## PREFACE

Alaska Population Overview provides frequently requested population information in one publication. This publication presents the resident population of Alaska under the same concepts and definitions used by the U.S. Bureau of the Census for the 1990 decennial census of Alaska. Population fluctuates throughout the year. Because of this fluctuation, the July 1 population presented here represents an average population for the year rather than the population on July first.

All 1990 census population counts presented in this publication are subject to possible correction for undercount or overcount. The U.S. Department of Commerce is considering whether to correct these counts and will publish corrected counts, if any, not later than July 15, 1991.

This edition of Alaska Population Overview includes four chapters which cover current and historical population estimates for the state, boroughs and census areas, special areas, and places. A description of specialized terms is in the glossary at the end of this publication. Population projections for the state appear in Alaska Population Projections. First published in 1986, the second edition is scheduled for July 1991.

In addition, specific information on life expectancy by age, race and sex for Alaska can be found in Alaska Life Tables for 1977-83, Demographic Report No. 1, Alaska Department of Labor, Research and Analysis, 1986.

The statistics which appear in this issue of Alaska Population Overview supersede figures which appeared in earlier issues, due to changes in methodology and the updating of estimates. Because of these revisions, it is recommended that any trend data be computed from this edition of Alaska Population Overview rather than a combination of past editions.

Where estimates occur in this publication they are published in unrounded form for ease of use in other computations, the reader should not assume that any estimates are accurate to the last place. In general, the State estimate is assumed to be accurate to the nearest thousand and borough and census area estimates to the nearest hundred.

Special acknowledgment is given to the Vital Statistics and Nursing sections of the Alaska Department of Health and Social Services, Public Health Division; the Alaska Department of Education and the Alaska Departments of Revenue and Community and Regional Affairs for their aid in regularly providing information used in the estimates program.

In addition, the Department of Labor wishes to thank the numerous individuals in city and borough governments and small communities who regularly provide information relative to the estimates program. The Department of Labor thanks personnel departments of the Army, Air Force, Navy, and Coast Guard in Alaska for the statistics they provide each year to the Department of Labor.

Comments or suggestions regarding the content or format of this publication are welcome. General requests for demographic information should be addressed to Greg Williams. The telephone number for the Demographics Unit is (907) 465-4500. Address questions regarding the 1990 census to the State Data Center at the same number.

## POPULATION OVERVIEW EXECUTIVE SUMMARY

The 1990 census count for Alaska's resident population was 550,043 or 0.22% of the population of the U.S. (248,709,873). Only Wyoming, with a population of 453,588, was smaller. The next largest state, Vermont, had a 1990 population of 562,758.

Land area in Alaska covered 570,374 square miles, and water area covered 86,051 square miles. Alaska had almost one-sixth of the land area of the U.S. and slightly over one-third of the water area. Alaska averaged 0.96 persons per square mile in 1990, whereas the U.S. averaged 70.33 persons.

A significant portion of Alaska's 1990 population (almost seven out of ten people) lived in urban areas, places of 2,500 persons or more. In 1990, 226,338 persons, or 41.1% of Alaska's population lived in the Municipality of Anchorage. Anchorage was the 69th largest city in America in 1990 compared to 78th in 1980. Almost threequarters of Alaska's population was concentrated in the five largest boroughs or census areas, which included Anchorage -Borough, Fairbanks North Star Borough (77,720), Kenai Peninsula Borough (40,802), Matanuska-Susitna Borough (39,683), and Juneau Borough (26,751). The Matanuska-Susitna Borough was the fastest growing area during the past decade, increasing by 122.7% from 17,816 in 1980 to 39,683 in 1990.

A total of 247,986 square miles (61%) of the land and 45,351 square miles of the water in Alaska lies outside of any incorporated city or borough. At the time of the census, 24,547 persons or 4.5% of the population of Alaska lived in these unorganized territories.

Natives were mostly concentrated (56.1%) in rural places, with 46.2% living in rural places below 1,000 persons and only 43.9% urban. In contrast, Whites were predominately urban (72.4%). High urban concentration was also shown by both Blacks

(92.7%) and Asian and Pacific Islanders (89.1%), with most Blacks (64.8%) and Asian and Pacific Islanders (55.3%) living in Anchorage.

More Alaska Natives now live in Anchorage (14,569) than in any other borough or census area. Bethel Census Area which had the largest number of Alaska Natives in 1980 dropped to second place with 11,370. The greatest increase occurred in the Anchorage/Matanuska-Susitna region which contained 15.0% of the Alaska Natives in 1980 and 19.3% in 1990. Most of the growth in Alaska Native population was due to natural increase (births minus deaths).

The White population accounted for 415,492 persons or 75.5% of the population in 1990. The other races were accounted as follows: Native (85,698 or 15.6%), Black (22,451 or 4.1%), Asian and Pacific Islanders (19,728 or 3.6%) and Others (6,674 or 1.2%).

In April of 1990, 260, 176 persons, or 47.3% of Alaska's population, were female compared to 51.2% female for the United States in 1989. Males totaled 289,867, thus yielding a state male-female sex ratio of 111 men to every 100 females. This differs significantly from the U.S. sex ratio of only 95 men to 100 females. The main sources

of distortion for the sex ratio in the state are the presence of military installations, logging, fishing, and mining operations.

The population in Alaska is younger than the national average. Further, the Alaska Native population is much younger than the White population because of its high fertility rate. The 1989 median age in the United States was 31.5 for males and 33.8 for females. The 1990 median age for males in Alaska was 28.5 and the median age for females was 28.4 years. Almost 40% of the population was age 25 to 44 years old. Only 4.1% of the population was over 65, while those under 18 accounted for 31.0%.

Alaska's fertility rate has always been well above the national average. In 1990, Alaska had one of the higher levels of fertility of any state with 2.6 children per family. Utah has had the highest fertility, averaging 2.6 children per family. Between July 1, 1989 and July 1, 1990, 11,695 persons were born in Alaska and 2,110 persons died, a net natural increase of 9,585 persons. This translated into a growth of 1.8% per year as a result of natural increase. Births each year were equivalent to about 2.1% of the beginning population. Approximately 0.4% of the population in Alaska died each year.

In 1990, 226,701 persons or 56.6% of the population 15 and over were currently married and not separated. The currently married declined from 58.1% in 1980. The largest increase was in persons currently divorced. In 1990, 44,541 persons or 11.1% of all persons 15 and older were currently

divorced, up from only 8.5% in 1980. The number of persons currently divorced increased 78.6%, twice as fast as the growth of the state's population. The statistics on changing marital status, along with the increasing proportion of persons living alone confirm the continuing decline in traditional families in Alaska and the U.S.

The role of Armed Forces' population in Alaska has always been significant in the state's population and population growth. Currently, the overall Armed Forces' population of Alaska is relatively stable, and accounts for 10.5% (including dependents) of the state's population. The largest number of military and dependents on bases in Alaska were found at Elmendorf AFB and Ft. Richardson in Anchorage Borough (27,486), Eielson AFB and Ft. Wainwright in Fairbanks North Star Borough (18,795). Adak Naval Station in Aleutians West Census Area (5,034), Kodiak Coast Guard Station in Kodiak Island Borough (2,435) and Ft. Greely in Southeast Fairbanks Census Area (1,157).

During the next few years, population change will continue to be strongly influenced by births. Alaska has one of the highest rates of natural increase in the nation. This provides a strong force for growth within the state even in periods of net out-migration. The positive economic growth expected in the early nineties should contribute to a period of net inmigration to the state which, when combined with the natural increase, should create fairly strong population growth at least for the short term.

### **CHAPTER 1**

#### ALASKA STATE POPULATION

#### Introduction

This chapter discusses population trends for Alaska. It contains a section on the components of population change which includes births, deaths, and migration. There is a discussion of the age/sex and race composition of the state.

#### 1990 Census Results

The U.S. Census population for Alaska, even though it has an April 1, 1990 date, was conducted over a period of months, beginning in February and ending in May.

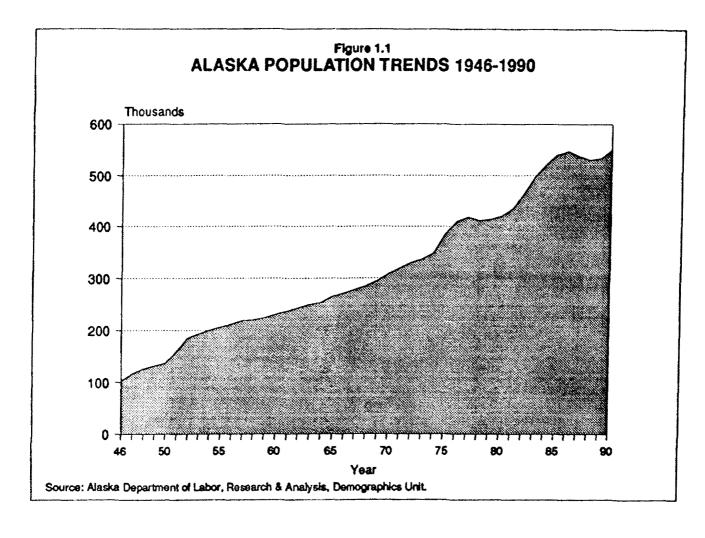

The U.S. Census Bureau defines a resident as a person who resides in a place for at least six months of the year and has no other usual place of residence. Residents of remote work sites are given the opportunity to list their place of residence as being somewhere other than the remote site. In 1980 and 1990, for example, most North Slope oil workers listed their place of residence as in some other part of Alaska or out-of-state.

Foreign nationals who were resident aliens were counted in the U.S. communities in which they resided. Persons enumerated at work sites, such as the North Slope or fish processing or logging camps, were given a form that allowed them to indicate their usual place of residence if it was different from the place in which they were being counted. Since these were special census forms, it is uncertain whether clear instructions on completing the form were given at all such sites in 1990.

Data on age, sex, and race composition for the state, census areas, boroughs, and places is currently available for 1990. Summary Tape File 1A containing age, race and sex and housing and household data for geography down to the block group level was released at the end of April. The data are too extensive to report here and will not be available in published form from the U.S. Census Bureau until late summer/early fall 1991. This publication only briefly covers age/race/sex data because of time and space limitations.

Detailed age/race/sex information will appear in Alaska Population Projections scheduled for release in August. Detailed 1990 census results for voting districts. census areas and places were released in spring 1991 as part of the Public Law data (PL94-171) used for redistricting. These counts of persons and houses are extremely detailed and cover every block in Alaska. Release of social and economic data is expected in late 1991 or early 1992. Inquiries may be made of the State Data Center unit or the Demographics unit of the Department of Labor, Research & Analysis regarding availability of tables from these tapes.

This issue of Alaska Population Overview differs from past issues because it primarily includes census information rather than estimates. The Demographics unit will be testing the accuracy of the estimates methods and indicators used during the 1980s against the 1990 census

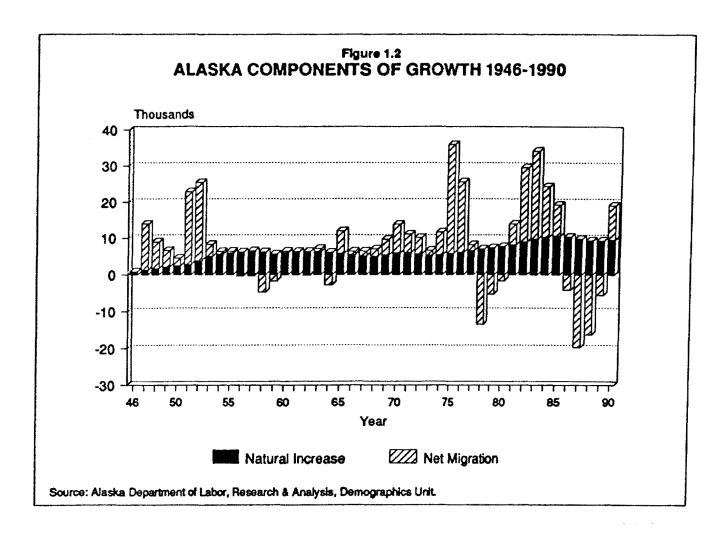

counts. The results of these tests will be used to select methods to use during the 1990s. These results will be summarized in the next Alaska Population Overview and presented in detail in a special demographic report series.

No estimation procedure can substitute for a full census population count. Unfortunately, even a census may contain errors. A census can miss people or count too many people because of flaws in the enumeration process such as poor maps, poorly trained enumerators, lack of follow-up on households which do not respond, and double counting of persons at two locations through inaccurate allocation of residency. In addition, the census can be flawed by the refusal of people to respond.

Every census is subject to a small undercount. Nationwide the undercount in 1980 was estimated at 1.0%. In 1980,

Alaska's census was among the worst in the country with an estimated 3.6% undercount. The undercount in Alaska for the 1990 census is about 2.0%. The 1990 census counts for Alaska are substantially better than the 1980 counts.

It appears that the 1990 census counted more persons as Alaska residents in fish processing and logging activity than were captured in 1980. Also the 1990 census allocated crews of commercial ships and naval and Coast Guard vessels in port to the harbor they were in when the census was taken. U.S. ships in U.S. waters with a given port as their origin or destination were counted as population of that port. Ships' crews were counted as group quarters population. Persons living on board small craft were counted the same as persons living in houses or apartments. Crews of small fishing vessels were counted at their shore based homes. Because the 1990

census created census block numbering areas and tracts for all of the U.S., it is now possible to identify commercial ships in port populations for any port. In 1980, these populations could only be identified for Anchorage, Juneau and Cordova. It is not yet certain, but it appears that these populations represent Coast Guard vessels and floating processor ships or other transient vessels or ships outward or inward bound to a given port.

Such vessels accounted for 2,066 persons in the 1990 census in Alaska or 0.4% of the state's population. In the Aleutians West Census Area, however, these vessels accounted for 11.2% of the population count; in the Aleutians East Borough, 7.6%; Kodiak Island Borough 3.1% and in Valdez-Cordova Census Area 2.9%. At the community level, these vessels had an even larger impact. These crews accounted for 31.7% of the population of Unalaska, 31.7%

of the population of Akutan, 13.1% of the population of Kodiak Station, 10.4% of the population of St. Paul, 5.6% of the population of Valdez, 2.9% of the population of Cordova, 2.2% of the population of the City of Kodiak, and 1.4% of the population of Homer.

#### **Population Trends**

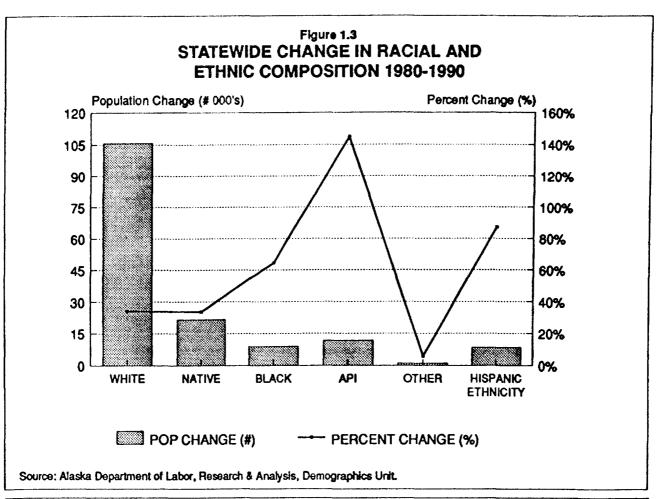

The 1990 census count for Alaska's resident population was 550,043 or 0.22% of the population of the U.S. The United States' population, including Armed Forces overseas, was 249,632,692 for April 1, 1990. The resident population of the United States, excluding territories and military overseas, was 248,709,873. Counting the District of Columbia, there were 51 "states" for population purposes. Despite its large size, Alaska was one of the smallest states by population. Only Wyoming, whose population was 453,588, was smaller. The next

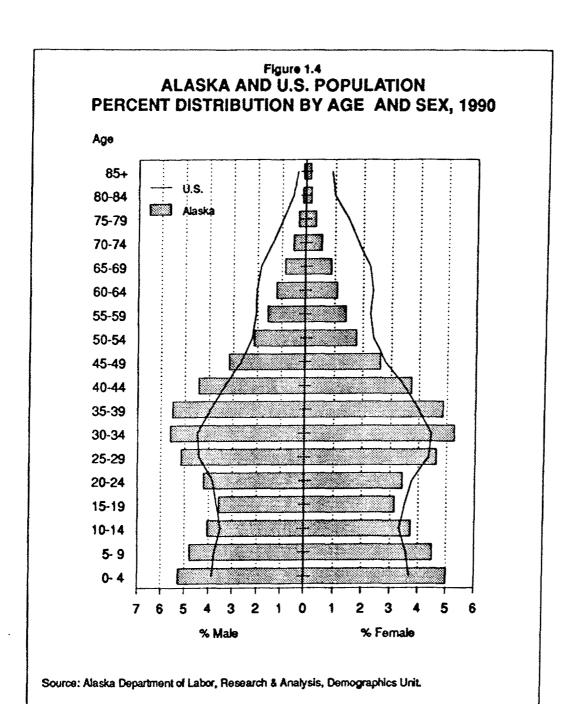

largest state, Vermont, had a 1990 population of 562,758.

Land area in Alaska covered 570,374 square miles, water area covered 86,051 square miles. Alaska had 16.1% of the land area of the U.S. and 34.3% of the water area. Alaska was about 70% urban, which meant that a significant portion of its population lived in places of 2,500 persons or more. Alaska averaged 0.96 persons per square mile in 1990, whereas the U.S. averaged 70.33 persons. Excluding Anchorage, which contained 41% of the state's population but only 0.30% of the land area, Alaska averaged 0.57 persons per square mile. Most Alaskans live in towns and villages or clustered settlements. Much of the state remains almost uninhabited or tied up in national parks, wildlife and wilderness preserves. Population densities for boroughs and census areas and places are shown in Table 4.3.

The population of Alaska was quite small before the gold rush in the 1880s. The early territorial censuses were incomplete. The first census in 1880 showed 33,426 persons. The gold rush doubled the state's population between 1890 and 1900. After the turn of the century, the population of Alaska remained stable for the next 40 years. The 1900 population was reported at 63,592 and by 1939 the population was only 59,278.

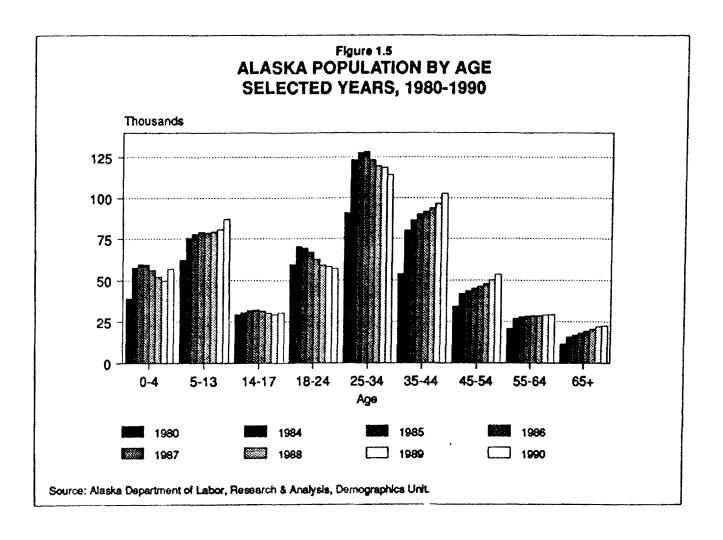

World War II brought the construction of the Alcan Highway. The result was dramatic growth of the state's population as shown in Table 1.1 and Figure 1.1. Although the proportion has declined since World War II, the military continues to play a substantial role in the state. Ten percent of the population is still military and their dependents. The military, historically, have played a key role in the development of both Anchorage and Fairbanks.

Alaska's population grew rapidly from the end of World War II to 1952 at an average annual rate of change of 9.5% per year. The population grew at a slower, smoother pace from 1952 to 1965 with an average annual rate of change of 2.7% per year. Alaska had approximately 224,000 people at the time of statehood in 1959. From 1965 to 1973 population growth gradually increased, to 3.0% per year.

The oil pipeline's effect on population growth began in 1973 and peaked in 1975. The average annual rate of change during this period was 6.6% per year. The completion of the pipeline construction boom was followed by a recession during the 1976-80 period. Alaska had a population loss of about 6,400 people between 1977 and 1978. The net loss of people as a result of migration in that year was over 13,400 persons.

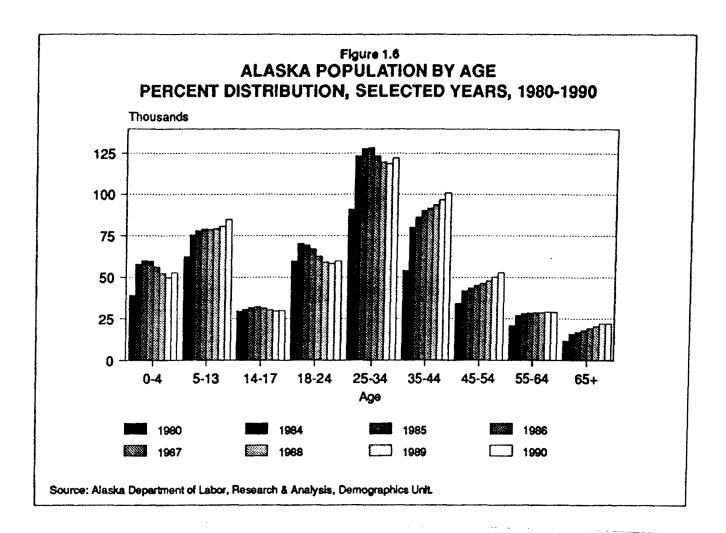

However, the annual rate of change over the four year period, averaged 0.6% per year.

Between mid-1980 and mid-1985, Alaska experienced another boom. This economic growth resulted from construction and infrastructure development fueled by a combination of state spending based on oil revenues, major federal expenditures, and private development. As a result, Alaska's population grew by a phenomenal 25% in five years, making it the most rapidly growing state in the nation. The most growth occurred in the 1981-1983 period during which the annual rate of change averaged 6.8% per year. The pace of growth began to slow during 1983-84 with a rate of change of 4.8% and declined further in 1984-85 to 3.6%.

From 1985-89, Alaska experienced a recession similar to that of 1977-80 but more

severe. During the period of most severe retrenchment in 1986-87, the rate of population change declined to -1.8%. The cumulative loss of persons to out-migration in the period 1985-89 was about 45,900 persons as compared to an out-migration of 20,400 during the post-pipeline period. This population loss was equal to about 8.3% of the state's peak 1986 population. This is a greater proportional loss than the loss of Spokane, Washington relative to Washington's total population or the loss of San Diego metropolitan statistical area relative to California's total population. By 1989, net out-migration slowed enough to allow the natural increase of births over deaths to produce the first increase in population since 1986.

A positive increase through net migration gain was achieved for the first time in five years in 1989-90. Migration increases even surpassed the natural increase, an event

that had not occurred since 1984. Growth increased during 1989-90 to the 1985 level at a rate of change of 3.6%. The net migration shown in Table 1.1, however, reflects both real migration and "error of closure" between the estimates series of the 1980s and the 1990 census. An adjusted intercensal smooth series between 1980 and 1990 cannot be created until it is determined what part of the change between 1989 and 1990 is produced by each of these factors. The average annual rate of population change for Alaska during the July 1, 1980 to July 1, 1990 period was 2.8% per year; whereas the change for the U.S. was only 0.9% per year.

Population change should continue to be strongly influenced by births in coming years. Alaska continues to have one of the highest rates of natural increase (births minus deaths) in the nation. This provides a strong force for growth within the state even in periods of net out-migration. The positive economic growth expected in the early nineties should contribute to a period of net in-migration to the state which, when combined with the natural increase, should create fairly strong population growth at least for the short term. As in the past, such growth may not continue unabated.

The prosperity of Alaska remains heavily dependent upon the demand for her natural resources both at home and abroad. Government spending and policy restrictions set by both the federal and state government will also affect population growth in Alaska. Cutbacks in spending at the federal, state and local government (including military) can dramatically affect the prosperity and growth of the state since about thirty-eight percent of the Alaska's labor force is directly employed by one of these levels of government. The

proportion of all income is even higher, since wages are higher than the state average among government workers. Undoubtedly, Alaska like most western states will continue to have a boom-bust economy for many years to come. Alaska's population has increased over fivefold since 1946. Despite fluctuations in population growth in Alaska, the overall trend during the post-World War II period has been towards strong positive growth.

The physical resources of this state will continue to be unique. Demand to exploit Alaskan minerals such as oil, gold, and coal remains strong. Fishing and forestry will continue to play a role in Alaska's future. Tourism continues to result in demands for increased access to the scenic beauty of the state. Beyond the economic considerations, the intangible resource of Alaska as a place of wilderness, beauty, and special way of life will continue to attract migrants to the last frontier.

#### Components of Change

Population change is made up of natural increase (births minus deaths) and migration as shown in Table 1.1 and Figure 1.2. For the most part, natural increase is the fairly stable component of population change. Death rates change very slowly, and while current fertility depends on a variety of factors, the general birth trend does not change direction quickly. Migration is the most unstable component of population change in the state, often changing dramatically from one year to the next.

#### **Births and Deaths**

Nationwide fertility rates declined from the 1970s to mid 1980s. In the latter 1980s, this trend reversed. From a nationwide low in 1987 of 1.8 children per family, fertility increased to a 1990 high of 2.1 children per family. This increase was primarily the result of increased fertility for older baby boom women who postponed marriage and childbearing. Alaska's fertility rate has always been well above the national average. In 1990, Alaska had one of the higher levels of fertility of any state with 2.6 children per family. Utah has had the highest fertility, averaging 2.6 children per family. Decade trends in crude birth rates for Alaska, its boroughs and census areas can be seen in Table 2.4. For

Source: 1980 and 1990 Census of Population & Housing and special U.S. Census tabulations.

most areas of the state, current birth rates were only slightly lower than those seen nationwide during the baby boom of the 1950s.

Between July 1, 1989 and July 1, 1990, 11,695 persons were born in Alaska and 2,110 persons died, a net natural increase of 9,585 persons. This translated into a growth of 1.8% per year as a result of natural increase. Births each year were equivalent to about 2.1% of the beginning population. Approximately 0.4% of the population in Alaska died each year.

Most of the growth in Alaska Native population was due to natural increase. Birth rates among Alaska Natives were very high. In 1990, the crude birth rate for Alaska Natives was 32.8 per 1,000 and the crude death rate was 6.2 per 1,000 for a natural increase of 2.6% per year. For Alaska Natives, the average number of children was about 3.9. In 1970, the average number of children for Alaska Native families was 4.6. The number declined to a low of 2.7 in 1976, and has slowly risen each year since.

In contrast, the crude birth rate for White Alaskans was 19.2 per 1,000 and the crude death rate was 3.6 per 1,000 for a natural increase of 1.6%. For White Alaskans, the average number of children was about 2.4 in 1990. The size of White families in Alaska has been relatively stable since the mid 1970s.

#### Migration To/From Alaska

As seen in Figure 1.2, migration to Alaska has varied widely from year to year. As a result, it is difficult to identify typical patterns of migration for the state. Rapid growth occurred during World War II represented by a 12.3% rate of proportional growth due to migration for 1945-46. The highest post-World War II proportional growth due to migration occurred during the build up for the Korean War in 1950-51 (14.7%) and 1951-52 (13.6%). In part, these high percentages resulted from the small population base in these years. While the net migration for 1981-82 and 1982-83 was numerically larger than that for 1950-51 and 1951-52, it was proportionally much smaller. By 1983, the net influx of 24,300 migrants accounted for only a 5.3% increase in the population.

The largest single numerical increase due to migration (30,222 or 8.7%), occurred during pipeline construction in 1974-75. The largest numerical loss (-19,645 or -3.6%), occurred in 1986-87, and was larger than the -13,414 or -3.2% loss, which occurred at the end of the pipeline construction in 1977-78.

Historically, the majority of growth from migration in the U.S. occurs in relatively few of the 3,139 counties. Most communities in the U.S. attract relatively few migrants each year. Because the late teens and twenties are the ages of highest migration, most communities provide a pool of young migrants who usually leave the communities of their birth to find better opportunities elsewhere.

Migration statistics are derived from change of address on Internal Revenue Service (IRS) tax returns. Alaska tends to have among the highest levels of in, out and gross migration of any state in the union. During 1987-88, 50,103 or 9.2% of Alaska residents left the state and some 33,909 persons or a number equal to 6.2% of Alaska's residents entered the state. The net loss due to migration was about 3.0%. These migration rates include rotation of military personnel in and out of the state. The military probably accounts for about 20% of the in, out and gross migration flow of the state each year.

IRS migration statistics for 1988-89 and 1989-90 were not available for this publication. The residual net migration for 1989-90 may not be accurate because it currently includes both migration and the error of closure. The error of closure is the difference between the estimate of population for April 1, 1990 and the April 1, 1990 census count of population. Since April 1. 1990 estimates of population cannot be completed without the 1988-90 IRS migration statistics, no attempt has been made to develop a smooth series for the 1980s that accurately reflects the migration for the 1989-90 period. The 1989-90 net migration will be somewhat less than the 9,615 shown, perhaps about 6,000-7,000. Readers should be aware of the discontinuity in the data series and Tables 1.1 and

The highest turnover is for persons in their twenties and children under 5. Sta-

tistically the average length of stay for a 21 year old in Alaska is 9.9 years for males and 13.6 years for females. This means that of a group of Alaska men currently age 21, 50% can be expected to leave the state by the age of 31.

Another characteristic of migration is that people tend to move short rather than long distances. These moves also tend to be in the form of streams and counter-streams. This means states that contribute more migrants in times of prosperity in Alaska are the same ones to which migrants return when the Alaskan economy falters.

Migration to and from the state is in part dependent upon federal military and program policies which tend to be unique historical events rather than easily predicted trends. The overall economies of the Pacific and Mountain regions relative to that of Alaska also helps to drive migration in this state. Thus when employment in Washington, California and Oregon becomes relatively weak, there is a greater tendency to look to Alaska for opportunity.

As shown in Table 1.2, changes in migration to/from Alaska are more a result of the decline in in-migrants to Alaska than changes in the out-migrants from Alaska. A net loss or gain results from an increase or decrease in the in-migrants relative to out-migrants. The higher the rate of gross migration or turnover, the more unstable the population is. Thus one cannot always tell by observing what appears to be a net gain or loss of population whether changes in in-migration or out-migration are the cause of the change. What appears as massive out-migration may be a normal 10% out-migration with a sharp decline in in-migrants to the state.

Most of the fluctuation in migrants during the 1980s is accounted for by non-Native migration to/from the state. While there has historically been a relatively large migration flow of Alaska Natives to and from the state each year, the flows have been fairly balanced. The net effect has produced an almost negligible gain or loss of Alaska Natives each year due to migration.

Population in Alaska is also very subject to seasonal fluctuations. While the exact

amount of seasonal population is currently unknown, an estimate of the annual average number of nonresident workers present in Alaska based on quarterly statistics is about 23,800 for 1988. The seasonal high quarter which occurs during the summer months, would add another 8,400 nonresident workers over the annual quarterly average. While the number of dependents per nonresident worker is unknown, one might assume that seasonal workers in Alaska would tend to bring few dependents with them. It is possible, therefore, that the nonresident population in the state at any given point in time may be equal to about 4-5% of the state's resident population. The midsummer de facto nontourist, nonresident population may be about 6% of the resident population.

#### **Population Composition**

#### **Race Composition**

Throughout most of Alaska's history, little reliable data has been available on Alaska Natives. This was particularly true before the 1929 Territorial Census. In 1929, there were some 29,983 Alaska Natives in Alaska and they made up 50.6% of the state's population. While their numbers have grown rapidly since 1929, they have not grown as fast as the non-Native population. The proportion of Alaska Natives has declined steadily over time.

The 1990 census showed that 134,551 persons, or 24.5% of the population of Alaska, considered themselves to be some race other than White. The number and proportions of persons by race and tribal group are shown in Table 1.4.

Of the 550,043 persons in Alaska in 1990, Native Americans made up 85,698. For this publication, all Native Americans living in Alaska are referred to as Alaska Natives, even though a small percentage of them belong to continental U. S. tribal groups. Approximately half of the Native Americans belonging to tribes from the Lower 48 states, were born in Alaska. On the other hand, about 20% of all Alaska Natives are estimated to be living outside of Alaska. The economic boom of the early 1980s brought many non-Natives to the state. As a result, the proportion of Alaska Natives dropped from 16.0% in 1980 to

15.6% in 1990. Alaska Natives made up 4.4% of all Native Americans in the U.S.

The White population accounted for 415,492 persons or 75.5% of the population in 1990. Other races, primarily Black, and Asian and Pacific Islanders accounted for 48,853 persons or 8.9% of the population in 1990. These groups were up from 27,521 or 6.8% in 1980.

Figure 1.3 illustrates the statewide population change which took place among the various races from 1980 to 1990. Whites had the largest numerical increase (+105,764) followed by Alaska Natives (+21,595), Asian and Pacific Islanders (+11,674), Blacks (+8,808), and Other Races (+351). Most notable was the substantial increase in the Asian and Pacific Islander population due to a large amount of Asian immigration to Alaska since 1980.

Although Asian and Pacific Islanders composed only the fourth largest race, the population had the third largest numerical increase and had by far the highest percentage gain from 1980, 144.9%. Asian and Pacific Islanders are disproportionately found in Anchorage Borough, Kodiak Island Borough, Juneau Borough, and Aleutians East Borough.

Among Alaska Natives, Eskimos increased by 10,257 persons or 30.0%, American Indians increased by 9,376 or 42.9%, and Aleuts increased by 1,962 or 24.3% during the decade. The distribution of Alaska Natives is discussed at greater length in the next chapter.

During the decade the Black population also increased by 70.8%. In 1990, 89.5% of the Black population of Alaska lived in Anchorage and Fairbanks North Star Borough. It was estimated that at least 40% of the Black population of the state are military or military dependents. The growth of Blacks in the military in Alaska during the decade, however, was only about 32%, so much of the black increase appears to be among the nonmilitary in these communities.

In 1990, there were some 17,803 persons of Hispanic origin in Alaska. This was a 87.3% increase from 9,507 in 1980. In 1990, Hispanics comprised 3.2% of the

population of Alaska compared to 9.0% nationwide.

#### Age/Sex/Race Composition

To produce the July 1990 state estimate, the cohort component model used during the 1980s was carried forward and controlled to the April 1, 1990 Census total for all known age/sex groups. In addition, a mix of model and age data from the Alaska Permanent Fund was used to estimate individual age groups. This model should compare favorably with 1990 census data by single year of age and sex when it is released.

Tables 1.5 and 1.7 show estimates of Alaska's population by detailed age and sex for July 1, 1990 and April 1, 1980. The estimate for July 1990 is based on the total population by age, race and sex for 1990.

The size of each age group in the population under forty has been affected by several events. The first key event was the baby boom which began after World War II and peaked during the late 1950s and early 1960s. The boom occurred when the American family began to average one more child per family, compared to the depression and war years, and the current national family size of about two children. In addition, the age at first marriage dropped and children were spaced a little closer together than in the preceding decades. During the late 1960s and 1970s, the average family size began to decline. This was due to increasing participation in the labor force by females, changing life styles, and better family planning. Currently, U.S. families are well planned and average slightly more than two children.

In general, Americans have been delaying the birth of children after marriage and having children farther apart. Marriage has been postponed until later and rates of divorce are high. Fertility in Alaska reached a low point in 1976 and has increased slowly up to 1990. The number of children born each year is increasing mainly because the baby boom generation is passing through the key child bearing ages. Births to "baby boomers" have not been as high as they could have been. The baby boom generation has married later, postponed children and had fewer chil-

<sup>...</sup> Information not available.

dren. Currently in Alaska, as well as the U.S., there is an upswing in births to these baby boom mothers, particularly those in their 30s. The relatively young average age of the Alaska population makes for many households with young children.

While these trends are reflected as part of the changing age structure of Alaskans, fertility has less impact on the population than does migration. Migration is particularly high for 18-35 year olds and their young children under school age. A decline in fertility from 1986 to 1988 corresponded to a net negative migration for this period. In-migration and fertility rates began increasing in 1989.

#### Specific Age Groups

The growth trends for various age groups may differ sharply from those of the population as a whole. This is due to differences in historical patterns of fertility, mortality, and migration by age. The population trends for age groups are found in Table 1.9 and Figures 1.5 and 1.6. Population estimates by single year of age/sex for 1990 and 1980 are found in Tables 1.5 and 1.7.

There were some 54,983 children under the age of five in 1990 compared with 38,949 in 1980. They made up 9.9% of the state's population. Between 1980 and 1990 there was a 41.2% increase in the number of children under 5, indicating that this age group grew more rapidly than the total population. Between 1985 and 1990 the number of children under five declined by 8.3% because of a net loss due to migration.

The population aged 5-13, those persons of elementary and junior high school age, increased to about 87,564 by 1990 compared to 62,363 in 1980. Currently 15.8% of the state's population is in this age range as compared to 15.5% in 1980.

The population of high school age children has been much more stable over the years. Alaska's adult population has traditionally been too young to have large numbers of high school age children. In the past, some high school age students have attended boarding schools outside Alaska. This practice is declining. In 1990, there were 30,444 persons aged 14-17 in Alaska

(29,433 in 1980). They made up 5.5% of the population (down from 7.3% in 1980). This age group is less subject to changes in migration flows than younger age groups because their parents are older and more stable workers.

The age group 18-24 is most subject to increases and declines in economic conditions. While nationwide this group was declining dramatically, it increased in Alaska to a high of 70,175 in 1984. Since 1984 this group has declined in Alaska to 56,381 in 1990, a decrease of 19.7% in six years.

The population aged 25-34 is composed of young adults in the prime ages for family and household formation. By the estimate, this age group peaked in Alaska at 128,401 in 1986. This age group increased almost 24.9% from 1980 to 1990. The families in this age group contributed to the rapid growth in the number of children under five. By 1990, the persons in this age category had declined to 113,450, a loss of 11.6% of young householders since 1986.

The population aged 35-44 represents the leading edge of the post World War II baby boom. Rapid growth in this age group since 1980 has resulted from an increased migration of more established families as well as the aging of the Alaska population. In spite of overall losses in the state's population in the 1986-87 period, this age group continued to grow reaching its highest level of 104,232 persons in 1990. This age group has also had the greatest numerical increase (50,210 or 92.9% since 1980), and is proportionally the most rapidly growing age group.

The ages 45-54 and 55-64 have traditionally been ages at which many Alaskans begin to move south. These age groups have continued to grow throughout the 1980s. By 1990, there were about 54,442 persons 45-54 and 29,645 persons 55-64 in the state. In general, middle aged Alaskans were more willing to stay in Alaska during the 1980s than in prior decades.

The 1990 estimate of the number of persons 65 years old or over is 22,459. Considering the size of the population currently 55-64, the number of senior Alaskans is likely to continue to increase rapidly in coming years. The estimate suggests a

94.5% increase in older Alaskans since 1980, one of the largest percentage increases in the population over 65 of any state. Alaska also has one of the smallest proportions of persons over 65 (4.1%) in the nation.

#### Median Age

The population in Alaska is younger than the national average. Further, the Alaska Native population is much younger than the White population because of its high fertility rate. The 1989 median age in the United States was 31.5 for males and 33.8 for females. The 1990 median age for males in Alaska was 29.5 and the median age for females was 29.4 years. This was an increase of 3.2 and 3.7 years respectively since 1980.

#### Voting Age Population

According to the April 1, 1990 census, the voting age population was 377,699. Whites made up 294,308 (77.9%), Alaska Natives 50,945 (13.5%), Blacks 14,553 (3.9%), Asian & Pacific Islanders 13,491 (3.6%) and Other Races 4,402 (1.2%). Ethnicity is separate from race. Many persons who list themselves as Other Races are of Hispanic Origin. In 1990 there were 11,048 voting-aged persons of Hispanic Origin. This number is equivalent to 2.9% of the voting age population. Although Alaska purges voter registrations every two years, areas with high turnover may contain up to 20% more registered voters than residents due to turnover.

Source: U.S. Census of Population and Houseing, 1990,1980.

#### Dependency

Dependency ratios show how large a burden of support is placed on the working age population by the young and old segments of the population. In 1990, statewide every 100 persons of working age supported 48.5 children and 6.3 persons over 65. In 1980, every 100 persons of working age supported 50.4 children and 4.4 persons over 65.

#### Sex Composition

In April of 1990, an estimated 260,176 persons, or 47.3% of Alaska's population, were female compared to 51.2% female for the United States in 1989. Traditionally, a high ratio of males to females has been associated with the American frontier. The myth that Alaska has substantially more men than women continues to

be perpetuated in the popular press. A few Alaskan communities tend to be more heavily male because employment may be transient or concentrated in occupations which have traditionally employed mostly males. Most communities, however, have sex ratios more in line with the rest of the nation. The presence of military installations, logging, fishing, or mining operations are the main sources of distortion for the sex ratio in the state. The young age of the population also increases the overall male proportion slightly. Older populations have more women because of the greater life expectancy among women at older ages.

The highest sex ratios by age in 1990 occurred among groups aged 40-44, 45-49, and 50-54. The sex ratios were 124 (that is 124 men for every 100 women), 121 and 121, respectively.

#### Housing Units and Households

The census counts all persons as living either in households or group quarters. A household occupies a housing unit. The census definition of a housing unit is a house, an apartment, a group of rooms or a single room intended as separate living quarters. Boats, tents, vans, and caves are included if they are occupied as a usual place of residence. Vacant mobile homes are included provided they are intended for occupancy on the site where they stand. Seasonal residences, forest service cabins, or vacant cabins which are habitable are included in the inventory. In 1990, the census counted some 232,608 housing units in Alaska, 188,915 of which were occupied, 43,693 vacant. In 1980, the census counted 162,825 housing units, 131,463 of which were occupied and 31,362 vacant. This indicates an increase of 69,783 during the decade or a growth of 42.9% in housing units. The number of occupied housing units or households in Alaska increased by 57,452 or 43.7% during the decade. The

vacancy rate for 1990 declined to 18.8% compared to 19.3% in 1980. Since the population of the state grew by 36.9% during the decade, housing and household growth outstripped the growth of population. Following the national trend, the number of persons per household in Alaska declined by 0.13 persons from 2.93 in 1980 to 2.80 in 1990. During the same period, the U.S. persons per household declined by 0.12 persons from 2.75 in 1980 to 2.63 in 1990.

#### Households

Persons in households and counts of households appear in Tables 1.10 and 1.11. Some 529,342 persons lived in 188,915 households in Alaska in 1990. Of the population, 454,726 persons or 82.7% lived in 132,837 family households. That is, in a household containing a householder and one or more persons related by birth or marriage. Not all households contain families. A household may also be composed of a group of unrelated individuals or one person living alone. The remaining 74,616 persons, 13.6% of all persons, lived in 56,078

nonfamily households. Overall, 70.3% of all households were family households and 29.7% were nonfamily households.

Family households can be further broken into husband-wife, male-headed and female-headed households. A married couple household is a family in which the householder and spouse are counted as members of the same household. Male and female headed households consist of a single adult head and at least one younger or older dependent.

#### Older Alaskans

In 1990, there were 22,369 persons over 65 living in 16,809 households with at least one person over 65. Of these people, the majority, 14,806 (66.2%), were in 10,571 family households. Almost three out of ten older Alaskans (6,357) lived in 6,238 nonfamily households. Most nonfamily households (5,727 households) contained a person over 65 living alone. In 1990, the occupant lived alone in 34.1% of all households with at least one person over 65. The remaining 501 households contained two or more unrelated individuals sharing a residence. Households containing older Alaskans accounted for 8.9% of all Alaska households in 1990, and 13.7% of all households containing persons living alone. 25.6% of all older Alaskans lived alone. In 1990, 1,196 persons over 65 lived in group quarters, 1,102 of them in institutions. Of all institutionalized persons in Alaska, 24% were over 65.

#### **Group Quarters Populations**

Group quarters are living quarters shared by ten or more unrelated persons. These include correctional institutions, nursing homes, mental (psychiatric) institutions, juvenile institutions, college dorms, military barracks, homeless shelters, persons living on the street, commercial ships, military and Coast Guard ships, and remote work sites, cannery or lumber camp dorms. In 1990, there were 20,701 persons or 3.8% of the population living in group quarters in Alaska. This compares to 16,260 or 4.1% in 1980. The remaining 96.2% of the 1990 population lived in households.

Institutionalized persons increased by 2,409 persons or 111.3% between 1980 and 1990 in the state. Ninety percent of this increase is accounted for by the growth of prison inmates during the decade. Most of the remainder is accounted for by the increase in nursing home populations. Noninstitutional group quarters populations have experienced only modest growth (14.4%) during the decade.

Of these group quarters college dorms and military barracks have been stable or declined while ships and work site dorms have grown.

For the first time, the Census Bureau released information related to the homeless. It does not purport to be a complete count of the homeless. However, during the 1990 census, 447 persons were counted in emergency shelters for the homeless and another 79 persons were counted as visible in street locations.

#### Marital Status

In 1990, 226,701 persons or 56.6% of the population 15 and over were currently married and not separated. The currently married declined from 58.1% in 1980. Marital statistics only tell current marital status, so that divorced or widowed persons who have remarried are listed as currently married. The total proportion never married also declined from 29.0% in 1980 to 27.2% in 1990. Some 8,601 or 2.1% of persons were separated, an increase of 68.2% up from 1.7% in 1980. The largest increase was in persons currently divorced. In 1990, 44,541 persons or 11.1% of all persons 15 and older were currently divorced, up from only 8.5% in 1980. The number of persons currently divorced increased 78.6%, twice as fast as the growth of the state's population. As the population has aged, the number and proportion of the population widowed has also increased. The number of widowed increased 53.1% to 11,623 in 1990. The statistics on changing marital status, along with the increasing proportion of persons living alone confirm the continuing decline in traditional families in Alaska and the U.S.

### **CHAPTER 2**

#### POPULATION TRENDS

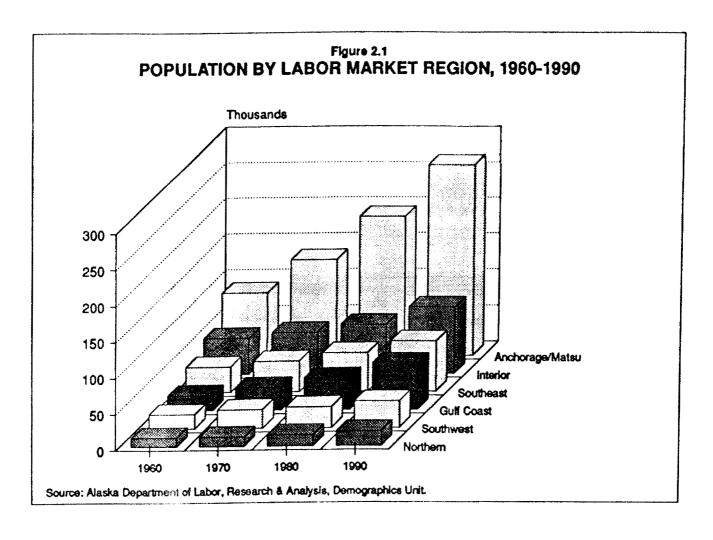

FOR ALASKA BOROUGHS & CENSUS AREAS

#### Introduction

Unlike the rest of the United States which is entirely organized into counties, Alaska still remains predominately unorganized. At the time of the 1990 Census, there were 14 boroughs which were equivalent to county governments in the rest of the U.S. Three of these boroughs, Anchorage, Juneau and Sitka, were city/boroughs which have the equivalent of city/county governments. Miami/Dade county in Florida and Oklahoma city/county are examples of this type of government. The other boroughs were Aleutians East Borough, Bristol Bay Borough, Fairbanks North Star Borough, Haines Borough, Kenai Peninsula Borough, Ketchikan Gateway Borough, Kodiak Island Borough, Lake and Peninsula Borough, Matanuska-Susitna Borough, North Slope Borough, and Northwest Arctic Borough. Since the census, one additional borough (Denali Borough, incorporated December 7, 1990) has been formed out of part of the Koyukuk-Middle Yukon Census Subarea of Yukon-Koyukuk Census Area. Each of these boroughs has independent, incorporated communities within its boundaries.

There is not a direct correspondence between all of the borough and census area boundaries of 1980 and 1990. The boundaries of the Northwest Arctic Borough correspond to Northwest Arctic Native Association boundaries and include the 3,298 square miles of land transferred from North Slope Borough. No population was involved in this land transfer, so the historical series is still 100% compatible with the Kobuk Census Area and North Slope Borough for 1980 onward. Aleutians East Borough and Aleutians West Census Area were formed out of the 1980 Aleutian Island Census Area and a small area of land transferred from Dillingham Census Area which contained no people. Similarly, Lake and Peninsula Borough and the 1990 Dillingham Census Area were formed out of the 1980 Dillingham Census Area. At the time of its formation a segment of the Dillingham Census Area containing 22 housing units, but no population was annexed to the

Kodiak Island Borough. In addition, a segment of the northern most part of the 1980 Dillingham Census Area was transferred to the Aniak Census Subarea of the Bethel Census Area. This segment contained no population or housing units. The Denali Borough was formed out of the Yukon-Koyukuk Census Area and includes Denali National Park and all communities on the Parks Highway between Anderson and the Matanuska-Susitna border. These communities are Cantwell, McKinley Park, Healy, Anderson, Ferry and Lignite. The Borough also includes a small portion of Southeast Fairbanks Census Area which may hold a few scattered individuals. Due to the recent formation of the Denali Borough, no recount of the 1990 Census to certify a 1990 population for the Borough has yet been made. The population estimate of Denali Borough for April 1, 1990 was approximately 1,750 persons.

The remaining unorganized territory was divided into 11 census areas for enumeration by the U.S. Census Bureau. While these are only statistical units, they are widely recognized by all federal and most state agencies as county equivalents for Alaska. Some program service areas, however, have different geography. While not universal, many of the boundaries of the census areas tend to follow native regional corporation boundaries. The reader may refer to the maps that accompany the place estimates in Chapter 4 of this publication for help in identifying borough and census area boundaries of Alaska.

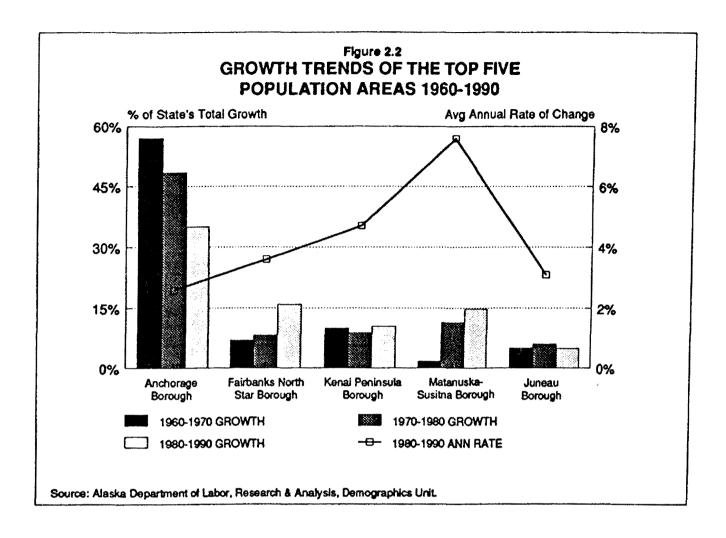

#### Borough and Census Area Population Trends 1960-1990

Alaska's population grew by 323,876 persons between April 1, 1960 and April 1, 1990, an increase of 143.2% in thirty years. The state's population increased by 148,192

or 36.9% during the past decade. Much of this growth has been in urban and suburban areas of the state.

In 1990, 226,338 persons, or 41.1% (Table 2.1) of Alaska's population lived in the Municipality of Anchorage. The five largest boroughs or census areas were Anchorage Borough, Fairbanks North Star Borough (77,720), Kenai Peninsula Borough (40,802), Matanuska-Susitna Borough (39,683), and Juneau Borough (26,751). These contained 74.8% of Alaska's population in 1990 compared to 72.4% in 1980. The remainder of the state contained an estimated 138,749 persons in 1990.

From July 1960 to April 1990, five areas accounted for 81.5% of the state's growth: Anchorage Borough (+143,505 or 173.2% increase), Fairbanks North Star Borough (+37,104 or 91.4% increase), Matanuska-Susitna Borough (+34,495 or 664.9% in-

crease), Kenai Peninsula Borough (+31,749 or 350.7% increase), and Juneau Borough (+17,037 or 175.4% increase). The total aggregate growth for these boroughs was an increase of 263,890 or 179.0%. Growth has been somewhat slower, but still rapid by national standards in the balance of the state which grew by 59,986, or a 76.2% increase between April of 1960 and April of 1990.

Figure 2.2 illustrates growth trends in the five largest population areas over the past three decades. Growth is shown as a percentage change in the area's share of the state's total growth. For each of the past three decades, Anchorage received a smaller share of the state's total growth each decade. Although the population increased by 178,000 from 1960-1990, Anchorage's portion of the state's growth declined from 57.0% in 1960-70 to 35.0% in 1980-1990. Two areas, Fairbanks North

Star Borough and Matanuska-Susitna Borough, experienced a marked increase in their share while Kenai Peninsula Borough and Juneau Borough basically maintained their shares over the periods. Growth rate was strongest during 1980-1990 in Matanuska-Susitna Borough which experienced an average annual rate of change of 7.6%, almost three times the rate of Anchorage (2.6%).

# Housing Unit and Household Counts

The Census Bureau has also released 1990 information on housing units, households and group quarters for Alaska by census area and place.

# Housing Unit Change

As shown in Table 2.3, the number of occupied households in Alaska was esti-

Alaska Population Overview

Source: Alaska Department of Labor, Research and Analysis, Demographics Unit.

38

mated as 188,915. The number of persons per household declined slightly from 2.93 persons in 1980 to 2.80 in 1990. 1990 households ranged in size from 3.4 to 4.2 persons per household in the predominately Native areas of north and west Alaska to 2.6 to 2.7 persons in Anchorage, and some areas of southeast Alaska such as Juneau, Ketchikan-Gateway and Haines boroughs.

## Components of Change

#### **Births and Deaths**

Births and deaths for census areas and labor market areas appear in Table 2.4. The average birth rate for the state in the 1980-90 period was 24.4 per 1000 population. The highest birth rates were found in the heavily Native areas of the state: Wade Hampton Census Area (37.8), Northwest Arctic Borough (36.2), Lake & Peninsula Borough (33.2), North Slope Borough (32.3), Bethel Census Area (30.8), Dillingham Census Area (30.4), Nome Census Area (30.2). The lowest birth rates were found in areas of southeast Alaska: Skagway-Yakutat-Angoon Census Area (18.5), Haines Borough (18.7), Ketchikan Gateway Borough (20.3), Sitka Borough (20.6) and Juneau Borough (21.4). Heavily military and fishing areas such as the Aleutians West Census Area (16.2), Bristol Bay Borough (17.9), and Aleutian Islands East Borough (18.6) also have lower fertility rates.

The average death rate for the state in the 1980-90 period was 4.1 per 1000 population. During the decade, mortality was highest in heavily Native areas of the state: Nome Census Area (7.2), Northwest Arctic Borough (7.1), Lake and Peninsula Borough (7.1), Wade Hampton Census Area (7.0), Yukon-Koyukuk Census Area (6.8), Dillingham Census Area (6.1), Bethel Census Area (5.6), and North Slope Borough (5.5). As these areas also have younger populations, the higher mortality rates are even more noticeable. Areas of the state with older populations also had higher than average death rates during the decade: Ketchikan Gateway Borough (6.1), Wrangell-Petersburg Census Area (5.8), and Sitka Borough (5.5).

The lowest death rates during the decade were found in Aleutians West Census Area

(2.0), Anchorage Borough (3.4), Bristol Bay Borough (3.4), Fairbanks North Star Borough (3.6), Prince of Wales-Outer Ketchikan Census Area (4.0), Juneau Borough (4.2), Matanuska-Susitna Borough (4.2), and Southeast Fairbanks Census Area (4.2). Several of these areas have young transient segments of population associated with the military, fishing or timber. It is possible that some death certificates for Prince of Wales-Outer Ketchikan Census Area were erroneously attributed to Ketchikan Gateway Borough.

#### Migration

Flows of migrants within boroughs and census areas are made up of people coming from or going to other states and people coming from or going to other areas of Alaska. Net flows for the 1980s are shown in Table 2.4. During the 1980s, net migration was greater than natural increase in Matanuska-Susitna Borough, Kenai Peninsula Borough, Prince of Wales-Outer Ketchikan Census Area, Skagway-Yakutat-Angoon Census Area and Aleutians East Census Area. The areas which gained the most through net migration during the decade were Anchorage Borough (27,078), Matanuska Susitna Borough (16,006), Kenai Peninsula Borough (9,306), Fairbanks North Star Borough (9,095) and Juneau Borough (5,736).

Nine areas experienced net out-migration during the decade: Southeast Fairbanks Census Area (-1,020), Yukon-Koyukuk Census Area (-932), Wade Hampton Census Area (-483), Sitka Borough (-464), Bethel Census Area (-444), Northwest Arctic Borough (-309), Lake and Peninsula Borough (-118), Dillingham Census Area (-101), and Wrangell-Petersburg Census Area (-99). Yukon-Koyukuk Census Area and Northwest Arctic Borough also experienced net out-migration for the 1970-80 decade.

# **Population Composition**

#### **Race Composition**

Tables 2.5 and 2.6 show borough and census area population by race, Hispanic origin, and labor market region.

Since 1980, the number of Alaska Natives increased in all boroughs and census areas

Source: U.S. Census of Population and Housing, 1980, 1990

as shown in Table 2.6. The largest numerical increases occurred in Anchorage Borough (5,616), Fairbanks North Star Borough (2,343), Bethel Census Area (2,123), Juneau Borough (1,272), Matanuska-Susitna Borough (1,251), Kenai Peninsula Borough (1,197), North Slope Borough (1,111), Northwest Arctic Borough (1,096), Wade Hampton Census Area (1,058), Nome Census Area (974), Prince of Wales-Outer Ketchikan Census Area (707), Dillingham Census Area (494), Ketchikan Gateway Borough (492), Yukon-Koyukuk Census Area (360), and Kodiak Island Borough (242).

More Alaska Natives now live in Anchorage (14,569) than in any other borough or census area. Bethel Census Area which had the largest number of Alaska Natives in 1980 dropped to second place with 11,370. The proportion of Alaska Natives increased during the 1980s in Anchorage Borough, Matanuska-Susitna Borough, Kenai Peninsula Borough, Fairbanks North Star Borough, Southeast Fairbanks Census Area, Yukon-Koyukuk Census Area, Northwest Arctic Borough, Haines Borough, Juneau Borough, Ketchikan Gateway Borough, Wrangell-Petersburg Census Area, and Wade Hampton Census Area. Two phenomena account for the changes in these areas, the gradual urbanization of the Alaska Native population, and higher native fertility. Alaska Natives declined as a proportion of the population in all other census areas.

In 1990, 41,380 or 48.3% of all Alaska Natives still lived in census areas where Natives made up more than half of the population. This percentage declined slightly from 1980 when it was 54.5%. Because of increased out-migration from rural areas, the proportion of the Native population that lived in census areas with

less than eight percent Native population grew to 28.9% from 22.4% in 1980. The four boroughs with populations less than eight percent Native in 1990 were Anchorage, Matanuska-Susitna, Fairbanks North Star and Kenai Peninsula Borough.

Geographically, the Alaska Native population has shown only a slight redistribution since 1980. The greatest increase occurred in the Anchorage/Matanuska-Susitna region which contained 15.0% of the Alaska Natives in 1980 and 19,3% in 1990. Proportional declines occurred in the Southwest region (30.3% to 27.5%) and Northern region (19.5% to 19.3%), Specifically, there was an increase in the proportion of all Alaska Natives in Anchorage Borough, Matanuska-Susitna Borough. Kenai Peninsula Borough, Fairbanks North Star Borough, North Slope Borough, Juneau Borough, and Prince of Wales-Outer Ketchikan Census Area. The proportion of the state's total Native population declined in all other regions and census areas. The changing geographic distribution reflects a gradual movement of Alaska Natives from small rural native villages to larger mainly white urban centers. Significantly, the degree of change during this period of general rapid urban growth remained relatively small. These relatively small changes reflect the strong desire of many Alaska Natives to retain traditional styles of life.

#### Age/Sex Counts

Normally age/sex distributions for boroughs, census area and labor market regions are included in the Alaska Population Overview. Because of the timing of the release of the 1990 census, these numbers will be presented in Alaska Population Projections which will be available this summer.

# **CHAPTER 3**

# COUNTS & ESTIMATES

FOR SPECIAL POPULATIONS & AREAS

#### Introduction

Estimates for special populations and areas were recently added to the publication. Future issues will be expanded to include other frequently requested special population estimates.

#### Armed Forces Estimates

The role of Armed Forces' population in Alaska has always been significant in the state's population and population growth. Currently, the overall Armed Forces' population of Alaska is relatively stable. Because of the rapid increase in the civilian population since 1980 and the diversification of the Alaskan economy, the military and dependent populations declined as a proportion of the total population of the state. Estimates for 1990 appear in Table 3.1.

In 1990, there were approximately 24,645 Armed Forces' personnel in Alaska, slightly higher (+8.6%) than in 1980. The proportion of military, however, continued to decline from 5.5% of the state's population in 1980 to 4.5% in 1990. Dependents of Armed Forces' personnel, in 1990, made up another 32,889 persons. This made the proportion of military and dependents in Alaska 10.5% of the state's population, down from 11.9% in 1980. Statewide, military and military dependents have increased by only 8,040 since July 1980. The growth of military and dependents accounted for only about 1.9% of the state's overall increase of 36.9% between April 1980 and April 1990.

When the size of military and dependent populations are considered relative to lo-

cal nonmilitary populations, some bases play a significant role in local areas. The Adak naval base dominated the Aleutians West Census Area where military and dependents accounted for 53.1% of the population. This military presence increased 51% since 1980.

The military influence of Eielson AFB and Ft. Wainwright in Fairbanks North Star Borough is also significant. Military and dependent populations grew by 6,039 or 47%. In 1990, they accounted for 24% of the residents of the borough, up slightly from 22% in 1980.

Because of the rapid growth of the population of Anchorage over the decade, the relative influence of military and dependents assigned to Elmendorf AFB and Ft. Richardson in the municipality declined. In 1980, military and dependents accounted for 15.2% of the Anchorage population. By 1990, that proportion had declined to 12.1%.

Military and dependents at Fort Greely accounted for some 19.6% of the population of Southeast Fairbanks Census Area in 1990. More specifically, the population of the immediate Delta Junction/Fort Greely area of Southeast Fairbanks remained quite stable at between 3,774 in 1980 to 3,721 in 1990. Cutbacks in military and dependents at Ft. Greely over the

decade caused a significant decline of that base's influence in the area from more than 52.3% in 1980 to only 31.1% in 1990.

In Yukon-Koyukuk Census Area, the military played a key role in the communities of Galena and Anderson. The Air Force's role at Galena grew slightly during the decade. It accounted for 35.2% of the population of Galena in 1980 and 37.8% in 1990. Clear AFB accounted for 23.2% of the population of Anderson in 1980, but declined to 18.8% in 1990. Current cuts may lead to a further decline in the role of the military in the Anderson area. The Air Force also played a major, but declining role in Bristol Bay Borough, where the military accounted for 19.9% of the population in 1990, down from 28.7% in 1980.

The local influence of the Coast Guard in Kodiak Island Borough has also been historically significant. The area of the city of Kodiak and its immediate vicinity contained about 11,900 persons in 1990, an increase from about 8,579 in 1980. Coast Guard personnel and their dependents in 1990 accounted for about 20.5% of the local population, down slightly from 24.9% in 1980.

The role of the Air Force in the state at a number of remote sites has declined during the decade as automation and satellites have made old ground stations obsolete.

#### Legislative House and Senate District Counts

The current House and Senate areas of the Alaska State Legislature were established by the redistricting plan of 1984. Currently, the Governor's Redistricting Board is considering a new redistricting plan to reapportion the Alaska State House and Senate. The 1990 census counts for current districts are shown in Tables 3.2 and 3.3. While 1984 populations used for redistricting purposes were adjusted for military nonresidents, a completely comparable adjustment could not be made with this set of estimates. The adjustment in the 1984 redistricting plan was made using an estimate of the location of off-base military population produced by the Institute of Social and Economic Research. Since these residence patterns may have changed, the only adjustment possible for

1990 was for on-base military nonresidents. It is clear from these counts that the differential growth of the state in the 1980s will require a number of district shifts in the new redistricting plan. The probable size of House Districts in 1990 will be about 13,750 residents if military nonresidents are included and the probable size of Senate Districts will be about 27,500.

# Alaska Native Regional Corporation Counts

The 12 Alaska Native Regional Corporations in Alaska established as part of the Alaska Native Claims Settlement Act, include all areas of the state except the Annette Island Reserve, Alaska's only American Indian Reservation. Their boundaries are shown in Figure 3.1. Census counts by race of the populations living within the geographic areas held by the regional corporations are shown in Table 3.4. The counts of Native population living within these regions do not necessarily represent shareholders of these corporations.

During the past decade, the distribution of Native American population relative to the different corporate regions has not changed significantly. Overall, there was a slight decline in the proportion of Alaska Natives in the state and all regions except AHTNA, Chugach, Cook Inlet, NANA, and Sealaska Corporation regions.

Numerically, the largest growth in Native American population within the corporate regions occurred in Cook Inlet (+7,727), Calista (+3,181), Sealaska (+2,798), Doyon (+2,745), Arctic Slope (+1,111), and NANA (+1,096). The large increase in the number of Natives living inside the Cook Inlet Region resulted from the growth of the proportion of Natives living in Anchorage. The remaining regions grew by less than 1,000 each in the 1980-90 period.

#### School District Estimates

School districts use population estimates for planning purposes. Districts can allocate resources more effectively when they know the magnitude of population change. The populations in Table 3.5 are for total district populations, and not school age populations.

Detailed school age populations by district have not yet been released by the Census Bureau. The number of persons under 18 years of age is available (Table 3.5) and may serve as an approximation of the number of persons potentially served by districts.

The proportion of Alaska's population living in each district and the proportion of the population under 18 in each district is also shown.

# **CHAPTER 4**

# POPULATION, HOUSING UNIT & RACE COUNTS FOR PLACES

#### Introduction

This section contains counts of population and housing for April 1, 1990 and 1980. These are presented for all incorporated places, census designated places (CDPs), Alaska Native Village Statistical Areas (ANVSAs) and the rural balances of both census areas and census subareas (CSAs). Counts for places are presented in two forms, by census area and alphabetically. The alphabetical listing also includes places ranked by size in 1990 and 1980 as well as cities ranked by size in 1990. These counts are found in Tables 4.2, 4.3, 4.4 and 4.5, respectively.

A wide variety of information is presented for communities for both 1980 and 1990. This includes population, group quarters, persons per household, population change 1980-90, total, occupied and vacant housing units, land and water area, population density, persons 18+, and population by race and Hispanic origin.

#### Characteristics of Places

Changes in the population for places observed between 1980 and 1990 may result from changes in geography. While it insures that the geography is comparable for 1980 and 1990 for boroughs and census areas, it cannot insure comparable place level geography for counts. Places may show population change as a result of real change or a change in the boundaries of the community. In the case of cities, this can be through annexation. In the case of Census Designated Places and Alaska Native Village Statistical Areas, all bound-

aries for 1990 are different from 1980 but may include the same basic population.

While general maps for places are included here, detailed paper and machine readable maps of Alaska showing place boundaries, roads, and major hydrography are available as part of the Census Bureau's Topologically Integrated Geographic Encoding and Referencing (TIGER) mapping. While too new to include in this publication, TIGER maps will improve the ability to display census and estimates information beginning in the next year.

#### Cities

As of January of 1990, there were 152 incorporated cities in Alaska. In 1990, 19 cities were considered urban (2,500 or greater) by U.S. Census Bureau definition. These cities in 1990 rank order are listed below:

1990 Rank	1980 Rank		1990 Population	1980 Population
1.	1.	Anchorage city/borough	226,338	174,431
2.	2.	Fairbanks city	30,843	22,645
3.	3.	Juneau city/borough	26,751	19,528
4.	4.	Sitka city/borough	8,588	7,803
5.	5.	Ketchikan city	8,263	7,198
6.	6.	Kodiak city	6,365	4,756
7.	7.	Kenai city	6,327	4,324
8.	8.	Bethel city	4,674	3,576
9.	9.	Valdez city	4,068	3,079
10.	21.	Wasilla city	4,028	1,559
11.	14.	Homer city	3,660	2,209
12.	11.	Nome city	3,500	2,544
13.	12.	Soldotna city	3,482	2,320
14.	13.	Barrow city	3,469	2,267
15.	10.	Petersburg city	3,207	2,821
16.	22.	Unalaska city	3,089	1,322
17.	16.	Palmer city	2,86 <b>6</b>	2,141
18.	17.	Kotzebue city	2,751	2,054
19.	19.	Seward city	2,69 <b>9</b>	1,843

Cities with 1990 populations between 1,000 and 2,500 were Wrangell (2,479), Cordova (2,110), Dillingham (2,017), North Pole (1,456), Craig (1,260), Haines (1,238), and Sand Point (1,087)

### Census Designated Places

An additional 163 unincorporated communities qualified as census designated places (CDPs) in 1990. To qualify as a CDP, a place must have a community character, 25 or more persons residing in it at the time of the 1990 census, and it must have been recognized as possibly fitting this definition in 1986 when the Census Bureau began planning the 1990 census.

Since CDPs have no incorporated boundaries, the limit of the settled area in 1990 was defined according to geographic features such as streams, roads or ridges which encompass the settled area. These definitions may be similar to the 1980 boundaries which did not follow geographic features but usually circled the settled area. In Alaska, most small isolated communities had few if any persons living near, but not in the place. In areas such as Matanuska-Susitna, Kenai and similar densely settled areas, the boundaries for CDPs may be substantially different from the 1980 definition.

Alaska had several large CDPs which were bigger than many of its incorporated cities and would meet the Census Bureau definition of urban places: College (11,249), Eielson Air Force Base (5,251) in Fairbanks North Star Borough; Adak Station (4,633) in Aleutians West Census Area; Sterling (3,802) and Nikiski (2,743) in Kenai Peninsula Borough. Several others had populations between 1000 and 2,500: Meadows Lakes (2,374), Butte (2,039) and Big Lake (1,477) are in Matanuska-Susitna Borough; Kodiak Station (2,025) in Kodiak Island Borough; Ridgeway (2,018) and Fritz Creek (1,426) are in Kenai Peninsula Borough; Metlakatla (1,407) in Prince of Wales-Outer Ketchikan Census Area; and Fort Greely (1,147) in Southeast Fairbanks Census Area. Such places are ripe for annexation or incorporation.

There were a number of communities which became CDPs for the first time in 1990:

Aleutians West Census Area: Amchitka (25)

Fairbanks North Star Borough: Pleasant Valley (401)

Haines Borough: Covenant Life (47), Lutak (45), Mosquito Lake (80)

Kenai Peninsula Borough: Cohoe (508), Crown Point (62), Fox River (382), Happy Valley (309), Nikolaevsk (371), Primrose (63), Ridgeway (2,018)

Kodiak Island Borough: Chiniak (69), Women's Bay (620)

Lake and Peninsula Borough: Port Alsworth (55)

Matanuska-Susitna Borough: Chase (38), Chickaloon (145), Knik (272), Lazy Mountain (838), Meadow Lakes (2,374), Skwentna (85), Trapper Creek (296)

Prince of Wales-Outer Ketchikan Census Area: Dora Bay (57), Edna Bay (86), Hollis (111), Labouchere Bay (149), Long Island (198), Naukati Bay (93), Polk Inlet (135), Port Alice (30), Port Protection (62)

Skagway-Yakutat-Angoon Census Area: Cube Cove (156), Freshwater Bay (68), Hobart Bay (187), Game Creek (61), Whitestone Logging Camp (164)

Southeast Fairbanks Census Area: Alcan (27), Dry Creek (106), Northway Junction (108)

Valdez-Cordova Census Area: Copperville (163), Kenny Lake (423), McCarthy (25), Mendaltna (37), Chenega (97)

Wrangell-Petersburg Census Area: Rowan Bay (133), St John's Harbor (69)

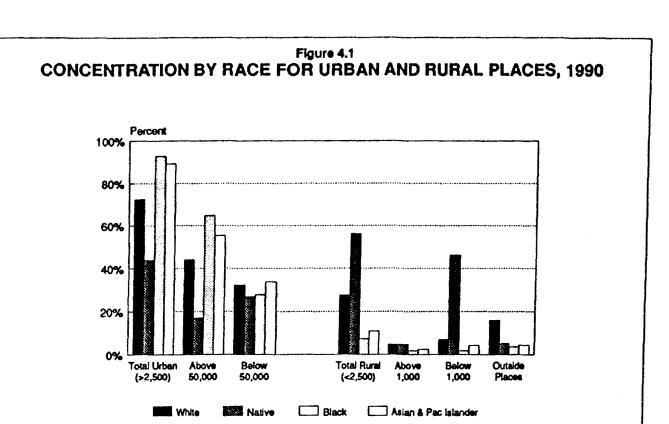

Yukon-Koyukuk Census Area: Ferry (56), Lake Minchumina (32), Lignite (99), and Circle Hot Springs Station (29).

Due to a census error, Shemya Station CDP was not included in the preliminary census statistics. It is not yet known if this error will be corrected in 1990 census publications.

In addition, there were several 1980 Census Designated Places which were not ANVSAs and which were dropped from the 1990 census either at the request of a borough or because their populations fell below the minimum of 25:

Aleutians West Census Area: Attu Bethel Census Area: Sparrehvohn Station, Cape Newenham

Fairbanks North Star Borough: Big Horn, Murphy Dome

Source: Alaska Department of Labor, Research and Analysis, Demographics Unit.

Kenai Peninsula Borough: Portage Creek Ketchikan Gateway Borough: Clover Pass, Herring Cove, Ketchikan East, Mountain Point, North Tongass Highway, Pennock Island, Saxman East Matanuska-Susitna Borough: Montana North Slope Borough: Cape Lisburne Prince of Wales-Outer Ketchikan Census Area: Cape Pole

Yukon-Koyukuk Census Area: Campion Station, Indian Mountain, Suntrana, Usibelli Mine, Tatalina Station.

#### Alaska Native Villages

The Alaska Native Claims Settlement Act identified 209 Alaska Native Villages (ANV). Populations were first reported for these in the 1980 Census. At the time of the 1990 census there were 217 Alaska Native Village Statistical Areas (ANVSA). Most of these villages are contiguous with cities or CDPs in the state. The concept of

Alaska Native Village Statistical Area (ANVSA) for 1990 is somewhat different than in 1980. In 1980, the boundaries of most Alaska Native Villages corresponded to city or census designated place boundaries. For 1990, the Census Bureau asked village councils to define the boundaries of the ANVSAs. In many cases, these continue to correspond to city or census designated place boundaries. In other cases, they do not correspond. Thus, the 1990 ANVSAs may differ from other community boundaries and they may differ from the ANV boundaries as defined in 1980. Boundaries established for ANVSAs are for statistical purposes only and have no legal status.

According to the U.S. Census Bureau, in only one case did a village council define an ANVSA to be vastly larger than the local community area. The native village of Ninilchik defined the boundary of the

60

ANVSA to include all of the Kenai Peninsula south of the community of Ninilchik to Kachemak Bay. This includes the communities of Ninilchik, Anchor Point, Nikolaevsk, Homer, Kachemak, and Fritz Creek as well as suburban areas along the highway and around Homer. The resulting data for Ninilchik ANVSA is useless and misleading for almost all statistical purposes. A substitution of Census Designated Place information for Ninilchik ANVSA data is recommended where an accurate portrait of the character of the community of Ninilchik is needed.

In the tables, there are specific indications where 1990 ANVSA boundaries are different from city or CDP boundaries. No attempt has been made, however, to show differences from 1980 ANV boundaries. Between 1980 and 1990 a few zero population native villages were dropped; a few others with very small or zero populations were added. In addition, a few communities which were cities or CDPs but not ANVs in 1980 became ANVSAs in 1990.

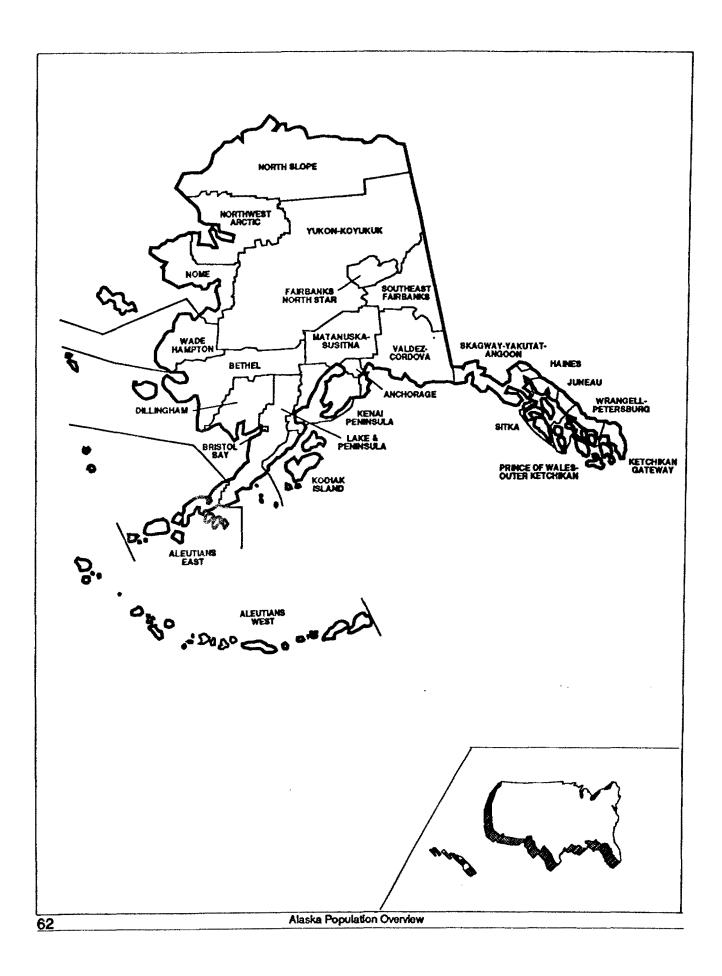

There were a few Alaska Native Village Statistical Areas (ANVSAs) which should have become CDPs in 1990, but did not because they were not identified as possible CDPs in 1986. These included Grouse Creek Group (580), Tazlina (247),

Alexander (40), and Wiseman (33). The lack of CDP status does not diminish the 1990 census information available for these communities.

## **Unorganized Territory**

A total of 247,986 square miles of land and 45,351 square miles of water in Alaska lies outside of any incorporated city or borough. This area amounts to 61% of the state's land area. At the time of the census, 24,547 persons or 4.5% of the population of Alaska lived in these areas. The number of persons living in these same areas totaled 19,999 in 1980 and accounted for 5.0% of the population. About 80% of the persons living in areas with no city or borough governments, lived in communities. The number of persons that lived outside of CDPs or ANVSAs and beyond the purview of any government other than the State of Alaska was 4,842 or about 0.9% of the state's population in 1990. About 37% of these lived in Southeast Fairbanks Census Area (primarily around Delta Junction), 18% in Valdez-Cordova Census Area (primarily in the Copper River Valley area), and 12% along the Parks Highway in Yukon-Koyukuk Census Area.

<sup>6/</sup> The recognized boundaries of Nome were smaller in the 1980 U.S. Census than the actual legal boundaries. This was corrected by the Census Bureau in 1981. In 1982, Nome annexed the unincorporated place of "key View" which had 210 residents and Perkinsville CDP. The 1980 population of Nome reflects its current boundaries.

CDP - Census Designated Place \* Alaska Native Village Statistical Area

<sup>7/</sup> Revised 1990 census number. Teller's 1982 annexation was not included in census geography.
