FOREWORD

The protection of the marine and coastal environment is mandated by the Outer Continental Shelf (OCS) Lands Act of 1953, the National Environmental Policy Act of 1969, and the OCS Lands Act Amendments of 1978. An essential responsibility of the Department of the Interior (DOI), as manager of the OCS Leasing Program, is to ensure that proposed OCS development and production activities will not irreparably damage the marine environment and its resources. To help meet this responsibility as it applies to development of the Alaska OCS, the Outer Continental Shelf Environmental Assessment Program (OCSEAP) was initiated by interagency agreement between DOI's Bureau of Land Management (BLM, now Minerals Management Service, MMS) and the Department of Commerce's National Oceanic and Atmospheric Administration (NOAA).

The objectives of OCSEAP are as follows:

1. To provide information about the OCS environment that will enable DOI to make sound management decisions regarding the development of mineral resources on the OCS;

2. To acquire information that will enable DOI to identify those aspects of the environment that might be affected by oil and gas exploration and development;

3. To establish a basis for predicting the effects of OCS oil and gas activities on the environment; and

4. To acquire impact data that may result in modification of leasing stipulations, operating regulations, and OCS operating orders in order to permit more efficient resource recovery with adequate environmental protection.

In each OCS area for which oil and gas development is proposed, extensive studies must be conducted to meet these objectives before development is allowed. If the studies show that development of specific areas will result in unacceptable environmental impacts, those areas either will not be leased or mitigating measures will be designed to alleviate the impacts.

In response to the OCSEAP objectives and the environmental issues identified for each lease area, the scientific objectives of OCSEAP research as well as individual research projects are planned according to combinations of subdivisions of the following general study elements:

1. Contaminant Distribution: Determination of the predevelopment distribution and concentration of contaminants commonly associated with oil and gas development.

2. Environmental Hazards: Identification and estimation of the potential hazards posed by the environment to petroleum exploration and development.

3. Pollutant Transport, Weathering, and Fate: Determination of the ways in which contaminants would move through the environment and how they would be altered by physical, chemical, and biological processes.

4. Living Resources: Determination and characterization of the biological populations, communities, and ecological systems that are subject to impact from petroleum exploration and development.

5. Effects: Determination of the potential effects of contaminants and other insults on living resources.

Research, data management, and information synthesis under OCSEAP are planned and conducted by the Alaska Office of the Ocean Assessments Division, Office of Oceanography and Marine Assessment, National Ocean Service, NOAA, U.S. Department of Commerce, under interagency agreements with MMS, U.S. Department of the Interior.

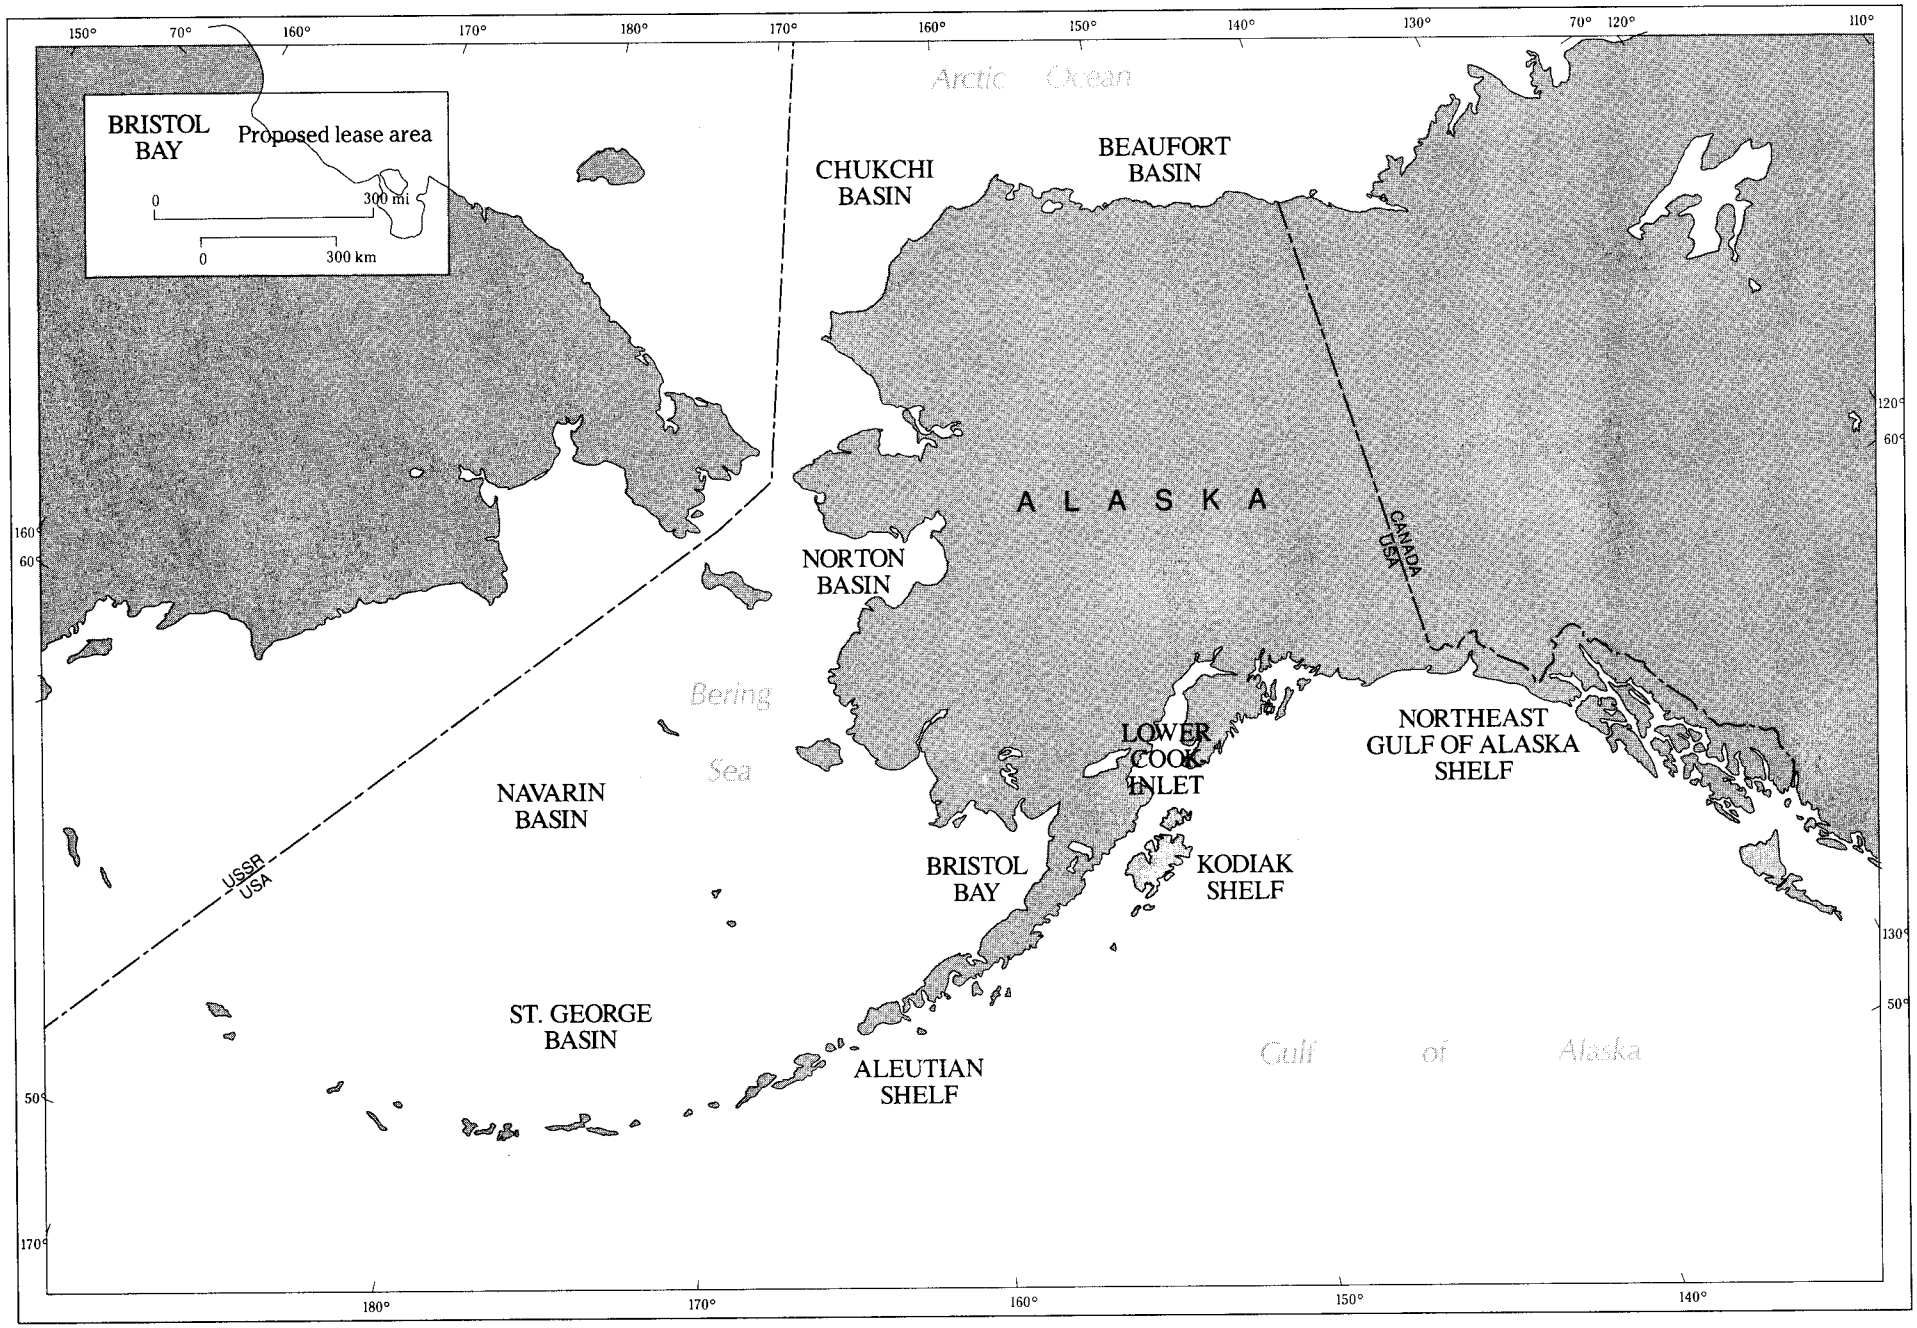

This bibliography is a compilation of publications and reports that have resulted from research funded by OCSEAP since its inception in 1975 and is an updated version of the Comprehensive Bibliography published in January 1988. Certain other publications that have appeared in other government documents, books, or refereed literature relating to environmental problems associated with oil and gas development are included in the bibliography. The Alaska Office attempts to provide copies of documents on request; some, however, are now available from the National Technical Information Service (NTIS). (NTIS numbers for published volumes of reports are referenced in Section V of this document.)

Geographic and disciplinary keyword descriptors are associated with each citation in the bibliography. The geographic descriptors are the original BLM-proposed lease areas and the regional codes ARCTIC, BERING, and/or GULF, or NON-SITE, as appropriate. The Research Unit (RU) associated with each publication or report is listed by RU number at the end of the citation.

The bibliography consists of five sections. In Section I, citations are sorted alphabetically by author. In Section II, citations are sorted numerically by citation number. Sections III, IV, and V provide cross-reference information: (III) lease areas and disciplines to citation numbers, (IV) research unit numbers to citation numbers, and (V) published report volume numbers to NTIS numbers and citation numbers.

This bibliography has been produced from a computerized file that is routinely updated at the Alaska Office to include new citations on OCSEAP-related research. Additional copies of the bibliography may be obtained from the following source:
