## INTRODUCTION

### Purpose

The Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes (referred to as the "Catalog") contains a record of the streams, rivers and lakes documented as used by anadromous fish for spawning, rearing or migration. The Atlas to the Catalog shows cartographically the location of the anadromous fish waters, the fish species using these waters and the fish life history phases for which the waters are used (to the extent known). Waterways containing anadromous fish are protected by the Alaska Department of Fish and Game through Alaska Statute 16.05.870. A Habitat Protection Permit is required from the Department for activities which affect those waterways.

### Authority

Implementation of AS 16.05.870 is carried out through the Habitat Protection Permit which can be obtained from the appropriate ADF&G Regional Habitat Division Supervisor. The applicant may be required to submit plans and specifications for the proposed work, plans for the protection of anadromous fish, and the approximate date the construction or use will begin. Refer to the section titled "Permits".

Plans for the work are reviewed by Habitat Division personnel and approval given for procedures which have minimal or no harmful effects on anadromous fish or their habitats. In some cases, work may be restricted to certain seasons to avoid interference with fish, or recommendations given for operational methods which would have minimal effect upon spawning and rearing areas. In some instances, damage may be unavoidable and the permit may be withheld.

## The Law

"Sec. 16.05.870. Protection of fish and game. (a) The Commissioner shall, in accordance with the Administrative Procedure Act (AS 44.62) specify the various rivers, lakes, and streams or parts of them that are important for the spawning, rearing or migration of anadromous fish.

(b) If a person or governmental agency desires to construct a hydraulic project, or use, divert, obstruct, pollute, or change the natural flow or bed of a specified river, lake, or stream, or to use wheeled, tracked, or excavating equipment or log-dragging equipment in the bed of a specified river, lake, or stream, the person or governmental agency shall notify the Commissioner of this intention before the beginning of the construction or use.

(c) The Commissioner shall acknowledge receipt of the notice by return first class mail. If the Commissioner determines to do so, he shall, in the letter of acknowledgement, require the person or governmental agency to submit to him full plans and specifications of the proposed construction or work, complete plans and specifications for the proper protection of fish and game in connection with the construction or work, or in connection with the use, and the approximate date the construction, work, or use will begin. The Commissioner shall approve the proposed construction, work or use in writing unless he finds the plans and specifications insufficient for the proper protection of fish and game. If the Commissioner finds the plans and specifications insufficient for the proper protection of fish and game, he shall notify the person or governmental agency which submitted the plans and specifications of his findings by first class mail. The person or governmental agency may, within 90 days of receipt of the notice, initiate a hearing under AS 44.62.370. The hearing is subject to AS 44.62.330 - 44.62.630."

"Sec. 16.05.880. Violation of Paragraphs 870-895 of this chapter. If a person or governmental agency begins construction on a work or project or use for which notice is required by paragraph 870 of this chapter without first providing plans and specifications subject to the approval of the Commissioner for the proper protection of fish and game, and without first having obtained written approval of the Commissioner as to the adequacy of the plans and specifications submitted for the protection of fish and game, his is guilty of a misdemeanor. If a person or governmental agency is convicted of violating paragraphs 870-895 of this chapter or continues a use, work or project without fully complying with paragraphs 870-895 of this chapter, the use, work, or project is a public nuisance and is subject to abatement. The cost of restoring a specified river, lake, or stream to its original condition shall be borne by the violator and shall be in addition to the penalty imposed by the court."

"Sec. 16.05.890. Emergency situations exempted from paragraph 870 of this chapter. In an emergency arising from weather or stream flow conditions, the Department, through its authorized representatives, shall issue oral permits to a riparian owner for removing obstructions or for repairing existing structures without the necessity of submitting prepared plans and specifications as required by paragraph 870 of this chapter."

"Sec. 16.05.895. Penalty for causing material damage. If a person or governmental agency fails to notify the Commissioner of any construction or use that causes material damage to the spawning beds or prevents or interferes with migration of anadromous fish, the person or governmental agency shall be guilty of a misdemeanor."

"Sec. 16.05.900. Penalty for violations. (a) A person who violates paragraphs 830, 870-895, or 920 of this chapter or any rule or regulation promulgated under this chapter is guilty of a misdemeanor and, upon conviction, is punishable by a fine of not more than \$1,000 or by imprisonment for not more than six months, or by both. A person who violates a rule or regulations promulgated under this chapter for the regulation of commercial fisheries shall be punished as provided in paragraph 720 of this chapter.

(b) The court shall transmit the proceeds of all fines to the proper State officer for deposit in the general fund of the State."

#### Permits

Habitat Protection (Title 16) Permits are required "to construct a hydraulic project or use, divert, obstruct, pollute or change the natural flow or bed" of a river, lake or stream listed in the Catalog, or "to use wheeled, tracked or excavating equipment or log-dragging equipment in the bed" of a river, lake or stream listed in the Catalog (quoted portions from AS 16.05.870(b)). This includes construction, road crossings, gravel removal, placer mining, the use of vehicles or equipment in the waterway and bank stabilization. A person or agency desiring to use the waterway can obtain information about the permit requirements from the Alaska Permit Information Center (see Figure 1). The Permit Information Center will advise the potential user which permits may be required and who to contact. Permits from the Army Corps of Engineers, the Alaska Department of Environmental Conservation, and the Alaska Department of Natural Resources as well as the Alaska

Department of Fish and Game may be required for certain activities or work in specific waterways.

Applications for Habitat Protection Permits from the Department of Fish and Game may be required, as indicated below. The Habitat Division will inform the applicant about what information is required for the proposed project. The applicant may be required to supply the following information:

- location of the waterway.
- type of project; eg., bridge, culvert, utility line placement, erosion control, gravel removal, placer mining, etc.
- a project outline of materials, methods and equipment proposed for use; eg., specifications for construction, design blueprints, type or amount of fill, description of stream at project site, etc.
- inwater use of wheeled or tracked vehicle; eg., type and size of vehicle
- description of proposed or anticipated stream diversions, channelization or bank alterations
- removal of material from or deposition in the waterway
- description of proposed blasting or use of explosives
- the approximate project schedule
- other contractors involved in the project
- mitigation measures

### Limitations

The inch-to-the-mile maps are used when available for the Atlas. Exceptions are in the Arctic and Southwest Regions where some 1:250,000 quadrangles have not yet been subdivided by USGS. Where inch-to-the-mile maps do not exist, anadromous fish streams are drawn on 1:250,000 quadrangles. These maps are folded and included in each volume. The most recent editions of USGS maps were used for the Atlas, however, many of these maps have not been revised since the early 1950's.

Locations of the stream reaches were described as accurately as possible but inaccuracies in the legal descriptions may occur because channel and coastline configurations have changed since the maps were published. As updated maps become available from USGS, the coordinates of the channels and coastlines in the Atlas which are inaccurate will be changed. In situations where the stream configuration has changed, permits are required for the present waterway, regardless of its actual distance from the mapped or legally described channel.

Virtually all coastal waters in the State provide important habitat for anadromous fish. Small tributaries, flood channels, intermittent streams and beaver ponds are often used for rearing. Because of their small size or ephemeral nature, these systems are often not included on 1:63,360 scale maps. Most surveys are conducted by aircraft for purposes of determining escapement to manage the commercial fisheries. The presence of juvenile fish and the actual upper limit of anadromous fish are not observed during these aerial surveys. Therefore, the upper points of stream reaches recorded on the fishery maps usually reflect the extent of fish surveys in a particular waterway rather than the actual limits to fish occurrence or of habitat use. In addition, only a limited number of the waterways in Alaska have actually been surveyed. It will be many years before ADF&G has surveyed all of the waterways in this vast state.

### Update Procedures

The updating procedures of the Atlas and the Catalog allow for continuous revisions. Waterways can be added or deleted and the upper range of anadromous waterways changed as more current surveys document the presence or absence of anadromous fish. Proposals for additions or changes to the Catalog can be made by ADF&G personnel, private individuals and other agencies. All proposed changes or additions will be field checked or approved by ADF&G.

Proposals for revisions to the Catalog, including addition of newly identified anadromous waterways, deletion of waterways determined to not contain anadromous fish, or changes to the upper points, should be submitted to:

Alaska Department of Fish and Game  
Habitat Division, Region II  
333 Raspberry Road  
Anchorage, Alaska 99502

The proposed revision must include a nomination form which lists the name and location of the waterbody, the fish species using the waterbody, the date the fish were observed and the life stages for which the waterbody is being used and any other clarifying information. The nomination form, which is available through the Habitat Division's regional offices, must be signed by the person submitting the proposed revision. A map showing the mouth of the waterway and the upper known extent of anadromous fish usage must be included for each change. The waterway should be located on a 1:63,360 scale USGS map (or 1:250,000 scale if 1:63,360 scale is unavailable for the area). All other quadrangle maps needed to delineate the specific uses of the proposed waterway should be included. The species using the waterway must be specified and the activities for which the waterway is used (migration, spawning, rearing, or overwintering) should be specified if known.

Changes to the Catalog and Atlas will be made in accordance with the regulation adopting procedures of the Administrative Procedures Act (AS 44.62). It is anticipated that the Catalog and Atlas will be revised annually.

## USERS' GUIDE

### Catalog and Atlas Format

The Catalog contains a numerically ordered listing of all of the identified anadromous streams by stream number, and a listing of those named streams in alphabetical order. The Atlas to the Catalog illustrates cartographically the documented anadromous fish streams. The Catalog and Atlas are divided into six volumes corresponding to the State's six fish and game resource management regions (Arctic, Interior, Western, Southwest, Southcentral and Southeast) established in 1982 by the Joint Boards of Fisheries and Game (see Figure 2). The figure on the front cover of each Catalog and Atlas shows the geographic area covered within the respective volume.

### Maps

The State of Alaska is covered by one hundred and fifty-three 1:250,000 scale U.S. Geological Survey quadrangles (see Figure 3). The quadrangles have been included in the Atlas to aid the user in locating maps which contain the anadromous fish stream information for the area desired.

Most of the 1:250,000 scale quadrangles are further divided into 1:63,360 scale (also known as quadrangles), inch-to-the-mile maps. In some instances anadromous fish streams are shown on both the 1:250,000 scale and 1:63,360 scale maps. These smaller quadrangles are numbered according to an established convention. Numbering begins at the lower right corner across to the left. The quadrangles on the bottom row are numbered A1, A2, A3, etc. Quadrangles on the second row are numbered

- 1 SOUTHEASTERN
- 2 SOUTHCENTRAL
- 3 SOUTHWESTERN
- 4 WESTERN
- 5 ARCTIC
- 6 INTERIOR

FIGURE 2 REGIONAL BOUNDARIES

from B1, on the third row from C1 and on the fourth row from D1. This numbering system is consistent for all quadrangles.

#### Stream Numbering

All streams, rivers and lakes have a unique identifying number (please refer to Figure 4). The number starts with a body of saltwater identified by the ADF&G statistical fishing district number in use in 1982. Although some of the statistical fishing district numbers will be changed, the stream numbers will always be based on the 1982 number. Each district has a five digit number (a three digit number and a two digit number separated by a hyphen). The first order streams (those streams which flow into the saltwater) are identified by a five digit number added to the fish district number into which it flows. This second group of five digits is started by the number 1 which signifies a first order or primary stream. For example, Big River (at the top) is 101-52-10100 (101-52 identifies the statistical fishing district and 10100 is the first order stream within that district). A stream branching from this first order stream (second-order) is identified using the same base number (101-52-10100) plus a four digit number indicating that specific tributary. In the example for Big River this number is 2021 for the tributary on the left. Therefore, the entire number for the example second order stream is 101-52-10100-2021. Third, fourth and higher order streams are numbered in the same way by adding a four digit number for each branch. The first digit for each branch sequence always indicates the stream order. By definition, the last digit in the number sequence used to identify second and higher order streams is even numbered if the tributary branches to the right (facing upstream) and odd numbered if it branches to the left. Because of space limitations on the maps, only the number sequence identifying a specific tributary is written next to that tributary; however, the entire number sequence down to the statistical fishing district number can be determined by following the waterway. The entire number sequence is used in the Catalog.

Lakes are designated by a number sequence with a first digit of 0. In the example shown for the Blue Creek drainage, a lake occurs along a third order stream. Therefore, the lake number incorporates the third order stream number (101-53-10100-2010-3005) plus the four digit lake identifier (0010) to give the lake's number as 101-53-10100-2010-3005-0010.

There are four possible lake-river systems. In the first system, the outlet river is named (in this example, "Kleen River"). The named river does not continue above the lake. The first order outlet river is numbered with the statistical fishing district number 101-53, and the first order number 10200. The lake above this first order river retains the base number, 101-53-10200, adding the lake identifier, 0010. All tributaries flowing into the lake retain the base number of the first order stream, adding second order identifiers. The lake above the second order tributary has the same number as the secondary tributary, with an added lake number: 101-53-10200-2016-0010. Any streams flowing into this lake would be third order and would be numbered accordingly.

In the second lake-river system, Rain Creek continues through a series of lakes. Therefore each lake is numbered with the tributary number 101-53-10300, and its unique lake number, 0010 for the first lake, 0020 for the second. Tributaries branching from either Rain Creek or the lakes are designated with second order numbers added to the base number.

The river in the third lake-river system is not named, however it has a distinct main channel with tributaries (see left side of Inoue Passage). Therefore, numbering is the same as in the second system: each lake is numbered from the main channel with an added lake number (101-53-10400-0010, for the first lake, 101-53-10400-0020 for the second lake).

In the fourth example Great River, Little River and Small Creek are numbered as first, second and third order tributaries, respectively. The lake above each tributary has the same number as the tributary below with an added lake number. In this example, the first lake (above the

first order tributary, Great River) is 101-54-10100-0010, the second lake (above the second order tributary, Little River) is 101-54-10100-2014-0010, and the third lake (above the third order tributary, Small Creek) is 101-54-10100-2014-3005-0010.

### Symbols

The legend on the bottom of each map contains the symbols for each fish species. The number on the lower left corner identifies the 1:63,360 scale quadrangle of the 1:250,000 scale quadrangle. (Numbers for the 1:250,000 scale quadrangles are identified on Figure 3.)

Arrows on the maps delimit the distribution of the fish in the stream. A single arrow at the beginning of the stream shows which fish migrate upstream. Arrows at upper regions indicate the highest point where the fish species are currently known to occur (see king salmon spawning on Chance Creek, Figure 4). Double arrows pointing in opposite directions are usually added to clarify information and to indicate that the range of the anadromous fish continues onto adjacent maps (see king, chum, coho salmon and sheefish migrating on Main River).

### Interpretation of the Catalog

#### Streams and Rivers by Number

Each stream in the Catalog of Waters Important for the Spawning, Rearing or Migration of Anadromous Fish is listed on two lines. The first line contains the stream number and information about the location of the mouth of the stream. The second line lists the stream name (if known) and locates the upper point. Column headings occur at the top of each page. For example, the Grant Creek would be listed:

<u>STREAM/LAKE</u>	<u>MAP SHEET</u>	<u>LAT./LONG</u>	<u>LEGAL</u>
101-75-10100	Bradfield Canal A-4	56 2 21 131 12 45	C 67S 92E20
Grant Creek	Bradfield Canal A-5	56 6 31 131 20 40	C 66S 91E33

The first line gives:

1. the stream number (101-75-10100);
2. the quadrangle name containing the mouth of the stream (Bradfield Canal A-4);
3. the latitude-longitude of the mouth of the stream (56 degrees, 2 minutes, 21 seconds latitude, 131 degrees, 12 minutes, 45 seconds longitude);
4. the legal description of the stream mouth, given by meridian (Copper River), range (67S), township (92E), and section (20).

The second line gives:

1. the stream name, if known (Grant Creek);
2. the quadrangle name containing the stream's upper point, if different from the quadrangle containing the mouth (Bradfield Canal A-5);
3. the latitude-longitude of the upper point;
4. the legal description of the upper point.

Lakes by Number

Lakes are also listed in the Catalog on two lines. For example, Hidden Inlet Lake (in Southeast Alaska) is listed:

STREAM/LAKE	MAP SHEET	LAT./LONG	LEGAL
101-11-11000-0010	Prince Rupert D-2	54 59 15 130 24 1	C 79S100E30
Hidden Inlet Lake			

The first line shows:

1. the lake number (101-11-11000-0010);
2. the quadrangle name on which most or all of the lake occurs (Prince Rupert D-2);
3. the latitude and longitude of the approximate center point of the lake (54 degrees, 59 minutes, 15 seconds latitude and 130 degrees, 24 minutes, 1 second longitude);
4. the legal description of the approximate center of the lake, given by meridian (C= Copper River), range (79S) township (100E) and Section (30).

The second line gives the name of the lake, if known (Hidden Inlet Lake).

Lakes will not have mouths or upper points. Where a lake occurs on several quadrangle maps, the quadrangle which contains the largest area of the lake will be listed.

The locational information (latitude-longitude and legal description) is taken from the U.S. Geological Survey quadrangle maps. Most of these quadrangles are now out of date, with many streams and portions of coastlines having been displaced. The maps may no longer accurately

represent the true geographic location of the stream or lake, however, the locations provided in the Catalog are within the tolerances of the USGS maps. The intent of the locational information is to avoid any ambiguity in referring to a specific stream or lake, and therefore the locations listed in the Catalog should be compared to the USGS maps and not to field surveyed or photo-extracted locations.

#### Waters by Name

To reference an anadromous water by name, there is an alphabetical listing of those known named rivers, streams and lakes as they are named on the USGS Quads.

#### Sources

Sources of information for this Catalog were the ADF&G "Alaska's Fisheries Atlas" (1978), ADF&G field notes from area and regional offices and various ADF&G individual reports. Additional information for Southeast Alaska was obtained from U.S. Forest Service and U.S. Fish and Wildlife Service field notes and the series Revised Anadromous Fish Stream Catalog of Southeastern Alaska (1977) by John Edgington, Robert Larson, Jim Eastwood and Paul Novak. Information from the Arctic-Yukon-Kuskokwim (AYK) Commercial Fisheries Region was supplemented by Bureau of Land Management survey notes, and Index to Northslope Stream and Lake Surveys (1982) by Terry Bendock and John Burr. Data for the Southcentral Region were supplemented by the U.S. Forest Service and the U.S. Fish and Wildlife Service. Many Federal and State agencies and individuals contributed information and verified the anadromous fish data.

## Definitions

1. "Anadromous fish" means fish that enter fresh water from the sea for spawning purposes. These include anadromous Dolly Varden, rainbow trout (steelhead), arctic char, sheefish, smelt, lamprey, whitefish, coastal cutthroat, and salmon.
2. "Anadromous fish stream" means a river, lake, or stream from its mouth to its uppermost reach as it is presently listed in this Catalog and depicted in the Atlas and includes all sloughs and backwaters adjoining the listed waters, and that portion of the streambed or lakebed covered by ordinary high water.
3. "Atlas" means The Atlas to the Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes.
4. "Braided stream" means a river or stream consisting of intertwined branches or collateral channels as further characterized by the successive division and rejoining of two or more interconnected channels separated by bars or islands.
5. "Catalog" means The Catalog of Waters Important for Spawning, Rearing or Migration of Anadromous Fishes.
6. "Lake" means a ponded body of inland water that has a restricted outlet or no outlet and contains fish.
7. "Migration" means the predictable, purposeful, or seasonal movement of fish, unrestricted by other than natural influences.
8. "Mouth" means a line drawn between the seaward extremities of the exposed tideland banks of any anadromous fish stream at mean lower low water.

9. "Overwintering" means inhabitation by fish of a water body, including its substrate, at any time during October 1 through April 30.
10. "Permit" means a habitat protection permit, including an anadromous fish protection permit and any amendment or condition issued or approved by the commissioner or his authorized designee that has not expired or been suspended or revoked; a permit constitutes approval of the plans and specifications required by AS 16.05.870.
11. "Pollution" means causing alteration of a stream, river, or lake to the extent that the water fails to meet the water quality standards of the Department of Environmental Conservation set forth in 18 AAC 70.010-110.
12. "Portion of the streambed which is covered by ordinary high water" means 1) in the portion above the high tide, the stream and exposed banks, except that if the stream is braided the exposed stream bed and banks are delimited by the natural vegetation bordering the most distant channels; and 2) in the portion below the mean high tide and the mouth, the stream between the tideland banks exposed at lower low water.
13. "Rearing" means the life phase of a fish from hatching until spawning or any portion thereof.
14. "Regional and area office" means the Alaska Department of Fish and Game, Habitat Division, offices located as follows:

Region I - Southeast

Post Office Box 20  
Douglas, Alaska 99824

415 Main Street  
Ketchikan, Alaska 99901

Post Office Box 510  
Sitka, Alaska 99835

Post Office Box 667  
Petersburg, Alaska 99833

Region II - Southcentral

333 Raspberry Road  
Anchorage, Alaska 99502

Region III - Arctic and Interior

565 University Avenue  
Fairbanks, Alaska 99701

Region IV - Western and Southwest

333 Raspberry Road  
Anchorage, Alaska 99502

15. "Spawning" means deposition or fertilization of eggs, including preparation for deposition or fertilization.
