BIBLIOGRAPHY AND INDEX OF CITATIONS | 451
INDEX OF ORGANISMS | 519
SUBJECT INDEX | 543
Figures

I, 1. Diagram of the routes taken by the products of precipitation 3
I, 2. Two types of notched weir used to measure the discharge of streams 4
I, 3. A simple current meter 6
I, 4. The rate of flow of water at different depths in an open channel 6
I, 5. The patterns of flow in cross-sections of open channels 7
I, 6. Photograph of particles carried by flowing water over a stone facing page 8
I, 7. Diagrams of the patterns of flow below a waterfall and at the foot of a slope 10
I, 8. A sketch-map showing stream orders 13
I, 9. Scour and refill during a flood 17
I, 10. A rating curve for gauging stations in the eastern United States 18
I, 11. Diagrams of the patterns of flow near small irregularities in a channel and in a meander 20
II, 1. The levels of light at the surface of a small stream throughout the year 34
IV, 1. Diatoms of the attached algal community 54
IV, 2. Red, blue-green, and yellow algae of the attached community 55
IV, 3. Green algae of the attached community 56
IV, 4. Diagram of the distribution of certain algae on submerged and emergent stones 75
FIGURES

iv, 5. Photographs of travertine and diagrams of some of the algae which make it facing page 76
v, 1. The position which Podostemaceae occupy on emergent rocks
v, 2. Diagram of formation and erosion of banks of sediment formed by rooted plants
v, 3. Changes in the rooted vegetation in the River Lark during a ten-month period
v, 4. Changes in the vegetation in the River Acher during three years
vi, 1. Common phytoplankters from running water
vi, 2. Common zooplankters from running water
vi, 3. The abundance of plankton in the Sacramento River at different points and times of year
vii, 1. Survivors of ancient invertebrate stocks which now occur mainly in running water
vii, 2. Two members of the Gerridae which occur primarily on running water
vii, 3. Comparison between the nymphs of some European stoneflies and their morphological equivalents among the Gripopterygidae of South America
viii, 1. Two flattened mayflies of the family Ecdyonuridae which live exposed on stones
viii, 2. Flattened mayflies which live in sheltered places under stones
viii, 3. Two flattened animals which are common under stones in rapid water in Central Africa
viii, 4. Flatworms and a leech which occur under stones in rapid water
viii, 5. Streamlined nymphs of the family Baetidae
viii, 6. A caddis-worm with a long tail to its case and several animals with lateral projections
viii, 7. Larvae of Blepharoceridae
viii, 8. Broad-footed snails
viii, 9. Larvae with peripheral bristles which fit the surfaces of stones
viii, 10. Two mayflies with friction-pads of bristles
FIGURES xvii

viii, 11. Ventral views of the abdomens of a dragonfly and a mayfly with friction-pads 134
viii, 12. The hooks at the rear ends of insect larvae from rapid water 135
viii, 13. Larvae of Deuterophlebia and larva and pupa of Limnophora 135
viii, 14. Larvae of pyralid moths and Rheotanytarsus, and adult Corophium 137
viii, 15. Larva of Simulium 138
viii, 16. Caddis-worms with heavy stone cases 140
viii, 17. The shells of several large bivalves 141
viii, 18. Prosobranch Gastropoda and Sphaeriidae which occur in streams and rivers 142
viii, 19. Lateral views of Taeniopteryx and Araucanioperla 144
viii, 20. Larvae of Diptera which burrow in the substratum 147
viii, 21. Elongate stonefly and mayfly nymphs which burrow in gravel 148
viii, 22. The mitten-crab 154
viii, 23. The mandibles of a caddis-fly pupa and the pupae of three families of Diptera which emerge under water 157
viii, 24. Adult insects which creep down into quite rapid water to oviposit 158
ix, 1. Graphs showing the effect of current speed on the oxygen consumption of some animals 164
ix, 2. Oxygen concentrations which are just too low for the survival of experimental animals at different current speeds 165
ix, 3. Insects which use plastron respiration 171
ix, 4. Animals which are associated with the water surface in streams 174
ix, 5. Mayfly nymphs which burrow in sand in rivers 176
ix, 6. Mayflies and a dragonfly which burrow in soft substrata 177
ix, 7. Very flattened animals which live in silty substrata 178
ix, 8. Nymphs of mayflies which occur in silty places in streams 179
ix, 9. Phoretic associations between Simulium and mayflies and crabs 181
FIGURES

x, 1. The head of *Brachyptera* and comparison of its maxilla with that of an unspecialized stonefly 183

x, 2. Ventral views of the heads of mayfly nymphs and details of mouth parts 184

x, 3. Insects which strain particles from the water with fringes of hairs 185

x, 4. Head of the larva of *Simulium* and a position commonly assumed during feeding 186

x, 5. Photographs of nets of *Hydropsyche* and *Neureclipsis* facing page 188

x, 6. Cases and nets of *Diplectrona* and *Hydropsyche* 189

x, 7. The larva of *Hydropsyche* and the head of an African *Cheumatopsyche* 189

x, 8. The larval case of a Brazilian species of *Macronema* 190

x, 9. Nymphs of Zygoptera 191

x, 10. The carnivorous mayfly *Centroptiloides* 194

xi, 1. The larva of *Helicopsyche* 198

xi, 2. The numbers of species of three insect orders emerging at four points along a stream 202

xi, 3. The oxygen consumption of two species of the leech *Erpobdella* 217

xiii, 1. The numbers of *Gammarus* caught in drift samples at different times of day and year 263

xiii, 2. The numbers of *Baetis* caught in drift samples at different times of day and year 264

xiv, 1. The size-distributions in monthly collections of three species from a stream in Wales 272

xiv, 2. A diapausing nymph of *Capnia bifrons* 281

xiv, 3. Diagrams of the various types of life cycle commonly found in stream-dwelling insects 295

xiv, 4. Diagrams of unusual types of life cycle found in stream-dwelling insects and of typical cycles of Peracarida and Mollusca 296

xiv, 5. Diagrams of the seasonal fluctuations in numbers and biomass of invertebrates in streams 298

xv, 1. Outlines of fishes which live in fast-flowing water 303

xv, 2. Outlines of fishes which live in slow-flowing water 303
| FIGURES | xv, 3. | Outlines of small fishes which live on the bottom in fast-flowing water | 304 |
|         | xv, 4. | Ventral views of fishes with friction devices and suckers             | 306 |
|         | xv, 5. | Tadpoles from rapid streams                                            | 307 |
|         | xvi, 1.| The relationship between the lethal temperature and the temperature to which specimens of *Salvelinus fontinalis* have been acclimated | 323 |
|         | xvi, 2.| Changes in the instantaneous growth-rate of *Salvelinus fontinalis*     | 325 |
|         | xx, 1. | Diagram of the occurrence and abundance of common species of *Ephemeroptera* in rivers in north-western Europe | 389 |
|         | xx, 2. | The altitudinal distribution of the Elminthidae in streams on Mount Elgon | 390 |
|         | xx, 3. | The altitudinal distribution of the important members of the fauna in streams on Mount Elgon | 395 |
|         | xxi, 1.| Madicolous animals which may occur in collections made in streams     | 409 |
|         | xxii, 1.| Diagram of the trophic relationships of the ecosystem in the rhithron | 439 |
|         | xxii, 2.| Diagram of the trophic relationships of the ecosystem in the potamon  | 440 |
Tables

1, 1. Mean velocities of clear and muddy water required to initiate movement of various types of particles 11
1, 2. Speeds of flow required to move mineral particles of different sizes 11
1, 3. Calculated mean velocities of water in three channels of differing dimensions at various slopes 19
1, 4. Suggested terminology, categories and methods for particle-size analysis 24

III, 1. Chemical content of the water of the River Dee at various points below its source 45

IV, 1. Some common attached algae of various types of habitat in running water 59
IV, 2. The rate of oxygen production by algal communities in laboratory streams at different temperatures and illuminations 62
IV, 3. The effect of current on the growth of algae in the laboratory 64

V, 1. The dominant submerged plants in various types of river in Great Britain 84

VI, 1. The numbers of plankton organisms on various dates at two stations on the Montreal River 102
VI, 2. The numbers of plankters at various distances below the Lunzer Untersee 103
VI, 3. The numbers of planktonic organisms at different seasons in the River Danube 109

VIII, 1. The maximum current speeds resisted, moved against, and inhabited in nature by a number of European stream animals 149
TABLES

IX, 1. The oxygen consumption of the nymphs of various European mayflies 161

XI, 1. The percentage composition of adults of various groups of insects emerging over different types of substratum in streams in Algonquin Park 208

XI, 2. The percentage composition of the fauna on various types of stream bed in north-eastern England 209

XI, 3. The percentage composition of the faunas of riffles and pools in the Black River 211

XI, 4. The numbers of various animals in ten samples taken in April 1962 from Shelligan Burn 212

XI, 5. The percentage composition and mean number of animals per square metre on various types of substratum in Doe Run 214

XI, 6. The numbers and weights of animals in different species of plant in the River Angara 215

XI, 7. The average number of animals per square foot taken from three streams in Utah with a Surber sampler 225

XI, 8. The average amounts of invertebrate fauna in three small rivers and their tributaries in Transcarpathia 227

XI, 9. The average number of invertebrates per square foot at three altitudes in the Sagana River 228

XII, 1. The numbers of invertebrates collected in six standardized samples from Alit Leathan 240

XII, 2. The numbers and weights of animals per one tenth square metre collected by three methods from the River Polenz 245

XII, 3. The weights of invertebrates collected with a Surber sampler at the sides and centres of various streams in New York State 248

XII, 4. The numbers and weights of organisms per square metre at different distances from the bank in the River Plane 249

XII, 5. The average numbers of animals collected by a standardized method in spring and summer from streams in the Scottish Highlands 252

XII, 6. The numbers and weights of invertebrates at various points on the River Håelva 254

XIII, 1. The numbers of animals per square foot collected on various dates above and below four lakes on the Montreal River 258
