Period Covered: July 1, 1983 to June 30, 1984

ABSTRACT

This report presents 1983 findings from an annual survey providing statewide estimates of Alaska sport fishing effort and harvests by fisheries, areas, regions, and species. The survey indicated that 309,998 anglers fished 1,732,528 days to harvest 3,086,280 fish in 1983. All are record highs. The methodology of the survey, based primarily on mailing questionnaires to a sample of licensees, continued to prove effectual.

KEY WORDS

Harvest, catch, fish, sport, recreation, Alaska, statewide, effort, use, fishermen, angler-days.

BACKGROUND

Meeting public demand for recreational fishing opportunities in Alaska while at the same time maintaining and protecting the fishery resources has become increasingly complex. In the early years of statehood--before rapid population expansion and industrial development--good, uncrowded sport fishing was accessible; large sport fisheries were few and easily monitored; and sport fishing was considered to be a minor factor in management of commercially exploited species.

Today, along with increasing tourism and forest, mineral, petroleum, and associated government development, has come a mushrooming recreationally-oriented population. Accessible sport fisheries have become crowded, new fisheries have developed, and pressure from a large mobile population is

spilling ever farther afield. Native land allotments, (d)(2) national interest lands legislation, the issue of subsistence, state legislated land conveyance quotas, and problems of access have complicated maintenance and expansion of sport fishing opportunities. The State and private corporations have made substantial commitments to aquaculture and hatchery propagations. Also, recreational fishing is now a significant factor in total fisheries management, especially in Cook Inlet where vociferous sport-commercial-subsistence user conflicts have developed.

Against this backdrop, a statewide data base providing information on where sport fishing occurs, the extent of participation, the preferences of participants, and the species and numbers of major game fishes being harvested is essential for regulation and management of Alaska's sport fisheries and for total regulation, management, and allocation of multiple-use fisheries. In addition, this information is needed for establishing priorities; for formulating policies; for planning and evaluating rehabilitation, enhancement, hatchery, stocking, habitat protection, and access acquisition projects; for stock assessment; for forecasting; for gauging the economic and social significance of sport fishing; and for satisfying requests for information from individuals, special interest groups, government agencies, and the recreational industry.

Because of Alaska's vastness, meeting all these data requirements statewide by on-site creel censuses would be prohibitively expensive. Thus, an economical supplementary program has been developed. Described herein are results from the seventh year of that program.

Species covered are listed in Table 2, Appendix A. Alaska sport fishing regulatory and management areas are delineated on the map in Figure 1, Appendix A.

RECOMMENDATIONS

1. Refine and continue to evaluate the methodologies developed to estimate statewide sport fish effort and harvests.
2. Continue to provide statewide estimates of effort and harvest for major Alaskan sport-caught species by area and fishery.

OBJECTIVE

1. To provide statewide estimates of effort and harvest for major Alaskan sport-caught species by area and fishery.

TECHNIQUES USED

The Alaska statewide sport fish harvest program combines postal surveys and creel censuses to obtain estimates of effort and harvest by fishery and by species. The postal surveys consist of repeated mailings of questionnaires to random samples of Alaska sport fishing license holders. Creel censuses consist of on-site interviews of random samples of sport fishermen. The postal surveys provide estimates for all fisheries, while creel censuses of major selected fisheries provide validity correction and check.

The 1983 harvest survey consisted of a mailing of 12,047 questionnaires, followed by two reminders to nonrespondents (examples of the questionnaire and reminders are in Appendix B). Otherwise, techniques used were the same as described by Mills (1979).

FINDINGS

Results

The Alaska Sport Fish Harvest Survey indicated that 309,998 anglers fished 1,732,528 days to harvest 3,086,280 fish in 1983. All are record highs and represent increases of 6% in anglers, 7% in days, and 9% in fish over 1982, in which 293,011 anglers fished 1,623,090 days to harvest 2,828,706 fish.

Of the 309,998 anglers who fished in 1983, 224,269 (72%) were Alaska residents while 85,729 (28%) were nonresidents. This represents a 6% increase in both resident and nonresident anglers over 1982, in which there were 211,958 (72%) residents and 81,053 (28%) nonresidents. Since 1977, the first year of the survey, the annual increase in anglers has averaged 7%. The annual increase for resident anglers has averaged 7%. The annual increase in nonresident anglers has averaged 10%.

Of the 1,732,528 angler-days fished in 1983, 1,212,680 (70%) were expended in the Southcentral region of Alaska, 320,487 (18%) were expended in the Southeast region, and 199,361 (12%) were expended in the Arctic-Yukon-Kuskokwim region. The Cook Inlet area had 948,330 days (55%) of the State total sport fishing. The Kenai Peninsula had 592,846 angler-days or 34% of the State total. The Kenai River alone had 229,228 angler-days, 13% of the State total. An estimated 576,135 days, 33% of all sport fishing, was in saltwater; 1,156,393, 67% of all sport fishing was in freshwater.

The 3,086,280 fish harvested in 1983 included 1,186,751 razor clams and 360,856 smelt. Of the remaining 1,538,673 harvested fish 532,519 (35%) were sea-run salmon, 168,782 (11%) were rainbow trout, 181,006 (12%) were Arctic grayling, and 221,872 (14%) were Dolly Varden and Arctic char. Also harvested were 117,042 halibut, 82,796 rockfish, 71,010 landlocked salmon, 20,429 cutthroat trout, 20,304 lake trout, 21,476 northern pike, 14,465 burbot, 16,872 whitefish, 5,364 steelhead, 3,323 sheefish, and 1,606 brook trout. Chinook salmon, sockeye salmon, steelhead trout, Dolly Varden/

Arctic char, Arctic grayling, halibut, northern pike, whitefish, sheefish, and razor clam harvests were all-time record highs.

Except for razor clams, shell fisheries are not included in the 3,086,280 total fish harvest or the 1,732,528 angler-days reported above. For the Kenai Peninsula, however, these fisheries were surveyed for king crab, dungeness crab, tanner crab, shrimp, and hardshell clams. Harvest and effort for these species are reported in Table 53.

The 1983 total sea-run salmon harvest of 532,519 included 83,112 chinook, 149,270 coho, 176,761 sockeye, 104,365 pink, and 19,011 chum salmon. The marine harvest total of 203,878 included 29,594 chinook, 72,651 coho, 19,409 sockeye, 76,066 pink, and 6,158 chum salmon. The freshwater total of 328,641 included 53,518 chinook, 76,619 coho, 157,352 sockeye, 28,299 pink, and 12,853 chum salmon. Regionally, 138,510 sea-run salmon were harvested in Southeast Alaska, 374,135 in Southcentral, and 19,874 in the Arctic-Yukon-Kuskokwim. The sport harvest of small chinook salmon statewide totaled 11,435 and is included in the 83,112 reported above.

Harvest and effort for 1983 are tabulated by region, area, fishery, and species in Appendix A. Detailed tabulations for 1977 through 1982 may be found in Mills (1979, 1980, 1981a, 1981b, 1982, 1983).

DISCUSSION

Over the past seven years the statewide sport fish harvest program has proved effectual in economically meeting management needs for reliable estimates of effort for and harvest of Alaska's game fishes. The program has been well received by the angling public: overall response to initial delivery has averaged nearly 70%. In addition, results have been consistent with creel censuses and sport fish biologists report that harvest program estimates for areas not creel censused are in accordance with their own knowledge and observations.

Thus, in the interest of economic efficiency, the statewide harvest program has replaced on-site creel censuses in several cases where creel censuses were not required for protective in-season management or ensuring compliance with regulatory and management policies, quotas and guidelines. It is planned that a survey similar to this year's will be undertaken in 1984.

APPENDIX B
QUESTIONNAIRE AND REMINDERS

Dear Alaska Sport Fisherman:

As the State of Alaska grows in population, pressure on its fishery resources is increasing rapidly. This survey is conducted annually by the Sport Fish Division of the Alaska Department of Fish and Game. It is designed to help the Department obtain the best possible information necessary to maintain and improve the quality of sport fishing in Alaska.

I would very much appreciate your taking a few minutes to answer the questions attached to this letter. Although there are quite a number of pages, the questions are straightforward and you need only respond to those pertaining to the areas where you sport fished. Be assured that your responses will be considered confidential.

It is my hope that you recognize this survey as a means by which you can participate in decisions concerning this State's fishery resources. We need your input. Only when we know your needs can we respond to them.

Sincerely,

Don W. Collinsworth
Commissioner

SPORT FISH SURVEY

ALASKA DEPARTMENT OF FISH AND GAME

INSTRUCTIONS:

1. Questions apply to all members of your household, that is, everyone living at your place of residence including yourself but **NOT** including visiting friends and relatives.
2. If more than one member of your household received a copy of this questionnaire, you need to fill out only one questionnaire, but to avoid repeated mailings, please return all.
3. Please answer the general questions on this page.
4. If you or any members of your household **sport** fished during 1983, please fill out the remaining pages which cover the areas **sport** fished. The maps on pages 4, 14, 15, and 30 will help you find the pages which deal with those areas. If no member of your household **sport** fished during 1983, please return your questionnaire in the enclosed postage-paid envelope after answering the questions on this page.
5. If you cannot remember exactly how much **sport** fishing was done or how many fish were caught, please estimate as closely as you can. Do not count commercially-caught or subsistence-caught fish. Include personal use dipnet-caught fish and fish caught during 1983.
6. Please return your completed questionnaire in the enclosed postage-paid envelope.

Thanks for helping us help you.

This booklet is printed entirely on recycled paper.

GENERAL QUESTIONS:

1. How many members of your household purchased an Alaska Sport Fishing license during 1983 (including members who did not fish)? _____
2. How many members of your household **under** the age of 16 sport fished in Alaska in 1983? _____
3. How many members of your household 16 years of age or older sport fished in Alaska during 1983? _____
4. What do you recommend to improve sport fishing in Alaska?

A-H

A horizontal number line with a vertical tick mark at the left end labeled '0' and another vertical tick mark at the right end labeled '100miles'. A third vertical tick mark is located between 0 and 100, labeled '40' below it. The letter 'N' is positioned above the right end of the line.

Pacific Ocean

A. KETCHIKAN AREA: All Waters From Portland Canal to Ernest Sound, Including Duke, Annette, and Gravina Islands and Associated Waters.

A

1. Mark the number of days spent **sport** fishing. *In the example, a man fished 5 days (count any part of a day as one whole day) and his son fished with him 3 of those days. "8" (5 + 3) is entered in the space.
2. For each variety of fish, mark the number caught and kept. In the example, 2 coho and 1 rainbow were caught and **kept** by that household. (Please note that many fish are called by different names: smelt = hooligan, eulachon; king = chinook, coho = silver; red = sockeye; pink = humpback; chum = dog.)

	Days Fished	K. Salm. Under 28"	K. Salm. Over 28"	Coho	Red	Kokanee Salmon	Pink	Chum	Halibut	Steel- head Trout	Rainbow Trout	Cut- throat Trout	Brook Trout	Dolly Varden	Arctic Gray- ling	Smelt	Rock- fish	Other

X

X. NORTHWEST ALASKA: Kotzebue Area, to include Drainages of Selawick, Kobuk, Noatak, Wulik, and Kivalina Rivers.

1. Mark the number of days spent sport fishing. *In the example, a man fished 5 days (count any part of a day as one whole day) and his son fished with him 3 of those days. "8" (5 + 3) is entered in the space.

2. For each variety of fish, mark the number caught and kept. In the example, 2 king and 2 rainbow were caught and kept by that household. (Please note that many fish are called by different names: smelt = hooligan, eulachon; king = chinook, coho = silver; red = sockeye; pink = humpback; chum = dog.)

SPORT FISH SURVEY

ALASKA DEPARTMENT OF FISH AND GAME

Dear Alaska Sport Fisherman:

We have not yet received your completed 1983 Alaska Sport Fishing Survey form. If you have not yet returned it to us, please complete the enclosed form and return it in the postage-paid envelope that is provided for your use.

Please do not underestimate the importance of your fishing activities. You have been chosen as part of a representative sample of Alaskan sport fishermen and the information that you can provide is vital to the success of this study, and may have significant impact on the future management of Alaska's sport fish resources.

If you have already returned your questionnaire, please disregard this letter and accept our sincere thanks.

Sincerely,

Dick Logan

Dick Logan, Director
Sport Fish Division
