APPENDIX A

STAGE/DISCHARGE DATA

This appendix includes mainstem discharges versus mainstem and slough water surface elevations (pp. 4-A-2 to 4-A-32); cross sectional profiles of sloughs (pp. 4-A-33 to 4-A-51); mainstem, slough, and tributary discharge data (pp. 4-A-52 to 4-A-61), periodic water surface elevations for sloughs (pp. 4-A-62 to 4-A-79); continuous hourly streamflow and surface water temperature records for Indian River and Portage Creek (pp. 4-A-80 to 4-A-177); periodic water surface elevations and measured flow at sloughs and tributaries (pp. 4-A-178 to 4-A-183); and surface areas of aggregate type II hydraulic zones at DFH sites compared with mainstem discharges (pp. 4-A-184 to 4-A-187). These data were collected during the open water season in the study area located within the Cook Inlet to Talkeetna reach of the Susitna River.

^aThe upstream end (head) of a side slough is usually connected to the mainstem Susitna River only during those high mainstem flows capable of breaching the head portion of the slough.

^bGage was dewatered, 684.0 was the estimated point of zero flow.

^cGage was dewatered, 703.0 ft. was point of zero flow.

^bNot sampled in early June or in early July.

^cNot sampled in early July.

APPENDIX B

SLOUGH AVAILABILITY AND UTILIZATION DATA

This appendix includes depths, velocities, and substrate types for Chum Channel, Rabideux Slough and sloughs 8A, 9 and 21 that were available to (pp. 4-B-2 to 4-B-89) and utilized by (pp. 4-B-90 to 4-B-100) chum, pink and sockeye salmon for spawning at various slough discharges. It also contains a complete summary of instantaneous intragravel and surface water temperature data at redds in sloughs 8A, 9, 11 and 21 (pp. 4-B-92 to 4-B-100). Other temperature data for these sloughs, not included in this appendix, are presented in Appendices C and D. Appendix C includes a complete summary of continuous surface and intragravel water temperatures collected with thermographs and datapods in these and other locations. It also includes the instantaneous temperature data included in this Appendix. Instantaneous surface and intragravel water temperature data collected along transects in Sloughs 8A, 9, 9B, 11 and 21, and at specified locations in sloughs 8A, 9 and 21 are in Appendix D. Mainstem depth and velocity utilization data for eulachon, Bering cisco and chum salmon spawning sites are presented in Appendix F. All of the above data were collected during the open-water season in the study area located within the Cook Inlet to Devil Canyon reach of the Susitna River.

APPENDIX C

TEMPERATURE DATA

This appendix includes an index of continuous temperature data collected in the Susitna River basin, 1981-1982, (pp 4-C-2 to 4-C-6); a complete summary of continuous surface water temperatures collected during the open water season in mainstem, sloughs, and tributaries (pp. 4-C-7 to 4-C-94); weekly water temperatures calculated from the mainstem, slough and tributary data (4-C-95 to 4-C-118); continuous intragravel and surface water temperatures collected during the open water season in sloughs (pp. 4-C-119 to 4-C-221); summaries of continuous surface and intragravel water temperatures collected during the ice-covered season in sloughs (pp. 4-C-222 to 4-C-260); weekly water temperatures calculated from the surface and intragravel data (4-C-261 to 4-C-271); and instantaneous intragravel and surface water temperatures in sloughs collected during the open water season at salmon redds (pp. 4-C-272 to 4-C-276). These data were collected during the open water and ice-covered seasons in the study area located within the Cook Inlet to Oshetna reach of the Susitna River. Instantaneous surface water temperature data collected during the ice-covered season, not included in this summary, are located in Appendix J.

Appendix Table 4-C-1. ADF&G Susitna River Basin continuous temperature data index, 1981-1982.

Table 4-C-51. Datapod intragravel and surface water temperature (C) continuous record, at Slough 8A-Upper, RM 126.4, Geocode S3ON03W20CDD.

Note, that time periods are 6 hours and 3 minutes and 42 seconds in duration; accordingly, daily minimum, maximum and mean values can not be directly calculated from this data.

Table 4-C-53. Datapod intragravel and surface water temperature (C) continuous record, at Slough 11, RM 135.7, Geocode S31N02W30ADC.
 Note, that time periods are 6 hours and 3 minutes and 42 seconds in duration; accordingly, daily minimum, maximum and mean values can not be directly calculated from this data.

Table 4-C-58. Mean intragravel and surface water temperature (C) datapod data summary at Slough 8A-Mouth, RM 125.4, Geocode S30N03W30BCD. A two part linear equation interpolation method was used in order to "correct" readings from actual 6 hour, 3 minute and 42 second time intervals to 6 hour intervals.

Table 4-C-59. Mean intragravel and surface water temperature (C) datapod data summary at Slough 8A-Upper, RM 126.4, Geocode S30N03W20CDD. A two part linear equation interpolation method was used in order to "correct" readings from actual 6 hour, 3 minute and 42 second time intervals to 6 hour intervals.

Table 4-C-62. Mean intragravel and surface water temperature (C) datapod data summary at Slough 16B, RM 138.0, Geocode S31N02W17AAA. A two part linear equation interpolation method was used in order to "correct" readings from actual 6 hour, 3 minute and 42 second time intervals to 6 hour intervals.
