

**Appendix A:**  
**Strip Maps and Photographic Documentation**  
**of Lineament Data Presented in FCL (2013)**

**Explanation**

- Quaternary fault, solid where well constrained, long dash where moderately constrained, short dash where inferred (Koehler et al., 2012)
- Extent of stripmap tile; figure number indicated
- Field work planned in 2013 based on results of TM-8 (FCL, 2013)
- No field work planned in 2013 based on results of TM-8 (FCL, 2013)
- Proposed Watana site

**Lineament Groups and Corresponding Figures**

Lineament Group	Appendix A Figure Number
1	A1.1, A1.2
2	A2.1, A2.2
3a	A3a.1, A3a.2
3b	A3b.1, A3b.2
4	None, see TM-8 (FCL, 2013)
5	A5-1.1, A5-2.1, A5-2.2
6	A6.1, A6.2, A6.3, A6.4
7	A7.1, A7.2
8	A8-1.1, A8-2.1, A8-2.2, A8-2.3
9	A9-1.1, A9-2.1, A9-2.2, A9-2.3, A9-2.4
10	None, see TM-8 (FCL, 2013)
11	None, see TM-8 (FCL, 2013)
12a	A12a.1, 12a.2
12b	A12b.1, 12b.2
13	None, see TM-8 (FCL, 2013)
14	None, see TM-8 (FCL, 2013)
15	None, see TM-8 (FCL, 2013)
16	None, see TM-8 (FCL, 2013)

Clearwater Mtns. area	Plate A-CWM, A-CWM.1, A-CWM.2, A-CWM.3

This explanation applies to all figures and plates in Appendix A.

### Geologic Units from OFR 09-1108 (Wilson et al., 2009)

	Water, ice field, or glacier
<b>Unconsolidated Deposits</b>	
Qs Surficial deposits, undivided	
Qat	Alluvium along major rivers and in terraces
Qlc	Landslide and colluvial deposits
Qm	Glacial deposits, undivided
Qhg	Young moraine deposits
Qg	Major moraine and kame deposits
Qgc	Glacioalluvium
Qgo	Outwash in plains, valley train, and fans
Qge	Glacioestuarine deposits
<b>Sedimentary Rocks</b>	
Tsu	Sedimentary rocks, undivided
Tkn	Kenai Group, undivided
Tts	Tsadaka Formation
Tch	Chickaloon formation
Km	Matanuska formation
KJs	Turbiditic sedimentary rocks of the Kahiltna flysch sequence
Jtxc	Undivided Chinitna and Tuxedni formations
Jn	Naknek Formation, undivided
Jtk	Talkeetna Formation, undivided
JTrlm	Limestone and Marble
Pe	Eagle Creek Formation, marine argillite and limestone
Note: For full explanation of geologic units see USGS OFR 09-1108 and USGS OFR 98-133.	

### Geologic Units from OFR 98-133 (Wilson et al., 1998)

	Ice fields or glaciers
	Water
Tvu	Tertiary volcanic rocks, undivided
Tfv	Felsic volcanic and sub-volcanic rocks
Tem	Mafic volcanic rocks
TKd	Dikes and sills
Trn	Nikolai Greenstone and related rocks
Pzv	Slana Spur Formation, volcanioclastic rocks
Pat	Station Creek Formation andesitic volcanic rocks
<b>Plutonic Rocks</b>	
Ti	Intrusive rocks, undivided
Toegr	Granitic rocks
Tpgr	Granitic rocks of Paleocene age
Tgd	Biotite-hornblende-granodiorite
TKg	Granitic rocks, undivided
TKgd	Granodioritic rocks
Kgd	Granodiorite
Jtr	Trondhjemite
JPaur	Diorite, gabbro, picrite, and pyroxenite sill and dike swarm complex
Jqd	Quartz diorite, tonalite, and diorite
Jqm	Granodiorite and quartz monzonite
<b>Melange and Metamorphic Rocks</b>	
TKgg	Gneiss
Jpmu	Plutonic and metamorphic rocks, undifferentiated
JPam	Amphibolite
JPmb	Marble
Trnm	Metabasalt and slate
TrPavs	Basaltic to andesitic metavolcanic rocks
PPast	Metamorphosed Skolai Group

Faults Compiled by FCL (Wilson et al., 1998; Wilson et al., 2009; Williams and Galloway, 1986; Clautice, 1990; Clautice, 2001; Csejtey, 1978; Kachadoorian, 1979; Smith, 1988)

- — - Fault, approximate
- ?— Fault, inferred or queried

### Hydrographic Features from National Hydrography Dataset, 2000, 1:24,000 scale

Stream
Ice mass
Lake or pond

### Tectonic Features from WCC report (WCC, 1982)

- Detailed feature, from site-specific maps
- Regional feature, from small-scale maps

For completeness, features from both regional and detailed scale figures have been included. The location of regional features may not always be accurate and the detailed features may be limited to the extent shown on original figures.

T-2  
Location of trench T-2  
(shown on Figures A14 and A16)

**B** Location of photograph taken during 2013 and 2014 field reconnaissance, labeled with photo ID and showing view direction

- 116** ● GPS waypoint
- GPS track line, July and September 2013
- GPS track line, July and September 2014
- ★ Proposed Watana site

### Other Items

Attributes of lineaments mapped by FCL (2013) that apply to all figures and plates in Appendix A

Reconnaissance (INSAR)	Detail (LiDAR)	Lineament Groups
— 1 - 5	— 1 - 5	
— 10	— 10	
• • • • 77	• • • • 77	17a Lineament group mapped for this study coinciding with previously mapped fault or lineament
— 88	— 88	25 No previously mapped fault or lineament coincides with lineament group
Attribute	Cross Section Morphology*	Description
1		Linear break-in-slope bisecting a planar surface Uphill- or downhill-facing scarps, lateral moraines or kame deposits along lateral margins of valley glaciers
2		Abrupt changes in slope adjacent to otherwise relatively horizontal (and planar) surfaces Linear range fronts, faceted ridges, terrace risers, steep downstream faces of roche moutonnees
3		Linear U-shaped trough Glacial valleys, ice-scoured flutes, flood-scoured flutes,
4		Linear V-shaped trough Active stream channels
5		Linear ridges Drumlins, water-scoured terrain, eskers
6 (also 77)	n/a	A series of aligned features Could include attributes #1 - 5 above and/or aligned saddles, tonal lineaments, etc.
66	n/a	Data artifacts Linear seams between data sets collected on different dates
88	n/a	A series of aligned features, which are too small to individually map at the given scale Could include features with attributes #1-5 above and/or aligned saddles, tonal lineaments, etc.
99	n/a	A line which encloses a broad expanse of features all having the same orientation An area of jointing or of glacial striae all having the same, parallel orientation
10	n/a	Anthropogenic lineaments Roads, rail roads, power lines and other linear clearings, etc.

Notes: \*Arrow points to location of the mapped feature.

Explanation for relevant geologic units of Williams and Galloway (1986) shown on Figure A20.5 and A23.1

Geologic Units	Symbols
<b>Bottom deposits of 914 - 975 m lake</b> Overprint denoting glacial drift that is mantled by bottom sediments of glacial lake that extended to 914 - 975 m abovemodern sea level, largely confined to middle Susitna valley, above ice dam below Fog Lake (off map) and apparently bounded on east and south side by glacier ice. Does not cover late(st) Wisconsin (last major) morainal systems. No shoreline features are mapped.	
<b>Bottom deposits intermediate (777 - 747) lake</b> Overprint denoting bottom deposits of a local lake that covered melting glacier ice between Tyone Lake and Lake Louise, apparently behind Tyone Spillway, and drained as the elevation of the spillway was cut down from 777 m to 747 m above sea level while stagnant ice was still in valley bottom.	
<b>Bottom deposits of last regional lake</b> Overprint denoting drape of bottom deposits over drift and thick lake sediments that persisted in Copper River drainage basin from just before deposition of Old Man moraines to a time when glaciers had retreated to within 16 to 24 km of present glaciers: older than 13,000 years.

Explanation for relevant geologic units of Smith et al. (1988) shown on Figure A21b.1

Explanation for relevant geologic units of Reger (1990) shown on Figure A21a.2

Explanation for relevant geologic units and features from Acres, 1982 shown on Figure A6.1

#### UNCONSOLIDATED DEPOSITS

##### Alluvial deposits

**Qa** FLOODPLAIN ALLUVIUM - Unconsolidated deposits in modern stream drainages. Material ranges from coarse, unsorted gravel in highland valleys to finely bedded silt in large river drainages.

##### Glacial deposits

**Qdt<sub>3</sub>** TILL OF LATE WISCONSIN AGE - 11,800 to 25,000 yr B.P.

**Qdt<sub>2</sub>** TILL OF EARLY WISCONSIN AGE - 40,000 to 75,000 yr B.P.

**Ks** SCHIST - Medium- to coarse-grained biotite-plagioclase-quartz schist with local garnet and feldspar porphyroblasts to 0.5 mm. Dominantly gray or brown weathering. Includes local horizons that contain randomly oriented hornblende on foliation surfaces. Stippled pattern near intrusive contacts indicates hornfelsed zone in schist. K-Ar age of 57.2 m.y. was obtained from biotite in this unit in the adjacent Healy A-1 Quadrangle (Smith, 1981).

**Kp** PHYLLITE - Silver-gray, biotite-bearing phyllite with biotite porphyroblasts to 2mm long; locally calcareous. Minor compositional banding with more quartzose layers parallel to foliation. Biotite yielded K-Ar age of  $53 \pm 1.6$  m.y. (loc. 3 on map; Turner and Smith, 1974). Grades into amphibole-bearing phyllite (Khp) unit.

**Khp** AMPHIBOLE-BEARING PHYLLITE - Medium to dark gray spotted phyllite with planar laminations. Spotted with porphyroblastic biotite. Interlayered with beds that contain randomly oriented amphibole on foliation surfaces. Amphibole prisms commonly 0.5 to 3 mm long. K-Ar age of actinolitic hornblende from this unit in Healy A-1 Quadrangle is 64.1 m.y. (Smith, 1981).

#### MAP SYMBOLS

— · · · Contact - dashed where approximately located ; dotted where concealed; queried where inferred

**U** — · · · D High-angle fault - dashed where approximately located; dotted where concealed; queried where inferred. D, downthrown side; U, upthrown side

**35** Thrust fault - dashed where approximately located. Sawteeth on upper plate. Arrow indicates dip of fault

— L Lineament - inferred from aerial photographs, may represent fault

Modified from selected portion of Smith et al. (1988) explanation

#### GLACIAL LIMITS

Glaciation of unassigned age, dashed where discontinuously mapped

Glaciation of Illinoian age, dashed where discontinuously mapped

Glaciation of late Wisconsin age, dashed where discontinuously mapped

Glaciation of Holocene age, dashed where discontinuously mapped

#### OTHER FEATURES

Prominent meltwater drainage channel

Radiocarbon sample locality

#### PROMINENT WAVE-CUT SCARPS

3,700-ft (1,120-m) lake, dashed where discontinuously mapped, dots on descending scarp

3,650-ft (1,110-m) lake, dashed where discontinuously mapped, open triangles point down descending scarp

3,400-ft (1,030-m) lake, dashed where discontinuously mapped, solid triangles point down descending scarp

#### AREAS INUNDATED BY GLACIER-DAMMED LAKES

3,700-ft (1,120-m) lake

3,650-ft (1,110-m) lake

3,400-ft (1,030-m) lake

— Contact

▲ Thrust fault

— Shear

#### QUATERNARY

**Qa** Alluvium, alluvial terraces and fans

**Qid** Ice disintegration deposits

**Qt** Till

**Qo** Outwash

#### TERTIARY

**Tsu** Conglomerate, sandstone and claystone

#### MESOZOIC

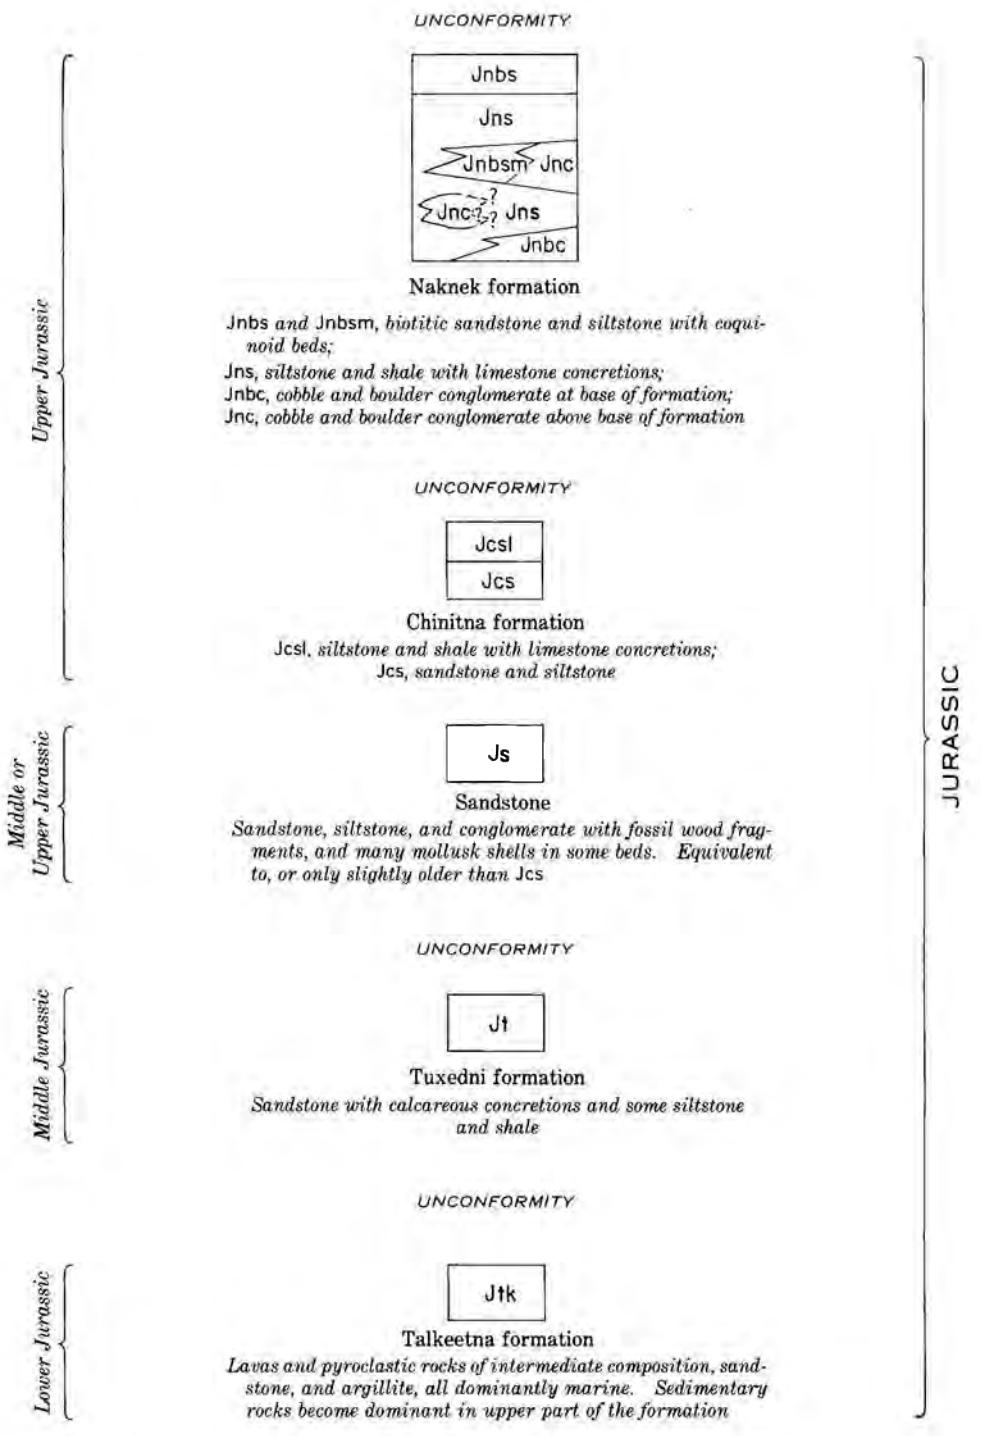

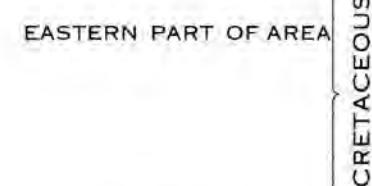

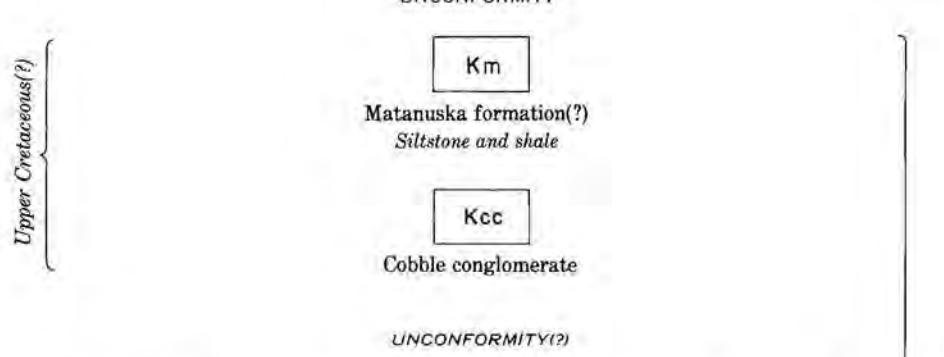

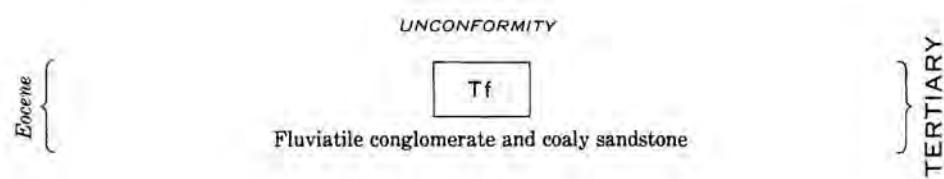

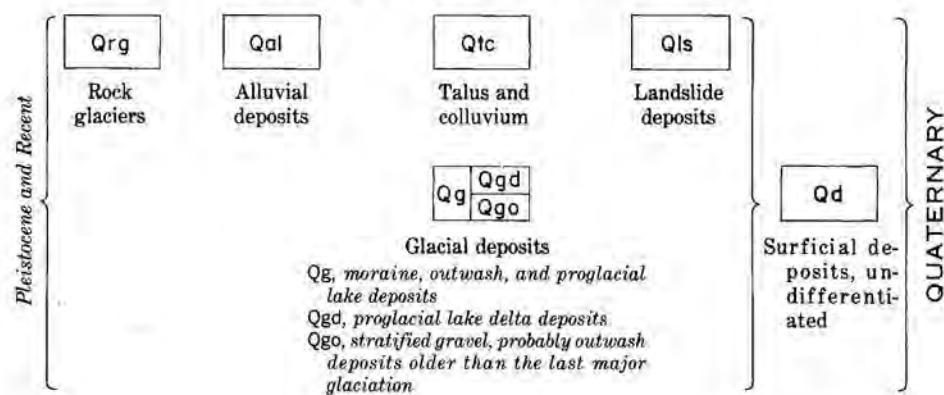

##### TRIASSIC

**TRvs** Basaltic metavolcanic rocks, metabasalt and slate

## Explanation

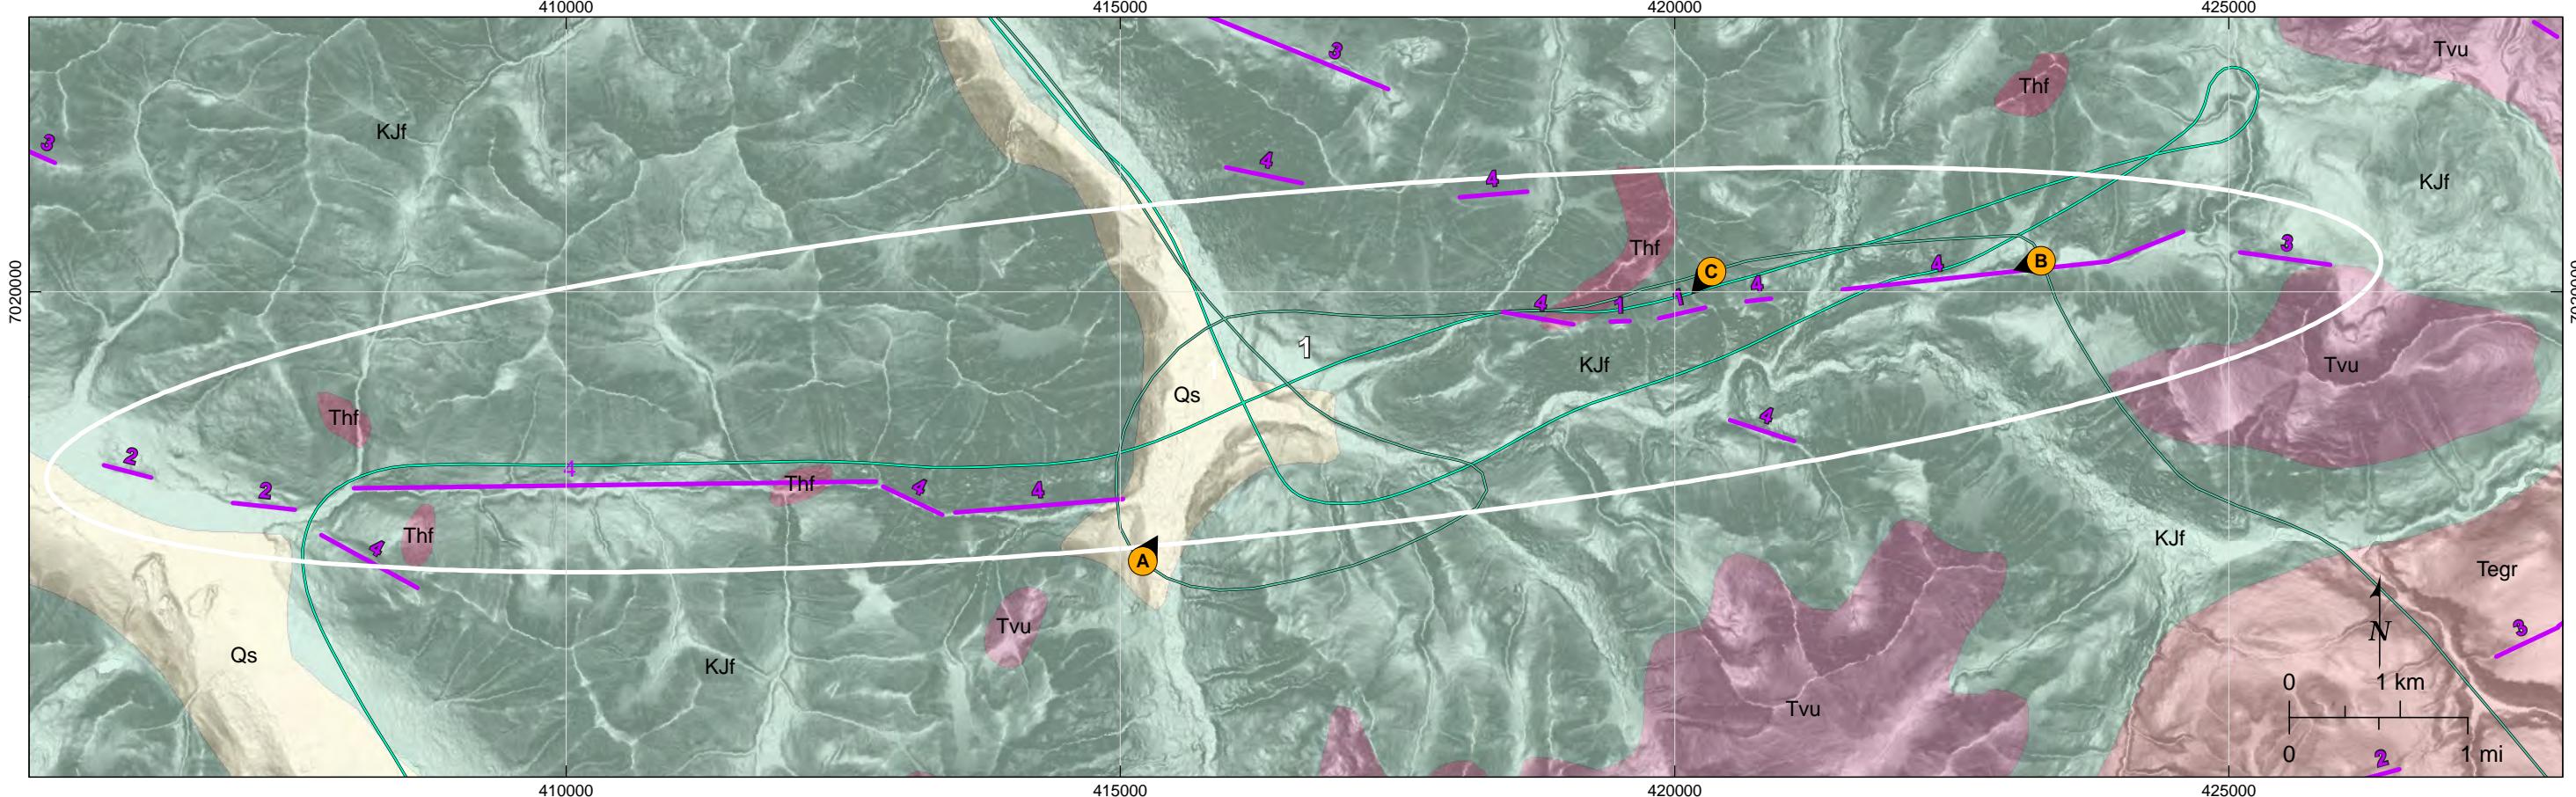

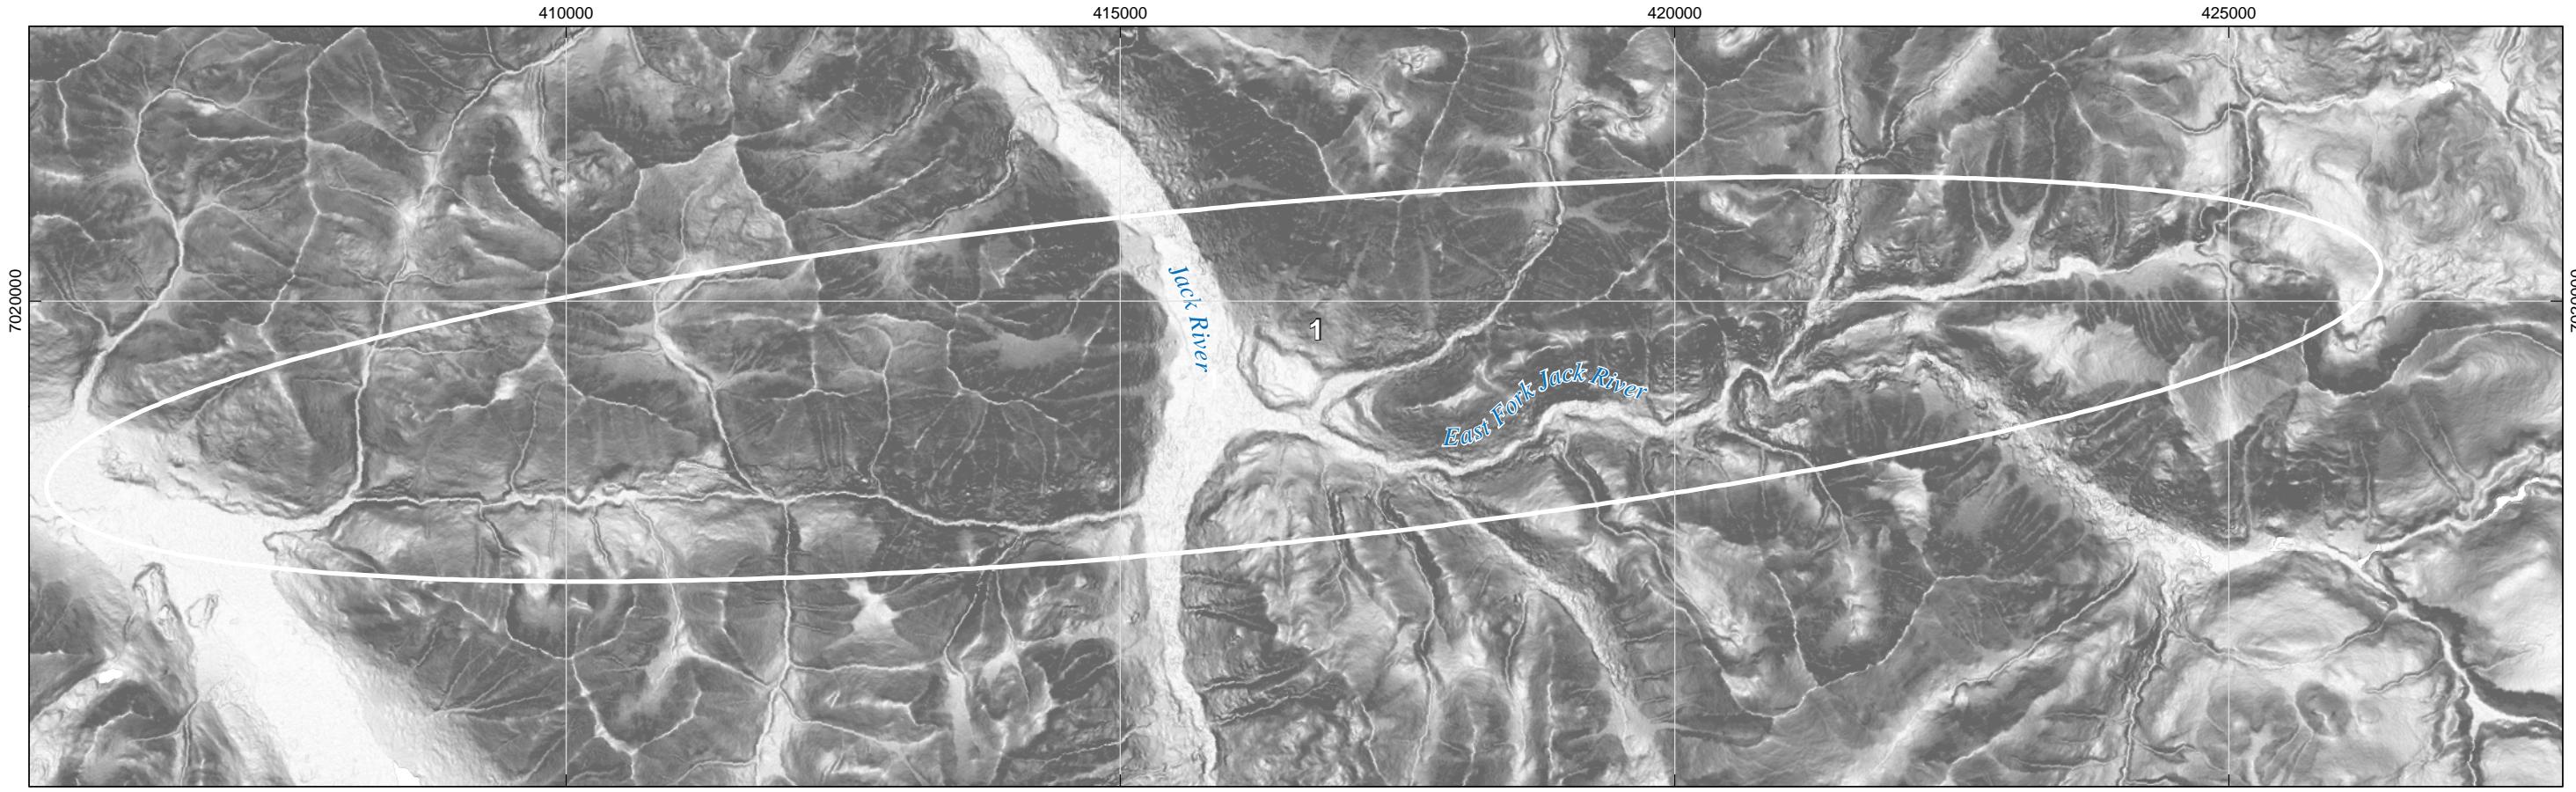

### Geologic Units

Bar beneath letter symbol indicates map units identified on aerial photographs or from distant views (If, Qd, etc.)

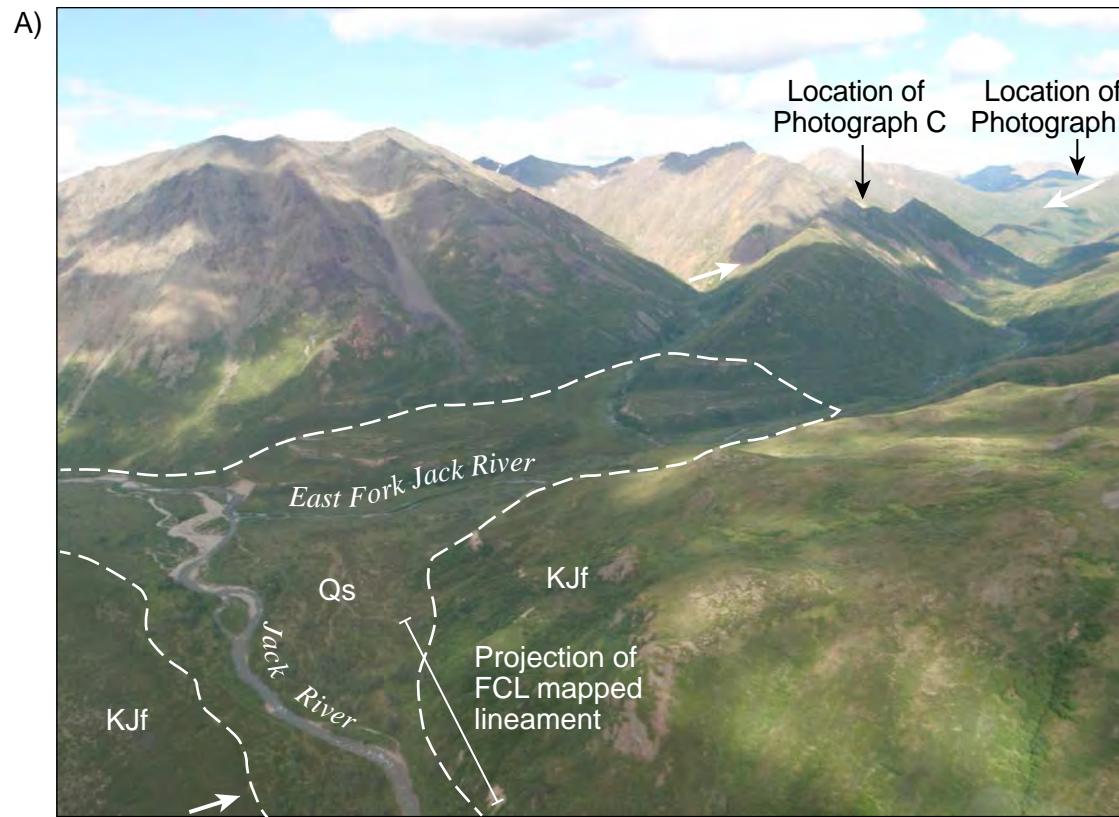

Lineaments, Faults, Contacts,  
Synclines, and Anticlines

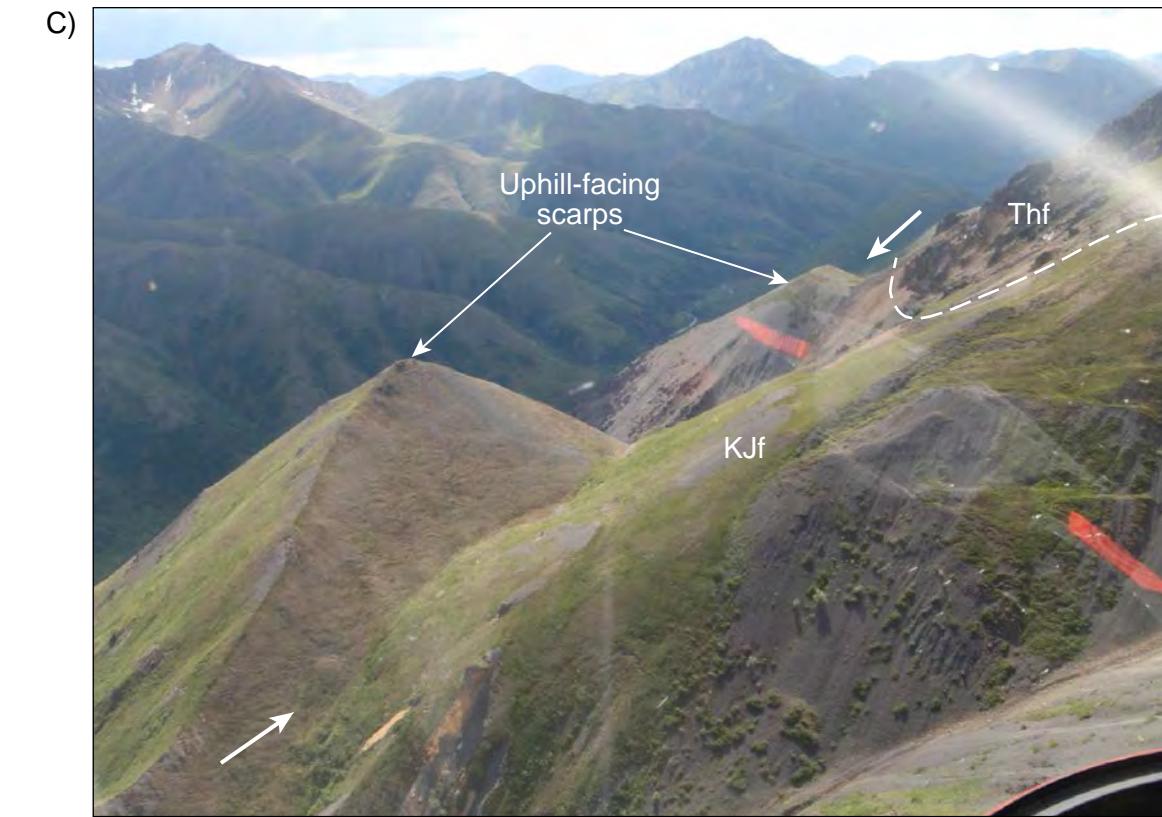

- ..... — ↓ — Anticline, dashed where approximate, dotted where concealed
- ?— + + + — Contact; solid where certain, dashed and queried where uncertain
- •?— — Fault; solid where certain, dashed and queried where uncertain, dotted where concealed
- — — Lineament, approximate
- ↓ — Syncline, approximate

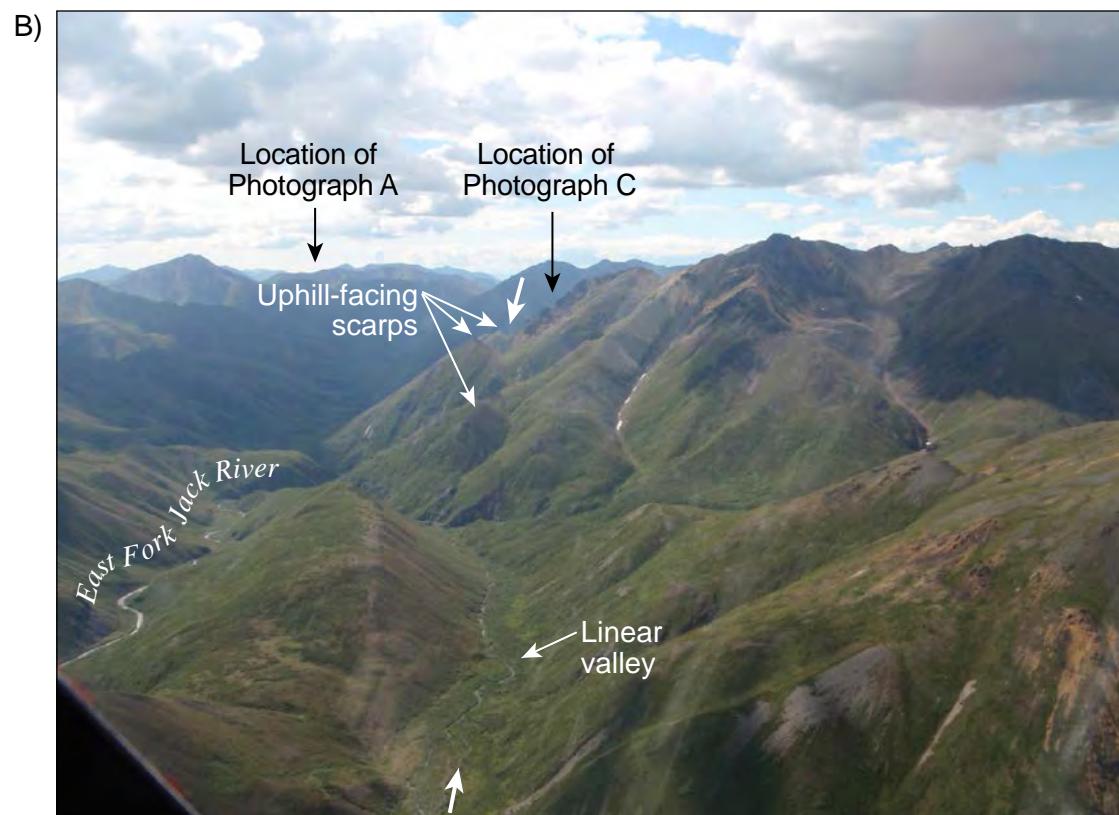

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
2. Geology by Wilson et al., 1998

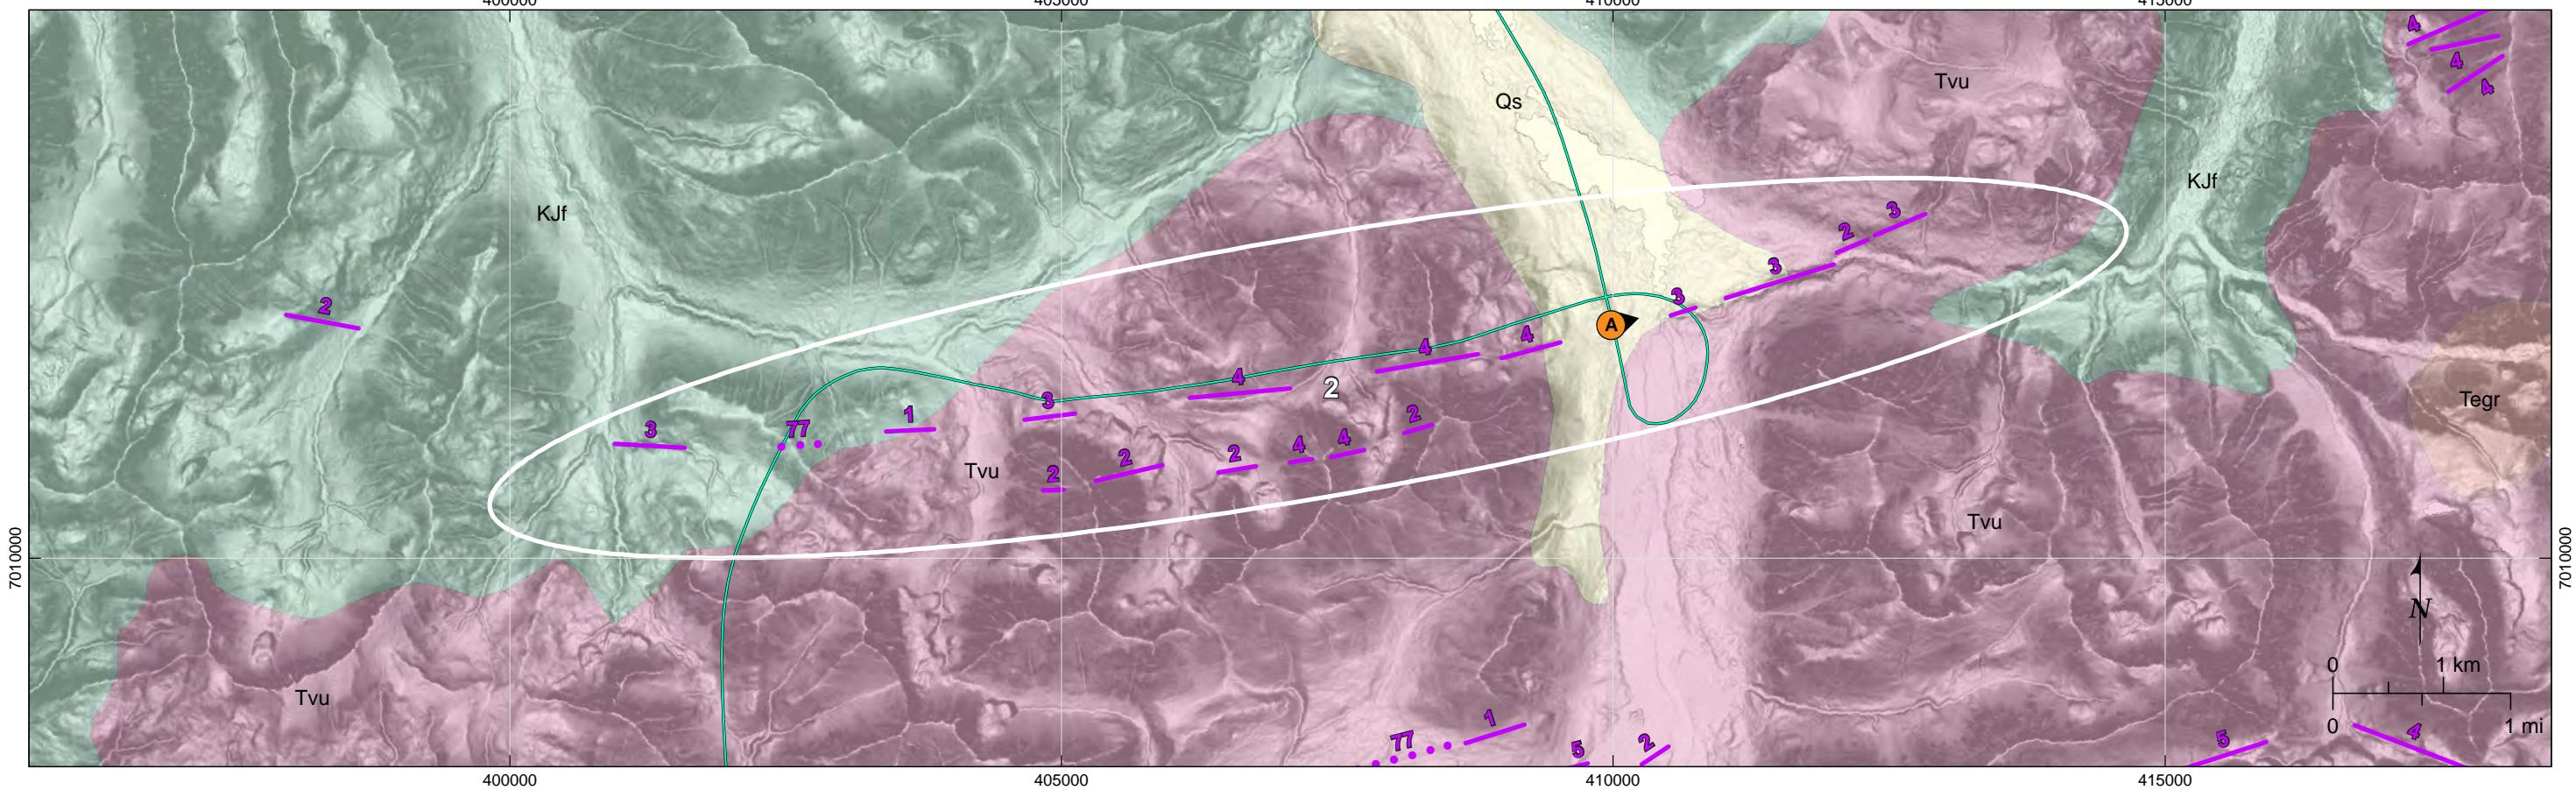

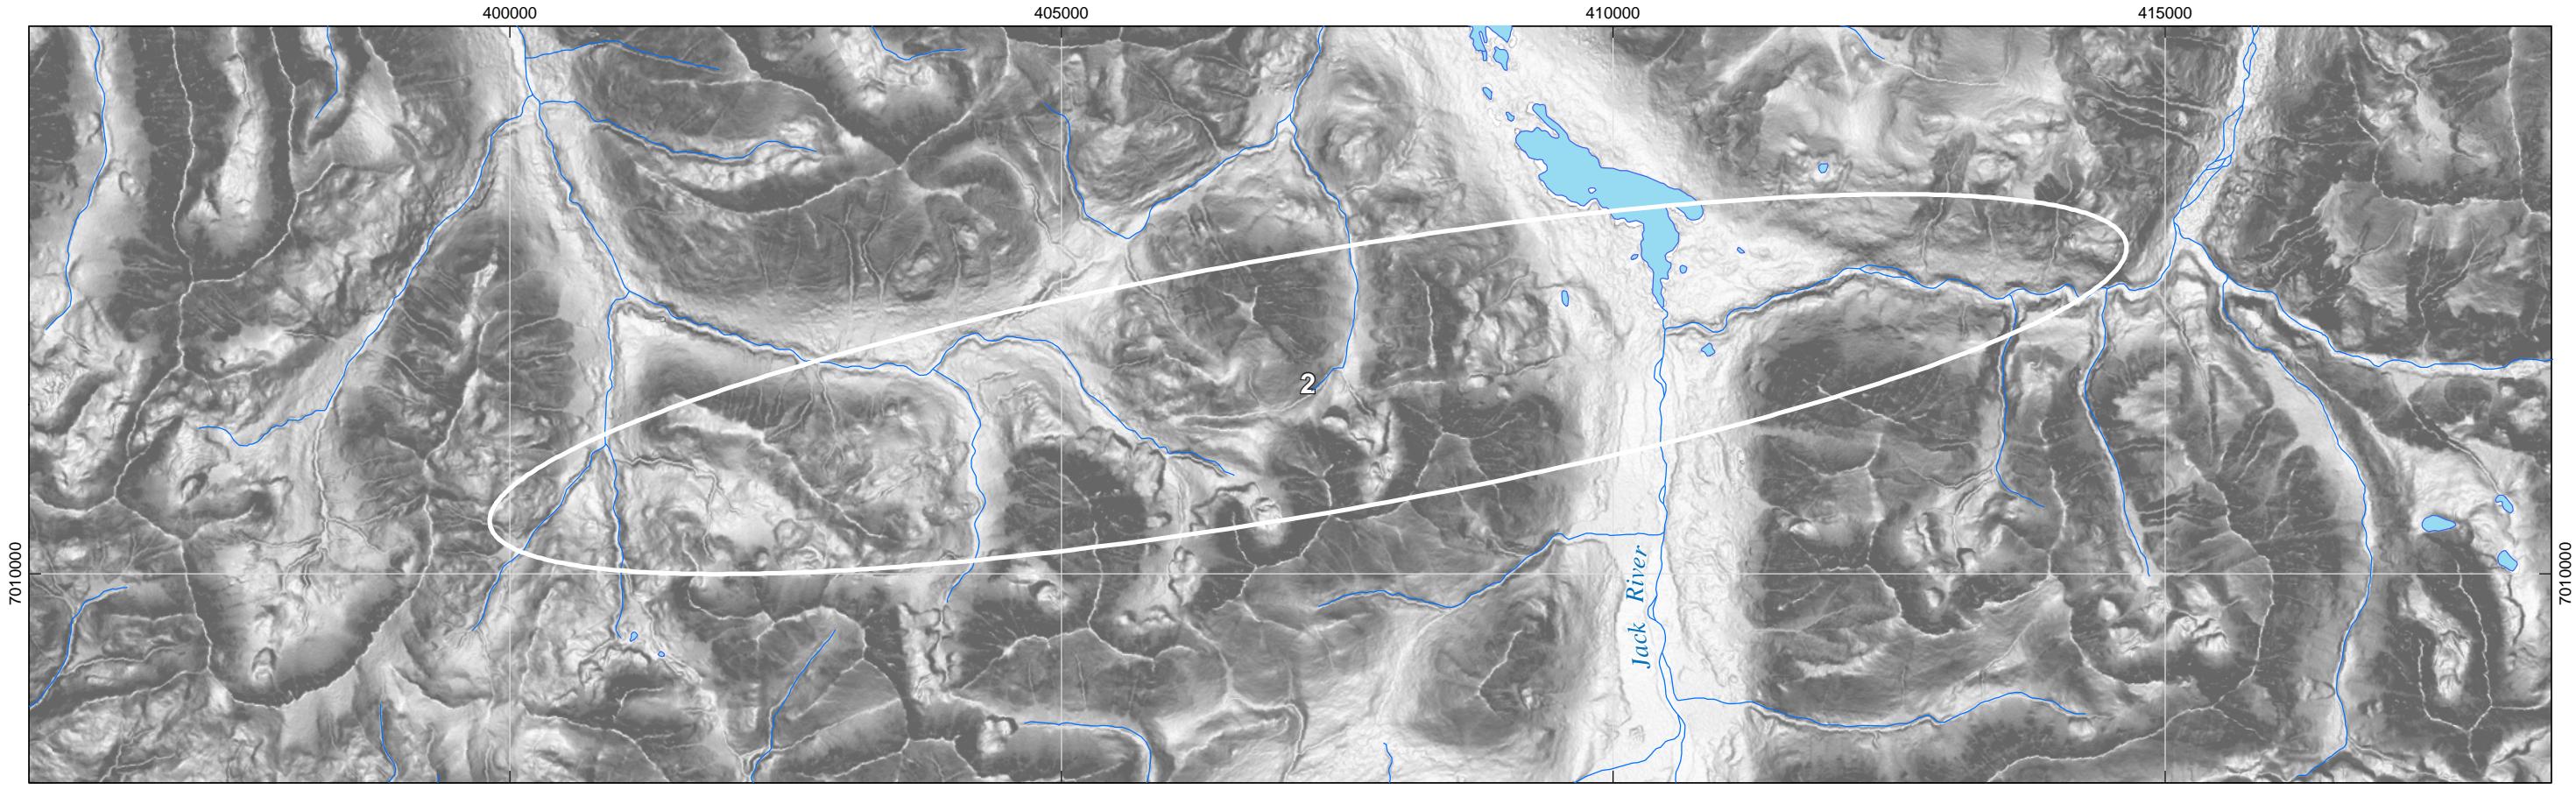

View looking northeast from location A towards the confluence of the Jack River and the East Fork Jack River. Arrows point along the alignment of mapped lineaments. Note absence of linear expression in Quaternary deposits.

View looking southwest from location C at a detailed view of aligned uphill-facing scarps. Note Thf contact is up-slope from the scarp in the distance.

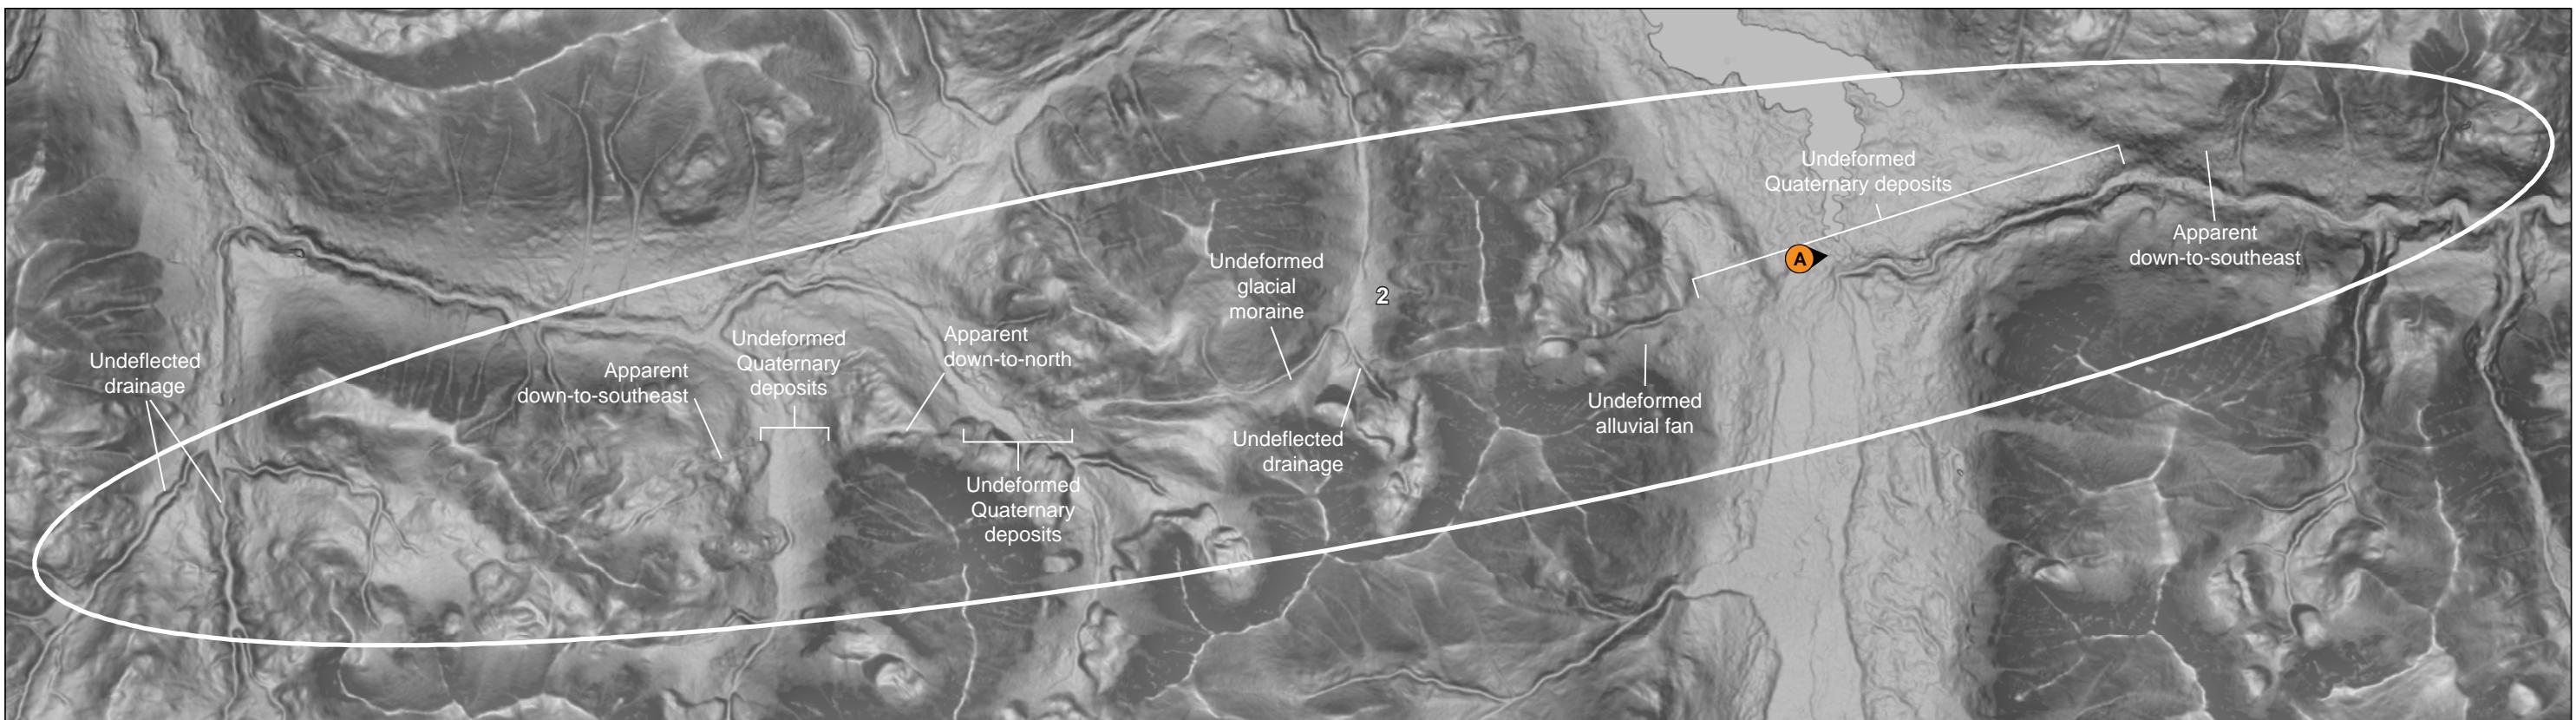

View looking southwest from location B along alignment of linear features. Arrows indicate the alignment of the mapped lineaments.

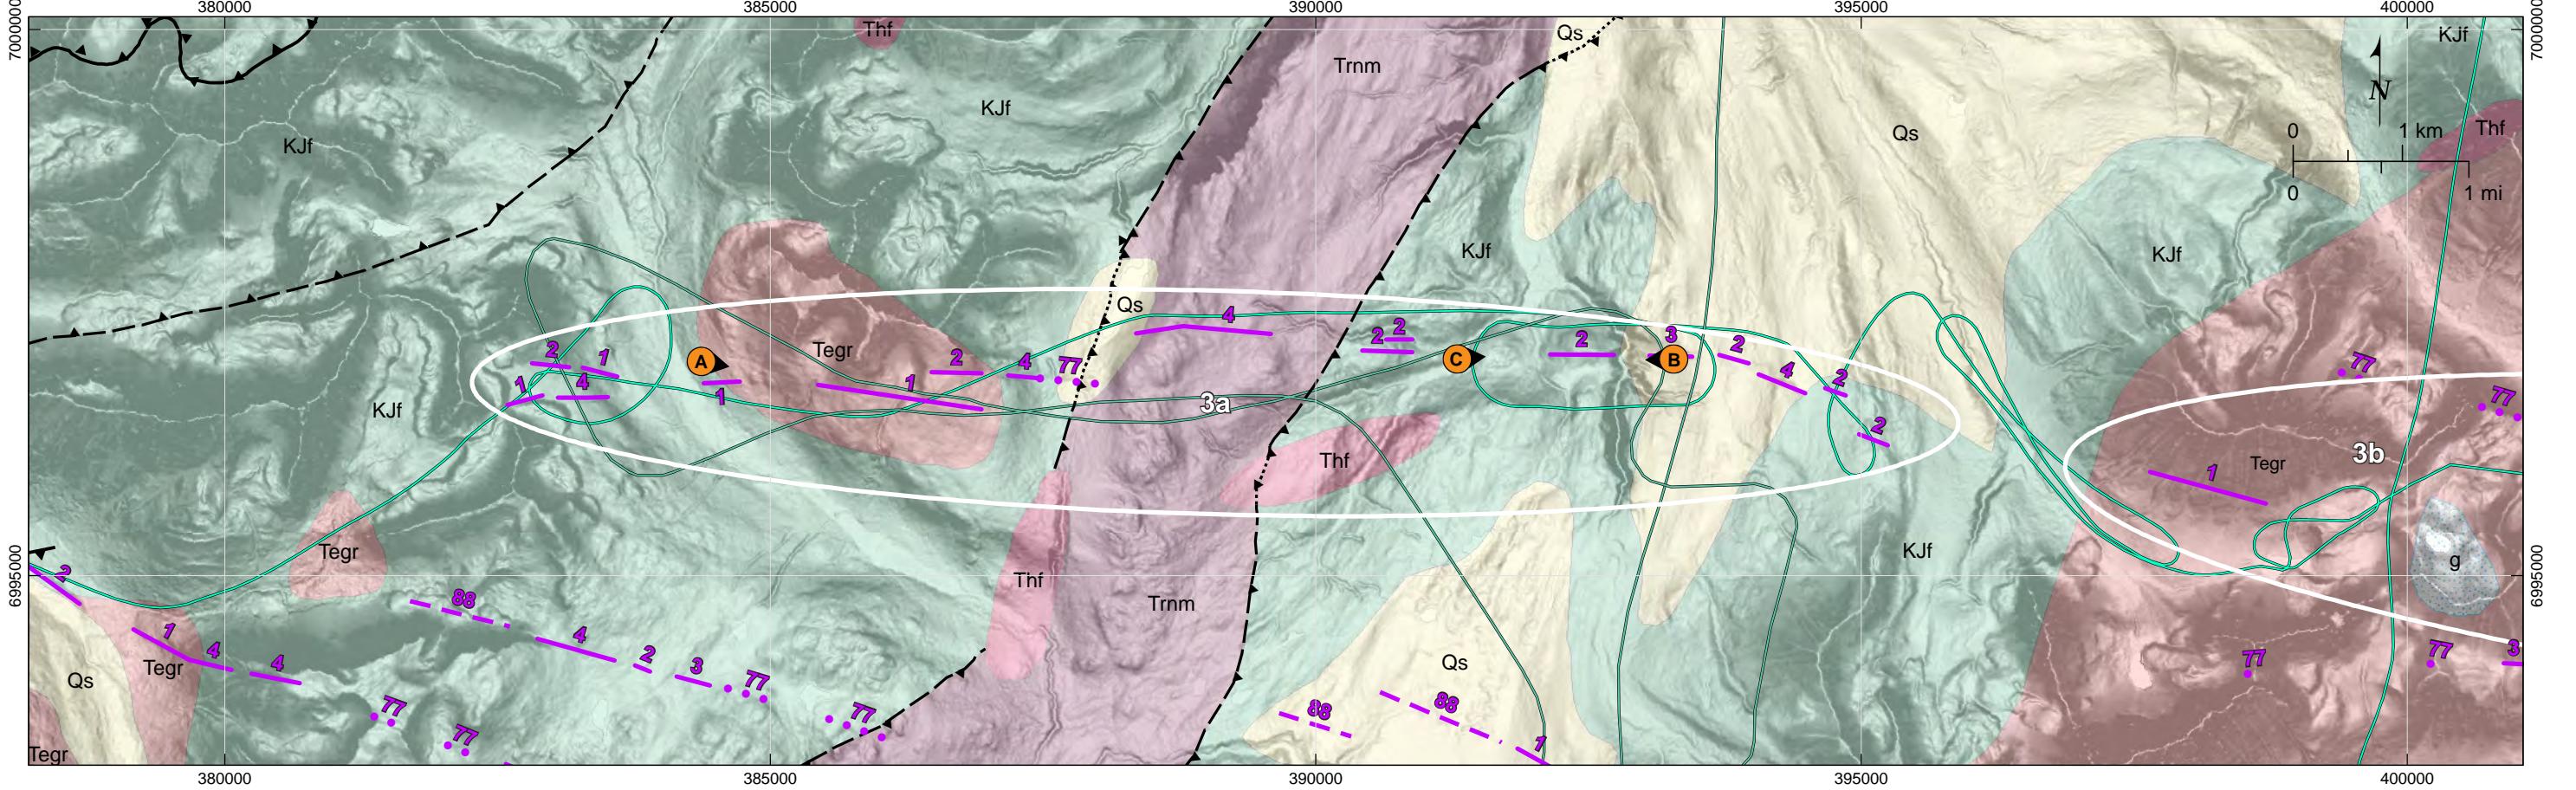

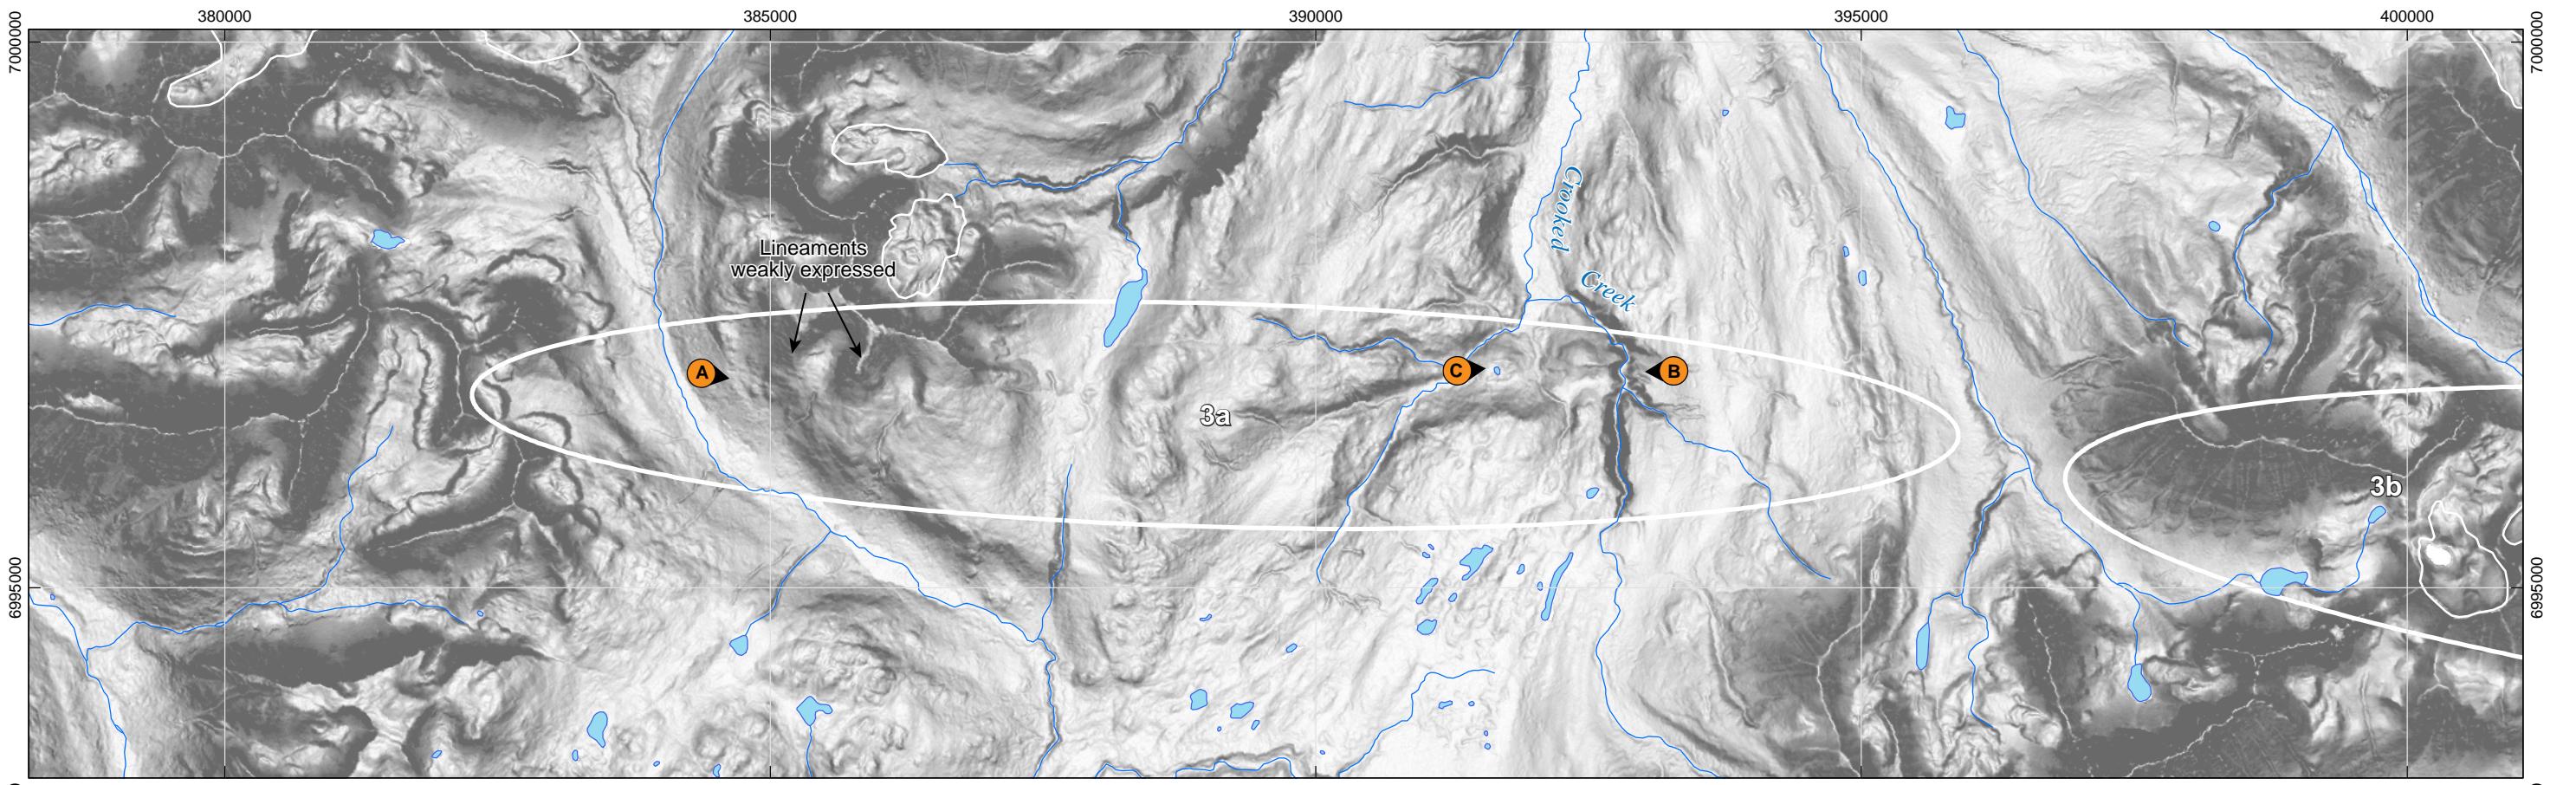

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
2. Geology by Wilson et al., 1998.

Photograph taken from location A looking east-northeast. Arrows show the alignment of FCL-mapped lineament. Note lack of apparent deformation in bedrock exposure along Jack River.

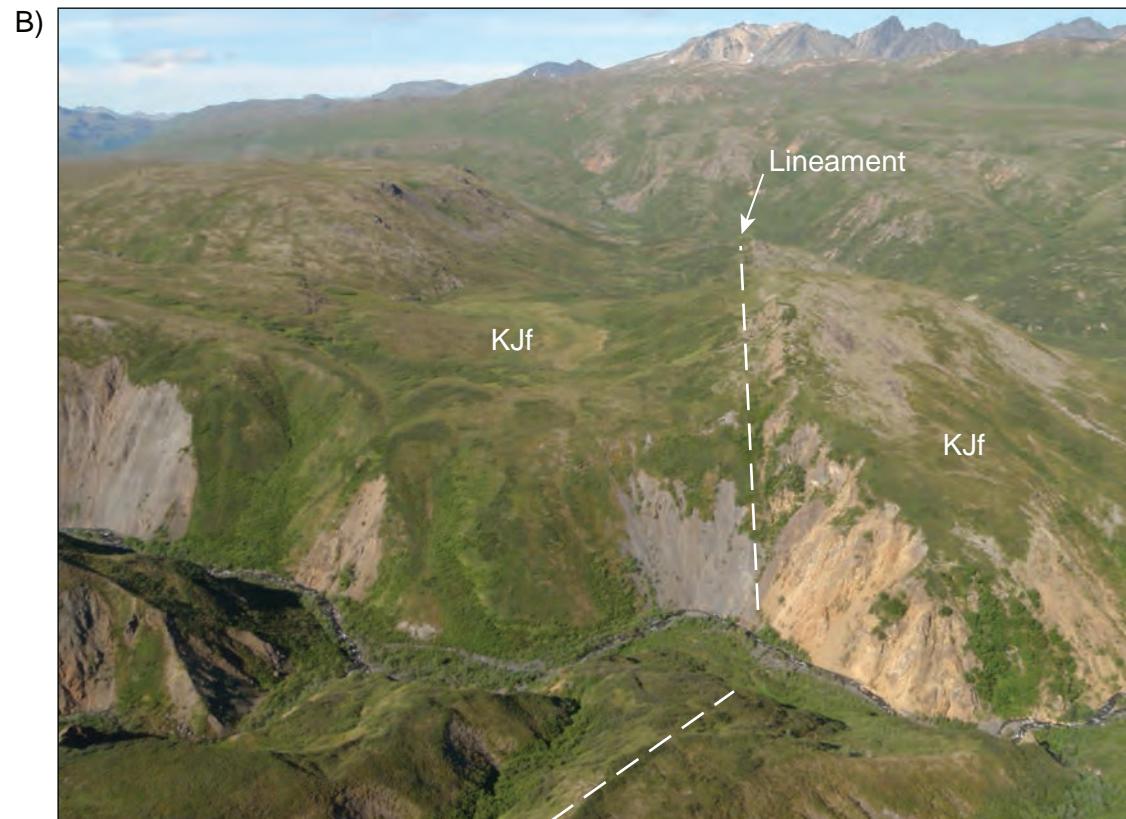

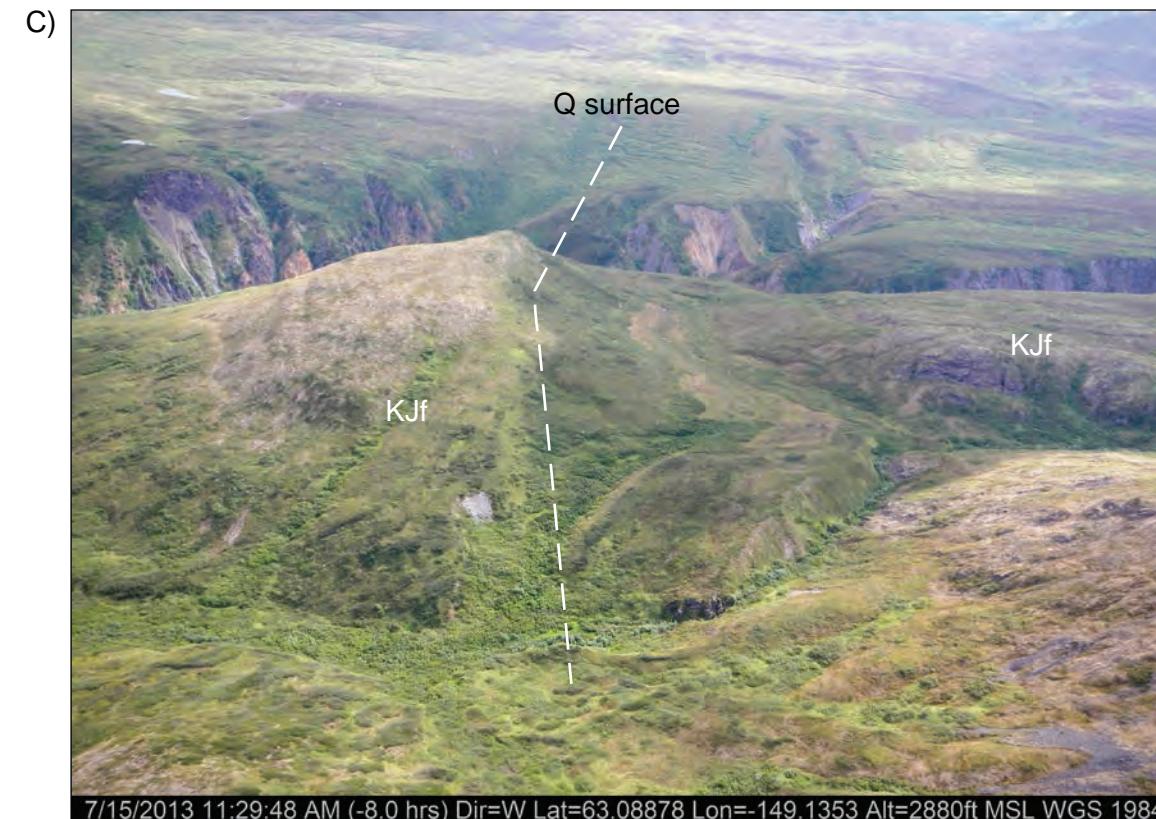

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
2. Geology by Wilson et al., 1998.

View looking east at likely solifluction-related scars on hillside that correspond with mapped lineaments. Large arrows point along lineaments.

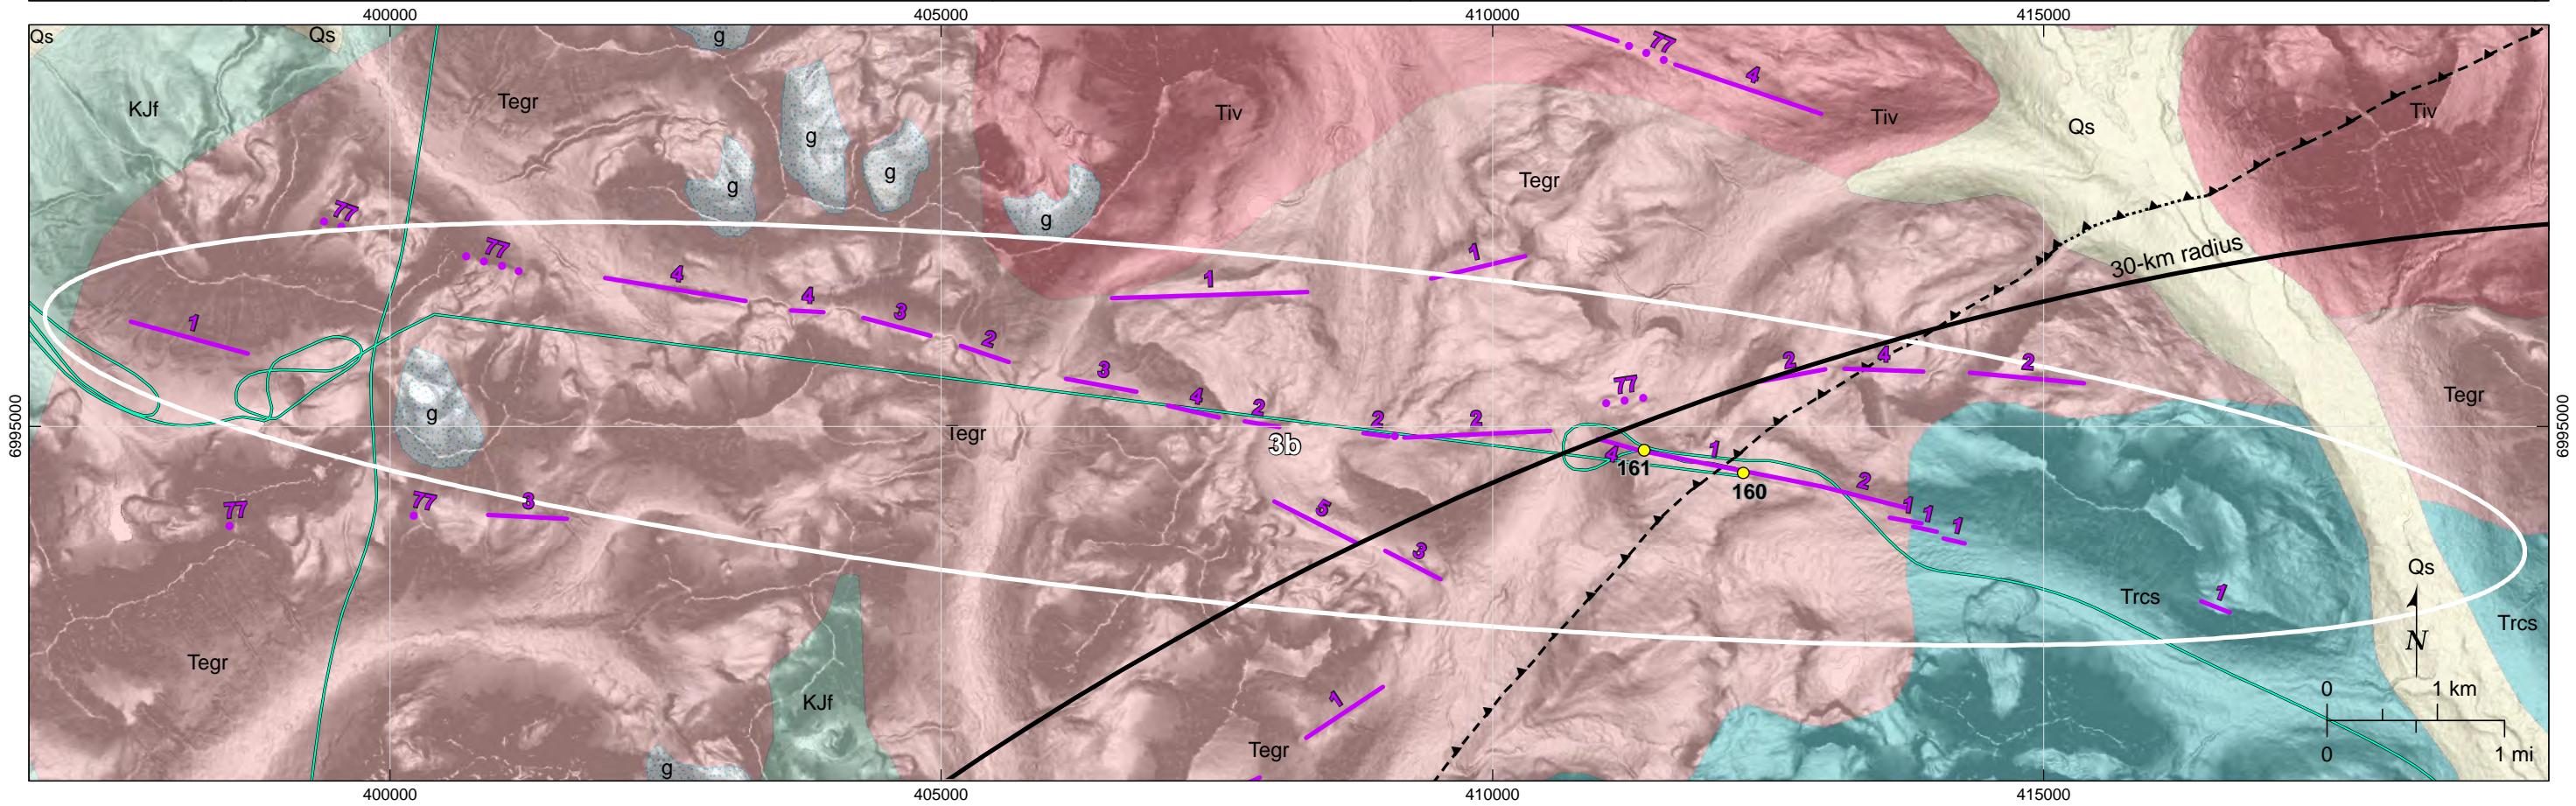

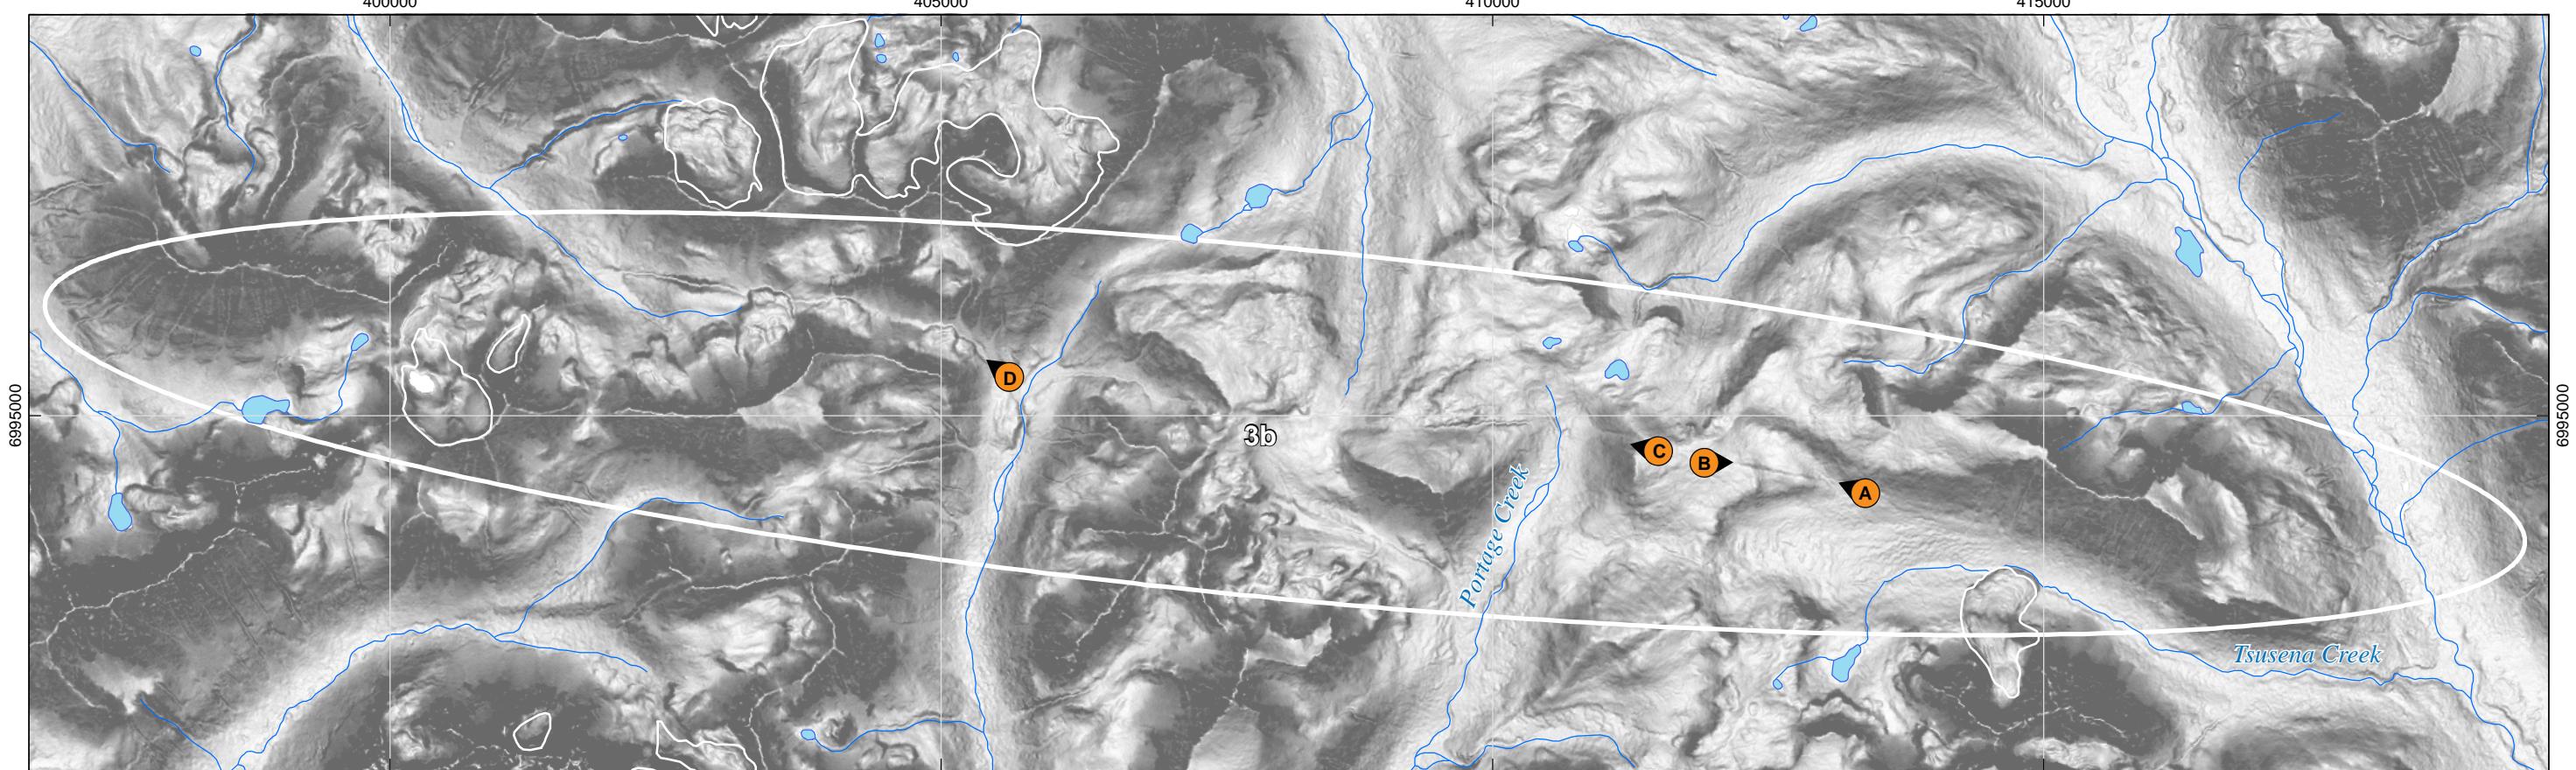

View looking west along 3a lineament expressed as sharp ridge within Kahlitna flysch (KJf). Apparent color change and topographic expression may suggest a geologic structure, however, none were previously mapped. The feature may be a result of weathering because of lithologic change within the flysch.

7/15/2013 11:29:48 AM (-8.0 hrs) Dir=W Lat=63.08878 Lon=-149.1353 Alt=2880ft MSL WGS 1984

View looking east past ridge, with unfaulted Quaternary sediments in the foreground and far distances.

Notes:  
 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
 2. Geology by Wilson et al., 1998.

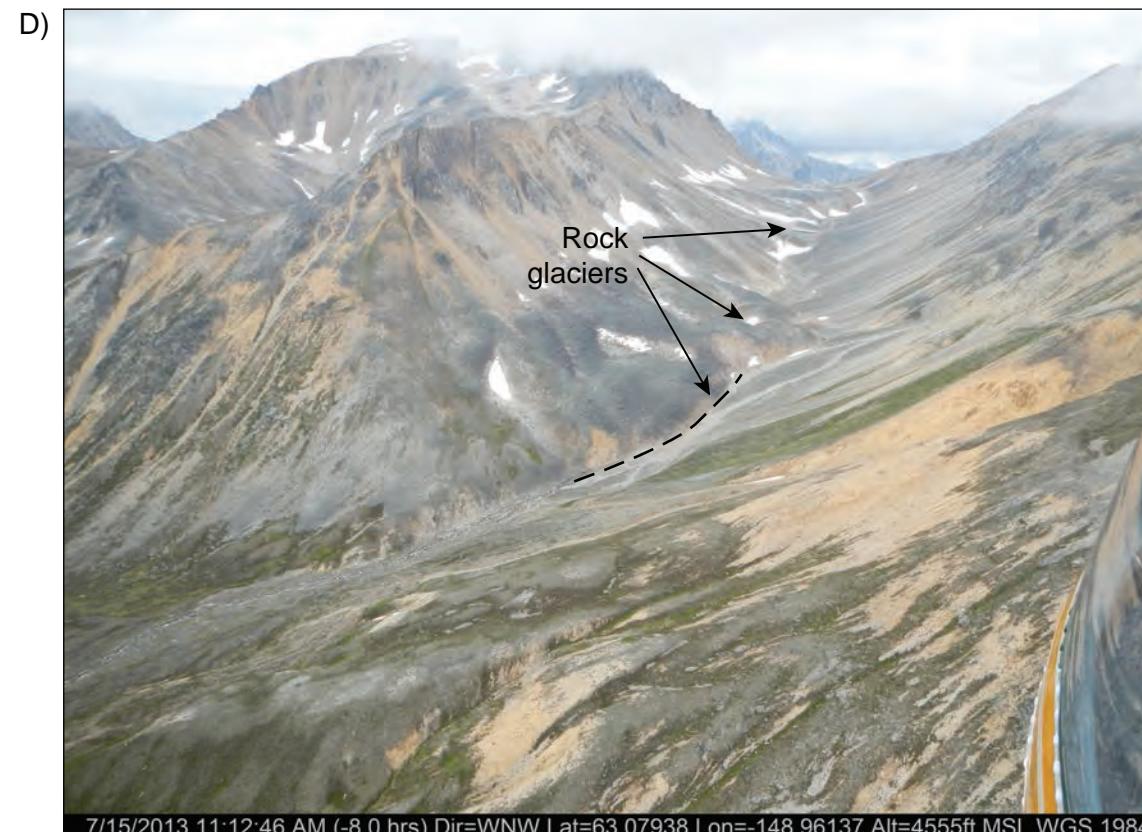

View looking west along north-facing escarpment in Eocene granitics.

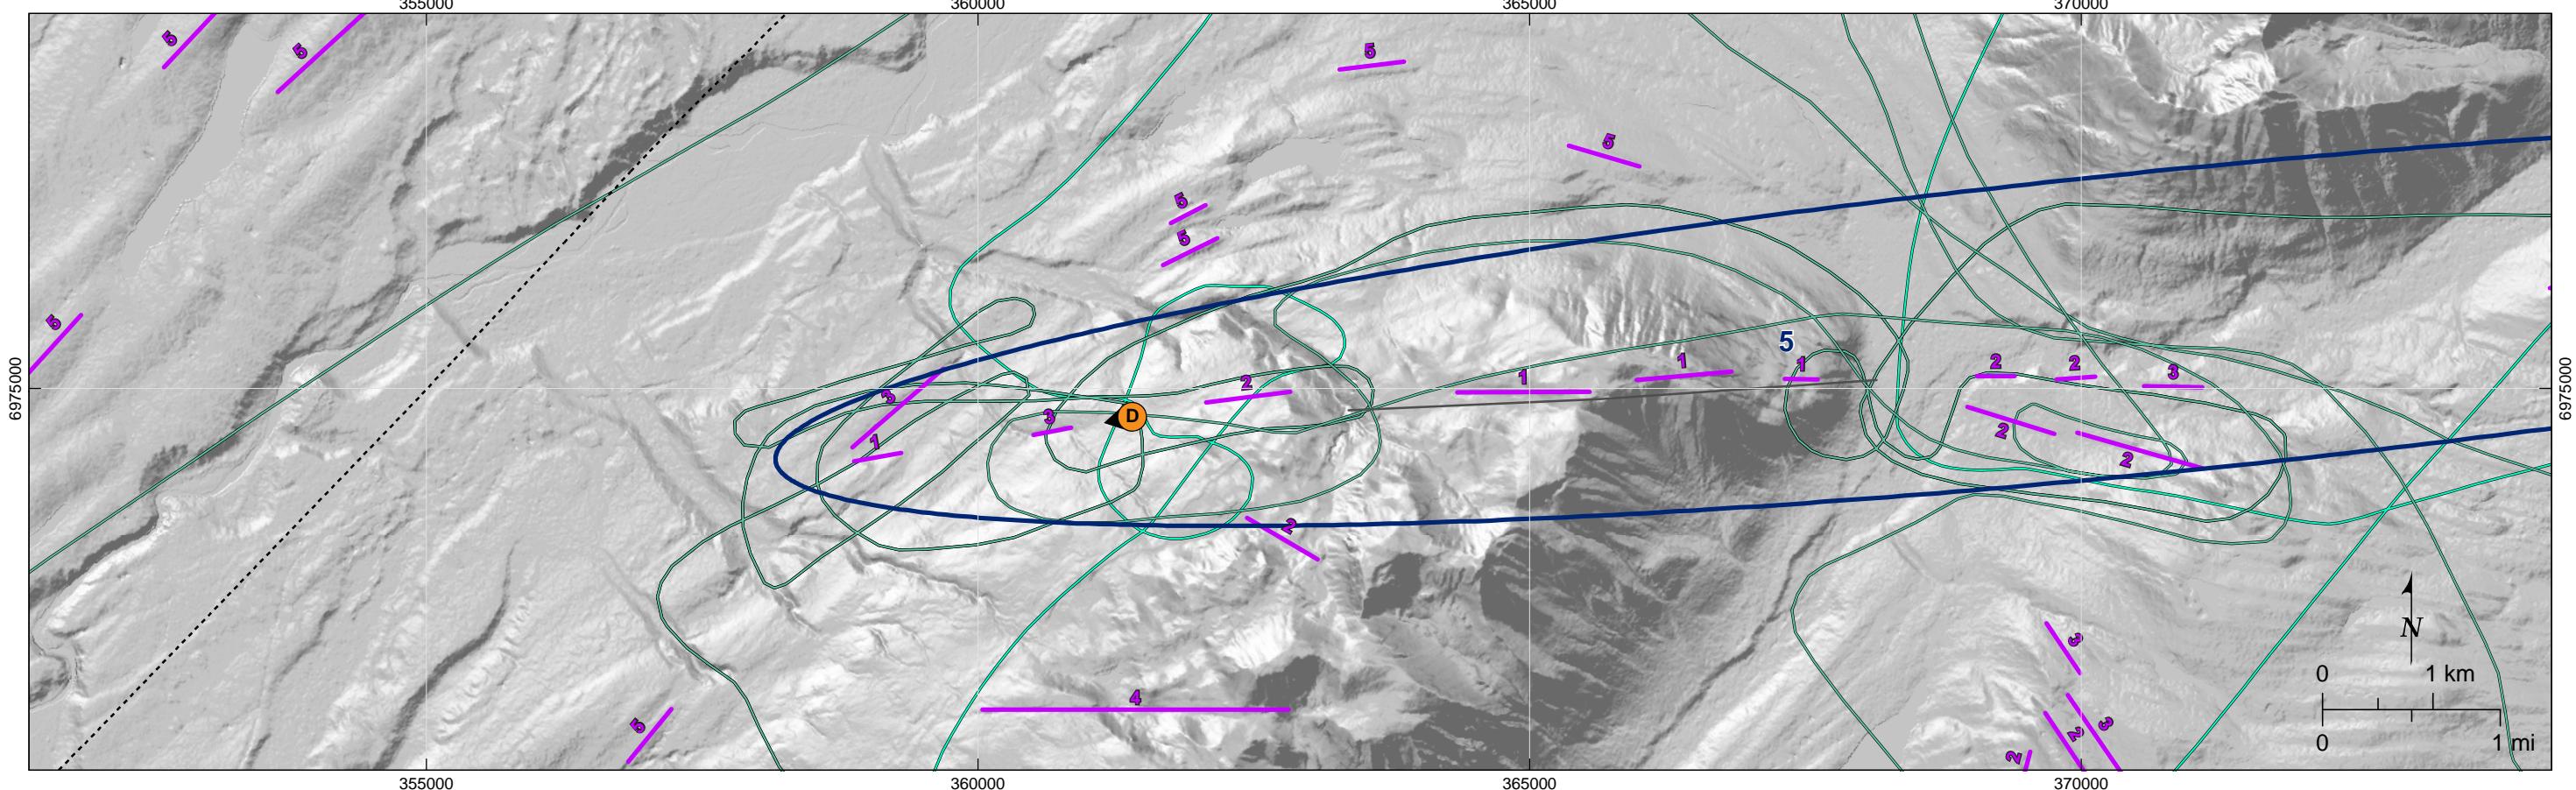

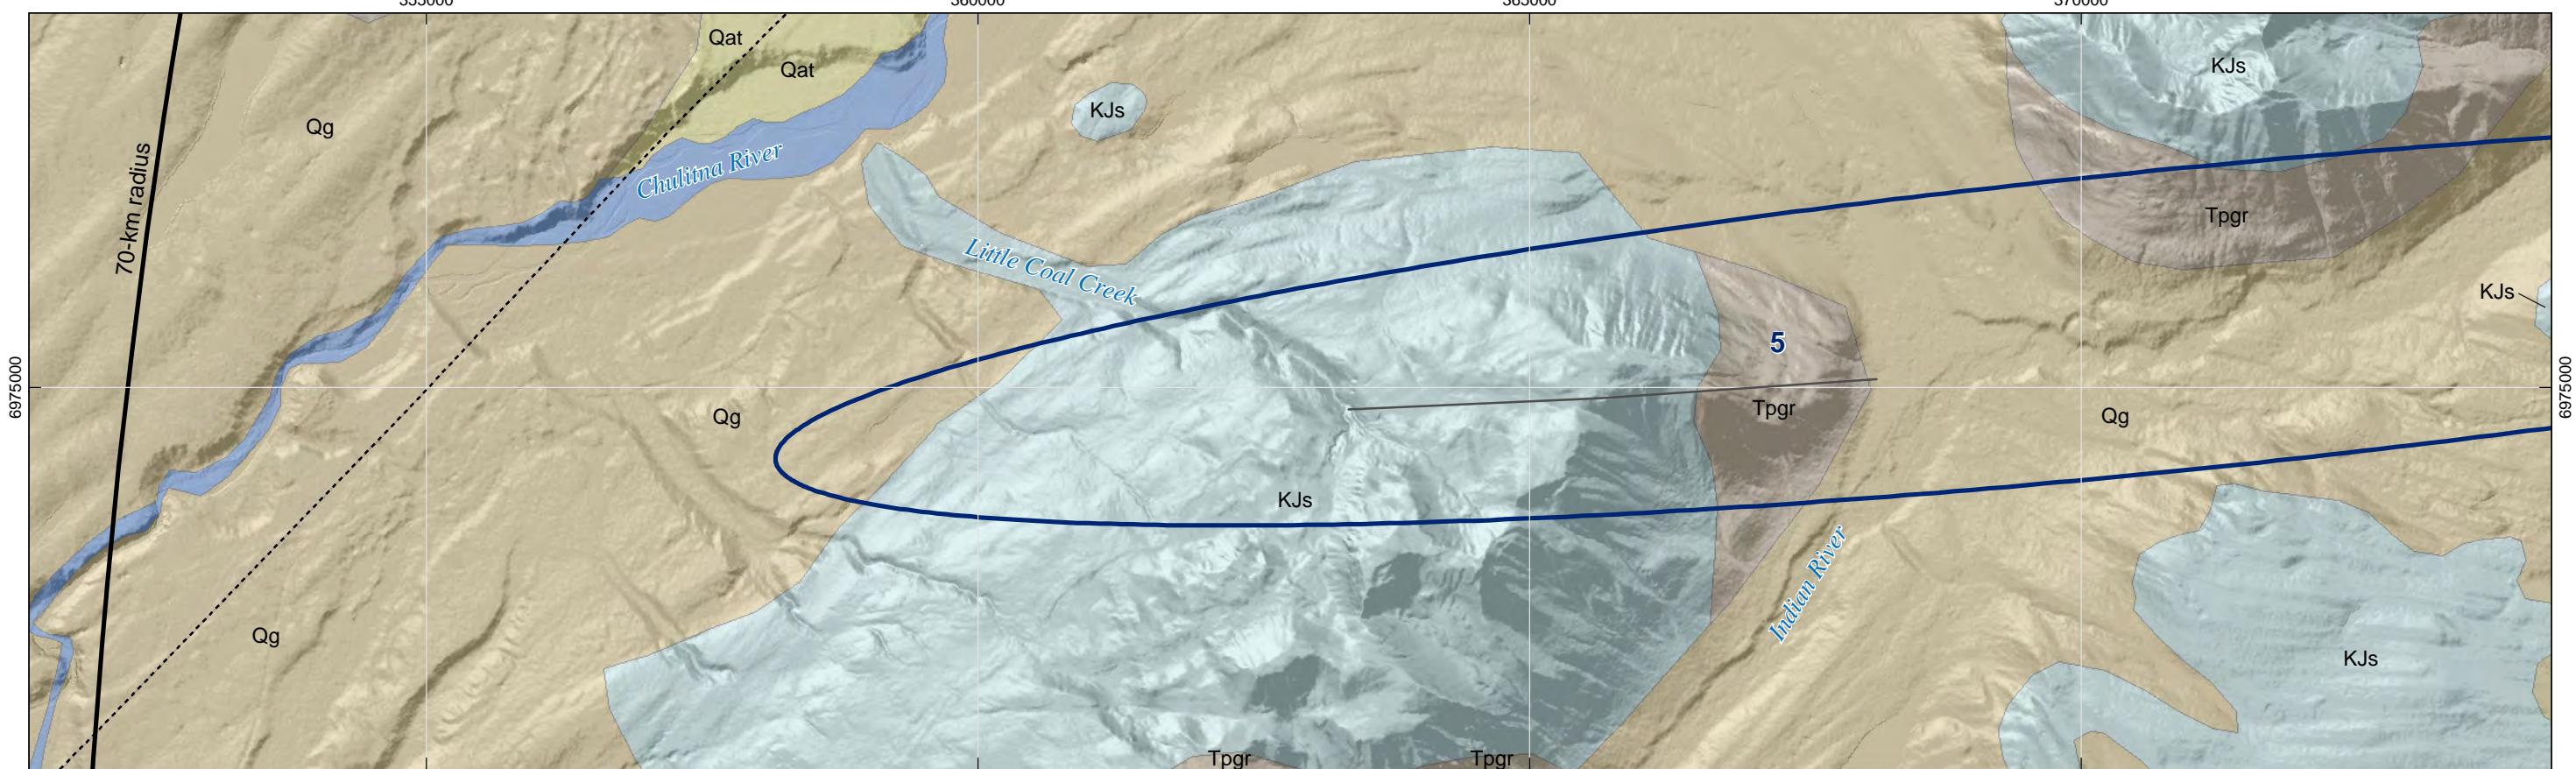

View looking west along lineament 3b projection. South-facing escarpment indicates a reversal in kinematic morphology.

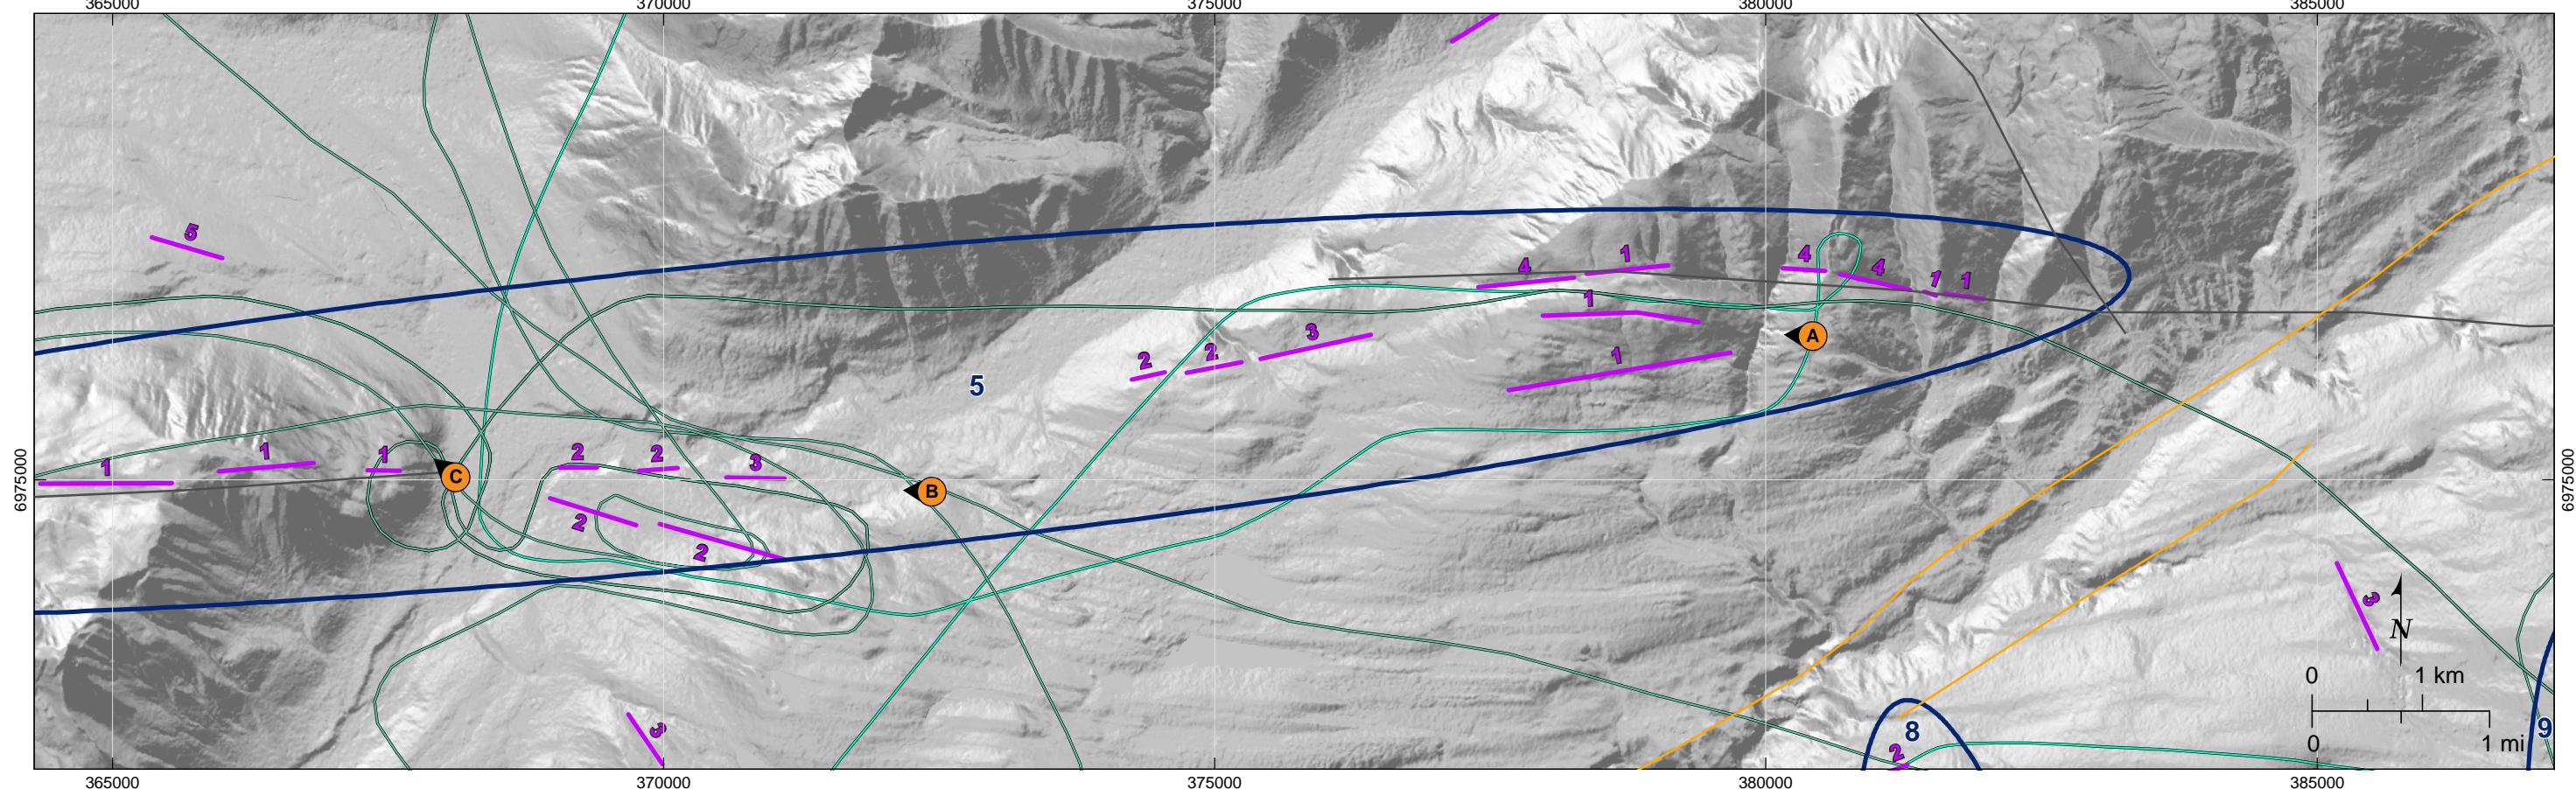

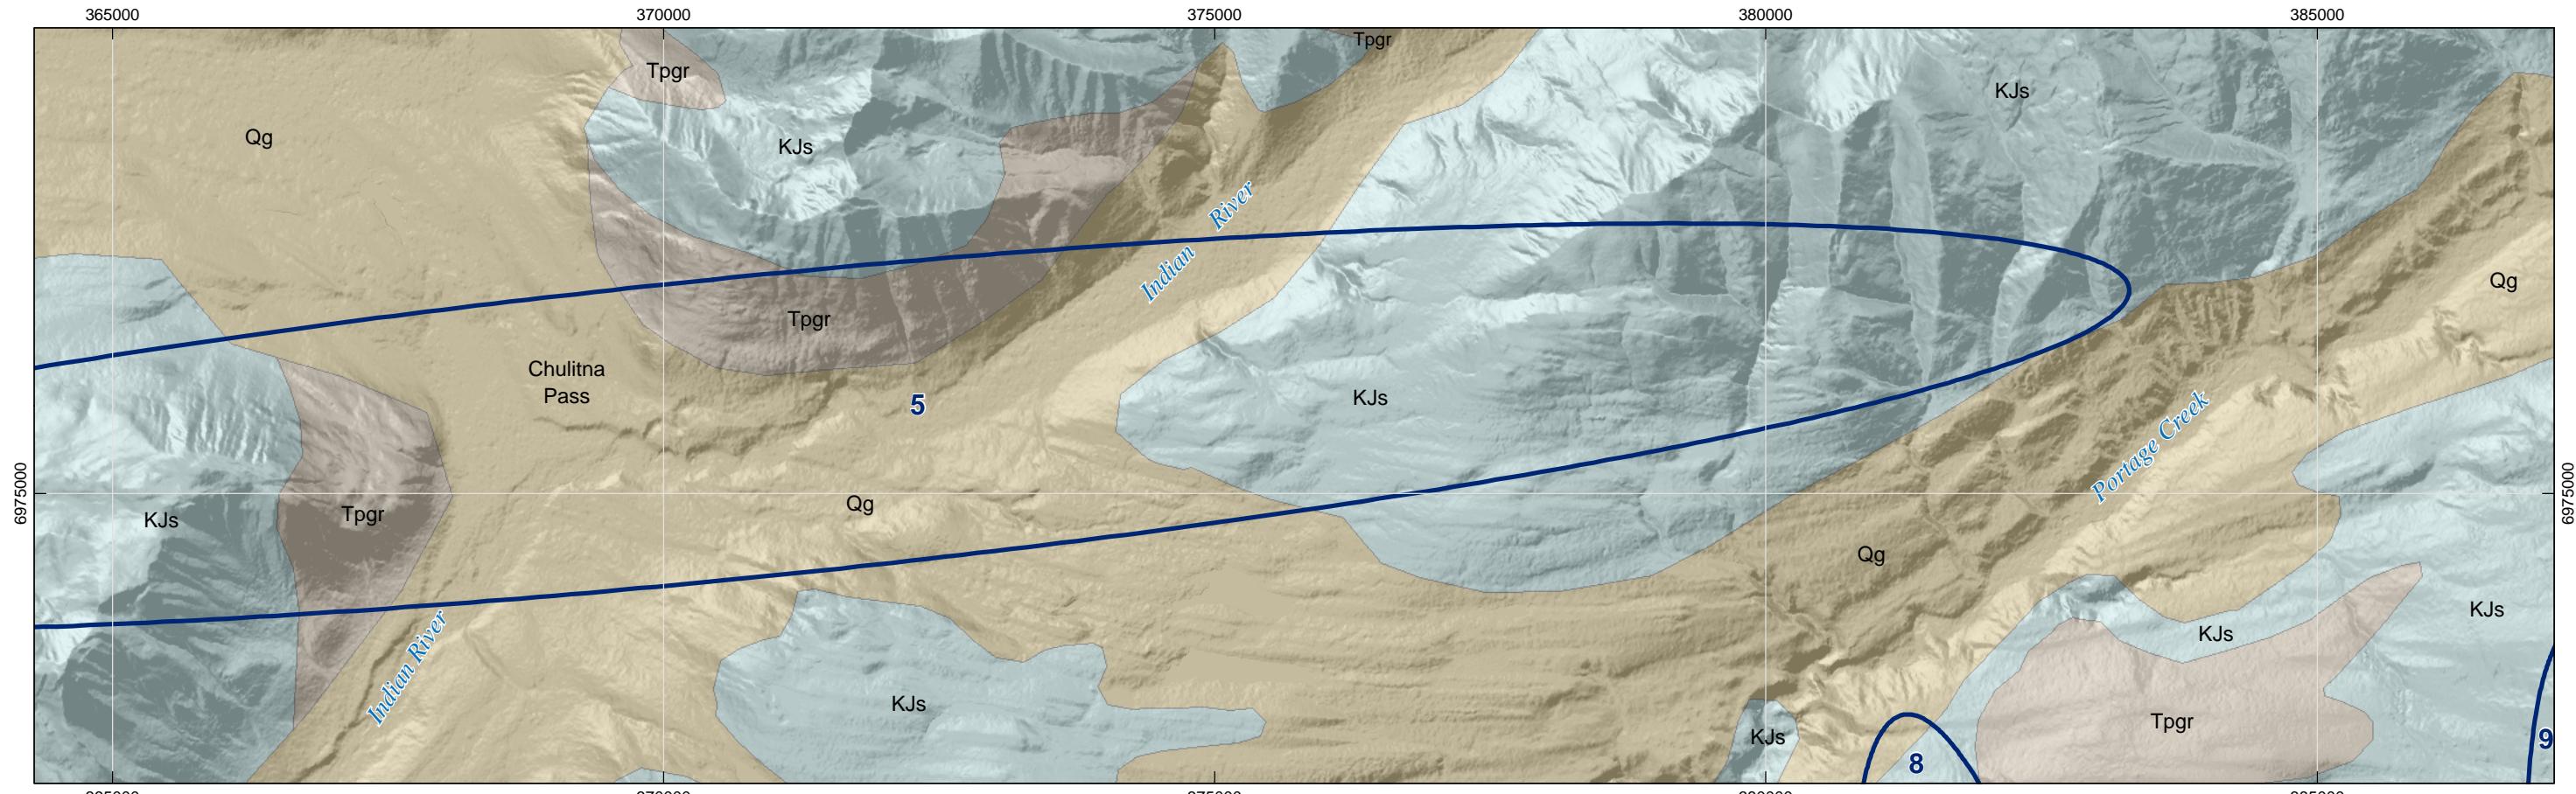

View looking east along lower talus scree field that shows decreasing relief at west end of lineament 3b.

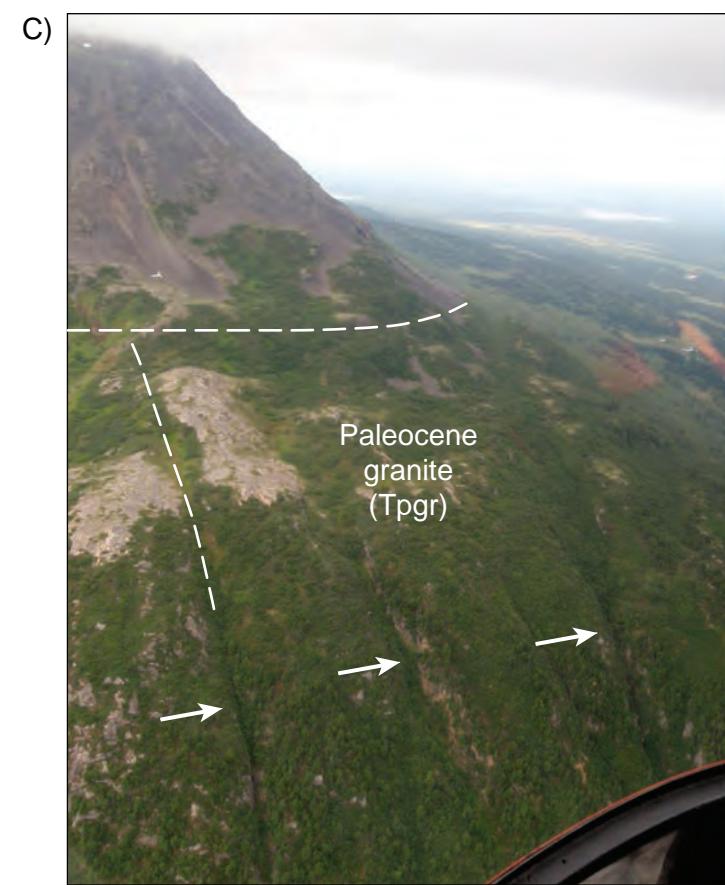

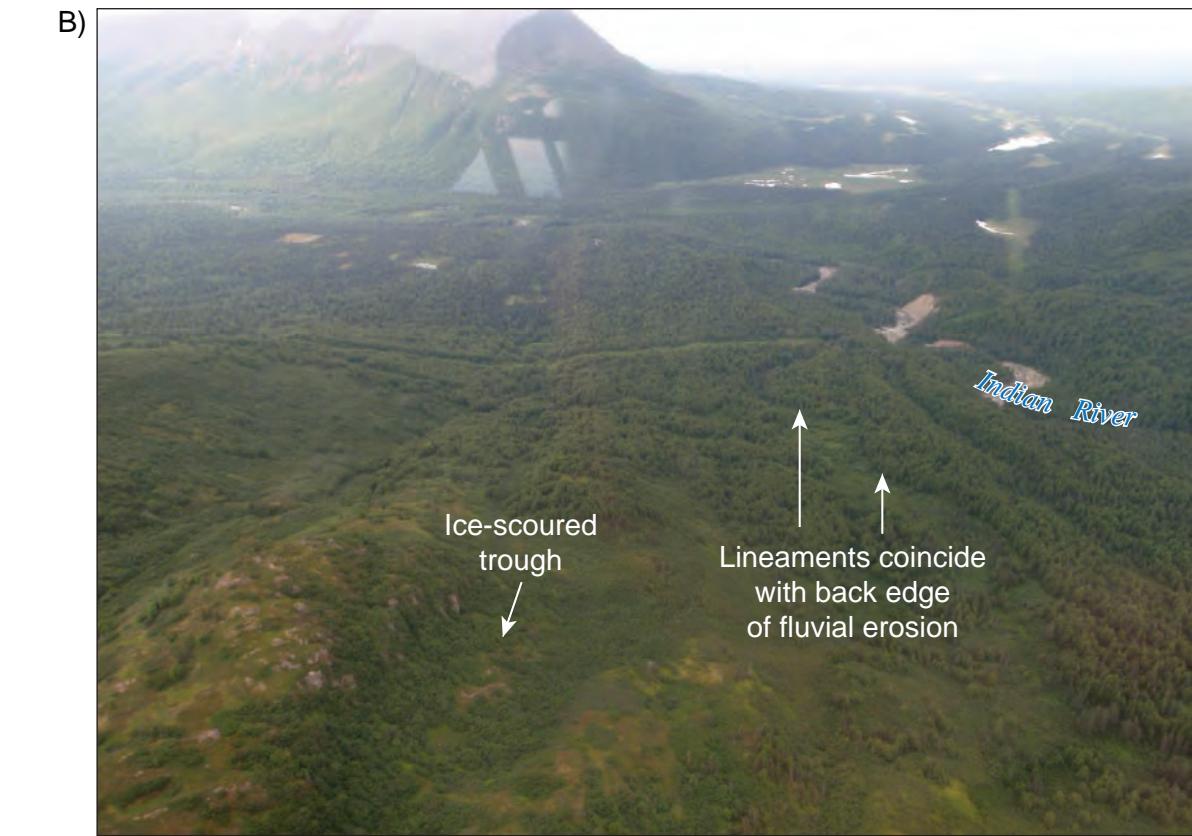

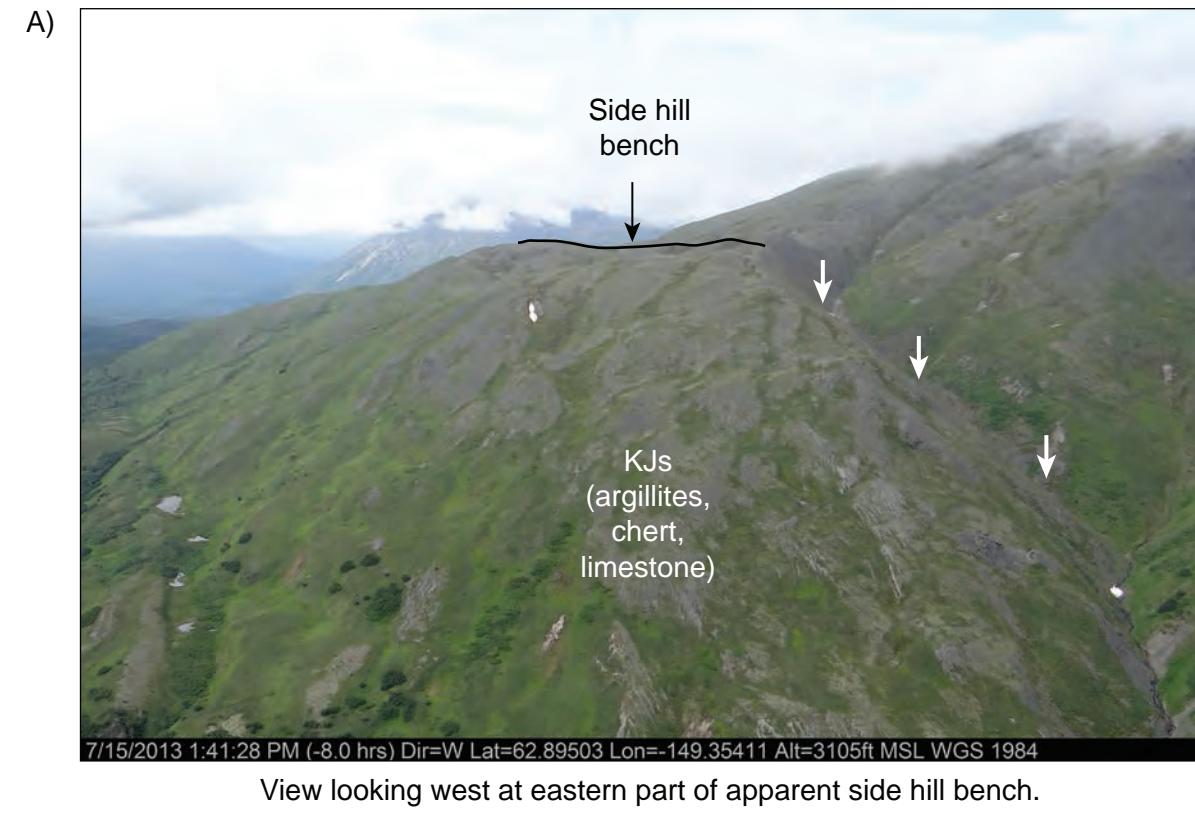

View looking west along lineament 3b projection. Holocene rock glaciers are not offset, and lineament is expressed as a linear valley.

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
2. Geology by Wilson et al., 2009.

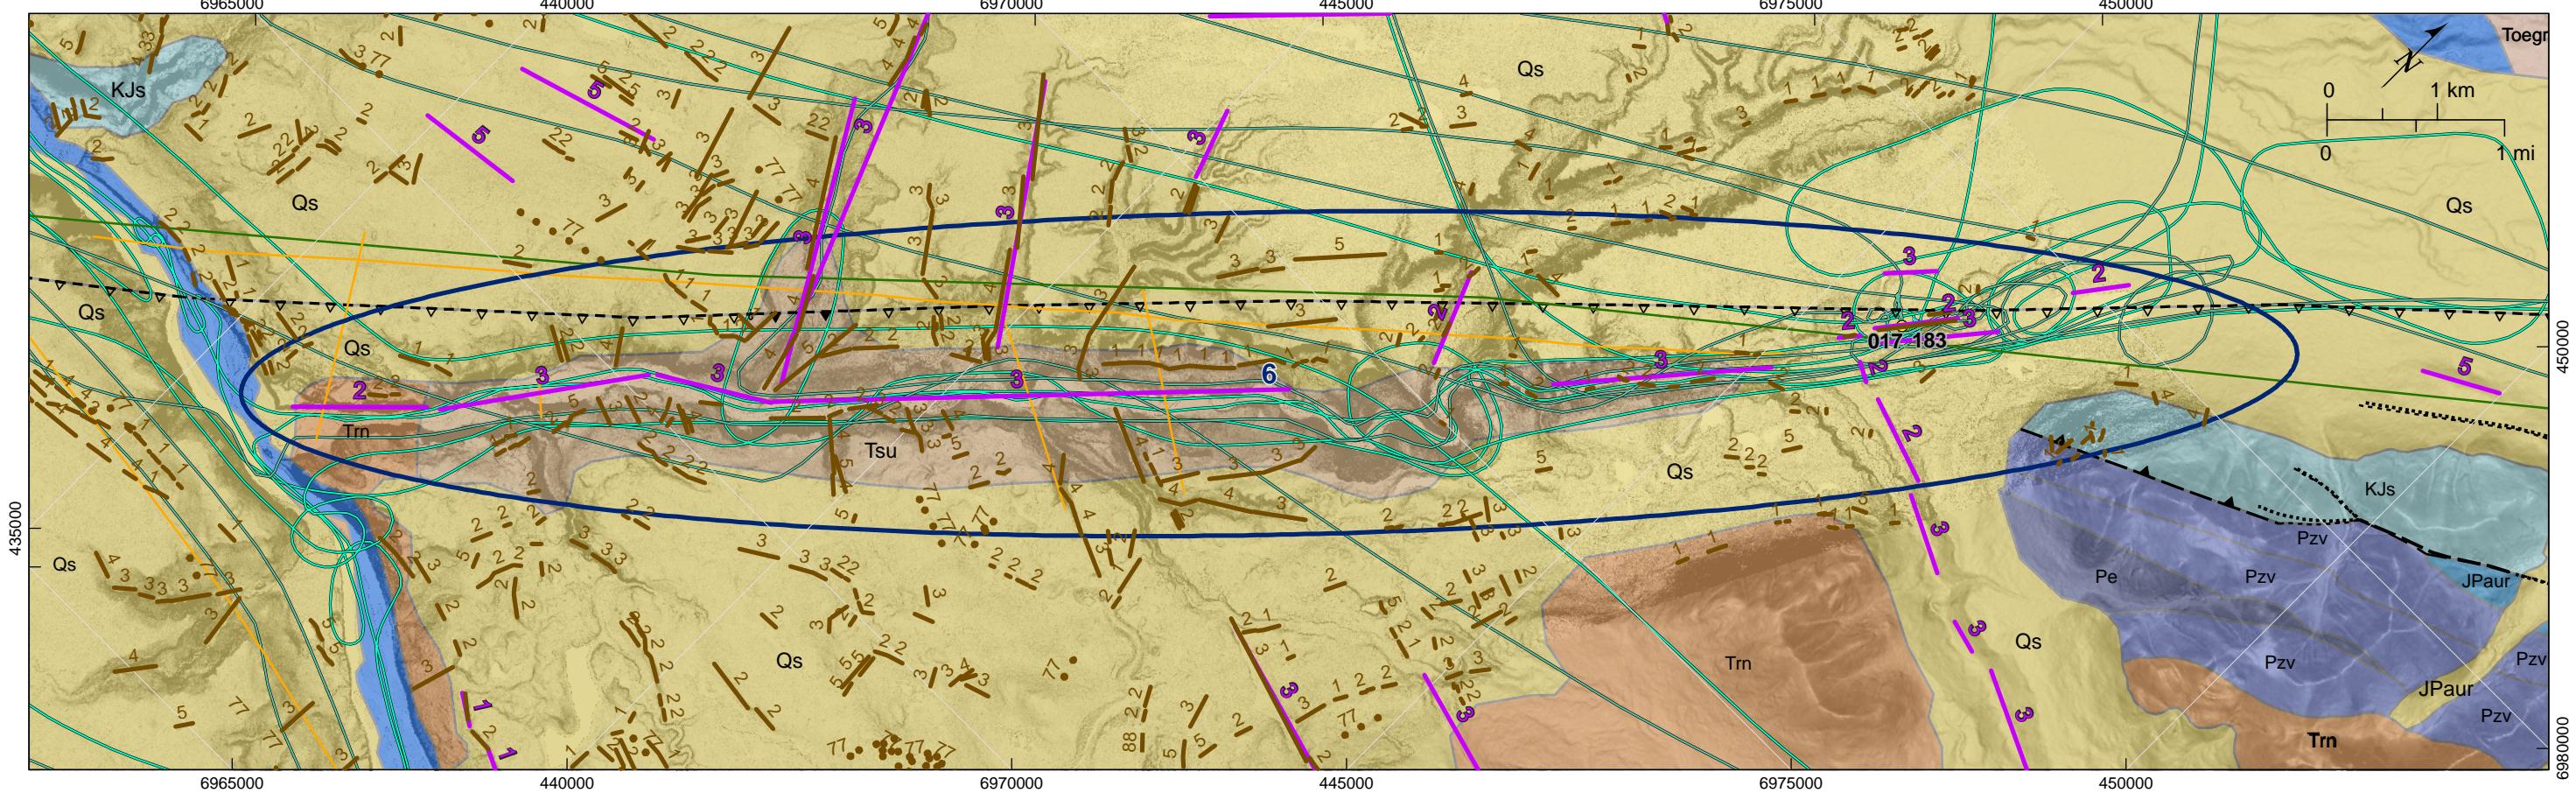

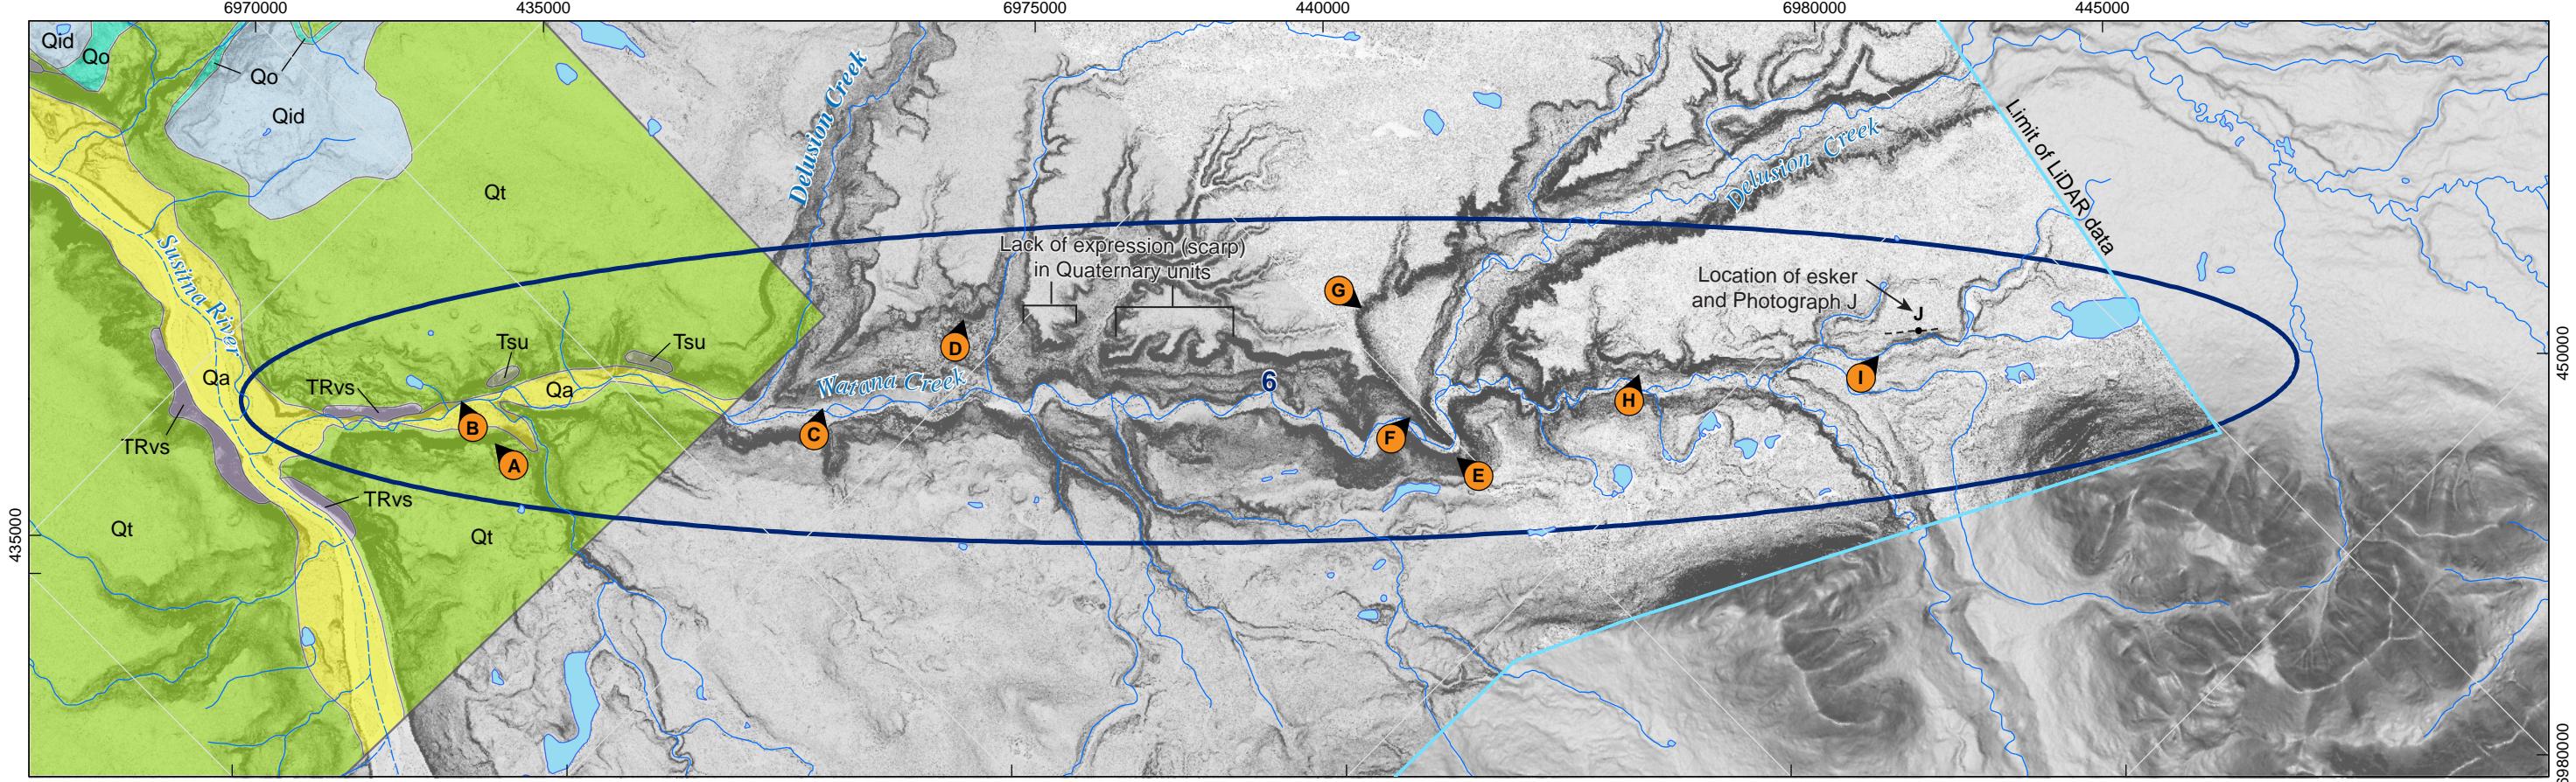

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
2. Geology by Wilson et al., 2009.

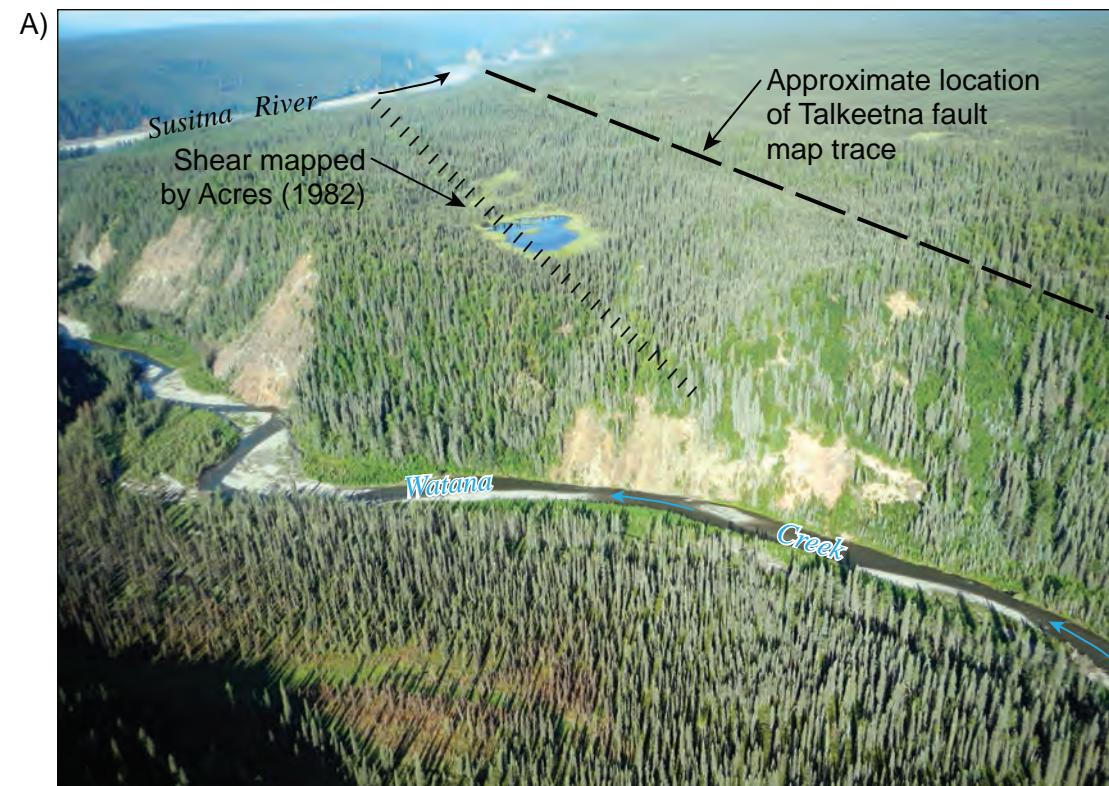

View of linear gullies developed on bedrock slope.  
Mapped lineament approximately shown.

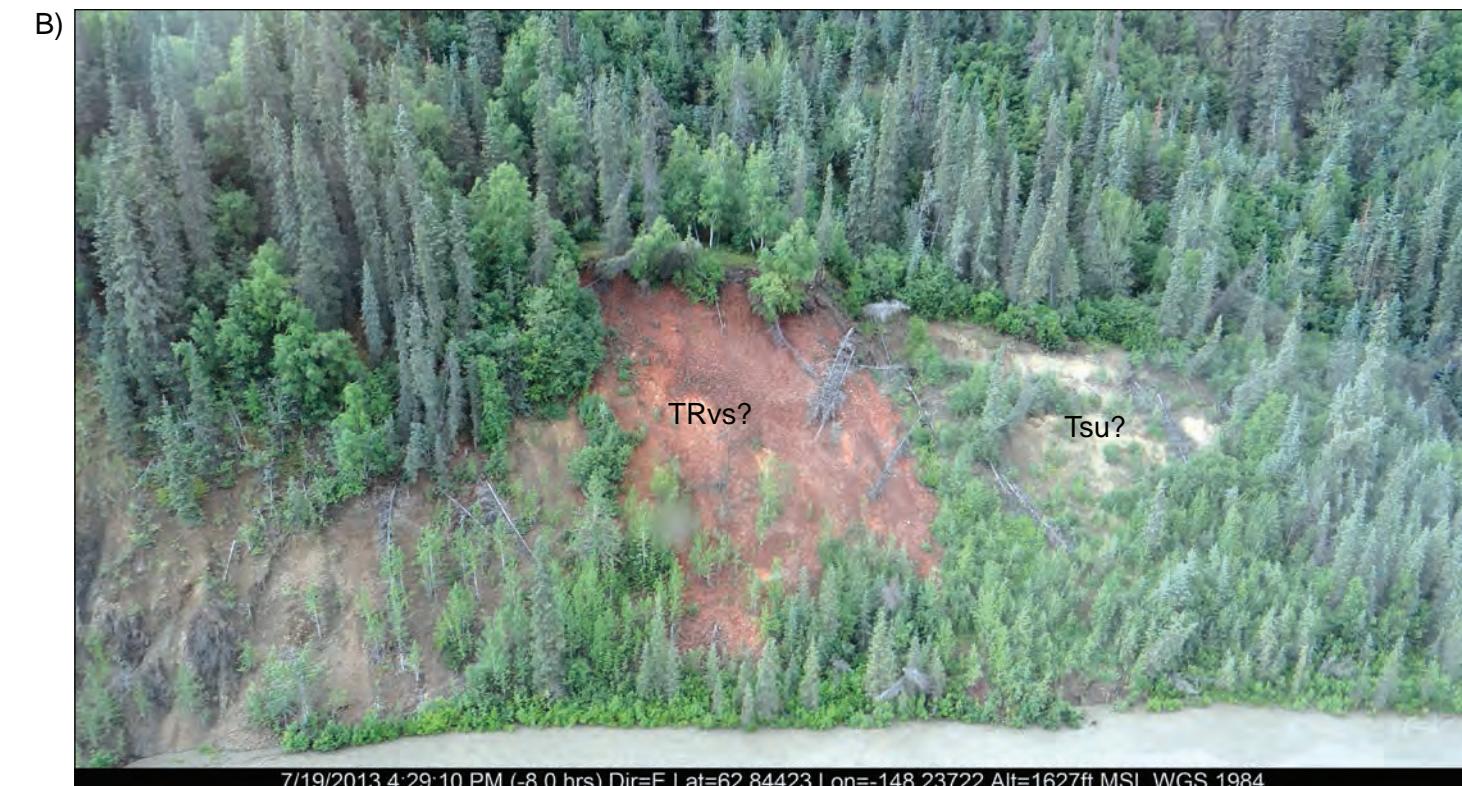

View of drainage with mapped lineament approximately shown.

- Notes:
1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.
  2. Data frame has been rotated 45° east of north.
  3. Geology from Acres, 1982 (top) and by Wilson et al., 2009 (bottom)

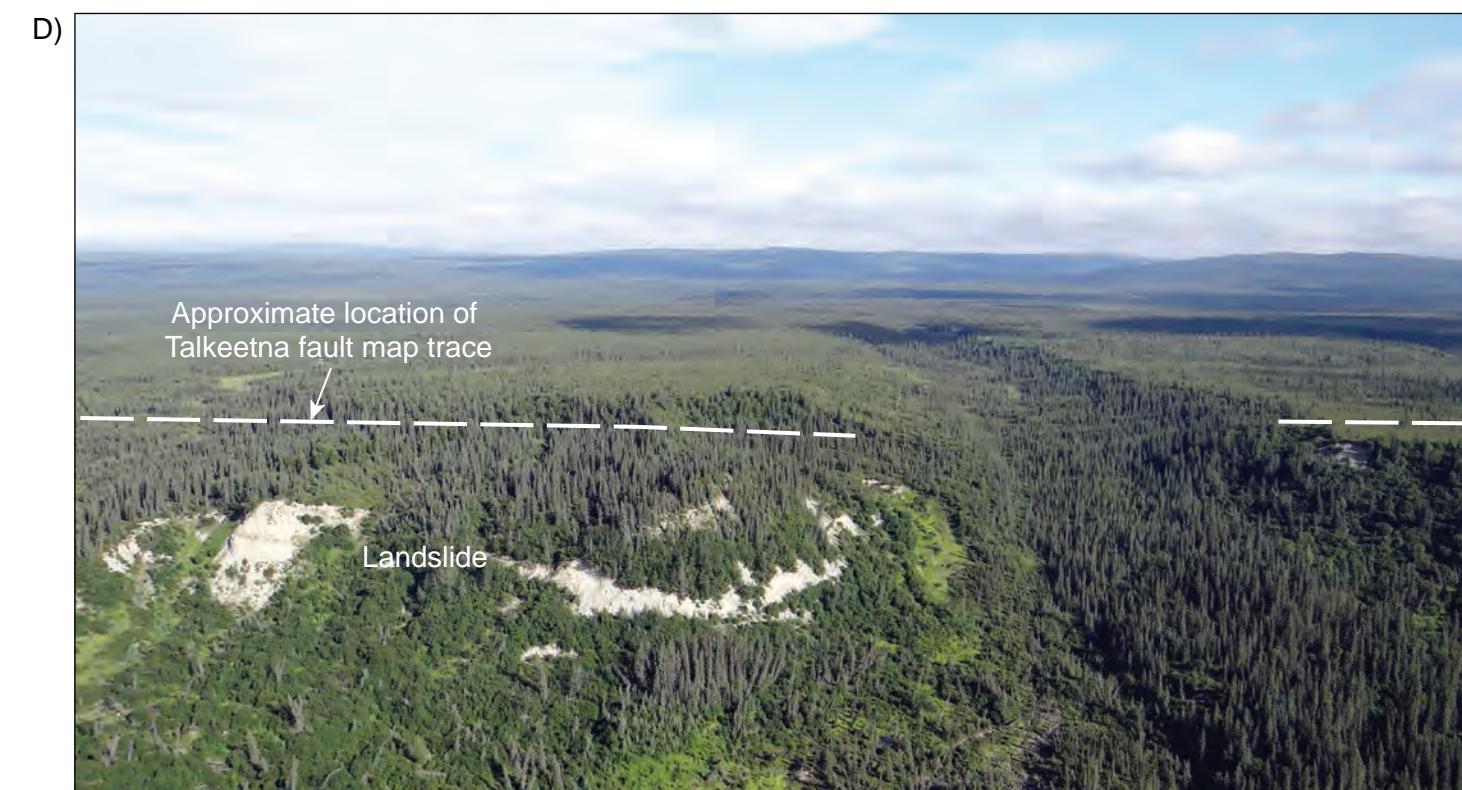

View looking west along oblique to projection of Talkeetna fault

View looking east along lower river bank at apparent alternation zone distinguished by color contrast, possible juxtaposition of Triassic metabasalts and undifferentiated Tertiary sediments. This location is east of the mapped projections of the Talkeetna fault.

View looking east at apparent flat-lying contact between Quaternary lake sediments (above) and Quaternary till (below). Arrows point to contact.

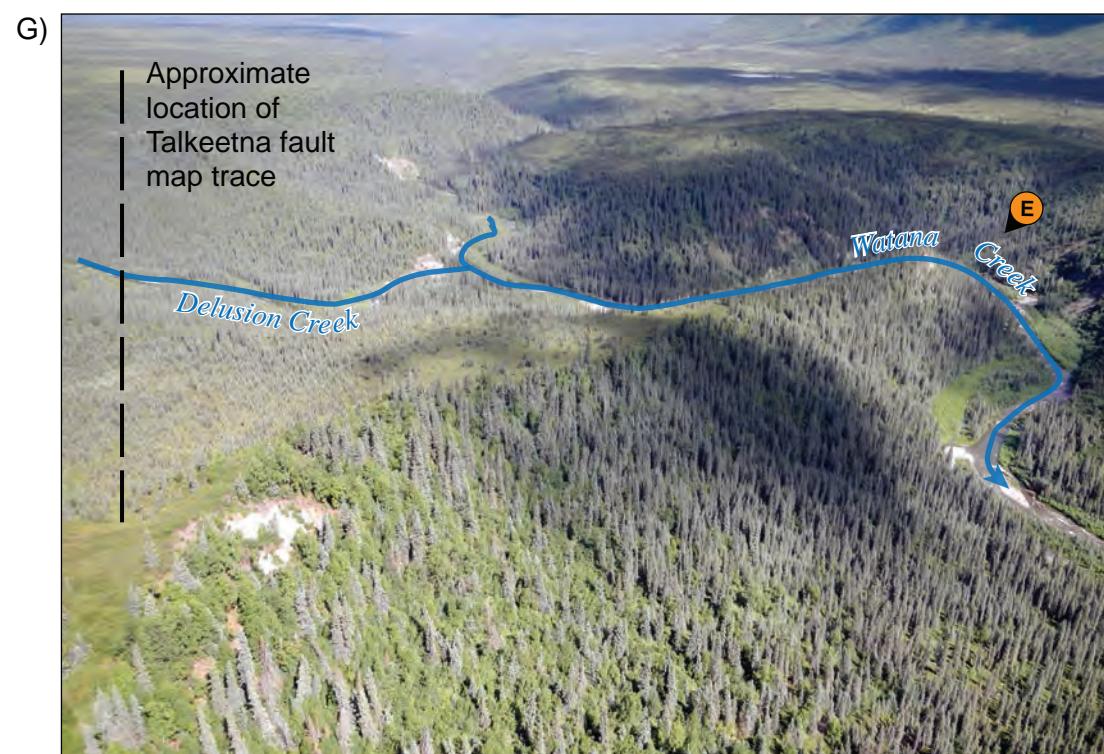

View looking west at projected trace of Talkeetna fault whose ground expression is absent in Quaternary surface.

View looking south at erosion-resistant ridge of Tertiary sediments whose beds dip gently to the northwest but appear undisrupted.

View looking west at apparently northwest-dipping beds in Tertiary sediments, relatively consistent with northwest dips measured by WCC (1982) in Tertiary sediments along west bank Watana Creek.

View looking north-northeast past ridge, with flat and apparently undisturbed Quaternary sediments in the background.

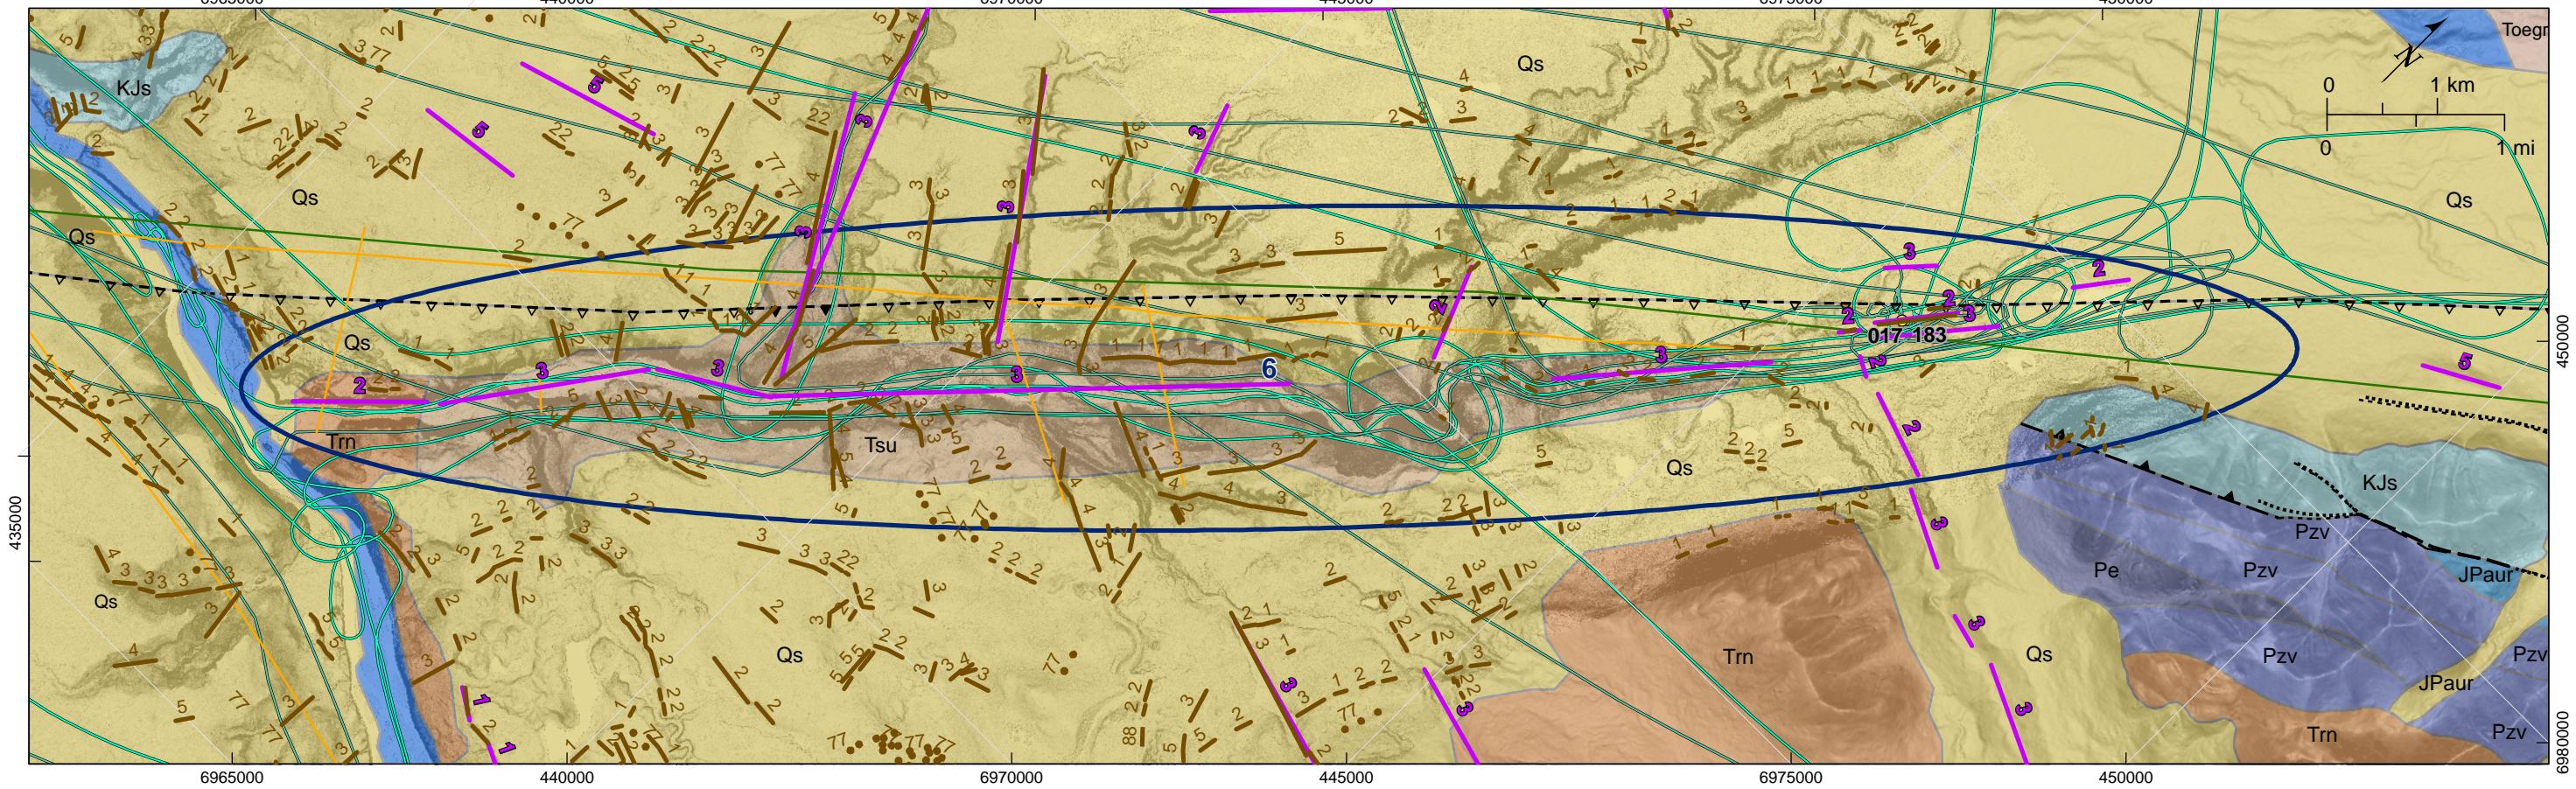

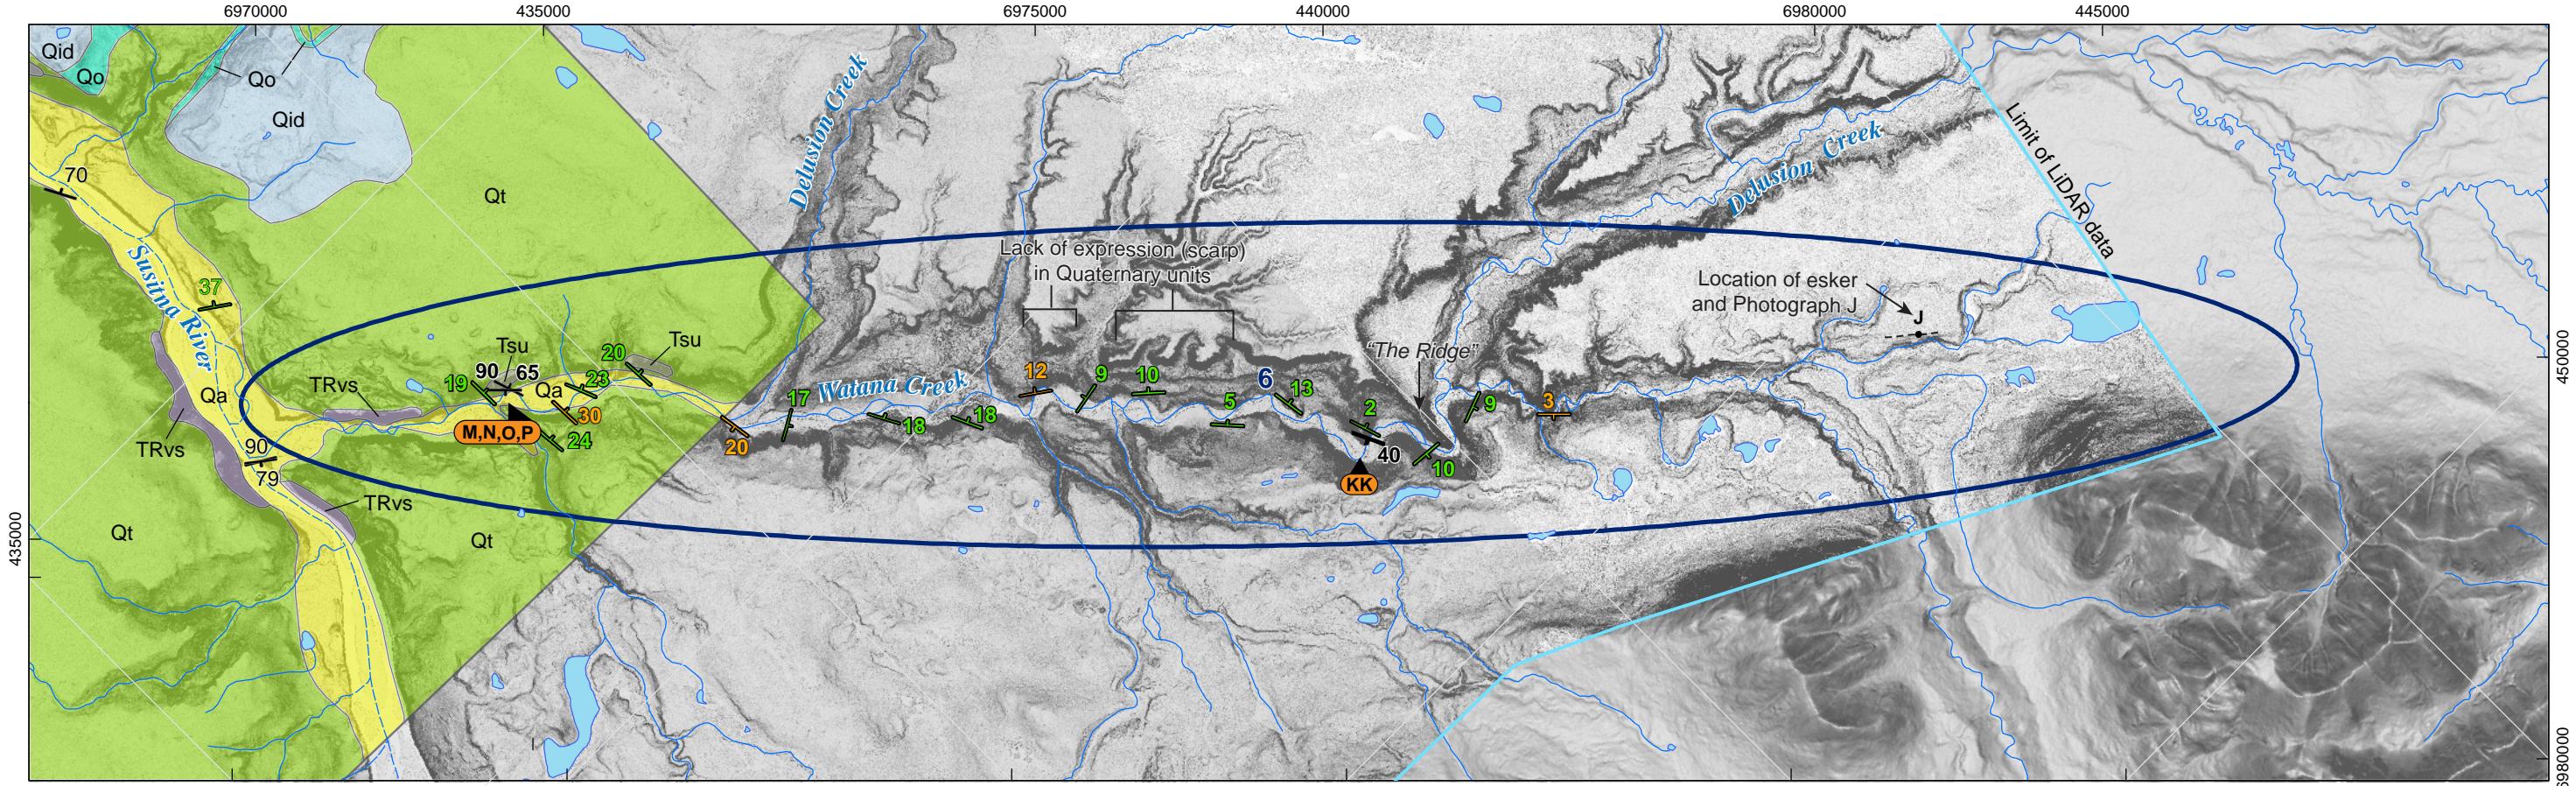

View looking west at bedded (lake?) stratigraphy exposed in eroding bluff. Beds appear relatively horizontal, but may have a sense of non-planar geometry because of semi-circular outcrop. Note fallen trees that indicate erosion/slope movement.

View looking north at linear esker nearly coincident with map projection of Talkeetna fault. See Figure A6.1 for location. Arrows point to esker crest.

View looking at shallow soil pit dug in esker crest. Upper black, gray, and reddish soil layers are Holocene tephras. Scale is in centimeters; the upper 45 centimeters of the pit are in view.

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
2. Data frame has been rotated 45° east of north.  
3. Geology from Acres, 1982 (top) and by  
Wilson et al., 2009 (bottom)

FIGURE  
FIGURE A6.8

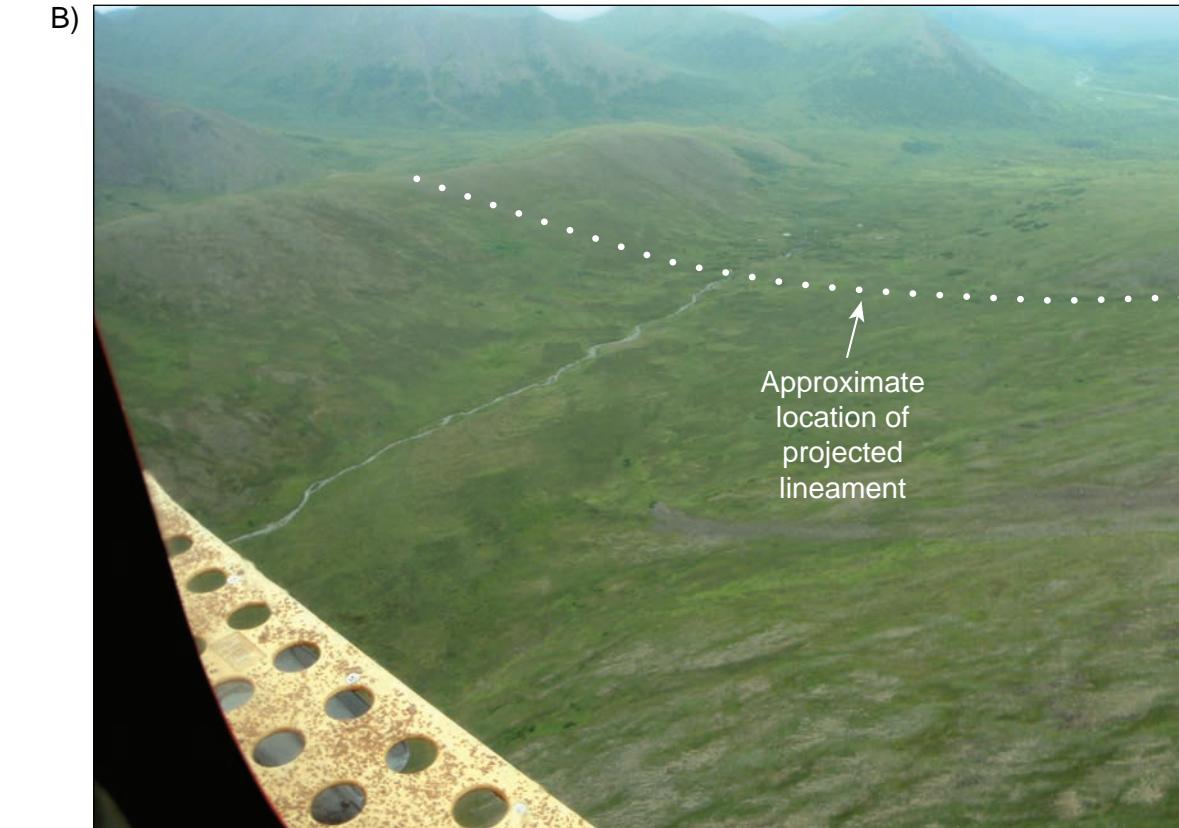

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.

2. Data frame has been rotated 45° east of north.

3. Geologic map by Kline et al., 1990.

View looking at color contrast at previously mapped bedrock fault.

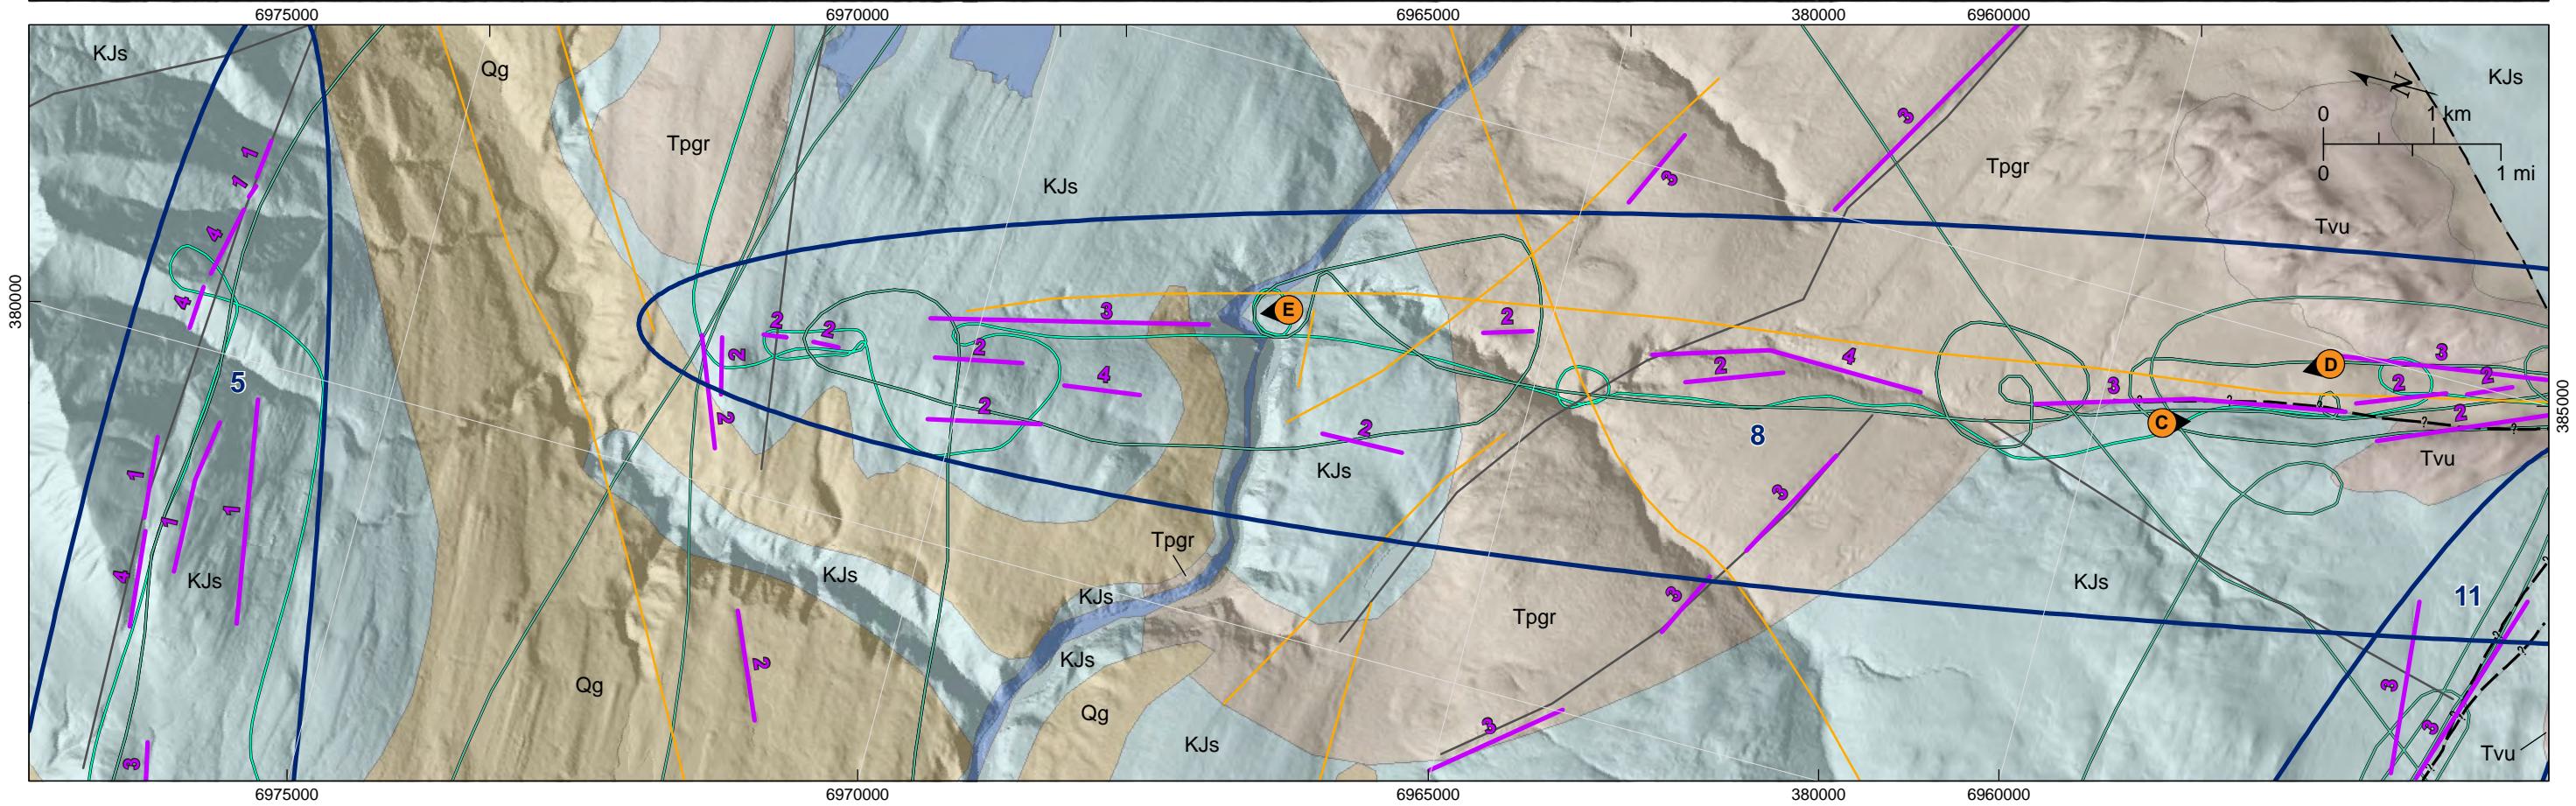

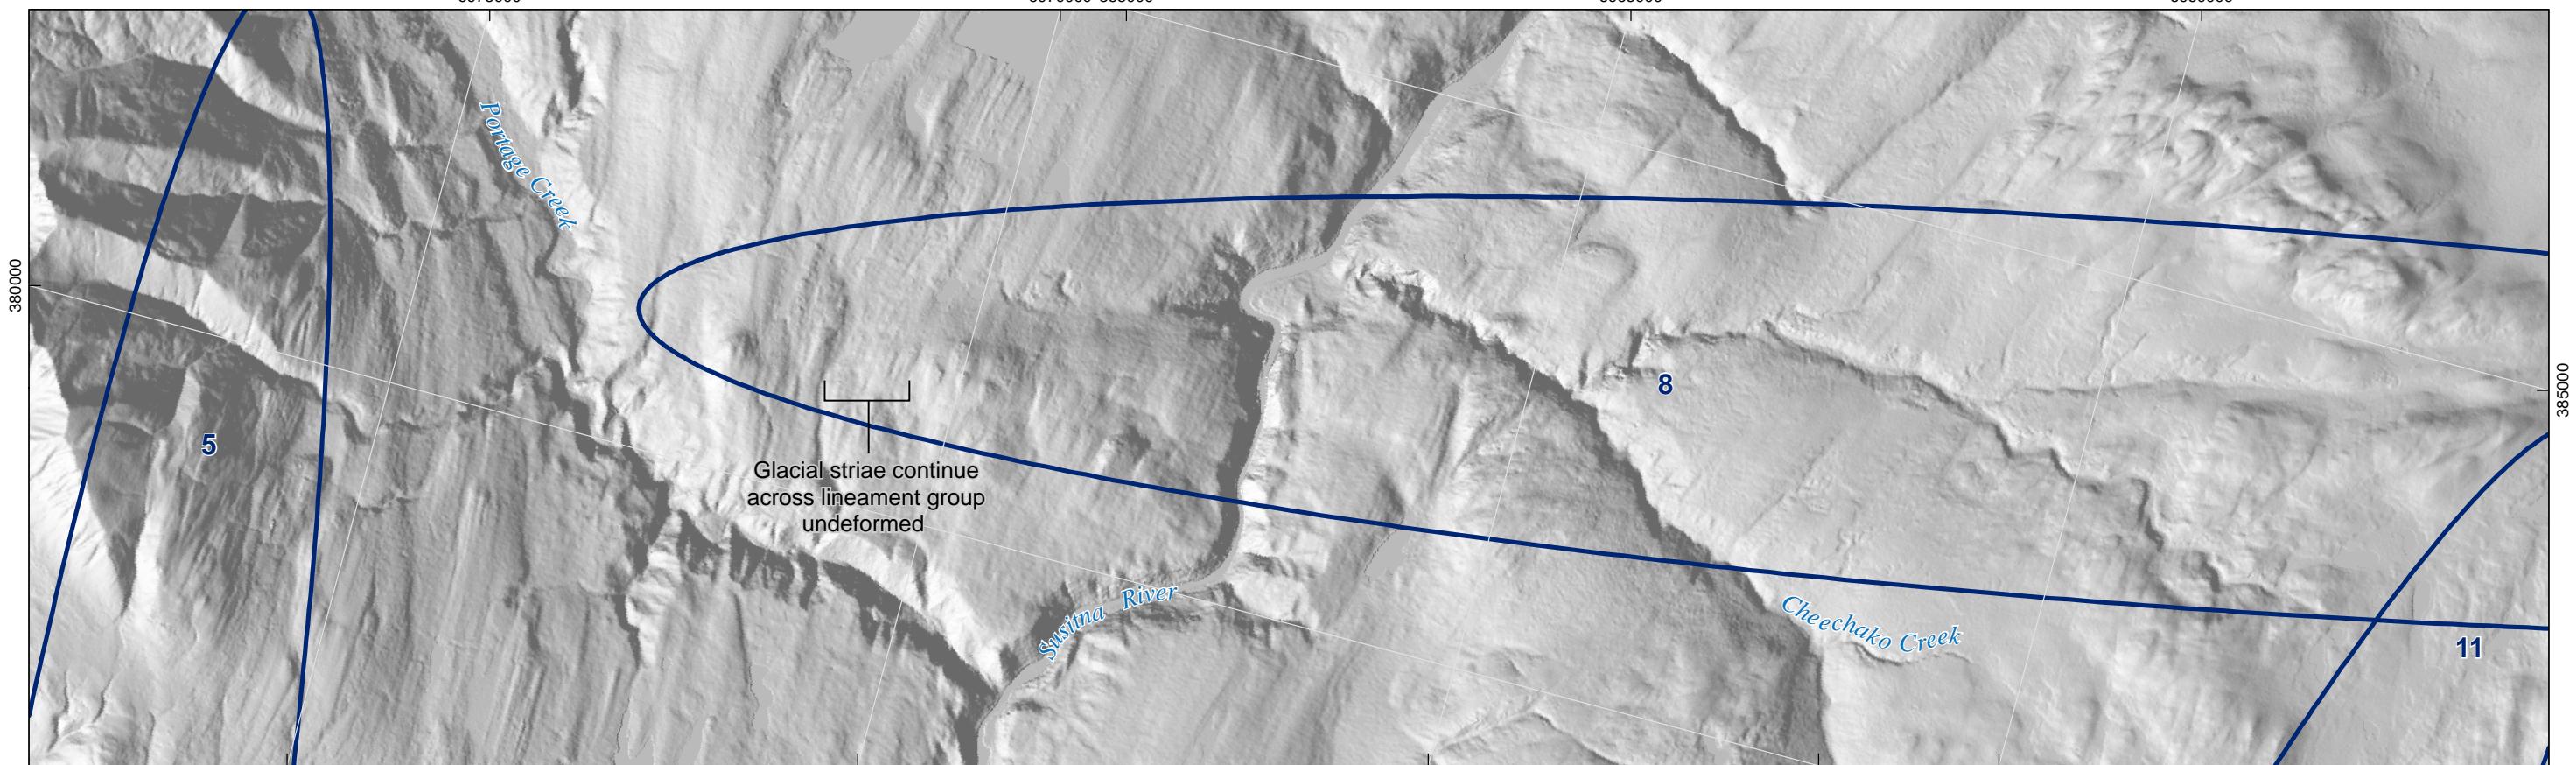

View looking west down-valley at apparent undeformed glacial sediments.

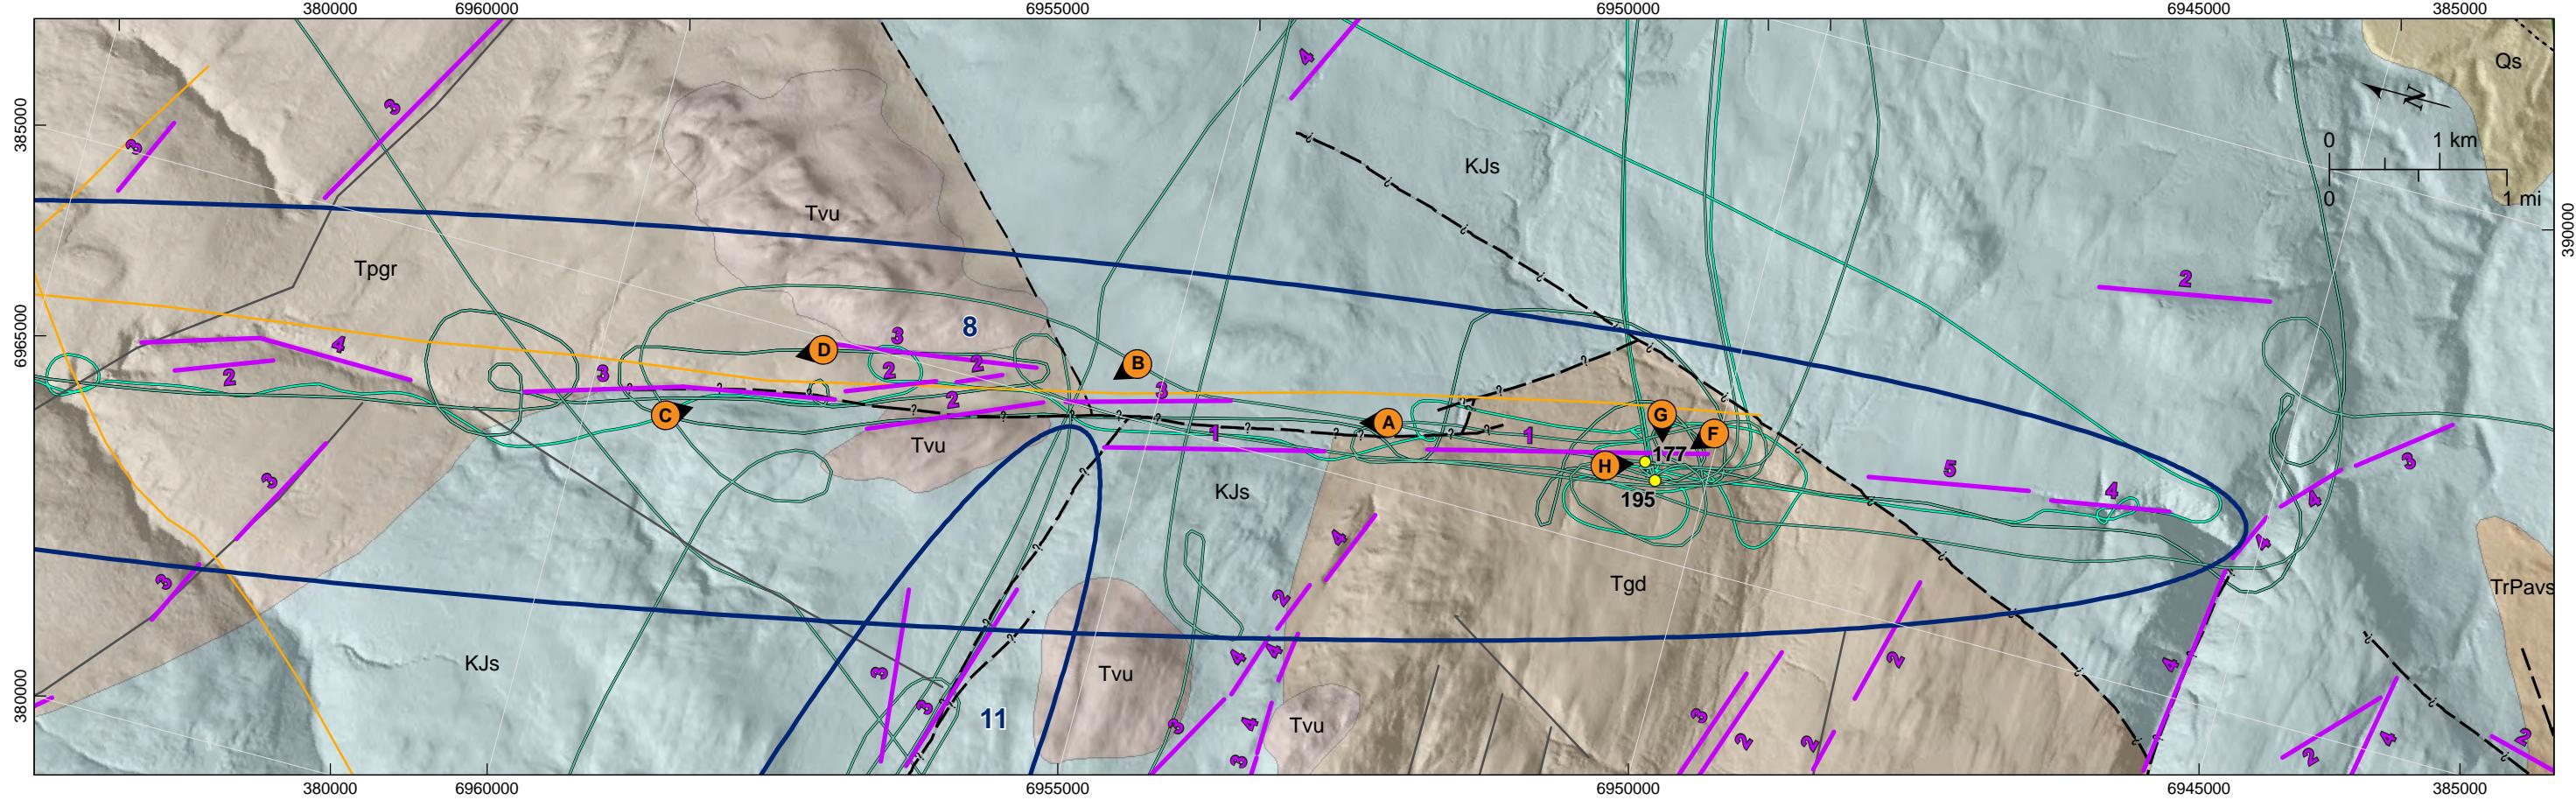

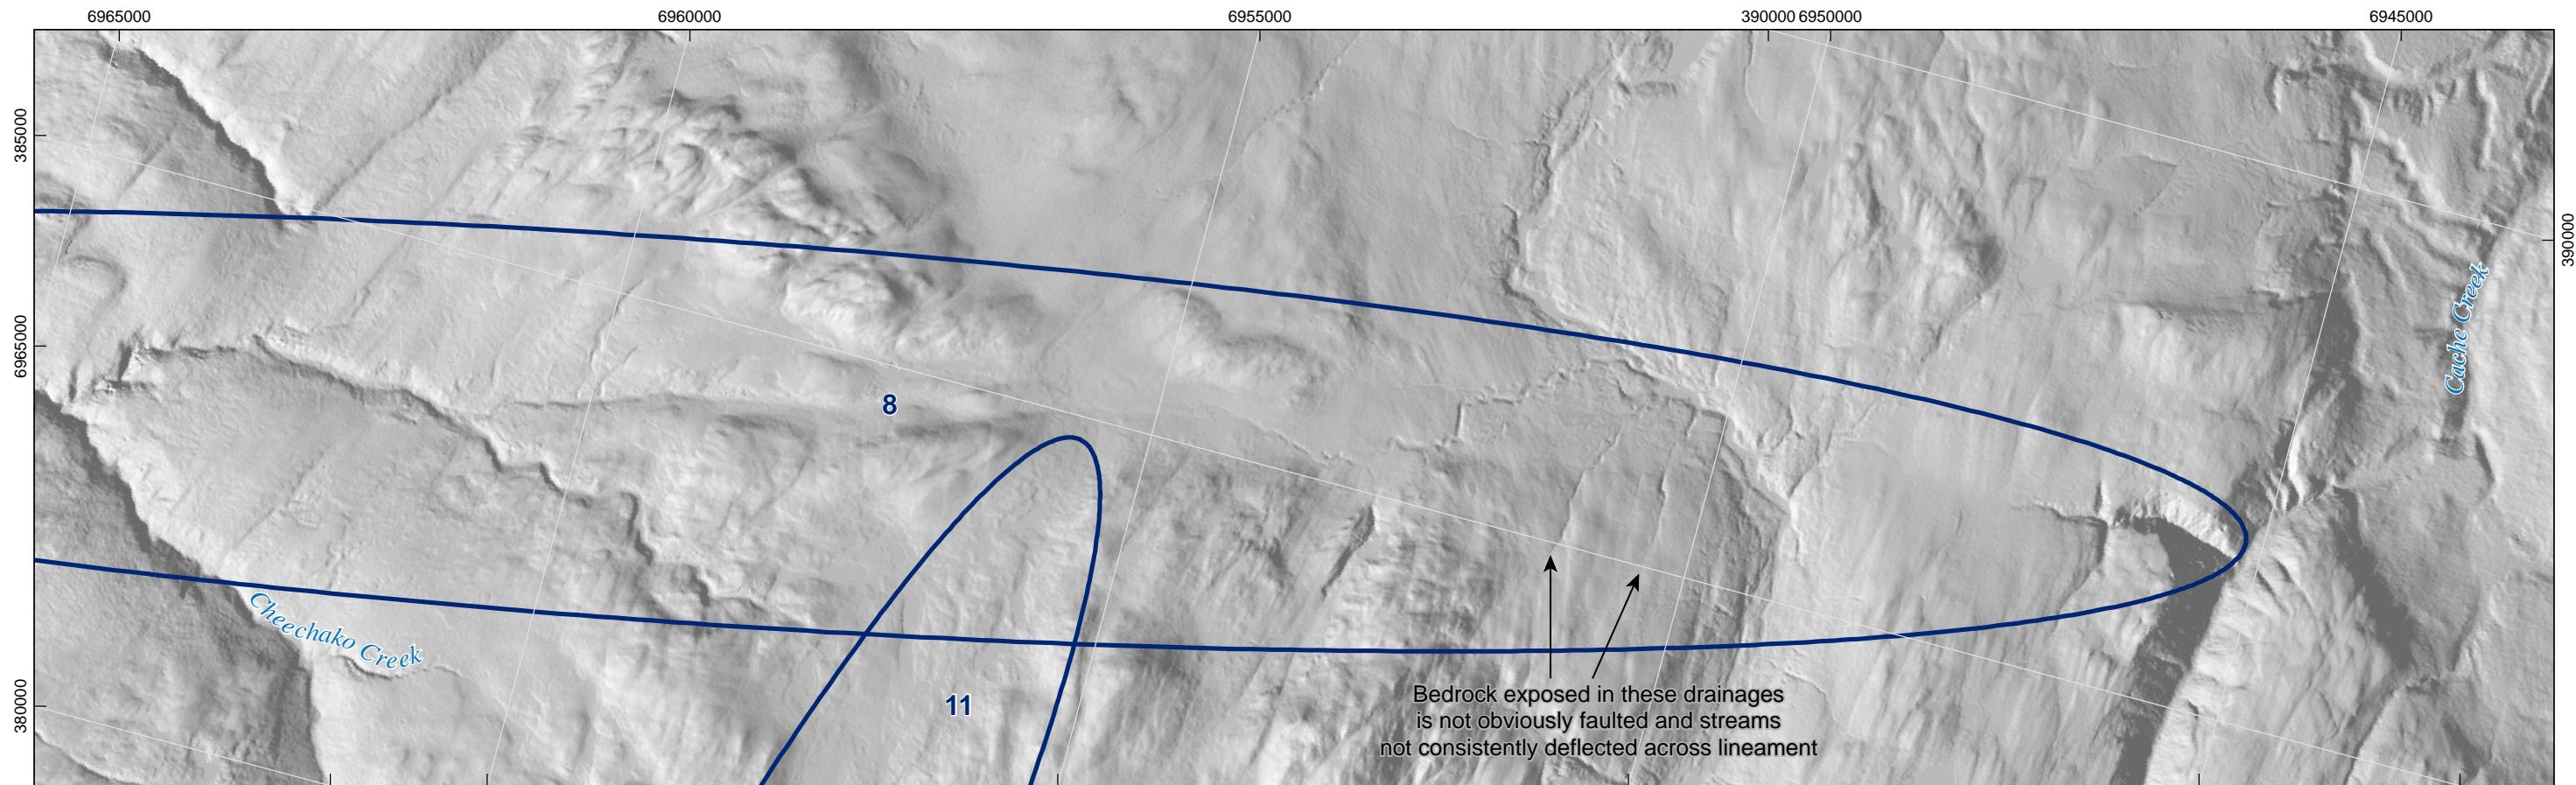

View looking up-valley at incised drainage that coincides with mapped lineament and previously mapped fault.

View looking down-valley from the top of the drainage seen in Photograph C.

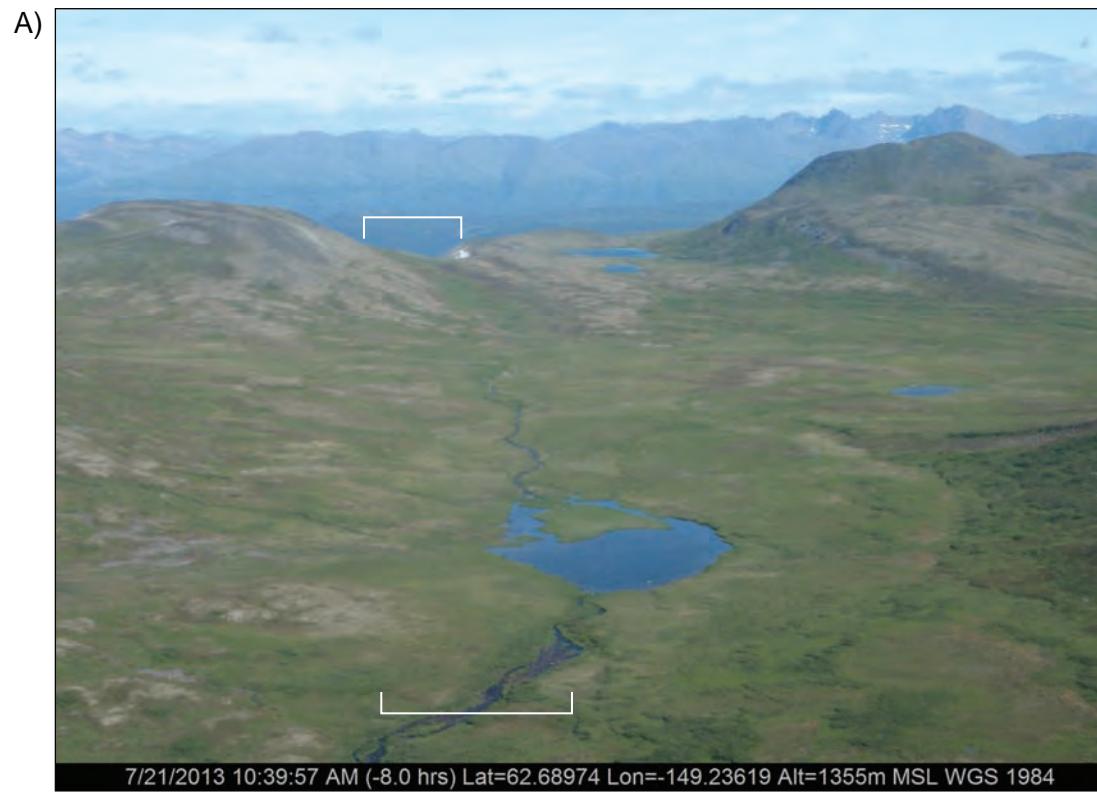

Notes:  
 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
 2. Data frame has been rotated 75° west of north.  
 3. Geology by Wilson et al., 2009.

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.

2. Data frame has been rotated 75° west of north.

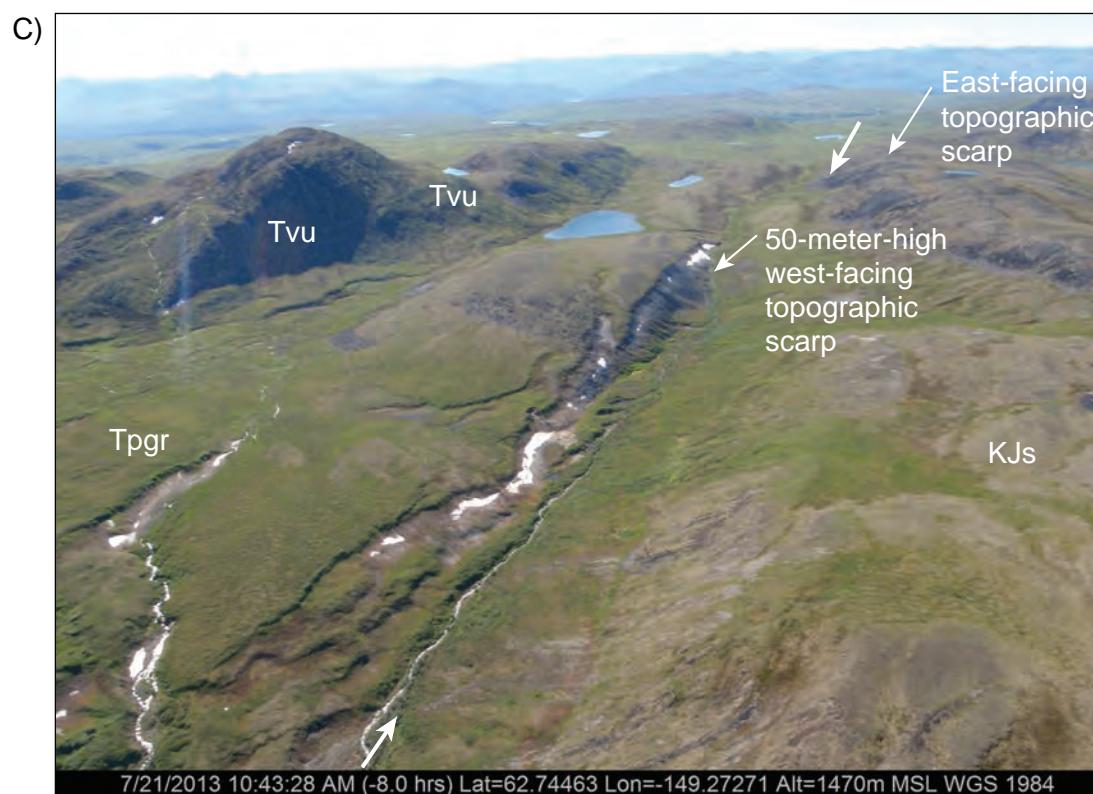

3. Geology by Wilson et al., 2009.

View looking north at middle portion of lineament group 8 along mapped inferred fault. Brackets show position of fault but note that no geomorphic expression of faulting is readily apparent.

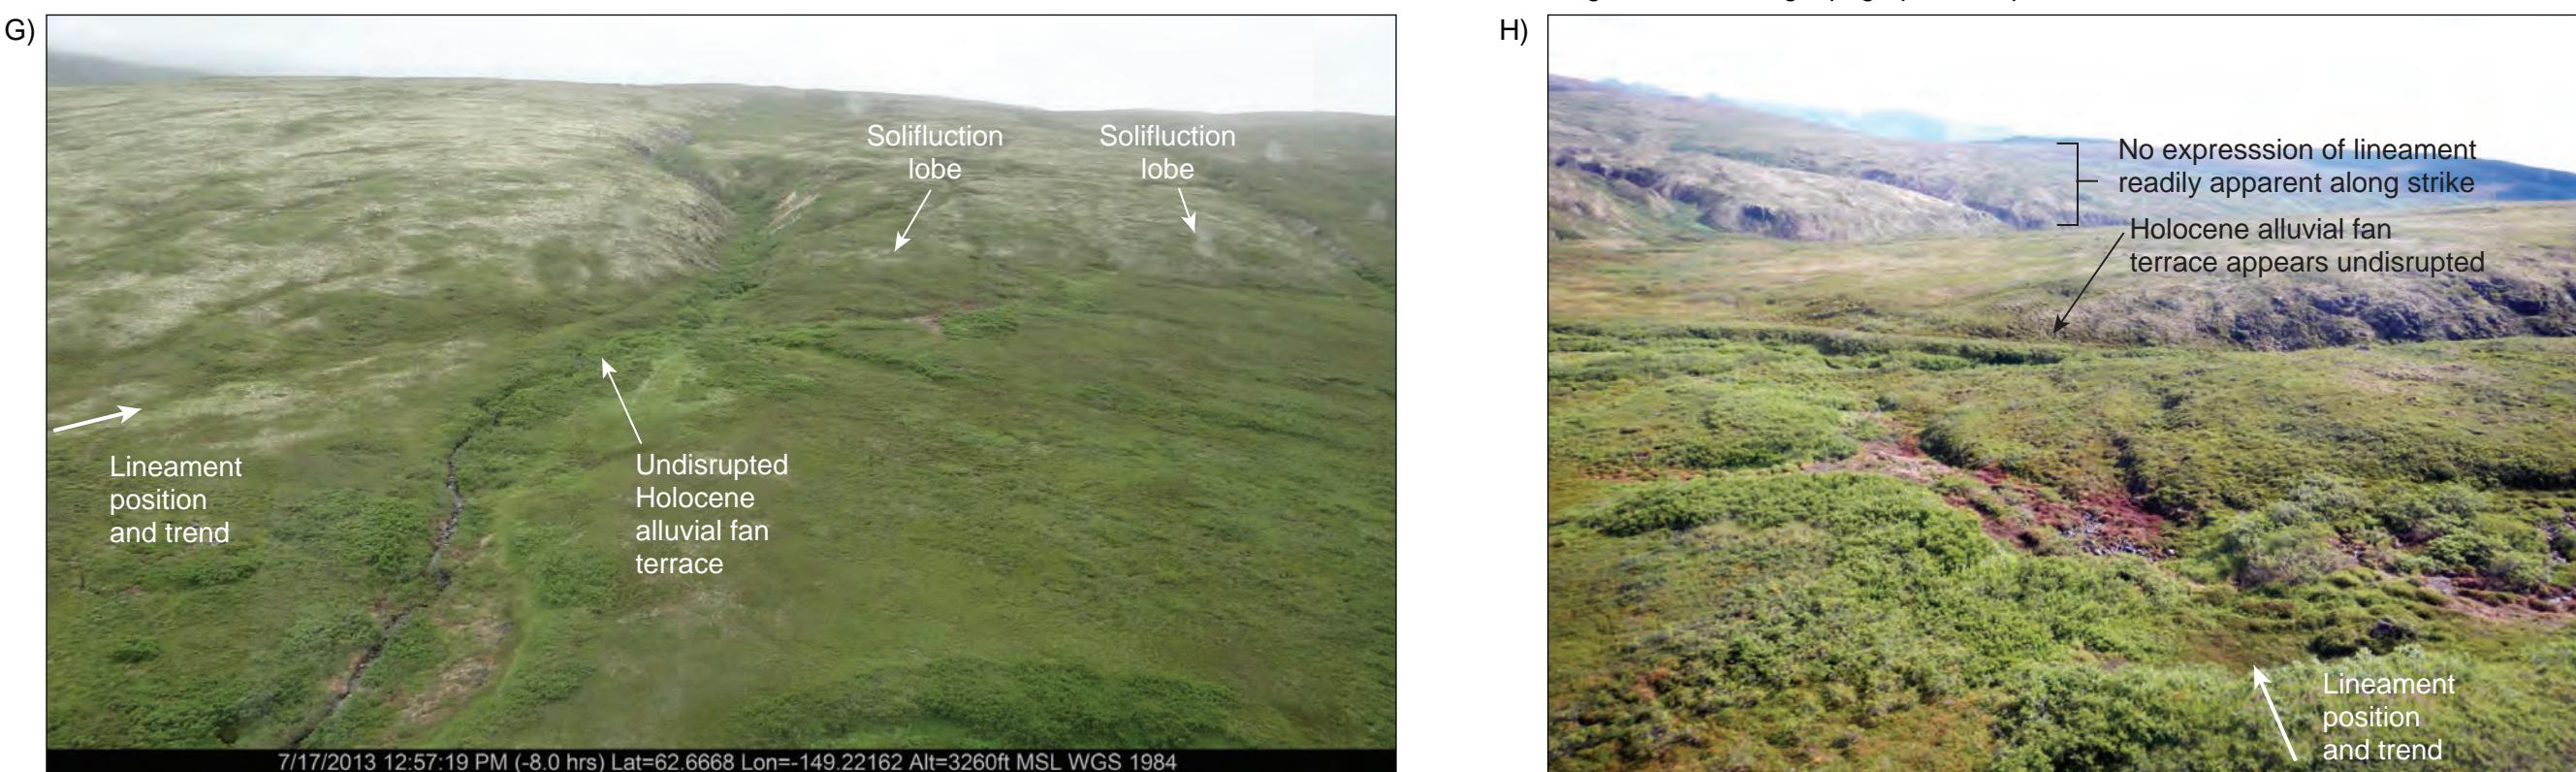

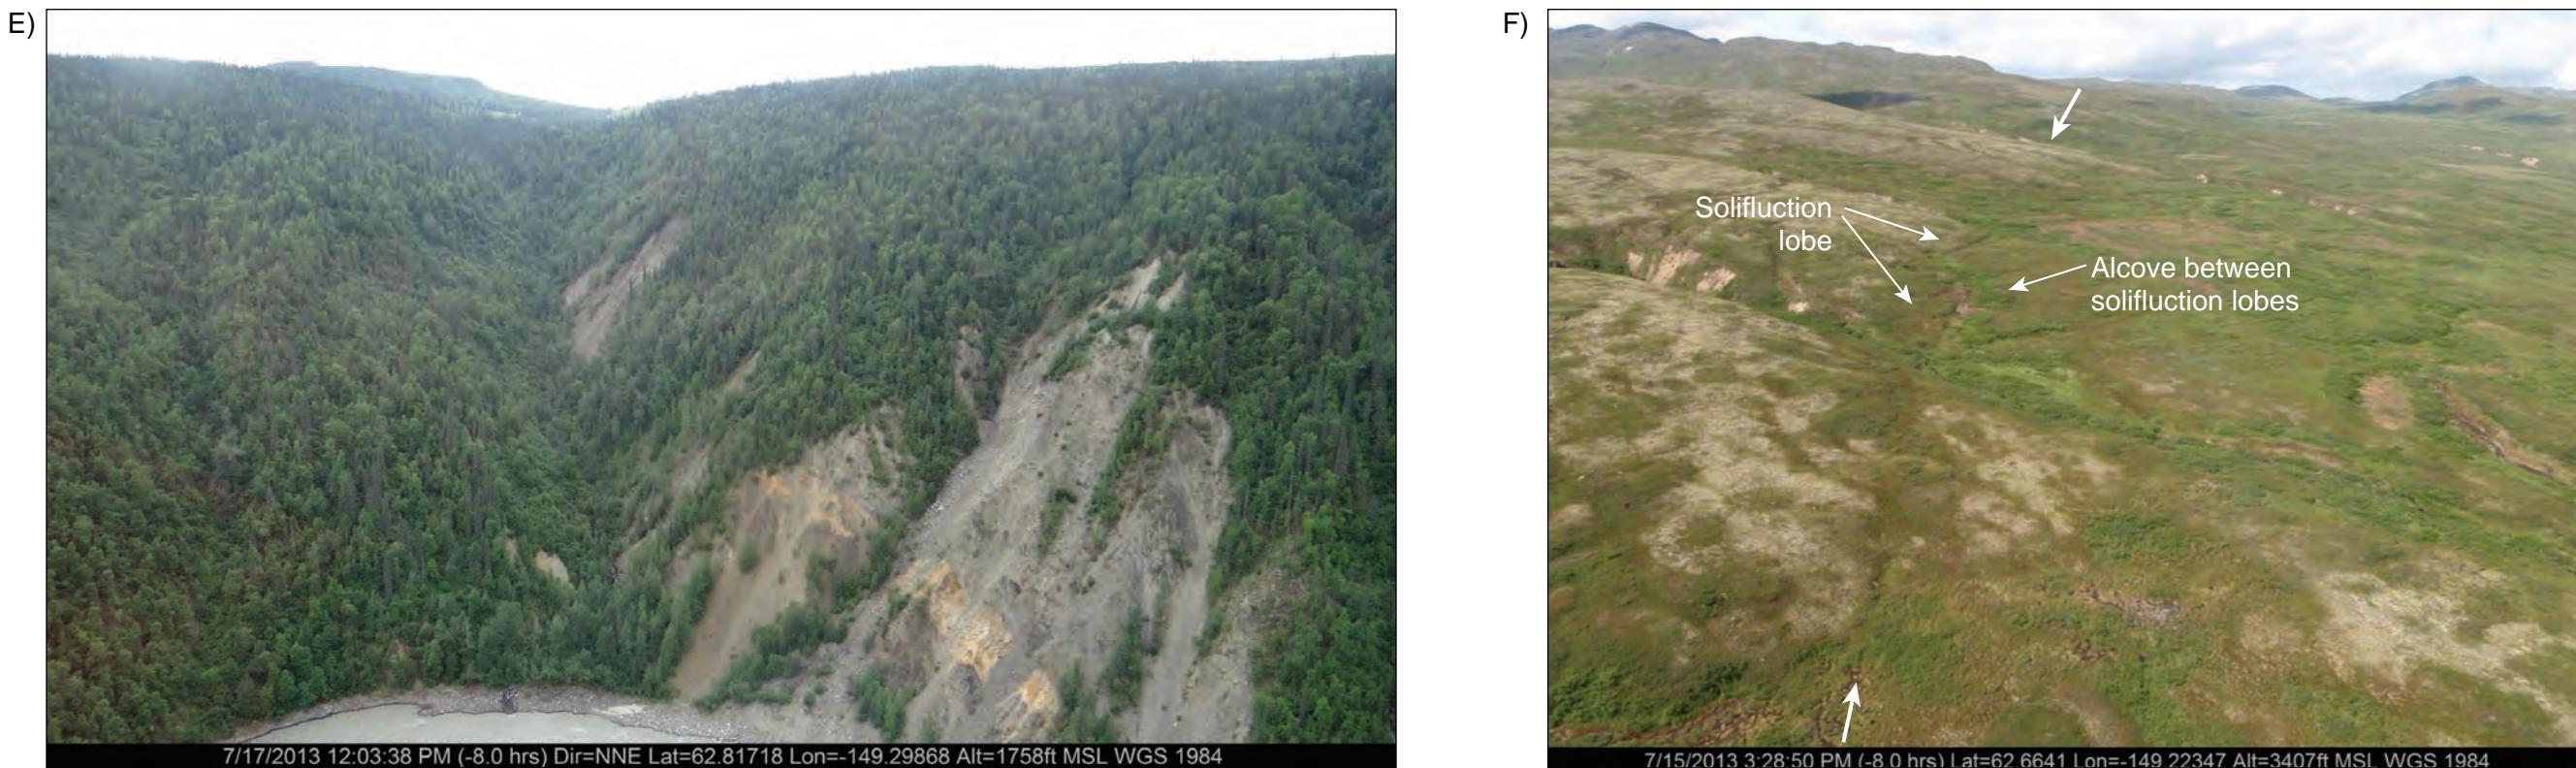

Close up view of saddle area shown in Photograph A. Brackets, again, show position of fault but note that no geomorphic expression of faulting is readily apparent.

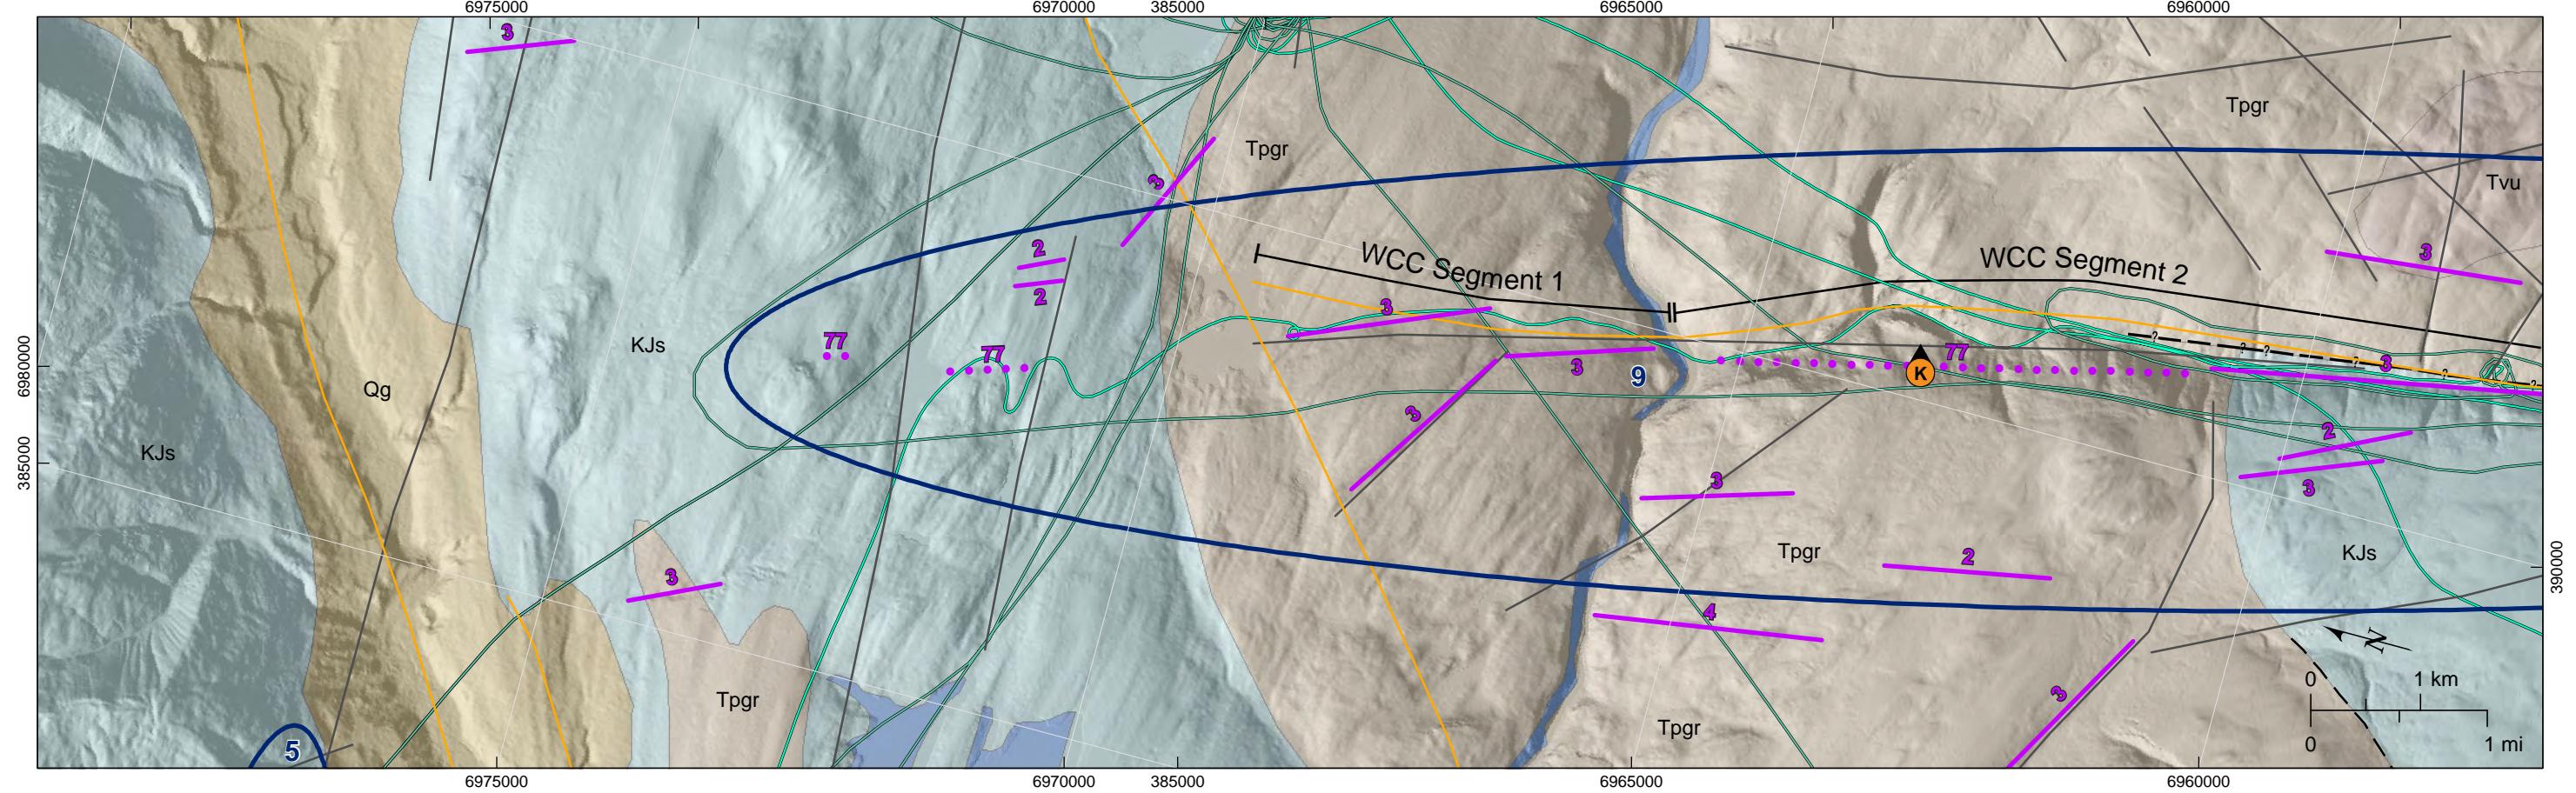

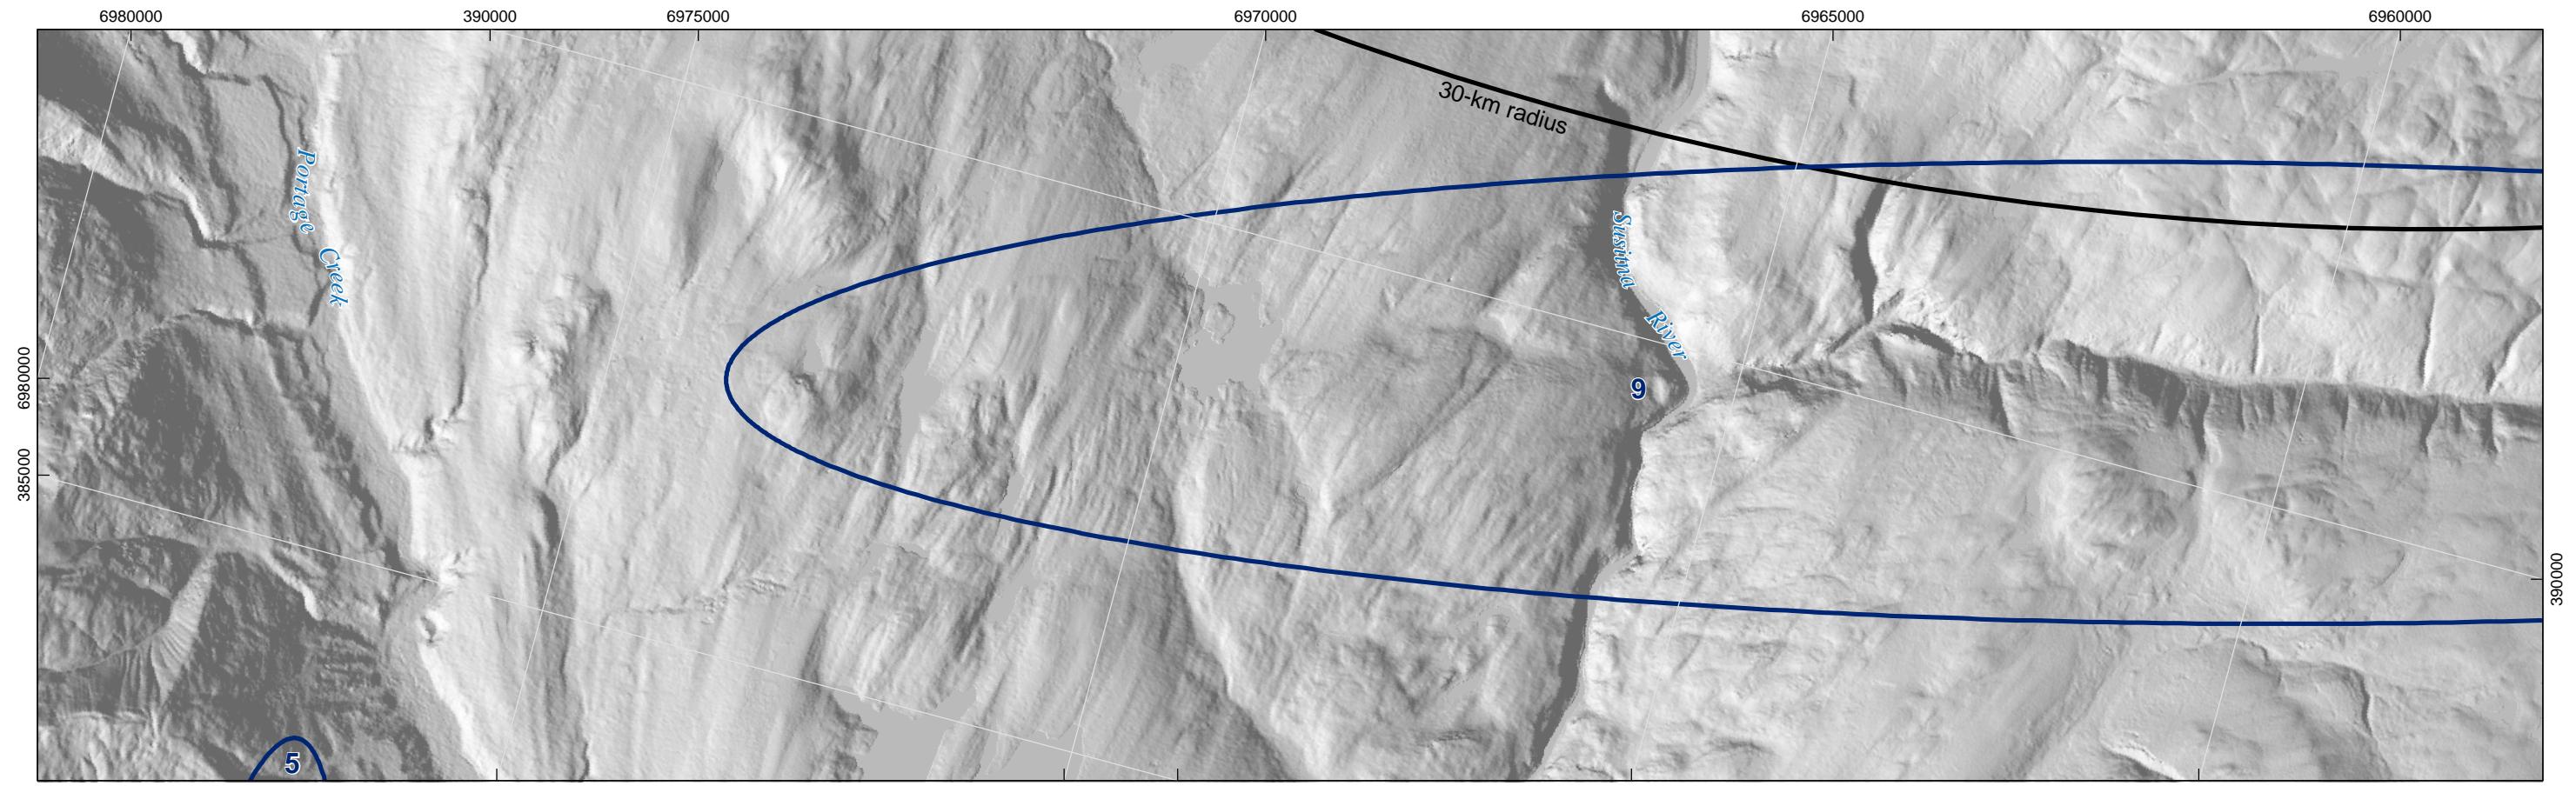

View looking south opposite that shown in Photograph B above. Mapped fault runs between large arrows. Note presence of many solifluction scars in the landscape.

View looking north down the prominent, deeply incised linear drainage. Mapped fault runs between large arrows.

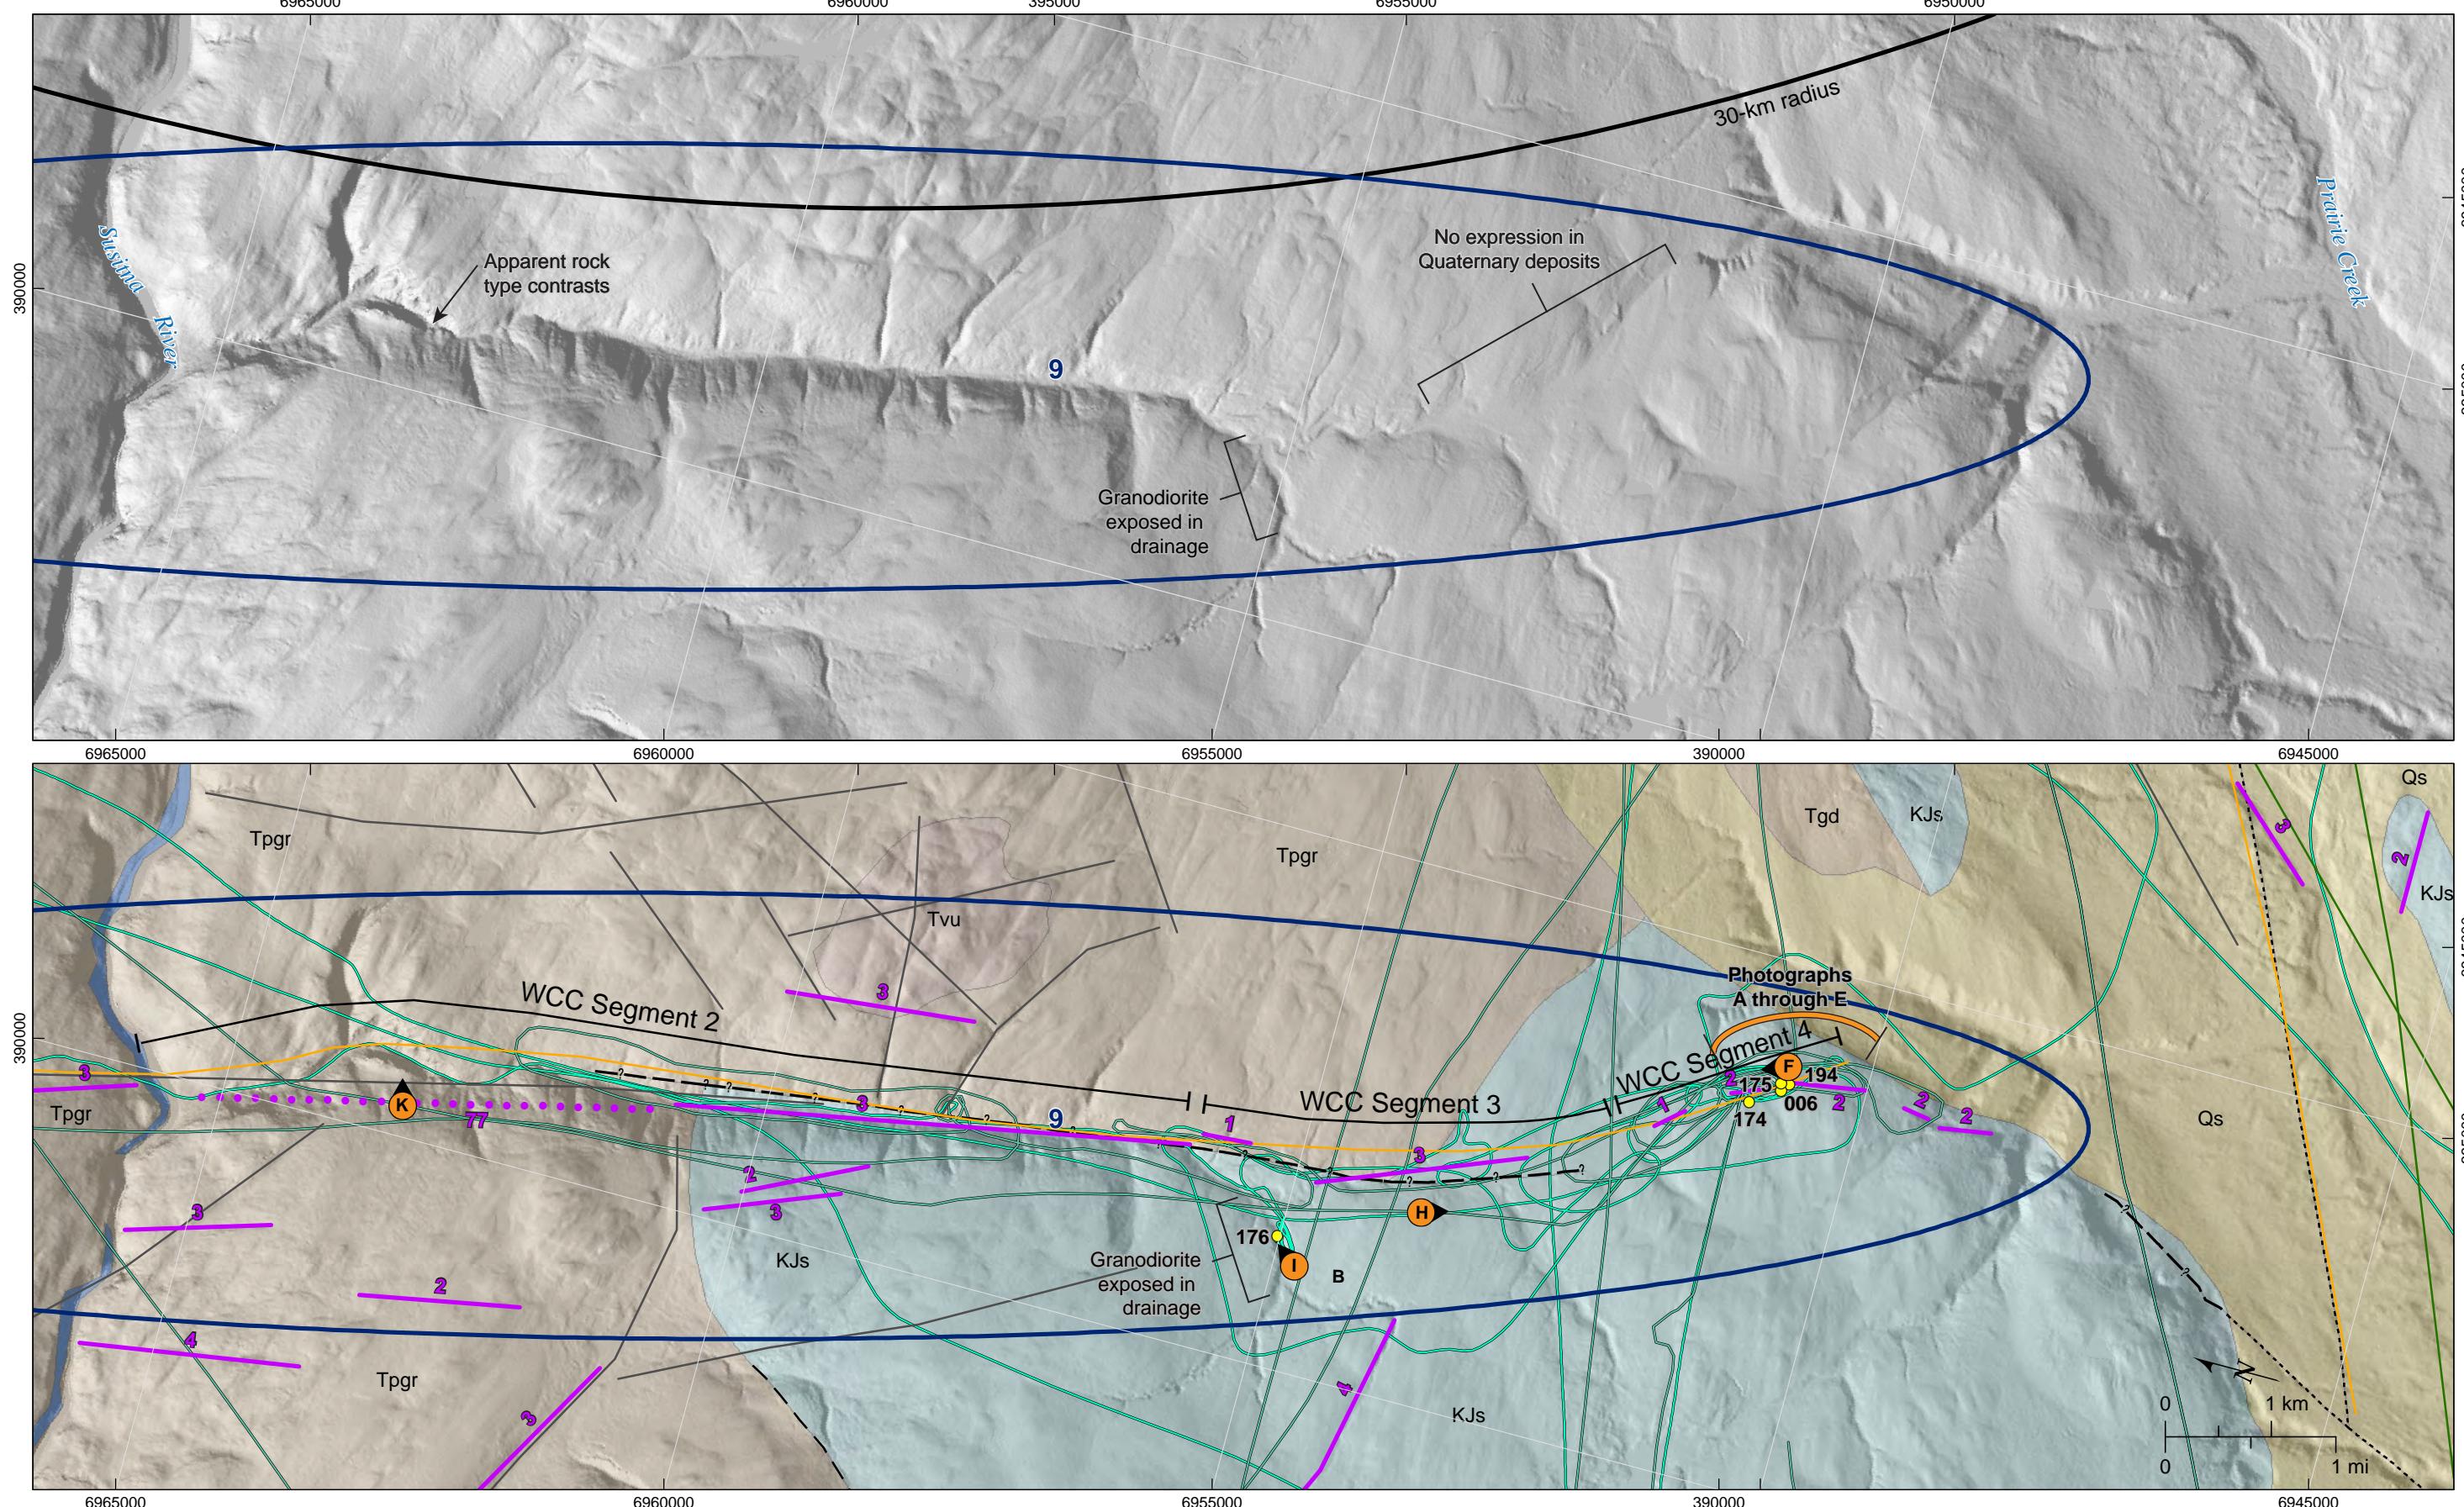

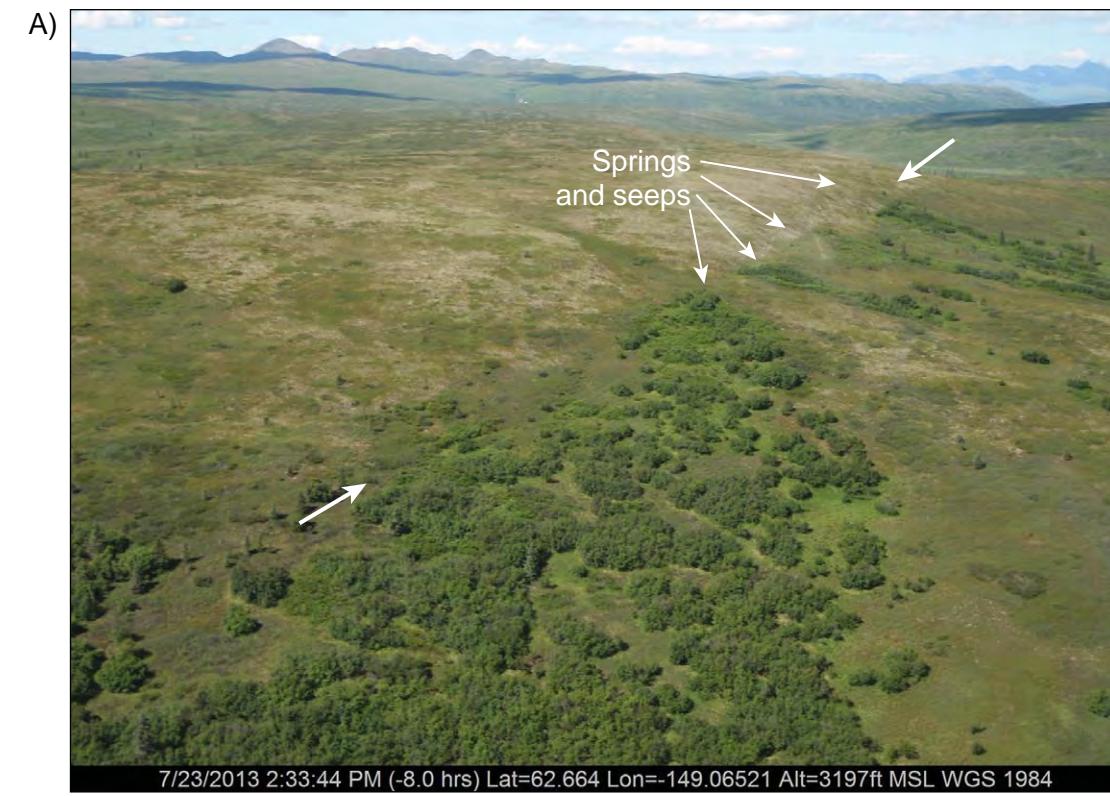

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.

2. Data frame has been rotated 75° west of north.

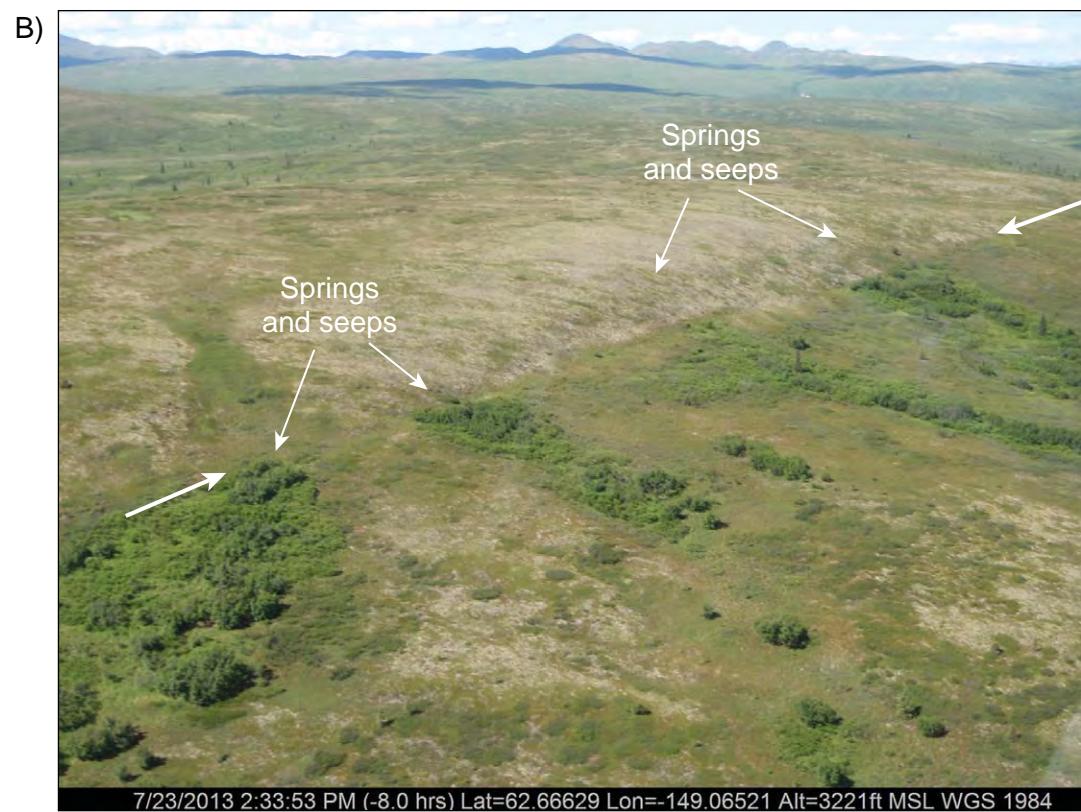

3. Geologic map by Wilson et al., 2009.

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
2. Data frame has been rotated 75° west of north.  
3. Geology by Wilson et al., 2009.

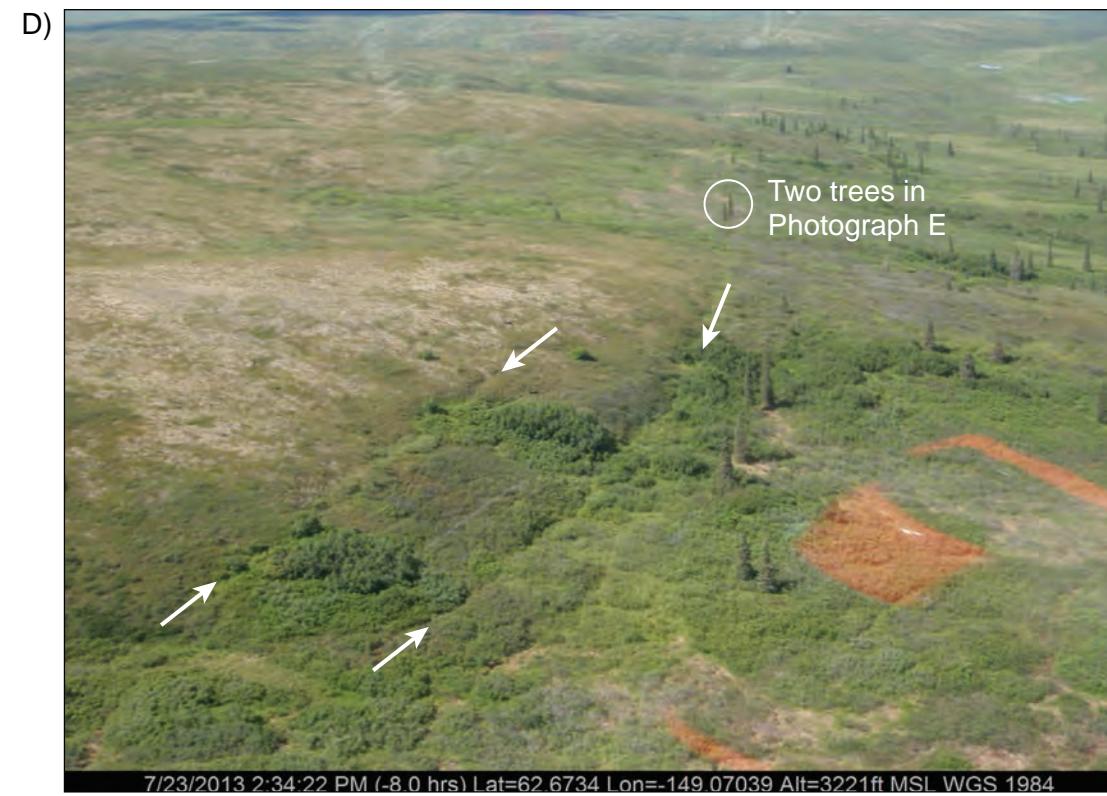

The first in a sequence of 5 photographs looking northwest taken along a series of north-trending, east-facing aligned slope breaks in the southernmost portion of lineament group 9. Large arrows point along lineament.

Photograph 2 of 5 looking northwest. Large arrows point along lineament.

Photograph 3 of 5 looking northwest. Large arrows point along lineament.

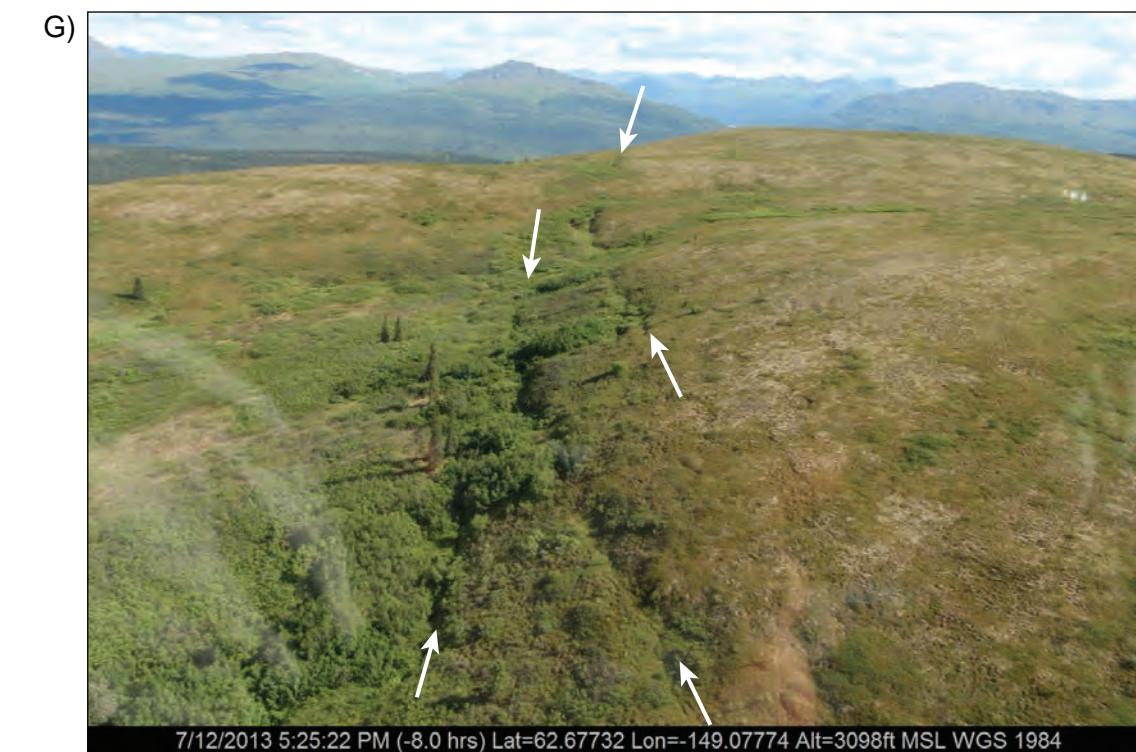

Photograph 4 of 5 with view looking northwest. Large arrows point along lineaments.

Photograph 5 of 5 with view looking northwest. Note that lineament expression has died out and brackets bound the location of its projection.

View looking north from location F. Geologist at base of east-facing break-in-slope is 170 cm tall.

View looking almost 180 degrees from that shown in Photograph D. Large arrows point along lineaments.

H)

7/23/2013 2:30:58 PM (-8.0 hrs) Lat=62.69581 Lon=-149.11298 Alt=3404ft MSL WGS 1984

View looking south from location I across area within WCC's segment 3. Note the lack of expression of any lineaments in the broad depression.

I)

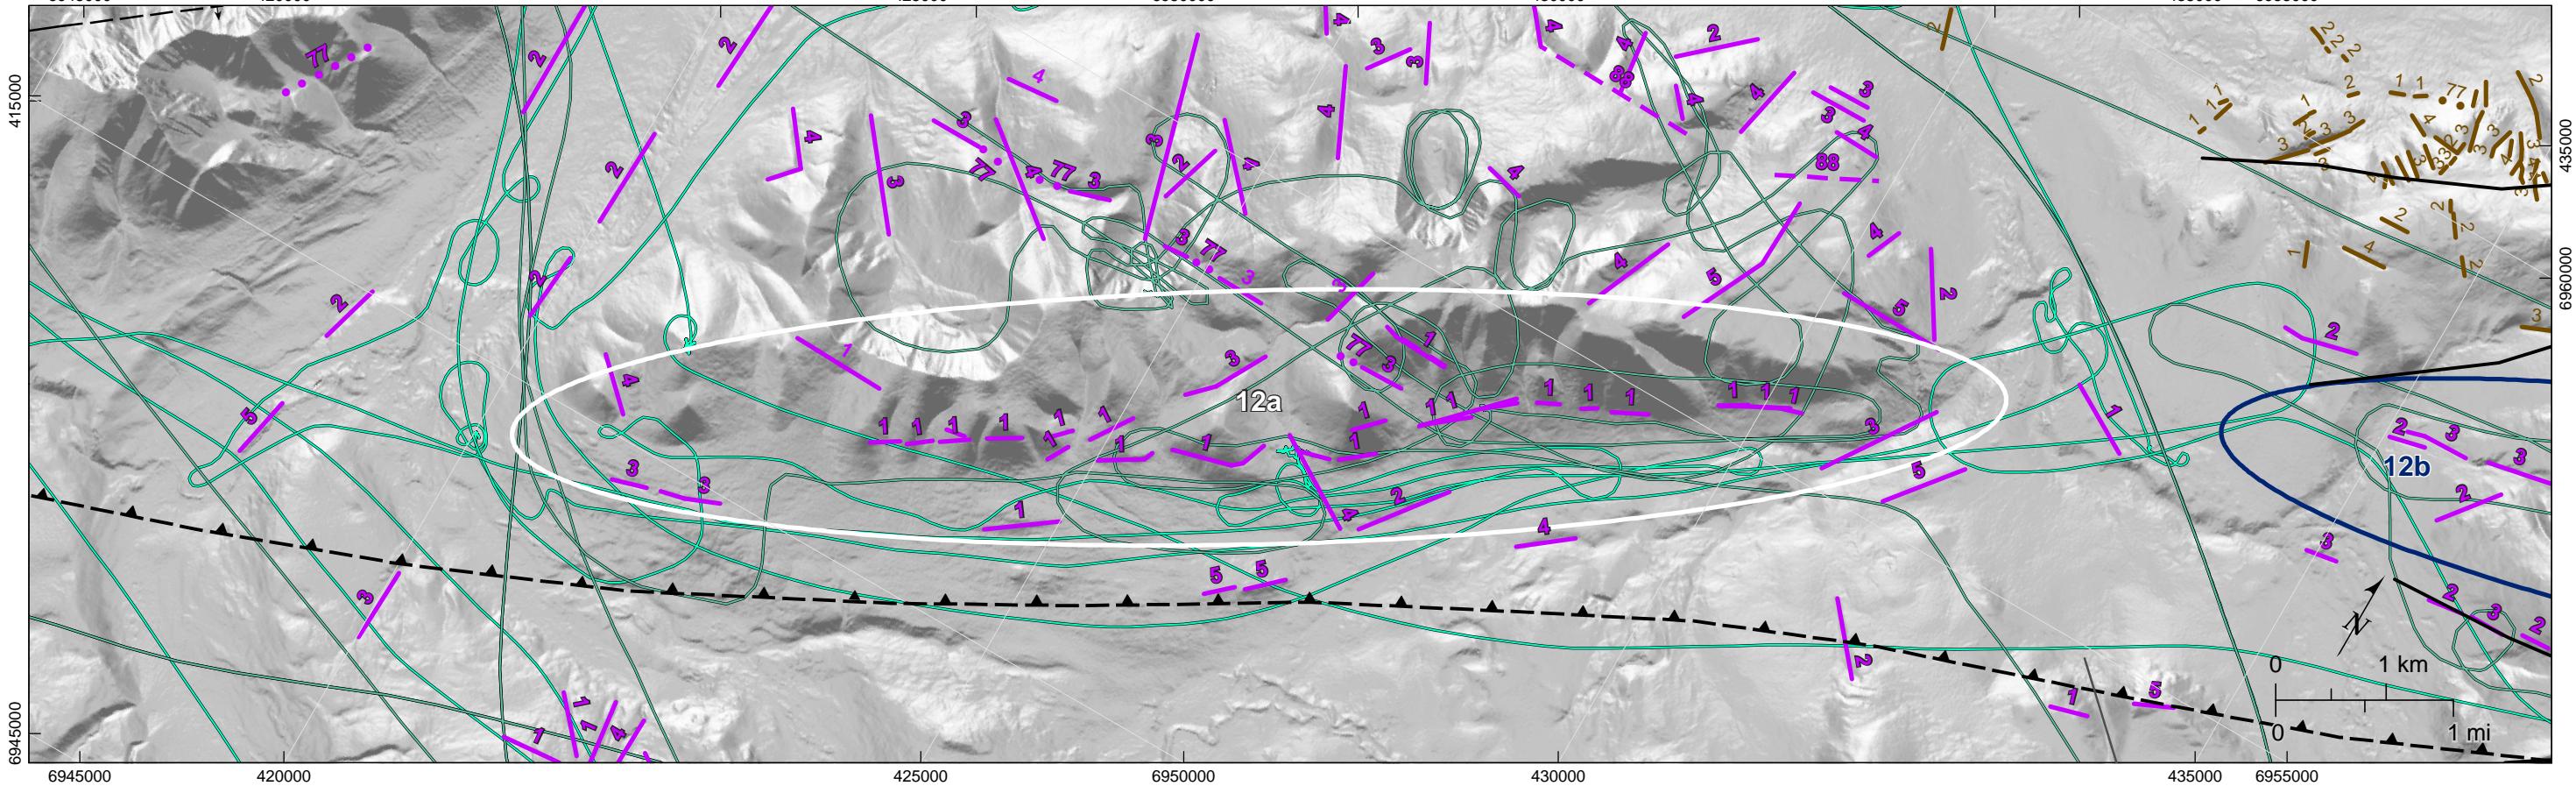

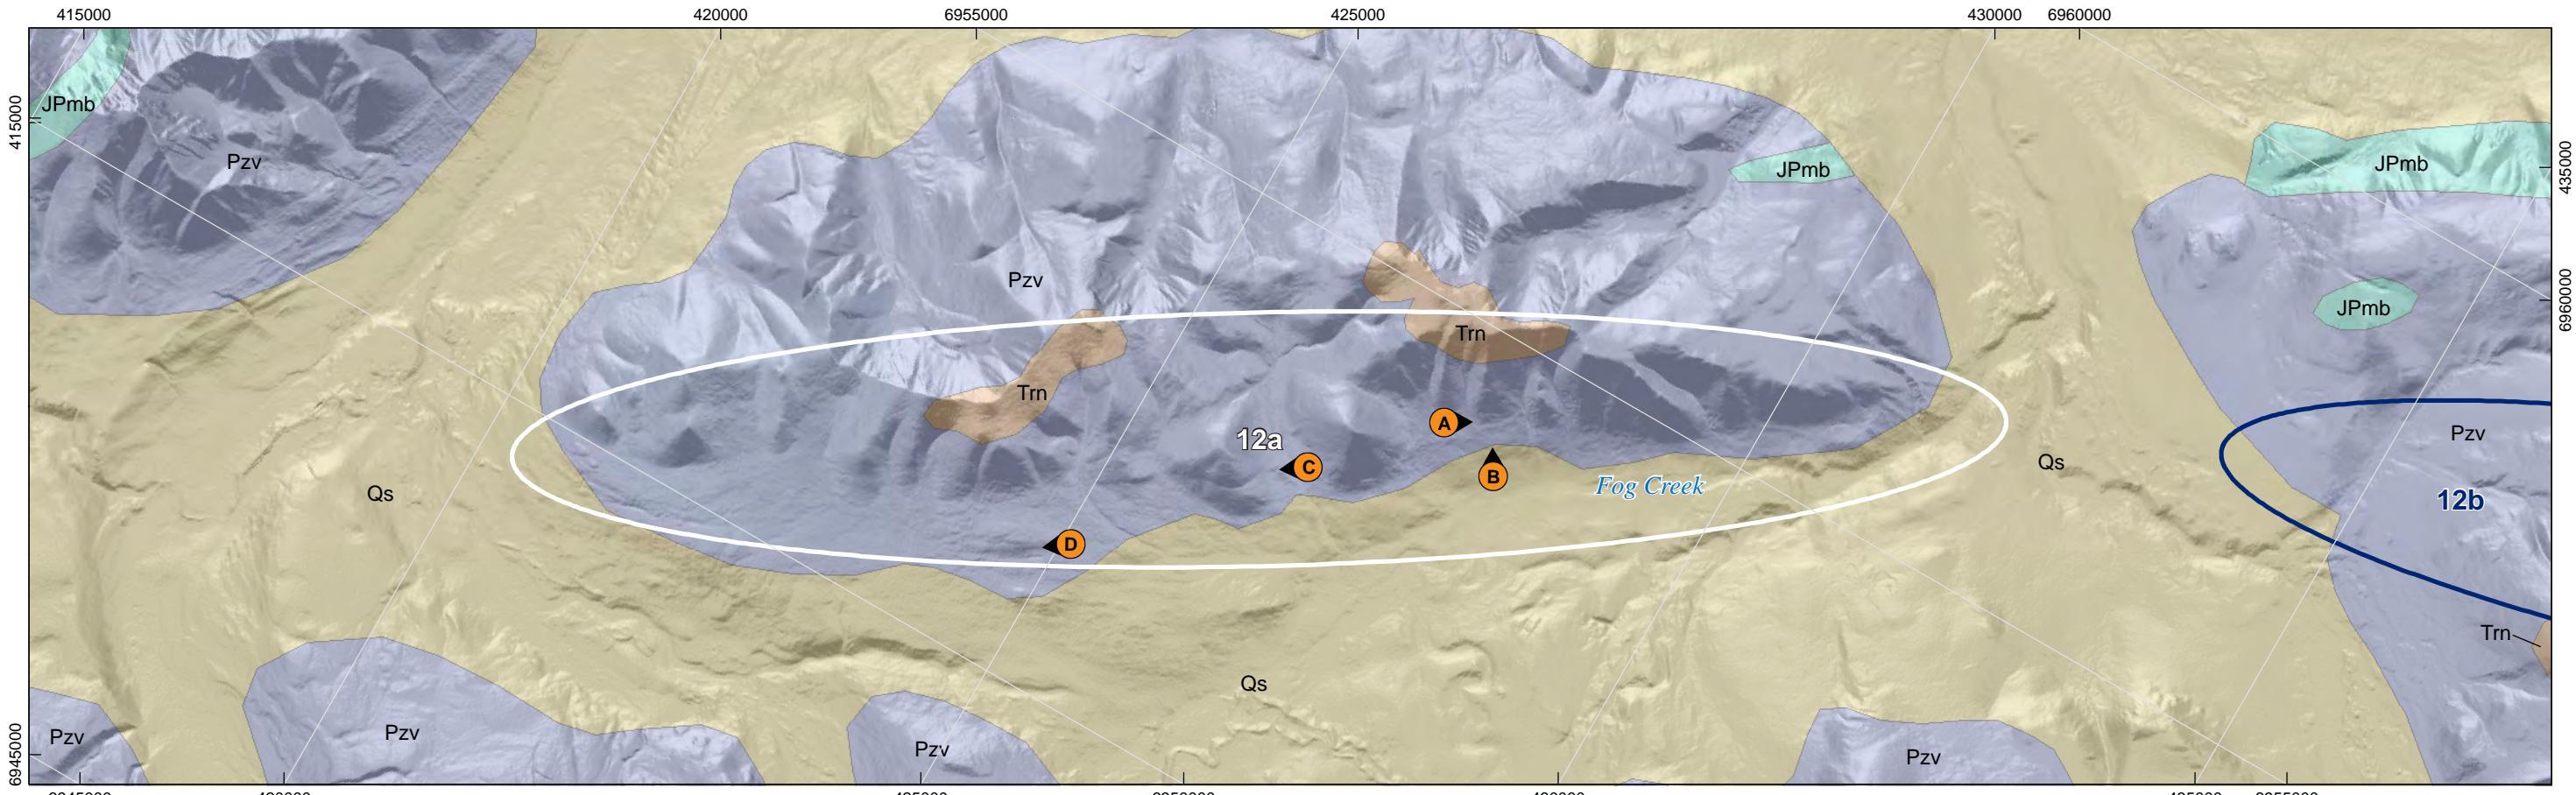

Exposures of widespread granodiorite in unnamed creek near GPS waypoint 176 in terrain mapped as flysch (map unit KJs) by Wilson et al. (2009). The geologist is approximately 175 cm tall.

J)

7/23/2013 2:27:19 PM (-8.0 hrs) Lat=62.78284 Lon=-149.15009 Alt=2881ft MSL WGS 1984

View looking northeast at right wall of linear v-shaped canyon. Large arrows point along apparent bedrock type contrast.

Notes:  
 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
 2. Data frame has been rotated 30° east of north.  
 3. Geologic map by Wilson et al., 2009.

A)

View looking northeasterly along lineaments. Arrows point along trend and position of lineaments.

B)

7/17/2013 3:25:34 PM (-8.0 hrs) Dir=SW Lat=62.70367 Lon=-148.41321 Alt=4117ft MSL WGS 1984

View of lineaments expressed in Quaternary sediment.

C)

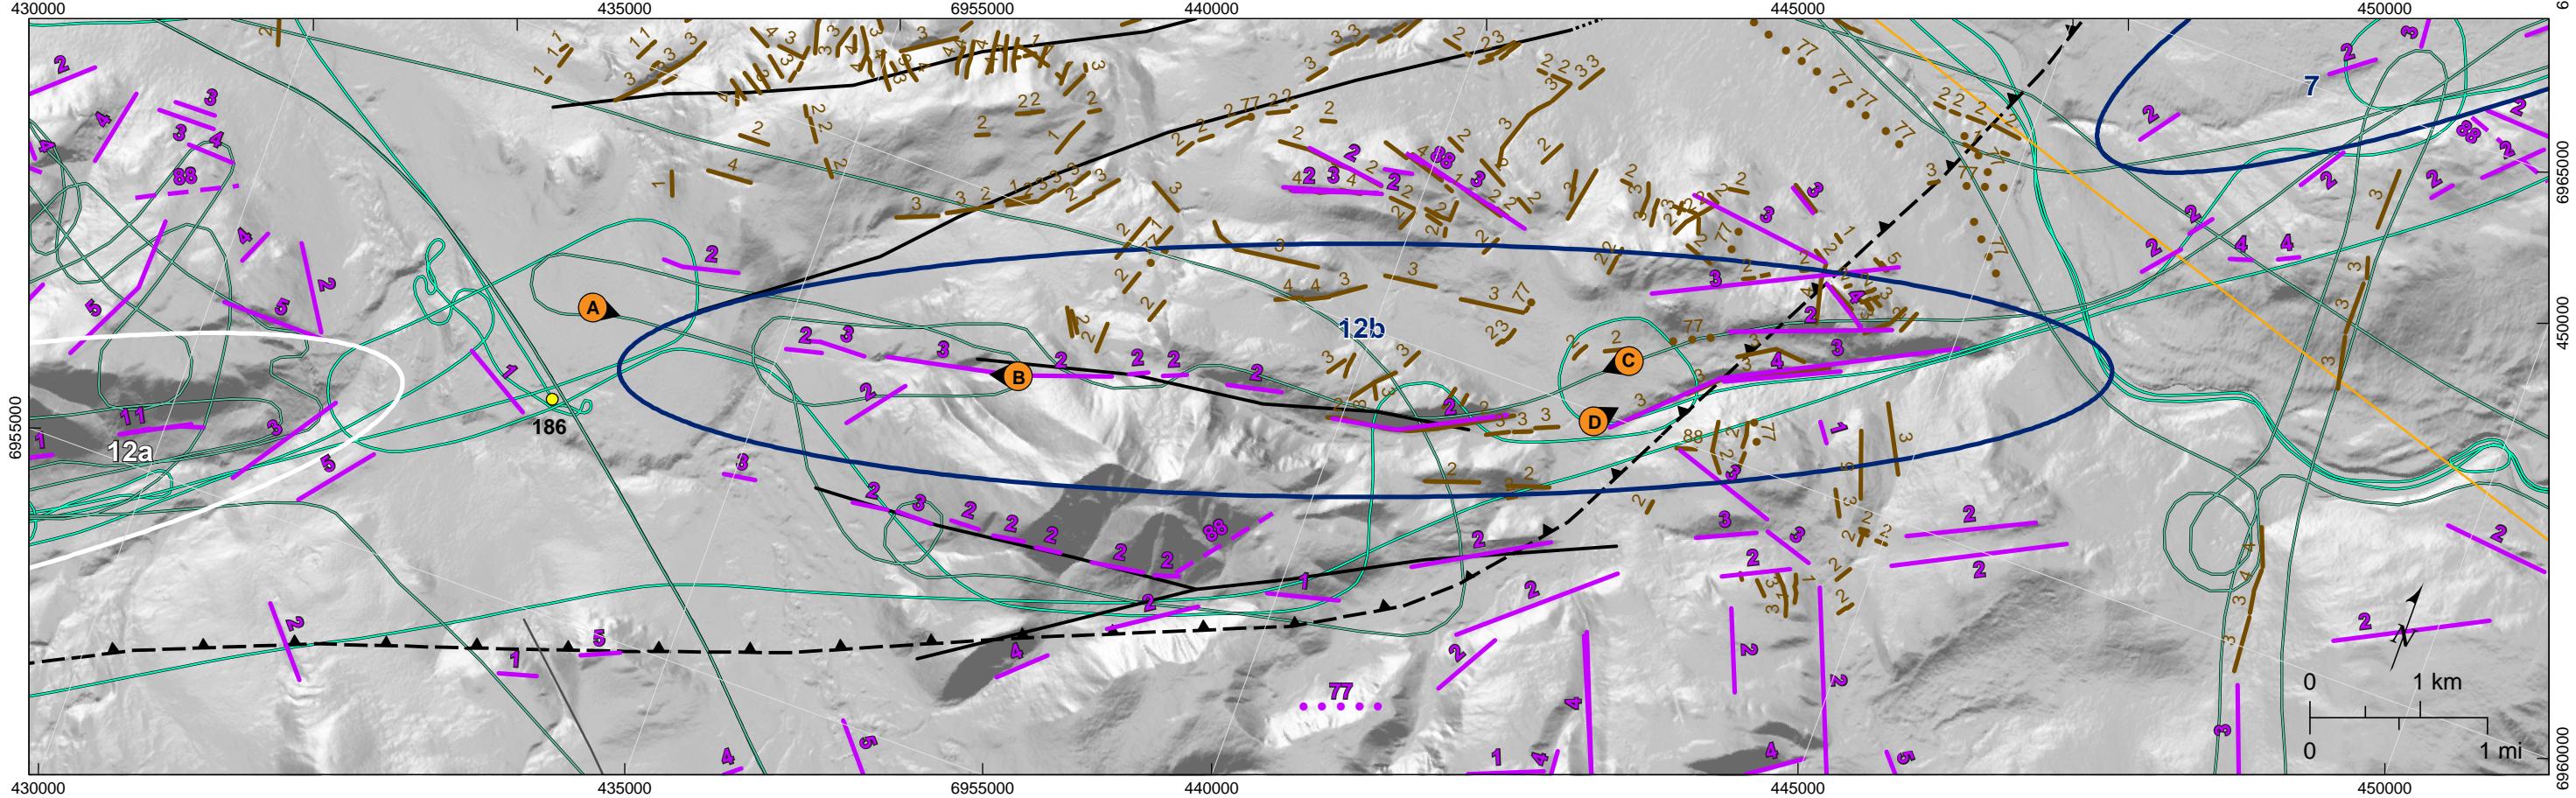

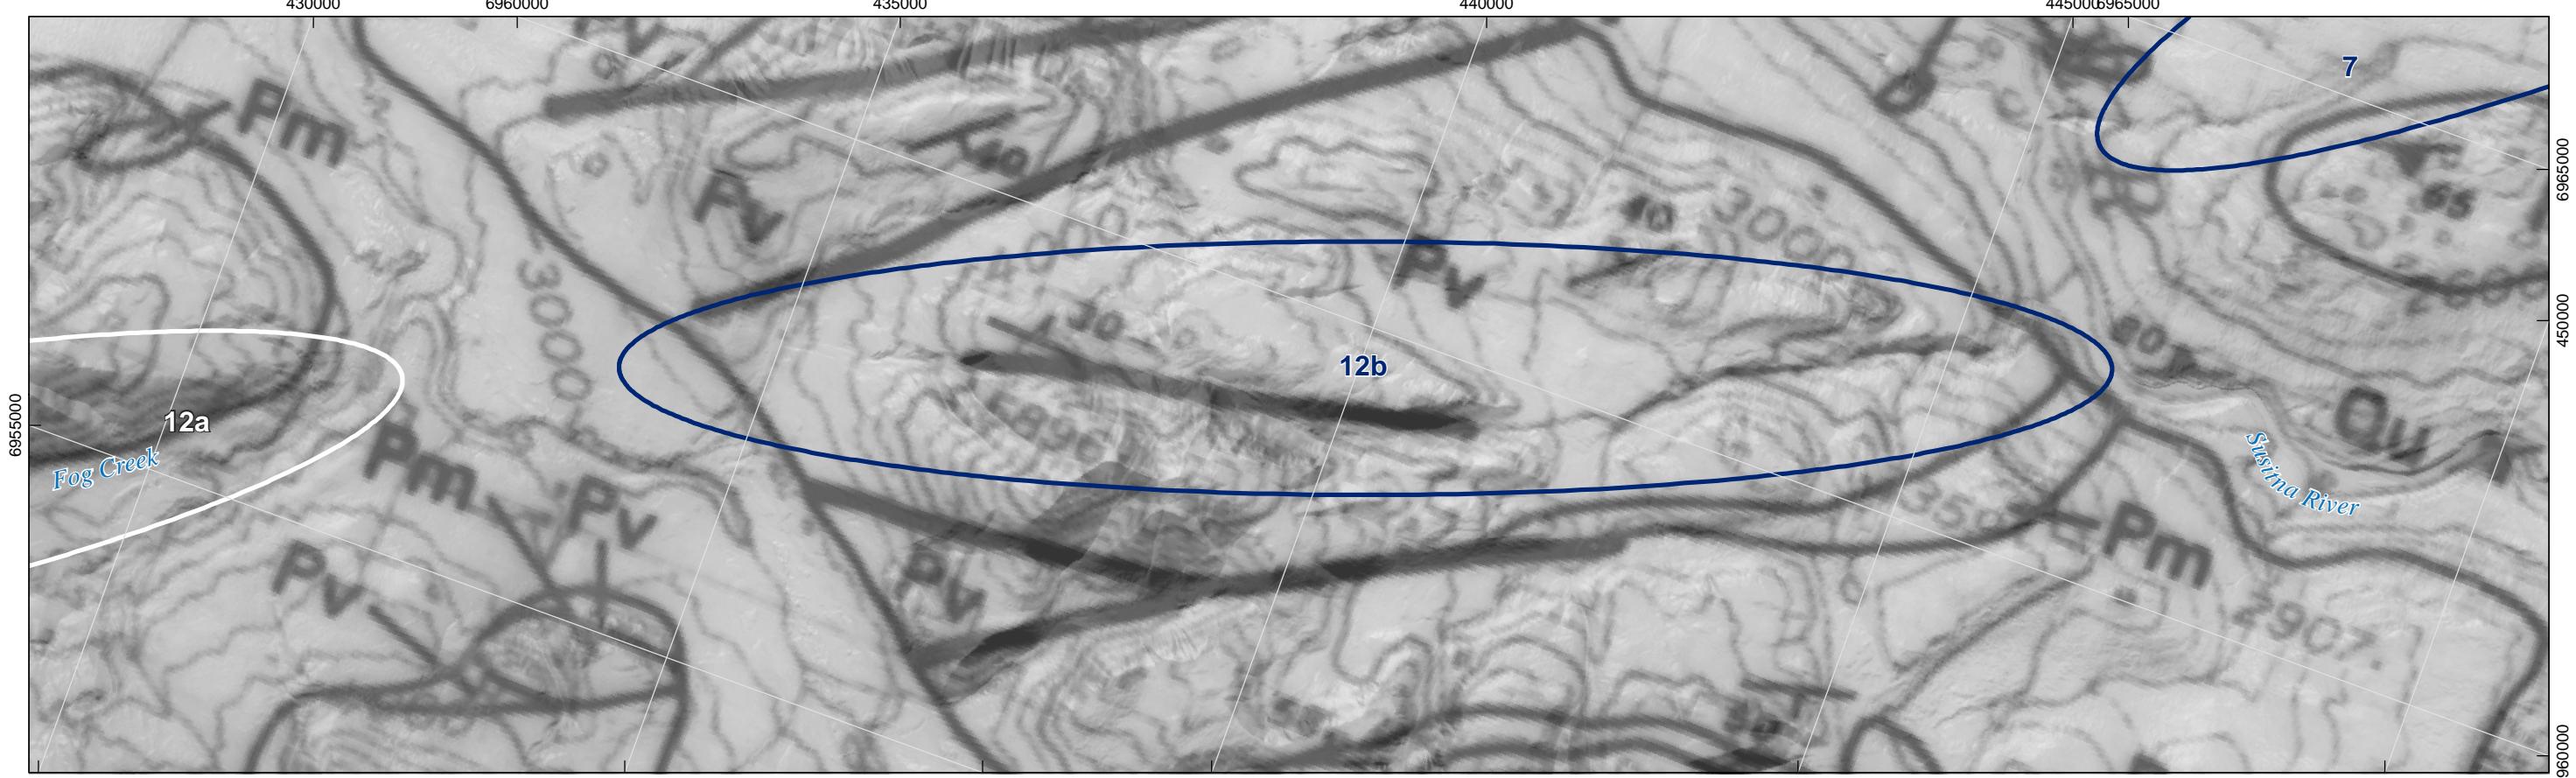

View looking at notch in bedrock with expression of apparent northwesterly dip.

D)

View looking southwesterly along glacially scoured surface.

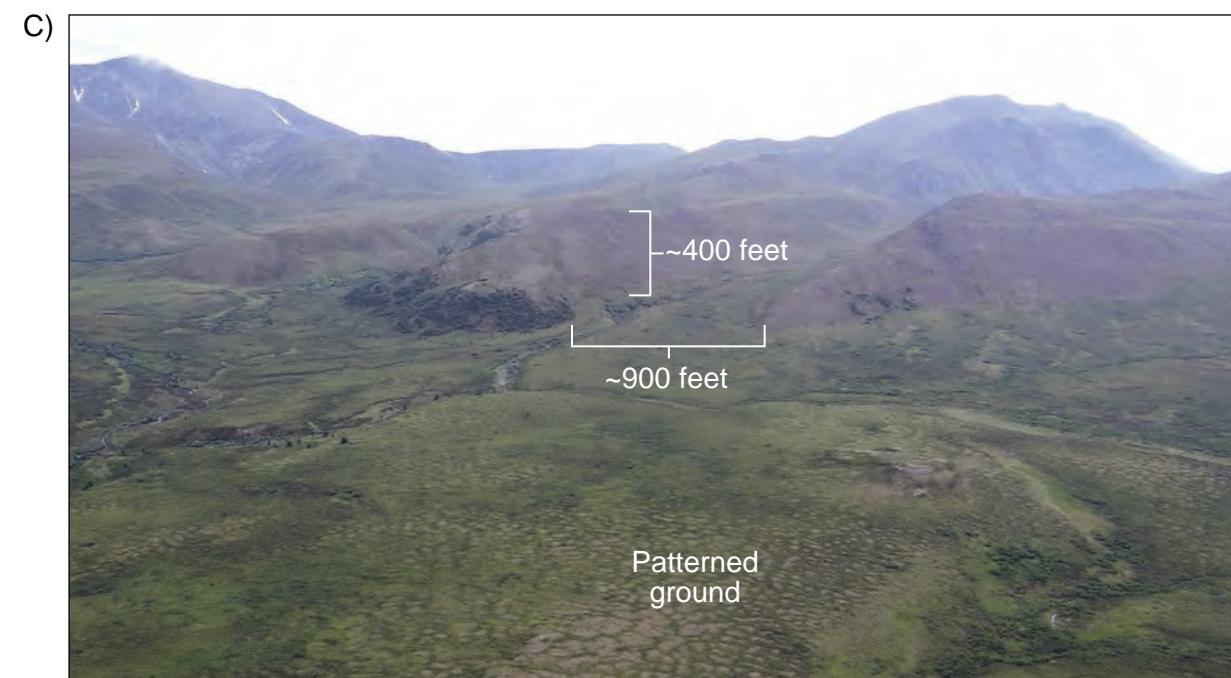

Notes:

1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.
2. Data frame has been rotated 20° east of north.
3. Geologic map by Clautice et al., 2009.

View looking northeast at erosional break-in-slope mapped as an individual lineament. Feature is absent in the background along projection of strike.

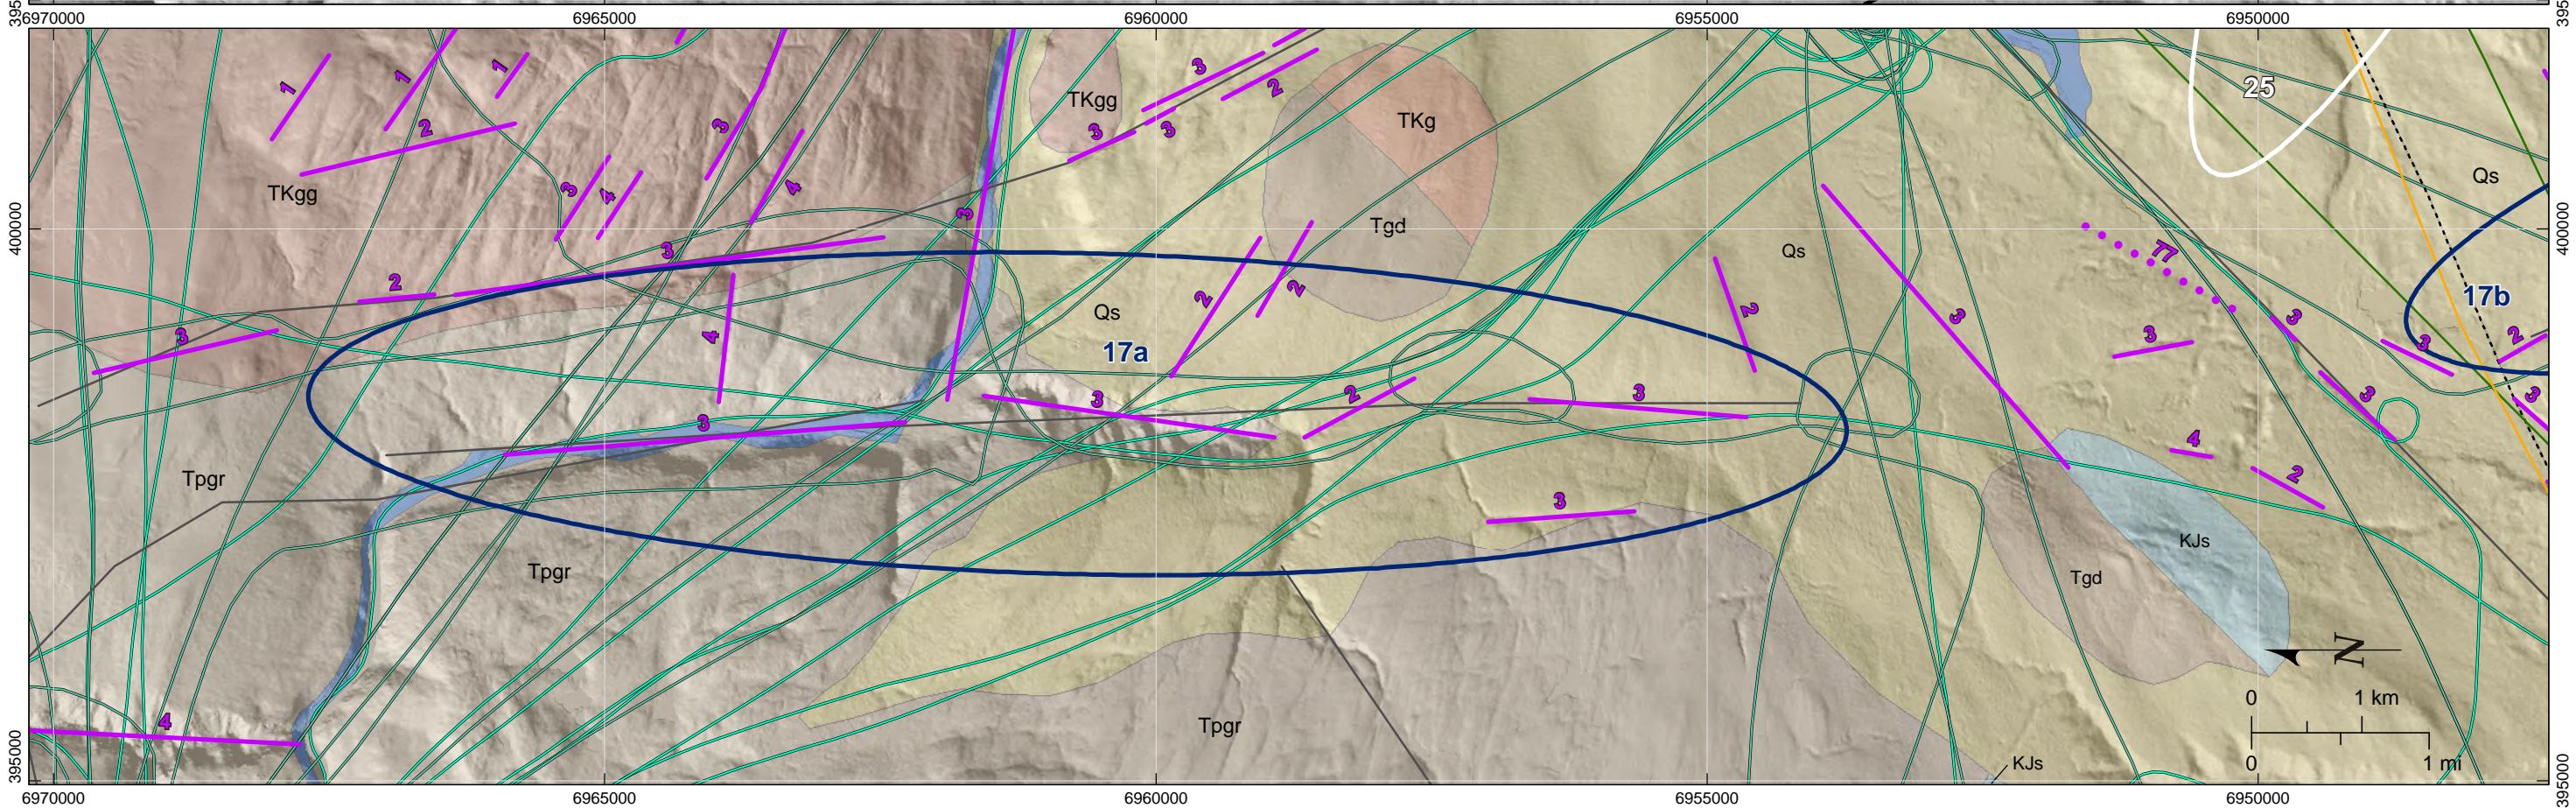

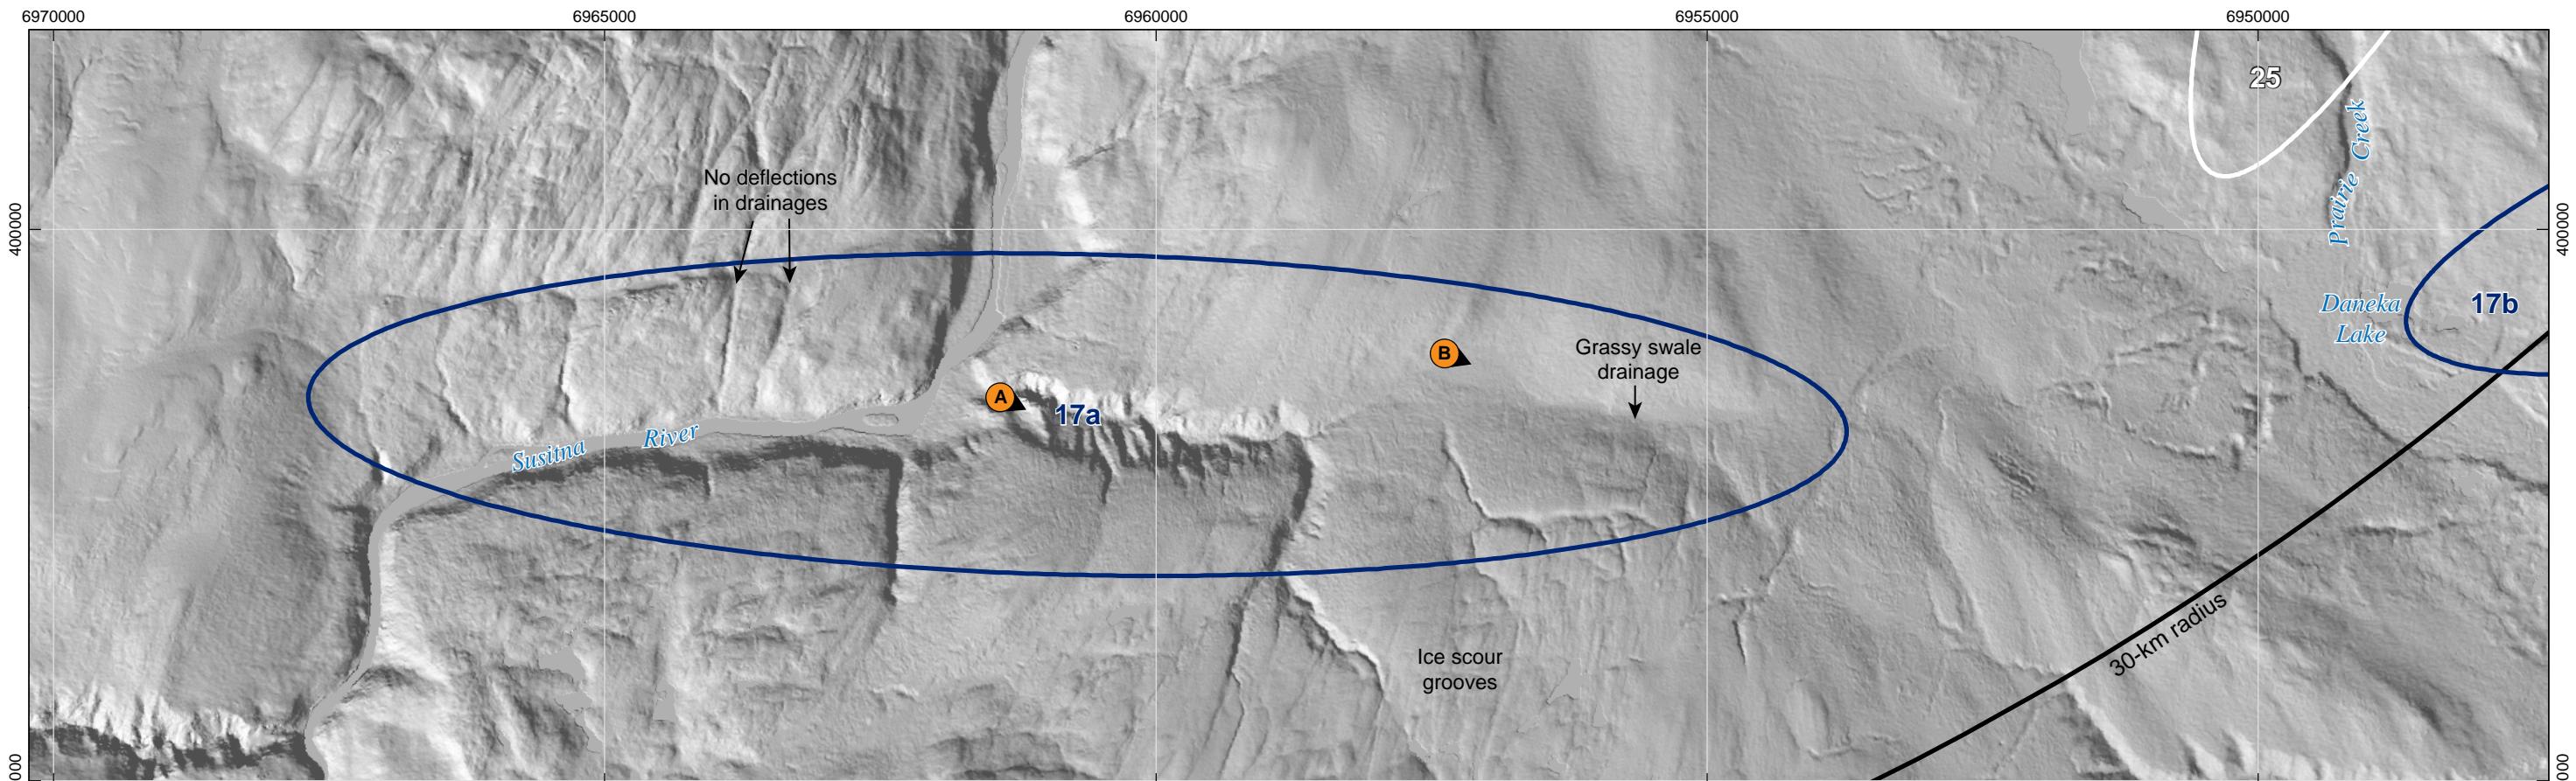

View southerly up-valley into glacial valley along lineaments geomorphically expressed as linear valley and drainage. Underfit creek in deep linear valley suggests landform created by sub-ice channel meltwater.

View looking southwest down-valley along lineament geomorphically expressed as linear valley. Very little alluvium has accumulated in the drainage, and glacially sculpted bedrock is shallow.

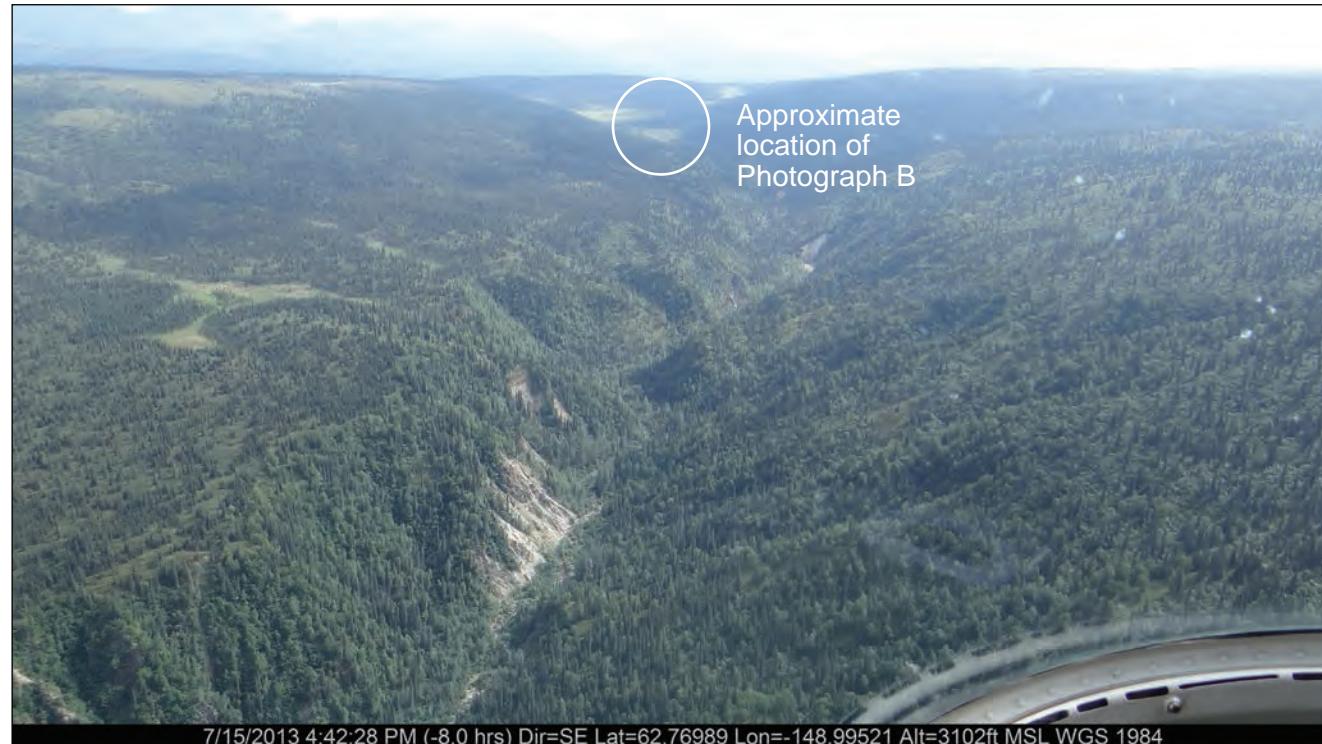

View northerly down-valley along lineaments geomorphically expressed as linear drainage. Thin cover of unconsolidated surficial sediment mantles the Paleozoic rocks.

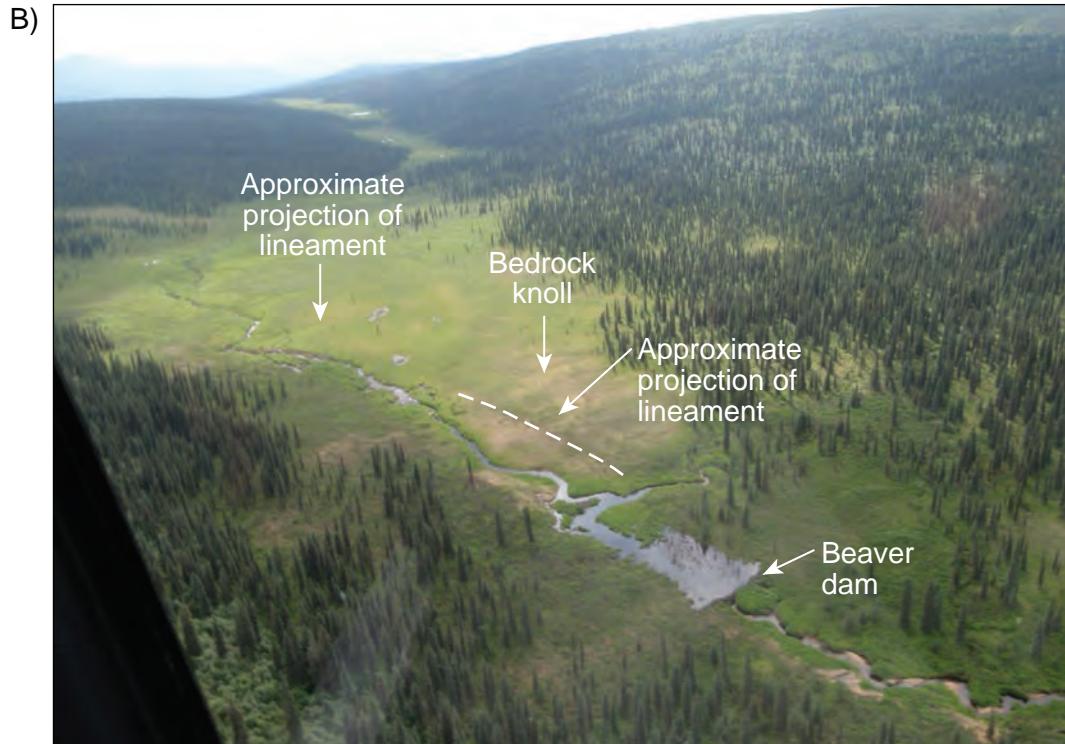

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
 2. Data frame has been rotated 90° west of north.  
 3. Geology by Wilson et al., 2009.

A)

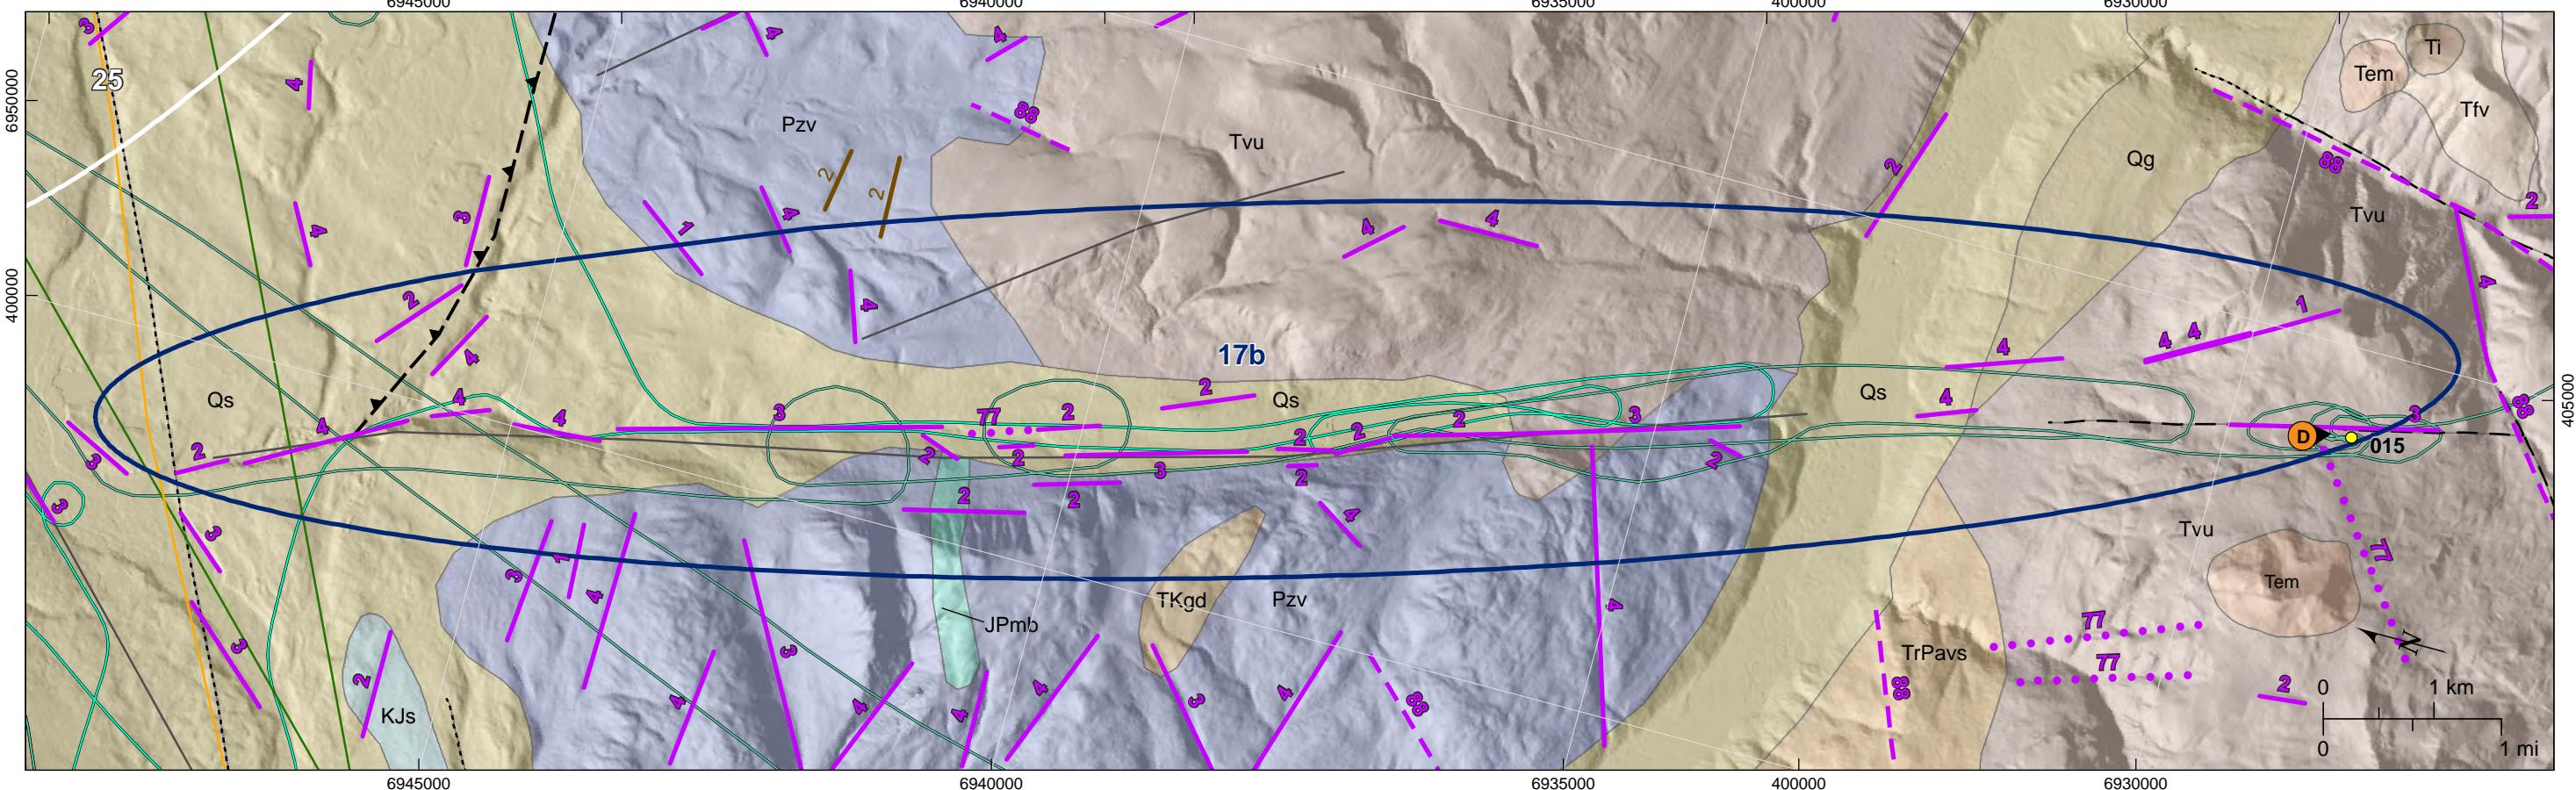

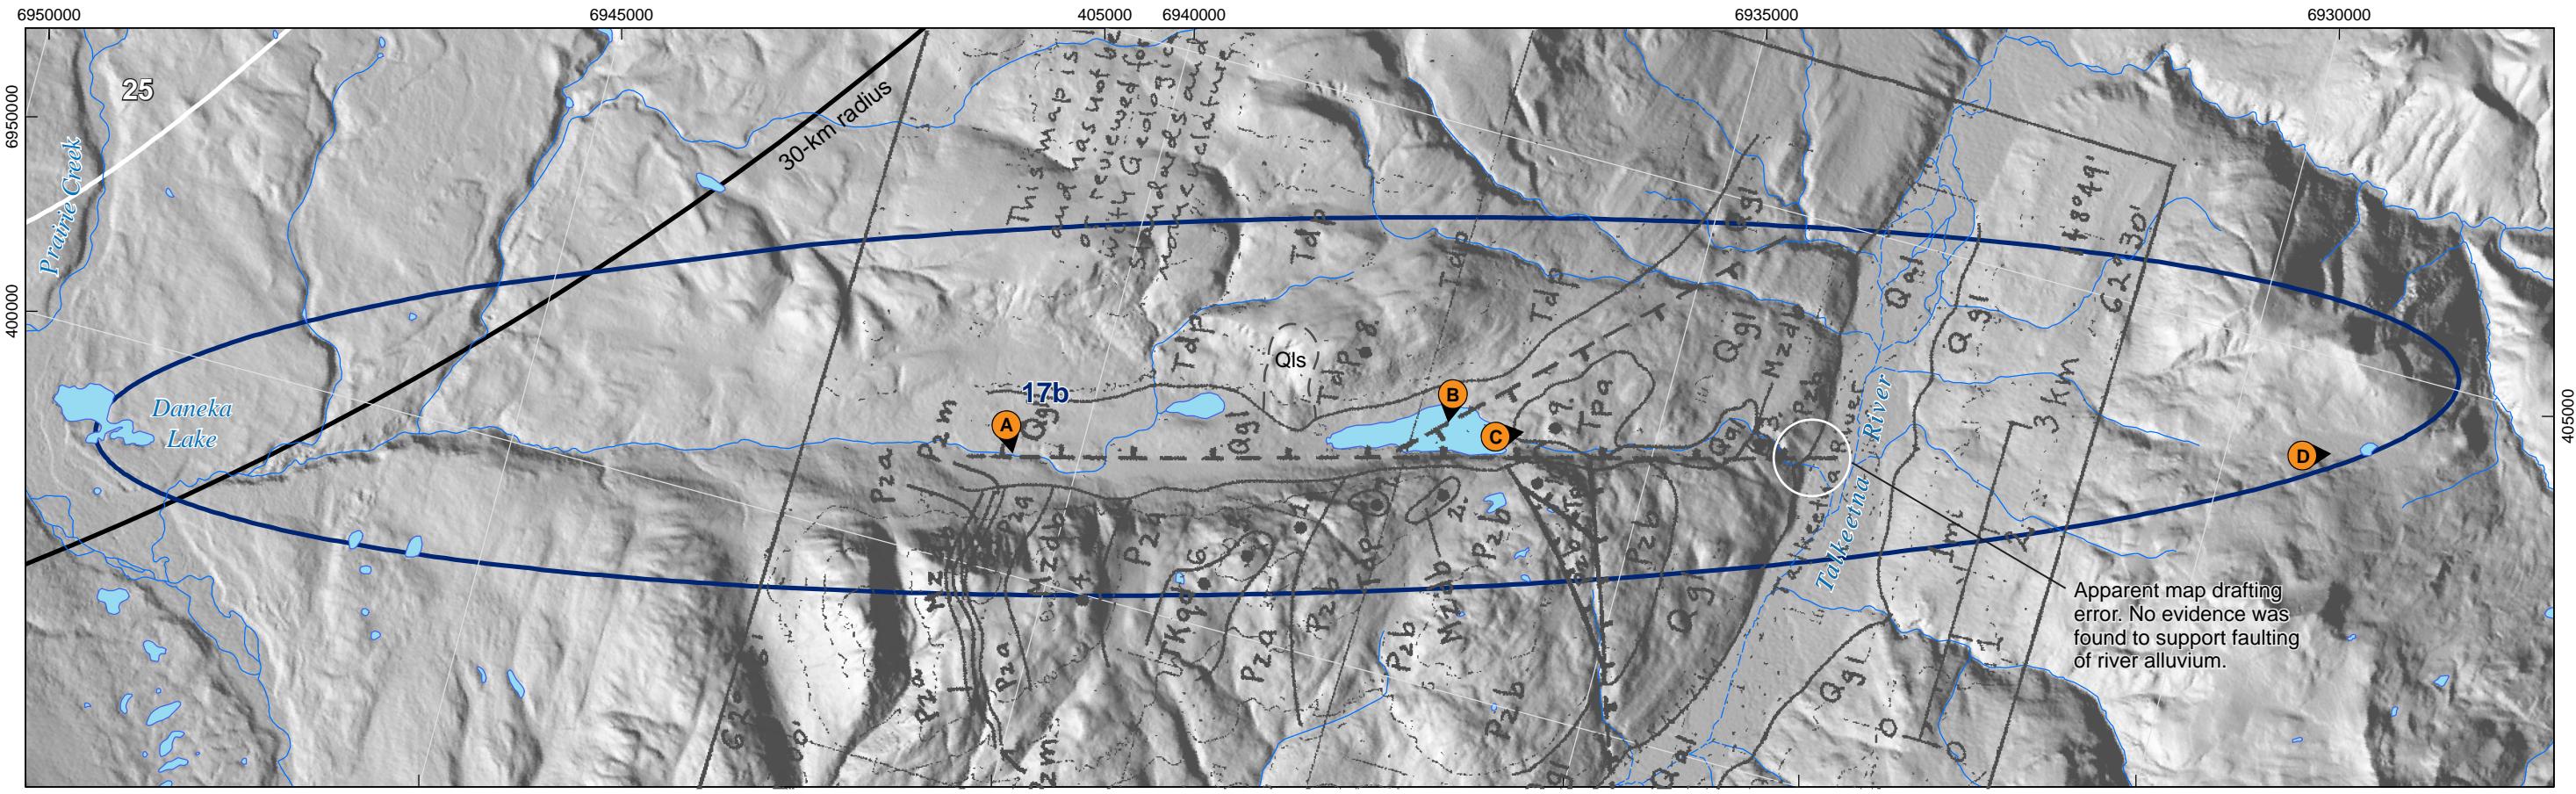

View looking south at linear canyon that is tributary to the Susitna River. Canyon bottom and creek drainage have sinuosity not apparent at smaller scales.

B)

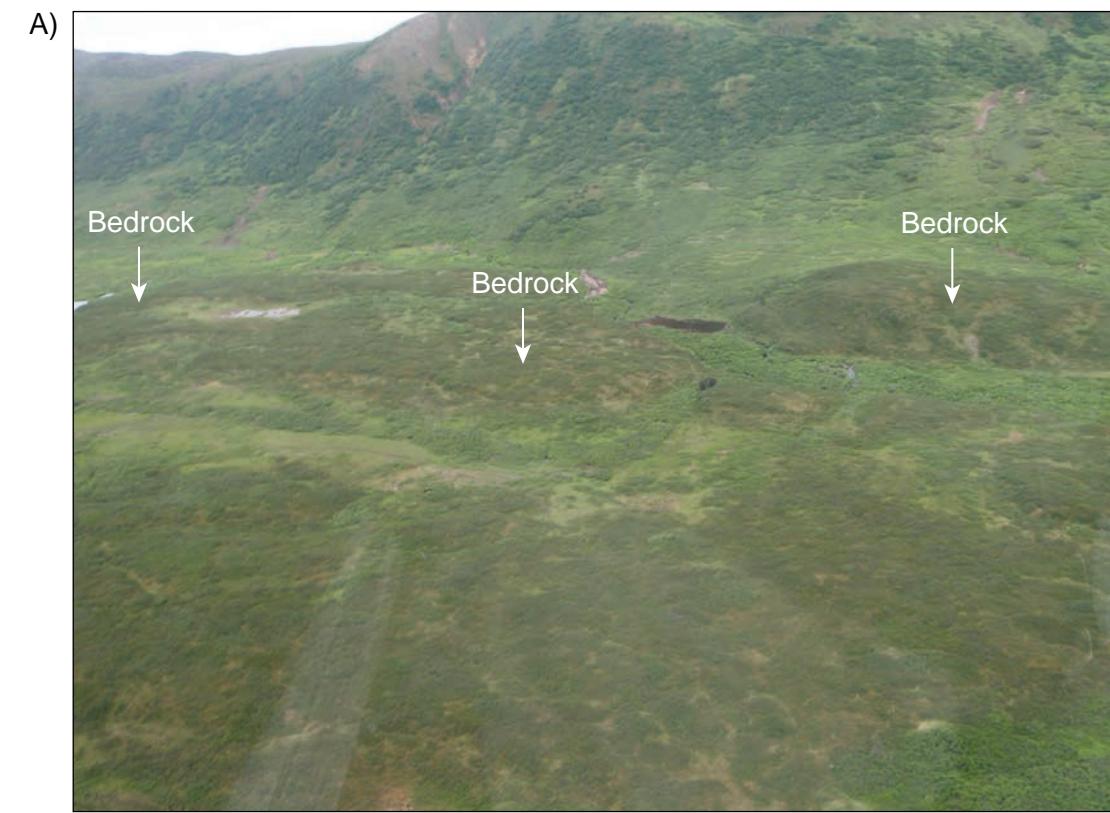

View looking north-northeast at creek in boggy (Holocene) drainage. Lineament is expressed as a depositional contact along the shallow bedrock knoll.

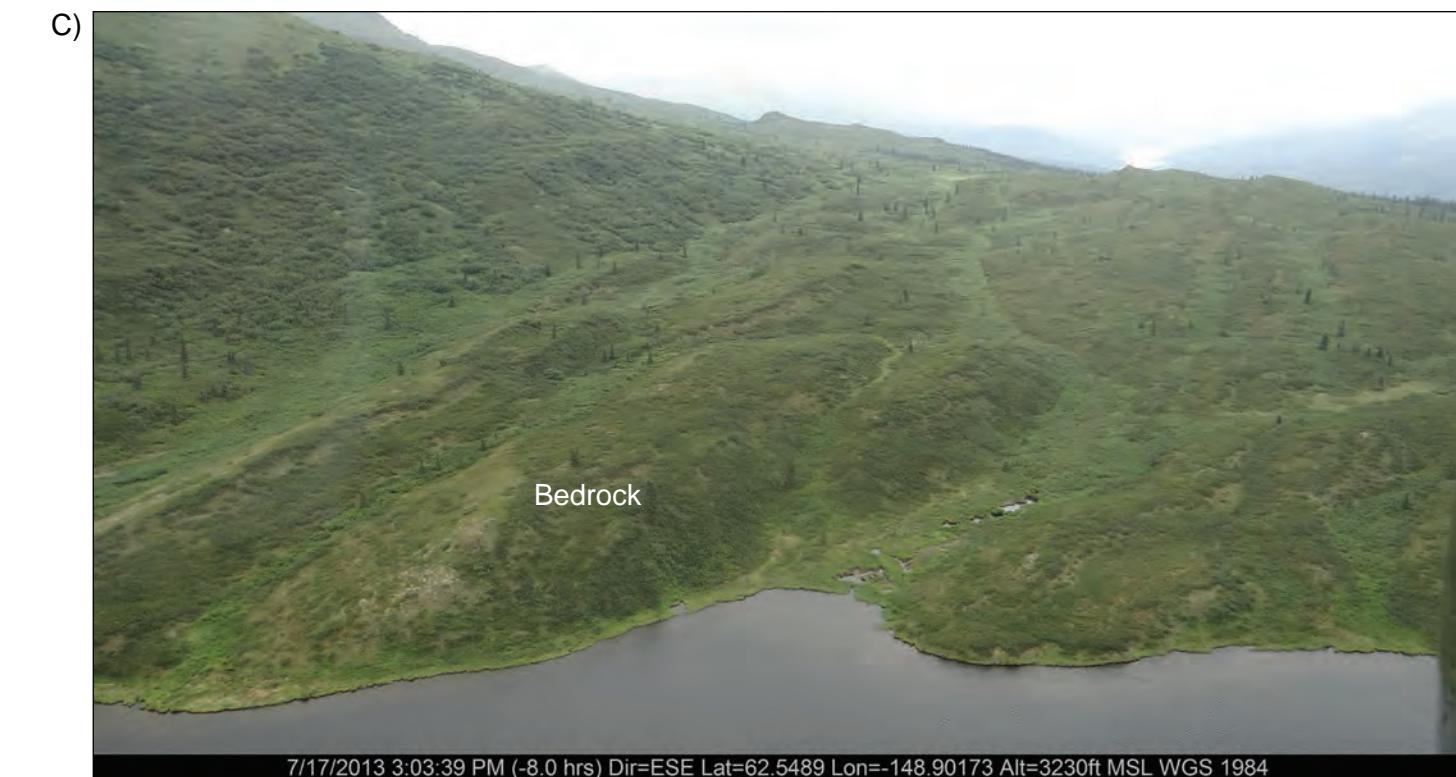

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.

2. Data frame has been rotated 75° west of north.

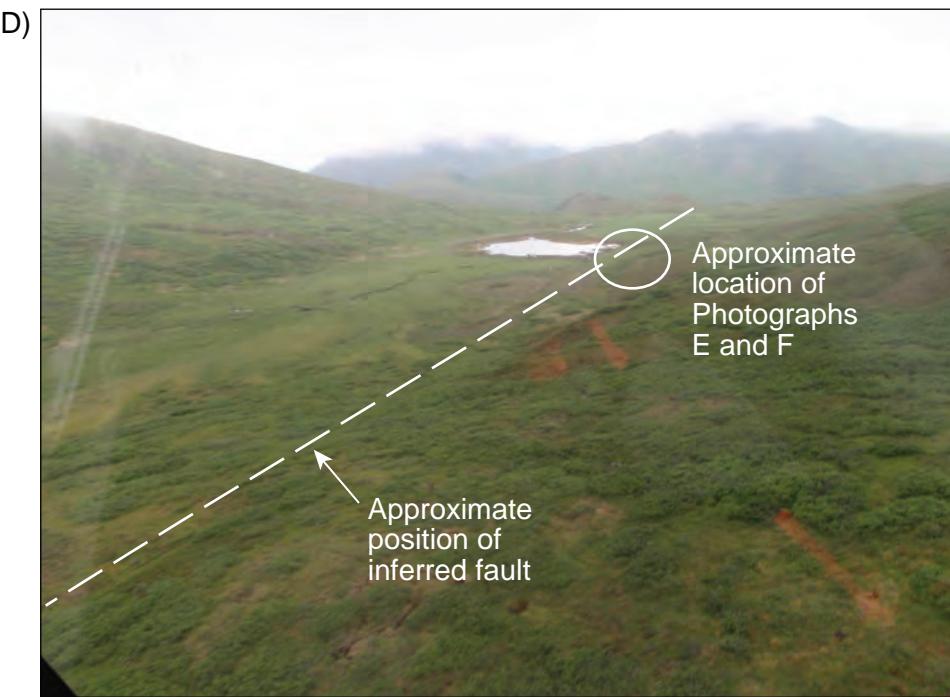

3. Geology by Csejtey (1974), Talkeetna Mountains, Figure 4 (top) and Wilson et al., 2009 (bottom).

View looking south southwest at lake margin of glacial valley. Lineament was mapped at base of slope, and is not expressed as a scarp-type feature. Apparent colluvium along projection of lineament does not appear offset.

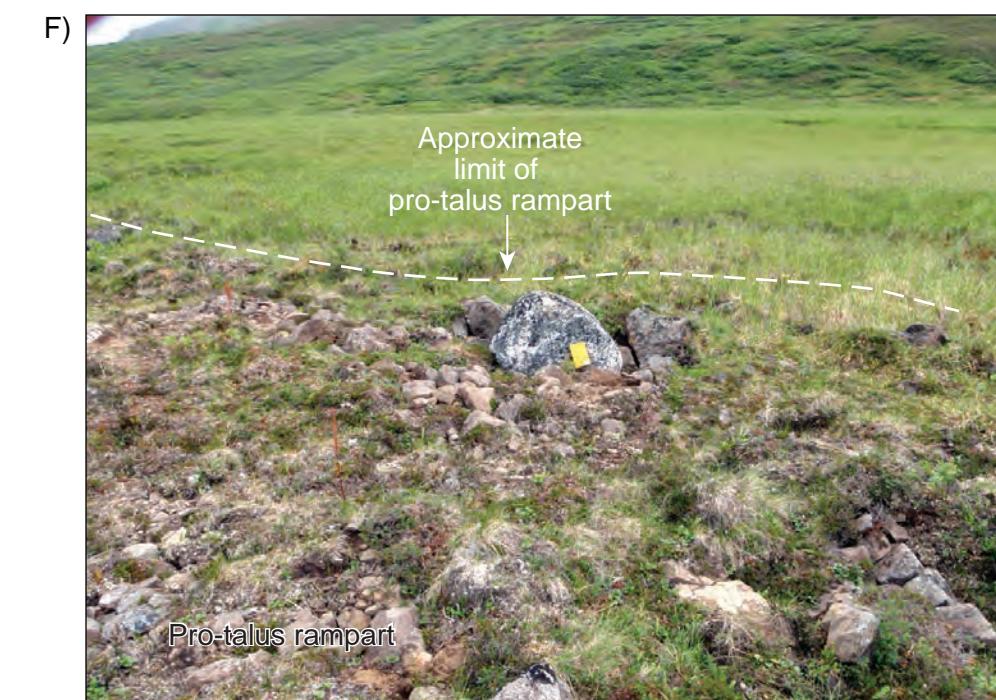

View looking south southeast along glacially-sculpted terrain along which Csejtey (1974) has inferred a fault within the glacial sediment that mantles the bedrock knolls (Figure A17b.1).

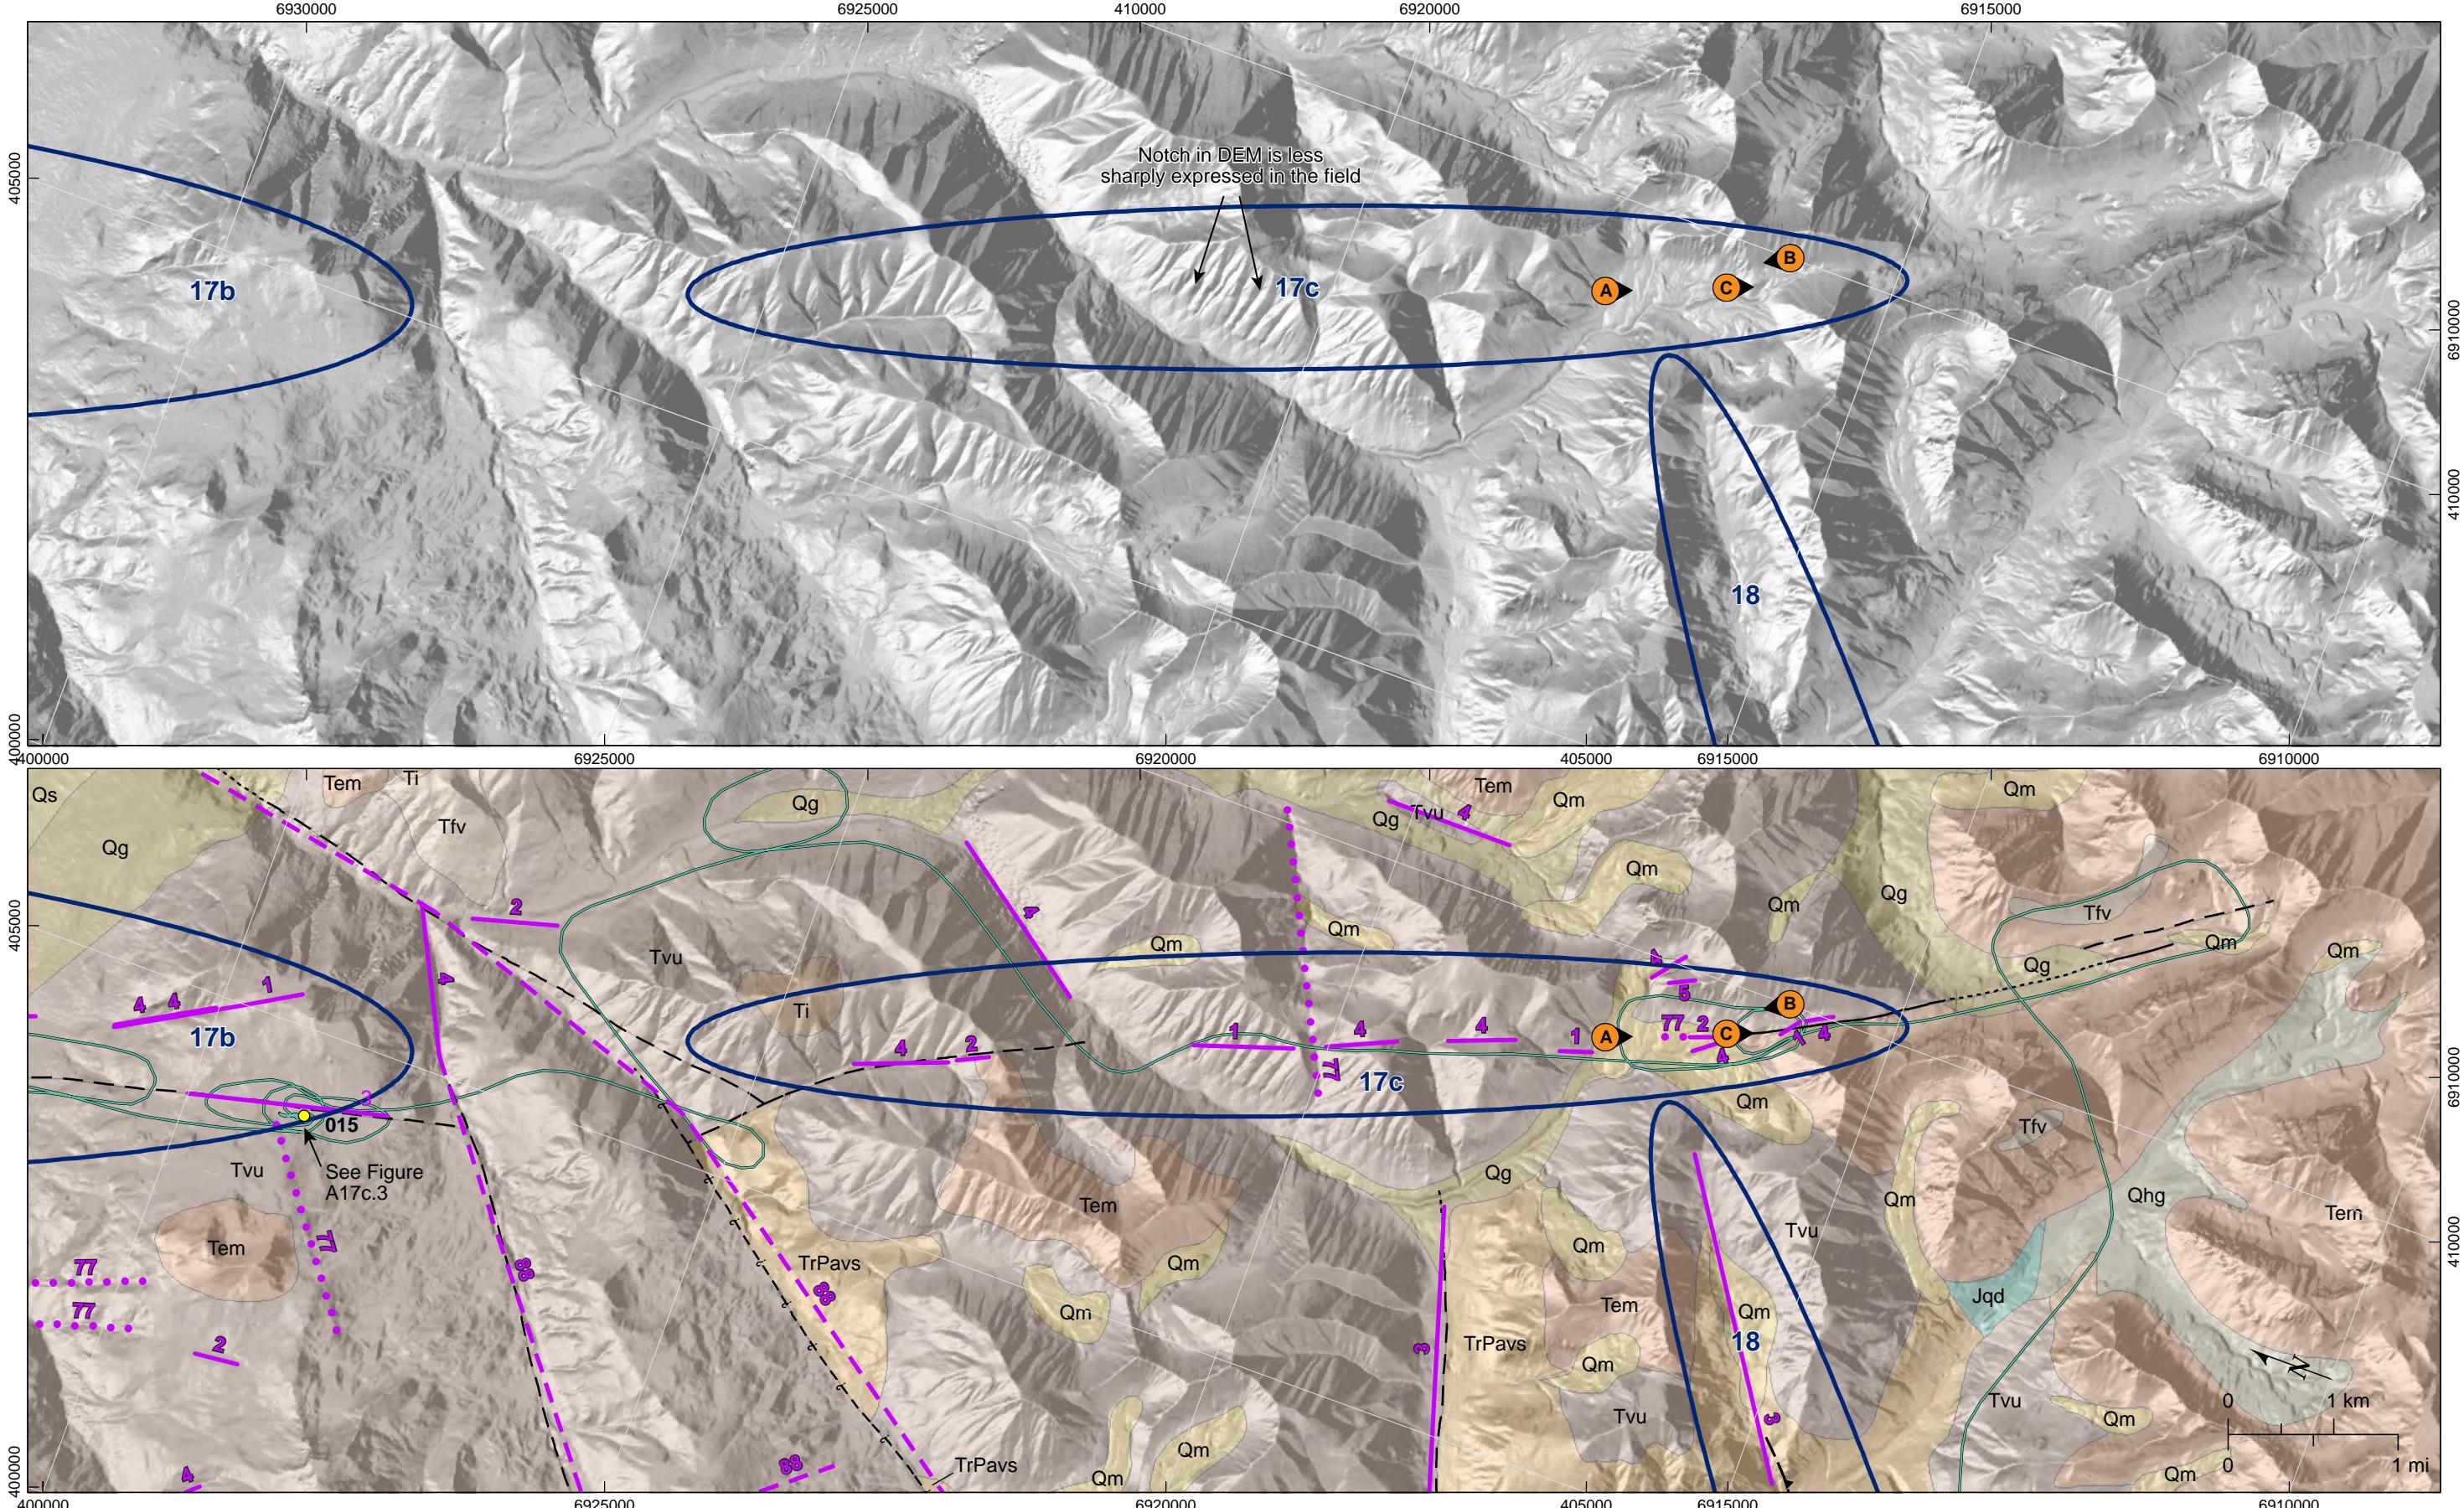

View looking south along southern extent of group 17b, along which an inferred bedrock fault is mapped by Wilson (2009). Photographs B and C are adjacent to lake.

View looking south at pro-talus rampart and GPS waypoint 15. Note lateral distance between base of slope to crest of rampart. Geologist for scale is about 180 cm tall.

Pro-talus rampart constructed from blocky, frost-shattered volcanic rocks. Photograph is centered on more sub-rounded glacial erratic (granitic) that is not similar to any of the local hillside lithologies. Field notebook is 19 cm tall.

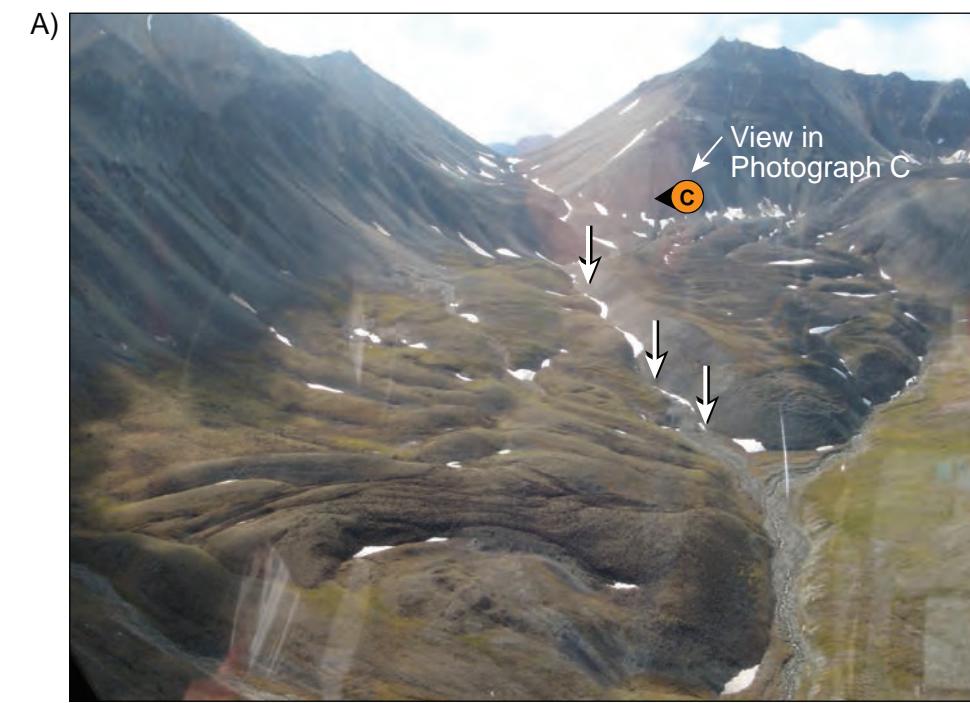

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
2. Data frame has been rotated 70° west of north.  
3. Geology by Wilson et al., 2009.

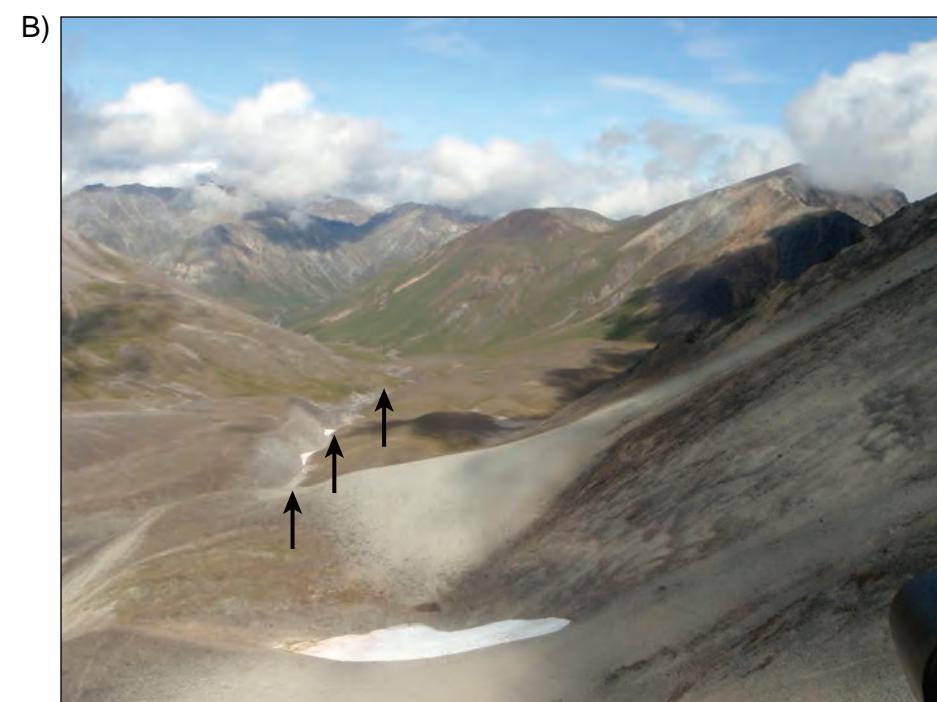

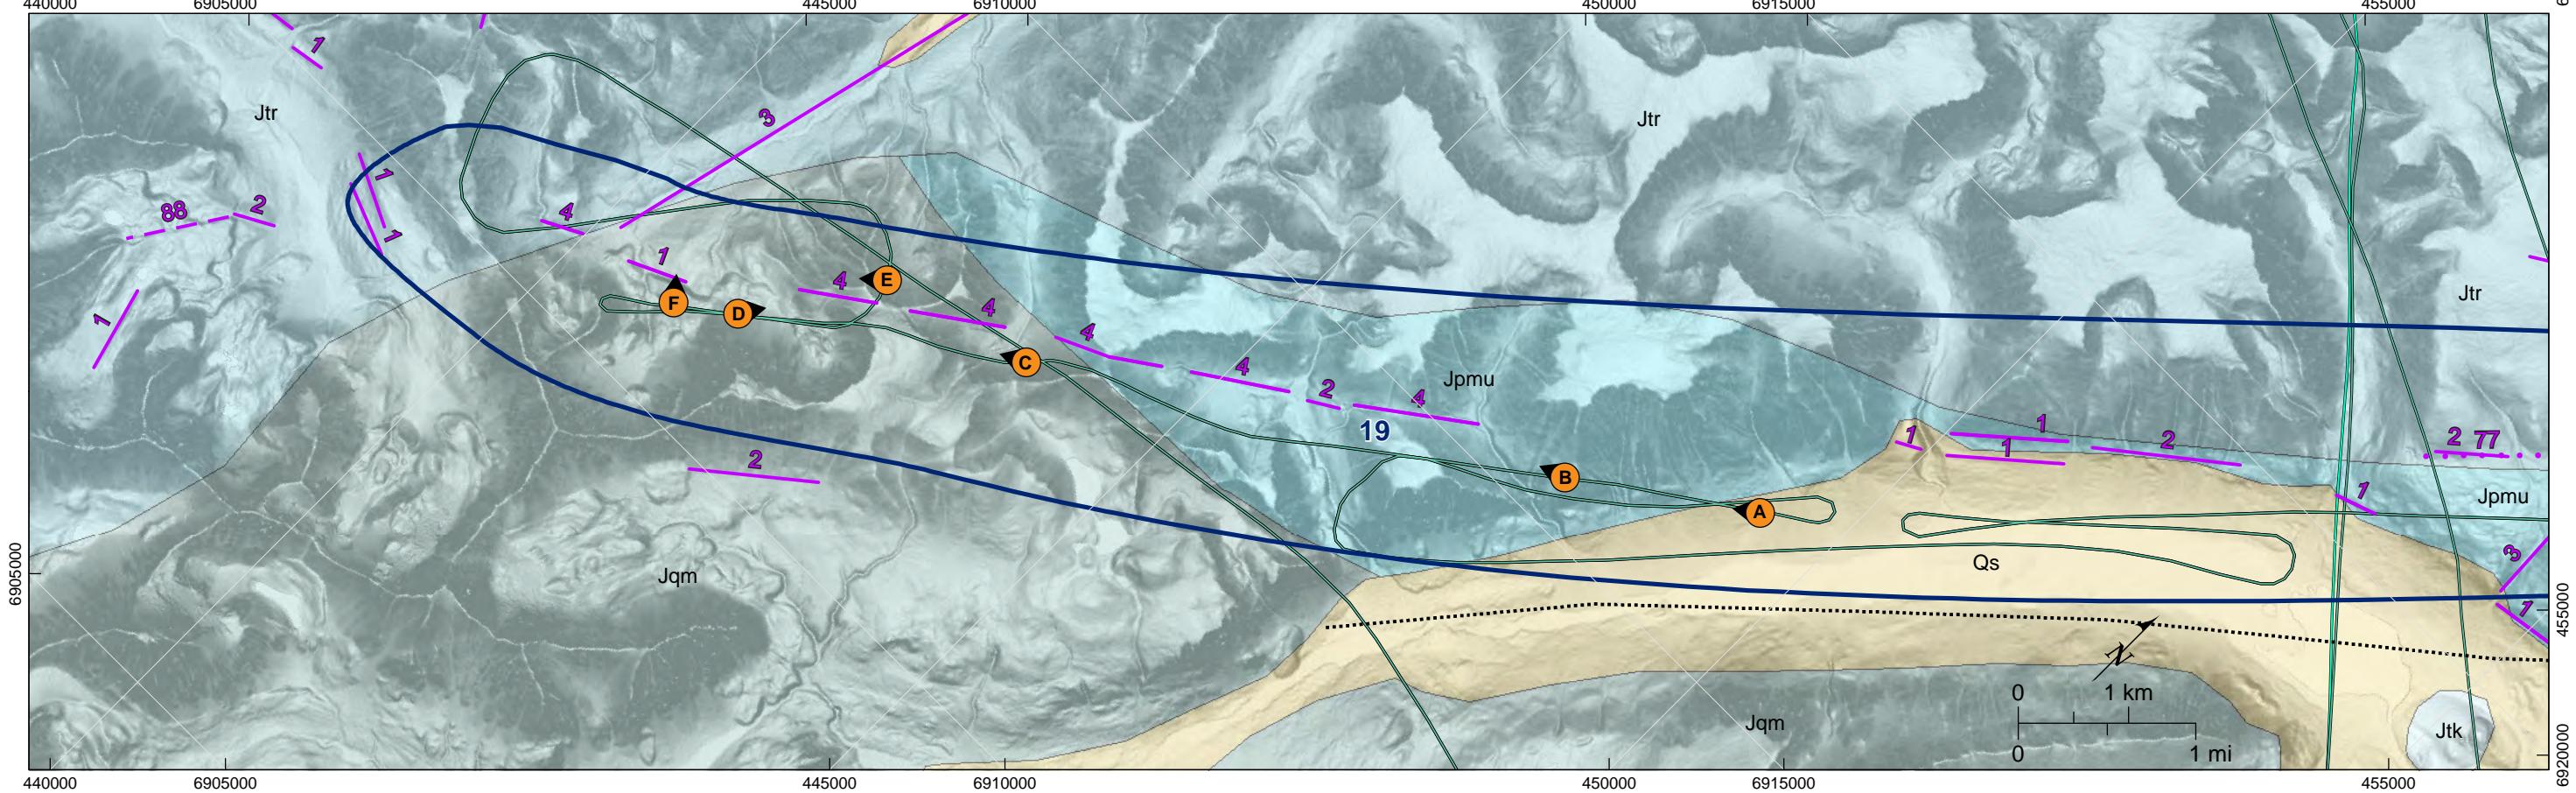

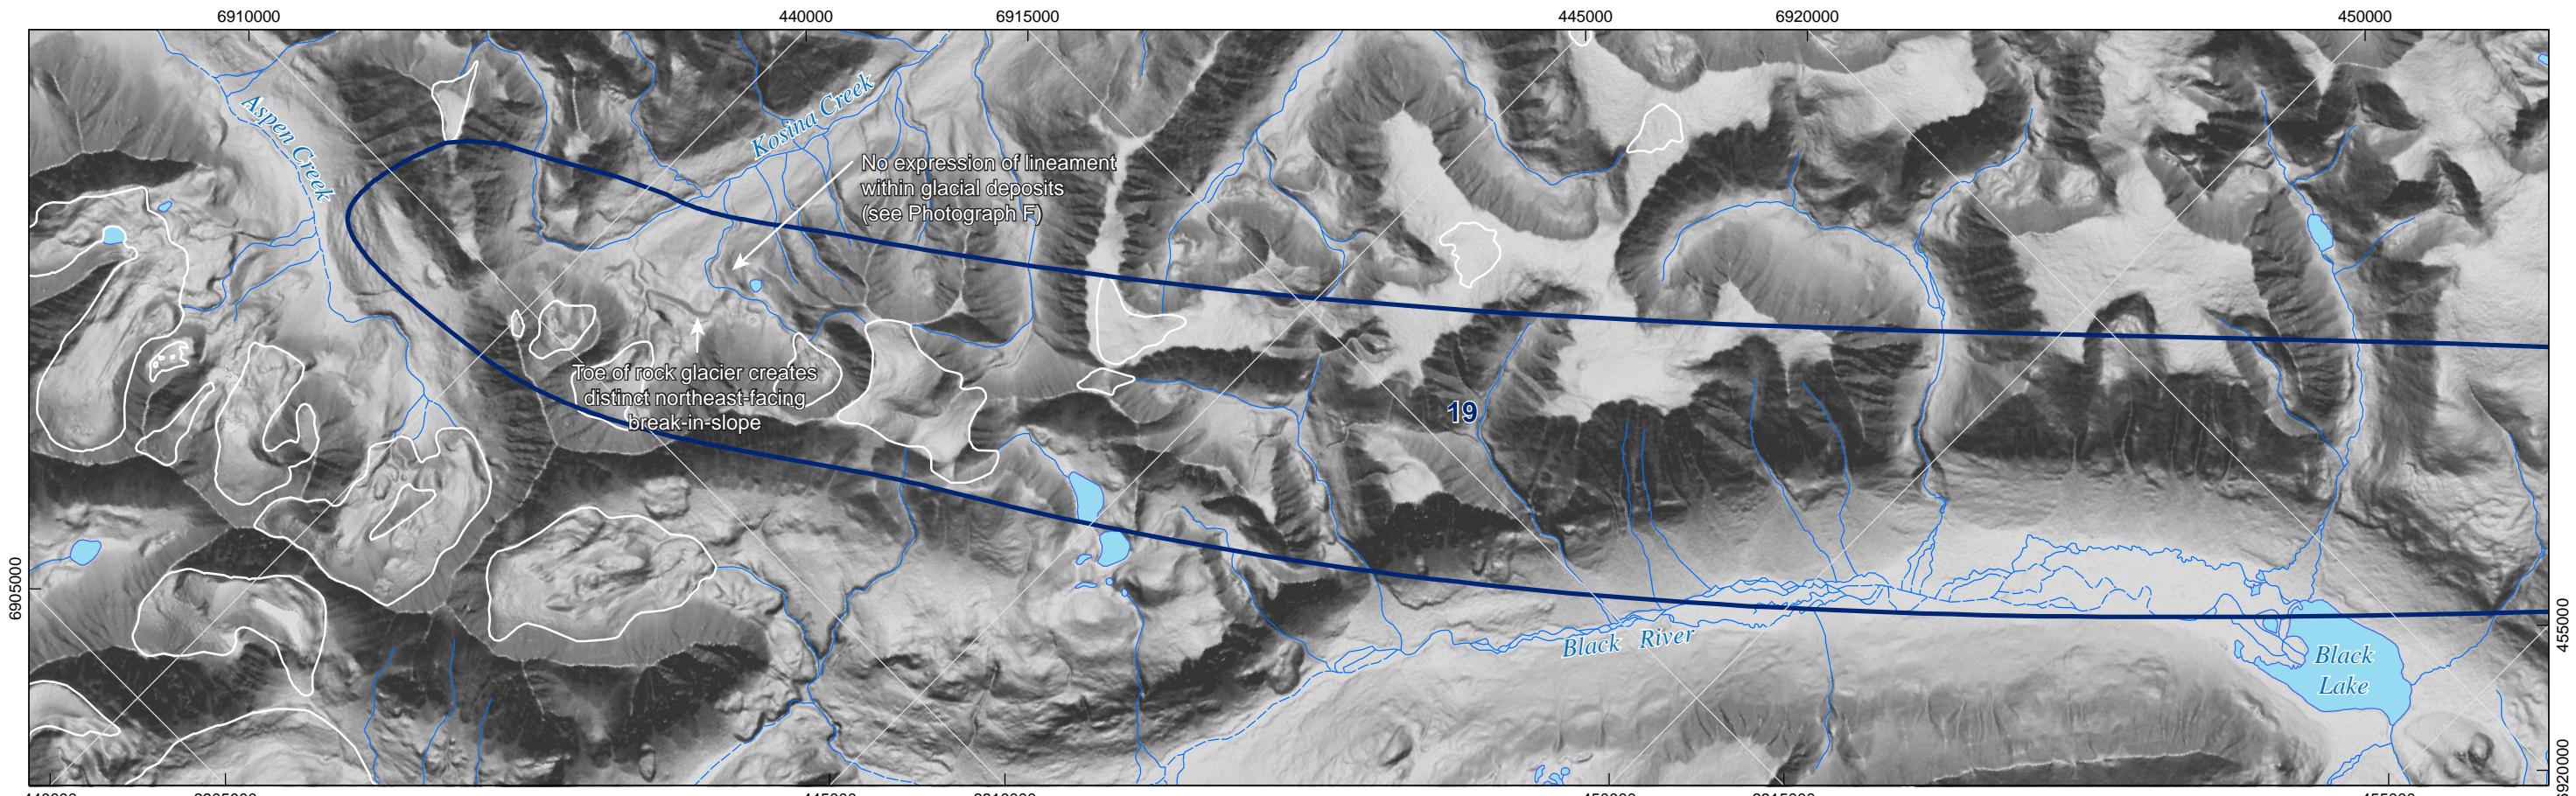

**SUSITNA-WATANA HYDROELECTRIC PROJECT**  
**LINEAMENT GROUP 17c**  
**MAP DATA**

**FIGURE**  
**A17c.1**

View looking southeasterly at lineament expressed at erosional drainage cutting through the likely Holocene rock glacier deposit.

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.  
2. Data frame has been rotated 45° east of north.  
3. Geologic map from Wilson et al., 2009.

Photograph taken from location A looking southwest along apparent rock type contrast (contact?) and towards mapped lineaments in steep-walled, v-shaped, linear drainage. Arrows point along apparent contact between less-resistant rock on the north and more resistant and craggy outcrops on the south.

Photograph taken from location B looking west along mapped lineaments and apparent rock contact in steep-walled, v-shaped, linear drainages.

Photograph taken from location C looking west at head of steep-walled, v-shaped, linear drainage where mapped lineaments correspond to apparent rock contact.

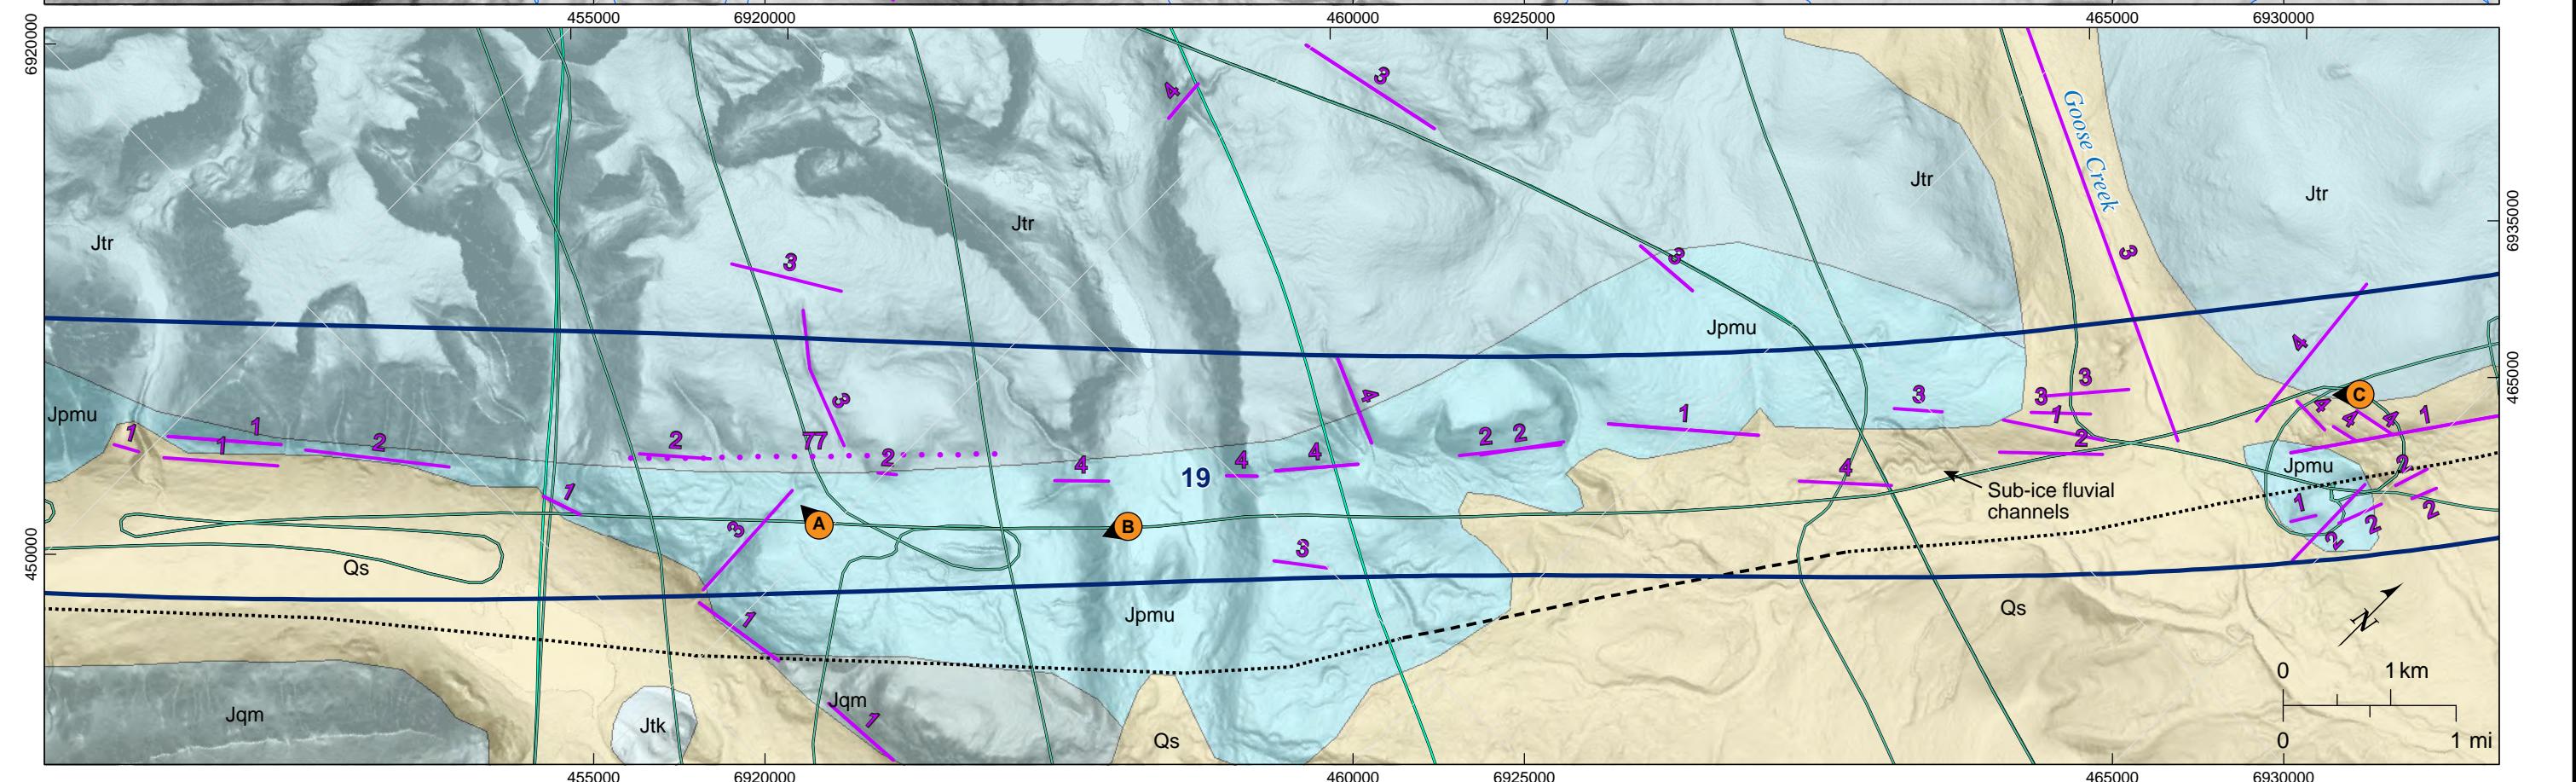

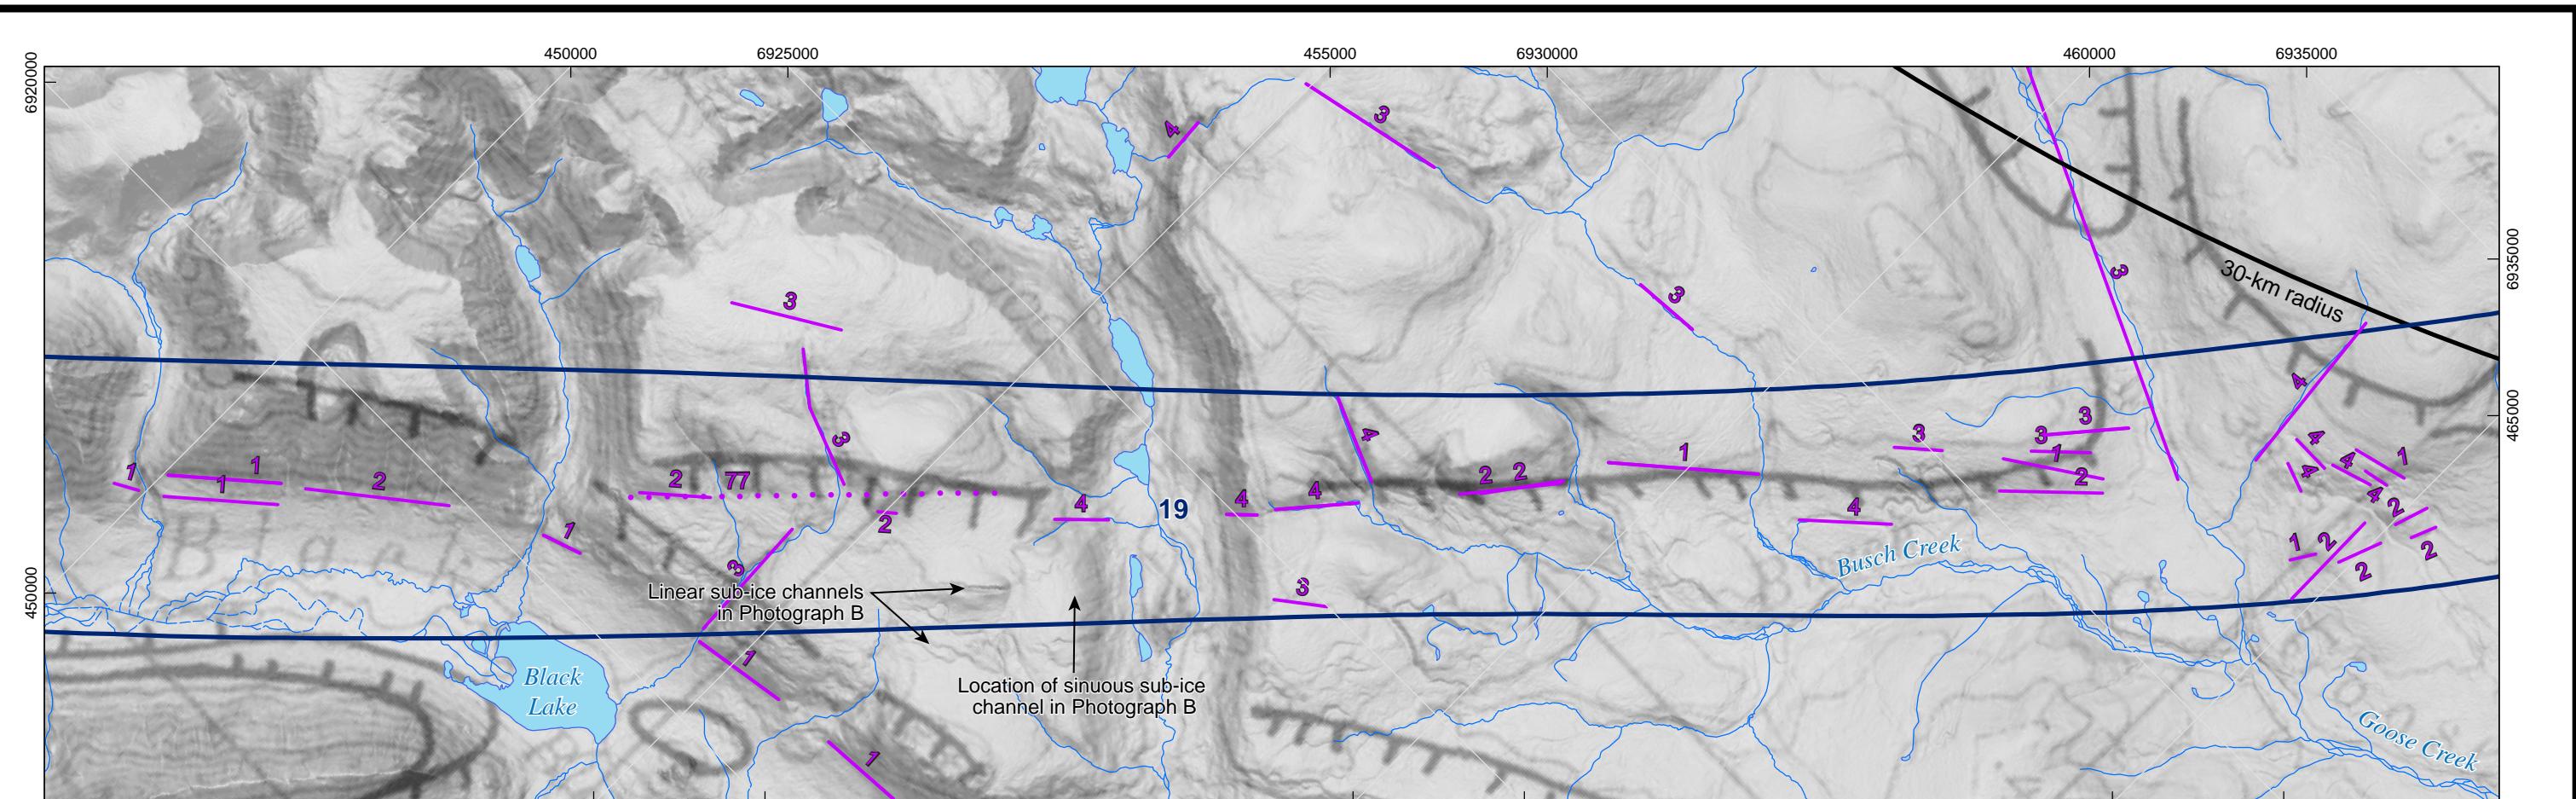

Photograph looking northeast from location D along the western continuation of the apparent rock type contrast shown in Photographs A, B, and C. Arrows point along apparent contact.

Photograph from location E looking southwest down the ridgeline shown in Photograph D. View is 180 degrees from that in Photograph D. Note presence of rock glacier and glacial deposits in valley bottom. Arrows point along apparent contact.

Photograph looking northwest from location F showing apparently undeformed rock glacier and/or glacial deposits along strike of the mapped lineaments and apparent rock contact shown in Photographs A through D.

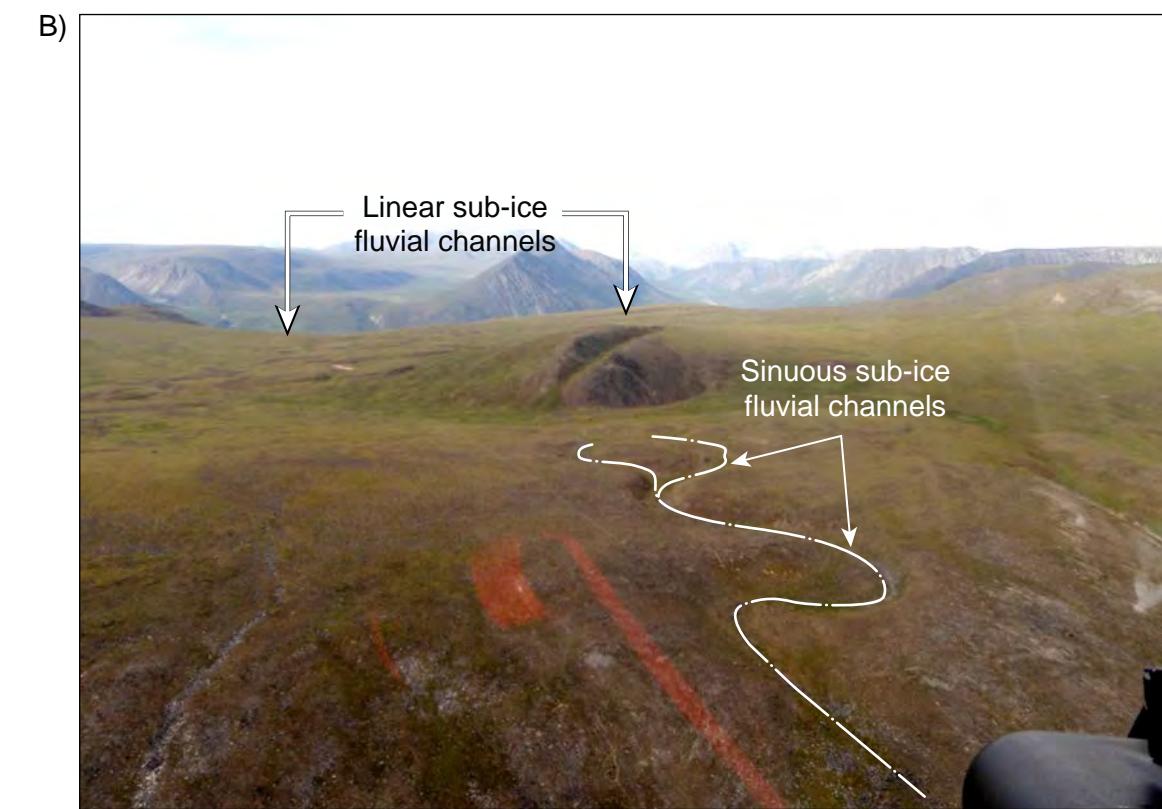

Notes: 1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.

2. Data frame has been rotated 45° east of north.

3. Geologic map in top panel by Williams and Galloway, 1986  
and bottom panel by Wilson et al., 2009

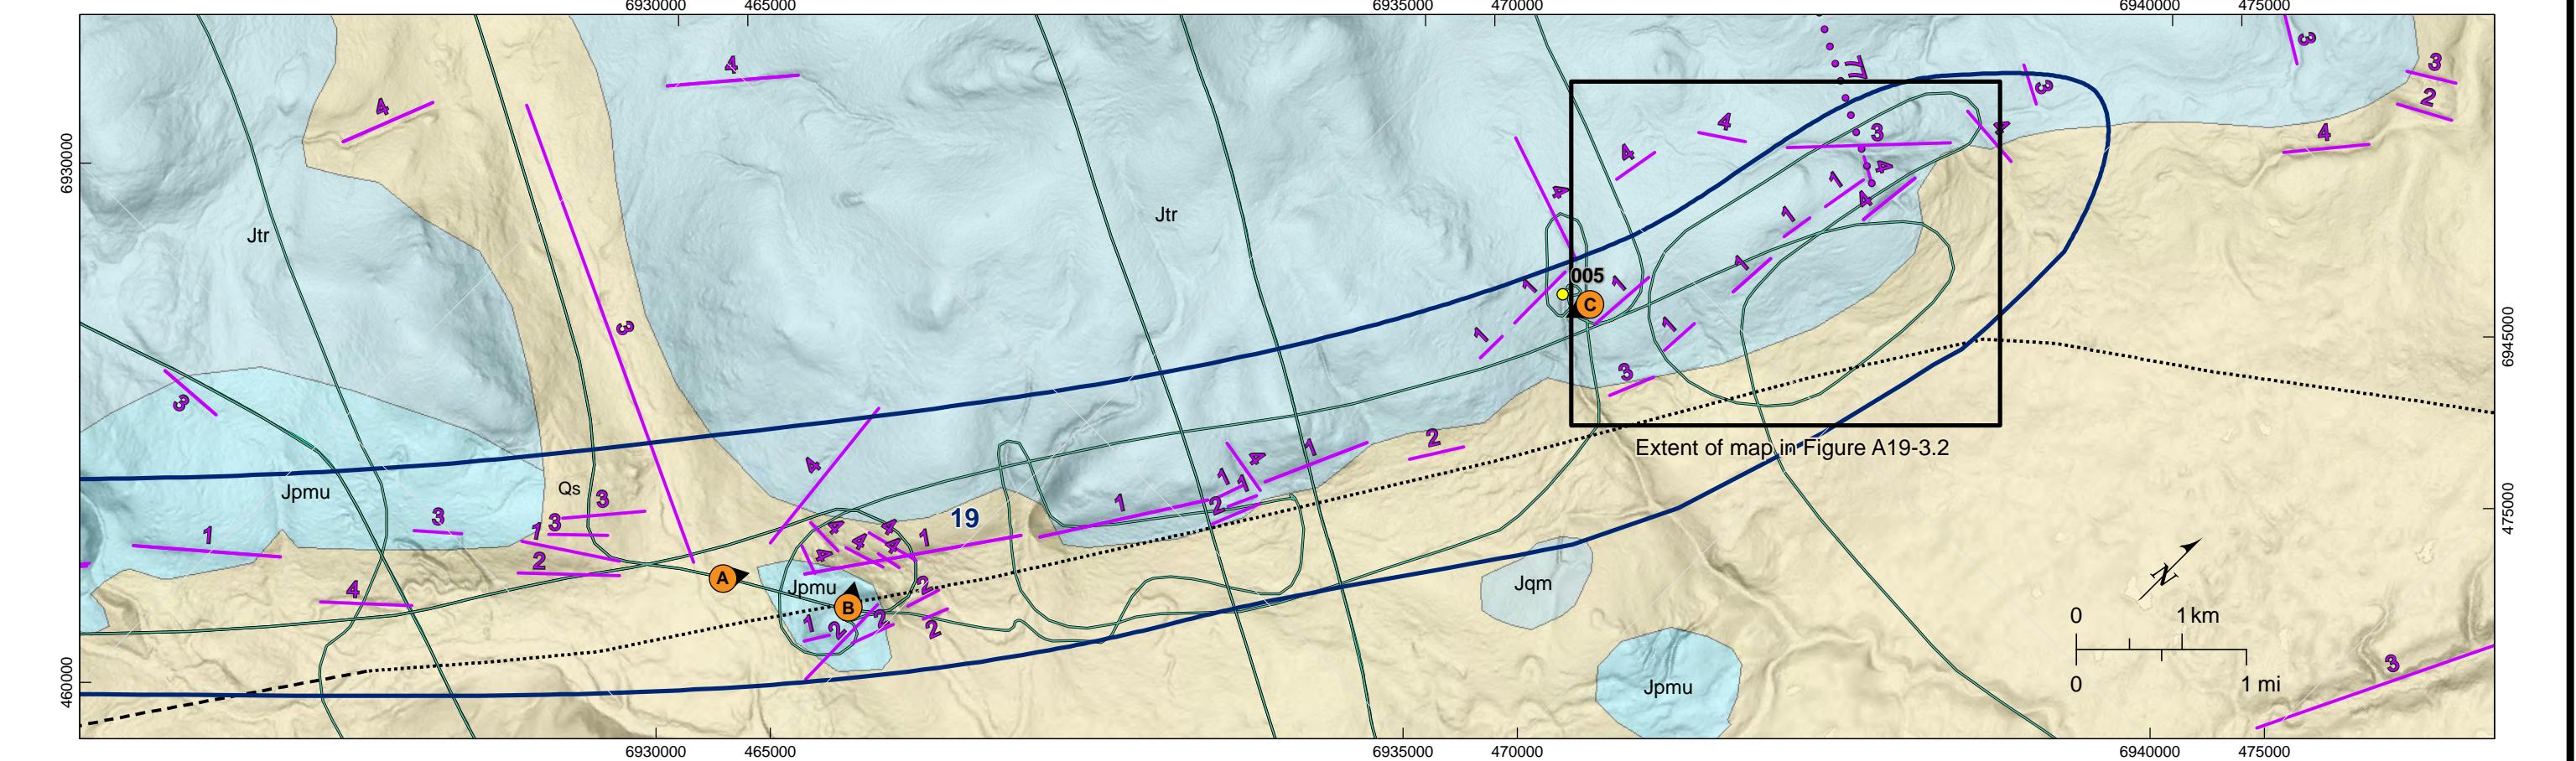

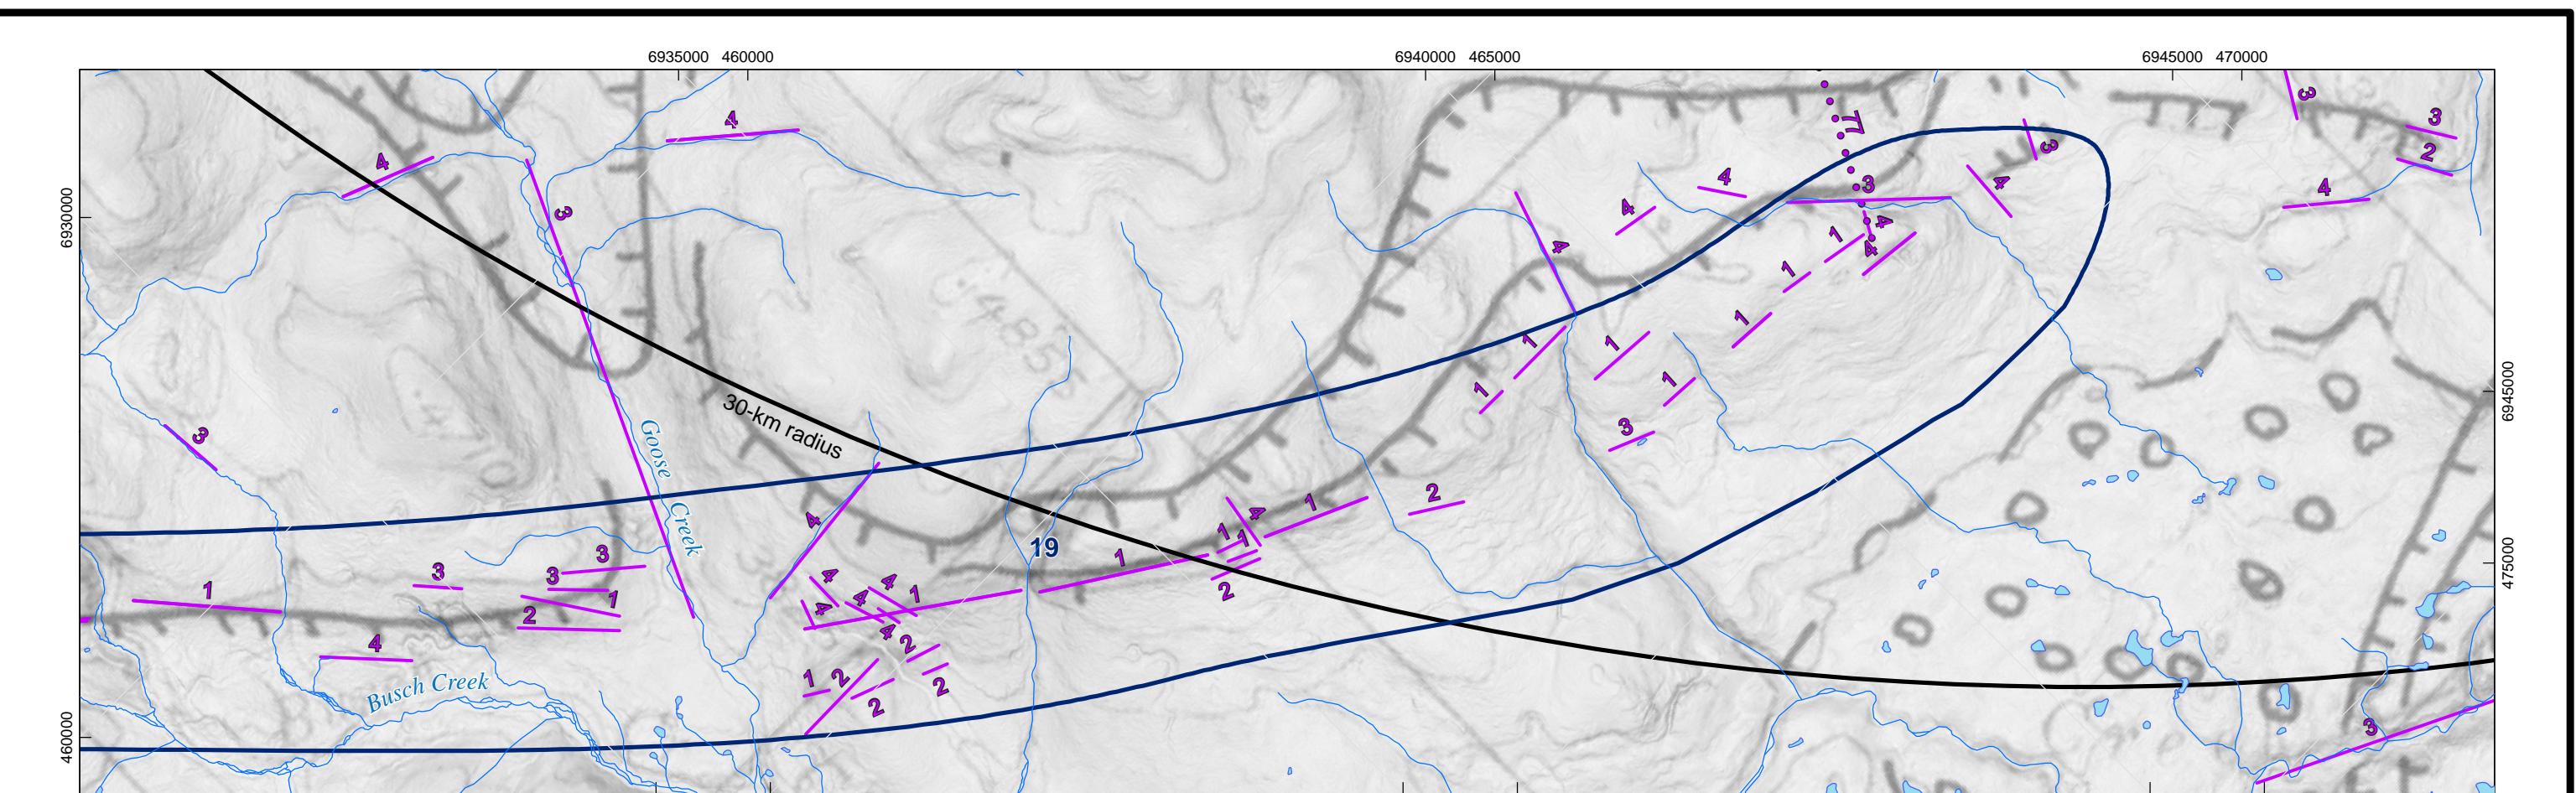

Photograph taken from location A looking west. Arrows point along trend of mapped lineaments along southwest-facing aligned break-in-slope. Note the rounded and subdued nature of break-in-slope. Relief across break-in-slope is ~125 m.

Photograph looking southwest from location B. The sinuous sub-ice channels are not large enough features to be seen on INSAR data.

Overview photograph looking southwest from location C along alignment of mapped lineaments. Arrows point along trend of lineament group 19. Note absence of expression of lineaments within the landscape across the Goose Creek portion of the lineament group.

79\_218900\_Alaska\_Railbelt/2189\_Lineament Report October 2013, modified 10.18.13

- Notes:
1. See Figures A0.2, A0.3, A0.4, and A0.5 for explanation.
  2. Data frame has been rotated 45° east of north.
  3. Geologic map in top panel by Williams and Galloway, 1986 and bottom panel by Wilson et al., 2009

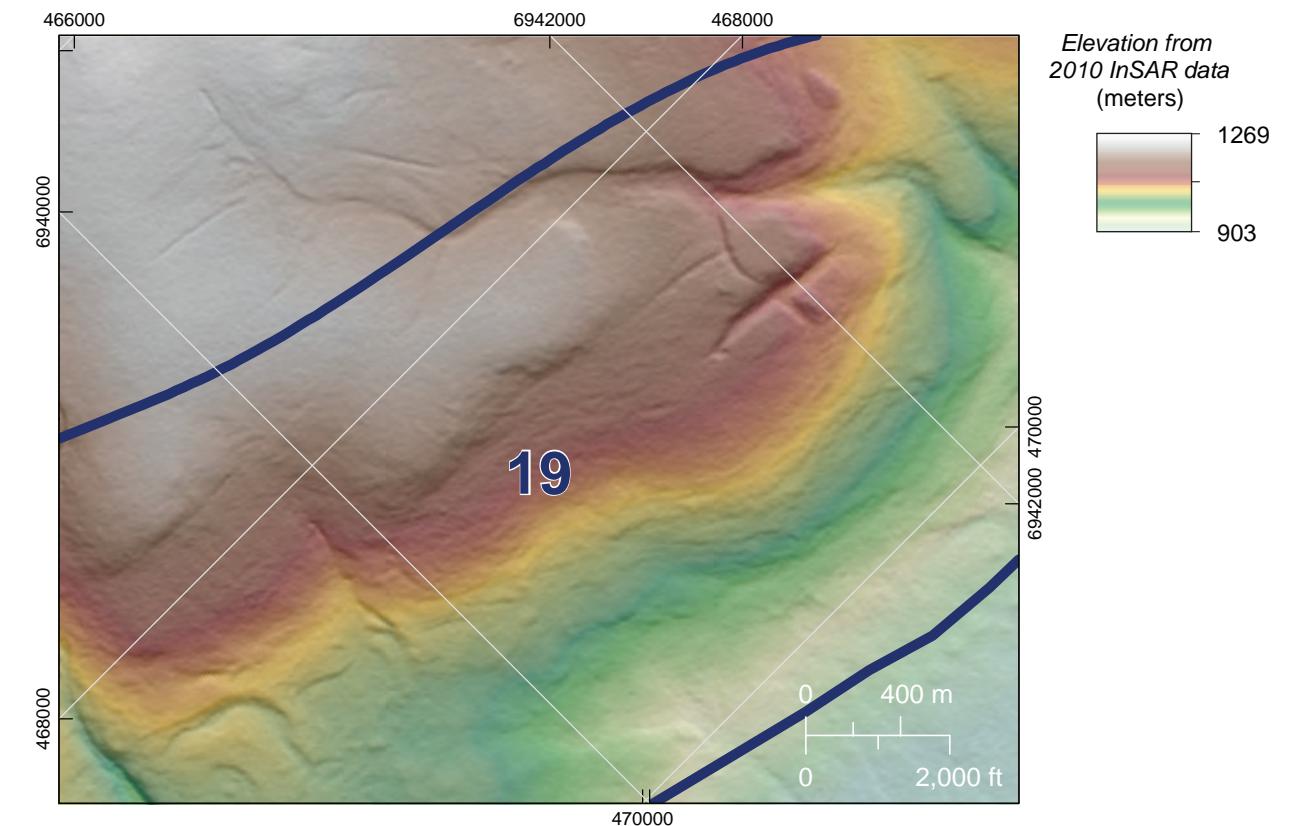

Photograph looking north-northeast from location A along the east-facing break-in-slope that defines the northeast portion of LG 19. Arrows point along alignment of mapped lineaments.

Photograph looking south-southwest from location C at widely spaced, near vertical, well-developed joints in trondhjemite (aka tonalite) bedrock. Joint spacing is 1 to 1.5 meters. Predominant orientations of joints are 042/80SE, 012/85SE, and 082/85SE but other orientations exist. Joint faces have clean surfaces with relief of minerals of 1 to 3 mm. No gouge or mineralization observed on joint surfaces, nor any sense of movement indicators (striae or mullions).

Photograph looking northwest from location B at sub-ice fluvially-eroded channels. Arrows point along the trend of mapped lineaments that make up group 19.

Detailed DEM showing orthogonal joint sets at northeast end of group 19.
