

ALASKA POWER AUTHORITY  
SUSITNA HYDROELECTRIC PROJECT

PROGRESS REPORT  
FOR  
AUGUST 1981

ACRES AMERICAN INCORPORATED  
1000 Liberty Bank Building  
Main at Court  
Buffalo, New York 14202  
Telephone: (716) 853-7525

**ALASKA POWER AUTHORITY  
SUSITNA HYDROELECTRIC PROJECT  
MONTHLY PROGRESS REPORT**

**Report No. 19**

**Period: August 1981**

Progress Report No. 19 covers the activities on the Susitna Hydroelectric Project for the month of August 1981.

Task 1, Power Studies, is complete.

Task 2, Survey and Site Facilities, continued with flights being maintained by Alyeska Air Services and Larry's Flying Service as required. Camp occupancy at both High Lake Lodge and the Watana camp continued at capacity levels for the month. Major quantities for the power development construction were estimated to be factored into the logistics study for the access alternatives.

Task 3, Hydrology, continued with the quarterly progress review meeting being held on August 18-20, 1981. The meeting addressed the major work load to be completed and established priorities for this information required for the final draft of the feasibility report. Professor R. Carlson, Acres' Consultant, reviewed R&M's Regional Flood Studies Report. Historical storms were analyzed to estimate the probable maximum flood (PMF). The HEC-2 model and the ice simulation model are being calibrated. Based on temperature modeling results, intake structure designs are being studied. Studies on post-project water temperatures have commenced.

R&M reduced the 1980 and 1981 data to date during the month. Through-the-hydrograph sampling and suspended sediment samples were collected. A purchase order to MRI was issued to process all data tapes collected to June 1981. The climatic summaries for Watana and Devil Canyon are expected by mid-September. A plan of study for navigation space studies on the Lower Susitna was prepared with the Alaska Department of Natural Resources.

Task 4, Seismic Studies, continued with a site visit by the Task Supervisor for the purpose of reviewing the progress of the field activities.

WCC commenced an analysis of historic events in and surrounding the Talkeetna terrain. Analysis of worldwide Benioff zone earthquakes also commenced during the month. Field mapping has been completed along thirteen faults and lineaments at both damsites. Preparation for the 1981 final field season will begin in early September. The trenching program has been completed.

Task 5, Geotechnical Investigations, continued with ongoing field activities; reduction and analysis of data, and engineering layouts, design, and cost estimates. Acres' comments on photo interpretation have been forwarded to R&M for finalization. Subsurface drilling continued throughout the month of August.

Nothing has been discovered, to date, during drilling at the powerhouse that would adversely affect the suitability of the area for a powerhouse. All

drilling in this area is to be completed by the end of September. Fracture logging of cores recovered during 1981 continued during the month. Diamond drilling was completed for BH-1 and BH-3 at the Watana site. Auger drilling of the borrow areas was completed.

R&M activities for the month included the drafting of terrain unit maps and summary report. This report has been reviewed by Acres and returned to R&M for finalization. Auger drilling was completed at Borrow Area D, and samples for testing were taken from Borrow Areas H and D. Fault trench excavations were completed.

Task 6, Design Development, continued by updating the design criteria report. A revised section of the main dam with steeper side slopes has been derived. A dynamic analysis of the arch dam based on finite element analysis has commenced. Alternative spillway schemes for Watana have been estimated, and cascade schemes have been developed. Devil Canyon spillway alternatives of flip bucket and stilling basin schemes are being analyzed. Preliminary camp designs and arrangements were produced during the month. Revised camp loadings have been received, and layout revisions are ongoing. Free-flow and submerged tunnel schemes are being developed in conjunction with schemes for low level releases for the Watana site. The Devil Canyon diversion scheme tunnel diameter/coffer-dam height optimization study is being revised because of new tailwater elevations and hydraulic parameters.

Task 7, Environmental Studies, continued with emphasis on coordination of information flow between Acres, ADF&G, TES, and other subcontractors. Report schedules were drafted and information priorities established. Acres participated in the first meeting of the Fisheries Mitigation Task Force. A response was prepared to APA's comments regarding the environmental portion of the Development Selection Report.

TES participated in report scheduling and coordination discussions. Contractual matters were discussed with Acres and an escalation report prepared.

The TES Resident Manager planned and conducted a tour of the Susitna Project area for Mr. Q. Edison of FERC. A separate helicopter tour of the Project area was also conducted by TES Resident Manager for eight members of the Susitna Steering Committee. Discussions were held with Acres and FO&A regarding the Work Package 4 Forecast. The field portion of the 1981 Cultural Resources Analysis Program ended with a total of 110 sites located since project initiation. All cultural material from reconnaissance and systematically tested sites has been catalogued and accessioned into the University of Alaska Museum.

Preliminary land use data was supplied to the Alaska Department of Natural Resources. The Recreation Planning Group Leader met with the Recreation Planning Coordinator at the University of Alaska.

Six subtask leaders from TES conducted a helicopter overflight of the proposed transmission line corridors. Meetings were also held with agencies to gather pertinent information. TES participated in the Fisheries Mitigation Task Force meeting and continued to assist ADF&G in field activities and report preparation.

Wildlife ecology field studies continued with work on radio tracking and avian surveys. Dr. Banfield spent several days in the field to review the potential for impacts to the Nelchina caribou herd. The Wildlife Ecology Group Leader held meetings with ADF&G and the University of Alaska concerning schedules and data requirements. Plant ecology field studies continued, and a helicopter overflight of the proposed access road route was conducted.

Task 8, Transmission, continued with the first draft of the Preliminary Transmission System Analysis planning memorandum which will review the work to June 15 in electric system studies. Commonwealth Associates has reviewed and concurred with Acres' conductor selection for the Devil Canyon to Anchorage transmission line. A copy of the Susitna transmission lines system planning criteria and single-line diagram was forwarded to Commonwealth for their review. Work on the transmission line routing is awaiting the results of field studies by other tasks.

Task 9, Construction Cost Estimates and Schedules, continued with the Task Supervisor and Acres' Senior Cost Estimator visiting the site to review the methods of construction to be utilized at Watana and Devil Canyon. The trip emphasized borrow material sources and excavation and foundation requirements. Also, a review of the access road alternatives was discussed. Discussions were held with FMA, and a cost-estimate package was received and reviewed. A meeting was held with a representative of Morris and Knudsun to review construction methods used in this region.

Task 11, Marketing and Finance, continued with several investment banking firm representatives visiting the site during the month.

Task 12, Public Participation, continued with Acres reviewing a newsletter prepared by APA. A discussion was held on the public comments regarding access road routing alternatives.

Task 13, Administration, continued with the updating of the project schedule. The subcontractors have submitted their cost escalation figures for 1980 and the first half of 1981. Acres is currently analyzing these figures.

Task 14, ADF&G Support, continued at a low level of activity during the month. Negotiations were concluded regarding outdoor storage at the existing warehouse for winter storage of boats and equipment.

## TASK 1 - POWER STUDIES

Task complete.  
TSI

## TASK 2 - SURVEY AND SITE FACILITIES

### ACRES ACTIVITIES

#### Subtask 2.02 - Provision of Field Camps and Associated Logistics Support

Flight services continued to High Lake Lodge from Alyeska Air Services at Merrill Field. Periodic flights by Larry's Flying Service in Fairbanks were made to the site to ferry University of Alaska field personnel.

Camp occupancy at both High Lake Lodge and the Watana camp remained at full levels throughout the month. Demobilization of the 15-person archaeological camp was planned at the end of the month. Total personnel in the field during the month peaked at approximately 75 for Acres and subcontractors, exclusive of ADF&G personnel.

#### Subtask 2.06 - Right of Entry

The last trenching site to explore seismic geology on the Talkeetna Thrust was cleared.

#### Subtask 2.10 - Access Roads

Indirectly, under Task 9, major quantities for the power development construction were estimated. The major quantities of mechanical and electrical equipment included turbines, generators, gates, valves, and other appurtenant items. These quantities will be factored into the logistics study for the access alternatives. Environmental data gathering, being carried out under Task 7, is almost complete.

## TASK 3 - HYDROLOGY

### ACRES ACTIVITIES

#### General

The quarterly progress review meeting was held during August 18-20, 1981, in R&M's offices. G. Krishnan of Acres was in Anchorage to conduct the meetings. Overall project progress is satisfactory. Several aspects of the studies need to be accelerated to meet the revised deadline of March 15, 1982, for the final draft feasibility report. The meeting addressed the major work load to be completed in the next few months and set priorities to ensure timely information transmittal to other study participants.

#### Subtask 3.03 - Field Data Collection and Processing

Routine monitoring of R&M field work and processing of data continued.

### Subtask 3.05 - Flood Studies

The Regional Flood Studies Report prepared by R&M was reviewed by Acres' consultant, Professor R. Carlson, of the University of Alaska, and his comments were discussed with R&M. A final response to Dr. Carlson's comments has been sent to him. R&M will make minor alterations to their report before final issue. Detailed analyses have been performed to estimate the PMF and associated dew point values. Historical storms have been analyzed for revised flood reconstitution studies and revised SSARR model runs were made to estimate the probable maximum flood in the basin. Minor refinement to the SSARR model parameters is being made prior to finalizing the PMF estimates.

### Subtask 3.06 - Hydraulic and Ice Studies

Computer runs were completed for the river reach between Chulitna confluence and Portage Creek to calibrate the HEC-2 open water model. The reach between Deadman Creek and Devil Creek is now being analyzed. Work continued on data input and calibrating of the ice simulation model. Based on the results of the reservoir temperature modeling, intake structure designs are being studied. Studies on post-project water temperatures below the dams are underway.

### Subtask 3.07 - Sediment Yield and River Morphology

The work plan formulated by R&M for morphological studies has been finalized. Acres is exploring possible involvement of Dr. C. R. Neill of the University of Alberta as expert consultant to review R&M's work.

### Subtask 3.10 - Lower Susitna Studies

Several hydrologic analyses of historical river flows required for environmental assessment of pre-project conditions have been carried out by R&M and USGS under Acres' direction. A meeting with TES on September 1, 1981, has been arranged to finalize formats and schedule for information transmittal.

## R&M ACTIVITIES

### Subtask 3.03 - Field Data Collection and Processing

All USGS and R&M stream gages are operating satisfactorily. R&M reduced the 1980 and the first half of 1981 data during the month. Minor maintenance was performed on several glacier snowmakers. The Martek water quality monitor was repaired and recalibrated by Martek and then installed in the Susitna River. Through-the-hydrograph sampling was performed three times at Vee Canyon and twice at Gold Creek. Suspended sediment data and water quality data were gathered at the same time. The second bedload sampling trip was conducted by USGS and R&M with no problem. Suspended sediment samples were collected for the settling column studies. All climatic stations are operating well. A purchase order was issued to MRI to process all data tapes collected through June 1981. The climatic summaries are expected by mid-September for the Watana and Devil Canyon sites.

#### Subtask 3.05 - Flood Studies

R&M responded to the comments made by Dr. Carlson, University of Alaska.

#### Subtask 3.06 - Hydraulic and Ice Studies

Calibration and verification of the HEC-2 water surface profile model were completed for the river between Devil Canyon and Talkeetna, and the results were transmitted to Acres as water surface elevations at selected cross sections.

#### Subtask 3.07 - Sediment Yield and River Morphology Studies

A literature search on the trap efficiency of lakes and glacial rivers and of the settling characteristics of glacial suspended sediment was initiated. The final report on the river will be delivered September 11. An extensive interim report on the river morphology from Devil Canyon to the confluence of the Susitna, Chulitna, and Talkeetna Rivers will be completed by early September.

#### Subtask 3.10 - Lower Susitna Studies

R&M is nearing completion of flow duration and low- and high-flow analyses of major rivers in the Susitna River system as input to Subtasks 3.04, 3.07, and 3.10. A plan of study for navigation studies near major boat-launching sites on the Lower Susitna was prepared with the Alaska Department of Natural Resources.

### TASK 4 - SEISMIC STUDIES

#### ACRES ACTIVITIES

During the first week of August, the Task Supervisor visited the project site to review the progress of the field activities. A brief discussion was held with the WCC field team as to the approach and preliminary findings on the ongoing field studies. It was agreed that WCC will excavate a trench across the Susitna Feature to increase the confidence level in resolution of the feature.

A review of the letter describing alternative approaches to preparation of the long-term seismologic monitoring program manual was completed by the Acres' Buffalo office. Recommendations were sent to Acres' Alaska office for further review.

#### WCC ACTIVITIES

#### Subtask 4.08 - Preliminary Dam Stability Analysis

This task is included as part of Subtask 4.13.

#### Subtask 4.09 - Long-term Seismologic Monitoring Program

Analysis of historic events in and adjacent to the Talkeetna Terrain has commenced. This analysis is based on interpretation of seismograms recorded at the

time of the events in the 1920s and 1940s. Preliminary results from this analysis are expected in early September 1981.

Analysis of worldwide Benioff Zone earthquakes has commenced. This analysis of the locations of large earthquakes on the Benioff Zone is expected to be completed by early September 1981.

Work on the network monitoring manual will commence in September 1981. Alternatives are being reviewed.

#### Subtask 4.10 - Reservoir-Induced Seismicity

A statistical model of the relationship between reservoir-induced seismicity and in situ, noninduced seismicity has been developed. This model will be used to provide input for the seismic exposure analysis of ground motion for dam design.

#### Subtask 4.11 - Seismic Geology Field Studies

Field mapping has been completed along the thirteen faults and lineaments at both damsites. Preparation for the 1981 final field review will commence on September 1, 1981.

The trenching program has been completed with the excavation of two trenches across the Talkeetna thrust fault and one trench across the Susitna feature. Trench T-1 was excavated south of Fog Creek and east of Stephan Lake. Trench T-2 was excavated south of Talkeetna Hill, west of the confluence of the Talkeetna River and Iron Creek. Trench S-1 was excavated near Deadman Creek, east of Deadman Mountain. Dr. Kerry Sieh of Caltech assisted Woodward-Clyde Consultants' field personnel in the trench logging.

All trenches have been logged and photographed. The trenches have been left open at present and will be backfilled after the review in September 1981.

Phil Birkhahn and Jon Lovgreen of WCC met informally with George Plafker and Bela Csejtey of the U.S. Geological Survey on July 30, 1981, respectively. Selected locations along the Talkeetna thrust fault and Susitna feature were examined. The purpose of the meetings was to exchange information informally on these two features.

#### Subtask 4.14 - Dam Stability Consulting Services

Consulting services were provided by Maury Power at Acres' request to establish earthquake input parameters for preliminary dynamic response analysis of Watana dam.

### TASK 5 - GEOTECHNICAL INVESTIGATIONS

#### ACRES ACTIVITIES

##### General

Acres' work on Task 5 through the month of August has involved continued field

activities and reduction and interpretation of data necessary for engineering layouts, design, and cost estimates.

Subtask 5.02 - Photo Interpretation

Acres' comments on photo interpretation have been forwarded to R&M for their cooperation and finalization. The final report for R&M is expected during September 1981.

Subtask 5.05 - Exploratory Program Design (1981)

Work under this subtask consisted of locating holes in the proposed powerhouse area on the right abutment at Watana. Work continued in defining the soil and rock testing programs for both sites.

Subtask 5.06 - Exploratory Program (1981)

Subsurface drilling of the Watana site continued throughout the month of August. BH-1 was drilled on the right abutment at Watana to investigate the seismic line anomaly downstream from the proposed centerline. BH-13 was relocated from the proposed "Fins" structure and drilled into the area of the proposed powerhouse on the right abutment. The rock quality in this hole was good to excellent. Nothing was found in the hole that would adversely impact the suitability of the area for a powerhouse. A second powerhouse hole is proposed to be drilled following completion of BH-13. All drilling onsite is expected to be completed by the end of September.

Geologic logging of the Corps of Engineers and Bureau of Reclamation's cores from Watana and Devil Canyon was performed by Acres' personnel in Anchorage. Following this, additional field mapping in the reservoir areas will be performed in September. Data reduction and interpretation of all field work continued in the Buffalo office throughout the month.

Relogging of drill core for the 1980 program was completed in August. Fracture logging on core recovered during 1981 continued throughout the month. Diamond drilling was completed at BH-1 to 300 feet and BH-3 to 950 feet at the Watana site. Permeability testing was completed in BH-12. Auger drilling in the borrow areas was completed at all sites. Seismic geology trenching was completed.

Subtask 5.08 - Data Compilation

Preparation of geologic maps, cross sections, boring logs, and data lists continued through the month of August.

R&M ACTIVITIES

Subtask 5.20 - Photo Interpretation

Draft terrain unit maps and summary report have been reviewed by Acres American and returned to R&M for revision and inclusion of north access corridor photo mapping.

Subtask 5.05 - Exploratory Program Design, 1981

Planning, scheduling, and preparation for field programs continued.

Subtask 5.06 - Exploratory Program, 1981

Auger drilling was completed in Borrow Area D, and samples from Areas H and D were returned to R&M's lab for testing. Testing schedules are currently being developed. Three holes were drilled in the Devil Canyon area to explore for impermeable materials.

Fault trench excavations were completed. Trenches have been left open for review.

Survey ties for seismic lines, test pits, test holes, and diamond boreholes were ongoing.

Diamond core drilling and pressure testing were completed for BH-W1 and BH-W3 at Watana.

TASK 6 - DESIGN DEVELOPMENT

ACRES ACTIVITIES

Subtask 6.09 - Design Criteria for the Watana Development

Subtask 6.10 - Design Criteria for the Devil Canyon Development

An updated copy of the design criteria has been substantially completed.

Subtask 6.11 - Preliminary Design of Watana Dam

A revised section of the main dam with steeper upstream slopes has been derived based on further discussions and review of world experiences. A dynamic analysis of the arch dam based on finite element analysis has commenced.

Subtask 6.15 - Watana Spillway Alternatives

Alternative spillway schemes have been costed and alternative flip bucket and cascade schemes have been developed in conjunction with valve releases acting on the service spillway.

Subtask 6.16 - Devil Canyon Spillway Alternatives

Further comparison of flip bucket and stilling basin schemes has continued in conjunction with valve type releases to replace the submerged orifice spillway and reduce nitrogen supersaturation and downstream erosion.

Subtask 6.20 - Access and Camp Facilities

Preliminary camp designs and layouts were produced during the report period.

Revised camp loadings have been received, and revised camp layouts are proceeding. A minimum of two alternative camp concepts are being evaluated along with a minimum of two camp locations.

#### Subtask 6.21 - Watana Diversion Scheme

Free-flow and submerged tunnel schemes are being developed in conjunction with schemes for low-level releases. Incorporation of the permanent low-level outlet into one of the diversion tunnels has necessitated revising the tunnel-diameter/cofferdam-height optimization study. Work is continuing on the design of the low-level outlet. Preliminary design of the cofferdam continued and a cross section was developed.

#### Subtask 6.22 - Devil Canyon Diversion Scheme

The tunnel-diameter/cofferdam height optimization study is being revised to incorporate new tailwater elevations and other hydraulic parameters. Preliminary design of the cofferdam continued in conjunction with Subtask 6.21. The optimum diameter and the height of the upstream cofferdam have been established.

### TASK 7 - ENVIRONMENTAL STUDIES

#### ACRES ACTIVITIES

##### Subtask 7.01 - Administration

Numerous discussions were held with ADF&G, TES, and other subcontractors regarding coordination of information transfers between various task supervisors. Discussions were also held with APA regarding the formal agency coordination process. Responses to APA's comments on the environmental portion of the Development Selection Report were prepared.

##### Subtask 7.05 - Socioeconomic Analysis

Discussions were held with TES regarding development of the Work Package 4 Forecast and information required to conduct the socioeconomic analysis.

##### Subtask 7.08 - Recreation Planning

Discussions were held with TES regarding distribution of the second questionnaire on recreation plans and the interrelationship of access road and recreation planning studies.

##### Subtask 7.09 - Transmission Analysis

A meeting was held with TES to discuss transmission route selection. The environmental section of the Transmission Corridor Screening Report was revised to depict the methodology and results more clearly.

##### Subtask 7.10 - Fish Ecology Studies

Acres' Environmental Coordinator attended the Fisheries Mitigation Task Force

meeting in Seattle. Extensive discussion was pursued to ensure compatibility with the Wildlife Task Force.

#### Subtask 7.11 - Wildlife Ecology Studies

Discussions were held with TES concerning downstream moose studies and schedule of input from ADF&G to TES for the feasibility report.

#### Subtask 7.14 - Access Route Analysis

Discussions were held with TES regarding their input into the access route analysis.

### TES ACTIVITIES

#### Subtask 7.01 - Administration

By telephone and meeting, TES discussed the proposed October workshop with members of APA's Public Participation staff. TES was subsequently informed by Acres that no formal workshop would be held.

TES received comments on the draft Schedule of Work Products distributed on July 23, 1981. The ADF&G big game team, ADF&G fish team, and Acres have all reported that it will not be possible to meet all the requests described in this memorandum.

An updated TES Information Needs List and Schedule was transmitted to Acres. This list itemizes the input by TES and Acres, Acres' other subcontractors, and ADF&G.

TES completed general cost and budget reviews for Task 7. As requested by Acres, TES submitted an escalation report covering the first half of 1981 and a list of project personnel and salaries.

The TES Resident Manager coordinated a tour of the Susitna Project area for Mr. Q. Edson, FERC. The TES Environmental Study Manager then accompanied Mr. Edson, Jim Gill, and Robert Mohn in the field as the environmental programs, project scope, and preliminary findings were reviewed.

In addition, a tour of the Susitna Project area was arranged for eight members of the Susitna Steering Committee. The TES Resident Manager also conducted a tour of the Watana camp, archaeology camp, and archaeology field activities at the Butte Lake site for Mr. Bruce Bedard, APA Native Inspector and Contract Compliance Agent.

#### Subtask 7.02 - Field Monitoring

The end of August 1981 brought with it the completion of various aspects of the summer field program. As a result, the TES Field Representative was finalizing office matters and preparing to leave the field. She will return periodically over the late fall-early winter months as field activities of TES subcontractors dictate.

### Subtask 7.05 - Socioeconomic Analysis

Discussions were held between the TES Environmental Studies Director and Group Leader for Socioeconomic Analysis and John Hayden of Acres concerning development of the Work Package 4 Forecast. As directed, TES/FO&A will proceed with the current scope of work, i.e., generic forecast, pending receipt of new ISER map outputs.

Acres' Environmental Coordinator and the Group Leader discussed types of information necessary to proceed with the socioeconomic analysis. While in Alaska during August, the Group Leader participated in an overflight of the proposed transmission corridors.

During August, the Socioeconomic Consultants prepared and transmitted to TES an analysis of socioeconomic factors related to access alternatives.

### Subtask 7.06 - Cultural Resources Analysis

The field portion of the 1981 program ended on August 31. During the three-and-one-half-month field season, 54 survey locales and Borrow Area C were examined for cultural resources. In addition, areas associated with geotechnical programs were also examined at the reconnaissance level. Based on this work, 73 new sites were located and documented. This brings the total number of sites located during both field seasons to 110. In addition to locating and recording sites, 16 sites were subjected to systematic testing. All cultural material from both reconnaissance and systematically tested sites has been catalogued and accessioned into the University of Alaska Museum. Carbon samples have been submitted for C14 dating in hopes of obtaining dates for cultural units, as well as for assisting in dating the volcanic tephra noted in the area. At present, the preparation of graphics is underway and will continue for the next few months. Cultural resource investigators participated in an overflight and limited ground-testing of proposed transmission corridors. One archaeological site was found.

An APA photographer visited the project and took photographs of the archaeology tent camp, as well as, a systematic test site.

### Subtask 7.07 - Land Use Analysis

During August, the Group Leader participated in the overflight of transmission corridors. Land use and aesthetic factors were assessed. While in Alaska, the TES Group Leader met with DNR to assist in analysis of project flows and relationships to navigational use. Locations for the installation of additional transects were identified based on existing and potential use of Susitna channels, sloughs, and tributaries. Preliminary data were also supplied to DNR concerning historical and present use of the Susitna drainage. The Group Leader also met with Acres' instream flow consultant to aid in coordination of the overall hydrologic assessment.

Meetings were held with the Principal Investigator and other land use team members concerning the outline for report preparation. Land use and aesthetic concerns were discussed in relation to Exhibit E regulations and incorporation of data in the report.

#### Subtask 7.08 - Recreation Planning

The Group Leader reviewed the draft recreation plan outline and content as they stand to date. Comments were transmitted to the recreation planning coordinator in meetings held at the University of Alaska. Minor changes will be incorporated into subsequent drafts, and the means for incorporation of additional data as they become available was determined. This related primarily to selection of an access plan and the upcoming participation survey.

The recreation planning team provided a working draft copy of the survey instrument to be used.

#### Subtask 7.09 - Transmission Line Analysis

In August, the TEST Group Leader traveled to Anchorage, Fairbanks, and the Watana Base Camp to review transmission corridors. On August 13, representatives of six Task 7 subtasks flew the entire proposed primary corridor. The subtask areas of socioeconomic, cultural resources, land use, recreation, transmission, and plant ecology were involved in the fly over. In addition, frequent stops were made to check for cultural resources and to verify plant community types previously mapped.

Following the overflight, ground visits were made to selected line locations in both the southern and northern study areas. In addition, contacts with agencies were held to gather information pertinent to the corridor route selection process. Also, maps requested by Acres and needed for corridor route selection were provided by TES.

#### Subtask 7.10 - Fish Ecology Studies

The major activity of the Fish Ecology Study Team during the month was an August 10 and 11 meeting held in Seattle, which was attended by members of the Fisheries Mitigation Task Force Technical Group.

Alaska-based activities included the continuation of assistance to the field operations and report preparations being undertaken by ADF&G. Additional dissolved gas measurements were taken in the Devil Canyon region with supersaturated values being reported.

Additional activities included the continuation of literature searches with more emphasis on impact and mitigation issues, subarctic and arctic lakes, and estuarine studies of relevance to the Susitna project.

#### Subtask 7.11 - Wildlife Ecology Studies

During the early part of August, the Wildlife Ecology Group Leader visited Alaska with Dr. A. W. F. Banfield to review the potential for impacts on the Nelchina caribou herd. Dr. Banfield spent several days in the field and gained familiarity with the key portions of the caribou range that may be impacted by the project, including all of the access route alternatives. Mr. Reed visited

Drs. Kessel and Gipson in Fairbanks to discuss upcoming schedule and report commitments. He also visited Mr. Karl Schneider of ADF&G in Anchorage to discuss the ability of ADF&G to provide necessary information needed for the preparation of an impact statement. Mr. Schneider indicated that it would be impossible for all portions of the big game report to be ready by the requested deadline of November 2, 1981; however, he will give priority to key information needs and forward the data as soon as available.

Progress was made in the preparation of the habitat value analysis. Although this approach was initially proposed to assist in the selection of a preferred access route, the results will be useful on other aspects of the Susitna Project. All wildlife subcontractors and consultants submitted recommendations concerning their review of the access route alternatives.

Field work by the furbearer investigators continued and centered around the collection of data on red foxes. Six more foxes were fitted with radio collars and five more active dens were located. The monitoring of fox activity around active den sites continued during August. Several surveys of ground squirrel abundance were conducted in alpine areas.

At the present time, only one functional radio collar remains on a marten. Plans for fall include the capture of additional martens for the purpose of radio collaring. The furbearer investigators continued their analysis of aerial transect data collected during 1980.

During the month, post-breeding censusing of birds on the low birch and the alpine plots continued, measuring of habitat variables was completed, and the general bird surveys were continued. Tabulation of the summer's bird data continued. Additional small mammal traplines were established in selected habitats and habitat variables measured; and the lines established in 1980 on the intensive study plots were trapped for a fall sample.

#### Subtask 7.12 - Plant Ecology

With approval of Acres, TES requested R&M Consultants to obtain additional 35mm photographs of the downstream floodplain. Photos were taken on August 24 when the flow at Gold Creek was estimated at 32,000 cubic feet per second. These photos will be used to determine the extent of habitat types at a given flow in the area downstream from Devil Canyon.

The AES continued work in the downstream area. Additional sampling was performed following initial statistical testing of data adequacy.

J. McMullen and Dot Helm participated in a helicopter overflight of a northern transmission line segment, primarily for vegetation mapping. This effort was very important due to the lack of aerial photos between clear MEWS and Healy.

Dr. Hugo Sjors, an expert in bog and peatlands in northern climates who is with Uppsala University in Sweden, was visiting Alaska in August. The AES had corresponded with Dr. Sjors, and a trip was arranged into the Upper Basin. He provided insight into the ecology of the wetlands of the area and answered questions on potential impacts.

AES prepared a report on the various access road alternatives. After review by TES, it was revised and submitted to the Access Road Study Group Leader.

#### Subtask 7.14 - Access Route Analysis

C. Baumgartner (TES Group Leader) traveled to Alaska in early August to fly all viable access routes, particularly new alignments of the northern route to the Denali Highway, and alignments in Stephan Lake and Fog Lake area.

In addition, while in Alaska she met with several subcontractors to discuss their analysis of alternative access plans and their input into the recommendations for the best access plan.

She also met with the U.S. F&WS staff (Anchorage) to discuss Habitat Evaluation Procedures Analyses that they have done in the past. Although not discussed, TES is attempting to use a modified Habitat Evaluation Procedure in relation to access for Susitna.

TES also coordinated with N. Gutcher of R&M with regard to any new road analyses developments (including scheduling related to Access Plans).

Upon returning to Phoenix, the study emphasis shifted to a commencement of analysis of input from subcontractors regarding plan recommendations and preliminary efforts on report preparation for Access Plan recommendations.

#### Subtask 7.15 - Preparation of FERC Application

TES received comments from Acres and TES subcontractors on the draft outline for the abstract, feasibility report and license application, which was distributed on July 31, 1981.

### STEPHEN R. BRAUND & ASSOCIATES ACTIVITIES

Separate field trips to Talkeetna and the McKinley and Cantwell areas were taken for data collection purposes. Data have been filed into topical categories following preliminary analysis and organization. Review of the APA's public testimony and correspondence files continued. Numerous meetings between Tom Lonner and Stephen Braund were held to discuss various aspects of the project.

### TASK 8 - TRANSMISSION

#### ACRES ACTIVITIES

The notes of meetings during the month of April with several utilities were forwarded in final form to the utilities and APA.

#### Subtask 8.01 - Transmission Line Corridor Screening

The draft of the closeout report was completed and distributed internally for review.

#### Subtask 8.02 - Electric System Studies

Work continued on the first draft of a planning memorandum entitled, "Preliminary Transmission System Analysis." This memorandum will review all the work completed on electric system studies up to June 15, 1981.

During this period, Commonwealth Associates reviewed Acres' conductor selection of 954 kcmil for the transmission line from Devil Canyon to Anchorage and concurred with the conclusions. A letter confirming the results of this review was received from APA. APA did not comment on Acres' selection of 795 kcmil for the lines from Devil Canyon to Fairbanks. A telephone discussion was held with Commonwealth with reference to the insulation level of the Susitna transmission lines. A copy of system-planning criteria and single-line diagram was forwarded to Commonwealth.

#### Subtask 8.03 - Transmission Line Route Selection 1981

It is expected that the results of field studies by other tasks will be available in the near future.

### TASK 9 - CONSTRUCTION COST ESTIMATES AND SCHEDULES

#### ACRES ACTIVITIES

Acres' Senior Cost Estimator and Task 9 Coordinator visited Anchorage and the Susitna site during early August. A review of the methods of construction to be employed at both Watana and Devil Canyon was made with particular emphasis placed on borrow material sources and excavation requirements. In addition, a review was made of the alternative access road routing from both the Denali Highway and the Parks Highway. Proposed locations for the Watana campsite and airstrip were also reviewed.

Discussions were held with Frank Moolin & Associates, and a cost information package prepared by them was received and reviewed. Discussions were also held with R&M concerning access road locations and the proposed airstrip site. In addition, a brief discussion was held with a senior representative of Morrison-Knudsen.

Work on Task 9 during the latter part of August included an assembly of information gathered in Alaska as a step towards the production of preliminary estimates and schedules required for Watana and Devil Canyon during October and November.

### TASK 11 - MARKETING AND FINANCE

#### ACRES ACTIVITIES

Several representatives of investment banking firms, including First Boston, visited the site accompanied by Eric Yould and Jim Gill on August 6.

### TASK 12 - PUBLIC PARTICIPATION

#### ACRES ACTIVITIES

During August, Acres reviewed a draft of a newsletter, as prepared by APA. An environmental workshop was discussed, and it was decided that the workshop was

not required at this time. Also discussed were public comments on the access road decisions.

### TASK 13 - ADMINISTRATION

#### ACRES ACTIVITIES

##### Subtask 13.04 - Develop Schedule Control System

Work continued on monitoring and updating the project schedule to September 7, 1981.

##### Subtask 13.05 - Cost Control

Work continued with an in-house computer providing a parallel cost report to the present Lanier System. An edited computer report will be submitted to APA for review in the near future.

During the month, the subcontractors submitted their revised escalation calculations for 1980, plus their escalation estimates for the six-month period ending June 1981. Acres is in the process of tabulating and analyzing the effects of this escalation. Other administrative functions continued routinely.

### TASK 14 - ADF&G SUPPORT

#### ACRES ACTIVITIES

Purchasing for ADF&G support continued at a relatively low level of activity. Negotiations were concluded with the warehouse owner for provision of the adjacent storage yard for winter boat storage.

Buffalo, New York 14202

RE: Monthly Report, August 1981

Dear Dr. Hayden:

## **ADMINISTRATIVE SUPPORT**

August was a busy month for the Administrative support staff. Tom Trent traveled to Juneau where he presented the ADF&G staff a status report on the Su Hydro Aquatic Studies. While in Juneau he held meetings with Commissioner Skoog, Deputy Commissioner Collinsworth, Sport Fish Division Director Andrews and Biometrician Mills to discuss the Phase I reporting schedule and expedition of the Boeing Computer Services contract through state channels.

A letter responding to comments on the Procedures Manual was drafted and submitted to Commissioner Skoog's office.

Tom traveled to Seattle to meet with TES and Acres American representatives in the first meeting of the Fisheries Mitigation Task Force Core Technical Group.

An APA-FERC-TES tour of the study area was hosted at the Talkeetna fishwheel/sonar camp where a description of ongoing field work was presented to the group.

A Su Hydro Steering Committee meeting was attended by Tom where Woody Trihey and Dana Schmidt discussed instream flow and fish and wildlife studies from their perspective.

Tom spent two days in the field with the Yentna Adult Anadromous ground survey and RJ/AH field crews reviewing their activities.

Larry Bartlett administered the Su Hydro office in Tom Trent's absence. He coordinated visits to field camps by a newspaper reporter and an ADF&G Publications Specialist from Juneau. Other tasks, in addition to routine office duty, undertaken by Larry were for the most part centered around writing reports, report scheduling and coordinating office procedure with Acres American staff.

Dr. John Hayden

September 10, 1981

### DATA PROCESSING

Review of computer data input form design for the various project sections was undertaken by the newly hired Data Control Clerk. Some refinement was required which will facilitate processing of data collected in the field.

The Programmer and Biometrician traveled to Fort Collins, Colorado to participate in the U.S. Fish and Wildlife Services Instream Flow Group computer analysis course. The course covered the theoretical background and general instructions to the IFG's Water Surface Profile, IFG-4 and Habitat computer simulation models.

The last two weeks of August saw input and analysis on data necessary for completion of the adult chinook salmon report. Daily thermograph data supplied by the AH project for selected Susitna and tributary sites were pulled together. Sex, length and age composition data collected at the 5 fishwheel sites was analyzed. Graphic presentations and analysis techniques were also considered.

### FIELD STUDIES

The impoundment area was sampled for the fourth time this summer between August 13 and 26. Eight streams were sampled with both angling and set gear. Angling, however, was the most productive fish capture technique.

Arctic grayling dominated the combined gear catch with 306 fish taken. A breakdown of area of capture for these and other species are listed in Table 1 from the trip report.

Catch rates were the lowest of any survey in the impoundment area to date with an angling CPUE of 4.6 grayling per hour. High or muddy water was encountered on Watana, Jay, Kosina and Deadman creeks. Air temperatures dipped to 20°F at night and the water temperature in Goose Creek was measured at 40°F.

An electro-shocker was used to sample areas of Goose and Fog Creeks, and the clearwater slough upstream from Jay Creek. The conductivity of the waters ranged from 60 to 400 mhos/cm in the areas electroshocked. The ridged one-piece electrodes appeared to be more effective than the flexible four-piece electrodes. The reason is not known at this time. A number of juvenile fish taken by electroshocker were preserved for subsequent identification and for the first time during the impoundment surveys, an adult Dolly Varden was taken from a backwater area of Fog Creek.

A total of 320 fish were tagged on this trip. Table 3 from the trip report lists the numbers and species tagged. There were a total of 84 tag recoveries plus two grayling that had lost tags.

The west bank of the Oshetna River was fished for the first time since the first trip to the impoundment area. This was because the river is too wide to cast across and on this trip a small raft was available to cross over. With crews fishing both sides, 38 fish were caught from the west bank (5% recaptures) and 50 fish (24% recaptures) from the east bank.

Dr. John Hayden

-3-

September 10, 1981

During the first several days, water levels on the Mainstem Susitna were the highest seen on any trip. By the trip's end however, they were only slightly above the levels normally experienced this summer.

The un-named lake within the proposed impoundment area was again sampled. A total of 25 lake trout and 14 grayling were caught with 12 and 10 respectively, tagged. The lake trout were found to be in spawning condition and most were captured in less than 4 feet of water.

Indian and Portage Creeks were also sampled this trip. In Indian Creek the catch included 154 juvenile chinook, 42 Dolly Varden and 1 rainbow trout. The Portage Creek catch included 109 juvenile chinook, 104 Dolly Varden and 1 rainbow trout. The Dolly Varden ranged to 165 mm and are believed to be sexually mature. Five grayling were also tagged in a Portage Creek pool about 10 miles upstream from the Susitna River confluence.

Resident and Juvenile Anadromous project sampling on the lower river reaches is continuing. Trip reports for the first half of the month from the Yentna Camp crew indicate that 48 hour surveys were conducted at 12 habitat locations between Alexander and Willow Creeks. A total of 246 fish were captured. All species-with the exception of burbot, showed a decline in numbers over previous catches in this reach. A total of 25 fish were tagged and released. These were 14 burbot, 9 sucker and 2 rainbow trout.

The Delta Islands section and upstream section of the river to the Parks Highway Bridge is extremely dangerous during high water periods which were experienced during the first half of the month. Shifting substrate, log jams and sweepers make sampling conditions hazardous.

A total of 1238 fish were captured from August 8th to the 15th in the reach that includes Goose Creek, Sheep Creek Slough and the Kashwitna River. Of these, chinook 0+ represented 52% and coho 0+ represented 35%. In numbers, fish captured 696 chinook 0+, 23 chinook 1+, 469 coho 0+, 60 coho 1+, 6 coho 2+, 13 adult Dolly Varden, 7 adult burbot, 28 cottid and 36 stickleback. Fourteen resident fish were tagged of which 11 were Dolly Varden. Approximately one half of these fish were taken in a trap constructed by modifying a minnow trap.

A trip in the Talkeetna area between August 8th and the 14th produced 22 chinook 0+, 1 chinook 1+, 220 coho 0+, 96 coho 1+, 2 grayling, 6 sucker, 17 burbot, 14 cottid and 98 stickleback. Eleven of the burbot were tagged and released for attempted recapture this winter.

A second trip to the Talkeetna reach resulted in the capture of 28 chinook 0+, 2 chinook 1+, 430 coho 0+, 41 coho 1+, 15 rainbow trout, 1 Arctic Grayling, 1 sucker, 1 round whitefish, 1 humpback whitefish, 22 burbot, 28 cottid and 280 stickleback. A total of 16 burbot, 1 grayling, 8 rainbow trout and 1 sucker were tagged and released.

The water levels were reported to be lower on the second Talkeetna trip than the first.

Through August 16, the Gold Creek crew took 297 chinook 0+ of which 80% were taken from the 4th of July Creek site, 83 coho 0+, 8 rainbow trout,

Dr. John Hayden

-4-

September 10, 1981

2 grayling, 3 sucker, 17 burbot, 8 sculpin, 3 Dolly Varden and 1 stickleback. Eight of the burbot and 3 rainbow trout were tagged and released. A reduction in gill net effort was necessary because of floating debris and milling adult salmon at the habitat locations.

The Aquatic Habitat and Instream Flow crews continued to monitor physical and chemical parameters of the aquatic environment. AH personnel accompanied the RJ crews to all sites sampled as well as 5 selected habitat locations. Temperature, dissolved oxygen, pH, specific conductance and turbidity data for all general habitat locations sampled to date has been summarized for data processing. Data relevant to the chinook salmon report in progress is receiving priority treatment.

Several thermographs have been lost to flood conditions and will have to be replaced. In instances where thermographs were lost, the banks along with numbers of trees had collapsed into the river. In other cases, the thermographs are believed to be attached to their securing lines but buried under several feet of deposited silt and gravel or lodged in log jams. Some staff gages show up to 2 feet of silt deposition.

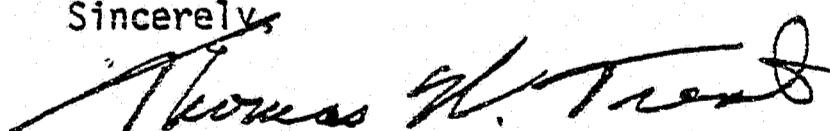

The Adult Anadromous project went smoothly this month with the gear performing well. Some fishing time was lost due to flooding but the gear was not substantially damaged.

Previously unknown spawning sloughs were discovered by the Gold Creek and sunshine crews. Two discoveries are significant - one slough is being utilized by approximately 200 adult salmon of various species and another by approximately 50 sockeyes.

The radio telemetry crew completed tracking operations on chinook salmon and are currently tracking 12 chum and several coho salmon. Analysis of the chinook tracking data was undertaken for the species/subject report on chinook salmon in September.

Daily and cumulative fish counts by species from the Talkeetna, Sunshine, Yentna and Su Station sonar counters are included which display seasons sonar activity to date. Fishwheel catches and unadjusted sonar and fishwheel summaries are included as supporting data.

Sincerely,
