Dear Robert:

Upon your review of the enclosed, you will be disappointed to find that they did not cut 160 days from the schedule in this new publication. I spoke with Bill Wakefield about this and he again assured me that the process could be tightened up as it is implemented, and that a substantial amount of time could be cut then.

I am not very sanguine about his prediction. Bill McDonald is out of town and upon his return I shall get with him immediately to see if we can tighten this process up on paper--as we both know is necessary.

Federal Energy Regulatory Commission
— Data For Decisions

Foreword

The proposed Susitna Hydroelectric Project would be the most costly and complex hydroelectric project ever considered by the Federal Energy Regulatory Commission. The Alaska Power Authority proposes to construct, at a cost of 5.1 billion dollars (January, 1982 dollars), an 885 foot-high earthfill dam and a 645 foot-high concrete arch dam forming two reservoirs with a total surface area of 45,800 acres. Two underground powerhouses would have a total generating capacity of 1,620 MW.

Recognizing the significance of the project, the Commission has established a Project Manager to coordinate the processing of the license application. The Project Manager is the Commission's primary source of information on the progress of the Susitna Hydroelectric Project; the Susitna Project Status Report is the major vehicle for reporting that information. The Susitna Project Status Report will be updated monthly by the Project Management Team. Any comments should be directed to the Commission's Project Manager, William Wakefield at (202) 376-1909. An explanation of the logic networks can be found in Appendix C.

Susitna Hydroelectric Project

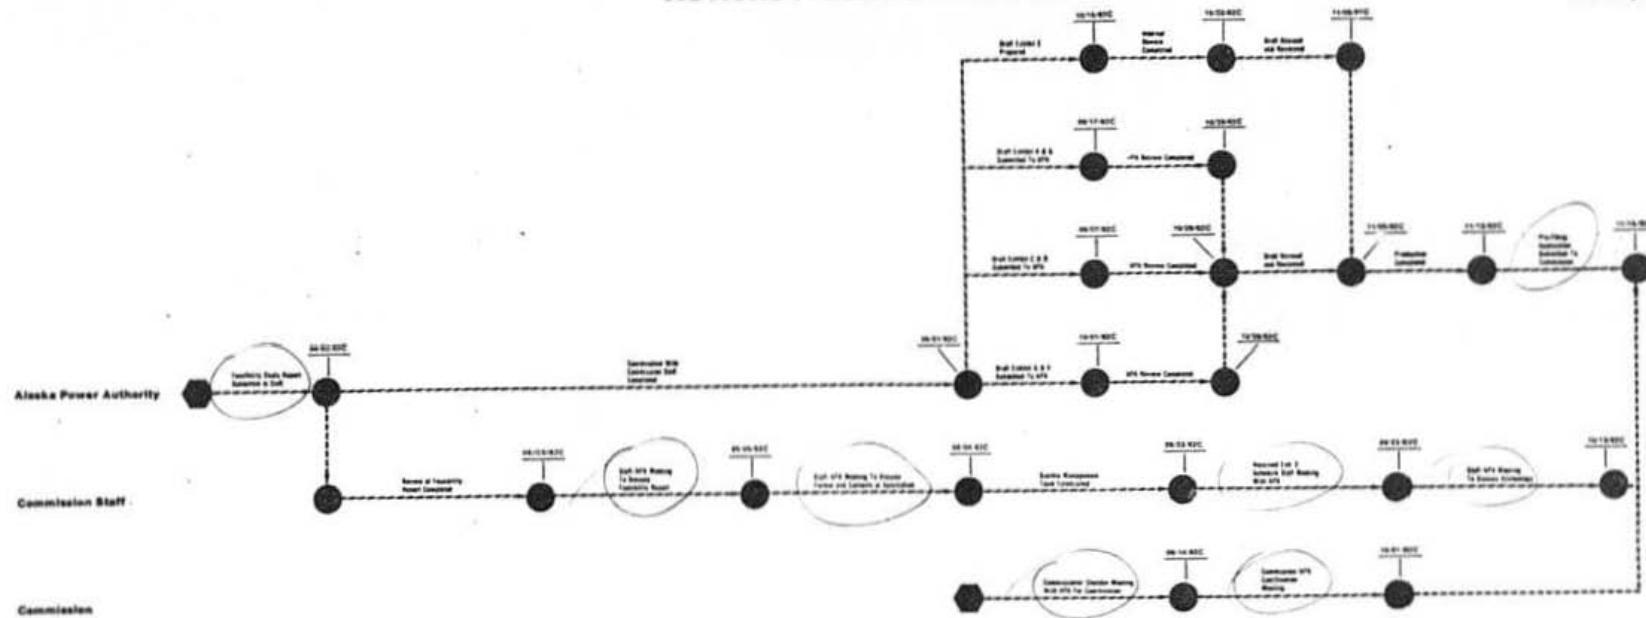

PROJECT MANAGER SUMMARY

In this issue of the Susitna Project Status Report, target dates are shown above each milestone. See Appendix C for an explanation of target dates and completion dates. In a meeting at the Commission on January 4, 1983, the Alaska Power Authority (APA) was provided with written draft comments on the Need for Power (Exhibits B and D). On January 6, 1983, OEPR's environmental staff met with APA to discuss the draft Exhibit E (archaeologic, historic, terrestrial, and aquatic resources) comments that were sent to APA on December 21, 1982.

11.0 pre-filing review of the draft application for license for the Susitna Hydroelectric Project was formally sent to APA on January 11, 1983. A list of deficiencies (items that do not conform to all of the relevant requirements of the Commission's regulations) and necessary supplemental information (information that would enable the Commission to fully evaluate the application) was provided. On January 10 and 11, 1983, the members of the Commission staff met with the Argonne and Oak Ridge National Laboratories (Labs) to coordinate scheduling and contractual details for the Labs' environmental review and analysis of the license application. On January 31, 1983, APA informed the project manager that the Susitna license application would now be filed on February 28, 1983.

ACTIONS PRIOR TO PRE-FILING**

February 1, 1983

Susitna Hydroelectric Project PRE-FILING REVIEW SCHEDULE

February 1, 1983

Susitna Hydroelectric Project

LICENSING PROCESS

The Federal Energy Regulatory Commission is charged with the responsibility of fostering the comprehensive development of the Nation's waterways consistent with public safety. The Susitna River is a public resource; therefore, the Commission must ensure that any hydroelectric development on the Susitna River is in the best interest of the public.

When the Susitna Hydroelectric Project license application is filed by the Alaska Power Authority (APA), the application is first reviewed by staff to ensure that it contains all the information necessary for the Commission to assess the project. When the application is deemed acceptable for processing by the Director, Office of Electric Power Regulation, the Commission initiates a public and agency comment period. Public notice in the Federal Register and in Alaskan newspapers will invite the public to comment on and participate in the licensing process. Federal, State, and local agencies are provided copies of the application and are asked to provide comments in their respective areas of expertise.

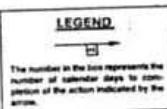

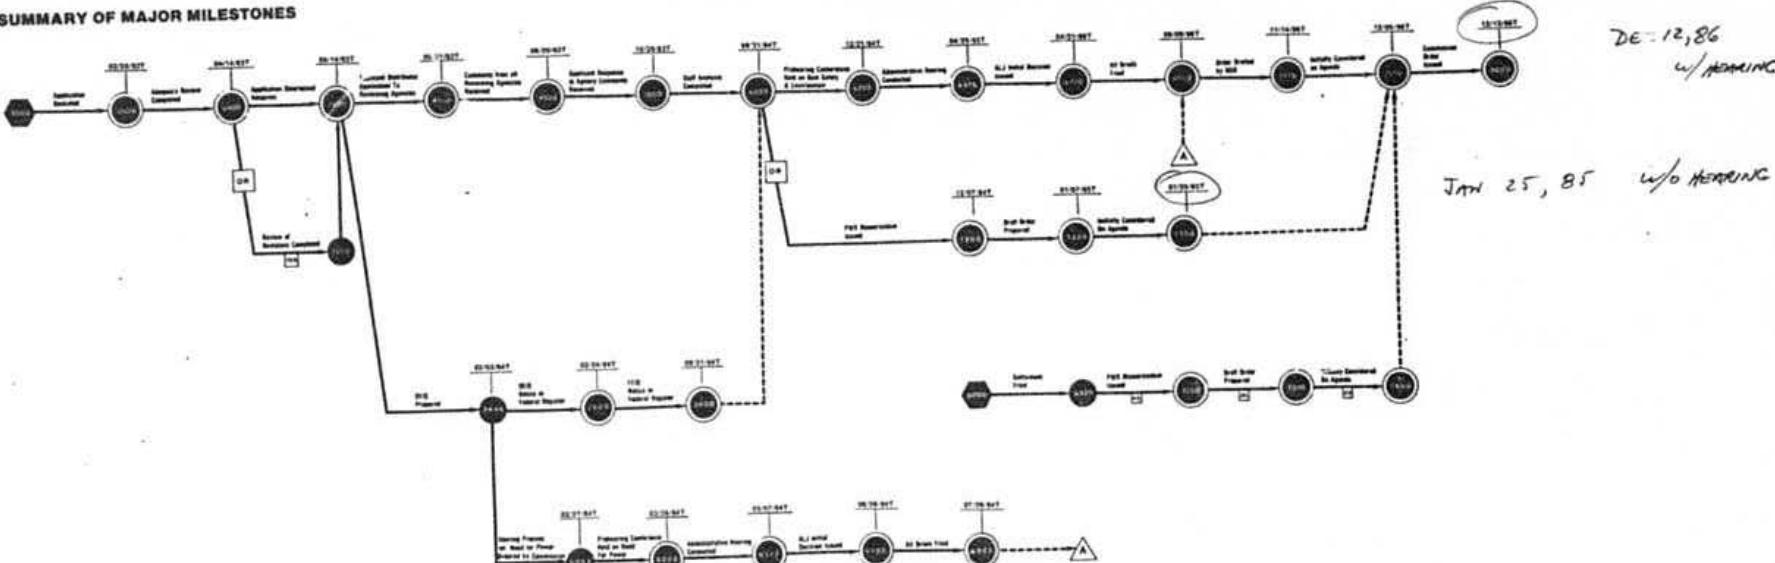

Concurrent with the public comment period, Commission staff experts initiate a three-pronged evaluation of the Susitna Project. Electrical engineers and economists will evaluate the adequacy of electrical load forecasts for Alaska and the need for Susitna Project power. Geologists and civil engineers will evaluate the integrity of project structures. A team of environmental scientists will prepare an environmental impact statement assessing the project's potential impacts on the Alaskan ecosystem. Upon completion of these analyses, the staff positions on need for power, project integrity, and environmental impacts may be subjected to the scrutiny of hearings before an administrative law judge. At these hearings, intervenors in the Susitna proceeding have the opportunity to support staff's analysis or present opposing positions. At the conclusion of the hearing, the administrative law judge prepares an opinion on the issues.

After the administrative law judge has rendered an initial decision, the five Commissioners will make the final decision on whether or not to issue the license for the Susitna Project and what conditions to attach to the license, if issued. If a hearing has been held, the Office of Opinions and Review, with guidance from the Commissioners, will prepare the license document. The Commissioners will review the entire record for the Susitna Project. In order for the APA to receive a license for the Susitna Project, the record must convince a majority of the Commissioners that the project is needed, that the structures will be safe, and that the environmental impacts of construction and operation will be adequately mitigated.

FEDERAL ENERGY REGULATORY COMMISSION
WASHINGTON 20585
RE B-1

September 22, 1982

MEMORANDUM TO: The Chairman
Commissioners
Executive Director
General Counsel
Lawrence C. Anderson
FROM: Lawrence C. Anderson
Director, Office of Electric Power
Regulation
SUBJECT: Susitna Project Management Team

A special project team has been formed to monitor the pre-filing review of the Susitna Hydroelectric Project. I have appointed William C. Wakefield, II, as the project manager. All communications, memos, directives and meetings will be coordinated by Mr. Wakefield. His phone number is 374-9733, and he will be located in room 301, 400 1st Street.

Attachment

Attachment A

SUSITNA PROJECT MANAGEMENT TEAM

The Susitna Hydroelectric Project in Alaska is among the larger hydroelectric projects (1650 MW) in the United States. The project is scheduled to be completed in 28 years at a cost in excess of \$3 billion. The project will be developed by the Alaska Native Power Corporation. It is anticipated that any delay in the construction of the Susitna project would increase total project costs by approximately \$1 million. It is, therefore, imperative that the Federal Energy Regulatory Commission (FERC) identify any deficiencies in the pre-filing application such that we may file an acceptable application at the earliest possible date.

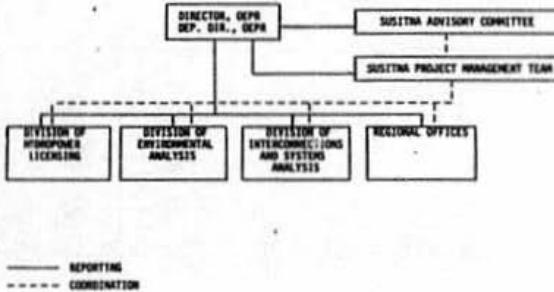

A special project management team has been formed to monitor and coordinate the pre-filing review of the Susitna Hydroelectric Project. It is the responsibility of this team to coordinate review of the application for adequacy and to advise FERC concerning any deficiencies prior to formal filing.

The "Susitna Project Management Team" is headed by a project manager who reports directly to the Director, Office of Electric Power Regulation (OEPER). The project manager:

- * provides the necessary coordination and liaison with all divisions of OEPER, with all other FERC offices, with Federal, State, and local agencies, the general public, and the applicant.
- * initiates correspondence with the APA and all other Federal, State and local agencies, and replies to inquiries from members of Congress and the general public.
- * reviews and analyzes staff reports and recommendations on the applicant data.
- * examines the pre-filing application to determine compliance with FERC Rules and Regulations.
- * informs APA of engineering, environmental or other deficiencies as they become known.
- * meets with the advisory Committee to report on the status of the pre-filing review.

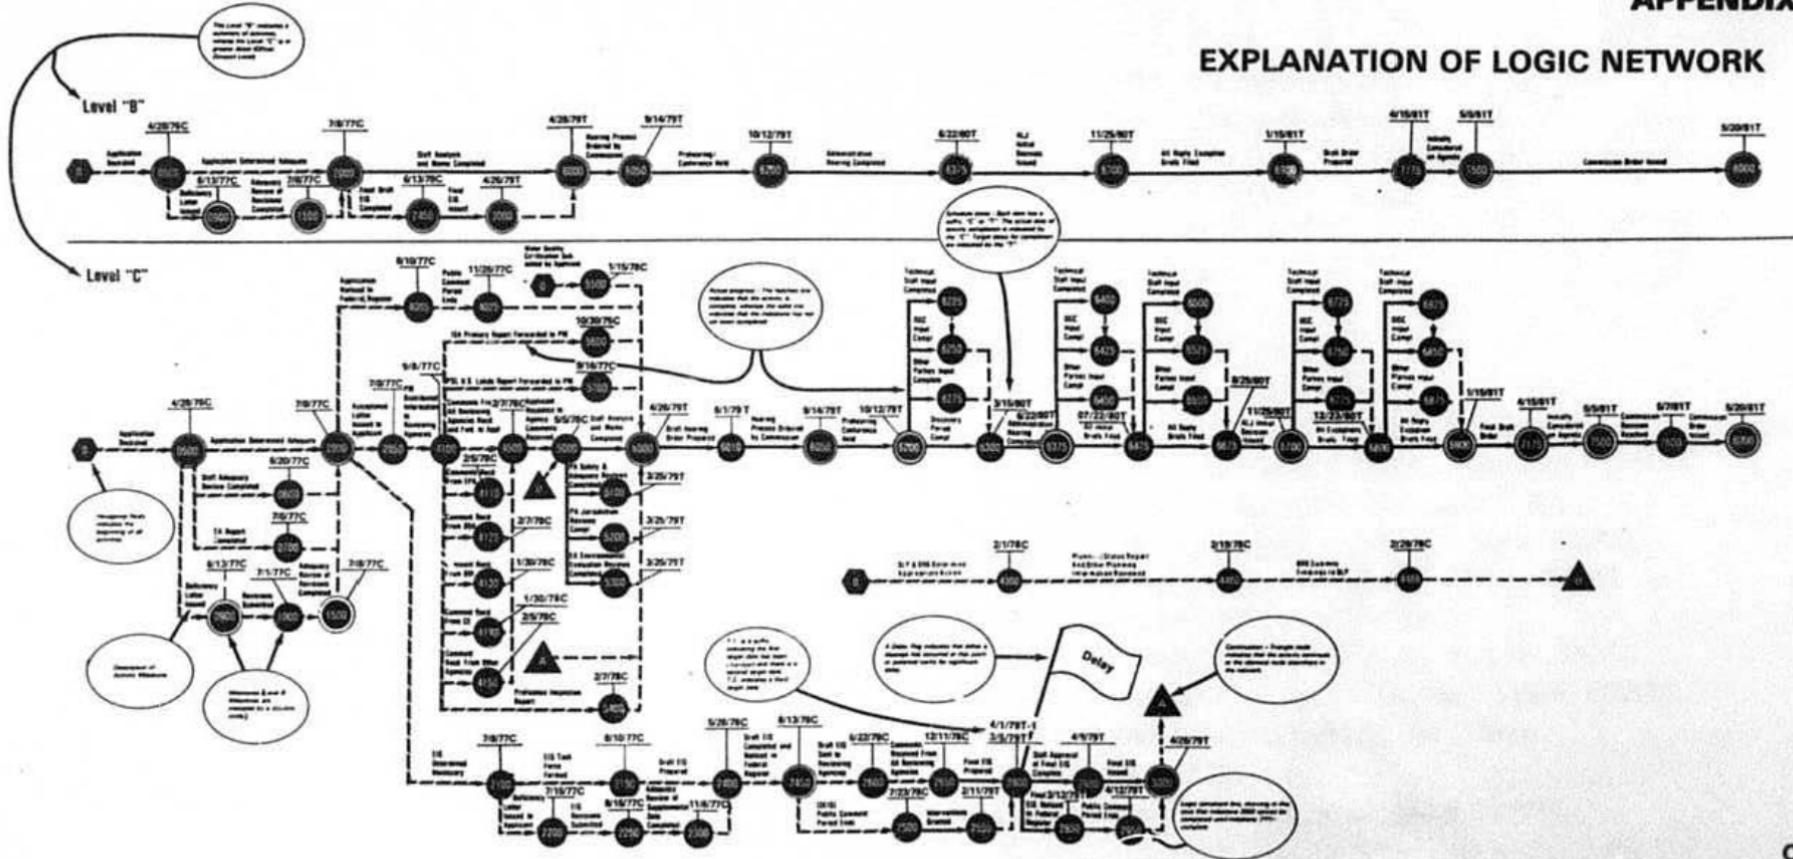

A Susitna Advisory Committee which reports to the Director, OEPER, is also established. It is the responsibility of this Committee to ensure adequate and timely technical input to the application process, highlight problems, and make recommendations to the Director of OEPER. The Susitna Advisory Committee is composed of the Deputy Director of OEPER, the Directors of the Divisions of Hydropower Licensing, Environmental Analysis, and Interconnection and Systems Analysis, and the Special Assistant to the Director, OEPER.

Susitna Hydroelectric Project PROJECT DESCRIPTION

APPENDIX E

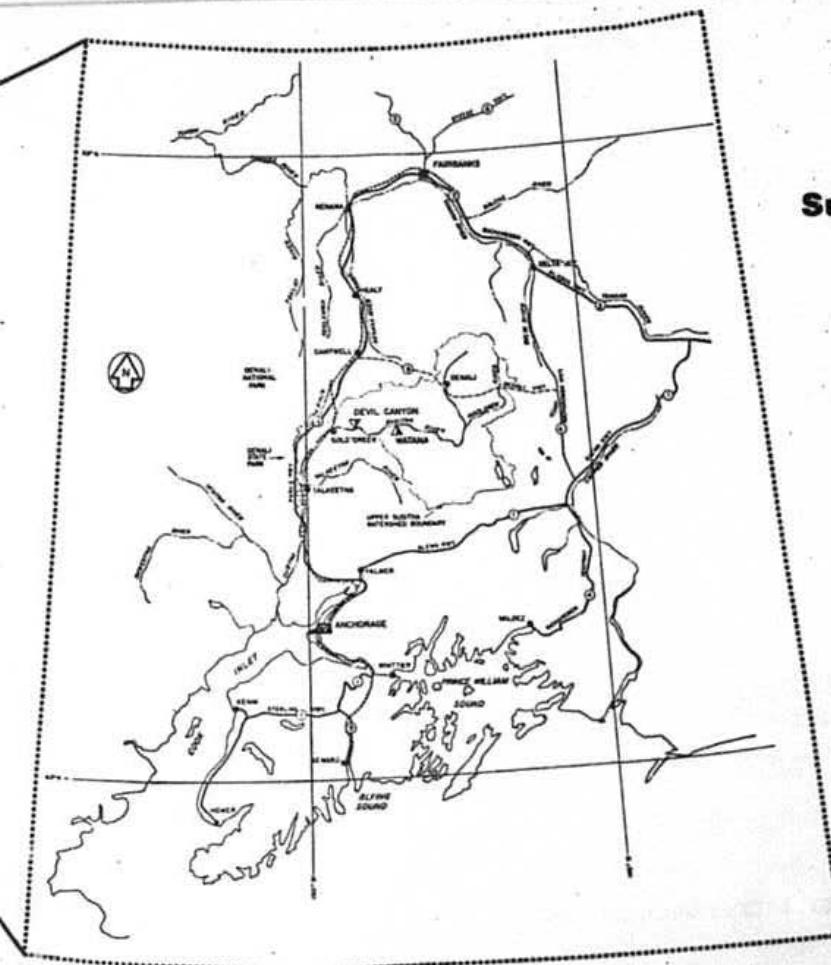

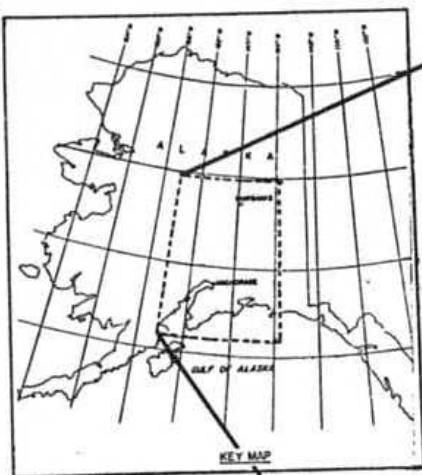

The Alaska Power Authority's Susitna Hydroelectric Project would consist of two developments along the Susitna River between Anchorage and Fairbanks, Alaska and related access and transmission facilities. The project would have a total installed capacity of 1,620 MW and would provide an average of 6,790 GWh of energy annually when completed in the year of 2002. The Susitna Hydroelectric Project is estimated to cost 5.1 billion dollars (January 1982 dollars).

The upstream Watana Development (See Watana General Arrangement) would include an 885 foot-high earthfill dam with a crest length of 4,100 feet forming a 48 mile-long reservoir with a surface area of 38,000 acres and a usable storage capacity of 4.21 million acre-feet at normal maximum water surface elevation 2,185 feet. Two chute spillways would be provided on the right abutment. A concrete, gated intake structure on the right abutment would lead to six 17 foot-diameter penstocks terminating in an underground powerhouse containing six 170 MW generating units. The first four units would come on line in 1993, followed in 1997 by the final two units.

The Devil Canyon Development (See Devil Canyon General Arrangement) would include a 645 foot-high, double-curved, concrete thin arch dam forming a 26 mile-long reservoir with a surface area of 7,800 acres and a usable storage capacity of 350,000 acre-feet at normal maximum water surface elevation 1,455 feet. A 245 foot-high, rock-fill saddle dam would be located on the left abutment. A spillway would be provided on each abutment. A concrete, gated intake structure on the right abutment would lead to four 20 foot-diameter penstocks terminating in an underground powerhouse containing four 150 MW generating units. The Devil Canyon Development would become operational in the year of 2002.

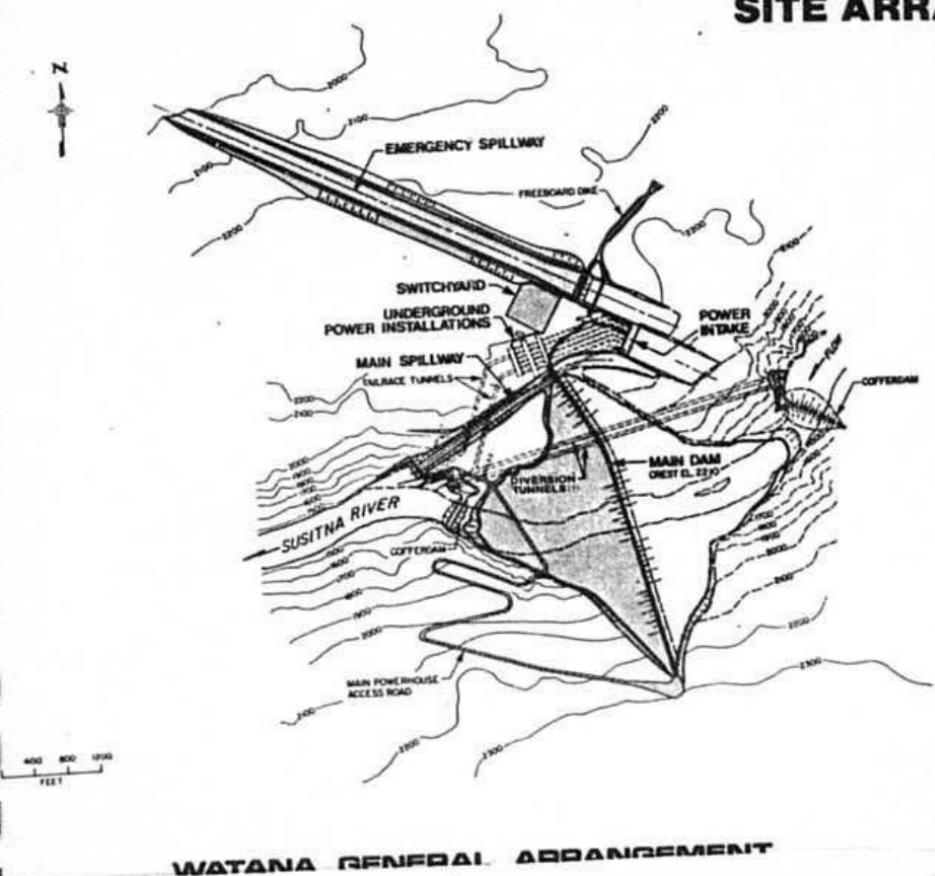

As part of the Susitna Hydroelectric Project, two 26 mile-long, 345 kV transmission lines would be constructed from Watana to Devil Canyon. From Devil Canyon, two 195 mile-long, 345 kV transmission lines would extend to the Fairbanks area and three 84 mile-long, 345 kV transmission lines would extend to Anchorage.

An access road would be constructed from the Denali Highway south to Watana and then west to Devil Canyon. A 6,000 foot-long airstrip and a permanent town for operation and maintenance personnel would be constructed at Watana.
