# Transmission Line Reference Book

**345kV and Above/Second Edition**

**Electric Power Research Institute**

**This document is copyrighted material.**

Alaska Resources Library and Information Services (ARLIS) is providing this excerpt in an attempt to identify and post all documents from the Susitna Hydroelectric Project.

This book is identified as APA no. 379 in the Susitna Hydroelectric Project Document Index (1988), compiled by the Alaska Power Authority.

It is unable to be posted online in its entirety. Selected pages are displayed here to identify the published work.

The book is available at call number TK3231.G37 1982 in the UAF – Rasmuson Library collection.

### **Notice**

This report was prepared by General Electric Company as an account of work sponsored by the Electric Power Research Institute, Inc. (EPRI). Neither EPRI, members of EPRI, General Electric Company, nor any person acting on behalf of any of them: (a) makes any warranty, express or implied, with respect to the use of any information, apparatus, method, or process disclosed in this report or that such use may not infringe privately owned rights; or (b) assumes any liabilities with respect to the use of, or for damages resulting from the use of, any information, apparatus, method, or process disclosed in this report.

### **Keywords**

EHV-UHV  
Conductors  
Corona  
Audible Noise  
Electric Fields

### **Ordering Information**

Requests for copies of this book should be directed to Research Reports Center (RRC), Box 50490, Palo Alto, CA 94303, (415) 965-4081. There is no charge for reports requested by EPRI member utilities and affiliates, contributing nonmembers, U.S. utility associations, U.S. government agencies (federal, state, and local), media, and foreign organizations with which EPRI has an information exchange agreement. On request, RRC will send a catalog of EPRI reports.

## **Editor**

J. J. LaForest

## **Editorial Committee**

M. G. Comber  
L. E. Zaffanella

## **Authors**

- Chapter 1 **Project UHV: A Transmission Research Facility**  
J. R. Doyle and L. E. Zaffanella
- Chapter 2 **EHV-UHV Transmission Systems**  
F. J. Ellert, S. A. Miske, Jr., and C. J. Truax
- Chapter 3 **Electrical Characteristics of EHV-UHV Conductor Configurations and Circuits**  
J. R. Doyle, J. J. LaForest, and T. S. Lauber (Rensselaer Polytechnic Institute)
- Chapter 4 **Corona Phenomena on AC Transmission Lines**  
M. G. Comber, D. W. Deno, and L. E. Zaffanella
- Chapter 5 **Radio Noise**  
M. G. Comber and R. J. Nigbor
- Chapter 6 **Audible Noise**  
M. G. Comber, R. J. Nigbor, and L. E. Zaffanella
- Chapter 7 **Corona Loss**  
M. G. Comber and L. E. Zaffanella
- Chapter 8 **Field Effects of Overhead Transmission Lines and Stations**  
D. W. Deno and L. E. Zaffanella
- Chapter 9 **Insulation — Design Criteria**  
J. D. Brown, F. A. Fisher, W. Neugebauer, and J. Panek
- Chapter 10 **Insulation for Power Frequency Voltage**  
K. J. Lloyd and H. M. Schneider
- Chapter 11 **Insulation for Switching Surges**  
K. J. Lloyd and L. E. Zaffanella
- Chapter 12 **Lightning Performance of Transmission Lines**  
J. G. Anderson
- Chapter 13 **Planning and Electrical Design of Transmission Lines**  
D. W. Deno, L. L. Garver, and J. J. LaForest

## Quick Reference Chart for Major Design Items

To facilitate the use of this book by experienced line designers, a portion of the contents of Chapter 13, Sections 13.9 and 13.8, is presented below for quick reference. Section 13.9 summarizes the main design topics covered by this Second Edition, and Section 13.8 summarizes general circulation performance items useful for design. Each topical summary directs the reader to specific design sections elsewhere in the book.

### Design Topics: Line

Switching Surge Insulation	614
Lightning Insulation	615
Insulation for Contamination	616
Ground Electric Field	617
Magnetic Induction	618
Audible Noise	619
Radio Interference	620
Television Interference	621
Corona Loss	621
Ground Wire Design (60 Hz)	622

### Design Topics: Station

Transient Voltage Insulation	623
Insulation for Contamination	624
Corona Performance	624
Corona Shields	625
Ground Electric Field	625

### Circuit Performance Items

Compensation	606
Stability	606
Line Loading	607
Routing	608
Transposition	609
Transmission-Line Protection	610
Power-Line Carrier	611
Environmental Measurements	612
Line Parameters	613

# Contents

<b>Foreword</b>	
<b>Chapter 1 Project UHV: A Transmission Research Facility</b>	<b>1</b>
1.1 Introduction	1
1.2 Description of Project UHV Facilities	2
900-kV Surge Arresters	3
Precision Capacitor	3
Single-Phase Cascade Operation	3
Switching Surge Operation	3
Three-Phase UHV Test Line	3
Insulator Strings	6
Corona Testing Cage	6
Insulator Contamination Research	7
1.3 Instrumentation for Data Acquisition	8
Data Acquisition Computer	8
Instrumentation Systems	8
References	9
<b>Chapter 2 EHV-UHV Transmission Systems</b>	<b>11</b>
2.1 Introduction	11
Role of Transmission	11
General Transmission Design Criteria	11
2.2 Load Growth and Transmission System Evolution	14
Historical Load Growth	14
Forecast Load Growth	14
AC Transmission Line Growth	14
Evolution of DC Transmission	16
2.3 Factors Affecting EHV-UHV Transmission Growth	17
Load Growth	17
Generation Siting	17
Fuel Costs and Availability	18
Reliability	18
Ecology	18
Government	18
Energy Centers	19
2.4 EHV-UHV Transmission System Characteristics	19
Stability Considerations	19
Series Compensation	20
Shunt Compensation	20
Power Transmission Capability	22
2.5 EHV-UHV Line Design — Principal Areas to Be Considered	24
Electrical	24
Environmental	25
2.6 Optimization of Transmission Systems	26
Long-Range Transmission Planning	26
Optimum Line Design	27
2.7 EHV Tower Geometries and Line Characteristics	30
References	62
<b>Chapter 3 Electrical Characteristics of EHV-UHV Conductor Configurations and Circuits</b>	<b>63</b>
3.1 Introduction	63
3.2 Conductor Surface Gradients	63
Gradient Terminology	63
Calculating Conductor Gradients	63
Graphical Method — Single-Circuit Horizontal	64
Graphical Method — Single-Circuit Vertical	75
Graphical Method — Single-Circuit Delta	75
Approximate Method for Single-Circuit Calculations	78
Graphical Method — Double-Circuit	87
Higher Phase Order	88
Distribution of Gradient in a Bundle	88
Asymmetrical Bundle Gradients	99
Graphical Method — Toroidal Shielding Electrodes	100
3.3 Reactance and Resistance of Bundle Conductors	105
Introduction	105
Types of Conductors and Conductor Materials	105
Inductive Reactance	105
Capacitive Reactance	123
Surge Impedance and Surge Impedance Loading	124
Resistance	124
Ground Wires	125
Equivalent Single Conductor	125
Transmission-Line Parameters	125
3.4 Transmission-Line Unbalance	131
Electrostatic Unbalance	131
Single-Circuit Electromagnetic Unbalance	133
Unbalance in Parallel Double-Circuit Untransposed Lines	136
Summary	140
3.5 Induced Voltages on Parallel Lines	140
Electrostatic Induction on the De-energized Circuit	142
Electromagnetic Induction on the De-energized Circuit	142
Appendix 3.1 Calculation of Electric Fields	143
Appendix 3.2 Inductive Reactance of Bundled Conductors	145
Appendix 3.3 Capacitive Reactance of Bundled Conductors	146

Appendix 3.4 Conductor Table Calculations	148	Antenna Systems	210
Appendix 3.5 Transmission-Line Parameters ( $> 60$ Hz)	150	Measurement of Transmission-Line Noise	211
Appendix 3.6 Unbalance Factor Equations	165	5.3 Design Considerations	211
References	167	Characterization of Transmission-Line Radio Noise	212
Chapter 4 <b>Corona Phenomena on AC Transmission Lines</b>	169	Effect of Line Geometry and Conductor Surface Conditions	212
4.1 Introduction	169	Noise Tolerability Criteria	213
4.2 Mechanism of Corona	169	5.4 Calculation of Transmission Line RI	217
Gas Discharge Processes	169	Generation and Propagation of RI	217
The Townsend Avalanche Process	170	RI Generation Data	222
DC Corona Modes	170	Determination of Propagation Characteristics	225
AC Corona	175	RI Design Curves	229
4.3 Corona Loss Concept	175	Comparison of the Reference Book RI Calculation Method with Measured Data	245
Field Without Corona	175	RI Statistics	247
Field in the Presence of Corona — Corona Current	175	5.5 Television Interference	248
Corona Loss in Fair Weather	176	TVI Calculation Procedure	249
4.4 Effect of Surface and Atmospheric Conditions	180	Example Calculation	250
Fair-Weather Corona Sources	180	Comparison of Calculations with Measurements	250
Corona Due to Particles Near the Conductor	181	5.6 Radio Noise from Substations	251
Effect of Water on the Conductor	181	Calculation of RI from Substations	251
Effect of Air Density, Humidity, and Wind	181	RI Generation from Toroidal Grading Rings	252
Effect of Surface Conditions	182	5.7 Additional Topics	253
Surface Treatment — Measurements and Results	185	Radio Noise of Insulator Strings	253
4.5 Evaluation of Corona Effects from Single-Phase and Three-Phase Tests	187	Ghosting and Blocking	253
Measurement and Analysis Using Single-Phase Test Facilities	187	Interference to Other than AM and TV Broadcast Services	253
Corona Generation and Surface Gradient	187	Appendix 5.1 RI Analysis for Single Conductor Above Ground	254
Generation Quantities	188	Appendix 5.2 Transmission-Line Propagation in Modal Quantities	256
Audible Noise-Generated Power	189	Appendix 5.3 Reference Method of RI Analysis of Three-Phase Transmission Lines	258
Radio Noise Generation Function	189	Appendix 5.4 Attenuation Constants and Modal Transformation Matrices	261
Measurement and Analysis Using Three-Phase Test Facilities	191	References	264
4.6 Influence of Corona Currents on Switching-Surge Overvoltages	192	Chapter 6 <b>Audible Noise</b>	267
Project EHV Test Program	192	6.1 Introduction	267
Project UHV Test Program	195	6.2 Audible Noise Characteristics and Measurement	267
4.7 Ozone	199	Characteristics of Transmission-Line Noise	267
Introduction	199	Measures of Audible Noise	268
Ambient Concentration	199	Instrumentation	269
Acceptable Levels	199	Measurements	270
Measurements at Project UHV	200	6.3 Design Considerations	270
Ozone Measurements in Other Locations	202	Effect of Weather Conditions	270
Calculations of Incremental Ozone Concentration	202	Effect of Line Geometry and Conductor Surface Conditions	271
Other Corona Products	203	Assessing the Impact of Transmission-Line Audible Noise	272
References	203	6.4 Calculation of Transmission-Line Audible Noise	274
Chapter 5 <b>Radio Noise</b>	205	Introduction	274
5.1 Introduction	205	Generation and Propagation of AN	275
5.2 Radio Noise Measurement	205	AN Generation Data — Broad-Band Noise	278
The Radio-Noise Meter	206	Calculation of Audible-Noise Levels — Random Noise	281
Weighting Circuits	206	Influence of Tower, Sag, and Ground Wires	283
Meter Response — Bandwidth and Pulse Repetition Rate	208		
Actual Band-Pass Characteristics	210		

AN Design Curves	283	Vertical Component of the Electric Field	330
Effect of Rain Rate	284	Space Potential	330
Effect of Conductor-Surface Aging	299		
Effect of Air Density	299	<b>8.3 Calculation of Electric Fields</b>	<b>330</b>
Comparison of the Reference Book AN Calculation		General Method for Transmission Lines	330
Method with Measured Data	300	Lateral Profile of Electric Field at Ground Level	332
Bundle Geometry Optimization	301	Maximum Electric Field at Ground — Generalized Curves	332
Generation of 120-Hz Hum	305	Effect of Changes in Line Geometry	333
Calculation of Audible Noise — 120-Hz Hum	306	Electric Field of Double-Circuit Lines	335
Audible Noise in Dry Conditions	307	Electric Field at Line Bends	338
		Electric Field in Substations	338
<b>6.5 Audible Noise from Corona in Substations</b>	<b>307</b>	<b>8.4 Calculation of Magnetic Fields</b>	<b>341</b>
Audible-Noise Generation of Basic Electrode Shapes	308	General Method for Transmission Lines	341
Calculation of Audible-Noise Levels for a Substation	309	Example Calculation	342
<b>6.6 Techniques of Audible-Noise Reduction</b>	<b>310</b>	<b>8.5 Measurement of Electric Fields</b>	<b>343</b>
<b>6.7 Correlation Between Audible Noise, Radio Noise, and Corona Loss</b>	<b>312</b>	Techniques for the Measurements of the Unperturbed Electric Field	343
Audible Noise [dB (A)] Versus Radio Noise	312	Measurements of the Electric Field on a Boundary Surface	346
Audible-Noise Hum Versus Corona Loss	314	Measurement of the Space Potential	346
<b>Appendix 6.1 Ambient Noise During Rain</b>	<b>314</b>	<b>8.6 Measurements of Magnetic Fields</b>	<b>347</b>
<b>Appendix 6.2 Sound Attenuation of Structures</b>	<b>314</b>	<b>8.7 Comparison Between HV Transmission-Line and Common Environment Electric and Magnetic Fields</b>	<b>347</b>
<b>Appendix 6.3 Adjustment of Measured Noise Levels to Account for Ambient Noise Intrusions</b>	<b>315</b>	<b>8.8 Electric-Field Induction In Objects</b>	<b>348</b>
<b>References</b>	<b>317</b>	Introduction	348
<b>Chapter 7 Corona Loss</b>	<b>319</b>	Transmission-Line Induced Currents	348
<b>7.1 Introduction</b>	<b>319</b>	Currents Induced on a Sphere Above Ground	348
<b>7.2 Corona Loss in Fair Weather</b>	<b>319</b>	Current Induced on a Round-Topped Hemisphere on a Ground Plane	349
<b>7.3 Corona Loss in Foul Weather</b>	<b>320</b>	Current Induced on a Cylinder Above Ground	349
Corona Loss in Rain	320	Current Induced on a Half-Cylinder on a Ground Plane	349
Corona Loss in Fog, Snow, and Frost	322	Methods for Approximate Calculation of Current Induced on Objects Close to the Ground	349
Results with the Three-Phase UHV Test Line	323	Currents Induced in Large Objects	350
<b>7.4 Evaluation of Corona Loss</b>	<b>324</b>	Currents Induced in TV and FM Antennas	352
Corona Loss Weather Model	324	Induced Current Summary Tables	354
Adjustment for Precipitation Within a Given Climate	325	Accuracy Expected in Calculating Induced Currents	354
<b>7.5 Heavy-Rain Corona Loss for Base Case Geometries</b>	<b>325</b>	Examples of Electric Induction Calculation	357
<b>7.6 Example of Corona Loss Computations</b>	<b>327</b>	Single-Phase vs Three-Phase Induction	358
<b>7.7 Comparison of Corona Losses with Resistance Losses</b>	<b>327</b>	Electric Induction Calculation with Impedance to Ground	359
<b>References</b>	<b>328</b>	Statistical Impedance with Vehicles	360

Chapter 11 Insulation for Switching Surges	503	References	542
11.1 Introduction	503	Chapter 12 Lightning Performance of Transmission Lines	545
11.2 Principal Variables in Switching-Surge Flashover	503	12.1 Introduction	545
Waveshape	504	12.2 Problems of Accuracy	545
Polarity	505	12.3 Terminology	546
Geometric Influence on Switching-Surge Strength	505	12.4 Lightning Flash Parameters	546
Meteorological Influence on Switching-Surge Strength	505	Keraunic Levels and Isokeraunic Maps	546
Statistical Fluctuations in Switching Impulse Strength	505	Number of Flashes to Earth	547
11.3 Flashover Mechanism	506	Interception of Flashes by the Line	547
11.4 Switching Impulse Flashover Testing Technique	506	Lightning Flashes to Shield Wires and Towers	548
Principal Data Variables	509	Flashes to Tall Structures	549
Organization of Data	509	Probability Distribution of Stroke Amplitudes	549
11.5 Switching-Surge Flashover Strength of Simple Airgaps	509	Stroke Waveshape Parameters Influencing Flashover	549
Rod-Plane and Vertical Rod-Rod Gaps	509	Composite Waveshapes	550
Horizontal Rod-Rod Gaps	510	Front and Tail Constants	551
Sphere-Plane Gaps	511	12.5 Circuit Elements Involved in Computation of Flashover Performance	552
11.6 Switching-Surge Flashover Strength of Line Insulation	512	Reducing Bundle Conductors to Equivalent Single Conductors	553
Tower Window Gap	512	Finding Effective Radii of Shield Wires and Phase Conductors with Corona Present	554
Outside Phase Tower Gap	512	Reduction of Shield Wire Surge Impedances to Equivalent Single Wire Surge Impedances	554
Insulator Strings	512	Computation of Tower Surge Impedances	555
Conductor to Tower Leg	515		
Conductor to Grounded Objects at Midspan	515		
Angled Line to Tower	516		
Anomalous Flashovers	516		
11.7 Switching-Surge Flashover Strength of Station Insulation	516		
Horizontal Insulator Strings	516		
Station Post Insulators	516		
11.8 Phase-to-Phase Switching-Surge Strength	517		
Introduction	517		
Results of Phase-to-Phase Switching-Impulse Tests	519		
Phase-to-Phase Insulation Stress	520		
Design Procedure for Phase-to-Phase Distances	522		
Examples	523		

Determination of Coupling Factors for Phase Conductors	556	Stability (Steady State)	606
Selection of Footing Resistance	556	Line Loading	607
Effects of a Statistical Distribution of Footing Resistance Values	560	Routing	608
12.6 Response of a Transmission Tower to a Lightning Flash	560	Transpositions	609
Computation of Tower Top Voltage	560	Transmission-Line Protection	610
Computation of Crossarm Voltages	561	Power-Line Carrier	611
Computation of Insulator Surge Voltages	562	Environmental Measurements	612
Penetration of Insulator Voltage into the Volt-Time Curve	563	Line Parameters	613
Reflections from Adjacent Towers	564	13.9 Line and Station Performance and Application Items	614
Effects of Power-Frequency Voltage	566	Insulation for Switching Surges	614
12.7 Shielding Failures of Transmission Lines	567	Insulation for Lightning	615
The Electrogeometric Theory	567	Insulation for Contamination	616
Attainment of Effective Shielding	568	Ground Electric Field	617
Shielding Failure Rate Computation	569	Magnetic Induction	618
12.8 Lightning Performance of UHV Lines	570	Audible Noise (AN)	619
12.9 Equivalent R-L Circuits of Transmission Towers	570	Radio Interference (RI)	620
12.10 A Simplified Two-Point Method for Computation of Lightning Performance of Transmission Lines	573	Television Interference (TVI)	621
Appendix 12.1 Reduction of Bundles to Equivalent Single Conductors	586	Corona Loss	621
Appendix 12.2 Computation of the Effective Diameter of a Conductor at High Voltage	586	Ground Wire Design (60 Hz)	622
Appendix 12.3 Surge Impedance of Shield Wires and Voltages Coupled to the Phase Conductors	587	Transient Voltage Insulation (Station)	623
Appendix 12.4 Derivation of the Fundamental Travelling Wave Equation for Tower Top Voltage	589	Insulation for Contamination (Station)	624
Appendix 12.5 Travelling Wave Equations for the Voltage at the Crossarm or at Any Point on the Tower	591	Corona Performance (Station)	624
