Regional Information Report<sup>1</sup> No. 4K93-28

Alaska Department of Fish and Game  
Division of Commercial Fisheries  
211 Mission Road  
Kodiak, Alaska 99615

October 1993

<sup>1</sup>The Regional Information Report Series was established in 1987 to provide an information access system for all unpublished division reports. These reports frequently serve diverse ad hoc informational purposes or archive basic uninterpreted data. To accommodate timely reporting of recently collected information, reports in this series undergo only limited internal review and may be subsequently finalized and published in the formal literature. Consequently, these reports should not be cited without prior approval of the author or the Division of Commercial Fisheries.

## **ACKNOWLEDGEMENTS**

The authors express their appreciation to the following seasonal employees who worked during the 1992 season: Kim Rudge, Morris Lambdin, Tom Emerson, Ed Sampson, Forrest Bowers, Millie Gray, Cort and Katrina Neff, Ed Hajdys, Paul Kuriscak, Steve Thompson, Bruce Wetterlin, Dave Sarafin, Malcolm Bennett and Shawna Rudio. Thanks to Lucinda Neel, Joanne Shaker, Joan Brodie, Jim Blackburn, and Sharon Theis for their technical support.

## INTRODUCTION

### *Management Area Description*

#### **Location and Boundaries**

The Kodiak Management Area (KMA) is comprised of the entire Kodiak Archipelago and that portion of the Alaska Peninsula which drains into Shelikof Strait between Cape Douglas and Kilokak Rocks at Imuya Bay (Figure 1). The archipelago is approximately 150 miles long extending from Shuyak Island south to the Trinity Islands. The Alaska Peninsula portion is about 160 miles long and is separated from the archipelago by Shelikof Strait which averages 30 miles in width. Chirikof Island, located approximately 40 miles south southwest of the Trinity Islands, is also included in the Kodiak Management Area. The regulatory description of the KMA is all waters of Alaska south of a line extending east from Cape Douglas at 58°52' North latitude, west of 150° West longitude, north of 55°30' North latitude, and east of a line extending south from the southern entrance of Imuya Bay near Kilokak Rocks at 156°20'13" West longitude<sup>1</sup>.

#### **Management Units**

The Kodiak Management Area (Area K) is one of thirteen designated salmon net registration areas in the State of Alaska. Inseason management of the Kodiak commercial salmon fishery is structured around seven districts subdivided into fifty two sections (Figure 2). These sections are occasionally subdivided inseason to adjust fishing effort on unexpected salmon surpluses or deficits. Each management unit (section) defines a traditional geographic harvest area, managed for specific stocks or traditional fishing patterns.

### *Salmon Resources*

#### **Salmon Producing Streams**

There are approximately 800 streams within the KMA in which salmon migration or spawning has been documented (State of Alaska, 1993). Of these, 440 streams have significant annual use by salmon, and are shown on the current Kodiak Area Salmon Statistical Area maps (Appendices A.1-A.11). Three streams support viable chinook salmon *O. tshawytscha* populations, 36 streams support sockeye salmon *Oncorhynchus nerka* populations of extremely varying size, 174 have coho salmon *O. kisutch* populations, approximately 150 have chum salmon *O. keta* populations, and the entire set of 440 streams have spawning pink salmon *O. gorbuscha* populations. A total of 92 of these streams are located in the Mainland District on the Alaska Peninsula, 18 are on

---

<sup>1</sup> All latitudes and longitudes currently used in ADF&G Commercial Fishing Regulations are based on North American datum of 1927 (5 AAC 39.997(b)). This document also follows that system.

Shuyak Island, 84 are on Afognak Island, 234 are on Kodiak Island, and 12 are on the Trinity Island group (Table 1).

### **Salmon Escapement Goals**

Biological escapement goals for each salmon species have been formulated by the Alaska Department of Fish and Game, Division of Commercial Fisheries, Kodiak salmon management and research staff. Escapement goals are expressed as a range; the low end of the range is considered a minimum escapement, and the high end of the range is the desired or targeted escapement. These escapement goals have been formulated for sockeye, pink, and chum salmon by river system (Appendices B.1-B.3). Escapement goals have also been prepared for most coho salmon and the major chinook salmon producing streams (Appendices B.4 and B.5). For the Kodiak Management Area the number of salmon desired for escapement (the upper end of the range) approximately totals 2.14 million sockeye salmon, 3.03 to 6.00 million pink salmon<sup>2</sup>, 2.12 million chum salmon, 120,000 coho salmon, and 18,300 chinook salmon.

### **Salmon Production Potential**

An "average salmon production potential" for the Kodiak Management Area can be formulated using the established escapement goals and estimated return per spawner (Table 2). Assuming that desired escapement requirements are achieved and the actual return per spawner ratios for each species average near the estimated ratios, the potential long term average harvests are estimated at 18,000 chinook, 3.0 million sockeye, 225,000 coho, 7.5 to 15.0 million pink and 2.7 million chum salmon. However, it can be expected that variable environmental conditions encountered throughout the life cycle of these species will create fluctuations in salmon production.

## **METHODS**

### *Commercial Salmon Harvest*

#### **Processing**

Commercial salmon processing within the KMA began in the late 1860's with small salting and pickling operations located around Kodiak Island near major harvest areas. Processing evolved to canning, and initial salmon canning operations in Kodiak began in 1882. Today's processors are multi-tasked operations producing fresh and frozen products, supplemental to canned salmon. Kodiak processors are currently exploring the marketability of various products, such as frozen

---

<sup>2</sup> Pink salmon production in individual systems tends to be large one year then small the next. On Kodiak there has been an "even year dominance"; that is, during even numbered years the major pink salmon systems produce larger returns. Hence the escapement goal is different between odd and even years, with odd numbered years having lower goals and even years having greater goals.

whole or frozen headed and gutted products, frozen fillets, frozen minced, salmon surimi, and boneless-skinless canned salmon products. The physical and operational nature of Kodiak processing plants has evolved from scattered seasonally operated canning operations to efficient shorebased plants, mainly congregated within the city of Kodiak. Recent technology used in processing other fish species have been adapted to salmon processing, yielding new, diverse, high quality salmon products.

The latest estimate of the sustained processing capacity of Kodiak's shorebased salmon processors is approximately 1.1 million salmon per day. With this high processing capacity, it is common for Kodiak processors to "import" salmon harvested elsewhere in the state. In 1992, salmon from Bristol Bay, Cook Inlet, and Chignik Management areas were processed in Kodiak plants.

## Gear

In the Kodiak area, beach seines were the first gear type used commercially. Initially, beach seines 40 fathoms in length were used to harvest sockeye salmon in Karluk Lagoon. As competition for fish grew the primary harvest location for Karluk sockeye salmon moved to just outside the lagoon, using heavily manned beach seines averaging 450 fathoms in length. Until the late 1950's the Kodiak commercial salmon fishery was dominated by cannery owned fish traps, with some fisherman owned set gillnet, purse seine and beach seine operations. Fish traps were prohibited in 1959 when Alaska received statehood, and the commercial salmon fishery was then conducted by purse seine, set gillnet, and beach seine gear (in decreasing order of abundance). In 1974 a "limited entry system" was adopted by the State of Alaska which restricted the number of individuals allowed to participate in commercial salmon fisheries. This system formally established post statehood levels of specific gear type participation. Actual numbers of permits fished each year varies slightly (Figure 3). The majority of KMA permits (over 75%) are owned by Alaska state residents, with ownership varying little since 1985 (Table 3).

In the KMA there are restrictions on which gear type can operate in any given management unit, based on historical gear use patterns. Seine gear, both purse and beach seine, is allowed to operate in the entire Kodiak Management Area except for the Olga-Moser Bay Section<sup>3</sup>. In the Central Section of the Northwest Kodiak District both set gillnet and seine gear are allowed. Only set gillnets are allowed in the Olga-Moser Bay Section<sup>4</sup>. The geographical areas currently open to specific gear types have remained unchanged since 1974 with three exceptions. First in the mid 1970's that portion of the Karluk District between Rocky Point and Cape Uyak was closed to set gillnet gear in an attempt to accelerate the rebuilding of the Karluk sockeye and pink salmon stocks. No documented gillnet gear had fished there since the early 1960's so no existing gillnetter's were affected. Several purse seine locations within that area, which could impact

---

<sup>3</sup> After September 5, seine gear is allowed in the Olga-Moser Bay Section.

<sup>4</sup> Prior to September 5. The Dog Salmon Flats, Inner and Outer Akalura, and the Inner and Outer Upper Station Sections are normally closed to commercial fishing. In the event of over escapement "mop up" fisheries can occur in these sections. Prior to September 5 only set gillnet gear would be allowed in these sections.

Karluk stocks, were brought under direct management control. This area was used to provide an increased closed water sanctuary for the severely depleted Karluk sockeye and pink salmon stocks. A second gear and area adjustment occurred in the late 1970's in the Alitak District. The common boundary between the Cape Alitak, Moser-Olga Bay and Humpy-Deadman Sections was adjusted in an effort to reduce gear conflicts caused by an unclear boundary description. The area open to set gillnet gear was reduced from Cape Alitak to Tanner Head and was increased in Deadman Bay to a point northwest of Fox Island. The third gear and area adjustment was made in Zachar Bay to alleviate fixed and mobile gear conflicts. In the late 1970's closed water sanctuary markers were reduced (moved further into the bay) and the new area was designated "seine gear only". The creation of this small area adjacent to the closed waters within Zachar Bay was consistent with that of other major westside Kodiak bays.

## Management

The ADF&G Commercial Fisheries Division, is responsible for the management of the salmon stocks of the state of Alaska. In the KMA, the staff responsible for regulation of the commercial salmon fishery consists of an Area Management Biologist, two Assistant Area Management Biologists, and approximately 15 seasonal employees. The Kodiak salmon research staff includes an Area Research Biologist and approximately 10 seasonal employees. A Regional Coordinator and a Regional Research Biologist oversee these operations (Appendix C.1).

Preseason salmon forecasts are developed jointly by the management and research biologists (Appendices D.1 -D.7). A preemergent pink salmon sac fry survival study has been conducted each spring by the KMA management staff for the past 25 years. This annual program examines pink salmon egg overwinter survival during March and April. Each year data is compared to previous year's results to develop a preseason forecast of return and potential harvest. The KMA pink salmon forecasts are normally reliable in projecting extremes for major systems and total production.

ADF&G management and research staff collect salmon smolt outmigration data and salmon escapement data at fish weir stations on many salmon systems (Appendix C.2). Escapement counts through all weirs in the Kodiak area are actual hand tallied counts by species. Electronic (sonar) or timed counts are not used and the gates are closed when personnel are not present to count. ADF&G staff also sample sockeye salmon escapement and commercial catch for sex and length data, plus collect sockeye salmon scales for age determination (Appendix E.1 - E. ). This information, along with run strength information (catch and escapement), is used to develop system specific and area wide sockeye salmon forecasts.

Standard inseason management activities focus around daily evaluations of actual run strength in comparison to preseason expectations by species. The management staff's inseason duties include daily contact with all salmon buyers to obtain current harvest information by area and species. Also, staff have daily contact with fishermen to discuss run strength and distribution along with obtaining feedback concerning inseason management activities. Salmon buildup estimates and escapement counts are collected from frequent fixed wing aircraft surveys of KMA bays and streams. Actual escapement counts are collected from up to 12 fish counting weir stations through daily single side band radio contact. Additional inseason information on returning sockeye salmon run strength is obtained from an ADF&G test fishery in the Alitak Bay District.

Since the mid 1970's, actual fishing time has been regulated through the use of Emergency Orders (EO) and News Releases which announce specific details of when and which areas will open to fishing. Prior to the mid 1970's fishing periods were set by regulation and any inseason changes, such as closures, were announced by EO. With analysis of all available data, the KMA Management Biologist writes an EO which describes details for upcoming or continued commercial salmon fishing time. The EO describes the starting date, time, and duration of the fishery along with the geographical areas (districts or sections) which are opened or closed to fishing, and puts them into regulation. A news release (NR) is then issued which publicly announces the fishery.

Inseason management actions are structured to adhere to a generalized plan described in an annually issued "Harvest Strategy". This strategy recognizes a specific chronology of management actions related to salmon run timing by species (Figure 4). Also guiding the KMA staff are several Board of Fisheries (BOF) approved "Management Plans" that describe biological and allocative constraints which the management staff must follow when structuring commercial salmon fisheries. In 1992, six management plans were in use for the KMA (Table 4). These plans are part of the Kodiak Area Commercial Salmon Fishery Regulations (Appendix F.1). These management plans reflect traditional fishing opportunities and the subsequent harvest allocations which have resulted between and within gear types participating in these specific fisheries.

## SALMON STOCK STATUS

### *Chinook Salmon*

The Kodiak area has two naturally occurring chinook salmon populations, in the Ayakulik and Karluk Rivers. A small introduced chinook salmon run occurs in the Frazer Lake/Dog Salmon River. Annual escapements are monitored into all three systems by seasonal employees at fish weirs, providing accurate escapement counts. There are no directed commercial fisheries targeting these stocks and any commercial harvest occurs incidentally in fisheries targeting sockeye and pink salmon. Sport fishing pressure on chinook salmon populations in the Ayakulik and Karluk Rivers is increasing as commercial sport fish operators and recreational anglers continue to "discover" fishing opportunities in the Kodiak area. In the Dog Salmon River, to aid in the establishment of a viable spawning population, sport fishing for chinook salmon is prohibited. Currently all three chinook salmon runs are considered healthy by both ADF&G and U.S. Fish and Wildlife Service (FWS - Kodiak National Wildlife Refuge), and annual escapement requirements are being achieved.

There are two other chinook populations in the Kodiak area, both introduced runs. One is at the Pasagshak River where eggs taken from Chignik River chinook salmon were used to begin a chinook run on the Kodiak "road system". Overall, the productivity of this run has been less than expected. The other introduced chinook salmon population is located at Mill Bay near the city of Kodiak. This introduction was basically designed to support "put and take" recreational fisheries. Approximately 100,000 chinook salmon smolt from the Elmendorf hatchery have been released annually into Island Lake since in 1989.

### *Sockeye Salmon*

There are 36 known sockeye salmon populations in the KMA. Large returns (greater than 500,000 fish) occur in four river systems: the Karluk, Ayakulik, Upper Station, and Frazer systems. The first three support naturally occurring runs, while the Frazer Lake sockeye population is a very successful introduced run. There is a large set of falls below Frazer Lake which blocks natural migration, so this population must be maintained through the use of a large "fish ladder".

These four major systems provide approximately 80 percent of Kodiak's current sockeye salmon production. Directed fisheries on these stocks are intense and require extensive management activities from June 5 through September 20. The Karluk and Upper Station systems have distinct early returns (May 25 through July 15) and late returns (July 16 through September 20). Frazer is primarily an early returning stock with most sockeye entering fresh water by July 20. Ayakulik also has an early returning stock which continues into mid August. The overall escapement goals for these four major systems has been achieved annually since 1988. Production from these systems should remain relatively stable providing existing "fish weir" programs and management strategies are not adversely affected and favorable environmental conditions persist.

Twelve sockeye systems in the KMA have minor but significant populations. These are the Afognak, Uganik, Akalura, Saltery, Kaflia, Pauls, Buskin, Swikshak, Little, Malina, Thorsheim, and Perenosa systems. These systems annually account for approximately five percent of KMA's current sockeye salmon production, and escapement into each is generally less than 60,000 sockeye salmon. Several of these systems have been monitored by seasonal ADF&G workers at fish weirs (Afognak, Uganik, Akalura, Saltery, Pauls, Buskin, Malina, and Perenosa) and the remainder are monitored by aerial survey. These minor stocks offer a relatively high yield per unit effort to directed commercial seine effort, and so, are vulnerable to overexploitation. The sockeye salmon run into Buskin Lake is not targeted by a commercial fishery. All fish surplus to escapement requirements are currently harvested in a subsistence fishery and, to a lesser degree, in a recreational sport fishery. All these minor sockeye salmon populations are considered to be moderately healthy with the exception of Malina, Pauls, and Perenosa. A more conservative management approach for these systems will prevail in upcoming years.

The timely and accurate data from weir camps allows for a more precise stock specific management. ADF&G budget cuts have reduced the use of fish weirs at Saltery, Pauls, and Perenosa systems, and the future use of a fish weir on the Uganik River. Without the use of fish weirs on the most heavily targeted systems, a more conservative management approach needs to be taken in order to ensure that biological protection for these stocks is assured.

The remaining 20 systems are comparatively minor systems and are not usually exploited by directed commercial effort.

Commercial sockeye salmon harvest strategies have not limited subsistence or sportfishing opportunities in the KMA. Both the Buskin and Barabara sockeye stocks receive substantial subsistence effort due to their close proximity to communities. These two systems may be

approaching maximum exploitation from subsistence effort alone. Sport fish interest in Barabara is minimal while the Buskin is seeing increasing effort. These systems will require close monitoring in the future to ensure biological protection and to ensure that future subsistence uses will not be jeopardized.

Currently, the Kodiak Regional Aquaculture Association (KRAA) in conjunction with ADF&G Fisheries Rehabilitation and Enhancement Division (FRED) is active in providing additional sockeye salmon production, both by introducing sockeye runs into previously "barren" lakes and by enhancing weak natural runs. Through the use of remote egg takes and hatchery incubation, sockeye salmon fry are being stocked to provide for future sockeye salmon fisheries. The release of "0 check" sockeye salmon directly into the marine environment is being attempted to provide for early and late sockeye salmon returns to the Kitoi Bay hatchery on Afognak Island. Pillar Creek hatchery, located near the city of Kodiak, is the only other hatchery located in the KMA, and is used primarily in the sockeye salmon stocking programs. This current trend in enhancement activities, supported financially by the commercial permit holders through the KRAA, is encouraging.

### *Coho Salmon*

About 174 systems have been identified which support coho populations in the KMA, with 20 percent of these systems (35 streams) producing 80 percent of the total KMA production. In recent years coho salmon have experienced the largest increase in exploitation by sport, commercial, and subsistence users within the KMA. Data concerning past escapements and subsequent production of coho salmon aids in the management of this fishery. With knowledgeable inseason management at least minimum escapements should be annually achieved. Concern exists for the remaining 80 percent (135 streams) where coho populations are relatively small and more susceptible to overexploitation. As with chinook salmon, there is an increase in the number of commercial sport fish operators targeting on local coho populations. The rather precarious status of these small stocks will not improve unless a concentrated regulatory and management effort is implemented to provide safeguards. To provide adequate protection for these smaller stocks all user groups must be monitored inseason for potential changes in harvest rates which may not correspond with fluctuation in run strength.

The Kitoi Bay Hatchery produces a minimal number of coho salmon for stocking in streams near the city of Kodiak. This is done to provide additional sport fishing and subsistence fishing opportunities. Most are strictly "put and take" operations, where all returning adults are expected to be harvested, and no escapement and subsequent spawning is possible. Coho salmon produced at Kitoi Bay Hatchery are also stocked into the Crescent Lake system for return to the stream near the village of Port Lions. Again, this is a "put and take" operation. A set of barrier falls precludes upstream migration of returning adult coho salmon. This is primarily done to provide subsistence and sport fishing opportunities, and a regulatory management plan stipulates that commercial fishing in the terminal area (Settler's Cove) will not occur prior to September 16th and then only if over 500 coho salmon are available for harvest.

### ***Pink Salmon***

All 440 known salmon streams within the KMA support pink salmon populations. Aerial surveys and weirs are the primary method of counting pink salmon escapement within the KMA. Pink salmon represent the foundation of Kodiak salmon production and comprise 80 percent of the total annual harvest. Pink salmon production has been relatively stable and should remain so, provided existing management strategies and inseason management activities are retained. The pink salmon forecast, based on preemergent sac fry sampling results, enables fishery managers to make decisions concerning fishing time and areas opened to fishing, especially during the early portion of the pink salmon run.

Prior to 1948, pink salmon runs during odd numbered years were larger than even year runs. However, from 1948 to 1988 the pink run was larger during even years. There was a large pink run in 1989 and with curtailment of the commercial salmon fisheries during 1989 as a result of the Exxon Valdez oilspill, all pink systems received excellent escapements. Overwinter stream and early marine environmental conditions were excellent for egg and fry survival and resulted in excellent harvests and escapements in 1991. These factors may indicate a switch to odd brood year dominant run strengths in future years. Pink salmon production in the KMA should remain above average if existing management strategies are retained and adverse environmental conditions don't occur. The long term outlook for Kodiak's wild pink salmon populations is very good.

The Kitoi Bay Hatchery on Afognak Island primarily produces pink salmon. In recent years pink salmon returns to this hatchery have ranged from approximately one million to seven million fish.

### ***Chum Salmon***

Chum salmon management has received increasing emphasis over the past fourteen years in the KMA. Since most chum salmon escapement data is gathered during aerial surveys it is difficult to evaluate inseason run strength. Increases in directed fishing on specific chum salmon stocks combined with efforts to harvest better quality fish (bright vs. dark) requires that more intensive chum salmon stock management strategies be developed to prevent over exploitation.

Currently, KMA management staff evaluates chum escapement goals, historical harvest and escapement data, age class information, and inseason harvest and escapement data to improve management of this species. Since similarities exist between pink and chum salmon freshwater and early marine survival it may be possible to use pink salmon forecasting information to predict chum salmon production. It will be possible to improve chum salmon management by developing more reliable escapement indexing methods and implementing a catch sampling program to collect more age class data. With this information, possibly used in conjunction with fry overwinter survival estimates (based on the existing pink salmon preemergent fry sampling program), more reliable chum salmon forecasts may be developed. The future status of this species is expected to be very good.

The Kitoi Bay hatchery is in the process of developing an early run chum salmon return to the hatchery. The majority of the chum salmon currently returning to the hatchery are needed for brood stock. Significant supplemental production is expected to occur within the next four years.

### *1992 Season Summary*

The 1992 Kodiak commercial salmon season began June 9 and continued through October 7 (121 days), when the last landing was reported. A total of 8.46 million salmon were harvested (Figure 5). Forty one emergency orders were issued to regulate fishing time and areas open to fishing (Table 5 and Figure 6). The pink salmon return overall was much lower than the preseason forecast, and some systems had lower than forecasted returns of sockeye salmon as well. However, management activities this season can be characterized as successful... overall escapement requirements were achieved for all species.

A total of 526 permit holders (12 beach seine, 178 set gillnet, and 336 purse seine) participated in the fishery, making a total of 16,363 deliveries. The 1992 effort levels (active gear) were above average for purse seine gear and below average for beach seine and set gillnet gear permit holders (Table 6).

In 1992 fourteen shorebased processing facilities bought salmon in the KMA (Table 7). Ten of these processing operations are located within the city limits of Kodiak and four major processing plants are located outside the Kodiak city limits: one each in Dry Spruce Bay, Northeast Arm of Uganik Bay, Larsen Bay, and Lazy Bay in Alitak. There were two relatively small shorebased processors which specialize in producing only smoked salmon as a finished product. Salmon processing ships generally operate in the KMA only during years when large harvests of pink salmon are expected. No floating processors took salmon in the KMA in 1992.

The 1992 salmon harvest was well below historical averages, and below the preseason harvest expectation of 13.6 million fish (Table 8 and 9, and Figure 7). The overall estimated exvessel value of the salmon harvest is approximately \$40.5 million dollars, which is \$3.5 million dollars higher than the 1991 season but well below the record \$104 million dollar season in 1988 (Table 10).

### *Escapement*

Overall, 1992 salmon escapements for all species exceeded the low end of the escapement goals, and so fell within the targeted ranges<sup>5</sup> (Table 11). A brief discussion of escapements, by species, follows. Summaries of indexed escapements by geographic area by species, plus

---

<sup>5</sup>Escapement values given in this document are "indexed counts". Most major chinook and sockeye systems are weired, so escapement counts for these species are the final weir counts plus the peak aerial survey count from the few unweired systems. Most chum, coho, and pink systems are not weired, so the index counts for chum and coho salmon are mainly the peak aerial survey counts. For unweired pink salmon systems the sum of two aerial counts may be used if those counts are 30 days apart (this is in consideration of the shorter stream life of pink salmon).

escapement counts from aerial surveys, stream walks, and final weir counts are found in Appendices G.1 - G.9. For details of escapement into systems with fish counting weirs see Brodie (1992).

### **Chinook Salmon**

The 1992 chinook salmon return originated from escapements achieved in 1986 through 1988. The escapements which occurred this season will affect the 1996-1998 chinook salmon returns.

In 1992, the overall chinook salmon escapement goals of 19,300 was achieved, with a total escapement of 19,000 fish. The Ayakulik River received 9,100 chinook salmon, the Karluk River 9,600 chinook salmon and the Dog Salmon River received 265 chinook salmon. Escapement counts for all three systems are actual fish counted through fish counting weirs.

### **Sockeye Salmon**

The 1992 sockeye salmon return originated from escapements achieved in 1986 through 1988. The escapements which occurred this season will affect the 1996-1998 sockeye salmon returns.

A total of 1.85 million sockeye salmon were counted through weirs on the following sockeye salmon systems: Ayakulik, Karluk, Frazer, Upper Station, Afognak, Uganik, Malina, Buskin, Pauls Bay, Saltery, and Perenosa. The weirs at Saltery, Pauls Bay, and Perenosa were closed July 1 due to budget cuts, so only partial escapement counts were obtained. An additional 118,000 sockeye (indexed counts) were counted as escapement into minor systems such as Kaflia, Little River, and Swikshak, bringing the 1992 sockeye salmon escapement total to 1.97 million fish. The targeted indexed escapement goal for all systems combined is 2.0 million sockeye.

### **Pink Salmon**

The 1992 pink salmon return originated from escapements attained in 1990. The escapements which occurred this season will affect the 1994 pink salmon return.

Pink salmon escapements ranged from poor to excellent. Lower than expected escapements were recorded in streams of the Alitak Bay District, the Karluk River, and streams located in Ugak and Chiniak Bays. The overall indexed pink salmon escapement was 3.5 million fish. The overall indexed escapement goal for even years is a range from 2.4 to 6 million pink salmon. The Ayakulik and Karluk Rivers are dominant even year pink salmon systems, and normally account for 1.2 to 2.4 million of the total pink salmon escapement. The 1992 pink salmon escapement into the Ayakulik River was 666,000 fish, within the established goal of 400,000 to 800,000. However, pink salmon escapement into the Karluk River was only 401,000, well below the escapement goal of 800,000 to 1,600,000. Aerial surveys are utilized to monitor pink salmon escapements into all other pink salmon systems.

## **Chum Salmon**

The 1992 chum salmon return originated from the escapements achieved from 1987 through 1989. The escapements which occurred this season will affect the 1995-1998 chum salmon return.

This year's overall indexed chum salmon escapement of 530,000 fish is at the low end of the escapement goal range of 500,000 to 1.5 million fish. Streams located in Alitak, Inner Ugak, Kizhuyak, and Dry Bays experienced relatively poor returns of chum salmon while streams in Zachar, Wide, and Kukak Bays had good returns. Chum salmon escapements are monitored via aerial surveys. Year end escapements should be used as minimum estimates, since water clarity (visibility) in major chum systems is more variable, and generally poorer, than for major pink salmon systems.

## **Coho Salmon**

The 1992 coho salmon return originated from the escapements achieved in 1988 and 1989. The escapements which occurred this season will affect the coho salmon returns in 1995-1996.

Overall indexed coho salmon escapements were good, though Chiniak Bay streams experienced weak returns. The 1992 overall indexed escapement was 290,000 coho salmon. The area wide indexed escapement goal for coho salmon is 150,000 fish. Coho escapements are monitored partially by salmon counting weirs and aerial surveys. These estimates should also be considered minimum estimates. Fluctuations in fall water flows shortened weir operations (due to flooding) and lengthy periods of adverse weather conditions reduced aerial survey opportunities.

## *Harvest*

Overall, the 1992 KMA commercial harvest of 8.46 million salmon ranks only 35th in the history of this fishery (Figure 7). Tables detailing the harvest by gear type, statistical area, time period, etc., can be found in Appendices H.1-H.7. Specific information on fisheries regulated by Board approved management plans is located in Appendices I.1-I.5 (Cape Igvak Management Plan); Appendices J.1-J.4 (Alitak Bay District Management Plan); Appendices K.1-K.4 (Westside Kodiak Management Plan); and Appendix L.1-L.3 (North Shelikof Management Plan). For additional information on the commercial salmon harvest in specific management units in the KMA (see Barrett 1992 and Prokopowich and Brennan 1992).

## **Chinook Salmon**

The 1992 chinook salmon harvest was 24,299 chinook salmon, with an average weight of 14.31 pounds. This is the largest chinook salmon harvest on record, just above the 1988 through 1991 average harvest of 21,000 fish (Figure 8). Chinook salmon are harvested incidentally during fisheries targeting sockeye, pink or chum salmon. Purse seiners harvested 85 percent, set gillnetters 14 percent and beach seiners 1 percent of the total chinook salmon harvest.

## **Sockeye Salmon**

There were 4,167,877 sockeye salmon harvested in the Kodiak Area this season. Average weight of the sockeye harvested in the KMA was 5.68 lb. The 1992 harvest was the fifth largest on record, only surpassed by the sockeye harvests of 1991, 1990, 1908 and 1901 (Figure 9). Preseason expectations were for a harvest of 3.25 million sockeye salmon. Purse seiners harvested 80 percent, set gillnets 20 percent and beach seiners less than 1 percent of the sockeye salmon caught this season.

The majority of sockeye salmon harvested in the Kodiak Management Area are caught in terminal and near terminal management units targeting sockeye bound to KMA major and minor sockeye systems, or in directed sockeye salmon fisheries based on Board of Fishery approved allocation plans (Cape Igvak and North Shelikof). In 1992, a significant portion of the sockeye salmon harvested were caught in fisheries where pink and chum salmon are the targeted management species. In addition many of the sockeye salmon harvested were larger than would be expected for Kodiak stocks. Based on daily catch figures from about July 6 to July 25 (when management is primarily directed toward pink and chum salmon) approximately 1.9 million sockeye salmon taken in the KMA averaged 6 pounds or greater (Table 12).

This was the first year sockeye salmon began returning to the Kitoi Bay hatchery. The hatchery contribution to the common property fisheries was small, with only approximately 4,000 taken by commercial fishers. An additional 4,500 sockeye were harvested for broodstock.

## **Pink Salmon**

The pink salmon harvest of 3,310,644 fish was approximately 6 million fish less than the preseason harvest expectations. Poor environmental conditions in the spring of 1991, which may have adversely affected initial early marine plankton production, is the most reasonable explanation for the low pink salmon return. The average weight was 3.75 pounds and overall quality of this year's pink salmon, based on processor reports, was excellent. Overall, this was the lowest even year harvest since 1974 and well below the past five even year (1982-1990) average harvest of 10.1 million pink salmon (Figure 10). Purse seiners harvested 83 percent, set gillnetters 16 percent and beach seiners 1 percent of the total pink salmon catch this season. Most of the pink salmon harvest occurs between July 6 and August 31.

From July 6 through July 30 the length of weekly fishing periods were based on the preseason forecasted strength of the pink salmon return (See Prokopowich, Brennan, and Gretsch 1992). The initial fishing period in 1992 was 57 hours long, beginning 12:00 Noon on July 6. The next three weekly fishing periods were 81 hours each. By the end of July, the actual pink salmon harvest was tracking well below preseason expectations. Fishing time was reduced during the peak of the run in order to allow maximum numbers of pink salmon to reach spawning streams and closed water sanctuaries. No targeted fishing time was allowed on pink salmon after August 12.

Approximately 21.4 percent (705,970 fish) of the 1992 pink salmon harvest may be attributed to pink salmon returning to Kitoi Bay hatchery (Table 13). During the peak of the return to the

Kitoi Bay Hatchery (July 28 to August 8) continuous fishing was allowed in the Duck Bay, Izhut Bay and Kitoi Bay Sections in order to harvest fish surplus to broodstock requirements.

### **Chum Salmon**

Preseason expectations were for a chum salmon harvest of 870,000 fish. The actual harvest was 679,559 chum salmon, and the average weight was 7.25 pound each. This harvest is below the recent ten year average of 962,000 chum salmon (Figure 11). Chum salmon are primarily harvested in targeted chum fisheries and during mixed pink and chum salmon fisheries.

The Kitoi Bay Hatchery contribution to the common property fishery was only approximately 3,500 chum salmon (Tim Joyce, 1992). The majority of the hatchery return, approximately 15,000 chum salmon, were harvested for broodstock.

### **Coho Salmon**

A total of 280,000 coho salmon, with an average weight of 8.18 pounds, were also harvested in 1992. This ranks as the seventh largest harvest on record (Figure 12). Preseason harvest expectations were for a harvest of 250,000 coho salmon.

Purse seines harvested 82 percent, set gillnetters 18 percent, and beach seiners less than 1 percent of the coho salmon catch. To a limited degree, coho are incidentally harvested during August fisheries targeting pink and chum salmon. However in 1992, due to the severely limited pink salmon fisheries, a significant portion of the coho were harvested in fisheries targeting late run sockeye salmon returning to Upper Station and Karluk Lakes. Due to weak returns there were no directed commercial coho fisheries allowed in Chiniak Bay (near the city of Kodiak).

### ***Exvessel Value***

The overall estimated exvessel value for the 1992 commercial salmon harvest was \$40,495,222 dollars (Table 14). By species, the 4.17 million sockeye salmon harvest was worth \$34.8 million dollars (86% of the total value of the commercial salmon fishery), the 679.5 thousand chum salmon harvest was worth \$1.9 million dollars (5.0%), the 3.31 million pink salmon harvest was worth \$2.2 million dollars (4.6%), the harvest of 280.1 thousand coho salmon was worth \$1.3 million dollars (3.5%), and the 24.3 thousand chinook salmon harvest was worth \$0.35 million dollars (less than 1% of the total value). By gear type, beach seiners averaged \$5,436, purse seiners averaged \$98,086, and set gillnetters averaged \$41,984, per permit holder (Figure 13).

### ***Subsistence Salmon Fishery***

The KMA staff issues subsistence salmon permits annually in an attempt to obtain harvest data. Only residents of the state of Alaska are eligible to take salmon for subsistence purposes. Since 1989 KMA staff has mailed out permits, regulations, and a map showing closed water areas to eligible residents (Appendix I.1 - I.3). The mailing list in 1992 was made up of only those subsistence permittees that returned their 1991 permit. Additional permits were issued to Alaska

residents at the Kodiak ADF&G office. Subsistence fishermen are requested to return their permits to ADF&G after the salmon season, listing areas fished by date and salmon harvest by species.

With few restrictions, the entire KMA is open to subsistence salmon fishing. Reported harvests have averaged 24,000 fish annually for the past ten years with sockeye salmon accounting for 61 percent followed by coho salmon which accounted for 26 percent. In 1992, 1,561 permits were issued, and 1,176 permits were returned. A total of 31,364 salmon were harvested, including 20,218 sockeye salmon and 8,544 coho salmon (Table 15). The most utilized subsistence fishery areas include the north end of Kodiak Island and the southeast side of Afognak Island (Table 16).

### *Outlook for 1993*

Initial harvest projections for the 1993 Kodiak commercial salmon fishery indicate that approximately 21,000 chinook, 290,000 coho, and 1,200,000 chum salmon should be available for harvesting (Table 17). In addition, up to 15.1 million wild stock and 6.5 million Kitoi Bay Hatchery produced pink salmon should be available for harvesting. Initial estimates for sockeye salmon returns in 1993, based on brood year escapements, are for less than average returns to the Frazer and Ayakulik systems. The overall sockeye harvest for Kodiak in 1993 is estimated to be near 2.4 million fish.

In January 1993 the State Board of Fisheries met in Kodiak to discuss potential regulation changes for the Kodiak commercial salmon fishery. New regulations concerning district and section boundaries, closed waters, and gear operation were passed. Also modifications were made to the North Shelikof Strait Sockeye Salmon Management Plan and two new plans were adopted. The 1993 Kodiak Area Commercial Salmon Fishery Harvest Strategy (R.I.R. 4K93-21) contains an update of all new regulations adopted by the Alaska Board of Fish. In addition, at that meeting a great deal of concern was expressed about the level of harvest of large, potentially non-local sockeye in the KMA during the 1992 season. The BOF has agreed to discuss proposed emergency regulation changes to limit the interception of Cook Inlet bound sockeye salmon, likely at the scheduled BOF meeting in Anchorage during March of 1994. The Kodiak salmon research and biometrics staff will conduct a more intensive study of the sockeye harvest around Kodiak Island and the Alaska Peninsula in 1993, plus study the reliability and feasibility of using average sockeye weights to determine the Cook Inlet influence on Kodiak sockeye harvests.

The first commercial salmon fishing period in the KMA during 1993 is scheduled for June 9. The directed pink salmon fishery will start July 6, and based on the preseason forecast initial fishing periods will be 4-1/2 days per week.

<sup>a</sup> The State of Alaska's Habitat Division identifies over 800 streams in the Kodiak Management Area which have documented use by anadromous fish (State of Alaska 1993). Many of these streams are very small and may only be used by pink salmon in years with very large returns. The streams identified in this table are depicted on the 1992 Kodiak Area salmon statistical map, and have documentable use each year.

<sup>b</sup> These estimates are based on current knowledge and, in fact, are expected to change as more system specific data is collected.

	6,000,000	3.5	21,000,000	15,000,000	8,865,000	10,142,000
CHUM	1,500,000	2.8	4,200,000	2,700,000	784,000	919,000
Odd Year TOTAL Even Year	6,669,000	-	20,122,500	13,454,000	7,808,000	12,356,000
	9,669,000	-	30,622,500	20,954,000	10,824,000	14,085,000

<sup>a</sup> The high end of the biological escapement goal range. KMA fisheries are normally managed to achieve this level of escapement.

<sup>b</sup> Return per spawner will vary each year. These values are averages around which natural survival and return will fluctuate somewhat (Barrett, Personal Communication, October 1993).

<sup>c</sup> 1989 harvest data not included in estimates.

<sup>a</sup> DATA SOURCE: For the period 1882-1947, the harvest data was derived from "casepack" information supplied by commercial buyers and processors. For the period 1948 - present, the harvest data was derived from "fish ticket" information summarized by ADF&G.

<sup>b</sup> The 1989 harvest data shown is unique from all other years in that the total harvest by species in this table is the summation of the actual harvest which did occur and the projected harvest which would have occurred if there had not been restrictions on the 1989 fishery because of the presence of oil-contaminated waters in the Kodiak Area due to the 4/24/89 "Exxon Valdez" oil spill and is not included in average harvest totals.

Table 9. Commercial salmon harvest vs. the harvest projections for the Kodiak Management Area, 1992.<sup>a</sup>

	Chinook	Sockeye	Coho	Pink	Chum	Total
1992 Projected Harvest	10,000	3,247,000	250,000	9,220,000	870,000	13,597,000

<sup>a</sup> Includes total commercial harvest, test fisheries, and Kitoi Hatchery cost recovery fishery harvests. These figures are in number of fish.

<sup>b</sup> 1970-1976 values are exvessel values based upon inseason prices. They may not include additional value associated with dock deliveries or postseason settlements. 1977-1988 and 1990-1992 values are from Commercial Fisheries Entry Commission reports.

<sup>c</sup> Actual harvest was limited in 1989 due to fishery closures caused by the presence of oil from the Exxon Valdez spill. Harvest figures for 1989 include actual and projected harvests on wild stocks, and actual harvest of hatchery stocks from a supplemental cost recovery fishery. The 1989 total value is estimated by multiplying price information from the limited actual wild harvest (from CFEC records) by the projected total harvest had there been no oil spill. The 1989 exvessel value by gear type is estimated by using the 1988 gear levels and proportional harvest by gear type, as if a normal fishery had occurred on a normal distribution of fish.

<sup>d</sup> 1992 data are preliminary, from ADF&G fish ticket summaries.

<sup>e</sup> 1989 data are not included in averages.

<b>TOTAL</b>	<b>1,116,982</b>	<b>26,544</b>		-	<b>953,286</b>	<b>26,544</b>

<sup>a</sup> Harvest information from Fish Ticket summaries.

<sup>b</sup> Percent of total harvest estimated to be from hatchery pink and chum salmon from tagging studies conducted in 1981 and 1982 (Probasco, personal communications 1993).

<sup>c</sup> The total 1992 pink salmon hatchery return of 953,286 adults resulted from a fry release in the spring of 1991 of approximately 121.5 pen reared (fed) fry and 2.6 million volitionally released (unfed) fry (Tim Joyce, Hatchery Manager, Personal Communication 8/30/1993).

<sup>d</sup> The Kitoi Bay hatchery contribution to the chum salmon harvest in those management units near the hatchery is estimated at only 3,500 chum salmon, (Joyce, 1992) well below the contribution estimates made by using past tagging data.

<sup>a</sup> Numbers and pounds of fish are derived from fish ticket summaries. There were 16,388 fish tickets generated in 1992; each fish ticket represents a "landing". Each gear type had the following number of landings: Purse Seine - 9,659, Beach Seine - 161, and Set Gillnet - 6,543. Average price per pound figures are derived from Commercial Fisheries Entry Commission estimates and reflect additional payments which were made for dock deliveries or postseason settlements.

## ALASKA DEPARTMENT OF FISH AND GAME

# KODIAK AREA SALMON STATISTICAL AREAS

Sixth Revision - May 1992

Prepared by J. Brodie

Approved by D. Prokopowich and K. Brennan

This map is intended as a general guide for fishermen, tender operators, and other industry personnel. For exact descriptions of the district and section boundaries, closed waters, legal gear, etcetera, please consult the current issue of the Alaska Commercial Finfish Regulations for the Kodiak Area (See Chapter 18-Articles 1,2, and 3, and Chapter 39 -Articles 1, 2, and 9).

The approximate location of each salmon stream, areas normally closed to salmon fishing, areas open to each gear type, district and section boundaries, and the statistical areas used in reporting catches are depicted on this map and are designated as follows:

Salmon streams with 500 yard saltwater closures - Streams may have ADF&G marker deployed which designate area closed.

Salmon streams without 500 yard saltwater closures - Streams without ADF&G markers deployed are open seaward of the exposed tideland banks.

Bays and lagoons closed to commercial fishing -

Seaward boundaries of districts and sections adjacent to the territorial sea boundary. (State 3 mile limit) -

District boundaries -

Section boundaries -

Statistical area boundaries -

\*In the Kodiak Area, salmon may not be taken within the designated freshwater salmon streams and rivers, and all saltwater within 500 yards of all points of a straight line extending between the seaward extremities of the exposed tideland banks, or as marked by ADF&G regulatory markers...Where regulatory markers have been deployed by the department to aid fishermen in determining closed waters, the marker will be placed as close as possible to the described locations or in a location deemed necessary...It is illegal to fish on the streamward side of the marker (5 AAC 18.350.(a),(10) and (b)).

\*According to Title 50, Part 674, of the Code of Federal Regulations, it is unlawful to engage in commercial fishing for salmon in the waters lying beyond the seaward boundary of the state (the "three mile limit") west of Cape Suckling.

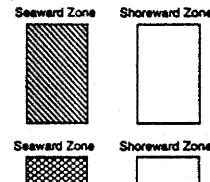

### \*\* NORTH SHELIKOF STRAITS SOCKEYE SALMON MANAGEMENT PLAN \*\*

\* Effective time period: July 6 - July 25.

\* Management units affected by this plan:

- North Shellikof Management Unit:

- N.W. Afognak Section
- Shuyak Section
- Big River Section
- Halo Bay Section
- Outer Kukak Bay Section
- Inner Kukak Bay Section
- Daktak Bay Section

\* Specific information regarding this plan is detailed in the Harvest Strategy and in the Commercial Finfish Regulations.

### \* REGARDING LEGAL GEAR IN THE KODIAK AREA PLEASE NOTE THE FOLLOWING:

- In the Central Section of the Northwest Kodiak District, set gillnet, purse seine, and beach seine gear are legal (5 AAC 18.330(b)).

- The Moes/Olga Bay Section, the Dog Salmon Flats Section, the Inner and Outer Akakura Sections, and the Inner and Outer Upper Station Sections, are exclusively for set gillnet gear prior to 5 September (5 AAC 18.330(d)).

- All other salmon fishing sections in the Kodiak Area are exclusively for purse seine and beach seine gear (5 AAC 18.330(e), (c), (e), (f) and (g)).

### KODIAK SALMON MANAGEMENT UNITS

#### NORTHWEST KODIAK DISTRICT - 10

Central Section  
North Cape Section  
Anton Larsen Section  
Kachemak Bay Section  
Tanner Bay Section  
Inner Ugashik Bay Section  
Seldovia Bay Section  
Ungalik Bay Section

#### SOUTHWEST KODIAK DISTRICT - 6

Outer Kukak Bay Section  
Inner Kukak Bay Section  
Shagron Section  
Halibut Bay Section  
Outer Ayakut Section  
Inner Ayakut Section

#### ALITAK BAY DISTRICT - 8

Cape Alitak Section  
Outer Ugashik Bay Section  
Daknak Bay Section  
Outer Axius Section  
Inner Axius Section  
Outer Upper Station Section  
Inner Upper Station Section  
Happy-Chester Section

#### EASTSIDE KODIAK DISTRICT - 5

Seven Rivers Section  
Mystic Bay Section  
Sililok Section  
Outer Ugashik Bay Section  
Inner Ugashik Bay Section

#### NORTHEAST KODIAK DISTRICT - 4

Outer Chirik Bay Section  
Inner Chirik Bay Section  
Bush River Section  
Makushin Bay Section

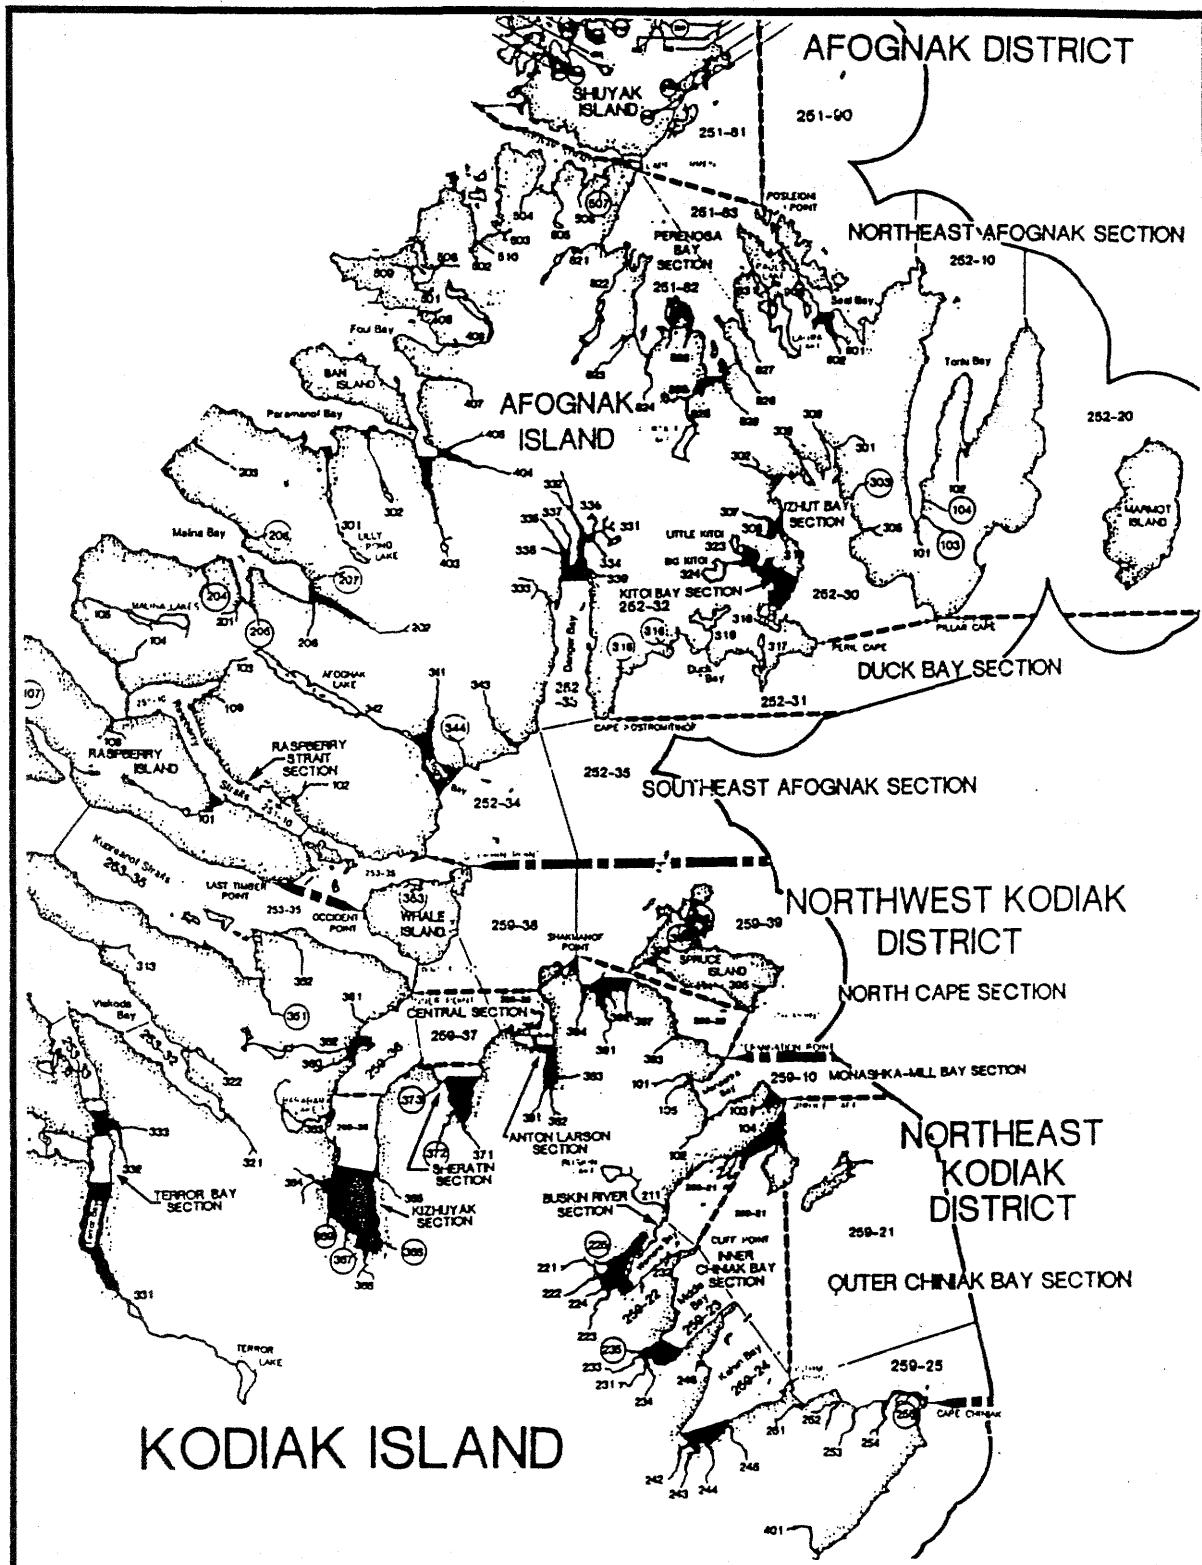

#### AFOGNAK DISTRICT - 10

Southeast Afognak Section  
Outer Afognak Section  
Inner Afognak Section  
Khalak Bay Section  
Northeast Afognak Section  
Peneroska Bay Section  
Seward Island Section  
Northwest Afognak Section  
Southwest Afognak Section  
Raspberry Strait Section

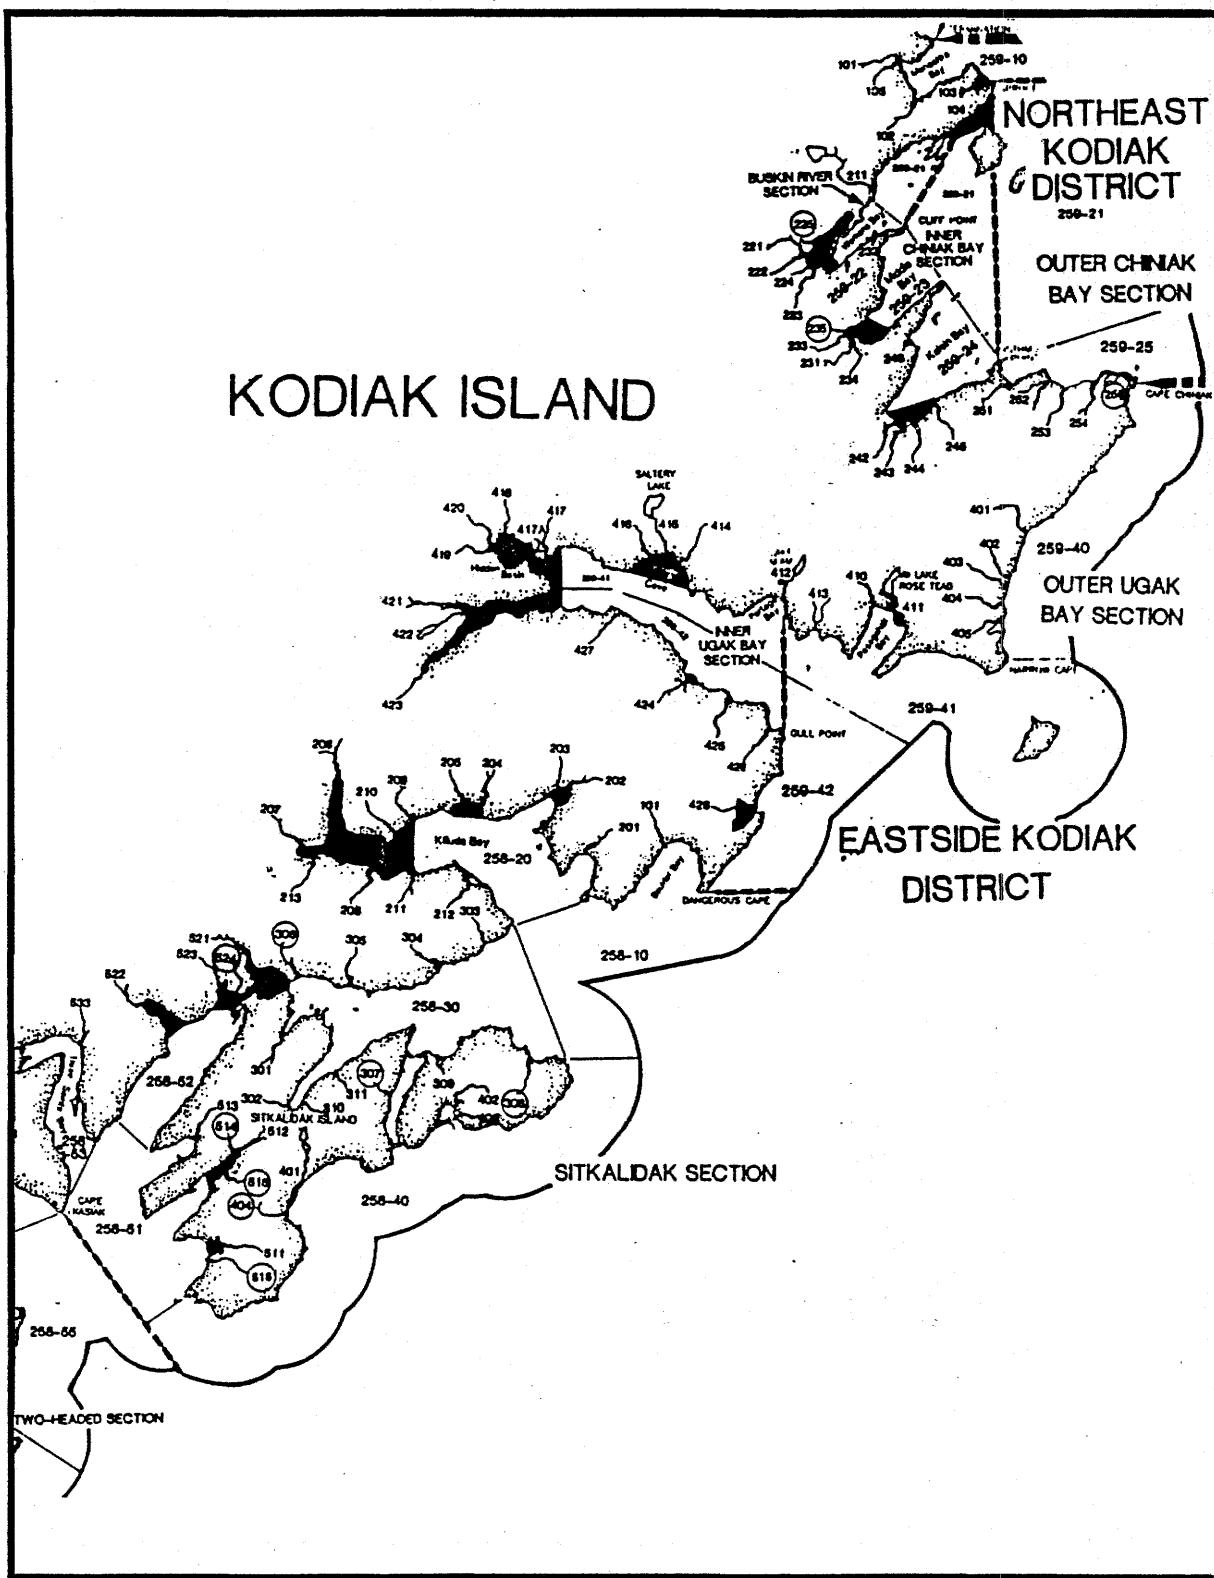

#### MAINLAND DISTRICT - 9

Big River Section  
Halo Bay Section  
Outer Ugashik Bay Section  
Inner Ugashik Bay Section  
Daknak Bay Section  
Ketmai Section  
Alakanak Bay Section  
Cape Ignalik Section  
Whale Bay Section

<b>Estimated total escapement for systems with weirs and indexed by aerial surveys</b>		1,447	1,754	2,140

<sup>a</sup> Source: Barrett et al. (1990) and Malloy et al. (1992).

<sup>b</sup> Indexed escapement represents a peak aerial escapement count.

<sup>c</sup> Indexed escapement expanded by a factor of 2.0 for an estimate of total escapement (Barrett et al. 1985).

**Appendix B.2. Pink salmon odd and even year index stream escapement goals by stream for the Kodiak Management Area<sup>a</sup>, 1992.**

**Appendix D.1. Preliminary forecast of the 1992 Kodiak pink salmon return<sup>a</sup>.**

	<u>Total Return</u>	<u>Escapement<sup>b</sup>/</u>	<u>Harvest</u>
<b>Point Estimate:</b>			
Natural Production	10.8 million	3.9 million	6.9 million
Hatchery Production	2.59 million	.27 million	2.32 million
<b>Total Production</b>	<b>13.39 million</b>	<b>4.17 million</b>	<b>9.22 million</b>
<b>Range Estimate:</b>			
Natural Production	9.8-11.8 million	3.9 million	5.9-7.9 million
Hatchery Production	1.44-3.53 million	.27 million	1.17-3.26 million
<b>Total Production</b>	<b>11.24-15.33 million</b>	<b>4.17 million</b>	<b>7.07-11.16 million</b>

<sup>a</sup> Hatchery production forecast is for Kitoi Bay Hatchery and was prepared by Tim Joyce. See Afognak District for additional discussion. All numerical values represent numbers of pink salmon.

<sup>b</sup> With the exception of hatchery production, escapement values represent indexed escapement.

#### **Forecast Methods**

The 1992 pink salmon forecast return to the Kodiak Management Area was determined as follows: An estimate for the total management area natural return was calculated from a linear least years regression analyses of the past 26 years pre-emergent fry data. Variables used in the analyses were the unweighted live fry densities and the average ambient 1991 April air temperature in Kodiak. The point estimate used is actually the lower end of the initial forecast range represented by the 80 percent confidence interval.

Average survival rates for the past six even years were used to estimate the mid-point of the Kitoi Bay Hatchery return. The low range estimate was calculated from using the average survival rates of the lowest three even year returns and the high end of the range was calculated from the average survival rates of the highest three even years.

#### **Discussion of the 1992 Forecast**

Pre-emergent fry sampling this spring (1991) indicated poor to excellent over winter survival from the brood year escapement of 5.0 million pink salmon. Sampling resulted in an unweighted live fry index of 161.0 live fry/m<sup>2</sup>. This fry index is below the most recent five even year return (1982-1990) of 190.3 live fry/m<sup>2</sup>.

The main factors which probably contributed to the lower live fry density were the poor brood year escapements achieved in the Alitak District and mainly due to freezing damage in early November 1990 when new record low temperatures over a one-two week period occurred during a time of relatively low water flows in most spawning systems. In addition to the low live fry densities, early marine survival conditions were generally poor due to continuous gales from mid April to mid May (1991). One other justification for the lower than average forecast natural return is the very low average weight of the pinks returning to Kodiak in 1991. This was the second year in a row of reduced average weights which may indicate additional unfavorable marine condition factors that may affect the 1992 pink return.

---

-Continued-

## Appendix D.1. (page 2 of 2)

---

**Afognak District:** The pre-emergent fry index for this district is above average. Heavy snowfall helped to insulate incubating fry from serious over-winter mortality due to freezing. Due to poor early marine rearing conditions, only 950,000 pink salmon are expected to return to this district. The escapement goal is 250,000 pinks leaving 700,000 pinks available for harvesting.

**Afognak District Supplemental Production:** Kitoi Bay Hatchery total return estimate is 2.59 million pink salmon. Approximately 270,000 pinks are required to meet broodstock and escapement requirements. Since no fish are to be utilized as "cost-recovery", 2.32 million pink salmon should be available for harvesting.

**Westside Districts:** Overall live fry densities for this district are average, however most of the production in this district should come from Karluk and Red Rivers. Less than average production is expected from the major spawning systems in Uganik and Uyak Bay complexes. 6,850,000 pinks are expected to return to this district. The escapement goal is 2,250,000 pinks, leaving 4,600,000 pinks available for harvesting.

**Alitak District:** The live fry index for this district is one of the lowest on record. Poor brood year escapements combined with poor over-winter conditions appear to be the main reasons for the low densities. Only 700,000 pinks are expected to return to the Alitak District. The escapement goal is 500,000 pink salmon leaving 200,000 pinks to be harvested during fisheries targeting late run sockeye into Olga Bay.

**Eastside Districts:** The overall live fry index for the district is one of the lowest on record. Freezing temperatures and weak brood year escapements appear to be the main reasons for the low live fry densities. Only 1.1 million pinks are expected to return to this district. The escapement goal is 500,000 pinks leaving 600,000 pinks available for harvesting.

**Mainland District:** No streams were sampled on the mainland this year due to poor weather conditions and the end of the helicopter contract period. Overall, this district received excellent brood year escapements. Early marine survival conditions appeared to have been more favorable in this district. Also considering that over-winter damage from freezing temperatures can be less in this district, 1.2 million pink salmon are expected to return. The escapement goal is 400,000 pinks leaving 800,000 pinks available for harvesting.

**Appendix D.2. Pink salmon forecast based on established methodology in the Kodiak Management Area, 1991.**

The standard approach for the estimate of pink salmon for Kodiak in 1992 yields an estimate of approximately 13 million pink salmon.

The standard approach uses a Stepwise Regression to select the variables that are important to the model and use those variables in a linear regression so that 80% prediction and confidence intervals can be computed. The choice is usually the model with the highest  $R^2$  and lowest MSE. The variables that entered the model were the weighted fry index and sum of the norms of the April and March temperatures (Table 1).

The models provide point estimates of return strength varying from 10 to 15 million (Table 1).

**Table 1. Statistics on Kodiak 1992 pink salmon forecast models.**

Model	$R^2$	MSE	80% Confidence Interval		80% Prediction Interval		Point Est.
			Lower	Upper	Lower	Upper	
<b>Fry 1 with:</b>

- (2) The Mainland District index streams were not sampled in 1991 due to weather caused delays. There are no preemergent results.
- (3) Temperature Data: March Mean Temp. = 33.6° f; Deviation from March Norm = +0.9° f. April Mean Temp. = 39.0° f; Deviation from April Norm = +1.0° f.

**Appendix D.4.      Preliminary forecast of the sockeye salmon run to the Ayakulik River, Kodiak Management Area, 1992.**

	<u>Forecast Estimate</u> <u>(Thousands)</u>	<u>Forecast Range</u> <u>(Thousands)</u>
Total Run	670	580-775
Escapement Goal	250	
Projected Harvest	420	

### **Forecast Methods**

The 1992 sockeye salmon forecast is the sum of individual predictions for seven age classes: 1.1, 1.2, 2.1, 1.3, 2.2, 2.3, and 3.2. The predictions were calculated from multiple regression equations developed from correlations between returns and escapements or siblings. The forecast range is the sum of the individual 80% confidence for the age class estimates.

### **Forecast Discussion**

The 1992 Ayakulik run is predicted to be 670,000 fish composed of 20% 4-year-olds, 60% 5-year-olds, and 20% 6-year-olds. This is about 50% fewer fish than the near record-high 1991 run. For the last 10 years (1982-91), the run has averaged 770,000 sockeye salmon annually.

This marks the fourth year that a formal forecast has been prepared for the Ayakulik River sockeye salmon run. Average error rate on the previous predictions is 39% (1989 run 25% overestimated; 1990 run 80% underestimated; and 1991 run 13% underestimated).

If the 1992 run materializes as predicted, approximately 420,000 Ayakulik sockeye salmon should be harvested in the Kodiak District.

Appendix D.5.      Preliminary forecast of the sockeye salmon run to the Frazer Lake System,  
Kodiak Management Area, 1992.

	<u>Forecast Estimate (Thousands)</u>	<u>Forecast Range (Thousands)</u>
Total Run	1,080	590-1,650
Escapement Goal	200	140-200
Projected Harvest	880	

### Forecast Methods

The 1992 Frazer Lake forecast is the sum of individual predictions for four age classes: age 1.2, 1.3, 2.2, and 2.3. Each age class prediction was calculated from a multiple regression equation developed from relationships between returns and escapements, returns and siblings, and returns and smolt data. Each equation was developed to maximize the coefficient of determination, and each estimate was interpreted for reasonableness. As an age class prediction was made it was entered into the database used to predict other age classes.

### Forecast Discussion

The 1992 Frazer Lake sockeye salmon run is predicted to be 1.08 million fish composed of 3% 4-year-olds, 38% 5-year-olds, and 58% 6-year-olds. The parent escapement for the 4-year-olds is 247,000 fish, for the 5-year-olds 41,000 fish, and for the 6-year-olds 126,000 fish.

The forecast is contingent on a record high return of 6-year-olds (60%) of the age class 2.3. The basis for predicting a large return of 6-year-old fish is that a record high number (1 million) of 5-year-old siblings, age 2.2 fish occurred in 1991. Of secondary importance is the forecast is an expected near record return of 5-year-old, age 2.2 fish, which is based on the relatively strong showing of 4-year-old siblings in 1991.

This is the sixth year that a formal forecast has been for the Frazer Lake run. Forecast error has been high, averaging about 65%. The 1987 run was overestimated, whereas the 1988 through 1991 runs were much stronger than predicted.

**Appendix D.6. Preliminary forecast of the early sockeye salmon run to the Upper Station Lake System, Kodiak Management Area, 1992.**

	<u>Forecast Estimate</u> <u>(Thousands)</u>	<u>Forecast Range</u> <u>(Thousands)</u>
Total Run	100	75-170
Escapement Goal	50	
Projected Harvest	50	

### **Forecast Methods**

The 1992 Upper Station forecast is the sum of individual estimates for four age classes (age 1.2, 1.3, 2.2, and 2.3) which were obtained from multiple regression equations using relationships of return-to-siblings and return-to-escapement. Each regression equation was developed to maximize the coefficient of determination, and all estimates were interpreted for reasonableness. The lower end of the prediction range for the run estimate is based upon minimum runs returning in recent years.

### **Forecast Discussion**

The 1992 early run to Upper Station Lakes is expected to be about 100,000 sockeye salmon composed mainly of 5-year-olds (64%) and 6-year-olds (31%).

This is the fourth year that a formal forecast has been prepared for the early Upper Station run. Overall forecast error has been moderate. The 1991 run was 25% lower than forecasted; 1990 run was 2.3 times stronger than forecasted, while the 1989 run was 8% below the forecast.

If the 1992 run forecast is correct, about 50,000 Upper Station early run fish should be harvested in the Alitak Bay District from 9 June through 15 July 1992.

**Appendix D.7. Preliminary forecast of the late sockeye salmon run to the Upper Station Lake System, Kodiak Management Area, 1992.**

	<u>Forecast Estimate</u> <u>(Thousands)</u>	<u>Forecast Range</u> <u>(Thousands)</u>
Total Run	300	200-700
Escapement Goal	175	150-200
Projected Harvest	125	

### **Forecast Methods**

The 1992 Upper Station late run estimate forecast estimate represents the sum of individual estimates for five age classes: age 0.2, 0.3, 1.2, 1.3, and 2.2. Each age class prediction was determined through a multiple regression equation developed based on relationships of return-to-siblings and return-to-escapement. Each equation was developed to maximize the coefficient of determination, and each estimate was interpreted for reasonableness. Individual age classes were estimated using existing count data except for the age 2.2 estimate which was derived using the forecasted age 1.3 value. The lower end of the prediction range for the run estimate is based upon minimum runs returning in recent years.

### **Forecast Discussion**

The 1992 Upper Station late sockeye salmon run is estimated to be about 300,000 fish composed of 16% 3-year-olds, 32% 4-year-olds, and 52% 5-year-olds. This is less than 50% of the run which occurred in 1990.

The late Upper Station run has been forecasted for four years now. Forecast error currently averages 40%. The 1989 run was forecasted at 929,000, and the actual run was 707,000. The 1990 forecast of 386,000 was well below the actual run of 711,000. The 1991 forecast of 633,000 was reasonable close to the actual run of 757,000. Forecast accuracy should improve with the addition of smolt data. Currently we have 1990 and 1991 smolt from the system. A robust number of age-0 smolt left the system in 1990. Some of these fish should return as age-0.2 adults in 1992. Age-0.2 return is difficult to predict. It is reasonable to believe that the age 0.2 component of the 1992 forecast of 47,000 fish may be an underestimate; thus the 992 run may be larger than forecasted.

If the 1992 forecast is correct, purse seine and gillnet fishermen can expect to harvest about 125,000 Upper Station late run fish in the Alitak Bay District between 16 July and mid-September.

a Percent are calculated on escapement after rounding, not on samples. Sample sizes are for the indicated week. Age composition is calculated daily. Composition is based on two samples when the date falls between two sample dates. When the date falls on a sample date, or before the first sample or after the last sample, calculations are based on only one sample date.

Appendix E.9.      Estimated age composition of Buskin River sockeye salmon escapement by week, 1992.

Note: Percents are calculated on catch after rounding, not on samples. Sample sizes are for the indicated week. Age composition is calculated daily. Composition is based on two samples when the date falls between two sample dates. When the date falls on a sample date, or before the first sample or after the last sample, calculations are based on only one sample date.

Appendix E.16. Estimated age composition of Mainland District sockeye salmon commercial harvest by week, 1992.

## **CHAPTER 18. - KODIAK AREA**

### **ARTICLE 1. - DESCRIPTION OF AREA**

**5 AAC 18.001. APPLICATION OF THIS CHAPTER** Requirements set forth in this chapter apply to commercial fishing only, unless otherwise specified. Subsistence fishing regulations affecting commercial fishing vessels or affecting any other commercial fishing activity are set forth in the subsistence fishing regulations in chs. 1 and 2 of this title.

**@5 AAC 18.100. DESCRIPTION OF AREA.** The Kodiak Area includes all waters of Alaska south of a line extending east from Cape Douglas (58°52' N.lat.), west of 150° W.long., north of 55°30' N.lat.; and east of a line extending south from the southern entrance of Imuya Bay near Kilokak Rocks (156°20'13" W.long.).

### **ARTICLE 2. - FISHING DISTRICTS**

**5 AAC 18.200. DESCRIPTION OF DISTRICTS AND SECTIONS.** (a) Afognak District: all waters of Afognak and Shuyak Islands bounded by a line from Occident Point (57°57'25" N. lat., 152°51'30" W. long.), to Last Timber Point (57°58'50" N. lat., 152°58'55" W. long.), by the latitude of Dolphin Point on Whale Island (57°59'10" N. lat.), by the latitude of Raspberry Cape (58°03'35" N. lat.), by mid-stream Shelikof Straits, and by the latitude of Cape Douglas (58°52' N. lat.);

(1) Raspberry Straits Section: all waters of Raspberry Straits bounded by the longitude of Dolphin Point on Afognak Island (153°09' W. long.) and by a line from Head Point to Dolphin Point on Whale Island and a line from Occident Point to Last Timber Point;

(2) Southwest Afognak Section: all waters west of Afognak Island bounded by the latitude of Raspberry Cape, the longitude of Dolphin Point on Afognak Island (153°09' W. long.) in Raspberry Straits, by the latitude of Cape Paramanof (58°18'20" N. lat.), and by mid-stream Shelikof Strait;

(3) Northwest Afognak Section: all waters northwest of Afognak Island bounded by the latitude of Cape Paramanof, by a line extending along mid-stream Shuyak Straits and perpendicular to mid-stream Shelikof Strait to Cape Current (58°27'40" N. lat., 159°29'10" W. long.), and by mid-stream Shelikof Strait;

(4) Shuyak Island Section: all waters in the vicinity of Shuyak Island bounded by a line extending along mid-stream Shuyak Straits and perpendicular to mid-stream Shelikof Straits to Cape Current, north of a line from Cape Current to Posliedni Point (58°26' N. lat., 152°19'30" W. long.), west of the longitude of Posliedni Point, south of the latitude of Cape Douglas, and by mid-stream Shelikof Strait;

(5) Perenosa Bay Section: all waters of Perenosa Bay south of a line extending from Cape Current to Posliedni Point;

(6) Northeast Afognak Section: all waters northeast of Afognak Island bounded by the longitude of Posliedni Point and by the latitude of Pillar Cape (58°09' N. lat.);

(7) Izhut Bay Section: all waters of Izhut Bay, excluding the Kitoi Bay Section, bounded by a line from Pillar Cape to Peril Cape (58°07'30" N. lat., 152°16'20" W. long.);

(8) Kitoi Bay Section: all waters of Kitoi Bay bounded by a line from 58°10'39" N. lat., 152°17'13" W. long. to 58°09'32" N. lat., 152°18'36" W. long.;

(9) Duck Bay Section: all waters of Duck Bay bounded by the latitude of Pillar Cape, by a line from Pillar Cape to Peril Cape, and by the latitude of Cape Kostromitinof (58°05'05" N. lat.).

(b) Northwest Kodiak District: all waters of north and west Kodiak Island bounded by the latitude of Termination Point (57°51'15" N. lat.), by the latitude of Dolphin Point on Whale Island (57°59'10" N. lat.), by a line from Occident Point (57°57'25" N. lat., 152°51'30" W. long.) to Last Timber Point (57°58'50" N. lat., 152°58'55" W. long.), by the latitude of Raspberry Cape (58°03'35" N. lat.), by the latitude of Rocky Point (57°39'45" N. lat.), and by mid-stream Shelikof Strait;

(1) Anton Larsen Bay Section: all waters of Anton Larsen Bay south of 57°52'18" N. lat.;

(2) Sheratin Bay Section: all waters of Sheratin Bay south of 57°51'09" N. lat.;

(3) Kizhuyak Bay Section: all waters of Kizhuyak Bay south of 57°50' N. lat.;

(4) Terror Bay Section: all waters of Terror Bay and Uganik Bay passages south of 57°50' N. lat., and east of 153°12'36" W. long.;

(5) Inner Uganik Bay Section: all waters of the South and East Arms of Uganik Bay south of the latitude of Rock Point (57°46'32" N. lat.);

(6) Spiridon Bay Section: all waters of Spiridon Bay east of the longitude of Hook Point (153°46'30" W. long.);

(7) Zachar Bay Section: all waters of Zachar Bay east of a line from Carlsen Point at 57°34'48" N. lat., 153°50' W. long., to a point on the opposite shore at 57°35'42" N. lat., 153°49'12" W. long.;

(8) Uyak Bay Section: all waters of Inner Uyak Bay south of the latitude of the southernmost tip of Amook Island (57°25'45" N. lat., 153°49'51" W. long.) to the west shore, and south of the latitude of the northernmost tip of Amook Island (56°59'44" N. lat., 154°01'42" W. long.) to the east shore;

(9) Central Section: all waters of the Northwest Kodiak District bounded by a line from Termination Point (57°51'15" N. lat., 152°24' W. long.), to South Point (57°53'10" N. lat., 152°22' W. long.), to Ouzinkie Point (57°54'50" N. lat., 152°31'09" W. long.), to Shakmanof Point (57°55'30" N. lat., 152°35'15" W. long.), to a point at 57°54'12" N. lat. on the east shore of Kizhuyak Bay; north of 57°52'18" N. lat. in Anton Larsen Bay; north of 57°51'09" N. lat. in Sheratin Bay; north of 57°50' N. lat., and south of the latitude of Inner Point (57°54'06" N. lat.) in Kizhuyak Bay; west of a line from Inner Point (57°54'06" N. lat., 152°47'40" W. long.) to Bird Point (57°55'20" N. lat., 152°47'25" W. long.); south of a line from Occident Point (57°57'25" N. lat., 152°51'30" W. long.) to Last Timber Point (57°58'50" N. lat., 152°58'58" W. long.); south of the latitude of Raspberry Cape (58°03'35" N. lat.); north of 57°50' N. lat., and west of 153°12'36" W. long. in Terror Bay and Uganik Bay passages; north of the latitude of Rock Point (57°46'32" N. lat.) in the South and East Arms of Uganik Bay; west of the longitude of Hook Point (153°46'30" W. long.) in Spiridon Bay; west of a line from Carlsen Point (57°34'48" N. lat., 153°50' W. long.) to 57°35'42" N. lat., 153°49'12" W. long. in Zachar Bay; all waters of Inner Uyak Bay north of the latitude of the southernmost tip of Amook Island to the west shore, and north of the latitude of the northernmost tip of Amook Island to the east shore; east of the latitude of Rocky Point (57°39'45" N. lat.); and by mid-stream Shelikof Strait;

(10) North Cape Section: all other waters of the Northwest Kodiak District.

(c) Southwest Kodiak District: all waters southwest of Kodiak Island bounded by the latitudes of Rocky Point (57°39'45" N. lat.) and Low Cape (56°59'35" N. lat.), and by mid-stream Shelikof Strait;

(1) Outer Karluk Section: all waters west of Kodiak Island bounded by the latitude of Rocky Point, the latitude of Pafco Point (57°38'20" N. lat.), and by mid-stream Shelikof Strait;

(2) Inner Karluk Section: all waters west of Kodiak Island bounded by the latitude of Pafco Point, the latitude of Cape Karluk (57°34'42" N. lat., 154°30'54" W. long.), and by mid-stream Shelikof Strait;

(3) Sturgeon Section: all waters southwest of Kodiak Island bounded by the latitude of Cape Karluk, the latitude of Sturgeon Head (57°30'40" N. lat., 154°37'20" W. long.), and by mid-stream Shelikof Strait;

(4) Halibut Bay Section: all waters southwest of Kodiak Island bounded by the latitude of Sturgeon Head, the latitude of Cape Ikolik (57°17'26" N. lat., 154°47'20" W. long.) and by mid-stream Shelikof Strait;

(5) Outer Ayakulik Section: all waters southwest of Kodiak Island bounded by the latitude of Cape Ikolik, the longitude of Old Red River (stream No. 256-202) (154°37'12" W. long.), and by mid-stream Shelikof Strait;

(6) Inner Ayakulik Section: all waters southwest of Kodiak Island bounded by the longitude of Old Red River (stream No. 256-202) (154°37'12" W. long.) and the latitude of Low Cape (56°59'35" N. lat.).

(d) Alitak Bay District: all waters south of Kodiak Island bounded by the latitude of Low Cape, the latitude of Cape Trinity (56°44'50" N. lat.), and by mid-stream Shelikof Strait;

(1) Cape Alitak Section: all waters bounded by the latitude of Low Cape, the latitude of Cape Trinity, by mid-stream Shelikof Strait, by a line from Cape Trinity (56°44'50" N. lat., 154°08'45" W. long.) to Middle Reef (56°54' N. lat., 154°03' W. long.), and by a line from Middle Reef to Tanner Head at 56°53'14" N. lat., 154°13'38" W. long.;

(2) Humpy-Deadman Section: all waters of Alitak Bay east of a line from Cape Trinity, to Middle Reef, to the southernmost tip of Fox Island (56°59'09" N. lat., 154°01'58" W. long.), and from the northernmost tip of Fox Island (56°59'44" N. lat., 154°01'42" W. long.), to 57°01'09" N. lat., 154°00'51" W. long., to the Moser Peninsula at 57°01'10" N. lat., 154°01' W. long.;

(3) Moser-Olga Bay Section: all waters of Moser and Olga Bays bounded by a line from Tanner Head (56°53'14" N. lat., 154°13'38" W. long.), to Middle Reef (56°54' N. lat., 154°03' W. long.), to the southernmost tip of Fox Island (56°59'09" N. lat., 154°01'58" W. long.), and from the northernmost tip of Fox Island (56°59'44" N. lat., 154°01'42" W. long.), to 57°01'09" N. lat., 154°00'51" W. long., to the Moser Peninsula at 57°01'10" N. lat., 154°01' W. long., and by a line from Stockholm Point (57°07'40" N. lat., 154°06'36" W. long.) to the opposite shore at 57°07'40" N. lat., 154°04'50" W. long., excluding the Dog Salmon Flats section;

(4) Dog Salmon Flats Section: all waters of Lower Olga Bay northeast of a line from 57°06'27" N. lat., 154° W. long. to the opposite shore at 57°07'33" N. lat., 154°03' W. long.;

(5) Outer Upper Station Section: all waters of Upper Olga Bay south of a line from 57°07'40" N. lat., 154°23'06" W. long., to 57°07'49" N. lat., 154°06'36" W. long., to Stockholm Point, excluding the Inner Upper Station Section;

(6) Inner Upper Station Section: all waters of Upper Olga Bay south of a line from 57°03'27" N. lat., 154°23'27" W. long. to 57°04'12" N. lat., 154°20'33" W. long.;

(7) Outer Akalura Section: all waters of Upper Olga Bay north of a line from 57°07'40" N. lat., 154°23'06" W. long., to 57°07'49" N. lat., 154°06'36" W. long., to Stockholm Point, excluding the Inner Akalura Section.

(8) Inner Akalura Section: all waters of Upper Olga Bay north of a line from 57°08'40" N. lat., 154°15'18" W. long. to 57°18'45" N. lat., 154°10'54" W. long.

(e) Eastside Kodiak District: all waters south and east of Kodiak Island bounded by the latitude of Cape Trinity (56°44'50" N. lat.), by the latitude of Cape Chiniak (57°37' N. lat.), and by mid-stream Shelikof Strait;

(1) Seven Rivers Section: all waters east of Kodiak Island bounded by the latitude of Cape Trinity, by the latitude of Boot Point (56°50' N. lat.) and a line extending seaward 144° from Cape Kasiak (57°04' N. lat., 153°29'38" W. long.), and by mid-stream Shelikof Strait;

(2) Two-Headed Section: all waters east of Kodiak Island bounded by the latitude of Boot Point and by a line extending seaward 144° from Cape Kasiak;

(3) Sitkalidak Section: all waters east of Kodiak Island bounded by a line extending seaward 144° from Cape Kasiak and by the latitude of Dangerous Cape (57°16'36" N. lat.);

(4) Inner Ugak Bay Section: all waters of Ugak Bay west of the longitude of Gull Point (152°06'W. long.);

(5) Outer Ugak Bay Section: all waters of Kodiak Island bound by the longitude of Gull Point, the latitude of Dangerous Cape, and the latitude of Cape Chiniak (57°37' N. lat.).

(f) Northeast Kodiak District: all waters northeast of Kodiak Island bounded by the latitude of Cape Chiniak (57°37' N. lat.), and the latitude of Termination Point (57°51'15" N. lat.);

(1) Outer Chiniak Bay Section: all waters north of Kodiak Island bounded by the latitude of Cape Chiniak and the longitude of Isthmus Point (152°19'30" W. long.);

(2) Inner Chiniak Bay Section: all waters of Chiniak Bay bounded by the longitude of Isthmus Point and the latitude of Spruce Cape (57°49'36" N. lat.), excluding the Buskin River Section;

(3) Buskin River Section: all waters of Chiniak Bay west of a line from Cliff Point (57°43'30" N. lat., 152°26'45" W. long.) to Spruce Cape (57°49'36" N. lat., 152°19'24" W. long.);

(4) Monashka/Mill Bay Section: all waters north of Kodiak bounded by the latitude of Spruce Cape and the latitude of Termination Point.

- (g) Mainland District: all waters along the southside of the Alaska Peninsula bounded by the latitude of Cape Douglas (58°52' N. lat.), mid-stream Shelikof Strait, and west of the longitude of the southern entrance of Imuya Bay near Kilokak Rocks (57°11'22" N. lat., 156°20'13" W. long.);
- (1) Big River Section: all waters bounded by the latitude of Cape Douglas, the latitude Cape Chiniak on the mainland (58°31' N. lat.), and by mid-stream Shelikof Strait;
- (2) Hallo Bay Section: all waters of Hallo Bay bounded by the latitude of Cape Chiniak on the mainland, the latitude of Cape Nukshak (58°23'30" N. lat.), and by mid-stream Shelikof Strait;
- (3) Outer Kukak Bay Section: all waters bounded by the latitude of Cape Nukshak and the latitude of Cape Gull (58°13' N. lat.), excluding the Inner Kukak Section;
- (4) Inner Kukak Bay Section: all waters of Kukak Bay west of 154°11' W. long.;
- (5) Dakavak Bay Section: all waters bounded by the latitude of Cape Gull, the latitude of the southern entrance of Dakavak Bay (58°01' N. lat.), and by mid-stream Shelikof Strait;
- (6) Katmai Section: all waters bounded by the latitude of the southern entrance of Dakavak Bay, the latitude of Cape Kubugakli (57°53'30" N. lat.), and by mid-stream Shelikof Strait;
- (7) Alinchak Section: all waters bounded by the latitude of Cape Kubugakli, the latitude of Cape Aklek (57°41'24" N. lat.), and by mid-stream Shelikof Strait;
- (8) Cape Igvak Section: all waters bounded by the latitude of Cape Aklek (57°41'24" N. lat.), the longitude of the southern entrance of Imuya Bay near Kilokak Rocks (156°20'13" W. long.), and by mid-stream Shelikof Strait, excluding the Wide Bay Section;
- (9) Wide Bay Section: all waters of Wide Bay enclosed by a line from Cape Kayakliut (57°17'35" N. lat., 156°19' W. long.) to the easternmost tip of Terrace Island at 156°15' N. lat., to Cape Igvak (57°26' N. lat., 156°01' W. long.).

**5 AAC 18.201. SEAWARD BOUNDARY OF DISTRICTS** The seaward boundary of districts and sections in Shelikof Straits is a line all points of which are equidistant from the east and west shore of Shelikof Strait.

### **ARTICLE 3. - SALMON FISHERY**

**5 AAC 18.310. FISHING SEASONS** (a) Salmon may be taken only from June 5 through October 31.

**5 AAC 18.320. FISHING PERIODS** (a) Salmon may be taken only during periods established by emergency order.

**5 AAC 18.330. GEAR** (a) In the Afognak District salmon may be taken only by purse seines and beach seines.

(b) In the Northwest Kodiak District salmon may be taken only by purse seines and beach seines, except that in the Central Section, salmon may also be taken by set gill nets.

(c) In the Southwest Kodiak District salmon may be taken only by purse seines and beach seines.

- (d) In the Alitak District salmon may be taken only by purse seines and beach seines, except that
- (1) in the Moser-Olga Bay Section salmon may be taken only by set gill nets;
  - (2) in the Dog Salmon Flats Section salmon may be taken only by set gill nets;
  - (3) in the Outer Upper Station Section salmon may be taken only by set gill nets;
  - (4) in the Inner Upper Station Section salmon may be taken only by set gill nets;
  - (5) in the Outer Akalura Section salmon may be taken only by set gill nets;
  - (6) in the Inner Akalura Section salmon may be taken only by set gill nets;
- (7) after September 4, salmon may be taken by purse seines, beach seines, and set gill nets in the entire Alitak District.
- (e) In the East Kodiak District salmon may be taken only by purse seines and beach seines.
- (f) In the Northeast Kodiak District salmon may be taken only by purse seines and beach seines.
- (g) In the Mainland District salmon may be taken only by purse seines and beach seines.

5 AAC 18.331. GILL NET SPECIFICATIONS AND OPERATIONS. (a) Except as provided for in (e) of this section. A CFEC permit holder may operate no more than 150 fathoms of set gill net in the aggregate, nor more than two set gill nets.

(b) Seine webbing may be used on the shoreward end of a set gill net and the length of the seine webbing used may extend no more than 50 fathoms seaward of the beach at the lowest tide of the current day, except that

(1) in the Moser-Olga Bay, Inner Dog Salmon, Inner Akalura, Outer Akalura, Outer Upper Station, and Inner Upper Station Sections of the Alitak District, seine webbing may be used only from the high tide mark seaward, and no portion of the seine web may be in water deeper than five feet at the lowest tide of the current day;

(2) in that portion of the Moser-Olga Bay Section of the Alitak District south of a line from Bun Point to the opposite shore at 56°57'59" N. lat., 154°07'35" W. long., seine webbing may be used only from the high tide mark seaward, and must meet one of the following requirements:

(A) no portion of the seine web may be in water deeper than five feet at the lowest tide of the current day; or

(B) the length of seine webbing used may be no more than 20 fathoms per set.

(c) Set gill nets must be operated in substantially a straight line, except that no more than 25 fathoms of a set gill net may be used as a hook. A hook may be used in any configuration.

(d) The shoreward end of a set gill net must be attached to a point of land which is exposed at the lowest tide of the day or to a rock that is within 5 feet of the surface at the lowest tide of the day. A rock is any naturally located or created geological formation that shows no evidence of having been located or created through man-made means. A set gill net may not be attached to the beach inside of closed waters.

(e) Two salmon set gill net CFEC permit holders may form a joint venture and combine their gear under the following conditions:

(1) a permit must be obtained from a local representative of the department before a joint venture may start operations;

(2) only one permit per year will be issued for each joint venture;

(3) the permit must be signed by both CFEC permit holders and each must have a copy of the permit readily available for inspection;

(4) the permit may be canceled by the department upon the request of one of the joint venture operators;

(5) the gear and site markers required by 5 AAC 39.280 must bear the five-digit CFEC permit serial number of both permit holders;

(6) no single set gill net may be more than 150 fathoms in length;

(7) no joint venture may operate more than three set gill nets; and

(8) both parties of the joint venture are legally responsible for the operation of all gear of the joint venture.

(f) No set gill net gear, including running lines, shore leads, anchors, and buoys, may be placed in the water, nor may signs required by 5 AAC 18 or 5 AAC 39 be placed on the beach before emergency order openings of the closed waters areas of Upper Olga Bay described in 5 AAC 18.350(a)(1)(B)(i).

(g) No gill net may be more than 125 meshes in depth.

(h) In the Alitak Bay district, the shoreward end of a set gill net must not begin further seaward, or in water deeper than the limit specified for seine webbing in (b) of this section.

**5 AAC 18.332. SEINE SPECIFICATIONS AND OPERATION.** (a) No purse seine and hand purse seine may be less than 100 fathoms or more than 200 fathoms in length. No seine may be less than 100 meshes or more than 325 meshes in depth. At least 50 fathoms of a seine must be 150 meshes in depth.

(b) One lead no more than 100 fathoms in length may be used with each purse seine or hand purse seine. The aggregate length of a seine and lead may not exceed 250 fathoms. Leads must be removed from the water within two hours after a season or fishing period closure. Each lead must have at each end a buoy, cork, or float plainly and legibly marked with the operator's five-digit CFEC permit serial number.

(c) Beach seines no less than 100 fathoms nor more than 225 fathoms in length may be used.

- (d) Beach seines may not be less than 100 meshes in depth.
- (e) When an anchor is used during the operation of a purse seine, hand purse seine or beach seine, only the shoreward end of the seine or lead may be anchored; the seine shall be attached to the licensed vessel, and the vessel may not be anchored.
- (f) In the Mainland District, it is unlawful to take salmon with the assistance of an aircraft directing the operation of the seine gear.
- (g) Seine mesh size may not be more than seven inches.

**5 AAC 18.335. MINIMUM DISTANCE BETWEEN UNITS OF GEAR** No part of a set gill net may be set or operated within 900 feet of any part of another set gill net, or be attached to the beach within 900 feet of another net, except that in the Dog Salmon Flats, Outer Upper Station, Inner Upper Station, Outer Akalura, and Inner Akalura Sections there is not minimum distance between units of set gill net gear.

**5 AAC 18.350. CLOSED WATERS.** (a) Salmon may not be taken in the following waters:

- (1) Alitak District.
  - (A) Humpy Cove: all waters east of a line from the northern entrance of Seaborg Cove at 56°53'45" N.lat., 153°58'48" W.long., to a point approximately two and three-quarters miles northeast of Hawk Point at 56°51' N.lat., 154°03'39" W.long.;
  - (B) Olga Bay.
    - (i) Upper Olga Bay: north and west of a line from Stockholm Point at 57°07'40" N.lat., 154°06'36" W.long., to the opposite shore at 57°07'40" N.lat., 154°04'50" W.long.;
    - (ii) Horse Marine: northeast of a line from 57°06'27" N.lat., 154° W.long.; to 57°07'33" N.lat., 154°03' W.long.;
    - (iii) Olga Narrows: south of 57°04'23" N.lat., and north of a line from 57°01'27" N.lat., 154°08'32" W.long. running east to a point 75 fathoms from the mean low tide mark to 57°11" N.lat., 154°07'58" W.long.;
  - (C) Portage Bay
    - (i) Southeast Arm: east of the longitude of Bert Point;
    - (ii) Sulua Bay: north of 56°58'36" N.lat.;
  - (D) Deadman Bay: north of a line from 57°05'30" N.lat., 153°50'54" W.long., to 57°07'05" N.lat., 153°51'44" W.long.;
  - (E) Sukhoi Lagoon: in the bay and the lagoon;
- (2) Southwest Kodiak District
  - (A) all waters east of the terminus of the Ayakulik River (Red River);

- (B) all waters east of the terminus of the unnamed stream at 57°16'21" N.lat., 154°37'10" W.long.;
- (C) all waters east of a line from 57°33'48" N.lat., 154°30'54" W.long., to 57°31'26" N.lat., 154°34'36" W.long., including Sturgeon Lagoon;
- (D) all waters of Grant's Lagoon and Halibut Bay Lagoon;
- (E) that portion of the Southwest Kodiak District enclosed by a line from Cape Karluk (57°34'42" N. lat., 154°30'54" W. long.), to 57°34'42" N. lat., 154°26'36" W. long., to Karluk Spit at 57°34'37" N. lat., 154°26'30" W. long.;
- (5) Northwest Kodiak District
- (A) Uyak Bay: south of 57°23'06" N.lat.;
- (B) Zachar Bay: within a line from 57°33'36" N.lat., 153°47'42" W.long. Northerly to a point at 57°34'36" N.lat., 153°47'30" W.long.;
- (C) Spiridon Bay: east of 153°42'24" W.long.;
- (D) Little River: within 500 yards of the terminus;
- (E) Cannon's Lagoon (Cambell's): in the lagoon and 500 yards from its mouth;
- (F) Uganik Bay
- (i) South Arm: south of 57°39'44" N.lat.;
- (ii) East Arm (Mush Bay): within a line from Packers Spit at 57°44'30" N.lat., 153°29'54" W.long., the opposite shore at 57°42'30" N.lat., 153°28'36" W.long., and including the lagoon behind Packers Spit;
- (G) North Uganik Passage: south of 57°49'30" N.lat., to 57°48'30" N.lat.;
- (H) Terror Bay: all waters of the bay south of 57°46'30" N.lat.;
- (I) Kizhuyak Bay
- (i) Barabara Cove: within one-half statute mile of the stream terminus;
- (ii) all waters south of a line extending from Pestchani Point to a point on the opposite shore at 57°47' N.lat., 152°54' W.long.;
- (J) Sharatin Bay: south of 57°50'41" N.lat.;
- (K) Soldier's Bay: within a line from Otmeloi Point to Entrance Point to the southern tip of Low Island to Seredni Point;
- (L) Anton Larsen Bay: south of 57°51'54" N.lat.;

(M) Ouzinkie Harbor: all waters of Ouzinkie Harbor north of a line from 57°55'10" N. lat., 152°36' W. long. to 57°55'03" N. lat., 152°29'20" W. long.;

(N) Monks Lagoon: all waters of the lagoon northwest of a line between ADF&G regulatory markers located on both sides of the entrance to the lagoon;

(6) Northeast Kodiak District

(A) Mill Bay and all those waters bounded by a line from Spruce Cape to the northernmost point of Woody Island, to the northernmost point of Holiday Island, to the northernmost point of Near Island, to the opposite shore on Kodiak Island at 57°47'25" N.lat., 152°23'23" W.long.;

(B) Women's Bay: all waters inside a line from the tip of Nyman Peninsula (57°43'18" N. lat., 152°31'25" W. long.), to the northeastern tip of Mary's Island (57°42'27" N. lat., 152°31'52" W. long.) to the southeastern shore of Women's Bay at 57°42' N. lat., 152°31'23" W. long.;

(C) Middle Bay: all waters south of a line from 57°39'58" N.lat., 152°29'15" W.long., to the opposite shore at 57°39'30" N.lat., 152°28' W.long.;

(D) Kalsin Bay: all waters south of a line from a bluff on the east shore at 57°36'30" N.lat., 152°24'30" W.long., to the opposite shore at the southwest corner of the bay at 57°36'30" N.lat., 152°28'06" W.long.;

(7) Eastside Kodiak District

(I) Ugak Bay

(i) west of 152°52'30" W.long.;

(ii) Eagle Harbor: within one-half statute mile of the terminus of Eagle River;

(iii) Gull Cape Lagoon: in the lagoon;

(iv) Saltery Cove: all waters north of a line from a point at 57°29' N.lat., 152°43'06" W.long., to a point on the opposite shore at 57°29'48" N.lat., 152°47'42" W.long.;

(v) Pasagshak River (No. 259-411): within 1000 yards from the terminus;

(J) Kiliuda Bay

(i) west of 153°03'36" W.long.;

(ii) Dog Bay: north of a line from Coxcomb Point to Shearwater Point;

(K) Shearwater Bay: north of a line from 57°20'23" N.lat., 152°52'47" W.long., to 57°20'45" N.lat., 152°53'30" W.long.;

(L) Sitkalidak Strait: north of a line at the latitude of Old Harbor Village (57°12'06" N. lat.) and west of 153°12'48" W.long.;

(M) Barling Bay: inside a line from 57°10'45" N.lat., 153°21'47" W.long., to 57°11'27" N.lat., 153°20'24" W.long.;

(N) Kaiugnak Bay: west of  $153^{\circ}39'32''$  W.long.;

(O) Kiavak Bay: in the lagoon and 500 yards from its mouth;

(P) Kaguyak Bay: west of  $153^{\circ}45'07''$  W.long.;

(Q) Seven Rivers Cove (includes stream no. 258-701): west of a line from  $56^{\circ}47'30''$  N.lat.,  $153^{\circ}52'36''$  W.long. to  $56^{\circ}46'54''$  N.lat.,  $153^{\circ}54'$  W.long.;

(R) Natalia Bay Lagoon: in the lagoon nside of  $153^{\circ}19'06''$  W.long.;

(8) Afognak District

(A) Kazakof Bay (Danger Bay): north of  $58^{\circ}10'54''$  N.lat.;

(B) Kitoi Bay: west of a line from  $58^{\circ}10'39''$  N.lat.,  $152^{\circ}17'13''$  W.long., to  $58^{\circ}09'32''$  N.lat.,  $152^{\circ}18'36''$  W.long.;

(C) Ruth Bay (Izhut): west of  $152^{\circ}18'33''$  W.long.;

(D) Seal Bay: south of  $58^{\circ}21'38''$  N.lat., in the inner West Bay;

(E) Pauls Bay (Perenosa): within one-half statute mile of the terminus of Pauls Creek;

(F) Discoverer Bay: south of  $58^{\circ}19'06''$  N.lat.;

(G) Paramanof Bay

(i) East Arm: east of  $152^{\circ}45'$  W.long.;

(ii) South Arm: south of  $58^{\circ}15'57''$  N. lat.;

(iii) Thorsheim Bay (includes stream no. 251-302): south of a line from  $58^{\circ}17'12''$  N.lat.,  $152^{\circ}50'24''$  W.long. to  $58^{\circ}17'08''$  N.lat.,  $152^{\circ}50'42''$  W.long.

(iv) Long Lagoon Bay (includes stream no. 251-301): south of a line from  $58^{\circ}16'28''$  N.lat.,  $152^{\circ}53'21''$  W.long. to  $58^{\circ}16'24''$  N.lat.,  $152^{\circ}53'11''$  W.long.

(H) Malina Bay: east of  $152^{\circ}55'$  W.long.;

(I) Afognak Bay: north of a line from Otrubistoi Point to Settlement Point;

(9) Mainland District

(A) Swikshak Lagoon: all waters of the lagoon;

(B) Kukak Bay: all waters west of a line from a point at  $58^{\circ}18'52''$  N.lat.,  $154^{\circ}16'32''$  W.long., then to a point at  $58^{\circ}18'45''$  N.lat.,  $154^{\circ}16'05''$  W.long., then to a point at  $58^{\circ}17'18''$  N.lat.,  $154^{\circ}17'23''$  W.long., then to a point at  $58^{\circ}15'56''$  N.lat.,  $154^{\circ}16'29''$  W.long.

(C) Kaflia Bay: within one statute mile outside the entrance of the outer lagoon;

(D) Wide Bay: west of a line from 156°28'42" W.long., 57°17'55" N.lat., to 156°31'59" W.long., 57°19'48" N.lat.;

(E) Chiniak Lagoon Creek (stream no. 262-154): all waters enclosed by a line from Cape Chiniak (58°31' N.lat., 153°54'30" W.long.) to a point on Village Beach approximately 500 yards from the entrance to Chiniak Lagoon;

(F) all waters of Big River (stream no. 262-152) flats west of 153°52'20" W.long.

(G) Hallo Bay

(i) Ninagiak River: inside of a line running in a southeasterly direction from a point approximately 500 yards north of the stream terminus and a line running in an easterly direction from a point approximately 500 yards south of the stream terminus;

(ii) unnamed stream (ADF&G stream no. 262-203): inside of a line running in an easterly direction from a point approximately 500 yards north of the stream terminus and a line running in a northeasterly direction from a point approximately 500 yards south of the stream terminus;

(H) Village Creek (stream no. 262-153): between two parallel lines that start at points located at higher high water beginning at approximately 500 yards north and 500 yards south of the stream terminus and extend east to mid-stream of Shelikof Strait;

(I) Kinak Bay (Kinak Creek, no. 262-451): in the lagoon and 500 yards from its mouth;

(10) within the designated freshwater salmon streams and rivers of the Kodiak Area, and all saltwater within 500 yards of all points of a straight line extending between the seaward extremities of the exposed tideland banks, or as marked by ADF&G regulatory markers. The provisions of 5 AAC 39.290 do not apply to the Kodiak Area. Freshwater salmon streams and rivers are those identified annually on a Kodiak Area Salmon Stream Chart available from the department.

(b) Where regulatory markers have been deployed by the department to aid fishermen in determining closed waters locations listed in this section, the markers will be placed either as close as possible to the described locations or in a location deemed necessary by the department. If the location of a regulatory marker is in conflict with the closed waters listed in this section, it is illegal to fish on the streamward side of the marker.

**5 AAC 18.355. SALMON PROCESSOR AND BUYER REPORTING REQUIREMENTS.** The operator of a floating salmon processing vessel or tender, or a shorebased processing operation, and a company employing aircraft used for transporting salmon, shall report in person, or by radio or telephone, to a local representative of the department located in the management area of intended operation before the start of processing or buying operations. The report must include the location and the date of intended operation, and identify and describe each vessel or other method of transport employed in hauling or processing salmon.

**5 AAC 18.360. CAPE IGVAK SALMON MANAGEMENT PLAN.** (a) In years when a harvestable surplus is beyond escapement goals, for the first (Black Lake) and second (Chignik Lake) runs of Chignik River system sockeye salmon is expected to be less than 600,000, there will be no commercial salmon fishery allowed in the Cape Igvak section, as described in 5 AAC 18.200(g)(8) until a harvest of 300,000 sockeye salmon in the Chignik Area, as described in 5 AAC 15.100, is

achieved. After July 8, and after at least 300,000 sockeye salmon have been harvested in the Chignik area, and if escapement goals are being met, the department shall manage the fishery so that the number of sockeye salmon harvested in the Chignik Area will be at least 600,000 and the harvest in the Cape Igvak Section will approach as near as possible 15 percent of the total Chignik sockeye salmon catch.

(b) In years when a harvestable surplus beyond escapement goals for the first and second runs of Chignik River system sockeye salmon is expected to be more than 600,000, but the first run fails to develop as predicted and it is determined that a total sockeye salmon harvest in the Chignik Area of 600,000 or more may not be achieved, the Cape Igvak section commercial salmon fishery will be curtailed in order to allow at least a minimum harvest in the Chignik Area of 300,000 sockeye salmon by July 9 if that number of fish is determined to be surplus to the escapement goals of the Chignik River system. After July 8, after at least 300,000 sockeye salmon have been harvested in the Chignik Area and its escapement goals are being met, the department shall manage the fishery so that the number of sockeye salmon harvested in the Chignik Area will be at least 600,000 and the harvest in the Cape Igvak Section will approach as near as possible 15 percent of the total Chignik sockeye salmon catch.

(c) On years when a harvestable surplus beyond the escapement goals for the first and second runs of Chignik River system sockeye salmon is expected to be more than 600,000, and the department determines the runs are as strong as expected, the department will manage the fishery in such a manner whereby the number of sockeye salmon taken in the Cape Igvak Section will approach as near as possible 15 percent of the total Chignik sockeye salmon catch.

(d) The total Chignik sockeye salmon catch constitutes those sockeye salmon caught within the Chignik area plus 80 percent of the sockeye salmon caught in the East Stepovak, Southwest Stepovak, Stepovak Flats, Balboa Bay, and Beaver Bay Sections, as described in 5 AAC 09.200(f), plus 80 percent of the sockeye salmon caught in the Cape Igvak Section. The harvest in the Cape Igvak Section at any time before July 25 may be permitted to fluctuate above or below 15 percent of the cumulative Chignik sockeye salmon catch.

(e) This allocation method will be in effect through July 25. The first fishing period of the commercial salmon fishing season in the Cape Igvak Section will not occur before the first fishing period of the commercial salmon fishing season in the Chignik Area. After July 25, commercial salmon fishing season in the Cape Igvak section may be allowed on the local Kodiak Area stocks or specifically for Chignik River system sockeye salmon if the second run escapement has reached 200,000.

(f) During the period from approximately June 26 to July 9, the strength of the second run of Chignik River system sockeye salmon cannot be evaluated. In order to prevent overharvest of the second run, commercial salmon fishing in the Cape Igvak Section will, in the department's discretion, be disallowed or severely restricted during this period.

(g) The department shall announce commercial salmon fishing periods by emergency order. The department shall give at least one day notice prior to the opening of a commercial salmon fishing period unless it is an extension of a fishing period in progress.

**5 AAC 18.361. ALITAK BAY DISTRICT SALMON MANAGEMENT PLAN** (a) The department shall manage the commercial salmon fishery in the Alitak Bay District in accordance with the guidelines set out in the Alitak Bay District Salmon Management Plan. The goal of this plan is to achieve escapement and harvest objectives of sockeye, pink, and coho salmon stocks returning to the Deadman-Portage Bay Section systems and the Horse Marine, Fraser, Akalura,

and Upper Station systems. It is the intent of the board that salmon bound to these systems be harvested to the extent possible by the traditional fisheries located in the Cape Alitak, Deadman-Portage Bay, and Moser-Olga Bay Sections.

(b) The Cape Alitak Section must be managed during the period June 9 through July 15 based on the sockeye salmon return to the Fraser system. During the period July 16 through August 9, in odd numbered years this section must be managed based on the pink salmon return to the Fraser system and, in even numbered years this section must be managed based on the sockeye salmon return to Upper Station. During the period August 10 through August 25, this section must be managed based on the sockeye salmon return to Upper Station but, on even numbered years this section must be managed based on the pink salmon return to the Fraser system. During the period August 26 through season's end, the Cape Alitak Section must be managed based upon the coho and sockeye salmon returns to the entire Alitak District.

(c) The Moser-Olga Bay Section must be managed, during the period June 9 through July 15, based upon the sockeye salmon return to the Fraser system. During the period July 16 through August 9, in odd-numbered years this section must be managed based on the pink salmon return to the Fraser system and, in even-numbered years this section must be managed based on the sockeye salmon return to Upper Station. During the period August 10 through August 25, in odd-numbered years this section must be managed based on the sockeye salmon return to Upper Station and, in even numbered years this section must be managed based on either the pink salmon return to the Fraser system or on the sockeye salmon return to the Upper Station system. During the period August 26 through season's end this section must be managed based on the coho and late sockeye salmon returns to all Olga Bay systems.

(d) The Humpy-Deadman Section must be managed simultaneously, and with equivalent fishing time, with the Cape Alitak and Moser-Olga Bay Sections during the period from June 9 through July 15. After July 15, the Humpy-Deadman Section must be managed based on the strength of returns to systems located within the section.

(e) The Dog Salmon Flats Section must be managed on the basis of sockeye and pink salmon returns to the Fraser River system during the period of June 9 through August 20. During the period of August 21 through season's end this section must be managed on the basis of coho salmon returns to the Dog Salmon River and Horse Marine systems. This section may only be opened to fishing when total desired escapement goals are expected to be exceeded. Such openings may not jeopardize achievement of minimum escapement goals for either of the two remaining salmon species. A 24 hour advance notice must be given before opening this section.

(f) The Inner and Outer Akalura Sections must be managed based on early and late returns of sockeye salmon to the Akalura system during the period from June 9 through August 20. From August 21 through August 26, these sections must be managed based on coho and late sockeye salmon returns to the Akalura system. After August 26, both sections must be managed based on coho salmon returns to the Akalura system. The Inner and Outer Akalura Sections may be opened to fishing only when desired escapement goals are expected to be exceeded. Such openings may not jeopardize achievement of minimum escapement goals for other salmon species. Fishing time in the Outer Akalura Section must always occur before any fishing time in the Inner Akalura Section is allowed for each target species. At least 24 hours advance notice must be given before opening either the Inner or Outer Akalura Sections.

(g) The Inner and Outer Upper Station Sections must be managed based on early and late returns of sockeye salmon to the Upper Station system during the period from June 9 through August 20. From August 21 through August 25, these sections must be managed based on coho and late

sockeye salmon returns to the Upper Station system. After August 26, both sections must be managed based on coho and late sockeye salmon returns to the Upper Station system. The Inner and Outer Upper Station Sections may be opened to fishing only when desired escapement goals are expected to be exceeded. Such openings may not jeopardize achievement of minimum escapement goals for the other salmon species. Fishing time in the Outer Upper Station Section must always occur before any fishing time in the Inner Upper Station Section is allowed for each target species. At least 24 hours advance notice must be given before opening of either the Inner or Outer Upper Station Sections.

5 AAC 18.362. WESTSIDE KODIAK MANAGEMENT PLAN. (a) The goal of the Westside Kodiak Management Plan is to achieve escapement and harvest objectives of sockeye salmon returning to the Karluk, Ayakulik and other Westside minor sockeye salmon systems and of pink, chum and coho salmon returning to systems in the Southwest Afognak, Central, North Cape, Anton Larsen Bay, Sheratin Bay, Kizhuyak Bay, Terror Bay, Inner Uganik Bay, Spiridon Bay, Zachar Bay, Uyak Bay, Outer Karluk, Inner Karluk, Sturgeon Bay, Halibut Bay, Outer Ayakulik and Inner Ayakulik sections. It is the intent of the Board that salmon bound to these systems be harvested to the extent possible by the traditional fisheries located in all 17 sections. The department shall manage the Northwest Kodiak and Southwest Kodiak Districts and the Southwest Afognak Section in accordance with the guidelines set out in this plan.

(b) The Central and North Cape section shall be managed

(1) from June 9 through approximately June 15, as a mixed stock fishery directed on early run sockeye salmon returning to Karluk, Ayakulik and Olga Bay systems. The department shall open two commercial test fishing periods, each not exceeding 33 hours in length, during this time.

(2) from approximately June 16 through July 5, based on early run sockeye salmon returning to the Karluk system.

(3) from approximately July 6 through August 15, based on pink salmon returning to the major pink salmon systems in the Northwest Kodiak district.

(4) from approximately August 16 through August 24, based on pink salmon returning to the Northwest Kodiak District and on late run sockeye salmon returning to the Karluk system.

(5) from approximately August 25 through September 5, based on late run sockeye salmon returning to the Karluk system.

(6) after approximately September 5, based on coho salmon returning to the Northwest Kodiak district.

(c) The Anton Larsen Bay, Sheratin Bay, Kuzhuyak Bay, Terror Bay, Inner Uganik Bay, Spiridon Bay, Zachar Bay and Uyak Bay sections shall be managed

(1) from June 9 through approximately June 15, based on local sockeye and early run chum salmon returning to the major systems in each section. The department shall open two commercial test fishing periods, each not exceeding 33 hours in length and occurring simultaneously with those in the Central and North Cape sections, during this time.

(2) from approximately June 16 through July 5, based on local sockeye and early run chum salmon returning to the major systems in each section.

(3) from approximately July 6 through July 31, based on local sockeye, pin and early run chum salmon returning to the major systems in each section.

(4) from approximately August 1 through August 24, based on local pink and late run chum salmon returning to the major systems in each section.

(5) from approximately August 25 through September 5 based on local pink, late run chum and coho salmon returning to the major salmon systems in each section.

(6) after approximately September 5, based on coho salmon returning to the major coho salmon systems in each section.

(d) The Southwest Afognak Section shall be managed

(1) from June 9 through approximately June 15, as a mixed stock fishery directed on early run sockeye salmon returning to Karluk, Ayakulik and Olga Bay systems. The department shall open one commercial test fishing period, not exceeding 33 hours in length, during this time.

(2) from approximately June 16 through July 5, based on early run sockeye salmon returning to the Karluk system.

(3) from approximately July 6 through August 15, based on pink salmon returning to the major pink salmon systems in the Southwest Afognak Section and the Northwest Kodiak District. From July 6 through July 25, the section must also be managed according to 5 AAC 18.363(c), the North Shelikof Management Plan.

(4) from approximately August 16 through August 24, based on pink salmon returning to the major pink salmon systems in the Southwest Afognak Section and the Northwest Kodiak district and on the late run sockeye salmon returning to the Karluk system.

(5) from approximately August 25 through September 5, based on late run sockeye salmon returning to the Karluk system.

(6) after approximately September, based on coho salmon returning to the major coho salmon systems in the Southwest Afognak district.

(e) The Inner and Outer Karluk sections must be managed

(1) from June 9 through July 15, based on early run sockeye salmon returning to the Karluk system. The department may open fishing periods in the Inner Karluk Section only if it appears that the desired early run escapement goal will be exceeded. In the Outer Karluk Section, the department may not open more than one 33 hour fishing period before June 16 and, from June 16 through approximately July 15, shall open fishing periods simultaneously with open periods in the Central Section.

(2) from July 16 through approximately August 24

(A) on odd year cycles, based on late run sockeye salmon returning to the Karluk system.

(B) on even year cycles, based on late run sockeye and pink salmon returning to the Karluk system.

(3) from approximately August 25 through September 5, based on late run sockeye salmon returning to the Karluk system.

(4) after approximately September 5, based on coho salmon returning to the Karluk system.

(f) The Sturgeon and Halibut Bay sections shall be managed

(1) from June 9 through approximately June 22, as mixed stock fisheries directed on early run sockeye salmon returning to the Karluk, Ayakulik and Olga Bay systems. The department shall not open any commercial fishing periods during this time.

(2) from approximately June 23 through July 15, based on early run sockeye salmon returning to the Ayakulik and karluk systems, except that the Sturgeon Section shall also be managed with consideration for early run chum salmon returning to the Sturgeon system.

(3) from approximately July 16 through August 24,

(A) in the Sturgeon Section

(i) on odd year cycles, based on late run sockeye salmon returning to the Karluk system.

(ii) on even year cycles, based on late run sockeye and on pink salmon returning to the Karluk system.

(B) in the Halibut Bay Section

(i) on odd year cycles, from approximately July 16 through July 31 on late run sockeye salmon returning to the Ayakulik system and, from approximately August 1 through August 24 on late run sockeye salmon returning to the Karluk system.

(ii) on even year cycles, from approximately July 16 through July 31, on late run sockeye salmon and pink salmon returning to the Ayakulik system and, from approximately August 1 through August 24, on late run sockeye salmon returning to the Karluk system and on pink salmon returning to the Ayakulik system.

(4) from approximately August 25 through September 5, based on late run sockeye salmon returning to the Karluk system.

(5) after approximately September 5, based on coho salmon returning to local coho salmon systems.

(g) The Inner and Outer Ayakulik sections shall be managed

(1) from June 9 through approximately July 15, based on early run sockeye salmon returning to the Ayakulik systems.

(2) from approximately July 16 thorough August 24

(A) on odd year cycles, based on late run sockeye salmon returning to the Ayakulik system.

(B) on even year cycles, based on late run sockeye and pink salmon returning to the Ayakulik system.

(3) after approximately August 24, based on coho salmon returning to the Ayakulik system.

5 AAC 18.363. NORTH SHELIKOF STRAIT SOCKEYE SALMON MANAGEMENT PLAN. (a) The purpose of the North Shelikof Strait Sockeye Salmon Management Plan is to allow traditional fisheries in the area to be conducted on Kodiak Area salmon stocks, while minimizing the directed harvest of Cook Inlet sockeye salmon stocks. The Board recognizes that some incidental harvest of other stocks has and will occur in this area while the seine fishery is managed for Kodiak Area salmon stocks. The Board intends, however, to prevent a repetition of the non-traditional harvest pattern which occurred in 1988.

(b) from July 6 through July 25 in the Dakavak Bay, Outer Kukak Bay, Inner Kukak Bay, Hallo Bay and Big River Sections of the Mainland district and in the Shuyak Island and Northwest Afognak Sections of the Afognak District, the department shall manage the fishery as follows:

(1) management of the fishery shall be based on local stocks;

(2) the fishery may remain open during normal fishing periods until the harvest exceeds 15,000 sockeye salmon;

(3) when the harvest exceeds 15,000 sockeye salmon, the department shall restrict the fishery by emergency order to waters of:

(A) Dakavak Bay, Outer Kukak Bay, Inner Kukak Bay, Hallo Bay and Big River sections west of a line from Cape Douglas at 58°51'06" N. lat., 153°14'54" W. long., to a point at 58°42'40" N. Lat., 153°26'18" W. Long., to a point east of Swikshak river at 58°38'06" N. lat., 153°35'24" w. long., to Cape Chiniak at 58°31' N. lat., 153°54'21" W. long., to Cape Nukshak at 58°23'30" N. lat., 153°57' w. long., to Cape Ugyak at 58°16'36" N. lat., 154°06'03" W. long., to Cape Gull at 58°13' N. lat., 154°08'30" W. long., to Cape Kuliak at 58°08'11" N. lat., 154°12'34" W. long., to Cape Atushagvik at 58°05' N. lat., 154°18'48" W. long., to Cape Ilktugitak at 58°01'12" N. lat., 154°34'48" W. long., to the southern entrance of Dakavak Bay at 58°01' N. lat., 154°43'30" W. long.;

(B) Shuyak Island and Northwest Afognak sections south and east of a line from Point Banks at 58°38' N. lat., 152°18'54" W. long., to Dark Island at 58°38'45" N. lat., 152°33'05" W. long., to Gull Island at 58°35'48" N. lat., 152°38'45" W. long., to the northern entrance of Big Bay at 58°06" N. lat., 152°40'12" W. long., to the western entrance of Blue fox Bay at 58°27'41" N. lat., 152°43'42" W. long., to Black cape at 58°24'33" N. lat., 152°53'09" w. long., to Cape Paramanof at 58°18'21" N. lat., 153°02'45" W. long.

(c) From July 6 through July 25 in the Southwest Afognak Section of the Afognak district, the department shall manage the fishery as follows:

(1) management of the fishery shall be based on local stocks consistent with 5 AAC 18.362(d)(3);

(2) the fishery may remain open during normal fishing periods until the harvest exceeds 50,000 sockeye salmon;

(3) when the harvest exceeds 50,000 sockeye salmon, the department shall restrict the fishery by emergency order to waters of the Southwest Afognak Section east of a line from Cape Paramanof at 58°18'21" N. lat., 153°02'45" W. long., to Tanaak Cape at 58°15'36" N. lat., 153°06'09" W. long., to Steep Cape at 58°12'05" N. lat., 153°12'33" W. long., to a point at 58°08'25" N. lat., 153°25'06" w. long., to Raspberry Cape at 58°03'35" N. lat., 153°25'06" W. long.

**5 AAC 18.364. CRESENT LAKE COHO SALMON MANAGEMENT PLAN.** (a) The department shall manage the commercial, sport and subsistence fisheries in Settler Cove to provide for full utilization of the enhanced stock of coho salmon returning to Crescent Lake in accordance with the Crescent Lake Coho Salmon Management Plan in this section.

(b) Sport and subsistence fisheries are allowed in all waters of Settler cove consistent with 5 AAC 64 and 5 AAC 01.

(c) The department may open, by emergency order, those waters of Settler Cove, between the causeway and a line from the seaward end of the Port Lyons breakwater to a department marker located directly across Settler Cove from the breakwater, to the commercial taking of salmon only as follows:

(1) the department shall not allow the commercial taking of salmon before September 16 and;

(2) before opening the fishery, the department shall determine that 500 or more coho salmon are available in Settler Cove for harvest.

**5 AAC 18.394. POSSESSION OF STEELHEAD.** Steelhead taken incidental to commercial salmon fishing in Karluk Lagoon must be returned to the water unharmed.

## **ARTICLE 5. - SMELT FISHERY**

**5 AAC 18.510. FISHING SEASON** There is no closed season on smelt.

Appendix G.1.      Indexed peak salmon escapement by District and species, Kodiak Management Area, 1992.

## Appendix G.9.

## Salmon escapement surveys for the Kodiak Management Area, 1992.

Stream	Date MM-DD	Observer	Visibility		Fish in Stream				Build Up Fish		Observer Remarks	
			Str	Mou	Sockeye	Coho	Pink	Chum	Mouth	Bay		
<b>Selfie</b>												
251-101	9- 3	Prokopowich	g	g	g	250	1900	3500	0   -	-	Looks fair for coho. No buildup seen in bay. Beaver dam at second lake.	
251-101	9- 7	Brennan	e	g	f	100	0	2270	0   250Co	-	1215 hrs. Fair look at lake but few reds visible. Eight sport fishermen below on bay. Some jumpers outside.	
<b>Haskanareska Creek</b>												
251-102	9- 7	Brennan	f	f	p	0	0	150	0   -	-	1210 hrs. Kind of choppy. Hard to see outside.	
<b>Muskomee Bay</b>												
251-103	9- 7	Brennan	g	g	f	0	0	30	2   -	-	1230 hrs.	
<b>Malina River</b>												
251-105	8- 7	Prokopowich	g	g	g	150	0	45000	0   -	-	All fish below weir.	
251-105	8-13	Weir Count	e	g	7610	44	60587	0   -	-	Final weir count. Numbers include estimates, from foot survey by weir personnel, of 300 sockeye and 45000 pink salmon in river when weir pulled (weir at lake outlet). Weir installed 6/03 and removed 8/12. Coho salmon just beginning to migrate into system. Number of sockeye removed for hatchery broodstock = 603 females and 401 males.		
251-105	9- 7	Brennan	g	g	f	0	2000	32120	0   -	-	1235 hrs. Fairly windy but good look with helicopter. Did not look for reds.	
<b>Herring Camp Creek</b>												
251-109	9- 7	Brennan	g	g	f	0	0	0	0   -	-	1230 hrs.	
<b>Malka Bay</b>												
251-201	9- 7	Brennan	g	g	f	0	0	30	0   -	-	1340 hrs.	
<b>Malina Bay</b>												
251-202	9- 7	Brennan	g	g	f	0	0	0	0   50P	-	1355 hrs. Very, very dead.	
<b>Side Creek</b>												
251-204	9- 7	Brennan	g	g	g	0	0	50	0   -	-	1335 hrs. Six boats fishing in bay.	
<b>Hunt Creek</b>												
251-205	9- 7	Brennan	g	g	f	0	0	150	0   200P	-	1345 hrs. One purse seiner anchored out front.

Appendix G.9. (page 2 of 37)

Stream	Date MM-DD	Observer	Visibility Str Mou Bay	Fish in Stream				Build Up Fish		Observer Remarks
				Sockeye	Coho	Pink	Chum	Mouth	Bay	
<b>Marker Creek</b>										
251-206	9- 7	Brennan	g g f	0	0	0	0	-	1500P	1350 hrs. Bay fish along shoreline - outside to west.
<b>Long Lagoon</b>										
251-301	8- 7	Prokopowich	g g g	0	0	4000	0	-	-	Fish in lower end of stream.
251-301	9- 7	Brennan	g g f	300	150	9300	500	1500Co	-	1400 hrs. Mouth coho in channel; four sport fishermen trying for them. sockeye in lake (poor look). Plus 2,000 sockeye carcasses and 1,000 pink carcasses.
<b>Thorsheim Creek</b>										
251-302	7-29	Brennan	f f f	250	0	0	0	-	-	1215 hrs. Not much showing outside. Nothing in lagoon by platform, a few in hole below old weir site. Creek hard to see. Stream reds in lake by upper creek. Two purse seiners west of Black Cape, 3 seiners traveling west to east across Shelikof.
251-302	8- 7	Prokopowich	g g g	0	0	0	0	6000P	-	No stream survey.
251-302	9- 7	Brennan	g g f	1300	100	4200	0	500Co	1500P	1410 hrs. Sockeye in lake. Plus 1,000 sockeye carcasses.
<b>South Arm Creek</b>										
251-403	7-29	Brennan		0	0	0	0	-	-	1215 hrs. Surveyed only quickly in bay and upstream 1 mile. No go, no show.
251-403	9- 7	Brennan	g g f	0	100	8000	0	500Co	-	1420 hrs. Pretty poor looking.....most fish in lower one mile. Bears in creek.
<b>East Arm Creek</b>										
251-404	7-29	Brennan	f f f	0	0	2700	0	1200P	6700P	1210 hrs. Two tight balls of pinks N.W. of mouth (estimate could be low).
251-404	8- 7	Prokopowich	g g g	0	0	15000	0	10500P	-	Looks fair, mostly dark pinks off mouth.
251-404	9- 7	Brennan	g g f	0	50	1900	0	150Co	-	1430 hrs. Not much showing - good look. Plus 600 pink carcasses. Bear in creek.
<b>Hidden Lake Creek</b>										
251-406	9- 7	Brennan	g g f	0	0	1200	0	-	1000Co	1445 hrs. Plus 53 elk by lake.
<b>Long Canyon Creek</b>										
251-407	9- 7	Brennan	g g f	0	0	150	0	50P	-	1440 hrs.

Appendix G.9. (page 3 of 37)

Stream	Date MM-DD	Observer	Visibility Str Mou Bay	Fish in Stream				Build Up Fish Mouth	Bay	Observer Remarks
				Sockeye	Coho	Pink	Chum			
<b>Bluefox Creek</b>										
251-502	8-22	Bowers	e e	0	0	132	0	200P	-	Foot survey. Went up to the falls. No fish above. 12 pink morts.
<b>Ester Lagoon Creek</b>										
251-503	8-22	Bowers	e e	0	0	229	0	-	-	Foot survey. Went up to the falls; no fish above the falls. 49 dead pinks in stream.
<b>SW Redfox Creek</b>										
251-504	8- 7	Prokopowich	g g g	0	0	0	0	1200P	-	No stream survey. Fish in bay but pinks in lagoon.
251-504	8-22	Bowers	e e	0	0	219	0	30Co 1500P	-	Foot survey. Went up to second lake, both lakes were empty. 112 pink morts in stream.
<b>SE Redfox Creek</b>										
251-505	8- 7	Prokopowich	g g	0	0	0	0	-	8000P	No survey of stream.
251-505	8-22	Bowers	e e	0	0	9900	0	-	-	Foot survey. Went about 1/4 mile up into the upper river; 4,000 pinks in upper river. 4,400 pinks in lower river. 1,500 in lower lake. 84 pink morts in stream.
<b>Hander Creek</b>										
251-510	8-22	Bowers	e e	0	0	4000	0	8000P	-	Foot survey. Went up about one mile until the fish thinned out. 25' x 35' area solid pinks in the mouth. 92 pink morts in stream.
<b>Big Bay Creek</b>										
251-601	9-19	Weir Count	e g	1	931	425	0	-	-	Final weir count. Numbers include count of 31 coho and 109 pink salmon from foot survey before weir put in. Likely more pink and sockeye salmon escaped into system earlier in season. Weir installed 8/09 and removed 9/19.
<b>Carry Bear Creek</b>										
251-705	9-19	Weir Count	e g	0	925	4895	0	-	-	Final weir count. Numbers include count of 100 pink and 20 coho salmon from stream survey prior to weir being put in. Likely more pink salmon escaped into system earlier. Weir installed 8/09 and removed 9/13.
<b>Big Waterfall</b>										
251-821	8- 7	Prokopowich	g g g	0	0	0	0	2500P	-	No fish seen between Big and Little Waterfall creeks.

Appendix G.9. (page 9 of 37)

Stream	Date MM-DD	Observer	Visibility   Str Mou Bay	Fish in Stream				Build Up Fish Mouth   Bay	Observer Remarks
				Sockeye	Coho	Pink	Chum		
253-122	7-20	Prokopowich	e e e	20000	0	33000	0	- 4500P	Pinks below weir, plus additional 1,000 reds and 10,000 Dolly Varden below weir. Sockeye in lake at inlet streams.
253-122	7-20	Hander	g f	17400	0	0	0	-	1450 hours, mid incoming tide, moderate stream flow, surveyed entire drainage, approximately 60,000 mixed fish below weir, sockeye observed in and above lake, 6,000 pinks in lower river.
253-122	7-29	Hander	g g	25000	0	0	0	-	1228 hrs., high incoming tide, moderate stream flow. All sockeye observed in and above the lake, estimated 70,000 mixed pinks and chums below weir. Chums spawning below weir.
253-122	7-31	Prokopowich	g g g	0	0	45000	0	- 40000P 20000Ch	Survey below weir, plus 10,000 Dolly Varden. Good show in bay for chums.
253-122	8- 7	Prokopowich	g g g	0	0	80000	25000	- 60000P 38000Ch	Stream fish below weir. Looks very good for chums in bay.
253-122	8-14	Prokopowich	g g p	0	0	80000	20000	-	Bay visibility poor; too windy. Stream fish below weir.
253-122	8-18	Hander	g g g	4775	0	82000	2200   100000P 30000Ch	50000P	1530 hours. Mid incoming tide, good stream flow. Surveyed entire system. Bay estimate conservative...many balls of pinks between head of Mush Bay to Packers Spit. Mouth fish up to weir, river fish above weir. Sockeye in lake.
253-122	9- 1	Brennan	e g f	8450	0	86000	27000   183000P 57000Ch	12000Ch	1125 hrs. Stream fish above weir, including pinks and reds along lake. Mouth fish below weir and in sloughs. One group of chums on flats. Obviously mistaken on chum vs. pink identification in river between weir and lake - big bright pinks. Plus lots of carcasses...43,000 carcasses below weir mostly pink, 22,000 above weir and above lake, mostly pinks, and 4,000 red carcasses above lake.
253-122	9- 1	Hander	g g g	9800	0	113200	30000   220000P 67000Ch	15000Ch	1130-1230 hrs. Low tide, stream flow moderate, surveyed entire drainage, 33,000 carcasses below weir, 10,000 carcasses above weir, bright pinks observed approximately 6 miles above lake. Mouth count fish below weir
253-122	9- 3	Hander	e g g	4075	0	61500	10000   200000P 33000Ch	-	1110 hrs. Low outgoing tide, stream flow moderate. Surveyed entire system, best survey conditions all year. 3,900 Dolly Varden in stream. Pinks and chums in stream were above weir, pinks and chums in mouth below weir.
253-122	9- 3	Prokopowich	g g g	0	0	175000	30000	-	Fish below weir. Few scattered schools of bright fish in bay, possibly coho.
253-122	10- 9	Weir Count	e g	75894	9967	117515	11771	-	Final weir count. Additionally, 5 chinook counted through weir. Numbers include estimates of 59433 sockeye and 40 coho salmon which passed over weir when sunk by high water and debris (5/25-6/30 weir under water or not fish tight; 9/28 weir down briefly). Weir installed 5/12 and removed 10/09.

Stream	Date MM-DD	Observer	Visibility   Str Mou Bay	Fish in Stream					Build Up Fish Mouth	Observer Remarks	
				Sockeye	Coho	Pink	Chum	Bay			
254-401	9- 1	Hander	f g g	260	0	8800	13950	- -	1245-1330 hrs. low incoming tide, moderate stream flow. Most reds spawning in Munsey Lake. Surveyed entire drainage, 4,000 total carcasses, shoals and low water areas had pretty good visibility, most chums were observed on N.E. side of river approximately 12 miles from mouth (side creeks).		
254-401	9- 3	Hander	g g g	325	200	5150	14690	- -	1245 hrs. Low outgoing tide, moderate stream flow. Surveyed entire stream. Best survey so far this year. Flew bay out to line across Weasel Cove and flew Weasel Cove, no fish seen.		
254-401	10-20	Barnes	e	0	3570	0	0	- -	1718 hrs. Surveyed entire river up to and above forks. Stream flow low. 3 singles.		
<b>Karluk River</b>											
255-101	6-24	Brennan	g f f	3000	0	0	0	5500R 500R	1030 hrs. 14 P/S at Rocky Point. No jumping or sign from Waterfall to mouth. A few at mouth. Nothing at Tanglefoot. Stream fish below weir - 500 at King Hole. Big guess, but 5,000+ in grass by front of village.		
255-101	7-31	Brennan	f f	0	0	0	0	42000R	1150 hrs. One jumper on beach north of falls, no show falls to spit. Lagoon with good jumper action....12k by barrel, 20k by island, 10k by village. No stream survey.		
255-101	8- 9	Prokopowich	p f	0	0	0	0	7000R 3000P	7,000 - 10,000 fish offshore. Most appear to be reds, some mixed pinks. Lagoon visibility poor, no stream survey.		
255-101	8-14	Prokopowich	f f f	0	0	0	0	- -	Estimated 5 - 6,000 fish at lagoon mouth. 40 - 50,000 fish offshore, majority pinks. 200,000 fish in lagoon appears to be sockeye.		
255-101	8-25	Prokopowich	p p p	0	0	0	0	- -	Poor visibility. Good show of jumpers off of lagoon mouth.		
255-101	9- 3	Prokopowich	e e e	350000	0	50000	0	- -	Estimates are fish in upper lagoon below weir. No show off mouth. Very few jumpers showing in lagoon but lots of fish just holding.		
255-101	9-26	Weir Count	e g	831414	5411	401083	123	- -	Final weir count. Additionally 9,601 chinook counted through weir. Numbers include estimate of 47,500 sockeye and 1,850 coho salmon in lagoon when weir pulled.		
255-101	10-21	Chatto	g	0	51750	0	0	- -	1410 hrs. Surveyed from lagoon to lake outlet. 90% of fish (coho) from portage to lake outlet. No count on sockeye in upper river.		
<b>Red River</b>											
256-201	6-24	Brennan	f f	0	0	0	0	1000R	1100 hrs. No stream survey. Jumpers on beach to south but not really fishy.		
256-201	8- 9	Prokopowich	g g	0	0	0	0	60000P	Fair show off mouth.

<sup>a</sup> Gear Description: 01-purse seine, 02-beach seine, 04-set gillnet, 99-fish caught in test fisheries, cost recovery fisheries, or fish forfeited due to illegal fishing.

<sup>b</sup> Fish caught in test fisheries, cost recovery fisheries and forfeitures due to illegal fishing not included.

<sup>c</sup> Extensive fishery restrictions due to Exxon Valdez oil spill. Limited commercial openings resulted in only 1,492,399 salmon being harvested, 98% by set gillnet gear in the Alitak District. Majority of salmon harvested were from the Kitoi Bay Hatchery "supplemental cost recovery" fishery (approximately 6,437,666 pink salmon).

Appendix H.2. Commercial salmon harvest by gear type in the Kodiak Management Area, 1992.

## CAPE IGVAK MANAGEMENT PLAN

THE REGULATORY REQUIREMENTS OF THIS PLAN ARE DESCRIBED IN THE 1992 COMMERCIAL FINFISH REGULATION BOOK. A DIAGRAM OF THE CHRONOLOGICAL REQUIREMENTS OF THIS PLAN IS SHOWN BELOW ALONG WITH THE BIOLOGICAL AND ALLOCATION CRITERIA OF THIS PLAN. THE HARVEST PROJECTIONS FOR THE CHIGNIK SOCKEYE RETURN INDICATES THAT THE EARLY-PRODUCTION WILL BE ABOVE AVERAGE AND THAT THE LATE PRODUCTION SHOULD CONTINUE AT OR ABOVE AVERAGE.

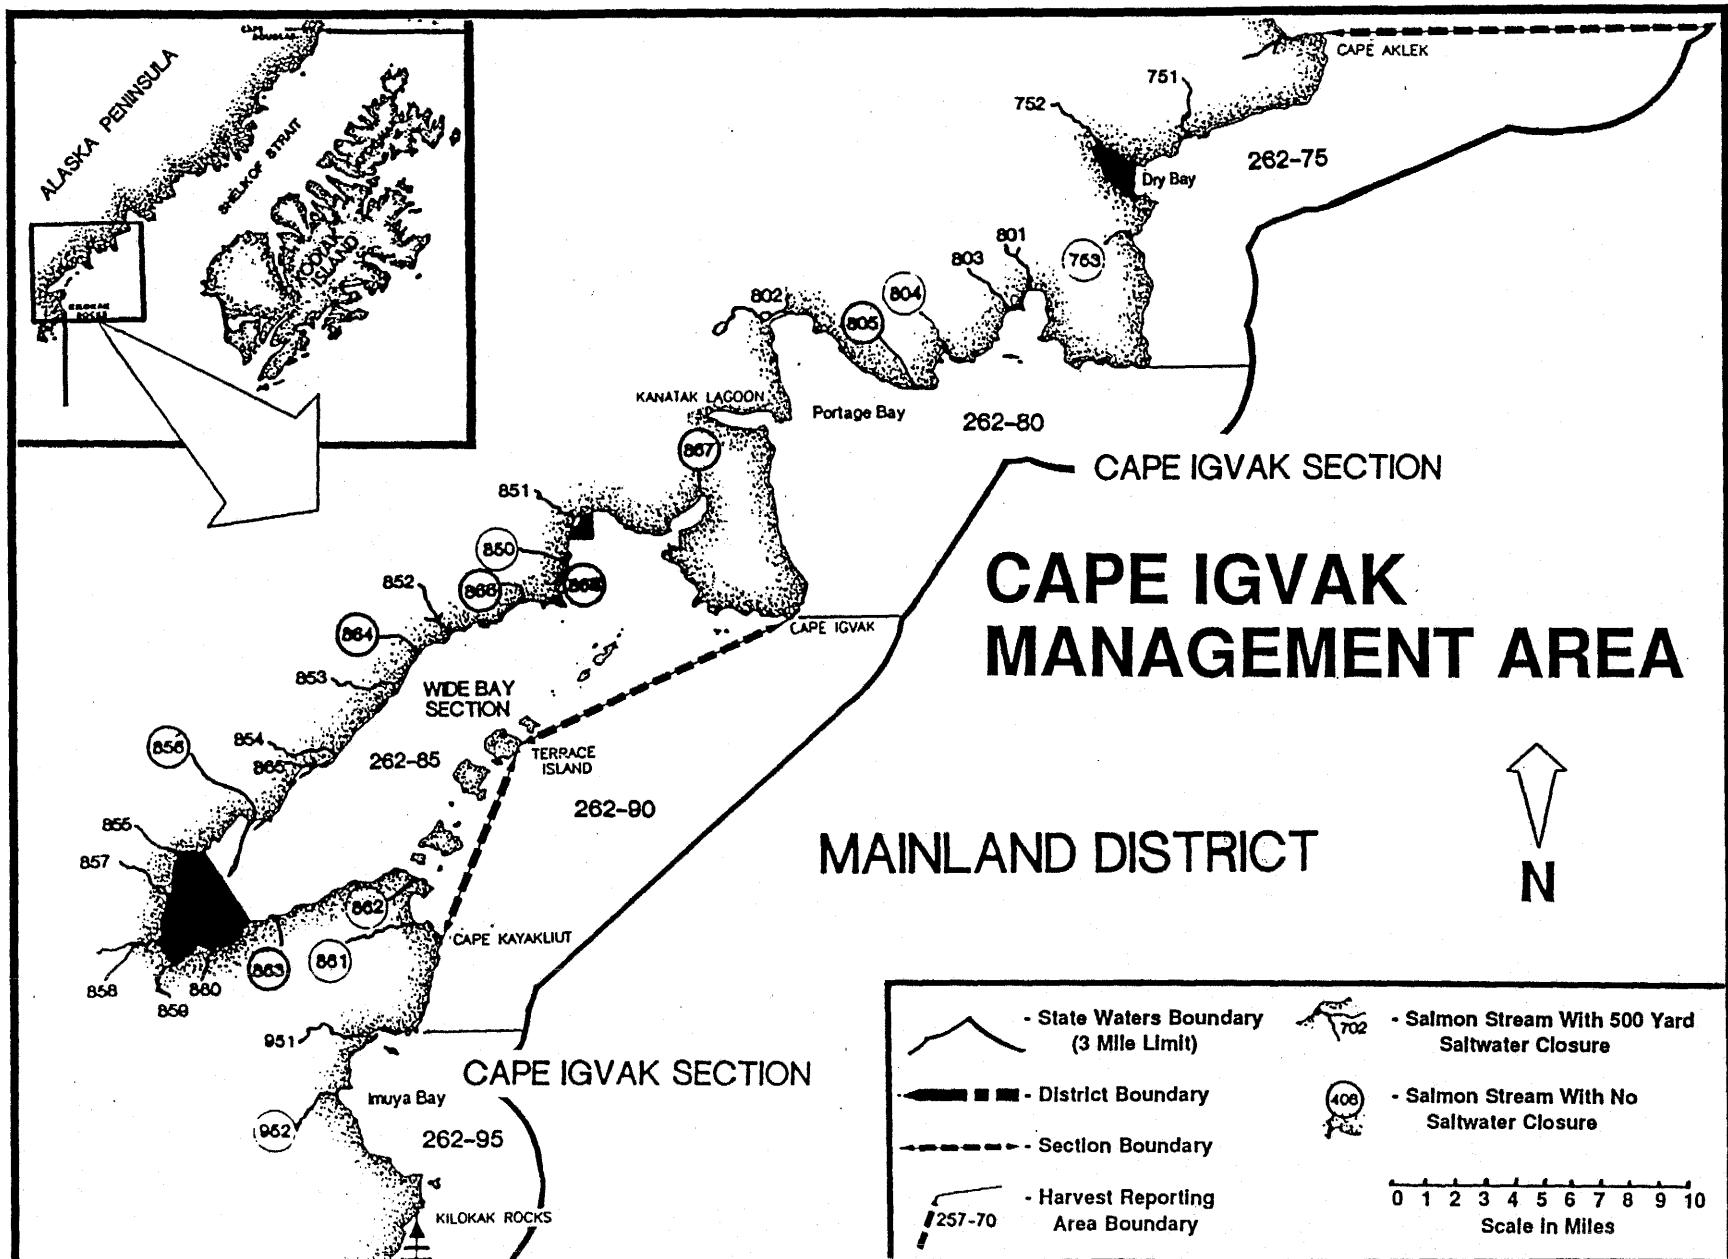

### MANAGEMENT CHRONOLOGY FOR CHIGNIK-BOUND SOCKEYE AND KODIAK SALMON

	CHIGNIK SOCKEYE STOCKS (EARLY RUN)	CLOSED OR SEVERLY LIMITED	CHIGNIK SOCKEYE STOCKS (LATE RUN)	KODIAK-BOUND STOCKS AND/OR CHIGNIK LATE RUN STOCKS
6/1	6/5	6/26	7/9	7/25

### BIOLOGICAL AND ALLOCATIVE CRITERIA FOR MANAGING THE CAPE IGVAK FISHERY ON CHIGNIK-BOUND SOCKEYE

BIOLOGICAL REQUIREMENTS			ALLOCATIVE REQUIREMENTS		
REGULATION 5AAC 18.360	ESCAPEMENT NEEDS		REGULATION 5AAC 18.360	CHIGNIK MINIMUM HARVEST	IGVAK %
	CHIGNIK (EARLY RUN)	CHIGNIK (LATE RUN)

1992 <sup>i</sup>	1,066,732	81.25	152,358	11.60	93,845	7.15	1,312,935	

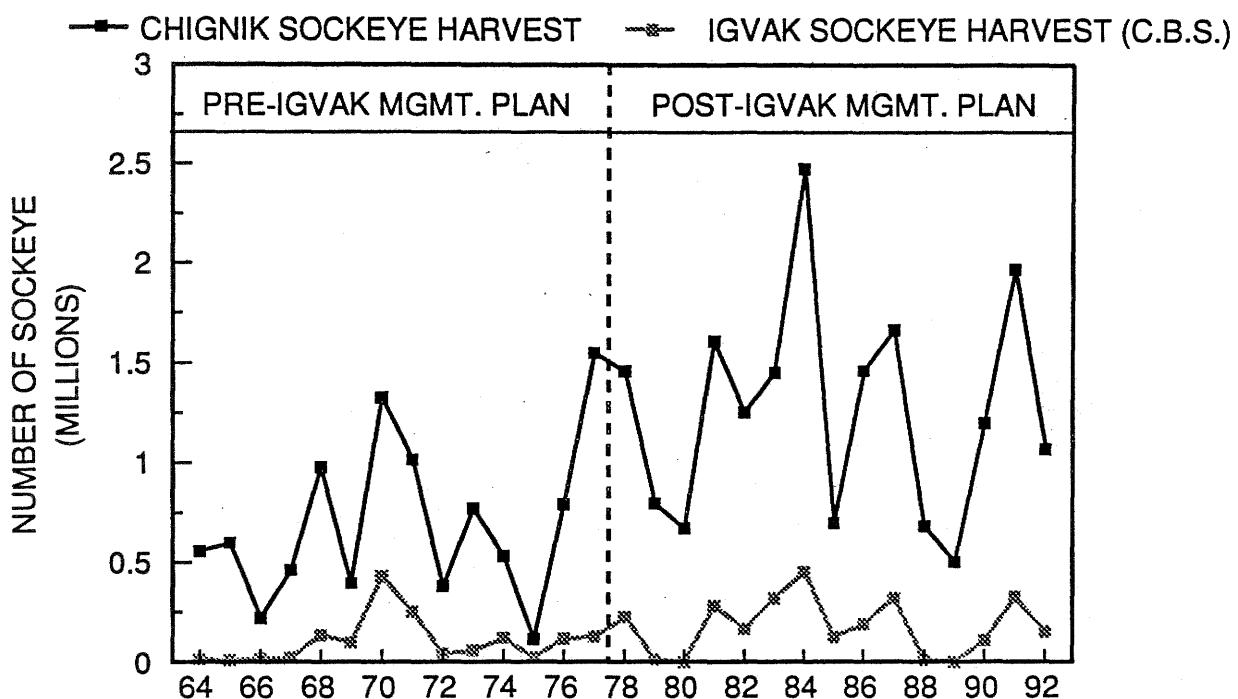

<sup>a</sup> The Cape Igvak and Southeast District Mainland figures represent 80% of the total sockeye catches for those areas as it is estimated that roughly 80% of the sockeye caught in the Cape Igvak section and Southeast District Mainland Area are destined for Chignik.

<sup>b</sup> The data from 1964 - 1972 are based on total yearly catches. Prior to 1973, Cape Igvak and Southeast District Mainland fisheries were set by regulation to weekly fishing periods, usually 5 days per week. Time modifications were implemented when poor escapements occurred at Chignik.

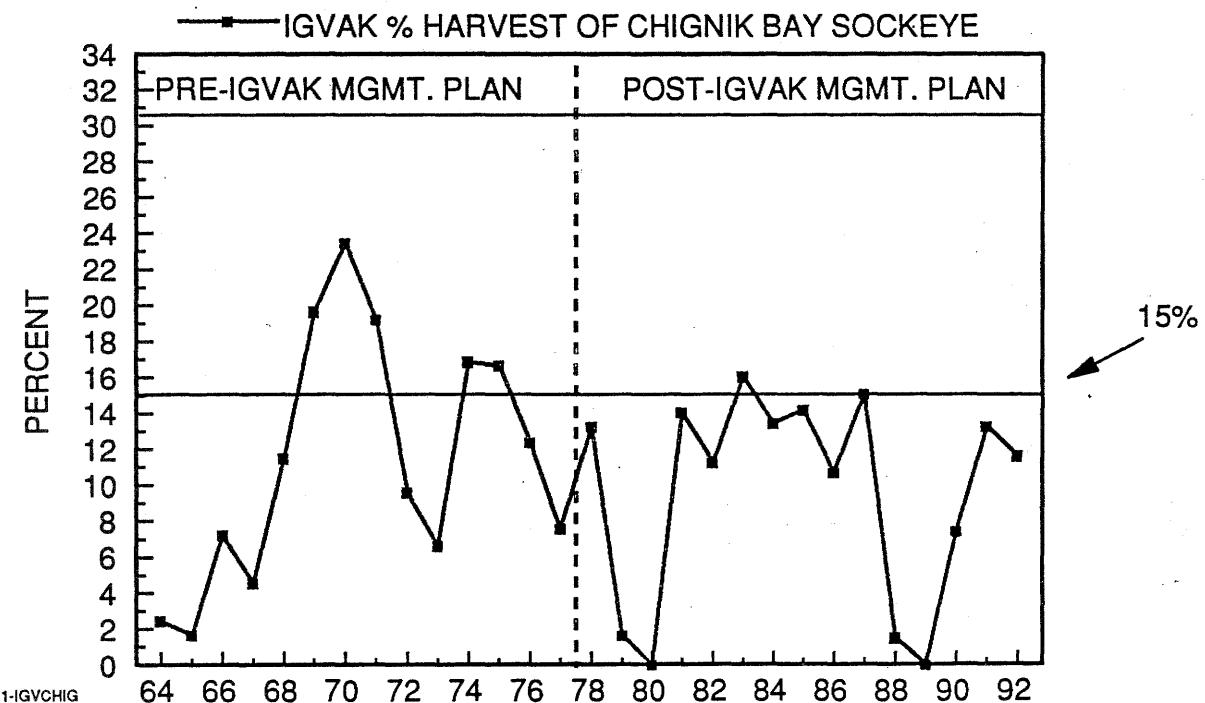

-Continued-

- c During 1973 through 1977 all three fisheries were managed on a day by day basis.
  - d From 1978 - 1991, the Cape Igvak Fishery Management Plan allocated 15 percent of the total sockeye catch destined for Chignik.
  - e During 1978, seining prior to July 11 was disallowed in the Southeast District Mainland. The set gillnet fishery was allowed to fish 3 days per week through July 10 after which the fishery was managed on the basis of local stocks.
  - f During 1979-1984 and prior to July 11, fishing was allowed 5 days per week in the Southeast District Mainland Area (including Beaver Bay) with an estimated ceiling of 60,000 sockeye destined for Chignik. If the Chignik Area sockeye catch was 1,000,000 or more before July 11, the 60,000 ceiling was to be dropped.
  - g Beginning in 1985, Southeast District Mainland Area was placed on an allocation of 6.2 percent of the total estimated Chignik sockeye catch through July 25. After July 25, Southeast District Mainland Area is managed on a local stock basis. The allocation changed back to an even 6 percent beginning in 1988. Seining is still not allowed prior to July 11.
  - h Includes over escapement of 278,305 sockeye counted past the weir during the Chignik Area seiners' boycott (Jun 23 - Jul 4).
  - i Review of Orzinski Lake historical and current escapement records led the Board to redefine the Southeast District Mainland Management Plan. Beginning in 1992, the Southeast District Mainland fishery exclusive of the Orzinkie Bay was placed on an allocation of 7.0 percent of the total estimated chignik sockeye catch through July 25.
-

### HARVEST COMPARISONS

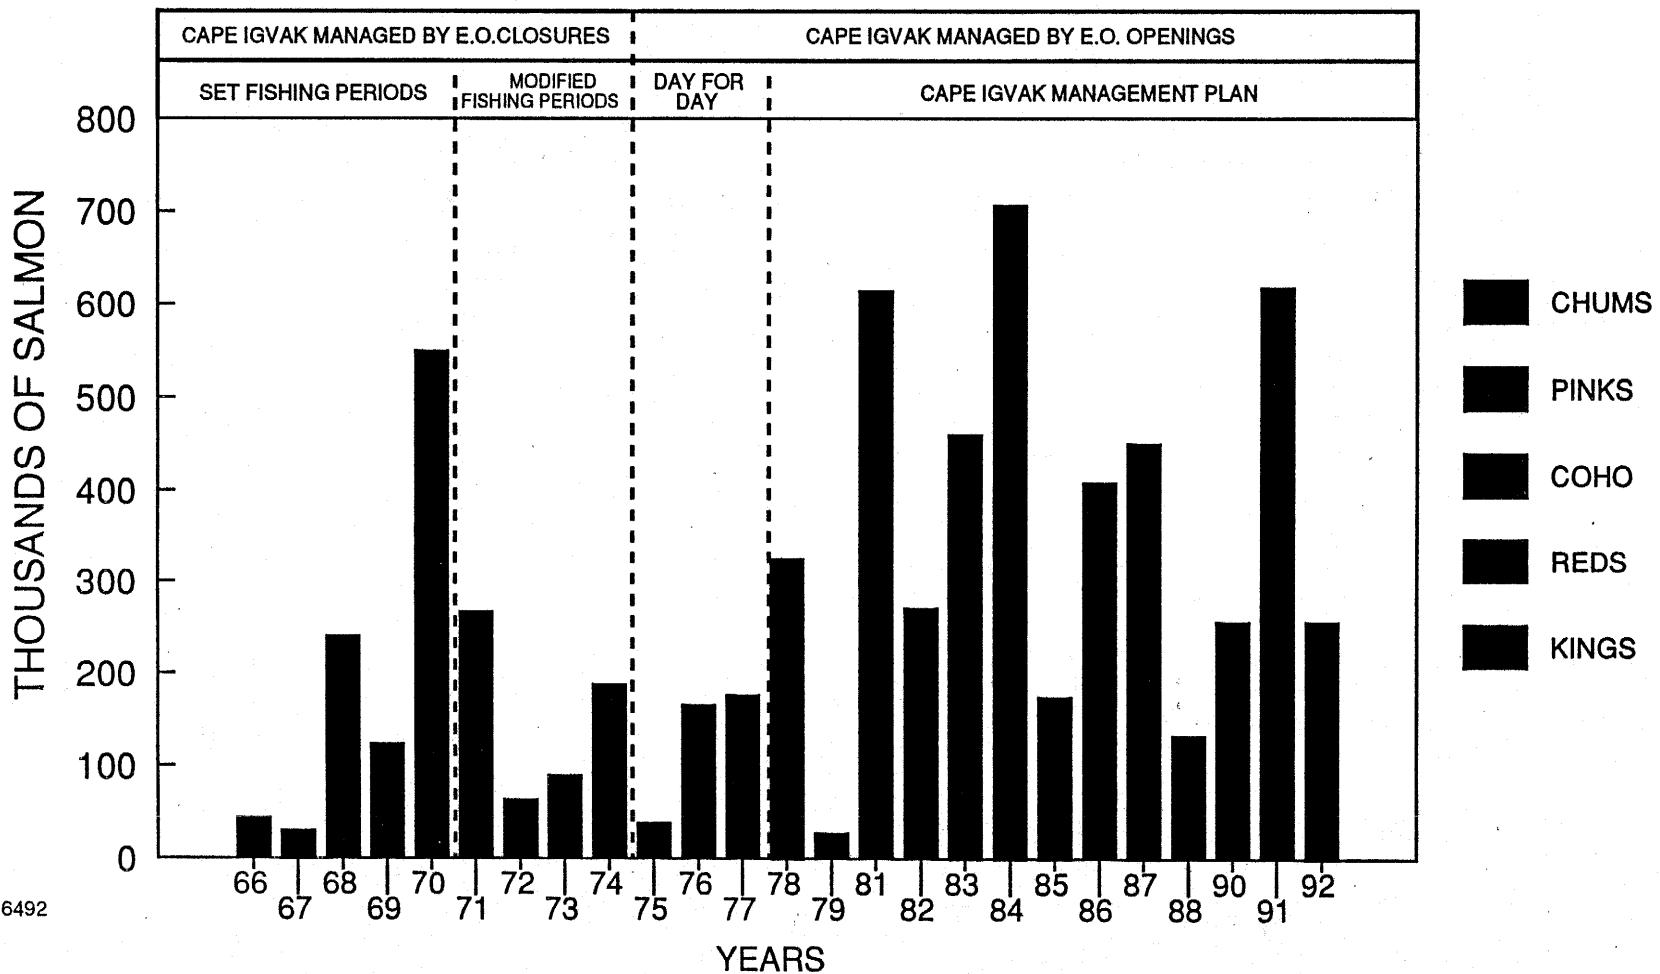

### PERCENT HARVEST OF CHIGNIK-BOUND SOCKEYE IN CAPE IGVAK FISHERY

<sup>a</sup> Does not include statistical areas associated with the Cape Igvak sockeye salmon fishery, includes only statistical areas 251-10 to 262-70. Data is derived from ADF&G fish ticket files, and is based on individual deliveries.

<sup>b</sup> Total of all sockeye salmon delivered in this time period which had an average weight of 6 pounds or greater.

<sup>c</sup> Total of all sockeye salmon harvested in this time period.

## **KODIAK AREA: SUBSISTENCE FINFISH**

### **ARTICLE 10. - KODIAK AREA.**

**5 AAC 01.500. DESCRIPTION OF KODIAK AREA.** The Kodiak Area includes all waters of Alaska south of a line extending east from Cape Douglas (58°52' N. lat.), west of 150° W. long., north of 55°30' N. lat.; and east of the longitude of the southern entrance of Imuya Bay near Kilokak Rocks (156°20'13" W. long.).

**5 AAC 01.510. FISHING SEASONS.** (a) Salmon may be taken for subsistence purposes from 6:00 a.m. until 9:00 p.m. from January 1 through December 31, with the following exceptions:

(1) from June 1 through September 15, salmon seine vessels may not be used to take subsistence salmon for 24 hours before, during, and for 24 hours after any open commercial salmon fishing period;

(2) from June 1 through September 15, purse seine vessels may be used to take salmon only with gill nets and no other type of salmon gear may be on board the vessel.

(c) Fish other than salmon may be taken at any time unless restricted by the terms of a subsistence fishing permit.

**5 AAC 01.520. LAWFUL GEAR AND GEAR SPECIFICATIONS.** (a) Unless restricted by this section or under the terms of a subsistence fishing permit, fish may be taken by gear listed in 5 AAC 01.010(a).

(b) Salmon may be taken only by gill net and seine.

(c) Halibut may be taken only by a single hand-held line with not more than two hooks attached to it.

(d) Subsistence fishermen must be physically present at the net at all times the net is being fished.

**5 AAC 01.525. WATERS CLOSED TO SUBSISTENCE FISHING.** The following locations are closed to the subsistence taking of salmon:

(1) all waters of Mill Bay and all those waters bounded by a line from Spruce Cape to the northernmost point of Woody Island, then to the northernmost point of Holiday Island, then to a point on Near Island opposite the Kodiak small boat harbor entrance and then to the small boat harbor entrance;

## KODIAK AREA

(2) all freshwater systems of Little Afognak River and Portage Creek drainage in Discoverer Bay;

(4) all waters closed to commercial salmon fishing in the Barbara Cove, Chiniak Bay, Saltery Cove, Pasagshak Bay, Monashka Bay and Anton Larsen Bay as described in 5 AAC 18.350, and all waters closed to commercial salmon fishing within 100 yards of the terminus of Selief Bay Creek and north and west of a line from the tip of Last Point to the tip of River Mouth Point in Afognak Bay;

(6) all waters 300 yards seaward of the terminus of Monks Creek;

(7) from August 15 through September 30, all waters 500 yards seaward of the terminus of Little Kitoi Creek;

(8) all freshwater systems of Afognak Island;

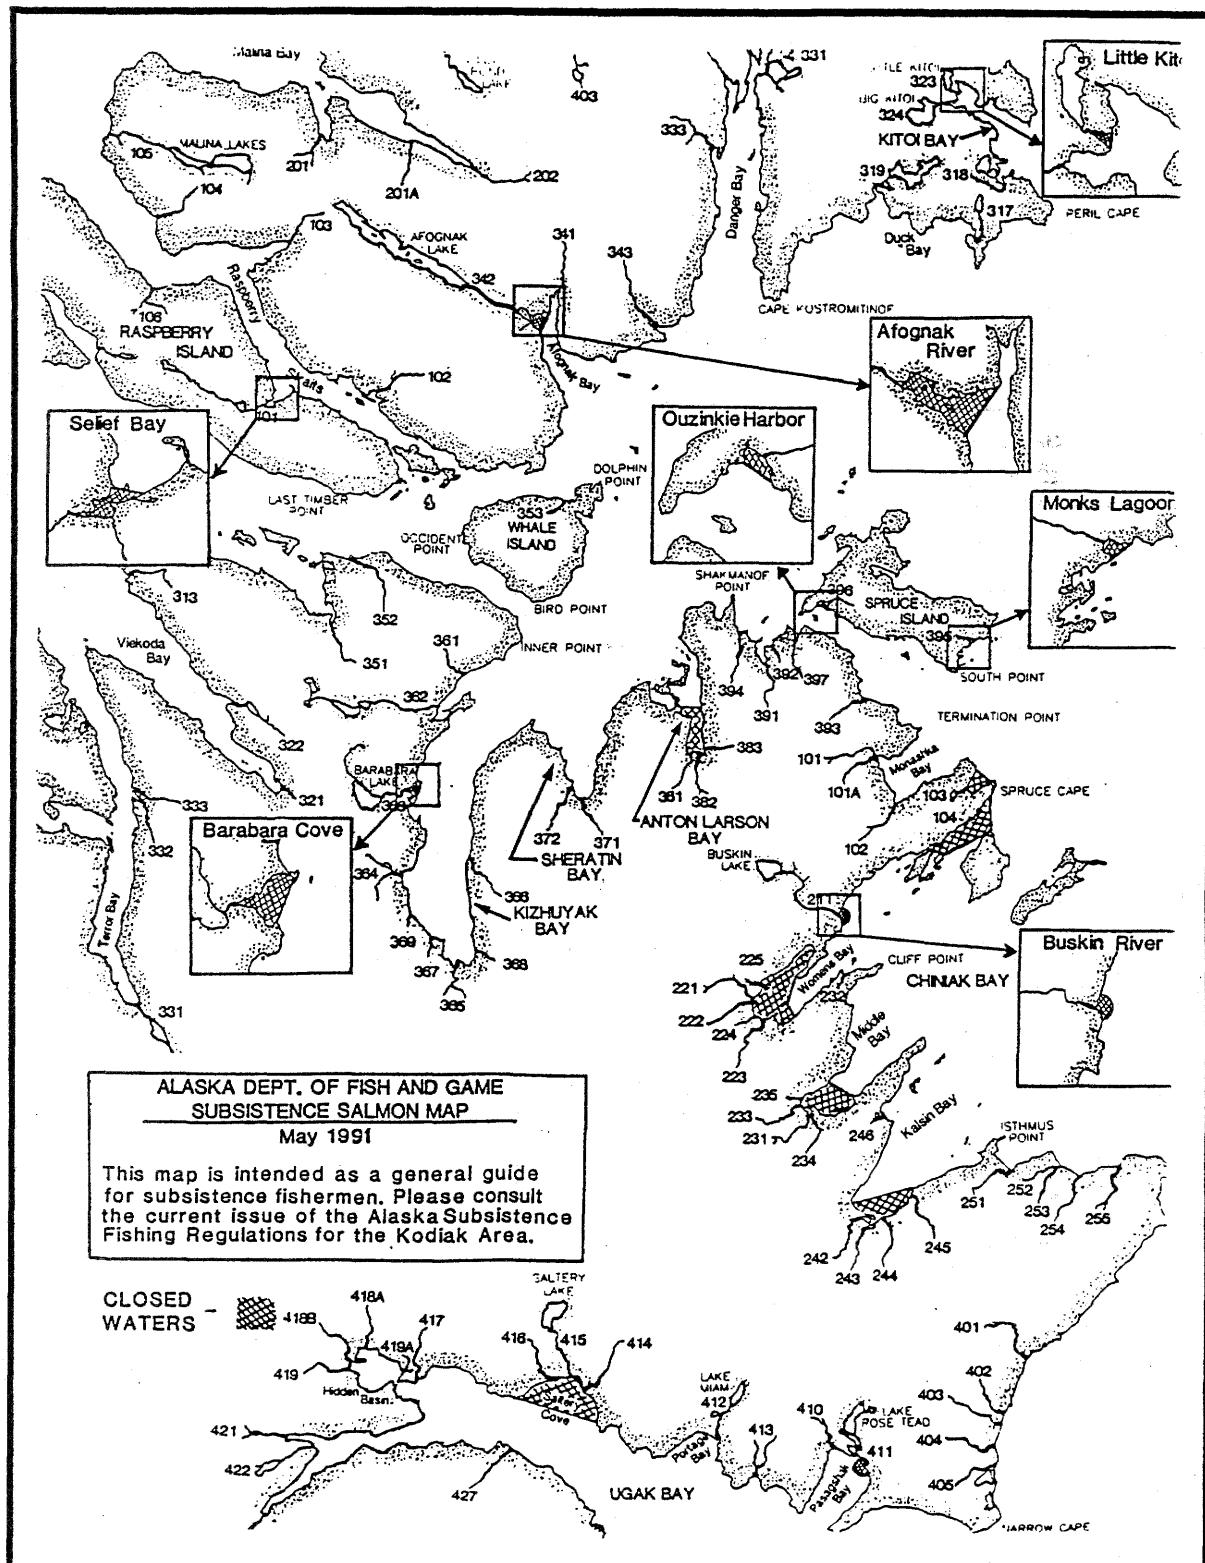

(9) all waters of Ouzinkie Harbor north of a line from 57°55'10" N. lat., 152°36' W. long. to 57°55'03" N. lat., 152°29'20" W. long.

**5 AAC 01.530. SUBSISTENCE FISHING PERMITS.** (a) A subsistence fishing permit is required for taking salmon, trout and char for subsistence purposes. A subsistence fishing permit is required for taking herring and bottomfish for subsistence purposes during the commercial herring sac roe season from May 1 through June 30.

(b) A subsistence salmon fishing permit allows the holder to take 25 salmon plus an additional 25 salmon for each member of the same household whose names are listed on the permit. An additional permit may be obtained if it can be shown that more fish are needed.

(c) All subsistence fishermen shall keep a record of the number of subsistence fish taken each year. The number of subsistence fish taken shall be recorded on the reverse side of the permit. The record must be completed immediately upon landing subsistence caught fish and must be returned to the local representative of the department by February 1 of the year following the year the permit was issued.

**5 AAC 01.545. SUBSISTENCE BAG AND POSSESSION LIMITS.** The daily bag limit for halibut is two fish and the possession limit is two daily bag limits. No person may possess sport-taken and subsistence-taken halibut on the same day.

**Appendix M.2. Subsistence salmon fishing map showing closed waters near the City of Kodiak, 1992.**

## EXAMPLE OF COMPLETED SUBSISTENCE PERMIT

<b>KODIAK SALMON SUBSISTENCE PERMIT</b>						
PERMIT NUMBER <b>000</b>	PERMITTER NAME <b>John Doe</b>					
	ADDRESS <b>123 Main St.</b>	YEAR <b>1992</b>	I CERTIFY THAT I AM AN ALASKAN RESIDENT, AND ANY SALMON TAKEN WILL BE USED FOR SUBSISTENCE PURPOSES ONLY.			
Subsistence fisherman's name and address						
DEPARTMENT SIGNATURE  <i>John Doe</i>	PERMITTER SIGNATURE <b>John Doe</b> DATE <b>4/15/92</b>					
	Subsistence fisherman's signature and date					
ADDITIONAL MEMBERS OF SAME HOUSEHOLD TO BE INCLUDED ON PERMIT (RESIDENTS ONLY)  <b>Jane, Joan, David</b>	ADDITIONAL MEMBERS OF SAME HOUSEHOLD TO BE INCLUDED ON PERMIT (RESIDENTS ONLY)					
	Names of household members for whom the permittee will be collecting subsistence salmon					
TOTAL NUMBER OF SALMON PROVIDED FOR ON THIS PERMIT <b>100</b>						
SUBSISTENCE HARVEST LOG						
TRIP DATE	SPECIFIC LOCATION	NUMBER OF SALMON BY SPECIES				
		CHINOOK	SOCKEYE	CORO	PINKS	CHUMS
PLEASE RETURN THIS PERMIT BY JANUARY 31, 19 <b>93</b> TO: ALASKA DEPARTMENT OF FISH & GAME, 211 MISSION ROAD, KODIAK, AK 99615						
<b>SALMON SUBSISTENCE FISHERMAN REMINDER</b>						
<ul style="list-style-type: none"> <li>-- BE FAMILIAR WITH <u>ALL</u> SUBSISTENCE REGULATIONS DISTRIBUTED WITH THIS PERMIT. ADDITIONAL COPIES OF REGULATIONS AVAILABLE AT KODIAK FISH AND GAME OFFICE.</li> <li>-- ALL PERSONS MUST HAVE A VALID SALMON SUBSISTENCE PERMIT IN POSSESSION WHILE TAKING OR ATTEMPTING TO TAKE SUBSISTENCE SALMON. PERSONAL SUBSISTENCE PERMITS ARE NON-TRANSFERABLE.</li> <li>-- SUBSISTENCE SALMON FISHING IS ALLOWED DAILY BETWEEN 6:00 A.M. AND 9:00 P.M.</li> <li>-- LAWFUL GEAR: GILLNET (MAXIMUM LENGTH 50 FATHOMS) AND SEINE. PURSE SEINES MAY BE USED FOR SUBSISTENCE FISHING ONLY BEFORE JUNE 1 AND AFTER SEPTEMBER 15. SALMON SEINE VESSELS MAY NOT BE USED FOR 24 HOURS BEFORE, DURING, OR FOR 24 HOURS AFTER ANY OPEN COMMERCIAL SALMON FISHING PERIOD.</li> <li>-- THIS PERMIT EXPIRES DECEMBER 31, AND CATCH REPORTS ARE DUE BY JANUARY 31. CATCH REPORTS MUST BE SUBMITTED TO ADFG BEFORE A NEW PERMIT WILL BE ISSUED.</li> <li>-- COMPLETE THE SUBSISTENCE HARVEST LOG ABOVE <u>IMMEDIATELY UPON LANDING FISH</u>.</li> <li>-- FOR EACH SUBSISTENCE TRIP RECORD DATE, LOCATION, AND HARVEST BY NUMBER OF FISH.
