August 1990

¹The Regional Information Report Series was established in 1987 to provide an information access system for all unpublished division reports. These reports frequently serve diverse ad hoc informational purposes or archive basic uninterpreted data. To accommodate timely reporting of recently collected information, reports in this series undergo only limited internal review and may contain preliminary data; this information may be subsequently finalized and published in the formal literature. Consequently, these reports should not be cited without prior approval of the author or the Division of Commercial Fisheries.

ACKNOWLEDGEMENTS

Chignik Management Area Biologist Frederick M. Thompson and his staff collected the 1989 catch and escapement data cited in this report.

INTRODUCTION

On 24 March 1989 the EXXON VALDEZ ran aground on Bligh Reef in Prince William Sound and spilled about 11 million gallons of Alaska North Slope crude oil. A significant amount of the spillage drifted into the Gulf of Alaska. The pollution extended south along the Alaska Peninsula from Cape Douglas well into the Chignik Management Area (CMA) (Figure 1). As a consequence the 1989 CMA salmon fisheries were restricted to prevent an appreciable likelihood of adulterated catch and or gear from oil pollution (Barrett and Monkiewicz 1989; Thompson and Fox 1990). Because of foregone fishing opportunity the CMA salmon runs were not fully utilized.

In late October 1989, the Alaska Department of Fish and Game estimated what the likely 1989 CMA salmon catch and escapement levels, in numbers of fish by species, would have been had there not been the spill. These estimates did not include any interception or non-local fish which would have been harvested in the course of normal CMA salmon fisheries. The methodology used to derive these estimates is the focus of this document.

METHODS

Catch statistics cited in this report were taken from ADF&G, Division of Commercial Fisheries fish ticket summary reports available through late October 1989 at the Kodiak office. Likewise the escapement count data were current to

ACE 9264079

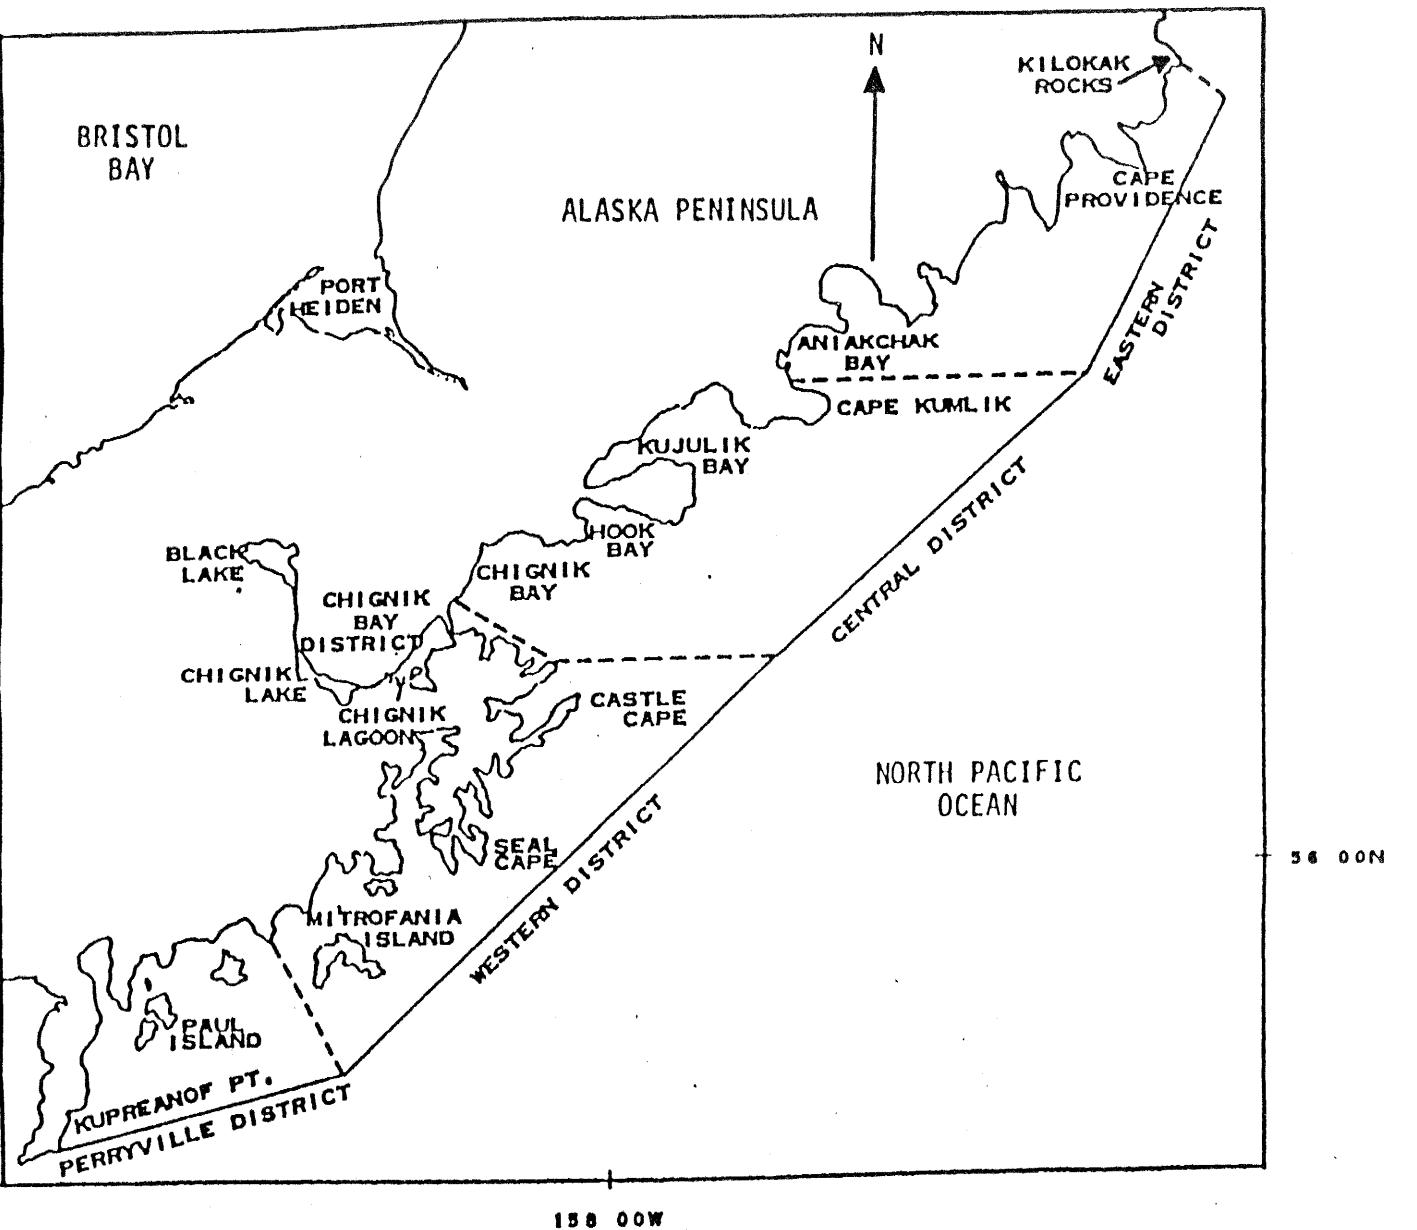

Figure 1. Map of the Chignik Management Area illustrating district boundaries, 1990.

the same time. A copy of the escapement survey data is in Appendix A.

Sockeye Salmon

The 1989 CMA sockeye run was the combined area commercial catch and estimated escapements into the Chignik River system and six other systems. A pile driven weir located about 4 km upstream of Chignik Lagoon was operated on the Chignik River to count escapement. The Chignik River system escapement estimate included the weir counts from 27 May through 8 August and the estimated escapement after 8 August which was when the weir was removed. The post weir escapement number was estimated from a time series model developed using 20 July through 6 August Chignik Bay District catch and Chignik weir escapement count data (F.M. Thompson, Alaska Department of Fish and Game, Chignik, personal communication). Sockeye escapement into six non Chignik River system streams was determined by expanding the peak aerial escapement counts by a factor of 2.0 (Barrett et al. 1985).

The 1989 sockeye catch estimate under a non-spill scenario was based on the assumption that: (1) the Black Lake and Chignik River escapements would equal the respective goals of 400,000 fish and 250,000 fish; (2) any fish surplus to escapement requirements in the Chignik River system runs would be caught; and (3) non-Chignik River system sockeye salmon would be harvested at the same rate as the Chignik River system fish.

ACE 9264080

Pink and Chum Salmon

Pink and chum escapements into 107 streams were periodically counted by aerial surveys conducted from early July through early September. For each stream a spawner abundance curve was electronically generated representing the number of live fish counted over time by species. Total escapement was then determined from the area under each the curve using an assumed 15.0 d average stream life for both species (Cousens et al. 1982; Johnson and Barrett 1988). The two exceptions were: (1) a peak count was used for the escapement estimate if the peak count exceeded the estimate obtained from the Johnson and Barrett model (1988); and (2) for those streams which were only surveyed once the pink escapement count was expanded by a factor of 1.13, while the chum escapement count was expanded by a factor of 1.24 for an estimate of total escapement. The respective expansion factors were determined by: (1) summing the estimated total escapement numbers for those streams having a peak count which was preceded by and also followed by at least one escapement survey count; and (2) then dividing this sum by the combined peak count for these same streams.

The estimated total run, in number of fish, was obtained by summing the commercial catch and estimated total escapements to 107 streams, respective to species.

The 1989 pink catch under a non-spill scenario was determined by subtracting the CMA escapement goal from the estimate of the 1989 run, while the chum catch was estimated from the regression of the run against the catch for years 1985-88.

ACE 9264031

Coho Salmon

Migratory and local coho salmon are caught in the CMA. Most of the local coho production is in the Chignik River system. All coho salmon caught in the Eastern, Central, and Chignik Bay Districts and post 14 August in the Western and Perryville Districts are considered local fish (F.M. Thompson, Alaska Department of Fish and Game, Chignik, personal communication).

The 1989 CMA local stock coho catch, under the non-spill scenario, was estimated based upon the average percentage of the total CMA local stock catch taken in the Chignik Bay District for years 1984-88.

Chinook Salmon

The Chignik River system supports the only CMA chinook run. Most of the chinook catch occurs in the Chignik Bay District which is the terminal catch area for fish returning to the Chignik River system. The potential 1989 CMA chinook catch under a non-spill scenario was calculated based on the average percentage of the total CMA catch taken in the Chignik Bay District for years 1984-88.

ACE 9264082

RESULTS

Sockeye Salmon

The total Chignik River system sockeye escapement was an estimated 941,173 fish which includes the 774,971 cumulative fish count through the Chignik River weir from 27 May through 8 August and a 166,202 fish escapement after the weir was removed. The Chignik Bay District catch was 1,154,372 sockeye salmon. Total sockeye salmon run into the Chignik Bay District was 2,095,545 fish (1,154,372 catch + 941,173 escapement). Outside the Chignik Bay District the sockeye catch was 2,505 fish, while the estimated escapement was 8,516 fish. The total CMA sockeye run was 2,106,566 fish (Chignik Bay District run of 2,095,545 fish + outside catch of 2,505 fish + outside escapement of 8,516 fish; Table 1).

The Chignik River system sockeye escapement goal is 650,000 fish which represents 400,000 Black Lake fish and 250,000 Chignik Lake fish. In 1989 the Chignik River system sockeye escapement would have been about 650,000 fish if: (1) the commercial fleet had been permitted to operate outside Chignik Lagoon thereby avoiding some of the crowded conditions and corresponding gear inefficiencies in the lagoon; (2) Chignik Lagoon fishing had not been restricted to daylight fishing; and (3) fishing had not been cancelled for the lagoon on 27 July, 4 August, 5 August, and 6 August, and there had not been the additional loss of potential fishing time in the lagoon from 7 August to 9 August.

The 1989 Chignik Bay District sockeye run of 2,095,545 fish, less a 650,000 fish

ACE 9264083

Table 1. Catch and escapement numbers of salmon by species returning to the Chignik Management Area and the estimated catch and escapement distribution of these fish if the Exxon Valdez spill had not occurred, 1989.

| Species | Estimated Distribution If No Spill Had Occurred | | | Actual | | |
|---------|--|--------------------|-----------|------------|-----------|-----------|
| | Escapement | Catch ^a | Run | Escapement | Catch | Run |
| Sockeye | 653,419 | 1,453,147 | 2,106,566 | 949,689 | 1,156,877 | 2,106,566 |
| Pink | 700,000 | 762,510 | 1,462,510 | 1,434,798 | 27,712 | 1,462,510 |
| Chum | 71,934 | 66,091 | 138,025 | 136,405 | 1,620 | 138,025 |
| Coho | - | 85,621 | - | - | 66,641 | - |
| Chinook | - | 4,550 | - | - | 3,542 | - |

^a The sockeye catch number includes an estimated 4,880 Chignik River sockeye salmon which would have been caught in the Kodiak Cape Igvak fishery pre-July 26.

^b The catch numbers do not include any interception fish which may have been harvested in the course of normal Chignik Management Area fisheries.

ACE 9264084

Chignik River system escapement, is 1,445,545 fish which would be the available catch. This catch level represents a run harvest rate of 68.98%. At this harvest rate the 1989 CMA sockeye run of 2,106,566 fish would produce a 1,453,147 fish catch had there not been oil (Table 1; Appendix C.1).

The estimated potential CMA catch of 1,453,147 sockeye salmon under a non-spill scenario includes 4,880 fish that would likely have been caught in the pre-26 July interception fishery at Cape Igvak Section (Kodiak Management Area) had fishing in this area also not been closed due to oil. The pre-July 1989 Cape Igvak Section catch would have been about 6,100 fish had the area been opened (Larry Malloy, Alaska Department of Fish and Game, Kodiak, personal communication), and 80% of the catch amounting to 4,880 fish would have been considered Chignik River system sockeye salmon.

Pink Salmon

The 1989 total CMA pink escapement was an estimated 1,434,798 fish into 107 streams (Table 2), while the commercial catch was 27,712 fish (Table 1). The total run was 1,462,510 fish.

The CMA escapement goal is 700,000 pink salmon (Probasco 1987).

The Eastern, Central, Western, and Perryville Districts produced most of the pink salmon in 1989, and these areas were closed due to oil. With an 700,000 fish escapement, the 1989 run would have produced a catch of about 762,510 fish had there not been the oil (Appendix C.2; Table 1).

^a Escapement enumerated at the Chignik River weir from 27 May through 8 August including the post 8 August estimated escapement of 166,202 fish.

ACE 9264089

Chum Salmon

The 1989 total CMA chum escapement was an estimated 136,405 fish into 107 streams (Table 2; Appendix C.3), while the commercial catch was 1,620 fish (Table 1). Total run which is simply the catch plus the escapement amounted to 138,025 fish.

There is no defined CMA chum escapement goal.

The Eastern, Central, Western, and Perryville Districts produced essentially all the CMA chum salmon in 1989. These districts were closed due to oil. Based on the regression of the run against the catch for 1985-88, the 1989 chum run would have distributed as a 71,934 fish escapement and 66,091 fish catch had there not been oil (Appendix C.3; Table 1).

Coho Salmon

The 1989 CMA coho catch was 66,641 fish with all but two of these caught in the Chignik Bay District (Table 1; Appendix C.4).

For the years 1984-88, the Chignik Bay District has averaged 77.83% of the CMA catch of local stock coho salmon (Appendix B.4). Using this average, the expected CMA 1989 coho catch would have been about 85,621 local stock fish had there not been oil (Table 1).

ACE 9264090

Chinook Salmon

In 1989, a total of 3,532 chinook salmon were caught in the Chignik Bay District, while another 10 chinook salmon were caught outside the Chignik Bay District (Table 1).

From 1984 through 1988 an average 77.63% of the CMA chinook catch was caught in the Chignik Bay District (Appendix C.5). Based on this average the potential 1989 CMA chinook catch would have been about 4,550 fish had there not been oil (Table 1).

Appendix C.1. Work sheet for estimating the Chignik Management Area sockeye salmon catch had there been a normal fishery in 1989.

| Year | Escap. | Catch | Run |
|------|---------|-----------|-----------|
| 1989 | 653,419 | 1,453,147 | 2,106,566 |

Note: The actual escapement was about 8,516 fish outside Chignik Lagoon, while the Chignik River system escapement was 941,173 fish which together total 949,689 fish. The estimated harvest rate on the outside local stock would have been in the range of 69.0% which is the estimated harvest rate on the 1989 Chignik River runs inside the Chignik Bay District with an escapement goal of 650,000 fish.

The Igvak fishery if operated in 1989 would reduce the total Chignik Management Area catch by about 4,880 fish. Total Igvak harvest is estimated at 6,100 sockeye salmon (80% Chignik fish).

1,154,372 Catch in lagoon
941,173 Escapement in lagoon

2,095,545 Total run inside lagoon

0.5509 Actual percentage harvested of Chignik Lagoon run

8,516 Escapement outside lagoon (2.0 X 4,258 peak count sum)
2,095,545 Run inside lagoon

2,104,061 Total which does not include outside catch of 2,505 fish
2,505 Outside catch

2,106,566 Total RUN

1,445,545 Potential catch in lagoon without oil and escapement goal of 650,000 fish
0.6898 Harvest rate in lagoon if no oil
7,602 Estimated total outside available catch
1,453,147 Estimated catch for entire management area without oil

Appendix C.2. Work sheet for estimating the Chignik Management Area pink salmon catch had there been a normal fishery in 1989.

| Year | Escap. | Catch | Run |
|------|---------|---------|-----------|
| 1989 | 700,000 | 762,510 | 1,462,510 |

Note: The estimated actual escapement is 1,434,798 fish using the Johnson and Barrett (1988) model with a stream life value of 15.0 days.

The actual 1989 escapement is 1,434,798 fish and the actual Chignik Management Area catch was 27,712 fish which added together is the total run. The escapement goal for the Chignik Management Area is 700,000 fish (Probasco 1987).

ACE 9264125

Appendix C.3. Work sheet for estimating the Chignik Management Area chum salmon catch had there been a normal fishery in 1989.

| Year | Escap. | Catch | Run | Harvest Rate |
|----------------|---------|---------|---------|--------------|
| 1985 | 62,013 | 26,146 | 88,159 | 0.297 |
| 1986 | 52,121 | 176,640 | 228,761 | 0.772 |
| 1987 | 85,391 | 127,261 | 212,652 | 0.598 |
| 1988 | 361,738 | 267,126 | 628,864 | 0.425 |
| | | | avg. | 0.523 |
| Estimated 1989 | 71,934 | 66,091 | 138,025 | 0.479 |

Note: The 1989 catch number is based on the regression of the run against the catch for 1985-1988. Total run estimates are not available for pre 1985 years.

The 1989 actual escap. was about 136,405 fish, while the actual catch was 1,620 fish. The sum of these numbers is the run. The 1989 escapement number shown is the estimated escapement had there been a normal fishery.
