7) throughout the model until the year of the spill isn't that
- (8) right?
- (9) A Yes there are only deviations you could discern in 1983
- (10) carrying on from the impact of the botulism thing at the end of
- (11) 1981 and the 1987 episode when it dipped but in neither case
- (12) there did it go outside the coefficient of determination
- (13) Only in the case of 1959 did it simply break well below -
- (14) Q 1989?
- (15) A 1989 excuse me did it break below - significantly below
- (16) the level that the model would have predicted
- (17) Q And what does that teach us?
- (18) A I'm sorry?
- (19) Q And what does that teach us?
- (20) A It taught us that certainly the oil spill had a major extra
- (21) market impact incidentally to test the validity of our
- (22) concept we also ran the model with raw data exactly nominal
- (23) prices in Tokyo wholesale market the nominal exchange rate
- (24) not adjusted and the nominal price
- (25) MR LYNCH Your Honor may we approach?

Vol 30 5169

- (1) (At side bar off the record)
- (2) BY MR O NEILL
- (3) Q Tell us what you were going to say on this subject and then
- (4) I have two or three more questions Go ahead and finish
- (5) A Yes I was anxious to see if running the model without any
- (6) of the adjustments we talked about if our basic assumption
- (7) that the Tokyo central market was the prime determiner of
- (8) ex vessel prices in Upper Cook Inlet it's the only place the
- (9) stuff is marketed it would have to be
- (10) When we ran the raw data the coefficient of determination
- (11) dropped from 96 percent to 92 percent with no adjustments of
- (12) any kind That's a very high level of determination for the
- (13) model
- (14) The predicted price dropped by less than a cent when we
- (15) used the unadjusted figures so we felt very strongly that the
- (16) basic assumption on which we were going that the single
- (17) market
- (18) to which the bulk of which this product flows is bound to have
- (19) the primary determining factor on prices ex vessel was
- (20) justified
- (21) Q Now when you and Mr Lynch were talking about you are
- (22) here
- (23) primarily to talk about the impact whether the spill had a
- (24) price impact or not the fact of the price drop as opposed to
- (25) measuring the price but the exhibit does show from where I put
- (26) all this red stuff where the price drop was doesn't it?
- (27) A Yes it does

Vol 30 5170

- (1) Q And it was about 85 cents a pound?
- (2) A 83 cents
- (3) Q 83 cents a pound And my last question is - deals with
- (4) farmed salmon and that is would you explain to the jury why
- (5) farmed salmon is not an explanation for what happened?
- (6) A My point that I wanted to emphasize to the jury is the fact
- (7) that the market for farmed salmon is a segmented market
- (8) geographically It's a very important factor in Europe where
- (9) it provided most of the salmon There's very little wild
- (10) salmon available there except some that's imported from the
- (11) states and Canada In Japan the figures are there very
- (12) clearly The amount of farmed salmon imported into Japan was
- (13) increasing It increased in 1989 almost entirely in coho
- (14) which is only an indirect competitor with sockeye
- (15) The increase in farmed Atlantic was very small and since
- (16) the time 19 - 1989 I looked at the more recent figures the
- (17) imports of farmed salmon into the Japanese market have
- (18) declined with the sole exception of Chile and a small
- (19) amount - very small amount less than a thousand tons from
- (20) New Zealand It apparently didn't hold
- (21) Q After years of increased sockeye salmon prices out of the
- (22) Inlet why did they crash in 89?
- (23) A Well the major factor in that crash was again a shift in
- (24) the bargaining position that always involves a good deal of
- (25) latitude one way or the other and that was certainly due to

Vol 30 5171

- (1) the impact of the uncertainty caused by the spill
- (2) MR O NEILL I have no further questions Thank you
- (3) Doctor
- (4) THE COURT Thank you sir You may step down
- (5) MR O NEILL Plaintiffs call Rob Mendelsohn
- (6) THE WITNESS Mr Lynch do you want your book back?
- (7) MR O NEILL I got it
- (8) THE CLERK Would you raise your right hand please
- (9) sir?
- (10) (The Witness Is Sworn)
- (11) THE CLERK Please be seated For the record sir
- (12) state your full name give us your address and spell your last
- (13) name please
- (14) THE WITNESS My name is Robert Mendelsohn
- (15) M E N D E L S O H N and I live at 145 Lemon Road
- (16) Woodbridge
- (17) Connecticut
- (18) DIRECT EXAMINATION OF ROBERT MENDELSON
- (19) BY MR O NEILL
- (20) Q Sir what do you do for a living?
- (21) A I'm a professor at the Yale School of forestry and
- (22) Environmental Studies
- (23) Q You're a professor of what?
- (24) A I'm a professor of natural resource economics
- (25) Q What does a professor of natural resource economics do?
- (26) A Teach and conduct research

Vol 30 5172

- (1) Q In what subject areas?
- (2) A In the general area of natural resource economics the
- (3) economics of the environment which is economics of pollution
- (4) control and in the area of valuing the environment
- (5) Q And what is Yale's school of forestry and environmental
- (6) studies?
- (7) A The school is - originally was just a forestry school but
- (8) in the last 20 years it's branched out and become a school of
- (9) environmental management
- (10) Q And do you have a specialty?
- (11) A My specialty is valuing pollution effects pollution
- (12) damages
- (13) Q Would you tell us about your education after high school?
- (14) A I have a bachelor's degree from Harvard in economics and I
- (15) have a doctorate from the Yale Economics Department in
- (16) economics
- (17) Q And what kind of courses did you take?
- (18) A In the - for my doctorate I took the standard economic
- (19) core courses which would cover microeconomics and
- (20) econometrics
- (21) Q Tell us what each of those words is?
- (22) A Microeconomics is the study of individual behavior the
- (23) behavior of consumers and firms and how individual markets
- (24) behave. Macroeconomics concerns how the whole economy
- (25) behaves and the econometrics is the techniques to actually measure
- each

Vol 30 5173

- (1) of those kind of factors
- (2) Q And that includes among other things what we've seen
- (3) dozens
- (4) of and that is regression analyses?
- (5) A That's certainly a major tool in econometrics yes
- (6) Q And did you in your doctoral program and in your studies
- (7) do work with regard to economic modeling and regression
- (8) analyses?
- (9) A Yes One of my real interests in economics is applying
- (10) economics to real problems and so I personally wanted to do
- (11) applied - what's called applied microeconomics which is to
- (12) take these tools that describe individuals and firms and apply
- (13) these problems to things that really matter to society So I
- (14) was very interested in trying to connect these tools with
- (15) what's really going on in society
- (16) Q Now I want to go over your job history if we could from
- (17) when you got your Ph.D. on okay? Could you tell us what you
- (18) did?
- (19) A After my Ph.D. I moved to Seattle and got a job as an
- (20) assistant professor at the University of Washington That's
- (21) where I first met Dr. Crutchfield We were at college together
- (22) in the economics department And then after that I spent a
- (23) year at the University of Michigan again teaching natural
- (24) resource economics and economics of pollution and then after
- (25) that in '84 I got a job at Yale as an associate professor
- where I've been for the last ten years

Vol 30 5174

- (1) Q You're now a full professor?
- (2) A I'm now a full professor yes
- (3) Q Is Dr. Crutchfield still here or -
- (4) A He's gone
- (5) Q While you were at the University of Washington did you do
- (6) work with Dr. Crutchfield?
- (7) A I didn't actually work with him directly but you know we
- (8) engaged in some research projects together on fisheries things
- (9) like that
- (10) Q Did you attend seminars that he gave with regard to
- (11) fisheries and economics?
- (12) A Yes It turns out the University of Washington is one of
- (13) the best schools in fisheries They have an excellent
- (14) fisheries school and so we - we naturally sort of got drawn
- (15) into doing the economics of fisheries So there were lots of
- (16) seminars by Dr. Crutchfield and Dr. Brown and lots of visitors
- (17) as well
- (18) Q What do you teach at the Yale School of Forestry?
- (19) A Primarily three courses I teach the course on the
- (20) economics of natural resources which is designed to show how
- (21) the - how firms and economy in general use resources use
- (22) natural resources as an input into the economy and then I
- (23) teach a course on the economics of pollution which is how
- (24) firms give back to the environment which is sort of not such a
- (25) happy exchange as all the questions about pollution control

Vol 30 5175

- (1) and how much should be controlled and exactly how much
- (2) damages
- (3) individual pollutants cause and that involves both some
- (4) regular missions just part of the normal industry as well as
- (5) accidents
- (6) Then I also teach a course on valuing the environment
- (7) which actually tries to quantify things which some people say
- (8) are unquantifiable you know trying to value the parts of the
- (9) environment that get damaged by pollution control that might
- (10) get affected by natural resource management in order to try to
- (11) bring them within the general common sense analysis that's
- (12) part
- (13) of economics
- (14) Q Okay Have you ever taught at groups of scientists
- (15) symposia?
- (16) A Numerous symposia That's been part of my career is to
- (17) give seminars in different symposia For example I just came
- (18) back from organizing a symposia in the Far East where we're
- (19) trying to get natural resource economists and environmental
- (20) economists organized so that they can become part of the
- (21) world
- (22) community and one trip that I couldn't take because I was on
- (23) standby for this case was a case in - a trip to Vienna to try
- (24) to talk about pollution control with respect to global warming
- (25) Q Do you blame me for that?
- (26) A Well it was a trade off
- (27) Q Do you do any writing in the area?
- (28) A Yes I've been working in this area for the last 15 or 16

Vol 30 5176

- (1) years and published about 40 articles on the subjects and
 (2) written about a hundred
 (3) Q Do you do any work with any government agencies?
 (4) A Yes Pretty much every agency that s had land resource
 (5) management responsibilities I ve worked for them at one time
 (6) or another U S Environmental Protection Agency National
 (7) Marine Fisheries Service U S Forest Service U S Fish &
 (8) Wildlife Service
 (9) Q Have you ever - do you do any work right now with the
 (10) Environmental Protection Agency?
 (11) A Right at the moment I m on their science advisory board
 (12) which is a board that puts together some of the top
 (13) environmental scientists and economists in the country to try
 (14) to give advice to the EPA administrator the head of the
 (15) agency about what s appropriate methodology for regulating
 (16) pollution
 (17) Q Have you ever worked with any state agencies?
 (18) A Yes At different times I ve been involved in research
 (19) projects for the states of Oregon Washington and Alaska and
 (20) Montana
 (21) Q Did any of those include fish?
 (22) A Actually a number of them did The study in Montana was
 (23) concerned about dams destroying some of their trout fisheries
 (24) The studies in Oregon and - Oregon were worried about the
 (25) trade off between recreational fishing and commercial fishing

Vol 30 5177

- (1) because it turns out there s some growing interest in having
 (2) recreational fishing and so they were competing for the same
 (3) resource with the commercial fishermen And in the case of
 (4) Washington we were concerned about forest management
 (5) techniques and what impacts those were having on fish
 (6) Q Have you done any other fisheries work?
 (7) A Well one of my students right now is studying the blue fin
 (8) tuna fishery in - off the Atlantic coast which is kind of
 (9) similar to some of the fisheries here in Alaska It s a very
 (10) high valued fishery where the fish are sent off to Japan
 (11) Q As most - or a lot of the work that you ve done been
 (12) cranking these models?
 (13) A That s one way to describe it I think of it as sort of
 (14) more of a solving mysteries about what s really going on in the
 (15) world but yes I do a lot of work where you have a very
 (16) concrete problem you use an economic theory to describe how
 (17) you d analyze it and then you use econometric techniques to
 (18) measure what s really going on
 (19) Q Have you written any books?
 (20) A I ve written one book My dissertation got turned into a
 (21) book and that concerned measuring the damages from air
 (22) pollution in coal fired power plants
 (23) Q We ve had other experts come in here who had written books
 (24) and I wonder who buys these books and do you buy them from
 (25) each other?

Vol 30 5178

- (1) A Well that s a good question Economists generally don t
 (2) turn their work into books They generally write articles and
 (3) when you write a book they all look at you kind of funny and
 (4) say why did you do that
 (5) MR O NEILL You can put those books on the snoozak
 (6) shelf I would offer Dr Mendelsohn as an expert in economics
 (7) with a specialty in quantifying the value of damages from
 (8) pollution
 (9) MR COOPER Your Honor I m not sure what that
 (10) includes but I don t believe I heard anything that had to do
 (11) with determining or predicting prices of fish much less salmon
 (12) in there That includes an offer with respect to expertise in
 (13) determining fish price he doesn t - it doesn t seem to me
 (14) like there s a foundation for that
 (15) MR O NEILL You want me to get more specific?
 (16) THE COURT Let s get a little bit more specific about
 (17) the fish side of things
 (18) BY MR O NEILL
 (19) Q With regard to modeling prices do you know how to do
 (20) that?
 (21) A Absolutely Yes
 (22) Q Would you tell us why -
 (23) A Well -
 (24) Q How did you get the expertise?
 (25) A The standard techniques in economics is talk about

Vol 30 5179

- (1) analyzing markets and how they behave so we have very
 (2) simple
 (3) models which explain both the demand side what consumers
 (4) do on
 (5) the buying and also the supply side you know how different
 (6) factors might affect supply and their interaction generates
 (7) prices
 (8) Q In the construction of these demand and supply models
 (9) which is why - specifically why we ve brought you here have
 (10) you done that in the past?
 (11) A Yes Yes In particular I ve looked at cases where
 (12) pollution has in fact affected markets I ve looked at for
 (13) example - in New Bedford for example where PCB pollution in
 (14) the harbor affected the real estate market the properties
 (15) nearby and another example I ve looked at where pollution s
 (16) affected models is a study which is just about to be published
 (17) in the American Economic Review which is sort of the premier
 (18) economics journal a study which examined how climate
 (19) change
 (20) has affected agricultural prices
 (21) Q Are the techniques that you ve used throughout your career
 (22) and with regard to these two studies the same econometric
 (23) techniques that a professor like you a scientist like you
 (24) would use in valuing fish?
 (25) A Absolutely The techniques I ve applied in this case are
 (26) standard economic procedures
 (27) Q And with regard to fish and the Alaska fish market over
 (28) the course of the last number of years have you extensively

Vol 30 5180

- (1) studied the Alaska fish market?
 (2) **A** Yes The last four years I ve spent something like 1500
 (3) hours studying the Alaska fish market so this has been a major
 (4) part of my research program for the last four years
 (5) **Q** With regard to your study of the Alaska fish markets are
 (6) the studies that you used the journals that you looked at the
 (7) information that you looked at the factors that you looked at
 (8) the kind that economists like you from the Yale School of
 (9) Forestry would traditionally look at?
 (10) **A** The techniques I ve used are in fact standard techniques
 (11) and there s nothing unusual about the kinds of work I ve been
 (12) doing in this case
 (13) **Q** With regard to the work that you bring here today the
 (14) models that you bring here today are they traditional
 (15) applications of your background in modeling to this market that
 (16) you ve studied at some great extent?
 (17) **A** Yes they are
 (18) **MR O NEILL** Renew the offer
 (19) **THE COURT** The offer as extended to Dr Mendelsohn s
 (20) qualifications as an expert are accepted by the Court He may
 (21) testify as to pollution effects on price of fish in Alaska
 (22) **MR O NEILL** Thank you Judge
 (23) **BY MR O NEILL**
 (24) **Q** Now what were you asked to do?
 (25) **A** I was asked to examine Alaska seafood prices and determine

Vol 30 5181

- (1) whether the oil spill had an effect on those prices and if
 (2) they did what was the magnitude of the effect
 (3) **Q** And what species of salmon did you look at?
 (4) **A** The species of salmon that I examined were all five of the
 (5) major Alaska salmon species which would be sockeye first
 (6) pink chum coho and king chinook
 (7) **Q** Coho are silvers?
 (8) **A** Coho are silver yes
 (9) **Q** Just so we know
 (10) **A** Get these colors right
 (11) **Q** How much time did you spend on the project?
 (12) **A** Approximately 1500 hours
 (13) **Q** And did you reach a conclusion about the impact of the
 (14) Exxon Valdez oil spill - you also looked at herring didn t
 (15) you?
 (16) **A** That s also correct the herring and the herring roe
 (17) market
 (18) **Q** Did you reach a conclusion about the impact of the Exxon
 (19) Valdez oil spill on salmon and herring prices?
 (20) **A** Yes
 (21) **Q** What conclusions did you reach?
 (22) **A** I ve concluded that the Exxon Valdez spill damaged the
 (23) reputation or damaged the image of high quality fish coming
 (24) out
 (25) of the Alaska seafood market and this resulted in lower prices
 for those fish from 1989 through 1991

Vol 30 5182

- (1) **Q** And that included red pink chum and kings?
 (2) **A** That s correct The salmon that I ve concluded have been
 (3) damaged would be the red sockeye the king the chinook
 (4) the - not the coho the pink and the -
 (5) **Q** Chums?
 (6) **A** The chums yes thank you
 (7) **Q** And with regard to silvers you were unable to reach a
 (8) conclusion on silvers?
 (9) **A** That s right In my opinion the evidence was mixed with
 (10) respect to silver and to be conservative I ve assumed that
 (11) there s no effect there
 (12) **Q** How about herring?
 (13) **A** It - it s clear that there s effects in the herring roe
 (14) market and roe on kelp market both
 (15) **Q** Those effects are the result of the Exxon Valdez oil spill?
 (16) **A** That s correct that the Exxon Valdez oil spill has
 (17) affected those markets has limited the premium that used to be
 (18) associated with those products and has resulted in lower
 (19) prices
 (20) **Q** How did you go about studying the effect of the Exxon
 (21) Valdez oil spill on the price of Alaskan seafood?
 (22) **A** Well the first step was to look at exactly what the prices
 (23) did over time so that was my first line of attack
 (24) **Q** And what prices did you use?
 (25) **A** Well the question that - that s on hand is what s

Vol 30 5183

- (1) happened to the price that the fishermen have received so
 (2) rather than going to later prices prices that are further down
 (3) in the market chain I examined exactly the prices the
 (4) fishermen were getting the ex vessel prices
 (5) **Q** I have pulled a boo boo but we had some preadmits for
 (6) today that I should have done before the doctor - I m going to
 (7) put you over in suspended animation if I could for a second
 (8) and do the preadmits because it ll save some time with your
 (9) testimony
 (10) **MR O NEILL** For the record plaintiffs would offer
 (11) the following exhibits Exhibits - Plaintiffs Exhibits 518
 (12) 519 520 522 523 524 3645 3647 Exhibit 430 530 531
 (13) Exhibits 439 440 441 442 443 444 445 446 447 448 449
 (14) 450 451 454 455 456 457 458 459 460 780 781 783
 (15) 784 786 789 790 792 793 6004 6005 6006 6007
 (16) (Exhibits 518 519 520 522 523 524 3645 3647 430
 (17) 530 531 439 440 441 442 443 444 445 446 447 448
 (18) 449 450 451 454 455 456 457 458 459 460 780 781
 (19) 783 784 786 789 790 792 793 6004 6005 6006 6007
 (20) offered)
 (21) **THE COURT** Are there objections to any of these
 (22) exhibits?
 (23) **MR COOPER** Your Honor at least insofar as those
 (24) exhibits concern this witness those are agreed upon as
 (25) preadmitted

Vol 30 5184

- (1) THE COURT The exhibits just announced by Mr O Neill
 (2) are admitted
 (3) (Exhibits 518 519 520 522 523 524 3645 3647 430
 (4) 530 531 439 440 441 442 443 444 445 446 447 448
 (5) 449 450 451 454 455 456 457 458 459 460 780 781
 (6) 783 784 786 789 790 792 793 6004 6005 6006 6007
 (7) received)
 (8) MR O NEILL Thank you Judge
 (9) BY MR O NEILL
 (10) Q Let s - if we could take a look at Exhibit 440 what does
 (11) Exhibit 440 show us?
 (12) A Well as you can see from looking at this exhibit the
 (13) prices of - the ex vessel prices of sockeye have gone through
 (14) a number of fluctuations The most important factor is that
 (15) for a long time prices have been in an upward trend through the
 (16) 80s but suddenly in 89 they ve taken a precipitous drop
 (17) and that drop has continued through 91
 (18) Q Now these prices on Exhibit 440 are the actual ex vessel
 (19) prices for those years?
 (20) A Yeah this is what the fishermen were actually paid This
 (21) is their annual payment the average salary for the year
 (22) Q For the sake of clarity could you draw a red circle if
 (23) you can get that thing up there around the 88/ 89 time
 (24) period?
 (25) A Well this is 88 which was a peak year and this is 89

Vol 30 5185

- (1) after the spill So these are year end prices
 (2) Q Now I want to take a look if we could briefly at what
 (3) happens - that s for sockeye red salmon?
 (4) A Yes
 (5) Q Let s take a look at pink salmon and see what happens with
 (6) regard to pink salmon and we re going to look at Exhibit 441
 (7) with regard to pink salmon and what do we see on Exhibit 441?
 (8) A Well the same kind of pattern The prices rose in the
 (9) late 80s but then following 88 again being a peak year and
 (10) then following that there was an abrupt reduction in prices in
 (11) 89 The price reduction was continued again through 91
 (12) Q So in 1988 the pink salmon price was above - or about
 (13) eighty cents a pound and by 1991 it s below 20 cents a pound?
 (14) A That s correct
 (15) Q What do we see with regard to king salmon prices?
 (16) A Again you can see that in the 80s there was an increase
 (17) in prices and then when we reached 88 there s again a peak
 (18) and then again following it back there s an abrupt decline
 (19) and the prices at this point just stay at that level
 (20) Q And on Exhibit 790 we have chum salmon
 (21) A And again you see the same pattern that in the 80s the
 (22) prices were rising rapidly They reached a peak in 88 and
 (23) abruptly fell in 89 and then again slightly more in 91
 (24) Q Now I m going to put up silver because as we proceed
 (25) we re going to talk about silvers but just to remind

Vol 30 5186

- (1) everybody you could not come to a good conclusion on
 silvers?
 (2) A That s correct On coho I was unable to conclude that the
 (3) oil spill was in fact the culprit for this
 (4) Q And what -
 (5) A Again you see the same kind of effect that the prices rise
 (6) to 88 reached a peak and then fall abruptly in 89 and stay
 (7) down in 89
 (8) Q Let s take if we could a look also at the two
 (9) predevelopment herring products sac roe herring and herring
 (10) roe spawned on kelp and we re going to take a look at Exhibit
 (11) 458 which deals with sac roe herring and tell me what we see
 (12) with regard to sac roe hearing?
 (13) A Sac roe herring you can see this is a shorter time line
 (14) This is slightly different than the salmon We didn t have
 (15) data going as far back so this is entirely the 80s and what
 (16) you can see in general the prices were rising again they
 (17) reached a peak in 88 and then abruptly fell in 89 and stayed
 (18) low
 (19) Q And herring roe spawned on kelp which is Exhibit 457 what
 (20) do we see there?
 (21) A Again you see the same pattern that prices were rising
 (22) through the 80s reached a peak again in 88 and then fell
 (23) abruptly in 89 and in this case the prices then recovered
 (24) somewhat
 (25) Q Now I want to talk about red salmon and just so everybody

Vol 30 5187

- (1) knows where we re going we re going to talk primarily about
 (2) red and pink salmon because they re the two major species so
 (3) we ll focus the discussion on those and we ll talk briefly
 (4) about the other species
 (5) If you want to in fact model red salmon as an
 (6) econometrician would like to model red salmon you d take a
 (7) look at the factors that affect salmon prices That s a
 (8) correct statement isn t it?
 (9) A That s right because generally what we want to know - now
 (10) we know there was an abrupt decline these prices in 89 and
 (11) what we re trying to determine it was what caused it Was this
 (12) a market effect was this caused by normal market factors or
 (13) was this caused by the oil spill
 (14) So what we try to do is build a model which would actually
 (15) quantify what even of those market factors would do We want
 (16) to know was it that the market factors would lower prices but
 (17) how much would they lower prices That s the important
 (18) question here The question here the quantifying things did
 (19) the forces forcing prices down enough to explain that big
 (20) gap in prices or did they only drop just slightly and that big
 (21) gap is actually due to something else not just market forces
 (22) Q And Exhibit 454 which is in evidence is what?
 (23) A That s the description of the factors which I included
 (24) examined in the model So there s two lists there the first
 (25) list includes the variables which are actually included in the

Vol 30 5188

- (1) model that you see in our exhibits and the second list
 (2) considers variables which we had then considered just to see if
 (3) they were important
 (4) Q I'll bring this up on the TV screen too so everybody can
 (5) get a good look at it
 (6) Now the top five on the chart include the amount of Alaska
 (7) king salmon the quantity of king salmon is that - what
 (8) quantity are we talking about?
 (9) A That's the quantity that was harvested in each year in
 (10) Alaska
 (11) Q And the quantity of Alaskan red or sockeye salmon?
 (12) A Yes Same
 (13) Q The real interest rate in Japan what is that?
 (14) A That's the - the interest rate that a person who's holding
 (15) that - those inventories over the year would actually face
 (16) So it gives you a sense of the cost of what the person's going
 (17) to face for holding the inventory for the entire year
 (18) Q The amount of salmon harvested in the world that's a
 (19) factor you looked at?
 (20) A Yes definitely included that that includes the amount of
 (21) farmed salmon harvested in the world
 (22) Q And the exchange rate with Japan?
 (23) A Yes that's the exchange rate the way you trade yen with
 (24) dollars it's the number of dollars you get back for giving up
 (25) a unit of yen

Vol 30 5189

- (1) Q These are factors after looking at the - all of the
 (2) factors on the exhibit that you found to have a relationship
 (3) with the price of red salmon?
 (4) A Yes Those turned out to be statistically most important
 (5) Q And all of these other 26 factors that include income in
 (6) the United States how much fish people are eating in the U S
 (7) nominal interest rates in the United States all of these other
 (8) factors you took a look at?
 (9) A Yes We had explored each of the factors that are listed
 (10) on the other list and that includes all the other sources of
 (11) salmon which we get the different species that includes other
 (12) sources in the sense of other places that were producing
 (13) salmon So it's a very extensive list of other variables which
 (14) could have affected the market so we wanted to make sure that
 (15) we tested them and measured whether they were important or
 (16) not
 (17) Q Now the ones that you found to be important is it an
 (18) oversimplification to say that you found a relationship between
 (19) sockeye prices and these five factors over a period of time?
 (20) A Yes You'd expect in terms of the ex vessel prices that
 (21) the - the amount of sockeye was going to be important because
 (22) it tells you how much supply there is and that it's possible
 (23) that other species of salmon might be important which is why
 (24) the king salmon variable is included and then the real
 (25) interest rate is part of why the cost of holding the thing so

Vol 30 5190

- (1) that's going to be important to the Japanese buyer and the
 (2) amount of farmed salmon people have claimed that was going
 (3) to
 (4) be very important so I thought it was essential to include
 (5) that variable in the model
 (6) And then the exchange rate is going to be important
 (7) because where the sockeye is going to be exported primarily is
 (8) Japan so it depends on from a Japanese point of view how
 (9) many dollars you - he can get for his yen is going to be very
 (10) important to them in terms of what kind of price they're
 (11) willing to pay
 (12) Q With regard to the factors you found to have a predicting
 (13) relationship you put those into a mathematical model you take
 (14) the data on these sources and put them into a mathematical
 (15) model?
 (16) A That's right As the analyst I get to decide which
 (17) variables go into a particular model and then the model
 (18) looking at the actual empirical data tells me how important
 (19) those factors are and what direction the effect is So it's
 (20) the empirical data which determines the size of the factors
 (21) not myself
 (22) Q And you go to a variety of different official data sources
 (23) for this information and you crank them through a computer?
 (24) A Yes that's one way to describe it We collected the data
 (25) from the - as you pointed out the official sources including
 the sources for king salmon quantities and prices and then

Vol 30 5191

- (1) official statistics about exchange rates between the two
 (2) countries and inflation rates and things like that And we
 (3) double checked all those numbers just to make sure that they
 (4) were exactly correct and then we introduced all that data
 (5) which includes data from 1964 all the way through 1991 We
 (6) introduced that into a statistical analysis and tried to
 (7) determine - and the model the statistical analysis determines
 (8) what each of those variables does to prices that is how much
 (9) does each one contribute to the prices we observe over time
 (10) Q I'm going to leave this board up but I'm going to pull up
 (11) on the TV Exhibit 444 which is in evidence Do I have - I've
 (12) got a board I'll use a board Changed my mind I'll put up
 (13) the board
 (14) And what is this Exhibit 444?
 (15) A Now what the exhibit shows - this is a very important
 (16) exhibit What this exhibit shows is what the model predicts
 (17) would happen and what actually did happen and if you look at
 (18) the data points from 1964 through 1988 the orange line shows
 (19) you what the model predicts would happen As you can see
 (20) the
 (21) orange line actually tracks actual prices fairly closely so
 (22) the model normal market factors are explaining a lot of the
 (23) variation that you observe in the actual prices up through
 (24) 1988
 (25) In 1989 through '91 we used the relationships that the
 model has predicted from all those previous years and we

Vol 30 5192

- (1) predict what those prices would have been if the spill had not
 (2) occurred that is just looking at the market factors alone
 (3) what would the prices have looked like and what this model
 (4) predicts is that the prices would have in fact increased over
 (5) this time period And if you look at 81 90 91 they would
 (6) have actually slightly increased over the 1988 price In fact
 (7) if you look at actual prices actual prices took a sharp drop
 (8) In my opinion the difference between these two is the
 (9) taint effect It s the effect the oil spill had on sockeye
 (10) prices
 (11) Q I ve going to parse that out into three parts The first
 (12) is up to 1988 Let s just talk for a minute about up to 1988
 (13) Up to 1988 the orange line is what the model predicts and
 (14) the black line is the actual price and you get a good fit?
 (15) A Yes
 (16) Q And is the fit that you get here significant to somebody in
 (17) your business?
 (18) A Yes It s saying that this model is - the market factors
 (19) included in this model actually are capturing a lot of the
 (20) variation that you observed happening in the marketplace up
 (21) until 1988 through 1988
 (22) Q Okay The model predicts that the prices would continue on
 (23) the same general incline that they had been on since 1983 for
 (24) 1989 1990 and 91 That s a correct statement isn t it?
 (25) A That s correct

Vol 30 5193

- (1) Q But in fact there is a crash which we ve already talked
 (2) about in red salmon or sockeye prices?
 (3) A That s correct
 (4) Q So that tells you that something s rotten in Denmark or
 (5) Alaska?
 (6) A Something other than normal market factors has happened
 (7) and it happened in 89 That s what it tells you
 (8) Q And you ve heard Dr Crutchfield s testimony about the
 (9) history of these kinds of things Is this kind of effect in
 (10) your view consistent with an environmental disaster like the
 (11) Exxon Valdez oil spill would have on the price of a product
 (12) like red salmon?
 (13) A Absolutely
 (14) Q Is it your opinion that the drop in price between the
 (15) predicted value and the actual value that the Exxon Valdez oil
 (16) spill was the major contributing factor to that price drop?
 (17) A That is my opinion
 (18) MR O NEILL Can we take a break now Judge?
 (19) THE COURT We ll take our recess at this time ladies
 (20) and gentlemen We ll be in recess for 15 minutes
 (21) (Jury out at 9 58)
 (22) (Recess from 9 58 a m to 10 16 a m)
 (23) (Jury in at 10 16)
 (24) MR O NEILL Thank you Judge
 (25) BY MR O NEILL

Vol 30 5194

- (1) Q Now we were talking about Plaintiffs 444 when we took our
 (2) break and you used an expression in describing this here the
 (3) effect the red effect you called it the taint effect?
 (4) A That s correct
 (5) Q Would you explain that to us?
 (6) A What that - what this graph shows what that red area
 (7) shows is that if you look at all the market factors prices
 (8) should have increased but in fact they did not And the
 (9) question is what could have caused that and it s pretty clear
 (10) from past evidence that from very small spills even very small
 (11) spills have a subtle affect on prices So we have experience
 (12) with the Glacier Bay spill we have some experience with the
 (13) spill in the Shetland Islands we have some experience with the
 (14) Torrey Canyon spill In all those cases we have some evidence
 (15) that following the spill there was a price effect and the
 (16) price effect - I m calling it taint
 (17) And in the case of sockeye my theory is that the reason
 (18) why you see such a big taint is that this is a very high
 (19) premium product This is the fillet mignon of fish This is
 (20) one of the top products and top types of seafood in Japan And
 (21) when you find out - when there s a threat in the consumers
 (22) minds risks small risks even that perhaps there s something
 (23) wrong with this fish it dramatically affects that premium and
 (24) that premium gets wiped out And that red area is the taint
 (25) effect the effect of that premium being eliminated

Vol 30 5195

- (1) Q The premium was eliminated in your opinion as a result of
 (2) the Exxon Valdez oil spill?
 (3) A Exactly
 (4) Q You mentioned the Torrey Canyon spill That s a new spill
 (5) here in the room It isn t for the world but it is for this
 (6) room When and where did the Torrey Canyon spill occur?
 (7) A I think it was in the 70s It occurred off the coast of
 (8) France close to England and the evidence that people had
 (9) following that spill the prices for catch French catch
 (10) actually fell even in places where there was no spill no
 (11) effect no direct effect people observed for the year
 (12) following that spill that the prices had in fact fallen
 (13) Q I m going to call up Plaintiffs Exhibit 443 the chart
 (14) and would you explain for us the relevance of Exhibit 443 to
 (15) what we re all doing here today?
 (16) A One of the questions is why does - why do you see prices
 (17) increasing during the 80s and one of - one of the strongest
 (18) factors that caused those prices to increase in the 80s was
 (19) Japanese buying power was the ability of the Japanese to pay
 (20) a
 (21) higher price because they had both higher incomes their real
 (22) incomes were going up and also because the yen relative to
 (23) the
 (24) dollar for whatever yen income they had they could buy more
 (25) dollars they could get more dollars for it So their ability
 (26) to buy went up dramatically
 (27) And one of the things you expect to see if you start

Vol 30 5196

- (1) getting wealthier is you re going to shift more of your income
 (2) into buying high quality products So that s directly affected
 (3) the sockeye market because this is one of the high quality
 (4) markets Japan can buy This stimulated the prices that you see
 (5) in the 80s and should have kept prices up
 (6) Q So this the buying power of the Japanese is another
 (7) indication that this is a result of the oil spill?
 (8) A That s right because the factors which were motivating
 (9) prices to increase in the 80s they re still there there s no
 (10) reason why the prices should have fallen then
 (11) Q Now I want to talk for a minute about pink salmon and I m
 (12) going to pull up on the screen Exhibit 439 And what is
 (13) Exhibit 439?
 (14) A Exhibit 439 is exactly like the exhibit you saw before with
 (15) sockeye except that this particular one is explaining what
 (16) factors were included in the pink model the model of the pink
 (17) salmon market Again it s an ex vessel market One of the
 (18) factor - there s two factors in here included that were not in
 (19) the previous model that turned out to be important in the pink
 (20) model One of them is canned pink salmon because it turns
 (21) out
 (22) most of pink salmon are canned so when you think of canned
 (23) salmon it s the pink that is the primary species that is sent
 (24) into the canning market It was important to include the
 (25) canned inventory in this model
 (26) Another factor which turned out to be important in this

Vol 30 5197

- (1) model was tuna and tuna serves as a substitute for salmon to
 (2) some degree both in the canned area and also to some degree
 (3) in
 (4) the fresh frozen area
 (5) Q So the factors on the top of the exhibit are those factors
 (6) that you looked at that had some predictive value with regard
 (7) to pink salmon?
 (8) A Yes These are the factors that turned out to be
 (9) important Once you included them in the model you could
 (10) see
 (11) that they were important
 (12) Q Let me just pull the ones that were in fact important up
 (13) Could I have control?
 (14) And the factors that did have a predictive value with
 (15) regard to pink salmon were the amount of Alaska pink salmon
 (16) the amount of Alaskan red or sockeye salmon the amount of
 (17) farmed salmon harvested in the world the United States
 (18) inventory of canned pink salmon and the United States
 (19) ex vessel
 (20) price of tuna and those were the ones that worked?
 (21) A Yes These are the factors that turned out to be important
 (22) in this market
 (23) Q And you looked at 26 other factors or studied 26 other
 (24) factors and they included such things as interest rates a
 (25) variety of inventories of other products a variety of other
 (26) harvest levels or supply levels and other kinds of economic
 (27) data and you found these other things not to have as important
 (28) a predicted value?

Vol 30 5198

- (1) A Yes We included the other factors - and I guess this is
 (2) a point we should raise with respect to all of the analyses
 (3) We included the other factors to see which ones were most
 (4) important We also wanted to include them to see if what we
 (5) were predicting that oil spill effect the taint effect would
 (6) be sensitive to whether you included these variables or not
 (7) What we found were these variables generally were not very
 (8) significant and further the taint effect was still there even
 (9) when they were put into the market
 (10) Q I m going to place in front of the jury and also bring up
 (11) onto the screen Plaintiffs Exhibit 445 And what is
 (12) Plaintiffs Exhibit 445 Doctor?
 (13) A This is again a description of what the actual prices were
 (14) that s the black line and what the model predicts the prices
 (15) would have been and that s the orange line And again it s
 (16) the same - you see the same patterns as we saw before in the
 (17) red salmon prior to the spill The model does a fairly good
 (18) job of predicting the actual observed variations in prices
 (19) and that once you reach the spill the model in this particular
 (20) case predicts the prices would have gone down but would not
 (21) have gone down anywhere nearly as much as the spill - as
 (22) actual prices did go down and that difference again is the
 (23) taint effect
 (24) Q This kind of model is exactly the kind of model we talked
 (25) about a few minutes ago with regard to red salmon?

Vol 30 5199

- (1) A Yes But one of the things that I guess is important to
 (2) note is that the model does predict prices would fall in this
 (3) particular market
 (4) Q Let s - okay Let s talk about this just for a second
 (5) because Dr Crutchfield talked at great length about the red
 (6) salmon market and the red salmon are fresh frozen and go to
 (7) Japan The pinks go in a different direction don t they?
 (8) A Yes They re primarily canned and sold in the United
 (9) States and Europe and though to some extent there s an
 (10) increasing amount of them being sent to Japan
 (11) Q But the fact that a good amount of them are sold in the
 (12) United States and Europe is the reason you look at different
 (13) factors in setting up a model?
 (14) A Exactly That s why each species is different because you
 (15) have to be careful not to mix the species together They re
 (16) not the same
 (17) Q We saw the model predict that red salmon prices would go
 (18) up in this case to a different market a market depicts a
 (19) modest decline in pink salmon prices?
 (20) A That s right
 (21) Q But not the precipitous decline that happened?
 (22) A That s right And the reason why that s really important
 (23) is it emphasizes how important it is to quantify these effects
 (24) because it s clear that the market did cause prices to go down
 (25) but that doesn t mean there was no taint effect This

Vol 30 5200

- (1) particular case prices went down but not by very much
 (2) because of market values so this business of quantifying the
 (3) size of these effects is critical to this - to determining
 (4) whether there's taint effect or not
 (5) Q And Exhibit 7 81 which is in evidence are the factors
 (6) that you looked at with regard to kings isn't that correct?
 (7) A That's correct
 (8) Q And what were the factors that you investigated that made a
 (9) difference?
 (10) A Again that these are very similar to the cases we had
 (11) before especially examples we just had included the king
 (12) salmon included the exchange rate with Japan included the
 (13) inventory of canned king salmon and the prices of tuna
 (14) Q And you looked at a variety of other factors for instance
 (15) kings and they're listed on Exhibit 781 just like you did for
 (16) the other species?
 (17) A Yes Pretty much these are exactly the same factors we saw
 (18) before the same factors that are both supplies from other
 (19) sources other kinds of species and other kinds of economic
 (20) factors
 (21) Q And on Exhibit 780 we take a look at factors with regard
 (22) to chum salmon? And the factors that I've blown up on the
 (23) screen are the factors again that made a difference?
 (24) A Yes
 (25) Q What are they?

Vol 30 5201

- (1) A They're quantity of chum salmon the amount of red sockeye
 (2) salmon they can act interchangeably sometimes they can take
 (3) substitute to a partial degree the exchange rate with Japan
 (4) the ex vessel price of tuna and in this case the income of the
 (5) United States
 (6) Q And with regard to king salmon I'm going to pull up on the
 (7) screen Exhibit 792 and is that a graphical depiction of the
 (8) model with regard to king salmon?
 (9) A Yes Again it's the same pattern as we saw before that
 (10) as you go through before 1988 you see these variations in
 (11) prices and you see the actual prices are fairly well captured
 (12) by the model so the model - the market factors are causing a
 (13) lot of the variations in prices you see through 1988 And
 (14) again in '89 through '91 you see that market factors would have
 (15) caused prices to decline but in fact actual prices declined
 (16) far more than the market predicted - the model predicted the
 (17) market prices would cost That difference once again is the
 (18) taint effect
 (19) Q And Exhibit 793 is a similar model with regard to chum
 (20) salmon?
 (21) A Exactly the same kind of results The model can predict a
 (22) lot of the variation in prices you see up through 1988 and then
 (23) in 1989 Again the model predicts a slight decline in prices
 (24) but nowhere near as much as actual prices declined
 (25) Q Now Doctor in building these models like the one depicted

Vol 30 5202

- (1) in Exhibit 444 are there statistical tests that you run on the
 (2) models to make sure that what the models are telling you make
 (3) mathematical sense?
 (4) A Yes There's a number of different tests that you could
 (5) run One test you could run is to see if the difference
 (6) between what the actual prices occurred and what the
 (7) predicted
 (8) price whether they tend to be very close and if they - if it
 (9) turned out there was lots of variation the model couldn't
 (10) explain then you could make a statistical test to see how well
 (11) the model was explaining overall
 (12) And in this case as you can see the model does a very
 (13) good job of explaining the fluctuations you see in observed
 (14) prices so one of the statistical tests you can do is an R
 (15) squared test That tests how close the predicted prices fit
 (16) the actual ones And in this model it's very close
 (17) Q And indeed for the species that - the four species that
 (18) we've looked at reds kings chums and pinks the statistical
 (19) tests that you ran gave your opinion confidence?
 (20) A That's right I have confidence in this opinion for two
 (21) reasons One is that the model fit very closely and two
 (22) that the size of that taint effect is so large and is so
 (23) consistent that the chances that that was just an accident or
 (24) chance is very very small
 (25) Q And it's consistent with the phenomenon that we've seen in
 (26) other oil spills?

Vol 30 5203

- (1) A Yes it is
 (2) Q Now Exhibit 430 is an exhibit that we used with Dr
 (3) Crutchfield but it shows a precipitous decline in sockeye
 (4) salmon throughout Alaska including Bristol Bay southeast
 (5) plus the four oil spilled areas?
 (6) A That's correct
 (7) Q Is the fact that there was a precipitous decline in Bristol
 (8) Bay and southeast consistent or inconsistent with what you've
 (9) done here?
 (10) A Well my model is - actually examines Alaska wide prices
 (11) and from what little we can understand of the consumer market
 (12) in Japan consumers there do not know where the salmon come
 (13) from They don't know which area the salmon come from They
 (14) just know that this is sockeye and so whatever has happened
 (15) to
 (16) the sockeye market it's going to happen to every one of these
 (17) areas
 (18) Q So if there's an impact in Prince William Sound Kodiak
 (19) Chignik and Upper Cook Inlet on sockeye the market perceives
 (20) that as an Alaska wide impact?
 (21) A That's correct
 (22) Q For the calculations though that we're going to make
 (23) today we're just doing a calculation for the oil spill
 (24) impacted areas?
 (25) A That's right This analysis the analysis we've shown to
 (26) date shows that in fact the price effect occurred throughout

Vol 30 5204

- (1) the entire state but the damages that we re actually going to
 (2) calculate are only for the oil spilled areas
 (3) Q Now did you take a look at the factors affecting the
 (4) prices for sac roe herring?
 (5) A Yes And the exhibit you show explains the factors which
 (6) we included in the model and again the additional factors which
 (7) we tested
 (8) Q And I put up Exhibit 459 on the screen and have it also up
 (9) on the board in front of the jury and with regard to sac roe
 (10) herring what figures or what factors did you find were
 (11) significant?
 (12) A Well the two factors that turned out to be significant in
 (13) the herring roe model was the inventory in Japan of the herring
 (14) roe and the income in Japan in U S dollars that is the
 (15) buying power the Japanese buying power
 (16) Q Now I m going to just for a minute regress back to
 (17) salmon for a second and then we re going to come right back to
 (18) herring I want to use this as a bridge to address a specific
 (19) topic
 (20) In your salmon models and particularly in the pink salmon
 (21) model you looked at farmed salmon isn t that correct?
 (22) A That s correct
 (23) Q And you found a correlation between farmed salmon and the
 (24) affected salmon prices and it went in a direction - in what
 (25) direction?

Vol 30 5205

- (1) A It was positive It means the more farmed salmon -
 (2) according to the model the more farmed salmon you included
 (3) the higher prices would be for sockeye
 (4) Q And do you have an explanation for that?
 (5) A You would normally expect if something was acting as a
 (6) substitute that as you got - more and more of the substitute
 (7) became available that the price would go down So what we
 (8) were
 (9) expecting prices would go down it would be a negative effect
 (10) Q In fact it was a positive effect?
 (11) A That s right And one of the reasons why and the question
 (12) is why why did this model - why looking at the data does the
 (13) data tell you it s a positive effect when expectations tell
 (14) you it should be negative and one of the reasons we found was
 (15) that we didn t really expect it to be very important
 (16) We included farmed salmon because everybody was saying
 (17) farmed salmon was the cause of the price decline so it was
 (18) important to include in the model but in practice there was
 (19) not really much of a reason to expect it to be important
 (20) because as Dr Crutchfield was saying if you look at that
 (21) market the Japanese market farmed salmon was not important
 (22) in
 (23) Japan as of 1988 It accounted for less than five percent of
 (24) the salmon at that time It was all coho And so the farmed
 (25) salmon that everyone s talking about this Atlantic the
 Atlantic salmon up to that moment you know until the spill
 occurred it hadn t actually really made it into the Japanese

Vol 30 5206

- (1) market So we thought when we included it it just wasn t
 (2) going to be important but in fact it came in and it was
 (3) important and it was the wrong sign and so the question is why
 (4) could it be the wrong sign
 (5) My feeling is that the reason it s the wrong sign is that
 (6) at the same time farmed salmon - world farmed salmon was
 (7) increasing so was Japanese buying power and when you
 included
 (8) farmed salmon in this model it acts as a proxy It acts as a
 (9) representative for Japanese income And so the reason why it
 (10) had a positive effect is that Japanese buying power does have a
 (11) positive effect on the sockeye prices and putting the farmed
 (12) salmon variable in it captures so the coefficient to the
 (13) effect turns out to be positive
 (14) Q Whatever though the numbers are with regard to these
 (15) factors they are and you can t change them and the model
 (16) does predict well?
 (17) A Yes
 (18) Q And the model predicts well through 1988 and then shows
 (19) what happens with regard to the oil spill?
 (20) A That s correct
 (21) Q Now the farmed salmon issue is not an issue at all with
 (22) regard to herring is it?
 (23) A No obviously not
 (24) Q So we can take a look at herring and both do the
 (25) calculation with regard to herring but see if there is a spill

Vol 30 5207

- (1) impact on herring coming out of the same fishery that there is
 (2) a spill impact on salmon?
 (3) A Exactly
 (4) Q And that will give us if in fact there is it gives us
 (5) further confidence in the result?
 (6) A Yes It s sort of like having a chance to do seven
 (7) different experiments instead of just one sort of have seven
 (8) experiments going on because there have been seven different
 (9) fisheries have all been oiled and the question is what s
 (10) happened to them
 (11) Q And with regard to sac roe herring you took a look at the
 (12) factors listed in Exhibit 783 and with regard to roe spawned
 (13) on kelp you took a look - I m sorry the sac roe you took a
 (14) look at the factors listed in Exhibit 459 and with regard to
 (15) roe spawned on kelp factors you took a look at the factors
 (16) listed in Exhibit 783 is that a correct statement?
 (17) A Yes
 (18) Q Let s see what the results are I ve placed in front of
 (19) the jury Exhibit 456 which I ll bring up on the screen And
 (20) what does the exhibit show?
 (21) A The exhibit shows exactly the same patterns as we just saw
 (22) for the - or for salmon that is prior to 1988 The model
 (23) does have a reasonable job of capturing the small change in
 (24) prices that you see that growth in prices that you see in the
 (25) sac roe herring market and then following that predicting

Vol 30 5208

- (1) what the prices would have been the market actually predicts
 (2) that the prices would have pretty much stayed at that level
 (3) It would have stayed near the level you observed in 1988
 (4) and in fact actual prices declined very dramatically from
 (5) there
 (6) Q We get high prices before the spill and a crash in prices
 (7) after the spill?
 (8) A That's what the observed prices do but that's not what the
 (9) model predicted would have happened
 (10) Q The model predicted the prices would have remained fairly
 (11) stable?
 (12) A That's right There would have been a slight decline in
 (13) prices in 1989 but then they would have bounced back
 (14) Q The red reflects the damage to the fisherman price?
 (15) A That's right that red area reflects the size of the taint
 (16) effect
 (17) Q And you also took a look in Exhibit 455 on herring roe
 (18) spawned on kelp which is my favorite fisheries product
 (19) A I suppose you don't have to eat these fisheries to
 (20) appreciate them
 (21) Q Hope not And that again is consistent with what we've
 (22) seen with regard to the four salmon species and the other
 (23) herring species?
 (24) A Exactly You see the model tracks prices fairly closely up
 (25) until 1988 and then following that the model does predict

Vol 30 5209

- (1) prices would have declined but not nearly as much as they
 (2) actually declined and the model predicts the difference
 (3) between actual and predicted prices remained steady from
 (4) 1988
 (5) Q With regard to the price results did you study the price
 (6) in pounds for the fisheries that came out of the oiled
 (7) fisheries?
 (8) A Yes I did so I took the observed price differences The
 (9) red area measures the difference between the observed price
 (10) and
 (11) what the price should have been and I multiplied that price
 (12) difference times the quantity of fish which were caught in each
 (13) of the areas in that particular year And that results in
 (14) these damage numbers
 (15) Q And I've placed in front of the jury Plaintiffs Exhibit
 (16) Number 448 which is in evidence and it breaks it down for the
 (17) jury by year and by fishery?
 (18) A Yes So this is the red salmon fishery The red salmon
 (19) fish this is the sockeye market these are the five different
 (20) fisheries and the effects you observed in each year
 (21) Q And that number is \$370 717 000?
 (22) A That's what the aggregate is yes
 (23) Q And is this the damage to these oiled fisheries as a result
 (24) of the Exxon Valdez oil spill with regard to price?
 (25) A Yes this is the taint effect
 (26) Q And is it your opinion that this damage is a result of the

Vol 30 5210

- (1) Exxon Valdez oil spill?
 (2) A Yes it is
 (3) Q And in Exhibit 451 which I've placed in front of the jury
 (4) you do the same thing with regard to pink fish?
 (5) A Yes So in this case you're taking the reduction in the
 (6) pink prices and multiplying by the quantity of pinks caught in
 (7) each of those areas in each of those years and multiplying it
 (8) out
 (9) Q For these five fisheries the damage number is
 (10) \$163 810 000 and is that - in your opinion is this the damage
 (11) that the Exxon Valdez oil spill cost the fishermen price for
 (12) pink salmon in these fisheries?
 (13) A Yes it is
 (14) Q And you did the same thing in Exhibit 449 with regard to
 (15) kings is that a correct statement?
 (16) A That's correct
 (17) Q And in Exhibit 450 you did it with regard to chums?
 (18) A That's correct
 (19) Q Again broken down by year and by fishery?
 (20) A Yes
 (21) Q And in Exhibit 460 we lumped the two kinds of herring
 (22) together in Exhibit 460?
 (23) A Yes
 (24) Q And that number is \$27 258 000?
 (25) A Yes

Vol 30 5211

- (1) Q With regard to all of these that we've looked at is it
 (2) your opinion that those numerical damages were caused by the
 (3) Exxon Valdez oil spill?
 (4) A That's my opinion
 (5) Q And in Exhibit 6007 which is in evidence we lay it out by
 (6) fishery and by type?
 (7) A That's right So those figures you've summed the
 (8) three year effect in each one of those
 (9) Q For herring and the four species of salmon and the total
 (10) damage number is \$580 445 000?
 (11) A That's correct
 (12) Q And for the jury's convenience with regard to Alaska salmon
 (13) and not herring but Alaska salmon and I'll get to herring in
 (14) a minute Exhibit 784 is a different array for salmon That's
 (15) done by species and by year so we're just slicing the pie
 (16) differently So it's a - it's the same numbers the same
 (17) damage number but for salmon we're slicing the pie instead of
 (18) by fishery and by species by species and by year?
 (19) A That's right So these numbers involve adding up the
 (20) effects in each of the areas
 (21) Q And if you were to take a look at Exhibit 784 and Exhibit
 (22) 460 which does the same thing for herring these two exhibits
 (23) the 460 and 784 are the herring and the salmon impacts that go
 (24) into this total?
 (25) A That's correct

Vol 30 5212

- (1) Q So the exhibits contain the same information but they
 (2) allow the jury when it's time for them to do so to either
 (3) analyze them by species and oiled area or by species and year?
 (4) A That's correct It's exactly the same information
 (5) Q And these two total this one?
 (6) A Yes
 (7) Q And is it your opinion that the Exxon Valdez oil spill had
 (8) an adverse price effect on the prices received by fishermen for
 (9) herring red salmon pink salmon king salmon chum salmon
 add
 (10) in the oiled fisheries for 1989 1990 and 1991?
 (11) A That is my opinion
 (12) Q And the amount of that impact was \$580 445 000?
 (13) A Yes
 (14) MR O NEILL And I have no further questions
 (15) Doctor Thank you very much
 (16) THE COURT You may cross-examine
 (17) CROSS EXAMINATION OF ROBERT MENDELSON
 (18) BY MR COOPER
 (19) Q Good morning Dr Mendelsohn I don't believe that we have
 (20) met before I am Burt Cooper How are you?
 (21) A Very well
 (22) Q We have put up there on the witness stand some documents
 (23) that we won't ask you to read every word of that
 (24) A Thank you
 (25) Q Or not even most words in those but we may be referring to

Vol 30 5213

- (1) them from time to time So I - so you'll have them there you
 (2) can look at them
 (3) Doctor just a couple of questions at the outset Is it -
 (4) you referred to having worked as I recall a response to
 (5) Mr O'Neill's questions some - did I hear it right 1400
 (6) hours on -
 (7) A At least 1500 hours
 (8) Q In the last four years or so?
 (9) A Yes
 (10) Q And that was on what?
 (11) A That is working on various aspects of - of this fish price
 (12) effect
 (13) Q This is the - is this litigation the first project that
 (14) you had that involved prediction of fish prices?
 (15) A Yes it is
 (16) Q And so you hadn't ever been involved before this case in
 (17) predicting salmon prices then I assume?
 (18) A I've hardly ever been involved in any court cases
 (19) Q I didn't mean with respect to court cases Just
 (20) generally
 (21) A That's correct
 (22) Q And you haven't predicted generally herring prices before
 (23) you got involved with this case?
 (24) A That's correct
 (25) Q So this was kind of your first stab at it?

Vol 30 5214

- (1) A At predicting prices salmon prices yes
 (2) Q And herring?
 (3) A That's correct
 (4) Q You have not previously - or at least before this
 (5) litigation you had not published any articles on how to
 (6) predict salmon or herring prices had you?
 (7) A No I had not
 (8) Q Or on just prices of fish generally in any other respect?
 (9) A That's correct
 (10) Q So you were kind of getting on the job training in this
 (11) litigation?
 (12) A On this particular aspect of the case yes
 (13) Q You didn't feel like you brought any particular expertise
 (14) in the fisheries area then when you came on to this case?
 (15) A No You have to realize that natural resource economics
 (16) deals with the economics of fisheries so I've taught this
 (17) subject for 15 years
 (18) Q Fish pricing though?
 (19) A Yes That's part of the market for fish part of managing
 (20) fisheries
 (21) Q Now you told us about the computer model that you
 (22) developed and I got - I'll have to concede here right off -
 (23) right off the bat that you're going to know one heck of a lot
 (24) more about computer models than I do but let me ask you a
 few
 (25) questions about it

Vol 30 5215

- (1) In this computer model you're basically determining how
 (2) well certain things correlate with fish prices?
 (3) A You're trying to determine the magnitude of the effect
 (4) Q Of the correlation?
 (5) A Of the size of the effect of how much a particular factor
 (6) might affect fish prices
 (7) Q Does the computer model tell you cause and effect or does
 (8) it tell you correlation?
 (9) A Well it turns out cause and effect is a combination of
 (10) economic theory that is what factors do you expect to be
 (11) important and if it turns out they're important empirically
 (12) then that corroborates a theory you had before on cause and
 (13) effect
 (14) Q I think you said what I was driving at there Let me see
 (15) if I understand it You need to bring some judgment to what
 (16) these computer models show to figure out if they're coming out
 (17) with a result that really makes sense?
 (18) A You need to have judgment in terms of understanding how to
 (19) interpret the results and also in terms of understanding how to
 (20) build the models that's correct
 (21) Q Let me use an example It's probably kind of a hokey one
 (22) but maybe it'll help me at least I suspect if an observer
 (23) came in here maybe an econometrician like yourself came into
 (24) the courtroom and watched what went on for a week or so he o
 (25) she would observe that every day several times a day

Vol 30 5216

- (1) everybody stands up and shortly thereafter the judge comes
 (2) through comes into the courtroom You've probably seen that
 (3) yourself?
 (4) A Yes I've observed that already today
 (5) Q Now that doesn't mean though does it that it's the -
 (6) it's the people in the courtroom standing up that cause the
 (7) judge His Honor to come into the courtroom?
 (8) A No
 (9) Q You wouldn't draw that conclusion?
 (10) A That would be a conclusion I would not draw no
 (11) Q In fact it's probably the other way around wouldn't you
 (12) say?
 (13) A Yes In fact we guessed that from other information we've
 (14) got
 (15) Q That's kind of an example where you need to bring some
 (16) judgment and some knowledge about what's going on to these
 (17) regression kind of analyses that tell you about correlations?
 (18) A To tell you how to interpret the results that's correct
 (19) Q I mean I've heard other examples and I won't go into
 (20) them except you probably - people I am told for instance
 (21) have conducted humorous studies that show that every time the
 (22) economy goes into a boom period like during the twenties and
 (23) during the late sixties that hemlines tend to rise but
 (24) whenever the economy goes bust hemlines tend to go down
 (25) Have you ever run across that example?

Vol 30 5217

- (1) A I'm not a fashion expert that's for sure
 (2) Q I'm not either but in any event you got to be careful
 (3) about - I mean you wouldn't conclude from that if that were
 (4) in fact the phenomena observed you wouldn't conclude that
 (5) dress designers have the ability to determine which way the -
 (6) cause which way the economy goes?
 (7) A I would not guess that hemlines cause economic
 (8) development
 (9) no
 (10) Q So it's fair to say then that one of the things that we
 (11) have to do and you've tried to do I assume is to bring to
 (12) bear on your computer model knowledge of the fishing
 (13) industry
 (14) and particularly the salmon and herring industry in Alaska in
 (15) order to figure out that these results really make sense?
 (16) A There are sort of two roles for that One is determining
 (17) what factors ought to be included and the second which I
 (18) think is what you're more driving at is how you interpret
 (19) results you get from the models
 (20) Q I guess a kind of a threshold question there is is there
 (21) indeed a correlation between the factors you're looking at and
 (22) if there is one you go to the next step and try to figure out
 (23) what this means?
 (24) A That's right the empirical data gives you a result and you
 (25) must interpret it
 (26) Q Let me kind of - in the vein of maybe testing your model a
 (27) little bit let's talk about sockeye Your model predicts for

Vol 30 5218

- (1) instance that there was a difference between actual and the
 (2) predicted price using your factors for sockeye in 1991?
 (3) A Yes
 (4) Q Which as I understand it you ascribe that to the oil
 (5) spill that difference?
 (6) A That's correct
 (7) Q Notwithstanding that 1991 is three years after the spill?
 (8) A That's correct
 (9) Q And in fact if I recall correctly the amount of the
 (10) difference between actual and predicted what you call the
 (11) spill effect actually increases from - in 1990 over 1989?
 (12) A In the sockeye market?
 (13) Q For sockeye yes
 (14) A Slightly yes
 (15) Q And it increases again in 1991 over 1990?
 (16) A Again that's true in the sockeye market Yes
 (17) Q See if I can lay my hands on that exhibit I believe it's
 (18) 444 Is that the one? You probably don't have that up there
 (19) do you?
 (20) A I don't see it
 (21) Q The one that I have doesn't have the pretty colors on it
 (22) but let me put it up here
 (23) This was your sockeye salmon -
 (24) A The sockeye salmon model yes
 (25) Q - prediction? So your model would say that in '89 this

Vol 30 5219

- (1) what I'm pointing to here is the difference - this is the
 (2) predicted and this was the actual so you're saying that's the
 (3) spill effect?
 (4) A That's correct
 (5) Q And then in 1990 a year later your model predicts that
 (6) apparently the passage of time has somehow heightened the
 (7) fears
 (8) of buyers?
 (9) A I wouldn't exactly put it that way What the model
 (10) predicts is that there was no - the market factors which
 (11) caused prices to continue to increase yet they continued to
 (12) decrease to decline
 (13) Q You attributed all that additional increase between
 (14) difference and actual to the spill and yet it's one year later
 (15) correct?
 (16) A That's correct
 (17) Q Then you come to 1992 two years after the spill?
 (18) A '91?
 (19) Q I'm sorry '91 If I haven't said it already I'm lousy
 (20) with numbers Dates are no better
 (21) In 1991 you've got an effect that's even much greater?
 (22) A In 1991?
 (23) Q I'm sorry 1991
 (24) A Yes
 (25) Q Now another thing that interested me here is that
 (26) let's - well let me ask you this question You in the

Vol 30 5220

- (1) course of these 14 or 1500 hours that you've spent working on
 (2) this matter have you - you've looked at prices for salmon
 (3) from other locations other countries?
 (4) A I have looked at some of the wholesale prices in Japan
 (5) that's correct
 (6) Q You didn't look at prices anywhere else?
 (7) A I'd seen prices in some of the - in some of the exhibits
 (8) provided by the defendants for British Columbia
 (9) Q Well that - let's take British Columbia and let's take
 (10) 1992 - 91 the year when you have this big spill effect Do
 (11) you know - what price do you predict under your model would
 (12) have prevailed for sockeye salmon in Alaska in 1991?
 (13) A Exactly which price?
 (14) Q Well more or less
 (15) A I can't remember off the top of my head You have the
 (16) chart so - this looks like a price around \$3 00
 (17) Q Little over \$3 00?
 (18) A Yes
 (19) Q I'll tell you that if the way we calculated was right it
 (20) was about three dollars I think and eighteen cents does that
 (21) sound about right?
 (22) A I think it will be
 (23) Q You're saying if there had been no spill in Prince William
 (24) Sound the price to fishermen in 1991 in Prince William Sound
 (25) and other areas of Alaska would have been \$3 18 per pound?

Vol 30 5221

- (1) A That's what this model says yes
 (2) Q Now the price in fact in British Columbia in 1991 was
 (3) about how much?
 (4) A I don't know I wouldn't be able to tell you that off the
 (5) top of my head
 (6) Q Wasn't that of some interest to you?
 (7) A Well I knew that it had the same pattern as Alaskan
 (8) prices so it - if I had to guess I would guess it was very
 (9) similar to the actual prices in Alaska
 (10) Q You also knew did you not that there was no oil spill -
 (11) the Exxon Valdez oil spill was in Alaska it wasn't in Canadian
 (12) waters?
 (13) A That's correct
 (14) Q In fact most of the British Columbian salmon comes from
 (15) where?
 (16) A The British Columbian salmon?
 (17) Q Yes
 (18) A I'm not sure but I thought it came from the Frazer
 (19) Q That's where?
 (20) A Vancouver
 (21) Q That's the river that comes through Vancouver isn't it?
 (22) A Yes
 (23) Q How far away is that from the site of the spill?
 (24) A That's very far away
 (25) Q Over a thousand miles probably?

Vol 30 5222

- (1) A That's correct
 (2) Q So we're now in British Columbia we're at least a thousand
 (3) miles away from the spill and we're three years away from the
 (4) spill and you're saying that the price that they would have
 (5) had in - or would have enjoyed in Alaska this 3 18 price
 (6) would have been enjoyed even though the price of British
 (7) Columbia salmon at the time was - and I'll represent this to
 (8) you this will be the subject of proof later on but if you
 (9) don't recollect it was about 1 33 a pound
 (10) A Okay Well that's exactly right and my feeling is -
 (11) Q That price then in other words the British Columbia
 (12) price in 19 - the actual in 1992 was right around here?
 (13) A In 1991
 (14) Q I'm sorry 1991
 (15) A If that's the date yes
 (16) Q Now does that - that means then what you're saying if
 (17) there hadn't been any spill even though a Japanese buyer
 (18) could
 (19) have gone to British Columbia in 1991 talking 1991 now and
 (20) bought salmon for 1 33 a pound nevertheless that Japanese
 (21) buyer would have been willing to go to Alaska and pay \$3 18 a
 (22) pound?
 (23) A My reason for that is this spill was so large in Japanese
 (24) minds it tainted sockeye It doesn't make any difference
 (25) where the sockeye came from it's tainted
 (18) have gone to British Columbia in 1991 talking 1991 now and
 (19) bought salmon for 1 33 a pound nevertheless that Japanese
 (20) buyer would have been willing to go to Alaska and pay \$3 18 a
 (21) pound?
 (22) A My reason for that is this spill was so large in Japanese
 (23) minds it tainted sockeye It doesn't make any difference
 (24) where the sockeye came from it's tainted
 (25) Q Have you talked to any economists from British Columbia to

Vol 30 5223

- (1) see if they share that view with you?
 (2) A I've read some of the literature from British Columbia
 (3) yes
 (4) Q And in fact you have never read anything that suggested
 (5) that British Columbia sockeye suffered some kind of taint
 (6) impact from the spill have you?
 (7) A I've never seen anyone study that that's correct
 (8) Q In fact if British Columbia had suffered from the spill
 (9) anybody thought that that was really something that had
 (10) happened an economist wouldn't you expect to have seen
 (11) somebody write something about that subject?
 (12) A Well this is one of the issues where my expertise and
 (13) fishery economist's expertise are different My expertise is
 (14) to discover what affects pollution has on markets Fishery
 (15) economists they try to understand what fishery markets have
 (16) on
 (17) future markets
 (18) One of the things you see if you look at the fishery
 (19) economists and what they've written they try to explain
 (20) everything they observe on the basis of fishery market
 (21) variables and if you look at the variables that they used
 (22) prior to the spill they have for example never thought
 (23) farmed salmon was going to be important for sockeye
 (24) Q Who never thought that?
 (25) A The fishery experts They basically said you know farmed
 salmon is important in some markets but not really very

Vol 30 5224

- (1) important in sockeye But you look after the spill after the
 (2) spill had already knocked prices down when they were trying
 to
 (3) use what little they understood about the future in market to
 (4) explain the pollution effects then all the sudden they thought
 (5) that the farm salmon very well did affect sockeye prices
 (6) Q So what you re saying is the economic works or articles or
 (7) whatever you ve seen indicates that farmed salmon had an
 impact
 (8) on prices?
 (9) A What I m trying to say is that - that the results that the
 (10) fishery experts found were different before the spill and after
 (11) the spill Something has changed even in their models where
 (12) there s no spill effect being measured at all
 (13) Q Something they think has changed is the impact of farmed
 (14) salmon?
 (15) A That s right and the question is why
 (16) Q And do you believe - well you don t have - you don t
 (17) attribute any of that spread between your predicted and actual
 (18) price we were just looking at a moment ago to the impact of
 (19) farmed salmon do you?
 (20) A No because it s included in the model
 (21) Q Not even in 1991?
 (22) A That s right because it s already in the model It s
 (23) already in the predicted prices
 (24) Q You re claiming that whole entire spread -
 (25) A That s exactly correct

Vol 30 5225

- (1) Q - was the spill effect?
 (2) Let me move to a different subject but kind of the same
 (3) general area of bringing some common sense to the subject of
 (4) what a model can show The - let s talk about silver salmon
 (5) cohos
 (6) Now the silver salmon swim - well there are silver
 (7) salmon that are commercially fished in the State of Alaska are
 (8) there not?
 (9) A That s correct
 (10) Q Indeed they re commercially fished in virtually all of the
 (11) areas that are the subject of the charts that you ve shown us
 (12) today?
 (13) A That s correct
 (14) Q And those coho salmon basically were swimming in the same
 (15) waters as were the sockeye salmon and the pinks and these
 other
 (16) species in 1989 at the time of the spill?
 (17) A That s correct
 (18) Q And the - if consumers or buyers had some concern that the
 (19) spill might cause a taint problem you would expect would you
 (20) not that that would show up also in connection with cohos?
 (21) A You would
 (22) Q I mean you don t think that a Japanese - the mother in a
 (23) Japanese - in a Japanese market as she s buying food or fish
 (24) for the family meal is going to somehow say the coho s all
 (25) right if she s thinking at the same time that the red - that

Vol 30 5226

- (1) the sockeye isn t all right because of the spill?
 (2) A That s right That s why I meant there were seven
 (3) experiments and there are seven results and what you re
 (4) pointing out is one of the results It may not have been a
 (5) price effect from the spill
 (6) Q But what I m driving at is well precisely that I guess
 (7) your model shows there is no price effect for coho?
 (8) A The model shows that the price effect is very mixed and my
 (9) feeling was that the other results were so strong that I didn t
 (10) want to include these very mixed results with them and so to
 (11) be conservative I ve dropped them I ve dropped the coho
 (12) effects
 (13) Q You dropped the coho effects - dropped the coho price
 (14) effect because your model didn t show there was really much of
 (15) a price effect there isn t that what it boils down to?
 (16) A I ve done a lot of different models In some of the models
 (17) there is a price effect in cohos but because it is mixed some
 (18) of the model don t show it I ve decided you don t want to
 (19) include that in damages
 (20) Q And in fact your testimony is is it not that you cannot
 (21) have - you cannot apply a model in which you have sufficient
 (22) confidence that shows an effect in coho salmon to allow you to
 (23) stand here and say that there was such an effect?
 (24) A That s right some of the model I tested showed there was
 (25) effect and as I said the model which I used in this report

Vol 30 5227

- (1) did not show a very strong effect and what we re trying to do
 (2) is show if things are having a mixed effect not to include it
 (3) as a damage
 (4) Q Because you don t have enough confidence that your
 models
 (5) vanous ones showed any real impact on coho?
 (6) A In the case of the coho I m not confident whether it was a
 (7) market effect or whether it was an oil spill effect I can t
 (8) tell and so because I can t tell for sure I m not counting it
 (9) as a damage
 (10) Q And indeed so far as you re aware the plaintiffs are not
 (11) claiming that there is any effect on coho effect on coho?
 (12) A That s correct
 (13) Q Now what - what is the current price if you know -
 (14) well let me back up a minute if I understand your charts
 (15) correctly and what the plaintiffs have indicated they are
 (16) making a price claim and you are supporting their price claim
 (17) for the years 1989 Right?
 (18) A That s correct
 (19) Q 1990?
 (20) A Correct
 (21) Q And 91?
 (22) A That s correct
 (23) Q I got it right that time
 (24) A Yes
 (25) Q And the - but there s no claim for a price effect beyond

Vol 30 5228

- (1) 1991?
- (2) A I ve only studied up through 1991 that s correct In the
- (3) paper - in the report that I provided the Court it only
- (4) includes through 91
- (5) Q You ve only run your models through 91?
- (6) A No Actually I ve done some work since that that go
- (7) through 92
- (8) Q Now the current price more or less for sockeye do you
- (9) know what that is?
- (10) A Well year end prices they re not finalized until later
- (11) so current price in terms of a 93 price I believe the 93
- (12) prices have recovered some from - well 92 prices went up
- (13) slightly and 93 prices came back down slightly and I don t
- (14) believe we know what the 94 prices are yet
- (15) Q But in terms of dollar amounts do you know about what they
- (16) are?
- (17) A Well we don t have year end 94 prices at all
- (18) Q The prices that you do have
- (19) A Well the final prices that I ve seen in 92 was -
- (20) Q 92?
- (21) A Yes
- (22) Q You haven t got any for 93?
- (23) A I believe the 93 prices are just preliminary at this
- (24) date
- (25) Q I guess what I was trying to drive at is do you know what

Vol 30 5229

- (1) the preliminary 93 prices are?
- (2) A My recollection is that they have - they re similar to the
- (3) 91 prices but I don t remember exactly what number they
- (4) were
- (5) Q They re down pretty low in any event?
- (6) A Yes
- (7) Q Compared to historical highs?
- (8) A That s correct
- (9) Q Now you will agree will you not that there are obviously
- (10) factors other than the oil spill that have produced some major
- (11) reductions in prices of salmon to the point where we ve had
- (12) these 93 prices that you re talking about?
- (13) A It s clear from the modeling work that I ve done that in
- (14) some circumstances the prices would decline from 89 levels -
- (15) from 88 levels for sure
- (16) Q For reasons having nothing to do with the oil spill?
- (17) A For market reasons that s what the predicted prices of
- (18) market show for example in pink
- (19) Q Now have you ever - you have utilized I m sure have you
- (20) not the publication called Salmon News?
- (21) A I did not really utilize it no
- (22) Q You are aware of that?
- (23) A I m aware of it yes
- (24) Q That is indeed a publication that comes out from time to
- (25) time about salmon marketing pricing and so forth?

Vol 30 5230

- (1) A Yes it is
- (2) Q Do you have Exhibit 3048 in front of you there?
- (3) A Yes
- (4) Q You ve seen that before haven t you?
- (5) A I m not sure
- (6) Q Part of your general background study in this whole area?
- (7) A I couldn t - I - it looks familiar but I wouldn t be
- (8) able to say whether I ve seen this particular issue before
- (9) Q You know who Gunter Knapp is do you not?
- (10) A Yes I do
- (11) Q Can you tell us who Gunter Knapp is?
- (12) A Gunter Knapp and I went to graduate school together and we
- (13) actually worked a lot on fisheries in the past together He s
- (14) an expert here in Alaska
- (15) Q He s a professor of economics at the University of Alaska
- (16) at Anchorage?
- (17) A That s correct
- (18) Q And he is a - you would recognize him as an expert in
- (19) salmon salmon pricing would you not?
- (20) A He s an expert in salmon markets but not an expert in
- (21) quantifying salmon effects that s right
- (22) Q He certainly is somebody who s very knowledgeable about
- (23) markets and what is causing major changes in salmon markets
- (24) is
- (25) he not?
- (26) A Yes

Vol 30 5231

- (1) Q Now let me show you this exhibit I ll put this Exhibit
- (2) 3048 on the machine here
- (3) THE COURT Is that a plaintiffs or a defendants
- (4) exhibit?
- (5) MR COOPER It s a DX Your Honor 3048
- (6) BY MR COOPER
- (7) Q There s a note on the bottom Sorry I didn t have a
- (8) brighter highlighter but in any event it indicates at the
- (9) bottom this paper is by Gunter Knapp and identifies him as we
- (10) just indicated It is the first in a series of papers and
- (11) workshops intended to provide information and then it looks a
- (12) little illegible there to fishermen and others to work
- (13) together to improve the salmon market Sponsors are the
- (14) Alaska
- (15) Commercial something and Agricultural Bank CFAB I think
- (16) that
- (17) is?
- (18) A Uh huh
- (19) Q Do you know what that is?
- (20) A Actually I m not sure
- (21) Q I think it s Commercial Fisheries and Agricultural Bank?
- (22) A Okay
- (23) Q You understand that that is a state organization that was
- (24) set up in order to help fisheries in agriculture?
- (25) A (Nods head up and down)
- (26) Q And the Alaska Department of Commerce - now this is in
- (27) November 1991 and in this publication Mr Knapp or
- (28) Professor

Vol 30 5232

- (1) Knapp indicates - this is November 91 This is still within
 (2) the time period that you believe or you are claiming that
 (3) there s a spill effect that accounts for the entire difference
 (4) between your predicted and actual prices?
 (5) A That s correct
 (6) Q And Mr Knapp indicates since 1988 - well Mr Lynch
 (7) reminds me that I probably need to zoom in
 (8) Since 1988 Alaskan salmon fishermen have watched the
 (9) bottom drop out of harvest price For several years before
 (10) that prices had soared I take it so far you re in agreement
 (11) with what Professor Knapp indicates?
 (12) A Absolutely
 (13) Q Then he says what caused the boom and bust in salmon
 (14) prices
 (15) and he gives reasons for that Now the first reason he gives
 (16) is that they boom between 85 and 88 because there was a
 (17) temporary drop in the world salmon supply at the same time the
 (18) value of the yen was rising You would agree with that?
 (19) A Yes
 (20) Q Then he says prices crashed between 88 and 91 because
 (21) the
 (22) rapidly growing supply of both wild and farmed salmon
 (23) outstripped demand I gather that here is where you depart
 (24) from Professor Knapp?
 (25) A Well you have to -
 (26) Q First just establish that you don t agree with him here do
 (27) you?

Vol 30 5233

- (1) A I disagree with the adjectives he s using
 (2) Q Don t you disagree entirely with the cause that he assigns
 (3) to the crash?
 (4) A Well the models that we just went through shows that in
 (5) fact in fisheries like in the pink salmon market where there
 (6) was a big increase in supply you do see prices going down
 (7) Now whether we described that as a crash or whether it s just
 (8) a small decrease in prices that s where I would disagree with
 (9) him It s choices of adjectives
 (10) Q What he s talking about here is the absolute level that the
 (11) prices have dropped down to correct?
 (12) A It s not clear See Dr Gunter has never really
 (13) quantified the size of the effects He s never quantified
 (14) which of the factors are doing what
 (15) Q It s pretty clear what his belief is from this Doesn t he
 (16) say that they crashed because of the rapidly growing world
 (17) supply?
 (18) A That s what he says in this particular case
 (19) Q There s nothing unclear about that is there?
 (20) A Well the question is did he take into account the oil
 (21) spill when saying that and the fact of the matter is he s
 (22) never done that
 (23) Q Well the fact of the matter he apparently doesn t believe
 (24) at that time the oil spill was a cause of this crash in the
 (25) prices?

Vol 30 5234

- (1) A I believe if you asked him he would tell you that he s
 (2) never examined that issue He s never examined whether the
 (3) oil
 (4) spill reduced prices
 (5) Q He certainly examined the crash sufficiently to apparently
 (6) form the opinion that the world supply caused the drop?
 (7) A I just - I don t disagree that if there s a large increase
 (8) in supply it will cause prices to go down but the question is
 (9) how much
 (10) Q Let s look at the next bullet here He says farmed salmon
 (11) will increasingly compete with Alaskan salmon in world
 (12) markets I presume you will agree with that?
 (13) A Yes
 (14) Q Now let me show you - I d like to show you one other
 (15) document here You see Exhibit DX2802? You have that in
 (16) front
 (17) of you there Doctor?
 (18) A Yes
 (19) Q And that is a report is it not by the general accounting
 (20) office of the United States government?
 (21) A That s correct
 (22) Q And it is entitled International Trade Factors Affecting
 (23) the Price of Alaskan Bristol Bay Sockeye Salmon?
 (24) A That s correct
 (25) Q You ve seen this before?
 (26) A Yes
 (27) Q And as you understand it the purpose of this report was

Vol 30 - 5235

- (1) for the general accounting office to answer some questions that
 (2) had been asked by congressional representatives from Alaska
 (3) or
 (4) from fish producing states?
 (5) A My understanding is this had something to do with concern
 (6) about a price fixing issue
 (7) Q Was it addressed as the general question as to what caused
 (8) the prices to fall?
 (9) A Yes but it - this was clearly not asking whether this was
 (10) an effect that was due to an oil spill or not The question
 (11) was focused on another issue
 (12) Q Let s look at the document then Government accounting
 (13) office et cetera the title factors affecting the price of
 (14) Alaskan Bristol Bay sockeye salmon
 (15) And if we go to the first page it s addressed to - there
 (16) I think I ve got it
 (17) It s addressed to the Honorable Leon E Panetta and Don
 (18) Young House of Representatives and it says as requested we
 (19) examined issues related to the prices commercial fishermen
 (20) received after their 1991 catch of sockeye salmon in Alaska
 (21) Then it talks about many fishermen having gone on strike that
 (22) year because the prices were so low?
 (23) A That s correct
 (24) Q And it pounds out that the 70 cents a pound price
 (25) eventually negotiated between the fishermen and processors
 (26) was
 (27) one third lower than the 1990 price and well below the \$2 10

Vol 30 5236

- (1) price paid in 1988 all of which I assume you'll agree with?
 (2) A Yes
 (3) Q And then they say we focused our work on identifying the
 (4) principal economic factors that have contributed to this year's
 (5) low prices. That's precisely what they were trying to do
 (6) wasn't it in this report?
 (7) A Exactly so that what they looked at was just market
 (8) factors
 (9) Q And after looking at market factors the principal economic
 (10) factors what they came up with was a combination of three
 (11) factors that explained much of the downward pressure on the
 (12) price for Bristol Bay sockeye salmon. So far we're together?
 (13) A Yes
 (14) Q And those were the size of the catch there the inventory
 (15) of salmon in Japan?
 (16) A Yes
 (17) Q And the competitive importance of farmed salmon in the
 (18) Japanese market?
 (19) A Exactly
 (20) Q And can we agree that they do not identify the oil spill as
 (21) a factor in the price?
 (22) A They do not look at the oil spill that's correct. They
 (23) don't examine that issue.
 (24) Q And do you not believe that the general accounting office
 (25) in responding to the congressmen if they believed or came

Vol 30 5237

- (1) across indications that the oil spill was some kind of a
 (2) significant factor they would have mentioned that?
 (3) A If the congressmen asked them to look at the oil spill
 (4) they would have addressed it yes. That wasn't what they were
 (5) asked to address.
 (6) Q And you believe that they simply left out what you say is a
 (7) major factor in responding to the congressmen's concerns
 (8) about
 (9) the low prices in Bristol Bay?
 (10) A That's correct.
 (11) Q Now while we're on the subject of farmed salmon - or at
 (12) least we've touched upon that let me move to that. If I
 (13) understood it correctly under your model if the - if the
 (14) amount of farmed salmon production increases that has the
 (15) effect of increasing the price of sockeye?
 (16) A That's what the results show yes exactly.
 (17) Q Well and you believe in those results do you not?
 (18) A Well they're empirically correct. The question is how to
 (19) interpret them.
 (20) Q Well I guess the fishermen would interpret them by jumping
 (21) up and down with joy if the farm production goes way up in the
 (22) rest of the world?
 (23) A That's not how I interpret them. I interpret them that the
 (24) farmed salmon variable is relatively unimportant in this data
 (25) and what it's doing is acting as a proxy for Japanese buying
 power.

Vol 30 5238

- (1) Q So it's your belief that indeed farmed salmon production
 (2) increases do result in an adverse impact on prices of salmon?
 (3) A Prior to the spill I would have said it would have almost
 (4) no impact on fisheries such as the sockeye fishery because the
 (5) sockeye fishery and the Atlantic salmon fishery aren't very
 (6) closely connected. The Japanese before the spill did not
 (7) look at Atlantic salmon as being a close substitute for
 (8) sockeye.
 (9) Q Well we obviously - we have a disagreement there and
 (10) we'll hear more witnesses on that subject later but your model
 (11) says there was a price impact not just in '89 but in '90 and
 (12) '91?
 (13) A That's correct.
 (14) Q And is it in fact the case then that in - well let's
 (15) take it year by year. In 1989 did increase in production of
 (16) farmed salmon make prices of sockeye salmon - influence
 (17) those
 (18) prices in an upward direction or a downward direction?
 (19) A Are you asking me what the model would have predicted that
 (20) variable would do or are you asking me how I think that
 (21) variable actually affected real prices?
 (22) Q Let's ask first in the model. Your variable would cause
 (23) what prices to go which way?
 (24) A In my model where I believe the farmed salmon variable is
 (25) acting as a proxy for Japanese income it would have predicted
 prices would have gone down slightly.

Vol 30 5239

- (1) Q And in 1990?
 (2) A It would have gone up again.
 (3) Q And in other words the more farmed salmon in 1990 that
 (4) floods the market the higher the price of sockeye is going to
 (5) be?
 (6) A That's right.
 (7) Q Under your model?
 (8) A Because it's acting as a proxy of the Japanese buyer
 (9) factor.
 (10) Q I know you're fond of that we'll come back to that. In
 (11) 1991 your model predicts?
 (12) A Would have predicted again an increase in prices.
 (13) Q So in 1991 if we could flood the market with farmed
 (14) salmon your market would say the price of the rest of the
 (15) salmon's going to go up?
 (16) A That's correct.
 (17) Q And if that were the case then the fishermen in Alaska
 (18) ought to be jumping for joy if Norway and Chile and Scotland
 (19) and all these other producers of farmed salmon increase their
 (20) production and start pumping it out?
 (21) A That would be an inappropriate use of the model that's
 (22) correct you could say that.
 (23) Q I think what you're telling me is that the variable in your
 (24) model that you have identified or that is identified as farmed
 (25) salmon isn't really farmed salmon?

Vol 30 5240

- (1) A That s correct
 (2) Q So you produced these whole series of models that basically
 (3) have got the wrong characterization here for this particular
 (4) element?
 (5) A Well I ve done some work since then I ve actually
 (6) included Japanese buying power which is this variable that
 (7) you re saying I ve omitted and I get - I still get these
 (8) taint effects These taint effects don t go away
 (9) Q Before we get to that let me just make sure that I
 (10) understand You produced a report to us Exhibit 437 I think
 (11) it was?
 (12) A That s correct
 (13) Q And you ve got that in front of you there and on page
 (14) T2 -
 (15) A T2?
 (16) Q T2 is what mine says at the bottom
 (17) A I m not sure what you re referring to
 (18) Q I ll tell you what if I may approach Your Honor let me
 (19) just show you this -
 (20) A Oh I see
 (21) Q You have it?
 (22) A The table? Yes I see it
 (23) Q On PX437 the table in your report this is the one that -
 (24) this is your linear OLS model of Alaskan salmon prices?
 (25) A Yes This is a description of the model we ve been

Vol 30 5241

- (1) discussing up till now
 (2) Q Now we ve been kind of teasing Mr Sanders here about
 (3) learning big words and big terms I m sure if we brought him
 (4) up here he could tell us what that OLS means but why don t
 (5) you tell us?
 (6) A It means I used ordinary least squares
 (7) Q He says I could have done it And that s a technique
 (8) that s used in computer model?
 (9) A In statistical modeling yes
 (10) Q What you listed up here this term dep variable that s
 (11) dependent variable?
 (12) A That is dependent variable
 (13) Q And the term you ve got in here is farmed?
 (14) A Yes that s world farmed salmon harvest
 (15) Q And what you plug into the model is a number that is -
 (16) that represents what some production pounds or something of
 (17) farmed salmon?
 (18) A Aggregate tons I believe but yes
 (19) Q And is it this the fact that there s no negative sign in
 (20) front of this number over here which I certainly won t try to
 (21) have you explain because I suspect it would take a while -
 (22) A Yeah The number above is giving you a sense of the
 (23) relationship between that variable and in this case sockeye
 (24) prices
 (25) Q And the fact that it s positive means that as the price of

Vol 30 5242

- (1) farmed - the quantity of farmed salmon goes up the price goes
 (2) up for in this case sockeye salmon?
 (3) A That s correct
 (4) Q Now you said - you said that you used a proxy or that you
 (5) believed that this farmed element - you now believe that
 (6) that s a proxy for something else?
 (7) A That s correct It s a proxy for Japanese buying power
 (8) Q For Japanese buying power? In other words somehow
 (9) Japanese buying power is the same thing as farmed salmon
 (10) quantity?
 (11) A If you look at the - if you charted both Japanese buying
 (12) power over time and farmed salmon over time what you ll see is
 (13) that all through the 70s they were relatively low practically
 (14) zero in the case of the farmed salmon and in the 80s they
 (15) rapidly increased so they both have exactly the same pattern
 (16) over time so they end up acting for each other
 (17) Q Then you are not - well are you or are you not of the
 (18) view that in 1989 90 and 91 the years you claim of the
 (19) price effect an increase in farmed salmon production had an
 (20) adverse impact on prices of sockeye salmon?
 (21) A Well in the model I ve used it increases but my
 (22) interpretation of that is that it s not due to the actual
 (23) farmed salmon resulting in higher prices but this proxy
 (24) effect
 (25) Q I understand that I guess what - the question I m asking

Vol 30 5243

- (1) I think is a little different Is it your view as you sit here
 (2) and testify today that in fact in 89 90 and 91 the - to
 (3) the extent that production of farmed salmon increased that
 (4) would have a lowering effect a reducing effect on prices of
 (5) sockeye salmon for Alaska?
 (6) A Yeah It turns out that when I included Japanese buying
 (7) power directly so it no longer was being fed through this
 (8) farmed salmon variable then in fact you get a very small
 (9) negative effect from the farmed salmon variable
 (10) Q So the answer to my question is that you agree -
 (11) A Yes
 (12) Q And increased farmed salmon production in those years in
 (13) fact would negatively affect sockeye salmon prices?
 (14) A Yes It s a negative effect and it s small
 (15) Q Now you say it s small and I d like to just stick with
 (16) that for just a moment You are familiar with the organization
 (17) known as the Alaska Seafood Marketing Institute?
 (18) A Yes
 (19) Q Sometimes called ASMI?
 (20) A Yes I am
 (21) Q And that is an organization that was set up in Alaska in
 (22) order to promote Alaskan seafood sales and marketing?
 (23) A That s correct
 (24) Q And you re aware - well you re aware of a report that
 (25) ASMI did in I believe it was 1991 late 91 or early 92

Vol 30 5244

- (1) called Salmon 2000?
 (2) A Yes I m aware of that report
 (3) Q 2000 meaning the year 2000?
 (4) A I don t know why they named it that but yes
 (5) Q And the board of directors of ASMI that consists of a
 (6) number of processors?
 (7) A I wouldn t be surprised yes
 (8) Q And fishermen?
 (9) A Yes
 (10) Q I think you have a copy of that report or at least some of
 (11) it as Exhibit 2806 and that is a DX You have it there?
 (12) A Yes
 (13) Q That s the one - you ve seen that before?
 (14) A Yes I have
 (15) Q And you ve read it?
 (16) A Yes
 (17) Q Let me just first put on this second - I believe it s the
 (18) second page of that document it just lists the board of
 (19) directors for ASMI and we have Mr Horgan large processor
 (20) fisherman large processor small processor et cetera Sheryl
 (21) Sutton fisherman Lance Ervin fisherman and so on You see
 (22) that?
 (23) A Yes
 (24) Q These are not exactly people you d expect to be fans of
 (25) Exxon would you?

Vol 30 5245

- (1) A I have no way of knowing
 (2) Q The report then indicates in the executive summary section
 (3) overview indicates Alaska salmon is losing ground at an
 (4) alarming rate after a decade of drastic change the Alaskan
 (5) salmon industry is at a critical juncture At the beginning of
 (6) the decade Alaskan salmon harvest accounted for 41 percent
 of
 (7) the world salmon supply By the end of 1990 Alaska salmon
 (8) accounted for just 31 percent
 (9) And then it talks about that decrease having occurred in
 (10) spite of a 50 percent increase in production And then it
 (11) says Alaska s dwindling market share is primarily due to the
 (12) increase in production of farmed salmon from one percent of
 (13) world supply in 1980 to 30 percent today
 (14) Now you will agree - can we agree that you disagree with
 (15) the authors of Salmon 2000 in the magnitude of the effect of
 (16) the farmed salmon phenomena?
 (17) A Depends what you re trying to argue If you re trying to
 (18) argue all total salmon produced anywhere in the world what
 (19) shares Alaska had of that total amount this statement is
 (20) perfectly accurate If you re trying to argue about what s
 (21) going on in the sockeye market per se what s happening to
 (22) sockeye the special fish then this is kind of irrelevant
 (23) because most of what s going on with the farmed salmon is
 (24) happening in Europe and the United States and sockeye s not
 (25) sold in Europe and the United States

Vol 30 5246

- (1) Q Are you saying that farmed salmon is not being sold at all
 (2) into Japan?
 (3) A What I m saying is that this - this particular statement
 (4) is addressing all salmon species as a group whereas most of
 (5) what we re concerned about here is the sockeye market what s
 (6) happened to the special sockeye fish and that s not going to
 (7) apply to sockeye
 (8) Q Let s break it down then You will at least agree with
 (9) respect to these other species of salmon that you have
 (10) testified to that farmed salmon has had a major impact in the
 (11) nature of driving those prices down?
 (12) A Well it s clear that farmed salmon that has had an impact
 (13) in terms of the purchase of salmon in Europe and the United
 (14) States that that s a place - those are the places where
 (15) farmed salmon has gone and if you re worried about market
 (16) share questions such as that then in those sites that s an
 (17) accurate statement that farmed salmon has caused a reduction
 (18) in market share
 (19) Q Isn t it true that Alaskan salmon used to be sold in some
 (20) of those places?
 (21) A That s correct
 (22) Q And it s been replaced by farmed salmon?
 (23) A That s correct It s largely pink
 (24) Q The market is pretty much a world one isn t it these days
 (25) for salmon?

Vol 30 5247

- (1) A The market that was always the key to the sockeye was
 (2) Japan Japan is the key to the sockeye market not what s
 (3) happening in Europe
 (4) Q So - well let me go back to the question that I was
 (5) asking a moment ago Are you saying or are you not saying
 that
 (6) the increase in farmed salmon production has had an effect a
 (7) negative effect on prices other than sockeye prices?
 (8) A My understanding reading this article is that it says
 (9) nothing about prices
 (10) Q Without regard to - without regard to - says nothing
 (11) about prices?
 (12) A This just talks about market share
 (13) Q Doesn t market share have - well let s go back to my
 (14) question Without regard to what the article says do you
 (15) believe that the increase in production of farmed salmon has or
 (16) has not had a substantial negative impact on prices of other
 (17) kinds of salmon besides sockeye?
 (18) A You re worried about Alaskan prices the Alaska salmon?
 (19) Q Prices for Alaska salmon let s take that
 (20) A It s - I don t have a - I don t disagree that it s going
 (21) to have a negative effect the direction of the effect is going
 (22) to be negative in general but there s not much evidence that
 (23) it was a dramatic effect
 (24) Q Not dramatic? If you d look at - I believe it s about the
 (25) fourth page in Unfortunately this does not have very good

Vol 30 5248

- (1) pagination on it If I could help - no it's page - that
 (2) A Page 2
 (3) Q The authors of Salmon 2000 indicate that the dramatic rise
 (4) in production and growing acceptance of farmed salmon as a
 (5) source of fresh salmon presents the greatest single threat to
 (6) Alaskan salmon
 (7) Now is it your belief that that statement has no
 (8) implications with respect to price of Alaska salmon?
 (9) A No that statement might
 (10) Q Might? It does doesn't?
 (11) A Yes
 (12) Q I mean isn't that what it's talking about when it says the
 (13) growing acceptance of farmed salmon as a source of fresh
 (14) salmon represents the single greatest threat to Alaska salmon?
 (15) A Yes
 (16) Q And then they go on to say that the consistent year round
 (17) availability and quality of fresh farmed salmon has made Alaska
 (18) salmon with its short season and quantities and supply
 (19) inconsistencies a secondary choice Would you agree with
 (20) that?
 (21) A It's certainly true that the consistent year round
 (22) availability and quality of farmed salmon has resulted in a
 (23) product that wasn't available before when you rely on wild
 (24) salmon because it all comes at one time
 (25) Q Isn't that the major advantage of farmed salmon? They've

Vol 30 5249

- (1) got the techniques down now where they can pull those farmed
 (2) salmon out of the pens any time during the year put them on a
 (3) air freighter and get them from Chile to Japan in just a matter
 (4) of hours fresh as can be?
 (5) A That is their evince yes It's kind of interesting In a
 (6) sense this is arguing that it's a strict substitute but one
 (7) of the other things that has happened because of this is
 (8) aggregate consumption of salmon has clearly increased
 (9) Q Let me move to some other subjects here quickly and I'll
 (10) try and finish up with you fairly quickly Were you here the
 (11) other day in the courtroom when Dr Crutchfield pointed out
 (12) that on his model he showed us where the - a couple of lines
 (13) diverged a little bit in 1983 I think it was '82 and he
 (14) said that was the botulism effect?
 (15) A I saw what was here this morning but not Friday
 (16) Q You're familiar with the fact that there was this botulism
 (17) scare in 1982 or so?
 (18) A Yes
 (19) Q And that involved somebody who died I understand of
 (20) botulism?
 (21) A It involved some contaminations of cans
 (22) Q Didn't somebody die?
 (23) A I believe that's the case yes
 (24) Q Now you didn't hear of any contamination of any cans as a
 (25) result of the oil spill did you?

Vol 30 5250

- (1) A That's correct
 (2) Q And certainly nobody died as a consequence of eating any
 (3) Alaskan salmon that was oiled in the oil spill?
 (4) A We certainly don't have any proof of that no
 (5) Q Nobody has made that claim that you're aware of have they?
 (6) A Not that I'm aware of
 (7) Q Now in your model your model doesn't show any effect
 (8) attributable to that botulism scare back in the early '80s
 (9) isn't that right?
 (10) A The model you saw in the report shows there was a minor
 (11) effect but it was not a significant one Some of the other
 (12) models that I've looked at do in fact pick up that botulism
 (13) effect in the pink salmon market
 (14) Q What I'm interested in I guess is your model and isn't
 (15) it in fact true that your conclusion was that the botulism
 (16) scare really didn't have a significant enough impact to include
 (17) in your model?
 (18) A That's true in this particular run of the model yes
 (19) Q And that's what - remember the statement I read is what
 (20) you testified to in your deposition do you remember that?
 (21) A Oh yes in this model the botulism effect was not a
 (22) significant effect In other models it was
 (23) Q I think Dr Mendelsohn that I'm almost done but I had
 (24) the feeling there was one or two other - all right There was
 (25) one other point I wanted to make and it's kind of a technical

Vol 30 5251

- (1) one but let me see if I can get some information from you
 (2) You probably weren't here the other day when Mr Hughes
 (3) testified on the subject of herring prices what herring prices
 (4) would have been in 1989 if there hadn't been an oil spill?
 (5) A No I'm not aware of that
 (6) Q Have you ever discussed with him the prices that he came up
 (7) with for different kinds of herring -
 (8) A No
 (9) Q - herring prices? Can you tell me what your - what your
 (10) predicted price is for Alaska roe on kelp for 1989?
 (11) A What the predicted price?
 (12) Q Yes
 (13) A If we can go back to the exhibits we can certainly see
 (14) that That was one of the factors you could easily read off
 (15) the chart
 (16) Q I think if you look at the Exhibit 455
 (17) A That helps
 (18) Q That's the one?
 (19) A Yes So in what year were you asking?
 (20) Q In 1989
 (21) A So in 1989 this model predicts the prices would have been
 (22) very close to \$3.00 a pound or underneath it
 (23) Q I think what we came out with was \$2.69 \$2.70 a pound
 (24) something like that?
 (25) A Something about that yes

Vol 30 5252

- (1) Q I gather when you were coming up with your predicted price
 (2) for herring roe spawned on kelp in 1989 you didn't talk to Mr
 (3) Hughes about what he was coming up with for his actual price?
 (4) A That's correct
 (5) Q If in fact the actual price that he came up with for 1989
 (6) for herring roe spawned on kelp is higher than your predicted
 (7) price you would agree I suspect that the - his estimation
 (8) of what the price would have been but for the oil spill if
 (9) that turns out to be higher than your predicted price you
 (10) would agree would you not that herring roe on kelp fishermen
 (11) ought not to get the benefit of both of those?
 (12) A That's correct
 (13) Q I'll tell you what I won't make you go through the math on
 (14) Mr Hughes' model or his numbers because you haven't seen
 (15) that
 (16) before
 (17) A That's correct
 (18) MR COOPER All right I have no further questions
 (19) THE COURT Redirect?
 (20) MR O NEILL Thank you Judge
 (21) REDIRECT EXAMINATION OF ROBERT MENDELSON
 (22) BY MR O NEILL
 (23) Q With regard to silver salmon the price of Alaska silver
 (24) salmon dropped precipitously like the other prices?
 (25) A That's correct
 (26) Q So its price pattern was consistent with what we saw with

Vol 30 5253

- (1) regard to all of the other fisheries?
 (2) A That's right
 (3) Q The problem is is when you crank the numbers the results
 (4) are not significant enough for you to draw a conclusion as to
 (5) why the drop occurred?
 (6) A That's right If we had the chart the corresponding chart
 (7) for the predicted price for the silver market one of the
 (8) things you would have seen is that our ability to predict the
 (9) variations that existed already in the market weren't very
 (10) good Prior to 1988 the model was not doing a very good job
 (11) of predicting all those variations you see in the price chart
 (12) and when you actually look at the taint effect the possibility
 (13) of a taint effect in some years it was very - it didn't exist
 (14) and in other years it was relatively small and that - it was a
 (15) very mixed result
 (16) Q When you said the model wasn't good at predicting the
 (17) modeling wasn't good at predicting the silver salmon?
 (18) A That's correct the silver salmon itself
 (19) Q And the problem with silver salmon there are so few fish
 (20) in the market that it creates a problem with regard to
 (21) statistical analysis?
 (22) A It certainly did create a problem There was a lot of
 (23) noise in this particular data set in the coho market It was
 (24) very difficult to analyze
 (25) Q But in any event silver salmon act consistently with what

Vol 30 5254

- (1) we found with regard to other salmon and our historical
 (2) knowledge about oil spills and fish?
 (3) A Yes You would have expected they would have been
 (4) affected
 (5) as well
 (6) Q Now I want to go to farmed salmon And if you - and you
 (7) and counsel for Exxon Corporation went on at some length
 (8) about
 (9) farmed salmon Would you tell us if you could how the oil
 (10) spill hurt fishermen in their competitive position with regard
 (11) to other sources of salmon?
 (12) A Yes I looked at a number of different fisheries seafood
 (13) and the only one that was affected was the high quality ones
 (14) So this is only an effect that occurs on high quality
 (15) fisheries and what we found is that basically the oil spill
 (16) has eliminated the premium that used to be associated with
 (17) these fisheries So these fisheries used to get a premium
 (18) they used to get a very high price relative to the fish you'd
 (19) get from other sources
 (20) After the oil spill that wasn't true anymore They were
 (21) treated just like everything else So after the oil spill you
 (22) do see them competing much more dramatically with farmed
 (23) salmon So if you look at fishery studies that were done
 (24) before this spill they kept concluding that impacted farmed
 (25) salmon wasn't going to be important in Japan but after the
 (26) spill when they tried to use market factors to explain that big
 (27) reduction in price they all conclude that it's farmed salmon

Vol 30 5255

- (1) competing
 (2) So what's happened is something's completely changed We
 (3) had one kind of effect before the spill and something else
 (4) afterward and what I'm arguing is that the oil spill
 (5) eliminated the premium With that premium gone the - these
 (6) fisheries are subject to this competition from outside and
 (7) they've lost that price and they've lost it for three years
 (8) Q And maybe longer?
 (9) A And from what little we can understand of '92 for longer
 (10) yes
 (11) Q So the oil spill because the Alaska fisheries compete
 (12) against other markets and historically have competed against
 (13) other markets they get whacked by the oil spill they lose the
 (14) premium and there's a long term impact on the ability of
 (15) Alaskan fishermen to sell their salmon in the rest of the
 (16) world?
 (17) A That's right You see an example just like this in the
 (18) bottled water market Perrier used to dominate bottled water
 (19) sparkling water then all the sudden they had some scare
 (20) There was some benzene in a couple bottles They eliminated
 (21) the benzene problem but in the meantime people didn't think
 (22) of
 (23) Perrier as the special product that absolutely had to be
 (24) purchased and as a result a whole bunch of other competitors
 (25) came in Now Perrier still hasn't recovered its former
 (26) position It's still way behind where it was before

Vol 30 5256

- (1) MR O NEILL I have nothing further Doctor Thank
 (2) you for coming
 (3) MR COOPER Your Honor if I could have just a couple
 (4) of questions on the benzene point that was just mentioned?
 (5) MR O NEILL It was a fair analogy within the -
 (6) within the scope of what he talked about
 (7) THE COURT I don t think that provides us a basis for
 (8) departing from our usual rule The examination is concluded
 (9) MR O NEILL Thank you Dr Mendelsohn
 (10) THE COURT Close enough to noon we should take our
 (11) recess at this point We ll be in recess for 15 minutes
 (12) (Jury out at 11 57)
 (13) (Recess from 11 57 a m to 12 16 p m)
 (14) (Jury in at 12 16)
 (15) MR O NEILL Plaintiffs call Roger Lohrer
 (16) THE CLERK Would you raise your right hand please
 (17) sir?
 (18) (The Witness Is Sworn)
 (19) THE CLERK Please be seated For the record sir
 (20) state your full name your address and spell your last name
 (21) please
 (22) THE WITNESS Roger Lohrer L O H R E R My address
 (23) is 2847 Northwest 62nd Seattle Washington
 (24) DIRECT EXAMINATION OF ROGER LOHRER
 (25) BY MR O NEILL

Vol 30 5257

- (1) Q And Mr Lohrer what do you do for a living?
 (2) A I m the owner of Dock Street Brokers
 (3) Q What does Dock Street Brokers do?
 (4) A We re the brokers for commercial fishing vessels and
 (5) limited entry permits
 (6) Q What does a broker do?
 (7) A A broker basically we act as a clearinghouse for buyers
 (8) and sellers of permits bring the buyers and sellers together
 (9) Q So if I wanted to sell my permit you re like a real estate
 (10) guy for permits?
 (11) A Exactly
 (12) Q And I could come to you and - and you d help me sell it
 (13) or if I wanted to buy a permit I could come to you and you d
 (14) help me buy it?
 (15) A Yes that s correct
 (16) Q Do you have any experience in the Alaska fishing industry
 (17) sir?
 (18) A Yes That is our primary area of operation
 (19) Q Have you yourself worked in the fishing industry?
 (20) A Yes I have I ran tenders in Alaska for approximately 15
 (21) years
 (22) Q And in what areas in Alaska?
 (23) A Chignik Kodiak and Southeast Alaska
 (24) Q And when you say you ran a tender a tender is the guy who
 (25) goes out and picks up the fish from the fishermen?

Vol 30 5258

- (1) A That s right and then delivers the fish back to the
 (2) cannery
 (3) Q How long have you been in the broker business?
 (4) A This will be our 17th years
 (5) Q And during those 17 years have you bought and sold
 (6) permits?
 (7) A Not personally but yes I have arranged sales
 (8) Q You have arranged sales of the permits?
 (9) A Yes that s correct
 (10) Q And of boats?
 (11) A Yes
 (12) Q And in what areas do you buy and sell permits?
 (13) A In every area in the state of Alaska as well as Washington
 (14) and down the coast
 (15) Q And how many employees does Dock Street Brokers have?
 (16) A During our normal selling season which is October through
 (17) June we have four full time employees
 (18) Q And have you sold limited entry permits for Upper Cook
 (19) Inlet drift and setnet gear types?
 (20) A Yes we have
 (21) Q And Prince William Sound various gear types in Prince
 (22) William Sound?
 (23) A Yes
 (24) Q Kodiak?
 (25) A Yes

Vol 30 - 5259

- (1) Q Chignik?
 (2) A Yes
 (3) Q Salmon and herring?
 (4) A Yes
 (5) Q Since 1990 1991 has there been a change with regard to
 (6) the frequency of sales and the prices for permits in Prince
 (7) William Sound Upper Cook Inlet Lower Cook Inlet Kodiak and
 (8) Chignik?
 (9) A Yes there has
 (10) Q And would you tell us about it?
 (11) A Since 1991 particularly after the release fish report 27
 (12) we ve seen a drastic drop in both the value of the permits
 (13) that would be the selling price as well as the number of the
 (14) permits we sell And we also see it taking a lot longer for us
 (15) to find buyers for permits in those areas
 (16) Q And so the permit prices have dropped?
 (17) A Yes that s correct
 (18) Q And it s harder to sell a permit out of those areas?
 (19) A Yes In some of the areas there s almost no market
 (20) whatsoever
 (21) Q And you said that that happened after fish study 27 or the
 (22) announcement of fish study 27?
 (23) A Yes We first started seeing it in the fall of 91 and
 (24) then that fall and then the following spring and winter so we
 (25) saw the drop really hit us

Vol 30 5260

- (1) Q And you ve worked in this area and talked to these people?
 (2) A Yes on a daily basis
 (3) Q And in sales negotiations for Prince William Sound salmon permits what reasons have buyers cited for not higher prices?
 (4) A The main thing we re hearing from the fishermen is they re concerned about the long term and short term effects of the oil spill and whether or not there s going to be sufficient runs or whether or not they re even going to have the opportunity to fish at all
 (10) Q And how about Kodiak?
 (11) A In Kodiak yes we re seeing the same general concerns from the fishermen
 (13) Q And with regard to Kodiak salmon seine prices for example what s happened to Kodiak salmon seine prices?
 (15) A In 1991 we were seeing prices in the range of 125 000 to \$140 000 and those prices now are down around 40 to \$50 000
 (17) Q And with regard to the sales negotiations for Kodiak salmon seine permits what reasons do permit buyers cite for not paying higher prices?
 (20) A The main concern is the long term effects of the oil spill on the fisheries
 (22) Q With regard to Prince William Sound herring permits what s happened with Prince William Sound herring permits?
 (24) A We ve seen a really radical drop there Those permits prior to 91 were almost impossible to find In 1991 92

Vol 30 5261

- (1) those permits were selling for approximately \$150 000 if you could find one to sell And this year they re trading for approximately \$50 000 right now
 (4) Q What reasons do buyers cite for not being - for attempting to drive the price down with regard to Prince William Sound herring permits?
 (7) A Again it s the effects on the oil spill on the herring the fact that we re seeing diseased herring or herring with lesions on them and lower quotas and just the runs appear to be in danger
 (11) Q Okay With regard to the numbers of permit sales the activity in permits -
 (13) A In all permits or just Prince William Sound herring seine?
 (14) Q Let s take Prince William Sound salmon permits
 (15) A That s probably the most drastic reduction on any permits that we ve seen in the state Those permits we ve sold them for as much as \$250 000 This year I believe we had three sales one I m just completing when I go back to my office tomorrow It is at 33 000 The other sales that we had this year were in the range of 50 to \$65 000 if you could find a buyer
 (22) Q With regard to the number of - the sales activity that you ve seen with regard to the various permits that we ve talked about compare if you would the sales activity in for example 1991 with the sales activity in 1993

Vol 30 5262

- (1) A Well not having the number offhand I can give you an approximation I would say that they are probably 25 percent of the total that they were prior to the -
 (4) Q So people are buying fewer permits?
 (5) A And paying less yes
 (6) Q And does it take more time to sell a permit now?
 (7) A Yes Typically Prince William Sound salmon seine for example if you could get one listing you know in October we would generally have those sold within a month or two sometimes within a day or two Now we ve had permits listed in Prince William Sound for both herring and salmon that have been listed for over a year without any offers at all
 (13) Q So people just won t buy them?
 (14) A That s right They re getting down to the point now where I think most of these buyers are speculators that are just hoping that you know something may happen or there may be an improvement but they re buying them and hanging on to them rather than even fishing them
 (18) MR O NEILL Thank you sir I have no further questions
 (21) THE COURT You may cross examine
 (22) CROSS EXAMINATION OF ROGER LOHRER
 (23) BY MR LYNCH
 (24) Q Hi Mr Lohrer
 (25) A Hello

Vol 30 5263

- (1) Q My name is Pat Lynch You indicated that your role is like that of a real estate agent real estate broker would be?
 (3) A Yes that s similar
 (4) Q And you cover - you sell permits or you broker permits for people in Alaska and you also do business in Washington and Oregon?
 (7) A Yes
 (8) Q And now in your experience first of all you see a wide variation in prices in areas outside of Alaska?
 (9) A You mean permits selling for instance in Washington do I see a wide variety in same type of permit?
 (12) Q In any given fishery in your experience is - from one transaction to the next for the same kind of permit in the same kind of fishery does it tend to jump up and down?
 (15) A Tends to be fairly constant over a reasonable period of time
 (17) Q Are you familiar with the CFEC statistics on Alaska permits?
 (18) A Yes We receive their regular reports
 (20) Q Your Honor I m looking for an exhibit which I may or may not have up here
 (22) Here it is Let me - may I approach Your Honor?
 (23) Let me hand you PX3647 for identification Do you recognize this document sir?
 (25) A I ve seen similar documents I don t recognize this

Vol 30 5264

- (1) particular one
 (2) **Q** Well this has been identified to us as a printout prepared
 (3) from CFEC data by plaintiffs for the purpose of trying to
 (4) estimate the losses that fishermen suffered on the sale of
 (5) various types of permits and the column headed cost you see
 (6) that?
 (7) **A** Yes
 (8) **Q** Are you able to identify the code on the front of the first
 (9) sheet? SO1E it looks like
 (10) **A** There s many of them You d have to help me with that
 (11) **Q** I m not sure I m able to identify it but I believe it to
 (12) be Prince William Sound seine a Prince William Sound seine?
 (13) **A** Salmon seine
 (14) **Q** Salmon seine permit is that right? I ve had that
 (15) confirmed
 (16) Would you look at that cost column for me? These are
 (17) the - or represented to be the official records kept by the
 (18) state board on the price at which permits have sold You see
 (19) the first one sold in June of 1989 and the price was 150 000?
 (20) **A** Yes
 (21) **Q** Then the next one is 100 000?
 (22) **A** Yes
 (23) **Q** The next one is 280 000?
 (24) **A** Yes I see that
 (25) **Q** Next one is 260 000?

Vol 30 5265

- (1) **A** Yes
 (2) **Q** Next one is 250 000?
 (3) **A** Yes
 (4) **Q** And 200 000?
 (5) **A** Yes
 (6) **Q** Then 150 000?
 (7) **A** Yes
 (8) **Q** Those transactions all occurred within the course of one
 (9) year correct?
 (10) **A** Yes
 (11) **Q** Range from a high of 280 000 to a low of 100 000?
 (12) **A** Yes
 (13) **Q** No two transactions at the same price?
 (14) **A** That s what it says here
 (15) **Q** No two transactions at a price less than a ten thousand
 (16) dollar differential right?
 (17) **A** Yes
 (18) **Q** Now those permits as I understand it are identical
 (19) insofar as the right they give the fisherman to engage in the
 (20) fishery?
 (21) **A** That s correct
 (22) **Q** Insofar as you re buying something when you buy the permit
 (23) each of them are buying exactly the same thing?
 (24) **A** That s correct
 (25) **Q** But they were paying sometimes 50 or a hundred thousand

Vol 30 5266

- (1) dollars difference in a matter of a couple months?
 (2) **A** That s what it says here
 (3) **Q** And you don t have any reason to doubt the accuracy of the
 (4) official records do you?
 (5) **A** Well there s a lot of - some of these transactions could
 (6) be made between family members
 (7) **Q** Okay
 (8) **A** Some of these transactions could be part of a package price
 (9) where there s a vessel and a permit In those kind of
 (10) transactions they tend to inflate the vessel price and deflate
 (11) the permit price
 (12) **Q** Let s take the first example you ve cited Family members
 (13) what would you expect if you learned they were transactions
 (14) between family members?
 (15) **A** It s hard -
 (16) **Q** Expect you weren t involved in the transaction?
 (17) **A** If it may be a transaction between a father and a son or
 (18) for instance there can be other considerations usually
 (19) they re lower
 (20) **Q** They re usually lower than market price?
 (21) **A** Yes
 (22) **Q** So for example maybe a father would say to his son if you
 (23) come to work with me for five years at the end of five years
 (24) when I m ready to retire I ll sell you the permit at some low
 (25) price?

Vol 30 5267

- (1) **A** Yes
 (2) **Q** Or maybe it s a transaction in which the owner of the
 (3) permit also wants to sell his boat?
 (4) **A** Yes
 (5) **Q** Or some recreational property down in southern California?
 (6) **A** Yes could be true
 (7) **Q** If you ll pay me a million dollars for the whole package
 (8) I ll give you the permit the boat and the recreational
 (9) property in southern California and I ll throw in two tickets
 (10) to Las Vegas as well correct?
 (11) **A** Yes
 (12) **Q** Now in that kind of a transaction your experience
 (13) does - do tax considerations come into play?
 (14) **A** Yes sometimes
 (15) **Q** Especially in the period from say 1989 1990 1991 could
 (16) you depreciate a salmon fishing permit?
 (17) **A** No
 (18) **Q** Maybe it would be helpful to explain what s the effect of
 (19) that? If I paid say \$280 000 for a salmon fishing permit and
 (20) I can t depreciate it what do I do with that on my tax return?
 (21) **A** You don t have any write-offs on that permit so you cannot
 (22) count it as an expense
 (23) **Q** So I m paying out to my bank or somebody out of my pocket
 (24) \$280 000 but I don t get to write it off is that correct?
 (25) **A** That s right

Vol 30 5268

- (1) Q If I make a deal to get the permit for a hundred thousand
 (2) dollars and I pay an extra 180 000 for the boat what s the tax
 (3) effect of that?
 (4) A You can write-off the boat but not the permit so you have
 (5) a tax advantage
 (6) Q So I get to take a tax deduction for an additional 180 000
 (7) if I can assign it to the boat?
 (8) A Yes
 (9) Q In your experience as a broker is that a pretty common
 (10) kind of arrangement for people to think about?
 (11) A It s fairly common Actually I think the entry
 (12) commission - you have to fill out a sworn statement on the
 (13) back of each permit of what the permit value was and what the
 (14) boat value was in the package transaction and the gear and I
 (15) think that they are - they scrutinize those pretty carefully
 (16) Q Have you ever had one rejected?
 (17) A Not to my recollection
 (18) Q Okay And certainly as a broker you would advise as a
 (19) broker you have a duty to the people you represent to structure
 (20) the best deal you can for them correct?
 (21) A Well on that type of a transaction we tell them right up
 (22) front to avoid a rejection that you know the market for the
 (23) value of the permit is X and you know you ve got to be
 (24) reasonable
 (25) Q You ve got to be reasonable?

Vol 30 5269

- (1) A You have to be reasonable
 (2) Q But you have a certain leeway to - even a tax man won t
 (3) object to a reasonable structure of the transaction isn t that
 (4) correct sir?
 (5) A Reasonable yes
 (6) Q May I approach Your Honor?
 (7) Let me show you PX515 for identification You recognize
 (8) that sir?
 (9) A Yes I do
 (10) Q I m going to take it back because it s the only copy I
 (11) have This is a report that you prepared for Mr O Neill and
 (12) his colleagues on valuation of permits?
 (13) A Yes
 (14) Q And you worked on that report with a Dr Karpoff?
 (15) A Yes I actually worked more closely with - his name
 (16) escapes me one of the other partners in the firm
 (17) Q Mr Freeberg?
 (18) A Yes Mr Freeberg and another gentleman also
 (19) Q Now in connection with preparing that report did you go
 (20) over these figures that have the actual sales transactions?
 (21) A I have never seen this exact type of report We get a
 (22) monthly or quarterly report of past sales which the entry
 (23) commission and the division of investment used for loan values
 (24) but I ve never seen a compilation like this
 (25) Q Well the monthly or the quarterly report that you get

Vol 30 5270

- (1) that s the one that s available to the general public correct?
 (2) A That s correct
 (3) Q That has sort of an average of prices?
 (4) A Yes I ve never seen this kind of variation on the reports
 (5) that we receive
 (6) Q So you in preparing the report that I just showed you
 (7) Exhibit PX515 for identification you didn t actually go over
 (8) the official transaction by transaction records?
 (9) A These were not available to us as far as I know What I
 (10) went over what we used occasionally was the monthly or
 (11) quarterly CFEC reports
 (12) Q When you say us are you referring to Dock Street Brokers
 (13) or are you referring to Natural Resource Consultants?
 (14) A I m referring to Dock Street Brokers
 (15) Q Natural Resource Consultants is who you worked with in
 (16) preparing that report correct?
 (17) A Yes
 (18) Q In that group they got the individual transaction records
 (19) from the government didn t they?
 (20) A I did not see them
 (21) Q You weren t shown them?
 (22) A No
 (23) Q Okay Now is it correct Mr Lohrer that based on your
 (24) experience you re not - you don t believe that comparing
 (25) prices in one - for licenses or permits in one fishery is

Vol 30 5271

- (1) necessarily a good idea in evaluating what prices are doing in
 (2) a different fishery?
 (3) A Well yes the potential income from a permit from all
 (4) areas is a consideration in determining the value of a given
 (5) permit
 (6) Q Well yes So the way you would think a buyer would look
 (7) at this sort of matter is that if the permit wouldn t generate
 (8) income sufficient to pay either a reasonable return on what he
 (9) was investing or help him meet his bank payments that
 (10) wouldn t
 (11) be a good deal for him?
 (12) A That s correct
 (13) Q So in that respect a buyer of a fishing permit is like
 (14) anybody who s making an investment right?
 (15) A Yes
 (16) Q They need to feel comfortable that they would be making a
 (17) reasonable return on their investment?
 (18) A I would assume that s why they re buying the permit yes
 (19) Q And you indicated that you re - what the people are saying
 (20) to you is they are concerned about the long term effects of the
 (21) spill correct?
 (22) A Yes
 (23) Q But that - what that - what their concern is whether
 (24) there are going to be enough fish there to catch to make money
 (25) right?
 (26) A Or whether they re going to be able to fish there at all

Vol 30 5272

- (1) Q Right but because they re concerned about whether they re making money right?
- (2) A Yes
- (3) Q They re also concerned are they not about price?
- (4) A Fish price?
- (5) Q Right For example in 1990 and 1991 fishermen in Prince William Sound were catching more fish than they knew what to do
- (6) with weren t they?
- (7) A Yes
- (8) Q They were throwing them overboard creating some kind of environmental questions about what happens when the fish gets
- (9) to the bottom but they couldn t do anything with it correct?
- (10) A I ve heard that yes
- (11) Q So there was plenty of fish but the price was so low that you couldn t even afford to take them back to the dock?
- (12) A There was - yes I heard that
- (13) Q So in that case if a person were looking at a Prince William Sound pink salmon fishing license his primary concern would not be whether he could catch fish because at least based on what s going on out there in the fishing grounds you can t - you could catch the fish with a - a bucket if you needed to right?
- (14) A Well yes but you know in Southeast Alaska for example they ve had the huge pink runs plenty of fish low price but the permit values are holding up very well

Vol 30 5273

- (1) Q So now is that - are you indicating that in Southeast then even though the price is low the permit values fishermen aren t concerned about whether they can make money on
- (2) their investment?
- (3) A They re concerned but I think that they feel that over the long haul they re going to be all right
- (4) Q Now you gave a deposition in this matter did you not sir?
- (5) A Yes I did
- (6) Q Let me see if I can find that here May I Your Honor?
- (7) I asked you if in your view it was appropriate to use one fishing area as a means of valuing the price at which a permit would transfer in another area and in fact in your view that is not appropriate isn t that correct sir?
- (8) A Would you repeat that again?
- (9) Q In your view it would not be appropriate to look at the price of say Southeast and use that as a basis for determining what would be a respectable price to expect in Prince William Sound?
- (10) A I think what I was saying was that because of the spill when you asked me whether or not low fish prices were what were
- (11) driving the price in Prince William Sound I said we have low fish prices in Southeast and the fisherman looks at the long term potential for the permit
- (12) Does that answer your question?

Vol 30 5274

- (1) Q I think it does in the sense of what the fisherman looks at
- (2) The question I was asking was a little bit different and that is in trying to determine how a price in one area would behave does it make any sense to look at a different fishing area and see how the permit is doing there?
- (3) And I understood you to testify at your deposition the way I read it you didn t think that was the appropriate thing to do because each fishing area has its own characteristics and that makes a different market in each place?
- (4) A I don t quite understand what your question is
- (5) Q Let me try to use real estate as an analogy I m not an Alaska regular but I picked up a couple of names if you had a house say in Eagle River and you wanted to know what a house in Wasilla would be worth one way to look at that question would say what - what s a similar house selling for in Eagle River correct?
- (6) A Yes
- (7) Q That s done sometimes right?
- (8) A Yes
- (9) Q Now if you had a fishing permit in Prince William Sound the question was do you think it makes sense to go look at Bristol Bay permits to see how they re doing in order to predict how fishing permit prices would go or might go in Prince William Sound And I understood that you testified at your deposition you didn t think that was a good idea?

Vol 30 5275

- (1) A Well looking at it as a business venture I think it s a fair comparison to look at each area
- (2) Q Would you look at your deposition at Page 222? I found when I looked at my copies that the way these things are numbered may not be entirely consistent Have you got it there sir?
- (3) A Yes I do
- (4) Q I m going to start reading at line 21 this question was asked For purposes of analyzing the issue of whether the spill impacted permit prices in general do you think it s appropriate to analyze the performance of permits in the non spill affected areas versus the spill affected areas?
- (5) Answer not necessarily no
- (6) Were you asked that question and did you give that answer?
- (7) A Yes
- (8) Q And then you were asked why not
- (9) Answer I think there s too many variables It s just too big - too big of a stretch to say that permit values in Southeast went down the same years that Prince William Sound went down There happened to be an oil spill therefore we conclude that there was no effect on permit prices in Prince William Sound I think that s too big a stretch There are too many factors to make that kind of conclusion
- (10) Were you asked that question and did you give that answer sir?

Vol 30 5276

- (1) A Yes
 (2) Q And it is your experience is it not for example that
 (3) Bristol Bay fishery is a unique fishery?
 (4) A Yes
 (5) Q Uniquely short seasoned?
 (6) A Yes
 (7) Q And that there are a lot of sort of quasi fishermen in
 (8) Bristol Bay?
 (9) A Fishermen that fish for a month or two yes
 (10) Q Fishermen who are so obviously unqualified to operate that
 (11) attorneys buy fishing permits in Bristol Bay?
 (12) A There s some very good attorneys fishing in Bristol Bay
 (13) Q I m sure there s some good attorneys but are there any
 (14) good fishermen?
 (15) A Attorney fishermen
 (16) Q Anything can happen lightning can strike but it is your
 (17) experience that there s kind of unusual experience in Bristol
 (18) Bay that attorneys and others invest in sort of a second job
 (19) on a second job basis?
 (20) A That is correct
 (21) Q You find that to be unique about Bristol Bay in the places
 (22) you work isn t that correct sir?
 (23) A And some places in Bristol Bay yes
 (24) MR LYNCH Thank you Mr Lohrer I don t have any
 (25) other questions

Vol 30 5277

- (1) MR O NEILL Thank you Mr Lohrer
 (2) THE COURT You may step down sir
 (3) Call your next witness
 (4) MR SARKO Your Honor Rosaleen Moore
 (5) THE CLERK Raise your right hand
 (6) (The Witness Is Sworn)
 (7) THE CLERK Please be seated For the record please
 (8) state your full name your address and spell your last name
 (9) please
 (10) THE WITNESS Rosaleen Moore and I live at 41980
 (11) Katchimak Drive Homer Alaska
 (12) THE CLERK Could you spell your last name please?
 (13) THE WITNESS Oh excuse me M O O R E
 (14) DIRECT EXAMINATION OF ROSALEEN MOORE
 (15) BY MR SARKO
 (16) Q Good afternoon Ms Moore My name is Lynn Sarko I m
 (17) one
 (18) of the plaintiff attorneys
 (19) Could you tell us how long you ve lived in Alaska?
 (20) A I was born in Anchorage and I ve lived in Alaska my entire
 (21) life
 (22) Q What do you now do?
 (23) A I m having a little trouble hearing Must be a fan or
 (24) something
 (25) Q What do you now do?
 (26) A I m a commercial fisherman and I also own a boatyard and

Vol 30 5278

- (1) storage facility with my husband and a boat brokerage in
 Homer
 (2) Q I understand that you actually have quite a background in
 (3) commercial fishing?
 (4) A I ve fished in Alaska all my life My parents owned setnet
 (5) sites in Cook Inlet since 1939 I imagine I picked my first
 (6) fish when I was learning to walk I ve - I personally have -
 (7) is that okay?
 (8) I ve personally fished Cook Inlet setnet Cook Inlet drift
 (9) False Pass drift Bristol Bay drift Prince William Sound
 (10) herring My husband has fished in three of the major seine
 (11) fisheries two of the gillnet fisheries and crab fisheries of
 (12) Alaska and my children fish also
 (13) Q Wow I want to get into just briefly some of your
 (14) background You re a past board member of CFAB correct?
 (15) A Yes that is correct
 (16) Q That s a new term Can you explain to the jury what CFAB
 (17) is?
 (18) A CFAB is Alaska Commercial Fisheries and Agricultural Bank
 (19) It is a private cooperative It was funded by the State of
 (20) Alaska to loan and then has leveraged money outside of the
 (21) state to loan to commercial fishermen and the agricultural
 (22) industry in Alaska
 (23) Q Do I also understand that you re a board member of United
 (24) Fishermen of Alaska?
 (25) A I ve been a board member several times of the United

Vol 30 5279

- (1) Fishermen of Alaska and I am presently a member
 (2) Q And what is that?
 (3) A It is a united - it basically handles political action in
 (4) the state and board members are made up throughout the state
 (5) from different areas and different fisheries groups and kind of
 (6) a watchdog of politics of Alaska fisheries
 (7) Q During your time in commercial fishing have you personally
 (8) sold and bought various vessels and permits?
 (9) A My husband and I personally since 1966 sold and owned 17
 (10) different vessels We also have sold our own permits in many
 (11) of the areas and transferred to different areas
 (12) Q I d like to get into your line of work You are a
 (13) commercial permit broker correct?
 (14) A Yes I am
 (15) Q And the name of your business is?
 (16) A Northern Enterprises
 (17) Q And how long has that business been - how long have you
 (18) been involved in this?
 (19) A I started the brokerage business in 1981
 (20) Q And is the business with your husband?
 (21) A He does very little in the brokerage business It s really
 (22) my own
 (23) Q Let me just quickly get to the subject at hand You ve
 (24) sold limited entry permits and I would just like to review in
 (25) what areas

Vol 30 5280

- (1) A The areas that our business sells permits in is Prince
 (2) William Sound Cook Inlet Kodiak Alaska Peninsula and Bristol
 (3) Bay We do some work in Southeast but geographically since
 (4) we re located here north we do very little The other ones
 (5) are where our primary business is and Cook Inlet is our real
 (6) primary - I mean it s where we sell the most
 (7) Q The jury has heard the mention of fish study number 27
 (8) Since 1991 when that came out have you seen a change in the
 (9) price of permits that you ve been involved with in your
 (10) business that have been bought and sold since the release of
 (11) that study?
 (12) A Well the information on the study started coming out in
 (13) the fall of 91 and the actual study came out just after the
 (14) first of the year in 92 When that word came out and started
 (15) getting onto the street basically that Cook Inlet would have
 (16) very little fishing in 94 95 and 96 permit prices started
 (17) to drop drastically I personally had some concerns and gave a
 (18) call to a biologist about it that fall
 (19) Q And the permit buyers and sellers that you dealt with
 (20) raised this as a concern?
 (21) A Repeat the last -
 (22) Q The permit buyers and sellers that you were involved with
 (23) spoke about this to you?
 (24) A Yes they did I probably deal - we store 500 boats
 (25) Half of those are from Cook Inlet so on a daily basis and a

Vol 30 5281

- (1) yearly basis I must talk to thousands of fishermen and in the
 (2) Cook Inlet area probably you know couple hundred in a year
 (3) And they were very concerned about what their future held for
 (4) them and would they be able to make a living in the fishing
 (5) industry
 (6) Q Let me move on to Prince William Sound Did - what
 (7) happened to permit prices in Prince William Sound?
 (8) A Permit prices in Prince William Sound actually started to
 (9) decline right at the oil spill The one area that dipped
 (10) immediately and started going down and just furtherly
 (11) especially the seine permit eroded The drift permit went
 (12) too down and kind of went across the board for a while and
 (13) now
 (14) it s went down even more
 (15) Q What types of concerns did Prince William Sound buyers
 (16) voice to you?
 (17) A Well the first few years or right after the oil spill I
 (18) had many complaints that they couldn t even get loans and to
 (19) even buy anything So that started the first erosion and they
 (20) just don t know what the long term effects are of the oil The
 (21) herring fishery has been closed for two years due to lesions on
 (22) the fish The salmon fishery last year guys did not even
 (23) break even I know of only one person that had any substantial
 (24) pounds and he was the only one practically fishing in the
 (25) Sound And he stayed over there and scratched it out but the
 rest could not even make their payments Our son in law did

Vol 30 5282

- (1) not even go because of it
 (2) Q These were concerns that were being raised to you?
 (3) A These were concerns They talk about it daily They
 (4) just - what are we going to do you know
 (5) Q You mentioned the term lending and I d just like to briefly
 (6) touch on that Do you have dealings with the State of Alaska
 (7) Department of Investments in connection with the financing and
 (8) purchasing of limited entry permits?
 (9) A Yes we do They financed the primary amounts of permits
 (10) in Alaska to state residents
 (11) Q And you briefly discussed what CFAB was?
 (12) A Yes
 (13) Q Are you familiar with those lending requirements?
 (14) A I m real familiar with it We do loan preparation along
 (15) with the sales of permits
 (16) Q And have you observed the lending requirements change
 (17) since
 (18) January of 92?
 (19) A Yes I have After the report came out fish study 27 the
 (20) State of Alaska issued a directive that they were drastically
 (21) going to reduce the amount of money they loaned into the Cook
 (22) Inlet and Prince William Sound fisheries Before they would
 (23) loan 90 percent of the appraised value of the fishery and 80
 (24) percent if you had additional collateral
 (25) After the directive came out it was 50 percent You had
 to come up with 50 percent of the cash in order to buy a permit

Vol 30 5283

- (1) in those areas
 (2) Q And in connection with those lending requirement changes
 (3) the effects that you ve mentioned have been voiced as to what
 (4) was the effect on the fisheries?
 (5) A Yeah fisheries families basically no longer could - even
 (6) if they had some confidence which they don t no longer would
 (7) have the capital to enter into the fisheries and they re very
 (8) concerned about it and the lending institutions did not want
 (9) to have anymore loans on the books that weren t well financed
 (10) and had a lot of collateral because they knew they were going
 (11) to have enough trouble with the ones they already had on the
 (12) books
 (13) Q Let me just quickly go over some of the various permit
 (14) areas Starting with Cook Inlet can you tell me what you ve
 (15) observed happening there in prices the market how quickly
 (16) the
 (17) permits have sold and whether there is a market?
 (18) A Well prior to about 91 it - I think Roger and I
 (19) probably both had to stay awake nights to see who was going
 (20) to
 (21) get the sales It was an absolute frenzy If I got a permit
 (22) on the table or on the desk from somebody I d probably have it
 (23) sold in 24 hours to 48 hours and we were looking for permits
 (24) constantly because we had a large list of buyers After that
 (25) we have a large list of sellers and very few buyers
 Q And the prices have plunged?
 A The price in 1980 - 1990 excuse me one was over \$200 000

Vol 30 5284

- (1) and I had people standing in line to buy them And the last
 (2) permit we closed for Cook Inlet was 58 000 and that was a
 month
 (3) ago
 (4) Q Let me ask -
 (5) A That was for Cook Inlet drift
 (6) Q Let me ask you about Prince William Sound salmon permits
 (7) There s been a change there also?
 (8) A There s been a drastic change Right at the oil spill I
 (9) had several contracts of prices around \$300 000 for Prince
 (10) William Sound salmon seine and we recently closed a permit I
 (11) think it was April 30th for 34 500 On the same day CFAB
 (12) auctioned a permit off that bought basically the same price
 (13) and so did the State of Alaska And those were foreclosed
 (14) permits and the one I sold was involved in a bankruptcy
 (15) Q And there similarly has been a change in the number of
 (16) people who wanted to buy permits to now the few people who
 (17) want to buy permits?
 (18) A The numbers are drastic and also the make up is drastic I
 (19) just don t have very many I used to have pages of people that
 (20) wanted to buy permits in any area of Alaska and now it s - you
 (21) can advertise a permit in almost any of these areas for months
 (22) and not get anybody to come up to it They re all looking for
 (23) bargains and if they do put their name down they say well
 (24) if the Sound permit reaches 25 give me a call if Cook Inlet
 (25) reaches 45 give me a call They just aren t interested and

Vol 30 5285

- (1) they are - I guess they re investment seekers they re not
 (2) really fishermen anymore
 (3) Q When you say - just to be clear when you say these areas
 (4) are having trouble selling permits these are the oiled areas?
 (5) A That s right It s Prince William Sound Cook Inlet
 (6) Kodiak It is not the Alaska Peninsula and it is not Bristol
 (7) Bay
 (8) Q Let me take you to Prince William Sound herring Is there
 (9) a similar problem with selling those permits?
 (10) A Yeah Prince William Sound herring sold for \$250 000 and
 (11) now there s nobody that wanted one I heard of one that sold
 (12) for 70 but I did not personally handle that in our office and
 (13) there s just no - you know who wants to buy into a fishery
 (14) you re not going to fish?
 (15) Q And lastly are you seeing the same problems in Kodiak
 (16) salmon permits?
 (17) A I have permits listed for Kodiak for 40 000 and I can t
 (18) sell them There are no buyers
 (19) Q And there s been a drop in those -
 (20) A The high was \$180 000
 (21) MR SARKO I have no further questions
 (22) THE COURT You may cross examine
 (23) CROSS EXAMINATION OF ROSALEEN MOORE
 (24) BY MR RUSSO
 (25) Q Good afternoon Ms Moore My name is Tom Russo I

Vol 30 5286

- (1) represent Captain Hazelwood in this case and I d like to ask
 (2) you a few questions
 (3) A Probably the reason I can t hear very well is a lot of
 (4) diesels over the years
 (5) Q I ll try and keep my voice up
 (6) A As long as it s in the mike I m okay I m not quite to
 (7) the hearing aid but we re close
 (8) Q If you have any trouble hearing me let me know
 (9) You described your business as a fish permit broker In
 (10) addition to that though you have other businesses correct?
 (11) A We have a storage and repair yard and also I commercial
 (12) fish
 (13) Q Traditionally what proportion of your business is the
 (14) brokerage business as opposed to the other?
 (15) A In what define net income gross income?
 (16) Q We ll do it both ways How about net income?
 (17) A The brokerage
 (18) Q What about gross income?
 (19) A The yard
 (20) Q Now in conjunction with this yard that you have I take it
 (21) this yard is in Cook Inlet?
 (22) A Yes it is It s located in Homer
 (23) Q And most of the people that deal with you in conjunction
 (24) with the yard are fishermen?
 (25) A I d say 95 percent are commercial fishermen and the five

Vol 30 5287

- (1) percent are charter boat owners and private vessel owners
 (2) Q The fishermen that deal with you in this yard are they for
 (3) the most part fishermen that have claims in this case?
 (4) A That s probably right
 (5) Q And you re also a fisherperson is that correct?
 (6) A Yes
 (7) Q You also have a claim in this case?
 (8) A I have a claim in this case on a Prince William Sound
 (9) herring permit
 (10) Q And your husband is also a fisherman?
 (11) A My husband is no longer fishing
 (12) Q He was a fisherman?
 (13) A He fished in Prince William Sound
 (14) Q He also has a claim in this case?
 (15) A Yes - yes he does
 (16) Q And your son is also a fisherman?
 (17) A Yes he is
 (18) Q And he also has a claim in this case?
 (19) A Yes He fishes Prince William Sound salmon seine
 (20) Q Now as a broker on these fish permits and I know it s
 (21) been - some people have said it s like selling real estate
 (22) but bear with me if I ask you a few preliminary questions as to
 (23) how this works
 (24) When you are selling the fish permit do you represent the
 (25) buyer or the seller?

Vol 30 5288

- (1) A It depends
 (2) Q You represent both?
 (3) A Could be either way It depends on the situation
 (4) Depends
 (5) Q Do you ever represent both buyer and seller?
 (6) A It s - if a seller comes to us and we have a signed
 (7) contract on a permit I m representing the seller If a permit
 (8) buyer comes to me and asks me to go look for a permit and
 (9) offers a fee for that I m representing him
 (10) Q In conjunction with the permits that you ve sold have you
 (11) mostly represented sellers or mostly represented buyers?
 (12) A Mostly represented sellers
 (13) Q Okay And in conjunction with selling permits for sellers
 (14) do you get paid a commission?
 (15) A Yes I do
 (16) Q What percentage is that?
 (17) A It s two percent
 (18) Q Two percent of the selling price?
 (19) A Sale price on a permit Vessels vary
 (20) Q When you represent a buyer what percent commission do
 (21) you -
 (22) A Usually a flat fee and then I ll have a percentage on the
 (23) sale too
 (24) Q Which is what?
 (25) A It varies There is no - anywhere from 500 to \$2 000

Vol 30 5289

- (1) Q Okay Now as far as selling permits go would you agree
 (2) with the proposition that there are multiple factors which
 (3) would go into the value of a permit for sale?
 (4) A Supply and demand is the main factor
 (5) Q In addition to supply and demand though there would be
 (6) other factors wouldn t there?
 (7) A No I d say supply and demand is the main factor that I ve
 (8) seen
 (9) Q What about price of fish? Would that be a factor at all in
 (10) your estimation as to the price of the fish permit?
 (11) A More of what is a value based on value and how stable runs
 (12) are because fish prices from one area to another like False
 (13) Pass and Bristol Bay have not affected the price of the
 (14) permits
 (15) Q Okay But so just so I understand this is it your
 (16) testimony that you don t believe that the - that the price of
 (17) fish has any effect on a fish permit price?
 (18) A Very very little
 (19) Q So in other words you do believe it has an effect but you
 (20) believe it has a very very little effect?
 (21) A Yes and I could probably explain why
 (22) Q No Now you mentioned fish study 27?
 (23) A Roger
 (24) Q Remember that? Do you recall when the newspaper articles
 (25) on fish study 27 appeared?

Vol 30 5290

- (1) A They came out right after the first of the year in 92
 (2) but I don t have the date
 (3) Q Would February of 92 be a date consistent with your
 (4) recollection?
 (5) A That s correct but the word was on the street in the fall
 (6) Q But any case the newspaper articles relevant to that study
 (7) first appeared in approximately February of 1992 is that
 (8) correct?
 (9) A I think that s approximate
 (10) Q Now I believe you mentioned on your direct examination
 (11) that one of the things that you noticed in 91 was that there
 (12) was a drastic reduction in the number of permits sold?
 (13) A It started in 91
 (14) Q And do you recall how many permits you were involved in
 (15) selling how many Cook Inlet drift permits you sold in 1991?
 (16) A I believe the number was 15
 (17) Q 15? All right And do you recall how many permits you
 (18) sold in 1992?
 (19) A The number had went down and I believe it was about 10
 (20) Q I d like to just show you a document to see if it refreshes
 (21) your recollection relative to the sales of Cook Inlet drift
 (22) permits in 1991 Okay This a DX9344 Just take a look at
 (23) that
 (24) Did you look at it?
 (25) A Yes I have

Vol 30 5291

- (1) Q Does that refresh your recollection as to the number of
 (2) sales that Northern Enterprises had of Cook Inlet drift permits
 (3) in 1991?
 (4) A I believe this was permits sold by themselves not with
 (5) vessels
 (6) Q All right How many was - how many were those in 1991?
 (7) A I counted this real quick here Let s see Seven -
 (8) eight Eight
 (9) Q Eight okay And how many of those permits were sold by
 (10) your company Northern Enterprises in 1992?
 (11) A Well these are permits that are - this list I believe
 (12) consists of permits that were sold by themselves not with
 (13) vessels
 (14) Q All right With that qualification
 (15) A Okay Nine
 (16) Q So then - give that back to me
 (17) A Okay
 (18) Q Thanks Thank you So with the qualification that you
 (19) just made then is it fair to say that at least insofar as
 (20) permits for Cook Inlet drift permits sold without vessels you
 (21) sold approximately the same amount of permits in 1991 as you
 (22) did in 1992?
 (23) A Yes
 (24) Q Now I think there was some testimony from the - from the
 (25) gentleman that testified previous to you - you were in court

Vol 30 5292

- (1) when he testified?
 (2) A Yes I was
 (3) Q About some tax advantages of selling permits in conjunction
 (4) with vessels and distributing the cost between the permits and
 (5) the vessels did you hear that testimony?
 (6) A Yes I did
 (7) Q In your practice as a broker have you been involved in
 (8) sales where vessels have been sold in conjunction with
 permits?
 (9) A Yes I have
 (10) Q And in conjunction with that have you ever seen situations
 (11) where the prices of the vessel or the permits have been
 (12) adjusted in such a way to create a tax advantage for the
 (13) buyer?
 (14) A I'd say it's more like this When there is a permit and
 (15) boat and gear and stuff sold together the permit will bring
 (16) less money in that sale and the reason is - is a tax
 (17) reason Most sellers will try to negotiate the deal that the
 (18) sale price of the vessel will match what the survey values that
 (19) they have on their boats that have been made by surveyors are
 (20) and - for that reason
 (21) Q Okay We discussed just briefly some of the factors that
 (22) go into permit prices Are you aware of situations where
 (23) people make sales of permits for the purposes of making a
 (24) lateral move like moving to another fishery?
 (25) A Yes I am I've done that a lot

Vol 30 5293

- (1) Q And is it a fact that at some time in those cases
 (2) generally speaking a seller will sell a permit for less than
 (3) the market value in order to be able to move on to another
 (4) fishery?
 (5) A I have not had to do that but for about oh a year ago
 (6) people bailing out of Cook Inlet in order to move into Bristol
 (7) Bay
 (8) Q But you have heard of that happening?
 (9) A I personally have not been involved in it no I - I
 (10) don't think it was ever necessary until in maybe the last
 (11) couple years and a few people did go five \$10 000 cheaper on
 (12) a Cook Inlet in order to have the cash in order to buy a
 (13) Bristol Bay permit and that was where I seen it the most and
 (14) only in a few incidents
 (15) I mean it'd be like selling a house in Anchorage in order
 (16) to move to Florida You need to move might sell this one
 (17) cheaper to get out
 (18) MR RUSSO I have no further questions Thank you
 (19) MR SARKO Your Honor just a couple follow up
 (20) questions
 (21) REDIRECT EXAMINATION OF ROSALEEN MOORE
 (22) BY MR SARKO
 (23) Q Let me start with Cook Inlet drift permits Since the date
 (24) of the oil spill what was the highest sale price you had?
 (25) A 230 000

Vol 30 5294

- (1) Q And what are they selling for now?
 (2) A 58 000
 (3) Q Cook Inlet setnet permit what's the high?
 (4) A 110
 (5) Q What's it selling for now?
 (6) A 22 500
 (7) Q Cook Inlet herring since the oil spill the high?
 (8) A 250 and I believe it was 75
 (9) Q Cook Inlet salmon seine?
 (10) A 180 and I can't sell them There is no market
 (11) Q Prince William Sound drift?
 (12) A 180 and 65 000 recently
 (13) Q Prince William Sound herring seine?
 (14) A 250, and 70 000 recently but they're not selling
 (15) Q Prince William Sound salmon seines?
 (16) A 308 and 34 500 is one of the most recent transactions we
 (17) have
 (18) Q What about Kodiak salmon seine?
 (19) A 180 000 40 000 is the market and there's no buyers
 (20) MR SARKO No more questions
 (21) THE COURT Thank you You may step down
 (22) You may call your next witness
 (23) MR SARKO Dr Karpoff
 (24) THE CLERK Would you raise your right hand please
 (25) sir?

Vol 30 5295

- (1) (The Witness Is Sworn)
 (2) THE CLERK Please be seated For the record sir
 (3) state your full name your address and spell your last name
 (4) please
 (5) THE WITNESS My name is Jonathon Karpoff I live at
 (6) 1828 Northeast Revenna Boulevard in Seattle Washington
 (7) THE CLERK Could you spell your last name please?
 (8) THE WITNESS K A R P O F F
 (9) DIRECT EXAMINATION OF JONATHON KARPOFF
 (10) BY MR SARKO
 (11) Q Dr Karpoff where are you employed?
 (12) A I work at the University of Washington's school of
 (13) business
 (14) Q And are you married?
 (15) A Yes
 (16) Q Do you have children?
 (17) A I have two daughters 11 and almost 7
 (18) Q Let me ask you a couple of questions about your
 (19) background Where did you go to school?
 (20) A Went to school - where do you want me to start?
 (21) Q Well let's start - where did you go to school in high
 (22) school?
 (23) A I graduated from high school from West Anchorage High
 (24) School went to college at the University of Alaska in
 (25) Anchorage and went to graduate school at UCLA

Vol 30 5296

- (1) Q What did you study at - what did you get your BA in?
 (2) A In economics
 (3) Q In economics And your graduate degree?
 (4) A My graduate degrees are both in economics
 (5) Q Did you specialize in any particular type of area in
 (6) graduate school?
 (7) A Yes I specialized in four areas development economics
 (8) industrial organization financial economics and natural
 (9) resource economics I - my career has focused on the last two
 (10) of those
 (11) Q And in graduate school did you do a dissertation?
 (12) A Yes
 (13) Q And what was the dissertation subject?
 (14) A The subject of the dissertation was the Alaska salmon
 (15) fisheries and in particular the limited entry permit system
 (16) I spent quite a bit of effort trying to value and figure out
 (17) how to value limited entry permits
 (18) Q Dr Karpoff you re at the University of Washington
 (19) correct?
 (20) A Yes
 (21) Q And do I understand that you were the director of the
 (22) University of Washington MBA environmental management
 program?
 (23) A Yes We started the environmental management program in
 (24) 1991 something that the school s quite proud of It was the
 (25) first in the nation I was the initial director I stepped

Vol 30 5297

- (1) down in 1993 as director but continued a teaching program
 and
 (2) also served on the steering committee
 (3) Q You might need to pull the microphone a little closer
 (4) Your Honor can I approach and retrieve some exhibits?
 (5) Thank you
 (6) Doctor it seems that professors have a habit of writing
 (7) articles Have you written any articles or published anything?
 (8) A Yes
 (9) Q And what areas?
 (10) A In a number of areas The ones that are probably most
 (11) relevant for this case are on fisheries fisheries regulation
 (12) and in particular the Alaska limited entry system and
 (13) valuation of limited entry permits
 (14) Q Let me go back After you received your degree could you
 (15) sort of bring us up to present in your employment history?
 (16) A I worked - while working on my dissertation I worked
 (17) teaching part time at the University of Alaska at Anchorage and
 (18) I also worked for the Commercial Fisheries Entry Commission
 (19) Going on the job market I had to leave Alaska to take a
 (20) job offer that I couldn't refuse at the University of
 (21) Washington and I have been there since
 (22) Q Just as a quick review what is the Commercial Fisheries
 (23) Entries Commission?
 (24) A The Commercial Fisheries Entry Commission now is a
 division
 (25) in the State s Department of Fish and Game It is charged with

Vol 30 5298

- (1) overseeing managing the limited entry system as it has been
 (2) applied in the Alaska salmon fisheries and now many other
 (3) fisheries
 (4) Q Have you also been a principal investigator for NOAA?
 (5) A Yes As part of my research I once was supported through
 (6) a grant from the Washington sea grant program which comes
 (7) through NOAA
 (8) Q In the area - I guess to sum up the work that you ve done
 (9) since you ve come to the University of Washington a
 (10) substantial part of that has actually involved analyzing
 (11) limited entry permits and the economic issues involved?
 (12) A Yes
 (13) MR SARKO Your Honor the plaintiffs would offer Dr
 (14) Karpoff as an expert in economics and valuation of limited
 (15) entry permits in Alaska
 (16) MR LYNCH Your Honor the second subject I have no
 (17) problem with The first seems awfully broad Do you want to
 (18) delete -
 (19) THE COURT I suspect he s going the talk about the
 (20) latter subject I ll accept the witness qualifications
 (21) MR LYNCH That s what I expected too Your Honor
 (22) BY MR SARKO
 (23) Q Dr Karpoff in the interest of time the jury - you ve
 (24) been here today and we ve already heard a couple of permit
 (25) brokers speak a little bit about the subject so let s - I d

Vol 30 5299

- (1) like to review but not spend too much time
 (2) We ve heard a little bit about the limited entry permit
 (3) system Could you just give us a brief overall explanation of
 (4) how it works as it would relate to valuation of permits?
 (5) A Yes Since it was passed in 1973 and applied to many
 (6) fisheries in Alaska the limited entry system requires that the
 (7) fishermen have in addition to vessel and gear a permit to
 (8) participate in the fishery The fishery is limited in the
 (9) sense that there are only a fixed number of permits issued
 (10) So for example a fisherman that wants to enter a fishery
 (11) must acquire a permit in addition to acquiring a vessel and
 (12) gear Likewise a fisherman must seek - fisherman who s
 (13) willing to sell and wants to leave the fishery has not only
 (14) valuable vessel and gear to sell but a valuable asset in the
 (15) form of a limited entry permit
 (16) What I think is important is that when buyers and sellers
 (17) get together the price of the permit reflects the long term
 (18) value of income that can be earned from participating in the
 (19) fishery Common sense for example would suggest that
 (20) fishermen would be willing to pay relatively large amounts of
 (21) money if the income that can be earned from participating in
 (22) the fishery is high and if the prospects are dismal on the
 (23) other hand fisherman would be willing to pay less
 (24) And in fact I think this common sense is - is consistent
 (25) with and is formalized in well established economic principles

Vol 30 5300

- (1) that show that the value of a permit reflects exactly the value
 (2) of expected future fishing incomes
 (3) Q Dr Karpoff so I understand what you re saying is what
 (4) gives a permit value is the right to earn the income in the
 (5) future?
 (6) A Exactly
 (7) Q And is there a relationship between the future income that
 (8) would be earned in the fishery and the value that I would pay
 (9) for a permit?
 (10) A Yes In fact the permit price is a barometer of the
 (11) health of the fishery One way that one could think about this
 (12) is that if we wanted to figure out what the long term impact on
 (13) future fishing incomes is from the Exxon Valdez oil spill we
 (14) could go through a very complicated and I think a process
 (15) that I think would be prone to error where we hire a lot of
 (16) experts to project future fishing prices 10 20 years in the
 (17) future or harvest five 10 20 years into the future and
 (18) fishing costs far into the future That process would be very
 (19) difficult to estimate the economic damage to participating
 (20) fishermen
 (21) What we have instead is a relatively easy way to find out
 (22) what fishermen themselves think the economic damage of the
 (23) fish - to the fishery is We can look at permit prices We
 (24) have through permit prices a market estimate of the long term
 (25) impact of the spill

Vol 30 5301

- (1) Q Let me briefly take you through - could you explain to us
 (2) how permits are traded? We ve heard two brokers talk about
 (3) that and some comparison to perhaps real estate but how -
 (4) how
 (5) are permits traded?
 (6) A Permits -
 (7) Q What is the market?
 (8) A There s a very well developed and sophisticated market for
 (9) trading permits Many permits are traded through family
 (10) contacts others through advertising advertisements and many
 (11) through brokers We ve just heard from probably the two most
 (12) widely known and respected brokers
 (13) Q So there is a formalized market with formalized prices?
 (14) A The market is formalized in the sense that buyers and
 (15) sellers are both interested in getting the best deals that they
 (16) can There are in normal times a fairly large number of
 (17) potential buyers and a fairly large number of potential
 (18) sellers
 (19) Q Is there a system to record the price at which permits are
 (20) traded?
 (21) A Yes The Commercial Fisheries Entry Commission requires
 (22) that people who engage in buying and selling the permits fill
 (23) out survey forms and on the survey forms the price of the
 (24) transaction is recorded The Commercial Fisheries Entry
 (25) Commission then keeps track of all of these transactions and
 the related prices

Vol 30 5302

- (1) Q Have you had the opportunity to investigate or look at the
 (2) pricing of permits in Alaska during and since the oil spill?
 (3) A Yes
 (4) Q Has there been a change in permit prices in Prince William
 (5) Sound Cook Inlet and Kodiak since the Exxon Valdez oil spill?
 (6) A Yes particularly when you look at the six salmon fisheries
 (7) that have been discussed previously two in Prince William
 (8) Sound one in Kodiak three in Cook Inlet And also on the
 (9) Prince William Sound herring seine fishery permit prices have
 (10) gone down quite dramatically and furthermore they have
 (11) gone
 (12) down compared to what we can reasonably expect them to
 (13) have
 (14) been absent the spill
 (15) Q Let me show you an exhibit and ask you in connection with
 (16) it was a model prepared a statistical model to attempt to
 (17) measure the impact of the Exxon Valdez oil spill on permit
 (18) prices in the oiled regions? And perhaps - this is Exhibit
 (19) 523 You might use it to explain that model
 (20) A This is a graph that shows the effect of the oil spill on
 (21) the value of Prince William Sound salmon purse seine
 (22) fisheries - permits excuse me It s the result of a modeling
 (23) exercise that was put together by Natural Resource Consultants
 (24) and which I reviewed in the development of the model and with
 (25) which I agree
 Thank you in the graph actual permit prices are traced
 over time - excuse me does this - thank you

Vol 30 5303

- (1) Actual permit prices are traced over time using this green
 (2) line from 1989 through 1993 the last - using the last data
 (3) that are available from the Commercial Fisheries Entry
 (4) Commission
 (5) The blue line represents the value of the permits that
 (6) could reasonably be expected absent the spill In constructing
 (7) estimates of the predicted value of the - of the permits
 (8) absent the spill what Natural Resource Consultants did was to
 (9) compare each oiled fishery with a similar non oiled fishery and
 (10) compare the actual permit price change in the - excuse me in
 (11) the oiled fishery with the percentage price change in the
 (12) non-oiled fishery
 (13) The blue line is constructed by applying the percentage
 (14) changes in the permit values of the comparison non-oiled
 (15) fishery The difference between the blue line and the green
 (16) line is the estimate of the effect of the oil spill on permit
 (17) values So for example if we look - I m sorry this is not
 (18) working huh?
 (19) Q There you go
 (20) A Thank you If we - if we look at the predicted versus the
 (21) actual values of these permits in 1993 you can see that Prince
 (22) William Sound percent seine permits were actually selling at
 (23) below a hundred thousand dollars around \$90 000 The
 (24) predicted value absent the spill based on what was happening
 (25) to permit values in another comparable benchmark fishery was

Vol 30 5304

- (1) much higher in the neighborhood of 230 \$240 000 The
 (2) difference in this case \$146 000 is the amount that s
 (3) attributed to the damage of the oil spill
 (4) Again it reflects the value in today s dollars of
 (5) fisher - fishermen and fisherwomen s expectations of the lower
 (6) fishing incomes that they expect to earn
 (7) Q Dr Karpoff just to make sure I understand what you did
 (8) was you had an oiled fishery say Prince William Sound and a
 (9) certain permit type and you tried to find comparable - and
 (10) we ve used a real estate example a comparable house another
 (11) fishery that you could use to compare it to?
 (12) A Yes
 (13) Q And then you - you looked and observed to see how they
 (14) moved in relationship with each other and actually saw that the
 (15) permit value the price in the oiled fishery dropped below
 (16) what the model would predict that price to be?
 (17) A Yes
 (18) Q Let me show you Exhibit 519 The one we just saw was the
 (19) Prince William Sound salmon seine permit model Exhibit 519 -
 (20) let s pull up 519 is the Prince William Sound salmon driftnet
 (21) permit model and is that constructed with a similar approach?
 (22) A Yes it s constructed with the similar approach
 (23) Q And there again the difference this shaded region is
 (24) what you conclude the damage to permit prices are caused by
 (25) the oil spill correct?

Vol 30 5305

- (1) A Yes What that shaded region represents is at each point
 (2) in time between the spill in 1989 and through the end of the
 (3) data that were available in 1993 the difference between the
 (4) two lines which is the shaded region represents the estimate
 (5) of the loss in value to permits as of that date
 (6) Q Let me show you Exhibit 522 There again I think I ve
 (7) broken this
 (8) 522 This is Cook Inlet salmon driftnet permits correct?
 (9) A Yes
 (10) Q And what I understand you said the next step in the
 (11) analysis which we ll get to is to then take individual
 (12) permits that are sold at a particular point in time and at
 (13) different points in time you can determine the difference the
 (14) damage caused by the oil spill in a permit sale at that point
 (15) in time correct?
 (16) A Yes
 (17) Q Let s look at Exhibit 520 which is Cook Inlet salmon purse
 (18) seine permits Now do all of these models use a similar type
 (19) of analysis comparing the oiled fishery permit to a non-oiled
 (20) fishery permit?
 (21) A Yes The difference in the models there are two different
 (22) possible differences One is whether or not annual data are
 (23) used or in two of these cases quarterly data when quarterly
 (24) data were available when there were enough transactions to be
 (25) able to record prices quarter by quarter The other difference

Vol 30 5306

- (1) is in the choice of the benchmark or comparison fishery
 (2) So for example in the Prince William Sound salmon purse
 (3) seine fishery the comparison fishery is Southeast purse seine
 (4) salmon purse seine On the other hand Cook Inlet salmon
 (5) driftnet fishery has as its comparison fishery the Bristol Bay
 (6) salmon driftnet fishery
 (7) Q I ve also finally put up Exhibit 524 which is Kodiak
 (8) salmon purse seine fishery Again here have you similarly
 (9) reached the conclusion that the oil spill caused a price effect
 (10) on permits since the date of the spill?
 (11) A Yes And in this case you can see the difference is
 (12) between an amount that s approximately \$125 000 represented
 (13) by
 (14) the blue line and just under \$70 000 represented by the green
 (15) line
 (16) Q We ve seen this exhibit before but let me have Plaintiffs
 (17) Exhibit 3647 pulled up
 (18) In your analysis this was the first step the construction
 (19) of a model Next did you actually look at the permits that
 (20) were sold since the date of the oil spill and make an
 (21) individual determination regarding the damage involved in each
 (22) sale?
 (23) A Yes As this exhibit illustrates this is a recording of
 (24) permit transactions as reported by the Commercial Fisheries
 (25) Entry Commission These are transactions that appeared not to
 be gifts for example between members of the same family

Vol 30 5307

- (1) For each case the actual reported transaction price was
 (2) compared to the predicted price as of the time of the
 (3) transaction and the difference is the estimate of the loss
 (4) Q Doctor I note that in the transaction transaction listed
 (5) in Plaintiffs Exhibit 3647 they only go - the most recent
 (6) one is in 1993 correct?
 (7) A Yes The available data at the time these data were made
 (8) available included permit transactions only up until some point
 (9) in August The latest transactions we have are in August of
 (10) 1993 Transactions after that are not included in these
 (11) estimates
 (12) Q Let me show you next Plaintiffs Exhibit Number 3645 and
 (13) ask you is this a summation of the conclusions you ve reached
 (14) regarding the damages attributable to the Exxon Valdez oil
 (15) spill in drops in permit values for those that sold since that
 (16) date of the spill?
 (17) A Yes These numbers are summary numbers for each fishery
 (18) listed The number that s associated with the fishery is the
 (19) sum of the loss associated with each permit that s sold where
 (20) that loss is calculated in the way I just described
 (21) Q And just to review one more time plaintiffs exhibit 3647
 (22) which listed all of those individual transactions the only
 (23) damages that you ve included in this chart are those that are
 (24) listed in these sales?
 (25) A Yes

Vol 30 5308

- (1) Q And so any sales which occurred after the point in 1993
 (2) when you had data you have not included those in your
 damage
 (3) calculations?
 (4) A Correct
 (5) Q And let me just quickly review is the number \$5 321 407
 (6) the damages to those people who sold Prince William Sound
 (7) salmon purse seine permits that you've identified that were
 (8) caused by the Exxon Valdez oil spill?
 (9) A Using this procedure yes
 (10) Q And the same question with regard to Prince William Sound
 (11) salmon drift gillnet that is \$3 612 282 correct?
 (12) A Yes
 (13) Q And Kodiak salmon purse seine the same question is your
 (14) conclusion that the damage was \$2 134 418?
 (15) A Yes
 (16) Q And the same question with regard to Upper Cook Inlet
 (17) salmon drift gillnet the damage of \$8 473 526 that is your
 (18) conclusion as - as to the damage caused by the oil spill?
 (19) A Yes
 (20) Q And just to read these into the record Lower Cook Inlet
 (21) salmon purse seine \$195 000?
 (22) A Yes
 (23) Q And Upper Cook Inlet salmon setnet 3 553 719?
 (24) A Yes
 (25) Q For a total of \$23 290 352?

Vol 30 5309

- (1) A Yes
 (2) Q Let me ask you since - between September of 1993 when
 you
 (3) last had data from the state on these individual transactions
 (4) and today have there been sales of limited entry permits
 (5) within the oiled regions?
 (6) A In most of the oiled fisheries there have been sales
 (7) although at a reduced rate from what we normally observe
 (8) Q And have you observed a further weakening or a decline in
 (9) the price of those permits?
 (10) A Using the summary numbers that are reported by the
 (11) Commercial Fisheries Entry Commission the answer is yes and
 (12) then also very persuasive to me from discussions with people
 (13) who are involved in the fisheries and in buying and selling
 (14) permits it looks like the drops in these permit values has
 (15) been substantial since the end of the data that I had
 (16) available
 (17) Q Could you explain to us how you would go about calculating
 (18) the loss for a permit that was sold after September 1993 what
 (19) method would you use?
 (20) MR LYNCH Your Honor may we approach Your Honor on
 (21) a relevance question?
 (22) (At side bar off the record)
 (23) MR SARKO Doctor we'll stop with September 93 I
 (24) have no further questions
 (25) THE COURT You may cross examine

Vol 30 5310

- (1) CROSS EXAMINATION OF JONATHON KARPOFF
 (2) BY MR LYNCH
 (3) Q Dr Karpoff may I approach Your Honor I'm going to loan
 (4) you as I loaned Mr Lohrer my one copy of PX515 for
 (5) identification and my question to you is you are the
 (6) Dr Karpoff who is listed there as a co author of this study?
 (7) A Yes
 (8) Q So this is a study that you authored together with
 (9) Mr Lohrer which you provided to plaintiffs and ultimately led
 (10) to the calculations which you presented here today?
 (11) A Acted primarily as a reviewer of the study
 (12) Q In other words somebody else did the work and you read it
 (13) and said okay I'll go along with it?
 (14) A The people who were involved in calculating the estimates
 (15) and in writing the report consulted with me both before and
 (16) during their conducting of the study
 (17) Q So in other words you had a ghost writer?
 (18) A Yes For some reason they stuck my name on - on the
 (19) report
 (20) Q Well like a lot of these other economic texts you
 (21) probably won't lose your place in literary history either way
 (22) A I think it improves my - the average quality of my
 (23) grading
 (24) Q Let me ask you about that very subject Let me if I may
 (25) show you DX9347 for identification which also has your name
 on

Vol 30 5311

- (1) the cover this time without Mr Lohrer's involvement You
 (2) recognize that document sir?
 (3) A Yes
 (4) Q Is that a document which you actually wrote?
 (5) A Yes
 (6) Q 9347? Is it DX9347?
 (7) A Yes
 (8) Q And this is a study that you wrote while you were working
 (9) for the Commercial Fisheries Entry Commission?
 (10) A Yes
 (11) Q And the purpose of this study was to conduct an economic
 (12) analysis of limited entry permit prices is that correct sir?
 (13) A Yes
 (14) Q And you concluded I'm referring to Page 2 you concluded
 (15) that not surprisingly price increases for permits correlate
 (16) strongly with increases in the profitability of fishing is
 (17) that correct?
 (18) A Yes
 (19) Q And your study from your study you indicated that what
 (20) was the profitability measure was the net profit what the
 (21) fishermen actually took home take home pay is that correct?
 (22) A Yes
 (23) Q And part of the study was you calculated what those - what
 (24) the costs that the fishermen had to pay out to run his
 (25) operation in determining what - what a fishing permit would

Vol 30 5312

- (1) support correct?
 (2) A Yes
 (3) Q And do you recall if you look at page 62 I think to
 (4) refresh your recollection your finding at that time was
 (5) that - as I have been told this reads and I have to confess
 (6) that I can't - if you tell me this isn't so I'm going to be
 (7) up here without a net but I'm told that you will tell me that
 (8) it is so that that formula in the middle of the page means that
 (9) the net to the fisherman is about 55 percent less twenty three
 (10) fifty four is that about right?
 (11) A Using data that were available at this time from 1980
 (12) survey that was done by a man named Doug Larsen who was
 (13) working also for the Commercial Fisheries Entry Commission at
 (14) that time I believe I was able to estimate that on average
 (15) there was a relationship as described in this equation between
 (16) the amount of money that people fishing brought in gross
 (17) proceeds and the amount that they were taking home This was
 (18) using survey data from 1980 on things such as the amount of
 (19) ice that the fishermen were using the amount of gasoline they
 (20) were using the cost of their vessels the cost of their help
 (21) and other issues
 (22) Q And is it - did I - was I told true that that equates
 (23) to about a 55 percent plus twenty three fifty one?
 (24) A It means - it's more that the net income is about 45
 (25) percent minus about 23 or 24 hundred dollars

Vol 30 5313

- (1) Q So the net income is 45 percent of the gross?
 (2) A On average
 (3) Q I understand on average?
 (4) A Using the data that were available in 1980 from the survey
 (5) Q And then you deducted sort of a fixed cost of \$2 351?
 (6) A Yes
 (7) Q Now so that would be one factor that a permit buyer if he
 (8) was at least as well advised as you would look at what his
 (9) net would be cost of operating the vessel paying the share
 (10) that goes to the crew and the pay that goes to the crew ice
 (11) all those things that you mentioned correct?
 (12) A It's not only what I would advise a person considering
 (13) buying a permit to do it looks like - the data indicate that
 (14) that's what in fact people who buy into these fisheries do
 (15) Q They calculate what they're going to make?
 (16) A They make estimates
 (17) Q Okay and you concluded going back to Page 2 that for
 (18) every one dollar of marginal net income you would expect a
 (19) \$1 61 increase in the associated permit price?
 (20) A Using the data that were - that I had available at that
 (21) time for that time period that was the - the best estimate of
 (22) the relationship between those two
 (23) Q You did not use that technique or NRC did not use that
 (24) technique or whoever Mr Lohrer didn't use that technique in
 (25) the approach that you've described today is that correct?

Vol 30 5314

- (1) A Correct
 (2) Q Now in carrying out that analysis to find out what the
 (3) dollar of marginal net income would be you figure your cost
 (4) You'd also try to estimate what your income would be correct?
 (5) A That would be - figuring the cost would be part of
 (6) figuring out what your expected income would be
 (7) Q I guess it's well established these economic terms income
 (8) to you means -
 (9) A After costs
 (10) Q After costs What would income before costs mean?
 (11) A We could call it revenues
 (12) Q Revenues okay So your revenues as a fisherman would be
 (13) the product of the number of fish you catch times whatever
 (14) somebody's paying for those fish correct?
 (15) A Yes
 (16) Q And in your judgment based on the study you conducted a
 (17) prospective buyer would look at both questions?
 (18) A Yes
 (19) Q So if the state of the world were such that the price of a
 (20) particular kind of fish was falling away competitively and
 (21) didn't show any reasonable prospect of improving you would
 (22) expect permit prices to fall in reaction to falling prices is
 (23) that correct sir?
 (24) A By themselves yes and that's I think a very important
 (25) insight as why the benchmarking analysis that NRC did in

Vol 30 5315

- (1) looking at permit price changes after the Exxon Valdez oil
 (2) spill is so useful because by comparing oiled permit prices
 (3) with and adjusting - sorry comparing them with the permit
 (4) price changes that happen in non-oiled areas it allows us to
 (5) control for changes in fish price that happen across all
 (6) fisheries
 (7) Q We probably could get out of here sooner if you'll try to
 (8) limit yourself to my question Dr Karpoff
 (9) You're a natural resources economist correct?
 (10) A I have as an area a specialty in natural resources
 (11) particularly fisheries
 (12) Q And does natural resources economics your academic work
 (13) does that include agricultural types of markets?
 (14) A No
 (15) Q In your studies are you acquainted with the - with the
 (16) syndrome for lack of a better term in which the price of
 (17) suppliers of a similar good will benefit from bad - from bad
 (18) fortune to a competitor?
 (19) A Could you give me an example?
 (20) Q Let's say for example there's a freeze in grapefruit in
 (21) Florida When that happens let's see what was that Eddie
 (22) Murphy movie about the grapefruit futures?
 (23) A Orange juice
 (24) Q Orange juice wrong citrus If there's a freeze of
 (25) grapefruit a grapefruit crop in Florida that will tend to

Vol 30 5316

- (1) help grapefruit farmers in Arizona won't it?
- (2) A I don't know about the data but economic theory predicts that it would
- (3) that it would
- (4) Q Predicts that it would so if I'm - if I'm a Southeast
- (5) pink salmon fisherman all other things being equal and there
- (6) are no runs of pink salmon to Prince William Sound that should
- (7) be to my benefit shouldn't it?
- (8) A To the extent that the - could you tell me why there would
- (9) be a benefit?
- (10) Q Because the supply of pink salmon that would otherwise be
- (11) available in the market will be less won't it?
- (12) A Oh if you think that the supply of salmon that comes from
- (13) say Prince William Sound substantially affects the price that
- (14) will be received by Alaska salmon fishermen in general then
- (15) you could derive such an inference
- (16) Q Well you do -
- (17) A The numbers suggest that that's unlikely
- (18) Q You've heard Dr Crutchfield and Dr Mendelsohn testify
- (19) haven't you?
- (20) A Yes
- (21) Q They would testify you wouldn't look at the price of Alaska
- (22) salmon in general if you're selling pink salmon you heard them
- (23) say that didn't you?
- (24) A I heard them say that especially when they were talking
- (25) about red salmon coming from Cook Inlet

Vol 30 5317

- (1) Q So you believe that pink salmon - it differs for pink
- (2) salmon? As a fisheries economist you think it differs for
- (3) pink salmon?
- (4) A That what differs the ability of -
- (5) Q If I'm a pink salmon canner and I'm worried about the
- (6) supply of pink salmon because the supply is low or there's no
- (7) fishery in Prince William Sound - I've got fixed costs
- (8) correct?
- (9) A Yes
- (10) Q And I will typically want to can some salmon so that I can
- (11) spread those fixed costs over some profit correct?
- (12) A Yes
- (13) Q And that will tend to create a higher demand or higher
- (14) price for the available supply of pink salmon in a constrained
- (15) market isn't that true sir?
- (16) A I think what you're trying to argue is that -
- (17) Q I'm just asking questions we're not here to argue
- (18) A No I think that the price - when you restrict the supply
- (19) of salmon coming out of Prince William Sound the effect of
- (20) that in and of itself on the price of salmon coming out of
- (21) other areas is going to be very small
- (22) Q But as an economic matter without - you didn't try to
- (23) measure the difference did you?
- (24) A No although you could -
- (25) Q But as an economic matter you would agree that the

Vol 30 5318

- (1) constraint of the supply in one market generally has a
- (2) beneficial price impact on a complementary supply side market
- (3) correct?
- (4) A That in general if you were to restrict the supply of a
- (5) substantial amount that's other things the same that the
- (6) price of salmon will go up I think that's actually one thing
- (7) that's surprising about the findings that were reported in
- (8) testimony today
- (9) Q One trade of the - one trade of the benchmark markets is
- (10) that they benefit if salmon supplies are reduced in the markets
- (11) you're purporting to measure isn't that true sir?
- (12) A Yes although to be able to make that argument you'd have
- (13) to show or argue convincingly that the salmon that come out of
- (14) Prince William Sound for example are such a large chunk of
- (15) the - of the world salmon supply that it has a big impact on
- (16) prices
- (17) Q Well -
- (18) A I'm not aware of any such evidence
- (19) Q I'm not going to take our limited time to go into that but
- (20) we're not talking about a world market The cannery that buys
- (21) the salmon it has a fixed cost then and there correct?
- (22) A Or on the market that's relevant for the salmon
- (23) Q Let me - may I approach Your Honor?
- (24) Let me hand you a copy of PX3647 I believe this in
- (25) evidence and this I believe is the document that you discussed

Vol 30 5319

- (1) with Mr Sarko?
- (2) A Yes
- (3) Q And that's the document from which the total numbers that
- (4) you gave us earlier were derived?
- (5) A Yes
- (6) Q When you did your earlier work on fish permit pricing did
- (7) you have actual transaction numbers from the individual
- (8) transaction numbers from CFEC?
- (9) A Do you mean when I did my work in the early 1980s?
- (10) Q Yes sir
- (11) A Yes
- (12) Q And I think I understood you to say with reference to this
- (13) exhibit however that you didn't use the individual
- (14) transaction numbers that are depicted on this exhibit to get
- (15) your benchmark prices for the related fisheries isn't that
- (16) correct sir?
- (17) A Oh to calculate the projected price absent the spill the
- (18) answer is yes
- (19) Q Yes you did not use?
- (20) A Yes I did not use Your statement is correct
- (21) Q What you used were averages?
- (22) A What NRC used were averages provided to them at that time
- (23) by the Commercial Fisheries Entry Commission
- (24) Q What they used were the publicly available averages
- (25) correct?

Vol 30 5320

- (1) A They got data from the Commercial Fisheries Entry
 (2) Commission and I don't know whether or not the numbers that
 (3) were provided from the commission were identical to those that
 (4) are published publicly by the commission or not
 (5) Q But they were not the individual transaction numbers
 (6) correct?
 (7) A Correct
 (8) Q And so assuming there were enough transactions if - if
 (9) one transaction took place at a very high price and nine
 (10) transactions took place at a low price all NRC would see is
 (11) the average correct?
 (12) A If those - if the average provided to NRC by the
 (13) Commercial Fisheries Entries Commission was computed -
 (14) Q Was an average?
 (15) A - using all such - and they used the arithmetic mean
 (16) yes
 (17) Q They would use the average not the arithmetic mean isn't
 (18) that right?
 (19) A The average - it's interesting you bring that up Average
 (20) can be measured a couple different ways Mean is one term
 (21) that's used where you just take up all the numbers and add
 (22) them up and divide by the number of numbers There are other
 (23) measures of average For example the median which is just
 (24) the midpoint
 (25) Q Do you know then? Do you know?

Vol 30 5321

- (1) A I don't know how CFEC computed the numbers that it
 provided
 (2) to NRC
 (3) Q Did you ask?
 (4) A No I didn't
 (5) Q So you took - now if I may let's just use a page of this
 (6) for illustrative purposes You took actual transactions listed
 (7) individually in the CFEC records for the areas that you claim
 (8) were damaged correct?
 (9) A Yes
 (10) Q And now you said that you - let me get back to that
 (11) later And that's the - these are the numbers that are in
 (12) this cost column correct sir?
 (13) A Yes the CFEC Commercial Fisheries Entry Commission and
 (14) its data tape called those prices costs
 (15) Q Now when you - well these fields are NRC fields are
 (16) they not sir?
 (17) A No These are provided off of a separate tape that -
 (18) Q I know the data is
 (19) A - was made available to me -
 (20) Q I know they are but the fields here P price that's an
 (21) NRC number only correct?
 (22) A That comes from the projections calculated by NRC but the
 (23) numbers under the column labeled cost come from the
 Commercial
 (24) Fisheries Entry Commission
 (25) Q And you made the assumption that every transaction that

Vol 30 5322

- (1) would occur over a period of - well 330 472 June of 89 -
 (2) I'm sorry December of 89 to June of 90 correct?
 (3) A Yes
 (4) Q That every one of those transactions should be projected to
 (5) sell at exactly the same price \$330 472?
 (6) A Yes
 (7) Q Although none of those none of the actual transactions
 (8) occurred at the same price is that correct?
 (9) A Yes
 (10) Q Now when you yourself had reviewed CFEC data back in the
 (11) early 80s were you acquainted with the fact that the CFEC
 (12) files customarily and routinely record information about the
 (13) nature of the transaction?
 (14) A Yes
 (15) Q For example whether it's an intrafamily transaction?
 (16) A Yes
 (17) Q For example whether it's a family that involves a
 (18) combination of considerations like a boat and a permit?
 (19) A Yes
 (20) Q Correct? Did you - do you know if NRC or you made any
 (21) effort to determine whether these prices which you have listed
 (22) as the actual prices and as which - and on the basis of
 (23) which - you've asserted people were damaged do you know if
 (24) you made any determination which of those transactions are
 (25) shown by CFEC records to be gifts?

Vol 30 5323

- (1) A I - my opinion is that NRC did not do any such
 (2) investigation I did however
 (3) Q Okay
 (4) A And -
 (5) Q When did you do that?
 (6) A I did that over the last five weeks
 (7) Q Okay And -
 (8) A And I found out a number of things One thing that I found
 (9) out is that even if you use slightly different estimation
 (10) procedures from those used by NRC you get basically the
 same
 (11) results
 (12) Q Well I think the question was what did you find out about
 (13) whether these are gifts intrafamily transactions trades and
 (14) the like
 (15) A I found out that most of the intrafamily transactions are
 (16) reported at a cost of zero and those transactions are - are
 (17) deleted from the file I guess I have a number of other
 (18) findings but that's an example of one
 (19) Q Now you have some additional findings that you didn't tell
 (20) us in your direct examination?
 (21) A Yes
 (22) Q Let's look at the first transaction - well we can go to
 (23) the side bar about that I don't want to make a public
 (24) spectacle about non disclosure
 (25) Let's look at the first transaction Dr Karpoff That

Vol 30 5324

- (1) refers to permit 62651?
 (2) A Yes
 (3) Q Correct?
 (4) A Yes
 (5) Q And you show a loss on that transaction of almost \$90 000?
 (6) A Yes
 (7) Q Based on the premise that the permit should have been selling at \$239 376?
 (8) A Yes
 (9) Q Do you know whether the seller of that permit made a profit?
 (10) A No I don't know
 (11) Q Do you know if the CFEC data indicated -
 (12) A The CFEC data for that transaction does not indicate whether or not that seller made a profit
 (13) Q Do you know if the CFEC data that you had at NRC indicates that the seller of that permit acquired it in 1985 for a hundred thousand dollars and made a profit of 50 000?
 (14) A I find it very plausible that that's true Apparently you looked it up
 (15) Q Some of it Let's go to the next transaction You show that transaction at a hundred thousand dollars correct?
 (16) A Yes
 (17) Q And you - you indicate that you think it should have sold at \$330 472 correct?

Vol 30 5325

- (1) A Yes
 (2) Q Did you determine if a hundred thousand dollars was the only consideration for that transaction?
 (3) A I decided in looking at the data that the - there seemed to be very little correlation between deviations in these cost figures either from those next to them or from the projected permit price and whether or not there were other things sold in conjunction with the permit As a result I decided to ignore that data field and indicating transactions that should be included in this list so I don't know
 (4) Q May I approach Your Honor
 (5) The short answer to my question is you don't know?
 (6) A I don't know if there was anything else sold with this permit
 (7) Q I've handed you DX9346 for identification which is a computer run based on PX3647 the listing that you gave us this morning and all that we've done is to try to put a number there that makes it easier to cross reference these things
 (8) Would it make a difference to you if in addition to getting the hundred thousand dollars the seller of this permit also got a setnet permit?
 (9) A Would it make a difference to me if the cost that the seller reported in this survey was somehow inaccurate is that what you mean?
 (10) Q Yes sir In your judgment as an economist you've - you

Vol 30 5326

- (1) come here and testified that you believe that some individual
 (2) was damaged to the extent of \$230 472 and you're asking Exxon
 (3) to - to - you're asking this jury to award that \$230 000
 (4) against Exxon correct?
 (5) A Yeah I think the important thing is to note that at the time of this transaction there was a projected price there is also an observed market price That difference is I think the - the best estimate of the loss as of that time for -
 (6) Q What do you mean by an observed market price?
 (7) A The observed market price which can be best estimated using
 (8) available transaction data
 (9) Q So you - by that do you mean that the \$150 000 actual sale that had occurred just a couple months earlier would be a good indication of what the observed market price is?
 (10) A It depends on what other data were available at that time
 (11) Q Okay But let me go back to my original question If the individual who sold this purse - this salmon seine permit can I say that just for simplicity sake also got in addition to the hundred thousand dollars a setnet permit that setnet permit had some value is that correct?
 (12) A Yes And that setnet permit transaction should also be reported with the Commercial Fisheries Entry Commission
 (13) Q And if you look at the Commercial Fisheries Entry Commission records you can find that it was can you not?
 (14) A Yes

Vol 30 - 5327

- (1) Q Assuming that the form was -
 (2) A Should be able to
 (3) Q - form was fully and honestly - now I'll represent to you that in this case those records indicated that indeed this seller received a setnet permit in addition to the hundred thousand dollars Do you think that seller was damaged to the extent of \$230 000?
 (4) A Are you telling me that this person filled out that they received a salmon setnet fishery and permit in some other area I take it?
 (5) Q Yes sir
 (6) A And they said they got it at zero cost and they reported that they got this permit at a cost of \$100 000
 (7) Q They said they traded the setnet permit plus boot as they say in the tax field of \$100 000 for their purse seine permit
 (8) A That makes it sound like they - they - oh they paid a hundred thousand dollars plus their setnet permit for the purse seine permit
 (9) Q Correct right Would you think it fair to assess \$230 000 of damages on a transaction in which the seller received \$100 000 plus a setnet permit?
 (10) A If the transaction is exactly as you are presenting to me then I think that the appropriate amount of damage would take into account any other - the value of things that are - that

Vol 30 5328

- (1) were included in the sale
 (2) Q I think I understood your earlier answer to indicate
 (3) though that you didn't even bother to look at that question?
 (4) A No I didn't. However I think that it's unlikely that we
 (5) would find that type of omission in reporting of the cost to be
 (6) prevalent
 (7) Q Oh okay. So now you're talking prevalence. This is only
 (8) a couple hundred thousand dollars among friends?
 (9) A Well no I think what you're saying is that -
 (10) Q Let me ask you -
 (11) A - that the cost of this - of the - what you're saying is
 (12) that when the CFEC records the cost which we use which I use
 (13) in calculating these numbers that the person who's filling out
 (14) the survey is putting down a number that isn't always
 (15) representative
 (16) Q Well it's represented in the CFEC records as a trade of a
 (17) purse seine permit for a setnet permit plus \$100,000?
 (18) A Uh huh
 (19) Q That's a perfectly legitimate straightforward
 (20) representation to the commission isn't it?
 (21) A So you would like to put down under cost the dollars
 (22) transferred plus the value of the setnet permit?
 (23) Q I would like to - I would just like to find out if you're
 (24) actually saying that in valuing the impact of this transaction
 (25) you shouldn't consider the setnet permit as a part of the

Vol 30 5329

- (1) value?
 (2) A No I agree with you that you should
 (3) Q Okay Let me ask you if you will look at the document I
 (4) handed you which is -
 (5) THE COURT Mr Lynch I'm getting looks from the
 (6) jury Can we finish quickly or should we go on tomorrow?
 (7) MR LYNCH I think Your Honor considering it's the
 (8) middle of the week that we should go over till tomorrow I've
 (9) got at least a half hour
 (10) THE COURT Ladies and gentlemen we'll adjourn at
 (11) this time Please don't read or look at anything about the
 (12) case during our recess We'll reconvene at 8:00 tomorrow
 (13) morning Be in recess until that time Would counsel stay for
 (14) just a moment please
 (15) Just a moment folks before you go I had a note from the
 (16) foreman asking me when we were going to be off during
 August
 (17) if we go that far If we are not finished by the 11th of
 (18) August we're going to suspend on the 12th which is a Friday
 (19) and we're going to suspend for the following week five days
 (20) We'll recommence then after that Thank you
 (21) (Jury out at 2:06 p.m.)
 (22) THE COURT Mr Murtashaw told me there was something
 (23) we needed to talk about at the end of the day today
 (24) MR O NEILL Yeah we'll - he's our last witness
 (25) We have - in fact we have an offer of proof on the matters

Vol 30 5330

- (1) that Your Honor excluded like we did for phase one which I've
 (2) marked as Court Exhibit 2 and I'll offer right now pursuant to
 (3) Rule 103 (a)(2) as Court Exhibit 2 and I've discussed it with
 (4) Mr Lynch
 (5) (Exhibit Court 2 offered)
 (6) MR O NEILL And we have one exhibit put in and
 (7) published -
 (8) THE COURT Just a second The Court Exhibit 2 will
 (9) be received It is not admitted into evidence because it will
 (10) not be going to the jury but it is received as part of the
 (11) record for purposes of preserving your record as an offer of
 (12) proof
 (13) (Exhibit Court 2 received)
 (14) MR O NEILL That's correct pursuant to Rule 103
 (15) (a)(2) of the Rules of Evidence
 (16) THE COURT Thank you Next
 (17) MR O NEILL And then we'll be offering by agreement
 (18) a summary exhibit which looks like this which the jury can
 (19) use as a road map It's got each of the items of damage the
 (20) number and the exhibit and then we'll rest
 (21) THE COURT Okay
 (22) MR O NEILL So that's just for planning purposes
 (23) So by 8:30 tomorrow or 8:45 we should - we should rest
 (24) Then the next question I'm the guy who everybody has asked
 (25) to step out in front and see if we can talk you into a four day

Vol 30 5331

- (1) weekend this weekend
 (2) THE COURT Whoa
 (3) MR O NEILL Neal's hiding behind the Barco
 (4) MR NEAL He's a real coward Judge Real coward
 (5) You talk about being nice I said I asked for the last one
 (6) Brian now will you take the hit on this one Oh sure I'll
 (7) take the hit that's how he takes the hit
 (8) MR O NEILL Well I think he at least - but so I am
 (9) requesting your consideration with regard to a four day
 weekend
 (10) this weekend so that these out of town lawyers can go home I
 (11) myself live in Anchorage
 (12) THE COURT Sure you do
 (13) MR LYNCH Your Honor I might say that we have
 (14) calculated the expected duration of our case and we believe
 (15) that we will be able to finish by next week even with a
 (16) four-day interruption
 (17) THE COURT Okay That causes me to ask you to really
 (18) get with it on your instructions I don't want to get cut
 (19) short like I sort of felt I was last time
 (20) MR SANDERS They haven't done that yet Your Honor
 (21) THE COURT No they haven't done that yet.
 (22) MR O NEILL I think you're going to get them today
 (23) Judge
 (24) THE COURT I take it there's some unanimity of
 (25) feeling that you'd like to have Friday off

Vol 30 5332

- (1) MR O NEILL Yes sir
 (2) MR LYNCH That s - yes Your Honor
 (3) MR SANDERS That s a way to say it yes
 (4) THE COURT You got it
 (5) MR SANDERS Thank you Your Honor
 (6) MR NEAL Thanks Brian for taking the lumps on
 (7) this
 (8) MR O NEILL Hey you re going home pal
 (9) Thank you Judge
 (10) THE CLERK This court is in recess until eight a m
 (11) tomorrow
 (12) (Recess at 2 10 p m)

 (1) PROCEEDINGS
 (2) (Jury in at 8 02 a m)
 (3) (Call to Order of the Court)
 (4) THE COURT Good morning ladies and gentlemen This
 (5) is the continuation of trial in case A89-0095 civil in re the
 (6) Exxon Valdez Mr Lynch you re still up
 (7) Dr Karpoff you understand that you re still under
 (8) oath?
 (9) THE WITNESS Yes
 (10) THE COURT You may proceed Mr Lynch
 (11) MR LYNCH Thank you Your Honor
 (12) CONTINUED CROSS EXAMINATION OF JONATHON
 KARPOFF
 (13) BY MR LYNCH
 (14) Q I sat there in front of you DX2950 for identification
 (15) Would you just take a look at that?
 (16) Your Honor, may I approach the witness?
 (17) Dr Karpoff, do you recognize DX2950 for identification as
 (18) the letter from the State of Alaska Commercial Fisheries Entry
 (19) Commission which was used to establish the benchmark
 (20) calculations that you talked about yesterday?
 (21) A Yes
 (22) Q And I wonder if I could ask you to turn to Page 2, please?
 (23) That s Page 2 of the attachment the table of prices
 (24) Am I correct that NRC used the Southeast purse seine price
 (25) as the benchmark for the Prince William Sound purse seine

Vol 31 5338

Vol 31 5340
 (1) price?
 (2) A NRC used percentage changes in the Southeast purse seine
 (3) salmon fishery permits as the benchmark
 (4) Q So their assumption was that whatever the percent of change
 (5) up or down that occurred in the Juneau area for purse seine
 (6) fishing permits would be a good indication of what you would
 (7) expect the change up or down to be in Prince William Sound?
 (8) A That the percentage change in the Southeast area would be
 a
 (9) good way to calculate a reliable estimate of the percentage
 (10) changes that would have otherwise occurred in the oiled
 (11) fishery
 (12) Q Okay Now if you look at Southeast percent seine for 1988
 (13) there - see that?
 (14) A Yes
 (15) Q What s the mean shown there?
 (16) A 54 911
 (17) Q And for 1989?
 (18) A 72 300
 (19) Q So the price of the benchmark went up by a percent - went
 (20) up by some number of dollars to begin with correct?
 (21) A Yes
 (22) Q And the percent, I ll represent to you is about 32
 (23) percent, is that correct?
 (24) A That looks - looks about right, yes
 (25) Q Now would you look at Prince William Sound 1988 price?

Vol 31 - 5341

- (1) A Yes
 (2) Q What s the price in 1988?
 (3) A 130 659
 (4) Q Okay That s before the spill correct?
 (5) A Yes
 (6) Q What s the price after the spill?
 (7) A The price for 1989 is 228 500
 (8) Q Do you know what that percentage gain is?
 (9) A Looks to be in the neighborhood of 80 percent or so 70
 (10) percent
 (11) Q So it went up about 32 percent in the Southeast the
 (12) benchmark area, and it went up 75 to 80 percent in the Prince
 (13) William Sound area where the spill was correct?
 (14) A Over that - over that period yes
 (15) Q That would indicate, would it not, that people in the spill
 (16) area did better than people in the non-spill area?
 (17) A That expectations of future fishing incomes increased in
 (18) the Prince William Sound area over that period compared to
 (19) similar increase in expectations in Southeast
 (20) Q And if they sold during that period of time they did
 (21) better?
 (22) A If they sold their - if they had bought in at this price
 (23) at 1988 and sold out at the reported price for 1989 they would
 (24) have done better
 (25) Q Okay But NRC nevertheless held that there was a loss

Vol 31 5342

- (1) during that period of time in Prince William Sound correct?
 (2) A No that isn t correct NRC calculated that when the first
 (3) information about the oil spill hit the permit markets that
 (4) was reflected in a decrease in prices of the affected area
 (5) permits in the second quarter of 1989
 (6) Q Now let me see if I follow this The CFEC data that you
 (7) used to set the benchmark showed a 75 percent to 80 percent
 (8) increase in the value of Prince William Sound purse seine
 (9) permits correct?
 (10) A The - over the 1988 to 1989 period yes
 (11) Q And in the Southeast which you were using as a benchmark
 (12) it only rose 32 percent?
 (13) A From the 88 to 89 period
 (14) Q But it is the fact if we look at PX3647 which you
 (15) discussed with Mr Sarko it is a fact that for every purse
 (16) seine transfer listed on there you claim a price of 330 000
 (17) higher than the - higher than the actual mean shown by the
 (18) CFEC correct?
 (19) A Yes What the procedure used to calculate these projected
 (20) prices did is it focused on the key informational periods when
 (21) news about the permit hit the markets That wasn't in 1988, it
 (22) was in 1989
 (23) Q Right And in 1989 as compared to your benchmark area
 (24) the price in the market where the spill occurred went up actual
 (25) price real world market price, went up 75 to 80 percent

Vol 31 5343

- (1) correct?
 (2) A From the 1988 to the 1989 period yes
 (3) Q Now -
 (4) A But again the spill happened in 1989 and what the NRC
 (5) estimates do is focus on the impact at the time of the spill
 (6) Q Well impact at the time of the spill is measured by what?
 (7) You have told this jury that you thought that the reasonable
 (8) way to measure what the permit would have done in the
 (9) absence
 (10) of the spill is to look at how permits were doing in a place
 (11) that didn t have a spill correct?
 (12) A Yes
 (13) Q And what the permits were doing in that area was rising 30
 (14) percent correct?
 (15) A If you use the time period that starts -
 (16) Q Before the spill?
 (17) A Long before the spill yes - well several months before
 (18) the spill yes
 (19) Q And goes until after the spill correct?
 (20) A And what the NRC procedure does is it focuses on that
 (21) period just right at the spill
 (22) Q Just right at the spill And it says that even though
 (23) after learning about the spill the price went up by 75 to 80
 (24) percent Even though that happened we ll still find a loss
 (25) correct?
 (26) A Even though prices previously had gone up?

Vol 31 5344

- (1) Q No The prices in 89 at the end of 89 were up over
 (2) what they were before the spill Isn t that what this document
 (3) shows?
 (4) A The document from - yes from - you re talking about the
 (5) CFEC document?
 (6) Q Yes sir And they continued to rise didn t they into
 (7) 1991?
 (8) A I can t answer that without looking at the numbers again
 (9) Q Let me show you if I may DX2961 for identification You
 (10) recognize Exhibit 2961?
 (11) A It is - it is a - looks like a copy of an excerpt from
 (12) the Fisherman s News
 (13) Q It s actually a series of columns from Fisherman s News
 (14) That s a trade publication You recognize that don t you Dr
 (15) Karpoff?
 (16) A Yes
 (17) Q And the columns are entitled permit news correct?
 (18) A Yes
 (19) Q And that column reports to the trade what people are asking
 (20) for permits in various parts of Alaska and California and
 (21) Oregon and Washington correct?
 (22) A Yes
 (23) Q Do you know who the author of those columns is?
 (24) A At the bottom of this list it says permit news is a
 (25) service of Dock Street Brokers of Seattle

Vol 31 5345

- (1) Q Do you know who runs Dock Street Brokers?
 (2) A Roger Lohrer
 (3) Q Roger Lohrer your co author on the report that led to your
 (4) damage calculation?
 (5) A Yes
 (6) Q And the man who was here yesterday to testify?
 (7) A Yes
 (8) Q Could you turn to the column for July 1992?
 (9) A Yes
 (10) Q What s the title of that column?
 (11) A Permit prices stabilize as Alaska salmon season kicks off
 (12) Q Would you read the third paragraph of that column?
 (13) A It says Permit prices tended to be more realistic this
 (14) year after several years of inflated values in some areas the
 (15) adjustment in the permit market is the result of short supply
 (16) in some cases and was also caused by large amounts of cash
 (17) flowing into the industry as a result of the Exxon Valdez oil
 (18) spill look for a more stable market in 92 and 93
 (19) Q In your analysis of how permit prices in the spill affected
 (20) areas were doing did you give any consideration to
 (21) Mr Lohrer s observation that permit prices in those areas had
 (22) actually benefitted from the flow of cash resulting from the
 (23) Exxon Valdez oil spill?
 (24) A Actually yes
 (25) Q How did you do that?

Vol 31 5346

- (1) A The key in going from just the data to I think an
 (2) accurate interpretation of the data is to focus on when
 (3) information about oil spill impacts was hitting the market Aa
 (4) I just said the NRC estimates did that by focusing initially
 (5) on the impact at the time of the spill They used the second
 (6) quarter price change in affected areas NRC then identified a
 (7) second informational period which they identify as starting in
 (8) late 1990 and extending on through the end of their time
 (9) period
 (10) One could quibble with the selection of this informational
 (11) event period For example you could say that NRC should
 (12) have
 (13) focused on the second - as its second informational period as
 (14) beginning in 1991 when first reports started appearing from
 (15) fish study 27, for example, about the projected crash in Cook
 (16) Inlet when initial runs came out of Prince William Sound
 (17) about the strange way that the pink salmon recruit was acting
 (18) in weird and strange ways
 (19) But regardless of your choice of the exact informational
 (20) period when you focus on the informational events, you find
 (21) that when this news was hitting the markets you get
 (22) substantial price decreases in the oiled permits especially
 (23) when compared to non oiled permits
 (24) Q Well the - the truth of the matter is that was a fairly
 (25) long answer to my question which is did you account for the
 inflation which Mr Lohrer observed in the spill areas from the

Vol 31 5347

- (1) cash flowing into those areas and not to other areas because of
 (2) the clean up activities following the Exxon Valdez oil spill?
 (3) A Yes And I m sorry that I got - that I -
 (4) Q The answer to that question is no, you did not?
 (5) A No that is not the correct answer In looking at the -
 (6) how to identify the correct informational period, I considered
 (7) the fact that there were assurances coming from Exxon soon
 (8) after the spill until sometime in through the 1990 season that
 (9) affected fishermen would be made whole, and that was
 (10) information that was helping to keep permit prices up When
 (11) those assurances appeared to be less credible to affected
 (12) fishermen that was another piece of information that affected
 (13) the permit markets adversely
 (14) Q Well, Dr Karpoff, you can repeat your informational story
 (15) over and over again, but not once have you referred to the
 (16) cash the hard cash flowing into the community which
 (17) Mr Lohrer in his permit news column, said had caused an
 (18) artificial inflation, increase in the value of those shares,
 (19) did you?
 (20) A I did not refer to that, no
 (21) Q And in order to find some way to claim damage during that
 (22) period when prices were rising, you didn't look to your
 (23) benchmark fishery, did you? You didn t look to the Southeast
 (24) percent seine prices did you?
 (25) A I don't understand

Vol 31 - 5348

- (1) Q You didn't use the Southeast purse seine fishery in the
 (2) second quarter of 1989 as your benchmark for the period from
 (3) 1989 to 1991 You created a different benchmark didn t you?
 (4) A For fisheries in which there were quarterly data, NRC was
 (5) able to isolate the impact of the oil spill at the second
 (6) quarter of 1989 For fisheries for which they only had annual
 (7) data, they did not They were not able to focus on - on that
 (8) quarter s impact
 (9) Q So in this case even though the Prince William Sound purse
 (10) seine permit rose more than double the benchmark permit you
 (11) looked to another place so you could find a loss, correct?
 (12) A No that isn t correct
 (13) Q Well, you did look to another place?
 (14) A What NRC did was said let s look to an area where we do
 (15) have information available
 (16) Q Was it a different place?
 (17) A And those were the fisheries where they had quarterly data
 (18) Q Was it a different place?
 (19) A And in the -
 (20) THE COURT Gentlemen you re going to have to stop
 (21) talking over one another Dr Karpoff you're not answering
 (22) the question Would you answer his question?
 (23) THE WITNESS I m sorry It was a different fishery
 (24) but it was a fishery where they had data
 (25) BY MR LYNCH

Vol 31 5349

- (1) Q Dr Karpoff we were looking last night at Plaintiffs
 (2) Exhibit 3647 and we were looking at the second transaction
 and
 (3) that was the transaction in which as I indicated the CFEC
 (4) records indicate that there was a trade of a setnet permit
 (5) Do the CFEC records as kept code transactions to indicate
 (6) whether they are straightforward transactions or whether
 (7) they re gifts or interfamily transactions?
 (8) A Yes
 (9) Q And isn't it the case or do you know have you checked
 (10) before this transaction is coded as a gift?
 (11) A I - I did check that actually and it is not coded as a
 (12) gift
 (13) Q It is not a G transaction?
 (14) A I base that on having double checked a couple of different
 (15) ways these numbers since the beginning of your cross
 (16) examination yesterday
 (17) Q Are you familiar with the CFEC s coding system where
 (18) transactions are coded A G N and O?
 (19) A I take it those are the codes for the type of transaction?
 (20) Q Right Are you familiar with that practice?
 (21) A Yes although I don t know which number or which letter
 (22) refers to which type
 (23) Q G I ll represent to you on the CFEC coding refers to gift
 (24) or interfamily transfer correct?
 (25) A I know that there is a coding for gift and there s a coding

Vol 31 5350

- (1) for interfamily transfer
 (2) Q Do you know whether the transaction that you show on line
 (3) two of Exhibit 3647 is coded G in the CFEC records?
 (4) A Again since having - checking since yesterday, in my
 (5) checking, the answer is that it is not coded that way
 (6) Q You understand it is not coded G?
 (7) A That is my understanding yes
 (8) Q All right And you personally checked the record?
 (9) A No What I did was I got my research assistant out of bed
 (10) this morning and asked him to rerun my program, checking for
 (11) gift or interfamily transfers I also asked him to check for
 (12) whether or not there were many cases in which other items were
 (13) traded as you indicated there was in this transfer
 (14) Q Did you - do you know what the name of the transfer is
 (15) according to the CFEC records?
 (16) A The records do provide that information
 (17) Q What is his name?
 (18) A I don't know
 (19) Q Russell B Williams, does that sound familiar?
 (20) A I did not record or look at the names
 (21) Q Do you know what the name of the transferee is in this
 (22) transaction?
 (23) A No
 (24) Q Would Gregory T Williams surprise you?
 (25) A No

Vol 31 5351

- (1) Q Would the fact that Russell Williams is trading to Gregory
 (2) Williams be a tipoff that that might be an interfamily
 (3) transaction?
 (4) A It could be yes
 (5) Q As an economist would you agree that an interfamily
 (6) transaction is not a fair representation of market value?
 (7) A It could be yes
 (8) Q Would you look on Exhibit -
 (9) A May I ask you do you know with whether this is coded as an
 (10) interfamily?
 (11) Q Our information is that it s coded as a G
 (12) Would you look at Exhibit DX9346 which I walked up to you
 (13) a few minutes ago and there s a column on the far left reading
 (14) exhibit line number Would you look at line number 30 on that
 (15) exhibit?
 (16) A On the first page?
 (17) Q Yes sir You see the - this as I told you is a reprint
 (18) of Plaintiffs Exhibit 3647 but this exhibit line number has
 (19) been added to make it easier to cross reference
 (20) A Okay Yes
 (21) Q What permit is covered by exhibit line 30?
 (22) A Line 30 the permit number is 62046 It s a purchase in
 (23) the Prince William Sound salmon purse seine fishery
 (24) Q Okay And what was - what permit was covered by line
 (25) two?

Vol 31 5352

- (1) A 62046
 (2) Q Is that the same permit?
 (3) A Yes
 (4) Q So the purchase - the purchaser of the permit who - as
 (5) to whom you ve accorded a full measure of damages on line
 two
 (6) correct?
 (7) A Yes
 (8) Q Apparently resold it?
 (9) A Yes
 (10) Q Some months later correct?
 (11) A Yes
 (12) Q And sold it at a price of a hundred thousand dollars?
 (13) A Yes
 (14) Q And again you claim full damages on that second sale?
 (15) A As presented in the exhibit yes
 (16) Q Are you aware that on your exhibit, there are instances
 (17) where permits have been sold three or four times and you claim
 (18) full damages on each sale?
 (19) A No
 (20) Q You re not aware of that?
 (21) A No
 (22) Q Did you check for that?
 (23) A No
 (24) Q If - if a permit is transferred at a lower than what you
 (25) claim to be the proper price the buyer receives an economic

Vol 31 5353

- (1) benefit doesn't he?
- (2) A The buyer - oh yes By getting a lower than market
- (3) price?
- (4) Q If your Exhibit 3647 is correct economically, correct?
- (5) A Yes
- (6) Q I said correct twice Let me restate the question If the
- (7) numbers on your Exhibit 3647 are correct - let's just take
- (8) this transaction number 2 The buyer of that permit 62046
- (9) received a benefit of approximately \$230,000 by being able to
- (10) buy that permit for less than you think the fair market value
- (11) would have been?
- (12) A No I would not call that a benefit I would say that the
- (13) seller of the permit absent the gift element that you re -
- (14) that you're arguing is there suffered a loss of 230 000
- (15) compared to what otherwise he or she would have gotten
- (16) Q Okay And the buyer certainly didn't invest market value
- (17) did it? According to your calculation of what the market -
- (18) would have been market value, the buyer invested a hundred
- (19) thousand dollars?
- (20) A Invested less than what the permit would have been worth
- (21) absent the spill
- (22) Q But when that buyer goes to resell you charge one hundred
- (23) percent damages for that subsequent sale is that correct?
- (24) A When it is sold again on the exhibit, yes
- (25) Q So under your exhibit this transaction you think had a -

Vol 31 5354

- (1) resulted in a loss of \$230 000 if a seller resells it every
- (2) three months, then that loss compounds and compounds and
- (3) compounds so that this one permit could end up representing a
- (4) million or two million dollars in your bottom line figure is
- (5) that correct?
- (6) A It's possible the way this exhibit was calculated
- (7) Q Could you look at - let's use the trade number - I think
- (8) trade number seven on your list
- (9) A Yes
- (10) Q Trade number seven is another purse seine permit?
- (11) A Yes
- (12) Q Now if you would that's a - I'll represent to you shown
- (13) in the CFEC data as a C transaction Do you know what a C
- (14) transaction is?
- (15) A No
- (16) Q Combination
- (17) A In that other items were sold with the permit?
- (18) Q Other items were sold with the permit
- (19) A Yes
- (20) Q Okay And according to the CFEC records the other item
- (21) was another permit Would you look at DX9346 and if you
- (22) would at line 147 what does that represent?
- (23) A That represents a transfer in the Prince William Sound
- (24) salmon driftnet fishery
- (25) Q Now as an economist do you think it is proper if the

Vol 31 5355

- (1) person who sold this Prince William Sound seine permit that
- (2) you
- (3) show in transaction number seven traded his - his seine permit
- (4) for a driftnet permit plus \$150,000, you think it's proper that
- (5) he should claim damages when he later sells the driftnet permit
- (6) for the full amount?
- (7) A Could you repeat that question? I think what you're saying
- (8) is that what was traded in line 137 was traded for what was in
- (9) line seven?
- (10) Q What I'm saying is your seventh trade here the seventh
- (11) permit for which you're claiming damages in this case you're
- (12) claiming damages of \$155 000, correct?
- (13) A Yes
- (14) Q Now, that trade, according to CFEC records, involved the
- (15) transfer of a seine permit for a driftnet permit plus a
- (16) payment a compensating payment of \$150,000, representing
- (17) apparently the higher value of the seine permit correct?
- (18) A As you're representing to me?
- (19) Q Assuming that to be the case
- (20) A Okay
- (21) Q Now if the person who made that trade later sells his
- (22) driftnet permit, you've included that you've claimed damages
- (23) on that sale, too, correct?
- (24) A In each case - now let's take the first case What I
- (25) argue as an economist is that all holders of Prince William
- (26) Sound purse seine fisheries suffered losses in that the value

Vol 31 5356

- (1) of the permit was less than what it otherwise would be,
- (2) representing that the expectation of the long-term fishing
- (3) incomes were lower - or was lower than it otherwise would be
- (4) So the person that sells the person realizes that loss
- (5) As an economist I maintain that all permit holders will have
- (6) experienced that loss So that's true, too for someone who
- (7) buys into and then subsequently sells out of the driftnet
- (8) fleet
- (9) Q So if a person - according to your analysis your baseline
- (10) analysis assumes that the spill is the damage triggering event
- (11) correct?
- (12) A Yes
- (13) Q All of your damage calculations date from March 24 1989,
- (14) correct?
- (15) A Yes
- (16) Q So if a person buys a permit in late 1989, because there's
- (17) a great pink salmon run - correct?
- (18) A Uh huh
- (19) Q - that person the seller of that permit suffers damage
- (20) correct?
- (21) A The seller of the permit in late 1989, yes
- (22) Q Suffers damage and then if he buys back in, he can suffer
- (23) that damage again?
- (24) A If I can repeat - all holders of permits will have
- (25) suffered the damage The seller realizes it and shows up on

Vol 31 5357

- (1) this exhibit
 (2) Q This exhibit only deals with actual sales correct?
 (3) A Yes
 (4) Q Now if that – the way you ve done this calculation if a
 (5) permit holder sells he gets damage and you ve calculated
 (6) that correct?
 (7) A Yes
 (8) Q He buys back in and sells a second time he gets more
 (9) damage right?
 (10) A Yes
 (11) Q If he buys back in and sells a third time he gets still
 (12) more damage?
 (13) A Yes And a large part of that is due to the fact that as
 (14) new information kept coming up, particularly in late 1991 and
 (15) continuing through '93 that – the information indicated that
 (16) things were worse than previously thought and permit prices
 (17) were going down
 (18) Q So it s in your view perfectly appropriate to keep
 (19) recharging the same damage dating from 1989 no matter how
 (20) many times? That s a great business isn t it Dr Karpoff?
 (21) A No You would want to avoid double counting You would
 (22) want to make sure to include the damages that accrue from new
 (23) information that was gotten after these –
 (24) Q Only these damages?
 (25) A Yes

Vol 31 5358

- (1) Q You haven t done that though, have you?
 (2) A No
 (3) Q All of the damage in this calculation dates from March 24
 (4) 1989?
 (5) A No I – no, that's not correct
 (6) MR LYNCH No further questions
 (7) THE COURT Redirect?
 (8) REDIRECT EXAMINATION OF JONATHAN KARPOFF
 (9) BY MR SARKO
 (10) Q Dr Karpoff the fact is the permit prices crashed in all
 (11) of the oiled fisheries when the long term consequences of the
 (12) spill became known is that right?
 (13) A Yes As information accrued we saw price crashes
 (14) Q And your conclusion is that the reason the prices have
 (15) declined so drastically is because of the oil spill correct?
 (16) A Yes
 (17) Q And is that conclusion reinforced by the testimony we heard
 (18) from Roger Lohrer concerning the transactions he was involved
 (19) in since the oil spill?
 (20) A Yes
 (21) Q And is that conclusion reinforced by the testimony of
 (22) Rosaleen Moore that we heard yesterday?
 (23) A Yes
 (24) Q Now Mr Lynch asked you some questions about the prices
 (25) and the way you estimated prices Do I understand correctly

Vol 31 - 5359

- (1) that when you sell a permit you report the sales price to the
 (2) State of Alaska?
 (3) A Yes
 (4) Q And the data that you used was the official data for the
 (5) official sales prices that you received from the State of
 (6) Alaska?
 (7) A Yes I used that data in two ways One in the
 (8) preparation of the exhibits about which we ve been talking and
 (9) the second is in my own calculations of the permit damages that
 (10) confirm NRC s findings
 (11) Q And that the calculations we saw in the exhibit were based
 (12) on those official prices?
 (13) A Yes
 (14) MR SARKO No further questions Thank you
 (15) THE COURT Thank you sir You may step down
 (16) MR O'NEILL Your Honor the plaintiffs offer Exhibit
 (17) 60 – Plaintiffs' 6077
 (18) MR LYNCH Your Honor there s no objection There
 (19) may be some need for mathematical corrections but I m sure
 (20) Mr O Neill would want to make them as much as I but the
 (21) document as far as both of us can tell is arithmetically
 (22) correct at the moment
 (23) (Exhibit 6077 offered)
 (24) THE COURT Plaintiffs Exhibit 6077 is admitted
 (25) (Exhibit 6077 received)

Vol 31 - 5360

- (1) MR O NEILL May I publish 6077 to the jury Your
 (2) Honor?
 (3) THE COURT Yes you may
 (4) MR O NEILL The columns read across the top item of
 (5) damages damage figure and source and the source column
 as
 (6) you ll see – we ll focus in on a line Take the one at the
 (7) top Kodiak salmon harvest gives you the category Kodiak
 (8) salmon harvest It gives you the damage number off of the
 (9) exhibit and it gives you the exhibit number So this is a
 (10) summary of all of the exhibits that went in that had damage
 (11) numbers on them
 (12) Plaintiffs rest
 (13) THE COURT Thank you sir This completes the
 (14) plaintiffs phase plaintiffs side of Phase II A The
 (15) defendants may call their first witness
 (16) MR SANDERS Your Honor, we re going to get off to a
 (17) rousing start with some readmitted exhibits
 (18) MS ROBINSON Your Honor we have an offer of
 (19) exhibits to which plaintiffs have no objection DX104 DX446

- (38) MR SANDERS May it please the Court I know it s a
- (39) hard act to follow
- (40) MR O NEILL I thought we did a pretty good job of
- (41) boring everybody
- (42) MR SANDERS Defendants call Hans Jahns
- (43) THE CLERK Would you raise your right hand please
- (44) sir?

Vol 31 5363

- (1) **THE CLERK** Please be seated For the record sir
 (2) state your full name your address and spell your last name
 (3) please
 (4) **THE WITNESS** My name is Hans Otto Friedrich Jahns
 (5) J A-H-N S I live at 8840 Larston Road Houston Texas 77055
 (6) **DIRECT EXAMINATION OF HANS JAHNS**
 (7) **BY MR SANDERS**
 (8) Q Good morning, Doctor
 (9) A Good morning
 (10) Q I m going to ask you if you'll pay particular attention to
 (11) that silver microphone which I think is the better broadcaster
 (12) of the two so that everybody can hear you
 (13) What are you looking for?
 (14) A The set up here
 (15) **THE COURT** Checking out the gear
 (16) **BY MR SANDERS**
 (17) Q Doctor I want to go into your background to some extent in
 (18) a moment but first I want to ask you as of right now you re
 (19) serving as a consultant to Exxon, correct?
 (20) A Yes
 (21) Q And how long have you been in that capacity?
 (22) A Since the first - since early January 1993
 (23) Q And prior to January of 1993 you were an Exxon employee
 (24) an Exxon scientist for a period of 30 years is that correct?
 (25) A Yes

Vol 31 5364

- (1) Q And you retired in '93 and since then or almost immediately
 (2) thereafter you became a consultant to and for Exxon and
 you ve
 (3) served in that capacity since then?
 (4) A That s correct
 (5) Q So you ve been essentially in one form or another an Exxon
 (6) employee for the last 32 years?
 (7) A That s correct
 (8) Q Were you born and raised in Germany?
 (9) A Yes
 (10) Q And you were born and raised in the pre-World War II years
 (11) is that correct?
 (12) A Yes
 (13) Q I m not going to ask you your age Would you describe for
 (14) the ladies and gentlemen of the jury where you were educated?
 (15) A I went to college - and that s the question, my college
 (16) education?
 (17) Q Yes sir
 (18) A I went to college to a School of Mines in the Harz
 (19) Mountains It s called back all class at that had and I
 (20) studied there geology and mining engineering
 (21) Q We ll spell that for the court reporter later
 (22) A School of Mines The German word
 B E R G A K A D - E M I E
 (23) and the city is Clausthal C L A - U S T - H - A - L It s an old
 (24) mining town
 (25) Q And with your permission, we ll refer to that here and

Vol 31 5365

- (1) after as the School of Mines?
 (2) A That s good
 (3) Q And did you receive a degree or a diploma or more from the
 (4) School of Mines?
 (5) A Yes I got two diploma degrees one in geology and one in
 (6) mining engineering and -
 (7) Q What years did you get those degrees please?
 (8) A Geology degree was in 1955 The mining engineering
 degree
 (9) was in 1956
 (10) Q All right Now is there an equivalent degree in the
 (11) United States in the same time period or even now for the
 (12) diploma you received in the field of geology?
 (13) A Yes That corresponds to an MS degree in geology
 (14) Q A masters of science degree United States?
 (15) A In geology yes
 (16) Q And is the same true for the diploma you received in
 (17) mining?
 (18) A Yes
 (19) Q All right Now, I think that we all know what geology is
 (20) Let me ask you about the breadth of this mining curriculum In
 (21) your mining curriculum in which you got the equivalent of a
 (22) master of science degree what types of mining did you study?
 (23) A That was a very broad range of mining types included coal
 (24) mining salt mining, iron or mining lead zinc other mining
 (25) and petroleum engineering

Vol 31 - 5366

- (1) Q And petroleum engineering, at least in Germany in the
 (2) 1950s was considered mining?
 (3) A Yes it was part of that faculty part of that science
 (4) Q Did you in fact study petroleum engineering as a part of
 (5) your work toward a degree at the School of Mines in Germany in
 (6) 1950 - in the 1950s?
 (7) A Yes
 (8) Q And I take it because it was the equivalent of a master's
 (9) program you did a paper or a thesis in each of those two
 (10) areas, 55 and 56?
 (11) A That s correct
 (12) Q And after receiving those diplomas in 55 and 56 did you
 (13) do graduate work?
 (14) A Yes
 (15) Q Further graduate work?
 (16) A Yes
 (17) Q And in what area did you do this further graduate work?
 (18) A That was specifically in petroleum engineering
 (19) Q And just so we get a glimpse of that without going into
 (20) everything that you did would you describe for the ladies and
 (21) gentlemen of the jury what is - what is studied in the field
 (22) of petroleum engineering in this curriculum at this School of
 (23) Mines?
 (24) A Well it deals with all aspects of the extract - the
 (25) finding and extraction of petroleum exploration exploration

Vol 31 5367

- (1) drilling production through well bores and also the
 (2) description and calculation of the processes that take place in
 (3) the reservoir By that I mean the accumulation of petroleum in
 (4) the subsurface
 (5) Q Do you study the composition characteristics chemical
 (6) make up of oil?
 (7) A Yes that's part of it
 (8) Q All right And is there a difference depending on what
 (9) kind of crude oil you're talking about in the composition of
 (10) various crude oils?
 (11) A Oh yes there are big differences
 (12) Q Is there a difference in for example the oil in Germany
 (13) and the oil on the Alaskan North Slope in composition
 (14) characteristics chemicals?
 (15) A Well in Germany we have hundreds of oil fields with a wide
 (16) range of properties some were tar like some are very liquid
 (17) There are probably some that are similar to the oil from the
 (18) North Slope
 (19) Yes from field to field you have important differences in
 (20) the flow properties and the chemical make up of the oil that is
 (21) produced
 (22) Q Okay Now I want to come back to this reservoir concept
 (23) in a moment but did you do a doctoral thesis as a part of this
 (24) graduate work at the School of Mines?
 (25) A Yes

Vol 31 5368

- (1) Q And would you tell the ladies and gentlemen of the jury in
 (2) English what the title of that paper was?
 (3) A The paper dealt with linear and radial displacement of oil
 (4) by water in layered reservoirs
 (5) Q That's a snappy title
 (6) A Sorry
 (7) Q What - what - describe what that was
 (8) A It dealt with the calculational procedure with a method of
 (9) predicting how you could produce oil from a reservoir that is
 (10) not homogenous Most reservoirs are not homogenous This
 (11) was
 (12) a particular case that is frequently found where a reservoir
 (13) consists of several layers of sand or limestone with different
 (14) properties and oil flows all through the layers and the
 (15) interaction of the flow through these different layers was the
 (16) subject of this dissertation
 (17) Q Dr Johns as I understand it then you're dealing with
 (18) how the oil will flow through layers of earth that is different
 (19) make up?
 (20) A Yes
 (21) Q Is that what the thesis was about?
 (22) A Yes
 (23) Q All right Now what is an oil reservoir?
 (24) A It's an accumulation of oil saturated rocks below the
 (25) surface from which you're able to extract the oil
 (26) Q All right And is part of the process of petroleum

Vol 31 5369

- (1) engineering figuring out how to make oil near the reservoir
 (2) flow into it so that that's where you put the well?
 (3) A That's correct how to make it flow into the well so you
 (4) can produce it
 (5) Q All right Did you stay in this field of petroleum
 (6) engineering after you received your - you did receive a
 (7) doctorate?
 (8) A Yes
 (9) Q When was that?
 (10) A 1961
 (11) Q And that was in petroleum engineering?
 (12) A Yes
 (13) Q Ph D or the equivalent?
 (14) A Doctorate of engineering yes
 (15) Q And after you received this degree did you work in the
 (16) field of petroleum engineering?
 (17) A Yes
 (18) Q Where did you go to work?
 (19) A I worked for an independent oil company in Germany called
 (20) Wintershall
 (21) Q How long did you work for Wintershall?
 (22) A About three and a half years
 (23) Q What work did you do for them?
 (24) A I headed what was called a reservoir lab a laboratory in
 (25) which reservoir studies were conducted

Vol 31 5370

- (1) Q What specifically did you study? Without getting into a
 (2) great deal of detail what was the basic area in which you
 (3) worked in that laboratory?
 (4) A Well two things Rock properties we would get samples
 (5) from the fields and measure the properties and flow processes
 (6) We would do model tests to simulate or to study the
 (7) displacement of oil in - in these rocks so that we could
 (8) design field methods for extracting the oil most economically
 (9) and most completely
 (10) Q Did you do - in the course of this work you mentioned the
 (11) laboratory work Did you do field work also?
 (12) A Yes I was also employed as a field engineer for a few
 (13) months
 (14) Q Did a lot more laboratory work than field work, right?
 (15) A Yes
 (16) Q Now, did there come a time when you left Wintershall and
 (17) left Germany?
 (18) A Yes
 (19) Q When was that?
 (20) A August of '62
 (21) Q '62 And where did you go?
 (22) A I went to Jersey Production Research in Tulsa Oklahoma
 (23) Q And that is or was a division or affiliate of Exxon or what
 (24) later came to be Exxon?
 (25) A Yes

Vol 31 5371

- (1) Q And continuously from that time in 1963 in Tulsa Oklahoma
 (2) until the present you ve worked with Exxon for Exxon?
 (3) A 1962 until the end of 1992
 (4) Q All right And when you came to – and just so we can do
 (5) it more quickly and cleanly I ll refer to whatever you were
 (6) working for as Exxon
 (7) A Yes that s fair
 (8) Q Even though we all understand there were different
 (9) subdivisions and affiliates but it s all Exxon?
 (10) A Yes
 (11) Q What was your first job with Exxon? What work did you do
 (12) with Exxon?
 (13) A Well I went to – I did research for Exxon and the first
 (14) assignment was in the area of reservoir description which
 (15) means –
 (16) Q Is that similar to the kind of work that you did for
 (17) Wintershall and that you did all this work in college on?
 (18) A Similar, yes, but more focused on specific research
 (19) questions I mean I came to the U S to do research and here
 (20) really I had the first opportunity to focus and concentrate on
 (21) research problems
 (22) Q Did you get involved in innovations and exploring and
 (23) researching these reservoirs?
 (24) A Yes
 (25) Q And did that take you into the field of computer modeling

Vol 31 5372

- (1) and that kind of thing?
 (2) A Yes, very much so
 (3) Q Did the focus of your work change thereafter?
 (4) A Yes I ve had many different assignments research
 (5) assignments and worked in different fields for Exxon
 (6) Q Tell me what the next general area – what I'm trying to do
 (7) is explain to the Ladies and Gentlemen of the Jury and the
 (8) Court the different areas in which you have expertise in order
 (9) to tell what you re going to tell later on
 (10) A Yes In about 1966 when I moved over into what we call
 (11) the oceanographic research and there, my – the research
 (12) question that I was working on was to define weight forces for
 (13) which offshore platforms had to be designed
 (14) Q Why was it necessary in the 60s for you or Exxon to worry
 (15) about wave forces on platforms?
 (16) A Well the problem was we were moving into the Gulf of
 (17) Mexico, into deeper water with offshore platforms, and these
 (18) platforms had to be designed for hurricane waves, very high
 (19) waves Not as big as the Gulf of Alaska, but still significant
 (20) wave action and we needed improved techniques to reliably
 (21) design the platforms for what we called the hundred year wave
 (22) Q What did the hundred year wave mean?
 (23) A That would be a wave you would expect on average once in a
 (24) hundred years
 (25) Q I gather that would be a fairly big wave?

Vol 31 5373

- (1) A Yes
 (2) Q Was it necessary in the course of this work that you did to
 (3) study and understand the properties of waves and the energy
 (4) transmitted in a large wave in a hurricane?
 (5) A Yes That was the purpose
 (6) Q Did you do that?
 (7) A Yes
 (8) Q Did you apply that information that you learned and studied
 (9) in designing these huge oil platforms?
 (10) A That – the method was applied in designing the structures
 (11) typically by other people in my company
 (12) Q How long did you work on that type of project?
 (13) A Full time about two years until 68
 (14) Q All right And did you then move into another area?
 (15) A Yes
 (16) Q What area was that?
 (17) A In 68 that was the year of the discovery of Prudhoe Bay
 (18) and I moved into an area in which I stayed for a long time
 (19) which we called arctic engineering
 (20) Q Can you tell the Ladies and Gentlemen of the Jury in a
 (21) general way what kinds of arctic engineering you actually did?
 (22) A Well much of the work was focused on Alaska It started
 (23) with the discovery of Prudhoe Bay and there were essentially
 (24) two problems that the industry had not faced before one
 (25) dealing on shore with permafrost ice ridge around, and the

Vol 31 5374

- (1) second dealing offshore with sea ice forces
 (2) Q And did that – the second one did that once again get you
 (3) into the area of understanding waves and action of the sea
 (4) against platforms?
 (5) A Yes And in this case it was gravel islands The
 (6) offshore activity in the North Slope specifically involved the
 (7) construction of gravel islands and they had to be designed not
 (8) only against ice flows but also against wave forces There
 (9) was a lot of coastal engineering shoreline protection work
 (10) involved in the designing of these platforms
 (11) Q Just very briefly what was the permafrost problem and how
 (12) did it get solved? Were you a part of that?
 (13) A Yes Well the permafrost problem was one around the
 (14) structures we built or the well bores or the pipeline If
 (15) permafrost were to thaw you would lose your foundation, which
 (16) is a common problem in Alaska It's related to the frost
 (17) heaves problems, permafrost subsidence and we worked on
 (18) that
 (19) in properly designing the well bores and properly designing the
 (20) pipeline so that problem would be overcome
 (21) Q And in part, was that problem overcome by elevating the
 (22) pipeline?
 (23) A Yes but that was not enough You had to also make sure
 (24) that the ground around the pipeline supports would stay
 (25) frozen
 (26) Q In the field of arctic engineering, we want to focus more

Vol 31 5375

- (1) on the protection of the shoreline the understanding of the
 (2) forces on these rocks gravels that would form the foundation
 (3) for these You obviously applied your previously acquired
 (4) expertise in understanding wave forces
 (5) Did you also have to understand currents?
 (6) A Yes The currents of course played a role in platform
 (7) design, just as well as waves
 (8) Q Did you also have to understand the geology of the beach or
 (9) the shoreline or the gravel island you were making as it
 (10) related to the currents and the waves and Mother Nature?
 (11) A Yes That is an important aspect of what I call the coastal
 (12) engineering determine the size of rocks that can be moved by a
 (13) wave for instance so that you could design bigger rocks to
 (14) protect the shoreline
 (15) Q All right Now in the course of these things that you
 (16) did up to this point in time - and let's get us an end point
 (17) here This project lasted quite a bit of your life, didn't it?
 (18) A Until '86
 (19) Q And from '86 backwards, did you publish various papers in
 (20) the various fields in which you've described to the jury that
 (21) you have worked?
 (22) A Yes
 (23) Q And were these papers submitted to scientific publications?
 (24) A Yes
 (25) Q And were these papers peer reviewed by the scientific

Vol 31 5376

- (1) society?
 (2) A Most of them, yes
 (3) Q Would you give us a brief snapshot if you would of
 (4) papers - of the types of papers you wrote in these different
 (5) areas that you've described to the jury?
 (6) A In reservoir engineering, I published papers on what we
 (7) called inverse simulation, a technique to deduce reservoir
 (8) properties from measurements you can make on the surface
 (9) a computer technique
 (10) In wave force probabilities I published a paper on that
 (11) topic probabilities of wave forces for instance this problem
 (12) of how do you select a hundred year wave wave force
 (13) And in the area of arctic engineering I published numerous
 (14) papers on the technology that was being developed for
 (15) instance for permafrost protection for the pipeline and also
 (16) for offshore technology for offshore exploration and
 (17) production
 (18) Q All right Now from '86 forward - and maybe I should
 (19) recapture a little time before that but in the hierarchy of
 (20) Exxon research - which is where you always stayed, correct?
 (21) A Yes
 (22) Q And you worked I think for Exxon Production Research?
 (23) A Yes
 (24) Q And that's one of a number of research facilities that
 (25) operate under the Exxon umbrella correct?

Vol 31 5377

- (1) A Yes
 (2) Q Did you kind of percolate up through the hierarchy of
 (3) the - of that particular research organization?
 (4) A Yes
 (5) Q By '86 what was your - what was your position?
 (6) A I had the title of senior research scientist which was the
 (7) highest technical position within Exxon
 (8) Q And as such, did your work broaden out some?
 (9) A Oh, yes
 (10) Q And did it broaden out to cover all of the areas that the
 (11) Exxon Production Research handled in those years from '86
 (12) forward?
 (13) A Many of those areas Perhaps most of them, yes
 (14) Q And did you get in a position where you were reviewing
 (15) proposals from other disciplines and using that information to
 (16) make decisions?
 (17) A Yes
 (18) Q By the way, I meant to ask you, when you would publish in a
 (19) scientific journal these types of papers that you talked about,
 (20) was there a company or corporate policy which required that
 (21) those papers first be reviewed by Exxon Corporation?
 (22) A Yes, that was customary
 (23) Q And to your knowledge is that customary for all
 (24) corporations?
 (25) A Yes

Vol 31 5378

- (1) Q Corporate employees going to publish something in a
 (2) scientific journal, the corporation gets to look at it first?
 (3) A Yes
 (4) Q Now this may be a little out of order but I think we
 (5) ought to go into this first In - I do this my own way
 (6) sometime
 (7) Dr Jahns did there come a time when you came to Alaska in
 (8) the late '80s as a result of this oil spill?
 (9) A Yes
 (10) Q And when did you come to Alaska?
 (11) A Well, my first trip to Alaska was in May in connection with
 (12) the oil spill I'd been in Alaska many times before, of
 (13) course In May '89 my first trip to Prince William Sound
 (14) Q And did you have a job in connection with the clean up of
 (15) the oil spill?
 (16) A Yes
 (17) Q What was your job?
 (18) A I was a member of a - of a task force which was
 (19) established to develop improved technology for cleaning up
 (20) this
 (21) mess that we had made here
 (22) Q All right Now, when you talk about the improved
 (23) technology here you're talking about the beach clean up
 (24) operation or some other type of clean up operation?
 (25) A The task force really dealt with the best way to cleanup
 the beaches because that was perceived as the biggest
 problem

Vol 31 5379

- (1) Q And certainly as of April and May of 1989?
- (2) A Yes sir
- (3) Q And were there other people in the task force on which you served?
- (4) A Oh yes
- (5) Q In which you served?
- (6) A Yes
- (7) Q Were they people - they were Exxon people?
- (8) A Yes The task force was composed of scientists from the various research organizations and operating organizations and laboratories that Exxon has worldwide really
- (9) Q Dr Jahns let me ask you when you came to Alaska to serve on this task force which was designed to try to come up with improved technologies for cleaning up this mess, did you know everything you needed to know about cleaning up an oil spill of this magnitude and this kind of environment?
- (10) A No I don't think anybody did This was unprecedented
- (11) Q From the time of the - that you came and started working on this project did you work on this project continuously for the next period of time?
- (12) A Pretty much so yes I still had a job on the side but I was focusing all my time on the task force
- (13) Q And as a result of being on that task force did you stay either in Alaska or in the laboratory in connection with these - these clean-up issues through the summer of 1989?

Vol 31 5380

- (1) A Yes
- (2) Q Through the winter 89/ 90?
- (3) A In the winter I transferred to Alaska and stayed here full time
- (4) Q And thereafter, did you stay with either physically or mentally with the cleanup and study of the Sound through those years?
- (5) A Yes
- (6) MR SANDERS May it please the Court I respectfully offer Dr Jahns as an expert in geology petroleum engineering the specific area of oceanography that we have discussed in his testimony and in arctic engineering
- (7) MR JAMIN No objection
- (8) THE COURT Thank you Dr Jahns qualifications are accepted by the Court
- (9) MR SANDERS Thank you, Your Honor
- (10) BY MR SANDERS
- (11) Q Dr Jahns, I left out one thing that I want to get to before I get to the main purpose you're here In the course of your work as a petroleum engineer, and you can tell us how far back this would apply, throughout have you performed what is called a mass balance?
- (12) A Yes
- (13) Q All right First tell us what a mass balance is and then tell us how long you have been dealing with that kind of

Vol 31 5381

- (1) concept
- (2) A Well mass balances are really the bread and butter I would call it of reservoir engineering which has been my original field of study It involves an accounting of all the inflows and outflows of oil water and other substances in a reservoir if you're talking about the mass balance of a reservoir It's a concept with which reservoir engineers petroleum engineers are very familiar
- (3) Q And I take it then that this is the kind of task if I can call it that that you've been engaged in ever since you started studying petroleum engineering?
- (4) A Yes
- (5) Q Dr Jahns I asked you to come here today in order to talk to the jury about what happened to the oil that was spilled and I would like to start if you would with a description of the composition of the particular oil that was spilled
- (6) And would you first confirm what everybody already knows what kind of oil was this?
- (7) A It was oil that was derived from the North Slope of Alaska loaded in Valdez into the tanker
- (8) Q And is it known at least colloquially as Alaskan North Slope crude oil?
- (9) A Yes
- (10) Q I have brought up what is marked for identification as Defendants Exhibit 5266

Vol 31 5382

- (1) Excuse me Is there an A on that?
- (2) 5266 A Would you explain to the jury - that's an exhibit you had prepared, right?
- (3) A Yes
- (4) Q And would you explain to the jury what this depicts and explain to the jury what the properties are and characteristics of Alaskan North Slope crude?
- (5) A Well I want to first say that before I get into this that oil is a mixture of many many compounds ten thousands of different compounds and they're all mixed up So if you put a barrel of oil put oil into a barrel you have all these compounds mixed up which is not what this picture shows This picture shows the result of what you would get if you could sort and order all the molecules according to their size Each compound is a different molecular structure
- (6) Q All right So you have for purposes of explanation or illustration you've taken the compounds and drawn a line so that there are three major groups?
- (7) A Yes Once you've done this assortment, you can easily - and it's the best for our discussion to divide this barrel of oil into three categories The top one is the light ends these are the volatile hydrocarbons the ones that evaporate most easily that you have in gasoline or liquefied petroleum gas
- (8) The bottom one let me do that next That's the inert

Vol 31 5383

- (1) stuff the refractory as it's called. You can't oil it off.
- (2) It's like tar or asphalt. And then the large portion in the
- (3) middle or the middle distillates the medium heavy oil is used
- (4) for making diesel oil, fuel oil, lube oil, et cetera.
- (5) Q Doctor, I'm going to ask you when you rear back there to
- (6) look at the screen, I want you to talk louder because you're
- (7) farther away from that microphone.
- (8) A Yes.
- (9) Q You have drawn the opposite the corresponding part of this
- (10) barrel, a picture of what these compounds look like, correct?
- (11) A A few of them are shown there for illustration.
- (12) Q That's one of my points. You haven't drawn them all in
- (13) there, that's a representative sample of that kind of compound
- (14) that's found in this light end?
- (15) A Yes.
- (16) Q And then for the second - the second or the middle portion
- (17) of the barrel, you've drawn these compounds to show how
- (18) different they are?
- (19) A Yes.
- (20) Q Or show the difference between them, correct?
- (21) A You want me to talk about these compounds a little bit?
- (22) Q Yeah, I do. I want to first point out though that you've
- (23) drawn different descriptions of these molecules, correct?
- (24) A Yes.
- (25) Q Now I do want you to describe what the difference is, and

Vol 31 5384

- (1) we're going to get to the significance of this difference in
- (2) just a moment, but tell the Ladies and Gentlemen of the Jury
- (3) and the Court what the difference is between these three major
- (4) groups.
- (5) A Well, it's mainly in the size of the molecules. You see
- (6) little bitty molecules up there, little chains and little rings
- (7) that make up the volatile portion. You see -
- (8) Q All right. Now let's stop a minute. Volatile, what is
- (9) volatile? Why is that significant for us?
- (10) A That's significant because the volatile portion will
- (11) evaporate easily.
- (12) Q Okay, that answers that. Now, what about the next area?
- (13) A These - the middle portion is composed of larger
- (14) molecules. We call these chains. Sometimes the chains are
- (15) doubled back on itself and you get rings, and they're saturated
- (16) rings like the one on the left here, and then there are others
- (17) that are called unsaturated aromatic (ph) ring compounds
- (18) which we call polycyclic aromatic hydrocarbons, or PAHs.
- (19) Q PAHs are toxic, are they not?
- (20) A That's what's listed here as toxic, one to two percent of
- (21) the oil.
- (22) Q Can you say where most of the toxic hydrocarbons are in a
- (23) typical barrel of Alaskan North Slope crude?
- (24) A Initially up here. It's these aromatic single ring
- (25) compounds, benzene.

Vol 31 5385

- (1) Q And when you say an aromatic compound, is that something
- (2) you can smell?
- (3) A Yes. That's why they're called aromatic.
- (4) Q When the spill occurred and there was this awful smell down
- (5) there, what was that?
- (6) A Those were the aromatics evaporating.
- (7) Q Now, the molecules in this second group, in the middle of
- (8) the barrel, I take it they don't evaporate?
- (9) A That's right, only very slowly.
- (10) Q Okay. Now let's go down and talk a little bit about the
- (11) bottom of the barrel?
- (12) A The bottom of the barrel, which we'll call the asphaltenes
- (13) and resins, really, is composed of very complicated, very large
- (14) molecules. We would call this chicken wire in the jargon, and
- (15) they are inert in many senses. You can burn them, but you
- (16) can't evaporate them, you cannot boil them off, and it's -
- (17) that's the substances that are in the roof tar or asphalt that
- (18) are put on the road.
- (19) Q What, the biologically inert and why is that significant for
- (20) us?
- (21) A Biologically inert means it neither affects nor can be
- (22) decomposed by biological organisms.
- (23) Q Now, of course with the barrel spills in the water, it
- (24) doesn't subdivide into these three sections, does it?
- (25) A That's right. That's the point I wanted to make earlier.

Vol 31 5386

- (1) Q Okay. And what is to become this bottom part of the
- (2) barrel, which is biologically inert, in some cases takes quite
- (3) a bit of time, does it not?
- (4) A Yes.
- (5) Q And let's stay with that just a moment. Of the - you've
- (6) got percentages out here in the far right hand corner?
- (7) A Yes.
- (8) Q And tell the Ladies and Gentlemen of the Jury what these
- (9) percentages represent first and then we'll discuss some of
- (10) them.
- (11) A Yeah. They're percentages of the total whole fresh oil.
- (12) So this means that 20 to 30 percent of the oil are in this
- (13) volatile fraction, 20 to 30 percent will evaporate. How much
- (14) depends on conditions, and we'll talk about that, 18 to 20
- (15) percent is this inert portion, the asphaltenes, and asphaltic
- (16) residue, as we call it, and the rest in this case, 50 to 60
- (17) percent is the middle portion.
- (18) Q All right. Now, eventually, did - from the oil that was
- (19) spilled in Prince William Sound, did 20 to 30 percent of it
- (20) ultimately evaporate? We're going to put a - maybe a tighter
- (21) number on that in a minute, but is that basically the
- (22) significance of this?
- (23) A Yes.
- (24) Q And did 18 to 20 percent of it find its way to someplace in
- (25) a biologically inert condition?

Vol 31 5387

- (1) A Yes with some qualification Some of it was picked up -
 (2) Q Right
 (3) A - in the cleanup
 (4) Q Some of it was picked up in the cleanup but that which was
 (5) not picked up that ended up somewhere in a biologically inert
 (6) condition correct?
 (7) A Yes
 (8) Q All right Now is biologically inert is that - is that
 (9) a danger to plant and animal life?
 (10) A No As the term implies it is not
 (11) Q I just wanted to make sure that was clear
 (12) A Right
 (13) Q Now let's talk about that just a minute It is
 (14) nevertheless here with us is it not?
 (15) A Yes
 (16) Q That 18 to 20 percent or roughly what it was it is with
 (17) us?
 (18) A Yes
 (19) Q You're saying it is not - it is biologically inert?
 (20) A Yes
 (21) Q And when it is - when it sifts out and becomes this
 (22) biologically inert thing is it - is it a tar mat?
 (23) A No And that's where the analogy to the asphalt road
 (24) breaks down It is not a tar mat It is finely dispersed in the
 (25) environment

Vol 31 5388

- (1) Q And I take it most of this goes in the bottom of some sea?
 (2) A Yes, eventually
 (3) Q And if you were a diver and you had the right equipment and
 (4) you went down and you swam along would you be able to see
 (5) it?
 (6) A No
 (7) Q Could you separate it from the other stuff that was at the
 (8) bottom?
 (9) A No
 (10) Q How do you do that?
 (11) A Either with a microscope or chemically
 (12) Q Have studies been made of what is at the bottom of Prince
 (13) William Sound in terms of biologically inert by products of
 (14) oil?
 (15) A Yes
 (16) Q Is it possible to tell scientifically what part of that
 (17) which was found at the bottom is attributable or is from the
 (18) Exxon Valdez?
 (19) A Yes You use a technique that is called fingerprinting to
 (20) do that
 (21) Q All right Let me get to the other side before we talk
 (22) about fingerprinting Is it possible to tell that the other
 (23) part of it is from some other source?
 (24) A Yes
 (25) Q Do scientists think they know what the majority of this
 other source is?

Vol 31 5389

- (1) A Yes
 (2) Q What is it?
 (3) A It is oil derived or it is hydrocarbons petroleum
 (4) hydrocarbons derived from natural seeps
 (5) Q And are natural seeps - do they occur in or near Alaska?
 (6) A They occur all along the coast of the Gulf of Alaska
 (7) Q And some of these are well known are they not?
 (8) A Oh yes
 (9) Q One of which is the Katalla Sea?
 (10) A Yes
 (11) Q And where is that or where are they?
 (12) A That is to the southeast of Prince William Sound beyond the
 (13) Copper River Delta
 (14) Q And are these seeps on the land?
 (15) A They're probably both You find most of the ones on the
 (16) land and there are some reports and certainly a very high
 (17) probability, that some of them are offshore as well
 (18) Q Was the Katalla area a place where at least they tried to
 (19) drill for oil or there was an oil drilling outfit at some
 (20) point?
 (21) A Yes there was an oil field there
 (22) Q When?
 (23) A In the 20s I believe These seeps are the first sign
 (24) that an explorationist looks for to try to find oil
 (25) Q Now do this - do this - moving right along Does the

Vol 31 5390

- (1) oil from the these seeps find its way into Prince William
 (2) Sound?
 (3) A Some of the hydrocarbons do yes
 (4) Q How is that?
 (5) A Well these hydrocarbons I mentioned that the Katalla
 (6) seeps are beyond the Copper River Delta and they drift along
 (7) the shoreline to the northeast through the waters that come out
 (8) of the Copper River Delta, which are heavily laden with
 (9) sediments and petroleum hydrocarbons particularly PAHs that
 (10) are here tend to be absorbed onto clays And as some of these
 (11) clay - suspended clay particles and other mineral particles
 (12) drift into Prince William Sound the hydrocarbons will go with
 (13) them and be sedimented out in Prince William Sound That is
 (14) how they get there
 (15) Q In other words the current from the Gulf of Alaska which
 (16) goes into Prince William Sound, brings this in?
 (17) A Yes
 (18) Q And then it's - some of it is deposited on the floor?
 (19) A Right
 (20) Q Now relating to your point about biologically inert how
 (21) long has this oil by-product these hydrocarbons been coming
 (22) into Prince William Sound?
 (23) A Well for hundreds of years probably since the last ice
 (24) age
 (25) Q And -

Vol 31 5391

- (1) A Which would be thousands of years
 (2) Q Using this fingerprinting process which we'll talk about a
 (3) little bit can one compare the amount of hydrocarbons existing
 (4) as biologically inert matter in Prince William - the floor of
 (5) Prince William Sound can one compare that from these seeps
 and
 (6) perhaps other sources with the amount that is there from the
 (7) Exxon Valdez?
 (8) A Yes
 (9) Q And is - which one - which one is most, more?
 (10) A Oh by far the - the highest portion of petroleum
 (11) hydrocarbons particularly the ones with the fingerprint are
 (12) from natural sources in Prince William Sound because it's been
 (13) going on for a long time That's the reason
 (14) Q Have these measurements been made?
 (15) A Yes I'm familiar with such measurements
 (16) Q You are?
 (17) A Yes
 (18) Q And are you familiar with the samples that were taken?
 (19) A Yes
 (20) Q And the comparisons that were made?
 (21) A Yes
 (22) Q I show you what's been marked as Defendants Exhibit - I
 (23) apologize I can't read the size of this I have to get
 (24) another source
 (25) MR JAMIN It's 4954 counsel

Vol 31 5392

- (1) MR SANDERS Thank you Mr Jamn
 (2) BY MR SANDERS
 (3) Q 4954 is this a representation of that study and that
 (4) analysis?
 (5) A Yes It was some of the results from that analysis
 (6) Q You're familiar with those?
 (7) A Yes
 (8) Q And quite clearly the amount of this sediment
 (9) attributable or which came from the Exxon Valdez oil spill is
 (10) in red on the charts?
 (11) A Yes
 (12) Q And that which is from the seeps and other sources is
 (13) called background?
 (14) A Correct
 (15) Q And colored green?
 (16) A Yes sir
 (17) Q And I take it that there were measurements made at
 (18) different locations within the Sound?
 (19) A That's correct
 (20) Q And nearshore is - well, the chart says less than a
 (21) hundred meters from the shoreline?
 (22) A Yes Specifically it's less than a hundred meters from
 (23) oiled shorelines from shorelines that were oiled by the Exxon
 (24) Valdez
 (25) Q And the embayment part where is that?

Vol 31 5393

- (1) A That's - embankments that were heavily oiled includes Bay
 (2) of Isles Northwest Bay and I believe Herring Bay
 (3) Q And then offshore refers to what areas?
 (4) A Areas in the spill path but more than - more than a
 (5) hundred meters from shore
 (6) Q Less than a kilometer?
 (7) A Yes
 (8) Q Then there's the deep subtidal?
 (9) A Deep subtidal, that's correct More than one kilometer
 (10) from shore, and some of that is not in the spill path
 (11) Q All right Now, I put this off long enough Would you
 (12) explain to the Ladies and Gentlemen of the Jury how one
 (13) fingerprints oil?
 (14) A The compounds that are best suited for fingerprinting are
 (15) the PAHs which I mentioned before the polycyclic aromatic
 (16) hydrocarbons I need to explain they are not only the two and
 (17) three ring compounds that we have in the middle class, but also
 (18) higher compounds which have four and five and six rings They
 (19) get to be real complicated structures All of those are used
 (20) for fingerprinting, and what - does that answer the question?
 (21) Q I beg your pardon?
 (22) A I've explained the compounds that were used for
 (23) fingerprinting Do you want me to go on and explain the
 (24) chart?
 (25) Q Please

Vol 31 5394

- (1) A The chart shows concentrations, average concentrations,
 (2) that were found in a number of samples taken at these various
 (3) locations The concentration is plotted in parts per billion
 (4) Now part per billion is a very small concentration If you
 (5) put a drop of oil or milk in a swimming pool, a large swimming
 (6) pool you have about a part per billion It's a very small
 (7) concentration
 (8) In these sediments in the deep subtidal, you find as many
 (9) as 700 parts per billion of these PAHs which are all not
 (10) derived from the spill The fingerprint shows that they do not
 (11) come from the spill but that they're part of the natural
 (12) background
 (13) In the nearshore where sedimentation is more rapid the
 (14) overall concentration is lower and we found maybe a third on
 (15) average, near these oiled shorelines coming from the Exxon
 (16) Valdez spill but two thirds still being derived from the near
 (17) backgrounds
 (18) Q Dr Jahns when were these samples taken the sediment
 (19) samples?
 (20) A This was taken in the summers of 1990 and 91
 (21) Q And when was the analysis and fingerprinting of that done?
 (22) A Subsequent - shortly thereafter
 (23) Q Now this fingerprinting is that - is that an Exxon
 (24) innovation?
 (25) A Well we've improved it but the technique and the concept

Vol 31 5395

- (1) are not new Fingerprinting is used to identify oils and other
 (2) substances
 (3) Q Matter of fact it s used by the government in prosecuting
 (4) pollution cases to be able to say this was your pollution as
 (5) opposed to somebody else s pollution correct?
 (6) A Yes Yes
 (7) MR SANDERS Your Honor I move the admission of the
 (8) exhibit and it's 4954 Is that the number?
 (9) (Exhibit 4954 offered)
 (10) MR JAMIN That s the number and that s fine
 (11) THE COURT Thank you Defendants Exhibit 4954 is
 (12) admitted
 (13) (Exhibit 4954 received)
 (14) THE COURT Did you wish to offer that earlier exhibit
 (15) also?
 (16) MR SANDERS I do eventually, and now s a good time
 (17) (Exhibit 5266 A offered)
 (18) THE COURT Is there objection to Defendants Exhibit
 (19) 5266-A?
 (20) MR JAMIN There is none
 (21) THE COURT 5266 A is admitted
 (22) (Exhibit 5266-A received)
 (23) BY MR SANDERS
 (24) Q I want to bring that up just a second Now I want - I
 (25) want the Ladies and Gentlemen of the Jury to see this one more

Vol 31 - 5396

- (1) time before we move to the next part of what happened to the
 (2) oil It is - it is clear and I want to make it clear that
 (3) within this middle portion of the barrel there are toxic
 (4) substances correct?
 (5) A Yes
 (6) Q And those toxic substances existed in this section of the
 (7) barrel?
 (8) A The middle portion yes
 (9) Q When the oil was in the water?
 (10) A Yes
 (11) Q This part didn t evaporate?
 (12) A No
 (13) Q And it is in to some extent maybe a lesser extent, when
 (14) the oil went on the beach?
 (15) A Yes
 (16) Q The various places and against the rocks?
 (17) A Yes
 (18) Q All right That s clear, then You estimate or is it an
 (19) estimate or is this precise how much of the - of the toxics
 (20) in the oil make up this middle section? What percentage of the
 (21) middle section is toxic?
 (22) A Well, this says one to two percent I think the most
 (23) accurate number is 1.4 percent for the PAHs, two and three ring
 (24) PAHs that are considered toxic
 (25) Q And in this top part, the light end, what percentage of

Vol 31 5397

- (1) that light end is toxic?
 (2) A Again we re talking about percentages of the whole oil
 (3) these benzene rings as they re called and other
 monoaromatics
 (4) are the toxic portions of the volatiles That s on the order
 (5) of one percent or a little less than one percent
 (6) Q Okay So of the toxic substances in a representative
 (7) barrel of Alaskan North Slope crude oil roughly half is in the
 (8) light end which evaporates?
 (9) A Yes and it s the more toxic half
 (10) Q I was going to ask you that Most of the toxic - the more
 (11) toxic of these molecules is in the light end and that s what
 (12) goes in the air?
 (13) A Yes
 (14) Q All right Now when it goes into the air what happens to
 (15) it?
 (16) A It disperses gets fully oxidized, gets broken down
 (17) Q All right Now I want to discuss with you more
 (18) particularly having understood the composition of this oil and
 (19) what happens to it where did it go Now I d like to start
 (20) with that part which was in the water and didn t come in
 (21) contact with the ground Okay?
 (22) A Yes
 (23) Q And to do that I d like to use three or four exhibits that
 (24) are pictures taken from what these jurors have already seen
 (25) from the plaintiffs exhibit as the NOAA HAZMAT hindcast Let

Vol 31 5398

- (1) me bring up the first one
 (2) This is I think, preadmitted Defendants Exhibit 601
 (3) What does that represent?
 (4) A Well it shows the situation one day after the spill event
 (5) at noon on March 25 and shows a good estimate of the extent of
 (6) the spill at that time
 (7) Q All right Now have you reviewed the entire videotape
 (8) that was prepared?
 (9) A Yes I m very familiar with it I have a copy myself
 (10) Q And do you know the fellow who actually did - this is a
 (11) model isn t it?
 (12) A Yes
 (13) Q Do you know the fellow who did that?
 (14) A Yes Jerry Gault
 (15) Q And do you believe that within its own limits, that it is a
 (16) reasonably accurate depiction of how the oil flowed through
 and
 (17) out of Prince William Sound?
 (18) A Yes
 (19) Q And are you familiar with from your own knowledge and
 (20) study, are you familiar with the currents that operate on these
 (21) areas of Prince William Sound where the oil comes to go?
 (22) A Yes
 (23) Q First let me - let me bring that up so we can - this is
 (24) Defendants Exhibit 4831 And what is that Doctor?
 (25) A That is a LANSAT picture of Prince William Sound It was

Vol 31 5399

- (1) taken sometime in 1973
 (2) Q Now when LANSAT does this they don't have the little
 (3) arrows and lines in it do they?
 (4) A No not at all This was the famous picture which was used
 (5) by various researchers one from University of Alaska to study
 (6) sediment transport in this area And the reason we chose it to
 (7) demonstrate currents is because you can see a sediment plume
 (8) following here from the Copper River Delta and entering the
 (9) Sound through Hinchinbrook Entrance which is what I
 explained
 (10) earlier Sediments get in there and they take the oil the
 (11) hydrocarbons with them It's not very clearly visible
 (12) I'd like to demonstrate more fully what the currents look
 (13) like We've superimposed some currents the deep important
 (14) currents the Alaska coastal current which follows the coast
 (15) closely here but splits here and enters the sounds
 (16) Q It enters through Hinchinbrook Entrance?
 (17) A Yes
 (18) Q You have shown basically two routes for that current within
 (19) the Sound and so there's no confusion about this one of those
 (20) currents is pretty strong and the other one isn't strong?
 (21) A That's right
 (22) Q You can't tell that from this drawing but that's true
 (23) isn't it?
 (24) A That's right
 (25) Q Which is the weaker of the currents?

Vol 31 5400

- (1) A Well this is a very weak current area and so is this we
 (2) just looked at on Gault's picture where the spill occurred but
 (3) the current system goes through the entire Sound The entire
 (4) Sound is caught up into what's called intercyclonic into a
 (5) counter current counterclockwise current system which tends
 (6) to transport any floating materials in this general direction
 (7) Q And because of this current is it known how long water
 (8) remains in Prince William Sound or how long it takes to use
 (9) a term that's been used before to flush the Sound?
 (10) A Well the surface waters in Prince William Sound on
 (11) average are flushed every two to three weeks or so in the
 (12) main part of the Sound
 (13) Q Is that a rare - a rather rapid compared to other parts in
 (14) the world?
 (15) A Yeah
 (16) Q That's pretty rapid?
 (17) A It's a well flushed body of water yes
 (18) Q Does that understanding of the currents and the timing help
 (19) explain the phenomenon that is - is portrayed by the Gault
 (20) model?
 (21) A Yes Gault had to include these currents and they are a
 (22) very important part of the model
 (23) MR SANDERS Your Honor I'm not sure whether this
 (24) 4831 is preadmitted but if it's not I respectfully move its
 (25) admission at this time

Vol 31 5401

- (1) MR JAMIN No objection Your Honor
 (2) THE COURT There's no objection to it so if it
 (3) hadn't been admitted already it is now
 (4) MR SANDERS Thank you
 (5) BY MR SANDERS
 (6) Q Then coming back to the Gault model I take it from what
 (7) you just told us that the spill in this first day March the
 (8) 25th at noon didn't have a strong current operating on it?
 (9) A That's correct
 (10) Q All right Let's take it down to about four days later
 (11) All right? This is noon on the 28th four days after the
 (12) spill and this is - the oil has now gotten into an area where
 (13) the two currents that you've portrayed in the previous exhibit
 (14) can operate on it, correct?
 (15) A Yes
 (16) Q Do you know and does anyone know what currents operated
 to
 (17) get it to this point?
 (18) A The big difference between the first picture and the second
 (19) one is that there was a storm occurring on March 26th and the
 (20) following day That was the big event which moved the slick to
 (21) the southwest and partially into the strong current system and
 (22) also against the shorelines and that's the result of that you
 (23) see on this scene which is on March 28
 (24) Q Let's take another look at it two days later and finally
 (25) let's take a look at it on April the 7th

Vol 31 5402

- (1) All right Now based upon this model and other
 (2) information do you have an opinion as to how long it took a
 (3) certain significant proportion of the oil to leave Prince
 (4) William Sound?
 (5) A Yes In April 7 here, the leading edge and the main slick
 (6) was already gone out of the Sound The previous scene, which
 (7) was March 30, I believe, showed the leading edge of the slick
 (8) right here
 (9) Q Okay All right And this model is a model that was used
 (10) or generated by and used by NOAA?
 (11) A Yes
 (12) Q And NOAA is what?
 (13) A National Oceanographic and Atmospheric Administration
 (14) Q They operate at least in this context underneath the
 (15) Coast Guard?
 (16) A They're the science advisor to the Coast Guard, the haz mat
 (17) branch in particular
 (18) Q Within a certain period of time which I would like to give
 (19) the Ladies and Gentlemen of the Jury, do you know
 approximately
 (20) what percentage of the oil that was spilled by the Valdez left
 (21) the Sound by way of this route?
 (22) A Well I would say by May 1, which is the end of this model
 (23) run that we've used about 35 percent has left the Sound, and
 (24) that's based essentially on this modeling that NOAA has done
 (25) Q And did NOAA have an estimate of how much left the Sound

Vol 31 5403

- (1) during this time frame?
 (2) A That would be their estimate
 (3) Q That s theirs?
 (4) A Yes
 (5) Q And you agree with it?
 (6) A Well yes Well I have no reason to disagree
 (7) Q Well you don t have to explain that Do you agree with
 (8) it?
 (9) A Yes
 (10) Q So 35 percent of the oil that was spilled left the Sound in
 (11) the first few weeks?
 (12) A Roughly
 (13) Q Roughly
 (14) A I should say these are only estimates The model is not
 (15) exact and there were other things that happened Some of the
 (16) oil was picked up and that s not modeled
 (17) Q And you re right, we need to make it clear this is an
 (18) estimate 35 percent of 11 million gallons of oil left within
 (19) the first two or three or four weeks?
 (20) A Yes
 (21) Q This way as an estimate?
 (22) A Yes
 (23) Q And then the amount that evaporated of this oil that s an
 (24) estimate too isn t it?
 (25) A Yes

Vol 31 5404

- (1) Q Now on your previous chart, that exhibit which was
 (2) admitted in evidence you said from 20 to 30 percent of all the
 (3) oil Do you have - can you give the Ladies and Gentlemen of
 (4) the Jury based on your expertise a - a little tighter
 (5) estimate than 20 to 30 percent?
 (6) A Well I ll give you my best estimate That s 25 percent
 (7) right in the middle of that range
 (8) Q Were there any tests that you asked to be performed or that
 (9) were performed that aided you in tightening up this?
 (10) A Yes My estimate is really based on an experiment that was
 (11) done in the cold room at Exxon Production Research Company
 (12) Q And that is what allowed you to narrow down from 20 to 30
 (13) percent to roughly 25 percent?
 (14) A Yes
 (15) Q But that still is an estimate?
 (16) A That s right
 (17) Q And did NOAA make an estimate on that?
 (18) A Yes The latest estimate NOAA made was 20 percent
 (19) Q Okay So that s within the original range that you gave
 (20) and, as we ll explain later on is the difference in those two
 (21) significant?
 (22) A NOAA s range I might add is from 18 to 25 so I m within
 (23) their range as well
 (24) Q Is there any significance between those two?
 (25) A As you ll see it s not very important

Vol 31 5405

- (1) Q All right Now roughly then as an estimate 40 percent of
 (2) the oil that was spilled this 11 million gallons I take it
 (3) then landed on shore somewhere in Prince William Sound?
 (4) A Yes
 (5) Q That s the 40 percent we want to deal with now Now the
 (6) 40 percent of the 11 million gallons that was washed ashore
 (7) that was the biggest part of this mess did most of this
 (8) ultimately get taken up someway or another?
 (9) A Yes Most of it has been removed from the shorelines
 (10) Q We re going to get to that point in a minute but let s
 (11) talk about how that happened What ways was this oil removed
 (12) from the shore?
 (13) A Essentially three ways One was the cleanup the cleanup
 (14) operation removed by people One was natural cleansing by
 (15) ocean, by wave forces and tides, and the third was nature s way
 (16) of taking care of hydrocarbons, biodegradation biological
 (17) decomposition of the hydrocarbons
 (18) Q Well of the three forces - well actually Mother Nature
 (19) is part of the - is a big part of the biodegradation process
 (20) too right?
 (21) A Yes
 (22) Q Of the two forces that worked on this cleanup who did the
 (23) better job?
 (24) A Well no question nature did most of it
 (25) Q Let s talk a little bit about the cleanup that was done

Vol 31 5406

- (1) Is it possible to actually relate the amount of human cleanup
 (2) to this 40 percent?
 (3) A Not accurately I ve estimated less than a quarter
 (4) Q Okay And the reason for the inaccuracy is that the
 (5) cleanup calculations include both solid waste and liquid waste
 (6) correct?
 (7) A Yes
 (8) Q And the liquid waste they didn t draw a distinction
 (9) between what had been skimmed off the water in the first few
 (10) days and weeks of the spill and what was skimmed up that was
 (11) cleaned off the beaches correct?
 (12) A That s correct
 (13) Q So you really can t tell?
 (14) A But in addition the estimates of how much was recovered
 (15) are also not very precise
 (16) Q The solid waste estimates?
 (17) A That particularly yes
 (18) Q Where was there a 50 percent margin of error on the
 (19) calculations statistical analysis of the solid wastes?
 (20) A Yes something like that
 (21) Q So a relatively small percentage of the oil that was on the
 (22) beaches on the rocks, was cleaned up by human beings?
 (23) A Yes, sir
 (24) Q And the rest of it was done by Mother Nature?
 (25) A Correct

Vol 31 5407

- (1) Q Did you have occasion to study the ways and processes that
 (2) Mother Nature used to clean up this - wait a minute I m
 (3) sorry Strike that I want to make a point here
 (4) When the solid waste cleanup occurred, was that solid waste
 (5) picked up and taken somewhere else and properly disposed
 (6) of?
 (7) A Yes
 (8) Q Now when the cleaning of the rocks other than by the
 (9) methods that produce solid waste like the digging and the
 (10) wiping and all that that was done by spraying water on the
 (11) rocks?
 (12) A That s correct
 (13) Q And of course when that happens the oil washes back into
 (14) the water correct?
 (15) A Yes
 (16) Q Now, did that oil coming off from the human cleanup effort
 (17) with the hoses, did that get back out into the Sound?
 (18) A No that was picked up The work sites were boomed off,
 (19) double or triple booms and the oil was picked up
 (20) Q All right I want to show you as an illustration of this
 (21) Exhibit Number -
 (22) MR JAMIN 607
 (23) MR SANDERS Defendants Exhibit 607
 (24) BY MR SANDERS
 (25) Q Would you describe to the Ladies and Gentlemen of the Jury
 what they probably already know those yellow lines in the bay

Vol 31 5408

- (1) there what are those?
 (2) A These are the booms That s the primary boom and you see
 (3) the brown coloring here from the oil that has been washed off
 (4) the shoreline This is a typical shoreline washing activity in
 (5) Sleepy Bay July of '89 and there s the secondary boom which
 (6) will prevent anything that goes through the first boom or most
 (7) of what could go through the first boom from escaping and
 (8) there s some absorbent boom used there to pick up what may
 (9) have
 (10) escaped the first boom
 (11) There s no skimmer This could be a skimmer Skimmers
 (12) would come to the scene intermittently to pick up the oil that
 (13) has been collected inside this primary boom
 (14) Q Eventually whatever was collected within these two booms
 (15) was skimmed up correct?
 (16) A Yes
 (17) MR SANDERS For that limited purpose Your Honor I
 (18) move the admission of this exhibit
 (19) (Exhibit 607 offered)
 (20) MR JAMIN No objection
 (21) THE COURT There being no objection Defendants
 (22) Exhibit 607 is admitted
 (23) (Exhibit 607 received)
 (24) MR SANDERS Thank you
 (25) BY MR SANDERS
 Q Now can anyone say to an absolute certainty that

Vol 31 5409

- (1) absolutely no particles of oil escaped those two booms?
 (2) A No There were machines downstream from these
 (3) operations
 (4) Q Now but the effort was made, at least to keep that to an
 (5) absolute minimum?
 (6) A Yes
 (7) Q And we re going to discuss in a couple of minutes in
 (8) connection with Mother Nature the difference between oil that
 (9) sneaked through that way and entered the Sound as compared
 (10) to
 (11) oil that was spilled initially in Prince William Sound Let s
 (12) go now to - take that off - to Mother Nature
 (13) You studied the process of natural cleansing that occurred
 (14) after the cleanup efforts had stopped the summer of 1989
 (15) because of the weather and went into the fall and winter storm
 (16) season in Prince William Sound?
 (17) A Yes
 (18) Q Were you surprised by what you found?
 (19) A Yes and no We all expected that winter storms would
 (20) remove a lot of oil but seeing how fast that went and how
 (21) efficient that was was a surprise
 (22) Q As a matter of fact, you were euphoric about that, weren t
 (23) you?
 (24) A Yes at times I was
 (25) Q Did you publish a paper?
 A Yes
 Q And that paper described the process and provided data so

Vol 31 5410

- (1) that the scientific community or the world at large could see
 (2) what had happened?
 (3) A Yes we think we had a very unique data set very complete
 (4) data set from a number of sites that were monitored in Prince
 (5) William Sound
 (6) Q Now in your euphoria did you overproject how good a job
 (7) Mother Nature was doing?
 (8) A Well, turned out that projecting - that we observed trends
 (9) which showed that the larger portion of what had been there in
 (10) the fall of '89 was removed during the following winter If
 (11) you projected those trends quantitatively, assuming that the
 (12) same percentage would be removed every year, those
 (13) projections
 (14) were overoptimistic
 (15) Q And you made those projections didn't you?
 (16) A Yes, I did
 (17) Q And the experience of the next year and the next year
 (18) showed you that you d been overly optimistic about that?
 (19) A Yes
 (20) Q But nevertheless the - was this paper that you did was
 (21) that a peer reviewed paper?
 (22) A Yes
 (23) Q Was it peer reviewed, though, in the same sense that we've
 (24) come to understand that papers are peer reviewed by scientific
 (25) society?
 A The paper was published in the proceedings of the

Vol 31 5411

- (1) International Oil Spill Conference and that does not rank at
 (2) the same rank as papers by professional society and does not
 (3) receive the same depth of peer review It does go through –
 (4) Q Little bit lower in ranking then?
 (5) A Yes
 (6) Q Now the other natural process other than this storm wave
 (7) grinding moving around action is what?
 (8) A Biodegradation
 (9) Q All right Would you briefly describe for the Ladies and
 (10) Gentlemen of the Jury what is biodegradation?
 (11) A Biodegradation is the decomposition of hydrocarbons in
 (12) this case hydrocarbons by natural bacteria that are able to
 (13) digest and get energy and multiply by eating these
 (14) hydrocarbons so it's the natural decomposition of petroleum
 (15) hydrocarbons
 (16) Q All right, and is this – has this been observed before the
 (17) Exxon Valdez oil spill?
 (18) A Oh yes that's a very well known phenomenon Petroleum
 (19) hydrocarbons occur essentially everywhere in the environment
 (20) and there are bacteria and other microbes that can utilize
 (21) them
 (22) Q As a matter of fact when you're drilling for oil you want
 (23) to keep those away from your oil don't you?
 (24) A That's right It turns out there are even hydrocarbon
 (25) degrading bacteria in reservoirs at great depths

Vol 31 5412

- (1) Q And that's a problem in that sense and in this case it was
 (2) a benefit?
 (3) A Yes, can be a problem if it plugs up your well bore yes
 (4) Q Now did you all seek to help this process along?
 (5) A Yes
 (6) Q What did you do how did you do it?
 (7) A There was a major effort that resulted from this task force
 (8) that I mentioned earlier to move into the field quickly with a
 (9) new technology which is called bioremediation It is based on
 (10) the theory that perhaps the bacterial growth the action of
 (11) these microbes can be accelerated if you feed them the right
 (12) fertilizer If they're limited with some nutrients if they
 (13) lack some nutrients you provide those nutrients to make them
 (14) grow faster There's plenty of oil there there's plenty of
 (15) food They might need some nutrients There was a successful
 (16) development we developed in cooperation with EPA,
 (17) Environmental
 (18) Protection Agency
 (19) Q Were you directly involved in this bioremediation?
 (20) A Yes, in the summer of 1990
 (21) Q We're all concerned with did harm occur during the course
 (22) of these two cleanups so I want to ask you specifically about
 (23) this When biodegradation occurs when these organisms
 (24) come up
 (25) and eat the oil do they give off any sort of toxic molecules
 (26) when they do that?
 (27) A Well, I'm aware that there has been some concern about
 (28) what

Vol 31 5413

- (1) We call intermediate products of metabolism intermediate
 (2) stages of oxidizing this but I believe that problem has been
 (3) put to rest by at least two studies that I've seen
 (4) Q How does it get put to rest?
 (5) A Well the first study was one done by or funded by National
 (6) Marine Fisheries and that study shows that at least in an
 (7) environment where petroleum hydrocarbons weather these
 (8) intermediate products occur such low concentrations and
 (9) produced so slowly and further biodegraded or reduced so
 (10) rapidly they never build up so it was not a problem
 (11) Q When one of these organisms eats the oil does it – does
 (12) that oil still exist?
 (13) A Well, an organism –
 (14) Q Like in the stomach of microorganisms?
 (15) A Well they don't eat the oil These organisms convert
 (16) hydrocarbons molecule by molecule They use enzymes to
 (17) make
 (18) chemical changes on little bitty molecules one at a time
 (19) Since there are trillions of them it makes a big difference
 (20) over time
 (21) Q But the end result of that process is that something that
 (22) is harmful?
 (23) A No The end result is what we call mineralization The
 (24) hydrocarbons the organic molecules are finally transformed
 (25) into water and CO₂ just as if you were burning diesel in your
 (26) car

Vol 31 5414

- (1) Q So the end result of bioremediation is to transform these
 (2) oil molecules some of which we know are toxic into something
 (3) that is no longer toxic?
 (4) A That's right
 (5) Q Now when Mother Nature extracted through storms and
 (6) waves
 (7) and tides the oil from the shoreline that oil that came off
 (8) had to go somewhere didn't it?
 (9) A Yes
 (10) Q And it went into the water didn't it?
 (11) A Yes
 (12) Q As a matter of fact was there an effort to try to boom
 (13) some of these areas to try to slow that down a little bit or
 (14) contain it?
 (15) A Yes, yes
 (16) Q It didn't work did it?
 (17) A Sometimes it did sometimes it didn't
 (18) Q Didn't work all the time?
 (19) A No when you had a storm you lost your booms
 (20) Q So tell us then about the potential for harm as best
 (21) scientists can analyze this from the oil that got washed back
 (22) into the water
 (23) A Well I think the best way to do that is to compare that
 (24) with the initial impact of the spill itself At that time
 (25) and the point I want to make is whatever was washed off the
 (26) shorelines was in no comparison similar in any way to what

Vol 31 5415

- (1) happened initially with the spill
 (2) Q You want to compare it in order to say there was no
 (3) comparison?
 (4) A Sorry
 (5) Q The concentration that comes off of this kind of action is
 (6) much much much less than the concentration that was
 (7) spilled right?
 (8) A Yes it's two things First the oil is weathered by now
 (9) evaporation has occurred and it has weathered more Some of
 (10) these PAHs have been washed out or biodegraded And
 (11) what comes off the shoreline comes off the shoreline
 (12) piecemeal Every storm takes some out every tide will take
 (13) some out and in a storm, every wave will take some out and the
 (14) more it's taken out in a big storm the more vigorously it gets
 (15) diluted
 (16) Q And dilution goes back to your example I think a while
 (17) ago of a drop of milk in a swimming pool?
 (18) A Yes
 (19) Q If it comes off in gradual amounts the dilution effect
 (20) takes away its ability to do as much harm anyway?
 (21) A That's right Once it's diluted below a certain limit it
 (22) can't do any harm anymore
 (23) Q I take it you're telling the Ladies and Gentlemen of the
 (24) Jury you can't rule out it did some harm coming back off the
 (25) beaches?

Vol 31 5416

- (1) A That's correct
 (2) Q But can you say to a reasonable degree of scientific
 (3) certainty or can you quantify that harm for us?
 (4) A Well I would say it was minimal risk to the environment
 (5) from what came off the shorelines after the oil had initially
 (6) stranded
 (7) Q And did some of that that came off the shorelines did it
 (8) eventually flush out just the way that the original slick in
 (9) part got flushed out?
 (10) A I think almost all of what came off the shoreline Let me
 (11) qualify that In the first summer some of what came off the
 (12) shoreline would restrand on other shorelines There was a lot
 (13) of oil floating around in the Sound and there was reoiling
 (14) going on We could see that and the shoreline mapping team
 (15) observed that
 (16) In the second summer the quantities that came off were so
 (17) small still visible but still so small that no significant
 (18) reoiling was observed So most of it went out of the sound
 (19) Q Now I want to concentrate in the final area for your
 (20) testimony I want to concentrate on what was left
 (21) A Okay
 (22) Q You've described the processes for the beaches and how
 (23) cleaning resulted in the oil coming off and either being
 (24) flushed out transformed into some other organism that is no
 (25) longer oil or no longer dangerous or sunk or got washed out as

Vol 31 5417

- (1) sediment which was biologically inert
 (2) Now let's talk about what's left First let's ask you
 (3) where is what's left?
 (4) A Most of it is in coarse grained boulder type shoreline
 (5) below the surface
 (6) Q All right and why is it that that's still there?
 (7) A That's where oil was able to penetrate the deepest but it
 (8) was also the area where storms could remove much of it, but
 (9) until now they have not removed all of it Some of it is left
 (10) in what we call wave shadows or in areas that are beyond the
 (11) depth to which the sediments have been reworked Every
 (12) storm,
 (13) the bigger the storm the more the sediments are reworked and
 (14) therefore, the shoreline's clean but there's a depth limit to
 (15) that
 (16) Q In other words some oil on these rocky more high energy
 (17) beaches that were - is there a characteristic of these that
 (18) they were heavily oiled in the first place?
 (19) A Yes
 (20) Q And the oil sunk down through a lot of rocks and into a
 (21) sediment where it stopped?
 (22) A Yes, sir
 (23) Q All right Now this is the same kind of thing that you've
 (24) been studying all your life right except it's going up the
 (25) other way?
 (26) A Yes yes I'm very familiar with the concept that a

Vol 31 5418

- (1) viscous fluid cannot very easily penetrate into a fine grained
 (2) sand
 (3) Q In addition to that, in this particular environment there's
 (4) another break on it isn't there It can't go below the water
 (5) level, can it?
 (6) A Yes
 (7) Q Why is that?
 (8) A It floats on water So the oil penetration is naturally
 (9) limited at someplace below the surface
 (10) Q So I take it then you're telling us there is a natural -
 (11) a two-fold natural bottom that limits where the oil can go that
 (12) still exists under these rocks and places?
 (13) A Yes
 (14) Q So in other words if it's going to get out cause anymore
 (15) mischief, it's going to have to come up, out the sides and up,
 (16) right?
 (17) A Yes
 (18) Q And the way that that is done or has been done over the
 (19) past four or five years is if a big enough storm comes in there
 (20) and rearranges the rocks to take away the protection then the
 (21) oil can get out and then it's taken off by the storm action?
 (22) A That's correct
 (23) Q And once again, the quantity, we'll get to the quantities
 (24) in a minute but when it comes out, it's going to come out
 (25) under the same conditions that you described the oil that came

Vol 31 5419

- (1) off in Mother Nature s cleaning of the oil that was obvious
 (2) it s going to come off in low concentrations correct?
 (3) A Little bit at a time yes
 (4) Q And it s going to be weathered oil when it comes off?
 (5) A Yes
 (6) Q And it's going to be greatly diluted once it hits the
 (7) water?
 (8) A Yes
 (9) Q And do you have an opinion on whether how harmful or
 (10) dangerous that little bit of oil is when it comes off?
 (11) A That can t be very harmful at all
 (12) MR SANDERS Your Honor this would be a good time to
 (13) take a break
 (14) THE COURT Take our first recess at this time We ll
 (15) be in recess for 15 minutes
 (16) (Jury out at 10 00 a m)
 (17) (Recess from 10 00 a m to 10 16 a m)
 (18) (Jury in at 10 16 a m)
 (19) THE COURT Mr Sanders, you may continue
 (20) MR SANDERS Thank you Your Honor
 (21) BY MR SANDERS
 (22) Q Dr Jahns we had been discussing the oil that was in a
 (23) specific kind of location that is below the surface and
 (24) predominantly in these high energy beaches which had this
 (25) rock
 (26) and sediment over cover correct?

Vol 31 - 5420

- (1) A Yes
 (2) Q Kind of acts like an armor?
 (3) A Yes
 (4) Q Now is there a name that you and others have used to
 (5) describe this kind of oil?
 (6) A Yes I call it sequestered oil because it s somehow
 (7) sequestered, taken away from the natural process of
 (8) biodegradation
 (9) Q And it is so far removed from the process of biodegradation
 (10) that it doesn t - biodegradation doesn't do an awful lot with
 (11) it very quickly?
 (12) A Let me clarify It doesn't biodegrade, because it s still
 (13) concentration For biodegradation to be effective it has to
 (14) be dispersed either in a fine layer or in small droplets so you
 (15) have these oil-filled pores or maybe even bigger chunks sitting
 (16) down there and the bacteria can t get to it
 (17) Q Are there different grades or quantities used to describe
 (18) this sequestered oil?
 (19) A There are different types yes The biggest - the bulk of
 (20) that is subsurface oil that we discussed
 (21) Q Now what are the other kinds of oil that remain?
 (22) A Well, the others are part of the surface oiling conditions
 (23) that are still observed One of them would be oiled mussel
 (24) beds that weren t cleaned to protect the mussels in the cleanup
 (25) or tar mats that you can find in particularly low energy

Vol 31 5421

- (1) environments or some small areas where coats oil coatings
 (2) have survived and tar balls mousse patties there are various
 (3) descriptions for them depending on the size and appearance
 (4) Q Let me show you I think this is an example of one of those
 (5) things This is Defendants Exhibit 458 Is that an example
 (6) of the stain that you described earlier?
 (7) A That s an example of a transition between a coating and a
 (8) stain It s a very thin stain but still thick enough to be
 (9) sticky enough to hold some spruce needles to it, and that s
 (10) really the distinction
 (11) Q When was this picture taken?
 (12) A This was taken from LaTouche in July of 93 I believe
 (13) Q Now the properties or - I m going to ask you the same
 (14) question about the danger or the concern factor for these other
 (15) things you described Let s first go to the mussel beds
 (16) Mussel beds you said were not cleaned?
 (17) A There were a number of mussel beds that were so dense that
 (18) there was - the rule was established that they should not be
 (19) cleaned in the cleanup even if they were heavily oiled
 (20) Q Who accomplished that rule?
 (21) A That was the - well the FOIC ran the show so NOAA
 (22) advised them that these mussel beds should not be cleaned
 (23) Q Now the jurors have heard so many initials in this trial
 (24) that FOIC won t mean a thing Who is FOIC?
 (25) A FOIC is the Coast Guard admiral He s the federal on scene

Vol 31 5422

- (1) coordinator
 (2) Q Let s call him that if we have to refer to him again
 (3) instead of an initial The rule s established by the on scene
 (4) coordinator the federal on scene coordinator and that rule
 (5) was you don t go in and tear up these mussel beds?
 (6) A That s correct
 (7) Q Now the oil that s underneath these mussel beds is that
 (8) oil capable of doing harm?
 (9) A Perhaps a little bit but it would be minimal
 (10) Q Does it harm the mussels?
 (11) A Apparently not Mussels seem healthy
 (12) Q And have those beds been studied?
 (13) A Yes they ve been -
 (14) Q Are you aware of those studies?
 (15) A I'm more aware of how much oil is left in the mussel beds
 (16) There was a survey done in 1993
 (17) Q Now let s go to another area Are there areas where oil
 (18) still persists in lower energy beaches?
 (19) A Yes Those typically would be described or would be in the
 (20) form of small tar mats or asphalt patches
 (21) Q And what are the - what are the characteristics of that
 (22) particular oil?
 (23) A Well, they consist of an oil residue which is mixed up
 (24) with a matrix of sand, so the oil serves as the glue to make a
 (25) little layer of sand that has cohesion to it and lies on the

Vol 31 5423

- (1) surface It s weathered but if you break it open the
 (2) interior is not as weathered as the outside so you can still
 (3) smell some but it s still weathered
 (4) Q Now if you can still smell it that means it still has
 (5) polycyclic aromatic hydrocarbons?
 (6) A Yes there s still some in there
 (7) Q Why weren t these cleaned?
 (8) A Some of them may have been overlooked and I have a
 theory
 (9) that - well they do form over time and I have a theory that
 (10) they form by oil droplets percolating up It s part of
 (11) nature s cleaning mechanism Every time a tide enters it
 (12) tends to raise oil particles and if they rise to the surface
 (13) and hit something impermeable like a rock or an existing thin
 (14) tar mat or coating they lay underneath but that s just a
 (15) theory
 (16) Q Now is there other evidence of oil that remains in Prince
 (17) William Sound another category?
 (18) A Well, there s a subsurface oil we talked about that
 (19) Q Right
 (20) A And I mentioned the smaller deposit the various
 (1) descriptions of them mousse patties which is really the
 (2) subsurface oil seeps to the surface that shows up as a mousse
 (3) patty or tar balls Small pieces of tar mat if you wish
 (4) Q Now the oil that exists under the mussel beds, the oil,
 (25) that exists locked inside these tar mats or in these coves

Vol 31 5424

- (1) that - where it hasn t been removed is this oil potential
 (2) danger harmful?
 (3) A It would be minimal in my assessment
 (4) Q Why?
 (5) A Because it s released only very slowly By the very nature
 (6) of the oil persisting that tells you it s only disappearing or
 (7) being released to the environment very slowly, so it can t do
 (8) much harm
 (9) Q All right Now let s talk about how much there is Have
 (10) you come to a conclusion or an opinion as to how much of this
 (11) original oil that was spilled by the Exxon Valdez persists or
 (12) remains in the environs of Prince William Sound?
 (13) A In terms of the - what I described as the sequestered oil
 (14) not fully degraded?
 (15) Q Right
 (16) A Yes I believe that that - my judgment is that that is
 (17) less than one percent of the oil that was originally spilled
 (18) Q All right Now you used the word and you use words
 (19) carefully you said your judgment?
 (20) A Yes
 (21) Q This is not a hard and fast calculation is it?
 (2) A No
 (3) Q It s an estimate?
 (4) A Well I have another estimate If you ask for my best
 (25) estimate, that s much less I m trying to be careful here

Vol 31 5425

- (1) I m making an estimate and that estimate is a thousand barrels
 (2) to name a round number But I m careful enough that that
 (3) estimate is not very accurate
 (4) To make a statement that I can fully stand behind, I say my
 (5) professional judgment is that it s highly unlikely to be more
 (6) than one percent of the original oil spilled, which would be
 (7) 2 600 barrels about
 (8) Q So that s your - that s -
 (9) A That s my outside guess
 (10) Q That s your outside and but your real estimate is that
 (11) it s something less than that?
 (12) A Yes
 (13) Q All right Now what do you base that estimate on?
 (14) A It s mostly based on a survey that was done last summer
 (15) Q And who conducted that survey?
 (16) A Exxon
 (17) Q And can you compare that survey to other surveys that had
 (18) been done previously?
 (19) A Well there had been annual surveys which were billed as
 (20) joint surveys because they were conducted under the guidance
 (21) and jointly with the federal and state agencies, operated by
 (22) Exxon but under the guidance and observations by state
 agencies
 (23) and land owners
 (24) Q All right Can you compare those prior surveys to this in
 (25) terms of how comprehensive it was, what area it covered those

Vol 31 - 5426

- (1) kinds of things?
 (2) A Yes I can From - it is evidenced from the results and
 (3) from the scope of the survey, that the last survey, the one
 (4) done in 1993 by Exxon, was the most comprehensive survey, as
 (5) far as residual oil how much more is left out there is
 (6) concerned
 (7) Q All right And how can you tell the Ladies and Gentlemen
 (8) of the Jury that this covered more than the previous survey?
 (9) A Well the shoreline length surveyed was more than in 1992
 (10) The number of segments surveyed was more than in 1992 and
 the
 (11) amount of oil found was more than in 1992 Obviously that
 (12) amount didn t increase over time, so it must have been there
 (13) before We just didn t find it in 1992
 (14) Q Is it possible that there is some residual oil out there
 (15) that was not found by the survey?
 (16) A I m sure there is
 (17) Q Is that one of the reasons why you round your estimate
 (18) upward?
 (19) A Yes
 (20) Q To cover that eventuality?
 (21) A Yes Even my thousand barrel estimate includes an
 (22) allowance for the oil we didn t find But over and above that,
 (23) there might be more than that
 (24) Q And to make it clear this survey did not include every
 (25) inch of shoreline on Prince William Sound did it?

Vol 31 5427

- (1) A That's right. And it did not include every inch there was
 (2) of oil.
 (3) Q And it also did not include every - pits weren't dug at
 (4) every beach to look underneath, right?
 (5) A That's right, and you can't dig pits everywhere. You have
 (6) to make a selection.
 (7) Q Now, this percentage, something less than one percent
 (8) that's left, to the extent that it exists subsurface in these
 (9) sequestered areas, why didn't Exxon go get that oil?
 (10) A That goes really back to a decision that was made in 1990
 (11) where a study was undertaken, a two-fold study - study. One
 (12) part of that study was to design some equipment that could do
 (13) just that, excavate the beaches, remove the sediments, wash
 (14) them and put it back. That was one part of the study.
 (15) The other part of the study, spearheaded by NOAA, was to
 (16) determine whether this type of activity, beach excavation and
 (17) cleaning, would have any what was called net environmental
 (18) benefit, what was called the net environmental study, or NEBA
 (19) study.
 (20) Q And whose study was that?
 (21) A NOAA was leading it. The State agencies and Exxon
 (22) participated.
 (23) Q And was a decision made, based upon either one or both of
 (24) those studies, as to whether somebody ought to go out there
 (25) and dig up these beaches to get that little remaining oil?

Vol 31 5428

- (1) A Well, no. NOAA concluded from the NEBA study that there
 (2) would be no net environmental benefit, I guess. On the
 (3) contrary, there would be net environmental harm if the massive
 (4) excavation job were to be undertaken.
 (5) Q Is it possible, given what you've told us about how storms
 (6) and waves and tides operate on this kind of oil, and knowing
 (7) what you know about sequestered oil and how it behaves, is it
 (8) possible that next week a large proportion of that which is
 (9) left as sequestered oil could be removed?
 (10) A No, since this is the summer. It could happen in the
 (11) winter.
 (12) Q Okay.
 (13) A If you have a large storm in early winter at a high tide
 (14) that's very important when these storms occur, could, for
 (15) instance, cleanup what's left of subsurface oil on Point Helen
 (16) or most of it?
 (17) Q I wanted to ask you about Point Helen. I got a picture of
 (18) Point Helen, and while the machine is bringing that up -
 (19) MR SANDERS: And, Your Honor, this is the - what the
 (20) exhibit looks like, and that's Exhibit 446, if I may, and with
 (21) counsel and the Court's permission, I'd like to change to a
 (22) kind of a blow-up of that picture, because right now I'm not
 (23) interested in what's written down there.
 (24) THE COURT: Is this a plaintiff or defendant's 446?
 (25) MR SANDERS: I'm sorry, Defendants' 446.

Vol 31 5429

- (1) BY MR SANDERS
 (2) Q Now, before we talk about that picture, do we - based on
 (3) the surveys, do you know where the largest percentage of this
 (4) sequestered oil is?
 (5) A Yes, it's at Point Helen.
 (6) Q Do you know what this is a picture of?
 (7) A Yeah, that's a picture of the - of the beach at Point
 (8) Helen. It's a boulder, cobble beach. We're looking from the
 (9) upper intertidal towards the lower intertidal, and we see two
 (10) people there digging a pit. And that's back-breaking work to
 (11) dig pits in this beach, and probably one reason why past
 (12) surveys
 (13) did not survey this beach as carefully as Exxon did last
 (14) summer.
 (15) Q And so we understand, do you say that most of the
 (16) sequestered oil exists right here?
 (17) A Yes, on a - 100 meter or three-quarter mile stretch of
 (18) that beach.
 (19) Q All right. Is this picture of the beach, which obviously
 (20) shows very little vegetation, is that representative of Point
 (21) Helen?
 (22) A Yes. And it's representative of these, what I call high
 (23) energy environments where large boulders are exposed on the
 (24) surface and there are large spaces between, and that's the
 (25) reason why the oil could penetrate.
- (1) MR SANDERS: Your Honor, I respectfully move the

Vol 31 5430

- (1) admission of defense Exhibit 446
 (2) (Exhibit 446 offered)
 (3) MR JAMIN: No objection.
 (4) THE COURT: There being no objection, Defendants' 446
 (5) is admitted.
 (6) (Exhibit 446 received)
 (7) BY MR SANDERS
 (8) Q Dr. Jahns, we mentioned where most of the - I mean, where
 (9) based on the survey data, the 1993 survey, where most of the
 (10) sequestered oil was, and I want to show you another exhibit
 (11) which is Defendants' Exhibit 8641. What does this - what does
 (12) this map or chart depict?
 (13) A It shows part of Prince William Sound and identifies five
 (14) areas where the majority of the subsurface oil was found in the
 (15) 1993 survey.
 (16) Q Now, once again, this is based on the survey, correct, '93?
 (17) A Yes.
 (18) Q And is this a chart which you prepared or had prepared?
 (19) A I prepared it, and I made the calculations based on that
 (20) survey, come up with these numbers.
 (21) Q And there is a number that says KN-405. And you've got
 (22) that pen there. You might circle that one.
 (23) A Yes, I'm sorry, I messed it up.
 (24) Q You need to press that - there you go.
 (25) A That area there.

Vol 31 5431

- (1) Q That is what?
- (2) A That is the 1100 meter stretch near the bottom of that east
- (3) coast of Sleepy Bay of Point Helen where most of the oil
- (4) sits and the number that is shown there as 56 percent of the
- (5) subsurface oil that was estimated is right there
- (6) Q And then there are two other areas below that Is that
- (7) LaTouche?
- (8) A That is LaTouche 20 That is Sleepy Bay where I had 3 9
- (9) percent and LaTouche 15 which is in the northeast corner of
- (10) LaTouche with 7 5 percent
- (11) Q And then above those what is that KN 26?
- (12) A KN 26 that is a part of Knight Island at the entrance of
- (13) Bay of Isles It is a very heavily oiled - it was a very
- (14) heavily oiled beach I know it
- (15) Q And then on up to -
- (16) A On Smith Island there is a particular corner there where the
- (17) subsurface oil did not clean up well 8 5 percent
- (18) Q All of these have the same characteristics as far as the
- (19) high energy beach lots of rocks boulders and stuff?
- (20) A Yes all high energy beaches
- (21) Q All of them were directly in the paths of the spill?
- (22) A Yes
- (23) Q And received substantial oiling initially?
- (24) A Yes
- (25) Q Had you - have you prepared estimates in the past about

Vol 31 5432

- (1) certain specific parts of - that you testified to here based
- (2) on the earlier surveys?
- (3) A Yes
- (4) Q And did you - was there a survey, this joint survey in
- (5) '92 Did you make a projection based upon that?
- (6) A Yes I was always interested in trends trying to pinpoint
- (7) cleaning trends and I made - I observed some cleaning trends
- (8) based on the surveys on up until 1992
- (9) Q All right Now ultimately - well you've told us that
- (10) there is a difference between the comprehensive nature of the
- (11) '92 survey as compared to the '93 survey?
- (12) A Yes
- (13) Q Do I take it then your estimates were somewhat more
- (14) optimistic about what was left in '92 based on the '92 survey
- (15) than they were on the '93 survey?
- (16) A Yes We found more oil in '93 You can't draw a
- (17) decreasing trend based on the data from 1992 to 1993 If you
- (18) take that data at face value and draw a trend it would go up,
- (19) which of course is unrealistic
- (20) Q Based on the '92 data what were you - did you make a
- (21) specific estimate?
- (22) A Yes In my paper that was published in April of 1993 I
- (23) drew conclusions regarding the trend of both surface oiling and
- (24) some types - the most heavy type of subsurface oiling based on
- (25) surveys that were conducted in 1992 and earlier years

Vol 31 5433

- (1) Q And in that - that paper based on that survey you were
- (2) focusing on something called OP?
- (3) A Yes
- (4) Q What is OP?
- (5) A OP is a subsurface oiling condition the most heaviest -
- (6) the heaviest category and it stands for oil filled pores
- (7) What happens - an unfortunate title but it describes a
- (8) condition where when you dig a pit and you open up the
- (9) sediment, oil will seep out of it That is the most heavy
- (10) condition we have
- (11) Q You made an estimate concerning OP oil-filled pores, based
- (12) on the 1992 data as to what?
- (13) A It was an estimate of - well, I used estimates that had to
- (14) be derived in the surveys to draw a trend of the size of area
- (15) or the total area still underlain by that type of oil
- (16) condition This was not a volume estimate like we're talking
- (17) about earlier but an area estimate
- (18) Q And you - you estimated that it was about the size of a
- (19) basketball court?
- (20) A Yes In 1992 the amount, the area found to be underlain
- (21) by this OP condition was less than the size of a basketball
- (22) court The area I remember was 3700 square feet
- (23) Q That was based on the 1992 survey?
- (24) A Correct
- (25) Q And do you have an opinion on the accuracy of that now

Vol 31 5434

- (1) based on the '93 survey?
- (2) A Well, there was probably more of that in 1993 I say
- (3) probably because that number - or that type of oiling
- (4) condition was not separated out again in the estimates that
- (5) were done in the field but we found more subsurface oil so I
- (6) suspect there probably was also more OP than we had in 1992
- (7) Q Now just so I haven't missed it - well first let me
- (8) bring up another exhibit
- (9) THE COURT Is 8641 admitted?
- (10) MR SANDERS I'm sorry Your Honor I lost my - I
- (11) move the admission of 8641
- (12) MR JAMIN No objection
- (13) THE COURT There is no objection to it Defendants
- (14) Exhibit 8641 is admitted
- (15) (Exhibit 8641 received)
- (16) BY MR SANDERS
- (17) Q This, Dr Jahns is exhibit - Defendants Exhibit 5505 A,
- (18) alpha I was going to ask you before I put this up, but I just
- (19) couldn't stand the surprise did you - did other people try to
- (20) do the same sort of thing with the mass balance that you have
- (21) done?
- (22) A Yes
- (23) Q And who was that other group?
- (24) A There is a paper by a group from NOAA principal author
- (25) being Doug Wolfe dealing with the question of mass balance for

Vol 31 5435

- (1) the Exxon Valdez spill
 (2) Q And is Defendants Exhibit 5505 a general comparison of
 (3) your estimate to what NOAA found in '92?
 (4) A Yes That's a comparison I prepared
 (5) Q All right Now we talked earlier about the differences in
 (6) these estimates Why is the difference between the evaporation
 (7) figure as between you and NOAA and the difference between
 (8) the
 (9) amount under recovered that applies to biodegradation why do
 (10) we not care about those particular differences?
 (11) A We're talking mainly about the five percent difference
 (12) between my estimate for - for evaporation and NOAA's 20
 (13) percent which I mentioned before The reason why that's not
 (14) important is because these volatile light end hydrocarbons if
 (15) they don't evaporate they are the ones that are biodegraded at
 (16) first So if you're off on evaporation by five percent you
 (17) can be sure these compounds will be caught in biodegradation
 (18) early on
 (19) Q All right Now under the NOAA model which is fully a
 (20) year if not more earlier than yours there's a little portion
 (21) right next to the bottom which says less than three percent
 (22) still degrading?
 (23) A Yes
 (24) Q The bottom of their barrel?
 (25) A Right That's right here
 (26) Q And if that had degraded that would add to that 62

Vol 31 - 5436

- (1) percent?
 (2) A Yes
 (3) Q And so the difference between - essentially between you
 (4) and NOAA is the extent of biodegradation? Perhaps over this
 (5) period of time that's the difference between their survey and
 (6) yours?
 (7) A Yes and no Overall NOAA's estimate has more
 (8) biodegradation but it doesn't show here because NOAA used a
 (9) more detailed model for biodegradation Wolfe's assumption
 (10) was
 (11) that only 16 percent of the oil was totally inert and that
 (12) some - the difference between 16 and 20 which I assumed
 (13) would
 (14) biodegrade very slowly so that's really what that is some of
 (15) that very heavy material
 (16) And maybe I should have pointed out earlier that the lines
 (17) I draw across this barrel are - in defining these categories
 (18) are not very precise Biodegradation is going on in this
 (19) bottom part of the barrel as well I assumed and assumed
 (20) conservatively that it would be 20 percent NOAA assumed
 (21) there
 (22) would be 16 percent and therefore in their model they still
 (23) have - some of that four percent is still degrading but it's
 (24) very heavily degraded And as you said one year later half
 (25) of that would be degraded, would be totally degraded to the
 (26) inert residue
 (27) Q So both of you get to the same bottom line, as we call it,
 (28) correct?

Vol 31 5437

- (1) A Yes
 (2) Q That there's less than one percent sequestered oil?
 (3) A Right Let me clarify there That number is not directly
 (4) NOAA's report What they say is there's two percent left on
 (5) the shorelines but more than 60 percent of that is refractory
 (6) totally biodegradable material So it's the 40 percent
 (7) difference that I would list here which is 8 percent
 (8) Q So if you make that last calculation which you told us
 (9) about, their estimate is actually more optimistic than your
 (10) estimate?
 (11) A Yes
 (12) Q And the difference between the other 99 percent is you've
 (13) got 25 - five percent more evaporation and they make it up in
 (14) biodegradation is that roughly right?
 (15) A That's right and the one percent difference in what we
 (16) estimate for the recovered oil
 (17) Q All right So ultimately is it your opinion then that
 (18) there is a certain percentage under which - well strike that
 (19) try it again
 (20) What is your opinion as to how much sequestered oil is left
 (21) in Prince William Sound?
 (22) A Less than one percent
 (23) Q And perhaps more importantly would you tell the ladies and
 (24) gentlemen do you have an opinion as to the properties and
 (25) character of that which is left in terms of its capacity to

Vol 31 - 5438

- (1) harm the environment? Do you have an opinion first?
 (2) A Yes I do
 (3) Q What is that opinion?
 (4) A It's a minimal risk to the environment That's the way it
 (5) has been characterized by NOAA also in the NEBA study and I
 (6) believe that very much that that's absolutely true
 (7) Q Why is that risk low?
 (8) A Two reasons One is this oil which while often described
 (9) as fresh it is not fresh it is also weathered it degrades
 (10) gradually It has less than half the amount of PAHs that it
 (11) used to have initially when the oil grounded
 (12) And second and perhaps more importantly this oil is
 (13) released only very slowly and if it's released in just the
 (14) right storm as I'm fond of saying, then it's being diluted
 (15) because storms are what creates wave action what creates
 (16) dilution and mixing It's diluted so rapidly that it can't
 (17) harm anything
 (18) MR SANDERS Your Honor I move the admission of
 (19) Defendants Exhibit 5505
 (20) MR JAMIN 5505 A I think it is No objection
 (21) MR SANDERS A excuse me
 (22) THE COURT There is no objection to 5505 A and it is
 (23) admitted
 (24) (Exhibit 5505 A received)
 (25) MR SANDERS With that, Your Honor I have no further

Vol 31 5439

- (1) questions on direct examination
 (2) THE COURT You may cross-examine
 (3) MR JAMIN May I proceed Your Honor?
 (4) CROSS EXAMINATION OF HANS JAHNS
 (5) BY MR JAMIN
 (6) Q Mr Jahns how many gallons of oil would one percent of the
 (7) amount that spilled from the Exxon Valdez be?
 (8) A About 110 000
 (9) THE COURT What s - a hundred and ten gallons?
 (10) THE WITNESS Yeah He asked how many gallons
 (11) MR JAMIN Thank you Your Honor
 (12) BY MR JAMIN
 (13) Q I wanted to ask you a question sir about 4954 which
 (14) Mr Sanders asked you about just a little bit And the portion
 (15) that s in the - in the nearshore section there that s less
 (16) than a hundred meters from the shore?
 (17) A Yes
 (18) Q Now when are these concentrations - when in time is this
 (19) occurring sir where we estimate the average PAH
 (20) concentrations?
 (21) A I think most of the samples were taken in the summer of
 (22) 1990
 (23) Q 1990?
 (24) A Yes
 (25) Q All right Would it be your opinion that in the nearshore

Vol 31 5440

- (1) that the numbers would have been pretty much the same right
 (2) after the spill as well?
 (3) A Oh there were perhaps some areas where this was higher
 (4) following beach cleanup for instance
 (5) Q Let me show you a portion of 247 A which is previously
 (6) admitted Plaintiffs 247 A
 (7) (Videotape played)
 (8) MR JAMIN I think that s enough
 (9) BY MR JAMIN
 (10) Q Now as we looked at that video, had you seen it before
 (11) sir?
 (12) A Not that particular video no but I know there was visible
 (13) oil in the subtidal shortly after the spill
 (14) Q And that oil - the jury has seen that before through a
 (15) fellow named Mr Rosenthal who had been hired by the Alaska
 (16) Department of Fish & Game That oil that was being removed
 (17) is
 (18) it your opinion that that was Katalla oil?
 (19) A Oh I don t know where that was taken
 (20) Q It was taken in Herring Bay, sir
 (21) A I do know that some subsurface sporadic subsurface tar
 (22) balls were also observed in some studies, so it does not
 (23) surprise me
 (24) Q With respect to what we just saw is it your opinion that
 (25) that was Exxon Valdez oil?
 (26) A It might well have been yes Or let me add it would not

Vol 31 5441

- (1) be Katalla oil
 (2) Q And it would not be background oil would it sir?
 (3) A That s right Background oil does not occur in this free
 (4) liquid form
 (5) Q So that would have been - some of that oil in the red
 (6) block on 4954, on the exhibit that s next to you or on the big
 (7) screen -
 (8) A Yes
 (9) Q - that's some of that Exxon Valdez crude?
 (10) A Well I said it might have been There are other sources
 (11) there but it probably was
 (12) Q And that s all I can ask you for
 (13) Let me ask you next, sir about another one that
 (14) Mr Sanders showed you, 5266 A and you talked a little bit
 (15) with Mr Sanders about a toxic component from the middle part
 (16) of the drum?
 (17) A Yes
 (18) Q And that was those PAHs?
 (19) A Yes
 (20) Q Those poly aromatic hydrocarbons?
 (21) A Correct
 (22) Q Now you re not suggesting to us, sir, that that top
 (23) element which is yellow is not toxic to the animals that -
 (24) that - or other species that get in its way, are you?
 (25) A No And we talked about that that being the - the most

Vol 31 5442

- (1) toxic portion of the oil, the single ring aromatics
 (2) Q And you re not suggesting that after the spill for a number
 (3) of days there wasn t a serious release of toxic compounds into
 (4) the air, are you?
 (5) A I do not know that it was serious There was a significant
 (6) release -
 (7) Q I ll take significant sir
 (8) A - of hydrocarbons into the air
 (9) Q On that bottom layer that is the darker brown you're not
 (10) suggesting to us if - that included asphalts, did it not?
 (11) A Yes
 (12) Q And you re not suggesting to us that if asphalts, let's say
 (13) smothered barnacles, that that would not be toxic to the
 (14) barnacles are you?
 (15) A No No I mean -
 (16) Q When you re talking about toxicity in this middle range, in
 (17) what I ll try to say is orange there the middle range of the
 (18) barrel you re talking about chemicals that do things like
 (19) cause cancer is that right?
 (20) A Yeah When I talk about toxicity, I do not talk about the
 (21) smothering effect that fresh oil or thick oil would have on the
 (22) beach
 (23) Q So the oil on the beach could have had a significant effect
 (24) on the plant and animal life just by smothering, right?
 (25) A Yes, and it did

Vol 31 5443

- (1) Q I want to just clarify a couple other things We talked -
 (2) or Mr Sanders showed you four stills from something he called
 (3) the hindcast model and it's a model that NOAA put together
 (4) Do you remember that sir?
 (5) A Yes
 (6) Q Let me pull one of them up here, which is Exhibit 6062 and
 (7) it displays the data about the oiling through a series of dots
 (8) does it not?
 (9) A Yes
 (10) Q Now does the NOAA Hindcast model show us where all the
 (11) oil went?
 (12) A Not in every detail No it can't do that
 (13) Q Why can't it sir?
 (14) A Because there's no way to describe the intricate process
 (15) the processes involved all the wind patterns all the current
 (16) patterns all the vortices in these infinite detail
 (17) Q All right And so we might see a particular - we get an
 (18) idea of the general flow of the oil out in a southwesterly
 (19) direction, do we not?
 (20) A Yes Yes
 (21) Q And the NOAA Hindcast model is good for that?
 (22) A Yes, and it's good for more
 (23) Q All right But it doesn't - it doesn't tell us just
 (24) because we're seeing oil in this area right here that for
 (25) example that port of - that part of Montague Island which is

Vol 31 - 5444

- (1) Zaikof Bay, was not oiled, does it?
 (2) A You could not conclude that with certainty, no
 (3) Q And if the - if for example the HAZMATs model showed
 (4) oiling going over into - let's get 543 up here if we can
 (5) If the NOAA HAZMAT model showed oiling going into the
 (6) Alaska Peninsula the area in between Alaska Peninsula and
 (7) Kodiak Island - which is called Shelikof Strait is it not?
 (8) A Yes
 (9) Q And it didn't show any oiling on the eastern shore of
 (10) Kodiak - just take a second and we'll look at this together
 (11) If it showed oiling sir in the general direction out the
 (12) Sound in a southwesterly area along the southern coast of the
 (13) Kenai Peninsula, a little bit up into Cook Inlet and then down
 (14) between the Alaska Peninsula and Kodiak Island in Shelikof
 (15) Strait that wouldn't - that wouldn't tell us for sure that
 (16) there wasn't oil on the whole eastern shore of Kodiak Island,
 (17) would it?
 (18) A No Based on that model alone no
 (19) Q Because of the model's limitations?
 (20) A Yes
 (21) Q We'll make reference to this again, but I'm going to take
 (22) it down for a moment so you can see the screen
 (23) Now, you told us that the surface waters in Prince William
 (24) Sound were flushed out generally or, for the most part every
 (25) two or three weeks?

Vol 31 5445

- (1) A Yes
 (2) Q And you're not saying when you make that statement that
 (3) there's flushing in every bay or fjord of Prince William Sound
 (4) are you?
 (5) A There's flushing in every bay but not necessarily at that
 (6) rate
 (7) Q Not at that rate?
 (8) A Right
 (9) Q In fact some of the bays may take months to flush out is
 (10) that not true sir?
 (11) A No I don't think that's right I've seen tidal flushing
 (12) calculations that would imply that it's much faster
 (13) Q Much faster than several months?
 (14) A Yes
 (15) Q What's your best opinion sir?
 (16) A Well I've seen the calculations for two particular bays
 (17) one being Passage Cove and another being Snug Harbor and
 (18) those
 (19) were on the order of a few tidal cycles three or five
 (20) Q That's actually less than a couple weeks?
 (21) A No It's less than - yes Well to get it out of the
 (22) bay not necessarily out of the Sound To get it out of the
 (23) bay then it's in the Sound and it's to be carried into the
 (24) current patterns
 (25) Q You'll agree with me sir will you not that there are
 (26) certain bays and certain coastlines that take significantly

Vol 31 - 5446

- (1) longer than two to three weeks to flush the water out?
 (2) A Yes And there's a difference to what happens between
 (3) dispersed oil which would be flushed out with the water no
 (4) questions asked and oil on the surface which is also subject
 (5) to winds
 (6) Q Let's talk about that for just a moment Is it - you used
 (7) the number 40 percent as a stranding number for the oil in
 (8) Prince William Sound on the beaches there?
 (9) A Yes and I accepted Gault's number there
 (10) Q And you've come to an independent judgment as to that?
 (11) A That that is reasonable yes
 (12) Q All right And is that 40 percent of the oil that left the
 (13) Valdez?
 (14) A Yes
 (15) Q All right So that 25 percent had evaporated already and
 (16) it's - 40 percent and 25 makes 65 and another 35, that's the
 (17) whole hundred percent?
 (18) A Yes and ignoring for the time being the cleanup
 (19) Q Yeah let's do that Now when is that 40 percent number
 (20) accurate sir?
 (21) A Perhaps not at any given time because the oil was sloshing
 (22) back and forth
 (23) Q And - but -
 (24) A But it's meant to be the number of the amount of oil that
 (25) hit the shoreline at some time

Vol 31 5447

- (1) Q Okay And is that a number that you come to by the end of
 (2) the summer in 1989?
 (3) A No I think that was in the early summer in the May time
 (4) frame
 (5) Q The May time frame?
 (6) A Yes
 (7) Q All right So as of May, 1989 your judgment is that
 (8) roughly 40 percent of the oil from the Exxon Valdez was on the
 (9) beaches in Prince William Sound?
 (10) A Well as I said some of it may have been at any given
 (11) time some of it may have been in transit from one beach to
 (12) another or piled up against a beach
 (13) This estimate is based on the Gault model which had a
 (14) certain rule If a particle, one of those 10 000 particles in
 (15) the model would cross a shoreline it was considered stuck
 (16) there
 (17) Now it might have been stuck just in front of the
 (18) shoreline and never really touch a rock, I don't know that
 (19) But in that sense that's what this estimate means
 (20) Q Okay And I just want to get a feel for that estimate
 (21) A Yes
 (22) Q As I understood your direct testimony, we've got roughly 25
 (23) percent evaporating, roughly 40 percent and you've refined it
 (24) now either on the shores or near the shores?
 (25) A Yes

Vol 31 5448

- (1) Q Or coming into the shores in Prince William Sound and 35
 (2) percent has gotten out of the Sound?
 (3) A Right
 (4) Q Translate for me in gallons what that 40 percent would
 (5) represent, sir, given the amount that in your mind left the
 (6) Exxon Valdez
 (7) A A little over four million gallons
 (8) Q About four million gallons?
 (9) A A little over, yes
 (10) Q Now of the 35 percent that left the Sound do we know that
 (11) some ended up along the beaches in the Kenai Peninsula and
 (12) in
 (13) the - in the area down here sir?
 (14) A Yes
 (15) Q And is that because of the general flow of the currents
 (16) along this southern portion of the northern Gulf of Alaska?
 (17) A Yes The Alaska coastal current will take it that way
 (18) Q And do we know that some of the oil came into Cook Inlet
 (19) and lodged in areas that I'm pointing to right now on the
 (20) north shore here?
 (21) A I'm not specific on shoreline segments but generally
 (22) yes
 (23) Q All right And do we know that some of the oil went over
 (24) into - besides the Cook Inlet went into the Shelikof Strait
 (25) area and lodged itself on the Alaska Peninsula?
 (26) A On some segments there yes

Vol 31 5449

- (1) Q And do we know that some of that oil went and lodged itself
 (2) on Shuyak Island and Afognak Island and Kodiak Island?
 (3) A Yes
 (4) Q And that that oil went all the way down passed Chignik on
 (5) the Alaska Peninsula?
 (6) A It went passed Chignik, yes what was floating, and floated
 (7) even farther ended up in the Pacific Ocean
 (8) Q All right Now that's a portion of that 35 percent that
 (9) we talked about -
 (10) A Yes
 (11) Q - that had been sort of freed from Prince William Sound in
 (12) 1989?
 (13) A Right
 (14) Q Can you tell me now what percentage of that 35 percent
 (15) ended up on those beaches sir?
 (16) A No I don't have - haven't made an estimate of that
 (17) Q Haven't made that calculation?
 (18) A No
 (19) Q And Exxon didn't ask you to make that calculation, did it?
 (20) A Right
 (21) Q Now I want to spend just a bit of time talking about the
 (22) report that was underneath the testimony that you've given us
 (23) today And do I understand correctly that you had generated a
 (24) couple of reports in early 1993?
 (25) A Are you talking about my paper?

Vol 31 5450

- (1) Q Your paper was part of your expert report, was it not?
 (2) A Yes I published one paper and that became an expert
 (3) report one in 1993
 (4) Q All right And did you have an initial -
 (5) MR JAMIN Thank you Mr O'Neill I don't know
 (6) why - the jury can see me that way, they need to look at Mr
 (7) Jahns
 (8) BY MR JAMIN
 (9) Q You had a couple of papers, though, you had generated
 (10) One
 (11) was called the Fate of the Oil from the Exxon Valdez?
 (12) A Yes a perspective
 (13) Q And there was another paper there?
 (14) A Yes
 (15) Q What did that deal with sir?
 (16) A With natural cleansing of the shorelines oiled by the Exxon
 (17) Valdez
 (18) Q All right
 (19) A Those were not in 1993 That's why I hesitated when you
 (20) said two reports
 (21) Q Let's get initial dates when they were prepared
 (22) A Excuse me?
 (23) Q The first dates when they were prepared
 (24) A Prepared? The first paper was prepared in 1990 and the
 (25) second in 1992 I don't quite know what date they were
 (26) finished It was just finished

Vol 31 5451

- (1) Q And those papers were available were they not at a
 (2) presentation that was given in early 1993 through an entity
 (3) called ASTM?
 (4) A I don't recall that my - both of my earlier papers were
 (5) made available there It's possible
 (6) Q Let's clarify ASTM first What is that?
 (7) A The American Society for Testing and Materials
 (8) Q And which one of your papers is it your recollection was
 (9) available there?
 (10) A Well the third one
 (11) Q What is that one?
 (12) A That's the report by me and Koons I was the lead author
 (13) on that the Fate of Oil From the Exxon Valdez a Perspective
 (14) Q That was offered to plaintiffs' counsel as one of your
 (15) expert reports was it not?
 (16) A Yes
 (17) Q Now do I understand correctly sir that that initial
 (18) report the Fate of the Oil From the Exxon Valdez a
 (19) Perspective which was submitted as an expert report in this
 (20) litigation was in your view not a scientific paper at the ASTM
 (21) conference?
 (22) A It was submitted as a perspective or overview paper - I'm
 (23) sorry, it was presented as a perspective overview paper It
 (24) was not submitted for publication at the conference
 (25) Q It was not an original scientific contribution?

Vol 31 5452

- (1) A No It was an overview based on my earlier paper and on
 (2) results pertinent results from many of the other papers that
 (3) were given at that same conference That's why I characterized
 (4) it the way you just asked
 (5) Q It was a compilation that - that came from other papers
 (6) then?
 (7) A Yes
 (8) Q And Mr Koons was actually the lead author of that paper?
 (9) A No I was The earlier publication with the same title had
 (10) Mr Koons as the lead author We switched lead authorship
 (11) Q All right And you've prepared the supplemental expert
 (12) report in this litigation and you gave us that in February of
 (13) 1994?
 (14) A Yes
 (15) Q And in preparing the 1994 report sir you relied, as you
 (16) had in the previous version, upon a number of other papers and
 (17) expert reports prepared by others did you not?
 (18) A Yes on my own calculations
 (19) Q All right And regarding the oiled shorelines, you relied
 (20) on work done by Mr Harrelson and his group, which included
 (21) Mr Trend Mr Reimer and Mr Snook, did you not?
 (22) A Yes Also one of Mr Harper which is another one of the
 (23) oil geomorphologists
 (24) Q And those persons are?
 (25) A OGS oil geomorphologists

Vol 31 5453

- (1) Q Oil geomorphologists And you don't claim to be an expert
 (2) in oil geomorphology do you?
 (3) A No but that is included as a sub - as a subarea of
 (4) geology
 (5) Q When you spoke to us about oiled mussel beds you relied
 (6) on
 (7) work done by Mr Paul Boehm did you not?
 (8) A Yes with regard to the quantitative estimate of oil
 (9) retained in these mussel beds
 (10) Q And Mr Boehm is a petroleum chemist?
 (11) A Yes I think that's correct
 (12) Q And you're not are you?
 (13) A Not specifically no
 (14) Q And you relied as well on the work on Mr Page who is a
 (15) chemist?
 (16) A I think he's a chemist yes
 (17) Q And you relied on the work of Mr Gilfillan whose
 (18) expertise is in biology and specifically intertidal biology
 (19) correct?
 (20) A Yes
 (21) Q And you're not a specialist in intertidal biology are you?
 (22) A Oh no
 (23) Q You relied on Mr Neff's expertise?
 (24) A Yes
 (25) Q His area of expertise is marine toxicology?
 (26) A I believe so

Vol 31 5454

- (1) Q And you're not a marine toxicologist sir?
 (2) A No
 (3) Q And you relied on the work on Babcock and others?
 (4) A Very little
 (5) Q What area is Mr Babcock's area of specialty do you know?
 (6) A No
 (7) Q All right
 (8) A I know they made surveys of mussel beds and I referred to
 (9) those surveys in that regard I didn't really rely on it
 (10) Q With respect to the section of your report and the section
 (11) of your testimony today relying on natural petroleum seeps you
 (12) relied on work performed by Mr Page Mr Boehm and Mr
 (13) Bentz?
 (14) A Among other things, yes among other authors
 (15) Q And Mr Douglas, too?
 (16) A Yes, and Becker and Manen There's a whole row - a whole
 (17) slough of people that have published and routed on these
 (18) seeps
 (19) Q And Mr Douglas is an analytical chemist?
 (20) A I think so
 (21) Q All right With respect to the section dealing with
 (22) biodegradation you relied on Mr Harner?
 (23) A Not very much on him but he's a co author on a paper that
 (24) I relied on that is a definitive paper on the bioremediation
 (25) effort that was done
 (26) Q All right And you relied on Mr Harner Mr Atlas and Mr
 (27) Prince for those comments?

Vol 31 5455

- (1) A There they were also co authors I think the name I'm
 (2) looking for is Bragg Bragg's paper on bioremediation is the
 (3) most definitive Excuse me
 (4) Q Certainly sir Is Mr Harner a statistician?
 (5) A Yes
 (6) Q Is Mr Atlas a microbiologist?
 (7) A Yes
 (8) Q And is Mr Prince a microbiologist?
 (9) A Yes
 (10) Q And do I understand that you're not a microbiologist?
 (11) A That's correct
 (12) Q Now with respect to your comments on hydrocarbons in the
 (13) subtidal sediments, did you rely on some work done by Page
 (14) and
 (15) Armstrong?
 (16) A Yes
 (17) Q And is Mr Armstrong's area of specialty marine biology?
 (18) A I believe so
 (19) Q And you relied as well on work done by Mr Owens?
 (20) A Not on subtidal Was the question subtidal?
 (21) Q Yes sir
 (22) A No I - Mr Owens was a co author with me in the
 (23) shoreline cleaning paper He's an oil geomorphologist that had
 (24) nothing to do with subtidal work
 (25) Q You did rely on Armstrong?
 (26) A Yes

Vol 31 5456

- (1) Q And Armstrong's area of specialty is marine biology?
 (2) A I think so
 (3) Q Now you talked with us specifically about an area that was
 (4) fingerprinting, did you not, in your direct testimony?
 (5) A Yes
 (6) Q Would you agree with me that fingerprinting, and
 (7) specifically Exxon's representations about fingerprinting, are
 (8) controversial?
 (9) A I don't think they're controversial There are different
 (10) ways of fingerprinting, and scientists authors of different
 (11) papers may have disagreed but I don't think that makes them
 (12) controversial As far as I know these authors have gotten
 (13) together and looked at each other's technique and I hope that
 (14) the differences have been removed
 (15) Q Let's explore it sir First though, as to your
 (16) representations as to fingerprinting you didn't do modeling in
 (17) the fingerprinting area did you?
 (18) A No
 (19) Q And you didn't do peer review for publication of articles
 (20) in that area?
 (21) A I don't recall any
 (22) Q All right And is it not true that NOAA disagreed with
 (23) many of Exxon's fingerprinting conclusions?
 (24) A Initially I believe
 (25) Q All right

Vol 31 5457

- (1) A Or I know
 (2) Q May I approach the witness Your Honor?
 (3) I'm going to show you sir what's been marked Plaintiffs'
 (4) 3086 Do you want to take a moment to familiarize yourself
 (5) with that but I want to ask you first sir whether or not
 (6) that is a report that NOAA generated on April 27, 1993?
 (7) A This is a statement dated April 27th, yes
 (8) Q And is it entitled the NOAA Response to Exxon's Challenge
 (9) to the Exxon Valdez Natural Resource Damage Assessment
 (10) Data
 (11) Base?
 (12) A Yes
 (13) Q All right Let me get you to focus on the page that's I
 (14) had up when I - when I came to you, sir It looks like you've
 (15) got it again
 (16) A Yes
 (17) Q Specifically with respect to fingerprinting, does NOAA say
 (18) at the bottom there is no evidence based on sampling before
 (19) the spill that indicates widespread contamination of shallow
 (20) subtidal sediments by Katalla or any other oil In fact, the
 (21) most extensive study of hydrocarbons in the marine sediments
 (22) of
 (23) the Sound was conducted by NOAA from 1977 through 1980 to
 (24) determine background oil contamination level of intertidal
 (25) sediments in mussels prior to anticipated oil pollution
 (26) effects Exxon's claim of widespread subtidal contamination by
 (27) Katalla oil is not accurate for intertidal or shallow subtidal

Vol 31 5458

- (1) sediments where EVC has been clearly documented
 (2) Did I read that properly sir?
 (3) A Yes
 (4) Q Is that your understanding of NOAA's position?
 (5) A It's my understanding it was NOAA's position on April 27
 (6) but I think they've been wrong and I think they know that now
 (7) Q The report that you gave us in February of 1994 and on
 (8) which you've relied today is it fair to say, sir, that you
 (9) relied on the work of persons from fields that you have no
 (10) particular expertise in yourself such as microbiology?
 (11) A I have some expertise in microbiology It is true that I
 (12) synthesized information that was produced by people having a
 (13) number of specialties, and that's been my strength throughout
 (14) my career sir
 (15) Q All right But the areas that you synthesized from are
 (16) outside the area of expertise that you've been certified to
 (17) talk about in this courtroom are they not?
 (18) A Some of them are, yes
 (19) Q It's not geology it's not engineering it's not petroleum
 (20) engineering?
 (21) A Microbiology is neither of those yes
 (22) Q And several of those other areas were outside the area of
 (23) expertise for which you've been certified in this court?
 (24) A Yes
 (25) Q All right Now I want to look for a moment sir, at that

Vol 31 5459

- (1) time – the pattern of work that you've been involved with on
 (2) the spill since the spill and focus a little bit on that
 (3) From 1989 to '90 1990 was your main activity to take
 (4) Woodward Clyde shoreline survey data and try to interpret and
 (5) extrapolate the trends that were evident in the data?
 (6) A From the fall of '89 on yes
 (7) Q All right
 (8) A One of the areas I worked in yes
 (9) Q And from that work your paper regarding natural cleaning
 (10) resulted?
 (11) A Yes
 (12) Q And then subsequent to that you were a member of Exxon's
 (13) natural resource damage assessment and litigation support
 (14) group?
 (15) A Yes
 (16) Q From approximately October 1 1990 through December 31
 (17) 1992 is that correct?
 (18) A That's correct
 (19) Q And in that capacity – well let me ask one more thing
 (20) You took over the position of environmental coordinator in the
 (21) fall of '91?
 (22) A Yes
 (23) Q In that capacity you became personally responsible for
 (24) supervising the scientific studies that were being conducted by
 (25) Exxon personnel and contractors that Exxon hired to look into

Vol 31 5460

- (1) spill related issues did you not?
 (2) A Environmental issues, yes
 (3) Q All right And members of the NRDA group compared the
 (4) claims being made by plaintiffs against the findings of the
 (5) NRDA group?
 (6) A Not by the plaintiffs in these proceedings We were
 (7) talking about natural resource damage assessment
 (8) Q All right
 (9) A So we were – and there were no plaintiffs I believe at
 (10) the time We were comparing with the results that were
 (11) obtained by government – by the Trustees who has – who had
 (12) also undertaken environmental studies
 (13) Q Sir, let me ask you, I've put by your right shoulder there
 (14) your deposition transcript up on the judge's bench
 (15) If I may approach for a second, Your Honor
 (16) I'm going to show you the pagination of this, and we're
 (17) going to be referring to the pages that are there I'm going
 (18) to ask you to go to page 115 if you would
 (19) MR SANDERS Where are you, counsel?
 (20) MR JAMIN Page 115 of the deposition
 (21) MR SANDERS Thank you
 (22) BY MR JAMIN
 (23) Q Are you on that page, sir?
 (24) A I see one page – page 115 yes
 (25) Q All right I'm going to ask if this question was given to

Vol 31 5461

- (1) you and if you made this answer
 (2) Well sir have you ever investigated the factual basis
 (3) of any of the claims asserted against Exxon by any of the
 (4) classes of people who claim to have been harmed by the Exxon
 (5) Valdez oil spill
 (6) And you answered "In our work we have compared the claims
 (7) that are being made with our own findings That was one of the
 (8) purposes of our existence Our group was here to assist the
 (9) lawyers in countering the claims it made against them
 (10) litigation support
 (11) Did you give that question – or excuse me Did you give
 (12) that answer to that question sir?
 (13) A Yes I gave that answer
 (14) Q All right Now in fact the NRDA group was there to
 (15) assist the lawyers in countering claims made against the
 (16) company is that not right?
 (17) A We were hired to provide factual information to the lawyers
 (18) so they could develop whatever procedures theories or
 (19) activities they wanted to undertake We were the scientific
 (20) arm of this
 (21) Q But at page 115 you gave this answer Our group was here
 (22) to assist the lawyers in countering the claims it made against
 (23) them litigation support did you not?
 (24) A Yes but I was referring to claims as our work was claims
 (25) of damages to the environment

Vol 31 - 5462

- (1) Q All right When you became a member of the NRDA and
 (2) litigation support group you saw your role as providing
 (3) factual information to those individuals who would undertake
 (4) the formulation of legal theories that were designed to deny
 (5) those who claimed to have been victimized by the Exxon Valdez
 (6) oil spill compensation for their claims Is that statement
 (7) true sir?
 (8) A Which page is that on?
 (9) Q You can take a look at 115 10 through 20 sir
 (10) A It's the next question?
 (11) Q It is
 (12) A I'm sorry, I missed that
 (13) Yes And my answer was The way I saw my role was to
 (14) provide factual information to those who would undertake what
 (15) you just characterized
 (16) Q What I just characterized?
 (17) A Yes
 (18) Q All right sir
 (19) A And the assumption there is that that's what lawyers do
 (20) but I didn't get into that
 (21) Q Now, later on, let me ask this – you understood that you
 (22) were supporting Exxon's litigation effort to deny those who
 (23) have claimed to have been harmed by the Exxon Valdez oil spill
 (24) compensation for their claims –
 (25) Well, let me ask you this, sir Was this question given

Vol 31 5463

- (1) and this answer given at 115 21 You understood that you were
 (2) assisting by providing factual information the attorneys for
 (3) Exxon who were trying to deny those who have claimed to have
 (4) been harmed by the Exxon Valdez oil spill compensation for
 (5) their claims correct sir?
 (6) And you gave the answer Well I knew I was supporting
 (7) Exxon s litigation effort That was our role in NRDA and
 (8) litigation support
 (9) A Yes I think the answer was clear made clear that I was
 (10) steering away from trying to imply that I knew anything about
 (11) the legal theories that were being constructed
 (12) Q Later on sir you had a consultancy contract with Exxon
 (13) under which you - it was agreed that you would act as a
 (14) coordinator for assisting in the preparation for the papers for
 (15) the ASTM conference, did you not?
 (16) A Yes
 (17) Q And that was for work which was performed between
 (18) January 8
 (19) and April 30 of 1993?
 (20) A Yes
 (21) Q All right Now let s take a look at that paper that you
 (22) did with Mr Koons, the Fate of Oil From the Exxon Valdez a
 (23) Perspective
 (24) MR SANDERS Which one? There s two of them
 (25) MR JAMIN Let s take a look at the first version in
 (26) which Mr Koons was the lead author Is that correct?

Vol 31 5464

- (1) THE WITNESS Yes
 (2) BY MR JAMIN
 (3) Q And was that paper reviewed by the public - by a public
 (4) affairs representative of Exxon sir?
 (5) A I m sure they saw it, yes
 (6) Q It was reviewed by them was it not?
 (7) A I m sure they read it yes
 (8) Q And the paper was also reviewed by lawyers for Exxon,
 (9) specifically Jim Stevens and John Redman?
 (10) A Yes I believe that's right
 (11) Q And Jim Stevens and John Redman are part of the Exxon
 (12) corporate legal department?
 (13) A Yes
 (14) Q And you incorporated comments from Mr Stevens and/or
 (15) Mr Redman in the final version of the paper that was submitted for
 (16) publication did you not?
 (17) A I think that s correct
 (18) Q And you understood that you were submitting the paper to
 (19) Mr Stevens and Mr Redman for the purpose of having them
 (20) review the paper prior to its being published?
 (21) A Yes
 (22) Q And one of the purposes of having the lawyers review it was
 (23) to make sure that the paper was not inconsistent with Exxon s
 (24) litigation strategy?
 (25) A Was that the question that was asked or is that something I

Vol 31 5465

- (1) said?
 (2) Q Let s take a look at Page 314 of your deposition, sir
 (3) A What was the page number?
 (4) Q 314 sir And starting at page -
 (5) A Sorry It s the second part of it I didn t have that
 (6) Q Sure You have 314 sir?
 (7) A Yes
 (8) Q And was this question given at line 9 And one of the
 (9) purposes to review it was to make sure that the paper was
 (10) consistent with Exxon s litigation strategy, correct?
 (11) And you answered Or not inconsistent with its litigation
 (12) strategy I would rather say
 (13) Is that correct?
 (14) A Yes, because -
 (15) Q All right So that when I asked you sir whether one of
 (16) the purposes for the review was so that it would be not
 (17) inconsistent with Exxon s litigation strategy the answer to
 (18) that is that is correct?
 (19) MR SANDERS Objection, Your Honor, he - I wanted so
 (20) I wouldn t cut him off but he is cutting off the witness
 (21) BY MR JAMIN
 (22) Q Is that correct, sir?
 (23) A Yes And I can give my additional answer now We were
 (24) giving factual information to the lawyers so it s obvious they
 (25) needed to know what factual information we were producing,
 and

Vol 31 - 5466

- (1) if that factual information was inconsistent with whatever
 (2) strategy they had it s obvious they had to change their
 (3) strategy so they needed to know about that
 (4) Q All right, sir Let s go on to the paper entitled Natural
 (5) Cleaning of Shorelines Following the Exxon Valdez Oil Spill,
 (6) and that was by you, along with Bragg, Dash and Owens?
 (7) A Yes
 (8) Q And it was presented to a 1991 oil spill conference in San
 (9) Diego?
 (10) A Yes
 (11) Q And that was the paper that you described with Mr Sanders
 (12) here today?
 (13) A We talked about it yes
 (14) Q Now prior to the publication of that paper it too was
 (15) reviewed by lawyers was it not?
 (16) A Yes as is common practice within Exxon I was not even in
 (17) the - I was not in the litigation support group at that time
 (18) Q So it s common practice in Exxon for the legal department
 (19) to review all papers sir?
 (20) A I can t say that There may be some that they say they
 (21) don t want to see
 (22) Q But you did just say common practice, did you not?
 (23) A It is common practice that as part of the release procedure
 (24) for a paper law would have the opportunity to look at them
 (25) Q All right And it would have been sent to Houston for

Vol 31 5467

- (1) legal review and to get release permission in this case then?
 (2) A It would have been sent to Houston for release and as part
 (3) of that it may have gone to the legal department as well I
 (4) do not know whether in fact it did Usually there was somebody
 (5) made a decision whether lawyers need to look at it or public
 (6) affairs needs to look at it or who else needs to look at it
 (7) Q All right sir Let me ask you to look at your deposition
 (8) and review what you have told us before on this issue at 318
 (9) A Yes
 (10) Q And we go along here sir prior to the publication of this
 (11) exhibit and I ll represent to you that that s the one we re
 (12) talking about
 (13) A Which line?
 (14) Q On line 21 on 318
 (15) A Yes
 (16) Q Was it reviewed by any Exxon lawyers and you said yes did
 (17) you not?
 (18) A Yes
 (19) Q And then the question is asked by whom, and you say you
 (20) don t recall, you say you wrote the paper when you were in
 (21) Anchorage and it would have been sent to Houston for review
 (22) and then the lawyer in Anchorage was Mike Smith?
 (23) A Right
 (24) Q Those are your words?
 (25) A Yes

Vol 31 5468

- (1) Q And you say he probably looked at it too?
 (2) A Yes, but you didn t ask about that sir
 (3) Q Was Mr Smith part of Exxon s legal team here in Anchorage?
 (4) A Yes
 (5) Q And it was - the question was then asked was it sent to
 (6) Houston for legal review and you answered for review yes
 (7) for review and release get the release permission
 (8) A Right
 (9) Q Was that your answer?
 (10) A That s what I tried to explain earlier I don t know
 (11) whether it was passed by the lawyers in Houston
 (12) Q So the way it works, you have to obtain management
 (13) approval
 (14) to publish and the law department advises management in that
 (15) process is that what you re saying?
 (16) A Yes Yes
 (17) Q And if you don t get Exxon management approval for a
 (18) paper
 (19) it doesn t get published?
 (20) A That s true
 (21) Q And one of the purposes of Exxon management approval of
 (22) this paper was to ensure that it did not contain any
 (23) information that was contrary to the litigation position of
 (24) Exxon is that true sir?
 (25) A I don t think so
 (26) Q Well, let s take a look at 320 And specifically sir
 (27) 320, line 20 was this question given And one of the - are

Vol 31 5469

- (1) you with me sir?
 (2) A Yes
 (3) Q And one of the purposes of Exxon management approval
 (4) was to
 (5) ensure that the document that has been marked as Exhibit
 (6) 69904
 (7) and I ll represent to you that s what we re talking about did
 (8) not contain any information that was contrary to the litigation
 (9) position of Exxon correct sir?
 (10) And you said I would assume that law would review it from
 (11) that viewpoint would have reviewed it from that viewpoint is
 (12) that correct?
 (13) A Yes
 (14) Q That was your answer?
 (15) MR SANDERS Read the rest of the answer please
 (16) MR JAMIN I ll be happy to read the rest of the
 (17) answer And you said I was not working in the NRDA
 (18) litigation support group at that time so I was - our work was
 (19) much less subject to lawyer review law department review We
 (20) weren t working for the law department I was working for
 (21) operations
 (22) BY MR JAMIN
 (23) Q Despite that at that time you would assume that law would
 (24) have reviewed the paper?
 (25) A Yes And I know Mike - I m pretty sure Mike Smith in
 (26) Anchorage reviewed it
 (27) Q All right Let s go on sir - or let me just ask you

Vol 31 5470

- (1) when you were talking with Mr Sanders this morning about that
 (2) particular report which was reviewed by law that s the one
 (3) that you said was overly optimistic about the removal of the
 (4) oil from the beaches was it not?
 (5) A I was overly optimistic at the time The statements I made
 (6) in there were correctly qualified as related - as being based
 (7) on the data obtained earlier that year
 (8) Q Let s go on to speak more generally and I want to talk
 (9) with you for a while about the entire ASTM conference where
 (10) you
 (11) gave one of these as your paper did you not?
 (12) A Yes
 (13) Q And you made a presentation?
 (14) A Yes
 (15) Q All right Now the ASTM conference was a conference in
 (16) which Exxon s consultants published a comprehensive set of
 (17) papers about their scientific findings and their studies in
 (18) Prince William Sound was it not?
 (19) A Yes
 (20) Q And that conference took place in Atlanta in April of 1993?
 (21) A Yes
 (22) Q And the Exxon-sponsored presentations at that conference
 (23) included both professionals that were under the employ of
 (24) Exxon as well as outside consultants that Exxon had
 (25) contracted
 (26) with to perform certain professional services?
 (27) A Yes

Vol 31 5471

- (1) Q Now in April of 92 you had discovered through your
 (2) employment that a conference had been scheduled by the oil
 (3) spill restoration fund trustees for here in Anchorage had you
 (4) not?
 (5) A Yes
 (6) Q And at that point in time discussions were had as to what
 (7) Exxon's response would be to the Trustee's initiative to
 (8) convene a conference here in Anchorage?
 (9) A Correct
 (10) Q And among the Exxon departments and individuals you
 (11) interacted with about that subject were public affairs your
 (12) own NRDA and litigation support group, the in house legal
 (13) department, the outside lawyers, and management in the form
 (14) of
 (15) a group of people including Mr Mel Harrison?
 (16) A Yes
 (17) Q And between the public affairs people and the lawyers it
 (18) was much more the lawyers who were involved in that process
 (19) because this was a litigation effort is that correct?
 (20) A Yeah We were working for litigation right
 (21) Q And once you had a manuscript which you believed was
 (22) pretty
 (23) much final for what you wanted to submit, you would be
 (24) required
 (25) to send it to a number of different people in different
 (26) departments?
 (27) A Yes
 (28) Q And the people and the departments that would receive the

Vol 31 5472

- (1) manuscript would include others in the NRDA and litigation
 (2) support group?
 (3) A Yes
 (4) Q And it would include the public affairs department, would
 (5) it not?
 (6) A Yes
 (7) Q Is the public affairs department like a public relations
 (8) department?
 (9) A Perhaps I don't -
 (10) Q Pretty much the same?
 (11) A Perhaps pretty much the same I don't know
 (12) Q And it would also be sent to the legal department for their
 (13) review and comment?
 (14) A Yes
 (15) Q And it was the case that for the ASTM papers that someone
 (16) from the public affairs department would send the manuscripts
 (17) out to other persons within that organization and they would
 (18) have purview on that particular topic as well?
 (19) A Yeah Someone in the public affairs department was
 (20) designated as the coordinator for getting the releases and
 (21) ensuring that those people that needed to see a particular
 (22) paper they had an interest in that area that's what I was
 (23) trying in the response I gave to be aware of that paper yes
 (24) Q But apart from just getting the word out you - you told
 (25) us before that public affairs was reviewing the documents were

Vol 31 5473

- (1) they not sir?
 (2) A Well whatever the term reviewing means
 (3) Q All right
 (4) A I may have used that term yes
 (5) Q All right And each and every one of the 28 papers that
 (6) were presented at the ASTM conference in April of 1993 were
 (7) approved by Exxon management prior to publication?
 (8) A Yes
 (9) Q And is that level of Exxon management at the level that Mr
 (10) Mel Harrison is on sir?
 (11) A I do not know whether Mel Harrison gave the approval for
 (12) each of these papers or whether it was the lower level
 (13) Q But he was involved in this - the general process of
 (14) preparing the ASTM effort, was he not?
 (15) A The general process, yes, but I do not - well, I'm sure he
 (16) didn't read all the papers
 (17) Q And again one of the purposes of Exxon management
 (18) approval
 (19) was to ensure that the papers did not contain any information
 (20) that was contrary to Exxon's litigation position, is that
 (21) correct?
 (22) A I think we've covered that before and I had - I did not
 (23) say that's correct in my response
 (24) Q All right, sir We'll let what went before go The 28
 (25) papers were approved by Exxon management even if the
 (26) authors
 (27) were not employees of Exxon is that correct?

Vol 31 5474

- (1) A Yes, of course
 (2) Q I'm sorry?
 (3) A Yes, of course
 (4) Q And had any of those papers not been approved by Exxon
 (5) management Exxon would not have released those papers for
 (6) publication in Atlanta, is that correct?
 (7) A Yes but let me make an addition there There wasn't very
 (8) much that could be done about whether or not you want to
 (9) publish these papers We had committed to publishing a
 (10) comprehensive set of papers at this conference, and
 (11) comprehensive meant not only covering all the areas that we
 (12) had
 (13) worked on but also within each area to describe and
 (14) summarize
 (15) all the information that was contained
 (16) If any of the papers in this case had occurred where the
 (17) lawyers might have taken exception to it, it's the situation
 (18) that I mentioned earlier If the factual information doesn't
 (19) agree with their - with what you call the strategy, then the
 (20) strategy had to change
 (21) We were here to provide factual information for the
 (22) lawyers, and part of this review process was to make sure the
 (23) lawyers learned what the factual information was that we
 (24) provided And the same holds for public affairs
 (25) Q All right Now you didn't make that clear to us in the -
 (26) that position clear to us in the depositions that you'd given
 (27) before?

Vol 31 5475

- (1) A Yes I m sorry I didn t make it clearer then
 (2) Q All right So we ve got a slightly different view right
 (3) now here in court?
 (4) MR SANDERS Your Honor I object to the
 (5) characterization If he wants to ask -
 (6) THE COURT Let s move on with the questioning We re
 (7) starting to quarrel just a little bit
 (8) MR JAMIN I don t want to quarrel I ll be happy to
 (9) accept the answers
 (10) BY MR JAMIN
 (11) Q Is it true sir that Exxon had a routine and customary
 (12) practice of approving contracts with its outside consultants
 (13) hired in connection with the Exxon Valdez litigation a
 (14) provision that required Exxon s approval of the content of any
 (15) information published by any such consultant?
 (16) A Yes That was standard procedure I m sure Not only in
 (17) our company
 (18) Q Was one of the purposes for publishing the papers at the
 (19) ASTM conference TO publicize Exxon s point of view about the
 (20) state of recovery from the contamination of the Alaska
 (21) shoreline from the oil discharged from the Exxon Valdez?
 (22) A Yes Our scientists had a strong desire to publish the
 (23) information they had developed
 (24) Q Sir do you have some allegiance towards Exxon s position
 (25) in this litigation?

Vol 31 5476

- (1) A I have a strong allegiance to Exxon
 (2) Q And is that based on your long career with Exxon?
 (3) A Yes
 (4) Q And you have - do you have an interest in the outcome of
 (5) this litigation?
 (6) A In what way do you mean?
 (7) Q Well have you told - told plaintiffs lawyers in
 (8) depositions before that you have an interest in supporting
 (9) Exxon s position?
 (10) A There were questions regarding whether I had a financial
 (11) interest and I don t know whether you re asking about that
 (12) Q Well did you not say in your deposition sir that you had
 (13) an interest in the outcome of this litigation and it was in
 (14) supporting Exxon s position?
 (15) MR SANDERS What page, counsel?
 (16) MR JAMIN 111
 (17) THE WITNESS What page?
 (18) MR JAMIN 111
 (19) THE WITNESS I was asked such questions yes
 (20) BY MR JAMIN
 (21) Q And you indicated affirmatively, sir?
 (22) A Perhaps
 (23) Q All right I ll accept that answer
 (24) Now, let s talk about some of the representations you ve
 (25) made to us about cleanup from the beaches And I think - let

Vol 31 5477

- (1) me ask first physical processes played an important role
 (2) during the first summer when the stranded oil was still
 (3) relatively mobile?
 (4) A Yes
 (5) Q And you ve talked some about that here today have you
 not?
 (6) A Yes
 (7) Q And some of the liberated oil was subsequently recovered by
 (8) booming and skimming but some drifted onto other
 shorelines?
 (9) A Yes
 (10) Q Do you have any estimate sir for us today as to the
 (11) amount of the oil that came off the beaches in Prince William
 (12) Sound and then restranded on other beaches?
 (13) A I have no quantitative estimate of that but it s a
 (14) significant amount
 (15) Q And when you say significant in that context can you give
 (16) me a range?
 (17) A Well it could have been 10 percent of the - of the oil
 (18) maybe a quarter of the oil that was in Gault s model considered
 (19) to have stranded, may subsequently have gone off that
 (20) particular shoreline and onto another shoreline That s a feel
 (21) I have I have not made a calculation I have not made a
 (22) scientific estimate of that
 (23) Q If that feel is right and 40 percent is initially stranded
 (24) and a quarter of that becomes restranded then the beaches
 feel
 (25) as if 50 percent hit them, is that correct?

Vol 31 5478

- (1) A I don t understand that
 (2) Q All right If 40 percent was originally stranded -
 (3) A Yes
 (4) Q - and a quarter of that - which would be 10 percent that
 (5) came from the vessel is that right?
 (6) A Yes Yes
 (7) Q - restrands -
 (8) A Yes
 (9) Q - then the different beaches feel the effect of 50 percent
 (10) one way or the other?
 (11) A Oh, I see what you re saying
 (12) Q Is that right?
 (13) A Well these effects are not cumulative in an arithmetic
 (14) sense If you spill a hundred barrels on the beach and you had
 (15) another barrel it doesn t mean it s now suffering one percent
 (16) more damage It doesn t go that quantitatively
 (17) Q Would you agree with me generally that the effect is -
 (18) because of the restranding is a quarter more than the 40
 (19) percent that originally strands?
 (20) A Not the effect but it s more If all of the oil had
 (21) stayed where it first hit the shoreline there would have been
 (22) less damage less oiling obviously, if it had never moved from
 (23) there If it had stayed put there would have been less
 (24) damage less oiled shoreline
 (25) Q All right Now we ve talked about this restranding from

Vol 31 5479

- (1) the summer As I understand it there were some beaches by the
 (2) fall of 1989 that still had more than 50 percent of their
 (3) surface oiled is that correct?
 (4) A No I would not characterize it that way
 (5) Q Well let me ask you if on west Green Island there was
 (6) still heavily oiled in September a beach that you - that was
 (7) called AP8 with 52 percent average covered you remember that
 (8) one?
 (9) A Yes I m aware of that sort of mapping but that doesn t
 (10) mean 50 percent of the oil that was there was still there
 (11) Q I understand that sir 50 percent of the beach?
 (12) A At the end of the summer of 89 there were some beaches
 (13) that still had areas with more than 50-percent coverage
 (14) Q All right
 (15) A Yes
 (16) Q And that was in September of 1989 was it not?
 (17) A Yes Yes
 (18) Q And was it September 15th that the cleanup ended for 1989?
 (19) A Yes
 (20) Q The Exxon cleanup?
 (21) A Right
 (22) Q All right Now over the course of the next six months a
 (23) substantial amount of oil according to your paper was
 (24) released from that site on west Green Island is that not true?
 (25) A Yes

Vol 31 5480

- (1) Q And so by your calculations it had diminished to about 20
 (2) percent coverage in March?
 (3) A Okay
 (4) Q You agree with that?
 (5) A Well I don t recall those numbers but -
 (6) Q You ll trust me here today?
 (7) A Yes Yes
 (8) Q All right And some of the re released oil was redeposited
 (9) on other beaches is that true?
 (10) A I don t know that but it may have been Some of it may
 (11) have been yes
 (12) Q Would you - without having to go to your article you
 (13) indicated that in your article at one point is that true?
 (14) A I don t recall that particular sentence
 (15) Q Would you disagree with me that it was there?
 (16) MR SANDERS We ll represent it was there
 (17) MR JAMIN All right Counsel has represented so
 (18) that we can move on and that sounds good
 (19) BY MR JAMIN
 (20) Q Now can you quantify for us generally for this period
 (21) between September when the cleanup ends, until March or
 (22) April when it picks up again in 1990 how much of this oil that is
 (23) being released by Mother Nature and the other factors that
 (24) you ve described ends up on other beaches as stranded oil?
 (25) A No

Vol 31 5481

- (1) Q Is it something that you ve looked at at all sir?
 (2) A No There were no surveys no mapping shoreline mapping
 (3) surveys done in the winter There was another survey done in
 (4) the next spring and it of course, was compared with this -
 (5) with surveys of last fall but the most rigorous comparison was
 (6) with a survey that was done in the previous summer So the
 (7) year to year surveys were the basis for most comparisons
 (8) Q All right Now I want to talk with you just a bit about
 (9) what you ve done to estimate the amount of oil remaining in
 (10) 1993 which is where you ended up with Mr Sanders, and I
 (11) think
 (12) it was your - your judgment that it s less than one percent
 (13) is that correct?
 (14) A The oil that stays in a recognizable form, sequestered oil,
 (15) yes
 (16) Q All right
 (17) A Excepting this inert residue That s why I emphasized the
 (18) definition
 (19) Q You ll agree with the statement that oil is a contaminant,
 (20) will you not?
 (21) A Yes Can - I m sorry it can be a contaminant It s also
 (22) a very useful product that we use all the time and couldn t get
 (23) by without it
 (24) Q In the right place?
 (25) A Yes
 (26) Q You re not going to argue with me that Prince William

Vol 31 5482

- (1) Sound in the water that s the wrong place?
 (2) A Yes
 (3) Q So you ll agree that oil is a pollutant when it gets into
 (4) the environment, such as Prince William Sound or the northern
 (5) Gulf of Alaska?
 (6) A Yes
 (7) Q And you re aware of many instances where oil spilled from
 (8) the Exxon Valdez got in not only to the water but also - and
 (9) not only into the lower intertidal area but into the upper
 (10) intertidal area and indeed the supra or above the tidal area?
 (11) A Well that s the same - yes
 (12) Q And that supratidal area refers to anything above the mean
 (13) high tide line does it not?
 (14) A Right but in this context it refers specifically to the
 (15) supratidal berm which is typically a berm of gravel that
 (16) builds up above the supratidal during storm surges
 (17) Q At the high tide mark or above the high tide mark?
 (18) A Just above the high tide mark, yes
 (19) Q Now you were deposed back in November is of 1993, is that
 (20) correct sir November of '93?
 (21) A Yes
 (22) Q And we ve been looking at that deposition a little bit
 (23) today?
 (24) A Right
 (25) Q And back then did you tell us that nobody knows the exact

Vol 31 5483

- (1) amount of oil that s in the subsurface either aerial wise or
 (2) volume-wise?
 (3) A Yes
 (4) Q And did you tell us that you don t have any clue whatsoever
 (5) as to the volume of Exxon Valdez crude oil that is presently
 (6) below the surface of any of the Alaska shoreline contaminated
 (7) by the spill?
 (8) A No I didn t say that
 (9) Q Let s take a look at 171 of your deposition
 (10) A That was the question but that s not what I said
 (11) Q Let s take a look -
 (12) A Again what page please?
 (13) Q 171 sir Let me ask you to start at line 16 Was this
 (14) question given Now sir do you have any clue whatsoever as
 (15) to the amount of Exxon Valdez crude oil that is presently below
 (16) the surface of any of the Alaska shoreline contaminated by the
 (17) spill from the Valdez?
 (18) And you said at first Yes I know some shorelines are
 (19) free of oil
 (20) And then the questioner said But I m talking about the
 (21) aggregate amount
 (22) And you said I thought you said any No the volume of
 (23) oil the mass of oil that s left on the shorelines
 (24) Questioner yes
 (25) And you said no and you went on to say did you not I

Vol 31 5484

- (1) defy anybody to have a number That s a problem we ve
 (2) wrestled
 (3) with and nobody has been able to do it
 (4) Is that your testimony, sir?
 (5) A Yes and what I mean is nobody has an accurate number
 (6) Q Now you ve come into court today and you ve made an
 (7) estimate for us?
 (8) A Yes
 (9) Q And that s just an estimate isn t it sir?
 (10) A Yes of course but I ve since -
 (11) Q Because -
 (12) A Since that time I ve gotten much better data than I had
 (13) then
 (14) Q So you wouldn't defy yourself now to come here with a
 (15) number?
 (16) A No
 (17) Q In fact you ve come here with a number?
 (18) A I m sorry I would - I would not defy myself coming up
 (19) with a properly qualified number
 (20) Q And the qualifications to the number here today are that
 (21) it's an estimate?
 (22) A Yes
 (23) Q All right
 (24) A And I ve done more I ve also specified an upper bound
 (25) which is a measure of how accurate or inaccurate an estimate I
 think it is

Vol 31 5485

- (1) Q All right Now as I understand it we ve got a couple of
 (2) numbers One roughly 40 percent which is oil stranded on the
 (3) beach in 1989 and we ve talked about May ish of 1989?
 (4) A Yes
 (5) Q And we ve got your estimate which is that there s one
 (6) percent out there in 1993?
 (7) A Less than one percent
 (8) Q Less than one percent?
 (9) A Yes
 (10) Q Did you do any work sir or did Exxon do any work to
 (11) quantify how much was out there in 1992?
 (12) A Not volume-wise Not that I m aware of
 (13) Q And was there any work to quantify how much was done
 (14) volume wise in 1991?
 (15) A No not that I m aware of
 (16) Q So your testimony here is about the amount - or your
 (17) judgment here is about the amount of oil that we could find
 (18) more than 4 years after the spill in the summer of 1993?
 (19) A Correct
 (20) Q And you re not testifying here on your direct as to the
 (21) amount that the volume of oil that was out there in 1992 or
 (22) 1991?
 (23) A That s correct
 (24) Q Let s take a look for a moment at the oil that s on the
 (25) beaches and under the beaches Is it your understanding that

Vol 31 5486

- (1) roughly 31 1 miles of shoreline in Prince William Sound and
 (2) 17 6 miles of shoreline outside of Prince William Sound were
 (3) surveyed by Mr Harrelson and Mr Reimer and the other
 (4) geomorphologists?
 (5) A Yes
 (6) Q And of what was surveyed of the shoreline over 20 percent
 (7) was found to be oiled is that correct?
 (8) A Oiled to some degree Most of that was very lightly
 (9) oiled
 (10) Q All right But oiled to some degree?
 (11) A Yes
 (12) Q And 31 1 miles were surveyed for subsurface oil?
 (13) A I cannot confirm that
 (14) Q I m sorry?
 (15) A I cannot confirm that All the - all the subdivisions
 (16) that were surveyed were surveyed for subsurface oil if there
 (17) was - seemed to be a possibility that it would exist
 (18) Q Well again in the interest of shortness of time do you
 (19) have a recollection that approximately - that more than 25
 (20) percent of the shoreline that was surveyed was found to have
 (21) subsurface oil?
 (22) A No I don t recall those numbers Are you talking about
 (23) the Prince William Sound shoreline maybe or -
 (24) Q Let s take a look at your deposition sir It s Page 381
 (25) That s the blue - the blue book that s next to your right

Vol 31 5487

- (1) shoulder again
 (2) A Yesterday s deposition?
 (3) Q Yesterday s deposition
 (4) A Again, what page?
 (5) Q Page 381, sir And at line 10 was this question asked,
 (6) and was 31 1 miles surveyed for subsurface oil and the answer
 (7) given yes
 (8) And was 8 73 miles found to have oil the answer yes
 (9) Now and in that 8 73 is a little bit more than 25 percent
 (10) of the amount surveyed and the answer was yes?
 (11) A I think that s a misprint or at least I thought we were
 (12) talking about surface oil Those are the amounts for surface
 (13) oil both the surveys and what was found in Prince William
 (14) Sound
 (15) Yes I remember that I remember these questions I
 (16) remember that I was thinking and reading numbers in a table
 (17) that pertained to surface oiling conditions but it doesn t
 (18) matter Yes, on these 31 miles we also looked - they also
 (19) looked for the presence of subsurface oil
 (20) Q And they found a significant amount of subsurface oil?
 (21) A Yes, but the 20 percent business, 25 percent business,
 (22) that s not right
 (23) Q So you all stand by the over 20 percent of the surface as
 (24) being oiled?
 (25) A In Prince William Sound these are Prince William Sound

Vol 31 5488

- (1) numbers It s more than 25 percent oiled to some degree
 (2) Q All right sir Let s take a look at some of the - the
 (3) oiling that s out there Mr Sanders showed you a photograph
 (4) and a log on it which displayed some of the oiling, and I
 (5) wanted to show you another photograph of Knight Island
 (6) And you had indicated that Knight Island was an area that
 (7) was still fairly heavily oiled is that correct?
 (8) A Portions of Knight Island yes
 (9) Q And that oil is in the subsurface?
 (10) A At Point Helen in particular yes
 (11) Q Now let s take a look at what is a portion of Plaintiffs
 (12) 6 - 6081 - excuse me which is a portion of Plaintiffs
 (13) 1911 I m going to get the Elmo on if I can
 (14) Now this is - this is a picture - I m going to focus on
 (15) the key just for a moment then we ll take a look at the
 (16) picture together But this photograph was taken in June of
 (17) 93 sir?
 (18) A Yes
 (19) Q And there s - I m going to let you have a quick look In
 (20) fact the problem I have, sir and I ve had the problem all the
 (21) way through is I received originally xerox copies color xerox
 (22) copies but I also later got photographs Let s take a look at
 (23) the photograph together
 (24) At this particular site on Knight Island is there a large
 (25) cobble overburden?

Vol 31 5489

- (1) A Yes
 (2) Q And underneath the surface is there an indication that
 (3) from about 13 to 18 centimeters down there s something called
 (4) OP?
 (5) A Yes, correct
 (6) Q And is that 13 to 18 centimeters about five to seven inches
 (7) down, something in that range?
 (8) A Yes Yes
 (9) Q And OP stands for oiled pore?
 (10) A Oil-filled pore
 (11) Q And is that defined as where pore spaces are completely
 (12) filled with oil, resulting in oil oozing out of the sediments?
 (13) A Yes
 (14) Q And underneath this layer in this particular picture, is
 (15) there something called HOR?
 (16) A Yes heavy oil residue
 (17) Q And that goes from about 18 to 40 centimeters down?
 (18) A That s correct
 (19) Q And that s from about seven inches down to about 15 inches
 (20) down?
 (21) A Yes
 (22) Q And HOR stands for heavy oil residue?
 (23) A Yes
 (24) Q And that s where pore spaces are partially filled with oil
 (25) residue but are not generally flowing out of the sediments?

Vol 31 5490

- (1) A That s correct
 (2) Q Now, in this particular pit, do I understand that the
 (3) bottom of the oil was not reached?
 (4) A That s correct
 (5) Q And does that mean that the geomorphologist just didn't dig
 (6) that pit deep enough to tell?
 (7) A That s correct
 (8) Q And if I understand your testimony on direct, though, you d
 (9) go down - the oil wouldn t go down any deeper than where the
 (10) layer is of the water, the water table?
 (11) A That s right
 (12) Q Because the oil floats on that?
 (13) A Yes
 (14) Q So it s not going through to China or anything like that?
 (15) A Yes
 (16) Q Let s take a look at the - at the actual photograph
 (17) together Are you able to distinguish between the heavy oil
 (18) residue -
 (19) A Yes
 (20) Q - and the OP on that?
 (21) A In the layering is somewhat disturbed, because as the pit
 (22) is dug you get some caving in and you get some oil flowing
 (23) out but - if I can get this pen to work
 (24) Q Oh, you can t use that there sir If you would like to
 (25) come down from the stand to show us the difference on this

Vol 31 5491

- (1) large television set that would be fine
 (2) A If I were the OG the oil geomorphology and I look at this
 (3) pit I would say there is a section here which has the OP
 (4) condition and I would try to expose a fresh portion of that
 (5) surface to ascertain just exactly from where to where I would
 (6) draw that classification And the person that did this
 (7) particular pit said it goes from 18 centimeters down That
 (8) measures from the top of the pit not from the top of the
 (9) armor because that's another foot probably down
 (10) And then below that there's heavy oil residue The oil
 (11) is - the oil is - is still thick in the sediment and I would
 (12) call that HOR
 (13) And then I would make a notation check whether I can get
 (14) down to the bottom of this and if I can't for some reason,
 (15) because either the survey has to stop or the tide is coming up
 (16) or time is just not there then I would make a notation that I
 (17) hadn't reached the bottom of the oiling condition
 (18) Q All right sir You can take the seat again if you'd
 (19) like
 (20) And this photograph was taken by the gentlemen who are out
 (21) on the geomorphology crew for Exxon in 1993?
 (22) A Yes
 (23) MR JAMIN Your Honor I'd like to offer and ask
 (24) permission to publish to the jury the photograph because of its
 (25) clarity, and offer this as 1911-A

Vol 31 5492

- (1) (Exhibit 1911-A offered)
 (2) MR SANDERS No objection
 (3) THE COURT Plaintiffs Exhibit 1911 A is admitted
 (4) (Exhibit 1911 A received)
 (5) BY MR JAMIN
 (6) Q All right Let's take a look at just a few more of the
 (7) photographs that were taken by Exxon in 1993 and I'd like to
 (8) have - just give - I think we've all got a pretty good idea
 (9) of Prince William Sound at the moment and from your own - I
 (10) hate to do this counsel but - Mr Lynch was behind the
 (11) Barco now he's behind the map
 (12) But this is Knight Island here is it not sir?
 (13) A That's the Knight Island complex yes
 (14) Q So that's where we saw that first photograph?
 (15) A Yes
 (16) Q Now I want to show you next a photograph that was taken by
 (17) the Exxon crew in 1993 from another area Do you know where
 (18) Cape Douglas is?
 (19) A Yes
 (20) Q And is it over in this area sir?
 (21) A Right You're pointing to the right spot
 (22) Q Right about there?
 (23) A Right
 (24) Q So that's over on the Alaska Peninsula below Cook Inlet?
 (25) A Yes

Vol 31 5493

- (1) Q All right Let's see if we can get an idea of the
 (2) geomorphologist description on this particular one
 (3) Is the description here AP MS patch? I may be able to zoom
 (4) that in a little bit for you sir Would that help?
 (5) A Asphalt patch asphalt mousse patch which is large
 (6) boulders behind bedrock rise near the center of the
 (7) subdivision That would be one of the occurrences in a wave
 (8) shadow
 (9) Q And the AP stands for asphalt?
 (10) A Yes
 (11) Q And the MS stands for mousse?
 (12) A I'm pretty sure yes
 (13) Q And the AP is described as heavily oiled beach sediment
 (14) held cohesively together?
 (15) A Yes That's what I described earlier in my testimony
 (16) Q And the mousse which - we've seen some mousse before
 (17) how would you describe that?
 (18) A As sticky brown substance
 (19) Q Okay It's a mixture of oil and some water?
 (20) A Yes It's emulsified - water is emulsified into it It
 (21) probably contains some sediment too
 (22) MR JAMIN All right Your Honor I'd offer the next
 (23) as Plaintiffs 1911-B and ask permission to publish it
 (24) (Exhibit 1911 B offered)
 (25) MR SANDERS May I see that please?

Vol 31 5494

- (1) MR JAMIN You certainly may
 (2) MR SANDERS I have no objection Your Honor
 (3) THE COURT Plaintiffs Exhibit 1911 B is admitted
 (4) (Exhibit 1911-B received)
 (5) BY MR JAMIN
 (6) Q All right So we've seen a little bit of oil on Knight
 (7) Island and a little bit of oil over in Cape Douglas Let me
 (8) ask you next sir if you can tell me where Windy Bay is on the
 (9) Kenai Peninsula?
 (10) A Yes I think the map is very accurate but it's a very
 (11) large -
 (12) Q Take me up or down the peninsula and tell me when to stop
 (13) A You passed it already
 (14) Q Right there?
 (15) A Yes
 (16) Q Right about there?
 (17) A Yes
 (18) Q And I agree with you it's pretty tough to find Windy Bay
 (19) on that map but I think you've done a good job
 (20) Let me ask you to identify how the geomorphologist
 (21) describes the oil in 1993 that is found at Windy Bay
 (22) A Pit number 1, upper intertidal zone, boulder over bedrock
 (23) HOR
 (24) Q What does the HOR mean?
 (25) A Heavy oil residue

Vol 31 5495

- (1) Q Is that where pore spaces are partially filled with
 (2) residue but not generally flowing?
 (3) A Yes Windy Bay is one of the few locations on the Kenai
 (4) where you find that condition
 (5) Q This was taken in July of 1993?
 (6) A Yes
 (7) Q Let me substitute the photograph, and in that photograph
 (8) are you able to determine what - what else is on the rocks in
 (9) the background behind the oil?
 (10) A Looks like some barnacles That's what you're referring
 (11) to?
 (12) Q Do you see anything else or you're seeing barnacles there?
 (13) A I'm not sure that I'm seeing a stain but that's hard to
 (14) tell
 (15) Q Let me give you the photograph directly and see if you can
 (16) identify anything else in that picture
 (17) A Oh those are mussels I thought it might be a stain
 (18) Looks like mussels to me
 (19) MR JAMIN Your Honor, I'd ask for permission to
 (20) offer this exhibit as 1911 C
 (21) (Exhibit 1911 C offered)
 (22) MR SANDERS No objection Your Honor
 (23) THE WITNESS This patch here
 (24) MR JAMIN May I publish it Your Honor?
 (25) THE COURT Plaintiff's Exhibit 1911 C is admitted

Vol 31 5496

- (1) (Exhibit 1911 C received)
 (2) MR JAMIN That's the one from Windy Bay
 (3) MR SANDERS Can we move this map? I can't even see
 (4) the clock from here That's awfully important
 (5) MR JAMIN We'll move the map Is this a good time
 (6) to stop Your Honor?
 (7) THE COURT It's a good time
 (8) MR JAMIN And I'll set up the map later
 (9) THE COURT We'll be in recess for 15 minutes
 (10) (Jury out at 12:00 p.m.)
 (11) (Recess from 12:00 p.m. to 12:17 p.m.)
 (12) (Jury in at 12:17 p.m.)
 (13) MR JAMIN Thank you Your Honor
 (14) BY MR JAMIN
 (15) Q Mr. Jahns I'm just going to be a few more minutes and I'm
 (16) going to explore a couple of other photographs and we'll be
 (17) done Let's look at this fourth photograph from the Exxon
 (18) program in 1993
 (19) Now is this from a location called Perevalnie Pass?
 (20) A I call it Perevalnie Pass
 (21) Q It's -
 (22) A On Shuyak Island
 (23) Q Let's get a sense just for a moment Shuyak Island is the
 (24) uppermost island in the Kodiak Island group?
 (25) A Yes

Vol 31 5497

- (1) Q And am I getting that in just about the right place?
 (2) A Yes
 (3) Q What is the geomorphologist seeing in this particular
 (4) photograph sir?
 (5) A He's seeing some SOR/H Says close up of SOR surface oil
 (6) residue
 (7) Q And is that defined as significantly oil coated beach
 (8) sediments in the top five centimeters where the sediments do
 (9) not form a cohesive layer?
 (10) A That sounds correct I'm not familiar - I call it surface
 (11) oil residue
 (12) Q And the geomorphologists when they find SOR are
 (13) supposed to
 (14) describe the SOR in terms of either heavy or light, is that not
 (15) true?
 (16) A Yes
 (17) Q And the geomorphologist here has done that and assigned
 (18) the
 (19) term H?
 (20) A Which means heavy
 (21) Q In this one it indicates the - around a boulder at the
 (22) base of the beach face after excavation Does that mean that a
 (23) boulder was turned up sir?
 (24) A It could It's not specific
 (25) Q Let me ask you to look at the photograph It might help
 (26) you answer that question I know these photographs are a lot
 (27) better than the xerox copies

Vol 31 - 5498

- (1) A Yes It looks like there was a boulder excavated and there
 (2) was oil underneath I find that very interesting, because it
 (3) agrees with the theory of mine that oil migrates towards the
 (4) surface and gets stuck under an impermeable layer That's why
 (5) we find it under boulders
 (6) Q We might go out on different beaches and turn over boulders
 (7) and see the oil there?
 (8) A Yes
 (9) MR JAMIN Your Honor, I'd like to offer and request
 (10) to publish Plaintiff's Exhibit 1911 D
 (11) (Exhibit 1911-D offered)
 (12) MR SANDERS No objection
 (13) THE COURT Plaintiff's Exhibit 1911-D is admitted
 (14) (Exhibit 1911 D received)
 (15) MR JAMIN I've managed to lose my paper clip here
 (16) but I'll get it together before they go to the exhibit room
 (17) BY MR JAMIN
 (18) Q Let's take a look at the next one, sir, and this one is
 (19) from the same area there on Shuyak Island in the Kodiak Island
 (20) group?
 (21) A Perevalnie Pass yes
 (22) Q Does this one show a close up of mousse on a rock surface?
 (23) A That's what the caption says yes I haven't - I can't
 (24) see it yet
 (25) Q I'm sorry And let me let you take a quick - I'm going to

Vol 31 5499

- (1) bring this photograph up for you
 (2) Does the geomorphologist say note the dead littoriana
 (3) shell?
 (4) A Yeah Littoriana That s the Latin name yes
 (5) Q What are they sir?
 (6) A Little mollusks that are on snails
 (7) Q Does having the photograph help you at all to describe what
 (8) the geomorphologist saw and you re able to confirm that it s a
 (9) close up of mousse on rock?
 (10) A Yes there is what looks like - now I can agree that may
 (11) be mousse there -
 (12) Q Okay
 (13) A - in to the right of the pencil
 (14) Q Fair enough
 (15) MR JAMIN Like to offer this as 1911-E Your Honor
 (16) (Exhibit 1911 E offered)
 (17) MR SANDERS No objection Your Honor
 (18) THE COURT You said E?
 (19) MR JAMIN I did May I publish it Your Honor?
 (20) THE COURT 1911 E is admitted
 (21) MR JAMIN Thank you
 (22) (Exhibit 1911 E received)
 (23) BY MR JAMIN
 (24) Q All right, Mr Jahns we just have two more I wanted to
 (25) take another one from down in Windy Bay This was taken from

Vol 31 5501

- (1) (Exhibit 1911 F offered)
 (2) MR SANDERS No objection
 (3) THE COURT 1911-F is admitted
 (4) (Exhibit 1911 F received)
 (5) BY MR JAMIN
 (6) Q And finally sir since you and Mr Sanders talked a little
 (7) bit about Point Helen let me get up one of the photographs
 (8) from the Point Helen pits
 (9) And can you indicate to us what the geomorphologist
 (10) notes - and I m going to give you the photograph if I may
 (11) and you can help explain what the geomorphologist is seeing
 (12) with reference to the photograph and the key?
 (13) A The comment says pit 14 cobble surface armor zero to 5
 (14) centimeter pebbles pebbles this size 5 to 20 centimeter
 (15) granule That s about pea size material
 (16) 20 to 35 cobbles and boulders so below the granules there
 (17) are bigger classes as they re called with granule matrix So
 (18) around them there s a matrix of pea size gravel 35 to 40
 (19) centimeters All these are depths below the surface
 (20) We re now 35 centimeters which is one and a half - little
 (21) over a foot Granules again and then oil is MOR to HOR which
 (22) means the oil showing in that sediment is classified as medium
 (23) oil residue or heavy oil residue in bottom of pit 35 to 40
 (24) centimeter not clean below
 (25) Q So down to about 40 centimeters what does that translate

Vol 31 5500

- (1) July 4 of 93?
 (2) A Yes
 (3) Q And it s by Mr Reimer?
 (4) A Yes
 (5) Q And does this - and I know that I m not showing you the
 (6) picture but does the geomorphologist note on this mousse and
 (7) sheen in bedrock crevices MITZ on bedrock outcrop?
 (8) A Yes
 (9) Q Can you help to translate that for us?
 (10) A Yes It means that there were - mousse and sheen were
 (11) observed in some crevices little cracks in the bedrock in the
 (12) middle intertidal zone that s what MITZ stands for in a
 (13) larger outcrop of bedrock
 (14) Q I m going to put the photograph on the screen and I m going
 (15) to try to zoom it down so we see the hole and give you the
 (16) photograph and ask if you can describe in addition to the
 (17) petroleum what else you see in that picture
 (18) A Okay I see a crack and around it some sheen and what may
 (19) be actually sheen on water It would have to be sheen on
 (20) water So all the liquid visible there is oil and I see
 (21) plenty of barnacles and some fucus growing very close to the
 (22) crack
 (23) Q All right Let s take a look if I may -
 (24) MR JAMIN Your Honor I d offer that as Plaintiffs
 (25) 1911-F and request permission to publish

Vol 31 5502

- (1) to in inches?
 (2) A It s one and a third foot so it would be 16 inches
 (3) Q 16 inches they re seeing MOR to HOR?
 (4) A Yes
 (5) Q And then - but they tell us that it s not even clean below
 (6) that?
 (7) A Not clean below
 (8) Q That s just as far -
 (9) A That s correct
 (10) Q So that s as far down as they have dug?
 (11) A Yes Yes That s one of the conditions I made what I
 (12) think is affirm allowance in the estimates We haven t found
 (13) all the oil we haven t penetrated in all places so I added 50
 (14) percent in one particular place to the estimates as you re
 (15) aware
 (16) Q Now Point Helen sir is back in Prince William Sound and
 (17) it s on Knight Island?
 (18) A Yeah Where your little sticker -
 (19) Q We put a couple of stickers on Knight Island?
 (20) A I forgot to check what section that was
 (21) Q Let me show you that again It s Knight 405 A?
 (22) A Okay All right It s Point Helen yeah
 (23) MR JAMIN Your Honor I d offer this as 1911 G
 (24) request that it is published and I am done - I m not quite
 (25) done with Mr Jahns Let me do the 1911 G part and I ll have

Vol 31 5503

- (1) one more question
- (2) (Exhibit 1911 G offered)
- (3) MR SANDERS No objection, Your Honor
- (4) THE COURT 1911 G is admitted
- (5) (Exhibit 1911 G received)
- (6) BY MR JAMIN
- (7) Q Sir are all the photographs that we ve had a chance to
- (8) look at together both this morning and this afternoon
- (9) photographs that were done by Exxon contractors in the
- (10) summer
- (11) of 1993?
- (12) A They look like they were yes
- (13) MR JAMIN Thank you sir I have nothing further
- (14) Thank you for your patience
- (15) THE COURT Redirect?
- (16) MR SANDERS Your Honor might it wait a second and
- (17) let the publication be completed?
- (18) THE COURT Certainly
- (19) MR SANDERS May I collect the pictures please? May
- (20) I approach, Your Honor?
- (21) REDIRECT EXAMINATION OF HANS JAHNS
- (22) BY MR SANDERS
- (23) Q Dr Jahns let me first go to one of the areas that counsel
- (24) covered earlier where he was reading portions of your
- (25) deposition concerning a phrase that caught my eye denial of
- (26) compensation And let me ask you if you will turn to page 115

Vol 31 5504

- (1) where he was reading from and the top of page 116
- (2) Let me ask you if right after that those questions that he
- (3) read starting at page 116 at line 11 midway through the
- (4) line the following question was asked - and I ll ask the
- (5) question that was asked of you in the deposition and I want you
- (6) to read the answer
- (7) Sir is it correct to state that from your own experience
- (8) working with the NRDA function of Exxon that you were aware
- (9) that you were assisting Exxon in its attempt to deny
- (10) compensation to people who had claimed to have been
- (11) victimized
- (12) by the Exxon Valdez oil spill and the subsequent contamination
- (13) of the Alaska shoreline with oil from the Exxon Valdez?
- (14) Then there was as you might expect an objection by
- (15) counsel and then this answer - please read
- (16) A Well what bothers me about the question is to deny
- (17) compensation I mean I know it was for litigation support in
- (18) defense against the legal action brought against us I mean
- (19) that s the extent to which I would answer yes We provided
- (20) factual information that would help Exxon to defend against
- (21) legal claims Legal action was brought against us
- (22) Q Thank you sir Now very briefly if you - these are
- (23) little pieces of paper that counsel put on this map and this
- (24) looks like a lot of oil if you look at these little pieces of
- (25) paper
- (26) How much - how much mileage are we covering here with

Vol 31 5505

- (1) these little pieces of paper? Can you give us an estimate?
- (2) A Very little
- (3) Q I mean, in terms of actual, where this piece of paper is
- (4) that covers the shoreline of a lot of miles doesn t it?
- (5) A Oh, yeah The piece of paper is of course much bigger than
- (6) the oiled shoreline in those areas
- (7) Q I was going to ask you you got these little pieces of
- (8) paper there but how big are those pits there?
- (9) A Pits would be about a square foot These pictures
- (10) typically the close ups cover a square foot
- (11) Q All right Now, you ve got a couple of questions about the
- (12) survey that was done in 1993 and I have a couple of questions
- (13) to ask you in order to clarify this area
- (14) First someone said, and I believe I heard it from counsel
- (15) that 25 percent of the shoreline was oiled initially Now
- (16) isn t it a fact that of roughly 3,000 miles of shoreline only
- (17) 486 miles were initially oiled, is that correct or were oiled?
- (18) A In Prince William Sound oiled to some degree yes
- (19) Q And that is - rather than being 25 percent that s 16
- (20) percent?
- (21) A It s about 16 percent, yes
- (22) Q Now when you were talking about 25 percent of the survey
- (23) that s a totally different concept or scope isn t it?
- (24) A Yes
- (25) Q Because the survey was designed to do what?

Vol 31 5506

- (1) A To identify remaining traces and evidence of oil
- (2) Q Right And so therefore are you aware of what the
- (3) instructions were to the people doing this 1993 survey?
- (4) A Yes I ve talked with them about that The instructions
- (5) were to find as much as possible of oil that left on those
- (6) shorelines where we had known there was oil in the past and in
- (7) the last few years and other shorelines where claims were
- (8) brought to our attention that there might still be oil
- (9) Q In other words they were looking for oil where it had been
- (10) found in the past or where it had been reported?
- (11) A Yes
- (12) Q And on looking at just those places where it was known to
- (13) be or where it was reported to be the survey found roughly 25
- (14) percent of that area had some oiling condition?
- (15) A Yes Of the 31 miles that were surveyed in Prince William
- (16) Sound 25 percent of that had still oil to some degree and most
- (17) of it was very light oiling which means less than ten percent
- (18) of whatever area had oil on it was actually covered by oil
- (19) Q Now at the time that you were deposed with the exception
- (20) of that one mention that s counsel made to you of being
- (21) deposed
- (22) last night the questions that you were asked - that he asked
- (23) you about in the course of - of his cross examination of you
- (24) at the time of that deposition did you have the 1993 survey
- (25) results?
- (26) A No

Vol 31 5507

- (1) Q Now I want to go finally to some questions about this
 (2) review process and these papers First let me ask you at
 (3) this ASTM conference that counsel asked you about in fact
 (4) when the conference actually occurred you were there weren't
 (5) you?
 (6) A Yes
 (7) Q And the procedure was that the people who had a paper to
 (8) submit or present or make available whatever word you guys
 (9) use you were actually there in a kind of a little booth area
 (10) weren't you?
 (11) A At one of the conferences yes there was what's called a
 (12) poster session where you showed off what you had done
 (13) Q And people could come up to you and ask you questions
 (14) about
 (15) it?
 (16) A Yes
 (17) Q Anybody could?
 (18) A Yes
 (19) Q As a matter of fact do you happen to recall one person who
 (20) came up and engaged you in conversation during that
 (21) conference?
 (22) A Yes
 (23) Q Did you see him today in the courtroom?
 (24) A Yes
 (25) Q Is it that guy right there?
 (26) A Yes
 (27) Q And did he talk to you about half an hour or so?

Vol 31 5508

- (1) A I don't know how long it was but yes I remember that
 (2) discussion
 (3) Q And did you tell him what you had found?
 (4) A Of course Probably gave him a paper
 (5) Q Now finally he asked you a lot of questions about your
 (6) papers being reviewed by the corporation and he quickly then
 (7) went to lawyers and public affairs What he didn't ask you is
 (8) what I want to ask you
 (9) Was there ever a time ever a time that any lawyer
 (10) representing Exxon in making these comments he was talking
 (11) about like Mr Redman's comments or Mr Stevens' comments
 (12) were you ever asked to change a fact?
 (13) A No
 (14) Q Were you ever asked to leave out any fact?
 (15) A No
 (16) Q Were you ever asked to change an opinion?
 (17) A No
 (18) Q Were you ever asked to soften up an opinion?
 (19) A No
 (20) Q Were you ever asked to strengthen an opinion?
 (21) A No I was asked to do it just right
 (22) Q Were those instructions made clear to you Dr Jahns?
 (23) A Yes And we made them clear to every one of our authors
 (24) We told them that above all they are to represent the facts
 (25) and present their professional opinions and there was no

Vol 31 5509

- (1) question about that
 (2) Q Did you ever hear from anybody in your group that worked
 (3) for Exxon that did - or participated in one of these papers
 (4) that they were asked to ever change a fact?
 (5) A No
 (6) Q Were they ever asked to change or modify an opinion?
 (7) A No
 (8) Q And of the people who worked on these papers who did not
 (9) work for Exxon but had been hired by Exxon were they ever
 (10) asked to change a fact?
 (11) A No
 (12) Q Or a conclusion?
 (13) A No
 (14) Q Or to modify it in any way?
 (15) A No
 (16) Q As a matter of fact Dr Jahns doesn't Mr Jamn have the
 (17) process upside down?
 (18) A Yes
 (19) Q Tell the Ladies and Gentlemen of the Jury exactly what this
 (20) process was
 (21) A As I viewed it from my viewpoint the process of having
 (22) the paper reviewed as it's called or circulated or read by
 (23) people that needed to know about it had two purposes One
 (24) was
 (25) to see whether these people could understand what the
 (26) scientists had written They had many comments or
 (27) suggestions

Vol 31 5510

- (1) for writing it better clarifying better Many of the people
 (2) that read it are better writers than some of the scientists
 (3) that wrote the papers
 (4) And second was these people understood what the facts and
 (5) conclusions were that we were drawing and if they had different
 (6) ideas about these facts and conclusions they had to change
 (7) their ideas about that because the facts couldn't be changed
 (8) and it would be stupid to suggest to do it because we all look
 (9) at the same data There's nothing to hide
 (10) Q As a matter of fact Dr Jahns when you and your
 (11) colleagues the scientists worked on collecting and analyzing
 (12) this data and then worked on publishing this data what was
 (13) your expectation about what kind of review it was going to
 (14) receive in the United States of America outside of Exxon?
 (15) A Well it would get peer review in the scientific community
 (16) and we hoped it would be read as widely as possible
 (17) Q And as a matter of fact didn't you know that if you made a
 (18) single mistake that there were going to be literally hundreds
 (19) of thousands of people looking for that mistake?
 (20) A Yes
 (21) Q And you couldn't afford to make one?
 (22) A That's right, we could not afford to make any mistakes
 (23) MR SANDERS No further questions
 (24) THE COURT Thank you sir You may step down
 (25) MR NEAL Your Honor we call Dr David Page

Vol 31 5511

- (1) THE CLERK Would you raise your right hand please
 (2) sir
 (3) (The Witness Is Sworn)
 (4) THE CLERK Please be seated For the record sir
 (5) state your full name, your address and spell your last name
 (6) please
 (7) THE WITNESS My name is David Sanborn Page, P A G E
 (8) I live at 29 Magean M A G E A N Street Brunswick Maine
 (9) DIRECT EXAMINATION OF DR DAVID PAGE
 (10) BY MR NEAL
 (11) Q It is Dr Page is it not?
 (12) A Yes it is
 (13) Q How are you employed presently Dr Page?
 (14) A I m a professor of chemistry and biochemistry at Bowdoin
 (15) College in Brunswick Maine I also direct a research group at
 (16) Bowdoin College called the hydrocarbon Research Center that
 (17) deals with environmental matters
 (18) Q How long have you held these positions as professor of
 (19) chemistry and biochemistry at Bowdoin and as director of the
 (20) Hydrocarbon Research Center at Bowdoin?
 (21) A Since 1974
 (22) Q Let me skip a moment and go to ask you the positions or
 (23) teaching positions you have held, if any, prior to 1974?
 (24) A Prior to 1974 I taught for three years at Bates College in
 (25) Lewiston Maine and I had a position as a teaching postdoc at

15

Vol 31 5512

- (1) Purdue for a year prior to that
 (2) Q And these were – these two positions prior to your 20
 (3) years at Bowdoin were in what area sir?
 (4) A Those positions were in the area of chemistry and
 (5) biochemistry as well
 (6) Q Now Doctor would you tell us about your formal education?
 (7) A I got my bachelors degree in chemistry from Purdue
 (8) University – Purdue I got any bachelors degree in chemistry
 (9) from Brown University in 1965 Then I went on to Purdue
 (10) University where I got my Ph D in 1970 in chemistry where I
 (11) did my research in the area of biochemistry
 (12) Q All right Now you said your current position is professor
 (13) of chemistry and biochemistry One more time tell us what
 (14) biochemistry is?
 (15) A Biochemistry is the chemistry of living organisms It s
 (16) chemistry as it s applied to understanding life processes
 (17) Q Have you – Doctor, have you published in the area of
 (18) biochemistry?
 (19) A Yes I have
 (20) Q Approximately how many publications in that area?
 (21) A Out of a total of about 60 some odd publications
 (22) approximately half are in the area of biochemistry of one sort
 (23) or another
 (24) Q So about 30 publications in the area of biochemistry?
 (25) A Yes

Vol 31 5513

- (1) Q Now we have mentioned a term here and I never got
 (2) straightened out on it peer review You want to publish an
 (3) article in your area of expertise and you want it – is peer
 (4) review something you d like to have done?
 (5) A I think peer review is very important because it provides
 (6) the author of any article even a report to a government
 (7) agency with very valuable feedback that helps make it better
 (8) Q Well what does peer review mean? Does that mean your
 (9) equals in your – in your field review it and say this is
 (10) baloney or this is good stuff or right on man or what s the
 (11) purpose of that?
 (12) A Well what it is, it s people who are technically competent
 (13) to evaluate what you re saying and what you ve written that
 (14) give their best effort in doing a critical evaluation of what
 (15) you re trying to say and what your conclusions are and again,
 (16) it s a way to make whatever you ve written better
 (17) Q So they critique your work, your hypotheses your tests of
 (18) your hypotheses your conclusions et cetera is that correct?
 (19) A Yes
 (20) Q If a magazine in your field asked you to submit a scholarly
 (21) paper and to have it peer reviewed and you had it you
 (22) submitted it for peer review and your peers didn t like it,
 (23) what happens to – what happens to that? Do you go ahead and
 (24) accept it or is it up to the publication to the magazine or
 (25) journal?

Vol 31 5514

- (1) A If the reviewers of an article or report find that there
 (2) are things that need revision or there are things that they
 (3) don t agree with then the editor or the manager who you re
 (4) writing the report to sends it back to you with their comments
 (5) and what you do is you respond to those comments in good
 (6) faith You revise the manuscript and then you send it back
 (7) Q Okay Now how many of these 30 some publications in the
 (8) area of biochemistry have you had submitted through the
 (9) process
 (10) of peer review as you ve described?
 (10) A Well, all of them in one way or another have gone through
 (11) peer review
 (12) Q Now Dr Page, you were asked by Exxon to do some work
 (13) on
 (13) the Exxon Valdez oil spill is that correct?
 (14) A Yes
 (15) Q Before we get to that however have you done work on oil
 (16) spills prior to the Exxon Valdez spill?
 (17) A Yes I have
 (18) Q Over what period of time?
 (19) A I ve been working on oil spill studies their fate and
 (20) effects for the last 20 years in collaboration with a
 (21) colleague at Bowdoin College
 (22) Q Would you identify for the Ladies and Gentlemen of the Jury
 (23) some of the oil spills that you ve worked on?
 (24) A Well, first oil spill I worked on was the Tomano spill
 (25) (ph), which occurred in Casco Bay, Maine right on my
 doorstep,

Vol 31 5515

- (1) in 1974 Then I went on did a big project with the Amoco
 (2) Cadiz oil spill in Brittany France over a period of a number
 (3) of years and then I've of course worked on the fate and
 (4) effects of the Exxon Valdez oil spill
 (5) In addition to those three I've worked on at least a dozen
 (6) oil spills during the last 20 year period
 (7) Q And you have worked on them to study the fate and effects
 (8) is that correct is that what you mentioned?
 (9) A Yes
 (10) Q Tell us what you mean by the fate and effects of an oil
 (11) spill
 (12) A Well we talk about fate and effects because there's really
 (13) two things you have to think about when you're studying an oil
 (14) spill There's the fate in other words what happens to the
 (15) oil once it reaches the environment because petroleum
 (16) changes
 (17) on exposure to the environment and therefore you know that's
 (18) a chemical problem You have to study the chemical changes
 (19) that take place in the oil over a time as it naturally breaks
 (20) down in the environment
 (21) The fate (sic) side of the equation is what is the oil
 (22) doing to marine plants and animals
 (23) Q You said the fate side -
 (24) A The fate side
 (25) Q Is that the fate side what it's doing to plants and
 (26) animals?

Vol 31 5516

- (1) A I'm sorry the effect side Thank you Mr Neal The
 (2) effect side of the equation is what effect is all this having
 (3) on marine plants and animals in the spill zone and of course
 (4) the effect side changes because the petroleum changes with
 (5) time and therefore it's a chemical problem the fate side
 (6) and a biological problem the effect side and you really have
 (7) to mesh the two very closely if you are going to understand
 (8) what's really happening at an oil spill site
 (9) Q Now other than this employment for Exxon have you
 (10) worked
 (11) for other members of the oil industry?
 (12) A Yes, I have
 (13) Q Would you tell us, identify some of those for us?
 (14) A Well we've worked with the Mobil Foundation Mobil Oil
 (15) Foundation worked with the Arco Foundation worked with
 (16) Exxon
 (17) Production Research I've worked with the American Petroleum
 (18) Institute over the years
 (19) Q Have you also worked for various governmental agencies or
 (20) entities?
 (21) A Yes I have
 (22) Q Would you give us some of those the governments you've
 (23) worked for?
 (24) A Well first and foremost over the years I've worked very
 (25) closely with the State of Maine in many ways which is my home
 (26) state In addition I've worked with the British government
 (27) and I've work with the U S government

Vol 31 5517

- (1) Q All right Now Dr Page have you been accepted as an
 (2) expert in chemistry and biochemistry in the United States
 (3) including an expert in the fate and effects of oil spills?
 (4) A Yes I have
 (5) Q Has that been in United States district courts like this
 (6) one?
 (7) A Yes it has
 (8) Q And have you been accepted as an expert in administrative
 (9) proceedings in the United States?
 (10) A Yes I have
 (11) MR NEAL May it please the Court I offer or tender
 (12) Dr Page as an expert in the fields of chemistry and
 (13) biochemistry including therein as an expert in the fate and
 (14) effects of oil spills
 (15) MR O NEILL We have no objection to his
 (16) qualifications and express only a concern that his testimony
 (17) not be cumulative of the last two hours
 (18) MR NEAL Well I'll do my best not to be cumulative
 (19) at all Obviously it touches on that but I'll do my best I
 (20) certainly want to get him out of here as well I'll move on
 (21) THE COURT The witness qualifications are accepted
 (22) BY MR NEAL
 (23) Q Dr Page what - in this case what were you asked by
 (24) Exxon to do?
 (25) A I was asked to study the intertidal shorelines of Prince

Vol 31 5518

- (1) William Sound and subtidal areas in Prince William Sound to
 (2) determine the remaining effects of the spill on those areas
 (3) Q Now you say shorelines You use shorelines and the
 (4) intertidal areas to mean the same thing?
 (5) A Yes
 (6) Q Okay So the shorelines or intertidal areas and the
 (7) subtidal area is that correct?
 (8) A Yes
 (9) Q And when you say subtidal areas you mean that area that is
 (10) below the water when the water is at low tide?
 (11) A Yes
 (12) Q Now did you have others helping you Dr Page?
 (13) A Yes I did
 (14) Q Would you very briefly identify some of those people who
 (15) helped you in this process and a brief very brief description
 (16) of their expertise?
 (17) A Well over the years since we engaged in many studies
 (18) I've worked with many people but to keep it short first and
 (19) foremost there's my colleague of long standing Dr Ed
 (20) Gilfillan is who is a marine ecologist at Bowdoin College
 (21) then Dr Paul Boehm who is a chemist at Arthur D Little Dr
 (22) Greg Douglas who is a chemist at Batel Ocean Science (ph)
 (23) there's Dr Jerry Neff who is a toxicologist at Batel Ocean
 (24) Science there's Dr Bentz who is an analyst at Exxon
 (25) Production Research

Vol 31 5519

- (1) And again this is just a few of the many people and groups
 (2) that I've worked with
 (3) Q All right Now I meant to ask you over what period of
 (4) time did your work for Exxon in this case cover?
 (5) A Well, the period of time that I worked with Exxon on this
 (6) was from 1990 to the present time
 (7) Q To as we sit or stand here today?
 (8) A Yes
 (9) Q From '90 to mid '94?
 (10) A Yes
 (11) Q All right Now you were asked by Exxon to determine the
 (12) fate and effects of the oil spill in respect to Prince William
 (13) Sound, is that correct?
 (14) A Yes
 (15) Q How did you go about your work?
 (16) A Well as part of a number of scientific studies that we
 (17) did I visited over 129 locations in Prince William Sound many
 (18) of them more than once
 (19) Q Let me stop you right there At my request, did you
 (20) prepare a map reflecting the areas you visited in Prince
 (21) William Sound as a part of your work?
 (22) A Yes, I did
 (23) Q I show you Defendants Exhibit 8986 - it was admitted in
 (24) evidence this morning I believe - and ask you what that
 (25) reflects? We'll hold it here for you We'll use this only one

4c 5

Vol 31 5520

- (1) time
 (2) A Okay what that shows is the little dayglow dots simply
 (3) represent all of the shoreline locations that I visited at
 (4) least once in Prince William Sound I'm sorry that the poster
 (5) is so floppy If you look some of the sites that I visited
 (6) were so close together that it appears like I did a lot of
 (7) diving in the middle of Prince William Sound but in fact that
 (8) just represents a lot of closely spaced locations on the north
 (9) end of LaTouche Island
 (10) Q So each spot here represents a site you visited?
 (11) A Yes
 (12) Q At least once?
 (13) A Yes
 (14) Q And these that look like they're out in the water or out in
 (15) the water there on the chart are simply because they'd just be
 (16) on top of each other if you put them on LaTouche Island okay
 (17) is that correct?
 (18) A Yes
 (19) Q Now we know from everybody that's told us that here we had
 (20) a - here we had a grounding and the oil spill without trying
 (21) to be precise at all came in the direction of your dots
 (22) correct?
 (23) A Yes
 (24) Q But I do notice that you have a dot up here that's -
 (25) Judge I hope I'm right Tatitlek Tatitlek?

Vol 31 5521

- (1) THE COURT Probably
 (2) MR NEAL Go ahead and say it out loud
 (3) MR SELNA Tatitlek
 (4) MR NEAL Okay, I can't see it and I can't pronounce
 (5) it
 (6) BY MR NEAL
 (7) Q Why did you go up there?
 (8) A Well that was a beach near the village of Tatitlek that
 (9) Mr Bush had visited in 1994 We had some pictures of rocks
 (10) from that beach that had tar spots on them and we wanted to go
 (11) back and visit the same place that he visited and see what that
 (12) beach was really like
 (13) Q Okay let me put this away now Now you visited these 129
 (14) sites in Prince William Sound you said at least once I guess
 (15) some you visited more than once?
 (16) A Yes
 (17) Q And this is a period from 1990 to 1994 correct?
 (18) A Yes
 (19) Q All right Go ahead and tell us what you did, then,
 (20) carrying out your work just your processes
 (21) A Well, the studies that we did really fall into two phases
 (22) In 1990 and 1991, we did a very extensive and rigorous
 (23) scientific study of the shorelines of Prince William Sound and
 (24) what that involved was visiting 64 randomly chosen shoreline
 (25) locations in Prince William Sound Of these 64 48 of these

Vol 31 5522

- (1) shoreline areas had been oiled and 16 had never gotten any
 (2) oil And the reason you visit unoiled locations is so that you
 (3) can understand what oiled locations should look like when
 (4) they've recovered
 (5) The shorelines that we visited in this random site study
 (6) were selected with the aid of a computer data base that had the
 (7) shoreline of the Sound in it and we were able to select sites
 (8) over a range of oiling levels and range of shoreline types
 (9) again, in a random unbiased manner
 (10) In addition to this random study -
 (11) Q Hold on just a minute You said a variety - you selected
 (12) them for a variety of oiling That means heavy moderate,
 (13) light?
 (14) A Yes
 (15) Q And you said you selected them to cover the nature
 (16) reflecting the shoreline of Prince William Sound?
 (17) A Yes
 (18) Q You mean we've heard bedrock boulder cobble and those
 (19) kind of areas that exist in Prince William Sound?
 (20) A Yes
 (21) Q So you wanted to cover them all?
 (22) A We wanted to do as comprehensive a job as possible
 (23) Q All right Now you've talked about 64 sites and you
 (24) started to say something else?
 (25) A Well at the same time we were doing that study in 1991, we

Vol 31 5523

- (1) also felt it was important not to miss studying heavily oiled
 (2) locations So we had in addition to these 64 locations 11
 (3) worst case places that were heavily oiled and that we've all
 (4) heard about here and we studied those sampled them in 1990
 (5) and 1991, and what we did at all of these sites that I just
 (6) described is that the sampling teams would go out take
 (7) samples biological samples from many places on the beaches
 (8) take samples of sediment take samples of water take samples
 (9) for testing the toxicity of the sediment to marine life These
 (10) samples we took back to the laboratory We analyzed them in
 (11) many different laboratories We reviewed the results We
 (12) analyzed the results in order to determine what remaining
 (13) effect the spill had on the shorelines in 1990 and 1991
 (14) Now that was sort of the first phase now
 (15) Q That's stage one?
 (16) A Right
 (17) Q What about stage two did you do anything else?
 (18) A Well in stage two in the second phase beginning in 1992
 (19) our effort was more directed toward shoreline surveys and
 (20) shorelines that we surveyed in 1992 1993 and this year
 (21) included the 11 worst case places that we had started to visit
 (22) in 1990 and in addition we visited many of the places that
 (23) Dr - or Mr Bush surveyed as part of his studies again to
 (24) broaden our understanding of what was going on in the Sound
 (25) And at all of those sites that we surveyed it was our practice

Vol 31 5524

- (1) to get there at low tide so we could look at the whole beach
 (2) not just the top part of it and really do a thorough job
 (3) digging pits in the beach and examining it as carefully as we
 (4) could
 (5) Q All right Now you've talked about the intertidal areas
 (6) What did you do with respect to the subtidal areas? You said
 (7) you were asked to look at both in your work
 (8) A Yes In 1990 and 1991 we did an extensive subtidal
 (9) sampling involving the collection of over 2400 sediment
 (10) samples
 (11) from subtidal areas in Prince William Sound and in the Gulf of
 (12) Alaska These samples came from locations near heavily or
 (13) near
 (14) shorelines of all sorts in water as shallow as six feet and
 (15) some of the samples we took in the middle of the Sound in very
 (16) deep waters off in the Gulf of Alaska
 (17) We again had the sediment samples sent off to be analyzed
 (18) for hydrocarbons We also had some of the - many of those
 (19) subtidal sediment samples tested to see whether they were
 (20) toxic
 (21) to marine animals and it turns out that we didn't do subtidal
 (22) studies after 1991
 (23) Q Let me - let me take the admonition of my friend Mr
 (24) O'Neill here and try not to be too repetitive Let me do as
 (25) they say in Hollywood let's cut to the chase You know what
 (26) that means?
 (27) A Yes
 (28) Q What does that mean?

Vol 31 5525

- (1) A It means get to the bottom line and summarize what we're
 (2) trying to say
 (3) Q Doesn't that mean in the old cowboy movies that some of us
 (4) used to see on Saturday afternoon at the movie if you cut to
 (5) the chase you end up with a huge chase where the good guys
 (6) are
 (7) chasing the bad guys or the bad guys are chasing the stage
 (8) coach and all that well let's cut to the chase in this case
 (9) and ask you this based on your work and using your
 (10) knowledge
 (11) and your experience have you reached any opinions as to the
 (12) remaining effects as we sit here today the remaining effects
 (13) of the spill on the shoreline or intertidal areas of Prince
 (14) William Sound?
 (15) A Yes I have
 (16) Q What is that opinion or opinions?
 (17) A As we sit here today in 1994 the shorelines of Prince
 (18) William Sound have largely recovered from the spill
 (19) Q Do you have any opinion as to whether the spill as we -
 (20) as we sit here today has any remaining effect on the plant and
 (21) animal life - or I'll use this new word I've learned learned
 (22) from Mr Sanders biota - biota in Prince William Sound?
 (23) A Yes I do
 (24) Q What is that opinion?
 (25) A Again my opinion is that whatever remaining traces of oil
 (26) that exist in Prince William Sound on the shorelines even in
 (27) beaches that had been heavily oiled are in a form and are in

Vol 31 5526

- (1) places where they're not available to biota marine plants and
 (2) animals and therefore aren't exerting any remaining adverse
 (3) effect
 (4) Q When you say not available is that another term called
 (5) bioavailability?
 (6) A Yes
 (7) Q Now That's as to the intertidal areas or the shorelines
 (8) that we've discussed What about the - what about have you
 (9) reached any opinion based on all the above about the
 (10) remaining
 (11) effects of the spill on the subtidal areas of Prince William
 (12) Sound?
 (13) A Yes, I have
 (14) Q And what is that opinion?
 (15) A Well, by 1991 our study showed that first of all very
 (16) little oil that could be attributed to the spill got down into
 (17) the sea floor of Prince William Sound even in nearshore
 (18) subtidal areas in shallow water Our toxicity studies testing
 (19) sediment samples with animals showed that what residues
 (20) were
 (21) present in some nearshore subtidal locations didn't pose a
 (22) widespread threat to biota in 1991
 (23) Now we're 1994 two years - three years later and
 (24) therefore I say that there is no longer any adverse effect
 (25) whatever it might have been to subtidal biota attributable to
 (26) the spill as of today
 (27) Q Now Doctor, to make it clear what you're talking about is

Vol 31 5527

- (1) the way the Sound is today? You're not discussing or denying
 (2) the fact that the spill had damage and all of that? You're
 (3) talking about the Sound as it is today in your opinion?
 (4) A That's right. Nobody in this room would deny that there
 (5) was damage in '89.
 (6) Q Now then, let me change and move on quickly. Mr. Bush
 (7) testified in this case regarding certain areas of Prince
 (8) William Sound, some ten areas, six of which he shows as
 heavily
 (9) oiled areas in Prince William Sound. Have you read his
 (10) deposition and testimony in this case?
 (11) A Yes, I have.
 (12) Q All right. Six of these sites were heavily oiled. Have
 (13) you been to these nine or ten sites?
 (14) A I've been to eight of the ten sites.
 (15) Q And when did you go to eight of those ten sites?
 (16) A Well, I went to them in 1993 and then I returned to them in
 (17) 1994.
 (18) Q Have you been to eight of those ten sites as recently as
 (19) 1994?
 (20) A Yes, I have.
 (21) Q Have you been to them as recently as this month?
 (22) A I was at some of the sites as recently as June 22nd, 1994.
 (23) Q All right. Why did you only go to eight of them?
 (24) A The reason we only went to eight of them was that two of
 (25) the sites, one at east Chenega Island and another site on east,

Vol 31 5528

- (1) LaTouche Island, the survey parties working with Mr. Bush
 (2) reported them to be virtually oil free by 1994, and therefore,
 (3) we felt no compelling reason to visit them.
 (4) Q All right. Now let's take them, let's start with six of
 (5) the most heavily oiled sites in Prince William Sound and let's
 (6) start with Point Helen first. Do you have -- and Point Helen's
 (7) on Knight Island, am I correct about that?
 (8) A Yes.
 (9) Q I'm beginning to learn something about the Sound. Do you
 (10) have a picture taken of Point Helen immediately after the spill
 (11) in 1989?
 (12) A Yes, I do.
 (13) Q I show you what is now in evidence as Defense Exhibit 1095
 (14) and ask -- and ask if you recognize that? Can the Members of
 (15) the Jury see this? Can you see that now? What is 1095?
 (16) A 1095 is a view of the east shore of the southern tip of
 (17) Knight Island known as Point Helen.
 (18) Q And this is the way it looked immediately after the
 (19) spill --
 (20) A Yes.
 (21) Q -- in '89, all right. Let's put that right over here now
 (22) and ask you, I believe you said you visited Point Helen
 (23) recently, this year?
 (24) A Yes.
 (25) Q Did you have pictures taken of Point Helen when you visited

Vol 31 5529

- (1) this year?
 (2) A Yes.
 (3) Q Let me show you first Defense Exhibit 8941, which has been
 (4) admitted in evidence, and ask if you will tell the Members of
 (5) the Jury what this reflects? Everybody see that? Okay, what
 (6) is -- what is shown on Defense Exhibit 8941?
 (7) A What is shown is the southern tip of Knight Island showing
 (8) the entire area of Point Helen.
 (9) Q All right. At my request, did you have another picture
 (10) made that is a blown up portion of a portion -- or of Defense
 (11) Exhibit 8941?
 (12) A Yes.
 (13) Q I show you what is in evidence as Defense Exhibit 8940 and
 (14) ask if you recognize that?
 (15) A Yes, I do.
 (16) Q Could you -- could you -- may the witness come down. Your
 (17) Honor? If we can't see this, we'll do something else. We'll
 (18) get it somewhere. If anybody can't see that, let me know.
 (19) Would you --
 (20) A Could we move the things forward?
 (21) Q Doctor, would you tell the Ladies and Gentlemen of the Jury
 (22) now or explain or point out, point out on 8941 the portion
 (23) that's shown in 8940.
 (24) A Can everybody see this? Okay, if you look at this large
 (25) scale view, see this -- these rocks here and this beacon here

Vol 31 5530

- (1) and these rocks here and these rocks here and this beach here
 (2) and now we'll look over here and you can see here's the
 (3) beacon, here's those left hand rocks, here's the right hand
 (4) rocks and here's this sort of catcher's mitt shape bedrock
 (5) outcrop right down there. So this is a blowup of that beach
 (6) right there.
 (7) Q Let me do one more thing, and we probably won't have this
 (8) many pictures with the next one, let me show you Defense
 (9) Exhibit 1091 (sic) and let me ask you to point out on both
 (10) 8941 and 8940 the area that's reflected in Defense Exhibit
 (11) 1091 (sic) which is this oiled beach, a picture of the oiled
 (12) beach immediately after the spill. Now show the Members of
 (13) the Jury as of 1994 this area on those two maps.
 (14) A What you're seeing in that picture is the beacon here in
 (15) the sort of upper middle of the picture. You're seeing this
 (16) rock in the left hand side of the picture on the beach, that's
 (17) this rock here, and so the view is across the surface of this
 (18) beach here. So this is -- you're looking south.
 (19) Q Okay.
 (20) A And you wish me to identify on this also?
 (21) Q Sure, go ahead and do it on here, too.
 (22) A Again, here's the beacon, here's the beacon here. This
 (23) rock here is this rock right here. Doesn't show up as well on
 (24) this picture. And we're looking across this beach in this
 (25) direction here.

Vol 31 5531

- (1) Q Okay Now let s take this away Thank you gentlemen
 (2) Let s go forward here then
 (3) Doctor did you conduct a detailed investigation of Point
 (4) Helen on Knight Island?
 (5) A Yes I did
 (6) Q Would you tell the Ladies and Gentlemen of the Jury what
 (7) you found?
 (8) A Well the picture says it all When you look at this
 (9) picture what we found was basically a very clean good looking
 (10) site And again this picture says it all We found a very
 (11) clean looking site
 (12) Q What did you find in the way of plant and animal life?
 (13) A Well we found a lot of plant and animal life If you look
 (14) along the shoreline here you see all this dark colored stuff
 (15) What that is because this is at low tide is a very dense
 (16) cover of fucus seaweed kelp In fact it makes it hard to
 (17) get out of the boat to walk through this stuff
 (18) In addition if you dig around in the beach lift the
 (19) stones aside in the middle and lower intertidal zone again
 (20) you find all kinds of critters living in that beach
 (21) Q All right Now let me - let me show you something along
 (22) I m pointing to the far right edge in the water of Defense
 (23) Exhibit 8941 What is that? Is that oil?
 (24) A You often see in any body of water - in fact you can see
 (25) it in Cook Inlet walking along the little path these wind and

Vol 31 5532

- (1) current patterns that just appear on the water surface And so
 (2) this isn t oil streaming off the beach It s just a natural
 (3) wind and current pattern
 (4) Q Doctor did you find oil -
 (5) A Yes I did
 (6) Q - on or in Point Helen?
 (7) A Yes I did
 (8) Q Where did you find the oil and how did you find it?
 (9) A Well let s first go to the large scale map and I ll say
 (10) that we surveyed this beach very intensively
 (11) Q Because that s what they ve seen as heavily oiled?
 (12) A That s right and we also surveyed this area by this rock
 (13) sticking out on the beach in 1994 Now I ll also say that
 (14) right here sort of in the V of this groove here is the area
 (15) that Mr Bush surveyed and visited And what we did was we
 (16) surveyed the upper part Perhaps I ll go to this map here
 (17) because - or this view it shows it better Where you see all
 (18) of these large logs that have been thrown up by the action of
 (19) the waves and in here if you walk along you can find at
 (20) intervals rocks with a little bit of surface coat on them
 (21) Q Coat of oil?
 (22) A It s the exception not the rule
 (23) Q Okay
 (24) A Okay So there s a little bit of surface stuff up here
 (25) but it s like a coating on a rock and it s abraded It s

Vol 31 5533

- (1) almost worn away If you look upon the line here that s made
 (2) by the seaweed from the high tide we dug a line of pits here
 (3) here here and here and we also dug one down here looking
 for
 (4) subsurface oil and what you find is that there is subsurface
 (5) oil at this place but it s localized behind this bedrock
 (6) outcrop and it s in an area about 10 by a hundred meters in
 (7) here and because -
 (8) Q Ten by a hundred meters?
 (9) A Ten by a hundred meters which is roughly the area that I m
 (10) tracing with my finger here and pits dug around here had no
 (11) subsurface oil Pits dug around here had no subsurface oil
 (12) Pits dug right in here had subsurface oil and you d expect to
 (13) find it there and the reason you expect to find it is that
 (14) this bedrock outcrop here protects this little area of the
 (15) beach from wave action and what that means is that whatever s
 (16) down there is just being worked out at a slower rate than the
 (17) stuff here and here which is long gone
 (18) And if you look at the overall view of Point Helen you can
 (19) see that this feature of the beach that s caused this condition
 (20) to exist isn t duplicated anywhere on the - you know several
 (21) miles of shoreline here And in fact when we surveyed it up
 (22) here we found little - very little subsurface oil We found
 (23) just a little bit of oil sheen in an area right here by this
 (24) rock
 (25) Q You re pointing now to 89 - Defense Exhibit 8941?

Vol 31 5534

- (1) A That s right
 (2) Q Far right side on the beach?
 (3) A That s correct So it s fair to say that along this whole
 (4) stretch of beach it s pretty well - subsurface oil is pretty
 (5) well gone because it s exposed but it s protected here so it
 (6) takes a little longer to go away
 (7) Q All right Now we ll leave this now and ask you this you
 (8) have said that you found some traces of surface oil on rocks
 (9) and some small portions of subsurface oil on Point Helen one
 (10) of these heavily oiled areas correct?
 (11) A Yes
 (12) Q Do you have an opinion whether the oil remaining residue
 (13) of oil that you had found do you have any opinion whether that
 (14) oil has any remaining affect on the plant and animal life in
 (15) that area?
 (16) A Yes I do
 (17) Q What is that?
 (18) A As this picture shows whatever remaining oil present in
 (19) this site, oil residues it s in a form and in a location
 (20) that s not available to the marine life along this coast and
 (21) therefore there s no remaining adverse effect to plants and
 (22) animals out here
 (23) Q Again we re talking about as of today is that correct?
 (24) A As of 1994
 (25) Q Now let s take another one of those six heavily oiled

Vol 31 5535

- (1) sites Sleepy Bay, did you visit Sleepy Bay in 1994?
 (2) A Yes I did
 (3) Q By the way Doctor do you have a picture of Sleepy Bay immediately after the spill?
 (4) A Yes I do
 (5) Q I show you what has been marked or is in evidence now as Defense Exhibit 1441 and ask if you recognize that?
 (6) A Yes I do
 (7) Q What is that?
 (8) A It represents a portion of the shoreline in Sleepy Bay as of 1991 (sic), and as you can see this shoreline was heavily oiled Here s the black oiling up here And the lower intertidal zone isn t as heavily oiled, therefore it appears light
 (9) Q All right Now, when you visited Sleepy Bay in 1994, this year did you have a picture made of Sleepy Bay?
 (10) A Yes I did
 (11) Q I show you what has been marked as Defense Exhibit 8936 and ask if you recognize - if you recognize this?
 (12) A Yes I do
 (13) Q What is this?
 (14) A Can everybody see this all right or should we put it on the podium?
 (15) Q Why don t we put it up here You hold that and I ll do this Okay

Vol 31 5536

- (1) A There Is that all right?
 (2) Q Okay Now this is a picture that you took or had taken of Sleepy Bay the same area over there is that correct in 1994?
 (3) A Yes
 (4) Q Now again, would you tell us what area - would you identify on this exhibit 8936 the area of oiling there that you see on the previous exhibit?
 (5) A Okay I d like you to kind of key in on this outcrop of rocks here that s exposed at low tide with all the seaweed and mussels on it And that outcrop is shown here as sort of this thing sticking out and so what we re doing at Sleepy Bay is we are standing roughly here and we re looking out across this whole area here and so that the beach in the foreground shown there is this part here and then we re going around the point
 (6) Q Doctor this picture over here as I understand it then Defense Exhibit 1441 is a picture of Sleepy Bay immediately after the oil spill in 1989?
 (7) A Yes
 (8) Q I think you may have misspoke yourself
 (9) A I m sorry This is a 1989 picture
 (10) Q And this one is a 1994 picture?
 (11) A And that is a 1994 picture
 (12) Q All right Did you investigate in some detail then other than taking this picture did you investigate in some detail Sleepy Bay, which is again one of these six heavily oiled

Vol 31 5537

- (1) sites?
 (2) A Yes I did
 (3) Q And what did you find?
 (4) A Well again, like Point Helen what I found was that this is a basically very clean very good appearing site This picture accurately represents what this site is like in 1994
 (5) Q Did you find it - did you dig around whatever you could do did you find any oil?
 (6) A Yes I did
 (7) Q Where did you find the oil?
 (8) A Well this ll take some time because Sleepy Bay s a big place
 (9) Q Just generally because we want to move on try to point out where you found the oil, how you went about finding the oil
 (10) A Our survey started in this location here on the eastern side of Sleepy Bay surveying this area carefully and then moving on to the salmon stream by the sailboat here and then I walked this entire shoreline and surveyed it all the way out to the tip of the point
 (11) Now there are only a few places left in Sleepy Bay where there s significant quantities of remaining oil residues and I ll point them out to you The area around the salmon stream is clean You find no oil residues around the salmon stream
 (12) This area here has some oil residues amongst the rocks and

Vol 31 5538

- (1) boulders in the upper part of the beach
 (2) In addition we found an area of tar about the size of a card table right around here Some of these rocks up in through this area which was very hard hit have some of that coat with spruce needles adhering to it in the back but they re eroding and going away
 (3) All throughout here I didn t see any oil residues at all until I got to this place right here which again has a deposit of oil residues amongst the rocks at the top of the beach
 (4) This is an area of boulders that don't get worked over very much
 (5) Through here there s some patches of you know like asphaltic material sort of driveway type stuff and we dug a line of pits down this beach and found some oil residue near the top of the beach in one of the pits here and another little patch of sheen down here but in general there s no surface oil residue up here except for this asphaltic material
 (6) Finally, I found a few spots of asphalt in and amongst the rocks at the top of this - but at this whole area here in the lower intertidal zone where all the critters and plants are was oil free
 (7) Q Do you have any opinion as to whether the residue of oil there has any effect on the plant and animal life?
 (8) A No The oil residue is in a place and in a form that it s not causing a problem for the rich plant and animal life that

Vol 31 5539

- (1) you see down in the intertidal zone
 (2) Q Doctor another area of the six heavily oiled sites the
 (3) Bay of Isles did you visit the Bay of Isles in 1994?
 (4) A Yes I did
 (5) Q And do you have a picture of the Bay of Isles taken this
 (6) year?
 (7) A Yes
 (8) Q And again this is another one of the heavily oiled sites
 (9) is that correct?
 (10) A Yes
 (11) Q And I m showing you and the jury Defense Exhibit 39 –
 (12) 8942 and ask if you could tell us what that is?
 (13) A This is an aerial view looking right down the mouth of the
 (14) Bay of Isles The Bay of Isles is probably one of the
 (15) prettiest places in Prince William Sound You can also see the
 (16) wind and current patterns on the surface of the Bay of Isles
 (17) here and what we re looking at in this aerial is we re drawing
 (18) a bead on the site right here that Mr Bush surveyed in 1994
 (19) and earlier years
 (20) Q Is that the marsh that he mentioned?
 (21) A Well it s really a little cove, but they call it a marsh
 (22) Q I show you what is in evidence as – can you read it?
 (23) A This is Exhibit 8943
 (24) Q 8943 and ask you what that reflects
 (25) A This is an eagle s eye view of this area known as the

Vol 31 5540

- (1) quote unquote Bay of Isles marsh looking at it from above and
 (2) to locate it again it s right here on this overall view of the
 (3) Bay of Isles
 (4) Q And this is the spot that Mr Bush investigated and
 (5) discussed here?
 (6) A Yes
 (7) Q Now did you investigate this entire area, including the
 (8) little spot that Mr Bush talked about?
 (9) A Yes I ve – I spent a lot of time in the Bay of Isles
 (10) over the years and I ve spent a lot of time studying that area
 (11) that Mr Bush talked about
 (12) Q And what did you find in your investigation?
 (13) A Well I found that the Bay of Isles, as a whole, is a
 (14) clean beautiful healthy environment and even in this worst
 (15) case place when you look at this eagle s eye view, you can see
 (16) fucus growing there It s a clean appearing site until you
 (17) start looking at it close up
 (18) Q All right Look at it close up and tell us what you
 (19) found
 (20) A Okay Well, in 1994 we surveyed this place with a
 (21) fine toothed comb and dug pits on this area here this little
 (22) mound and found oil residue in only one of six pits that we
 (23) dug
 (24) This area here this marsh or cove has a stream running
 (25) through it here, which runs seasonally and what you see here

Vol 31 5541

- (1) this green area is actually fucus seaweed and we were
 (2) surprised to see that because when I was there in 1991 it
 (3) wasn t there So this is a sign that even this place –
 (4) Q Even this bad place he talked about?
 (5) A Even this bad place is really on the road to recovery And
 (6) when you walk in the middle here around the stream in 1991
 (7) we had oil in our footprints come up By 1994 you didn t have
 (8) that and what you really have now it s like a bathtub ring
 (9) You have sort of deposits of weathered oil and tarry material
 (10) around the edges which again are breaking down by natural
 (11) processes and going away
 (12) We also found some oil residue in this Rocky Point here at
 (13) the mouth of the cove and some pits that we dug Again it
 (14) appears clean and you don t see anything until you dig down
 (15) well below the surface
 (16) And finally in surveying this beach I found one little
 (17) patch of asphaltic material that looked just like dirt until I
 (18) took a second look and it s again asphaltic material on its
 (19) last legs
 (20) Q Doctor I ll ask you the same thing that I ve asked you
 (21) before You found some residue of oil on this badly oiled
 (22) spot Do you have an opinion as to whether this remaining oil
 (23) has any remaining effect as we stand here today or sit here
 (24) today on the plant and animal life in this area?
 (25) A Yes I do have an opinion

Vol 31 5542

- (1) Q What is that opinion?
 (2) A My opinion is is that again outside of certain places
 (3) within this very small area this place here is having no
 (4) overall effect on the plants and animals in the Bay of Isles
 (5) This is just a very little hot spot and even inside here the
 (6) return of biota in this area indicates that whatever s left
 (7) there is having a minimal effect if any
 (8) Q All right Thank you sir
 (9) Another place that s mentioned by Mr Bush one of the
 (10) other six heavily oiled places was north Chenega Now I
 (11) think you apologized to me you don t have a picture of north
 (12) Chenega taken immediately after the spill is that correct?
 (13) A That s correct
 (14) Q However did you visit north Chenega in 1994?
 (15) A Yes I did
 (16) Q And did you investigate the area?
 (17) A Yes I did
 (18) Q Did you find any oil whatsoever?
 (19) A Yes, I did
 (20) Q Where – tell us where you found it – first tell us what s
 (21) the general overall situation with north Chenega
 (22) A Again until 1989, this was a heavily oiled site This
 (23) shoreline was coated with oil This picture clearly
 (24) represents fairly represents the condition of the north
 (25) Chenega site today There is no oil residues visible in this

Vol 31 5543

- (1) picture There is a very clean - in fact it's a very pretty
 (2) place to visit
 (3) Q Did you dig down or what did you do? You said you found
 (4) some oil Tell us what you did to find it and where it was
 (5) A Okay Well again we surveyed this place very
 (6) intensively What we did is starting at the mouth where you
 (7) can see these rocks have a very dense dark green coat of fucus
 (8) along here, seaweed there's darker appearing rocks at the top
 (9) is lichen which is normal for rocks throughout Prince William
 (10) Sound
 (11) Q Lichen is a little animal L I C H E N?
 (12) A Lichen is really a plant and animal living together You
 (13) see this dark bathtub type ring at the top of rocks in marine
 (14) areas that's lichen When you survey this site what you
 (15) find -
 (16) Q Go ahead Can you do it from over there?
 (17) JUROR NUMBER ONE Better go over there
 (18) MR NEAL Yeah come over here
 (19) THE WITNESS What you do when you survey this site
 (20) this is the area that Mr Bush surveyed It's - his study
 (21) site was right in the head of this cove and as you walk down
 (22) the line that he used for his study site you find that the top
 (23) of the beach because the gravel moves around that there
 (24) aren't many critters living there But as you get down you
 (25) find that there's snails mussels fucus That's a very rich

Vol 31 5544

- (1) place And then this dark looking stuff in this little lagoon
 (2) is actually a very dense bed of eelgrass and it's very pretty
 (3) to see
 (4) As you go around here there's - this dark colored part of
 (5) the beach here is actually a very dense mussel bed which we
 (6) also investigated and then very dense cover of seaweed As
 (7) far as oil what we found after a survey is right up in here in
 (8) these rocks there's a little coat eroding away of your
 (9) characteristic spruce needles and sort of I guess you'd call
 (10) it almost asphalt paint It's on its last legs
 (11) In throughout this beach here in very isolated places
 (12) scattered you find what I call eroding asphalt pavement
 (13) little patches maybe the size of your hand or less that look
 (14) like dirt and you can actually crumble them in your hand
 (15) because they're biodegraded patches of asphalt And the only
 (16) place in this whole area that you find subsurface oil in the
 (17) site visited by Mr Bush is right over here There's a little
 (18) spot right in these rocks where you dig down five inches or so
 (19) you can find some oily residue and that's all that's left from
 (20) 1989
 (21) And finally, to be as complete as possible, we went around
 (22) the corner here to this little pocket beach here and this is a
 (23) little gravel bar and we dug around in here and found again
 (24) a little bit of oily material buried under about five or six
 (25) inches of beach material in a short line on the upper

Vol 31 5545

- (1) intertidal zone but that was it
 (2) BY MR NEAL
 (3) Q Let me ask you the same question even though it gets a
 (4) little bit repetitive You found some slight residue of oil on
 (5) north Chenega one of the heavily oiled areas Do you have an
 (6) opinion as to whether that remaining oil has any remaining
 (7) effect as we speak here today on the plant and animal life in
 (8) that area?
 (9) A Yes I do
 (10) Q What is that opinion?
 (11) A Well again the remaining oil is simply not in a place or
 (12) in a form that's available to plants and animals and
 (13) therefore as the picture shows it's not exerting any
 (14) remaining effect on the plants and animals
 (15) Q Now Mr Bush also mentioned Squirrel Island Did you go
 (16) to Squirrel Island in 1994?
 (17) A Yes I did
 (18) Q And this was another heavily oiled site in 1989 is that
 (19) correct?
 (20) A Yes
 (21) Q I show you what is in evidence as Defense Exhibit 8925 and
 (22) ask you to explain come over here explain to the Ladies and
 (23) Gentlemen of the Jury what they're seeing now
 (24) A This is Squirrel Island It's on the west coast of Knight
 (25) Island and this beach was in fact heavily oiled And what

Vol 31 5546

- (1) you're seeing is the site investigated by Mr Bush and his
 (2) workers in 1994 and earlier years
 (3) Q Tell us what we're seeing here What is this in here and
 (4) here and around there?
 (5) A Okay Well what you're seeing here is this dark green
 (6) stuff here and in fact the picture's sufficiently detailed
 (7) that you can see this is a very dense coating of fucus all
 (8) around these rocks in the intertidal zone In fact these dark
 (9) areas here, here and here, are a very dense coating of mussels
 (10) you know growing on the rocks as well
 (11) You don't see seaweed of any kind growing in this part of
 (12) the beach here or over here because the rocks that form the
 (13) beach are smaller and they move around in the waves and it
 (14) really - if you're a bit of seaweed growing on the rock like
 (15) that you have a very short lifetime because you get -
 (16) Q That has nothing - the barrenness here has nothing to do
 (17) with the oil spill is what you're saying?
 (18) A It's simply a function of the type of the beach
 (19) Now other things here's this band of lichen that I
 (20) mentioned earlier that's common throughout beaches like this
 (21) And here we have at the top of the beach, again logs and other
 (22) debris kind of moved up by the storm or by storms in general
 (23) Q Did you find any oil in this area?
 (24) A Yes I did
 (25) Q Where did you find it and how did you find it?

Vol 31 5547

- (1) A Well again we arrived at this site at a low point in the
 (2) tide so that we could survey the entire beach What we did is
 (3) we dug a total of 11 pits throughout this We dug a line of
 (4) pits across the top of the beach where asphaltic material had
 (5) been reported to be buried and we dug a line of pits down the
 (6) line that Mr Bush used to guide his studies of this beach and
 (7) that sort of runs down here
 (8) There were really only two places where you find - well
 (9) three really where you find petroleum residues at this site
 (10) There s a little area right here in this upper corner
 (11) underneath the beach material where you can find some buried
 (12) asphaltic material All throughout here we couldn t find
 (13) anything We dug - we dug around a lot
 (14) When you dig down in this area here you find some holes
 (15) that have some sheen some traces of oil coming into them but
 (16) you don t see any sheening on this beach or any evidence of oil
 (17) when you walk on it without digging holes
 (18) Finally we surveyed this area very carefully and what we
 (19) found was surface coat surface patches of a tarry material
 (20) that weren t related to the spill but were from another
 (21) source
 (22) Q From another source?
 (23) A Yes
 (24) Q Not Exxon oil?
 (25) A Yes

Vol 31 5548

- (1) Q Now again would you say then that this is a - this
 (2) beach like the others we ve gone over have substantially
 (3) recovered from the spill as we speak?
 (4) A The picture says it all
 (5) Q Do you - we have one more here now then of the - what
 (6) do we have left here of the six oiled north LaTouche Your
 (7) opinion sir on the last one the remaining oil would it have
 (8) any remaining effect on plant and animal life in that area?
 (9) A No Again, whatever s remaining in the site is in a
 (10) location and is in a form that it s simply not available to do
 (11) any remaining harm to plants and animals living there
 (12) Q I m going to put one more up and that s all the last of
 (13) the six remaining oils Did you visit north LaTouche Island in
 (14) 1994 and did you have this picture made?
 (15) A Yes
 (16) Q Let me - is that what the jury is seeing now?
 (17) A Yes
 (18) Q Did you investigate this?
 (19) A Yes
 (20) Q What did you find?
 (21) A Again I found that this site which was very heavily
 (22) oiled, this whole northern shore of LaTouche Island which was
 (23) very heavily oiled in 89 looked really good in 1994 The
 (24) picture says all
 (25) Q Did you find any oil?

Vol 31 5549

- (1) A Yes
 (2) Q Without going through what you did to find the oil let me
 (3) go to the bottom line and ask you this and we ll move on Did
 (4) the remaining residue of oil you found on north LaTouche in
 (5) your opinion have any remaining effect on the plant and animal
 (6) life in that area as we speak?
 (7) A No effect as of 1994
 (8) Q All right Now we ve gone through the six heavily oiled
 (9) areas that Mr Bush came in here and talked about and we ve
 (10) seen pictures now of all of them Did you visit other places
 (11) discussed or alluded to by Mr Bush in his testimony here?
 (12) A Yes I did
 (13) Q And would you name some of those?
 (14) A Well we visited as I indicated earlier in this testimony
 (15) we visited the beach near the village of Tattilek I visited
 (16) the north end of Long Island which is a site surveyed by Mr
 (17) Bush I visited Green Island I visited Eshamy Bay the Bush
 (18) study site there I visited Shelter Bay And there s one
 (19) more
 (20) Q Lone Island did you mention that?
 (21) A I mentioned Lone Island
 (22) Q Green Island?
 (23) A Green Island I mentioned that
 (24) Q Tattilek site?
 (25) A Tattilek I mentioned that

Vol 31 5550

- (1) Q Shelter Bay?
 (2) A Shelter Bay
 (3) Q Eshamy Bay?
 (4) A Eshamy Bay and - well that covers it
 (5) Q Did you visit all of those?
 (6) A Yes, I did
 (7) Q Did you see any oil in any of those places?
 (8) A In some of the places I saw remaining residues of oil yes
 (9) Q Did you find oil there that was not Exxon oil?
 (10) A Yes I did
 (11) Q Whether or not it was Exxon oil in fact you told me I
 (12) believe in two of them of the places had oil that was not
 (13) Exxon oil at all is that correct?
 (14) A Yes
 (15) Q Whether or not it was Exxon oil do you have any opinion
 (16) whether the traces or residue of oil found in these areas
 (17) you ve just now discussed and I won t take the time to go over
 (18) them has any remaining effect on the plant and animal life in
 (19) those areas?
 (20) A You know again you know whatever isolated residues are
 (21) left they re just simply in a form and they re in you know
 (22) locations where they can t do any harm to living things plant
 (23) or animal
 (24) Q Doctor, it is your opinion and we ve fairly gone through
 (25) and told in these heavily oiled areas where you can find

Vol 31 5551

- (1) residue of oil is it your opinion that notwithstanding there
 (2) are some remaining residues of oil in certain spots in Prince
 (3) William Sound that were heavily oiled that the Sound as we
 (4) speak today has substantially recovered?
 (5) A Absolutely Again -
 (6) Q And do the pictures tell the story?
 (7) A Absolutely
 (8) Q And they are in evidence?
 (9) A Yes
 (10) Q Now you've testified that there were remaining residues of
 (11) oil in Prince William Sound and I'll try to go through this/
 (12) quickly because unknown to us Doctor it was covered some
 (13) this morning
 (14) Does oil exist naturally in the coastal areas of southern
 (15) California including Prince William Sound?
 (16) MR O NEILL Southern Alaska
 (17) MR NEAL I mean southern Alaska
 (18) MR O'NEILL Did you spill oil in California too?
 (19) MR NEAL You'd be down there hunting it if we did
 (20) You'd be down there chasing clients wouldn't you?
 (21) I'm trying to move this on I apologize
 (22) THE WITNESS The answer is yes to both your
 (23) questions because there are natural oil seeps in southern
 (24) California as well but there are large areas of natural oil
 (25) seeps in southern Alaska

Vol 31 5552

- (1) BY MR NEAL
 (2) Q Now do you agree with the previous witness that the -
 (3) that the wind and the currents move that sediment containing
 (4) seep oil into Prince William Sound?
 (5) A Yes
 (6) Q Did you undertake an investigation to - of the natural
 (7) seeps in the area?
 (8) A Yes I did
 (9) Q Where did you go what did you do?
 (10) A Well in 1993 last year and this year, I visited a number
 (11) of natural oil seeps both east of Prince William Sound in the
 (12) Gulf of Alaska sort of upstream relative to the currents and
 (13) also in areas on the Alaska Peninsula west of Kodiak and up
 (14) toward Cook Inlet
 (15) Q Now at my request did you prepare a very brief video for
 (16) the Members of the Jury respecting this seep oil?
 (17) A Yes I did
 (18) Q All right Could we have that?
 (19) Now would you tell us what - tell us what we're seeing
 (20) here now
 (21) And by the way this is Exhibit 8879 Your Honor
 (22) A It's so short it's going to be half over by the time - so
 (23) we can start from the beginning again Mr Neal?
 (24) Q Somebody could ask for a rerun Let's go ahead right now
 (25) A If we can freeze on this for a minute that would be good

Vol 31 5553

- (1) Would it be all right if I sort of stood by here and pointed?
 (2) Q Sure Just don't stand in the way of the jury
 (3) A I promise I won't
 (4) What these red dots show are areas where oil seeps are
 (5) known to occur They don't show all the oil seeps but they
 (6) show major oil seep areas that have been known by various
 (7) surveys for many years some as early as last century
 (8) And we can see that there's this area here east of Prince
 (9) William Sound an area here near Cook Inlet and a large body
 (10) of oil seeps west of Kodiak Island around Becharof Lake Now
 (11) we can roll them
 (12) The Alaskan coastal current brings a lot of sediment past
 (13) these and whatever's associated with the sediment into Prince
 (14) William Sound and Dr Jahns described the transport of
 (15) petroleum hydrocarbons from these areas into the seafloor of
 (16) Prince William Sound What I'm simply going to do show you
 (17) what these natural oil seeps are like and particularly we're
 (18) going to look at a number of salmon streams, and everything
 (19) we're going to see here is a salmon stream
 (20) Okay First we're going to visit Oil Creek I didn't give
 (21) it the name It's on the topographic map It's west of Kodiak
 (22) Island, on the Alaskan Peninsula It's near an area called
 (23) Puale Bay And this shows the location of Oil Creek right here
 (24) and this is Puale Bay right here And what this shows - this
 (25) is a map a topographic map that shows where the ADF&G

Vol 31 5554

- (1) surveyed areas where salmon pink salmon are known to
 spawn
 (2) are located and where the little black dot that was in that
 (3) picture showed where the oil seep was right here Little blue
 (4) dot actually
 (5) So salmon stream, and this is also a salmon index stream
 (6) and what that means is that ADF&G area biologists actually go
 (7) out every year as often as they can and count fish in this
 (8) stream Okay Now, this is what a natural oil seep looks
 (9) like That bubbling stuff is natural gas as you can see
 (10) giving my hands for science showing that it burns Here I'm -
 (11) Q Let me see your fingers You still got all of them?
 (12) A Here I'm sort of skimming this natural petroleum very much
 (13) like Cook Inlet crude oil and now we're looking down Oil Creek
 (14) in the background past this little lake and - with tar in it
 (15) and the field down below and now we're going to go down into
 (16) the bed of Oil Creek
 (17) And here we are this is 1993 in our visit and this looks
 (18) like a typical upland Alaskan stream The only difference is,
 (19) the reason they call it Oil Creek is as the picture shows
 (20) that you have all up and down the upper part of it oil seeping
 (21) into the stream and running downstream
 (22) Now this is oil occurring naturally, and we're going to
 (23) now go down from the upper part of the stream which is right
 (24) up here to the area where salmon, pink salmon are known to
 (25) spawn And again when you dig around the gravel bed of Oil

Vol 31 5555

(1) Creek you find oil which is why they call it Oil Creek And
 (2) this is again some mousse and sheen on the gravel in this
 (3) creek
 (4) And when you look down again you see a typical Alaskan
 (5) stream with the bay Shelikof Straits in the background
 (6) Barbara Creek which is also on the Alaskan Peninsula is over
 (7) here and it's part of the watershed that feeds into Lake
 (8) Ugashik and ultimately into Bristol Bay And Barbara Creek is
 (9) a sockeye salmon stream and again ADF&G has surveyed this
 and
 (10) has shown this to be an area where salmon spawn right up to
 the
 (11) head of the creek sockeye salmon
 (12) These dots represent that there are a lot of seeps in this
 (13) area where they have salmon streams and we're going to look
 at
 (14) this dot here in a little more detail
 (15) Now, this little flashing area we're looking at Barbara
 (16) Creek here This flashing arrow shows the dark spot on the
 (17) hillside shown here close up with oil moving down the hillside
 (18) where this natural oil seep is This is one of the number of
 (19) seeps in the area And as you kind of move downstream from
 the
 (20) seep area it simply shows that this natural release of oil is
 (21) continuous and significant And we'll just quickly get down to
 (22) where the salmon are which is down here and you can see
 some
 (23) oil sheen along the side of the creek
 (24) Again this is where red salmon spawn in an area that has
 (25) natural inputs of petroleum

Vol 31 5556

(1) Now we're in a place called Well Creek on the Iniskin
 (2) Peninsula and this is up near Cook Inlet
 (3) Q Those dots are oil seeps?
 (4) A That's reported oil seep areas and we went to this - this
 (5) is called Well Creek and oddly enough it's near a place
 (6) called Oil Bay feeds into it and Bowser Creek which this
 (7) runs into is a salmon stream where pink salmon are surveyed
 (8) and reported by ADF&G to spawn
 (9) We're going to take a look right in this area here where
 (10) the blue dot is What you see is a pretty coastal Alaskan
 (11) meadow with a creek running through it beaver dam and you
 (12) also see along one side sheen on the water, which is, again,
 (13) naturally released from the seeps And you can skim this stuff
 (14) with a soup spoon and it's very much like Cook Inlet crude
 (15) A few yards away in the creek you have these fish juvenile
 (16) fish one species or another
 (17) Now we're going to go to Johnston Creek which is now east
 (18) of Prince William Sound and, again, this is from the area
 (19) that's responsible for the subtidal natural petroleum
 (20) background that Dr. Jahns pointed out Johnston Creek again
 is
 (21) identified as a coho salmon stream by ADF&G and this is a
 (22) major seep area And when you have an aerial view, you have a
 (23) bunch of salmon streams come together and flow out together
 (24) toward the sea with Johnston Creek And the seep area itself
 (25) looks like a typical sort of upland stream except it has oil

Vol 31 5557

(1) occurring naturally in it
 (2) And as you move downstream you can see again the release
 (3) of oil from this natural seep is chronic and continuous and
 (4) when you sort of get beyond these brushes in the background
 (5) you get to Johnston Creek And we know that the stuff is
 (6) getting downstream because now we're in the area where
 Johnston
 (7) Creek joins the sea and all throughout this gravel zone you
 (8) have coho salmon habitat you find oil sheen from natural
 (9) sources and this is you know part of whatever the
 (10) environment in this area is This is natural petroleum And
 (11) the fish are living in this area
 (12) Q That's you?
 (13) A That's me It was raining at the time so you can tell
 (14) Q Was that it?
 (15) A That's it
 (16) Q That was about an hour until I insisted he cut it down
 (17) He liked seeing himself on television
 (18) Doctor did you take samples or have samples taken of these
 (19) streams that we just discussed having natural seep oil in them?
 (20) A Yes I did
 (21) Q And did you have these samples analyzed?
 (22) A Yes I did
 (23) Q Could you tell us what were the parts per billion of this
 (24) seep oil in these streams?
 (25) A Well water samples from Barbara Creek we took two
 samples

Vol 31 5558

(1) and they were 50 and a 109 parts per billion Oil Creek in
 (2) the Alaskan Peninsula came out at one part per billion of
 (3) petroleum
 (4) Johnston Creek came out over five parts per billion and
 (5) another creek that we sampled near Johnston Creek which is a
 (6) salmon stream which is not shown on the video called
 Snowshoe
 (7) Creek came out at about two and a half parts per billion
 (8) We also took some sediment samples from Johnston Creek
 and
 (9) Snowshoe Creek and the parts per billion values again this
 (10) is for polycyclic aromatic hydrocarbons This isn't total PAH
 (11) this is just the aromatics in the oil
 (12) Q The ones we discussed with the previous witness the PAHs?
 (13) A That's correct The sediment samples ranged from 280 to
 (14) 1500 parts per billion total aromatics in the sediments from
 (15) the streambed of Johnston Creek and Snowshoe Creek
 (16) Q Doctor I - there's something I wanted to show you that I
 (17) went over There was - there was a picture in the plaintiffs
 (18) case of an island and I believe it's - what is it
 (19) Plaintiffs Exhibit 245 and 48 a picture of that or
 (20) something
 (21) I want to put this on Brother Elmo here and show you the
 (22) picture that plaintiffs admitted was taken shortly after the
 (23) spill in 1989 and we can see I think the oil streaming
 (24) around that little island Do you see that?
 (25) A Yes

Vol 31 5559

- (1) Q Now I want you to look at Exhibit 8987 Defense Exhibit
- (2) 8987 which is a map of Prince William Sound and see if you
- (3) can locate that little island on the map And I apologize I
- (4) should have gone over this before we got to the seeping oil
- (5) but -
- (6) A Okay Would you like me to locate where that island is?
- (7) Q I would You know the name of the island?
- (8) A It actually doesn't have a name
- (9) Q It's No Name Island We'll give it a name Henceforth
- (10) known as Dr Page's No Name Island Where is it?
- (11) A This little island is located in Foul Bay - and I need my
- (12) reading glasses on
- (13) Q Doctor come on this side
- (14) A Okay If you look at this map and if you look closely you
- (15) see these three little dots here and No Name Island is the
- (16) outermost - this is Foul Bay here and No Name Island is the
- (17) outermost dot that my pointer's on It's right there
- (18) Q And that's what we're seeing now on the Elmo is that
- (19) correct?
- (20) A Yes
- (21) Q Okay Now did you visit No Name Island this year?
- (22) A Yes I did
- (23) Q And did you take a picture of No Name Island this year?
- (24) A Yes I did
- (25) Q I show you what is in evidence - I show you what is in

Vol 31 5560

- (1) evidence as Defendants Exhibit 8985 is that correct?
- (2) A Yes it is
- (3) Q And what is that sir? When was this picture taken?
- (4) A This picture was actually taken by me through the window of
- (5) a helicopter going back to Anchorage on June 22nd 1994
- (6) Q Last week?
- (7) A Last week
- (8) Q And that's the same little island that the Members of the
- (9) Jury can see on the video screen This is a picture of that
- (10) taken this week?
- (11) A Yes it is
- (12) Q Does this picture Defense Exhibit 8985 accurately
- (13) represent what one sees on that island as of today or as of
- (14) last week?
- (15) A Yes it absolutely does
- (16) MR NEAL Thank you Doctor Looks like to me I've
- (17) managed to eat up the day so I'll leave you to the tender
- (18) mercies of Mr O'Neill tomorrow morning I guess
- (19) THE COURT We'll adjourn for the day now ladies and
- (20) gentlemen Please don't read or listen to anything about our
- (21) case during our recess We will reconvene at 8:00 tomorrow
- (22) morning
- (23) Before you go one thing that I need to tell you that we
- (24) discussed at this point yesterday after you all left the
- (25) lawyers sort of ganged up on me and told us how they'd really

Vol 31 5561

- (1) really like to have Friday off this Friday Since it is a
- (2) long weekend since we do have a lot of people here from out of
- (3) town, people want to take a long weekend so we will stand
- (4) down
- (5) this Friday as well as the following Monday So it means
- (6) you've got a four day weekend instead of three
- (7) MR NEAL Unless they really want to come back and
- (8) work
- (9) THE COURT Do you want to - we could change Mr
- (10) Neal
- (11) MR NEAL I think not only do you have the unanimity of
- (12) the lawyers but the jurors, too Judge so I say it's a done
- (13) deal
- (14) THE COURT Very well Thank you ladies and
- (15) gentlemen We're in recess until 8:00 tomorrow morning
- (16) (Recess at 2:00 p.m.)

(1) PROCEEDINGS
 (2) (Jury in at 8 00 a m)
 (3) (Call to Order of the Court)
 (4) THE COURT Good morning ladies and gentlemen This
 (5) is the continuation of trial in case A89-0095 civil in re the
 (6) Exxon Valdez
 (7) We re going to continue with Dr Page I believe
 (8) MR O NEILL I have unsightly dandruff
 (9) MS STEWART Your Honor before we continue this
 (10) could we read in a list of exhibits to which the defendants
 (11) would like to offer into evidence?
 (12) THE COURT Fine
 (13) MS STEWART Thanks DX5099 DX5111 A DX5120
 (14) DX7441 DX8423 DX8424 DX8477 A DX8681 DX8762
 DX8787-A
 (15) DX8899 DX1820 DX1821 A and DX8658 A
 (16) We offer these exhibits into evidence
 (17) (Exhibits DX5099 DX5111 A DX5120 DX7441 DX8423
 DX8424
 (18) DX8477 A DX8681 DX8762 DX8787 A DX8899 DX1820
 DX1821 A
 (19) and DX8658-A offered)
 (20) MR O NEILL No objection
 (21) THE COURT Thank you sir The defendants exhibits
 (22) just announced are admitted
 (23) (Exhibits DX5099 DX5111 A DX5120 DX7441 DX8423
 DX8424
 (24) DX8477 A DX8681 DX8762 DX8787 A DX8899 DX1820
 DX1821 A
 (25) and DX8658 A received)

Vol 32 - 5570

(1) MR O NEILL Sir, my name is Brian O'Neill
 (2) THE COURT Dr Page, you understand you re still
 (3) under oath?
 (4) THE WITNESS Yes I do Your Honor
 (5) THE COURT Mr O'Neill proceed
 (6) CROSS EXAMINATION OF DR DAVID PAGE (Cont g)
 (7) BY MR O NEILL
 (8) Q You have some wonderful photographs that you brought
 with
 (9) you and I am interested in what has been admitted as 8944
 and
 (10) I m interested in the whole photograph but would it be fair to
 (11) say that this photograph your photograph does depict the
 (12) grandeur of Prince William Sound?
 (13) A Yes it does
 (14) Q And this photograph 8942 I will admit is one of the best
 (15) ones that I've ever seen and if you get out of the business
 (16) that you re in you ought to go into coffee table books It
 (17) again depicts the grandeur of Prince William Sound Would
 you
 (18) agree with that?
 (19) A Yes I do
 (20) Q And 8942 in 1989 was heavily oiled this area was heavily
 (21) oiled wasn't it?
 (22) A Yes it was
 (23) Q And indeed with an area as beautiful as that in 1989 if
 (24) you went to areas here in Bay of Isles and other places in
 (25) Prince William Sound you would see scenes like we saw

Vol 32 5571

- (1) yesterday in Defendants Exhibit 1441 that s a correct
 (2) statement? Oil on the beaches?
 (3) A Yes it is
 (4) Q And like you showed us yesterday in Defendants Exhibit
 (5) 1095 we d see scenes like this wouldn t we?
 (6) A Yes
 (7) Q And indeed much of the shoreline of Prince William Sound
 (8) was oiled as a result of the oil spill?
 (9) A No it wasn t In fact over 80 percent of the shoreline
 (10) of Prince William Sound was not oiled at the time of the spill
 (11) in 1989 We re talking about a fraction of the shoreline and
 (12) shorelines as are depicted there in 1989 were even a smaller
 (13) fraction of the shoreline
 (14) Q This kind of oiling for the environment and this area and
 (15) down through the intertidal area, this kind of oiling presents
 (16) a shock to the ecosystem doesn t it?
 (17) A In 1989 yes
 (18) Q Just sort of bams it doesn t it?
 (19) A Like any natural disaster yes
 (20) Q You used the term disaster just now and would it be fair
 (21) to say that the Exxon Valdez oil spill was a disaster?
 (22) A I think like the earthquake of 1984 nobody can deny that
 (23) in 1989 for beaches like that the oil spill was indeed a
 (24) disaster
 (25) Q And I listened to your testimony and I also listened to the

Vol 32 5573

- (1) picked up if you re looking at it quantitatively You were
 (2) here for that weren t you?
 (3) A Yes I was
 (4) Q And that s what he testified to isn t it?
 (5) A Yes he did
 (6) Q Now I was interested in your answers to some questions
 (7) because I was surprised that you were asked the questions
 (8) yesterday but you were asked the question do you have any
 (9) opinion as to whether the spill as we sit here today has any
 (10) remaining effect on the plant and animal life I ll use this
 (11) new word I ve learned learned from Mr Sanders biota biota
 (12) at Prince William Sound Do you recall being asked that
 (13) question?
 (14) A Yes
 (15) Q I read the question off of the transcript in point of
 (16) fact sir you are aware that the State and federal trustees
 (17) are of the view that, as we sit here today the following
 (18) resources are not recovering Common murre s harbor seals
 (19) harlequin ducks intertidal ecosystem marbled murrelets
 (20) Pacific herring, pigeon guillemots pink salmon sea otters
 (21) sockeye salmon in the Kenai River and the subtidal ecosystem
 (22) are the resources that are not recovering that s their view
 (23) and you re aware of that aren t you?
 (24) A (No response)
 (25) Q I m not saying it s your view I m saying it s the view of

Vol 32 - 5572

- (1) testimony of Dr Jahns and indeed, the extent of oiling in
 (2) 1989 was such that mankind Exxon Corporation with its
 (3) resources to a great extent had to rely on God or Mother Nature
 (4) to clean it up isn t that right?
 (5) A I think that it s fair to say that the cleanup activities
 (6) that were done gave nature a head start, but in the end after
 (7) getting a head start with whatever cleanup is done, the best
 (8) processes are natural processes once you finish cleaning up
 (9) the worst deposits of oil
 (10) Q This mess was so big that in fact as a cleanup tool or
 (11) mechanism we had to rely on the earth?
 (12) A That s not a fair characterization Again the cleanup
 (13) effort that was done gave Prince William Sound s affected areas
 (14) a head start on recovery
 (15) Q How much oil was picked up by Exxon Corporation and how
 (16) much oil was cleaned off by Mother Nature?
 (17) A Again in the heavily oiled places like we re seeing here
 (18) a great deal of the oil was picked up by the cleanup
 (19) operation
 (20) For the majority of the oil affected areas which were in
 (21) fact lightly oiled it was best to let Mother Nature take care
 (22) of the job of natural cleanup
 (23) Q Now you were asked yesterday - well Dr Jahns testified
 (24) that the vast majority of the oil was cleaned up or removed
 (25) from the shorelines by natural forces as compared to what was

Vol 32 - 5574

- (1) the State and federal trustees as we sit here today and you re
 (2) aware of that?
 (3) A I don t know whether that s the view of the State and
 (4) federal trustees as of June 1994
 (5) Q How about November of 1993 when they published the draft
 (6) restoration plan You reviewed the draft restoration plan
 (7) didn t you?
 (8) A No I did not review the draft restoration plan in detail
 (9) I might have received it but I didn t read it
 (10) Q So it was sent to you?
 (11) A It might have been
 (12) Q Now, have you reviewed this publication?
 (13) A I haven t reviewed it no
 (14) Q Was it sent to you?
 (15) A It might have been
 (16) Q And you re aware that it describes long term impacts to
 (17) intertidal communities subtidal communities birds manne
 (18) mammals fish aren t you? You re aware of that?
 (19) A Yes I m aware of what those documents purport to be
 (20) Q And these documents come from the State and federal
 (21) trustees?
 (22) A Those are not peer reviewed scientific documents Those
 (23) documents are simply documents describing how they want to
 (24) spend restoration money To the best of my knowledge I didn t
 (25) see any data in any of those documents telling me what those

Vol 32 5575

- (1) studies that may have been referred to in there are saying
 (2) about the environment as it exists in 1994
 (3) Q So you just said I didn't see any data just a second ago
 (4) you said I didn't see any data So you did read these
 (5) documents didn't you?
 (6) A I said I may have looked at them and the reason I didn't
 (7) read them or review them in any detail was - is that when I
 (8) you know get a stack of documents to look at if there's no
 (9) real data in them I don't really take a close look at them
 (10) And I don't think I remember you know seeing any documents
 in
 (11) those - data in those documents Again if I missed anything
 (12) and if I should have read those more thoroughly I'll be glad
 (13) to take a closer look at them now
 (14) Q Are you aware that the trustees in the document describe
 (15) the resources that I read as being resources that are not
 (16) recovering?
 (17) A It's my understanding that that's what those documents
 (18) purport to do But again I've talked to scientists who are
 (19) working on these problems who are government scientists and
 (20) trustee's scientists as recently as November of 1993 and what
 (21) they're telling me based on my conversations with them at
 (22) professional meetings is not what you represent those
 (23) documents as saying
 (24) Q What I represent the document as saying let's look at a
 (25) page from the document What I represent the document as

Vol 32 5576

- (1) saying there's an implication I'm misrepresenting what's in
 (2) the document Let's put the document up And it says
 (3) resources not recovering the following resources show little
 (4) or no sign of recovering nearly five years after the spill and
 (5) it lists the resources That's what the document says It
 (6) isn't what I represented to say isn't that right?
 (7) A Well again as I said if that's what the document says
 (8) there has to be some basis for the document saying that and
 (9) what I'm saying is that I don't know that the basis is for
 (10) those you know trustee documents All I know is what I have
 (11) learned by talking with professional colleagues who are
 working
 (12) on these problems
 (13) Q How many scientists do the trustees have working for them?
 (14) A I don't know
 (15) Q Dozens isn't that right?
 (16) A Probably
 (17) Q Of all disciplines just like Exxon?
 (18) A Probably
 (19) Q You know that to be the case?
 (20) A Again outside of my area of expertise on the shoreline
 (21) program I don't know how many scientists are working on birds
 (22) and sea otters and so forth
 (23) Q And herring and salmon?
 (24) A Yes
 (25) Q I was interested in the way you phrased your answers to the

Vol 32 5577

- (1) questions yesterday and your answers - and if I'm wrong here
 (2) correct me because I want to focus essentially on what your
 (3) opinion is but my understanding of your answers was that the
 (4) oil that is left there poses no threat of harm or words to
 (5) that effect. Is that a fair statement?
 (6) A Yes
 (7) Q I'm not interested in the next couple of questions with the
 (8) oil that is left there but - let me see if I can think of a
 (9) common example There are many situations that we know of
 (10) where the toxic agent poison pollutant the active agent
 (11) does its damage and then goes away You understand the
 (12) concept? Fetal Alcohol Syndrome a baby that is harmed
 because
 (13) of Fetal Alcohol Syndrome, after the first five or ten days
 (14) after its birth no longer has any alcohol in it The agent
 (15) that caused the harm is gone isn't that right?
 (16) A Yes
 (17) Q You're not saying are you sir in your testimony that you
 (18) were qualified on yesterday you were not contending that the
 (19) oil in 1989 did not cause harm to natural processes in 1989
 (20) You were limiting your testimony to the fact that oil that
 (21) leaches off of the beaches in 1994 doesn't cause that kind of
 (22) harm is that a fair statement?
 (23) A Yes
 (24) Q And indeed the shocks that this kind of disaster have on
 (25) the ecosystem on herring and salmon is the subject of a whole

Vol 32 - 5578

- (1) different line of studies than what you came here yesterday to
 (2) testify about?
 (3) A Well with one very important qualification and that is
 (4) that yesterday I presented evidence that shows that petroleum
 (5) occurs in many salmon producing areas naturally and
 therefore
 (6) we have to understand there is a definite dose/response
 (7) relationship with things like petroleum and the environment as
 (8) there are with other contaminants
 (9) Q We'll get to that in a couple of minutes That's the
 (10) thesis that oil is good for fish?
 (11) A No That's not what I said I said that petroleum at
 (12) levels below a threshold of effect does not exert harm to
 (13) natural environments We saw that yesterday
 (14) Q Let me ask one question With regard to any of the fish
 (15) that were in those streams where oil naturally occurred did
 (16) you do studies on the fish?
 (17) A The only studies that I did was to satisfy myself that
 (18) those salmon streams that we surveyed had fish that were
 known
 (19) to return year after year and that those salmon streams
 (20) provided an environment that permitted those fish to reproduce
 (21) and return
 (22) Q Did you pick up any of the fish and touch any of the fish?
 (23) A When we visited them there weren't any adult fish in the
 (24) streams
 (25) Q So your - the answer to my question is I picked up none

Vol 32 5579

- (1) of the fish and touched the fish?
 (2) A I did not pick up any fish and touch the fish
 (3) Q With regard to those salmon streams did you enumerate the
 (4) numbers of fish in those salmon streams?
 (5) A I looked up data from ADF&G that did enumerate the salmon
 (6) in oil creek on the Alaskan Peninsula
 (7) Q Would you explain to us if you could as you sit here
 (8) today what the history of those fish run numbers are by
 (9) number?
 (10) A Well the Alaskan Department of Fish and Game -
 (11) Q They know what ADF&G is Tell us what the numbers are
 (12) A The - over a number of years the area biologists in ADF&G
 (13) go out and make counts of fish in certain streams to establish
 (14) the escapement or the run Oil Creek is one of those streams
 (15) that they actually count fish They do that by an aerial
 (16) survey so they get a snapshot and then estimate numbers from
 (17) that
 (18) Over the last 11 years when ADF&G counted the escapement
 (19) in Oil Creek to the best of my recollection the numbers of
 (20) fish that they surveyed in that one little stream ranged from
 (21) about 8 000 up to 73 000 pink salmon
 (22) Now a lot of the variability in numbers like that are a
 (23) function of you know how they were flying that day or what
 (24) snapshot they took but the fact remains that historically
 (25) that particular stream that we - I showed you in that video

Vol 32 - 5580

- (1) does support a sizable population of salmon
 (2) Q And does that stream look like this?
 (3) A In places
 (4) Q It does?
 (5) A In places as I showed you in the video in places there
 (6) are - you know there is oiled gravel In places there is
 (7) oil coming out of the banks of that stream, and as I showed you
 (8) in the video yesterday in places where you dig around in the
 (9) gravel where the salmon spawn you can find oil in the gravel
 (10) Q So your testimony is the video that you showed the jury
 (11) yesterday shows a scene like this on that Oil Creek?
 (12) A That Oil Creek does not have boulder cobble beach on it.
 (13) Q Now you - I want to talk a little bit about your kind of
 (14) science and one of the things that you did as you went out and
 (15) visited the sites was to observe isn't that right?
 (16) A Yes
 (17) Q So your powers of observation are important to what you do
 (18) I assume?
 (19) A Yes
 (20) Q How careful you are?
 (21) A Yes
 (22) Q Whether you bring a predisposition to the subject matter is
 (23) important isn't it?
 (24) A Yes
 (25) Q So that if you're careful, you have good observation

Vol 32 5581

- (1) powers you bring no predisposition you're open minded you
 (2) tend to do a better job than if you weren't those things?
 (3) A Yes
 (4) Q And indeed it's helpful if you're going to do long term
 (5) studies that if you go to one of these sites and you make a
 (6) mistake that you remain open minded genial so that your
 (7) study
 (8) doesn't get biased?
 (9) A Yes
 (10) Q You make a mistake you accept the mistake you don't
 (11) blame
 (12) it on somebody else you move on that's a correct statement?
 (13) A Yes
 (14) Q And there are a variety of ways we can test that thesis
 (15) with the variety of work you did One is to go back over your
 (16) history Another one is if we can go back and take a look
 (17) actually at what you did and in some instances you videotaped
 (18) what you did didn't you?
 (19) A Yes
 (20) MR O NEILL. And I'm going to show you and the jury
 (21) one of those videotapes Play the videotape
 (22) (Videotape Played as follows)
 (23) VIDEO SPEAKER This is the ICF transect site in
 (24) Shelter Bay It is now 10 30 and very nearly low tide We are
 (25) now looking right down the transect that ICF did We've
 (26) documented it from pictures in the report We make special
 (27) mention of these rocks shown in this frame Contrary to ICF's

Vol 32 - 5582

- (1) assertions there are mussels limpets barnacles on these
 (2) rocks It is hard to believe that in the space of one year
 (3) this could go from being devoid of microfauna in the upper
 (4) intertidal zone as was asserted to something as rich as this
 (5) Again, no oil, contrary to ICF's assertions These rocks
 (6) contrary to ICF's assertions have no oil staining, no
 (7) coating Their statement in their report is unfounded in
 (8) fact. This big rock, which is shown in one of the site
 (9) pictures anyone not familiar - anyone not familiar with
 (10) manne ecology and unwilling to entertain possibilities other
 (11) than effects of the oil spill - this means through ICF's
 (12) assertion that 25 percent of this area is covered with oil is
 (13) totally unfounded in fact and is not even speculative It's
 (14) incorrect.
 (15) It's difficult to believe that someone could look here and
 (16) say that there's no fauna Preceding segment of tape dealing
 (17) with the ICF site is incorrect We reestablished the actual
 (18) site We were one cove over too far to the south due to the
 (19) poor documentation of the site from the ICF report
 (20) The next roll of tape will deal with the actual - this is
 (21) the actual ICF transect.
 (22) (Videotape concluded)
 (23) BY MR O NEILL.
 (24) Q And that was you and you were at the wrong site?
 (25) A As I said, I profit from my mistakes and I think that the

Vol 32 5583

- (1) tape as you played it in a very edited form I might add
 (2) really bears out the things I was trying to say yesterday
 (3) namely that tape shows a very rich and abundant intertidal
 (4) community of plants and animals living on the rocks even in a
 (5) place that originally had oil
 (6) Moreover we had a very hard time with some of the sites
 (7) because the - Mr Bush did not describe where he went very
 (8) well and did not provide detail enough data to really home in
 (9) on the sites
 (10) I can tell you this we are now confident that we went to
 (11) every place he actually went to In some cases as in Shelter
 (12) Bay we had to you know regroup and go and make sure that
 (13) we
 (14) went to the right site because we didn't want to do an
 (15) incorrect assessment of the places where he went That tape
 (16) demonstrates how thorough and open-minded we were in our
 (17) approach to our shoreline surveys
 (18) Q We saw the tape and we can each of us draw our own
 (19) conclusions about how open minded we are about your
 (20) shoreline
 (21) surveys and I'll move onto a new topic okay?
 (22) Now another way we can take a look at the rigorosity of
 (23) this shoreline survey process of Exxon s - and it is Exxon s,
 (24) isn't it? You work for Exxon Corporation as a consultant?
 (25) A (Nods head)
 (26) Q Is to see whether you were given any marching orders early
 (27) on with regard to the shoreline ecology project I mean that

Vol 32 5585

- (1) A Yes
 (2) Q And indeed in all likelihood you had a copy of it at this
 (3) meeting because you were at the meeting isn't that right?
 (4) A I probably did
 (5) Q And who was at the meeting?
 (6) A That was so long ago I don't remember I know I was at
 (7) that meeting I know that my colleague from Bowden Dr
 (8) Gilfillan was at that meeting Dr Boehm from Arthur D Little
 (9) was probably at that meeting Exxon scientists were also at
 (10) that meeting but again I'd have to see who was there I
 (11) didn't keep a record of who actually attended that meeting
 (12) Q A lot of folks were there?
 (13) A Yes there were
 (14) Q In fact it was one of the final meetings with regard to
 (15) the design construction of the Exxon shoreline ecology
 (16) program isn't that a correct statement?
 (17) A Yes
 (18) Q And I'm going to come back to this document but you know
 (19) what I'm going to ask you and I'll ask it right now
 (20) Scientists when they decide to go out and do a study
 (21) shouldn't predispose them to the answer or assume the answer
 (22) isn't that right?
 (23) A Absolutely
 (24) Q And this document this meeting agenda has as its review
 (25) objective at least in writing to rigorously document recovery

44

Vol 32 5584

- (1) would be an interesting thing to explore wouldn't it?
 (2) A Yes
 (3) Q And would you agree with me with this proposition that in
 (4) exploring it it's easier to go back and take a look at the
 (5) written word than it is to trust our recollections biases
 (6) those kinds of things? You understand the concept you can't
 (7) change the written word?
 (8) A Yes
 (9) Q I want to show you what has been marked - I'm not sure
 (10) whether it's been preadmitted or not It's Plaintiffs' Exhibit
 (11) 1969?
 (12) MR NEAL Could I have a look at it first?
 (13) MR O NEILL I'll offer 1969 Plaintiffs 1969
 (14) (Exhibit 1969 offered)
 (15) THE COURT Is there objection?
 (16) MR NEAL No objection
 (17) THE COURT Plaintiffs 1969 is admitted
 (18) (Exhibit 1969 received)
 (19) BY MR O NEILL
 (20) Q And Plaintiffs 1969 is a meeting agenda for a meeting that
 (21) was held in March 29 1990 isn't that right?
 (22) A Yes
 (23) Q And you've seen this before?
 (24) A Yes
 (25) Q And it was discussed at your deposition?

Vol 32 - 5586

- (1) of oiled shorelines over time in relation to the initial degree
 (2) of oiling
 (3) Now you as you sit here today disagree with the fact that
 (4) this in fact either was the review objective or you contend
 (5) that document means measure I'm trying to be fair about the
 (6) document Are my statements fair that you either take issue
 (7) with it or would interpret it as saying roughly measure
 (8) recovery of oiled shorelines?
 (9) A Well the fact of the matter is the verb to document means
 (10) to present or measure in a factual manner We watch
 (11) documentaries on television and documentaries are movies that
 (12) present in a factual manner something that happened
 (13) historically And when you read that whole thing not just the
 (14) highlighted part what that shows is that we went out and
 (15) planned in a fact - in a factual way to document
 (16) factually - to document means to present or measure factually
 (17) in an unbiased way the unhighlighted part down at the bottom
 (18) of that first paragraph that is on the previous page to the one
 (19) that's shown there has the word unbiased in it and I think
 (20) unbiased and factual is the keystone of the studies that we
 (21) started planning in 1990
 (22) Q And on the second page of the document it goes one step
 (23) beyond that with regard to an objective and it says
 (24) demonstrate and document effective nearshore on shore
 (25) marine communities are recovering Demonstrate and document isn't

Vol 32 5587

- (1) that what the document says?
 (2) A Again -
 (3) Q My question is is that what the document says?
 (4) A That is what that particular document that was not written
 (5) by me says
 (6) Q This document was handed out by Exxon Corporation to its
 (7) scientists at a meeting in March of 1990 with regard to the
 (8) study program is that a correct statement?
 (9) A Yes it is
 (10) Q Now I want to test a little bit just so you know where
 (11) I'm coming from your history And it's my understanding
 (12) that - what was the first spill you worked on?
 (13) A The Tomano spill
 (14) Q And the Tomano spill was when?
 (15) A The Tomano spill was in 1972
 (16) Q And in the Tomano spill your work was for the State of
 (17) Maine?
 (18) A Yes it was
 (19) Q And since that time you've had extensive oil spill
 (20) experience you've worked on a lot of spills?
 (21) A Yes
 (22) Q But since that time all of your work has been either on
 (23) behalf of oil companies or their foundations shipping
 (24) companies who ship oil or their insurance companies isn't
 (25) that right?

Vol 32 - 5588

- (1) A No
 (2) Q Well let's go over the spills you talked about yesterday
 (3) and figure out who you worked for on them You work with this
 (4) Ed Gilfillan?
 (5) A Yes
 (6) Q And you did consulting work with regard to the vessel Zoie
 (7) Coltronic (ph)?
 (8) A Zoie Coltronic
 (9) Q And what was that project?
 (10) A That project was a study in connection with litigation of
 (11) an oil spill in Puerto Rico
 (12) Q And you represented or worked for the vessel owners is
 (13) that correct?
 (14) A No
 (15) Q It isn't?
 (16) A I represented the insurance company that -
 (17) Q You represented -
 (18) A The underwriters
 (19) MR NEAL Excuse me would you let him finish his
 (20) answer Mr O'Neill?
 (21) THE WITNESS I represented the underwriters of the
 (22) vessel
 (23) MR O NEILL Are you finished?
 (24) THE WITNESS Yes
 (25) BY MR O NEILL.

Vol 32 5589

- (1) Q You represented the insurance company of the vessel
 owners
 (2) against plaintiffs?
 (3) A Yes
 (4) Q And you represented the Presidente in that oil spill is
 (5) that right?
 (6) A Yes
 (7) Q And who did you represent there?
 (8) A The underwriters of the vessel
 (9) Q The insurance company? Underwriters are insurance
 (10) companies?
 (11) A Yes
 (12) Q And you did work concerning a Mobil spill on the Columbia
 (13) River?
 (14) A Yes
 (15) Q And that was for Mobil Oil Company?
 (16) A Yes
 (17) Q And you did work with regard to the vessel owner at a spill
 (18) concerning the Apex Houston?
 (19) A Yes
 (20) Q That was for the vessel owner the spillers?
 (21) A The insurers
 (22) Q You did work with regard to the 1987 spill of the Glacier
 (23) Bay here in Cook Inlet that interrupted the 1987 fishing
 (24) season?
 (25) A Yes

Vol 32 - 5590

- (1) Q And who was that for?
 (2) A The insurers
 (3) Q And you've done work for the American Petroleum Institute
 (4) you said do you recall that?
 (5) A Yes
 (6) Q What is the American Petroleum Institute?
 (7) A The American Petroleum Institute is a petroleum institute
 (8) that conducts education and public affairs and research
 (9) activities on behalf of the petroleum industry But I might
 (10) simply say that we're not reading the complete list of oil
 (11) spills that I've enumerated You left some important ones out
 (12) Q I have some more
 (13) A Oh okay
 (14) Q At your program at Bowden your little operation that you
 (15) and Gilfillan run a major funding source of that is the
 (16) American Petroleum Institute isn't it?
 (17) A It has been in the past We did a big project in 1980 to
 (18) 1984
 (19) Q And the Mobil Oil Foundation contributes to this little
 (20) institute of yours and Ed Gilfillan doesn't it?
 (21) A Yes, just like Masterpiece Theater and public television
 (22) Q So you and Gilfillan and Masterpiece Theater and public
 (23) television are all in the same pot?
 (24) A That's exactly correct
 (25) Q And the Arco Foundation has given you unsolicited

Vol 32 5591

- (1) donations hasn't it?
 (2) A Yes
 (3) Q Just here's money guys from Arco Oil Company?
 (4) A It was program support for us yes
 (5) Q And you worked on a program for another spill in Prince
 (6) William Sound the Arco Anchorage?
 (7) A That spill was in Puget Sound
 (8) Q I'm sorry And who did you represent there?
 (9) A Arco
 (10) Q With regard to your work in this particular situation this
 (11) case the colleagues - who are the colleagues that you worked
 (12) with in this particular study?
 (13) A As I indicated yesterday I've worked with Dr Gilfillan on
 (14) a number of oil spill projects over the last 20 years many of
 (15) which you did not mention were supported by the State of
 (16) Maine
 (17) In addition I've worked with Dr Paul Boehm Arthur D
 (18) Little worked with Dr Greg Douglas of Battelle Ocean
 (19) Sciences Dr Neff worked with Dr Ted Bence of Exxon
 (20) Production Research and a number of other analysts at Exxon
 (21) that there wasn't time to mention I'll be glad to be more
 (22) specific if you wish
 (23) Q Well this really isn't one of those acknowledgments on the
 (24) book A D Little and Battelle are both Exxon vendors aren't
 (25) they?

Vol 32 5592

- (1) A They are companies that do environmental consulting work
 (2) for a variety of clients both you know private and
 (3) governmental
 (4) Q I just asked you whether Exxon - whether Battelle and A
 (5) D Little were Exxon vendors and you did not answer the
 (6) question did you?
 (7) A What do you mean by the term vendor?
 (8) Q Are they taking money from Exxon to do studies in this
 (9) case?
 (10) A Yes
 (11) Q Okay And with regard to your work with the Exxon
 (12) scientists it's essentially a collaborative or interactive
 (13) effort isn't that right?
 (14) A Yes
 (15) Q And the Exxon scientists substantively review your work
 (16) don't they?
 (17) A Yes
 (18) Q Now you were at the ASTM conference weren't you?
 (19) A Yes
 (20) Q And as part of your preparation at the ASTM conference, you
 (21) met with Exxon's media relations people to help you prepare for
 (22) dealing with the press didn't you?
 (23) A Yes
 (24) Q And you met with a media consultant for several hours
 (25) didn't you?

Vol 32 5593

- (1) A Yes
 (2) Q And in part in meeting with that media consultant you
 (3) were told how to sit and how to keep your hands in front of
 (4) you weren't you?
 (5) A Absolutely
 (6) Q Thank you And with regard to getting ready for the ASTM
 (7) conference the public relations people told you to think about
 (8) what messages you wanted to get across and this was what you
 (9) called a pregame practice wasn't it?
 (10) A Well can you be more specific?
 (11) Q Have you ever used the phrase "pregame practice" with
 (12) regard to your meetings with the media consultants prior to the
 (13) ASTM conference?
 (14) A In -
 (15) Q Is that specific enough?
 (16) A Well again, let me explain There were a bunch of
 (17) scientists people like me who had never interacted with news
 (18) media before and interacting with news media is a very
 (19) intimidating process Certainly you know I would have found
 (20) it so And I think that it was only natural that Exxon wanted
 (21) to make sure I didn't walk into an interview with my you know
 (22) shirt unbuttoned or something like that And so that what
 (23) these you know sessions with these media consultants were
 (24) simply a lot of very common sense things to make sure that I
 (25) accurately said the things that I was trying to present in this

Vol 32 5594

- (1) scientific meeting
 (2) And so if you characterize it as a pregame practice it
 (3) simply means that you know I don't go into a - you know
 (4) have somebody stick a microphone in my face for the first time
 (5) and expect to sort of stand there and look at the camera like
 (6) I'm you know looking down the barrel of a deer rifle
 (7) Q Did you ever use the phrase "pregame practice"?
 (8) A I might have I don't remember doing it
 (9) Q Thank you And at the pregame practice or during the
 (10) pregame practice sessions they told you to physically present
 (11) yourself exactly as you're presenting yourself right now hands
 (12) in front leaning forward isn't that right?
 (13) A No What they told me to do was to appear like I would
 (14) normally appear sitting at my desk talking to somebody which
 (15) is the way I do it
 (16) Q Now I want to talk a little bit about these Katalla
 (17) seeps Katalla seeps have never closed to your knowledge a
 (18) fishing season have they?
 (19) A Not to my knowledge
 (20) Q And Katalla seeps have never impacted the price of fish
 (21) have they?
 (22) A Not to my knowledge
 (23) Q And you're not contending as you sit here today that the
 (24) Katalla seeps had any impact adverse impact on the intertidal
 (25) areas of Prince William Sound are you?

Vol 32 5595

- (1) A No
- (2) Q So the Katalla seeps – and you re not contending with
- (3) regard to the crash in pink salmon in 1992 and 1993 that the
- (4) Katalla seeps caused the crash in pink salmon runs in those two
- (5) years are you?
- (6) A All I m contending is that there are pink salmon where oil
- (7) naturally occurs in the environment
- (8) Q And you re not contending that the Katalla seeps caused a
- (9) crash with regard to this very dramatic crash with regard to
- (10) herring in the last year or so are you?
- (11) A No
- (12) Q The Katalla seeps to your knowledge had nothing to do
- (13) with any of that did they?
- (14) A No
- (15) Q And indeed just so we know you do not represent that seep
- (16) oil is a contributor to the intertidal hydrocarbon background
- (17) in Prince William Sound do you?
- (18) A I do not represent that seep oil is a contributor to the
- (19) intertidal hydrocarbon background It is a contributor to the
- (20) subtidal hydrocarbon background
- (21) MR O NEILL. I have nothing further Doctor thank
- (22) you
- (23) THE COURT Redirect?
- (24) MR NEAL Thank you
- (25) REDIRECT EXAMINATION OF DR DAVID PAGE

Vol 32 - 5596

- (1) BY MR NEAL
- (2) Q Doctor Mr O Neill asked you about working for various
- (3) people in oil spills and you said you re not telling them
- (4) all Who else have you worked for in oil spills?
- (5) A Well a number of oil spills We worked with the State of
- (6) Maine in addition to the Tomano spill For example in 1976
- (7) 77 78 we spent a great deal of time and effort supported
- (8) by the State of Maine to help them do a damage assessment of
- (9) a
- (9) major pipeline break of jet fuel which is very toxic material,
- (10) on a large cove in Searsport Maine
- (11) In addition to that we did a beach restoration project
- (12) with the State of Maine in 1980 that was actually funded by
- (13) Exxon production research, but the State of Maine and Bowden
- (14) College actually did the work with that support.
- (15) I might add that the major project we did in 1980 to 1984
- (16) funded by the American Petroleum Institute was in conjunction
- (17) with the State of Maine And again I emphasize that we have
- (18) been a professional resource over the years for the State of
- (19) Maine and have a very close working relationship with a variety
- (20) of state agencies and it s simply worked out that these other
- (21) spills mentioned we worked with other parties There s
- (22) nothing wrong with working for private, you know industry
- (23) Q Now Doctor if I may approach the witness Your Honor and
- (24) hand him – I hand you Plaintiffs Exhibit 1969, a portion of
- (25) the top part was read to you or shown to you by Mr O Neill

Vol 32 5597

- (1) Would you read the remaining part of that paragraph?
- (2) A Yes I will And again this describes the – you know
- (3) the way all of the scientists felt very strongly about the
- (4) scientific work we did It said that we – objective was to
- (5) rigorously document or demonstrate show factually measure
- (6) factually recovery of oiled shorelines over time in relation
- (7) to the initial degree of oiling and substrate habitat type
- (8) using a statistically defensible unbiased – key word
- (9) unbiased sampling plan And then it goes on to say recovery
- (10) measured in terms of a whole variety of scientific parameters
- (11) to do –
- (12) Q What does the word – what does unbiased mean to you?
- (13) What
- (13) were you being told when you were asked to do an unbiased
- (14) study?
- (15) A We were told to – again do it in such a way that there
- (16) could be no question whatsoever as to how we went out and
- (17) chose
- (17) our sites because the selection of where you go to study in
- (18) any environmental project is key I could go to your yard and
- (19) do a survey of your backyard make a beeline to your kids
- (20) sandbox and conclude you lived in a desert I mean that s
- (21) what bias is in how you select your sites and we didn t want to
- (22) fall into that trap in this study
- (23) Q Did Exxon ever attempt to influence in any way your
- (24) scientific work in this case?
- (25) A No

Vol 32 - 5598

- (1) Q Did Exxon ask you to do an unbiased study in this case?
- (2) A Yes
- (3) Q And did you do an unbiased study in this case?
- (4) A Yes
- (5) Q And do you remain of the view that as we are here today
- (6) Prince William Sound does not have to worry about remaining
- (7) effects on plant and animal life from any remaining residue of
- (8) oil in Prince William Sound?
- (9) A Yes
- (10) MR NEAL. Your Honor could we approach the side bar
- (11) just a moment before I continue?
- (12) (Side Bar Conference off the Record)
- (13) MR NEAL. I have no further questions, Doctor thank
- (14) you very much
- (15) MR LYNCH Call Dr Jerry Neff Your Honor
- (16) THE CLERK. Would you raise your right hand please
- (17) sir
- (18) (The Witness is Sworn)
- (19) THE CLERK. Please be seated For the record sir
- (20) state your full name your address and spell your last name
- (21) please
- (22) THE WITNESS My name is Jerry Neff that s spelled
- (23) N E F F I live at 20 Templewood Drive in Duxbury
- (24) Massachusetts That s D-U-X-B-U-R Y in Massachusetts
- (25) DIRECT EXAMINATION OF DR JERRY NEFF

Vol 32 5599

- (1) BY MR LYNCH
 (2) Q Dr Neff you re currently employed as a senior research
 (3) leader at Battelle Ocean Sciences Laboratones?
 (4) A That s correct
 (5) Q That s one of the private research entities that was just
 (6) discussed with Dr Page that among other things does work for
 (7) Exxon is that correct sir?
 (8) A That is correct
 (9) Q Could you tell the jury something about Battelle Ocean
 (10) Services Laboratones? What is it?
 (11) A Battelle Ocean Sciences Laboratory is part of the Battelle
 (12) Memorial Institutes which is a private not for profit research
 (13) institute that is engaged in contract research for government
 (14) and commercial clients throughout the world Battelle has
 (15) about 8 000 employees most of them scientists in various
 (16) disciplines
 (17) Q And not for profit means that the fees you charge go to
 (18) what?
 (19) A What not for profit means is we do not have any
 (20) stockholders who have a financial interest in the company All
 (21) profits either go to charity as dictated by the will of Gordon
 (22) Battelle the founder of Battelle or to reinvest in what's
 (23) called capitalization of the laboratories That is buying new
 (24) equipment and new facilities No profits go to outside
 (25) entities

Vol 32 5601

- (1) North Carolina?
 (2) A No I went to -
 (3) Q I m sorry - correct me
 (4) A Correct that. I went on from my bachelor s degree to study
 (5) for a Ph D in zoology at Duke University in Durham North
 (6) Carolina and I was there from 1963 to 1967 when I received my
 (7) degree
 (8) Q Probably in Durham North Carolina if you go to Duke and
 (9) you re accused of going to North Carolina that s a cause for
 (10) some offense You went to North Carolina eventually though
 (11) is that correct sir?
 (12) A Yes after I received my Ph D I went to the University of
 (13) North Carolina which is just down the street and spent five
 (14) years there on the faculty at the University of North Carolina.
 (15) Q And then you went to Texas A&M?
 (16) A That is correct in 1972
 (17) Q And you stayed there until 1980?
 (18) A That is correct I was on the faculty the biology
 (19) department of Texas A&M University
 (20) Q Now while you were in Texas A&M did you do any work
 (21) related to oil spills?
 (22) A Yes Most of my research at Texas A&M University dealt
 (23) with the toxicology, aquatic toxicology of petroleum in the
 (24) marine environment that is the effects of oil on manne
 (25) organisms and manne ecosystems

Vol 32 5600

- (1) Q Dr Neff are you married?
 (2) A Yes I am I m married I ve been married for 22 years
 (3) and I have two sons, 13 and 19 years old
 (4) Q And what s your age?
 (5) A I m going to be 54 in about two weeks
 (6) Q Graduated from college in 1963?
 (7) A That is correct
 (8) Q And what did you study in college?
 (9) A I went to Antioch College in Yellow Springs Ohio where I
 (10) studied biology and received a bachelor of arts degree in
 (11) biology 1963
 (12) Q What got you interested in biology as a field of study?
 (13) A Well my hometown where I grew up in Cohasset
 (14) Massachusetts is along the coast of Massachusetts Its major
 (15) industry is lobster fishing I was an avid fisherman as a
 (16) young boy collected all my bait worms, clams and stuff, and
 (17) was always fascinated by the marine life of the shoreline of
 (18) Massachusetts which I was interested in both biologically and
 (19) gastronomically and when I got to college I seized on the
 (20) opportunity to study biology and to study these animals in more
 (21) detail in a college environment
 (22) Q That was your first interest in the food chain?
 (23) A That was my first interest in the food chain as a member of
 (24) it yes
 (25) Q And you continued studying biology at the University of

Vol 32 5602

- (1) Q What exactly did you do relating to the toxicology of oil
 (2) in the marine environment?
 (3) A We did some of the fundamental research on the toxicity of
 (4) oil and specific components of oil to marine animals from the
 (5) Gulf of Mexico and we published some of the original
 (6) quantitative work on how much oil it takes to affect a marine
 (7) animal
 (8) Q Now when you say some of the original work you mean that
 (9) you were one of the first to do research of this kind?
 (10) A Work had been done earlier but rarely had it been done
 (11) quantitatively And what I mean by that is we measured
 (12) exactly how much hydrocarbon was required and solution was
 (13) required to cause effects in aquatic organisms and we were the
 (14) first to really quantify how much was required
 (15) Q What led you to be interested in quantifying how much
 (16) hydrocarbon would cause adverse effects in living things?
 (17) A Well the problem with oil and actually it s a good
 (18) problem because it helps protect the environment oil and
 (19) water don t mix and when you mix oil and water they tend to
 (20) want to come apart right away and so in the past before we
 (21) did our studies in the early 70s people had just added oil to
 (22) water and what s called the nominal concentration but had no
 (23) idea how much oil actually remained in the water during
 (24) exposure We measured how much it was and found in fact it
 (25) was very little but at least we were able to quantify that and

Vol 32 5603

- (1) this enables us to use those results to predict the effects of
 (2) oil spills on marine organisms in the natural environment where
 (3) you don't know how much was added often
 (4) Q Dr Neff is it possible to have water in a body of water
 (5) like Prince William Sound or the Pacific Ocean or the Gulf of
 (6) Mexico that has absolutely no petroleum chemicals in it?
 (7) A Petroleum is a natural product that has been around for
 (8) hundreds of millions of years basically since the origin of
 (9) life and it seeps and gets into the ocean from various
 (10) sources both natural and human sources and in fact one of the
 (11) major sources is runoff from urban areas from cities just like
 (12) Anchorage And so almost any water sample you take
 anywhere
 (13) especially in coastal waters that's within a hundred miles of
 (14) shore or so will have traces of petroleum hydrocarbons in it.
 (15) Q Now Mr O Neill I think somewhat sarcastically asked Dr
 (16) Page if oil was good for fish Based on your training and
 (17) experiments you've done, is petroleum chemicals necessarily
 bad
 (18) for fish?
 (19) A It's not necessarily good but certainly it can be bad but
 (20) only if the concentration is high enough There are natural
 (21) concentrations or concentrations below which no effects will be
 (22) seen during lifelong exposure
 (23) Q And do we also get exposed to petroleum chemicals in our
 (24) daily life?
 (25) A We get exposed every day to petroleum chemicals When you

Vol 32 - 5604

- (1) go and fill your gas tank at the gas station, those vapors you
 (2) smell are benzene toluene and so forth which are major
 (3) components of gasoline We change the oil in our car we
 (4) get - we're dealing with petroleum and it gets on our skin
 (5) In many places in the past they oiled roads dirt roads
 (6) with waste diesel fuel to keep down the dust The asphalt
 (7) pavement in our driveway or the playground that our children
 (8) play on is a part of petroleum It's a petroleum product from
 (9) crude oil and so every day we come in contact with petroleum
 (10) Q Now we were talking about the period of time that you were
 (11) at Texas A&M from 1972 to 1980 After that you went into
 (12) private consulting either with A D Little and Company or
 (13) Battelle?
 (14) A Yes in 1980 I left Texas A&M University and took a
 (15) position at Battelle Ocean Sciences Laboratory in Duxbury
 (16) Q Did you continue to work in those positions in the field of
 (17) marine biology?
 (18) A Yes I did The major focus of research at Battelle and
 (19) in 1990 I went to Arthur D Little for three years both
 (20) companies is environmental assessment, that is the effects of
 (21) chemicals on marine environments and that was the focus of
 my
 (22) research
 (23) Q And are you program manager of the EPA office of marine
 and
 (24) estuarine protection task order agreement for studies relating
 (25) to the estuary program and ocean dumping?

Vol 32 5605

- (1) A I was manager of that program in the past yes
 (2) Q Previously?
 (3) A Yes
 (4) Q What is an estuary?
 (5) A Estuary is an area in the river where the river meets the
 (6) ocean It's an area where fresh water and seawater mix so
 (7) basically the mouth of an estuary the bay at the mouth of a
 (8) river and of course this is important in Prince William Sound
 (9) in Alaska because that's the area where the salmon come in and
 (10) initially enter the river The estuary stops where the water
 (11) no longer stays salty and has a low enough salt concentration
 (12) you can drink it. So by definition we say the estuary extends
 (13) from the ocean to where you can drink the water
 (14) Q How do you know where the ocean starts?
 (15) A That's obvious where the salinity approaches out of the
 (16) open ocean which is about 32 grams per liter
 (17) Q And were you technical director of the mineral management
 (18) services California monitoring program for the development of
 (19) offshore oil and gas resources?
 (20) A Yes I was
 (21) Q Your were project manager of the Department of Interior
 (22) Georges Bank benthic infauna monitoring program on the
 impact
 (23) of oil and gas explorations of the marine exploration
 (24) activities of Georges Bank?
 (25) A Yes I was

Vol 32 5606

- (1) Q What is Georges Bank?
 (2) A Georges Bank is a large sand bank off the coast of
 (3) Massachusetts and in the past has been one of the richest
 (4) fisheries areas in the Atlantic and in the world, and of
 (5) course there was concern when exploration for oil and gas
 (6) started there that that might have an adverse effect on the
 (7) environment. So we did multi year studies for the Minerals
 (8) Management Service which is a branch of the government on the
 impact
 (9) potential effects of that activity on the fisheries
 (10) Q And what are benthic infauna?
 (11) A Benthic infauna is a long name for little animals that live
 (12) in the bottom mud These are little worms and clams and so
 (13) forth, but they're very important for bottom living fish
 (14) because that's the food of these fish like cod and so forth
 (15) flounder, halibut and so forth eat large numbers of these
 (16) benthic infauna animals the little critters on the bottom
 (17) Q Did that project that you worked at Texas A&M try to
 (18) determine where to draw the line between the point where
 (19) petroleum chemicals cause problems and the point where
 they're
 (20) not causing problems?
 (21) A That is correct, yes We were trying to determine if the
 (22) drilling had any effect in the discharges which included solid
 (23) materials but also some oily materials would cause any effect
 (24) Q In referring again to the Minerals Management Service did
 (25) you work with them on a critical review of oil spill fisheries

Vol 32 5607

- (1) impact models?
- (2) A Yes I did several years ago
- (3) Q What did you do for them on that sir?
- (4) A Well an important aspect of the Minerals Management Service has a mandate to protect ocean environments from offshore oil and gas activities and to assess the potential impacts And as part of that they developed several mathematical models that would predict the interaction of an oil spill or other accidental event on fisheries species and they have several of these models as I say that they've contracted for over the years and I was asked to review the toxicological aspects of those models to evaluate whether they might provide accurate predictions of the effects of a spill in fisheries species so the toxicological aspects of course are the effects of the oil in the water on the fish or on their food
- (17) Q Did the Australian Petroleum Exploration Association have an environmental review committee?
- (18) A Yes it did and I was the single non Australian member of that environmental review committee
- (21) Q And what did that work involve?
- (22) A We were asked to commission a review of the scientific literature to produce a book dealing with the effects of offshore oil and gas development on the marine environment of Australia and we produced a book a 600-page book that was

Vol 32 5608

- (1) published in January 1994 dealing with that subject
- (2) Q And were you on the research and development monitoring subcommittee of the federal committee on offshore pollution?
- (4) A Yes I was
- (5) Q And are you on the mineral management service outer continental shelf advisory boards scientific committee?
- (7) A Yes I'm currently on that committee
- (8) Q We're going to - we're going to give a plug to your book
- (9) Are you the author of that perennial favorite polycyclic aromatic hydrocarbons in the aquatic environment sources, fates and biological effects Sounds like a real -
- (12) A It's a real best seller Yes I published that book in 1979 and as a matter of fact it was the standard reference book in that area for more than 10 years That's a very esoteric area but it deals directly with the effects of oil pollution on marine environments
- (17) Q It's like herring eggs on kelp there are some people who like that stuff?
- (19) A That's right and some people who don't
- (20) Q And did you also publish responses of marine animals to specific petroleum hydrocarbons?
- (22) A Yes I did I published that book in 1981
- (23) Q And then the book you mentioned a few minutes ago arriving from your Australian work?
- (24) A That is correct

Vol 32 5609

- (1) Q Is this the totality of your writings?
- (2) A No I have approximately 110 scientific publications in peer review journals or symposium volumes et cetera most of those deal with the effects of pollution on marine environments
- (6) Q Dr Neff you indicated earlier that - do these articles include the work that you did at Texas A&M that was sort of the original work in trying to define the level at which petroleum chemicals may cause problems for marine animals?
- (10) A Yes that original work was published in 1974 in the Journal of Marine Biology which is a very prestigious journal and has been the most cited article on that - in marine biology in the last several years So it was widely accepted widely used widely copied and this was the original work
- (15) Q Now apart from the Exxon Valdez spill have you had any involvement in other oil spills in your professional career?
- (17) A Yes I've studied several other oil spills throughout the world
- (19) Q By the way I see you're sitting there with your hands crossed is that because a media consultant told you to?
- (21) A No no one ever told me to do it that way it's just the chair is too high
- (23) Q I don't want you to feel uncomfortable if that's the way you feel comfortable even though the media consultants say it you can sit that way What oil spills have you worked on?

Vol 32 - 5610

- (1) A Perhaps the biggest one is the Amoco Cadiz spill, which I think everyone has heard about many times here and I severed a
- (3) contract from the National Oceanic Atmospheric Administration to study the effects of the Amoco Cadiz spill on oyster resources and commercial fish resources The fish I studied is a plaice it's similar to a flounder
- (7) Q Could you spell that so we'll be able to look -
- (8) A Plaice it's P L A I C E And anyway it's a flat fish fairly minor commercial value but it lives in shallow estuaries and some of the estuaries were very heavily contaminated with oil after the spill right downstream within a few miles of the wreck of the tanker Amoco Cadiz And by the way Amoco Cadiz actually released six times more oil than was released by the Exxon Valdez so this was one of the biggest spills at the time in the world
- (16) Q Was it a remote site?
- (17) A No In fact it's a very heavily inhabited site The Brittany coast of France has been inhabited since thousands of years It's a very important cultural area in France It's a major source of fisheries for all of France Most of the fish from Brittany go to the fish markets in Paris and they have major maniculture industries for oysters and crabs and shrimp plus offshore commercial fisheries for a wide variety of different fish species so it was right in the middle of an important fishery area that this spill occurred

Vol 32 5611

- (1) Q And your work on the Amoco Cadiz did that involve
 (2) evaluating the toxicological effects of oil after it's gotten
 (3) into seawater?
 (4) A Yes it did
 (5) Q What other oil spills if any have you worked on?
 (6) A There have been several A lot of small spills one in
 (7) Texas in the late 1970s crude oil spill into salt marshes and
 (8) we were asked by Exxon in that case to study the effects on
 (9) shrimp in the estuaries A spill in fresh water in the
 (10) Monongahela River and there was concern about damage to
 (11) the
 (12) drinking water supplies and the Ohio River the Monongahela
 (13) flows into the Ohio and the Ohio is used for drinking water by
 (14) the people of Ohio and Kentucky, so we evaluated that.
 (15) Larger spills more recently I was the Italian - I
 (16) assisted the Italian government and scientists to study the
 (17) Haven oil spill off Genoa, Italy, and again this is a major
 (18) fishery area for Italy in the northern Mediterranean Sea And
 (19) I assisted the Italian government and marine scientists in
 (20) Italy to investigate the effects of that spill in commercial
 (21) fisheries off Genoa Italy
 (22) Just recently in February I was asked by the government of
 (23) the United Arab Emirates to investigate a spill in the Straits
 (24) of Hormuz You probably heard that during the Gulf War
 (25) That's the narrow area between the Arabian Gulf where we get
 (26) most of our middle eastern oil And there was a big spill and

Vol 32 - 5612

- (1) the government of United Arab Emirates asked me to
 (2) investigate
 (3) the effects of that spill on fisheries in the Emirate of
 (4) Fujairah which is a very poor emirate relies heavily on
 (5) fishery products
 (6) Right now I'm in the study of an unusual spill it was a
 (7) blowout near Milan Italy into rice fields and we're studying
 (8) effects of that blowout on the rice crops and wildlife
 (9) There's a national park right near and there's oil spilled on
 (10) the rice crops and the wildlife living in the natural park in
 (11) the area
 (12) Q Have you had an occasion to study an oil spill in arctic or
 (13) subarctic conditions prior to the Exxon Valdez?
 (14) A I was part of the experimental oil spill called the bio
 (15) study and this was north shore of Bathurst Island, that's about
 (16) as far north as you can get. It's in northern Canada, and that
 (17) investigation was to determine the effects of crude oil and
 (18) chemically dispersed crude oil on nearshore arctic
 (19) environments, and I was - again I received sponsorship from
 (20) the National Oceanic and Atmospheric Administration to study
 (21) the effects of that oil spill that experimental oil spill on
 (22) marine clams
 (23) Q Now you've been involved in either the academic field or
 (24) private consulting investigation of the effects of oil on the
 (25) environment for at least 20 years correct?
 (26) A That is correct yes

Vol 32 5613

- (1) Q And you get paid for that?
 (2) A That's right I receive a salary
 (3) Q And you need to also buy materials and travel and those
 (4) things to do that study correct?
 (5) A That is correct.
 (6) Q Are those kinds of studies funded year in and year out by
 (7) fishermen?
 (8) A Not most of them Fishermen have supported studies of that
 (9) type but most of the funding comes from either the commercial
 (10) side or from government
 (11) Q The commercial side being the industries that produce and
 (12) transport oil?
 (13) A Organizations like American Petroleum Institute or
 (14) Australian Petroleum Exploration yes
 (15) MR LYNCH Your Honor I would tender Dr Neff as an
 (16) expert in marine biology particular emphasis on the adverse
 (17) effects of spilled oil on marine life the evaluation of
 (18) harmful potential of petroleum chemicals contained in marine
 (19) waters
 (20) MR O NEILL We have no objection
 (21) THE COURT Thank you the witness' qualifications are
 (22) accepted by the Court.
 (23) BY MR LYNCH
 (24) Q Let me ask you first off Dr Neff to sum up what you know
 (25) about the world's experience with major oil spills including

Vol 32 - 5614

- (1) the Amoco Cadiz spill that was six times the size of the Exxon
 (2) Valdez spill, and the spills that you have personally been
 (3) involved in and that you know from the literature What is -
 (4) what has world historical experience told us about the likely
 (5) effect of a major marine oil spill on fish populations?
 (6) A Okay, one of the immediate concerns after any oil spill is
 (7) the potential impact on commercial fisheries because that's
 (8) the major economic value of the oceans and coastal waters and
 (9) so perhaps that's been one of the most studied aspects of oil
 (10) spills recorded in recent history and there have been a great
 (11) many studies of oil spills, of the effects of oil spills and to
 (12) my knowledge there's never been a report of a major impact of
 (13) an oil spill, even oil spills much larger than Exxon Valdez on
 (14) any commercial fishery for a sustained length of time
 (15) Q Now when you say major impact, you mean there haven't
 (16) been
 (17) instances where there have been large losses of fish income or
 (18) fish harvest?
 (19) A There have been small fish kills usually representing a
 (20) very small fraction of the fish and few fish floating up to the
 (21) surface or something like that. This does not have an impact
 (22) on the fishery I'm not saying that there weren't fish killed
 (23) by oil spills in the past or even by Exxon Valdez That does
 (24) happen, regrettably However at the population level that is
 (25) the level at which we harvest these fish commercially there's
 (26) never been a substantial impact

Vol 32 5615

- (1) Now in many cases there are fishery closures as happened
 (2) in Prince William Sound or there's a reluctance on the part of
 (3) fishermen to fish in the area because they might contaminate
 (4) their nets and so forth and that happened after the Genoa
 (5) spill the Haven spill off Genoa. So there are impacts because
 (6) of either reluctance or prohibition of fishing but usually when
 (7) the fishermen are able to go back the fish are there and the
 (8) fisheries the harvests are good and have not been
 (9) significantly affected by the spill
 (10) Q Dr Neff let me show you DX5355 B for identification
 (11) A Okay this is the results of some toxicity tests done at
 (12) the Auke Bay laboratory near Juneau Alaska and it shows
 (13) what's called the lethal toxicity of petroleum measured as
 (14) aromatic hydrocarbons to pink salmon adults. Now when we
 (15) try
 (16) to measure the toxicity of oil or other chemicals to a fish we
 (17) usually expose them to several concentrations and measure the
 (18) concentration in which half the animals die or half survive
 (19) the glass is half full or half empty but there's a 50 percent
 (20) response that's got the median lethal response or LC 50
 (21) In this case we see the median lethal response after four
 (22) days or 96 hours of adult salmon was in the range of 1 000 to
 (23) approximately 1700 parts per billion. So that's a fairly large
 (24) amount of oil in water to cause that effect
 (25) Q Let me ask you a few questions about this chart. First of
 (26) all in the bottom it refers to Rice NOAA to Rice NOAA I

Vol 32 5618

- (1) think it is and Rice to NOAA. This is not something you did?
 (2) A That's correct
 (3) Q You know who Dr Rice is or Mr Rice is?
 (4) A I know him very well. He's probably one of the other
 (5) foremost experts of aquatic toxicology in the world and he
 (6) works at the Auke Bay laboratory just outside Juneau Alaska
 (7) Q Has he concentrated on the fish species common to Alaska?
 (8) A Yes that's why his data is so important. He's focused on
 (9) crude oils from Alaska and native species to Alaska in fish and
 (10) invertebrates
 (11) Q Now you described the work you initially did at Texas A&M
 (12) and published and that's an opinion read and followed by
 (13) other
 (14) scientists and as I understand from what you said the
 (15) technique the first part of the technique is to find the level
 (16) of petroleum chemicals that will cause a number of fish to die
 (17) within a specified time?
 (18) A That is correct
 (19) Q And that's called the median lethal level?
 (20) A That's right
 (21) Q And that gives you a way of knowing how much chemical in
 (22) the water will actually cause the death of the animals?
 (23) A That is correct
 (24) Q What use is made of that information once it's been
 (25) ascertained?
 (26) A That information alone is hard to interpret in terms of

Vol 32 - 5617

- (1) environmental effects of an oil spill and so we usually will
 (2) virtually always try to collect additional information that is
 (3) on the concentrations of petroleum in the water that might
 (4) cause other effects less than mortality. In other words
 (5) changes in growth rates what are called sublethal or chronic
 (6) effects. Chronic just means long term exposure. Sublethal
 (7) means an effect that's less than the death of the animal. And
 (8) we need to find out this information because we're just not
 (9) concerned whether fish are killed we're concerned whether
 (10) their life is impaired in any way in the environment
 (11) MR LYNCH Your Honor I'd offer 5355-B
 (12) (Exhibit 5355 B offered)
 (13) MR O NEILL. No objection
 (14) THE COURT Defendants Exhibit 5355-B is admitted
 (15) (Exhibit 5355-B received)
 (16) BY MR LYNCH
 (17) Q Let me show you DX5328-Baker Dr Neff and ask you if you
 (18) would just briefly describe what this chart depicts?
 (19) A I just mentioned the chronic toxicity and these are the
 (20) results of some chronic toxicity tests on pink salmon. In this
 (21) case the investigators again from the Auke Bay laboratory
 (22) studied juveniles and fry of pink salmon and studied the effect
 (23) of oil on growth rate and on restoration in these animals and
 (24) showed that it required 400 parts per billion to reduce the
 (25) growth rate or to increase restoration. These exposures were

Vol 32 - 5618

- (1) for approximately 40 days at least in one instance there for
 (2) the juveniles. So that's considered a chronic exposure
 (3) That's probably longer than any fish would be exposed in the
 (4) environment but it represents a long term exposure causing
 (5) sublethal effects that has reduced growth rate
 (6) Q So the first chart tells us that according to these
 (7) experiments something like a thousand parts per billion is
 (8) that correct?
 (9) A That is correct
 (10) Q That would be a thousand drops in a swimming pool?
 (11) A Something like that yes
 (12) Q To use Dr Jahns measurement?
 (13) A Uh huh
 (14) Q And that would result in death to the animals at least to
 (15) a number of them?
 (16) A That's right
 (17) Q And what you're trying to determine here is some kind of
 (18) other impact less than death some kind of impairment or -
 (19) A Yes what the chronic toxicity tests are trying to
 (20) determine is what is the lowest concentration that will cause
 (21) an effect and by logical inference what is the lowest - the
 (22) highest concentration that will not cause any effect even
 (23) during lifetime exposure. These chronic tests are designed to
 (24) find that interface where oil begins to have an effect and
 (25) below which there is no effect of the oil

Vol 32 5619

- (1) MR LYNCH Your Honor I'll offer 5328-Baker
 (2) (Exhibit 5328-B offered)
 (3) MR O NEILL No objection
 (4) THE COURT Defendants s Exhibit 5328 B is admitted
 (5) (Exhibit 5328 B received)
 (6) BY MR LYNCH
 (7) Q Is there a use for this information apart from oil spills
 (8) this information about where the so-called interface is?
 (9) A That s extremely important information for environmental
 (10) protection because then we can establish what levels of
 (11) discharges from permitted - permitted effluents should be
 (12) allowed We can determine whether - you might say the safety
 (13) factor If we have a discharge of any waste material
 (14) containing oil what is the safety factor how much below the
 (15) concentration that might cause an impact there is
 (16) We can use this for regulatory purposes or for evaluating
 (17) risks of aquatic marine organisms to routine activities human
 (18) activities
 (19) Q Has this type of scientific research been used relied on
 (20) by government in setting standards when to say for example if
 (21) I'm running a hotel on the shore of Prince William Sound how
 (22) much runoff from my property can be regarded as safe without
 (23) posing a threat to the environment?
 (24) A That is true yes
 (25) Q Let me show you Exhibit DX5356-Baker and is this a similar

Vol 32 - 5620

- (1) chart showing the level at which petroleum chemicals aromatic
 (2) petroleum chemicals will lead to death in Pacific herring
 (3) adults?
 (4) A Yes it is and this graph shows that again in
 (5) experiments done at the Auke Bay laboratory that anywhere
 (6) between 1200 and 2200 parts per billion total aromatic
 (7) hydrocarbons in water will cause 50 percent mortality in adult
 (8) herring
 (9) Q This is Dr Rice s work again?
 (10) A That s correct.
 (11) MR LYNCH Your Honor offer 5356-Baker,
 (12) DX5356 Baker
 (13) (Exhibits 5356-B offered)
 (14) MR O NEILL No objection
 (15) THE COURT The exhibit is admitted
 (16) (Exhibit 5356 B received)
 (17) BY MR LYNCH
 (18) Q Next chart is 5377 Alpha, DX5377 Alpha relating to Pacific
 (19) herring chronic toxicity, and without reviewing what the chart
 (20) says since I think we can all read it and got the hang now of
 (21) what you're talking about, is this some further research that
 (22) Dr Rice has done indicating the lower level at which adverse
 (23) effects begin to be seen in Pacific herring?
 (24) A That is correct yes
 (25) MR LYNCH Offer 5377-Alpha, Your Honor

Vol 32 5621

- (1) (Exhibit 5377 A offered)
 (2) MR O NEILL No objection
 (3) THE COURT Defendants Exhibit 5377 A is admitted
 (4) (Exhibit 5377 A received)
 (5) BY MR LYNCH
 (6) Q Let me ask you to address DX1957 Alpha Dr Neff
 (7) A Okay this is a summary of several experiments with herring
 (8) eggs and often the eggs are considered very sensitive
 (9) However Rice s group showed that to cause direct mortalities
 (10) in the eggs requires about 1500 parts per billion aromatics
 (11) from petroleum However a variety of what is called sublethal
 (12) or chronic effects may be produced at much lower
 (13) concentrations and Dr Pearson who you'll hear later on found
 (14) that exposure of herring eggs for 24 hours to 40 parts per
 (15) billion caused increased levels of abnormal - numbers of
 (16) abnormal larvae That was the lowest concentration that
 (17) caused
 (18) any abnormal larvae
 (19) Dr Kocan who you heard the other day did other
 (20) experiments and he found about as low as 20 parts per billion
 (21) he could see some evidence of chromosomal damage in some
 (22) of the
 (23) eggs
 (24) Q In his study that occurred after continuous exposure for
 (25) what?
 (26) A That was continuous 18 day exposure to water soluble
 (27) fraction oil and water mixtures that were renewed every two

Vol 32 - 5622

- (1) days during the 18 days yes
 (2) MR LYNCH Offer DX1957 Alpha Your Honor
 (3) (Exhibit 1957-A offered)
 (4) MR O NEILL No objection
 (5) THE COURT The exhibit is admitted
 (6) (Exhibit 1957-A received)
 (7) BY MR LYNCH
 (8) Q Let me refer you to Exhibit DX5658 Baker Dr Neff Could
 (9) you describe for the record what this chart depicts?
 (10) A Okay, the U S Environmental Protection Agency in its
 (11) effort to protect marine waters and fresh waters for wildlife
 (12) and for fish and wildlife and so forth and for propagation of
 (13) fish and so forth sets water quality criteria and this is a
 (14) summary of marine water quality criteria for three of the most
 (15) important components of crude oil, these are benzene toluene
 (16) and ethyl benzenes and we'll be referring to those later as
 (17) VOAs or volatile aromatic compounds but the criteria for
 (18) benzene is 700 parts per billion Remember benzene is that
 (19) smell you smell when you're pumping gas at the gas station
 (20) and
 (21) smell the vapors that s mostly benzene
 (22) Toluene is the other component of gasoline and the
 (23) criterion value there is 5 300 And ethyl benzene is about
 (24) 430, and that means as long as those aren't exceeded in the
 (25) water column, fish and other water life is protected that is
 (26) they're not harmed at all by the exposure to these

Vol 32 5623

- (1) concentrations
 (2) Q Now these VOAs those are the very highest or very
 (3) lightest components of crude oil?
 (4) A That is correct
 (5) Q Now how is it that we only look at these aromatic
 (6) components of crude oil? What about the ones further down
 (7) the
 (8) barrel?
 (9) A Well there s been a tremendous amount of research done to
 (10) identify what components of petroleum are toxics They re not
 (11) all toxic Not everything in the world is toxic and the work
 (12) from my laboratory when I was at Texas A&M and the work of
 (13) Stan
 (14) Rice and his group at Auke Bay and other investigators have
 (15) shown quite convincingly that it s the aromatic hydrocarbons in
 (16) oil that cause virtually all the toxicity and we can relate or
 (17) correlate the toxicity of any crude or refined oil to the
 (18) relative amount of aromatic hydrocarbons in the oil
 (19) Q So it s a little bit like my cough medicine bottle it
 (20) talks about an active ingredient and then -
 (21) A That s right and the active ingredients in oil with
 (22) respect to fish are the aromatic hydrocarbons
 (23) Q In terms of the danger they could pose to fish?
 (24) A In terms of interaction yes
 (25) Q Why do we differentiate between VOAs and polycyclic
 aromatic hydrocarbons?
 A The main one is analytical We measure them a different

Vol 32 5624

- (1) way and the main reason is VOAs are volatile they evaporate
 (2) very easily If you put a glass of benzene out here on the
 (3) table and it had half an inch of benzene in it within half an
 (4) hour all that benzene would be gone it would be up in the air
 (5) in the vapor phase It would have evaporated just like if you
 (6) left a bottle of scotch open or a glass of scotch open and left
 (7) it out on the counter for a day or so it wouldn t be scotch
 (8) anymore the next day All the alcohol would be gone It s
 (9) evaporated into the air and so we call these volatile
 (10) compounds and those are the benzene toluene and xylene
 (11) and
 (12) so forth
 (13) The polycyclic aromatic hydrocarbons these compounds are
 (14) composed of one ring six carbons linked together in a nice
 (15) little ring a hexagon The polycyclic aromatic hydrocarbons
 (16) as the name implies there are two or more rings polycyclic
 (17) many cycles or circles These are less volatile They tend to
 (18) not evaporate quickly but they are important components of
 (19) petroleum and as I ve already indicated contribute to the
 (20) toxicity of oil because they do go into solution to a slight
 (21) degree
 (22) Q Well you just sort of anticipated my next question
 (23) You ve told us how they interact with air How do they
 (24) interact with seawater these two types?
 (25) A The volatile compounds like benzene are moderately
 soluble That is if you put benzene in water a little bit

Vol 32 5625

- (1) will go into solution but it much prefers to be in the air
 (2) So its you might say affinity or avidity for the water is
 (3) only 1 100th of its preference to go into the air but it will
 (4) dissolve
 (5) For the polycyclic aromatic hydrocarbons they re slightly
 (6) soluble just a little bit will go into the water if they re
 (7) mixed water for a long enough period of time
 (8) Q Now you referred to something I hadn t heard you say
 (9) before to the fact that if you leave a glass of scotch out for
 (10) a while it ll lose its kick If you have benzene dissolved in
 (11) seawater will it stay in the seawater once it s dissolved in
 (12) solution?
 (13) A Just like the glass of scotch it ll lose its kick It ll
 (14) all go into the air and evaporate and go away
 (15) Q If benzene were to go into solution what is the probable
 (16) sequence of events there?
 (17) A Well say after an oil slick some of the benzene from the
 (18) slick will go into solution in the water Most will go up into
 (19) the air and evaporate right away within a day or so but a
 (20) small amount will go into the water but as soon as it does it
 (21) wants to get out of the water and it will evaporate from the
 (22) water almost as quickly as it goes into solution
 (23) MR LYNCH Let met show you DX5657 I believe this
 (24) has been offered Your Honor but if it hasn t been I ll offer
 (25) it

Vol 32 5626

- (1) (Exhibit 5657 offered)
 (2) THE WITNESS Okay The U S -
 (3) THE COURT Wait a minute
 (4) THE WITNESS I m sorry
 (5) MR O NEILL No objection
 (6) THE COURT 5657 is admitted if it hasn t already
 (7) been
 (8) (Exhibit 5657 received)
 (9) THE WITNESS Sorry for that The federal government
 (10) for that also has tried to develop a criterion for totally
 (11) polycyclic aromatic hydrocarbons Let s call them PAHs Their
 (12) criterion is acute criterion I mean this concentration can t
 (13) be exceeded even for a single spike and that concentration is
 (14) 300 parts per billion total PAH However the State of
 (15) Alaska - most states develop - develop their own criteria
 (16) which now are called standards because they re water quality
 (17) standards for the local users of the state and each state is
 (18) asked to do that and they re asked to use the federal water
 (19) quality criteria but to develop their own standards based on
 (20) best practices and uses of the water in the State
 (21) The State of Alaska in 1979 developed a standard for
 (22) total aromatic hydrocarbons in water That standard is ten
 (23) parts per billion That s the most conservative standard in
 (24) the whole country That means there s no criterion or standard
 (25) lower than that anywhere else in the country This is the most

Vol 32 5627

- (1) conservative one anywhere
 (2) Q So the Alaska standard of ten parts per billion says that
 (3) if there are ten drops of either VOAs or PAHs in a sample of
 (4) water the size of a swimming pool that that water is
 (5) nevertheless safe in the judgment of the State of Alaska for
 (6) living things fish and clams and mussels and the little
 (7) critters that fish and clams and mussels eat?
 (8) A That is correct. As long as the concentration doesn't
 (9) exceed 10 then everything's safe and the State has said that
 (10) that is a safe concentration
 (11) Q And compared to the scientific research that Dr. Rice has
 (12) done that you've done that others have done that accomplish
 (13) levels at which harm starts to occur how does that ten parts
 (14) per billion match up? Is that pushing the lower limit of harm?
 (15) A No that's much lower than the concentrations at which we
 (16) see effects and the reason for that is the State has applied
 (17) what's called the safety factor. They want to be absolutely
 (18) sure that no critter even the ones that were exposed in the
 (19) laboratory will be protected will be safe. It's a very
 (20) conservative number.
 (21) Q I think you may have misspoken yourself and just to try to
 (22) straighten out they try to concern themselves that no critter
 (23) will be safe?
 (24) A Oh that every critter will be safe. I'm sorry.
 (25) MR LYNCH I may have misheard you. Offer 5657

Vol 32 - 5628

- (1) THE COURT We did that.
 (2) MR LYNCH Have I done that already?
 (3) THE COURT At least once.
 (4) MR LYNCH I'm nervous about overlooking it.
 (5) BY MR LYNCH
 (6) Q Now Dr. Neff you were hired to begin working on the Exxon
 (7) Valdez oil spill in late March of 1989?
 (8) A Yes I got a telephone call on the 27th or 28th and was in
 (9) Valdez on the 29th.
 (10) Q Okay Now I'd like to ask you a few questions
 (11) preceding - about the spill and what you know about the spill
 (12) preceding your arrival in Valdez on March 29. The record up to
 (13) this point indicates that the spill occurred about 10 minutes
 (14) after midnight on March 24, 1989 and that between that time
 (15) and
 (16) the following Sunday March 26th the spilled oil remained in a
 (17) fairly cohesive slick in the vicinity of the vessel and that
 (18) conditions were calm. And is that your understanding from -
 (19) from the information that you looked into?
 (20) A Yes that is correct.
 (21) Q Based on your research your knowledge of -
 (22) THE COURT We have a technical problem. We'll fix it
 (23) in just a second if you'd stand by, please.
 (24) (Off the record)
 (25) BY MR LYNCH
 (26) Q Dr. Neff Mr. Cooper was concerned that my analogy about

Vol 32 5629

- (1) drops in the swimming pool might be understood as referring to
 (2) drops of oil. The drops would be drops of the active
 (3) ingredient?
 (4) A That's right.
 (5) Q And the standards would be the amount of that ingredient
 (6) that was dissolved into the water?
 (7) A That is correct.
 (8) Q So for example if you dropped a drop of benzene in the
 (9) water and some of it evaporated you might have more of that
 (10) then?
 (11) A That's right.
 (12) Q Now I was asking you about the state of the oil spill from
 (13) the time of the accident on the morning of March 24 until the
 (14) storm that occurred that following Sunday. At that time did
 (15) the oil from the Exxon Valdez represent a threat to the safety
 (16) of fish to the viability of fish?
 (17) A During that time the weather was relatively calm as you
 (18) said and so the oil spread mostly by gravity. It just spread
 (19) flushing away from the tanker and covered a fairly small area
 (20) of upper Prince William Sound basically southwest of Bligh
 (21) Reef.
 (22) At that time of year late March there are no salmon in
 (23) Prince William Sound at least in the water column offshore.
 (24) There are a few in the streams but they're in the gravel and
 (25) far away from the oil spill. So the salmon would not be

Vol 32 5630

- (1) potentially affected.
 (2) Let me go back a minute even though there was not much
 (3) mixing because the weather was calm there - probably some
 (4) hydrocarbons got into the water column and -
 (5) Q And when you say hydrocarbons you mean aromatic -
 (6) A Petroleum aromatics yes hydrocarbons and some would
 (7) have
 (8) dissolved from underneath the slick that was coming out of the
 (9) tanker and some would be in the form of little oil droplets
 (10) that were pushed down into the water and then tended to go
 (11) back
 (12) up to the surface and so most - to the extent that
 (13) hydrocarbons were in the water column or aromatic
 (14) hydrocarbons,
 (15) most would be up near the slick near the water surface and
 (16) there would be very little a greater depth down into the water
 (17) column.
 (18) We don't know where herring are until they arrive on shore
 (19) to spawn but the general feeling at that time of year they
 (20) probably would have been in their - just beginning to come out
 (21) of the wintering areas which we think may be in the Montague
 (22) Straits well south of the spill site or well west of Naked
 (23) Island. So it's unlikely there would be significant numbers of
 (24) herring in the spill area in those few days and if they were
 (25) there, herring don't feed in the month or so before they spawn
 (26) so they probably would have been in deep water because they
 (27) stay in deep water except to come up to feed to protect them
 (28) from predators. Almost everybody out there loves herring for

Vol 32 5631

- (1) dinner They stay in the area of deep water and they would not
 (2) have been exposed
 (3) My feeling is that in those days immediately after the
 (4) spill probably very few fish of commercial value were in the
 (5) area and could have been exposed if there were significant
 (6) hydrocarbon concentrations in the water column
 (7) Q Now let me just focus on the part of your answer that
 (8) relates to the - to the spacial territory where you think
 (9) there may have been concentrations of petroleum - aromatic
 (10) petroleum chemicals sufficient to cause harm to fish or other
 (11) living things That would have been immediately under and
 (12) probably a little to the side of the slick itself?
 (13) A For the most part immediately under the slick in that time
 (14) frame yes because there wasn't much mixing and the currents
 (15) were pushing the oil so the oil under the slick would move the
 (16) oil itself
 (17) Q How far down into the water would you expect the
 (18) concentrations to be?
 (19) A In that time -
 (20) Q In levels of concern?
 (21) A At that time frame they may be of concern or not We
 (22) don't know the actual numbers but probably 10 to 20 feet
 (23) below
 (24) the water surface you might get slightly elevated concentration
 (25) of hydrocarbon but it's doubtful it would be deeper than about
 (26) 10 to 20 feet below the surface

Vol 32 5632

- (1) Q On Sunday - this is also prior to your arrival correct?
 (2) A That is correct
 (3) Q On Sunday there was a big storm and that as we've heard
 (4) blew the slick out and broke it up into smaller agglomerations
 (5) of oil What would be the chemical properties of the oil
 (6) vis a vis marine biology subsequent to the storm?
 (7) A Okay the storm obviously provided a lot of wave action
 (8) that would have broken the slick up into many smaller slicks
 (9) and what are called streamers which are long thin slicks
 (10) mixed water with the oil and mixed oil with water and what you
 (11) would have during and immediately after the storm would be
 (12) small slicks spread around in different areas spread over a
 (13) much larger area in the water column Under them you would
 (14) have some hydrocarbons both in the form of small droplets of
 (15) oil that had broken off the slick and forced down into the
 (16) water and some dissolved hydrocarbons in the upper water
 (17) column perhaps the upper 30 feet or so you would have both
 (18) dissolved and what is called dispersed oil That's droplets of
 (19) oil suspended in the water
 (20) Q So if I understand that answer I was a little distracted
 (21) by getting the chart put up as the oil slick is broken up into
 (22) a lot of smaller puddles of oil on top of the water you think
 (23) there would have been more mixing?
 (24) A Yes definitely there would have been
 (25) Q That would have caused little droplets to become
 (26) commingled

Vol 32 5633

- (1) into the water?
 (2) A That is right.
 (3) Q And the presence of those droplets would raise the level of
 (4) chemicals that could be harmful?
 (5) A That is correct
 (6) Q And you also believe there would be some solution or
 (7) dissolution of the chemicals into the water?
 (8) A That is correct yes
 (9) Q As opposed to all being gathered in one big continuous
 (10) territory it would be associated with the place where the oil
 (11) was still?
 (12) A Pretty much and it would be in little patches here and
 (13) there where the oil still was congregated on the surface
 (14) Q Now we talked - whether or not the analogy works we
 (15) talked about the fact that a part per billion is if you could
 (16) take a tablet say, of this and mix it into a swimming pool
 (17) that would give you - that's equal to a drop it would equal a
 (18) part per billion?
 (19) A That's right.
 (20) Q Do you know approximately how far from the oil how far in
 (21) feet would you go before you got down into the level of parts
 (22) per billion?
 (23) A As I just indicated right near the surface and again
 (24) during the storm and immediately after you'd have much
 (25) higher
 (26) concentrations but the concentration would tend to decrease

Vol 32 5634

- (1) with depth below the surface slicks and so forth and the wave
 (2) action - and this has been shown in other spills both
 (3) experimental and real spills and by 30 feet or so you would
 (4) be getting down to very low concentrations
 (5) Q In your opinion as the slick broke up and formed these
 (6) mini slicks or mini puddles around the Sound did they - did
 (7) those - did that dispersed oil or scattered oil represent a
 (8) significant risk to commercial species of fish in Prince
 (9) William Sound?
 (10) A Again the salmon weren't there so they weren't at risk
 (11) The herring as I say were mostly in deeper water outside the
 (12) main spill path in that time frame So I think for the most
 (13) part they were out of danger you might say from significant
 (14) water column exposure
 (15) The oil on the surface again never during that time
 (16) represented a threat to the fish It's what gets down into the
 (17) water column where the fish live that could cause a problem
 (18) Q Now beginning after your arrival in March - on March 29
 (19) 1989 you were involved in a program to actually measure the
 (20) levels of petroleum chemicals that were to be found in the
 (21) water areas?
 (22) A That is correct yes
 (23) Q Let me show you Exhibit DX8646 Alpha Does this exhibit
 (24) summarize the water quality assessment program in which you
 (25) were involved beginning on March 29 1989?

Vol 32 5635

- (1) A This summarizes the sum total of all the water quality
 (2) measurements that we took between 1989 about 1991
 throughout
 (3) Prince William Sound in areas where the oil was known to go
 (4) That's oil spill path areas so it's called oiled areas here
 (5) What we see is there are nine different studies involving water
 (6) quality samples and we sampled at 236 locations in Prince
 (7) William Sound alone We sampled additional locations outside
 (8) the Sound and we took more than 2400 samples for water
 quality
 (9) measurements This is by far the largest water quality program
 (10) performed after any oil spill large or small
 (11) MR LYNCH Your Honor if Dr Neff could step to this
 (12) chart here and just give us a general idea of where the 236
 (13) locations for checking the water would be While he's doing
 (14) that I'll offer 8656-Alpha
 (15) (Exhibit 8656-A offered)
 (16) MR O NEILL No objection
 (17) THE COURT Defendants Exhibit 8656-A is admitted
 (18) (Exhibit 8656-A received)
 (19) THE WITNESS This is a rather beautiful Landsat
 (20) photograph from a satellite flying over Prince William Sound on
 (21) April 7th 1989 and fortunately the weather was very good at
 (22) that -
 (23) MR LYNCH Step over here You're blocking His
 (24) Honor's view
 (25) THE WITNESS The weather was very good that day We

Vol 32 5636

- (1) have a clear picture of the Prince William Sound The actual
 (2) tanker accident occurred up here in the corner It's off the
 (3) map put the spill the oil moved down through the central
 (4) Sound around Naked Island group and we'll be talking about
 (5) Naked Island later and down through Montague Pass and
 down
 (6) through the islands in the eastern Sound This is Knight
 (7) Island group here seen in real life rather than a map and
 (8) down through all these islands here LaTouche Island Elrington
 (9) Island Evans Island so forth, eventually out into the Gulf of
 (10) Alaska.
 (11) Now these red blobs that look like modern art that's
 (12) actually oil on the water surface This was April 7th We
 (13) picked this date because this is just before the beginning of
 (14) spawning of herring in Prince William Sound and the herring
 (15) spawn up here There was some spawned on the northern part
 of
 (16) Montague Island up in Tattiek Narrows out off the map here
 and
 (17) around Naked Island and you can see there are a few red dots
 in
 (18) this area here representing oil slicks so some oil in this
 (19) area and lots of oil down here and you can see that it's
 (20) broken up into narrow strands and so forth
 (21) So our sampling locations extended from near the tanker up
 (22) here but throughout this area around these islands like Naked
 (23) Island We had some samples up around Montague the
 northern
 (24) interior of Montague Island around Green Island and many
 (25) samples around the Knight Island group because that's where

Vol 32 - 5637

- (1) most of the oil went and samples down here in all the passes
 (2) where the oil exited and basically throughout the area through
 (3) which the oil passed we had sampling locations where we went
 (4) and sampled at different times after the spill to determine the
 (5) water quality how much oil was in the water column
 (6) Q You've given us a top down or a flat view of where the
 (7) sampling locations were What about depth in the water?
 (8) A Well most of the biological life in the water column of a
 (9) deep fiord like Prince William Sound occurs in the upper
 (10) hundred feet or so It's not spread throughout the water
 (11) column from the surface to the bottom and likewise most of
 (12) the oil that gets into the water is not spread throughout the
 (13) water column
 (14) So most of our samples are taken near the water surface
 (15) where most of the biological activity occurs in Prince
 (16) William Sound and other oceanic environments the food chain
 is
 (17) based on microscopic plants that have to live in the upper
 (18) water layers where the sunlight penetrates and everything else
 (19) that depends on them lives up there too So we are sampling
 (20) locations that are just below the water surface at about three
 (21) feet below the water surface nine feet and as deep as about a
 (22) hundred feet below the water surface for the most part We
 (23) did take deeper samples
 (24) Q In the nature of things when you're dealing with petroleum
 (25) chemicals that get into seawater where would you expect to

Vol 32 - 5638

- (1) find concentrations, if they did exist?
 (2) A We would expect the highest concentrations to be in the
 (3) near surface waters and lower concentrations to be in the
 (4) deeper areas of the water column That's why we focused our
 (5) sampling in the upper layers of the water column to get the
 (6) deepest concentrations
 (7) Q You began taking samples in early April of 1989?
 (8) A That is - well our first samples are actually the end of
 (9) March March 30th
 (10) Q Even before April?
 (11) A Yes
 (12) Q At that time, there was as this picture shows there was
 (13) still oil on top of the water to be seen from a satellite photo
 (14) and I suppose if you got closer, you'd see a little more oil?
 (15) A That is correct, yes
 (16) Q Let me direct your attention to DX5719 Baker and ask you
 (17) about this First of all is it accurate that the first
 (18) commercial species to make its appearance in Prince William
 (19) Sound following the oil spill was Pacific herring?
 (20) A Yes that's true
 (21) Q Or at least of the species we're talking about here There
 (22) may have been - someone will tell me I missed a species
 (23) but -
 (24) A Right
 (25) Q Now, what does this chart tell us about the exposure of

Vol 32 5639

- (1) Pacific herring to dangerous petroleum chemicals following the
 (2) Exxon Valdez oil spill?
 (3) A Well we took water samples in the upper water column in
 (4) areas where we expected migrating herring to occur or to pass
 (5) As I indicated earlier we re not sure quite where the herring
 (6) are in the middle of winter but mostly they re west of Naked
 (7) Island and in Montague Pass but we sampled in those areas of
 (8) the red dots and what we found was the water quality
 throughout
 (9) this area was uniformly of a very high quality That means
 (10) very low concentrations of PAHs or PAHs well below the State
 (11) standard throughout the area So the water quality was good
 (12) where the herring might be moving to their spawn grounds
 (13) Q What do the little charts or boxes on the side tell us?
 (14) A Okay those are graphs I m sorry let met explain this
 (15) The top one there it says there were a hundred and ten
 samples
 (16) in this time period between April 1st and April 24th and we
 (17) picked that time interval because that s when the herring are
 (18) moving towards the areas where they spawn and in the map on
 (19) the - on the left there the black bands along the shore are
 (20) where the herring actually spawn and the little diamonds in
 (21) the graphs are individual water samples and the concentrations
 (22) of PAH in those water samples and for companson at the top
 (23) of each one we ve shown the State of Alaska standard of ten
 (24) parts per billion
 (25) So what these graphs show is water quality was of a very

Vol 32 5640

- (1) high quality throughout the area when the herring were moving
 (2) in to spawn
 (3) Q These black lines which at least from where I'm standing
 (4) don t look too sharp but these are the locations near the
 (5) shore where the herrings lay their eggs?
 (6) A Yes the herring lay their eggs right at the shore in the
 (7) subtidal and supratidal zone and those are the areas marked in
 (8) black where the herring actually spawned in 1989
 (9) Q Now do you know Dr Neff which if any of these areas
 (10) were areas where oil actually went ashore?
 (11) A Okay there are two areas where the herring spawn and the
 (12) oil coming ashore occurred together That s where there was
 an
 (13) overlap and these are - can I use this? Does this work or
 (14) no I guess not the overhead - anyway -
 (15) Q Would you prefer to have it up so you can do that?
 (16) A That s okay I can explain Maybe you can use a pointer
 (17) or I could use a pointer
 (18) Q Your permission Your Honor Real sense of power when
 (19) you re holding that thing
 (20) A The majority of herring spawning was up in the northeastern
 (21) Sound and the northern Sound in these areas which were well
 (22) outside the spill path However on the north shore of
 (23) Montague Island in a place called Rocky Bay some oil did
 come
 (24) ashore along the shore but the oil was very patchy and
 (25) generally considered light

Vol 32 5641

- (1) And then Naked Island is a very complicated island up here
 (2) lots of little bays and inlets perhaps some of you have been
 (3) there and some of these bays and inlets also received some oil
 (4) and also there was spawning in some of these bays Places like
 (5) Pass Harbor Outside Bay and Cabin Bay got both herring
 spawn
 (6) and some oil Again the oiling was generally light But
 (7) those are the two places where both oil and herring spawn
 (8) occurred together
 (9) Q And I note that in the graphs that we have on Exhibit
 (10) DX5719-Baker you have the VOAs and the PAHs listed
 separately
 (11) is that correct?
 (12) A That is correct.
 (13) Q And then you have the hatched area is the Alaska aromatic
 (14) limit?
 (15) A That s right.
 (16) Q And the Alaska aromatic limit takes the two in combination
 (17) is that correct?
 (18) A That s correct.
 (19) Q Have you looked at the question of whether if you combined
 (20) the VOA samples with the PAH samples you d get above the
 ten?
 (21) A Yes we did look at that That was a concern because what
 (22) scientists measure in the environment and what the State
 (23) standard says are somewhat different So we tried to make
 them
 (24) compatible and when we compared - when we took - we had
 data
 (25) we took very careful records so we knew that if we took a

Vol 32 5642

- (1) water sample for VOA and a water sample for Ph that we could
 (2) match them up later on as the same sample and when we did
 this
 (3) analysis in our computer we found that there was very little
 (4) overlap so that the total number of samples more than ten ppb
 (5) total PAH plus VOA was only a little - there were only a few
 (6) cases where the combination put it over that limit of ten parts
 (7) per billion So for the most part this is a good
 (8) representation of both VOAs and PAH We don t get more what
 (9) we call hits that is levels above ten if we combine the two
 (10) together
 (11) Q Measured by VOAs you had one sample where sometime
 (12) between April 1 and April 13 the VOAs in the water exceeded
 (13) the State limit is that correct?
 (14) A That s correct.
 (15) Q And that would have been one place? How long would that
 (16) situation continue in the normal course of -
 (17) A Well particularly for VOAs because as I indicated earlier
 (18) they don t want to stay in the water they evaporate quickly
 (19) it s likely that was a single event a small patch of water
 (20) that was there for a short period of time and we happened to be
 (21) there to sample it at that time It doesn t represent an
 (22) area wide trend
 (23) Most of the other values nearby were lower than that but
 (24) we've shown every single point for completeness and clarity
 (25) We haven t eliminated any points because they weren t the

Vol 32 5643

- (1) numbers we wanted So that would be a short lived event It
 (2) probably would have no effect on any herring that was passing
 (3) in through the area
 (4) Q Now these numbers these plots here both of the PAHs and
 (5) the VOAs as I understand your testimony if you had a factory
 (6) or a sawmill or a hotel and it was regularly day in and day
 (7) out producing that level of hydrocarbon in the water that
 (8) would be considered safe water under Alaska law?
 (9) A Under Alaska law that would be completely safe yes
 (10) Q Do you have an opinion, based on these data on the
 (11) question of whether herring migrating to spawn - migrating in
 (12) the Prince William Sound to spawn in 1989 April of 1989 were
 (13) at risk from the Exxon Valdez oil spill?
 (14) A Yes I do have an opinion
 (15) Q What is that opinion sir?
 (16) A My opinion based on all the scientific data is that the
 (17) herring the adult herring moving into the spawning areas were
 (18) not at risk from the hydrocarbons in the water column at that
 (19) time
 (20) MR LYNCH Your Honor I'll offer DX5719-Baker and
 (21) 1368 DX1368
 (22) (Exhibits DX5719-B and DX1368 offered)
 (23) MR O NEILL No objection on the condition that we
 (24) take a break now because it's 10 00
 (25) THE COURT Defendants Exhibit 5719-B - and 1368 is

Vol 32 5644

- (1) a defendants exhibit also isn't it?
 (2) MR LYNCH Yes Your Honor
 (3) THE COURT They're both admitted and we'll take our
 (4) break at this point We'll be in recess for 15 minutes
 (5) (Exhibits DX5719 B and DX1368 received)
 (6) (Jury out at 10 00 a m)
 (7) (Recess from 10 00 a m to 10 15 a m)
 (8) (Jury in at 10 15 a m)
 (9) THE COURT Mr Lynch you may continue
 (10) BY MR LYNCH
 (11) Q Dr Neff let me refer you to DX8895 What were you
 (12) studying that is illustrated by DX8895?
 (13) A As I indicated before the break the areas of herring
 (14) spawning are indicated by the black lines up here in the
 (15) northeast near Tatitlek Narrows and over Fairmont Bay and so
 (16) forth in the northern Sound as well as around Knight Island -
 (17) around Naked Island and on the north shore of Montague
 (18) Island
 (19) As part of our water quality program and as part of the program
 (20) performed by the National Oceanic and Atmospheric
 (21) Administration called NOAA water samples were taken and
 (22) various water quality measurements were made in herring
 (23) spawning areas that might have been affected by the oil spill
 (24) that is within the oil spill path particularly around Knight
 (25) Island - I mean around Naked Island and in Rocky Bay on the
 north shore of Montague Island where the pointer is right now

Vol 32 5645

- (1) Q Could you just touch the screen twice there
 (2) A Where here?
 (3) Q Just tap it twice
 (4) A Doesn't want to do anything Why isn't it doing anything?
 (5) Q Here we go that's what we want
 (6) Now these are the data as shown in the box to the right
 (7) are the water quality measurements that you made there?
 (8) A Yes they are and we've combined water quality
 (9) measurements that were taken by - during several Exxon
 (10) supported studies as well as studies performed by NOAA and
 so
 (11) the water samples include water collected in my studies and
 (12) offshore water quality and herring studies and so forth
 (13) performed for Exxon plus NOAA water quality studies
 (14) Next we used mussel studies Mussels are bivalve mollusks
 (15) that tend to bioaccumulate bacteria from the waters We can
 (16) back calculate the concentration of PAH in the water to which
 (17) the mussels were exposed These are mussels sitting on the
 (18) beach right next to where the herring are spawning so we
 (19) calculated what the mussels are exposed to the average
 (20) concentrations This is summarized in this graph The blue
 (21) stars are the mussel data and the red diamonds are the water
 (22) data and what we see here is that in early April and into May
 (23) period of spawning in 1989 the concentrations of PAH were
 very
 (24) good The water quality was excellent throughout this period
 (25) and after that period water quality got better and better but

Vol 32 5646

- (1) never did we find concentrations calculated either way that
 (2) exceeded the State of Alaska standards
 (3) Q Let's get a couple things clear here First of all there
 (4) was oil in the vicinity of some of these spawning sites
 (5) correct?
 (6) A Yes and in fact these data reflect that. You wouldn't
 (7) ordinarily get but around three or five parts per billion PAH
 (8) in the water if there was no oil around at all The background
 (9) concentrations are actually lower than that so the mussels as
 (10) well as the water quality data documented there was oil in the
 (11) general area at this time of spawning yes
 (12) Q That oil was on top to the extent it was still in the
 (13) water it was on top of the water?
 (14) A For the most part the oil was on the water surface and what
 (15) we're seeing here was actually in the water column and
 (16) available to critters living in the water column
 (17) Q In the nature of the rise and fall of the tides you're not
 (18) saying there were no herring ever exposed to oil in the areas
 (19) where the oil was present?
 (20) A No As I think I said earlier herring spawn both below
 (21) the low tide line and above the low tide line in what's called
 (22) the intertidal zone And if there's a lot of oil on the
 (23) substrate they like to spawn on kelp and seaweed and so
 (24) forth If that seaweed is oiled either before or after they
 (25) spawn and eggs come in contact with that oil they probably

Vol 32 5647

- (1) will suffer injury They may die
 (2) MR LYNCH Let me ask Rob to show us a videotape
 (3) which Mr Jamin has shown us once or twice You have the PX
 (4) number for that? This is PX247 A Alpha
 (5) (Videotape Played)
 (6) BY MR LYNCH
 (7) Q Now this is film or videotape that was taken at a time
 (8) when according to the witness who presented this videotape
 (9) the tide was in and as you can see that kelp is completely
 (10) submerged and the witness has testified that there s oil on
 (11) that kelp
 (12) If herring eggs were to be deposited on that kelp Dr
 (13) Neff in your opinion would those eggs have a chance of
 (14) producing successfully?
 (15) A Okay that s my first viewing of that thing and it looked
 (16) like the kelp which you called it was actually rockweed or
 (17) fucus which grows in the intertidal zone so I m quite sure
 (18) that that was intertidal area and of course, as you know the
 (19) tides come in and go out and there s a difference of about 12
 (20) feet between high tide and low tide So if you have a diver
 (21) swimming around just off the shore at high tide he s in an
 (22) area that s exposed to the air at low tide and I think what we
 (23) saw there is evidence that in fact that intertidal algae the
 (24) fucus was oiled by again oil coming in on the water surface
 (25) the tide goes out and the oil settles down on top of it.

Vol 32 5648

- (1) Now that actually did occur in many places throughout
 (2) Prince William Sound I don t know where those pictures were
 (3) taken but if a herring adult if the parents were so unwise as
 (4) to deposit their eggs on that stuff they probably - the eggs
 (5) probably would not survive
 (6) Q So the net effect is that where the substrate on which the
 (7) eggs came to be deposited did have oil on it and that oil was
 (8) under the water that would be harmful to the herring eggs
 (9) there s no argument about that is there?
 (10) A No there s no argument about that
 (11) Q That would reduce - all things being equal that would
 (12) reduce the reproduction of herring for that particular year is
 (13) that correct?
 (14) A That is correct
 (15) Q What would be the biological significance of that impact on
 (16) herring reproduction that is the kind of situation where oil
 (17) would get on the kelp itself?
 (18) A The biological significance of that is dependent completely
 (19) on how many miles of herring spawn were actually deposited
 (20) oiled fucus or oiled sea weeds and if that s a large part of
 (21) the total spawning then that could have a significant effect
 (22) at the population level What we re concerned about here I
 (23) don t want to be callous but herring deposits thousands of
 (24) eggs apiece and all that s needed during the life of that
 (25) herring is for two of those - and it does it several years in

Vol 32 5649

- (1) a row and all that s needed for that herring to maintain a
 (2) population is for two of those to survive to adult hood to
 (3) reproduce like their parents so there s a large natural
 (4) mortality So for it to have a significant impact on the adult
 (5) population you probably would have to have more than 50
 (6) percent of the herring affected in this way
 (7) Q And do the data that are available about where the oil was
 (8) and where the herring spawn occurred in 1989 give you any
 (9) indication about how significant the risk of herring eggs being
 (10) actually physically present in the oil was to the reproduction
 (11) of the herring population?
 (12) A Yes Of the total miles of herring spawn and often
 (13) fisheries biologists measure miles of shoreline where the
 (14) spawning occurs there were only two places where the oiling
 (15) maps show an overlap between the spawning miles and the
 (16) oiling
 (17) and those were as I ve already said were in Rocky Bay in the
 (18) north shore of Montague Island and in the bays on the
 (19) southern
 (20) and western shore of Naked Island that is Bass Harbor Cabin
 (21) Bay and Outside Bay In all of these areas the oiling was
 (22) generally very light and patchy and it s been estimated by
 (23) Exxon scientists and by the chief scientists of the trustees
 (24) that perhaps five to ten percent of the total miles of herring
 (25) spawned were in areas that actually were oiled in 1989
 (26) Now half of that in Prince William Sound the herring
 (27) spawn about half of the spawn is in the intertidal zone

Vol 32 5650

- (1) between the tides and half is below the tidal zone and the most
 (2) at risk are those in the intertidal zone So if you say five
 (3) to ten percent could have been in areas where there was
 (4) actually oil on the shore then half of that would be a
 (5) greatest risk in the intertidal zone that would reduce it down
 (6) to two to five percent of the total spawn probably did
 (7) experience direct contact with oil and probably suffered
 (8) significant effects from that
 (9) Q So based on the statistics that are available you would
 (10) think that where in the area of ten percent of the herring eggs
 (11) deposited that year might have been unable to reproduce
 (12) because
 (13) of the presence of oil?
 (14) A Yes that would be the upper limit estimate on my part
 (15) perhaps ten percent of the herring eggs did not survive or were
 (16) adversely affected by the oil
 (17) Q I d like to just spend a couple of minutes with you on the
 (18) blue stars which you told us were indications of tests done by
 (19) NOAA on mussels?
 (20) A That s right
 (21) Q The mussels were they taken out of a refrigerator or
 (22) something and placed there by NOAA or were these mussels
 (23) growing there naturally?
 (24) A These were mussels collected from the intertidal zone in
 (25) different areas where the herring were spawning and they were
 (26) used to indicate relative concentration of hydrocarbons in the

Vol 32 - 5651

- (1) area They were what I call Native mussels They lived there
 (2) before the spill they were living after the spill they were
 (3) collected from the shore in the time when herring were
 (4) spawning
 (5) Q And so you collect the mussels you cut them open and some
 (6) chemist figures out how many of these petroleum hydrocarbons
 (7) are in the flesh the body of the mussel?
 (8) A That is correct yes
 (9) Q And does the - I m pointing myself at the highest entry
 (10) for mussel Does that indicate that the measurement on that
 (11) particular mussel was less than five parts per billion or
 (12) active ingredient?
 (13) A No what that indicates is that if you calculate or
 (14) estimate the concentration of hydrocarbons or PAH in the water
 (15) column to which that mussel was exposed that number comes
 (16) out
 (17) to about five Now the mussel itself Hawaii actually has
 (18) higher concentrations of PAH and what that means is that the
 (19) mussels are able to accumulate the hydrocarbons from the
 (20) water
 (21) column That s why they re used They build up the
 (22) hydrocarbons in the tissue They filter very large volumes of
 (23) water
 (24) If you can imagine a little mussel on the shore filters
 (25) almost a gallon of water every hour and it does that to get
 (26) food And in the process if there s oil in the water and
 (27) solution or little particles of sediment with oil on it, it

Vol 32 - 5652

- (1) ingests those and these accumulate in its tissues
 (2) Now if the mussel then is taken to a clean area or the
 (3) oil goes away, he releases those hydrocarbons back to the
 (4) water So the level in the mussel tissues reflects what s in
 (5) the water that he s encountering, you might say that day or for
 (6) a few days just before we went out and cruelly wrenched them
 (7) from the shoreline and took them back to the laboratory and
 (8) analyzed them
 (9) Q Now the method this method of testing for hydrocarbons
 (10) is that a recognized scientific technique?
 (11) A Yes it is In fact NOAA the National Oceanic and
 (12) Atmospheric Administration had a country-wide program called
 (13) the National Status and Trends Program, Mussel Watch
 (14) Program
 (15) and they take mussels from shorelines throughout the country
 (16) to
 (17) evaluate the level or the status of pollution in urban areas
 (18) places like Seattle and Los Angeles and there are actually
 (19) several mussel watch stations in Prince William Sound that have
 (20) been sampled even before the oil spill
 (21) Q And what s the - what s the advantage of using mussels as
 (22) opposed to the method that is depicted by the little red
 (23) diamonds?
 (24) A Okay the two methods have their own advantages and
 (25) disadvantages The water sample is a discreet sample you can
 (26) compare it with a standard like the Alaska standard It s very
 (27) simple it s direct you know exactly what you ve got you know

Vol 32 5653

- (1) where you collected it what time
 (2) The mussel on the other hand does what we call
 (3) integrating exposure What it does is it s sampling the
 (4) environment all the time and for a period of time and the
 (5) level in its tissue reflects the average concentration for a
 (6) period of time maybe a week or a few days before you actually
 (7) went and collected it. So it - it evens out the ups and downs
 (8) but gives you an average concentration which is what you want
 (9) for a status study what s the average concentration of oil in
 (10) the water column Well the mussel will tell you that whereas
 (11) a single sample of water will tell you exactly what the
 (12) concentration is at one point at one time but won t give you
 (13) an average over a period of time unless you sample
 (14) everywhere
 (15) all the time every day So the mussel helps you get an
 (16) average concentration over time
 (17) Q So you take the actual concentration that you measure in
 (18) the mussel and then you do some kind of formula that tells you
 (19) what you think the concentration was in the water?
 (20) A Yes There have been several scientific studies and the
 (21) studies we used were done by EPA at their Narragansett lab in
 (22) Rhode Island There s a mathematical relationship between the
 (23) concentration in the water and the concentration in the mussel
 (24) tissues chemicals like PAHs
 (25) Q These figures have been - they re the result of doing that
 (26) calculation they re not the actual measure of the mussel s

Vol 32 5654

- (1) concentration?
 (2) A That is correct.
 (3) Q And did you draw any conclusions from the relationship
 (4) between the mussel plots and the direct measurement plots?
 (5) A Our objective in doing this was to determine if our water
 (6) samples reasonably reflected the overall trends in the
 (7) concentrations of PAH and other hydrocarbons in the water
 (8) We
 (9) recognize that this mussel extrapolation is only an
 (10) approximation but what the data shows is that there s
 (11) reasonably and very good agreement actually between the
 (12) water
 (13) data and the mussel data that gives us a very high degree of
 (14) confidence that taking the two together we have an accurate
 (15) representation of what herring eggs and larvae and so forth
 (16) were exposed to in that period of April when we took these
 (17) samples April and May
 (18) Q Dr Neff, I think many people would be concerned to learn
 (19) that the mussels are taking these even in minute quantities
 (20) are taking these chemicals in and they re building up in the
 (21) mussel s tissue Is that a danger?
 (22) A Well, if there was enough hydrocarbon in the water and the
 (23) mussels accumulated enough and mussels are very tolerant to
 (24) oil they can accumulate amazing amounts of PAHs But
 (25) basically, EPA has said if the concentration of the water is
 (26) below their criterion values then they account for - they
 (27) include consideration of bioaccumulation which we ve talked

Vol 32 5655

- (1) about So small levels of PAH in the mussel tissues are
 (2) commensurate That means they re not in disagreement with
 the
 (3) idea that there s an acceptable level of PAH in the
 (4) environment
 (5) So a certain level is acceptable and it would not pose a
 (6) harm to any animal that came along and chomped on that
 mussel
 (7) and ate him for dinner
 (8) Q Let me try to say that in simpler words The ten parts per
 (9) billion standard that Alaska sets recognizes that mussels and
 (10) other animals that live in the water will be accumulating these
 (11) chemicals and may actually get to a higher than ten level
 (12) themselves?
 (13) A Well yes in essence Alaska didn t consider
 (14) bioaccumulation but the Environmental Protection Agency in
 (15) developing their much less stringent criteria did consider
 (16) bioaccumulation so that is considered in the evaluation The
 (17) development of the criteria and levels in mussel tissues in
 (18) equilibrium with ten parts per billion would be acceptable
 (19) yes
 (20) Q What about fish do fish bioaccumulate the chemicals in the
 (21) water as they swim through?
 (22) A They do but to a much less extent because they have very
 (23) efficient enzyme systems for breaking down the chemicals and
 (24) excreting them rapidly so we wouldn t expect to see as high
 (25) concentration of PAH in the tissues of fish as we do in

Vol 32 5656

- (1) mussels They d be much lower if we could measure them at
 all
 (2) Q Now overall considering the measurements that are
 (3) represented here in DX8895 and the mussel measurements and
 your
 (4) general experience with the water quality sampling program
 that
 (5) you conducted what conclusion do you draw about the risk to
 (6) herring in the areas where herring spawn occurred in 1989?
 (7) A The risk to individual herring individuals particularly
 (8) the eggs and larvae obviously there was some danger that
 (9) individual animals died as a result of the oil spill The
 (10) population level I think that smaller risk to individuals is
 (11) not translated to the population level In other words the
 (12) risk to the population of herring in Prince William Sound was
 (13) not significant after the oil spill
 (14) MR LYNCH Your Honor I ll offer 8895
 (15) (Exhibit 8895 offered)
 (16) MR O NEILL No objection
 (17) THE COURT Defendants Exhibit 8895 is admitted
 (18) (Exhibit 8895 received)
 (19) BY MR LYNCH
 (20) Q Let me show you Exhibit 8888 Dr Neff and could you just
 (21) very briefly tell us what if anything this adds to the
 (22) discussion we ve just had about water quality levels in the
 (23) vicinity of Naked Island?
 (24) A Okay this is an extent of the same graph we just saw The
 (25) whole bunch of stars and diamonds on the left hand side

Vol 32 5657

- (1) under - over 1989 those are the data I just showed you But
 (2) we went back and NOAA went back in 1990 and again in 1991
 and
 (3) sampled the same location or some of the same locations
 because
 (4) of concern of long term effects on herring populations
 (5) What we see here is that after 1989 the concentrations of
 (6) hydrocarbons in the water where the herring were spawning
 went
 (7) way down There were a few slightly elevated levels I
 (8) believe those were McPherson Passage on Naked Island And
 by
 (9) 1991 basically all the numbers were down on the baseline
 (10) there That means we had trouble even detecting any
 (11) hydrocarbons at all or it was near or detection limits just
 (12) above it well under a part per billion So basically the
 (13) water quality was pretty good in 1989 it got better in 1990
 (14) and was basically pristine by 1991
 (15) MR LYNCH I ll over 8888 DX8888 Your Honor
 (16) (Exhibit 8888 offered)
 (17) MR O NEILL I have no objection
 (18) THE COURT Defendants Exhibit 8888 is admitted
 (19) (Exhibit 8888 received)
 (20) BY MR LYNCH
 (21) Q I d like to turn now Dr Neff to the question of - I m
 (22) sorry I don t want - I don t want to turn to the question
 (23) Let me show you DX5708 Alpha and this refers to a
 (24) different kind of testing that you also did about the safety or
 (25) the risk that chemicals in the water presented in 1989?

Vol 32 5658

- (1) A Yes we were concerned that just doing chemical - I m a
 (2) biologist and so I know a lot of chemistry I ve done chemistry
 (3) most of my professional life but I m a biologist and I want to
 (4) know are the animals going to be affected by this stuff
 (5) irrespective of the chemistry
 (6) And so in addition to our water samples that we analyzed
 (7) for petroleum hydrocarbons for PAH and VOAs we also took
 water
 (8) samples during our early uses early field surveys in 1989 in
 (9) the period - in this case a few studies in June or July off
 (10) heavily oiled beaches and we subjected them to what are
 called
 (11) laboratory toxicity tests or bioassays to determine if the
 (12) water in Prince William Sound was toxic to marine animals
 (13) And we did several standard EPA toxicity tests with very
 (14) sensitive species and one of this shows early life stages of
 (15) sheepshead minnow little minnow that swims around near the
 (16) shore there was no effect of the water from Prince William
 (17) Sound on these animals and these were acute toxicity - well
 (18) they re actually run for seven days but they re a toxicity
 (19) test we measured survival and this says survival of all the
 (20) individuals was no different between those exposed to Prince
 (21) William Sound water and those exposed to clean water from
 (22) another location that had never been subjected to an oil spill
 (23) Q So basically what you found was that from the point of
 (24) view of the fish the water that had oil on the top and the
 (25) water that had never seen oil on the top the fish seemed to

Vol 32 5659

- (1) survive about the same?
 (2) A That s right There was no difference
 (3) Q And this little I beam on the top of each of these bars
 (4) what does that refer to?
 (5) A That s a statistical parameter called 95 percent confidence
 (6) interval said if you repeated that test a hundred times you d
 (7) get - your results would fall between those two bars in the H
 (8) every time or 95 percent of the time almost every time
 (9) MR LYNCH Your Honor I ll offer 5708 Alpha
 (10) DX5708 Alpha
 (11) (Exhibit 5708 A offered)
 (12) MR O NEILL No objection
 (13) THE COURT Defendants Exhibit 5708 A is admitted
 (14) (Exhibit 5708 A received)
 (15) MR LYNCH And DX5715 is a similar method of testing
 (16) using - presented on a similar chart as to sheepshead minnows
 (17) in April of 1989 DX5714 is a similar chart about a test of
 (18) algal cell density in April of 1989 And DX5717-Alpha is a
 (19) similar test on mysid shrimp for the period April 3 to April
 (20) 14 1989
 (21) In the interest of time Your Honor I ll offer those
 (22) without going through each of them individually, but I will ask
 (23) Doctor -
 (24) (Exhibits DX5715 DX5714 and DX5717 A offered)
 (25) MR O NEILL No objection

Vol 32 5660

- (1) THE COURT The last one was 57 -
 (2) MR LYNCH 17 Alpha
 (3) THE COURT There being no objection they are
 (4) admitted
 (5) (Exhibits DX5715 DX5714 and DX5717 A received)
 (6) BY MR LYNCH
 (7) Q And you heard me describe those exhibits Dr Neff Is it
 (8) correct that those charts are to be interpreted substantially
 (9) the same way?
 (10) A That is true yes
 (11) Q And the other substances are besides sheepshead shrimp
 (12) over mysid shrimp?
 (13) A They re considered by EPA to be the most sensitive animals
 (14) to marine pollution so they ve been recommended to be used
 (15) in
 (16) these tests throughout the country Mysid shrimp are similar
 (17) to the small shrimp like creatures that herring feed on and
 (18) juvenile salmon feed on in Prince William Sound
 (19) Q When you say small shrimp how small is small? Are we
 (20) talking about a shrimp I could have in salad?
 (21) A No a shrimp more like a quarter of an inch long, little
 (22) guys The herring and salmon love them in large quantities
 (23) Q And the other one was algal -
 (24) A These are algae these are the single-celled microscopic
 (25) plants that live in the upper ocean and provide the basis for
 the food chain in Prince William Sound and elsewhere They re

Vol 32 5661

- (1) called phytoplankton and we did studies with phytoplankton to
 (2) determine the effects of three different types of organisms
 (3) plants little shrimp like creatures and little fish
 (4) Q And mysid shrimp and algae taken together does that give
 (5) you an indication of how phytoplankton and zooplankton would
 (6) fare?
 (7) A That would be an indication how phytoplankton and
 (8) zooplankton would fare under an oil slick yes
 (9) Q Let me refer you to DX5723 Alpha Would you tell us what
 (10) that chart reflects Dr Neff?
 (11) A Okay there are several salmon hatcheries in Prince William
 (12) Sound This shows some data for three pink salmon hatcheries
 (13) that were outside the spill path Again one of the major
 (14) concerns as I indicated earlier were the commercial fisheries
 (15) and so a lot of our water sampling was around hatcheries in the
 (16) Sound These are hatcheries as I said outside the spill path
 (17) area We wouldnt have expected high concentrations of
 (18) hydrocarbons in the water column and in fact that s what we
 (19) see The water - the water quality around these hatcheries is
 (20) excellent It was perfect for support of juvenile salmon being
 (21) released from the hatcheries in the time frame of this
 (22) picture
 (23) MR LYNCH Offer DX5723 Alpha Your Honor
 (24) (Exhibit DX5723 A offered)
 (25) MR O NEILL No objection

Vol 32 - 5662

- (1) THE COURT That exhibit is admitted
 (2) (Exhibit DX5723 A received)
 (3) BY MR LYNCH
 (4) Q Let me ask you to look at Exhibit DX5722 Baker This is a
 (5) similar chart. Could you explain that chart Dr Neff?
 (6) A Yes there was one hatchery in Prince William Sound was in
 (7) the spill path that s the A F Koernig hatchery down on Evans
 (8) Island in Sawmill Bay That hatchery has been there for quite
 (9) a while and it was right there the spill and they put booms
 (10) around the entrance of Sawmill Bay so no oil got into the bay
 (11) itself, but there still was concern when they released the
 (12) salmon fry which they did I believe in late April and early
 (13) May that they could be affected by the oil spill So we did a
 (14) lot of sampling around Sawmill Bay and around where the fish
 (15) might go
 (16) And again we found uniformly very high water quality very
 (17) low concentrations of PAH and VOAs Again the water quality
 (18) there was very good very suitable for propagation of salmon
 (19) fry
 (20) Q At the time salmon fry was released by all four hatcheries
 (21) your finding was below the surface of the water the water was
 (22) not affected by petroleum chemicals at a level that would be
 (23) harmful to the young pink salmon?
 (24) A That is correct
 (25) Q Let me show you DX5720 Alpha

Vol 32 5663

- (1) THE COURT Are you going to admit 5722?
 (2) MR LYNCH Yes Your Honor
 (3) (Exhibit DX5722 B offered)
 (4) MR O NEILL No objection
 (5) THE COURT Is there objection?
 (6) MR O NEILL No objection Judge
 (7) THE COURT Defendants Exhibit 5722 B is admitted
 (8) (Exhibit DX5722 B received)
 (9) BY MR LYNCH
 (10) Q Could you tell us what is summarized by Exhibit
 (11) 5720 Alpha?
 (12) A Okay Salmon after they come out of the hatcheries or
 (13) after they come out of the wild run salmon as they re called
 (14) after they come out of the streams where they've overwintered
 (15) congregate in coastal waters throughout Prince William Sound
 (16) and feed and grow for a period of time before they move out to
 (17) sea to spend a year in the ocean before coming back The
 (18) adults come back starting in late July and early August into
 (19) September to come back to the streams where they grew up
 and
 (20) of course back to the hatcheries where they re caught and sold
 (21) or used to get new fry next year
 (22) And so we sampled throughout the areas where the salmon
 (23) might congregate might migrate during the fry stage the early
 (24) life stages when they re growing after coming out of the
 (25) streams and then during the fall late summer and fall when

Vol 32 5664

- (1) they come back as adults And this summarizes a very large
 (2) amount of data about the water quality in areas of Prince
 (3) William Sound where herring (sic) might occur at different
 (4) times of year
 (5) Q Herring?
 (6) A I m sorry salmon I know the difference it just - and
 (7) we - there s a bar a bar on the top there showing the time of
 (8) the hatchery releases which was as I say, late April and
 (9) into - well into May and again a very large number of water
 (10) samples included here from both Exxon and NOAA data and
 what
 (11) we see is that most nearly always the water quality was
 (12) excellent There are a few exceptions and those are in July
 (13) you see a vertical series of triangles not a triangle -
 (14) Q Diamonds?
 (15) A Diamonds yeah I ll get it right Both in the VOAs and
 (16) the PAHs what was happening there that was Northwest Bay in
 (17) the north shore of Eleanor Island That was a heavily oiled
 (18) bay NOAA agrees Exxon agrees that that was very heavily
 (19) oiled During the time we were taking the samples they were
 (20) cleaning up most of the eastern shore of Northwest Bay There
 (21) was a major cleanup effort going on and what is reflected here
 (22) the affect of that cleanup effort on water quality We had a
 (23) few samples that had more than ten part per billion Alaska
 (24) standard This was a short period of time When we went back
 (25) just a little while later the water quality had returned to

Vol 32 5665

- (1) normal level
 (2) There s another couple of values in July of elevated levels
 (3) and again that was monitoring what Exxon did around
 shoreline
 (4) cleanup sites I believe this was on the north shore of
 (5) Elrington Island down in the southern part of the Sound What
 (6) Exxon was concerned about that in beach cleaning where they
 (7) went in with high pressure hoses on the beach and tried to wash
 (8) the oil off the shore into the intertidal - into the subtidal
 (9) water and then collect it with skimmers that some of the oil
 (10) might escape under the booms There were two layers of
 booms
 (11) put out to protect from any oil escaping but we monitored both
 (12) inside the booms outside the booms both before during and
 (13) after this cleanup effort and those higher values were taken
 (14) during the cleanup effort at one location in Elrington Island
 (15) and reflect that in some cases a few cases - most cases none
 (16) of the water quality went below the Alaska standard but in a
 (17) few cases, we did exceed the limit for a short period of time
 (18) We went back the next day to the same place and the water
 (19) quality was fine So what we see here is with the exception
 (20) of in the immediate vicinity of cleanup efforts the water
 (21) quality throughout Prince William Sound was excellent for
 (22) salmon throughout the summer of 1989
 (23) Q Now let s just again be clear Do these data indicate to
 (24) you that there was never a time when pink salmon in Prince
 (25) William Sound might have been exposed to levels of petroleum

Vol 32 5666

- (1) chemicals that could be dangerous to them?
 (2) A What the data show is that there are a few very short
 (3) instances when water quality was less than we would hope or
 the
 (4) State would mandate But as far as the water quality or water
 (5) column exposure is concerned water quality was uniformly
 (6) excellent for salmon throughout the year However there is
 (7) one period when salmon might be exposed to oil that s not
 (8) considered here and that is when the young fry, called
 (9) alevins they've just hatched from the egg but they re still in
 (10) the gravel might be exposed to the oil in the gravels of their
 (11) streams where they were deposited This might have occurred
 in
 (12) the period from March - well after the spill when it came
 (13) ashore
 (14) In Knight Island it was late March to early April and May
 (15) before they emerged from the gravels and there is some
 (16) indication that some herring (sic) alevins were exposed to oily
 (17) gravel in that time period in 1989
 (18) Q Let me see if I understand that You didn t sample you
 (19) didn t have a way to sample the purity of the water where oil
 (20) had actually become commingled with the gravel is that what
 (21) you re saying?
 (22) A That wasn t part of my program I believe other
 (23) investigators might have studied that
 (24) Q It s possible in those areas if there were eggs deposited
 (25) there or small fish there that pink salmon were - some pink

Vol 32 5667

(1) salmon were exposed to a dangerous level of petroleum hydrocarbons?
 (2) hydrocarbons?
 (3) A Yes that's quite possible that occurred
 (4) Q Do you have any way to estimate the size of that exposure in terms of the population of pink salmon that return to Prince William Sound annually?
 (5) William Sound annually?
 (6) A Well we know that well over a billion salmon fry emerge from Prince William Sound every year That's a tremendous number Most of those salmon come from the hatcheries that I just talked about Well over 700 million salmon in 1989 And so most of the salmon avoided the spill at that time in their life cycle They were in the hatcheries The hatcheries did not release the salmon until they were sure or reasonably confident enough of the oil had gone away so that the salmon weren't endangered So that leaves us the wild run salmon These are the salmon that go up in the natural streams along Knight Island, Montague Island and so forth and I've heard various estimates of the number of salmon streams in Prince William Sound that were actually oiled because many of the salmon streams weren't oiled If you have enough fresh water flow in the stream the oil won't come in it can't go upstream It can only come in if it settles there at low tide and the flow is not too high and I've heard an estimate of 25 percent of the wild salmon streams might have gotten some oil so that would be the upper bound limit 25 of less than 50

Vol 32 5668

(1) percent of the total salmon so it's a very small fraction I guess it would come down to maybe five or ten percent of the salmon fry might have been exposed as alevins
 (2) guess it would come down to maybe five or ten percent of the salmon fry might have been exposed as alevins
 (3) salmon fry might have been exposed as alevins
 (4) MR LYNCH Your Honor I offer DX5720 Alpha
 (5) (Exhibit 5720-A offered)
 (6) MR O NEILL. No objection
 (7) THE COURT That exhibit is admitted
 (8) (Exhibit 5720 A received)
 (9) BY MR LYNCH
 (10) Q The last exhibit I have today, everyone will be delighted to hear is DX8886 Is this just a summary of your overall Prince William Sound water quality sampling program?
 (11) to hear is DX8886 Is this just a summary of your overall Prince William Sound water quality sampling program?
 (12) Prince William Sound water quality sampling program?
 (13) A Yes it is
 (14) Q Over the two and a half years?
 (15) A That's correct
 (16) Q And this exhibit relates only to the PAHs or the poly aromatic hydrocarbons?
 (17) aromatic hydrocarbons?
 (18) A That is correct yeah
 (19) Q And not the VOAs?
 (20) A That's correct
 (21) Q You would expect as I gather the VOAs to have evaporated fairly early in the process?
 (22) fairly early in the process?
 (23) A Yes Our studies generally show that we saw VOAs in the water column only in the first few - month or so after the spill and by summer they had virtually gone except for a few

Vol 32 5669

(1) isolated instances
 (2) Q So that's the reason for the difference between 1500 and 67 and the 2400 samples that were on the earlier chart?
 (3) and the 2400 samples that were on the earlier chart?
 (4) A Yes the others were VOA samples
 (5) Q You also did water quality sampling outside of Prince William Sound?
 (6) William Sound?
 (7) A Yes there was a fairly extensive program in the Gulf of Alaska entrance to Cook Inlet around in the Shelikof Straits and so forth
 (8) Alaska entrance to Cook Inlet around in the Shelikof Straits and so forth
 (9) and so forth
 (10) MR LYNCH I offer DX8886 Your Honor
 (11) (Exhibit DX8886 offered)
 (12) MR O NEILL. No objection
 (13) THE COURT That exhibit is admitted
 (14) (Exhibit DX8886 received)
 (15) BY MR LYNCH
 (16) Q Dr Neff, looking at the totality of the water quality sampling and testing that you conducted beginning on March 29 1989 and continuing to 1991 do you have an opinion as to whether oil from the Exxon Valdez oil spill could have had a population level impact on the herring population in Prince William Sound?
 (17) William Sound?
 (18) 1989 and continuing to 1991 do you have an opinion as to whether oil from the Exxon Valdez oil spill could have had a population level impact on the herring population in Prince William Sound?
 (19) whether oil from the Exxon Valdez oil spill could have had a population level impact on the herring population in Prince William Sound?
 (20) population level impact on the herring population in Prince William Sound?
 (21) William Sound?
 (22) A Yes I have an opinion
 (23) Q What is that opinion sir?
 (24) A The opinion is that none of my data would indicate that there was any population level impact on herring in Prince

Vol 32 - 5670

(1) William Sound
 (2) Q And by population level we mean an impact that would cause the fish not to return in numbers equivalent to the population that existed there at that time?
 (3) the fish not to return in numbers equivalent to the population that existed there at that time?
 (4) that existed there at that time?
 (5) A That's right an impact on the commercial fishery the total population that's exploited
 (6) total population that's exploited
 (7) Q Do you have an opinion on the same terms about whether or not the oil from the Exxon Valdez oil spill had a population level impact on pink salmon in Prince William Sound?
 (8) not the oil from the Exxon Valdez oil spill had a population level impact on pink salmon in Prince William Sound?
 (9) level impact on pink salmon in Prince William Sound?
 (10) A Yes I do
 (11) Q And what is that opinion?
 (12) A My opinion is that my data and that of NOAA and so forth that I've used here is consistent with the conclusion that the pink salmon population in Prince William Sound was not adversely affected by the Exxon Valdez oil spill
 (13) that I've used here is consistent with the conclusion that the pink salmon population in Prince William Sound was not adversely affected by the Exxon Valdez oil spill
 (14) pink salmon population in Prince William Sound was not adversely affected by the Exxon Valdez oil spill
 (15) adversely affected by the Exxon Valdez oil spill
 (16) Q Now, have you considered in addition to your own testing activity and in addition to your own direct experience have you considered the literature of other scientists around the world who've been involved in oil spill situations and their relationship to fisheries?
 (17) activity and in addition to your own direct experience have you considered the literature of other scientists around the world who've been involved in oil spill situations and their relationship to fisheries?
 (18) you considered the literature of other scientists around the world who've been involved in oil spill situations and their relationship to fisheries?
 (19) world who've been involved in oil spill situations and their relationship to fisheries?
 (20) relationship to fisheries?
 (21) A Yes, I have I've examined published literature and much of the unpublished literature about oil spills in the past all the major oil spills that have occurred in the last 20 or 30 years, and based on that, yes I've tried to relate that to what we've been seeing with the Exxon Valdez oil spill

Vol 32 5671

- (1) Q And if you look in terms of what has been disclosed in the
 (2) literature are you aware of any instance disclosed in the
 (3) professional or scientific literature that would indicate a
 (4) population level impact to a commercial fishery from an oil
 (5) spill like the Exxon Valdez?
 (6) A There have been no reports of significant population level
 (7) impact to any commercial fishery after an oil spill even much
 (8) larger oil spills than the Exxon Valdez
 (9) Q Now it's been suggested by witnesses who've testified in
 (10) this case that the effect of the oil spill was to cause some
 (11) problems to - some seeds of problems to be planted in 1989
 (12) which only came to bloom in 1993 or 1994 that the problems
 (13) from the oil spill showed up one or two harvest years later or
 (14) three harvest years later
 (15) Based on your experience as a marine biologist do you know
 (16) of any mechanism that would explain the population level
 impact
 (17) to a commercial fishery from oil that did not show up until two
 (18) or three years after the exposure to oil?
 (19) A I know of no mechanism biological mechanism by which that
 (20) could occur no
 (21) Q Now in the Amoco Cadiz situation you yourself
 (22) discovered an impact on a fishery did you not sir?
 (23) A Yes we did
 (24) Q That was the plaice spelled some other way?
 (25) A That's correct uh huh

Vol 32 - 5672

- (1) Q And what over time what was the nature of that impact,
 (2) did it get worse or better or -
 (3) A Well these plaice as I said they're bottom living fish
 (4) they feed on animals on the bottom The benthic infauna we
 (5) talked about earlier they were in very heavily oiled
 (6) estuaries the oysters in those estuaries had much higher
 (7) concentration of PAH than any of the mussels we examined in
 (8) Exxon and NOAA and it was a heavy impact and these plaice
 had
 (9) a variety of clinical manifestations of harm various lesions
 (10) in the liver and so forth and the digestive tract condition
 (11) called fin necrosis which is you know the fins waste away
 (12) and so forth And there was a moderate instance of that
 (13) shortly after the spill and various other conditions continued
 (14) for a period of time
 (15) We examined the plaice for 27 months after the spill,
 (16) little over two years and most of those conditions improved
 (17) during that time Now there were some that were still
 (18) existent after that Other investigators French investigators
 (19) have followed that longer and shown that the plaice population
 (20) has completely recovered within about three years after the
 (21) spill
 (22) Q Now in that case was there any symptom that you observed
 (23) that just sprang up for the first time one or two years after
 (24) the - or in your case 27 months after the exposure to oil?
 (25) A No there was not

Vol 32 5673

- (1) Q So the symptoms that you saw you saw immediately after
 the
 (2) oil?
 (3) A That's consistent with what we saw and what everyone else
 (4) has seen in other spill areas
 (5) Q Have you looked into the fisheries experience in connection
 (6) with the Santa Barbara channel blowout in 1969?
 (7) A Yeah that was a fairly famous oil spill the first one I
 (8) think to galvanize the U S public awareness of oil spills and
 (9) that was a long term spill that lasted actually three months
 (10) more than three million gallons were released into the Santa
 (11) Barbara channel from a blowout and that's a major fishery
 (12) area and two of the commercial species there the sardine and
 (13) the anchovy are very similar to herring in some ways They
 (14) feed in the upper water column on small organisms and there
 (15) was a lot of concern about the anchovy and sardine fishery
 (16) there
 (17) And fisheries biologists from the Southeast Fisheries
 (18) Center studied it very extensively and they documented they
 (19) had lots - unlike Prince William Sound they had lots of data
 (20) from before the spill and lots of data during and after the
 (21) spill and were able to show that there was no effect on the
 (22) sardine or anchovy fishery
 (23) There was also a mackerel fishery there that was very
 (24) important and in fact there was one report that the fishermen
 (25) of course were concerned about oiling their nets with the

Vol 32 5674

- (1) floating oil that was all around Santa Barbara channel but
 (2) they found in overflight with the spotter planes that they
 (3) could see the anchovies under the oil slicks so they would
 (4) watch the anchovies until they came out from the oil slick and
 (5) send the fishermen out to catch the anchovies clean and
 (6) acceptable for harvest and so forth And basically no
 (7) significant impacts on any of those fisheries other than a
 (8) temporary decrease in fishing because of the oil on the water
 (9) surface
 (10) Q Now I want to go back to those I beams that you had on one
 (11) of your charts the 95 percent confidence level that you talked
 (12) about and there's been some discussion in this case about
 what
 (13) scientists consider to be efficient basis to form a conclusion
 (14) or give an opinion
 (15) The jury in this case has been advised that they are to
 (16) decide on a more probable than not standard 50 percent or 51
 (17) percent Now trying to apply that standard and using your
 (18) expertise in marine biology for the benefit of the jury if you
 (19) were being asked whether it's more probable than not 51
 (20) percent just even the chances that the problems that have
 (21) shown up in 1993 and 1994 in Prince William Sound resulted
 from
 (22) the 1989 Exxon Valdez oil spill what in your opinion is the
 (23) likelihood? Is it a 50 percent likelihood that the oil spill
 (24) contributed to these problems?
 (25) A I think it's an extremely low - I would place it down one

Vol 32 5675

- (1) percent or less the problems we're seeing now with fisheries
 (2) in Prince William were in any way directly related to the oil
 (3) spill of 1989
 (4) Q So if you - if you use your scientific information about
 (5) the way fish live and the way petroleum interacts with fish and
 (6) you try to use the court standard instead of the scientific
 (7) standards you would not reach the 50 percent level?
 (8) A Never no I would not.
 (9) MR LYNCH Thank you very much Doctor
 (10) THE COURT You may cross-examine
 (11) CROSS EXAMINATION OF DR JAMES NEFF
 (12) BY MR O NEILL
 (13) Q Doctor I first want to explore with you briefly the number
 (14) of subjects that you came here to testify about today as an
 (15) expert. And you've testified about pink salmon is that a
 (16) correct statement?
 (17) A That's correct.
 (18) Q You've testified about herring that's a correct statement?
 (19) A That's correct.
 (20) Q And you've testified about fisheries that's a correct
 (21) statement?
 (22) A Yes to a limited extent.
 (23) Q And you've testified about commercial fisheries in France
 (24) that's a correct statement?
 (25) A That's correct.

Vol 32 - 5676

- (1) Q And you testified about commercial fisheries in Prince
 (2) William Sound that's a correct statement, isn't it?
 (3) A That's correct.
 (4) Q And you testified about the history of oil spills in the
 (5) modern world that's a correct statement, isn't it?
 (6) A That is correct.
 (7) Q And you've testified about how oil flows and in what
 (8) direction it flows that's a correct statement, isn't it?
 (9) A That is correct
 (10) Q And you've testified about chemistry and different chemical
 (11) analyses that's a correct statement isn't it?
 (12) A That's correct.
 (13) Q You've testified about a lot of different things haven't
 (14) you?
 (15) A Certainly have
 (16) Q Now, you began your testimony talking about the Amoco
 (17) Cadiz
 (18) spill and the Amoco Cadiz spill while it may have spilled
 (19) more oil impacted a heck of a lot less shoreline than the
 (20) Exxon Valdez spill did didn't it, only 375 kilometers?
 (21) A That is correct, but the impact was much greater on that
 (22) shoreline
 (23) Q And the number of miles of shoreline that were affected by
 (24) the Prince William Sound spill far exceeded that than the Amoco
 (25) Cadiz spill didn't it?
 (26) A The miles of shoreline that were affected to some extent,

Vol 32 5677

- (1) yes exceeded that.
 (2) Q Now you testified here about the major economic value of a
 (3) fishery being its - an area like Prince William Sound a
 (4) fishery being its commercial fishery and you said there's
 (5) never been a report of a major loss Those were your words
 (6) Do you recall that?
 (7) A Okay
 (8) Q Now to him over there who's a commercial fisherman if he
 (9) doesn't fish for a season that's a major loss isn't it?
 (10) A It could be yes to him
 (11) Q And there were an awful lot of fishermen you're aware that
 (12) there were thousands and thousands and thousands of
 (13) fishermen
 (14) 3500 3300 permit holders and almost 10 000 fishermen that
 (15) didn't fish in 1989 as a result of the Exxon Valdez spill
 (16) you're aware of that?
 (17) A I don't know the number
 (18) Q A lot?
 (19) A I'll take your word for it
 (20) Q So at least with regard to the fish that they didn't catch
 (21) in 1989 you sitting here as an expert on fishery harvests and
 (22) oil spills would admit that to those fishermen that was a
 (23) major loss?
 (24) A That is correct.
 (25) Q And would you also agree that to a Native whose dining room
 (26) table is the intertidal zone if he can't collect from that

Vol 32 - 5678

- (1) intertidal zone as a result of an oil spill that's a major
 (2) loss?
 (3) A That's correct.
 (4) Q And with regard to both of those people the fishermen and
 (5) the Native the oil spill in many respects was a tragedy would
 (6) you agree with that?
 (7) A Yes, I do agree
 (8) Q Just so we're clear Now let's move on to science Would
 (9) you agree with the proposition that in looking at pink returns
 (10) and herring returns in Prince William Sound in 1993 and 1994
 (11) we have a serious problem?
 (12) A My understanding is that both returns are way down from
 (13) previous historical returns
 (14) Q In 1993 and 1994, if you look at herring and salmon returns
 (15) and you look at the condition of the herring, one might draw
 (16) the conclusion that Prince William Sound is sick, would you
 (17) agree with that statement?
 (18) A Not necessarily, no
 (19) Q Now, we were looking at - when you talk about these PAH
 (20) levels that's the poisonous carcinogenic part of oil It's the
 (21) part of the oil that is most dangerous to living things?
 (22) A Okay the PAHs in petroleum very few are carcinogenic
 (23) There are a few high molecular weight ones not in the water
 (24) column
 (25) Q They're not?

Vol 32 5679

- (1) A Very trace levels much much better than what we re
 (2) talking about here
 (3) Q Now I want to go back if we could let s start at the
 (4) beginning of your employment with Exxon And you worked for
 (5) Battelle Laboratories?
 (6) A That is correct yes
 (7) Q While Battelle is set up as you stated a nonprofit
 (8) operation it s a company and it goes to people like Exxon and
 (9) does work for Exxon and it gets paid?
 (10) A That is correct
 (11) Q And you get paid when Battelle gets paid?
 (12) A I receive a salary from Battelle yes
 (13) Q So Battelle isn t like the trustees or the National
 (14) Institute of Health or the National Institute of Sciences It
 (15) is a private corporation that does research for pay?
 (16) A It s not a corporation It s a not for profit research
 (17) organization
 (18) Q It s a not for profit research corporation, it s a not for
 (19) profit corporation?
 (20) A I don t know the legal terms I m sorry
 (21) Q Let s stick with where we re going and Al Maki from Exxon
 (22) Corporation hired you to come and work for Exxon in 1989?
 (23) A That is correct
 (24) Q And John Prince (ph) was an engineer at Exxon who was in
 (25) charge overall of the Exxon science program?

Vol 32 5681

- (1) Q So Pentec was looking at the impacts of the oil on the
 (2) shoreline and the cleanup on the shoreline?
 (3) A That s correct yes
 (4) Q And John Houghton and Dennis Lees work for Pentec isn t
 (5) that right?
 (6) A That is correct
 (7) Q And Houghton - and you know Mr Lees don t you?
 (8) A I know both gentlemen yes
 (9) Q They re both scientists aren t they?
 (10) A Yes I believe so
 (11) Q And Houghton and Lees and Pentec at some time or another
 (12) ended up having a disagreement with Exxon isn t that right?
 (13) A That appears to have been the case yes
 (14) Q And indeed Mr Houghton and Mr Lees were of the opinion
 (15) that the shoreline cleanup was damaging the ecology or further
 (16) damaging the ecology of areas where the cleanup was taking
 (17) place and they were vocal about that isn t that right?
 (18) A That is correct.
 (19) Q And Pentec and Houghton and Lees were fired by Exxon
 (20) weren t they?
 (21) A They were fired
 (22) Q And they were fired for speaking the truth weren t they?
 (23) A I have no idea why they were fired That is not within my
 (24) realm of knowledge
 (25) Q Now I want to go to your specific studies and I want to

Vol 32 5680

- (1) A In the summer about August I think he came on board yes
 (2) Q And that same Mr Prince at some point in time indicated to
 (3) you that lawyers would be reviewing your scientific work?
 (4) A That subject came up in the fall of 1989 yes
 (5) Q And you did over the course of the years while doing your
 (6) scientific work meet with Exxon lawyers both in house and the
 (7) law firms?
 (8) A Mostly after 1989
 (9) Q And you were advised to be cautious about your note taking
 (10) weren t you?
 (11) A Yes
 (12) Q And the reason that you were advised - normally you take
 (13) good solid detailed notes but the reason you were advised to
 (14) be cautious about your note taking was because any written
 (15) document could be discovered in the litigation and we d have to
 (16) talk about it here?
 (17) A That was one of the reasons given yes
 (18) Q Now I want to talk for a minute about Pentec You were
 (19) involved in the initial phases of developing Exxon s science
 (20) program?
 (21) A That s correct
 (22) Q And there was some work done in your area by Pentec even
 (23) before you got around to it isn t that right?
 (24) A Pentec was involved in some work on the shoreline yes not
 (25) the water quality

Vol 32 - 5682

- (1) recognize a problem and that is - and it s a problem not with
 (2) the studies it s a problem that is inherent in oil And that
 (3) is if the sooner we can sample thoroughly after the spill the
 (4) better we can measure whatever shock to the system the spill
 (5) had because you get - you do get evaporation and you want a
 (6) complete data set.
 (7) So if we measure in April or May or June and the spill
 (8) happens on Good Friday in March we have a problem in
 (9) measuring
 (10) the shock if we re going to measure the chemicals because the
 (11) shock s already taken place, does that make sense?
 (12) A Not completely
 (13) Q Makes no sense?
 (14) A It makes some sense
 (15) Q Okay And another problem that is inherent in going out
 (16) and - how big is Prince William Sound? It s just huge isn t
 (17) it?
 (18) A Huge several thousand square miles
 (19) Q And as good as we are at picking where we re going to
 (20) measure a problem with the water sampling program is we
 (21) could
 (22) be sampling in the wrong places?
 (23) A We can t sample everywhere that s true
 (24) Q I mean I m not criticizing your study I m just saying -
 (25) A That s correct
 (26) Q It s in the beast And you would admit - and we don t
 (27) have to get into how likely it is that there may be many areas

Vol 32 - 5683

- (1) in which the PAH levels were higher than those you in fact
 (2) measured You did your best but that s a possibility isn t
 (3) it?
 (4) A We sampled a large number of locations that I think we have
 (5) a reasonably good confidence that we covered the waterfront,
 as
 (6) they say There probably were not large numbers of the areas
 (7) of the Sound that had higher concentrations but there could be
 (8) a few isolated locations there s no doubt about that
 (9) Q And you wouldn t disagree with this proposition would you
 (10) that it is entirely possible that in many of the areas in which
 (11) you took samples that prior to the time you took samples there
 (12) were doses of oil in the water column that may have been
 (13) sufficient to kill organisms in the water column?
 (14) A Well in aquatic toxicology there are two parts of aquatic
 (15) toxicology that make up the dose that s the concentration of
 (16) chemicals which is what we were measuring and the duration of
 (17) exposure and the two have to be combined and considered
 (18) together to estimate whether an organism would have been
 killed
 (19) by the oil spill before we got there to take our measurement
 (20) And the fact of the matter was we got out there as soon as
 (21) possible we can extrapolate back and I did that in my original
 (22) testimony here and so I think it s unlikely that there would
 (23) be many places that had high enough concentrations for long
 (24) enough to cause significant injury to aquatic life that was
 (25) existing there in Prince William Sound in late March of 1989

Vol 32 - 5684

- (1) Q That s a possibility
 (2) A A real possibility, yeah
 (3) Q I want to go into this briefly but we ve been into it
 (4) before You published at the ASTM conference?
 (5) A Yes I did
 (6) Q And you went through the same internal Exxon review that
 (7) other people have talked about with regard to your ASTM
 paper
 (8) you submitted it for review and the lawyers and public
 (9) relations took a look at your papers?
 (10) A I submitted it to the Exxon scientists and they distribute
 (11) it for review yes
 (12) Q I guess you pride yourself on the fact that you re a good
 (13) enough scientist with enough experience to where you think
 you
 (14) can design some pretty good studies I would bet?
 (15) A Correct
 (16) Q In fact a heck of a lot of fun - the fun isn't in
 (17) collecting the data the fun is in using your background and
 (18) your experience in the design of the study, and then at the end
 (19) the evaluation of the study results?
 (20) A That s correct
 (21) Q And the sort of grind of going out and collecting the data
 (22) is best left for what I make the young lawyers do, same -
 (23) it s the same drill Isn t that right?
 (24) A To some extent We used trained people though
 (25) Q I know you use trained people and I m not criticizing you

Vol 32 5685

- (1) for that
 (2) A But that s true yes
 (3) Q I want to talk - the reason I asked the questions is I
 (4) want to talk about the design or potential design of studies
 (5) That s where I m going I m not criticizing the people that
 (6) work for you okay?
 (7) A Okay
 (8) Q Now with regard to the potential design of studies you
 (9) did indeed do some preliminary design work and propose a
 study
 (10) called How Clean is Clean?
 (11) A That is correct That dealt with shoreline conditions
 (12) Q And would you tell the jury what the heck that study
 (13) composed of or was to be composed of?
 (14) MR LYNCH Your Honor I don t have any objection to
 (15) counsel generally inquiring of Dr Neff about subjects outside
 (16) the scope of direct but this seems to relate solely to the
 (17) shoreline cleanup issues which - on which Dr Neff was not
 (18) called and about which I did not ask him
 (19) MR O NEILL Deals with the general - he has studied
 (20) and talked generally about the entire ecology of Prince William
 (21) Sound and how it s healthy today and I am going to go through
 (22) a series of studies that he proposed that would have given us
 (23) better information and talk about what happened to those
 (24) studies So it s very relevant to his general conclusion
 (25) THE COURT There s a distinction though I take it

Vol 32 5686

- (1) that you re making between shorelines and -
 (2) MR LYNCH Dr Neff has done a lot of work relating
 (3) to shorelines and to cleanup activities and what was and
 (4) wasn t -
 (5) MR O NEILL I m not going to talk about the cleanup
 (6) if that s the concern I m going to talk about -
 (7) MR LYNCH How Clean is Clean is a study that relates
 (8) to whether the net environmental benefit of additional cleanup
 (9) activities was such as to justify the additional activities
 (10) Dr Neff has testified in direct as to what the content of the
 (11) water column was
 (12) THE COURT I sustain the objection
 (13) BY MR O NEILL
 (14) Q I ll move on to another study that you proposed concerning
 (15) sheens and sampling You studied the water?
 (16) A That s correct
 (17) Q And you proposed another study to Exxon to study oil
 sheens
 (18) to see whether the sheens at the top of the water presented
 (19) problems You wanted to investigate the sheen at the top of
 (20) the water?
 (21) A That is correct.
 (22) Q And part of the problem that we re looking at right here is
 (23) that the top of the water that little layer at the top of the
 (24) water is scientifically different than the water column?
 (25) A It s completely separate from the water column yes

Vol 32 5687

- (1) Q Then the bottom is another environment?
 (2) A That is correct
 (3) Q And with regard to sheen sampling there is indeed much scientific literature including studies done by Paul Boehm
 (4) another Exxon consultant which shows that toxics toxic materials tend to concentrate in the thin micro layer at the surface of the water?
 (5) A I don't believe Dr. Boehm did any studies on sheens but any way he summarized some previous studies
 (6) Q And there are - there's a whole group of micro animals little critters and bugs and things that we can't see and some that we can see that are associated with this thin interface?
 (7) A They're associated with the upper centimeters upper half an inch or so of the water yes
 (8) Q Many of these organisms to some extent form the fundamental building blocks of the food chain?
 (9) A I disagree with that I think quantitatively they're a very minor component of the food chain
 (10) Q There are indeed some stages of fish stages that live in the micro surfaces?
 (11) A They live just below
 (12) Q You proposed to Exxon to do a quantitative sheen study to determine if they are a potential hazard?
 (13) A That is correct
 (14) Q You had the special samplers available to take the samples?

Vol 32 5688

- (1) A Yes we did
 (2) Q Instead you did not do a quantitative study, isn't that right?
 (3) A That is correct
 (4) Q And that was Exxon's decision?
 (5) A That was Exxon's decision
 (6) Q Now you had written a paper concerning the long term impact of Amoco Cadiz crude oil on - what is this fish called again?
 (7) A Plaice
 (8) Q A plaice?
 (9) A Uh huh
 (10) Q In that paper you concluded this particular fish although not heavily damaged with oil shows serious histopathological biochemical damage?
 (11) A That's correct those are my words
 (12) Q Because of your Amoco Cadiz study, you recommended Exxon Corporation study the biochemical effects of the Exxon Valdez oil spill on fish that live in the lower part of the water column?
 (13) A That is correct
 (14) Q Now when some animals are exposed to toxins those toxins are converted to something else in the body before they're removed from the body and those are called metabolites?
 (15) A That is correct

Vol 32 5689

- (1) Q And you stated in your report on the Amoco Cadiz spill that the metabolites of hydrocarbons particularly PAH are more toxic than the parent compound?
 (2) A Some of them are yes
 (3) Q So when they get into the living organism they can be more toxic than when they're in the water?
 (4) A That's a possibility yes
 (5) Q And if a species of animal is fatty has a high fat content it tends to retain metabolites in the fat?
 (6) A Some of them are Most of them are water soluble and most are excreted quite rapidly
 (7) Q And some of the toxic metabolites have been demonstrated to bind to the DNA of salmon?
 (8) A That is true
 (9) Q And some metabolites can induce tumors?
 (10) A Some of the higher molecular weight polycyclic aromatics can induce tumor yeah
 (11) Q You wanted to study metabolites at the bottom of the water column and in August of '89 Exxon rejected your proposal?
 (12) A That is correct.
 (13) Q I want to discuss a couple of your exhibits and the one thing I didn't understand and you can explain it to me and this is a total filer I don't have it in your deposition - be assured whatever you say I can't do anything about it I don't have it in your deposition transcript or anything but I'm

Vol 32 - 5690

- (1) interested in this chart And my question is on the top chart that has Exxon and NOAA data?
 (2) A Correct
 (3) Q Are each of these points either an Exxon or a NOAA data point or are they - are they averages?
 (4) A No these are each individual data points individual water samples
 (5) Q Okay and - oh I get it the top one deals with PAHs and the bottom one deals with?
 (6) A VOAs yes
 (7) Q The volatiles?
 (8) A The benzene and stuff like that
 (9) Q Oh, I feel like an idiot probably not the first or last time And would it be fair to say that indeed there were places within the Sound where we did find PAH levels and volatile levels that exceeded the State requirements?
 (10) A That is correct
 (11) Q But the vast majority didn't exceed?
 (12) A That's correct only there are more than 800 samples there and only 10 exceeded the standard
 (13) Q With regard to the presence of these substances in the water we did find at least trace elements of PAHs and volatiles in a lot of different places?
 (14) A That's correct
 (15) Q And in all likelihood it is more probable than not that

Vol 32 5691

- (1) they were the result of the Exxon Valdez oil spill?
 (2) A I think most of them probably came from that There were
 (3) other sources but most probably came from the Exxon Valdez
 (4) Q And I was interested in this chart from Northwest Bay
 (5) which is there and at least in Northwest Bay with the Exxon
 (6) and the NOAA data with regard to PAHs we do get hits above
 the
 (7) ten parts per billion level?
 (8) A That s correct
 (9) Q And you talked for a while about mussels do you recall
 (10) that?
 (11) A That s correct
 (12) Q And at least in June of 1989 the caged mussel study showed
 (13) that these mussels were assimilating a good amount of PAHs?
 (14) A Mussels from some locations were like Snug Harbor and
 (15) Northwest Bay and so forth that s correct.
 (16) Q And 4 000 5 000 6,000 parts per billion?
 (17) A That s correct
 (18) Q Now I want to trace this through, and I may not understand
 (19) it and if I don't fix it, okay?
 (20) A Okay
 (21) Q But we talk about many of these animals or critters having
 (22) the ability to bioaccumulate in their tissues?
 (23) A That is correct
 (24) Q And at some point in time they die and they go to the
 (25) bottom?

Vol 32 - 5692

- (1) A Maybe yeah
 (2) Q Some do?
 (3) A Yeah
 (4) Q And at least in these kinds of situations they could
 (5) present a problem on occasion because you have the source
 you
 (6) have the poison you have the contaminant on the bottom in its
 (7) bioaccumulated stage and it could reemerge?
 (8) A That s true but the total amount that would reach the
 (9) bottom that way would be very small but that could occur I
 (10) agree
 (11) Q And indeed organic pollutants - or after the pollutants
 (12) have been absorbed into organic mechanisms and the oil can
 (13) reach much higher concentrations in sediments than in the
 water
 (14) column?
 (15) A That s often the case yes It s possible
 (16) Q And polycyclic aromatic hydrocarbons PAHs entering water
 (17) can become absorbed on organic or in organic particulate
 matter
 (18) and be deposited in the bottom?
 (19) A That can happen yes
 (20) Q Now we talked about the State of Alaska standards and we
 (21) talked about LD or LC 50 levels Acute toxicity data does not
 (22) adequately represent the potential impact of chronic low level
 (23) PAH contamination on aquatic organisms or ecosystems does
 it?
 (24) A That is correct sounds like a quote from something I
 (25) wrote

Vol 32 5693

- (1) Q Doctor I ll tell you a secret everybody else here knows
 (2) I am not smart enough to ask a novel question And I have a
 (3) sheet here that has a collection of things that you ve
 (4) written
 (5) A Okay
 (6) Q So it s no secret I m sure they told you that before you
 (7) came here
 (8) A No they didn t
 (9) Q That s how I know how to ask these questions I m probably
 (10) one of the few people in the world that has written most of
 (11) what you read -
 (12) A Read most of what I ve written
 (13) Q Or read most of what you written See it wasn t on the
 (14) outline I didn't have a chance did I?
 (15) And sublethal effects may be detrimental to the long term
 (16) survival of an organism in its normal environment?
 (17) A That is correct.
 (18) Q And chronic exposure to certain PAHs may induce mutation
 (19) and cancer in sensitive species?
 (20) A Yes but those aren t the ones that are most important in
 (21) petroleum
 (22) Q And your lab testing data did not include any long term
 (23) exposure data?
 (24) A Yes we did lots of long term tests sublethal effects
 (25) tests

Vol 32 5694

- (1) Q Did yours?
 (2) A Texas A & M University yes much of my research dealt with
 (3) long term effects
 (4) Q With regard to the Prince William Sound oil spill?
 (5) A Oh we used what EPA in their infinite wisdom called rapid
 (6) chronic tests now that s a contradiction in terms but
 (7) basically it s a shortened test that reflects what might happen
 (8) in a chronic exposure and we measure things like growth of the
 (9) fish and so forth and so these are accepted by EPA as
 (10) surrogates or replacements of tests that may last months so we
 (11) did those in the laboratory
 (12) Q You did rapid chronic tests in seven to ten days but you
 (13) did not do any tests that included in fact long term
 (14) exposure?
 (15) A No because EPA has accepted these rapid chronic tests as
 (16) adequate representation of chronic effects
 (17) Q With regard to the rapid tests would you agree with the
 (18) proposition that in some cases such as with fish that may live
 (19) several years, it is harder to determine if you are missing
 (20) something with the rapid chronic tests?
 (21) A They re not perfect, but they re a reasonable surrogate
 (22) given the time constraints, but yes you can always miss
 (23) something
 (24) Q Would you agree generally with the proposition that
 (25) abundance of certain species in the intertidal ecosystem can

Vol 32 5695

- (1) produce substantial and direct and indirect effects on other
 (2) species?
 (3) A That can have an effect yes
 (4) Q And the oil spill represented a substantial disturbance to
 (5) the intertidal rocky shores which set back the community
 (6) structure and successional stages to an earlier less complex
 (7) stage and the succession back to prespill is still going on?
 (8) A That sounds like another quote that I made in like 1990 and
 (9) I agree that that was true in 1990
 (10) Q Would you believe that bio - there is your deposition
 (11) transcript Would you believe that bioaccumulation and direct
 (12) exposure probably kill fish at all levels of the water column
 (13) and primarily at the upper and lower levels of the water
 (14) column?
 (15) A I ve already said in my direct testimony that some animals
 (16) were killed by the oil spill
 (17) Q And again it s possible that some juvenile salmon could
 (18) have been because they stay in close to the shore?
 (19) A That is correct in a few isolated cases I think probably
 (20) some juvenile salmon did die
 (21) Q Would you agree with the proposition that eggs and larval
 (22) stages of most marine organisms are the most sensitive to
 (23) hydrocarbons?
 (24) A That seems to be the case particularly the early life
 (25) stages after the egg stage

Vol 32 5698

- (1) Q You gave some testimony about herring and salmon first
 (2) herring and then with salmon and whether in fact they
 (3) coexisted at certain times with the oil in the water column or
 (4) the oil on the top?
 (5) A That s correct
 (6) Q That s a gross -
 (7) A Right correct
 (8) Q - summary but would it be fair to say that in point of
 (9) fact you don t know?
 (10) A In the case of the herring spawning in the intertidal zone
 (11) we have pretty good indications of where the oil was and where
 (12) the herring spawned That s easy because you can go out
 (13) there
 (14) and walk the shore and see where the oil is and see where the
 (15) herring spawned and so I think our estimates there are very
 (16) good There was very extensive monitoring of what are called
 (17) the anadromous streams these are salmon streams after the
 (18) spill So we know which streams were oiled and which were
 (19) not
 (20) and so I think we have a pretty good picture we know where the
 (21) salmon are and we know where the oil is so I think we have a
 (22) reasonably good picture of where they occurred
 (23) Q How about the salmon?
 (24) A I talked about the salmon the salmon streams we know
 (25) which
 (26) ones were oiled and which ones were not
 (27) Q Let s just take a look Have you ever seen this picture
 (28) before?

Vol 32 5697

- (1) A No I have not to my knowledge At least in that form
 (2) Q The pictures purport to depict you can agree with it or
 (3) not agree with it herring spawning beaches and attempts to
 (4) quantify with herring spawning beaches by kilometer a lot of
 (5) different herring spawning areas do you see that?
 (6) A Yes I do
 (7) Q Does this at least from your experience reflect the
 (8) situation in Prince William Sound?
 (9) MR LYNCH 1989?
 (10) BY MR O NEILL
 (11) Q In 1989?
 (12) A What it shows as best I can read here it s a little fuzzy
 (13) is it shows where the herring zone the different zones I
 (14) think the circles are different zones The investigator used
 (15) to breakdown the total spawn in the different areas and shows
 (16) kilometers of spawn That s the length of shoreline and along
 (17) which herring spawn, so it seems it s consistent with what I
 (18) showed earlier in my testimony
 (19) Q And we have almost - almost 60 miles 60 kilometers
 (20) metric miles of herring spawning beaches that were in the oil
 (21) spill area isn t that right?
 (22) A That is correct but only a small fraction of the shoreline
 (23) in that area was actually oiled
 (24) Q And we saw the videotape of the oil down on - was it kelp
 (25) or was it -

Vol 32 - 5698

- (1) A It looked like fucus or rockweed to me yes
 (2) Q Fucus okay And if indeed herring spawned on kelp that we
 (3) saw in the videotape we could at least agree in general terms
 (4) that that is not a good thing for that herring spawn is that
 (5) right?
 (6) A Those will probably be pretty unhappy herring eggs yes
 (7) They probably would not make it Some of them anyway
 (8) MR O NEILL. Thank you Doctor I have no further
 (9) questions
 (10) MR LYNCH Do you have that chart of the Northwest
 (11) Bay?
 (12) MR O NEILL. Of what?
 (13) MR LYNCH Northwest Bay chart that you showed?
 (14) REDIRECT EXAMINATION OF JERRY NEFF
 (15) BY MR LYNCH
 (16) Q Dr Neff first of all let s try to clear up one thing
 (17) about the last subject you discussed with Mr O Neill He
 (18) showed you a map of places in Prince William Sound where the
 (19) herring spawned in 1989
 (20) A That is correct
 (21) Q Are herring like salmon do they always return to the same
 (22) beach to spawn?
 (23) A We don t know for sure but there s very strong evidence
 (24) that they don t have what s called site fidelity They don t
 (25) come back to the same place each time that s why the miles of

Vol 32 - 5699

- (1) herring spawn have to be monitored each year because the
 (2) herring spawn wherever they seem to feel like and it varies
 (3) from year to year. Some places there's a lot of herring spawn
 (4) one year and no herring there the next year and they're
 (5) spawning someplace else. It looks like the adults do not come
 (6) back to the same place each year to spawn.
 (7) Q So when we talk about herring spawn beaches we're talking
 (8) about the beaches where the herring chose to spawn in 1989?
 (9) A That is correct.
 (10) Q And you said you could match that with the oiling data you
 (11) were referring to the 1989 oiling information. Is that correct?
 (12) A That is correct.
 (13) Q Now just a minor point, do you know what the disagreement
 (14) was that Drs. Houghton and Laes had with Exxon?
 (15) A No, I do not know.
 (16) Q Do you know whether or not it related to the fact they
 (17) thought the beaches should not be cleaned because it was
 (18) biologically to let nature cure itself?
 (19) A I know that was one of the issues and that's what they've
 (20) published extensively on since their departing the Exxon fold.
 (21) Q Their objection was to cleaning the beaches they wanted to
 (22) leave the oil there?
 (23) A That was - yes, that was a concern for everyone. At what
 (24) point do you stop cleaning up and let nature do its thing?
 (25) Q And just so the record is clear, did you not take good

Vol 32 - 5700

- (1) solid detailed notes of your work on this water sampling?
 (2) A We were never asked not to keep records of our scientific
 (3) findings. What we were asked to do is not have memo wars or
 (4) whatever you want to call them, memos back and forth among
 (5) scientists arguing trivial points and so forth, and so we were
 (6) asked to keep that, use the phone, don't use the fax machine
 (7) basically, but we were actually - the scientist can't do
 (8) research without taking notes. I mean, I can't remember
 (9) everything in my head. I need to keep records and it's
 (10) particularly important if there is - it's litigation
 (11) sensitive. We have to have very complete records of all of our
 (12) scientific data.
 (13) Q And you do?
 (14) A We do.
 (15) Q And Mr. O'Neill and his colleagues got those notes, didn't
 (16) they?
 (17) A Yes.
 (18) Q They got a chance to depose you for nine days?
 (19) A Eight days. I think it was. Seemed like nine.
 (20) Q Now with respect to chronic exposure and sublethal
 (21) effects that has been studied in the laboratory extensively,
 (22) hasn't it?
 (23) A Very extensively.
 (24) Q Dr. Rice for example has spent a great deal of time
 (25) studying that as to Alaska species, is that correct?

Vol 32 5701

- (1) A That is correct.
 (2) Q And in setting the ten parts per billion factor in the
 (3) State of Alaska they took account of that literature?
 (4) A Yes, it's critical in doing criteria or standards that both
 (5) acute and chronic effects being considered completely, yes.
 (6) Q When you spoke about chronic exposure possibly producing
 (7) sublethal effects, you were referring to exposures that would
 (8) be high enough to cause sublethal effects?
 (9) A Exactly, yes.
 (10) Q And it is the consensus of the State and scientific
 (11) community that levels as low as we've been talking about today
 (12) ten parts per billion would be far below the level at which
 (13) chronic sublethal effects that is adverse effects from
 (14) exposure would occur?
 (15) A Yes, a fish could live its whole life in water with ten
 (16) parts per billion aromatic hydrocarbons and never suffer any
 (17) bad effects.
 (18) Q All the detritus, whatever might be in the water could
 (19) float to the bottom, would that cause adverse effects?
 (20) A It's unlikely that it would, it's just not enough.
 (21) Q What's the basic reason for the conclusion that free
 (22) swimming fish were not hurt in this oil spill as they have not
 (23) been hurt in other oil spills around the world?
 (24) A Because exposure is very low, very little oil gets into the
 (25) water. The old adage that oil and water don't mix is basically

Vol 32 - 5702

- (1) true. Chemists are just getting too darn good. They can
 (2) measure vanishing low concentrations in the water column, but
 (3) these concentrations don't have any effect so our extensive
 (4) water quality monitoring showed that the water quality was very
 (5) good and adequate for the support of fish and the food that
 (6) they rely on.
 (7) Q Now, lastly I'd like to ask you about DX8760, which was a
 (8) chart for Northwest Bay. Could you - you were asked about
 (9) that, so could you just explain what that chart shows?
 (10) A Okay. Actually, the data from this chart was shown in one
 (11) that we had in the examination that was of salmon migration
 (12) routes.
 (13) Q We showed a different -
 (14) A Very same -
 (15) Q Showed a different chart but the same information?
 (16) A It's just a smaller subset of the data and these points
 (17) above, above the State of Alaska standard line were shown in
 (18) that chart, and I explained that that was during shoreline
 (19) cleanup in Northwest Bay. There was a major cleanup effort
 (20) there. There was a lot of oil on the shore. We monitored
 (21) offshore water quality during that cleanup and showed that for
 (22) a very short period of time during cleanup, there were
 (23) concentrations in excess of the State standard.
 (24) Q And for a very short time, are we talking hours, we talking
 (25) days, we talking -

Vol 32 5703

- (1) A Probably a day or less because we only sampled once a
 (2) day when we were monitoring these kinds of things
 (3) Q When you went back the next day you didn't have that?
 (4) A That's right
 (5) Q So it's conceivable that if 30 parts per billion could
 (6) cause a problem for that one day if there happened to be fish
 (7) there they might have had some adverse effects?
 (8) A There might have been a few critters that yeah didn't
 (9) like 30 parts per billion for one day yes that could have
 (10) some effects
 (11) Q And at a population level in terms of the concerns that
 (12) Mr O'Neill's clients have to catch as many of those fish in
 (13) nets as they possibly can what kind of consequence could that
 (14) have on herring and pink salmon?
 (15) A At most a few individuals might have been affected and
 (16) that would have no effect on the population everyone within
 (17) Northwest Bay
 (18) Q You also talked with Mr O'Neill very briefly about the
 (19) very very surface of the water the first centimeter or
 (20) something like that?
 (21) A That is correct yeah the top micro layer as it's called
 (22) Q Now the species that we're talking about here in this case
 (23) salmon herring do those fish lay their eggs in that - in
 (24) that one centimeter?
 (25) A No they do not

Vol 32 5704

- (1) Q And does that centimeter have anything to do with an
 (2) evaluation of the likely effect of oil on herring and pink
 (3) salmon?
 (4) A Well the herring larvae after they hatch spend a short
 (5) period of time about 10 days near the water surface It's
 (6) been my contention for many years that there's always a layer
 (7) of water between them and that micro layer The micro layer is
 (8) composed of materials that will not go into solution in the
 (9) water that's why they're on the surface And the physics of
 (10) that is very well known and there's always a layer of water
 (11) between any organism floating up against that and the layer
 (12) itself otherwise herring larvae in places like Puget Sound
 (13) would all die because the micro layer contains lots of
 (14) chemicals from airborne deposition and so forth so the micro
 (15) layer contains concentration of chemicals but I don't think
 (16) organisms are ordinarily exposed to them
 (17) Q So insofar as your analysis of this spill on herring and
 (18) all their life stages did you need to study the micro layer to
 (19) reach the conclusions that you gave the jury today?
 (20) A No And the second reason is because by the time the
 (21) herring were hatching which is about 20 days after their eggs
 (22) were deposited the eggs were deposited in April so we're
 (23) talking about May 1989 That satellite photo taken in April
 (24) shows very clearly that there were very few slicks or sheens on
 (25) the water surface in May and June and so forth There were

Vol 32 5705

- (1) scattered sheens but the likelihood of herring larva coming up
 (2) right under a sheen was very remote because all the herring
 (3) spawned in the upper northeast corner of the Sound and that's
 (4) where the oil had left first where the oil left first so
 (5) there wasn't any overlap between their exposure
 (6) Q These little guppy size fish would have had to swim about
 (7) 35 miles to the nearest -
 (8) A Exactly
 (9) MR LYNCH Thank you Doctor
 (10) THE COURT Thank you sir You may step down You
 (11) may call your next witness
 (12) MR COOPER Your Honor defendants will call
 (13) professor any Brannon
 (14) THE CLERK. Raise your right hand please sir
 (15) (The Witness is Sworn)
 (16) THE CLERK. Please be seated For the record sir,
 (17) state your full name your address and spell your last name
 (18) please
 (19) A Ernest Leroy Brannon University of Idaho P O Box 8943
 (20) Moscow Idaho Zip code 43843 B R A N N O - N
 (21) THE CLERK. Thank you sir
 (22) DIRECT EXAMINATION OF DR ERNEST BRANNON
 (23) BY MR COOPER
 (24) Q Good morning Dr Brannon Dr Brannon can you tell us
 (25) what your current employment is?

Vol 32 - 5706

- (1) A I'm a professor at the University of Idaho in fisheries
 (2) science and aquaculture
 (3) Q Are you tenured?
 (4) A Yes I am
 (5) Q That means they can't fire you?
 (6) A Hopefully not
 (7) Q And do you have any other positions at the University of
 (8) Idaho?
 (9) A I'm the director of the aquaculture research institute
 (10) Q Can you explain briefly what that institute is?
 (11) A The aquaculture institute was started by the University of
 (12) Idaho in 1988 to provide extension and educational services to
 (13) the aquaculture industry in Idaho That would include both the
 (14) trout farmers in Idaho and the conservation hatcheries that
 (15) produce salmon for the Columbia River fishery and sport
 (16) fishery
 (17) Q Let's talk a moment about your education Can you describe
 (18) your educational background?
 (19) A The academic?
 (20) Q Yes let's -
 (21) A I started in 1955 at the University of Washington and
 (22) completed my bachelor's degree in 1959
 (23) Q And that was a bachelor's degree in what?
 (24) A In fisheries
 (25) Q All right I interrupted you

Vol 32 5707

- (1) A I went to work for a federal agency in fisheries and
 (2) returned about 1966 for graduate studies and finished my
 Ph D
 (3) in fisheries with the - with my Ph D thesis in fish genetics
 (4) behavior in 1972
 (5) Q Now when you were a youth were you involved with
 (6) fisheries or hatcheries?
 (7) A Yes I was one of those rare people raised at a salmon
 (8) hatchery
 (9) Q And your father was involved in the hatchery operation?
 (10) A He was an employee of the Washington State Department of
 (11) Fisheries and I was - had the good fortune of helping him
 (12) Q This is kind of a case of not a river running through it
 (13) but a hatchery running through it. All right, I think you
 (14) mentioned already that you had worked for a fishery
 commission
 (15) at some point during your course of your education?
 (16) A Yes
 (17) Q Was that the International Pacific Salmon Fishery
 (18) Commission?
 (19) A That's correct
 (20) Q And that's in British Columbia?
 (21) A The headquarters in British Columbia or were in British
 (22) Columbia
 (23) Q Can you describe what that commission the name of which
 (24) I'll never be able to repeat twice in the same way?
 (25) A The salmon commission was developed by treaty between

Vol 32 - 5708

- (1) Canada and the United States and their objective was to
 manage
 (2) the sockeye and pink salmon fishery between the two countries
 (3) because both countries fish extensively on it and to share
 (4) responsibility for enhancement in management and prevent fish
 (5) wars The salmon commission was formed to regulate and
 manage
 (6) that fishery
 (7) Q And if I read the newspaper correctly lately I guess some
 (8) of those fish wars are beginning to break out again?
 (9) A That's correct because that salmon commission was
 (10) eliminated for the new treaty and the new treaty just hasn't
 (11) been good enough
 (12) Q That probably doesn't have a whole lot to do with what
 (13) we're here to talk about, so let me move on here Let's see
 (14) when you were at the - at that commission you - maybe you
 (15) already said this but you ultimately became the chief
 (16) biologist for that organization?
 (17) A Yes I started actually in high school working during the
 (18) summers for them and worked up through a university career
 and
 (19) was involved in field initially then research, and finally I
 (20) was promoted to the chief research biologist for the salmon
 (21) commission
 (22) Q Do you have other experience, work experience in the area
 (23) of fish biology?
 (24) A Well my - my work experience when I left the salmon
 (25) commission and took a position at the University of Washington,

Vol 32 5709

- (1) my responsibility was to research fish culture and subjects
 (2) associated with fisheries management
 (3) Q And let's see for a while you were the director of the
 (4) Fin Fish Aquaculture Program at the University of Washington?
 (5) A Yes I was
 (6) Q Briefly what was that program involving?
 (7) A That was a hatchery program teaching undergraduates and
 (8) graduate students about fish culture and researching factors
 (9) that affect the culture of fish such as fish new transition
 (10) of management schemes those issues
 (11) Q Now let's see you were - you were awarded an endowed
 (12) share at University of Washington?
 (13) A Yes I received the Keiler Foundation (ph) endowed share
 (14) for work we were doing in the Lake Washington Puget Sound
 area
 (15) with regards to salmon and trout fisheries
 (16) Q All right, let me talk for a moment or have you talk for a
 (17) moment about professional associations Do you belong to any
 (18) professional associations?
 (19) A I'm a member of the American Fisheries Society and member
 (20) of the Pacific Fisheries Biologists The others are either
 (21) academic or not related to fisheries
 (22) Q This Western Regional Aquaculture Center that you
 mentioned
 (23) at the outset that's the one that's affiliated with the
 (24) University of Idaho, do I have that right?
 (25) A No the Western Regional Aquaculture consortium or center

Vol 32 - 5710

- (1) is 12 western states including Alaska and I'm on the board of
 (2) that, and we identify dollars that come from the department of
 (3) agriculture U S Department of Agriculture and direct those
 (4) to projects that will enhance our understanding of aquaculture
 (5) Q You were chairman of the board of directors of that
 (6) organization for ten or so years?
 (7) A I was actually board chair for only two years It's a
 (8) rotating chair
 (9) Q Now, did you - were you involved in your role in that
 (10) organization in evaluating proposals for research that had to
 (11) do with Alaska?
 (12) A Well, the requirements were requirement of all proposals
 (13) they have at least two states, institutions from two states
 (14) involved and Alaska has been involved in of course several of
 (15) them
 (16) Q Let's see, how about the advisory role do you serve in an
 (17) advisory role to any organizations or groups?
 (18) A Yes that's part of my responsibility at the University of
 (19) Idaho and one of my responsibilities that I assumed when at the
 (20) University of Washington
 (21) Q How about with respect to the Pacific Marine Fisheries
 (22) council do you advise any members of that organization?
 (23) A Yes, I advise the Idaho delegation that's involved with the
 (24) Pacific Fisheries management council
 (25) Q And what does that council basically do?

Vol 32 5711

- (1) A Well they look at the - at the management regulations
 (2) that are being imposed especially as it identifies the species
 (3) that come back into the Columbia River and so I advise them
 (4) with regards to how those management decisions might impact
 (5) those populations
 (6) Q Let s see you ve also been an advisor with respect to
 (7) trout unlimited?
 (8) A Yes I have been
 (9) Q That s a sport fishing organization?
 (10) A Yes that s correct
 (11) Q Northwest Steelhead and Salmon Council?
 (12) A Yes
 (13) Q That s also a sport fishing organization?
 (14) A That s correct
 (15) Q Pacific Trollers Corporation?
 (16) A That s of course a commercial fishing group, small boat
 (17) owners
 (18) Q That s involved with coho salmon?
 (19) A Anything that can troll for chinook primarily and coho
 (20) yes
 (21) Q And you ve been - served in an advisory role with respect
 (22) to the Puget Sound Gillnetters Association?
 (23) A Yes I have
 (24) Q That s obviously a commercial fishery?
 (25) A Yes

Vol 32 5712

- (1) Q How about Native American Tribes have you been involved
 in
 (2) any advisory roles with respect to fishery issues in the Native
 (3) American Tribes?
 (4) A We ve both at University of Idaho and University of
 (5) Washington have extended a fair amount of extension activities
 (6) to the tribes to involve them more in fisheries management and
 (7) so I ve advised at least eight or ten tribes primarily with
 (8) regards to their hatchery developments and enhancement
 (9) programs and less in the area of management
 (10) Q And you ve also served as consultant for the Bonneville
 (11) Power Administration?
 (12) A Yes I have
 (13) Q Just very briefly what kind of consulting work?
 (14) A That has dealt with how to look at recovery measures of
 (15) sockeye salmon on the Columbia River They re listed as an
 (16) endangered species and management has to take some fairly
 (17) careful approaches to try to recover that population
 (18) Q How about the City of Seattle have you done consulting
 (19) work for the city?
 (20) A City of Seattle has been involved with the sockeye spotting
 (21) channel on Lake Washington to help recover the sockeye
 (22) salmon
 (23) in that system
 (24) Q Let s see you ve done some studies pursuant to grants
 (25) academic studies research studies pursuant to grants for the
 United States government?

Vol 32 5713

- (1) A Yes I have and those have been related primarily to
 (2) behavior of salmon migration homing behavior those kinds of
 (3) subjects
 (4) Q You did some work for the National Science Foundation in
 (5) 1986?
 (6) A Yes
 (7) Q That involved coho salmon?
 (8) A Yes we tried to look at the phenomena of imprinting on
 (9) home stream motors how does a fish find its way back to home
 (10) stream and we were looking at that fishery
 (11) Q 25 words or less how does a fish find its way back?
 (12) A It smells its way home
 (13) Q All right that s less than 25 words U S Department of
 (14) Commerce sea grant effort have studied chinook salmon
 (15) return
 (16) survival for that organization?
 (17) A Yes we looked at where the salmon go based on tags after
 (18) release and their survival
 (19) Q You ve also done work for the American Petroleum Institute
 (20) that was mentioned here earlier in court today?
 (21) A Yes
 (22) Q What kind of work have you done for the American Petroleum
 (23) Institute?
 (24) A Well at the University of Washington we re concerned of
 (25) course about oil shipping in Puget Sound with the potential
 that there might be an oil spill and so we looked at issues

Vol 32 - 5714

- (1) that were related to how salmon might respond to an oil spill
 (2) in terms of the migratory pathways
 (3) Q Let s see you ve received some awards for your work in
 (4) enhancement and sport fishery work involving salmon?
 (5) A These were more awards of appreciation or recognition
 (6) conservationists-of the-year type of awards yes
 (7) Q Those include from the United States Navy looks like I
 (8) threw you for a loop I had ultrasonic testing systems?
 (9) A Yes that wasn t an award that was a volunteer advisory
 (10) role
 (11) Q I see Conservationist-of the-year award Puget Sound
 (12) anglers?
 (13) A Yes
 (14) Q Outstanding publication award in fish ecology and
 (15) management from the wildlife society?
 (16) A That was the first work done to show that genetics are very
 (17) strongly involved in homing or migratory behavior of small
 (18) fish
 (19) Q Let s turn for a moment to some publications Have you
 (20) published in learned treatises?
 (21) A Them yes and some gray literature government reports
 (22) Q You have published scientific articles?
 (23) A Yes I have
 (24) Q About how many?
 (25) A Probably about 60

Vol 32 5715

- (1) Q And some or all of these were subject to the full peer review process?
- (2) A Most of them were peer reviewed
- (3) Q Some of the topics include the salmon spawning time in relation to stream temperatures and fry emergence?
- (4) A Yes much of it was early life history type questions
- (5) Q Origin and development of life history patterns in Pacific salmonid?
- (6) A Yes
- (7) Q Factors affecting sockeye salmon growth in four lakes of the Fraser River system?
- (8) A Yes
- (9) Q And others?
- (10) A Yes
- (11) Q Now Dr Brannon have you worked before you were engaged on this case on salmon systems in Alaska?
- (12) A Before this case no I have not.
- (13) Q Now you've obviously worked on that subject for the last four years since the spill?
- (14) A Yes
- (15) Q Do you feel that the fact that you hadn't studied Alaskan salmon systems for some reason makes you unable to discuss the kinds of things you're going to be talking about today with respect to some of the fisheries areas in Alaska?
- (16) A No not at all

Vol 32 5718

- (1) Q The basic principals tend to be the same?
- (2) A Well with the salmon commission we certainly were concerned about pink salmon and sockeye salmon life history and used Alaska data Washington data as well as British Columbia data to look at how we might alter our management programs and certainly their life histories are very very similar
- (3) Q Now you have studied work and you've mentioned some of it but you have done work in the area of the impacts of effect of hydrocarbons on salmon?
- (4) A Yes I did
- (5) MR COOPER Your Honor we would tender Dr Brannon as an expert in the area of salmon biology behavior, including the effects of oil on salmon
- (6) MR JAMIN No objection, Your Honor
- (7) THE COURT Did I hear no objection?
- (8) MR JAMIN No objection
- (9) THE COURT Thank you -Dr Brannon's qualifications are accepted and why don't we take our break at this point. We'll be in recess for 15 minutes
- (10) (Jury out at 12 00 p m)
- (11) (Recess taken from 12 00 p m to 12 15 p m)
- (12) (Jury in at 12 16 p m)
- (13) BY MR COOPER
- (14) Q Dr Brannon now you were asked to do some work by Exxon in connection with this litigation is that right?

Vol 32 5717

- (1) A I'm sorry I didn't hear the last part
- (2) Q You were asked to do some work for Exxon in connection with this litigation right?
- (3) A Yes I was
- (4) Q Can you just explain briefly how you came to be contacted and what that initial contact was?
- (5) A I believe the initial contact was from Dames & Moore who was a consultant for the field work with Exxon They asked me to be their procedures manual reviewer This would be the - the experimental plan they were planning to execute on the streams or wherever they're going to be investigating pink salmon and there would be a manual that would identify the procedure they were to follow and Dames & Moore asked me to review those manuals They would send them to me periodically I believe I reviewed three or four and after that just before the - this would have been right after the oil spill for the next couple months I believe
- (6) Then I was contacted by Wolfgang Kunkel from Exxon asked if I would be a researcher for them In fact I believe I was contacted by Bogle & Gates before that
- (7) Q In any event, you were asked to change to assume a different role or a new role?
- (8) A Yes I don't believe Bogle & Gates was really aware that I was a procedures manual reviewer
- (9) Q Did you ultimately then agree to expand your role?

Vol 32 5718

- (1) A Yes I did Make it short and simple, I did
- (2) Q What role did you have at that point?
- (3) A I was then asked to develop the pink salmon studies to look at the potential impact of oil in Prince William Sound on pink salmon
- (4) Q And was there an organization by the name of Pentec that was involved when you stepped into this role?
- (5) A Yes
- (6) Q Did you review some of the work that they had done?
- (7) A I was reviewing manuals they were doing They were the only ones that actually I reviewed
- (8) Q And did you have - well did you have any problems with the work that Pentec was doing?
- (9) A Well, I had no problems with the work they were doing I made suggestions how they should alter their procedures in a couple cases
- (10) Q Some of the procedures you thought were - could be better?
- (11) A Well, I felt that some of the things weren't - you weren't able to assess the impact of oil by what they were doing
- (12) Q Can you give an example of that?
- (13) A Well, in one case they were enumerating fry from the upper part of the stream that had no application to the affect of oil
- (14) Q Because the oil doesn't reach in the upper part of the streams?

Vol 32 5719

- (1) A Yeah the oil wouldn't reach the upper part of the stream
 (2) of course
 (3) Q And when you came on board did you undertake to design
 and
 (4) develop a suite of studies yourself?
 (5) A Yes I did I was asked to develop a set of studies that
 (6) would satisfy me with regards to the potential effect of oil
 (7) and I set out to do that I made up my - my study plan and
 (8) then sent that down to Exxon for their review
 (9) Q Now did you have - did you have pretty much a free hand
 (10) in doing what you wanted to do to accomplish this review?
 (11) A Oh yes That was one of the preconditions that - that
 (12) there be no influence from Exxon in terms of what studies would
 (13) be done how they would be done certainly I couldn't do all
 (14) the field work by any means so they would provide the
 (15) personnel the contract which was Dames & Moore, for the field
 (16) work and also provide me the scientists that I would work with
 (17) and they were not Exxon scientists but consultants like myself
 (18) that would be doing the field work
 (19) Q This was kind of the deal you cut at the outset that you
 (20) would be free to do these things?
 (21) A That's right
 (22) Q Let me ask you if - let's approach it this way There
 (23) were - as I understand it basically three or so approaches that
 (24) you have taken in looking at this question of the effect of the
 (25) oil spill on pink salmon in Prince William Sound?

Vol 32 5720

- (1) A Yes in terms of the - of my evaluation of impact I
 (2) looked at three general approaches
 (3) Q Can you tell us what the first general approach is just
 (4) generally?
 (5) A Well the first one was to look simply at the response of
 (6) the adults coming back into the Sound if there was an oil
 (7) impact I would have expected to see it in the adult returns of
 (8) those fish who were at risk and that was - the first approach
 (9) is look at the adult return or what I might call the harvest of
 (10) pink salmon
 (11) Q Just the simple concept of seeing how well the fish that
 (12) were really potentially exposed did?
 (13) A Yeah straightforward kind of evaluation
 (14) Q And then what was your second approach that you used?
 (15) A Well again the second approach was to look at the - if
 (16) there had to be an effect from oil then it had to be through
 (17) some kind of a mechanism in other words what they had to be
 (18) exposed to so I looked at the percentage of fish that were
 (19) exposed to oil in Prince William Sound - pardon me the
 (20) percentage of pink salmon exposed to oil in Prince William
 (21) Sound
 (22) Q We've got how well the fish did that were most potentially
 (23) exposed looking at how many were actually exposed and then
 (24) what was the third?
 (25) A The third area dealt with the science and that was what I

Vol 32 - 5721

- (1) spoke of earlier designing a bank of studies that I could
 (2) examine the most critical stages that I felt would be most
 (3) susceptible to oil and those results then would - would give
 (4) me the insight that I needed with regards to potential impact
 (5) that various stages
 (6) Q All right Now I guess one of the things I've learned is
 (7) that kind of underlying all of this you have to understand what
 (8) the life cycle of a pink salmon is is that a fair statement?
 (9) A That's right Many pink salmon have a simple life history
 (10) but it's not characteristic of other salmon or salmonids
 (11) Q I think we've got a large poster board we can use in order
 (12) to deal with the subject of life cycle of pink salmon?
 (13) MR COOPER Could I inquire if the jury could all see
 (14) that?
 (15) BY MR COOPER
 (16) Q All right we've got kind of a busy looking chart here
 (17) Dr Brannon but could you - well, let's - I tell you what
 (18) let's start at the top Can you start there and tell us what
 (19) this is depicting? And maybe we ought to start with this
 (20) fellow right here or this lady right here I guess
 (21) A Okay, that would be the returning pink salmon of the 1988
 (22) brood year That would be - the brood year is defined as the
 (23) year of spawning and so the 1988 brood year is of concern
 (24) because they had exposure later in their life history but the
 (25) adult comes back in 1988 and enters the Prince William Sound

Vol 32 - 5722

- (1) goes up to the home stream and spawns
 (2) Q So it produces the eggs here?
 (3) A That's right She'll deposit the eggs Pink salmon have
 (4) from 1200 to 1700 eggs per female They'll dig down in the
 (5) nests have several nests actually but all within a local area
 (6) called a redd R E D-D and that is the nest site she defends
 (7) against other fish coming in until she dies and she'll die
 (8) usually within a few days after spawning
 (9) Q So shortly after the spawn then the parent fish die both
 (10) the males and females?
 (11) A Both male and female die after spawning
 (12) Q What happens with the eggs in the redd or the nest?
 (13) A The eggs will incubate just like little banty eggs or
 (14) chicken eggs They'll hatch out usually within a couple three
 (15) months but by the middle of November most of the eggs have
 (16) hatched the female has spawned and now since they've
 (17) hatched they're now able to move around a little bit and that gives
 (18) them great access to better water if they're - if oxygen is
 (19) low from too many fish utilizing the site Being able to move
 (20) around can get them a little bit better incubation spot
 (21) Q These are these fellows?
 (22) A That's right they're yolk sac fry or alevins and they'll
 (23) remain at that stage until they leave the gravel which we call
 (24) emergence in the spring of the year
 (25) Q Let me stop you there for a moment if I can We've got

Vol 32 5723

- (1) this line on here that says - this vertical line that says oil
 (2) spill This is - we re trying to depict the time of the oil
 (3) spill in March 1989?
 (4) A Yes for the 88 brood the alevins and the eggs and the
 (5) adults of course missed - they were too soon for the oil
 (6) spill but the alevins that were just about ready to absorb
 (7) their yolk and become what we call fry the fry leave the
 (8) gravel now and go to the Sound to start feeding in the marine
 (9) environment Pink salmon unlike other trout and other salmon
 (10) don t feed in fresh water They go directly to the marine
 (11) environment
 (12) Q So this is - this portion of the life cycle?
 (13) A Yes And so then they will then go into the marine
 (14) environment and stay in Prince William Sound a few months
 (15) again from April till about August, and then they take off on
 (16) their long ocean migration and go counterclockwise around the
 (17) Pacific Ocean or the North Pacific Ocean and then back up the
 (18) Pacific coast of British Columbia and Alaska and back to their
 (19) home streams in Prince William Sound
 (20) Q So these are the - after they ve done this gyre around the
 (21) North Pacific they come back to the northern streams?
 (22) A Yes that s the even year run The 1988 produces the 1990
 (23) spawners and they produce the 1992 and so forth
 (24) Q Eve y two years basically you ve got another cycle
 (25) start:

Vol 32 - 5724

- (1) A Yes
 (2) Q Now what happens in the other years in the in between
 (3) years or the odd years?
 (4) A Well there we have the odd year run and because pink
 (5) salmon are just two-year-old fish they never mix Sockeye
 (6) chinook salmon coho and even chum salmon have intermixing
 (7) year
 (8) classes they come back at ages three four five six and
 (9) they can spawn with one another So the year classes mix but
 (10) in cases of pink salmon the even and the odd year classes
 (11) never mix they stay separate so the -
 (12) Q That means that for instance the spawners coming in in
 (13) 1989 would come in a year later after these spawners would
 (14) come
 (15) in?
 (16) A That s right with the exception of them being the same
 (17) species they re absolutely unrelated genetically to the even
 (18) year run And the odd year run now came in after the oil
 (19) spill so the adults have come in a few months after the event
 (20) of the spill
 (21) Q About when do they - when would these adults in 1989 have
 (22) entered the Sound in order to start spawning?
 (23) A They ll be coming back just about now June and July They
 (24) will - the earlier ones will be back already coming into
 (25) Prince William Sound Those going to cold streams will be
 back
 (26) and ready to spawn before too long but the bulk of the run
 (27) will come in a little bit later than that and they ll be

Vol 32 5725

- (1) spawning Then in this case in 1989 they will be spawning in
 (2) those streams that had been oiled or of those streams that had
 (3) been oiled they would be spawning in those and -
 (4) Q All of them or just some of them are you talking about?
 (5) A Well the 1989 population coming back in Prince William
 (6) Sound will be spawning all of them will be spawning A
 (7) segment of them will be spawning in oiled streams
 (8) Q And we ll come to that
 (9) A Yeah So they ll deposit their eggs August September
 (10) maybe even a little bit into October some of the late fish
 (11) And -
 (12) Q Well -
 (13) A They ll start their incubation period at that time
 (14) Q Where in the streams do they deposit their eggs what
 (15) portion of the streams?
 (16) A Well all salmon require fresh water to irrigate their
 (17) nests and so they all spawn associated with fresh water In
 (18) Prince William Sound this particular population of pink salmon
 (19) spawn in the intertidal area as well as the area above the
 (20) tidal area so about 50 percent of the population spawns
 (21) upstream and about 50 percent spawn below in the intertidal
 (22) area between the low tide and high tide but in that section of
 (23) stream that s irrigating the fresh water down through the
 (24) redds
 (25) Q We ve been talking about wild stock salmon or wild salmon?

Vol 32 5726

- (1) A Yes this is wild stock
 (2) Q There s also another large bunch of salmon in Prince
 (3) William Sound pink salmon that s not wild stock?
 (4) A They all came from wild stock in Prince William Sound but
 (5) the hatcheries developed their own populations from those and
 (6) now we ve got a substantial segment of pink salmon in Prince
 (7) William Sound being produced by the hatcheries and the
 (8) remainder being produced by the wild populations
 (9) Q Let me see if I can bring up have Exhibit 5120 Maybe I
 (10) can maybe I can t
 (11) Now does this show where the hatcheries are in Prince
 (12) William Sound?
 (13) A Yes it does
 (14) Q Can you tell us where the pink salmon hatcheries are in the
 (15) Sound here?
 (16) A Yes, I can Here is the Solomon Gulch hatchery up on top
 (17) right-hand corner Those are the cooler spawning
 (18) temperatures
 (19) and Solomon Gulch would be having fish coming back right
 (20) now
 (21) Then there s Cannery Creek also a pink salmon hatchery
 (22) Esther Noerenburg hatchery which is a pink salmon hatchery
 (23) Main Bay, I think it started out as a pink salmon hatchery back
 (24) in the earlier or mid 80s is no longer a pink salmon hatchery
 (25) it produces other species And then AFK down here is the
 fourth pink salmon hatchery in Prince William Sound
 (26) Q All right Now about what proportion more or less of the

Vol 32 5727

- (1) pink salmon fry that enter the Sound these days or that are
 (2) produced in the Sound come from hatcheries as opposed to the
 (3) wild stock?
 (4) A The - at least 54 percent of the production in Prince
 (5) William Sound this year this - these last few years have
 (6) come from hatcheries and that estimate might be up as high as
 (7) 80 percent depending on the year
 (8) Q And does that also depend upon which set of numbers you
 use
 (9) from ADF&G?
 (10) A Well that's one of the problems because of the spill
 (11) Alaska Fish & Game was able to give a lot more attention to the
 (12) area and they've actually found more streams They're minor
 (13) streams but nonetheless they still add them to the stream
 (14) count so that number's still evolving a bit
 (15) Q In any event is it at least about 50 55 percent or so?
 (16) A Yes over 50 percent
 (17) Q All right Now let me come back to -
 (18) MR COOPER Well Your Honor I would move to admit
 (19) exhibit 5120 DX5120
 (20) (Exhibit DX5120 offered)
 (21) MR JAMIN I think it was preadmitted but if it
 (22) isn't it's fine Your Honor
 (23) THE COURT If it hasn't been admitted already
 (24) Defendants DX5120 is admitted
 (25) (Exhibit DX5120 received)

Vol 32 5728

- (1) MR COOPER Thank you Your Honor
 (2) BY MR COOPER
 (3) Q Now with that little tutorial on life cycle and so forth
 (4) let's come back to the first approach you said you utilized in
 (5) tackling this question what effect the oil spill may have had
 (6) on the pink salmon in Prince William Sound I think if I
 (7) recall correctly you said that was basically looking at how
 (8) well these fish that were most potentially exposed did when
 (9) they came back?
 (10) A Yes
 (11) Q And can you tell us now which fish are you talking about?
 (12) A Well that's - that's the important distinction between
 (13) the two year classes because the two year classes were not in
 (14) any way experiencing oil in the same way You'd have the 1988
 (15) brood the even year class experience oil at the very end of
 (16) their incubation period so they experience it as new or
 (17) alevins ready to leave the gravel
 (18) Q That's this stage here?
 (19) A Yes they would be much more advanced than that which is
 (20) shown there that have very little yolk left on the abdomen and
 (21) then they would have experienced a potential exposure to oil in
 (22) that fry to fingerling stage when they would be rearing in
 (23) Prince William Sound
 (24) Q We're talking about wild stock?
 (25) A Wild stock

Vol 32 5729

- (1) Q And how about then the odd year brood?
 (2) A Well the odd year would have not experienced it as adults
 (3) of course because they would have come in after the oil had
 (4) left Prince William Sound for the most part But going into
 (5) those streams the stream captured some of the oil and it would
 (6) have deposited it in the gravel and the adults would have gone
 (7) in there deposited their eggs and that was the first year of
 (8) full incubation in stream gravels that had potentially oil
 (9) exposure
 (10) Q We've been talking about wild stock but as you just
 (11) mentioned there was also hatchery fish that were being
 (12) produced correct?
 (13) A Yes
 (14) Q And with respect to the hatchery fish, are there ever -
 (15) were there ever any hatchery eggs in streams?
 (16) A No of course not. They would have been in the hatchery
 (17) and would have been incubating under the hatchery's control
 (18) conditions with the controlled water supply and so forth
 (19) Q Where does that water supply come from?
 (20) A Well, I believe all of the hatcheries in Prince William
 (21) Sound have fresh water supplies that come from small little
 (22) lake basins, and that's one reason why the hatcheries can
 (23) produce fish a little bit earlier in development than wild
 (24) because they've got that warmer water and so those - those
 (25) hatchery fish would be protected in the hatchery under
 hatchery

Vol 32 5730

- (1) conditions
 (2) Q Now let's see I think you've located a videotape that
 (3) shows - sheds some light on the question of how these fish may
 (4) or may not have been exposed?
 (5) A Yes This was a promotional tape by the Prince William
 (6) Sound Aquaculture Corporation and so it shows their general
 (7) routine It's not any one particular hatchery but it's a
 (8) combination I believe of some of their hatcheries
 (9) Q Would it be helpful to explain how these hatchery fish are
 (10) protected from some aspect at least of the spill by referring
 (11) to that videotape?
 (12) A I think so
 (13) MR COOPER Your Honor with the Court's permission
 (14) I would show that videotape Exhibit DX0127 B
 (15) (Exhibit DX0127 B offered)
 (16) THE COURT Has that been admitted at this point?
 (17) MR COOPER I'm sorry?
 (18) THE COURT Has 0127-B been admitted at this point?
 (19) MR COOPER I don't believe it's been preadmitted
 (20) MR JAMIN If it's PX -
 (21) MR COOPER DX DX0127 B
 (22) MR JAMIN I haven't seen it May I have just a
 (23) second Your Honor? This is one that was not on the list
 (24) Your Honor based on counsel's representations we have no
 (25) objection

Vol 32 5731

- (1) THE COURT Defendants 0127 B is admitted You may
 (2) show it
 (3) (Exhibit DX0127 B received)
 (4) MR COOPER Why don't you go ahead and narrate this
 (5) Dr Brannon
 (6) THE WITNESS Is that showing on the screen here?
 (7) MR COOPER Should be on the monitor in a moment
 (8) (Videotape Played)
 (9) THE WITNESS This shows the adults coming back to the
 (10) hatchery and they home back at that hatchery in large numbers
 (11) of course and the purse seiners will scoop them up and kind of
 (12) encourage them into net pens You can see the net pens are
 (13) plastic frame pens with regular mesh webbing and the adults
 (14) are forced into those They're of course much more dense than
 (15) they could survive there for very long It's a very short term
 (16) exposure and actually siphon the fish into the hatchery where
 (17) they can make their selection for spawning Some of the
 (18) hatcheries allow the fish to swim in themselves and others will
 (19) use this device They come into the hatchery and they're
 (20) spawned and the eggs are put into these incubators in
 (21) darkness
 (22) because daylight or sunlight will kill the eggs and they're
 (23) very carefully handled at this stage and poured into the
 (24) incubator And in the spring of the year they'll hatch out or
 (25) emerge from those incubators and come down into these little
 collection tubes into a collection pond and from that pond

Vol 32 5732

- (1) they can pick them out and mark them They'll clip the adipose
 (2) fin that's the fin on the back by the tail and use that as a
 (3) mark to identify the hatchery fish They'll put them out in
 (4) the net pens and feed them until the plankton bloom is right in
 (5) Prince William Sound to release them Here's the young fish
 (6) being fed and waiting to be released in Prince William Sound
 (7) BY MR COOPER
 (8) Q Now those pens they tend to be right near the hatchery?
 (9) A Yes they are They're close - well I should say
 (10) they're - they have satellite facilities as well where they'll
 (11) haul the fish and release them if they want to spread the
 (12) return back into a larger geographical area for the fishery
 (13) purposes but the brood stock they're using will come back to
 (14) the hatchery
 (15) Q All right Now what did you look at to see to answer the
 (16) basic question as to how well these fish that were most
 (17) potentially exposed fared when they came back?
 (18) A Well that first route was to look at the total return back
 (19) into Prince William Sound - Primarily of those fish that were
 (20) at risk of exposure That would have been the progeny from the
 (21) 1988 brood and the progeny of the offspring of the 1989 brood
 (22) and they'd come back in 1990 as a two-year-old fish and 1991
 (23) as a two-year-old fish
 (24) Q What we're looking to do is to see how well these two
 (25) groups did?

Vol 32 5733

- (1) A That's right yes
 (2) Q Now you've prepared an exhibit that shows the return size
 (3) run size?
 (4) A Yes I have
 (5) Q Let me put DX5140-B up I think you have a light pen up
 (6) there Dr Brannon
 (7) A Yes I do
 (8) Q If you want to use that to explain Can you use this to
 (9) explain what this signifies to you?
 (10) A We have here the 1988 brood and the 1989 brood those are
 (11) the years the progeny or the years at risk when they were
 (12) either in the gravel or going out in Prince William Sound and
 (13) the 1988 produced the 1990 return and the 1989 produced the
 (14) 1991 return in Prince William Sound
 (15) Q And obviously those returns were pretty good?
 (16) A Yeah, that was the first test of course and in fact the
 (17) 1990 was the biggest run in the recorded history of Prince
 (18) William Sound and 1991 was the second largest run of pink
 (19) salmon in the recorded history of Prince William Sound
 (20) Q So the fish that were most potentially exposed were the
 (21) ones that came back first and second highest runs ever?
 (22) A Yes the 1988 of course had a very - a good return The
 (23) 1989 had a very good return They happened to have good
 (24) rearing conditions in Prince William Sound with a good
 (25) temperature good plankton level food supply and they came

Vol 32 5734

- (1) back very successfully
 (2) Q Now have you in fact ranked the various runs going back to
 (3) 1960 to show where these run sizes fit in if you go back that
 (4) far?
 (5) A Well I went back with regards to the wild runs because
 (6) the - the hatchery runs as you can see here dominated the -
 (7) that would be the yellow portion of the bar so it got - the
 (8) yellow portion of the bar here that would be the hatchery
 (9) component and the green portion of the bar would have been
 (10) the
 (11) wild component and the hatchery fish were very successful in
 (12) return The record hatchery return actually The wild fish
 (13) were not the record - record return but they were a very good
 (14) return
 (15) Q And is the listing, the ranking that you did of the wild
 (16) stock fish?
 (17) A Yes I just ranked the wild stock
 (18) Q Okay I think that's DX - can you read that? Well it
 (19) looks to me like 3681 - 8681 If I can put that on the
 (20) screen this is the ranking?
 (21) A Yes this would be the ranking of the 1988 brood
 (22) production so the fish that came from the 1988 brood actually
 (23) was the second best return success over the last 31 years of
 (24) the wild stock And the 1989 shown here was the fifth
 (25) largest return from the wild most productive return from the
 wild run in the last 31 years

Vol 32 5735

- (1) Q If we go back to that other chart DX5140-B for a moment
 (2) can you learn anything about the success of the wild stock run
 (3) wild stock portion of those two big years by comparing how
 (4) many returned versus how many - how large their parent return
 (5) was?
 (6) A Well you can look here the 1988 wild stock would have
 (7) contributed that much to the 88 brood Then they produce the
 (8) 1990 and so you can see the wild stock is at least twice as
 (9) good or better than their parent year so they had a very good
 (10) production and this would be in contrast say 1986 to 1988
 (11) where there was a substantial reduction from 1986 to 88 and
 (12) then in 1989 our line would be right there and - and they
 (13) produced up there in 1991 So their production was nearly
 (14) twice that of their parent year as well
 (15) Q What does that tell you then?
 (16) A Says the productivity the natural runs wild runs was very
 (17) good and was consistent with what we've seen in the hatchery
 (18) fish
 (19) Q Now we're going to come back to this later but obviously
 (20) if you look at 92 and 93 the runs were pretty low then?
 (21) A Yes they were
 (22) Q But those were not fish that were around in - at the time
 (23) of the spill March of 1989?
 (24) A No those are fish that were - were returning and not
 (25) exposed to any oil for at least two years

Vol 32 5736

- (1) Q So overall then from the returns that you observed and
 (2) the size of the returns of these fish what general conclusion
 (3) do you draw what does that tell you then about the impact of
 (4) the oil spill on pink salmon?
 (5) A Well I concluded based on the adult return information
 (6) that approach that the oil spill had really no effect on - on
 (7) the pink salmon populations
 (8) Q Now you've said that you used then a second approach to
 (9) look at this question?
 (10) A Yes
 (11) Q And that was - what was that approach?
 (12) A That was the percentage of fish that were potentially at
 (13) risk of exposure to oil
 (14) Q How did you go about looking at that time?
 (15) A Well I looked at the percentage of the run that was
 (16) produced by hatcheries and as we've gone through the
 (17) hatchery
 (18) routine the hatchery fish were not exposed directly to the
 (19) high concentrations of oil and so I eliminated them from the
 (20) percentage of the population in Prince William Sound that
 (21) would
 (22) be exposed Then I went to the wild population and I looked at
 (23) the percentage of the population in the natural environment
 (24) that would be exposed to oil and those that were not exposed in
 (25) the natural environment I added those to the hatchery fish and
 (26) those that were exposed in the natural environment I kept them
 (27) as a potentially exposed portion of the population

Vol 32 5737

- (1) Q All right Let's come back to that in a moment but let me
 (2) ask you first, did you look at the timing of the spill versus
 (3) the pink salmon run?
 (4) A Well as a basic approach looking at the issue of what
 (5) population or what segment of the population was exposed I
 (6) had
 (7) to know where the oil was where it went and that was looking
 (8) then at the pathway and timing of the oil
 (9) Q Now you have used things I think we've been calling it
 (10) the Gault model or the NOAA model for purposes of looking at
 (11) this timing?
 (12) A Yes NOAA tracked the oil in Prince William Sound They
 (13) actually did a simulation model which is a - is a best
 (14) demonstration of where the oil went based on overflights and
 (15) looking at the actual mapping of where the oil went, taking
 (16) into consideration the current patterns of water through Prince
 (17) William Sound and also wind patterns that would affect the
 (18) distribution of surface material, and Gault was a scientist for
 (19) NOAA Gault and others and they developed this simulation
 (20) model that would show the pathway and spread and the timing
 (21) of
 (22) the oil in Prince William Sound
 (23) Q Now you have made some modifications or additions to that
 (24) model?
 (25) A What I've done is add the timing components of when the
 (26) hatchery fish were released I've not superimposed that on the
 (27) model but it shows right after the basic model of when the fish

Vol 32 - 5738

- (1) were released
 (2) MR COOPER All right Your Honor I'd like to show
 (3) that video, if I may That is DX1820-A
 (4) (Exhibit DX1820 A offered)
 (5) MR JAMIN If it's not preadmitted it should be
 (6) there's no objection Your Honor
 (7) THE COURT Is it 18 -?
 (8) MR COOPER DX1820-A Your Honor
 (9) THE COURT Is admitted
 (10) (Exhibit DX1820-A received)
 (11) MR COOPER Your Honor while I'm on that I should
 (12) move to admit if I haven't already 8681 if I have that
 (13) number right the ranking of the -
 (14) (Exhibit 8681 offered)
 (15) THE COURT Is there objection to 8681
 (16) MR JAMIN There is not Your Honor
 (17) THE COURT Defendants Exhibit 8681 is admitted
 (18) (Exhibit 8681 received)
 (19) THE COURT There was another one you talked about
 (20) 5140-B If it's not we -
 (21) (Exhibit 5140 B offered)
 (22) MR JAMIN If not -
 (23) THE COURT Defendants' Exhibit 5140 B is admitted
 (24) (Exhibit 5140 B received)
 (25) MR COOPER Thank you

Vol 32 5739

- (1) BY MR COOPER
 (2) Q Will you narrate the videotape for us then?
 (3) A Yes I will
 (4) (Videotape Played)
 (5) THE WITNESS Okay this is the oil spill simulation
 (6) modeled and the pink salmon fry released timing And the oil
 (7) spill you can see there coming out from Bligh Reef and it
 (8) drifted by wind and current in the southwesterly direction It
 (9) went down through the - the corridor there around Knight
 (10) Island
 (11) BY MR COOPER
 (12) Q Timing we're at March 29?
 (13) A Yes
 (14) Q March 30 now?
 (15) A So we re looking at March 31 the beginning of April 1st
 (16) and oil is passing through into the Gulf area those specs that
 (17) you can see there occurring southwest of the - of the Prince
 (18) William Sound area shows the oil going out and the date here
 (19) now is April 6th already We still have no major emergence
 (20) coming from the wild streams and nothing released from the
 (21) hatcheries and the oil is passing through with the exception
 (22) of that oil that is reaching on the beach or is being slowed
 (23) down in the base or what we re seeing a regular pattern of
 (24) movement where quite a bit of the oil is moving out of Prince
 (25) William Sound clear up through April 14th April 15th nearly

Vol 32 - 5740

- (1) three weeks now past the time of the oil spill And so the oil
 (2) is continuously moving through with the current that goes in a
 (3) kind of a counterclockwise direction from outside into Prince
 (4) William Sound and down through the southwest corner
 (5) Q And then at what time then, do the fish start coming out
 (6) of the streams?
 (7) A Well now we start - well about the middle part of April
 (8) is a general kind of a point of reference and here s the
 (9) timing of the hatcheries You can see Esther hatchery April
 (10) 23rd to May 24th AFK, 24 April to 3 May Solomon Gulch 25
 (11) April to 19 May and 5 May to June 1st of Cannery nearly a
 (12) month plus after the potential of the oil spill
 (13) Q Now you re not saying that there wasn't any oil still
 (14) around in Prince William Sound?
 (15) A No I m not I m saying that the body of oil was being
 (16) drained out of Prince William Sound over this period of time
 (17) still oil on the beaches certainly
 (18) Q And you still -
 (19) A Still oil in the gravel
 (20) Q You ve still got the problem of oiled streams and so forth?
 (21) A That s right.
 (22) Q But better I guess that that release came a month or so
 (23) after the spill than right at the time of the spill?
 (24) A Well that was fortunate from the standpoint of several
 (25) reasons I guess

Vol 32 5741

- (1) Q Now you mentioned before that you undertook to calculate
 (2) then as I understood it the portion of the fry that were
 (3) being released into the Sound either by the hatcheries or wild
 (4) stock from the streams that might have been exposed or were
 (5) more likely to have been exposed to any of this oil?
 (6) A Yes I did
 (7) Q How did you go about doing that? Just briefly?
 (8) A Well the hatchery fish are known I mean the released
 (9) numbers not every individual fish certainly but the general
 (10) population size coming out of the hatchery is a known number
 (11) And I'd take those as the hatchery contribution from the four
 (12) pink salmon hatcheries in Prince William Sound and then the
 (13) wild population as you can see the pathway of the oil excluded
 (14) a lot of Prince William Sound from oil concentrations in the
 (15) water column to an extent and so I took that area that was
 (16) around the - the eastern northern and western perimeter where
 (17) the oil didn't go and used that as the portion of the
 (18) population in Prince William Sound that was not impacted by oil
 (19) of the wild fish And then I took the corridor where we
 (20) noticed the oil came down along Knight Island Montague
 (21) Island
 (22) and some of the other islands there and looked at that as the
 (23) oil corridor but of course not all those streams in that
 (24) corridor were even oiled
 (25) For that objective I used the stream cleanup assessment
 team s assessment of what shoreline and therefore streams
 were

Vol 32 - 5742

- (1) oiled and that was a team of scientists from NOAA Alaska Fish
 (2) & Game included Exxon the Coast Guard that was the official
 (3) designation of what was oiled and what wasn't oiled to the best
 (4) of their judgment
 (5) MR COOPER All right Now incidentally Your
 (6) Honor before I - if I didn't move to admit the videotape
 (7) 1820-A I would do so now
 (8) THE COURT You did
 (9) BY MR COOPER
 (10) Q You have prepared an exhibit Dr Brannon to show what
 (11) you
 (12) ended up with in this calculation you were just describing?
 (13) A Yes it lays out the distribution of the different segments
 (14) of the run
 (15) Q I think that s Exhibit 8898-A Let me see if I understand
 (16) this Where would you start out here one of the hatcheries?
 (17) A My light pen isn't working here so I'll just -
 (18) Q Try getting the color on
 (19) A Okay, there we go So if we look at the hatchery
 (20) contributions this would be the 1989 hatchery contributions
 (21) we've got the AFK hatchery and they produce 161 million fry
 (22) 17 percent of the entire population in Prince William Sound
 (23) Esther hatchery, 160 million another 17 percent of the
 (24) population of fry in Prince William Sound
 (25) Q These were all fry that were protected at least in part
 from the spill by virtue of the way the hatcheries operated as

Vol 32 5743

- (1) we saw?
- (2) A Both by where the hatchery was located being out of the
- (3) pathway of the oil except for AFK and the fact that their
- (4) rearing area was protected away from oil Cannery Creek up
- (5) here six percent another 59 million Solomon Gulch 129
- (6) million 14 percent And those hatcheries then constitute
- (7) about 54 percent of the entire population in Prince William
- (8) Sound
- (9) Then we have the non spill affected areas and that would
- (10) have been the areas around Prince William Sound that were not
- (11) in the pathway or the corridor of oil
- (12) Q You calculated how many - how many fry were released into
- (13) the Sound and from those areas?
- (14) A Yes that calculation was simply a direct estimate The
- (15) estimate that Alaska Fish & Game uses to come up with the
- (16) production of fry from a given number of adults so it would be
- (17) the number of fry recruited from the adult spawning population
- (18) and then I took the number of oiled streams against the number
- (19) of unoiled streams in those areas and estimated the number of
- (20) wild fish actually produced from those streams
- (21) Q And that turned out to be?
- (22) A 344 million in the area of non impact and in the area of
- (23) impact there was about 87 to 90 million fry, which constitutes
- (24) about nine percent of the Prince William Sound population But
- (25) I want to point out that the oiled streams in that impact -

Vol 32 5744

- (1) Q Before you do that let me just - so the nine percent that
- (2) you come up with is the basically the percentage of the - of
- (3) the total fry that were entering the system from hatcheries or
- (4) otherwise that was either not protected because it was inside a
- (5) hatchery for at least part of this time or from an area that
- (6) wasn't in the trajectory of the spill?
- (7) A Right That would be this along this corridor where the
- (8) oil had the biggest distribution on the beaches and whatnot.
- (9) That would have been the area that contained the 87 million
- (10) fry or 90 million fry
- (11) Q Are there some further adjustments that you would make to
- (12) that number in order to get down to the fish that were really
- (13) the most potentially exposed?
- (14) A Yes I would The actual number of oiled streams in that
- (15) corridor area was a substantially smaller number than the total
- (16) streams in it
- (17) Q Do you know exactly what the number is?
- (18) A Well because we haven't defined the exact number of
- (19) streams in Prince William Sound I can't give you a stream
- (20) number but in terms of the 1985 anadromous stream catalogue
- (21) and taking that percentage and applying it to whatever number
- (22) of streams there might be in Prince William Sound it comes out
- (23) to about one percent of the streams in Prince William Sound
- (24) were actually oiled but in that corridor of streams that were
- (25) oiled it's a good 10 percent of the streams in that area

Vol 32 5745

- (1) MR COOPER Your Honor I would move to admit this
- (2) Exhibit 8898-A
- (3) (Exhibit 8898 A offered)
- (4) MR JAMIN No objection
- (5) THE COURT It is admitted without objection
- (6) (Exhibit 8898-A received)
- (7) BY MR COOPER
- (8) Q So Dr Brannon then let me pick up just a couple more
- (9) things before we leave this point on the hatchery fish In
- (10) looking at the potential for exposure to the hatchery fish did
- (11) you look at their survival rates?
- (12) A Yes I did
- (13) Q And can you explain why you - what you were looking at and
- (14) why?
- (15) A Well I was looking at the - you might say the return per
- (16) spawner That's not a totally valid number because the
- (17) hatcheries harvest their total return or much of their total
- (18) return and keep the brood stock from that and so if you look
- (19) at just the number of fry released from the hatchery and the
- (20) success of fish coming back that gives you a good estimate of
- (21) the percent survival of hatchery fish and I have an exhibit
- (22) showing the general survival success of the hatchery fish
- (23) Q And if I read this correctly I believe that's DX5139 A
- (24) Is that the exhibit?
- (25) A Yes that's the exhibit

Vol 32 - 5746

- (1) Q And can you explain that?
- (2) A Well you can see that the - again the 1990 and the 1991
- (3) years of return were the fish of greatest risk because the 1988
- (4) and 89 brood were the ones exposed to oil so then I looked at
- (5) the survival success and if there was a potential for exposure
- (6) and poor survival you'd expect to see it in the percent of
- (7) hatchery survival
- (8) Q How do they determine what the survival is for these
- (9) hatchery fish?
- (10) A The number of fry released and the adult count coming back
- (11) both in the fishery and the hatchery and the adult returns
- (12) would be based on hatchery marks Not all the hatchery fish
- (13) would be marked but a percentage of hatchery fish are marked
- (14) Q So it happens with a hatchery because both those numbers
- (15) are known unlike in the case of the wild stock you have a
- (16) ready means of calculating their survival rate?
- (17) A Yes, those numbers are good estimates
- (18) Q All right, I think I interrupted you in the middle of your
- (19) answer
- (20) A So then we have the 1990 return which was higher than any
- (21) other return in recent years and the 1991 return which was as
- (22) good as the second largest prior to that time indicating we
- (23) had very good hatchery survival Six percent five percent
- (24) would be exceptional exceptionally high survival for hatchery
- (25) fish

Vol 32 5747

- (1) Q Before we leave the hatcheries altogether let me just ask
 (2) you quickly with respect to the one hatchery that you said was
 (3) in the trajectory of the spill that was AFK?
 (4) A Yes
 (5) Q Was it your understanding that special measures were taken
 (6) to try to protect the waters near that hatchery?
 (7) A Yes I saw a video put out by the PWSAC corporation about
 (8) the extent of effort they put in to keep the oil away from the
 (9) hatchery They were about ready to release their fry or at
 (10) least they were putting them in the pens to rear them and they
 (11) were concerned about the oil coming down and causing
 (12) problems
 (13) and so they put out an extensive amount of - of oil boom to
 (14) prevent the oil from getting into the hatchery area
 (15) Q A lot of fishermen worked awful hard in order to keep the
 (16) oil out of there?
 (17) A That's right
 (18) Q Now we've talked about the percentage OF the fish that
 (19) were most likely or most potentially exposed Is another
 (20) potential way that these fish could have been exposed even if
 (21) they were from a - a stream on the eastern side of the Sound
 (22) where the oil never reached or from a hatchery as they swam
 (23) through the water column? I mean is that something that one
 (24) should consider?
 (25) A Well that was certainly an area of concern to us in
 Prince - in Puget Sound about the - the delay effect it might

Vol 32 5748

- (1) have of fish moving through it In Prince William Sound that
 (2) of course was a concern It primarily dealt with the 1988
 (3) brood offspring
 (4) Q Now that is referring back to this chart - well we can
 (5) just hold it up You're referring to the - these fish?
 (6) A Just really those fish in the marine environment If you
 (7) put the red arrow right by that particular fish there yeah
 (8) that would be the stage of greatest concern for that brood
 (9) year and that was the only brood year that had potential risk
 (10) for exposure to elevated oil concentrations in the water
 (11) column Now I mean substantially elevated because of the oil
 (12) coming off the beach of course would always have some level
 (13) of contribution to the water column even though it might be
 (14) very very small
 (15) Q I'm sorry, I didn't mean to interrupt your answer
 (16) A But that would be the year of primary risk.
 (17) Q And the odd year brood with respect to that brood by the
 (18) time you get fish in the water column there you're already
 (19) into 1990?
 (20) A That's right. Those fish would have come out into Prince
 (21) William Sound virtually with no oil in the marine environment.
 (22) Their potential risk was during the incubation period
 (23) Q Now you were here I think when Dr. Neff was testifying
 (24) earlier?
 (25) A Yes I was

Vol 32 5749

- (1) Q And you probably heard much of his testimony about the low
 (2) water column measurements of VOAs and PAHs according to
 (3) the
 (4) measurements that he took?
 (5) A That's correct
 (6) Q And you heard his testimony about the water toxic -
 (7) toxicology tests that were conducted on mysid shrimp and
 (8) sheepshead minnows and so forth?
 (9) A I'm aware of that yes
 (10) Q I don't want to have you repeat what he has already said
 (11) but what just generally what conclusion do you reach about
 (12) the likelihood of exposure of these fish that we've been
 (13) talking about to oiled or to oil as they were swimming through
 (14) the water column?
 (15) A Well there just wasn't enough oil in Prince William Sound
 (16) in the water column to do any harm to the pink salmon That's
 (17) the general conclusion The concentrations that are toxic are
 (18) several hundred times higher than what was measured in Prince
 (19) William Sound and even my own work at University of
 (20) Washington
 (21) looking at oil where we did bioassay work the concentration
 (22) is many times hundred times less or was a hundred times less
 (23) in Prince William Sound than what would concern me about
 (24) toxic
 (25) effects So there just was not enough oil there in the water
 column to effect the pink salmon
 (26) Q All right. Have we now covered basically the points that
 (27) you wanted to make with respect to the second basic area that

Vol 32 5750

- (1) you were looking at the potential for exposure?
 (2) A I think so yes
 (3) Q All right You indicated at the beginning that there were
 (4) three principal things that you were looking at How the fish
 (5) that were most exposed did when they came back we've talked
 (6) about that
 (7) A Yes
 (8) Q How many fish were really exposed we've talked about that
 (9) and the third group then was what?
 (10) A Third group was the bank of studies that I recommended to
 (11) Exxon that we undertake to look at effects of oil on critical
 (12) life history stages
 (13) Q Can you explain generally what you went about doing there?
 (14) A Yes And you want me to review that did you say?
 (15) Q Yes and while you're doing that I'm going to see if I can
 (16) get the Rock of Gibraltar out from under my contact lens here
 (17) Go ahead
 (18) A Well if we can take the acetate on the life cycle poster
 (19) and put it down over, it'll help everyone see You might have
 (20) to move that arrow off there
 (21) So that shows the general life history stages that we
 (22) looked at and I - I felt that the - the critical areas dealt
 (23) with each one of those life history stages that I've got marked
 (24) on the poster
 (25) Q Shall we start with the earliest stages the embryos?

Vol 32 5751

(1) A Yes that would be 1989 the embryo survival study and here
 (2) this would have been done then on those fish that were
 (3) experienced The incubation environment the first group of
 (4) fish that experienced their incubation environment for the
 (5) whole of their incubation period and to do this we went to
 (6) oiled streams and spawned fish and put their eggs in little
 (7) baskets and put them in the gravel and we went to the
 (8) non oiled streams and spawned fish and put their eggs in little
 (9) baskets and I've simplified it It was quite a controlled
 (10) complex system We wanted to make sure we had the various
 (11) tidal levels covered the low tide the middle tidal area and
 (12) the upper tidal area in that intertidal area and then we
 (13) wanted to look at the intertidal areas well enough so we would
 (14) put several boxes in each one of those intertidal areas We d
 (15) have about 12 boxes per intertidal area about - pardon me
 (16) six six per intertidal area and 18 per stream - 24 per
 (17) stream sorry
 (18) Q The idea you were looking for - what were you looking for?
 (19) A We were looking to see if oil would have any impact on the
 (20) survivability of the alevins incubating in that oiled substrate
 (21) or oiled gravel and we compared then oiled streams versus
 (22) unoiled streams and looked at survival just after hatching
 (23) Went back to those streams I didn't it was Dr Moulten, one
 (24) of my field personnel and he went back He is the one that
 (25) designed that study actually and went back and removed those

Vol 32 5752

(1) boxes and looked at the live/dead ratio
 (2) Q You've got an exhibit I think that shows some of the
 (3) results from this?
 (4) A Yes the results are summarized on the next exhibit.
 (5) Q That would be Exhibit DX5106
 (6) A Okay now this shows the actual results from the embryo
 (7) study and at the four tidal levels this would be about at the
 (8) two foot tide level - pardon me the six foot tide level the
 (9) eight foot ten foot and 12 foot We report things in meters
 (10) because that's what's required for publications and in the
 (11) scientific literature and - but it comes down to the six
 (12) eight ten 12 foot level Kind of a midsection of the tide
 (13) level and - the squares the blue squares are the unoiled
 (14) streams and the red diamonds are the oiled streams and here
 (15) you can see that the difference between the unoiled streams
 and
 (16) the oiled streams was very very very close It was not
 (17) significantly different As you can see in this comparison
 (18) between the controlled or the unoiled stream and the
 (19) experimental or the oiled stream
 (20) Q What basic conclusion then do you draw from that?
 (21) A Well I concluded from this study that there was no impact
 (22) on the embryo stage of the development in the gravel and this
 (23) was important because it was the first incubation period in
 (24) which the oil was exposed to the alevins throughout the
 (25) incubation period and so it was an important study And if we

Vol 32 5753

(1) were going to find affects on the eggs we should have seen it
 (2) here and we demonstrated to our delight that there wasn't
 (3) any
 (4) MR COOPER Your Honor I think it's now Mount Denali
 (5) that has moved into this contact lens I wonder if I might
 (6) take a moment I could just take it out probably operate on
 (7) one eye
 (8) MR JAMIN Please
 (9) THE COURT We've already fixed one technical problem
 (10) this morning we'll take care of another
 (11) MR COOPER This is our morning for technical
 (12) problems
 (13) That certainly feels a lot better I may not see very
 (14) well
 (15) BY MR COOPER
 (16) Q Now, we've talked about - maybe I can move this over here
 (17) in such a way, I don't know whether that's visible or not If
 (18) that's visible we could just leave it there We have talked
 (19) about the embryo survival study What was the next one that
 (20) you did and why?
 (21) A Well I'll have to go from memory because I can't see the
 (22) board anymore but that -
 (23) Q I've got you at a definite disadvantage If I give you a
 (24) hint maybe the thing to do would be to go on to the alevin
 (25) studies?

Vol 32 - 5754

(1) A I think if you just brought up that easel and put it on the
 (2) floor next to the easel I could see it there
 (3) Q You can but I'm not sure the jury can Now can you see
 (4) it Dr Brannon?
 (5) A I can see it very well thank you
 (6) MR COOPER Your Honor?
 (7) THE COURT Don't worry about me
 (8) BY MR COOPER
 (9) Q All right. Alevin studies?
 (10) A Okay, the next - the next set was our alevin studies and
 (11) the alevin studies involved again going to oiled streams and
 (12) going to unoiled streams and sampling just before emergence
 to
 (13) look at the survival or the live/dead ratio of the alevin and
 (14) whatever eggs, and at that stage the eggs would have been
 dead
 (15) if they were still eggs So we'd look at the live/dead ratio
 (16) out of those streams and we'd remove them by going in with a
 (17) pump and pumping in water into a section of stream that we had
 (18) quartered off with a little live trap and the water would
 (19) upwell in that live trap and catch the alevins coming out of
 (20) the gravel as well as any dead material so it was just like
 (21) washing them out with a hose you might say And then we'd
 (22) look at the - the live percentage and we'd look at the dead
 (23) and then we'd look at them for anomalies if there was any
 (24) deformities that we could associate with the oiled stream
 (25) compared to the lack of them in the unoiled stream

Vol 32 5755

- (1) Q Now you've prepared an exhibit that gives you an example
 (2) or provides an example of what you're saying?
 (3) A Yes I have
 (4) MR COOPER Before we go to that I would ask if I
 (5) didn't to move DX5106 --
 (6) (Exhibit DX5106 offered)
 (7) MR JAMIN No objection
 (8) THE COURT You've got two I got a question about
 (9) DX5106 submitted no objection
 (10) There was a previous one DX5139-A is that all right also?
 (11) (Exhibit DX5139-A offered)
 (12) MR JAMIN Fine
 (13) THE COURT Defendants Exhibit 5139-A is also
 (14) admitted
 (15) (Exhibit 5139-A received)
 (16) BY MR COOPER
 (17) Q I'll put up Exhibit DX5103 Is that the one that shows
 (18) summarizes your findings?
 (19) A Yes that summarized it for both the 1989 and the 1990
 (20) periods
 (21) Q You did that twice?
 (22) A Yes we did it in the '89 for the '90 brood or '90
 (23) emergence and we did it in '90 for '91
 (24) Q That's this one?
 (25) A Yes So the alevin studies there are shown in 1991 on the

Vol 32 5757

- (1) A Yes
 (2) Q And in 1991?
 (3) A Now 1991 was another important year It was a very
 (4) different kind of study as you can see on the chart of the
 (5) pink salmon life cycle the 1991 alevins came from the 1990
 (6) adults and the 1990 adults would have been exposed to oil
 (7) potentially exposed to oil at least as fingerlings in the
 (8) marine environment So now we're looking at the progeny of
 (9) the
 (10) fish that were exposed to oil and here again we found that
 (11) their survivals were no different Now I don't put any
 (12) significance between the difference in survival between '90 and
 (13) '91 That's kind of the normal variation you'll have from
 (14) year to year, but it definitely shows between the reference or
 (15) the unoled streams and the oiled streams there was no
 (16) difference
 (17) MR COOPER Your Honor I would move to admit DX5103
 (18) (Exhibit DX5103 offered)
 (19) MR JAMIN No objection
 (20) THE COURT It is admitted
 (21) (Exhibit DX5103 received)
 (22) BY MR COOPER
 (23) Q Now did you also - what's the next study that you did?
 (24) A Well the next study of course looked at the percentage
 (25) of abnormal fish in the oiled versus the unoled streams and so
 of those fish that we were taking out with that pump we'd take

Vol 32 5756

- (1) poster and they're shown in 1990 on the lower section there
 (2) with the red arrow
 (3) Q Now this graph that we have up here on the screen you're
 (4) charting the percentage of live alevins on the left vertical
 (5) axis there?
 (6) A Yes that would be the percent live There'd be no life
 (7) eggs left at that time so they would be taken into
 (8) consideration from the standpoint that they would represent
 (9) some of the dead material that would have been in the - in the
 (10) gravel
 (11) Q What did you find in 1990?
 (12) A Well 1990 we found that there was really no difference
 (13) between the oiled streams and the reference streams and this
 (14) was - this was the year that had been exposed to the oil if
 (15) oil was in the stream they'd been exposed to it through the
 (16) entire incubation period and these alevins showed no
 (17) difference
 (18) in survival between the oiled and the unoled streams
 (19) Q So if I can get some color that would be the area there
 (20) that I just circled?
 (21) A Yes So that would have been -
 (22) Q Both the oiled - oiled in the reference - does reference
 (23) mean unoled?
 (24) A That's correct
 (25) Q The oiled and the reference streams then were both
 basically at about the same percentage of live alevins?

Vol 32 5758

- (1) about 140 per tidal level and preserve those and send them
 (2) back
 (3) to the laboratory for closer evaluation to see if they were
 (4) containing any abnormal individuals
 (5) Q And is that your emergent fry work?
 (6) A No This was simply the - the abnormal percentage of the
 (7) alevins and that turned out that those were again no
 (8) different between the oiled and the unoled streams You don't
 (9) expect to have a high degree of abnormal fish in natural
 (10) situations and that was true in both the oiled and unoled
 (11) streams It was another check on the potential effect of oil
 (12) Q Now, did you also at some point then in some of these
 (13) studies look at the condition of the fry?
 (14) A Well I looked at fry condition in the fry emergent
 (15) studies
 (16) Q And that was?
 (17) A That would be that, still in the alevin studies arrow it's
 (18) in that section of their life history The fry now have
 (19) absorbed their yolk and they're getting ready to come out of
 (20) the gravel We looked at fry emergence timing because here
 (21) we
 (22) could look at a very subtle influence didn't involve
 (23) mortality not direct mortality it didn't involve any kind of
 (24) abnormality in physical characteristics but it might include
 (25) an abnormality in their behavior
 Now if they come out for instance too early they'll
 still have a little bit of yolk sac left on them and they'll be

Vol 32 5759

- (1) very vulnerable to predation That yolk is red fish can see
 (2) it and if you ve ever been around a hatchery you can see how
 (3) readily they start feeding on things that are red induces that
 (4) feeding response and if they came out with a little bit of
 (5) yolk showing they would be very vulnerable to being eaten but
 (6) not only that with that little amount of yolk it would create
 (7) a resistance and they couldn t swim quite as well so it s a
 (8) double edged sword - I shouldn t say double-edged sword it s
 (9) a double jeopardy for them
 (10) Q What did you find out when you looked at this?
 (11) A What we found out was that those alevins that came out of
 (12) the oiled streams had the same condition factor the weight
 (13) length relationship as those from the unoled streams
 (14) Q All right and then did you look at - what other studies
 (15) did you do now that you haven t told us about?
 (16) A Well I haven t talked about the early manne stage in
 (17) 1990 We went out and sampled in the manne environment
 (18) We
 (19) went to the oiled bays and selected four oiled bays and we
 (20) went away from the oiled areas and selected four unoled bays
 (21) and we went in with a larger vessel and a seine skiff and used
 (22) a mid water troll to sample the fingerlings from the marine
 (23) environment
 (24) Q And what were you looking for what kind of things were
 (25) you -
 (26) A We were looking to see if there was any growth effects

Vol 32 5760

- (1) negative growth effects We looked at general size but we
 (2) also really were more concerned about their condition factor
 (3) again their weight/length relationship that would indicate
 (4) whether they were a little bit on the starving side or whether
 (5) they were really doing well
 (6) Q And what did you find out?
 (7) A We found that the fish in the marine environment actually
 (8) showed the same kind of performance They were of high
 (9) condition good condition and there was no difference between
 (10) the oiled bays and the bays It more or less confirmed the
 (11) fact that there was no effect of oil There really wasn t much
 (12) opportunity for oil in the spring of 1990 in the - in the
 (13) marine environment but it showed that those fish had no
 (14) lingering effect at least of the oil
 (15) Q Now you also did some studies that we ve got them listed
 (16) here as adult returns Can you explain what - I see there s
 (17) two of them one for each?
 (18) A Yes we looked at the adult returns in 1989 1990 1991
 (19) and 1992 so we looked at adult returns for two successive
 (20) generations
 (21) Q And here you were doing more than just counting the
 (22) number
 (23) of adults that returned?
 (24) A That s right because the streams that were oiled were
 (25) really smaller the total number of fish going to those streams
 (26) would normally naturally be fewer in number and so we looked
 (27) at

Vol 32 5761

- (1) the actual spawning area in those streams and looked at the
 (2) number of adults spawning per unit of spawning area
 (3) Q And if you had seen a significant difference what would
 (4) that have meant to you?
 (5) A Well that would have meant that the adults came back and
 (6) either avoided those streams or that when it came - as they
 (7) were produced as young they might have had a higher mortality
 (8) and just simply couldn t come back
 (9) Q What did you find then, when you looked at those?
 (10) A We actually found that the oiled streams in spawner density
 (11) was no different than the unoled streams
 (12) Q All of those years where you looked at it?
 (13) A There was variation between year to year and I can t
 (14) recall the magnitude of the variation but they were virtually
 (15) insignificantly different.
 (16) Q Now I think we ve talked about all of them except one the
 (17) alevin studies - I m sorry the egg viability study?
 (18) A Egg viability
 (19) Q Can you tell us what you did? You did two of those?
 (20) A Yes I did I did it in 1990 and I did it again in 1991
 (21) The egg viability studies were meant to look at the long term
 (22) or potentially genetic effects of oil on the survival of pink
 (23) salmon in Prince William Sound And understanding that the
 (24) actual number of fish in the oiled area was low but this was
 (25) looking just at the viability of those in the oiled area versus

Vol 32 5762

- (1) those in the unoled streams in that area
 (2) Q You were looking at the viability basically, how well the
 (3) eggs did from the fish the eggs that were produced from the
 (4) fish that were most potentially exposed to the oil?
 (5) A That s right This was what I felt was one of the critical
 (6) studies The 1988 brood that came back of course in 88 and
 (7) spawned their progeny experienced the oil in the spring of
 (8) 1989 And had there been some difficulty in development rate
 (9) or tissue elaboration development growth that could have
 (10) been passed on into their - their small little gamuts the
 (11) ones that are going to produce eggs in the fish
 (12) So when it came back as adults, the best way to look at
 (13) that potential genetic effect was to be the eggs of those fish
 (14) that came back from exposure to oil and to see if they have a
 (15) high degree of viability viability means that their survival
 (16) success would be high They re capable of being fertilized and
 (17) they grow into little fish
 (18) Q I think we ve got an exhibit that shows some of your
 (19) results from there DX5099 This demonstrates the results of
 (20) your 90 and 91 agency viability study?
 (21) A Yes it does And in 1989 the fish that were exposed
 (22) potentially in the marine environment came back and spawned
 (23) and
 (24) their eggs that I took from those fish in 1990 and took back to
 (25) a hatchery for incubation demonstrated that the success of
 (26) survival was the same in both those streams that produced fish

Vol 32 5763

- (1) from oiled substrate compared to those from the unoiled
 (2) substrate
 (3) Q So for instance in 19 -- in 1990 whether it was the
 (4) unoiled stream or the oiled stream they -- the egg viability
 (5) was essentially the same percentage?
 (6) A Yes it was Now these streams would have produced fish
 (7) that came down into oiled bays It was primarily the marine
 (8) environment we re concerned about here and even though the
 (9) streams were oiled and unoiled it was primarily the bay that
 (10) we were looking at in 1990 and there was no difference
 between
 (11) fish that had to rear initially in the oiled bays versus those
 (12) from the unoiled bays
 (13) Q And in 1991 again essentially the same?
 (14) A Well in 1991 now we re looking at the same kind of a
 (15) situation The fish had been exposed to oil in this case
 (16) during the incubation environment when they came back as
 (17) adults we looked at their offspring viability and -- and did
 (18) the same thing with those fish except now they represented the
 (19) incubation environment, rather than marine environment and
 (20) they showed no difference in egg viability
 (21) Q Now let me show you one other exhibit -- let s see I
 (22) think we covered all of the studies that you did?
 (23) A Yes that completes I think all of the studies that
 (24) was -- that were done
 (25) THE COURT Did you want that --

Vol 32 5764

- (1) MR COOPER Let me stop there for a moment
 (2) BY MR COOPER
 (3) Q As a result of these various scientific studies that you
 (4) did did you reach a conclusion as to the likelihood or lack of
 (5) a likelihood that the oil spill had any impact on the
 (6) population level any significant impact on pink salmon?
 (7) A I had to make that decision on -- in this bank of studies
 (8) simply based on my research and in all the research that I did
 (9) and the early life history stages right up through to the adult
 (10) and the viability of the eggs that those produce that those
 (11) adults produce I detected no measurable effect of oil
 (12) Q Now there was testimony earlier by Dr Page, which I don t
 (13) think you were here for but he testified concerning the
 (14) presence of fish in naturally oiled streams I want to just
 (15) put one exhibit up that wasn t shown with Dr Page and ask you
 (16) a question about that First, though, Your Honor I would move
 (17) to admit exhibit if I can read it 5090 I think it is
 (18) (Exhibit DX5099 offered)
 (19) MR JAMIN I think it s 5099 and it s fine
 (20) THE COURT My notes suggest it s 5099
 (21) MR COOPER It s difficult to read on here So it is
 (22) 5099
 (23) THE COURT Defendants Exhibit 5099 is admitted
 (24) without objection
 (25) (Exhibit DX5099 received)

Vol 32 5765

- (1) MR COOPER Do you have DX8658 A?
 (2) BY MR COOPER
 (3) Q Now you ve seen this before? Can you --
 (4) A Yes I have
 (5) Q Can you explain what this indicates?
 (6) A This is a list of about 25 streams in Alaska and it s not
 (7) the only streams that are oiled but 25 streams that are listed
 (8) here and I think Mr Page did the examination of the records
 (9) to show what streams actually were oiled and whatnot
 (10) Q You haven t gone out and checked?
 (11) A I haven t done anything on this No I m just referring to
 (12) it And you have the five species of salmonids across the top
 (13) there the sockeye coho pink chum and the dolly varden and
 (14) it shows that of those species are in oiled streams and in
 (15) fact even shows what streams with the dark shadows on those
 (16) boxes across the side there what streams are routinely used to
 (17) enumerate salmon in
 (18) Q That s by ADF&G?
 (19) A By Alaska Fish & Game yes
 (20) Q They have certain streams they use as index streams?
 (21) A These are not probably totally categorized as oiled
 (22) streams I think down there Oil Creek in the bottom of the
 (23) chart oddly enough called Oil Creek is a pink salmon index
 (24) stream where they use that to determine what the return will be
 (25) in the next brood year

Vol 32 5766

- (1) Q Let s see, we ve got -- these as you understand it are
 (2) all streams Dr Page found were naturally oiled but supported a
 (3) salmon run of one kind of another?
 (4) A That s right, yes
 (5) Q And of those streams there are what one two three
 (6) four five six seven eight nine that were where apparently
 (7) he found -- where there are records of pink salmon?
 (8) A In some cases pink salmon might be in other streams but no
 (9) one s looked These are simply from the records
 (10) Q What significance, if any does this fact have with the
 (11) fact that there are salmon that apparently naturally live in
 (12) the environment of these oiled streams in reaching your
 (13) conclusion about the effect of the -- the impact of the oil on
 (14) pink salmon?
 (15) A I think it s a matter of -- of concentration If you had
 (16) really a high concentration of oil as we ve demonstrated in
 (17) bioassays you can certainly kill fish kill pink salmon but
 (18) even in situations where there s low concentrations salmon can
 (19) do quite well and this is evidence that they do quite well in
 (20) these situations
 (21) Q Now you ve now told us about the three different
 (22) methodologies or three basic approaches that you took the
 (23) scientific studies the potential exposure, how many were
 (24) potentially exposed and how the fish did when they came back
 (25) that were most likely to have been impacted by the oil?

Vol 32 5767

- (1) A Yes
- (2) Q What I d like to do now is to move to a slightly different
- (3) subject There was testimony earlier I believe from Dr
- (4) Mundy about some studies or a study that was done by the
- (5) trustee counsel some of the trustee counsel scientists that
- (6) had to do with embryo mortality Do you know what I m
- (7) referring to there?
- (8) A Yes I am
- (9) Q I think they have been referred to as the Bue study?
- (10) A Yes the Bue study
- (11) Q You have looked at the work that Mr Bue did in this area
- (12) of whether there was increased embryo mortality in streams that
- (13) were oiled in 1989?
- (14) A Yes I have
- (15) Q Do you agree with his conclusions?
- (16) A Well I - I disagree with the - the portion of it that
- (17) deals with the eggs the egg mortalities I don t disagree
- (18) with it with respect to what he found with the alevin
- (19) mortalities
- (20) Q Is that the difference between fall and spring that we re
- (21) talking about?
- (22) A Yes the egg mortalities would have been assessed for in
- (23) the spring - pardon me in the fall of the year just shortly
- (24) after spawning The alevin survival or mortalities would be
- (25) assessed in the fall - in the spring of the year just before

Vol 32 - 5768

- (1) emergence
- (2) Q All right Now I think this is an area where it might help
- (3) to do a run through an example that you and I have talked
- (4) about Do we have a flip chart?
- (5) All right if my memory is correct we start with a couple
- (6) of streams?
- (7) A Yes and the reason we re doing that is because the - my
- (8) disagreement with the conclusions that there s higher egg
- (9) mortality in the streams and yet there s no difference in the
- (10) alevin mortality in those streams
- (11) Q All right let s - let s start with labeling these too
- (12) Now he went to as you understand it some oiled streams and
- (13) some unoled streams?
- (14) A That s right
- (15) Q So we ll label one of these as oiled?
- (16) A Yes
- (17) Q And one as -
- (18) A And the other one as unoled
- (19) Q And then what did he do? Did he figure out - well when
- (20) did he go there first to these kinds of streams?
- (21) A Well his first studies actually was just with alevins but
- (22) he went back the following year in 1989 spawning year and
- (23) looked in 1990 looked at the - at the eggs and he would have
- (24) gone in and assessed a certain square area of stream bed and
- (25) counted the number of eggs in it

Vol 32 5769

- (1) Q So for instance just to keep it simple here shall we just
- (2) use a round number?
- (3) A Let s use a thousand eggs
- (4) Q He d go into each of the streams and he determined how
- (5) many
- (6) eggs per square unit of per square meter or something?
- (7) A That s right yes
- (8) Q How did he go about doing that? I mean how do you
- (9) determine how many eggs there are in a stream bed?
- (10) A It was the same pumping device I descnbed we used to
- (11) remove alevins in the spring of the year He would go in with
- (12) the pumping device and pump out the eggs in the fall collect
- (13) them in the same kind of net device and then he d look at the
- (14) live versus the dead in that group of eggs that would come out
- (15) Q I put a thousand down here too just to keep it simple
- (16) We re going to be basically dealing with percentages here?
- (17) A Right.
- (18) Q So what kind of thing, then just using an example not
- (19) necessarily his exact numbers but -
- (20) A Well in the unoled stream he would have found for
- (21) instance 800 live eggs and 200 dead eggs And so that would
- (22) have been 80 percent survival
- (23) Q Then he went to the unoled?
- (24) A Then he went to the unoled streams and he dug there and
- (25) had a fewer dead eggs, so he had 900 live eggs an a hundred
- (26) dead eggs as an example and 90 percent survival there

Vol 32 - 5770

- (1) Q What conclusion did he draw from that?
- (2) A Then he concluded that the oiled streams had higher
- (3) mortality and therefore oil must have killed the eggs
- (4) Q All right but he also then went back - we ll come back to
- (5) that portion of it but he went back in spring then of the
- (6) year?
- (7) A Then you go back to the spring of the year in the same
- (8) streams and sample them using a slightly different diagonal of
- (9) his sample so he wouldn t sample the exact same areas
- (10) Q Use the same -
- (11) A Same program
- (12) Q Same number of eggs per square whatever?
- (13) A Yes
- (14) Q What kind of thing would he come up with then give us an
- (15) example?
- (16) A Well as an example he d find 150 live alevins
- (17) Q Now we re down into the spring?
- (18) A Yes
- (19) Q So by now these - the eggs have hatched and he has these
- (20) alevins in the stream sediment?
- (21) A Right and they would be - they would be incubating
- (22) getting ready to emerge and that s about what you d expect to
- (23) find out of a thousand eggs spawned something like 150
- (24) alevins
- (25) being produced about 15 percent survival
- (26) Q That s pretty normal for pink salmon generally?

Vol 32 5771

- (1) A It's quite variable but that's within the range
 (2) Q All right Now what number do I need to write down next
 (3) here?
 (4) A Well then down in the control streams or unoled streams
 (5) went back there and counted there as well and he found that he
 (6) had 150 live alevins there
 (7) Q The same as he had in the oiled stream?
 (8) A That's right
 (9) Q And in fact is that basically correct the numbers
 (10) precise numbers may not be right but did his data show that
 (11) when he went back in the spring he had essentially the same
 (12) number of live alevins or same percentage of live alevins?
 (13) A That's right the number of live alevins the percentage of
 (14) live alevins or number was the same in the controlled streams
 (15) as in the oiled streams
 (16) Q The percentage of alevins over the number of eggs he
 (17) started out with?
 (18) A Yes
 (19) Q What does that signify about the oil impact or lack of an
 (20) oil impact?
 (21) A That's where my disagreement was with him It's really the
 (22) alevin count that matters that's the ones producing the fry
 (23) that come back as adults Those numbers are the same
 (24) between
 (25) oiled and unoled streams it doesn't much matter what you find
 (26) earlier in terms of mortality because it's the end count that

Vol 32 5772

- (1) really matters
 (2) Q What might have happened if you - if you think he's right
 (3) on his fall count and I understand that you have got a
 (4) disagreement with him on that but if we were that what that
 (5) would simply suggest because he had the same percentage
 (6) live
 (7) alevins by the time the spring rolled around there was just
 (8) some earlier mortality in the oiled streams that he was picking
 (9) up in the fall?
 (10) A Yes
 (11) Q But you'd end up at the same place by the time the spring
 (12) rolls around?
 (13) A That's right
 (14) Q Now have you in fact looked at his work in order to see
 (15) why even though he gets no difference oiled versus unoled in
 (16) the spring have you look at it to see why he's getting this
 (17) earlier mortality in the fall?
 (18) A Yes I did Now when I went to work on the project and
 (19) designed the studies with Exxon I let Exxon know that I really
 (20) wanted to use as much data as available, I was hoping
 (21) actually
 (22) that we could do combined studies with Alaska Fish & Game
 (23) and
 (24) as it turned out of course that wasn't possible but I did
 (25) ask that I use as much data as I could and that would increase
 (26) the strength of my conclusions from my data if I could use data
 (27) from others as well so my objective was to use as much data
 (28) from the Alaska Fish & Game studies as I could

Vol 32 5773

- (1) Q Incidentally that reminds me Did your embryo survival
 (2) study basically try to look at the same sort of thing?
 (3) A Well the difference was we went through the hatching stage
 (4) with our embryo study and Mr Bue only went three weeks after
 (5) spawning or thereabouts after spawning with his egg study but
 (6) it overlapped Ours overlapped his and of course if there had
 (7) been effect of oil we should have seen it in the embryo
 (8) studies and we didn't
 (9) Q You were a bit puzzled why he was seeing this fall
 (10) mortality?
 (11) A That's right
 (12) Q So can you tell us what you've done in order to try to see
 (13) what may be influencing that fall mortality that he comes up
 (14) with?
 (15) A Well yes I think that can be best expressed in the next
 (16) exhibit
 (17) Q I tell you what, before we do that let me ask you one
 (18) other question couple questions here Did he find - did he
 (19) do this in 1990 both fall and spring?
 (20) A Yes
 (21) Q And in 1991?
 (22) A Yes
 (23) Q And in 1992?
 (24) A Yes
 (25) Q And in all three years did he find - seemed like he

Vol 32 - 5774

- (1) found?
 (2) A He found
 (3) Q A fall mortality difference?
 (4) A Fall mortality difference but not only a difference but it
 (5) appeared to be increasing in both controlled and oiled
 (6) streams
 (7) Q How about his spring mortality then in all three years
 (8) were they basically essentially the same?
 (9) A The same yes
 (10) Q And do you know - incidentally you have seen what
 (11) conclusion he draws from the fall egg mortality differences
 (12) that he found?
 (13) A Well I have on my next exhibit the alevin data from his
 (14) streams I went to his report and in - in the - in the
 (15) appendix of his report he has the data from his streams live
 (16) and dead counts
 (17) Q All right do we have an exhibit on that one?
 (18) A I have an exhibit on that I planned an exhibit on that.
 (19) Q Well, let me see Actually before we get to that there's
 (20) one other thing I wanted to ask you about in here
 (21) A Okay
 (22) Q At the time of the spill were ADF&G people already out in
 (23) the field just by happenstance looking at embryo mortality?
 (24) A Not by happenstance but before the spill they were making
 (25) their normal fall stream assessments and - pardon me spring

Vol 32 5775

- (1) assessments before the - before the spill
 (2) Q All right
 (3) A And so they were going out to look at alevin survival in
 (4) these streams as part of the routine to get numbers to predict
 (5) what the next run size would be coming from those fish
 (6) Q And what happened after the spill then? Did they go
 (7) back?
 (8) A Well the oil spill came and of course it was a great
 (9) concern to everybody and so they thought this was an
 excellent
 (10) opportunity to go back and try to assess damage so they went
 (11) back to the streams they had sampled in the pathway of oil
 (12) prior to the spill and resampled those
 (13) Q So here s a situation where we ve got a prespill and a
 (14) post spill comparison?
 (15) A Yes that s right
 (16) Q Which is kind of unique I guess?
 (17) A Yes
 (18) Q That didn t happen too often?
 (19) A You wouldn t want to design that but that s kind of good
 (20) Q You have an exhibit which shows the results?
 (21) A I have an exhibit of that too
 (22) Q And that I believe is DX8682 You want to explain - well
 (23) let s see On this exhibit you ve got density of dead fry on
 (24) the left hand axis here?
 (25) A Yes that s correct That would be the number or the

Vol 32 - 5776

- (1) density of dead fry on the left and the prespill oiled streams
 (2) is the red column so that s this one here
 (3) Q And so they were getting what about 14 to 15 -
 (4) A About 15 percent
 (5) Q Dead fry?
 (6) A And -
 (7) Q Is that in percentage or is that in absolute numbers on the
 (8) left hand side there?
 (9) A That - I can t - I don t actually interpret what I ve got
 (10) here in terms of the -
 (11) Q We could probably find the answer out to that overnight,
 (12) but the -
 (13) A But anyway I ve got the general number of - of the
 (14) prespill situation compared to the post spill situation and
 (15) there s essentially no difference between these two levels
 (16) Q Now when you say essentially now it looks like there s
 (17) some difference?
 (18) A Yeah it was actually a little bit lower mortality in
 (19) the - in the stream after the spill But that s
 (20) insignificant and the point is that this is a stage of
 (21) alevins they re very sensitive to oil at this stage In fact
 (22) this is the most sensitive stage of the incubating alevin
 (23) including the egg stage and the alevin stage, the most
 (24) sensitive to oil So if you re going to expect to find any
 (25) effect from oil exposure we should have found it here in

Vol 32 5777

- (1) 1989
 (2) Q And what did this tell you about your own findings and
 (3) Mr Bue s findings that in the spring if you came back in the
 (4) spring you had essentially no difference between the oiled and
 (5) the unoiled streams?
 (6) A Well that certainly confirmed the alevin spring
 (7) assessment
 (8) Q All right Now let s go back we were talking we were
 (9) about to get into the subject of why you believed that his fall
 (10) numbers were probably not showing the true picture is that the
 (11) right phrase?
 (12) A Yes I feel that his experimental design was actually
 (13) responsible for the mortalities he was getting He was
 (14) essentially killing the eggs by his sampling procedure
 (15) Q Can you explain why you believe that?
 (16) A Yes The next exhibit I have is on the sensitivity during
 (17) incubation period to the toxicity of oil
 (18) Q I believe that is Defendants 8788-A is that the one?
 (19) A That s correct.
 (20) Q Could you explain what this signifies?
 (21) A This shows the most susceptible period to the effect of oil
 (22) toxicity occurs after the hatching period and actually
 (23) increases over this period during incubation as the alevin is
 (24) absorbing its yolk and becomes most susceptible to
 hydrocarbons
 (25) late in the incubation period just before emergence

Vol 32 5778

- (1) Q Now, this is information that is based on studies that were
 (2) done by NOAA national oceanic -
 (3) A Yes And Auke Bay over the years where they ve looked at
 (4) sensitivity of alevins and fry and eggs to oil and the
 (5) important point here that I want to show with this display is
 (6) the lack of sensitivity of the egg stage That s this blank
 (7) area here during the egg stage - you re going to have to put
 (8) it back there for me Sorry
 (9) Q Rob s pretty good at making up for our errors here
 (10) A This stage is the egg stage and that s the most insensitive
 (11) period to the presence of hydrocarbon toxicity And the reason
 (12) for it is because it s - the egg is encapsulated with a fairly
 (13) thick little eggshell and the eggshell actually protects it
 (14) from toxicants that try to get into the yoke material of the
 (15) embryo or into the - into the egg and it helps isolate those
 (16) from getting in And once it hatches that protective barrier
 (17) is gone and that s why the alevin becomes more susceptible to
 (18) oil
 (19) Q So the fact that these studies show that the eggs are not
 (20) very sensitive to oil you felt that conflicted with Mr Bue s
 (21) findings that there was higher egg mortality?
 (22) A Yes And so that made me look at what else could it be
 (23) if - because it shouldn t be from oil toxicity
 (24) Q Where did that inquiry lead you then?
 (25) A I then looked at how soon he was sampling his eggs after

Vol 32 5779

- (1) spawning
- (2) Q And why were you interested in that?
- (3) A Because the eggs go through a developmental process that
- (4) makes them extremely sensitive to physical movement we call
- (5) that shock If the eggs in a hatchery for instance are
- (6) moved it will kill them during that period of sensitivity It
- (7) lasts from about 48 hours after fertilization depending on
- (8) temperature up to 20 25 even 30 days after fertilization so
- (9) it s that period of extreme sensitivity to shock If the egg is
- (10) moved you can kill it
- (11) So hatchery men leave their eggs absolutely untouched until
- (12) that time if they can - if they can get away with it and
- (13) don t remove the dead eggs until after that period which we
- (14) called the eyed stage when the little embryo is starting to
- (15) show its eye
- (16) MR COOPER Your Honor I see it s 2 00 straight up
- (17) THE COURT We will adjourn at this time ladies and
- (18) gentlemen Please don t read look at listen to anything
- (19) about our case We will reconvene at 8 00 tomorrow morning
- (20) I would like to see in chambers briefly at this point our
- (21) lead counsel so that I can discuss a couple of things that have
- (22) come up during the course of the day In recess now
- (23) (Recess at 2 00 p m)

 (2) (Jury in at 8 00 a m)
 (3) (Call to Order of the Court)
 (4) THE COURT Good morning ladies and gentlemen This
 (5) is the continuation of trial in case AB9 0095 civil in re the
 (6) Exxon Valdez We had Dr Brannon I believe up yesterday if
 (7) he could resume the stand please
 (8) Dr Brannon you understand you re still under oath?
 (9) THE WITNESS Yes I do
 (10) THE COURT You may proceed Mr Cooper
 (11) MR COOPER Thank you Your Honor Your Honor
 (12) there s one or two housekeeping items that s occurred to me
 (13) We ve used this large posterboard chart of the life cycle We
 (14) have a smaller version of that Exhibit 8477 which I would
 (15) like to admit into evidence
 (16) (Exhibit 8477 offered)
 (17) THE COURT Is there objection?
 (18) MR JAMIN No objection Your Honor
 (19) THE COURT Thank you Defendants Exhibit 8477 is
 (20) admitted
 (21) (Exhibit 8477 received)
 (22) MR COOPER Thank you Your Honor If memory serves
 (23) me right I had not requested the admission of Exhibit 8788 A
 (24) That s the one that dealt with mortality the toxic shock
 (25) (Exhibit 8788 A offered)

(1) MR JAMIN No objection
 (2) THE COURT Defendants Exhibit 8788 A is also
 (3) admitted
 (4) (Exhibit 8788 A received)
 (5) CONTINUED DIRECT EXAMINATION OF DR ERNEST
 BRANNON
 (6) BY MR COOPER
 (7) Q Dr Brannon let me go back to one of the exhibits that we
 (8) were talking about yesterday DX8682 and this is if I recall
 (9) the one where you were pointing out that the density of dead
 (10) fry in streams right after the spill was not as great as it was
 (11) in streams just before the spill?
 (12) A Yes
 (13) Q And I think we had - I had asked you a question about the
 (14) vertical scale on the left Have you had a chance to refresh
 (15) yourself on what that vertical scale - what units that s in?
 (16) A That s right It s density of dead fry per square meter of
 (17) stream
 (18) Q So the oiled streams on the right side or the post spill
 (19) density in the - for instance post spill there were what
 (20) it looks like about perhaps 12 dead fry per square meter?
 (21) A That s right
 (22) Q And prespill just before the spill there was - there was
 (23) a higher number?
 (24) A Yes But my point was that they were really not
 (25) different If there was going to be an oil effect from the

Vol 33 5789

- (1) sensitivity of alevins to oil and they are the most sensitive
 (2) stage during incubation the late alevins prior to emergence
 (3) One would expect that to be an elevated level and I don't see
 (4) any difference there In other words it's not - while it
 (5) shows a slightly smaller mortality 14 versus 12 is so close
 (6) that it's really not different
 (7) Q Now were there other streams that they looked at post
 (8) spill?
 (9) A Well they had looked at a bank of streams in anticipation
 (10) that the oil was coming and they looked at at least six more
 (11) streams but they didn't have prespill information on them
 (12) Q When they looked at those post spill what did they find?
 (13) A The mortality was no greater than ones they looked at in
 (14) fact was a little bit less than what they looked at
 (15) Q All right Now I think yesterday we were - when we left
 (16) off we had been talking about this situation where Mr Bue
 (17) found more or higher mortality embryo mortality in the fall
 (18) even though in spring it looked like there was no difference
 (19) and I believe you were explaining to us why you believe he
 (20) found that number of elevated higher mortality in the oiled
 (21) streams in the fall Do you remember that general subject
 (22) matter?
 (23) A Yes the egg mortality
 (24) Q Yes egg mortality And I think we had - well I believe
 (25) we were about to talk about or maybe had begun talking about

Vol 33 5790

- (1) Exhibit 8787 A You had explained that at some early stage
 (2) after fertilization pink salmon eggs are sensitive to physical
 (3) shock?
 (4) A Yes They're sensitive to physical shock and insensitive
 (5) to chemical shock
 (6) Q And before that shock which is part of the mystery we've
 (7) been talking about you've got Exhibit 8787 A - 8787 A can
 (8) you explain now what you're depicting in this exhibit?
 (9) A My light pencil okay This part of the figure shows
 (10) the -
 (11) Q Maybe we better start if I can interrupt you Dr Brannon
 (12) what do we have on the bottom axis going along the bottom?
 (13) A This is the days after fertilization showing from - the
 (14) day of fertilization would be at zero and then we go on to the
 (15) 200 days of incubation That would be representative of a
 (16) incubation period for pink salmon
 (17) Q So as we go to the right we're increasing in time from
 (18) the -
 (19) A Yes And so late in the incubation phase during this
 (20) period here you're going to have the effect of oil toxicity
 (21) most pronounced and in this phase right here you're not going
 (22) to have any oil toxicity as we showed on the previous figure
 (23) but we do have a very high sensitivity to shock
 (24) Q Physical shock?
 (25) A Physical shock moving the eggs at this period when the

Vol 33 5791

- (1) yolk is still just covered by a very thin membrane rather than
 (2) a thicker epidermis or skin and that lasts from 48 hours after
 (3) fertilization to about 20 or 25 days after fertilization
 (4) Q And that is because the egg or the embryo just isn't
 (5) completely protected yet by this - what did you call it?
 (6) A Yeah this membrane
 (7) Q Membrane?
 (8) A Yeah And the membrane is covering the yolk and the
 (9) thicker epidermis or skin that gives it some tolerance to shock
 (10) is absent at that point
 (11) Q What we're talking about here is days after fertilization
 (12) or after the spawn basically?
 (13) A Yes
 (14) Q So now you've explained that there is this period of
 (15) heightened or very high sensitivity for the first few days?
 (16) A Just to physical shock
 (17) Q To physical shock?
 (18) A Right
 (19) Q Now what's the next step in your reasoning to lead you
 (20) that Mr Bue was wrong in his egg mortality work?
 (21) A He was sampling in that time period for some reason I
 (22) think because they wanted to get a lot of streams covered and
 (23) so they probably started earlier so he was sampling within the
 (24) sensitive period of those eggs too close to the time that the
 (25) last of the spawn was occurring

Vol 33 5792

- (1) Q In the - this time period that I've outlined in blue here?
 (2) A That's correct yes
 (3) Q Now when you sample for these eggs does that subject
 (4) them
 (5) to physical shock?
 (6) A Yes very very severe shock
 (7) Q And I think you have - you brought a video with you that
 (8) shows the sampling operation?
 (9) A Yes I brought a video that is the characteristic type of
 (10) sampling done to remove alevins or eggs from the gravel
 (11) Q This is the method that Mr Bue used?
 (12) A That's correct
 (13) Q This isn't his actual work?
 (14) A No it's not This is actually our alevin crew in the
 (15) spring of the year but it's the same process that's used for
 (16) egg removal
 (17) MR COOPER Your Honor with the Court's permission
 (18) I'd like to show that video It's Exhibit DX1821
 (19) THE COURT Is there objection to 1821?
 (20) MR JAMIN No objection
 (21) THE COURT Very well Defendants Exhibit 1821 is
 (22) admitted and may be played
 (23) (Exhibit 1821 received)
 (24) (Videotape Played)
 (25) THE WITNESS This is the pumping operation on a
 stream and you see the pumping and the digging crew They got

Vol 33 5793

- (1) their - they got their net around the area they re going to be
 (2) washing the alevins out of the gravel with That s the pump
 (3) and these are the station men that would be pulling the
 (4) material around the stream and putting the box around the redd
 (5) site or nest site and probing into the water jetting into the
 (6) gravel and washing the eggs and the gravel out of the nest into
 (7) the collection trap on the net which shows there the screen or
 (8) the netting going down to a little collection box And as the
 (9) eggs come out with water and silt they ll be washed down into
 (10) that collection box
 (11) This shows what you have to do to probe make sure you get
 (12) all of the eggs or alevins out of the gravel spot that you re
 (13) digging in So that s - that s very severe shock and if you
 (14) drop an egg just three or four inches above water in the water
 (15) that will kill it at this stage and so that - that amount of
 (16) shock is very severe
 (17) (Videotape over)
 (18) BY MR COOPER
 (19) Q Now have you looked at the timing when Mr Bue was out
 (20) sampling the streams in the fall to see how it might correlate
 (21) with this area of very high sensitive?
 (22) A Yes I did Mr Bue was thorough enough to leave his data
 (23) in his appendices and that made it available to look at and
 (24) retrace his steps and so I took that data and looked at the
 (25) timing element of it

Vol 33 5794

- (1) Q And that - there s information in that data that leads you
 (2) to think that he was sampling during this period of extreme
 (3) sensitivity early on?
 (4) A Yes He shows his date of initial sampling and his end
 (5) date of sampling in that process
 (6) Q I d like to show you Exhibit 1817 C which I believe is one
 (7) that you have utilized to demonstrate this phenomena Does
 (8) this exhibit explain what you were just talking about?
 (9) A Yes The red little marks there are the - that sample
 (10) date on the bottom of the figure and you ve got percent
 (11) mortality on the vertical axis of the figure so you ve got
 (12) mortality on this axis and date of sampling on this axis and
 (13) then the little red dot is the actual percentage mortality that
 (14) would have been calculated from that particular date
 (15) Q Maybe it would help if you could just circle one of those
 (16) dots and then explain how or what that means on each of the
 (17) scales?
 (18) A Yes There would be one dot there would be another one
 (19) another one - each one of those would be a separate percent
 (20) mortality from one of his digs
 (21) Q So for instance on that first dot that you marked there
 (22) this one right here that means that that was a - a sample
 (23) that he took from one of the streams going down to the bottom
 (24) scale what about late October or late September early
 (25) October?

Vol 33 5795

- (1) A That s correct
 (2) Q And in that stream he found an 80 percent mortality rate?
 (3) A Yes
 (4) Q So the more these dots are grouped over here high and on
 (5) the left that means the higher the mortality and the earlier
 (6) they were sampled?
 (7) A Yes that s correct And the blue line is the best fit
 (8) curve showing the relationship with time
 (9) Q That s a statistical method of -
 (10) A Yeah just simple mathematical best fit curve
 (11) Q So with respect to this group that I m circling in red
 (12) those samples were demonstrated - tended to demonstrate a
 (13) lower mortality than the earlier ones?
 (14) A Yes they did and those very early have a very high
 (15) mortality
 (16) Q Whereas the ones along the - the ones in this group have
 (17) lower mortality and they re later samples?
 (18) A That s correct That shows the effect of sampling too
 (19) early in the streambed when those eggs are still sensitive
 (20) And sensitivity once it s over at that 20 to 25 day period it
 (21) drops down rather quickly so it s not a transition that occurs
 (22) over weeks but just over a day even a couple days would
 (23) make
 (24) a difference in that - in an individual egg s sensitivity
 (25) Q Is that because within that period of time the last bit of
 otherwise vulnerable egg -

Vol 33 5796

- (1) A That s right
 (2) Q - is closed up in that membrane?
 (3) A Yes that s correct
 (4) Q This shows the later he sampled the less mortality he had
 (5) and vice versa How do you know whether or not he was
 (6) disproportionately sampling too early in the oiled streams as
 (7) opposed to the unoled streams?
 (8) A My next exhibit demonstrates that and it shows the timing
 (9) of the fish returning to the spawning streams in the oiled
 (10) versus the unoled streams
 (11) MR COOPER If we could have Exhibit 8689 While
 (12) that s happening Your Honor I would move to admit the exhibit
 (13) that we were just looking at
 (14) (Exhibit 1817 C offered)
 (15) THE COURT Is there objection to 1817 C?
 (16) MR JAMIN There is not Your Honor
 (17) THE COURT 1817 is admitted
 (18) MR COOPER Thank you Your Honor
 (19) THE COURT 1817 C
 (20) (Exhibit 1817 C received)
 (21) BY MR COOPER
 (22) Q Now what have you got on the - can you explain what this
 (23) graph is showing?
 (24) A Yes The red line is the unoled stream adult return time
 (25) and they start coming into the stream towards the first middle

Vol 33 5797

- (1) part of August and the - peaks in the unoled stream around
 (2) the middle of August and then tapers off towards the first
 (3) part middle of September And the blue line shows the salmon
 (4) returning to the oiled streams and you can see that that -
 (5) those populations come in a little bit later They peak in the
 (6) populations - in other words the greatest number of fish in
 (7) the stream occurs in oiled streams about two weeks after it
 (8) occurs in the unoled streams and then it - it tapers off and
 (9) remains fairly high until the first part - or the middle part
 (10) to the end of September
 (11) Q Now I notice on the left hand side here you say percent
 (12) escapement What does that tell you about the time that these
 (13) embryos or these eggs were deposited?
 (14) A Well the percent escapement is simply the number of fish
 (15) that are entering the stream and that percent escapement into
 (16) the stream then for instance at the peak of the unoled
 (17) stream arrival time about 22 percent of the population will be
 (18) represented at that date and on the peak of the oiled stream
 (19) which occurs two weeks later the - that represents about 40
 (20) percent of the population being in the stream on that date
 (21) So the point is if you sample here towards the end of
 (22) September you can see that the number of eggs sensitive to
 (23) shock in the oiled streams is at least twice maybe three times
 (24) higher than the number of eggs sensitive to shock in the
 (25) unoled streams

Vol 33 - 5798

- (1) Q Then that would account for why he was getting the higher
 (2) egg mortality embryo mortality in the oiled streams as opposed
 (3) to the unoled?
 (4) A That's right And this progressed In fact as he
 (5) progressed from 89 90 91 he was progressed earlier in the
 (6) season in 1991 than he was in 89 which tends to increase the
 (7) number of sensitive fish he's intercepting and killing
 (8) unknowingly and of course then arriving at the conclusion that
 (9) for some reason mortality's increasing in the streams with
 (10) time when in fact it was his sampling time that was changing
 (11) Q That would also explain why then even though he got this
 (12) higher mortality which was as I understand what you're
 (13) saying basically a false reading because it was being created
 (14) just by the shock of pumping these eggs out even though he
 (15) got that higher mortality then in the spring measurements oiled
 (16) and unoled was the same?
 (17) A That's right and they should be because if it's an
 (18) artificial mortality you'd expect to see the same survival in
 (19) the spring Mr Bue was sampling about a month earlier in his
 (20) streams than what they'd done historically back in the 70s
 (21) even
 (22) Q Was there a time when ADF&G did sample for embryo
 (23) mortality just as a matter of course in Prince William Sound?
 (24) A Yes They were testing that as a mechanism to use for
 (25) prediction of survival in the spring and therefore use it as a

Vol 33 5799

- (1) prediction for the next brood year survival and they abandoned
 (2) that and used just the fall - pardon me just the spring
 (3) alevin sampling period
 (4) Q But when they were looking at that embryo mortality in the
 (5) fall were they out looking as soon after the spawn as Mr Bue
 (6) was?
 (7) A I'm probably mixing you up
 (8) Q That's easy to do
 (9) A The fall would have been the egg sampling and the spring
 (10) would have been the alevin or fry sampling and they've gone
 (11) just to the fry sampling because that gives them the best
 (12) estimate of course and the egg sampling in the fall has been
 (13) discontinued
 (14) Q Just discontinued completely?
 (15) A To my knowledge yes
 (16) MR COOPER Your Honor I would ask that we admit
 (17) this latest exhibit
 (18) (Exhibit 8689 offered)
 (19) THE COURT Is there objection to -
 (20) MR JAMIN 8689 is fine Your Honor
 (21) THE COURT Defendants Exhibit 8689 is admitted
 (22) (Exhibit 8689 received)
 (23) BY MR COOPER
 (24) Q Dr Brannon I've got about two or three more subjects and
 (25) we can probably get through them fairly quickly What I'd like

Vol 33 5800

- (1) to turn your attention to now is a question or a matter that
 (2) was raised very briefly right at the end of Dr Mundy's
 (3) testimony and he made a reference to - there was a reference
 (4) made to a question of whether there may be any genetic
 (5) damage
 (6) that was done by the oil
 (7) Now is this a matter that you've considered also?
 (8) A Oh yes Our egg viability studies were designed to look
 (9) at long term or genetic effects
 (10) Q Now those studies you've already described and I don't
 (11) want to go over those in much detail but that's the one
 (12) that - one that the arrow's pointing to here?
 (13) A Yes That would have been - the egg viability study would
 (14) have been examination of the egg survival from those adults
 (15) that had been exposed and were at highest risk of exposure to
 (16) oil when they were juveniles
 (17) Q All right And why would looking at the eggs from these
 (18) fish that were most potentially exposed shed any light on
 (19) whether there was any genetic problem?
 (20) A Well because the genetic damage would upset some of the
 (21) genetic mechanism in the eggs chromosomes or the actual
 (22) sequences in the DNA and as a result when the eggs were
 (23) fertilized by the male the probability of a high mortality
 (24) associated with that genetic damage would be demonstrated
 (25) there
 (26) most readily
 (27) Q So if all of the things that have to happen for a damaged

Vol 33 5801

- (1) gene to manifest itself in a problem in the offspring if all
 (2) of those things happen you would expect to see some
 indication
 (3) of that or a clue to that would at least be how did the eggs
 (4) do?
 (5) A That's right In our hatchery experience we can see that
 (6) if the eggs are bad for some reason they usually occur as more
 (7) total Sometimes they'll last to the alevin stage before they
 (8) die We do get some deformities lasting to the yolk
 (9) absorption but that incubation phase is where most of the
 (10) mortality associated with any genetic damage would occur
 (11) Q All right And you also looked at the egg viability for
 (12) the even year brood or odd year brood as well?
 (13) A Yes So we examined that with regards to their exposure
 (14) history one having the exposure history in the incubation
 (15) gravel primarily and the other having the exposure during the
 (16) early marine phase of their growth And in both cases those
 (17) fish at greatest risk came back and spawned eggs that were
 (18) highly viable
 (19) Q And you couldn't detect any difference between those that
 (20) returns to the oiled versus the unoled streams?
 (21) A That's correct
 (22) Q So is it your conclusion from that then that there was
 (23) not likely any significant genetic damage that impacted these
 (24) populations?
 (25) A Well certainly the eggs demonstrated that but you have to

Vol 33 5802

- (1) look at the very large adult return of those years at greatest
 (2) risk so 1990 91 adults came back at very large numbers and
 (3) both hatcheries primarily hatcheries but also very well into
 (4) the wild environment and that would indicate lack of - of
 (5) long term genetic damage
 (6) Q Now let's turn to another subject although we've kind of
 (7) been turning on it what you've been saying obviously bears on
 (8) it but the subject of the 1992 and 1993 very low runs can you
 (9) focus on that for a minute?
 (10) A Yes
 (11) Q Now have you given some thought to whether the low run
 (12) sizes in 1992 and 1993 were caused in substantial part or a
 (13) substantial factor was the oil spill?
 (14) A Well as I mentioned earlier in order for there to be an
 (15) effect there has to be a mechanism through which the oil is
 (16) going to have an impact on the pink salmon in question In -
 (17) 1992 and 1993 were years far past in the life histories of pink
 (18) salmon far past the time of the spill or the potential
 (19) exposure displaced by at least a generation from the exposure
 (20) time so one would have to ask what is the mechanism for such
 (21) an impact And because the - both the brood years were
 (22) exposed to oil at different times in their life history you
 (23) then expect if it wasn't - if there was an effect it would
 (24) occur in one brood year over the other and both 92 and 93
 (25) were low return years well displaced from the point of the oil

Vol 33 5803

- (1) impact So I would conclude that there's - there's definitely
 (2) a problem in Prince William Sound but it's not related to
 (3) oil
 (4) Q The run figures are Sound wide as you understand it?
 (5) A Well when you look at the fishery the entire Sound is
 (6) down yes
 (7) Q Did you also give any consideration in thinking about this
 (8) question whether or not the oil could be responsible for the
 (9) low run sizes did you give any consideration to the
 (10) relationship between the wild stock and the hatchery fish?
 (11) A Yes I did Because the hatchery fish were excluded from
 (12) exposure during the incubation phase and during the early
 (13) rearing phase from oil one would expect then if there was
 (14) some kind of effect you would see it in the most vulnerable
 (15) group of fish in the - in the Sound That most vulnerable
 (16) group would be the wild fish and even within the wild fish it
 (17) would be within that group that was in the oil impacted
 (18) districts
 (19) Q All right And have you prepared an exhibit to help look
 (20) at that issue?
 (21) A Yes I have
 (22) MR COOPER Could I have DX5114 A?
 (23) I'm sorry DX5111 A
 (24) BY MR COOPER
 (25) Q All right Is this the exhibit?

Vol 33 5804

- (1) A Yes this is the exhibit It shows that the hatchery
 (2) fish - well of course we've got percent survival on the
 (3) vertical axis again here we've got percent survival and
 (4) across the horizontal axis we've got the return year and we've
 (5) got the wild stock survival shown on the red line and the
 (6) hatchery survival shown on the green line
 (7) And the point is here that after the advent of the spill
 (8) we see the same population trend in both the wild and the
 (9) hatchery fish and the same kind of drop in 1992 - I don't have
 (10) 1993 on here but it would be a continuation of those lines on
 (11) kind of a flat line at the bottom there to 1993 We see the
 (12) same trend in both hatchery and wild populations indicating
 (13) that whatever it is that's bothering those fish in Prince
 (14) William Sound it's impacting the whole of the Sound not just
 (15) one group hatchery or wild fish
 (16) Q And it doesn't - it doesn't look like it was
 (17) disproportionately affecting the wild stock as compared to the
 (18) hatchery fish?
 (19) A No it doesn't
 (20) Q Which is what you would expect if the spill were the
 (21) culprit given the fact that the hatchery fish are more
 (22) protected from oil for the reasons you've talked about?
 (23) A Yes
 (24) Q Now have you also in thinking about this question as to
 (25) what might account - or whether the oil might account for the

Vol 33 5805

- (1) low runs in 1992 and 93 have you looked at the wild stock run
 (2) sizes generally and the trends there?
 (3) A Yes I have
 (4) MR COOPER Your Honor before I move to that I
 (5) would move to admit DX5111 A
 (6) (Exhibit 5111 A offered)
 (7) MR JAMIN No objection
 (8) THE COURT DX5111 A is admitted without objection
 (9) (Exhibit 5111 A received)
 (10) MR COOPER Could I have DX8884?
 (11) BY MR COOPER
 (12) Q Now is this the exhibit that demonstrates this point?
 (13) A Well this exhibit shows that the problem in Prince William
 (14) Sound does not appear to have happened in 1992 or 1993 but
 (15) it
 (16) actually had occurred - started to occur prior to the oil
 (17) spill
 (18) Q Now this is dealing with wild stock and not hatchery fish?
 (19) A Yes We re looking at the even year and the brood year
 (20) It s the same - same figure that I used when I had the total
 (21) numbers of fish coming back into Prince William Sound over
 (22) the - over the 10 or 15 year period What I ve done here is
 (23) take the even years out so we can see the even year runs
 (24) those that reproduce themselves on even years and those that
 (25) reproduce themselves on odd years so you can see the trends
 there more easily and you can see in 1984 1985 the even and

Vol 33 5806

- (1) the odd years thereafter start to have a slide down
 (2) Q This was well before the spill?
 (3) A Yes It was two cycles before the spill so we see -
 (4) Q You want to use the light pen and I ll -
 (5) A Okay thank you You can see the trend starting someplace
 (6) like - so as kind of a general direction in both the even and
 (7) the odd years and so it was the next year after the primary
 (8) spawning year here and here we see a decrease
 (9) We see another decrease occurring here Then the oil spill
 (10) comes and we see an increase but it s really the abnormal
 (11) pattern in - abnormal year in the pattern and then we go back
 (12) down to the low year 1992 and 1993 So it would appear that
 (13) we were having this low trend starting - lowering trend in run
 (14) return success occurring back in 1986 and 1985
 (15) Q All right So did that then lead you to think about what
 (16) factors might account for this trend since obviously the oil
 (17) spill couldn t account for it?
 (18) A Well it was probably certainly involved but - but when I
 (19) was with the salmon commission this was always a primary
 (20) issue
 (21) of concern is what are the impacts of environmental factors
 (22) In this case - in that case it would have been the Gulf of
 (23) Georgia in Puget Sound down in Washington and British
 (24) Columbia
 (25) on the return success what is it we can use to predict return
 because we were measuring the fish so the fishery could
 harvest
 them and how do we give them the best estimate

Vol 33 5807

- (1) So we always look at a variety of factors to help us
 (2) predict that so this kind of fits into the same situation up
 (3) here in Prince William Sound i e food level or population
 (4) density or environmental temperatures Those kind of things
 (5) are always major influences on success
 (6) Q When you said at the beginning of your answer it was - it
 (7) was certainly involved what were you referring to there?
 (8) A Well this - this figure this trend here was certainly
 (9) involved in my examining that but we also looked at other -
 (10) other factors
 (11) Q Now are there other factors that you have identified that
 (12) you think are likely candidates for the downturn here in the
 (13) Sound?
 (14) A Yes
 (15) Q Can you tell us what those other factors are?
 (16) A Well certainly the food supply would be a major factor and
 (17) that is - is related to population density but it s not
 (18) dictated totally by population density If you put too many
 (19) cattle out onto a field they re going to crop the grass down
 (20) too far and if you - but if you have a bad year anyway and
 (21) there s not much grass out there you ll even have worse
 (22) circumstances So it s not just the population density but
 (23) it s related to the environmental factors that influence food
 (24) supply and growth rate
 (25) Q Well we ve actually heard earlier Dr Mundy the

Vol 33 5808

- (1) plaintiffs expert talk about some of the things that may be
 (2) going on in the Sound that have to do with this but have you
 (3) prepared an exhibit to demonstrate this food supply
 (4) phenomena
 (5) that you re talking about?
 (6) A Yes I have
 (7) MR COOPER And I believe that is DX1968 A Before I
 (8) bring that up though I should seek to admit the exhibit that
 (9) we currently have
 (10) (Exhibit 8884 offered)
 (11) MR JAMIN 8884 is fine Your Honor
 (12) THE COURT Defendants Exhibit 8884 is admitted
 (13) (Exhibit 8884 received)
 (14) BY MR COOPER
 (15) Q If I could have 1968 A is this the exhibit Dr Brannon?
 (16) A Yes, it is
 (17) Q And here you have the return year the year of the returns
 (18) on the bottom?
 (19) A That s right That would be the return year and then the
 (20) millions of fish on the vertical column here and then the year
 (21) across the bottom
 (22) Q Now where do you get the data for instance as to the
 (23) millions of fish or how many fish?
 (24) A That comes from the Alaska Fish & Game annual
 (25) management
 reports
 Q And we re talking about pink salmon? That s what kind of

Vol 33 5809

- (1) fish are here?
- (2) A Yes these are only pink salmon
- (3) Q All right And so you re showing each year the return of
- (4) the pink salmon and you indicate hatchery and - divided
- (5) between hatchery and wild stock?
- (6) A Yes So this would be the total - total return of
- (7) hatchery and wild stock coming back into Prince William Sound
- (8) showing the peak the big years 90 and 91
- (9) Q And then the disappointing low runs in 92 and 93?
- (10) A Yes And what I ve done here is take the planning plankton
- (11) measurements - this was done by the PWSAC hatchery Mr
- (12) Olsen
- (13) reported this in his report to the annual meeting of the
- (14) corporation showing the - the population of - or plankton
- (15) level that he was assessing and I took that information and
- (16) superimposed it onto the adult return population based on the
- (17) year that they would be in the marine environment feeding as
- (18) juveniles
- (19) Q So you lagged this in order to account for the time?
- (20) A That s right
- (21) Q And this is the blue line then the zooplankton density
- (22) that would be available for these juveniles?
- (23) A Yes that s right And it shows the trend in population of
- (24) pink salmon corresponds some degree to the level of plankton
- (25) available so on big years of plankton you had good return
- (26) years and on poor years of plankton you had reduced success

Vol 33 5810

- (1) in adult returns
- (2) Q And that would account for why it s a Sound wide
- (3) phenomena?
- (4) A Well it certainly would contribute to it
- (5) Q Now have you also given any thought to whether the
- (6) hatchery program may have been impacting this situation?
- (7) A Yes I have Hatcheries are a big factor now in worldwide
- (8) concerns about losses of wild populations and in fact the
- (9) tendency for populations to collapse after the hatcheries take
- (10) on a major part of their production The coho on the Oregon
- (11) coast the chinook salmon in the Columbia River the chinook
- (12) and coho salmon in the northern Skagit River northern
- (13) Washington the Skagit River in British Columbia the effect
- (14) of hatchery fish is a serious biological question now and one
- (15) that we re trying to address in my situation on the Columbia
- (16) Q And this exhibit that we have up there right now does this
- (17) indicate or did you determine from this the trend in the number
- (18) of hatchery fish over the recent years?
- (19) A I m sorry I m not quite following the question
- (20) Q Well it was a pretty lousy question What does this
- (21) exhibit that s on the screen right now indicate about the trend
- (22) in how many hatchery fish had been pumped into the Sound
- (23) over
- (24) the last few years?
- (25) A Well the gold bar is the hatchery returns and as the
- (26) hatchery returns have increased they re responding to an
- (27) increase in hatchery fry releases and while they re having

Vol 33 5811

- (1) very good survival out of those hatchery releases and I think
- (2) demonstrates how a hatchery program can be very good for a
- (3) fishery it s reaching that point now where it s becoming very
- (4) very large and is of concern to biologists managing that
- (5) fishery
- (6) Q Now in fact if I look at the harvest information on this
- (7) chart it appears that starting in 79 the runs began to - the
- (8) harvest began to get much larger Is a large part of that
- (9) attributed to this growing numbers of hatchery fish that have
- (10) been introduced into the Sound?
- (11) A That s right Generally a characteristic of hatchery
- (12) production in any hatchery situation is that as you increase
- (13) hatchery production you tend to see a decrease in the wild
- (14) population as is indicated here In the mid 80s when fewer
- (15) hatchery fish are going in the wild population was taking
- (16) advantage of those good growing conditions in Prince William
- (17) Sound and was contributing to a major part of the fishery and
- (18) as the hatchery fish increased in released density it started
- (19) showing a decrease in the wild population That follows the
- (20) same trend that you see in any of the hatchery programs down
- (21) in
- (22) Washington Oregon or British Columbia
- (23) Q About how many hatchery fish are being pumped into the
- (24) system let s say around the time of the spill 1989 those
- (25) years?
- (26) A Well the hatchery fish as I mentioned constitute over 50

Vol 33 5812

- (1) percent so you re looking at something around 700 million 650
- (2) million hatchery fish going into Prince William Sound
- (3) Q Well let s see I believe you ve also prepared a chart
- (4) that compares the weight of salmon versus the number of
- (5) hatchery fry releases?
- (6) A Yes I did this to show the effect that population density
- (7) can have on return success and return size
- (8) Q Why don t we move to that one I believe we ve already got
- (9) admitted in evidence the one that s on
- (10) MR JAMIN If 1968 is not in evidence Your Honor it
- (11) may be admitted
- (12) THE COURT Defendants Exhibit 1968 is admitted
- (13) (Exhibit 1968 received)
- (14) MR COOPER Could we have Exhibit 8762?
- (15) BY MR COOPER
- (16) Q Now this is the chart we were just talking about?
- (17) A Yes it is
- (18) Q What have you charted here?
- (19) A Here on the - on the left the vertical axis shows the
- (20) average weight of the pinks at time of harvest and along the
- (21) bottom again we have return year and the red lines show the -
- (22) the red columns show the weight of adults returning
- (23) Q So can you just pick a bar and explain what that means?
- (24) A Yes This would mean that we re looking at an average
- (25) weight of pink salmon harvested here at about four and a

Vol 33 5813

- (1) quarter pounds down here we re looking at a fish that s around
 (2) three pounds It s not marking but right there And down
 (3) here we re looking at something that s a little over two and a
 (4) half pounds around two and a half pounds
 (5) So that s the weight of the adult returning and what I
 (6) have contrasted that with as you see there s a general
 (7) reduction then in weight of adults returning as they - as
 (8) the magnitude of hatchery releases have increased This is the
 (9) blue line shown here It shows up rather poorly on this
 (10) background but that blue line right at the pencil on the
 (11) screen shows the increase in number of hatchery fish going into
 (12) Prince William Sound And so we re seeing a potential
 (13) density dependent response in adult return size The more fish
 (14) that go out beyond the threshold of maximum weight results in
 (15) a
 (16) reduced weight of adult coming back
 (17) Q And what does that suggest then about the impact of the
 (18) hatchery fish on the wild stock in the Sound?
 (19) A Well it says that they re competing not only with one
 (20) another but competing with the wild stock and that has severe
 (21) implications for their survival and also has some implications
 (22) for the harvest because usually small fish are not as
 (23) marketable as large fish Put too many out and they come back
 (24) successfully but only half size You won t have a market for
 (25) them and you would end up losing in the long run
 (26) MR COOPER Your Honor I would ask that DX8762 be

Vol 33 5814

- (1) admitted
 (2) (Exhibit 8762 offered)
 (3) MR JAMIN No objection Your Honor
 (4) THE COURT Defendants Exhibit - I m sorry was
 (5) it -
 (6) MR COOPER 8762 I believe it is
 (7) THE COURT DX8762 is admitted
 (8) (Exhibit 8762 received)
 (9) BY MR COOPER
 (10) Q You ve brought some charts with you here an exhibit that
 (11) demonstrates a similar thing in Japan?
 (12) A Yes with the Hokota chum production in Japan there is
 (13) major concerns amongst the biological folks in Japan the
 (14) hatchery people about the reduction in the size of chum
 (15) coming
 (16) back as it increased the number of chum into the system and
 (17) the
 (18) smaller size as well as the smaller number
 (19) Q Could we have 8778 A?
 (20) Now can you explain - is this basically the same kind of
 (21) a graph we were just looking at? You ve got - you re looking
 (22) at the weight trend over time?
 (23) A Yes We have the weight of the chum salmon over here and
 (24) we have the year on the horizontal axis on the figure and it
 (25) shows as we increased the number of fry going into the sea
 (26) around Hokota that the average size has decreased
 (27) Q And if we can have the next piece of that graph exhibit

Vol 33 5815

- (1) and what are you showing here?
 (2) A This was the same trend but we had previous to this
 (3) showing the size reduction again the weight of adult
 (4) returning and the year along the bottom
 (5) Q And this is Prince William Sound?
 (6) A This is Prince William Sound And the red line shows the
 (7) increase in fry going into Prince William Sound and the
 (8) tendency for the adult size to taper off as it gets in higher
 (9) population densities
 (10) Q And if we could have the - and then the next frame?
 (11) A Well this is the growth pattern of the whole population in
 (12) Japan in - as you can see the number of adults has been going
 (13) up and reaching a peak there in 90 91 and then they re
 (14) concerned because they ve seen this drop off this part of the
 (15) curve towards these last few years and that s related to the
 (16) small - that s corresponding to the small size as well So
 (17) they re getting a small size and now a reduction in number of
 (18) chum salmon coming back into the fishery
 (19) Q And if we compare that to Prince William Sound?
 (20) A And now if we look at the adult return in millions here as
 (21) we did in the chum salmon situation and we look at the
 (22) horizontal axis the years we can see that this trend with
 (23) the exception of 90 91 started back there in the 87 85
 (24) era And we ve seen that kind of a slide down to the present
 (25) time the same kind of a situation that they re concerned about

Vol 33 5816

- (1) in Japan and - and of course they re puzzled as we are
 (2) puzzled because as you increase numbers of fish going out if
 (3) the year is good and is very productive you might still get
 (4) good returns But if you have a poor year the probability of
 (5) having a poor return is much greater then and so as you
 (6) increase your fry production you re increasing the chance of
 (7) having run failure in the future
 (8) Q Now Dr Brannon are you saying that you know for a
 (9) certainty that it s this increasing number of hatchery fish
 (10) that are responsible for the low runs in 92 and 93?
 (11) A No I m really saying that there s several factors
 (12) involved Food supply is one population density is another
 (13) And these relationships are not just indicators but serious
 (14) indicators that we have to be concerned about the number of
 (15) fish we re putting out in this case in Prince William Sound
 (16) and the impact that those numbers have upon themselves even
 (17) as
 (18) they migrate around the perimeter of the north Pacific because
 (19) they interact amongst themselves certainly and they also
 (20) interact amongst the other species out there
 (21) Q One last point on the run sizes in 93 and 94 - 92 and
 (22) 93 We don t know the run size I guess in 94 quite yet
 (23) do we?
 (24) A Not quite yet
 (25) Q Is there any information about that?
 (26) A The Solomon Gulch is of course an early run coming back

Vol 33 5817

- (1) Q This is Solomon Gulch area of the Sound?
- (2) A Yes That's Valdez harbor in fact so that's right up in
- (3) the most eastern part of the Sound and the catches thus far
- (4) they've caught there there are about a half a million fish
- (5) right now coming back to Prince William Sound headed for the
- (6) hatchery It's hatchery fish coming back It's an early run
- (7) so they - it's about - probably about two to three weeks in
- (8) the cost recovery fishery which they're allowed to have early
- (9) to cost recover for the hatchery operations They're well into
- (10) that at about a half a million fish
- (11) Q How does that look? Are you able to say that looks good
- (12) bad -
- (13) A I just don't know enough about Solomon's return They're
- (14) looking at four or five million fish and they're well on their
- (15) way It's early earlier than they expected Maybe that's an
- (16) indication it's a big run or maybe it's a small early run I
- (17) don't know
- (18) Q At any event by the time the trial is over we won't have
- (19) the returns yet on all these various runs?
- (20) A That's right
- (21) Q One last thing on this point You understand do you not
- (22) that the plaintiffs are claiming that the shortfall between
- (23) what ADF&G has predicted for runs in Prince William Sound this
- (24) year and what they believe will actually occur or has
- (25) happened - let me back up a minute

Vol 33 5818

- (1) 92 and 93 plaintiffs are claiming that the oil spill is
- (2) responsible for the shortfall between what ADF&G predicted
- (3) were
- (4) going to come into the Sound and the number that actually
- (5) came
- (6) into the Sound?
- (7) A Yes I understand that
- (8) Q And have you looked at the accuracy of ADF&G forecasts
- (9) generally?
- (10) A Yes We - we are always plagued by our accuracy of
- (11) forecasts with all the species
- (12) Q And the ADF&G is not - the ADF&G forecasts are no worse
- (13) than any other forecasts I assume?
- (14) A Not much worse We always took pride on the Fraser River
- (15) that our forecasts were very good and I think the fishermen
- (16) agree that they were very good but we also had our
- (17) variabilities But as you get into bigger more complex
- (18) systems like we have in Alaska with many many fishing areas
- (19) and many many many streams in those fishing areas it's
- (20) difficult to be accurate
- (21) Q It's just hard to be accurate no matter how good you are at
- (22) it?
- (23) A That's right yes
- (24) MR COOPER Let's see I'll move to admit DX8778 A
- (25) (Exhibit 8778 A offered)
- (26) MR JAMIN No objection
- (27) THE COURT No objection that exhibit is admitted

Vol 33 5819

- (1) (Exhibit 8778 A received)
- (2) BY MR COOPER
- (3) Q If we could bring up DX9360 this is the exhibit that
- (4) demonstrates the accuracy of the forecast?
- (5) A Well this is the difference between the actual run size
- (6) and the predicted run size as a percent of the forecast run
- (7) So if you were for instance off by - if you estimated 40
- (8) million fish and only 20 million fish came back you'd be off
- (9) by 50 percent If 60 million fish came back you'd be off by
- (10) 30 percent So this is showing the difference in forecasts and
- (11) actual as a percent of the forecast
- (12) Q So for instance if we just take one of these in 1986 I
- (13) guess it goes through the blue?
- (14) A Yes Prince William Sound here is the yellow column and
- (15) the other columns represent other fishing districts in Alaska
- (16) but all pink salmon
- (17) Q So for instance on the yellow one here that I'm pointing
- (18) to that indicates that the prediction or the forecast the
- (19) actual run size was only about what -
- (20) A 50 percent of the forecast It came in half as large as
- (21) they anticipated
- (22) Q Now let's see going this direction when you've got an
- (23) overprediction - you can never have more than a hundred
- (24) percent of an overprediction right? You'd never be more than
- (25) a hundred percent off? If none of the fish came back you'd be

Vol 33 5820

- (1) a hundred percent off?
- (2) A That's right yeah
- (3) Q On the other hand in - looks like Southeast Alaska the
- (4) red?
- (5) A Yes south Southeast right
- (6) Q The runs there came in larger than the forecast?
- (7) A That's right about 50 percent larger than they had
- (8) expected
- (9) Q And what conclusions generally do you draw then by
- (10) looking at the percent by which ADF&G missed the forecast?
- (11) A Well it says that we're in a highly variable business of
- (12) trying to forecast runs and some years we're close and some
- (13) years we're extremely off and it's a normal kind of a thing
- (14) Fishermen should never expect the agencies to be that
- (15) accurate
- (16) but it gives them a kind of a ballpark figure to gear up with
- (17) their nets whatever else they might need to anticipate what
- (18) their costs are going to be for the next run
- (19) They were actually pretty good in 1992 They were - I
- (20) believe it was 1991 they were pretty close to their prediction
- (21) in Prince William Sound In '90 they were - actually 50
- (22) percent more fish came back than they predicted
- (23) Q You're not criticizing the ADF&G people for being lousy
- (24) predictors?
- (25) A No I would not probably do as well
- (26) Q Dr Brannon let me see if we can wrap up here with a few

Vol 33 5821

- (1) odds and ends here
 (2) First let me find out your - can you tell the - tell the
 (3) Court and the jury your opinion on the question whether there
 (4) was any - whether the oil spill played a substantial role or
 (5) an important role in reductions or any reductions in the size
 (6) of the population of pink salmon at Prince William Sound?
 (7) A In my opinion you know we don't like oil spills we don't
 (8) want oil spills certainly but in my opinion the oil spill in
 (9) Prince William Sound had no measurable impact on the pink
 (10) salmon population
 (11) Q Now I guess you recognize though that you can't always
 (12) measure everything?
 (13) A That's right
 (14) Q Have you thought about whether there's any kind of an
 (15) upward bound on if there were some impact what it might be?
 (16) A Well it's - you're asking me in the face of all my data
 (17) and all my conclusions do I still think there might be some
 (18) level of impact and I would say I cannot say there's no
 (19) impact but I think it would be - it would be a minor one if
 (20) there was or I would have been able to detect it either in
 (21) adult returns or in the various studies we undertook We
 (22) should have seen some level of impact and I didn't see that so
 (23) my estimate in terms of magnitude of impact would probably
 (24) be
 (24) not to exceed that which the last Fish & Game has suggested
 (25) Q Now Fish & Game or Dr Spies are you referring to?

Vol 33 5822

- (1) A Dr Geiger or Mr Geiger
 (2) Q Mr Geiger did a study for the Trustee Council?
 (3) A That's right and he came up with a level a rather
 (4) uncertain quantity which includes Bue's information which I
 (5) disagree with but it would - it was still not a great number
 (6) so I mean -
 (7) Q Do you remember approximately what those numbers were?
 (8) A I think it was something around 1.8 million fish on the
 (9) year of the spill thereabouts and so I would say certainly
 (10) the impact would not be greater than that My estimate of
 (11) magnitude would be from zero to his estimate
 (12) Q And as I recall he had 70,000 fish or so in the - or
 (13) maybe a hundred thousand fish in the following two years after
 (14) that 1.8 million estimates?
 (15) A Yes
 (16) Q You know who Dr Spies is?
 (17) A Yes I do He was the senior scientist overseeing the
 (18) Trustees program
 (19) MR COOPER Could we have Exhibit 5983? I believe
 (20) it's 5983
 (21) THE COURT While we're on that did you mean to offer
 (22) 9360?
 (23) MR COOPER Yes Your Honor I did
 (24) (Exhibit 9360 offered)
 (25) MR JAMIN No objection

Vol 33 5823

- (1) THE COURT There being no objection to Defendants
 (2) Exhibit 9360 it is admitted
 (3) (Exhibit 9360 received)
 (4) BY MR COOPER
 (5) Q Has Dr Spies - well we've already heard some testimony
 (6) concerning the Trustee Council fifth anniversary of the spill
 (7) brochure You've looked at that?
 (8) A Yes I have
 (9) Q And do you recall that there was an estimate in there by
 (10) Dr Spies as to the total number of missing fish or percentage
 (11) of missing fish pink salmon -
 (12) A Yes
 (13) Q - as a result of the spill?
 (14) A I remember that
 (15) Q And do you recall what that number was?
 (16) A Dr Spies suggested that about 10 percent of the population
 (17) coming back into Prince William Sound would be impacted
 (18) including the effect of the oil but including all the other
 (19) environmental factors that might be associated with a low pink
 (20) run And so 10 percent would certainly be within the range of
 (21) just population density and so potential population density
 (22) effects or temperature effects or food effects so I would say
 (23) the 10 percent level is within the normal range of variability
 (24) and I couldn't disagree with that including all the
 (25) environmental factors

Vol 33 5824

- (1) Q Does that number also sound to you like if you had to put
 (2) an upper bound on what damage the spill may have caused to
 (3) Prince William Sound pinks that that would be an upper
 (4) bound?
 (5) A Well no We're dealing just with the oil absolutely that
 (6) would be my upper bound I'd say somewhere between zero
 (7) and
 (8) that would be my estimate
 (9) Q Finally I think we asked you to - we had - parties had
 (10) promised the jury that we would give them some charts that
 (11) they
 (12) could relate to the verdict form ultimately and we've asked
 (13) you to prepare something along those lines with respect to the
 (14) Prince William Sound lost pink harvest if we can call it that
 (15) for 1990 through '95 You've done something on that?
 (16) A Yes
 (17) Q If we could have Exhibit 8980 A
 (18) Now let's see maybe we can just walk through this
 (19) quickly You have indicated here in this column entitled
 (20) plaintiffs slash Mundy your understanding of what the
 (21) plaintiffs are claiming with respect to fish that - pink
 (22) salmon they were unable to harvest on account of the spill?
 (23) A Yes that's correct
 (24) Q And then in the next column ADF&G and Trustees what is
 (25) that number or the numbers you have there represent?
 (26) A That would represent what the Trustees had arrived at
 (27) based on Geiger's initial estimate and that -
 (28) Q This is by year we're doing this?

Vol 33 5825

- (1) A Yes that s correct And the red line shows the magnitude
 (2) Q Then you have a column entitled Exxon slash Brannon and
 (3) can you tell us what -
 (4) A It s a little bit confusing there You ve got a zero and a
 (5) slash which means zero to that number and what I m saying is
 (6) that my estimate would be less than that of the Alaska Fish &
 (7) Game and Mr Spies but I - because I can t say for certain
 (8) that there was no impact even though it might be minor I -
 (9) my estimate is someplace between zero and their number
 (10) Q And then with respect to 1991 and 92 and so forth it just
 (11) continues the same calculation?
 (12) A That continues the same calculation using Mr Spies - or
 (13) Dr Spies estimates in the latter part of the columns there
 (14) MR COOPER Your Honor I would move to admit this
 (15) exhibit 8980 A
 (16) (Exhibit 8980 A offered)
 (17) MR JAMIN No objection Your Honor
 (18) THE COURT Defendants 8980 A is admitted
 (19) (Exhibit 8980 A received)
 (20) MR COOPER Thank you Dr Brannon I have no further
 (21) questions at this time
 (22) THE COURT You may cross examine
 (23) CROSS EXAMINATION OF DR ERNEST BRANNON
 (24) BY MR JAMIN
 (25) Q Now sir by your right shoulder there there s two

Vol 33 5826

- (1) folders
 (2) A Okay
 (3) Q And one of them has some exhibits that we re going to refer
 (4) to and I m going to put them in a pile for you
 (5) A Okay Thank you
 (6) Q And next to that is your deposition all right?
 (7) A Yes
 (8) Q Now u ve spent over three hours on the witness stand and
 (9) I m going to be happy to tell you that you re not going to be
 (10) on that long again for cross okay?
 (11) A Okay
 (12) Q But I want to start and maybe we could get DX1968 A up
 (13) one of the exhibits you just talked with us about a little bit
 (14) before And as I understand it sir what you were saying is
 (15) that you were very interested in the zooplankton levels and how
 (16) that might have affected the fish in 92 and 93 is that
 (17) right?
 (18) A Yes
 (19) Q And that s because at least as I understand it the
 (20) zooplankton is what those fish are eating isn t it?
 (21) A Yes
 (22) Q And so it s important for us to look at what the fish are
 (23) eating as one of the critical factors of their survival?
 (24) A Certainly quantity available yes
 (25) Q And quality too? I mean if they re eating something

Vol 33 5827

- (1) that s toxic that s not good is it?
 (2) A No
 (3) Q All right We re going to come back to that sir I want
 (4) to spend a little bit of time though talking about that video
 (5) that Mr Cooper went through with you And it was that video
 (6) where the NOAA HAZMAT data was displayed Remember how
 the oil
 (7) was moving out?
 (8) A Right
 (9) Q And rather than play it I thought I d just show a couple
 (10) of stills that were exhibits There was - there was the one
 (11) still from March 28th which showed the - the oil in the Naked
 (12) Island area and working its way down Knight Island and so
 (13) forth?
 (14) A Yes
 (15) Q And then we saw later on that that oil by March 30th had
 (16) worked its way a little bit farther down and it s sneaking out
 (17) here in the channel out of Prince William Sound isn t it?
 (18) A Right
 (19) Q All right And then farther on down on April 7 even more
 (20) of it s out right?
 (21) A (No response)
 (22) Q It s gotten past Elrington Island and moving towards the
 (23) Kenai Peninsula?
 (24) A Yes
 (25) Q You were making two points the first of which was when the

Vol 33 5828

- (1) fish that were returning to spawn in 1989 came back there
 (2) wasn t much oil because that HAZMAT showed it s heading out
 (3) right?
 (4) A The adults yes
 (5) Q And the other point you were making was that the fish that
 (6) were leaving the Sound in 89 the little guys that had been
 (7) lain in the fall of 88 when they left there wasn t much oil?
 (8) A That s right
 (9) Q Now that HAZMAT whether it s in the video form or the
 (10) individual slides we ve just looked at it doesn t tell the
 (11) whole story about the oil does it?
 (12) A Certainly not
 (13) Q And roughly 40 percent of the oil or about 4 million
 (14) gallons was in the area these fish were going through?
 (15) A As juveniles?
 (16) Q Yes sir
 (17) A Okay I m not aware of that but -
 (18) Q All right Well Mr Jahns told us about that and we ll
 (19) stand by that but for those fish on their way out in this
 (20) nearshore period the movement of fish occur in a general
 (21) downstream pattern with the current through Prince William
 (22) Sound is that correct sir?
 (23) A That is correct
 (24) Q All right And the oil that was on the beaches you re
 (25) aware that some of that oil was rereleasing into the

Vol 33 5829

- 1: environment and restrandng on other beaches aren t you?
- 2: A Yes I am
- 3: Q And the bays and estuaries in the southwestern portion of
- 4: Prince William Sound - this area down here?
- 5: A Yes
- 6: Q Those bays and estuaries they are the nursery areas for
- 7: pink salmon fry immediately after emergence from their natal
- 8: streams?
- 9: A Definitely
- 10: Q All right And the fry emerge from gravel in the spring
- 11: between April and June and immediately move into this
- 12: nearshore habitat?
- 13: A Yes
- 14: Q And the juveniles feed in the nearshore areas for a few
- 15: weeks before moving out through this channel into the Gulf of
- 16: Alaska?
- 17: A The nearshore area defined as the area right next to shore
- 18: or -
- 19: Q I m using your words as you know - and why don t you tell
- 20: me what the nearshore area is?
- 21: A The nearshore area would be as close or as far as several
- 22: miles from the actual beach line but it s nearshore because
- 23: it s within Prince William Sound
- 24: Q All right And it s in this area down here?
- 25: A Yes sir

Vol 33 5831

- (1) (Videotape Concluded)
- (2) BY MR JAMIN
- (3) Q That portion that I was pointing out to you that s an
- (4) example of the habitat is it not where these young pink
- (5) salmon come out and eat?
- (6) A You re referring to which of the two pictures that the -
- (7) the overview where the seagulls are in the water?
- (8) Q Not with the seagulls Before when I was specifically
- (9) pointing that s an example of that nearshore habitat isn t
- (10) it?
- (11) A It s really a very minor part of it
- (12) Q But it is an example of it sir?
- (13) A Certainly that example that part next to beach yes
- (14) Q Let me ask you did you actually go to Prince William Sound
- (15) at all? Did you go there at all before September of 1989?
- (16) A Yes September - no No sir I didn t
- (17) Q September was the first you were out there?
- (18) A Right
- (19) Q All right You didn t have a chance to do any work
- (20) yourself involved in any fieldwork yourself or any visual
- (21) observations of that oil as it was leaving Prince William Sound
- (22) and affecting these fish as they were - they were leaving and
- (23) the other fish as they were coming in before September of 1989
- (24) did you?
- (25) A I didn t observe anything in Prince William Sound before

Vol 33 5830

- (1) Q All right
- (2) A Well that s the exit out right
- (3) Q But that s how the fish go out of the Sound isn t it sir?
- (4) A Yes that s correct
- (5) Q There may be a couple that head out over here by Cordova
- (6) but the general -
- (7) A General -
- (8) Q - Trend is out this way?
- (9) A That s right
- (10) Q And that general trend is for the hatchery fish that come
- (11) from these areas up here too isn t it?
- (12) A Yes it is
- (13) Q Now sir did you get a chance to look at Mr Rosenthal s
- (14) video the one where - the herring spawn video?
- (15) A No I didn t
- (16) MR JAMIN Let s just take a quick look at the first
- (17) portion of that There s another portion where there s a guy
- (18) wiping oil but I don t want to look at that Let s look at
- (19) the beginning This is 247 A
- (20) (Videotape Played)
- (21) BY MR JAMIN
- (22) Q These are herring aren t they?
- (23) This is what I want you to look at sir and I want to ask
- (24) you a question about it in just a little while
- (25) All right That s enough

Vol 33 5832

- (1) that date
- (2) Q All right Let s take a look at some of the fieldwork that
- (3) you actually did sir and some of the work that was not done
- (4) as well In 89 Exxon used another contractor to gather data
- (5) pertaining to nearshore survival of juvenile pinks in Prince
- (6) William Sound is that correct?
- (7) A Yes that s correct
- (8) Q And that was Pentec?
- (9) A Yes it was
- (10) Q And in your deposition you acknowledge that you did not
- (11) review any of the data gathered in 1989 pertaining to nearshore
- (12) survival of pinks in Prince William Sound is that correct?
- (13) A That would be a mistake I didn t review it as it came
- (14) back but certainly I have reviewed it in my analysis of
- (15) effects in Prince William Sound
- (16) Q So would you agree with me when you gave your deposition
- (17) you hadn t reviewed it?
- (18) A I would say that would be incorrect yes
- (19) Q Let s just take a look at your deposition and see whether
- (20) that s what you told us at that time Could you go to page 53
- (21) sir?
- (22) A That s the first one?
- (23) Q Yeah it s the first one but I m not sure it s the first
- (24) one you re going to take out Let me help you a little bit
- (25) here That s volume three and that - the page is going to be

Vol 33 5833

- (1) in volume one This is two - you see those Roman numerals on
 (2) the front and this is one volume - page 53 will be in volume
 (3) one sir
 (4) A Okay I guess I don't see the Roman numeral Is that up
 (5) on the corner?
 (6) Q Should be in the middle of the page
 (7) All right This is - let's go right to the page numbers
 (8) which are up in the right hand corner
 (9) A Okay
 (10) Q And we'll go to page 53 sir and do you see on lines 12 to
 (11) 15 you see it and was this question given sir?
 (12) A I'm sure it was yes
 (13) Q Did you review data gathered in 1989 pertaining to
 (14) nearshore survival of juvenile pink salmon in Prince William
 (15) Sound and you said no?
 (16) A That's correct
 (17) Q All right Now you told us at the same time did you not
 (18) that it was your preference in doing your research regarding
 (19) pink salmon condition in Prince William Sound following the oil
 (20) spill to look at offshore data rather than nearshore data is
 (21) that correct?
 (22) A Yes
 (23) Q And you did not analyze any of the 1989 data that looked at
 (24) the specific effects of the oil on samples that were taken in
 (25) 1989 did you?

Vol 33 5834

- (1) A That's nearshore
 (2) Q That's correct sir?
 (3) A That's correct yes
 (4) Q All right Now there's been a lot of talk about genetic
 (5) damage in this courtroom and we're going to come back to that
 (6) later this morning but first am I right that there was some
 (7) work that you started to do on - for Exxon on genetic effects
 (8) on pink salmon from exposure to crude oil?
 (9) A Yes
 (10) Q All right And that - that work on the assessment of
 (11) potential genetic effects on pink salmon from exposure to crude
 (12) oil was terminated?
 (13) A Oh yes right
 (14) Q All right and when you were deposed you said you were not
 (15) aware of any other efforts by anybody else within Exxon or
 (16) affiliated within Exxon to replicate or redo the work that you
 (17) began on this paper is that correct?
 (18) A Right
 (19) Q And in fact it would have been your recommendation that
 (20) you should have been allowed to go ahead and do that genetic
 (21) research is that correct?
 (22) A I - I don't recall exactly but I would have liked to have
 (23) done it yes
 (24) Q All right and it's your point of view that the research
 (25) you began regarding the assessment of potential genetic
 effects

Vol 33 5835

- (1) on pink salmon should be pursued is that correct?
 (2) A Yes
 (3) Q All right Now I want to talk just a bit about
 (4) bioaccumulation That's where an animal is accumulating
 (5) something in their body is that right?
 (6) A That's right
 (7) Q And in your deposition you stated that it was considered
 (8) unlikely that long term effects from bioaccumulation would
 (9) occur?
 (10) A Yes
 (11) Q And in your deposition you said in terms of what you
 (12) designed for Exxon you did not do anything to determine
 (13) whether there were long term effects from bioaccumulation?
 (14) A That's right
 (15) Q Just wasn't done?
 (16) A I didn't do that yes
 (17) Q And you don't know whether anybody or any group outside
 of
 (18) Exxon attempted to study the long term effects from
 (19) bioaccumulation do you?
 (20) A Well I'm aware of NOAA's studies yes
 (21) Q Nobody in Exxon did it?
 (22) A No Well I'm not aware of anything but I think I would
 (23) have been aware if they'd done it but I can't say
 (24) Q Because you were responsible for this area weren't you?
 (25) A That's right yes

Vol 33 5836

- (1) Q And you would have been aware of it?
 (2) A Well Exxon often would only allow me to know what I
 needed
 (3) to know so if they were doing something else I couldn't say
 (4) for sure
 (5) Q I understand sir You haven't done any work in this pink
 (6) salmon area involving straying on the Exxon Valdez oil spill
 (7) situation have you?
 (8) A No sir
 (9) Q And straying is where the fish that normally would go back
 (10) to one stream go to another stream?
 (11) A That's right
 (12) Q And that when they do that that's a chance that - that if
 (13) an animal was genetically damaged it might be able to pass it
 (14) into another stream's stock?
 (15) A That's right
 (16) Q Now I'm going to ask you sir if you're willing to agree
 (17) with the following statements Organic contaminants absorbed
 (18) into natural sediments can be bioaccumulated to a limited
 (19) extent and enter the marine food web?
 (20) A Bioaccumulated in the sediments?
 (21) Q Yes sir
 (22) A Yes
 (23) Q And marine microalgae like plankton rapidly accumulates
 (24) PAH - that's those polycyclic aromatic hydrocarbons right?
 (25) A Yes

Vol 33 5837

- (1) Q - to high concentrations during exposure to low
 (2) concentrations of PAH in the ambient water?
 (3) A I don t know that sir
 (4) Q Well let me ask you do you - do you rely on Dr Neff for
 (5) this kind of information?
 (6) A I do
 (7) Q And if he told you this you d believe it?
 (8) A I would
 (9) Q Let me get Dr Neff s deposition if I may and we ll come
 (10) back to that
 (11) Would you agree with me that all of the food items
 (12) copepods amphipods zooplankton tend to accumulate
 (13) hydrocarbons to which they re exposed?
 (14) A I would think they would tend to accumulate them yes
 (15) Q Those are some of those little critters that the pink
 (16) salmon eat when they re coming back in right?
 (17) A That s right
 (18) Q In fact pink salmon when they re coming back in they re
 (19) fairly voracious animals aren t they? They eat almost
 (20) everything they see?
 (21) A As adults?
 (22) Q Yes sir
 (23) A They really stop - they start stopping to feed when they
 (24) come back in
 (25) Q But before they stop feeding they ll eat pretty much

Vol 33 5838

- (1) anything in sight?
 (2) A To grow fast they must eat a lot yes
 (3) Q All right and the - would you agree with me that early
 (4) growth rate of salmon can affect survival?
 (5) A Yes sir
 (6) Q In fact that s a very significant factor in terms of
 (7) survival is it not?
 (8) A I believe it is yes In terms of a - within the group of
 (9) fish the smaller ones are more vulnerable than the larger
 (10) ones
 (11) Q And would you agree with this statement sir that a great
 (12) many species of organisms live on or just below the surface of
 (13) the ocean?
 (14) A Yes
 (15) Q Is that that neustonic level layer that we talked about a
 (16) little bit?
 (17) A I think it would include the whole of the ocean depth
 (18) Q All right but I wanted to see whether you agree with me on
 (19) a very specific statement - A great many species of organisms
 (20) live on or just below the surface of the ocean on or just
 (21) below?
 (22) A Yeah I would think that would be true
 (23) Q And the neuston are bacteria plants and animals that spend
 (24) all or part of their life cycles associated with the water
 (25) surface?

Vol 33 5839

- (1) A Yes
 (2) Q And included among the neuston are the eggs and larvae of
 (3) several species of fish and invertebrates that spend the
 (4) remainder of their lives deep in the water column or on the
 (5) bottom of the sea?
 (6) A I would think that s true yes
 (7) Q You d agree with that?
 (8) A Well I don t know from personal knowledge I m sorry but
 (9) I think that s most likely true
 (10) Q So if Mr Neff said that you d agree with him?
 (11) A I would highly suspect it as being true
 (12) Q All right Now let s take a look at some of this water
 (13) quality work we ve talked about This is an area where you -
 (14) I think I d like to get - maybe Mr Cooper could get me 5720 A
 (15) and the color copy Could we bring up 5720 A? Let s do that
 (16) We weren t blessed with a color copy But now we have one
 (17) Now in part you relied on the work that Mr Neff told us
 (18) about?
 (19) A Yes I did
 (20) Q And this is an important part of the basis for your
 (21) conclusions?
 (22) A I think so yes
 (23) Q And part of the point of this - this diagram at the top is
 (24) that -
 (25) A Could you move that - that -

Vol 33 5840

- (1) Q Sir I would be happy to
 (2) A - flip chart and I can see what I m looking at
 (3) Q Because I want you to look at this And part of the point
 (4) is that there s just - I mean you have eight over ten parts
 (5) per billion and 840 below you ve only got one percent above
 (6) this line that was part of the point right?
 (7) A I heard Mr Neff say that yes
 (8) Q That s part of what you relied on?
 (9) A Yes
 (10) Q And the same thing down here for these VOAs but I m also
 (11) interested in them We just don t see much according to you
 (12) and Mr Neff above this line?
 (13) A Yes
 (14) Q So we don t have much to worry about is that right?
 (15) A That s right
 (16) Q Now were you here for Mr Neff s testimony?
 (17) A Not all of it sir
 (18) Q All right Is it your understanding that Mr Neff sampled
 (19) water at different layers of the ocean?
 (20) A Yes
 (21) Q And one of those - like one was down a meter one was down
 (22) three meters and some down nine meters stuff like that?
 (23) A Yes
 (24) Q Sir do you know that these data points are blends or
 (25) averages of that data?

Vol 33 5841

- (1) A I would suspect it would be
 (2) Q You would suspect it would be? So from these data points
 (3) we can't tell what the PAH is right at the top or a little ways
 (4) down or farther down because they're averaged right?
 (5) A I can't say for certain how much an average they are
 (6) Q But if they are averaged -
 (7) A Okay
 (8) Q - then you really can't distinguish what the PAH level is
 (9) at the top in the middle or farther down can you?
 (10) A That's right
 (11) Q That averaging takes it out is that right?
 (12) A That's right
 (13) Q It takes out some of the detail?
 (14) A It takes out some of the variability
 (15) Q All right Now you're familiar are you not with some
 (16) work done by Messrs Rice Short and Heintz (ph) on the
 (17) exposure of salmon to oiled incubation substrate?
 (18) A Yes I am
 (19) Q I got something out there we better define The substrate
 (20) is the stuff they're incubating in like the gravel right?
 (21) A That's right
 (22) Q And incubation means they're down there and they're - the
 (23) eggs are down there and they're going to come out of there?
 (24) A In the gravel in the streams right
 (25) Q So they looked at that area down there specifically where

Vol 33 5842

- (1) the salmon eggs are?
 (2) A Yes
 (3) Q All right And you're aware that they - they did some
 (4) fairly careful analysis as to the amount of oil in that
 (5) substrate and then the amount of oil that was directly near or
 (6) adjacent to the substrate at what time they called the
 (7) effluent from the substrate is that correct?
 (8) A Yes
 (9) Q Now Mr Rice one of those three authors is the man -
 (10) and I don't know whether you were here when Mr Neff told us
 (11) this but you tell me whether you were or not He's the man
 (12) Mr Neff said was the expert on toxic effects of oil on Alaska
 (13) species were you here for that?
 (14) A I was not But I would agree he's well informed about
 (15) that at least with salmon
 (16) Q You independently agree with Mr Neff on that then?
 (17) A Yes
 (18) Q All right And Mr Neff had in fact relied some on some
 (19) work from Mr Rice when he talked about this Were you here
 (20) for that?
 (21) A I know he was referring to it
 (22) Q All right There's an exhibit there sir that we're going
 (23) to talk about very specifically It's 3554 and I think it's
 (24) just a couple down Right there it is sir all right?
 (25) A Uh huh

Vol 33 5843

- (1) Q Now that's the report by Mr Rice and Mr Short and
 (2) Mr Heintz and we've talked about it a little bit so far is
 (3) that right?
 (4) A Yes
 (5) Q And they were considering in that report a hypothesis of
 (6) a Mr Sharr from ADF&G that pink salmon embryos the eggs
 and
 (7) larvae incubated in oiled substrates - that's that gravel?
 (8) A Yes
 (9) Q May have experienced genetic damage resulting in
 functional
 (10) sterility is that right?
 (11) A That's correct
 (12) Q Now what they did is they put some of the pink salmon eggs
 (13) into the sediments and the sediments that they - that they put
 (14) them in had different levels of oiling is that correct?
 (15) A That's right
 (16) Q And then they looked at the fry that came out?
 (17) A Yes
 (18) Q All right and they keep track of the fry and whether or
 (19) not the fry display lesions and if they do they count the
 (20) lesions is that correct?
 (21) A Yes
 (22) Q And they found that common lesions included clubbed
 caudal
 (23) fins shortened opercula edema scoliosis and abnormal eye
 (24) development didn't they?
 (25) A Yes

Vol 33 5844

- (1) Q You're going to have to help me out again I think maybe
 (2) all of us What's the caudal fin?
 (3) A That's the tail
 (4) Q The tail all right and is a clubbed caudal fin
 (5) significant for a pink salmon sir?
 (6) A I think it would be
 (7) Q What does it mean?
 (8) A It means the fin wouldn't form properly and they wouldn't
 (9) be able to fan the water or swim quite as well
 (10) Q And I hope I got this right it is the opercula?
 (11) A Opercula That would be the gill covers
 (12) Q What does it mean a shortened opercula?
 (13) A Means that the edge of the gill cover is showing a little
 (14) bit of a gill
 (15) Q Okay So there's like a part of the fish that covers the
 (16) gill?
 (17) A Right
 (18) Q Is that like the equivalent of skin and muscle covering the
 (19) gill?
 (20) A No it would be like a sleeve on your arm
 (21) Q All right So part of that is pulled back then or it just
 (22) isn't there?
 (23) A That's right
 (24) Q Is that of any significance for the fish?
 (25) A Well we don't know Certainly the fish normally has it

Vol 33 5845

- (1) covered so you'd think that would be the best situation but
 (2) where we've seen it shortened we haven't seen any differences
 (3) in survival They come back sometime with shorter opercula
 (4) Q Now how about edema?
 (5) A Swelling that's fluid buildup
 (6) Q Is that significant for the fish?
 (7) A Well if it's extensive I would think it would be yes
 (8) Q Why would it be sir?
 (9) A Would reduce their ability to exercise probably listless
 (10) not able to respond readily to predators so forth
 (11) Q All right Now how about - what's scoliosis?
 (12) A That's where you've got a bent spine
 (13) Q Okay and so instead of being sort of straight the fish is
 (14) bent a little bit?
 (15) A That's right
 (16) Q Does that affect survival? Is that important for this
 (17) fish?
 (18) A I see very few come back that have a bent spine
 (19) Occasionally but not very many
 (20) Q When you say come back you mean they die?
 (21) A They come back as adults with a bent spine You see it in
 (22) streams and you see it in hatcheries but I think that would be
 (23) a survival disadvantage
 (24) Q All right Now I got to translate this to something I can
 (25) understand When you say survival disadvantage you mean they

Vol 33 5846

- (1) probably die don't you?
 (2) A They'd be eaten yeah
 (3) Q All right And Mr Rice and his co authors report results
 (4) for the 1990 brood year don't they?
 (5) A Yes they do
 (6) Q And they report that pink salmon embryos incubating in
 (7) gravel contaminated with oil experience poor survival
 (8) increased energetic demands and impaired osmo regulation
 (9) don't
 (10) they?
 (11) A Yes
 (12) Q What does increased energetic demands mean sir?
 (13) A Means that they're putting more energies into some other
 (14) activity other than growth
 (15) Q And so that would lead to them being smaller than they
 (16) would otherwise be?
 (17) A Yes
 (18) Q And that's one of the factors that leads to survival that
 (19) we talked about before? -
 (20) A That's correct
 (21) Q What's the osmo regulation part?
 (22) A That's their ability to maintain their water balance in the
 (23) presence of saltwater which is going to tend to draw salt out
 (24) of them or fresh water out of them
 (25) Q So their skin is like sort of a membrane and there's a
 balance between the saltwater and the internal?

Vol 33 5847

- (1) A It's probably the gills but that's true
 (2) Q And the gills too all right And is that something that
 (3) might affect survival sir?
 (4) A Well it - if they can't get their ability to balance
 (5) their salt levels in saltwater if it's a temporary thing
 (6) that's one thing If it's a long term thing I would think
 (7) that would affect the survival yes
 (8) Q Now do the gentlemen report that survival from
 (9) fertilization to emergence was inversely related to dose?
 (10) A Yes I was thinking of mortality but yes inverse -
 (11) Q And this inverse relationship that means that the higher
 (12) the dose or the more the dose of oil in the substrate the less
 (13) the survival?
 (14) A If you look at their data they only had one point where
 (15) survival was markedly reduced
 (16) Q Well let me ask you do they report embryos incubating in
 (17) the 1.5 and 5.7 grams per kilogram doses - and that's the oil
 (18) in the substrate right?
 (19) A Right
 (20) Q Demonstrated early emergency timing small size at
 (21) emergence reduced glycogen stores suggesting relationship
 (22) between dose and energy demand?
 (23) A Yes
 (24) Q And do they report that proportionately more embryos from
 (25) those doses displayed edema indicating impaired osmo

Vol 33 5848

- (1) regulation?
 (2) A I believe they did
 (3) Q Now they measured this water or this effluent that's
 (4) coming out of the gravel right near the sediments didn't they?
 (5) A Yes they did
 (6) Q And it was about 50 parts per billion right by the
 (7) sediment?
 (8) A From the high dose
 (9) Q Yes sir
 (10) A No that was the effluent coming through the columns yes
 (11) Q All right and did they say that these results suggest that
 (12) the state standard for water quality may be too high?
 (13) A They incorrectly state that
 (14) Q Well they do state it though sir?
 (15) A Yes they do state that
 (16) Q It's your view that they're incorrect?
 (17) A Yes
 (18) Q But they say that?
 (19) A Right
 (20) Q They're not working for the plaintiffs here are they?
 (21) A No
 (22) Q Do they also say sir that at the 50 parts per billion
 (23) rate mortality was higher than 96 percent?
 (24) A I would - I would have to check that I know it's -
 (25) Q Would you go ahead and do it? Because I know you spent

Vol 33 5849

- (1) some time looking at this and I want to have this right
 (2) A Yes in excess of 90 percent right
 (3) Q 96?
 (4) A Well at least it could be high but I don't see the place
 (5) for 96 but -
 (6) Q I'll take your at least 90 for now We won't quibble on
 (7) that Now do you know something about how standards are
 set
 (8) in the toxicological business sir?
 (9) A I'm aware that they set them to make sure they're below
 (10) potential effects yes
 (11) Q And they often set them at an order of magnitude or two
 (12) orders of magnitude below where we find significant death is
 (13) that right?
 (14) A That's right
 (15) Q Now an order of magnitude that's like that thing where we
 (16) Alaskans know about for earthquakes that's like that Richter
 (17) scale where you go up one and it's really one order of
 (18) magnitude is ten fold?
 (19) A Right
 (20) Q And I think we talked about this is little bit with
 (21) Mr Neff yesterday If you've got this lethal dose at 50
 (22) percent or lethal dose at 90 percent you drop down a couple of
 (23) order of magnitudes below that for safe levels don't you?
 (24) A Right
 (25) Q So if we were at 50 parts per billion and we were

Vol 33 5850

- (1) generating 96 percent death then we'd go down one order of
 (2) magnitude and it would be 5 parts per billion is that right?
 (3) A We're talking about the water column not the substrate
 (4) oiling?
 (5) Q We're talking about water column now
 (6) A Yeah
 (7) Q And if we go down two orders of magnitude we'd be down
 (8) to 5 parts per billion is that right?
 (9) A I suspect it is but I -
 (10) Q I want to be sure about my math here
 (11) A I probably need a calculator but I think I'm following
 (12) your rationale
 (13) Q All right Now were you here when Dr Neff said that fish
 (14) could spend a significant portion of their lives in 10 parts
 (15) per billion without a problem?
 (16) A I was yes
 (17) Q Now let me go on to another study sir Let me - one
 (18) more question there When Mr Neff said that he was relying
 (19) on some work that Mr Rice had done many many years ago is
 (20) that not right?
 (21) A Yes sir
 (22) Q And that was before Mr Rice studied the effects of the
 (23) Exxon Valdez oil spill and generated this whole area of
 (24) research is that correct?
 (25) A His most recent research that was - that was before his

Vol 33 5851

- (1) most recent research yes
 (2) Q That recent research is what we've just been talking about
 (3) isn't it?
 (4) A That's right
 (5) Q Now you can put that one to the side sir
 (6) Are you familiar with Mr Bue's recent work in this area
 (7) and it's reflected in a letter that he wrote to the
 (8) commissioner of the Alaska Department of Fish and Game in
 (9) December of 1993?
 (10) A Could I see the letter please?
 (11) Q Yes sir it's up there and it's in front of you and it's
 (12) Plaintiffs Number 868 Are you finding it sir?
 (13) A I will in a minute I'm sure
 (14) Q I tell you what rather than spend a lot of time let me
 (15) let you look at my copy and see if you remember it This is
 (16) the one we're going to talk about okay?
 (17) A Okay thank you
 (18) Q Now let me just give you a second to become familiar again
 (19) with it so you know what we're talking about
 (20) A Okay
 (21) Q Is that work that you are familiar with?
 (22) A I've seen part of this yes
 (23) Q Okay Have you looked at it carefully sir?
 (24) A Yes
 (25) Q All right And you know that Mr Bue has concluded that

Vol 33 5852

- (1) there's an inheritable difference in egg mortality for fish
 (2) from oiled versus unoiled streams don't you?
 (3) A Yes
 (4) Q And that inheritable when Mr Bue uses it that way that
 (5) means genetic right?
 (6) A I think so yes
 (7) Q Now Mr Bue isn't working for the plaintiffs is he sir?
 (8) A No
 (9) Q Now I want to look at some of the research that was out
 (10) there prior to the time you decided to do your analysis for
 (11) Exxon here And let's start with - actually some of it
 (12) was - was after you started with Exxon You had a - a peer
 (13) reviewed paper in which you were a co author that was entitled
 (14) The Influence of Crude Oil and dispersant on the Sensory
 (15) Characteristics of steelhead in Marine Waters didn't you?
 (16) A That's right
 (17) Q And that was with a series of co authors?
 (18) A Yes
 (19) Q Steelhead is that a fish that's in the salmonid family?
 (20) A That's right
 (21) Q And you and your co authors in that report state do you
 (22) not sir that the tanker transport of oil along the Pacific
 (23) coast of North America can result in serious oil spills that
 (24) have significant implications to the fishing industry?
 (25) A Yes I did

Vol 33 5853

- (1) Q And you recognize in that report that fish can absorb
 (2) hydrocarbons?
 (3) A Yes
 (4) Q And you say oil tainting or absorption from hydrocarbons
 (5) from oil to the edible portion of fish would have serious
 (6) implications on the marketability of fish and fish products in
 (7) general don t you?
 (8) A That s right
 (9) Q And you also determine that just sniffing raw or cooked
 (10) fish may not detect that contamination has occurred?
 (11) A That s right
 (12) Q And you said cooked fish placed in the mouth may increase
 (13) the testing of oil contaminant?
 (14) A Yes
 (15) Q And the changes in flavor perception or low levels of off
 (16) flavor can have profound implications on market quality?
 (17) A Yes
 (18) Q Now you re also aware of a work by Mr - that same
 (19) Mr Rice Stan rice is that his name?
 (20) A Yes
 (21) Q They call him Jeep though don t they?
 (22) A Okay
 (23) Q Do you know that?
 (24) A I m not sure if I ve heard him called that
 (25) Q Have you met Mr Rice?

Vol 33 5854

- (1) A I ve met him but only quite some time ago
 (2) Q All right You re familiar with a 1993 paper where
 (3) Mr Rice says that several studies document that crude oil and
 (4) its components inhibit growth of fish aren t you?
 (5) A Yes
 (6) Q And the authors say that if exposure to oil inhibits the
 (7) growth of pink salmon these fish would be more susceptible to
 (8) predation and that means more likely to being eaten?
 (9) A Yes
 (10) Q And possibly more susceptible to disease and might
 compete
 (11) less successfully for food than unexposed fish aren t you?
 (12) A Yes
 (13) Q And the authors state that even low levels of oil pollution
 (14) could reduce survival of pink salmon during their early marine
 (15) life?
 (16) A Yes
 (17) Q And in fact the authors concluded that fish exposed for 40
 (18) days to sublethal that means less than enough to kill right?
 (19) A Yes
 (20) Q Concentrations of naphthylene in the water soluble fraction
 (21) of Cook Inlet crude that s what they were looking at in that
 (22) study?
 (23) A Yes
 (24) Q Those fish grew significantly less than unexposed fish?
 (25) A That s correct

Vol 33 5855

- (1) Q Let s take a look at some of the work the Trustees have
 (2) done in the area One of the Trustee papers by Wortheimer
 (3) found a significant loss in adult returns in 1990 because oil
 (4) in those marine feeding areas bays and estuaries caused
 (5) poorer growth of pink juveniles which would result in higher
 (6) losses you re familiar with that aren t you sir?
 (7) A I m familiar with it yes
 (8) Q All right Now Mr Willette -
 (9) A He didn t state that however
 (10) Q I m sorry?
 (11) A He didn t state that however That he found reduced adult
 (12) return He speculated that what he was measuring caused an
 (13) adult return loss but he didn t state that he found that
 (14) Q So that this was what he found from a review of others
 (15) work is what you re saying?
 (16) A No he was reviewing his data and others work in terms of
 (17) the growth in the marine environment and found a difference in
 (18) their size that he correlated or he said was related to oil and
 (19) then he said that could cause an adult return loss
 (20) Q I ll take it sir Now you re familiar as well with Mr
 (21) Willette s work?
 (22) A Yes I am
 (23) Q And that he has concluded that the number of adult pink
 (24) salmon that return each year appears to be strongly affected by
 (25) mortality during the early marine period?

Vol 33 5856

- (1) A Yes
 (2) Q And that early marine period that s when those fish are
 (3) out there in this environment and they re - some of them are
 (4) in this nearshore environment?
 (5) A Yes
 (6) Q And that s where they re mixed with those that kelp and
 (7) eelgrass and fucus they re in that environment?
 (8) A No they re really on the surface some distance from that
 (9) Q They re on the surface?
 (10) A The top three to four feet of water usually
 (11) Q All right Is it - is it your position that the juvenile
 (12) salmon don t live in the - in the vegetable environment the
 (13) kelp and the eelgrass and the -
 (14) A You can certainly find them there at times but in terms of
 (15) the greatest percentage of their time like 99 percent of the
 (16) time they are in free swimming environments away from
 (17) shoreline
 (18) Q All right And let me ask you whether Mr Willette said
 (19) that slow growing individuals sustain a higher mortality
 (20) because they are vulnerable to predators for a longer time?
 (21) A That s what he says yes
 (22) Q And you agree with that don t you?
 (23) A I do
 (24) Q And that oil contamination can reduce the growth rate of
 (25) juvenile pink salmon in seawater?

Vol 33 5857

- (1) A He says that yes
- (2) Q Now I'm going to ask you sir about - about whether you
- (3) agree or disagree with some of the results that the Trustees
- (4) came up with
- (5) A Okay
- (6) Q All right? Do you agree with the following in autumn of
- (7) 1989 egg mortality in oiled streams averaged about 15 percent
- (8) compared to about 9 percent in unoiled streams?
- (9) A Based on - I mean just a statement I agree that that
- (10) statement has been given
- (11) Q That the Trustees said that?
- (12) A Yes
- (13) Q Now do you agree that that's what really happened?
- (14) A I believe they found dead eggs when they - when they
- (15) pulled them out of the gravel
- (16) Q Okay is your work consistent with the Trustees in that
- (17) area or inconsistent?
- (18) A We found no embryo mortalities which would be comparable
- (19) to the egg mortalities
- (20) Q All right Are you telling me that your work is consistent
- (21) with what the Trustees found or inconsistent?
- (22) A Inconsistent
- (23) Q Inconsistent all right And would you agree or disagree
- (24) with the following Since 1989 egg mortality in the oiled
- (25) areas has generally increased?

Vol 33 5858

- (1) A I would disagree with that
- (2) Q Disagree with the Trustees on that?
- (3) A Yes
- (4) Q Do you agree with the following 1991 and 1992
- (5) approximately 40 to 50 percent of the salmon eggs in oiled
- (6) streams did not survive as compared to an 18 to 30 percent
- (7) mortality in unoiled streams?
- (8) A I would disagree with that
- (9) Q Trustees found that though?
- (10) A That's correct
- (11) Q Do you agree with the following In 1993 though the rates
- (12) of egg mortality had dropped to an average of less than 25
- (13) percent in oiled streams and less than 15 percent in unoiled
- (14) streams the difference has still persisted?
- (15) A I have no data that I gathered that would counteract that
- (16) Q But you know that's what the Trustees found?
- (17) A Yes
- (18) Q And do you agree with the following There was a genetic
- (19) effect in the young which carried over into adulthood and was
- (20) even inherited by the next generation?
- (21) A Of course not
- (22) Q You don't agree with that?
- (23) A No
- (24) Q That's what you're here to tell us about today?
- (25) A Yes that's right

Vol 33 5859

- (1) Q But that's what the Trustees found isn't it?
- (2) A Yes sir
- (3) Q All right And as far as you're concerned that's not even
- (4) a possibility?
- (5) A I - in science everything always has a possibility
- (6) Q All right but to understand what you're telling us here
- (7) today that possibility is right down at the bottom isn't it?
- (8) A All my data pointed to the opposite direction
- (9) Q We'll come back to look at that sir Do you agree with
- (10) the following or disagree Differences in egg mortality
- (11) between pink salmon from the oiled and unoiled streams when
- (12) both were raised in the laboratory were as great as the
- (13) differences seen in the wild essentially eliminating
- (14) environmental factors from consideration
- (15) A They said that yes
- (16) Q The Trustees said that?
- (17) A Yes sir
- (18) Q But you don't agree with that?
- (19) A Well I - I didn't look at their data - I didn't look at
- (20) my data or didn't have any data on that year
- (21) Q And you said you didn't look at their data on that issue
- (22) did you?
- (23) A Well this is what it is here I believe sir
- (24) Q Did you look at it?
- (25) A Yes

Vol 33 5860

- (1) Q Do you agree or disagree with it? You don't have any data
- (2) yourself in this area Do you agree or disagree with what the
- (3) Trustees said there?
- (4) A I would disagree
- (5) Q Don't need any data to disagree?
- (6) A Well in looking at their data
- (7) Q Would you agree or disagree with the following that
- (8) there's an inheritable difference in egg mortality for fish
- (9) from oiled versus unoiled streams?
- (10) A Is that the same question?
- (11) Q Well it is - you're right It's a question I asked you
- (12) before that Mr Willette had in his report and now the Trustees
- (13) have adopted it Do you agree or disagree with the Trustees
- (14) statement?
- (15) A I would disagree with that
- (16) Q Disagree with it and do you agree or disagree with the
- (17) following Besides the fate of eggs laid in oiled gravel
- (18) juvenile fish emerging into Prince William Sound in the spring
- (19) of 89 encountered oil in the water as slicks or small droplets
- (20) which were consumed along with food?
- (21) A I would not agree - I would not disagree with that
- (22) Q Would not disagree?
- (23) A Yeah
- (24) Q Well does that show on this chart here sir on 5720 A?
- (25) A No sir

Vol 33 5861

- Q And despite the large size of the 1990 run of pink salmon
 (2) it would have been larger by as much as 1.9 million fish if the
 (3) spill had not occurred say the Trustees agree or disagree
 (4) sir?
 (5) A That's where I said my range - that would be the maximum
 (6) impact perhaps
 (7) Q So you're not agreeing with them on that point but you
 (8) recognize it may be a possibility?
 (9) A Yes
 (10) Q Are you able to quantify that possibility at all for us?
 (11) A No sir
 (12) Q All right Let's look at some of your differences now with
 (13) Dr Mundy You weren't present for his testimony?
 (14) A No I wasn't
 (15) Q But I'm sure you've been told about it?
 (16) A I've been told about segments of it yes
 (17) Q You know that Dr Mundy - first of all you know Dr Mundy
 (18) reached his conclusions before he was hired by the plaintiffs?
 (19) A I'm not -
 (20) Q You weren't told about that part of his testimony?
 (21) A That he was -
 (22) Q That he reached his conclusions before he was hired by the
 (23) plaintiffs?
 (24) A I'm not aware of when he reached his conclusions
 (25) Q All right but you know that or were told that he relied

Vol 33 5862

- (1) for his conclusions that there was damage to Prince William
 (2) Sound pinks based on studies dealing with damage to herring
 (3) with nearshore intertidal damage with the damage to other
 (4) species like cutthroat trout damage to salmon embryos the
 (5) low survival of herring the low survival of both wild and
 (6) hatchery stocks the effects seen only in Prince William Sound
 (7) on the runs in '92 and '93 and that there was evidence of
 (8) continued damage to the ecosystem and that the forecast
 models
 (9) were shooting high about what he perceived to be an adequate
 (10) estimation you were told about those reasons weren't you?
 (11) A Not all of them but certainly those associated with the
 (12) pink salmon
 (13) Q All right Let me see to what extent you and Dr Mundy
 (14) have some overlap anyway Based on the research you've
 done
 (15) in the case and your knowledge of pink salmon you would
 agree
 (16) at least that the pink salmon returns to Prince William Sound
 (17) in '93 were on the low end of the historical range of returns
 (18) at least through the sixties is that right?
 (19) A Yes
 (20) Q And would you agree that in 1993 both the amount of wild
 (21) pink salmon and hatchery pink salmon returning to Prince
 (22) William Sound were low?
 (23) A Yes
 (24) Q Would you agree that it's your opinion or is it your
 (25) opinion that the actual return to Prince William Sound pink

Vol 33 5863

- (1) salmon in '92 was something less than 10 million fish?
 (2) A Yes
 (3) Q And you've heard that the predicted total return to Prince
 (4) William Sound for '92 was very high?
 (5) A Yes
 (6) Q In 1993 the actual return of Prince William Sound pink
 (7) salmon was also - was something less than the '92 return?
 (8) A That's right
 (9) Q And you know that the prediction for the return for 1993
 (10) was predicted higher?
 (11) A Yes For 1993 yes
 (12) Q And you know at least generally from what was predicted
 (13) versus the actual returns in both '92 and '93 that the actual
 (14) return was substantially smaller than that was predicted?
 (15) A Yes
 (16) Q In fact you know that the 1992 and 1993 actual returns
 (17) were among the lowest in recent history don't you?
 (18) A Yes
 (19) Q All right Now let's take a look at some of a - or a
 (20) couple of your own findings You agree with the statement that
 (21) pre emergent pink salmon fry in some heavily impacted streams
 (22) incorporated Exxon Valdez hydrocarbons into various tissues
 (23) more than two years after the initial spill don't you?
 (24) A Yes
 (25) Q And you agree with the statement that the hydrocarbons and

Vol 33 5864

- (1) their metabolites - let me stop Metabolites is what the body
 (2) turns those hydrocarbons into right?
 (3) A Yes
 (4) Q The hydrocarbons and their metabolites induced detectable
 (5) physiological changes in those pre emergent pink salmon fry
 and
 (6) incorporated Exxon Valdez crude into the various tissues don't
 (7) you?
 (8) A I'm sorry I'm not - I'm not familiar with the statement
 (9) you're making
 (10) Q Let's take a look at your deposition at page 146 line 22?
 (11) A Okay
 (12) Q I think that's in volume one sir?
 (13) A Yeah I've got 146 here and line which?
 (14) Q Let's look at line 22 Okay? Let me ask if this question
 (15) was given with reference to a particular report the current
 (16) study demonstrates that pre emergent salmon fry in some
 heavily
 (17) impacted streams incorporated Exxon Valdez petroleum into
 (18) various tissues more than two years after the initial spill and
 (19) that the hydrocarbons and their metabolites induced detectable
 (20) physiological changes and you were asked if you saw that
 (21) sentence and you said yes is that correct?
 (22) A Yes
 (23) Q And then you were asked do you have any comment as to
 the
 (24) author's statement relating to two years after the initial
 (25) spill and you said sure it means that there were still

Vol 33 5865

- (1) hydrocarbons of sufficient concentration to be detected in the
 (2) tissue analysis didn't you?
 (3) A Yes
 (4) Q And were you asked do you agree or disagree that could
 (5) have been true and you said I'm sure that's true it was also
 (6) true in our data is that correct?
 (7) A Yes
 (8) Q So now you remember?
 (9) A Yes
 (10) MR COOPER Your Honor could we have the next
 (11) question and answer read to put that in context?
 (12) MR JAMIN I'm happy to read the next one then we
 (13) can take a break
 (14) Then you went on and said it's just as your research comes
 (15) to the conclusion -
 (16) MR COOPER That's the question
 (17) MR JAMIN The question it's just that as your
 (18) research comes to the conclusion that that did not have any
 (19) adverse impact on the fish and you said that's right as to
 (20) your research right?
 (21) THE WITNESS Yes
 (22) MR JAMIN Good place for us to end Your Honor
 (23) THE COURT Take our recess now ladies and
 (24) gentlemen We'll be in recess for 15 minutes
 (25) (Jury out at 10:00 a.m.)

Vol 33 5866

- (1) (Recess from 10 o'clock a.m. to 10:17 a.m.)
 (2) (Jury in at 10:17 a.m.)
 (3) THE COURT You may continue Mr. Jamin
 (4) MR JAMIN Thank you Your Honor
 (5) BY MR JAMIN
 (6) Q Sir there was one area that I asked you a question and you
 (7) didn't agree with me or you didn't know and we were talking
 (8) about whether food items such as copepods amphipods and
 (9) other
 (10) types of zooplankton whether they would tend to
 (11) bioaccumulate
 (12) hydrocarbons that they were exposed to And do you
 (13) remember
 (14) that question?
 (15) A Yes sir
 (16) Q And you indicated that if Mr. Neff felt that they did that
 (17) that would be enough for you?
 (18) A Yeah I don't have any personal knowledge on their uptake
 (19) of hydrocarbons
 (20) Q Okay And Mr. Neff is the sort of person on whom you would
 (21) rely then?
 (22) A Yes sir
 (23) Q Let me just ask you to take a look at his deposition at
 (24) volume six page 1071 the first two lines and you can hold
 (25) that up there
 (26) Have you had a chance to look at that time?
 (27) A Yes I did
 (28) Q That's what Mr. Neff says?

Vol 33 5867

- (1) A That's what he says yes
 (2) Q Let me move to another area sir and that specifically has
 (3) to do with pink salmon harvested in '91 You examined
 (4) information regarding the quality of pink salmon harvested in
 (5) late 1991 in Prince William Sound did you not?
 (6) A Say again please?
 (7) Q You examined information regarding the quality of pink
 (8) salmon harvested in Prince William Sound in 1991?
 (9) A Yes
 (10) Q And you didn't collect any data of your own on that
 (11) subject?
 (12) A No sir
 (13) Q The gist of the information you examined was that the
 (14) salmon were showing maturation characteristics and they were
 (15) small?
 (16) A Yes
 (17) Q And the salmon were poor quality measured in terms of size
 (18) and color weren't they?
 (19) A Yes
 (20) Q That was in 1991?
 (21) A That's right
 (22) Q And it's your impression that the poor quality has an
 (23) effect on marketability is that correct?
 (24) A Yes sir
 (25) Q And your impression of the 1991 late pink salmon was that

Vol 33 5868

- (1) they were not of a very good marketable quality is that
 (2) correct?
 (3) A Well I can't speak for the whole quality but looking at
 (4) the variables and size in that population there was definitely
 (5) some small fish that would be hard to market
 (6) Q You did not undertake an analysis as to what may have been
 (7) a cause of the bad appearance of these fish did you?
 (8) A Well maturation was the cause of the bad appearance You
 (9) mean in terms of visual appearance?
 (10) Q Did you do any kind of fieldwork -
 (11) A No sir
 (12) Q - to try to figure that out?
 (13) A No
 (14) Q And in examining the information that you reviewed on the
 (15) quality of 1991 pink salmon that returned late in the season
 (16) you heard that those fish may have returned late because they
 (17) apparently lost their way to the hatcheries is that correct?
 (18) A I heard that yes
 (19) Q And you didn't do any further investigation of that did
 (20) you?
 (21) A No
 (22) Q No science from Exxon on that?
 (23) A No sir
 (24) Q And you were aware of literature that indicates that the
 (25) exposure to hydrocarbons may have an effect on the homing

Vol 33 5869

- (1) mechanisms of chinook and coho salmon haven't you?
 (2) A Yes
 (3) Q Let's take a look at your conclusions sir Exxon hired
 (4) you to do some work relating to - I just want to clarify this
 (5) to red salmon but you're not talking about red salmon today
 (6) is that right?
 (7) A That's right
 (8) Q So we're talking about pink salmon only?
 (9) A Yes
 (10) Q And you talked about to the jury about a summary of your
 (11) opinions concerning pink salmon population dynamics and
 (12) estimates of fish didn't you? That was that 8980 A Let's
 (13) get that up DX8980 A
 (14) All right Let me ask the question first again sir
 (15) This exhibit 8980 A that you talked about to the jury is
 (16) a summary of your opinions concerning the pink salmon
 (17) population dynamics and estimate of fish populations isn't it?
 (18) A In terms of loss
 (19) Q Is that correct?
 (20) A Right
 (21) Q And the lost population predictions made by ADF&G were
 (22) based on certain life history population dynamics done by Hal
 (23) Geiger from the data he gathered working on the Trustee
 (24) science
 (25) program?
 (26) A Yes

Vol 33 5870

- (1) Q And you disagree with the population predictions done by
 (2) Geiger and the Trustees here and your best estimate is down at
 (3) the zero range isn't it?
 (4) A I said my estimate would be from zero to the higher number
 (5) there on the right and I say my data indicates that there was
 (6) no impact but to say there was absolutely no impact I
 (7) couldn't say that definitely so I'm someplace in a range
 (8) Q When you talk about impact you're talking about the Exxon
 (9) Valdez oil spill?
 (10) A Yes sir
 (11) Q Would you say that the Exxon Valdez oil spill was a
 (12) substantial factor sir in these numbers the 1 860 000 the
 (13) 70 000 and the 40 000?
 (14) A Based on Mr Geiger's estimate that's what he assumes
 (15) yes
 (16) Q I know Mr Geiger does but I want to try to understand
 (17) what you're saying as you quantify and you say someplace
 (18) between the zero and 1 860 000
 (19) A Yes
 (20) Q Is it your view that the spill or the impact was a
 (21) substantial factor in these failures 1 860 000 the 70 and the
 (22) 40?
 (23) A No I wouldn't think that would be a substantial factor
 (24) but it could go that high yes
 (25) Q It could go that high?

Vol 33 5871

- (1) A Yes
 (2) Q All right Now you have to appreciate that the jury has
 (3) to go back into the room and do some quantification and
 (4) they're using this 50 percent standard more probable than
 (5) not
 (6) A I'm not aware of that but you can tell me
 (7) Q Okay Well I will tell you that and that's why I want to
 (8) try to test you a little bit more here Is there some range
 (9) above zero where it would be your testimony that it's more
 (10) probable than not that the Exxon Valdez oil spill was a
 (11) substantial factor in causing some damage and if so where's
 (12) that number?
 (13) A Yeah I just think that number would be really hard to say
 (14) because I feel their numbers are at the high extreme and
 (15) therefore I'd be someplace between zero and that - and I'm
 (16) sorry I can't give you a real hard fast number
 (17) Q All right I just wanted to test you But you disagree
 (18) with the population predictions done by Geiger and the
 (19) Trustees
 (20) at the high range fair to say?
 (21) A Yes
 (22) Q And the population loss opinions provided by Dr Mundy
 (23) were
 (24) based on his expertise in population dynamics and fisheries
 (25) management weren't they?
 (26) A He used - I believe he used Mr Geiger's estimates for his
 (27) 1990/91 studies and he was using the different document an

Vol 33 5872

- (1) earlier document before Mr Geiger recorrected his so
 (2) Mr Geiger had once said it was about 2 181 000 and that was
 (3) the number Mr Mundy was using He didn't - well I mean he
 (4) chose probably not to use Mr Geiger's second estimate of a
 (5) lower estimate
 (6) Q Well actually Mr Geiger's original number was bigger than
 (7) this the 2 101 000 and Mr Mundy made some adjustments to
 (8) Mr Geiger's number isn't that true?
 (9) A I'm not aware he made much adjustment but -
 (10) Q He testified to that we'll stick with that
 (11) A Okay
 (12) Q These other numbers Mr Mundy talked with us about the 20
 (13) million and the 19 million those numbers were based upon his
 (14) expertise as a fellow who had been an Alaska fish biologist a
 (15) fisheries manager a former chief scientist of the Alaska
 (16) division of commercial fisheries and a population dynamicist
 (17) is that not right?
 (18) A Yes
 (19) Q Now other than agreeing with Dr Mundy that the runs were
 (20) down in 1991 and down in 1993 you don't agree with him on
 (21) the
 (22) causes is that right?
 (23) A That's correct
 (24) Q All right Now you're aware that Dr Mundy was certified
 (25) by this Court in population dynamics aren't you?
 (26) A That's right

Vol 33 5873

- (1) Q And when you were first approached by Bogle & Gates -
 (2) Bogle & Gates is one of the groups of lawyers that s working
 (3) for Exxon here is it not?
 (4) A Yes
 (5) Q And you were asked if you wanted to consult for Exxon as an
 (6) expert You said you didn t That you didn t is that
 (7) correct?
 (8) A Did not yes
 (9) Q And you said no because you felt that the expertise they
 (10) required was someone with a specialty in population dynamics
 (11) is that correct?
 (12) A Yes
 (13) Q All right While you were familiar with population
 (14) dynamics that s just not your expertise?
 (15) A That s right
 (16) Q All right So even though you told Exxon from the very
 (17) beginning that you had insufficient expertise in population
 (18) dynamics you re testifying here in court to contradict Dr
 (19) Mundy who has been certified as a population dynamicist is
 (20) that correct?
 (21) A I would disagree with him yes
 (22) Q Now you also told the jury yesterday did you not that
 (23) before you were hired when you actually signed on with Exxon
 (24) that one of the preconditions was that there would be no
 (25) influence from Exxon and that you would work with consultants

Vol 33 5874

- (1) like yourself and not Exxon scientists is that right?
 (2) A I realized that Exxon would be involved in terms of the
 (3) study
 (4) Q There d be some involvement?
 (5) A Yes
 (6) Q But you wanted independent scientists didn t you?
 (7) A Yes
 (8) Q All right Now you wrote two papers for those meetings
 (9) that we ve talked about down in Atlanta in 1993 at that ASTM
 (10) conference didn t you?
 (11) A Yes
 (12) Q And one of them dealt with the early stages of pink salmon
 (13) and one of them dealt with the later stages of pink salmon?
 (14) A Yes
 (15) Q And your co author on those papers was a gentleman whose
 (16) name is Al Maki?
 (17) A Yes
 (18) Q And Mr Maki s been in the courtroom?
 (19) A Yes sir
 (20) Q All right And those two papers describe in detail all the
 (21) science you told the jury about yesterday and today?
 (22) A Yes
 (23) Q And you were the lead author on one of those papers
 (24) weren t you?
 (25) A Yes on the early life history

Vol 33 5875

- (1) Q But down at the ASTM conference Mr Maki presented the -
 (2) both of the papers didn t he?
 (3) A No - oh pardon me the synopsis combining them yes I
 (4) think he did
 (5) Q And the papers say on their cover do they not presented
 (6) to ASTM by Exxon?
 (7) A Would have to look
 (8) Q Okay May I approach Your Honor?
 (9) Does it say at the top for presentation at the third ASTM
 (10) symposium on environmental toxicology and risk assessment
 (11) aquatic plant and terrestrial April 26th to 28th 1993 in
 (12) Atlanta Georgia this manuscript has been submitted by Exxon
 (13) to ASTM for publication and may not be reproduced or
 (14) distributed all rights reserved to Exxon? And that s on both
 (15) of them isn t it sir?
 (16) A Yes Yes it is
 (17) Q Now sir let me ask you can science be inconclusive by
 (18) design?
 (19) A Yes it could be
 (20) Q It can?
 (21) A Yes
 (22) Q And what does that mean?
 (23) A Means that it was designed on a program of investigation
 (24) that wasn t meant to demonstrate a result
 (25) Q All right And I don t believe talked about a - that you

Vol 33 5876

- (1) didn t find any mechanism that dealt with - that could explain
 (2) what happened in Prince William Sound in 1992 1993 1994
 (3) and
 (4) 1995 right?
 (5) A I didn t look at 94 95 but up to that time yes
 (6) Q You looked at 1992 and 1993 and you testified that there
 (7) was no mechanism right?
 (8) A Yes
 (9) Q But as we ve talked this morning as we ve had an
 (10) opportunity to check here today you ve acknowledged to me
 (11) that
 (12) what the fish eat is very important to their well being?
 (13) A That s right
 (14) Q And you ve acknowledged that there s a whole series of
 (15) studies out there and even Dr Neff recognized that the fish
 (16) eat stuff that s bad for them it s bad for the fish right?
 (17) A Right
 (18) Q And you ve acknowledged for me that there are a series of
 (19) studies out there that attribute the losses we ve talked about
 (20) to genetic damage?
 (21) A Yes
 (22) Q You disagree with him?
 (23) A Right
 (24) Q But you didn t study the genetic damage? In fact you
 (25) started to but then it was stopped is that right?
 (26) A The last study yes
 (27) Q It was stopped and you wanted to keep going but it

Vol 33 5877

- (1) wasn't - it didn't keep going did it?
 (2) A I'm the one that stopped it
 (3) Q But after it was stopped you wanted to keep going We
 (4) talked about that didn't we?
 (5) A That would be the following year yes
 (6) Q Right Now can science be inconclusive by design because
 (7) you blur data too? Is that a possibility?
 (8) A That would be a possibility
 (9) Q And what does that mean?
 (10) A That means that you would analyze it in a way or - or not
 (11) recognize the conclusions that the data would suggest
 (12) Q All right And if we were - were looking at the issue of
 (13) water quality and we had data from various levels in the water
 (14) and we blended them or averaged them we'd lose some of the
 (15) precision that was available from the data wouldn't we?
 (16) A One would do that yes
 (17) Q Now is it also possible in science to lose some of what
 (18) might be available by using population samples that are too
 (19) small?
 (20) A Yes
 (21) Q All right What does that concept mean? We call it power
 (22) in science don't we?
 (23) A That's right
 (24) Q Could you explain what it is?
 (25) A Means that's your means would be based on a large

Vol 33 5878

- (1) variability and when you did your statistics on that that
 (2) large variability would not allow you to detect real
 (3) differences in those means
 (4) Q Now that's related to those error bars that we saw around
 (5) the circles in some of your pictures isn't it?
 (6) A Yes
 (7) Q All right And the gist of it is that the error bars
 (8) reflected what statisticians tell us is the range of
 (9) possibilities given a particular sample?
 (10) A Yes
 (11) Q All right And as we increase the size of the sample we
 (12) can very often suck in those error bars is that right?
 (13) A That's right
 (14) Q In fact some of your charts showed that is that right?
 (15) A Yes
 (16) Q Now if we have a sample that's very small in comparison to
 (17) the entirety we can probably expect some pretty large error
 (18) bars?
 (19) A Well yes that's right --
 (20) Q As the sample size increases very often those error bars
 (21) come in?
 (22) A Yes
 (23) Q One way science could be inconclusive by design would be
 (24) if
 (25) our sample - the samples we took of a particular population
 were small rather than large they were small samples rather

Vol 33 5879

- (1) than larger samples?
 (2) A That's right
 (3) Q Now is another way that science could be inconclusive by
 (4) design is when a scientist isn't told all he needs to know
 (5) about data?
 (6) A Yes
 (7) Q All right And you told me a couple of times today and I
 (8) wrote it down Exxon would only allow me to know what I
 needed
 (9) to know didn't you?
 (10) A Yes
 (11) MR JAMIN I have nothing further sir
 (12) THE COURT Redirect?
 (13) MR COOPER Thank you Your Honor
 (14) REDIRECT EXAMINATION OF ERNEST BRANNON
 (15) BY MR COOPER
 (16) Q Dr Brannon a few questions in a few areas that Mr Jamn
 (17) touched on
 (18) On the last matter that he asked you about you made the
 (19) comment Exxon telling you what you needed to know Can
 you
 (20) explain what you mean by that?
 (21) A Yes I think I can The - the study that I would design
 (22) on pink salmon I would be - would be responsible for There
 (23) might be another scientist doing something on herring another
 (24) scientist doing something on birds another scientist doing
 (25) something on water quality And I wouldn't know who those

Vol 33 5880

- (1) scientists were or what they were doing and I guess it was
 (2) because they didn't want to bias my opinion one way or the
 (3) other so that I was totally uninfluenced by Exxon's viewpoint
 (4) or viewpoint of other experts
 (5) So when I said only giving the information I needed to
 (6) know that was within the realm of my study Certainly
 (7) anything within my study I was allowed to know or they made
 (8) sure that my data was being accumulated and so forth if that
 (9) was the issue but what I meant by that was that if there's
 (10) anything outside of my area of need to know such as other
 (11) species or other studies that didn't directly affect me I
 (12) didn't even know who was doing it
 (13) Q But with respect to matters in your area of expertise if
 (14) you needed something from Exxon and asked Exxon for
 something
 (15) was it always provided?
 (16) A I wish the university would work that way yes
 (17) Q You're satisfied that you got what you needed?
 (18) A Yes
 (19) Q And you got what you asked for?
 (20) A Yes I did
 (21) Q Now while we're on that general subject Mr Jamn talked
 (22) about the study having to do with genetic effects and you
 (23) recall this is one you testified a few minutes ago that you
 (24) terminated?
 (25) A Yes

Vol 33 5881

- (1) Q Can you - when was that - when did you start that study?
 (2) Was that last year?
 (3) A Yes I started it in the fall of last year
 (4) Q And just very generally what were you trying to do? How
 (5) were you going to go about it?
 (6) A Well I was aware that the issue was coming up about
 (7) genetic damage I felt I really had to address those issues of
 (8) genetic damage with the egg viability study on the years at
 (9) risk The studies you've already talked about and there was
 (10) concern we should be doing something in that regard so I was
 (11) asked if I would design a study that would follow up my work on
 (12) genetics and I designed that I designed it rather late for
 (13) the pink salmon season because of the limited time I had to
 (14) work on it but I did design it and we did get eggs flown in to
 (15) us to do the study
 (16) Q Just generally the study would have taken eggs salmon
 (17) eggs?
 (18) A Take the eggs from pink salmon expose them to oil, much
 (19) like the Auke Bay study is doing now
 (20) Q You take the eggs and artificially spawn them and keep them
 (21) in a laboratory to see how well they did?
 (22) A Just exactly like the hatchery procedures
 (23) Q And as is typical in some of these studies you've talked
 (24) about already that would involve a group that was then
 (25) subjected to an oil treatment and a group that was not

Vol 33 5882

- (1) subjected to an oil treatment?
 (2) A Yes that's right We would have a control that would not
 (3) have any of the experimental levels of oil but just our
 (4) freshwater control as an example of what it would be without
 (5) the presence of oil
 (6) Q Why do you use - why do scientists use a control group?
 (7) A That's one of the ways you could blur your data I guess
 (8) if you didn't use a control you wouldn't know what to compare
 (9) it with
 (10) Q Do you worry about whether or not the controls are
 (11) appropriate controls?
 (12) A That's right
 (13) Q And in this case what happened with your control group?
 (14) A My controls all died
 (15) Q What did that - these were eggs that hadn't even been
 (16) subjected to any oil?
 (17) A That's right In the process - often when you fly eggs
 (18) some distance if the person doing the spawning has altered
 (19) their incubation success in some way or just the high
 (20) elevation frankly I don't know what it is that caused it but
 (21) sometimes we blank out on flying eggs to lab for
 (22) experimentation It's probably happened - 20 or 30 percent of
 (23) my experience comes with poor quality of eggs shipped in like
 (24) that
 (25) Q Now it took a while for the eggs - for the control eggs

Vol 33 5883

- (1) to die?
 (2) A Yes If you don't - if you don't move them If you're
 (3) very careful and don't move them you don't shock them and
 (4) even though the egg cannot live it's kind of suspended in that
 (5) situation That little membrane keeps the bacteria and
 (6) everything away from the yolk and so it doesn't turn white and
 (7) so it doesn't look like it's dead but it is dead
 (8) Q So when you found the controls died you couldn't go
 (9) forward with the experiment?
 (10) A That meant that the study was useless
 (11) Q And what did you want to do then? Did you want to get some
 (12) more eggs and start over?
 (13) A I had already taken eggs at the very end of the run so I
 (14) knew there was no eggs left
 (15) Q You couldn't get more eggs in 1993?
 (16) A No
 (17) Q So the next opportunity to get any eggs in order to do the
 (18) study would have been when?
 (19) A This fall
 (20) Q And you would have had to have gotten the eggs
 (21) artificially spawned them and allowed them to hatch and study
 (22) the results Is there any way that you could have done that by
 (23) the time of this trial?
 (24) A No I would have to be taking the eggs next week or week
 (25) after next

Vol 33 5884

- (1) Q Is that why the study wasn't pursued?
 (2) A That's right
 (3) Q In terms of the trial it wouldn't mean anything?
 (4) A That's right
 (5) Q You wanted to pursue it just from the standpoint of pure
 (6) science?
 (7) A Oh yes I would like to continue those - that kind of
 (8) study
 (9) Q But it wouldn't have shed any light on - by the time of
 (10) the trial that we're involved in now?
 (11) A I wouldn't have the results until 1994 late 1994
 (12) Q I guess under those circumstances you don't criticize Exxon
 (13) for not wanting to go ahead and pursue it?
 (14) A Well I'll still criticize them yeah
 (15) Q From the standpoint that you would have liked to have seen
 (16) it done for science?
 (17) A Yeah right
 (18) Q Could we have Exhibit 5720 A please?
 (19) Now you remember Mr Jamin asked you about some of the
 (20) data points on Dr Neff's chart?
 (21) A Yes
 (22) Q I think we're going to get that up here in a minute
 (23) A That wasn't the one
 (24) Q I think this was it actually
 (25) A Yeah

Vol 33 5885

- (1) Q And if I recall he asked you in a question if it wasn't
 (2) true that these data points are averages Do you remember that
 (3) question?
 (4) A Yes
 (5) Q And I think you then said if I heard it right you said
 (6) you suspect I think suspect was the word that you used You
 (7) suspected that they were Do you remember that?
 (8) A Yes I didn't know if they were some that were actually
 (9) averages of other samples
 (10) Q And then there was some discussion between you and
 (11) Mr Jamin about whether or not if these were just averages
 (12) that wouldn't mean that there were higher spikes that someho
 (13) got averaged down?
 (14) A Yes
 (15) Q Well let me just point out over here on the caption where
 (16) it says samples eight over ten PPB 840 over ten does that
 (17) suggest to you that your suspicion may have been wrong that
 (18) indeed these were individual samples?
 (19) A Yes
 (20) Q You were not here for all of Mr Neff's -
 (21) A No I wasn't
 (22) Q - testimony? Let me read from the transcript of
 (23) Mr Neff's testimony at the trial This is June 29 at page
 (24) 5690
 (25) Kind of frightening to think that we're at page five

Vol 33 5886

- (1) thousand six hundred and some already
 (2) THE COURT That is frightening
 (3) BY MR COOPER
 (4) Q But he was asked the question are each of these points
 (5) either an Exxon or a NOAA data point or are they dash are
 (6) they averages? Answer no these are each individual data
 (7) points individual water samples
 (8) Does that clear up any question in your mind as to whether
 (9) these are averages or individual samples?
 (10) A It certainly clears up the issue of whether they're
 (11) averaged or not From my perspective the values are so low
 (12) it doesn't matter whether they're averages of a hundred or
 (13) one It's so low beyond the level of effect that - that was
 (14) my main concern in terms of looking at the water column but
 (15) that does satisfy the question from the standpoint of single
 (16) samples yes
 (17) Q Now Mr Jamin asked you a number of questions about a
 (18) study that Mr Rice was doing I believe the study at Auke
 (19) Bay Do you recall that general subject matter?
 (20) A Yes
 (21) Q And I think he showed you a summary a document that
 (22) summarized or indicated some of the data and so forth?
 (23) A Yes
 (24) Q And you're familiar basically with how Mr Rice is
 (25) conducting that study?

Vol 33 5887

- (1) A Yes He's doing the study I would have liked to have been
 (2) doing down there in
 (3) Q You mean the - the one we were just talking about the egg
 (4) to the control?
 (5) A Yes the genetic study
 (6) Q Controls all died On Mr Rice's study describe generally
 (7) how that is set up Is he flowing water over gravel that he's
 (8) loaded with oil?
 (9) A He's put eggs in PVC plastic tubes columns that are
 (10) several feet high He's put gravel in those columns he's
 (11) mixed that gravel with oil prior to putting it in the columns
 (12) Then he puts eggs on top of screens and allows them to hatch
 (13) out and go down through the screen into the gravel and
 (14) incubate
 (15) He's using aluminum screens which we wouldn't use in fish
 (16) culture situations because aluminum can be toxic to eggs but
 (17) the eggs then hatch out and the alevins go down through the
 (18) gravel and incubate in that high concentration of oil on
 (19) gravel
 (20) Q That's the point that I want to get to is this
 (21) concentration but I guess we've got a couple of different
 (22) measurements We know the amount of oil the dosage in the
 (23) gravel and the sediment where these eggs are incubating?
 (24) A Yes they've added that based on grams of oil to grams of
 (25) substrate and that's total oil

Vol 33 5888

- (1) Q Okay We also - they've also measured the amount of oil
 (2) one form or another PAHs or VOAs or whatever the water that
 (3) is coming off of that substrate?
 (4) A Yes They will take samples of the effluent from those
 (5) pipes the waters flowing through the pipes and do analysis on
 (6) that
 (7) Q But these little eggs and alevins are being exposed not
 (8) only to whatever oil that may be in that water but also
 (9) whatever may be in the sediment?
 (10) A No It's primarily what's on the sediment because you see
 (11) that 50 parts per billion only occurs for the first few days
 (12) Q That's in the effluent?
 (13) A In the effluent then it drops right back down to less than
 (14) 10 parts per billion and even less than that So it's
 (15) primarily the effect of oil on the rocks that he's measuring
 (16) Q You've looked at what those measurements are haven't
 (17) you?
 (18) A Yes
 (19) Q Let me call up if I may Defendants Exhibit DX8900
 (20) You prepared this graph which reflects the sediment
 (21) dosages?
 (22) A That - that is his figures showing the concentrations of
 (23) oil based on his dose levels of how many grams of oil he put
 (24) on the gravel and he's got them in the - he had six - six
 (25) concentrations but because of some problems with his
 incubation set up he had to eliminate one and so he's got the

Vol 33 5889

- (1) zero the control
- (2) Q So this is no oil for these samples being raised in this?
- (3) A Right
- (4) Q And what is this?
- (5) A That's the 1 gram per kilogram of gravel 5 grams per
- (6) kilogram of gravel 15 grams per kilogram of gravel and 57
- (7) grams
- (8) Q When you were - Exxon was conducting the studies and going
- (9) out to the streams and so forth doing the samples were samples
- (10) taken of the actual oil loading in the oiled stream sediments?
- (11) A Yes that's right
- (12) Q And is that reflected on here?
- (13) A That's that hatched bar there on top 96 percent of the
- (14) field sample values fell within that range so it's something
- (15) between 0 and 0.1
- (16) Q This one happens to be on survival As you look at this
- (17) was there any effect on survival of these pink salmon in his
- (18) experiment at the levels that were actually experienced out in
- (19) the field?
- (20) A No And another thing you have to realize that he's
- (21) testing fresh oil It's unweathered Prudhoe Bay crude oil and
- (22) so when you leave the oil sit out there for three weeks before
- (23) it even gets to the streams or - or a week before it gets to
- (24) the streams it's weathered and it's lost much of its
- (25) toxicity So you can't even compare the concentrations and say

Vol 33 5891

- (1) A Yes
- (2) Q - VOAs VOAs?
- (3) A Yes
- (4) Q Do you recall that?
- (5) A Yes
- (6) Q And you said in your answer something to the effect if I
- (7) heard it right that you thought it was incorrect to suggest
- (8) that?
- (9) A That report we're referring to is a preliminary report and
- (10) Mr Rice will never put that in a peer reviewed journal because
- (11) the reviewers would catch that that he's using the effluent
- (12) concentration but talking about the oil contact on gravel as
- (13) actually the factor that's influencing the mortality and I'm
- (14) sure Mr Rice would correct that before he would allow that to
- (15) go out in print So that's a preliminary report and it would
- (16) be incorrectly stated if that's how it remained
- (17) Q Because what he's doing is really bearing on exposures in
- (18) the sediments as opposed to exposures in the water column?
- (19) A That's right He's got lots of data from other studies
- (20) that shows the tolerance level to oil in the water column is
- (21) much much higher than 50 parts per billion
- (22) Q All right Now another thing that Mr Jamin did was to
- (23) ask you a series of questions about places where you disagreed
- (24) with Trustee Council scientist studies do you remember that?
- (25) A Yes

Vol 33 5890

- (1) they're equivalent
- (2) Q And where do you first get the - where do you think you
- (3) first get a significant effect here on the various dosages on
- (4) survival?
- (5) A He didn't get any significant difference until he got past
- (6) 15 so someplace between 15 and 57
- (7) Q So based on all of that do you - what conclusion do you
- (8) arrive at about what that study reveals insofar as effect of
- (9) the oil on these embryos in the streams?
- (10) A As a scientist concerned about fish biology and oil it
- (11) makes me feel very good that they actually are very tolerant of
- (12) the concentrations we measured in the gravel and in the water
- (13) column and it has to get a devil of a lot higher before it
- (14) causes any problem to fish or to pink salmon
- (15) Q Do you feel this actually confirms the work that you did?
- (16) A My genetics work wasn't like this and I didn't do any dose
- (17) levels in terms of where did the fish die with high doses I
- (18) just measured what was in the stream and those - those levels
- (19) were very very very low
- (20) Q Now when Mr Jamin was cross examining you about this
- (21) subject I think that he asked you about whether or not this
- (22) information was going to result in or should result in a
- (23) lowering of that 10 parts per billion of -
- (24) A Yes
- (25) Q - volatile -

Vol 33 5892

- (1) Q And if I heard it right I may not have but if I heard it
- (2) right it sounded to me like most all of them if not all of
- (3) them dealt with the subject of embryo mortality in the
- (4) streams?
- (5) A Most of them dealt with that
- (6) Q And you disagree with the embryo mortality studies for the
- (7) reasons that we talked about at length on -
- (8) A Yes
- (9) Q - on direct examination and in a nutshell that's because
- (10) of the problems with the fall sampling which is where they get
- (11) their embryo mortalities?
- (12) A That's right
- (13) Q So most of those questions that you were responding to
- (14) when
- (15) you said you disagreed is for the very reasons that you
- (16) explained at length in your direct examination?
- (17) A At great length I think
- (18) Q I won't ask you if it was too long
- (19) Now to the extent - well let's see if we could call
- (20) up - well maybe I could do it without putting up the exhibit
- (21) again but he asked you also about effects that some other
- (22) scientists for the Trustee Council had discussed including Mr
- (23) Willette and Mr Wortheimer do you remember that?
- (24) A Yes
- (25) Q Those individuals were studying to see whether there was an
- (26) effect on the growth or the size of the fish I think young

Vol 33 5893

Vol 33 5895

- (1) pink salmon?
 (2) A That s right
 (3) Q Now I d like to just put that into context in terms of
 (4) what that translates into Even if they re correct their
 (5) findings don t really jibe with your findings I gather?
 (6) A Well their sample sizes were extremely small
 (7) Q Is that a design problem like Mr Jamin was talking to you
 (8) about?
 (9) A Yes They had just very very small samples it was hard
 (10) for them to conclude They were probably doing the best they
 (11) could with what they had but they just didn t have the sample
 (12) size to make the kind of transition from their growth
 (13) assessment to the adult return data
 (14) Q But if you assume that they re right one of the Trustee
 (15) studies then tried to synthesize did it not what all of that
 (16) would - including the embryo mortality in terms of damage on
 (17) the population?
 (18) A Yes That was Mr Geiger He took the Sharr studies
 (19) which was the embryo or egg mortality the Willette studies
 (20) which was the early marine growth and Wortheimer studies
 (21) which also were involved with early marine growth and came to
 (22) the conclusion that there was a damage or level of damage
 (23) associated with that
 (24) Q And that level of damage if we could have DX8980 A that
 (25) level of damage is what is included in this range That s

- (1) variables
 (2) Q However he gets to those numbers?
 (3) A That s right
 (4) Q Now that reminded me that Mr Jamin was suggesting that -
 (5) that Dr Mundy had some unique qualifications here because
 he s
 (6) a population dynamicist Do you recall that general
 (7) discussion?
 (8) A Yes
 (9) Q Now you were qualified in this court as an expert on
 (10) several matters including effect of oil on salmon do ou
 (11) recall that?
 (12) A Yes
 (13) Q I don t know if you were here when - I don t think you
 (14) were here when Dr Mundy testified?
 (15) A No I wasn t
 (16) Q You don t know one way or the other - well -
 (17) A I haven t even read his testimony
 (18) Q You don t know whether he was qualified as somebody with
 (19) expertise in studying the effects of oil on the salmon?
 (20) A I don t know how he was presented no
 (21) Q Did Mr Mundy was he the principal investigator on a
 (22) single one any of the Trustee studies?
 (23) A No he wasn t
 (24) Q On the pink salmon?
 (25) A No

Vol 33 5894

Vol 33 5896

- (1) really the high end of the range that s reflected on this
 (2) exhibit?
 (3) A That s right That would be the center column would be
 (4) the upper three or four lines there would be what Alaska Fish
 (5) & Game has used Mr Geiger used the Sharr data and the
 (6) Willette data and the Wortheimer data to come up - and that s
 (7) the magnitude of their effect
 (8) Q Now these big numbers here the 92 93 94 and 95
 (9) which are much larger obviously than these ADF&G Trustee
 (10) numbers who came up with those numbers? Whose numbers
 are
 (11) those?
 (12) A I believe the first - that 92 93 columns are Dr
 (13) Mundy s numbers
 (14) Q And there s no Trustee study that you re aware of that says
 (15) those - that comes up with those numbers is there?
 (16) A No Mr Mundy would be depending on the Trustee
 (17) scientists data in some way in interpreting that
 (18) Q Have you ever seen anything where he explains how he gets
 (19) to those numbers?
 (20) A Well as a population dynamicist Mr Mundy has not been
 (21) involved in actually collection of data in the field He would
 (22) be using some other s data and in order for the population
 (23) dynamicist to make a good estimate he has to have good data
 (24) He has to have - the variables that go into his model have to
 (25) be accurate and unfortunately Mr Mundy has been using
 faulty

- (1) Q As far as you know he did no original work of his own?
 (2) A That s correct
 (3) Q He was never out in the field supervising data collection
 (4) he wasn t - he was not in any of the studies?
 (5) A I just don t know Not to my knowledge no
 (6) MR COOPER Your Honor I don t have any further
 (7) questions
 (8) THE COURT Thank you sir you may step down You
 (9) may call your next witness
 (10) MS STEWART Your Honor defendants would call Al
 (11) Menin It s done by video deposition
 (12) MR COOPER Your Honor before we do that I think I
 (13) neglected to offer into evidence that one exhibit I used on
 (14) redirect DX8900 regarding the Rice study
 (15) (Exhibit 8900 offered)
 (16) MR JAMIN No objection whatsoever Your Honor
 (17) THE COURT Defendants Exhibit 8900 is admitted
 (18) (Exhibit 8900 received)
 (19) (Videotape Played)
 (20) DIRECT EXAMINATION OF ALBERT MENIN (Video)
 (21) BY VIDEO EXAMINER
 (22) Q Could you state your name and address please Mr Menin?
 (23) A Oh my name is Albert Menin I live at 13820 Kinbrook
 (24) Street Sylmar California spelled S Y L M A R 91342
 (25) Q And how old are you sir?

Vol 33 5897

- (1) A 66
 (2) Q What is your profession?
 (3) A Electronic engineer Retired now
 (4) Q Okay What background do you have in the field of
 (5) electronic engineering?
 (6) A My entire life since I was a kid
 (7) Q Okay Could you describe generally for me what your
 (8) background is in that area?
 (9) A Basically electronic engineering I started out in Bendix
 (10) Corporation as a technician and eventually became engineer
 (11) Q Do you have an educational background in electronic
 (12) engineering?
 (13) A Yes Not very impressive but approximately two years in
 (14) about three colleges
 (15) Q Which colleges were those?
 (16) A Let s see Milwaukee College of Engineering in Milwaukee
 (17) Wisconsin UCLA where I took some courses San Francisco
 (18) City College Heal Engineering College in San Francisco That s
 (19) about it
 (20) Q When was it that you joined Bendix?
 (21) A I think it was 1952
 (22) Q How long were you with Bendix?
 (23) A 35 years
 (24) Q Was your entire career at Bendix spent in the field of
 (25) electronics and electronic engineering?

Vol 33 5898

- (1) A Yes
 (2) Q Are you one of the inventors of the Bendix side scan sonar
 (3) that s used to count adult salmon in Alaska rivers?
 (4) A Yes
 (5) Q And could you describe for me what your involvement was in
 (6) that invention?
 (7) A Oh I basically designed it - when we first started first
 (8) got the contract from Alaska Fish & Game it was given to one
 (9) engineer who passed it on to another And I was a technician
 (10) at that time and it sounded like a very interesting program
 (11) so I went to Alaska - well I was given the task of aiding in
 (12) the design of the first counter which doesn t even resemble
 (13) the current salmon counters And eventually I got most of
 (14) the - well all the electronic design responsibility and
 (15) every year Alaska would require - request improvements to
 (16) make
 (17) them simpler to use And that was basically it
 (18) Q Were there others at Bendix who were involved in designing
 (19) the hydroacoustic aspects of the counting system?
 (20) A Yes They re no longer - none of them are there anymore
 (21) They re all retired
 (22) Q And the patents that were filed with respect to the
 (23) inventions that rose from that work to date include both your
 (24) name and the names of others at Bendix?
 (25) A Yes uh huh
 (26) Q You indicated I think that you left Bendix after 35

Vol 33 5899

- (1) years in what 1987? Is that roughly right?
 (2) A It was either 87 or 88 June I have the exact date in
 (3) my pocket if you re interested
 (4) Q I think that s good enough for now
 (5) A Oh all right
 (6) Q Since the time you left Bendix have you continued to do
 (7) private consulting in the fish counting field?
 (8) A Yes I - I go - I come up to Alaska in the summer to help
 (9) train people because there s a turnover in Fish & Game so I
 (10) teach them how to use the equipment and basically to make
 (11) any
 (12) repairs inseason repairs
 (13) Q Okay So you ve had contracts just between you personally
 (14) and the State Department of Fish & Game since the time you left
 (15) Bendix to do that kind of work?
 (16) A Right.
 (17) Q Have you done contracting work for other entities related
 (18) to fish counting since you left Bendix?
 (19) A Oh yeah South Carolina
 (20) Q State of South Carolina?
 (21) A Right
 (22) Q Do they still use Bendix side scan sonars to count fish
 (23) there?
 (24) A Yes
 (25) Q Just so I understand did the State of Alaska at some point
 (26) while you were at Bendix hire Bendix to develop and install

Vol 33 5900

- (1) sonar counters on Alaska rivers?
 (2) A Yes
 (3) Q Did that start sometime in the 1960s?
 (4) A Right 1965 was the very first one
 (5) Q And as part of your job responsibilities at Bendix did you
 (6) come to the state of Alaska every summer starting in 1965 to do
 (7) work on those counters?
 (8) A Yes
 (9) Q And since the time you left Bendix have you been hired by
 (10) the State each summer to come and do that same type of work?
 (11) A Right
 (12) Q That would include this past summer 1992?
 (13) A Correct.
 (14) Q You plan to come again in the summer of 93?
 (15) A Yeah I hope to
 (16) Q Has the State asked you to?
 (17) A No It s sort of unwritten
 (18) Q I know they go through a budget process at this time of the
 (19) year Do you have to wait until after that s over to find out
 (20) if they want you to come back?
 (21) A That s correct but I assume it ll be okay
 (22) Q Do you usually visit all of the sites where there s an
 (23) adult salmon counter during the course of that July trip?
 (24) A No I used to but now for budget reasons I ll visit
 (25) typically four five sites

Vol 33 5901

- (1) Q What are the ones that you re most likely to visit?
- (2) A Oh Copper River Kenai River in Soldotna and then Crescent
- (3) River that s in Cook Inlet and there s one more there I
- (4) forgot the name of it now
- (5) Q The Kasilof you visit that one?
- (6) A The Kasilof right and Yentna That s the one I couldn t
- (7) think of It s Y E N T N A
- (8) Q So the ones that you visit most frequently are the systems
- (9) in Upper Cook Inlet and the one over on the Copper River in
- (10) Prince William Sound?
- (11) A Right I used to go annually to northern Alaska but they
- (12) haven t requested me there
- (13) Q When you make this trip in July to the various locations
- (14) that you ve identified what do you do on those trips during
- (15) July?
- (16) A Oh repairs and many times I ll build small pieces of
- (17) equipment that - to make the salmon counters more easily
- (18) usable One good example is this last year at Crescent River
- (19) the - there s a salmon run only in spurts you know an hour a
- (20) day or so and not predictably and the field camp was across
- (21) the river and it was a dangerous river to cross
- (22) I built a device that when salmon are passing and counting
- (23) it blares out on a loudspeaker which they can hear from a
- (24) thousand feet away Little things like that to make life
- (25) easier for the biologists

Vol 33 5902

- (1) Q Do you spend time on those trips in July training new
- (2) personnel if there are new crew at those locations?
- (3) A Right
- (4) Q And what do you do to train personnel? How do you go
- (5) about
- (6) that?
- (7) A Oh I show them how to use it use the counter show them
- (8) what to look for You know if there are any problems how to
- (9) identify them and show them how to use an oscilloscope which
- (10) they use to verify the accuracy of the counters while the fish
- (11) are passing
- (12) Q Have - based on your work here in the state of Alaska for
- (13) the last oh well I guess it s 27 going on 28 years now
- (14) have you received any awards or commendations from the
- (15) State
- (16) for your work?
- (17) A Yeah quite a few I ve got a plaque that was given to me
- (18) by Governor Hammond in the dead of winter and I had to make
- (19) a
- (20) trip up to Juneau for that
- (21) Q What was that award for?
- (22) A Well for contributing to the advancement of fisheries
- (23) Q Do you recall what year that was?
- (24) A It was in the 70s And oh I ve gotten a lot of informal
- (25) awards - oh one other for 25 years of dedicated fishery
- (26) scientific help
- (27) Q Is that from the Department of Fish & Game?
- (28) A Right Right

Vol 33 5903

- (1) Q So you actually came up to Juneau and shook hands with
- (2) the
- (3) governor and received an award sometime in the 70s?
- (4) A Uh huh Right In fact he was my first floatplane pilot
- (5) before he became governor
- (6) Q Are you familiar with an allegation that s been made that
- (7) in years of very large runs that is sockeye runs that Bendix
- (8) side scan sonar counters tend to undercount the number of fish
- (9) coming by?
- (10) A No
- (11) Q You never heard that?
- (12) A Well let s see I - I think at that last deposition for
- (13) the Glacier Bay spill I think it was mentioned
- (14) Q Do you believe there s any truth to it?
- (15) A No
- (16) Q Why is that?
- (17) A Well from what I ve observed the counters have been able
- (18) to keep up with the largest migrations I ve seen
- (19) Q And then when was it that you came back to the idea of
- (20) doing a side scan system?
- (21) A 75
- (22) Q Where was the first of the new side scan sonars to go in?
- (23) A We tested it first in Wood River in clear water to verify
- (24) the accuracy and also in a couple other clear rivers in
- (25) northern Alaska the Anvik Aniak and in a weir somewheres
- (26) around - not too far from Anchorage to verify the accuracy

Vol 33 5904

- (1) Q Where did you first deploy that system on a permanent basis
- (2) as opposed to just testing it?
- (3) A In - on the Kenai River
- (4) Q Do you recall what year that was?
- (5) A Oh my guess would be 77 or 78
- (6) Q And has essentially the same type of system been in place
- (7) on the Kenai ever since then?
- (8) A Yeah the same principle It s been radically improved to
- (9) make it easier to operate consume less power It runs from
- (10) solar power
- (11) Q But the counting itself is done the same way?
- (12) A Basically yes
- (13) Q Okay You mentioned that you put it in the Anvik and the
- (14) Copper as well as the Kenai What other rivers has that
- (15) system been deployed on since you first came up with it?
- (16) A Well the Crescent River Kasilof Yentna Anvik Aniak -
- (17) I did say Copper River right?
- (18) Q Right
- (19) A And Nushagak River And I can t think of any others at the
- (20) moment
- (21) Q Why did the new system - why was it used instead of the
- (22) older one?
- (23) A It was much easier to deploy and it could be monitored much
- (24) more accurately You re looking on an oscilloscope you re
- (25) observing one transducer as opposed to 30

Vol 33 5905

- (1) Q Why is that easier to monitor?
- (2) A Well at the time I could only monitor - on the upward
- (3) looking system I could only monitor three transducers at a
- (4) time It was multi plexed screens so I could only look at
- (5) three at a time And if the salmon weren't crossing in that
- (6) spot you'd miss them but on the side scanner you can
- (7) observe
- (7) the entire counting range at any time on the oscilloscope see
- (8) one fish pass or when there's nothing there
- (9) Q Have you visited all of these sites that you've identified
- (10) where side scan sonars were installed?
- (11) A Right
- (12) Q Have you been at the Kenai sonar site at the time of a peak
- (13) of the sockeye run?
- (14) A Yes uh huh
- (15) Q Are you typically there every year at the peak?
- (16) A Typically at the peak although I have - I've missed a
- (17) couple peaks
- (18) Q When you have been there at the time of the peak of the
- (19) run have you observed any problems that the system
- (20) encounters
- (20) with counting the number of sockeye passing at that point?
- (21) A No No Actually the Nushagak has a far larger peak
- (22) Q And have you been on the Nushagak River when the peak of
- (23) the run is going by?
- (24) A Yes for about the past six seven years It's typically
- (25) July 4th

Vol 33 5906

- (1) Q Have you observed any problems with the side scan sonar's
- (2) ability to deal with that peak run?
- (3) A No
- (4) Q With respect to the sonar systems in place in Upper Cook
- (5) Inlet and at the Copper River location you identified have
- (6) they been deployed and used in essentially the same manner
- (7) each
- (7) year since the late 70s?
- (8) A Yes
- (9) Q Do you have an opinion about the accuracy of the Bendix
- (10) side scan sonar in counting return of adult sockeye salmon?
- (11) A Only based on what I've seen in clear rivers and reports
- (12) from Fish & Game personnel that you know we've gotten as
- (13) high as 98 percent correlation between visual counts and
- (14) electronic counts
- (15) Q Okay so what is your opinion about the accuracy of the
- (16) side scan sonar?
- (17) A I think it's quite accurate
- (18) Q That's based on you mentioned there was some tests in
- (19) clear water systems and some reports from ADF&G people?
- (20) A Right
- (21) Q We'll get into those tests specifically in a little bit
- (22) but could you tell me what reports you have in mind that have
- (23) been prepared by ADF&G that you're referring to?
- (24) A Well there's quite a few of them Almost every year I'll
- (25) get one or two in the mail telling me how actually it worked

Vol 33 5907

- (1) Q But you've seen reports from ADF&G that in your mind
- (2) confirm the accuracy of the counting?
- (3) A Right and I was present at many of the tests
- (4) Q You mentioned some tests that were done in clear water
- (5) systems Was one of those done on the Wood River in or about
- (6) 1977?
- (7) A Yes 75 76 77 In fact every time any modification
- (8) was made to the counter we'd try it on Wood River
- (9) Q Okay
- (10) A Since the water's extremely clear
- (11) Q Were you involved in that test?
- (12) A Yeah
- (13) Q With what did you do?
- (14) A I observed - I would take turns with another biologist
- (15) there One of us would have our back to the river just
- (16) watching the oscilloscope and the other looking in the river
- (17) and counting the fish with a mechanical tallywacker and we'd
- (18) compare each other's counts to the electronic counts the side
- (19) scanner counts
- (20) Q What did those tests show?
- (21) A Very good accuracy
- (22) Q In other words there was a close correlation between the
- (23) tallywacker counts and the oscilloscope counts?
- (24) A Yes
- (25) Q Do you recall how close the correlation was?

Vol 33 5908

- (1) A If I remember right it was on the order of 95 percent It
- (2) would drop to 90 percent at times sometimes we'd hit almost a
- (3) hundred percent I think that averaged around 94 95 percent
- (4) correlation
- (5) Q Are those tests memorialized in a report?
- (6) A I didn't but - I believe the Fish & Game did In fact
- (7) I'm quite sure Fish & Game documents everything I don't
- (8) remember having seen that lately but I vaguely remember that
- (9) they were documented
- (10) Q Those Wood River tests was that a matter of several days
- (11) you did that that summer?
- (12) A Yes
- (13) Q Did you do any tests on any other clear water systems that
- (14) year do you recall?
- (15) A Well no One year we had time to do two clear water
- (16) tests the one being in Wood River and then the Anvik which
- (17) was very clear
- (18) Q So you went to both rivers in one season?
- (19) A Right
- (20) Q Could you tell me what you did in that test on the Anvik?
- (21) A It was extremely clear water so it - a tower a counting
- (22) tower was set up In fact that's what they used to use to
- (23) count the fish there It was about a 30 foot high aluminum
- (24) tower right next to the river and they counted the fish
- (25) visually while we counted them electronically and they

Vol 33 5909

- 1) compared the count
 2) Q So in this test you were comparing tower counts to sonar
 3) counts?
 4) A Yes
 (5) Q And do you recall what the results of those tests were?
 (6) A Yeah That one ran around 98 percent correlation
 (7) Q Did you find that the tower counts differed as among
 (8) various counters who were on the tower that is different
 (9) individuals would come up with different counts?
 (10) A Right
 (11) Q Okay I d like to ask you now if you recall testing done
 (12) on the Russian river in the 70s?
 (13) A Oh yeah We - we did a clear water test It was near a
 (14) weir and there weren t many fish involved but we - we got
 (15) better than 90 percent accuracy on that one That was clear
 (16) water
 (17) Q I d like to ask about another clear water test location
 (18) the Nushagak Do you recall doing some testing there in July
 (19) of 1984?
 (20) A Right
 (21) Q The side scan sonar?
 (22) A Yes
 (23) Q Can you describe for me what you did on that occasion?
 (24) A Okay That was when we decided to try to go without a
 (25) substrate this fifty long - 60 foot long pipe that we used to

Vol 33 5910

- (1) level the river bottom so we wanted a good comparison What
 (2) we did was put two counters of different vintages two to three
 (3) years apart in vintage
 (4) We put them on the same side of the stream so they would be
 (5) counting the same fish and I believe it was 1600 feet apart
 (6) quite a jog and we ran that through the entire run That run
 (7) was roughly a quarter million fish and they were within one
 (8) percent of each other
 (9) Q Okay So that s testing two different vintages of the
 (10) sonar counters against each other?
 (11) A Right
 (12) Q And the counts were very closely correlated?
 (13) A I was amazed they were that close really It was
 (14) documented by Mack Minard Eric Minard E R I C I believe
 (15) Minard M I N A R D
 (16) Q He was with Fish & Game?
 (17) A Right Still is
 (18) Q And it sounds like you counted a large volume of fish on
 (19) this occasion is that right?
 (20) A Yeah It was roughly a quarter million if I remember
 (21) right
 (22) Q So you were there for a matter of a number of days?
 (23) A Right That occurred I think over a week and a half
 (24) period
 (25) Q Based on your experience with the Bendix side scan sonars

Vol 33 5911

- (1) do you have any reason to believe that they ever get into
 (2) situations where they re chronically overcounting or
 (3) undercounting?
 (4) A No not for more than a few minutes because they re
 (5) monitored constantly And the people at least in Cook Inlet
 (6) are quite experienced and well trained and when the fish
 speed
 (7) up when their velocity speeds up there tends to be an
 (8) undercounting So it s very easily compensated for by
 (9) observing the oscilloscope and twirling a dial which is called
 (10) a fish velocity dial and vice versa when they slow down they
 (11) would tend to be overcounted And they do - over a period of
 (12) a day it will speed up and slow down so they re - they have
 (13) to be - excuse me they are monitored frequently
 (14) Q Who are the people in Cook Inlet who operate those counters
 (15) or who are primarily responsible for the operation of the
 (16) counters?
 (17) A Bruce King Randall Davis Jim Tarbox and people who work
 (18) for them
 (19) Q Do you have based on your - strike that
 (20) Have those people been involved in operating those sonar
 (21) counters for a number of years?
 (22) A Oh yes quite a number
 (23) Q Have you worked with them at those sonar counting sites?
 (24) A Yes
 (25) Q Do you have an opinion about their qualifications to

Vol 33 5912

- (1) successfully operate sonar counters?
 (2) A Yeah they - they re good well-experienced and very
 (3) good Randall Davis and Bruce King are probably the two most
 (4) experienced and they ve been around in Cook Inlet for quite a
 (5) while
 (6) Q I m talking now about when you were at the sonar site on
 (7) the Nushagak during the peak of the run which you said was
 the
 (8) largest you ve observed I m curious how many counts you
 (9) received per second on the counter if you can recall?
 (10) A I can remember 30 000 an hour
 (11) Q And what s the most number of spikes or pulses you ve seen
 (12) on the oscilloscope when a run of that size was going?
 (13) A Oh 10 on the order of 10 at any given time during the -
 (14) during the peak
 (15) Q And in your observation was the counter able to count that
 (16) number of fish passing at a time?
 (17) A Oh yeah Yeah you can see them on the oscilloscope The
 (18) counter can count them because it can literally count a few
 (19) million per second you know which is impossible
 (20) Electronically there s no problem
 (21) Q Mr Menin we talked earlier about the accuracy of the
 (22) counters as deployed in Upper Cook Inlet specifically Do you
 (23) recall any seasons during the 1980s when there were any
 (24) persistent or chronic problems that caused sonar counts in any
 (25) of the Upper Cook Inlet counting units to be significantly off

Vol 33 5913

- (1) or to cause significant errors?
 (2) **A** No No From time to time there s been electronic
 (3) failure but that s a catastrophic one and they have spare
 (4) counters have spare parts and they can repair them within
 (5) minutes
 (6) **Q** In your experience have the Fish & Game people you ve
 (7) worked with on sonar counting been satisfied with the quality
 (8) of the salmon estimates that are generated through that
 (9) process?
 (10) **A** Right
 (11) **Q** I d like to focus just for a minute on the year 1989 Do
 (12) you recall any particular problems with the sockeye sonar
 (13) counters in that year vis a vis the other years that you ve
 (14) worked on them?
 (15) **A** No
 (16) **Q** Were they operated in essentially the same fashion that
 (17) year as in other years?
 (18) **A** Yes every year
 (19) **Q** On any of the counters you ve worked on in the various
 (20) rivers in Alaska have you ever observed a situation where the
 (21) counter was not able to keep up with the number of fish that
 (22) were passing?
 (23) **A** No
 (24) **MS STEWART** Your Honor that concludes defendants
 (25) direct

Vol 33 5914

- (1) **MS WAGNER** We have a very short cross Your Honor
 (2) **THE COURT** Go ahead
 (3) **CROSS EXAMINATION OF AL MENIN (Video)**
 (4) **BY VIDEO EXAMINER**
 (5) **Q** Can you tell me about any training that you had any
 (6) educational training that you had in sonar or sonar - sonar
 (7) engineering?
 (8) **A** The - I took one sonar class at UCLA and the rest
 (9) basically rubbed off on me since I - I m surrounded by sonar
 (10) engineers at Bendix
 (11) **Q** The class you took at UCLA was that just a basic sonar
 (12) class?
 (13) **A** It was a little bit more advanced than basic I ve read a
 (14) few books on sonar
 (15) **Q** Do you consider yourself an expert in sonar?
 (16) **A** No
 (17) **Q** I want to talk for a minute about the different parts of a
 (18) sonar counter the side scan sonar counter As I understand
 (19) there s the sonar portion which is the transducer is that
 (20) right?
 (21) **A** Yes
 (22) **Q** And did you have anything to do with inventing that?
 (23) **A** No
 (24) **Q** Has - have there been any changes made to the transducers
 (25) that are used in the side scanner that you know of in the last

Vol 33 5915

- (1) five years?
 (2) **A** None
 (3) **Q** Have there been any changes made in let s say the last 10
 (4) years?
 (5) **A** None
 (6) **Q** Let s start with you Have you done any testing of the
 (7) transducers in the last 10 years?
 (8) **A** No not I
 (9) **Q** Would you consider yourself an expert in that kind of
 (10) testing?
 (11) **A** No
 (12) **Q** So your invention on the side scanner essentially goes to
 (13) the part of the counter that takes whatever information comes
 (14) off the transducer and counts it, isn t that right?
 (15) **A** Correct
 (16) **Q** And your invention doesn t look at what s in the water
 (17) column except to the extent that it s been translated or
 (18) reported through the transducer, is that -
 (19) **A** Correct
 (20) **Q** I d like to focus on what you do in terms of looking at the
 (21) counter and making sure that to the best of your
 (22) understanding it s working properly What do you do when
 (23) you
 (24) get - let s go to the Kenai River What do you do when you
 (25) take a look at the counter?
 (26) **A** Okay Number one I put in a simulated electronic salmon

Vol 33 5916

- (1) signal
 (2) **Q** And what s that?
 (3) **A** It s - it s a tiny signal that represents an echo from a
 (4) small salmon And I put it in at 3 7 feet and 53 feet and
 (5) inject it electronically and verify that it s counting them all
 (6) the time And number - now -
 (7) **Q** I just want to -
 (8) **A** Yeah
 (9) **Q** So what you re doing is you re creating you re simulating
 (10) what the echo of a salmon would look like on an electronic
 (11) device?
 (12) **A** Right uh huh
 (13) **Q** And you do that so that it would be simulating a salmon at
 (14) 3 7 feet out from the transducer and at -
 (15) **A** Right
 (16) **Q** - 53 feet out from the transducer?
 (17) **A** Uh huh
 (18) **Q** You verify that one electronic salmon that you ve created
 (19) is counted on the counter?
 (20) **A** Yes
 (21) **Q** And that s really a test just of the counter in other
 (22) words it doesn t have anything to do with the transducer?
 (23) **A** True
 (24) **Q** For any of these let s call them tests that occurred on
 (25) either the Crescent the Nushagak or the Naknek when the

Vol 33 5917

11 river cleared up and you were able to do some sort of
 12 comparison do you know whether or not any of these were
 13 documented that is are they written down anywhere are they
 14 published anywhere do you have copies in your documents on
 15 them?
 16 A I don't I don't know if anything was published I
 17 suspect not because it happened for such a short period of
 18 time
 19 Q Is there any way that you know of to document each and
 20 every test that has been done on a particular counter each
 21 year?
 22 A No
 23 MS WAGNER That concludes the cross Your Honor
 24 MS STEWART Your Honor before we continue to the
 25 next witness we have a rather extensive list of exhibits
 26 defendants would like to offer into evidence and which we
 27 believe plaintiffs have no objection

 - (7) received)
 - (8) MS STEWART Defendants would like to call Larry
 - (9) Nicholson to the stand by read deposition testimony
 - (10) THE CLERK Would you raise your right hand please
 - (11) sir?
 - (12) (The Witness Is Sworn)
 - (13) THE CLERK Please be seated For the record sir
 - (14) state your full name your address and spell your last name
 - (15) THE WITNESS Yes I am Donald K Ford You need my
 - (16) address? That s 605 West 2nd Suite 201 Anchorage Alaska
 - (17) 99501
 - (18) THE CLERK Spell your last name
 - (19) THE WITNESS Oh F O R D
 - (20) DIRECT EXAMINATION OF LARRY NICHOLSON (Read)
 - (21) BY MS STEWART
 - (22) Q Mr Nicholson could you state for the record your address
 - (23) please?
 - (24) A My home address is 515 Mozart Circle Kodiak
 - (25) Q What is your educational background?

Vol 33 5921

- (1) A I have a bachelor s of science in wildlife management from
- (2) University of Humboldt northern California
- (3) Q When did you first come to Alaska?
- (4) A 1965
- (5) Q How does that relate to when you received your bachelor s
- (6) degree?
- (7) A Oh I didn t receive my bachelor s until the end of my four
- (8) years in the military which would have been in 72 or 73
- (9) Q Did you then come to Alaska permanently after you
- (10) graduated?
- (11) A Yes within about six to eight months
- (12) Q What employment have you had since that time?
- (13) A I have worked for the department ever since
- (14) Q Could you tell me what positions you have held and which
- (15) years?
- (16) A I might be able to Let s see Initially in, I believe
- (17) it was 73 74 I worked for Shellfish Research in Kodiak
- (18) primarily on a shrimp program Then 75 through about 81
- (19) approximately I was a Chignik area management biologist for
- (20) salmon Then I jumped ship and moved to Kodiak - or excuse
- (21) me to Juneau for about a year and a half and worked for our
- (22) game division Then in 84 I took this current position as
- (23) regional supervisor in Kodiak and I have been there ever
- (24) since for commercial fish
- (25) Q I would like to turn back to the spring and summer of 1989

Vol 33 5922

- (1) subsequent to the Exxon Valdez oil spill Were there concerns
- (2) in the westward region about the possibility of overescapement
- (3) on the sockeye spawning streams in the westward region area?
- (4) A Yes
- (5) Q Do you - do you recall which streams specifically you were
- (6) concerned about?
- (7) A Well any of the major sockeye systems I can name most of
- (8) those
- (9) Q Well I ve seen documentation indicating that there were
- (10) concerns about the Ayakulik or Red River specifically and
- (11) also the Akalura River Do you recall that there were others
- (12) there were concerns about?
- (13) A Yes we were concerned for all of them
- (14) Q After the 1989 season was over and the escapement
- (15) numbers
- (16) were in were there any specific streams that you had had
- (17) concerns about?
- (18) A Well two in particular we put too many fish out Red
- (19) River - or Red Lake Red River complex Akalura That s one
- (20) system The other one was Akalura
- (21) Q Akalura?
- (22) A I m sorry Akalura was one of the lake systems The other
- (23) was the Red Lake system which has two streams off of it the
- (24) Ayakulik and the Red River
- (25) Q In the spring before the salmon season - well do you
- (26) recall that these concerns were expressed in April and May of

Vol 33 5923

- 1) that year?
 A Yes they were We as a staff had discussed those
 3) concerns
 4) Q Do you recall discussing the possibility of taking steps to
 5) limit the escapement on some of the sockeye streams?
 6) A Yes
 7) Q And what particular methods did you talk about possibly
 8) doing?
 9) A Well it was certainly system dependent For instance
 10) within the Red River system the lagoon itself was a very small
 11) lagoon It s subject to tidal influence and it also is necked
 12) down at the mouth to the point where you couldn t get a seiner
 13) in that particular lagoon So the only gear type you could
 14) move in which is currently not a legal gear type under the
 15) existing plan would be the setnets and/or beach seine So
 16) that was the alternative for that system
 17) Q Did you discuss at all doing something at the weir that
 18) is collecting the salmon at the weir and bringing them out
 19) there a departmental activity?
 20) A That would have been part and parcel to allowing gear type
 21) to go in and remove them from the lagoon itself You would
 22) shut the weir off back the fish up harvest them within that
 23) lagoon
 24) Q But you don t recall a discussion of departmental personnel
 25) actually harvesting the fish at the weir and then transporting

Vol 33 5924

- (1) them out of that location?
 (2) A Yes we did talk about that too
 (3) Q Oh okay Did you talk about any other possible ways of
 4) dealing with potential overescapement?
 (5) A No Those two methods would be the only ones we would
 have
 6) considered
 (7) Q Did you discuss possible ways of dealing with the potential
 8) overescapement with anyone outside of the westward region?
 (9) A Yes we had conversation throughout the course of the
 10) season with industry
 (11) Q Processors?
 (12) A And fishermen
 (13) Q What were you trying to learn or what was the nature of
 (14) that discussion?
 (15) A Just looking at our options
 (16) Q Do you recall discussing your options with anybody at the
 (17) headquarters office of ADF&G in Juneau?
 (18) A Yes I am sure I talked to the director at the time Ken
 (19) Parker
 (20) Q What was the decision in terms of trying to do some special
 (21) harvest arrangements with respect to potential
 overescapement?
 (22) A Well for Red River if we re still on that topic -
 (23) Q Yes I m talking about Red River
 (24) A It was predicated on the appreciable likelihood that we
 (25) were going to encounter any oil within that lagoon and we might

Vol 33 5925

- (1) consider a mop up type approach but the problem there is we
 -
 (2) we continued to have oil showing up at the mouth and as I said
 (3) earlier we had tidal influence all the way up through that
 (4) lagoon area We just felt it probably wasn t safe to try to do
 (5) it
 (6) Q So you concluded that you couldn t safely put in setnetters
 (7) or beach seiners at that location
 (8) A That s right
 (9) Q What about the objection o arvesting at the weir what
 (10) was the final decision on that?
 (11) A Well the weir itself you would have to back down
 (12) approximately 200 yards from the weir to harvest the fish
 (13) Behind the weir is simply too shallow We are talking about on
 (14) most situations excluding flood conditions your water level is
 (15) a foot or less
 (16) Q So how did that affect the decision the fact that you have
 (17) to back down 200 yards? Maybe I need to know how close is
 the
 (18) weir to the river mouth?
 (19) A The weir itself from the lagoon is I m estimating maybe
 (20) 300 to 400 yards Then the lagoon itself to the mouth then
 (21) empties into the ocean is only about 1500 yards and about 20
 (22) yards wide
 (23) Q How did those physical attributes of that location affect
 (24) your decision to try to do some sort of a special harvest
 (25) there?

Vol 33 5926

- (1) A The schooling fish tended to build up within the lagoon
 (2) There were fish also in that very shallow component the 400
 (3) yards below the weir that you couldn t fish in As I stated
 (4) earlier the lagoon itself was subject to intertidal
 (5) involvement and we were concerned about oil moving in and
 out
 (6) of that area in that it was showing up routinely at the mouth
 (7) Q Would it have been possible to do some sort of inriver
 (8) fishery using department boats as opposed to a commercial
 (9) endeavor?
 (10) A You could have attempted something like that but I think
 (11) it would have been relatively ineffective
 (12) Q Why is that?
 (13) A Because the water is so shallow if you threw a gillnet in
 (14) there the lower meshes would be the only effective meshes
 (15) Those would fill up real quick and all other fish would just
 (16) pass right over the gear
 (17) Q Do you recall any particular point in the season when you
 (18) decided you just weren t going to try to do it?
 (19) A When the runs were over
 (20) Q I have seen some numbers and we can look at the
 documents
 (21) later but the escapement on the Red River in 1989 was
 (22) approximately 760 000 is that right?
 (23) A I think that s right
 (24) Q In any event do you recall what the run came - that the
 (25) run came in smaller than forecast - in smaller than forecast

Vol 33 5927

- (1) on the Red River in 1989?
- (2) A Yes I remember that the total run forecast is somewhere
- (3) in the neighborhood of close to a million
- (4) Q Any others that you ve looked at?
- (5) A The only one that we routinely do smolt work on is Fraser
- (6) Q Have you seen any problem on the Fraser arising from
- (7) escapement in 1989?
- (8) A No We didn t overescape
- (9) Q So am I correct that the Red River is the only one that you
- (10) are continuing to monitor for a potential overescapement
- (11) problem?
- (12) A That s correct
- (13) Q Now these discussions you had about potentially using
- (14) some special measures with respect to overescapement in 1989
- (15) those went on within the department is that right?
- (16) A Yes
- (17) Q Was Exxon privy to those discussions any Exxon personnel?
- (18) A No
- (19) Q Well then those fish were processed in Kodiak either
- (20) canned or frozen and distributed to various towns and villages
- (21) in the Kodiak area?
- (22) A That s correct
- (23) Q Mr Nicholson do you recall a term or a policy known as
- (24) the zero tolerance policy as applied to the spill related
- (25) closures in the Kodiak area in 1989?

Vol 33 5928

- (1) A Yes
- (2) Q What was that?
- (3) A We just weren t going do allow fishery to occur if we
- (4) thought there was any likelihood that they would encounter
- (5) oil Zero tolerance specifically was we weren t going to allow
- (6) any fish to enter the marketplace contaminated so we were
- (7) going to take every measure possible to prevent that
- (8) Q Would you describe that as a relatively tough policy?
- (9) A A very conservative policy
- (10) Q Was there any oiling of gear of commercial fishermen during
- (11) commercial openings in the westward region in 1989?
- (12) A Not that I know of
- (13) Q And were any oiled fish actually landed in the commercial
- (14) openings in the westward region in 1989 to your knowledge?
- (15) A Not that I m aware of
- (16) Q Were you successful in preventing any oiled seafood product
- (17) from reaching processors that year?
- (18) A Yes
- (19) Q Do you attribute that success to the zero tolerance policy?
- (20) A Yes
- (21) Q Do you recall there being any differences of opinion within
- (22) the management staff as to whether or not openings should
- (23) occur in areas within the westward region?
- (24) A Yes
- (25) Q Could you describe those for me?

Vol 33 5929

- (1) A Yes There was at least a discussion among staff to how
- (2) conservative we had to be and still ensure the zero tolerance
- (3) policy and attitudes varied from individual by individual
- (4) Q And Mr Probasco testified in his deposition that there was
- (5) some difference of opinion with respect to the Olga Moser Bay
- (6) area and in particular that Larry Malloy thought that area
- (7) should not be opened and Mr Probasco and others thought it
- (8) should be opened Do you recall that issue at all?
- (9) A Now you jogged my memory I do remember those
- (10) discussions
- (11) Q Is that generally an accurate description of what happened?
- (12) A Yes I think it is
- (13) Q The ultimate decision was to open the Olga Moser Bay for at
- (14) least the Alitak district for setnet fishing is that right?
- (15) A That s correct
- (16) Q Did you agree with that position?
- (17) A I approved it
- (18) Q Do you recall that Mr Malloy was opposed to that?
- (19) A Yes
- (20) Q Do you remember why?
- (21) A Yes I do It had more to do with not actually following
- (22) to the letter the management plan that was adopted for that
- (23) area by the board and nothing to do with the fact that the
- (24) fish was subject to potential - potential contamination
- (25) Q So he did not believe that there was a risk of potential

Vol 33 5930

- (1) A No It was a violation of the plan
- (2) Q In what respect was it a violation of the plan?
- (3) A The plan is predicated on trying to distribute fishing time
- (4) among all users which includes the seine fleet and the areas
- (5) that the seine fleet is subject to fishing was inundated with
- (6) oil so we could only allow the setnetters to fish and shut the
- (7) seiners off
- (8) Q So his objection was that it wasn t fair under the plan to
- (9) the seiners because they couldn t fish whereas the setnetters
- (10) could?
- (11) A That s correct
- (12) Q And did the setnetters in fact have a very successful
- (13) season that year because they were - they were the only gear
- (14) type that could fish?
- (15) A They had a very successful season not because they were
- (16) the only gear type that did fish
- (17) Q Why was it a very successful season?
- (18) A If both gear types would have been allowed to fish they
- (19) probably both would have had a successful season
- (20) Q Is that because the runs were strong?
- (21) A Yes
- (22) Q Were you the person that ultimately decided whether or not
- (23) commercial fisheries in the westward region would be opened
- (24) or closed?
- (25) A Yes

Vol 33 5931

- (1) Q Going back to the Kodiak management area now there were
 (2) there was overescapement in the pink salmon runs in 1989 was
 (3) there not?
 (4) A That s correct
 (5) Q Do you know whether or not there was any long term impact
 (6) on the Kodiak pink runs as a result of those overescapements?
 (7) A No
 (8) Q You don t know or there was not?
 (9) A There was not And I would like for you to be more
 (10) specific with your question What do you mean long term
 (11) effects? I mean we are talking about a different cycle of
 (12) fish altogether here
 (13) Q Right A pink is a two-year cycle correct?
 (14) A That s correct
 (15) Q And so you have observed the returns in 90 and 91 in the
 (16) pink fisheries in Kodiak?
 (17) A That s correct
 (18) Q And based on those observations it does not appear there
 (19) is any impact from the 89 overescapement is that correct?
 (20) A That s right
 (21) Q And the only area where the department is studying a
 (22) potential long term impact in the sockeye returns in the
 (23) westward management region is the Red River is that correct?
 (24) A Correct
 (25) Q Have you ever fished commercially yourself?

Vol 33 5932

- (1) A Yes
 (2) Q And could you tell me when and where?
 (3) A I assisted a commercial operation back in I think it was
 (4) 65 Bristol Bay setnet fishery one summer with Jay Hammond
 (5) and his family
 (6) Q And in a typical year how much time do you spend out area
 (7) offices?
 (8) A A typical year a couple weeks
 (9) Q Where do you go? Do you go to Chignik?
 (10) A Chignik Sand Point Cold Bay Port Moller
 (11) Q What involvement do you have in the sorts of day to day
 (12) management activities in those areas?
 (13) A I require that any of the major decisions concerning the
 (14) allocation of a given fishery when we reach the critical
 (15) points in the management plan that the issues be reviewed by
 (16) me and Mr Probasco Most of the time that s done over the
 (17) telephone
 (18) Q You talked about major decisions on allocation under the
 (19) management plans Could you give me an example of what
 (20) those are in the Chignik area?
 (21) A There are two examples There is a Stepovak interception
 (22) fishery and then on the other end is an Igvak We have an
 (23) allocated set of the Chignik total run that s allocated to
 (24) those two areas and the review that I require when we get down
 (25) to deciding on where we are as far as a percentage in the

Vol 33 5933

- (1) current escapement level at that time the potential impact of
 (2) having another period in those areas and what that impact
 (3) might
 (4) be as far as jeopardizing or potentially jeopardizing our
 (5) escapement so I like to look at all the numbers and finalize
 (6) our decision
 (7) Q And those interception fisheries are you in charge of both
 (8) ends of the interception right?
 (9) A That s correct
 (10) Q Are you the person who gets to make the final call or
 (11) maybe I should say has to make the final call on when openings
 (12) will occur in those interception fisheries?
 (13) A I am the guy that ultimately takes the responsibility if
 (14) the final call is not correct so I do review those
 (15) Q On the Stepovak interception fishery who decides if the
 (16) Sand Point people are going to be able to fish at the initial
 (17) level? Is it Mr Shaul or the person in Chignik or you?
 (18) A At Stepovak right now it s a combination of the area
 (19) manager that s based in Sand Point The name is Jim
 (20) McCullough and the management biologist in Chignik which is
 (21) Al Quinley Pete Probasco and myself
 (22) Q So all four of you have input into that?
 (23) A Yes
 (24) Q Do you recall in 1989 your staff taking a look at the
 (25) question whether or not oil spill closures impacted the
 Stepovak interception fishery?

Vol 33 5934

- (1) A Yes
 (2) Q Do you recall Mr Barrett concluding that there was no
 (3) impact on the interception fishery from oil closures?
 (4) A I do
 (5) Q Turning to a different subject in any year have you heard
 (6) of any claims that you were under that is the department was
 (7) underestimating the herring biomass in the Kodiak area?
 (8) A Yes
 (9) Q Do you think there is any validity to those claims?
 (10) A Yes
 (11) Q Could you describe for me what you mean?
 (12) A Well I think that again assessment ability is certainly
 (13) not an exacting science whether you are talking about aerial
 (14) assessment or sonar and I think we have probably
 (15) overestimated
 (16) on some years and underestimated on others But I think the
 (17) one thing to keep in mind is that we still have healthy stocks
 (18) so whether we have overestimated on any given year in any
 (19) given
 (20) bay I think we ve perpetuated that resource They have
 (21) continually improved over the last few years so whatever we
 (22) are doing I think we are probably doing the right thing
 (23) Q So it s your opinion that there may be years when you were
 (24) high or low?
 (25) A Yes
 (26) Q Or in between?
 (27) A Yes

Vol 33 5935

- (1) Q Do you know of any chronic bias in the way that you
 (2) estimate that would cause it to be consistently high or
 (3) consistently low?
 (4) A No
 (5) Q Is there any reason why the department would try to make it
 (6) either high or low? Would that accomplish anything?
 (7) A No
 (8) Q Is the same true of counting that is aerial counting or
 (9) sonar counting?
 (10) A That's true there is no reason why we would to fudge it
 (11) Q Regarding the Red River system the total escapement goal
 (12) for that system is 200 000 to 300 000 What was the goal when
 (13) you took over in 1984 - I'm sorry was that the goal when you
 (14) took over in 1984?
 (15) A It was
 (16) Q Has it been the same since?
 (17) A Yes
 (18) Q Do you know if there has ever been consideration made to
 (19) changing that?
 (20) A Yes there has We have talked about that for the last few
 (21) years but there has been no change made to date
 (22) Q I'm going to refer you to what's been marked as DX5802 and
 (23) it's a January 10 1989 memo from Doug Pengilly to Bruce
 (24) Barrett Do you recall seeing this memo on or about January of
 (25) 1989?

Vol 33 5936

- (1) A No I don't remember
 (2) Q Do you recall that at or about that time there was a
 (3) discussion about the possibility of changing the escapement
 (4) goal on the Red River?
 (5) A I do
 (6) Q Why don't you tell - first tell me what you recall about
 (7) that discussion
 (8) A It was brought to my attention by Bruce Barrett that the
 (9) subject of the escapement requirements for Red Lake in
 (10) particular was one that he felt we probably should sit down and
 (11) take a look at So in preparation for that meeting he had
 (12) asked Doug to run some analysis on that and we as a staff did
 (13) sit down and go through all of this That's about all I can
 (14) tell you
 (15) Q Do you recall what conclusion was reached if any about
 (16) that?
 (17) A Well we basically didn't make a change We did not
 (18) change
 (19) Q Do you recall why?
 (20) A We really didn't feel that the data we had was conclusive
 (21) Q Over on the second page of that exhibit which were looking
 (22) at during your deposition Mr Pengilly says quote does the
 (23) data indicate that the return depends upon escapement level?
 (24) Despite all the noise in the data due to unknown factors for
 (25) example environment and competition between generations
 it's

Vol 33 5937

- (1) clear that returns increase with increasing escapement in this
 (2) data the trend is statistically significantly Do you recall
 (3) that this was his analysis?
 (4) A Yes Yes
 (5) Q Did you agree with that?
 (6) A Basically no I didn't agree with it or we probably would
 (7) have upped the escapement
 (8) Q Do you recall - you said you didn't feel the data was
 (9) conclusive What was it about the data that you felt you
 (10) needed more information on?
 (11) A I think we simply needed more data points
 (12) Q Down at the bottom of this page that you were looking at in
 (13) your deposition in the next to the last sentence Mr Pengilly
 (14) says quote with the data that we presently have we cannot
 (15) set an optimal escapement goal with any certainty the data
 (16) shows increasing return with increasing escapement and does
 (17) not
 (18) indicate that the optimal escapement level has been reached
 (19) close quote
 (20) Focusing on just that first clause in that first sentence
 (21) that quote we cannot set an escapement goal with any
 (22) certainties close quote did you agree with that at that time?
 (23) A I did
 (24) Q And in the last sentence he says quote if it is desired
 (25) to set escapement goals to optimize return less escapement we
 need a wider range of data values to understand the stock

Vol 33 5938

- (1) recruit relationship so that an optimal escapement can be
 (2) identified close quote Did you agree with that statement?
 (3) A More or less
 (4) Q Do you recall that there was a year on the Red River when
 (5) the escapement was approximately 775 000 in 1980?
 (6) A I do
 (7) Q In 1989 did you have an opinion as to whether or not you
 (8) Mr Nicholson in the westward region really knew what the
 (9) optimum or maximum escapement was for your sockeye
 (10) system?
 (11) A No and I don't think I know that precisely today And I
 (12) don't know that we ever will precisely
 (13) Q Well confidence in spawner recruits small euphotic
 (14) volume and other theoretical means are all those variables
 (15) that you need to know about in order to assess that?
 (16) A Yes
 (17) Q And as time passes you refine that is that fair?
 (18) A Yes And certainly the adult mortality that's suffered
 (19) is - that's totally unmeasured in high seas that can be a
 (20) real factor that we will never have a grasp on We know the
 (21) 200 mile limit certainly had some impact on that but there is
 (22) a lot of different types of gear offshore and various fisheries
 (23) that subject themselves to bycatch of salmon and the
 (24) recording
 (25) of those bycatches are not as good as they should be so -
 Q Are there other factors relating to optimum escapement that
 you really don't know a lot about?

Vol 33 5939

- (1) A These are the big ones and I shouldn't say we don't know a
 (2) lot about it I think we know quite a bit about each of those
 (3) components but do we know everything and do we have it
 down to
 (4) the bottom line on optimum and maximum no we don't
 (5) Q Well then focusing on particular marine survival that is
 (6) what happens to sockeye after they leave the freshwater
 (7) environment are there a lot of unknowns with respect to that
 (8) phase of their life cycle?
 (9) A There are
 (10) Q We talked earlier about the 1989 season and the closure
 (11) decisions I want to follow up and ask you about 1990 Were
 (12) there any Valdez spill related fishing closures in your region
 (13) during the 1990 season commercial fisheries?
 (14) A As I recall there was no closures
 (15) Q Okay And we talked a little bit earlier about the Red
 (16) River You explained that in your view it would have been hard
 (17) to have a fishery there because of the shallowness of the water
 (18) and how close the weir is to the ocean?
 (19) A Right
 (20) Q And you talked about tidal influence and so on I wanted
 (21) to ask you a follow up question If in fact you received
 (22) instructions from Juneau ADF&G in Juneau in 1989 from
 (23) commercial fisheries headquarters to limit the escapement in
 (24) that river to a fixed number say 300 000 or 400 000 are
 (25) there ways physically you could have done that?

Vol 33 5940

- (1) A Yes
 (2) Q How would you have done that?
 (3) A We would have simply tried to close the weir off entirely
 (4) and the fish would have simply died behind the weir
 (5) Q Mr Probasco I asked him that question in his deposition
 (6) and he said that if you had the money and the manpower you
 (7) could have conceivably netted the fish and helicoptered them to
 (8) Kodiak for processing You think that would be feasible?
 (9) A Oh it's possible
 (10) MS STEWART Thank you
 (11) MS WAGNER I'll wait for the cross until after the
 (12) break
 (13) THE COURT We'll take our recess at this time ladies
 (14) and gentlemen We'll be in recess for 15 minutes
 (15) (Jury out at 12 02 p m)
 (16) (Recess from 12 02 p m to 12 17 p m)
 (17) (Jury in at 12 17 p m)
 (18) MS WAGNER Thank you Your Honor
 (19) CROSS EXAMINATION OF LARRY NICHOLSON (Read)
 (20) BY MS WAGNER
 (21) Q Ready?
 (22) A I am
 (23) Q What was the decision in terms of trying to do some special
 (24) harvest arrangements with respect to potential
 overescapement?
 (25) A Well for Red River - if we're still on that topic?

Vol 33 5941

- (1) Q Yes I'm talking about the Red River
 (2) A It was predicated on the appreciable likelihood that we
 (3) were going to encounter any oil within that lagoon and we might
 (4) consider a mop up type approach But the problem there is
 that
 (5) we continued to have oil showing up at the mouth and as I said
 (6) earlier we had tidal influence all the way up through that
 (7) lagoon area We just felt it probably wasn't safe to try to do
 (8) it
 (9) Q Would it have been possible to do some sort of inriver
 (10) fishery using department boats as opposed to a commercial
 (11) endeavor?
 (12) A You could have attempted something like that but I think
 (13) it would have been relatively ineffective
 (14) Q Why is that?
 (15) A Because the water is so shallow if you threw a gillnet in
 (16) there the lower meshes would be the only effective meshes
 (17) Those would fill up real quick and all the other fish would
 (18) just pass right over the gear
 (19) Q In 1989 the oil had some very significant impacts on the
 (20) Chignik area did it not?
 (21) A It did
 (22) Q What happened in part was that the cape areas were closed
 (23) off because of oil?
 (24) A That's correct
 (25) Q And the cape fleet then were pushed into the lagoon to

Vol 33 5942

- (1) fish?
 (2) A That's correct
 (3) Q And not only were areas closed off but at some point
 (4) during the season fishing was limited to daylight hours?
 (5) A That's right
 (6) Q And that's because you wanted to be able to have the
 (7) fishermen see and avoid oil?
 (8) A That's correct
 (9) Q Now Mr Probasco testified that it was his opinion that
 (10) the closures of the cape and the other restrictions due to oil
 (11) caused Chignik fishermen to lose catch Would you agree with
 (12) that assessment?
 (13) A Yes I do agree with that We found with maximizing the
 (14) fishing effort in the lagoon with an extremely strong run you
 (15) are still going to have fish escape harvest So by allowing a
 (16) fishery in those outside capes you are obviously slowing that
 (17) run down before it accumulates within the lagoon itself prior
 (18) to running the river
 (19) Q And one of the things that happens in the normal way the
 (20) fishery is conducted - not in 1989 You have the cape fleet
 (21) out there They're catching the Chignik bound fish earlier
 (22) than if they were in the lagoon I take it?
 (23) A That's correct
 (24) Q And Mr Probasco said that the travel time for fish from
 (25) the cape areas outer cape areas or inner cape areas for that

Vol 33 5943

- (1) matter to the lagoon can be anywhere from two to ten days
 (2) Would you agree with that assessment?
 (3) A Yes
 (4) Q Now the cape fleet they are targeting Chignik bound fish
 (5) aren't they?
 (6) A They are
 (7) Q But in fact they will catch some non Chignik bound fish
 (8) won't they?
 (9) A That's correct
 (10) Q When you are fishing in the lagoon you are catching not
 (11) only predominantly but probably only Chignik fish is that a
 (12) fair statement?
 (13) A A better word is predominate We have in fact found a few
 (14) stray stocks very few A case in point we've had fish that
 (15) were tagged in other locations that were recovered in Chignik
 (16) Lagoon This is a rarity If we were going to look at
 (17) percentages we're probably looking at less than one tenth of
 (18) one percent something of that magnitude but it does happen
 (19) Q But having non Chignik fish in the lagoon that would be a
 (20) fluke sort of thing?
 (21) A Yes it would
 (22) Q Now escapement for the Chignik fishery it is done on a
 (23) kind of an interval goal system is it?
 (24) A Yes
 (25) Q In other words you don't wait for your 400 000 goal in the

Vol 33 5944

- (1) early run rather you get so many escaped fish by a certain
 (2) date and then you have different dates pegged is that how it
 (3) works?
 (4) A Yes This is referred to as a time of entry table The
 (5) rationale is that you will segment your escapement throughout
 (6) the entire length of that run instead of taking a big chunk out
 (7) of only one portion of the run Again the reason we do that
 (8) is because we have discreet stocks of fish within a given run
 (9) that actually spawn in separate areas So if you want to make
 (10) sure you adequately cover all the spawning grounds you will
 (11) systematically want to take those fish escapement throughout
 (12) the entire lengths so you segment it out
 (13) We have a table that we publish annually for the early and
 (14) late run and it gives the desired over time for each date
 (15) Q One statement you made yesterday you were talking about
 (16) 18 million spawners in 1989 getting into the Kodiak system which
 (17) was more designed for 3 million spawners?
 (18) A That's correct
 (19) Q Do you remember that? In your assessment what kind of
 (20) impact does that have when you have that many more
 (21) spawners?
 (22) A One of the concerns that we had was when you put that many
 (23) fish in the spawning beds themselves whether or not you are
 (24) going to suffer a real problem as far as depleted dissolved
 (25) oxygen and would that in fact kill a lot of those fish prior to
 them having the ability to spawn

Vol 33 5945

- (1) We really didn't find a relationship What happens is that
 (2) when you have spawning on top of spawning they tend to go in
 (3) and dig the redd and the eggs out that have already been
 (4) deposited so you finally reach a saturation point for a given
 (5) system That's basically what we saw in quite a few of the
 (6) systems to Kodiak
 (7) No we really didn't measure any of the quote negative
 (8) effect The pink salmon are unique in that they do not require
 (9) the system itself to support them during that life cycle In
 (10) other words they emerge in the spring the spring after they
 (11) spawn They immediately migrate out to the estuaries so they
 (12) are not relying on those streams to support them unlike
 (13) sockeye
 (14) Sockeye will rely on the lake systems for at least one or
 (15) two years of life so that lake has to be able to support that
 (16) volume of fish An example is if all 18 million of those fish
 (17) were sockeye and they were within sockeye systems it would
 (18) be
 (19) a real problem They would basically eat themselves out of
 (20) house and home Not the case with either pink or chum
 (21) salmon
 (22) MS WAGNER That concludes the cross Thank you
 (23) MS STEWART Your Honor defendants call Kenneth
 (24) Florey to the stand by read deposition testimony
 (25) THE CLERK Would you raise your right hand please
 sir
 (The Witness Is Sworn)

Vol 33 5946

- (1) THE CLERK Please be seated For the record sir
 (2) state your full name your address and spell your last name
 (3) please
 (4) THE WITNESS My name is James N Reeves My address
 (5) is 4001 Westwood Drive Anchorage Alaska
 (6) THE CLERK Spell your last name
 (7) THE WITNESS R E E V E S
 (8) DIRECT EXAMINATION OF KENNETH FLOREY (Read)
 (9) BY MS STEWART
 (10) Q Mr Florey could you state your name and address for the
 (11) record please?
 (12) A Kenneth R Florey My home address is 19603 Belduque
 (13) Circle Chugiak Alaska 99567
 (14) Q Would you tell me what your educational background is?
 (15) A I have a bachelor of science degree in fisheries biology
 (16) from the University of Alaska Fairbanks 1974 graduate
 (17) Previous to that is high school and I was in the Navy for seven
 (18) and a half years in nuclear submarines Education there was
 (19) primarily in missile electronics I've had training post
 (20) college days primarily in program management negotiation
 (21) skills and that sort of thing
 (22) Q Could you tell me what full time employment you've had
 (23) since you left the University of Alaska Fairbanks?
 (24) A In June of 1974 I went to work for the Alaska department
 (25) of Fish & Game as a research biologist working on coho salmon

Vol 33 5947

1) in Southeast Alaska I was stationed in Juneau In October of
 (2) 1975 I was transferred to Soldotna as the area biologist for
 (3) the FRED division which is fisheries enhancement
 development
 (4) In December of 1977 I was transferred to Anchorage as the
 (5) regional project manager for FRED division I was responsible
 (6) for all the program management of the FRED programs in most
 all
 (7) of western Alaska excluding Prince William Sound and Cook
 (8) Inlet And in December of - well actually January 1st 1980
 (9) I transferred back to the commercial fisheries division as the
 (10) regional project or regional management biologist for Upper
 (11) Cook Inlet and Bristol Bay In December of 1983 I was made
 (12) regional supervisor for the central region which includes
 (13) Bristol Bay Cook Inlet and Prince William Sound and that is
 (14) the position I still hold
 (15) Q Turning to salmon first of all in Prince William Sound
 (16) what are the principal management challenges there from the
 (17) standpoint of ADF&G?
 (18) A The primary management challenge in Prince William Sound
 is
 (19) to try and harvest the nine to one or ten to one hatchery fish
 (20) to wild fish ratio without over harvesting stocks wild stocks
 (21) in the same fishery Also while prosecuting those fisheries
 (22) around those facilities trying not to over harvest sockeye
 (23) returns to Eshamy Lake and also to Coghill Lake Those are the
 (24) three major management concerns in western or Prince William
 (25) Sound along with the returns to Valdez Solomon Gulch
 hatchery

Vol 33 5948

(1) a similar thing trying to harvest returns to that facility
 (2) while not over harvesting wild stocks at Red River and in
 (3) Valdez on Port Hidalgo areas
 (4) Q Okay And am I right that the ten to one ratio you cited
 (5) has been a typical ratio of hatchery to wild pinks in Prince
 (6) William Sound since about 1988?
 (7) A While variable that is probably a reasonable percentage
 (8) 90 percent plus hatchery fish
 (9) Q And in those years since 88 or so has ADF&G been forced
 (10) to limit the harvesting largely to the terminal hatchery areas
 (11) themselves?
 (12) A Yes
 (13) Q And that is a change from the traditional fishery in which
 (14) the commercial fleet would spread over much of the Sound
 during
 (15) much of the summer is that correct?
 (16) A Yes
 (17) Q Moving over to Cook Inlet salmon management for a minute
 (18) I guess first of all on the Upper Cook what are the
 (19) significant management challenges there?
 (20) A The mixed stock fishery which has four major stocks -
 (21) five five major stocks the Susitna sockeye Cook Inlet or the
 (22) Fish Creek Big Lake sockeye Kenai sockeye Kaslof sockeye
 (23) Crescent River sockeye and trying to manage the fisheries to
 (24) obtain escapement goals in those systems while minimizing the
 (25) interception of coho salmon bound for the Susitna River and

Vol 33 5949

(1) chinook bound for the Kenai Those are the big ones as per the
 (2) Cook Inlet management plan
 (3) Q Going to a different topic for a moment you mentioned a
 (4) person by the name Al Menin as the inventor of the Bendix side
 (5) scan sonar Have you met with Mr Menin?
 (6) A Yes
 (7) Q Have you worked with him professionally?
 (8) A Yes
 (9) Q In what context?
 (10) A As a program manager we have hired Al Menin on an annual
 (11) basis to come to Alaska and work on our equipment to ensure
 (12) that it s working correctly
 (13) Q When Mr Menin visits or has visited since 1983 the sonar
 (14) sites in Upper Cook Inlet who does he work with from ADF&G?
 (15) A The various project leaders who are responsible for the
 (16) sonars in Cook Inlet That would be primarily Ken Tarbox and
 (17) Bruce King
 (18) Q Did Mr Tarbox and Mr King have experience in the
 (19) deployment and operation of the adult sockeye sonar counters
 in
 (20) Upper Cook Inlet?
 (21) A Yes
 (22) Q How far back does that experience go to your knowledge?
 (23) A Mr Tarbox since 1980 Mr King probably about the same
 (24) time
 (25) Q Does the Department of Fish and Game have any incentive to

Vol 33 5950

(1) make its adult sockeye salmon counts either high or low?
 (2) A No
 (3) Q Have you visited the sonar sites in Upper Cook Inlet?
 (4) A Yes
 (5) Q Have you been to all of the ones that we talked about
 (6) Kenai the Kaslof the Crescent and the Yentna?
 (7) A Yes yes
 (8) Q Have you observed the operation of the sonar counter on the
 (9) Kenai River when it was - well when it was actually counting?
 (10) A Yes
 (11) Q Do you recall who you - what year or what years?
 (12) A Annually
 (13) Q Have you been out there every year since 1983?
 (14) A Yes
 (15) Q Do you go out there sometimes unannounced?
 (16) A Always unannounced
 (17) Q Well is it your belief that ADF&G personnel do monitor the
 (18) counter during the course of a day when the run is going up the
 (19) river?
 (20) A Yes
 (21) Q Do they do that on an hourly basis?
 (22) A Yes
 (23) Q Have you observed calibration of the counter occurring?
 (24) A Yes
 (25) Q Have you yourself calibrated the counter?

Vol 33 5951

- (1) A Not in an official capacity
 (2) Q Well have you had calibration explained to you by Mr
 (3) Menin or Mr Tarbox and Mr King?
 (4) A Yes
 (5) Q All three of them?
 (6) A Yes
 (7) Q Have you looked through the oscilloscope that s part of the
 (8) counter deployment?
 (9) A Yes
 (10) Q And have you observed spikes in the oscilloscope as
 sockeye
 (11) pass?
 (12) A Yes
 (13) Q From your observations and explanation do you believe that
 (14) the adult sockeye side scan sonars are useful - are a useful
 (15) management tool?
 (16) A Yes
 (17) Q Why is that?
 (18) A Primary management tool we use
 (19) Q And is that true specifically with respect to the Kenai
 (20) River sockeye and adult sockeye counter?
 (21) A Yes
 (22) Q With respect to escapement counts generally does the
 ADF&G
 (23) commercial fisheries division endeavor in good faith to come up
 (24) with the best escapement numbers that it can?
 (25) A Yes

Vol 33 5952

- (1) Q Do you know of any way in which the department would gain
 (2) anything by making those numbers artificially high or low?
 (3) A No
 (4) Q Would you personally gain anything as regional supervisor?
 (5) A No
 (6) Q Okay well let me ask you this is collecting data on the
 (7) catch and the escapement the single most important piece or
 (8) status particular that is gathered by ADF&G?
 (9) A Yes
 (10) Q In the years that you ve been the regional supervisor for
 (11) the central region has collecting that information been a
 (12) significant part of your job?
 (13) A Yes
 (14) Q Is that something you took seriously?
 (15) A Yes
 (16) Q And did the managers that worked under you also view that
 (17) as a significant part of their job?
 (18) A Yes
 (19) Q In terms of inseason management what techniques does
 ADF&G
 (20) use in the central region to assess the escapement of the
 (21) various species in the streams you look at?
 (22) A In the central region we use sonar counting tower weirs
 (23) and aerial surveys
 (24) Q And do you view - do you view coming up with an accurate
 (25) escapement number as an important part of your job?

Vol 33 5953

- (1) A Yes
 (2) Q Why is that?
 (3) A It s the basis for our management decisions It s the
 (4) basis by which we build our entire data base to hopefully in
 (5) the future become even more accurate with our management
 and
 (6) maximize the yield of the resource back to the various users
 (7) Q Do you believe that the escapement counts that ADF&G
 comes
 (8) up with in the various management areas that you oversee are
 (9) generally accurate?
 (10) A As I stated before with the sonar there s certainly a
 (11) range around those estimates but yes for the purposes of
 (12) management yes they are accurate in my estimation
 (13) Q Do you believe that they are sufficiently accurate to permit
 (14) you to manage those fisheries effectively?
 (15) A Yes
 (16) Q And to build on the resource?
 (17) A Yes
 (18) Q What is the current status of the fishery stocks in the
 (19) central region the principal fishery stocks in the central
 (20) region and I m focusing on those that are targeted by the
 (21) commercial fisheries compared with what is in I guess it was
 (22) in 1972 you indicated when you first came to Alaska?
 (23) A As a general statement they are healthier
 (24) Q Do you believe that the strength of those resources as of
 (25) today compared to 20 years ago is related at all to the quality

Vol 33 - 5954

- (1) of the management that ADF&G has applied to them?
 (2) A That is one important factor
 (3) Q What other factors could have been involved in that?
 (4) A Favorable weather conditions and the Magnuson Act
 (5) Q How has favorable weather helped?
 (6) A Cold winters in the early 70s were very detrimental to all
 (7) the salmon stocks We haven t had those same similar severe
 (8) weather conditions We ve had milder weather than we had to
 (9) years ago
 (10) Q And how has the Magnuson Act helped?
 (11) A Decreased the high seas interception
 (12) Q So you would say good management good weather and the
 (13) Magnuson Act for the improvement in Alaska fish stocks in the
 (14) last 20 years?
 (15) A Yes
 (16) Q Any other factors you cite?
 (17) A Those are the primary ones
 (18) Q So then what is the State of herring abundance now
 (19) compared to 20 years ago?
 (20) A It s good
 (21) Q Is it stronger than it was?
 (22) A Yes
 (23) Q Is the biomass larger?
 (24) A Yes
 (25) Q And to what do you attribute that?

Vol 33 5955

- 1 A Primarily good weather and decreased interception in the
 2 high seas
 3 Q Now I m going to talk regarding a memo from you to ADF&G
 4 headquarters the commercial fisheries division and I m going
 5 to show you Mr Florey what has been marked as Exhibit DX48
- 6 excuse me 5843 I m going to show you the first couple
 7 pages At this time appears to be a memorandum from you and
 8 Charles P Meacham to Ken Parker and Doug Eggers dated
 June
 9 19th 1989 Do you recall authoring this memorandum?
 10 A Yes
 11 Q And is that your signature on the front page there where
 12 it says Ken?
 13 A Yes
 14 Q Do you recall what circumstance - what the circumstances
 15 of your preparing this were?
 16 A We previous to this memo had discussed the PPC meeting
 17 which is the policy planning committee which is the regional
 18 supervisors the director and the chief fisheries scientists
 19 the needs for an escapement goal policy so we could on a
 20 statewide basis implement an escapement goal policy that was
 21 consistent About that time the oil spill happened then Out
 22 of that this draft document was produced by Mr Eggers and
 23 sent out to the other members of the PPC for review That is
 24 why we drafted the response back to Mr Park - Mr Ken Parker
 25 and Doug Eggers that we did It was in response to this draft

Vol 33 5956

- 1 Q This draft that is attached to your memo in the second
 2 paragraph talks about the impact of the presence of oil in the
 3 normal prosecution of fisheries Was this draft the result at
 4 least in part of the fact of the Exxon Valdez oil spill?
 5 A Yes
 6 Q And was it at least in part addressed to trying to deal
 7 with the management difficulties that arose from that?
 8 A That was my understanding
 9 Q Now you list some of your specific concerns and the first
 10 one which is in the third paragraph of your memo which says
 11 would the biological justification within the policy apply to
 12 overescapement situations caused by fishermen price industry
 13 disputes Were you concerned about that at the time?
 14 A We have a history of problems in the state where fishermen
 15 go on strike if they re not happy with the price Because of
 16 that more fish go up the river in excess of escapement
 17 goals It s happened on a number of occasions
 18 Q In other words the escapement goal has been exceeded
 19 because there wasn t sufficient effort to catch the fish?
 20 A Correct
 21 Q Do you recall any specific years or fisheries where that
 22 occurred?
 23 A 1980 in Bristol Bay was one example that jumps quickly to
 24 mind
 25 Q And I know there was a striking in 91 Did that cause

Vol 33 5957

- 1 overescapement?
 2 A In a couple of instances there were overescapements but
 3 there was a lot more fishing effort in 1991 than there was in
 4 1980 But yes in 1991 - again the one in 1980 was the
 5 really big one
 6 Q There was overescapement in 91 but it was smaller
 7 magnitude?
 8 A Compared to the 1980
 9 Q Because the strike was shorter?
 10 A Yes
 11 Q In DX5843 your memo addressing the potential ADF&G
 policy
 12 on overescapement in 1989 you also say how about
 escapement in
 13 excess of Emax associated with management imprecision
 what
 14 did you mean by that
 15 A He defines Emax in here as the level of escapement which
 16 produces the greatest expected return Escapements greater
 17 than Emax are greater than that which can be accommodated in
 18 either the rearing area or the spawning area of the system
 19 Using that as his definition of Emax through management
 20 imprecision that being where we make a management call and
 the
 21 result of that management call is more fish made it into the
 22 system than would be called for in Emax our question was
 what
 23 would we then be liable for fish in excess of that?
 24 Q What you were referring to is because you don t have total
 25 knowledge as to the size of the return the escapement goal is

Vol 33 5958

- 1 exceeded because of management decisions that are made is
 that
 2 right?
 3 A Because we were more conservative than we would have
 needed
 4 to have been
 5 Q Had you known -
 6 A Had we known more fish made it into whatever system
 7 Q Has that occurred in various years in some of the systems
 8 that you have overseen?
 9 A Yes
 10 Q Does it occur in part because of the need to be
 11 conservative in managing the fisheries?
 12 A Yes
 13 Q Is there some removal technique that would take the fish
 14 out as they entered or before they entered the river?
 15 A Well to do it in a manner to have any chance of success
 16 you would have to do it somewhere below where you counted
 them
 17 but above the commercial fishery Then - so then -
 18 Q So somewhere low in the river then?
 19 A Low in the river using lead weirs The fish are closely
 20 oriented to the bank and it would be a very easy thing to do to
 21 remove some of them from the river some from the river at that
 22 point because they would be easy to catch
 23 Q What do you mean by a lead weir? What is that?
 24 A If you look at a river and say the water is flowing from
 25 you to me and this is the river you go to each bank and you

Vol 33 5959

- (1) put out a picket fence at an angle into the stream which say
- (2) goes out say one hundred feet on either side and the fish are
- (3) very closely bank oriented They come up and they would lead
- (4) right along that picket fence in tight to the bank and you
- (5) could somehow have some capture structure at the top where
- you
- (6) could remove them
- (7) Q Well focusing on the Kenai because the sockeye are bank
- (8) oriented it would be easy to get them into those weirs?
- (9) A Very easy
- (10) Q Referring again to that memo DX5843 which is your memo in
- (11) response to the ADF&G s circulated draft policy regarding
- (12) potential overescapement on Page 2 in the first paragraph you
- (13) say there appear to be very few citations regarding the
- (14) mechanisms associated with reduced production We think this
- (15) is a largely theoretical discussion For example what studies
- (16) show the relationship between egg density and egg survival
- (17) Are there data outlining the relationship between fry
- (18) emergence - fry and emergence and marine survival close
- (19) quote What are you referring to in that paragraph?
- (20) A The fact that is there or is there not data studies that
- (21) have been done that shows the effect of overescapement based
- (22) upon the relationships of egg density and egg survival In
- (23) other words instead of in the wild versus inside to
- (24) demonstrations There wasn t a lot of information This is a
- (25) debate that rages within this profession on what
- overescapement

Vol 33 5960

- (1) means
- (2) Q At least in your view and Mr Meacham s view it would be
- (3) fair to say that you don t believe - or you - or would it be
- (4) fair to say that you don t believe or you believe there is a lot
- (5) that is not known about the relationship between for example
- (6) egg density and survival and fry emergence and marine
- survival
- (7) would that be fair?
- (8) A There is a lot that is not known
- (9) Q In this whole area of escapement what is - what is
- (10) optimal - oh in this whole area of escapement and what is
- (11) optimal?
- (12) A Yes
- (13) Q In the next paragraph you say I guess continuing on the
- (14) same theme do we really know the optimum or maximum
- escapement
- (15) for any system in Alaska Was it your view when you prepared
- (16) this memo that ADF&G did not really know what the optimum or
- (17) maximum escapement was for any system in Alaska?
- (18) A It s an ever changing situation of which as we get more
- (19) information our understanding becomes better We know
- more
- (20) now than we did in 1989 We knew more in 89 than we did in
- (21) 85 et cetera It s a very plastic totally and ever changing
- (22) dynamic situation of which we re just now starting to
- (23) understand
- (24) Q Then you go on to talk about not having sufficient
- (25) confidence in spawner recruit smolt euphotic volume and
- other

Vol 33 5961

- (1) theoretical means of describing salmon production In the next
- (2) sentence Does that accurately state your belief that at the
- (3) time with respect to at least Cook Inlet Prince William Sound
- (4) and Prince William Bay (sic)?
- (5) A Yes
- (6) Q Still referring to DX5843 your memo responds to the
- (7) ADF&G s draft policy on overescapement, down in the third
- (8) paragraph from the bottom about the middle of the page you
- say
- (9) quote we are concerned that we may be over reacting There is
- (10) no precedent for the department to respond to
- overescapement
- (11) We have had overescapement in many instances in the past
- and
- (12) not responded in this manner close quote Is that an accurate
- (13) statement?
- (14) A Yes
- (15) Q What instances did you have in mind when you made that
- (16) statement?
- (17) A If you have a stated escapement goal and more fish go into
- (18) that system than your stated goal you by definition have an
- (19) overescapement That does not necessarily mean you won t
- get
- (20) good production off of that but with the information you have
- (21) at that point in time that is your best guess of what the
- (22) system can produce so until you have a lot more information
- (23) and we normally change the escapement goals usually on like a
- (24) four or five year rotation depending upon information we have
- (25) we just at that point had never reacted in that fashion when we

Vol 33 5962

- (1) had large escapements in excess of our stated goals I felt
- (2) that - and felt that would not would be a poor precedent to
- (3) start reacting in that fashion now very inconsistent with the
- (4) way we operated in the past
- (5) Q Were there many years in each of the systems that you
- (6) managed where there was overescapement?
- (7) A No not many But certainly some and again to varying
- (8) degrees
- (9) Q Do you recall any particular ones where there was
- (10) overescapement?
- (11) A 87 and 88 in Kenai River obviously There s been a
- (12) number of instances in Bristol Bay be it Egegik Ugashik
- (13) Igushik Nushagak and Naknek where we ve had escapements
- in
- (14) excess and sometimes way in excess of stated goals
- depending
- (15) upon the circumstances most of the time beyond our control
- (16) Q Has the department in fact raised the escapement goals
- (17) during the 1980s on rivers in the Bristol Bay system sockeye
- (18) producing rivers?
- (19) A Yes
- (20) Q What reasons have gone into those increases?
- (21) A The factors I just mentioned
- (22) Q Is it fair to say that in general the conclusion of the
- (23) department was that those river systems could sustain a larger
- (24) spawning population than historically had been in those rivers?
- (25) A Yes

Vol 33 5963

- (1) Q On the Kenai River in Upper Cook Inlet have you ever seen
 (2) a return - or excuse me have you ever seen an escapement
 (3) that
 (4) you included was above the optimum in terms of a maximum
 (5) sustained yield?
 (6) A Based on current information I could not answer that The
 (7) best information we have to date would be escapements to 87
 (8) and it would be difficult to characterize that we ve had a
 (9) problem so far based on those escapements
 (10) Q So in your view it s too early to tell what the impact of
 (11) the record escapement in 1987 is?
 (12) A That s correct
 (13) Q Referring to 1989 in the possibility of overescapement in
 (14) Upper Cook Inlet did you see a risk that if you let the
 (15) escapement rise beyond the levels you had traditionally set in
 (16) some of the systems you were responsible for because of the
 (17) spill and because there would be no harvest that year did you
 (18) see a substantial risk that you might get a poor return because
 (19) of that result?
 (20) A There was that possibility
 (21) Q Mr Florey I m showing you a July 5th 1989 memorandum
 (22) from Mr Hilsinger to you which has been marked as Exhibit
 (23) DX5842 Do you recall receiving this memorandum?
 (24) A Yes I do
 (25) Q Paragraph four Mr Hilsinger in the second sentence says
 (26) having escapements of 1 6 million 1 1 million excess and 1 0

Vol 33 5964

- (1) million 300 000 excess in the Kenai River is providing us with
 (2) valuable information regarding the productive capability of
 (3) that system quote unquote Do you agree with that statement?
 (4) A It s certainly providing more data points which we
 (5) previously did not have
 (6) Q And in paragraph five Mr Hilsinger says in a large number
 (7) of river systems we simply do not know when it is E -
 (8) A Emax
 (9) Q Emax or Eopt probably and then it says the existing
 (10) escapement goals may not represent these values very well and
 (11) then he says additionally the Emax will change every year
 (12) depending on fresh water and marine survival Do you know
 (13) what
 (14) he meant by that
 (15) A Every system is dynamic every minute of every day of every
 (16) year the system you cannot put a specific number of terms
 (17) because conditions change so in a general sense you could
 (18) have
 (19) a set of parameters but specifically depending upon
 (20) environmental conditions Those carrying capacities change
 (21) they re dynamic
 (22) Q Okay So the number of spawners that will produce the
 (23) maximum return in one year is probably different than the
 (24) number that will produce the maximum return in another year?
 (25) A Yes
 (26) Q And then in the last sentence of this paragraph Mr
 (27) Hilsinger says no systems in Cook Inlet have a long enough

Vol 33 5965

- (1) history of good data to accurately determine Emax Do you
 (2) agree with that statement as of July 19th 1989?
 (3) A Yes
 (4) Q I m going to show you now a document that has been
 (5) marked
 (6) as Exhibit DX4030 and this is a letter from Theo Matthews the
 (7) president of UCIDA to Don - well he spells it Collingworth
 (8) but it s Don Collingsworth dated July 27th 1989 and it copies
 (9) you as the - he describes you as the area supervisor Do you
 (10) recall receiving a copy of this letter at or about this date?
 (11) A Yes
 (12) Q In DX4030 this memo Mr Matthews of the Upper Cook Inlet
 (13) drift association says although conditions obviously were good
 (14) pour the 1987 offspring this may not be the case for the 1988
 (15) brood To expect conditions to be favorable three years in a
 (16) row may be unrealistic
 (17) Was that a concern that was raised by anyone within the
 (18) central region that is that it might be overly - excuse me
 (19) that it might be unrealistic to assume that there would be good
 (20) conditions for three years in a row for the volumes of
 (21) escapement that were occurring?
 (22) A Yes
 (23) Q Who did you talk to about that?
 (24) A All my Cook Inlet staff
 (25) Q And what was the consensus after this discussion? What did
 (26) you decide?

Vol 33 5966

- (1) A The consensus was there was concern but no concrete data
 (2) suggests anything at that point in time
 (3) Q You didn t have any data to indicate that that would
 (4) necessarily create a problem?
 (5) A At that point in time
 (6) Q And at that point in time did you - you did not have such
 (7) data?
 (8) A We did not have enough data point in time to determine
 (9) whether overescapement three years in a row was going to
 (10) negatively impact or not We certainly had concerns We
 (11) didn t have the hard data
 (12) Q Well now in 1987 you had an all time record escapement on
 (13) the Kenai River of 1 597 000 sockeyes is that right?
 (14) A In 1987 what was the number you said
 (15) Q 1 597 000?
 (16) A I believe 1989 was a little larger but yes
 (17) Q Bullet up to that time -
 (18) A Yes
 (19) Q That was the record How did that come about? Why was
 (20) the
 (21) escapement so high that year?
 (22) A We were limiting our ability to manage one very large
 (23) return two we had the Glacier Bay oil spill which impacted
 (24) our ability to aggressively harvest on the earlier part of the
 (25) run because of the oil spill
 (26) Q Any other factors?

Vol 33 5967

- (1) A Not that I can remember
 (2) Q Was that the largest sockeye return in the Kenai to that
 (3) date?
 (4) A Yes still is
 (5) Q Do you recall just roughly in rough terms what the total
 (6) return was that year?
 (7) A Total return 12 and a half 13 million something like
 (8) that
 (9) Q And it's still a record?
 (10) A Yes
 (11) Q Okay then 1988 the escapement was again over a million by
 (12) 20 000 plus fish Why was the escapement in excess of the goal
 (13) range that year do you recall?
 (14) A I don't remember specifically but I think the primary
 (15) concern was the fact that we had a little different run entry
 (16) pattern that we weren't able to maintain the harvest rate to
 (17) keep it under 700 000 But I don't remember specifically It
 (18) was - again it was the fact that it was a very large run and
 (19) early indications didn't quite support as aggressive a fishery
 (20) as we probably should have prosecuted therefore we went up
 (21) to
 (22) a million a million back in the river
 (23) Q Was run size a problem that year? Was it a big run?
 (24) A It was also a very good run yes It wasn't nearly as
 (25) large as 87 but it was a pretty good run
 (26) Q In either 1987 or 1988 do you recall there being any

Vol 33 5969

- (1) A Yes it was
 (2) Q Was there any impact from the Valdez oil spill on the
 (3) management of the fisheries in the central region this past
 (4) year in 1992?
 (5) A No not to my knowledge
 (6) Q What about 1991?
 (7) A Not to my knowledge
 (8) Q Do you recall that the 1990 salmon harvest in Prince
 (9) William Sound was an all time record 46 5 million fish?
 (10) A I believe that's correct
 (11) MS STEWART Thank you Concludes our direct
 (12) MS WAGNER Just to make the record clear the
 (13) deposition that the defendants have been reading from and
 (14) which
 (15) we will be reading from were taken on August 17 1982
 (16) September 24th and 25th 1992
 (17) We'll continue in the deposition of Ken Florey
 (18) CROSS EXAMINATION OF KENNETH FLOREY (Read)
 (19) BY MS WAGNER
 (20) Q Mr Florey with respect to your testimony about sonar
 (21) counters do you consider yourself to have any expertise
 (22) such - such that you can give a personal opinion on the
 (23) accuracy of sonar counters?
 (24) A No
 (25) Q Do you know who designs the sonics portions of the Bendix
 (26) sonar counters?

Vol 33 5968

- (1) discussion of trying to institute additional measures that
 (2) might have limited escapement towards the end of the season
 (3) when you realized that you were going to exceed the goal?
 (4) A I'd have to go back and look specifically But I think we
 (5) instituted - instituted the reduced closed mouth areas at the
 (6) mouth of the rivers that basically brought the drift in the
 (7) mouth of the river to mop up the surplus
 (8) Q Was that done in both years?
 (9) A I don't remember specifically I'd have to look We did
 (10) it a couple of those years I'd have to - have to go back and
 (11) look at the information
 (12) Q Do you recall any other measures that were considered to
 (13) try to limit the escapement?
 (14) A No
 (15) Q Okay in 1989 you had what was up to then - and maybe
 (16) still is - the all time record escapement on the Kenai River
 (17) almost 1 6 million What caused that?
 (18) A Large return and we did not have the drift fishery to help
 (19) us harvest so it was strictly a setnet fishery only and it was
 (20) just saturated We couldn't fish it any harder than we did
 (21) Q So the setnet fishery even though it was open most of the
 (22) season wasn't sufficient to mop up all the extra fish?
 (23) A That's correct
 (24) Q To your recollection was that a record year for the setnet
 (25) fishermen on the east side of the Upper Cook Inlet?

Vol 33 5970

- (1) A No I do not Are you talking about the hydrophones?
 (2) Q And the transducer
 (3) A No
 (4) Q Do you know a fellow named Don Rogers?
 (5) A Yes
 (6) Q Who is Don Rogers?
 (7) A He is a fisheries scientist that is employed by FRI
 (8) Fishery Research Institute
 (9) Q And are you aware of studies that Don Rogers did on the
 (10) Nushagak and Wood Rivers relating to the accuracy of sonar
 (11) counters?
 (12) A No
 (13) Q Have you ever heard that he's done it?
 (14) A No
 (15) Q Are you familiar with what was known as the zero tolerance
 (16) policy that was imposed in the wake of the Valdez oil spill?
 (17) A Yes
 (18) Q Did that in fact become part of the State's policy to
 (19) assure that no contaminated fish reached the marketplace?
 (20) A There was a memorandum of understanding that was drafted
 (21) between the Department of Fish and Game and DEC which
 (22) outlined
 (23) how we were going to manage the fisheries and which agency
 (24) and
 (25) what they would be responsible for
 (26) Q Was it your understanding that the goal of the memorandum
 (27) of understanding was to assure that no contaminated seafood

Vol 33 5971

reached the marketplace?

- (2) A Yes
- (3) Q Was that goal achieved?
- (4) A To my knowledge yes
- (5) Q Were you involved at all in the drafting of the memorandum of understanding?
- (6) A Yes I was
- (7) Q What was your role?
- (8) A As a contributor and editor
- (9) Q You actually wrote up portions of it?
- (10) A Yes
- (11) Q And what was your role in implementing it?
- (12) A Primarily on the management side to make sure - pardon me to make the determinations on the appreciable likelihood of getting gear fish and fowl and whether we would or would not open fisheries
- (13) Q Was it your belief that in implementing that memorandum it was important to err on the side of closure if there was any risk in oiling?
- (14) A Yes
- (15) Q Did you apply with that belief in your decisions as to whether or not to allow openers to occur?
- (16) A If there was in our estimation appreciable likelihood that they fouled gear or product we would not open the fishery
- (17) Q Okay So to the best of your knowledge no commercial

Vol 33 5972

- (1) fishermen ever brought in an oiled fish in the 1989 season?
- (2) A To the best of my knowledge there were no oiled fish
- (3) Q And do you attribute that result in whole or in part to the application of the memorandum of understanding?
- (4) A Yes I do
- (5) Q What kinds of closures were there if you can describe them just generally in Prince William Sound as a result of the oil spill?
- (6) A Large area closures in areas of western and southwestern Prince William Sound where there was contamination of the beach Areas that were outside of the oiled area were open but were analyzed on a daily basis to ensure that there was not appreciable likelihood The entire drift fishery Upper Cook Inlet was closed for the season Setnet fishery was left open with the exception of closure on one day There were large areas closed in the Lower Cook Inlet where the beaches were oiled Some of the more inside areas or areas were free of oil contamination or there was no appreciable likelihood were opened in 1989
- (7) Q Were there any other gear types that were totally shut down other than the Upper Cook Inlet drift fleet?
- (8) A Herring fishery in Prince William Sound was not opened in 1989 Also there were - there was closures in the ground fishery and also the shrimp shell fisheries in Prince William Sound and Lower Cook Inlet after a portion of time Halibut

Vol 33 5973

- (1) fishery went on schedule
- (2) Q Okay Following up on zero tolerance zero tolerance was not in any way kept a secret was it?
- (3) A No
- (4) Q It was widely publicized and known by fishermen and everybody else involved?
- (5) A To my knowledge yes
- (6) Q It was promulgated was it not well in advance of most of the major fisheries?
- (7) A That s correct
- (8) Q Did you ever receive any objection from any representative of Exxon or Alyeska to the promulgation of the zero tolerance policy?
- (9) A Not that I recall
- (10) Q Are you aware of any other official of the State of Alaska that received objection by Exxon or Alyeska to the establishment of the zero tolerance policy?
- (11) A Not that I m aware of
- (12) Q Have you ever been told of any such thing?
- (13) A Not that I m remember
- (14) Q I m going to ask you a very similar question What I just asked you about is whether or not you had any objections to the establishment of the policy Do you recall ever receiving any objections from Exxon or Alyeska to any specific fisheries closure that resulting from the existence of the zero tolerance

Vol 33 5974

- (1) policy?
- (2) A Not that I can specifically recall
- (3) Q Showing you Mr Florey what s been marked as Exhibit 3707 do you recognize this as the 1989 annual management report for Upper Cook Inlet prepared by Paul Ruesch?
- (4) A Yes
- (5) Q If you would turn to page 3 Arabic three it is actually about ten or 12 pages into the document there is a heading there Exxon Valdez oil spill and then a discussion of the impact of the spill on the 1989 Upper Cook Inlet fishery and in the second paragraph Mr Ruesch talks about test fishing that was done and in the second sentence he says quote crude oil is generally in the form of mousse patties - excuse me crude oil is generally found in the form of mousse patties was readily found throughout much of the central district being most concentrated near the tidal rips the most important area of the park for the gillnet fishery
- (6) Were you involved in the decision under the memorandum of understanding to essentially close down the drift gillnet fleet in Upper Cook Inlet in 1989?
- (7) A Yes
- (8) Q Did you discuss that issue with Mr Ruesch?
- (9) A Yes
- (10) Q And did you agree with the decision to essentially close that fishery for the summer?

Vol 33 5975

- (1) A Under the guidelines of the memorandum of understanding
 (2) that was our decision
 (3) Q Focusing specifically on the order of July 19th that closed
 (4) the Upper Cook Inlet drift fishery until August 5th I have the
 (5) following question and it is more – a more specific iteration
 (6) of a question I asked you earlier Did you receive or to your
 (7) knowledge did the department receive any objection
 whatsoever
 (8) from Exxon or Alyeska with respect to that order?
 (9) A Not that was given to me or that I recall was given to
 (10) anyone else
 (11) Q Have you ever even heard of such a thing?
 (12) A Not that I remember
 (13) Q Now Mr Clafin asked some questions about whether you
 (14) considered other methods of in essence harvesting Kenai fish
 (15) Are you aware of any reasonable or prudent methods that the
 (16) state might have adopted that could have appreciably affected
 (17) the amount of escapement in the Kenai River in 1989?
 (18) A Not that could have been implemented in the time frame we
 (19) were dealing with
 (20) Q Is it fair to state that Alaska Fish & Game did everything
 (21) it could to control escapement into the Kenai in 1989?
 (22) A Within our ability I believe so yes
 (23) Q And to the extent that you lacked the ability one of the
 (24) reasons you lacked the ability to do more is because you didn't
 (25) have all of the management information you would have had
 had

Vol 33 5976

- (1) the drift fleet been fishing correct?
 (2) A In a general sense More correct would be that we did not
 (3) have the fishing power of the drift fleet to help us curb
 (4) sockeye and I said – as I said there was no more management
 (5) decisions to be made It was very clear that we could or
 (6) couldn't – what we could or couldn't do We fished as hard as
 (7) we could with what we had available
 (8) Q So basically would it be your opinion that the Upper Cook
 (9) Inlet setnet fleet harvested as many fish as it could
 (10) possibly – as it possibly could have harvested in 1989?
 (11) A Based on the way we ended up managing the season I don't
 (12) know how they could have caught anymore
 (13) Q Would it be feasible to do anything with respect to the
 (14) inriver users that is increase the bag limit for sport
 (15) fishermen or subsistence users to try to limit escapement in
 (16) years of large runs?
 (17) A I don't believe that it would effectively harvest the
 (18) numbers that were there in 87 or 89 that being over double
 (19) the escapement goal
 (20) Q It is correct is it not that the catch from the
 (21) commercial drift fleet in Upper Cook Inlet is perhaps the most
 (22) important piece of management information you use in gauging
 (23) potential run size mid season?
 (24) A Prior to the salmon hitting the beach and therefore
 (25) becoming exposed to the setnet fishery the drift fishery has

Vol 33 5977

- (1) the really only option to sample the run size and so
 (2) characterizing in that fashion I would say yes it is very
 (3) important
 (4) Q And you didn't have that management tool available in 1989?
 (5) A That's correct
 (6) Q And that was because of the Exxon Valdez oil spill wasn't
 (7) it?
 (8) A It was due to the fact that there was oil in the central
 (9) district that's correct
 (10) MS WAGNER Thank you
 (11) MR COOPER Your Honor Defendants would call as the
 (12) next witness Tom Carlson
 (13) THE CLERK Would you raise your right hand?
 (14) (The Witness Is Sworn)
 (15) THE CLERK Please be seated For the record, sir
 (16) state your full name your address and spell your last name
 (17) please
 (18) THE WITNESS My name is Thomas James Carlson I live
 (19) at 323 Skagit Street in Richland Washington 99352 The last
 (20) name is spelled C A R L S O N
 (21) DIRECT EXAMINATION OF THOMAS CARLSON
 (22) BY MR COOPER
 (23) Q Good afternoon Dr Carlson How are you?
 (24) A Doing fine
 (25) Q You have the privilege and honor of being the last witness

Vol 33 5978

- (1) on the afternoon before a four day holiday Everybody of
 (2) course is thinking of nothing except what's going on in this
 (3) courtroom
 (4) THE COURT At least up until now
 (5) BY MR COOPER
 (6) Q Dr Carlson can you tell us what your current employment
 (7) is?
 (8) A I'm currently working as a staff research scientist at
 (9) Battelle Labs in Richland Washington
 (10) Q And what kind of an organization is Battelle Labs?
 (11) A Battelle is a not for profit research company
 (12) Q And we've already heard some testimony from some other
 (13) witnesses about Battelle but generally what kind of work
 (14) does it do?
 (15) A It does a broad range of research and development
 (16) activities including running the DEO's Pacific northwest
 (17) laboratory
 (18) Q DEO is?
 (19) A Department of energy I'm employed in a group that does
 (20) aquatic ecology types of research
 (21) Q Can you tell us about your educational background degree
 (22) in –
 (23) A I have bachelor's and a master's and a Ph.D. all in
 (24) fisheries science
 (25) Q And when did you get your bachelor's degree?

Vol 33 5979

- 1 A That was 1971
 2 Q And your master s degree?
 3 A 1974
 4 Q And your Ph D ?
 5 A 1979
 6 Q And those were all from the University of Washington?
 7 A All from the University of Washington
 8 Q Seems like we ve seen a number of people here who have
 9 received an education or part of it at the University of
 10 Washington Is that a particularly prominent place for people
 11 who are interested in fish?
 12 A Particularly salmon
 13 Q Now I want to get a little bit of information about
 14 your - about your employment history and kind of work that
 15 you ve done Can you tell us just give us very briefly what
 16 you have done and the nature of the work that you ve done in
 17 fisheries or fish biology?
 18 A Okay I need to start with my master s work where I was
 19 working as a research assistant in the Kvichak system
 20 Q You might want to spell that
 21 A Kvichak?
 22 Q Yes
 23 A It s K V I C H A K
 24 Q That s an Alaskan system?
 25 A That s an Alaskan system Lake Iliamna is the major lake

Vol 33 5981

- 1 A Well in this particular case we re interested in what
 2 portion of the zooplankton community that the juvenile sockeye
 3 preferred and in particular I was interested in a specific
 4 zooplankton name of the zooplankton is bosmina and I was
 5 particularly interested in how portions of that population were
 6 being consumed
 7 Q Did you do any work on the Kvichak in connection with
 8 spawning ground surveys?
 9 A Yes I did We went to the spawning grounds of course
 10 after the fish were spawned out We measured the fish
 11 obtained sex information and also collected otolith
 12 Q Otolith may be a term that people are going to hear about
 13 more What s an otolith?
 14 A Otolith is a bone in the inner ear of fish and it has a
 15 unique property It s like a scale You can deduce some of
 16 the life history from looking at its otolith
 17 Q Kinds of like the rings of a tree?
 18 A Kind of like the rings on a tree
 19 Q You can tell how old the fish are by looking at this little
 20 otolith?
 21 A That s correct
 22 Q Let s see Now we were kind of getting your background
 23 here and we talked about the Kvichak What else have you
 24 done?
 25 A You mean besides Kvichak?

Vol 33 5980

- 1 there and the Kvichak system is the largest producer of
 2 sockeye salmon in the world I believe
 3 Q What kind of work were you doing there on the Kvichak?
 4 A A variety of things but my responsibility was primarily
 5 the secondary production and that was looking at the
 6 zooplankton that were in the lake
 7 Q The zooplankton - and that s what the salmon feed on?
 8 A That s right that s the primary food for juvenile sockeye
 9 Q You were looking at the food production of the lake?
 10 A That s correct
 11 Q What else were you doing on that Kvichak project?
 12 A We did a variety of things When we weren t involved in
 13 the primary activity why then you usually did a number of
 14 other things We did -
 15 Q Did you look at -
 16 A Pardon?
 17 Q Did you look at fry behavior for instance?
 18 A I looked at fry behavior and that included helping out
 19 with the work to do the abundance estimates distribution of
 20 fry within the lake
 21 Q Did you look at matters concerning selective predation by
 22 fry?
 23 A Sure did
 24 Q Can you - now having said that can you explain what that
 25 means for us?

Vol 33 5982

- 1 Q Yes
 2 A Okay Following that I went to work for an engineering
 3 company in the midwest and there I did what s more
 4 characterized as physical limnology
 5 Q Physical limnology is going to be a term that some of us
 6 probably won t be too familiar with at least What does that
 7 mean?
 8 A Physical limnology has to do with the behavior mainly of
 9 the water mass that constitutes lakes or reservoir
 10 Q And does that - what kind of things do you look at if
 11 you re a limnologist?
 12 A Well there are two primary things you look at in that
 13 area is you look at the temperature how heat is actually
 14 stored and distributed in the water body and you also look at
 15 what s called a mass budget You look how the water actually
 16 moves within the water body how quickly it moves in how
 17 quickly it moves out Evaporation
 18 Q Then do you try to relate that to the biota in the lake?
 19 A You absolutely do The temperature regime of the lake
 20 aspects of the mass budget determine the suitability of the
 21 lake or the reservoir for certain species of fish
 22 Q Now was that with Harza Engineering that work you were
 23 describing?
 24 A Yes that was Harza
 25 Q How about in connection with your Ph D what kind of work

Vol 33 5983

- (1) did you do there that involves some of the things we re going
 (2) to be talking about today?
 (3) A Okay My Ph D work the dissertation itself was involved
 (4) with the sound scattering properties of salmonids What s
 (5) meant by that is it had to do with sonar and there s a branch
 (6) of sonar that s involved with assessing fish populations It s
 (7) a very well developed science and many of the major fisheries
 (8) in the world are managed using sonar information And the
 work
 (9) that I did I looked at how fish of various sizes scattered
 (10) sound at two different frequencies depending upon their
 (11) activity level
 (12) Q Now have you continued to have an interest in
 (13) hydroacoustics as well as these other areas you ve talked
 (14) about?
 (15) A Oh yes it s continued
 (16) Q Can you tell us just describe for us briefly what your
 (17) background is in terms of your work experience involving
 (18) hydroacoustics?
 (19) A As I - starting with my Ph D the time I was working on
 (20) that I participated in a rather large number of studies in
 (21) areas such as the offshore marine environment off Sana Onofre
 (22) in California through the lower Columbia River to several
 (23) lake systems in Washington state and in Canada In almost all
 (24) of these cases what we were interested in were three things
 (25) We were interested in the behavior of fish We were also

Vol 33 5984

- (1) interested in the distribution at a particular point in time
 (2) We were also interested in estimating their abundance
 (3) Q Now have you in fact performed hydroacoustic surveys of
 (4) fish?
 (5) A Yes a great many of them
 (6) Q Including salmon?
 (7) A Including salmon uh huh
 (8) Q Let me just list a few here and see if I could cover part
 (9) of it at least Banks Lake?
 (10) A Banks Lake that s a reservoir in Washington state and has
 (11) a population of kokanee
 (12) Q Population of?
 (13) A Kokanee land locked form of sockeye
 (14) Q If you got a sockeye that never gets out to the ocean
 (15) you ve got something that s called a kokanee?
 (16) A That s a sport fish Americans really love
 (17) Q How about Lake Roosevelt?
 (18) A Lake Roosevelt is one of the storage reservoir on the
 (19) Columbia River and it s in back of Grand Coulee Dam the dam
 (20) that maybe some of you have heard about
 (21) Q You ve done work in Alaska on the Egegik?
 (22) A I ve done work in Alaska on the Egegik In that particular
 (23) case it was a special project to try to look inseason and
 (24) determine the number of adult sockeye that had made it inside
 (25) the fishing boundary and were escaping into the river system

Vol 33 5985

- (1) Q This is all utilizing sonar units?
 (2) A This is all sonar
 (3) Q You also worked - I don t think we need to spend time on
 (4) it Wenatchee?
 (5) A Like in Washington state?
 (6) Q Lower Columbia River
 (7) A Right
 (8) Q You ve referred already to the offshore manne work I
 (9) think at Sana Onofre and one called - look I m not going to
 (10) be able to pronounce it
 (11) A Ozoyouss It s another lake system in the northern part of
 (12) the state
 (13) Q These surveys have both adults and juvenile salmon?
 (14) A Usually not at the same time but been a mixture, adults
 (15) and juveniles depending upon the time of year you go there
 and
 (16) the life stage you re sampling for
 (17) Q Now have you instructed in short courses on some of these
 (18) subjects?
 (19) A Yes I have At the time I was getting my Ph D a program
 (20) was starting up or had been underway at the University of
 (21) Washington in marine acoustics and as part of that the
 (22) university offered short courses to train fisheries managers in
 (23) the use of acoustic instruments and I was a lecturer in those
 (24) short courses
 (25) Q Now you are also - you ve been involved with an

Vol 33 5986

- (1) organization called BioSonics?
 (2) A Yes I am
 (3) Q Could you explain what that organization is and what your
 (4) role is in it?
 (5) A It started out I was working at the applied physics lab
 (6) and two electrical engineers started a company called
 (7) BioSonics They were having trouble getting a technical
 (8) services activity going and I was able to earn part of the
 (9) company by actually doing that starting a consulting activity
 (10) and over the course of time I finally became the president of
 (11) that company
 (12) Q Are you still affiliated with BioSonics?
 (13) A No I m not
 (14) Q Now I think you told me that you also have an interest in
 (15) what I would call I guess or what you would call aquatic
 (16) ecology?
 (17) A Yes that s correct
 (18) Q Could you explain what you mean by that?
 (19) A Aquatic ecology is really trying to understand how aquatic
 (20) systems work how the various pieces fit together and what
 goes
 (21) right and what goes wrong That s it
 (22) Q Does your work that you ve described already when you ve
 (23) been to these various lakes doing survey work and limnology
 (24) work and so forth all involve aquatic ecology?
 (25) A It all meshes together When you go out there and make

Vol 33 5987

- (1) observations on a fish community or a zooplankton community
 (2) you observe fluctuations you observe trends and inevitably
 (3) what you re trying to understand you re trying to understand
 (4) the mechanisms that actually cause these sorts of events to
 (5) happen And that requires that you look at the - look at the
 (6) lake or whatever it is you re looking at as a system with parts
 (7) that sometimes work together sometimes don t
 (8) Q Let s see Are you a member of any professional
 (9) organizations?
 (10) A Yes I belong to the American Fishery Society
 (11) Q How about on any scientific review panels?
 (12) A I ve served on several I served on one international
 (13) review committee looking at - they were interested in
 (14) acoustic tomography which is part of our global warming
 (15) program trying to understand how the oceans are responding
 (16) to
 (17) increased CO2 in the atmosphere
 (18) Another part of that program was actually looking at krill
 (19) in the Antarctic I served as an advisor to that group I
 (20) also served as a member of a group intervening between
 (21) seismic
 (22) the seismic industry and fishermen in the Santa Barbara
 (23) Channel where the concern was the effects of high intensity
 (24) seismic survey activities on fish communities
 (25) Q Seismic survey being basically making a loud noise and -
 (1) A Putting a lot of sound in the water
 (2) MR COOPER Your Honor I would tender Dr Carlson as

Vol 33 5988

- (1) an expert in the areas of aquatic ecology salmon biology and
 (2) hydroacoustics
 (3) MR O NEILL Would repeat those one more time?
 (4) THE COURT Aquatic ecology salmon biology
 (5) hydroacoustics
 (6) MR COOPER Yes
 (7) MR O NEILL No objection
 (8) THE COURT Thank you Qualifications of Dr Carlson
 (9) are accepted
 (10) MR COOPER Thank you Your Honor
 (11) BY MR COOPER
 (12) Q Dr Carlson we ve talked about pink salmon and some other
 (13) species and we spent a lot of time the past couple days
 (14) dealing with the pink salmon life cycle What I d like to do
 (15) is to have a brief description of the life cycle of the sockeye
 (16) salmon since that s the species that you re going to be
 (17) dealing with here and it isn t really quite the same as the
 (18) pink salmon
 (19) A That s correct
 (20) Q We have I believe an exhibit that demonstrates the life
 (21) cycle Defendants DX7124 A which I ll put on the screen
 (22) Then again maybe I won t
 (23) That s an exhibit that indicates the life cycle of a
 (24) sockeye salmon?
 (25) A Yes that s correct

Vol 33 5989

- (1) Q I guess since we ve started at the beginning with the
 (2) others we ought to start at the beginning here We ve got the
 (3) eggs up there?
 (4) A Okay If you don t mind I have a hard time disconnecting
 (5) the eggs from the adults so if I could start there
 (6) Q Start on the other end Incidentally do you know how to
 (7) use the light pen?
 (8) A I think I do I ll give it a shot
 (9) Start with the adults and I think the Kenai system is a
 (10) good one to use as an example But the adults after spending
 (11) a period of time in the ocean a variable period of time
 (12) return in the - well they return this time of the year They
 (13) start coming in July and pretty much are finished by
 (14) mid August And the Kenai system there is actually an early
 (15) run that comes in earlier as well but regardless of what the
 (16) entry pattern might be fish are pretty much into the spawning
 (17) areas by late summer where they reside and complete
 (18) spawning
 (19) by late fall early winter at which time eggs are deposited in
 (20) the gravel of the spawning streams or beaches wherever the
 (21) sockeye have spawned
 (22) The next stage is the egg stage and the eggs are in the
 (23) gravel and they incubate for a period of time And towards the
 (24) latter part of the winter why then they start to develop and
 (25) start to become something that s beginning to look like a
 (1) fish And this particular stage is the alevin stage

Vol 33 5990

- (1) Q Is that when they have the yolk sac still?
 (2) A This is when they have the yolk sacs This is pretty much
 (3) standard and very similar to the pink salmon biology the story
 (4) that was heard earlier
 (5) They remain in this stage until they will go through the
 (6) button up process which you heard Erwin Brannon talk about
 (7) before And then let s go ahead and quit on that
 (8) And then beginning in April or May why then they emerge
 (9) from the gravel and these juvenile fish move out of the
 (10) spawning areas and sockeye salmon move towards lake
 (11) systems
 (12) that is the majority of them do
 (13) Q That s where I want to stop there for just a minute
 (14) because that s where they re a lot different from pink salmon
 (15) is that right?
 (16) A Yeah that s correct The pink salmon go directly out into
 (17) the marine environment but sockeye the majority of sockeye
 (18) require a lake that they can reside in for a period of one or
 (19) two or maybe even three years
 (20) Q So they re going into the lakes instead of into the ocean?
 (21) A That s correct they re going into the lakes instead of
 (22) into the ocean Go ahead and put a checkmark there
 (23) And their movement into the lake actually takes place in
 (24) two stages They initially move into the nearshore areas
 (25) which limnologists call the littoral areas then there they
 (1) grow a little bit and then over a period of time they go

Vol 33 5991

- (1) through a process that we call recruitment that is they move
 (2) towards the center of the areas towards the center of the
 (3) lake the more open areas of the lake
 (4) And that recruitment process is typically pretty complete
 (5) by July and that's where they reside They stay in that part
 (6) of the lake They feed on zooplankton and grow through the
 (7) summers and then stay over winter and then depending upon
 (8) their particular stage why then they may outmigrate as smolts
 (9) in the spring The outmigration that's a smolt right here
 (10) Q What is it that marks the difference between a juvenile
 (11) that's in the lake and something you now are calling a smolt?
 (12) A Well a smolt there are a bunch of physiological changes
 (13) and what have you but basically when the fish - when the
 (14) juvenile actually leaves the lake system and moves into the
 (15) river why then it's considered a smolt
 (16) Q And is the smolt stage the one now where it's preparing
 (17) itself for the saltwater?
 (18) A That's right It's - a lot of the preparation takes place
 (19) during the process of smoltification before they actually enter
 (20) the river system They typically aren't in the river systems
 (21) too long at least not in Alaska and not in the Kenai
 (22) Q You mean after they leave the lake as juveniles?
 (23) A After they leave the lake as juveniles they make their way
 (24) down to the ocean in a relatively short period of time No
 (25) more than a couple of days

Vol 33 5992

- (1) Q And how far down do they go - well I guess in the Kenai
 (2) system about how far are they going in the rearing place to
 (3) get to the ocean?
 (4) A Oh it's about - I think it's about 55 60 miles from the
 (5) Skilak to the outlet there and some of these fish come from
 (6) Kenai Lake so they have to come down through the river and
 (7) they have an appreciably greater distance to come some from
 (8) the Russian River some from Kenai Lake
 (9) Q So now they've smoltified and head down the river What
 (10) becomes of them?
 (11) A They move into the marine environment and they stay in that
 (12) environment for a variable period of time depending upon a lot
 (13) of factors In the Kenai system they typically spend one year
 (14) in the lake system and three years in the ocean environment
 (15) and
 (16) then -
 (17) Q Do you know where they go when they're in the ocean? We
 (18) heard about pink salmon going all around the north Pacific
 (19) A Well the sockeye pretty much should go around the north
 (20) Pacific too They cover a very broad range Their migratory
 (21) behavior covers a lot of geography so they go all the way out
 (22) go counterclockwise all the way out through the Aleutians and back
 (23) again into the spawning streams
 (24) Q How long are they out there?
 (25) A They're out there for a variable period of time Some of
 them come back after spending a year out there some come
 back

Vol 33 5993

- (1) after spending four years out there but the majority spend
 (2) three
 (3) Q I guess now in the case of the pink salmon we learned
 (4) because they're on a strict two year life cycle, you never have
 (5) the odd year group and the even year group mixing So it's
 (6) just one or the other That's not the situation here?
 (7) A No not at all You have age groups from more than one
 (8) brood year where the brood year means the year of spawning
 (9) You actually have a lot of genetic interchange between brood
 (10) years because of the multiple age groups because of this
 (11) complex life cycle So you actually have a lot of genetic
 (12) interchange in the population
 (13) Q So when the adults come in or when the adults will be
 (14) coming in later this year they will be comprised of fish that
 (15) were born over a few year period as opposed to all having been
 (16) born at the same time?
 (17) A Right They're actually - I think it's about six major
 (18) age classes that ADF&G uses in their forecasts
 (19) Q I've seen the professional way sockeye biologists refer to
 (20) age of these fish like a 1 3?
 (21) A Yeah That's -
 (22) Q That doesn't mean 1 3 years old does it?
 (23) A No it doesn't It's just - the convention is to have two
 (24) numbers like this and the - the 1 refers to the number of
 (25) winters that they spent in freshwater as they're in the

Vol 33 5994

- (1) freshwater lake system as juveniles The 3 refers to the
 (2) number of winters that they spent in the ocean
 (3) Q So a 1 3 age fish would have spent how many winters in the
 (4) lakes?
 (5) A It would have spent one winter in the lake and then three
 (6) winters in the ocean
 (7) Q But - because they come into the lake in the springtime?
 (8) A That's right
 (9) Q If you wanted to know - I mean if we asked you in human
 (10) terms how old would that fish be that 1 3 how many years old
 (11) would he be four?
 (12) A From the time of spawning it would actually be five
 (13) Q So if you want to know the total age you got to add one to
 (14) that?
 (15) A Got to add one to that
 (16) Q Okay Hopefully we won't have to get too hung up in that
 (17) And about how much do these fish weigh when they return?
 (18) A The Kenai River fish weigh in the vicinity of five six
 (19) pounds Nice fish
 (20) MR COOPER Your Honor I believe that this is
 (21) preadmitted
 (22) BY MR COOPER
 (23) Q All right Now we're going to - you're going to talk
 (24) here about two different issues is that right?
 (25) A Yes that's correct

Vol 33 5995

- (1) Q And let s take them one at a time and then when we get to
 (2) the second one we ll stop for a minute and talk about the
 (3) differences between the two But the first issue that I d like
 (4) to have you focus on is this issue about the sonar counting
 (5) unit in the Kenai River
 (6) A Okay
 (7) Q All right? And you understand that what we re talking
 (8) about here is the fundamental question of how many fish the
 (9) Upper Cook Inlet fishermen would have caught if there hadn t
 (10) been an oil spill in 1989?
 (11) A That s correct I understand that
 (12) Q So we re dealing here with the 89 harvest We re not
 (13) talking about what s going to happen in the years past 1989
 (14) and you also understand that Dr Rogers who was here to
 (15) testify earlier has testified to the effect that in fact there
 (16) were more fish that were in the Upper Cook Inlet available for
 (17) fishermen to catch in 1989 than the sonar unit in the Kenai
 (18) River was indicating?
 (19) A That s correct I understand that
 (20) Q Now you also understand that that claim turns on the issue
 (21) as to whether or not the sonar counter accurately counted fish
 (22) or whether it underestimated them?
 (23) A That s correct I understand that
 (24) Q So that s the first thing that we need to talk about is
 (25) the question of whether or not that sonar counter was working

Vol 33 5996

- (1) the way ADF&G thought it was or not Can you - well have you
 (2) been to that sonar counter?
 (3) A Yeah I sure have
 (4) Q Why don t we go back and pick up just a little bit just
 (5) explain a little bit about your background as to what you ve
 (6) done in connection with working - your work involving the
 (7) sonar counter on the Kenai River
 (8) A At the Kenai?
 (9) Q Yeah at the Kenai
 (10) A Okay I have to back up a little bit I ve had more than
 (11) a casual interest in the Kenai River or the Bendix side scan
 (12) sonar for quite a few years
 (13) Q That s the type of unit on the Kenai?
 (14) A Type of unit on the Kenai River It was a major competitor
 (15) with similar instruments that BioSonics was manufacturing and
 (16) so we were always concerned about how we might get an edge
 (17) and
 (18) get some of the - of that type of the state of Alaska s
 (19) business so it was a topic of study for many many years
 (20) As a consequence of that whenever I had an opportunity to
 (21) go to one of the sites and to see one of the systems operating
 (22) or talk to someone about it why then I took that opportunity
 (23) That changed of course in 1991 when I left BioSonics but
 (24) then through various circumstances I had the opportunity to go
 (25) and visit the sonar site as late as 1993 here again
 (26) Q About how many times - well since you - since Exxon

Vol 33 5997

- (1) asked you to look at this issue in this litigation you have
 (2) spent a fair amount of time up there at the site haven t you?
 (3) A I certainly have
 (4) Q Have you worked with the ADF&G people who have been -
 (5) who
 (6) are in charge of that sonar unit?
 (7) A Yeah I - both in 1992 and 1993 well throughout these two
 (8) years and even the latter part of 1991 and continued to the
 (9) present I ve spent a lot of time with Ken Tarbox box and Bruce
 (10) King In many respects I feel like I m part of the crew
 (11) there
 (12) Q And have you actually done work in conjunction with them
 (13) trying to look at some of these aspects of the Kenai counting
 (14) system?
 (15) A Yes I have both - well there are actually three kinds
 (16) of counting that are going on in the Kenai system One is the
 (17) counting of adults which uses the Bendix side scan sonar The
 (18) second is the counting of smolts juvenile fish that are
 (19) moving in the opposite direction of the adults going down the
 (20) river and then the fry that are in the lake They have
 (21) programs to do all three
 (22) Q And you ve basically worked on all three of those with the
 (23) people from ADF&G up there?
 (24) A I haven t worked on the adult counter project but the
 (25) other two I have
 (26) Q But you ve looked - you re familiar with the adult?

Vol 33 5998

- (1) A Oh yes very Yes absolutely
 (2) Q Now why do they use a sonar counter on the Kenai River?
 (3) Why can t they just count the fish by looking at them?
 (4) A Well the Kenai River maybe all of you here have seen it
 (5) but it s fed by water melted from a glacier so it has a lot of
 (6) very fine particles in it so that you can t see through the
 (7) water and observe the fish directly
 (8) Q You just can t see them?
 (9) A No you can t see them
 (10) Q There are other systems where - clear water systems where
 (11) you can see the fish?
 (12) A Oh yeah there are many of those
 (13) Q Now is sonar some kind of a brand new technology that s
 (14) just come out?
 (15) A No not at all It s - it s - it originally - or it
 (16) really got its boost during the second world war thanks to the
 (17) Japanese and their submarines and a way to detect them was
 (18) desperately needed and so there was a - there were major
 (19) advances at that point in time
 (20) Q Generally with a sonar unit what s - what s happened? I
 (21) think I ve heard you compare it to a light beam in the past
 (22) Can you explain how it works?
 (23) A That s correct It s very similar to that It consists of
 (24) a number of components one of which you ve already heard
 (25) about and that s the transducer itself or hydrophone both of

Vol 33 5999

- (1) those were terms that were used in depositions that you just
 (2) heard
 (3) And you can think of the transducer or the hydrophone as
 (4) the bulb in a flashlight There s a lot of other parts to a
 (5) flashlight other than just a bulb but that s an important part
 (6) of it What a bulb does in a flashlight is takes electrical
 (7) energy stored in a battery turns it into light energy and
 (8) what the transducer does is takes electrical energy from other
 (9) parts of the sonar and turns it into sound energy
 (10) And then the sound energy is sent out into the water in a
 (11) beam that in almost all respects is very much like a light
 (12) beam and that is that - the majority of the light is
 (13) concentrated in the center of the beam and then the beam gets
 (14) much less strong as you move towards the periphery and the
 (15) sonar beam looks exactly like that
 (16) Q Now you have an exhibit up there 5629 which I think may
 (17) help explain that
 (18) A Yeah This exhibit shows - everybody is familiar with -
 (19) well most people I talk to know what a fish finder is or a
 (20) fish locator and a fish locator is simply a sonar that s
 (21) looking vertically into the water column And they re used for
 (22) a number of purposes but most fishermen I know whether
 (23) commercial fishermen or sports fishermen consider them to be
 (24) an essential part of the tools that they use to find fish so
 (25) that they can become more effective in catching them

Vol 33 6000

- (1) What this exhibit shows is it shows how a fish locator
 (2) works These little funny marks here the ones I m going to
 (3) point to here what they actually - what they indicate is they
 (4) indicate the sound moving down through the water Sound
 (5) moves
 (6) through water very very rapidly and it goes a long distance
 (7) before it becomes weak and that s the reason that sound is
 (8) preferred over light in water for these kinds of jobs
 (9) But the sound goes down and when it encounters something
 (10) like a fish or the bottom in the water within a very small
 (11) amount of energy of that sound energy is reflected back
 (12) towards
 (13) the transducer
 (14) The transducer does two parts - does two things This is
 (15) how it s maybe unlike a flashlight bulb What it does is when
 (16) sound hits it it actually generates an electrical signal that
 (17) then can be used to show the location of what was hit in the
 (18) water column For instance those marks there are really
 (19) typical of the kind of marks you would see on the screen of a
 (20) fish finder or on the paper output chart of a fish finder
 (21) MR COOPER Your Honor I would ask to admit that
 (22) exhibit that we were just looking at 5629
 (23) (Exhibit 5629 offered)
 (24) MR O NEILL No objection
 (25) THE COURT Defendants Exhibit 5629 is admitted
 (26) (Exhibit 5629 received)
 (27) BY MR COOPER

Vol 33 6001

- (1) Q And I ll call up Dr Carlson Exhibit 8687 A Defendants
 (2) Exhibit 8687 A and this I think may help explain what the
 (3) transducer is and so forth how the sonar system works now
 (4) A Yeah this is a graphic almost - well it s
 (5) diagrammatically correct It shows what the components of the
 (6) Bendix side scan sonar are and it consists of a number of
 (7) pieces There are some pieces that are in the water and the
 (8) pieces that are in the water are what is called a - woops
 (9) what did I do now?
 (10) Q You ve done it now We ll all have to go home
 (11) A Oh there it is There s the substrate and really what
 (12) this is is it s a - essentially a piece of paper that s 60
 (13) feet long it lies in the water and it provides a smooth path
 (14) for the sound beam to follow
 (15) It also forces the fish to swim up and over and through the
 (16) beam With the side scanner fish can only be counted if they
 (17) go through the beam Not all of the units that ADF&G has
 (18) deployed have substrates but they were originally and
 (19) continue
 (20) to be an apparent part of some of their systems
 (21) The second part of the side scanner that s in the water is
 (22) the transducer and -
 (23) Q That s the one equivalent of a light bulb?
 (24) A That s correct that s the equivalent of a light bulb And
 (25) the transducer in the Bendix side scan sonars are about that
 (26) big around maybe three inches or so not very big The

Vol 33 6002

- (1) thing s not very thick either They re about like that so
 (2) they re actually very small and they re connected by a cable
 (3) to - just put a mark there so we keep track of things
 (4) connected by a cable to what on this diagram is called a
 (5) computer and what the ADF&G people refer to as a counter
 (6) This counter does a number of things One of the things it
 (7) does is it - it packages the electrical energy that goes to
 (8) the transducer and it also handles the electrical energy that
 (9) comes back from the transducer when sound comes back from
 (10) an
 (11) echo and it also has the circuitry that processes the echoes
 (12) and counts fish
 (13) Q The fish counting is actually done inside the - inside the
 (14) computer by counting the return echoes?
 (15) A Right And the computer is where the - the person who s
 (16) operating the sonar also makes the adjustments to assure its
 (17) correct operation
 (18) Check here The point I just put a check on is the
 (19) oscilloscope and the oscilloscope is really an electronic test
 (20) instrument And what I allowed the side scan operator to do is
 (21) to see the electrical signals the echo returns from fish and
 (22) these echo returns have the shape of - people here like to
 (23) call them spikes and they really are a very fast rising and
 (24) rather tall and narrow spike that appears on the screen and
 (25) very characteristic of fish echoes very characteristic
 (26) And then the last thing that is basically an integral part

Vol 33 6003

of the Bendix side scan sonar is the skilled operator Without
 2 a skilled operator the machine simply will not work properly
 3 and in many respects when I think about the Bendix side scan
 4 sonar I think of it as an extension of the operator itself
 5 it s a way to avoid the tedium the hours of observation that
 6 would otherwise have to go into enumerating escapement in
 these
 7 systems where the side scanner is used
 8 Q And you have worked with as you described these sonar
 9 technicians that are utilizing the Kenai equipment?
 10 A Have I worked with them?
 11 Q Yes
 12 A Do I know them? Yes I do
 13 Q And what s your opinion of their qualifications and
 14 capabilities?
 15 A Well on the Kenai system in particular they ve been
 16 rather fortunate in being able to return - or being able to
 17 retain their seasonal employees for long periods of time plus
 18 the people who have the primary supervisory responsibility
 have
 19 been involved in this project since 1980 so they have a group
 20 of very skilled operators
 21 Q All right Now you ve worked out a computer animation as
 22 it were In order to demonstrate how this sonar system works?
 23 A Yeah It s two or three clips showing how fish are
 24 actually counted and how they re not counted
 25 Q And this is DX8989?

Vol 33 6004

1 A Right
 2 Q Which with the Court s permission we ll go ahead and
 3 show
 4 THE COURT Is there objection to DX8989?
 5 MR O NEILL No objection
 6 THE COURT It is admitted
 7 (Exhibit 8989 received)
 8 THE WITNESS Could I explain what we re going to see
 9 before we go into it?
 10 BY MR COOPER
 11 Q Why don t you go ahead because it tends to go pretty
 12 quickly
 13 A Yeah it tends to go pretty quickly And there are a
 14 sequence - there are sequence of segments of this video and
 15 they help explain those things that sonar does and how fish are
 16 actually counted It turns out - as you ll see it turns out
 17 the velocity of sound in water is very fast It s almost 5 000
 18 feet per second if you can imagine that A bullet from a
 19 pistol for instance which is - the animation is much slower
 20 than that
 21 I ll do some of the explaining upfront That way I won t
 22 divert you from watching it
 23 What that allows you to do is it allows you to send out a
 24 number of pulses in a very short period of time six eight
 25 ten within a very short period of time This means that for

Vol 33 6005

(1) all practical purposes at least for fish the beam that you
 (2) are putting into the water is essentially there continuously
 (3) that is it s - a fish cannot swim in the region insonated by
 (4) the beam and get through without being detected That s
 (5) extremely important
 (6) Q In fact it usually detects it Usually get more than one
 (7) echo off the fish don t you?
 (8) A Right it s - the side scan sonar requires more than
 (9) one - they call it a hit more than one echo return from a
 (10) fish to consider that fish as counted
 (11) And then the fish themselves the primary scatterers those
 (12) things that cause echoes to form in a fish are the swim
 (13) bladder which is an air filled cavity in the body of the fish
 (14) and in salmon it s actually farther back in the body than you
 (15) might think
 (16) Q And you mean that the sound isn t echoing off the - off
 (17) the tissue and the muscle and so forth it s echoing off this
 (18) air bladder?
 (19) A Off the air bladder about 80 percent or more of the return
 (20) comes from the air bladder There s some reflection a small
 (21) amount off of other parts of the fish but most of it comes
 (22) from that air filled sac
 (23) Q Does the - when the sound hits the rest of the fish not
 (24) the sac does it just stop and is it absorbed or does it go on
 (25) through them or what?

Vol 33 6006

(1) A Goes on through - a fish s body like our own is mostly
 (2) water and since they re swimming in water there s nothing
 (3) really there to stop the sound And it s the same sort of
 (4) principle that is involved when you go in for diagnostic
 (5) ultrasound yourself pregnant women going in to look at their
 (6) fetuses what have you It s because your body has a very high
 (7) water content that sound is an effective diagnostic tool If
 (8) it weren t for that fact why then these wouldn t be used for
 (9) instruments
 (10) Q I kind of interrupted you in your explanation
 (11) A I was going to say the other part of the echo that comes
 (12) from the fish is formed mostly by the backbone but again
 (13) remember that about 85 percent of the echo comes from a very
 (14) very small part of the fish
 (15) I guess with that as a start we can go ahead and roll the
 (16) video
 (17) Q Incidentally on the video they re going to see some
 (18) animations of some fish swimming through the sonar beam?
 (19) A Yes
 (20) Q Is the - have you tried to make the speed at which they re
 (21) swimming through here relate more or less to the real world?
 (22) A We ve tried to make this simulation as accurate as
 (23) possible and we ve also tried to make it as comparable as
 (24) possible to the kinds of counting situations that are typical
 (25) on the Kenai River

Vol 33 6007

- (1) On the Kenai River what happens is the - the fish come
 (2) through at what's called a passage rate That's the number of
 (3) fish per hour and the passage rate is slow at the beginning of
 (4) the run builds to a peak and then it falls off in the latter
 (5) stages of the run as the adults move passed the counting
 (6) location
 (7) A characteristic of the Kenai is that there are some
 (8) important numbers Typical passage rates are about one
 (9) thousand fish per hour
 (10) Q We're going to be talking a lot more about this later
 (11) A A lot more about it and on this video you'll see two
 (12) passage rates one about a thousand fish per hour the other
 (13) about 5 000 fish per hour Sounds like a lot but when you
 (14) actually are breaking it down into the number of fish that move
 (15) through the acoustic beam at any point in time it's actually
 (16) kind of underwhelming I think and the video shows that
 (17) Q All right And feel free to narrate as we look at the
 (18) video here
 (19) (Videotape Played)
 (20) A Well the one block I forgot here on the Kenai the
 (21) current velocities are such - could that be stopped?
 (22) Q Yeah
 (23) A The current velocities are such that the fish are forced to
 (24) swim near the bottom of the river and nearshore and this is
 (25) important in terms of the accuracy of the side scan sonar

Vol 33 6008

- (1) since its range is limited And so they - there's - there
 (2) are three parts that have to be kept in mind regarding the side
 (3) scan sonar One is the environment the other is the behavior
 (4) of the fish and the other is the skillful operation of the
 (5) sonar itself
 (6) If there is something in the environment that permits the
 (7) fish to behave in other than an optimum way why then the
 sonar
 (8) itself will not produce accurate estimates
 (9) Q You made the statement a moment ago that the fish swim
 (10) towards the bottom And why is that?
 (11) A The reason for that is that in channels like rivers
 (12) they - as you get further away from the shore and further away
 (13) from the bottom water velocities actually increase very very
 (14) rapidly The water is hardly moving at all when it's very
 (15) close to the bottom but then it actually increases in velocity
 (16) very very quickly very very rapidly
 (17) Q And these fish are swimming upstream by definition?
 (18) A Right they're swimming upstream and if they happen to get
 (19) up there with enough energy to spawn they've got to use every
 (20) trick that they can to conserve their energy for that so
 (21) that's exactly what they do
 (22) Q And on this video you've made some of these little white
 (23) things flow a little faster on the top and along the bottom to
 (24) demonstrate that difference?
 (25) A Right to show the difference in velocity as you move up in

Vol 33 6009

- (1) the water column
 (2) Q Shall we proceed?
 (3) A And this does it shows near bottom orientation of these
 (4) fish which are appropriately colored - or inappropriately
 (5) colored for counting sockeye
 (6) Q This right here shows the comparison of the speed of sonar
 (7) signal and that of a bullet This is actually about
 (8) one thirtieth of the actual velocity So if you want when we
 (9) fire this thing here in a minute we're going to fire the sonar
 (10) beam from the transducer?
 (11) A Right it's the actual time it would take for the sound
 (12) beam to go this 60 foot distance which is what this simulation
 (13) is would be on the order of a thousandth of a second or so
 (14) So we are actually slowing it down a considerable amount to
 (15) allow you to see it
 (16) Q We're going to compare it to a bullet from a gun and as
 (17) you say if you were doing this in real time it would be 30
 (18) times faster So fast you can't see it move?
 (19) A Right In fact - well we'll just go ahead and show it
 (20) And you can see the bullet didn't get very far and the
 (21) sound beam got a good distance
 (22) Q Sound beam went out hit the object and came back?
 (23) A Came back before the bullet there got out 15 feet. As we
 (24) go through here in velocities we'll actually show the screen
 (25) There you can see it So it's really rather surprising

Vol 33 6010

- (1) This is how fish are counted and we're going to look at
 (2) three situations counting one fish The sound beam itself
 (3) would be coming from the right to left
 (4) Can we stop right there? What you saw there are
 (5) several -
 (6) Q Dr Carlson if you want to come down here with the
 (7) Court's permission and point out things on the large one
 (8) you're welcome to do that
 (9) A There are several parts important about this What we're
 (10) doing is we're actually emulating the pulse the echo return
 (11) from a fish and how it looks on the oscilloscope
 (12) Q Stand over here so His Honor can see
 (13) A Okay This right here the reason for the shading is again
 (14) to try to demonstrate how the sound beam actually forms It
 (15) has much more concentrated energy in the center than it does
 (16) out towards the edges There's no sharp definition to the
 (17) sound beam It becomes weaker and weaker and weaker and
 (18) weaker until it essentially fades into the background
 (19) This right here shows the swim bladder in this fish here
 (20) This is actually appropriate scales for Kenai River sockeye
 (21) In the next one when we're actually looking at two fish
 (22) what you'll notice is as this beam comes out as this pulse
 (23) comes out as it starts to encounter the edge of the air
 (24) bladder why then the echo starts to form and it continues to
 (25) form as it goes through the fish and this is the result This

Vol 33 6011

- (1) is what goes back
 (2) Q That s the return echo?
 (3) A This is the return echo The return echo is very very
 (4) very much weaker than the energy that goes out
 (5) There s one more important thing about the return echo is
 (6) that it s longer than the pulse that was projected because the
 (7) scatterers in the fish have a discreet physical size
 (8) Q You want to stay down there?
 (9) A Oh okay That s counting one fish This is counting two
 (10) fish We have two fish that are fairly close together Stop
 (11) it there please
 (12) What allows you to count two fish to get two spikes here
 (13) on the oscilloscope is they have to be separated by a certain
 (14) distance and this distance turns out to be half of the width
 (15) of the outgoing pulse And there are good physical reasons for
 (16) that I won t go through it but that s the distance that you
 (17) have to have
 (18) It turns out for sockeye salmon on the Kenai and the
 (19) characteristics of the Bendix side scan sonar that fish have
 (20) to be almost touching before you can t resolve them as
 (21) individuals You can see these These echo returns are going
 (22) back There s space between them and that space between
 (23) them then shows up on the oscilloscope as independent peaks You
 (24) can recognize those as two and this is counting when fish are
 (25) too close

Vol 33 6012

- (1) Stop that there please In this particular case what we
 (2) have is the parts of the fish that are actually forming The
 (3) echoes are so close together that the echo that goes back
 (4) there s no space between it here It s overlapping So what
 (5) happens you don t get that single spike on the screen you get
 (6) another spike It s oftentimes but not always wider than the
 (7) spike that you would see from a single fish
 (8) When this happens why then you count two fish as one
 (9) fish You ve undercounted
 (10) Q So that s the situation that you want to avoid?
 (11) A That s a situation we d like to avoid
 (12) And this is the part I was telling you about counting fish
 (13) at Kenai passage rates This is a typical passage rate about
 (14) 900 fish per hour This is the beam as it typically occurs
 (15) These fish are zooming along a little faster than might be
 (16) optimum but you can see as they go through why then we
 (17) simulate just a single echo
 (18) When they actually go through this why then they re hit
 (19) several times but as you can see there s only a fish in the
 (20) beam every few seconds and that s the way it That s what
 (21) happens
 (22) Okay This is the second part We re looking at peak
 (23) passage rates now This is 5 000 fish per hour Fish are
 (24) coming through you can see it - we got some fish in there
 (25) lot of doubles and this is what - what the passage of fish

Vol 33 6013

- (1) looks like at peak passage rates on the Kenai River a matter
 (2) of maybe at the most a couple of spikes on the screen at any
 (3) one instant in time
 (4) MR COOPER Your Honor it s 2 00 straight up it
 (5) appears
 (6) THE COURT Before we adjourn for the day ladies and
 (7) gentlemen we got the note that you gave us through your
 (8) foreman Mr Murray yesterday about a possible jury view
 (9) That question had come up before it was raised by the parties
 (10) on two occasions I turned them down on that request because
 (11) there are some - there are some pretty tricky difficult
 (12) problems with a jury view under the circumstances it would
 (13) have
 (14) to be done in this case
 (15) In light of your request we re taking another look at it
 (16) We don t have an answer for you yet but we ll have an answer
 (17) I trust probably by Tuesday Please remember that we are not
 (18) going to be here tomorrow just like you would have forgotten
 (19) Also will not be here Monday We will be taking a four day
 (20) weekend
 (21) Please be especially careful this weekend when you re out
 (22) and around not to allow yourself to become involved in any
 (23) conversations or discussions with anyone about this case
 (24) Don t read or look at anything about the case
 (25) We will recess now until eight a m on Tuesday morning and
 I will see counsel lead counsel in chambers to take up this

Vol 33 6014

- (1) other matter again We ll be in recess now until 8 00
 (2) Tuesday Have a good weekend
 (3) (Recess at 2 00 p m)
