1.0 INTRODUCTION

1.1 Background

The Alaska Department of Fish and Game (ADF&G) Susitna Hydro Aquatic Feasibility Study Team has collected surface and intragravel temperature data on a continuous basis at selected locations throughout the Susitna River Basin since 1981. The primary intent of the data collection program has been to characterize the seasonal surface and intragravel water temperature regimes of the mainstem Susitna River and its peripheral side channel, side slough, upland slough, tributary mouth and tributary habitats. Results of these investigations have been used by project biologists to evaluate the effects of intragravel and surface water temperatures on fish and fish habitats, and by project engineers to validate or calibrate various temperature related models.

1.2 FY 85 Objectives

The objective of the 1984 open water season temperature study conducted by the ADF&G Susitna Hydro Aquatic Feasibility Study Team was to collect sufficient surface water temperature data to meet the specific objectives of the task 32 temperature modelling study being conducted by the Arctic Environmental and Information Data Center (AEIDC).

This technical memorandum presents a summary of the data collection methods and a summary of the initial data reduction and analyses.

2.0 Methods

2.1 Site Selection

In support of Task 32, water temperatures were recorded at 15 mainstem Susitna River sites and 8 tributary sites located between Susitna River Miles 18.5 and 184 (Table 1 and Figure 1). Also included are additional tributary sites at which continuous water temperatures were recorded. Selection of study sites was based on discussions with AEIDC personnel (Voos and Meyer 1984).

2.2 Field Data Collection

Water temperatures were continuously recorded using either Peabody-Ryan model J-90 temperature recorders or Omnidata two channel datapod recorders. The Peabody-Ryan temperature recorders were used to record surface water temperatures only. The two channel datapod recorders were installed at monitoring stations to simultaneously record intragravel and surface water temperatures.

2.2.1 Peabody-Ryan Temperature Recorders (Thermographs)

The Peabody-Ryan model J-90 temperature recorders (thermographs) continuously record temperatures on a 90-day strip chart. Instrument accuracy, as stated by the manufacturer, is $\pm 0.6^{\circ}\text{C}$. Prior to field installation, each instrument was screened at two temperatures (0°C and between $10\text{--}16^{\circ}\text{C}$) using a calibrated American Society for Testing and Manufacturing (ASTM) thermometer as a standard. Following this

screening process a calibration factor was applied to each instrument. Thermographs found in error by more than 2°C at either screening temperature are returned to the manufacturer for calibration.

Peabody-Ryan temperature recorders are used to monitor surface water temperatures. Thermographs are inspected twice each month to retrieve the charts and to detect malfunctioning instruments. Each time the thermographs are checked, an instantaneous water temperature measurement is taken using a calibrated Brooklyn thermometer (accuracy $\pm 0.1^{\circ}\text{C}$). Field installation procedures are outlined in the FY 84 ADF&G Su Hydro Aquatic Studies (May, 1983 - June, 1984) Procedures Manual (ADF&G 1984).

2.2.2 Omnidata Temperature Recorders (Datapods)

Omnidata model DP2321 two channel temperature recorders (datapods) simultaneously record water temperatures using TP10V temperature probes. Instrument accuracy, as stated by the manufacturer, Omnidata International, is $\pm 0.1^{\circ}\text{C}$. Temperature data are recorded on an ultraviolet, erasable electronic memory chip referred to as a data storage module (DSM). Temperatures are measured every five minutes and the mean, minimum, and maximum temperature measured during each six-hour interval are recorded on the DSM. Prior to installation each temperature probe is calibrated at 0.0°C and assigned a correction factor. Intragravel temperatures are measured at a substrate depth of approximately 15 inches, whereas surface water temperatures are measured approximately two inches above the substrate.

The datapods are also examined twice each month to exchange DSM's and to detect malfunctioning units. A short display sequence is activated on the datapod which enables the field investigator to determine the operating condition of the instrument and associated probes. The following information is displayed by the instrument, and recorded by the field investigator: errors made in storage, number of storage points used, minutes until the next recording, and current temperatures. An instantaneous surface water temperature was also measured using a calibrated Brooklyn thermometer (accuracy $\pm 0.1^{\circ}\text{C}$).

Field installation procedures are outlined in the ADF&G Su Hydro Aquatic Studies (May, 1983 - June 1984) Procedures Manual (ADF&G 1984).

2.3 Data Analysis

2.3.1 Peabody Ryan Temperature Recorders (Thermographs)

Using field notes as a guide, all Peabody-Ryan thermograph strip charts were screened for anomalous temperatures which may have resulted from instrument failure. From the strip charts, a reduced temperature data base was obtained as two-hour point temperatures.

A correction value for each strip chart was determined as the difference between the temperature obtained with a calibrated Brooklyn thermometer (accuracy $\pm 0.1^{\circ}\text{C}$) and the thermograph reading at the time the strip chart was removed. (A correction value is determined at the time of strip chart removal rather than installation because response time of the recorder to actual water temperatures can vary with each

installation). The correction value was then used to correct the two-hour point temperature data obtained from each strip chart. From these corrected data bases the daily, USGS water year weekly, and monthly minimum, mean, and maximum surface water temperatures were computer calculated and reported in tables and plots.

2.3.2 Omnidata Temperature Recorders (Datapods)

Water temperature data were retrieved from the datapod temperature recorders as six-hour minimum, mean, and maximum temperatures by reading the data storage module (DSM) via an Omnidata model 217 Datapod/cassette reader into a microcomputer. These six-hour data bases were edited and corrected for storage errors and anomalous data. From these corrected data bases the daily, USGS water year weekly, and monthly mean, minimum, and maximum temperatures were computer calculated and reported in tables and plots.

3.0 RESULTS

The water temperature data recorded at mainstem and tributary sites during the 1984 open water season in support of Task 32 are summarized in a series of tables and plots. Also included are site maps depicting the study locations.

3.1 Table 2 - Susitna River index of temperatures recorded in mainstem and tributary habitats during the 1984 open water season.

3.4 Tables 37 to 56 - Water year weekly minimum, mean and maximum temperatures recorded at mainstem Susitna River sites during the 1984 open water season.

Appendix Table 37

Weekly minimum, mean, and maximum surface water temperatures (C) recorded at Mainstem Susitna River at RM 18.5, GC S16N07W15CDC. Values were obtained from temperatures measured at two-hour intervals by a Ryan temperature recorder.

Water Year Week	Starting Calendar Date	Weekly Value (C)			n	No. of Days in Record
		Min	Mean	Max		
34	840520	7.5	---	8.5	32	3
35	840527	7.0	8.3	11.0	84	7
36	840603	7.5	9.6	11.0	84	7
37	840610	8.5	9.8	11.5	84	7
38	840617	8.0	10.0	11.5	84	7
39	840624	10.0	---	11.0	6	1
41	840708	8.5	9.3	10.5	76	7
42	840715	7.0	---	8.5	40	4
43	840722	7.5	8.7	10.0	84	7
44	840729	7.5	7.9	9.5	84	7
45	840805	8.5	9.2	9.5	83	7
46	840812	9.0	---	9.0	1	1
47	840819	7.0	7.3	8.0	82	7
48	840826	6.0	---	7.5	61	6
50	840909	6.5	---	7.5	14	2
3	841015	0.0	---	0.0	55	5
4	841022	0.0	---	0.0	29	3

---- Data not available.

Appendix Table 38

Weekly minimum, mean, and maximum surface water temperatures (C) recorded at Mainstem Susitna River above the Yentna River, RM 29.5, GC S17N06W07CAD. Values were obtained from temperatures measured at two-hour intervals by a Ryan temperature recorder.

Water Year Week	Starting Calendar Date	Weekly Value (C)			n	No. of Days in Record
		Min	Mean	Max		
34	840520	7.5	---	8.5	31	3
35	840527	7.0	8.5	11.5	84	7
36	840603	9.0	10.4	12.0	84	7
37	840610	8.0	10.4	12.0	84	7
38	840617	7.5	11.2	14.0	84	7
39	840624	10.0	11.3	13.0	81	7
40	840701	9.5	11.0	12.5	84	7
41	840708	10.5	---	11.5	9	1
48	840826	6.5	---	7.5	12	1
49	840902	7.0	8.3	9.5	84	7
50	840909	7.0	8.1	9.0	84	7
51	840916	5.5	7.1	8.0	84	7
52	840923	5.5	6.2	6.5	95	8
