LIST OF FIGURES

ACKNOWLEDGMENTS

These climatic data were collected under contract to Harza-Ebasco Susitna Joint Venture for the Alaska Power Authority on the Susitna Hydroelectric Project. Field maintenance and data collection were performed by the hydrology staff of R&M Consultants, Incorporated. Data reduction and processing were performed by Debbie Stephens, Len Story, Blair Parker, Jim Nelson and Jeff Coffin, using computer programs developed by Mark Holmstrand and revised by Bill Ashton.

1.0 BACKGROUND

1.1 Purpose

The Glacier climate station was installed adjacent to Susitna Glacier in the Eastern Alaska Range to obtain data representative of the high elevations within the Susitna drainage basin.

1.2 Station Description

The Glacier weather station lies near the confluence of three major glaciers eminating from the south slope of Mt. Hayes (13,832 feet). The site is located at the 4,700 feet level of a barren ridge which runs roughly east and west, and slopes steeply to the west. The instrument is on the southwest flank, approximately 500 feet above the glacier ice at 63°31'50" N latitude and 146°53'40" W longitude. Mountains rise abruptly from the glacier filled valleys to elevations over 10,000 feet. The mountains to the south of the site rise to over 7,000 feet at a distance of less than 3 miles. This site is shaded for most of the day during December and January and when sun angles are below 9° from the horizontal. (See Table 1.1 for angular elevations of terrain obstructions.)

Winds generally blow downhill in these glaciated mountains resulting in winds from the north or east at the instrument.

1.3 Methods of Data Collection

The climatic data at Glacier are collected using a Model 5100 Weather Wizard Digital Weather Station, manufactured by Meteorology Research, Inc., now part of Belfort Instrument Company. The Weather Wizard measures, processes, and records several weather parameters, which are described below. A 12-volt power supply powers the station and is kept charged by a solar panel. Data are recorded on a low-temperature cassette tape at 30-minute intervals. Fifteen-minute recording intervals were used prior to October 5, 1983. The station is visited approximately

once per month for maintenance and repairs, and to retrieve the data tapes.

Recorded data include instantaneous values of temperature, relative humidity, solar radiation intensity, and battery voltage; the cumulative amount of precipitation measured since the last reset; and several wind parameters. Wind direction is sampled every 15 seconds and averaged over the recording interval. Wind speed is measured by counting each revolution of the cup anemometer and averaging the speed over the recording interval (15 or 30 minutes). The fastest 15-second average speed for the interval is reported as the peak gust.

The anemometer and wind vane are part of a sensor array mounted atop a 3.5-meter tripod adjacent to the recorder shelter. The sensor array also contains a short boom with a radiation shield for the temperature and relative humidity sensors. A rain gage and solar radiation sensor are located on a separate platform 10 meters to the southeast from the main platform. The tipping-bucket rain gage is mounted on a 0.6-meter post and plumbed vertically. The solar sensor is installed facing vertically upward atop a 1.5-meter tripod.

Table 1.2 describes sensor types and performance characteristics for each parameter. The performance characteristics were provided by MRI. Conversion factors for the units are provided in the appendix.

1.4 Station History

The Glacier Station was installed on July 20, 1980. This report covers the period from October 1983 to December 1984 only. There are three previous data reports for this station:

	Report	Period Covered
1.	Processed Climatic Data Volume 1 Susitna Glacier Station (No. 0610) March 1982 (R&M Consultants)	July 1980 - September 1981
2.	Processed Climatic Data Volume 1 Susitna Glacier Station (No. 0610) December 1982 (R&M Consultants)	October 1981 - September 1982
3.	Processed Climatic Data Volume 1 Susitna Glacier Station (No. 0610) June 1984 (R&M Consultants)	October 1982 - September 1983

Tables 1.3 through 1.6 list the inspection dates and maintenance performed for the station, significant data gaps, adjustments to raw data, and values that have been estimated where data are missing. Periods with more than one hour of missing data are shown on Table 1.4. Intermittent gaps in the wind data occur frequently in the winter and are not identified individually. The number of missing days for these cases is approximated by the total number of missing hours during the period. The beginning and ending dates for the data gaps and for the adjustments to raw data correlate with the inspection and maintenance dates. Relative humidity data for measurements with wind speeds less than 1.0 m/sec are not valid and thus not used in calculating the percentage of total observations for each month, which are tabulated in Table 2.2. However, these missing RH values do not constitute data gaps in Table 1.4.

TABLE 1.1. ANGULAR ELEVATIONS OF TERRAIN OBSTRUCTIONS AROUND GLACIER WEATHER STATION

Azimuth(1) (True)	Elevation(2) (ft, MSL)	Vertical Angle(3)
14°	7690	11°
37°	7381	8.3°
58°	7725	8.9°
73°	7120	14°
75°	8451	11°
94°	5485	15°
139°	7250	7.2°
154°	6990	7.2°
180°	7172	9.7°
228°	5565	2.4°
287°	6490	4.8°
290°	6170	6.5°
305°	6710	7.1°
350°	7110	13°
352°	8220	14°

NOTES:

(1) Azimuth angles are in degrees from true north.

(2) Elevations were obtained from U.S.G.S 1:63,360 scale maps. Points used were selected mountain peaks and other features surrounding the weather station. Elevation differences from the weather station at 4700 ft, msl. and horizontal distances were used to triangulate the vertical angles.

(3) Vertical angles are measured above the horizontal.

TABLE 1.2 DESCRIPTION OF METEOROLOGIC SENSORS

Sensor	Model #	Manufacturer	Description	Operable Range	Accuracy
Temperature	T5100	MRI	Linearized Thermistor	-30°C - +50°C	±1°C
Relative Humidity	PCRC-11 Electro-Humidity Sensor	Phys-Chemical Research Corp.	Exposed circuit element Senses changes in RH by changes in impedance	10% to 95%	±6%
Solar Radiation	RS 1008 Photo Voltaic Pyranometer	RHO Sigma Corp.	Temperature-Compensated Silicon Photovoltaic Cell	0 to 140 Milliwatts/cm²	±5mw/cm²
Precipitation	P5100	MRI	Tipping Bucket Rain Gage	0 to 99.8 mm	±1% up to 76.2 mm/hr ±5% from 76.2 mm/hr to 254 mm/hr
Wind Speed	5100	MRI	Cup Anemometer (vertical axis)	0 to 50 m/sec	±0.5 m/sec
Wind Direction	5100	MRI	Sensitive Vane driving a 360° Plastic Film Potentiometer	0 to 359°	±3.6°

TABLE 1.3. INSPECTION DATES AND MAINTENANCE
GLACIER CLIMATE STATION
OCTOBER 1983 TO DECEMBER 1984

Inspection Date	Maintenance
10/05/83	Changed to 30 minute recording interval.
11/16/83	None.
01/09/84	Reset date to 009.
02/27/84	None.
04/09/84	Weather Wizard removed for repairs.
05/04/84	Re-installed Weather Wizard.
	RH sensor replaced and calibrated.
05/23/84	None.
07/16/84	None
08/27/84	Weather Wizard removed for repairs.
09/22/84	Weather Wizard replaced.
	Changed to 5 minute recording interval.
	RH oscillator replaced.
11/02/84	Changed to 15 minute recording interval.
	Attached new wind vane tail.
11/28/84	RH sensor calibrated.
	Changed to 30 minute recording intervals.

NOTE: Inspections noted where no maintenance was performed are dates when cassette tapes were replaced.

TABLE 1.4. EXPLANATION OF DATA GAPS AT
SUSITNA GLACIER CLIMATE STATION
OCTOBER 1983 TO DECEMBER 1984

Period	Approximate Number of Missing Days By Parameter							Explanation
	Temp	RH	WS	WD	Precip	Solar	Gust	
10/1 - 10/21/83			1	6			1	Frozen anemometer and wind vane (intermittent).
11/11 - 11/30/83		1.5						Low RH values deleted from raw data.
12/1 - 12/5/83				1				Frozen wind vane (intermittent).
2/13 - 2/25/84				1.5				Frozen wind vane (intermittent).
2/27 - 5/4/84	67	67	67	67	33	67	67	Weather Wizard not functioning.
5/4 - 5/23/84		2						Bad RH oscillator. Intermittent eratic data.
5/23 - 6/11/84		17						Bad RH oscillator.
6/11 - 6/26/84		1.5						Bad RH oscillator. Intermittent eratic data.
6/26 - 9/22/84	87.5	87.5	87.5	87.5	87.5	87.5	87.5	Weather Wizard not functioning.
10/2 - 10/8/84				0.3				Frozen wind vane (intermittent).
10/8 - 11/2/84	25	25	25	25		25	25	Data tape ran out due to 5 minute recording intervals.
11/11 - 12/14/84	2	2	1.5	3		0.5	2	Weather Wizard malfunction. Intermittent garbled data.
11/24 - 12/26/84			0.5	3.5			0.5	Frozen anemometer and wind vane (intermittent).
Total	182	204	182	195	120	180	183	

NOTE:

Precipitation data collected April through September only. Collector is not designed for winter temperatures.

TABLE 1.5. ADJUSTMENTS MADE TO RAW DATA
GLACIER CLIMATE STATION
OCTOBER 1983 TO DECEMBER 1984

Period	Solar Radiation Adjustment	RH Adjustment	Wind Direction Adjustment
10/1 - 11/16/83	-1 mW/cm^2	-15 RH Points	
11/16 - 12/31/83	-1	-12	
1/1 - 2/27/84	-1	-7	
5/4 - 6/11/84	-1		
6/12 - 6/26/84	-1	-25	
9/22 - 10/8/84	-1	-2	-180°
11/2 - 11/28/84	-1	+5	
11/28 - 12/31/84	-1	+7	

NOTE: No data 2/27 - 5/4 and 6/26 - 9/22 due to Weather Wizard malfunction.

2.0 ANNUAL DATA SUMMARY

Table 2.1 presents a summary of the monthly averages or totals for each parameter for the full period covered by this report, October 1983 to December 1984. The symbols used in the table are explained in Section 3, Report Preparation. Conversion factors are provided in the appendix. The data reported herein are also summarized in Figure 2.1, a sequential plot of all the measured parameters. Annual summaries for prior years are provided in the previous data report (R&M Consultants, 1984).

With this report, a shift has been made from presenting the climatic data on a water year basis to presenting it for the calendar year. The calendar year format matches that used by the National Oceanic and Atmospheric Administration (NOAA) in reporting climatic data, and simplifies comparisons. Future reports will also be for calendar years.

A summary of the percentage of usable data recovered for each climatic parameter by month during this reporting period is presented in Table 2.2. The cumulative percentage in this case applies for the whole 15-month period.

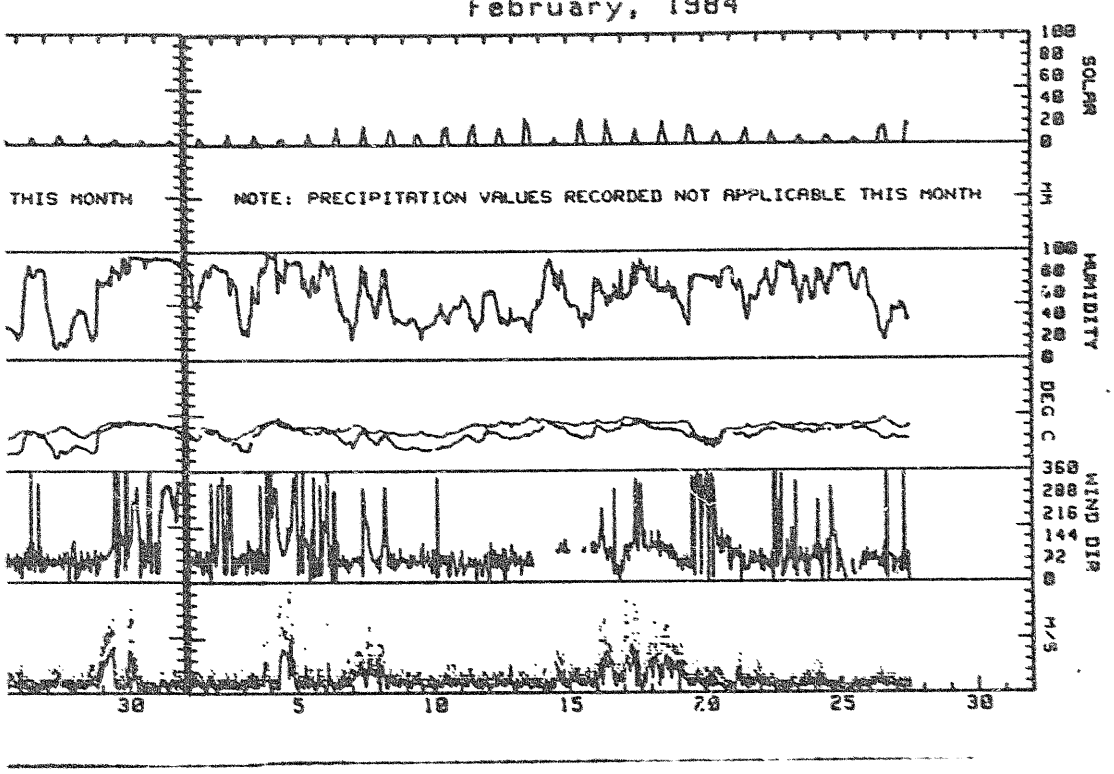
NOTES:

1. RH and dewpoint data are not valid and have been discarded for samples when the wind speed is less than 1.0 m/s.
2. Precipitation data are recorded from April through September only. Collector is not designed for winter temperatures.
3. The percentage reported as TOTAL is for the full 15-month period (10/83-12/84).



NOTE: A larger copy of each plot is presented in Section 5, Climatic Data Summaries.

SUSITNA GLACIER STATION,
OCTOBER 1983-
DECEMBER 1984

3.0 REPORT PREPARATION

3.1 Description of Symbols Used in Annual and Monthly Summaries

3.1.1 Annual Summary

Blank entries for monthly values indicate the station had not yet been installed at the site or that it had been removed prior to that month. Installation and removal dates are noted on the table as well.

M — Insufficient or partial data. M follows average and/or total values if 1-9 daily values were missing data for all or part of the day. M appears alone for the month if 10 or more daily values were missing or contained missing data. Parentheses surround the M where other letters may cause confusion (i.e. in prevailing direction). M follows average and/or total values for the year if any month was missing data. M appears alone for the year if any month was missing enough data to require it to have an M alone or if three or more months were missing any data.

3.1.2 Monthly Summaries

**** — Erroneous or missing data (may be from 2 to 6 asterisks, depending on number of digits possible in the value). Asterisks appear in place of the value if all readings required for determination of the table value were missing.

\- — A dash in the hourly precipitation table indicates the volume for that hour is not known, but the cumulative total of precipitation over the interval of consecutive dashed hours is included in the next hour where a value is

reported. Similarly, a dash for precipitation in the monthly summary table indicates the volume for that day is not known, but the cumulative total over the interval of consecutive dashed days is included in the next day where a value is reported.

3.2 Data Computation Standards (Climate)

Conversion factors for units are presented in the appendix. Specific segments of the monthly reports are described below.

3.2.1 Graphical Data Plot

The data plot is a graphical representation of valid recorded and/or computed data.

3.2.2 Hourly Precipitation Summary Table

Hourly precipitation values are calculated as the difference between valid (current and preceding) consecutive hourly readings. When either of these hourly precipitation readings are invalid, no value is reported for the current hour. No table is published for the winter months (October through March) unless a heater is part of the tipping bucket installation.

3.2.3 Monthly Summary Table

1. Maximum daily and monthly temperatures are determined from all valid recorded temperatures.

2. Minimum daily and monthly temperatures are determined from all valid recorded temperatures.

3. Mean daily and monthly temperatures are determined from all valid recorded temperatures. The mean daily temperature is determined from the mean of the maximum and minimum temperatures. The mean monthly temperature is determined from the mean of all reported daily mean temperatures.

4. Resultant daily and monthly wind directions and speeds are summed vectorially from all valid readings.

5. Average daily and monthly wind speeds are determined from all valid readings (arithmetic mean).

6. Maximum daily and monthly gust speeds are determined from all valid readings. Associated directions are the resultant directions from the recording interval in which the peak interval gust was observed.

7. Prevailing daily and monthly directions are determined from all valid readings. The reported value is the most frequent direction observed.

8. Mean daily and monthly relative humidities are determined from all valid readings (arithmetic mean). When the wind speed is less than 1 m/sec, the RH value is omitted from the averaging (but is displayed in the graphical data plot and in the three-hour table).

9. Mean daily and monthly dewpoint temperatures are determined from all valid readings (arithmetic mean). Dewpoints are omitted when the wind speed is less than 1 m/s, when the dewpoint calculates to a value greater than the recorded temperature, or when the dewpoint calculates

to less than minus 47 degrees or more than 27 degrees Centigrade.

10. Daily and monthly precipitation values are determined from all valid readings.

11. Daily and monthly solar energy values are determined from all valid readings. Daily solar energy (in watt-hours per square meter) is determined by averaging the recorded solar intensity (which is in milliwatts per square centimeter) and converting the units. The monthly value is the sum of the daily values.

3.2.4 Three-Hour Summary Tables

1. The temperature reported is the temperature recorded at the specified time.

2. The dewpoint temperature reported is the dewpoint calculated at the specified time. Dewpoints are omitted when the wind speed is less than 1 m/s, when the dewpoint is calculated to a value greater than the recorded temperature, or when the dewpoint calculates to less than minus 47 degrees or more than 27 degrees centigrade, or when either the temperature or R.H. reading is invalid.

3. The relative humidity reported is the humidity recorded at the specified time.

4. The wind direction reported is the three-hour vectorial resultant sum of data recorded up to the specified time.

5. The wind speed reported is the three-hour vectorial resultant of data recorded up to the specified time.

6. The gust direction reported is the direction of the maximum gust recorded during the preceding three-hour period.

7. The gust reported is the maximum recorded during the three-hour period.

8. The radiation reported is the solar radiation intensity recorded at the specified time.

3.2.5 Wind Frequency Summary Table

Reported data are determined from all valid pairs of readings. Valid pairs of wind data are composed of valid wind speed and wind direction data for the same interval.

3.2.6 Hourly Solar Radiation Table

An addition to this year's report series, hourly solar radiation values are averages of all valid readings recorded during the preceding hour. If any data are missing or invalid, the remaining values are arithmetically averaged for the hour. The daily average values are determined by summing the hourly averages for the day and dividing by 24. If all data are missing for the hour, no value is printed; asterisks (***) appear instead, and no value is used for the hour in computing the daily average.

3.2.7 Wind Rose Graphical Plot

The plot is a graphical representation of the wind frequency summary table.

3.2.8 Observation Summary Table

Another addition to this year's report series is an observation summary. The number of usable observations for each parameter is determined by counting the number of valid readings for the entire month. The percentage of total observations is determined by dividing the number of usable observations by the number possible for the month. Data adjustments and additional comments applicable to the month are manually entered below the summary table.

3.2.9 General Notes

1. The following are the data ranges assumed valid, based on reasonable expectations for the parameters in south-central Alaska; data outside these ranges are not used:

   Time: 0000 through 2400 hours - at specified time intervals.

   Temperature: -50 through +35 °C

   Wind Speed: 0 through 99.9 meters per second and less than or equal to GUST

   Direction: 0 through 360 degrees

   Relative Humidity: 0 through 99 percent

   Precipitation: 0 through 99.8 mm. Precipitation during recording interval (15 or 30 minutes) should not exceed 30 mm.

   Solar: 0 through 150 milliwatts/cm^2

   Gust: 0 through 99.9 m/sec

Battery: 9 through 14.5 volts

2. Accuracy of the MRI (Meteorology Research, Inc.) sensors and processor are as follows:

Temperature: ±1°C
Wind Speed: ±0.5 meters per second
Wind Direction: ±1% of full scale (i.e., ±3.6 degrees)
Relative Humidity: ±6%
Precipitation: ±1% up to 76.2 mm/hr, ±5% from 76.2 mm/hr to 254 mm/hr
Solar Radiation: ±5mw cm^{-2}
Tape Recorder Error Rate: 1 bit in 10^7

3. The following are the direction ranges used in the prevailing direction, wind frequency and wind rose summaries:

DIRECTION	COMPASS HEADING
North	350 through 11
North-Northeast	12 through 34
Northeast	35 through 56
East-Northeast	57 through 79
East	80 through 101
East-Southeast	102 through 124
Southeast	125 through 146
South-Southeast	147 through 169
South	170 through 191
South-Southwest	192 through 214
Southwest	215 through 236
West-Southwest	237 through 259
West	260 through 281
West-Northwest	282 through 304
Northwest	305 through 326
North-Northwest	327 through 349

4.0 INTERPRETATION OF DATA, 1983-84

4.1 General Comments

4.1.1 Many of the sensors or the methods of measuring various parameters have peculiarities that affect how the data should be interpreted. The user is encouraged to become familiar with the methods of summation for each parameter and each table. These are described in Section 3.2 "Data Computation Standards."

4.1.2 As described in Section 2.0, a shift is being made from presenting the climatic data on a water year basis to presenting it for the calendar year. Thus, this report includes fifteen months of data. All future reports will be for the calendar year.

4.1.3 Changes made to the format of this year's report series include addition of an hourly solar radiation table and tabulation of the actual number of usable observations on a monthly basis for each parameter. Also, the data-processing program was modified slightly to permit output of daily prevailing direction when the wind speed sensor was not operational, and output of speed-only parameters (peak gust and daily average speed) when the wind direction sensor was not operational.

4.1.4 The U.S. Department of Transportation ordered a shift in the time zones of central and Southeast Alaska in October 1983. The official time in central Alaska was advanced one hour, and the offical Southeast Alaska time was retarded one hour, making the two areas on the same time. This transition occurred when daylight savings time ended, on Sunday, October 30, 1983. The effect on the reporting of

the data is that one hour was "lost" between midnight and 0100 on October 30. There are thus no data at all for 0030 and 0100 on that date.

4.1.5 Missing data values have been estimated where possible. Estimation, which was accomplished by manually editing the raw computer data files, was generally limited to data gaps of an hour or less, where interpolation between the preceding and following valid data points could be used to estimate the missing points. Interpolation was performed in this manner for temperature, relative humidity, and solar radiation data.

Solar data have been estimated only for clear or uniformly cloudy days and then only if not near the peak value of the day. Solar data are also estimated at night where zero minimum values should occur. Precipitation is estimated only if none at all occurred during the interval or if the tips of the tipping-bucket were manually counted during a rainfall event. Wind speed and direction data have been estimated by interpolation only if the preceding and following winds were very uniform. Peak gust speeds have not been estimated at all.

4.1.6 Intermittent garbled data due to a Weather Wizard malfunction at the Glacier station caused several data gaps from mid-November 1984 through mid-December. It was possible to estimate temperature, relative humidtiy, and solar radiation values where the gaps were not more than two or three hours. However, approximately two to three days of data were lost from the record during this period.

4.1.7 The recording interval was changed prior to the winter of 1983-84 to permit recording of data for longer periods of

time in the event monthly maintenance trips to the station were delayed. The interval was changed from 15 minutes to 30 minutes, which increased the maximum record length per data tape from approximately six weeks to approximately three months. The switch was made in November 1983 at all Susitna Basin stations and in December 1983 at the Eklutna Lake Station.

4.1.8 The Weather Wizard stopped functioning on February 27 at the Glacier Station. The propane heater probably didn't supply sufficient heat to keep the unit operating. The Weather Wizard was removed on April 9 for maintenance, and then replaced on May 4. Following re-installation, data were recorded until June 26 when the unit again ceased to function. The station was inspected on July 16. However, no data were recorded following the inspection. The unit was removed from the site on August 27 and sent back to Belfort for repairs. The Weather Wizard was re-installed on September 22, after which data were recorded consistently. A total of 154 days of data for all parameters were lost during the periods from 2/27 to 5/4 and 6/26 to 9/22, as indicated on Table 1.4.

4.1.9 Normal station maintenance procedure is to switch the recording interval from 30 minutes to 5 minutes for ease and expediency of inspection. This was done at the Glacier station on September 22 when the Weather Wizard was re-installed. However, the interval was not changed back to 30 minutes upon completion of the station inspection. Since the data tapes are designed to have a duration of approximately 15 days for 5 minute data, the tape ran out on October 8, after which no data were recorded. The cassette tape was replaced and the recording interval was switched to 15 minutes on November 2, 1984.

Approximately 25 days of data were lost from the record during this period.

4.2 Comments on Specific Parameters

4.2.1 Precipitation

Precipitation data are generally reported for April through September only. The stations do not have heaters in their precipitation sensors (tipping-buckets), so they are unable to record precipitation when the temperature is below freezing. The sensors are calibrated to tip for 0.2 mm of rainfall and not for snowfall. The sub-freezing temperatures may cause a loss or a delay of the recorded precipitation. Winds frequently blow snow away from or out of (or occasionally into) the collector, and snow collected in the bucket may not be melted and recorded until the next occurrence of warm weather, possibly days or weeks later. The months of October through March very often have sub-freezing temperatures on nearly every day of the month, so their precipitation records have been omitted. It should be noted that even in the months where precipitation data are reported (i.e. April through September), the occurrence of sub-freezing temperatures could affect the timing and the recorded amount of precipitation. The timing within the day may not be accurate but daily totals should be reasonable. The user should exercise caution and make note of the concurrent temperatures in interpreting the precipitation records.

4.2.2 Relative Humidity and Dewpoint

The relative humidity (R.H.) sensors used are printed circuit elements which sense changes in R.H. by changes in

impedance. The sensors, manufactured by Phys-Chem Research Corporation, have chemically-treated surfaces which degrade with time, and are thus very difficult to keep in calibration. Many of the months throughout the year (and at all stations) therefore display significant variations in R.H. patterns. Theoretically, the maximum value and RH reading can attain is 99%. However, when the sensor is not calibrated correctly readings may exceed 100%, or they may be noticably too low. Adjustments are therefore made accordingly, as noted in Table 1.5.

An additional consideration with respect to dewpoint is the fact that it is not computed when the reported wind speed falls below 1 m/sec, due to inadequate aspiration of the R.H. sensor. This typically causes elimination of at least one dewpoint value on nearly every day of data-collection.

The oscillator for the Glacier relative humidity sensor was bad during May and June 1984. Data were recorded for 17 days from mid-May to mid-June, but have all been deleted due to the unreliable oscillator. Data from the beginning of May and the end of June are somewhat eratic as well, but generally follow the diurnal cycle indicative of the summer RH. The station was not functioning from June 26 to September 22. The RH oscillator was replaced on 9/22 when the Weather Wizard was re-installed. RH data are reliable after this date.

4.2.3 Solar Radiation

Daily and monthly solar radiation values are the cumulative total energy, computed from all valid readings for the period. Either the daily or monthly value can be significantly above or below the true energy value if there are

large segments of missing readings (i.e. from the period of very low intensity at night or the period of very high intensity at mid-day). A check should be made, therefore, of the hourly solar radiation summary table to get a feel for the frequency and timing of lost solar radiation data. Caution should be used when a significant amount of data are missing.

Another frequent concern in the processing of solar data is the presence of non-zero minimum values. Since the sensors have a stated accuracy of ±5 mW/cm^2, they often record a reading of 0 (during night) as 1 or even 2 mW/cm^2. This also can bias the daily or monthly totals, making the computed energy much higher than the true solar energy. An error of +1 mW/cm^2 on every reading will cause the computed daily total energy to be high by 240 $watt\text{-}hr/cm^2$. Readings during periods when this sensor offset was demonstrated have been adjusted downward, as noted in Table 1.5.

4.2.4 Wind Speed and Direction

Occasional measurements of wind speed, wind direction, and peak wind gusts were lost between October 1983 and February 1984 and again from October to December 1984 due to intermittent freezing of the wind vane or anemometer. One or both of the sensors typically freezes and seizes up when the temperature drops after a rainstorm or freezing rain event and then stays stuck until the temperature rises above 0°C or until a wind event occurs that is sufficiently strong to free it.

When the Glacier Weather Wizard was replaced on September 22, 1984, the wind vane tail was not attached, causing all

wind direction data to be off by 180°. A new wind vane tail was attached on November 2. Therefore, all wind direction data from September 22 to October 8 when the data tape ran out (see Section 4.1.9) have been adjusted downward 180°, as indicated in Table 1.5.

5.0 MONTHLY CLIMATIC DATA SUMMARIES
SUSITNA GLACIER STATION
OCTOBER 1983 - DECEMBER 1984

Note:

Each month's climatic data summary report consists of the following 11 pages:

(1) Hourly Precipitation Summary Table (or note page)
(2) Three-Hour Summary Table (Days 1-9)
(3) Three-Hour Summary Table (Days 10-18)
(4) Three-Hour Summary Table (Days 19-27)
(5) Three-Hour Summary Table (Days 28-31)
(6) Monthly Summary Table
(7) Monthly Graphical Plot
(8) Wind Frequency Summary Table
(9) Wind Rose Plot
(10) Hourly Solar Radiation Summary Table
(11) Observation Summary and Note Page

No precipitation data for October

(See INTERPRETATION OF DATA).

SUSITNA HYDROELECTRIC PROJECT

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING October, 1983

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	1694	100
WIND SPEED	1653	98
WIND DIRECTION	1348	80
PEAK GUST	1653	98
RELATIVE HUMIDITY	1307	77
PRECIPITATION	0	0
SOLAR RADIATION	1694	100
DEW POINT	1307	77

THERE ARE 1694 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER. THE DATA RECORDING INTERVAL IS 15 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. RH -15 RH Points
2. Solar -1 mW/CM^2

Additional comments on this month's data:

1. One hour of data "lost" between 0000 and 0100 on 10/30 due to change of official time zone. See note in section 4 of text.
2. Recording time interval was changed on 10/5 from 15 minutes to 30 minutes.
3. Intermittent wind speed and direction data lost due to frozen anemometer and wind vane.

No precipitation data for November

(See INTERPRETATION OF DATA).

SUSITNA HYDROELECTRIC PROJECT

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING November, 1983

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	1440	100
WIND SPEED	1440	100
WIND DIRECTION	1436	100
PEAK GUST	1440	100
RELATIVE HUMIDITY	1256	87
PRECIPITATION	0	0
SOLAR RADIATION	1440	100
DEW POINT	1256	87

THERE ARE 1440 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER. THE DATA RECORDING INTERVAL IS 30 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. RH -15 RH Points 11/1 - 11/16
   -12 11/16 - 11/30

2. Solar -1 mW/CM^2

Additional comments on this month's data:

1. RH data looks suspiciously low in several places. Bad data deleted on days 10, 29, and 30.

No precipitation data for December

(See INTERPRETATION OF DATA).

SUSITNA HYDROELECTRIC PROJECT

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING December, 1983

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	1488	100
WIND SPEED	1488	100
WIND DIRECTION	1430	96
PEAK GUST	1488	100
RELATIVE HUMIDITY	1142	77
PRECIPITATION	0	0
SOLAR RADIATION	1488	100
DEW POINT	1142	77

THERE ARE 1488 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER. THE DATA RECORDING INTERVAL IS 30 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. RH -12 RH Points
2. Solar -1 mW/CM^2

Additional comments on this month's data:

1. Intermittent wind direction data lost due to frozen wind vane.

No precipitation data for January

(See INTERPRETATION OF DATA).

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING January, 1984

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	1488	100
WIND SPEED	1488	100
WIND DIRECTION	1488	100
PEAK GUST	1488	100
RELATIVE HUMIDITY	1291	87
PRECIPITATION	0	0
SOLAR RADIATION	1488	100
DEW POINT	1291	87

THERE ARE 1488 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER. THE DATA RECORDING INTERVAL IS 30 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. RH -7 RH Points
2. Solar -1 mW/CM^2

No precipitation data for February

(See INTERPRETATION OF DATA).

SUSITNA HYDROELECTRIC PROJECT

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING February, 1984

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	1272	91
WIND SPEED	1272	91
WIND DIRECTION	1184	85
PEAK GUST	1272	91
RELATIVE HUMIDITY	1009	72
PRECIPITATION	0	0
SOLAR RADIATION	1272	91
DEW POINT	1009	72

THERE ARE 1392 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER
THE DATA RECORDING INTERVAL IS 30 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. RH -7 RH Points
2. Solar -1 mW/CM^2

Additional comments on this month's data:

1. No data after 2/27. Weather wizard not functioning.
2. Intermittent wind direction data lost due to frozen wind vane.

No Data for March
(See INTERPRETATION OF DATA)

No Data for April
(See INTERPRETATION OF DATA)

SUSITNA HYDROELECTRIC PROJECT

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING May, 1984

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	1326	89
WIND SPEED	1325	89
WIND DIRECTION	1284	86
PEAK GUST	1325	89
RELATIVE HUMIDITY	632	42
PRECIPITATION	1326	89
SOLAR RADIATION	1326	89
DEW POINT	632	42

THERE ARE 1488 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER. THE DATA RECORDING INTERVAL IS 30 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. Solar -1 mW/CM^2

Additional comments on this month's data:

1. Station reinstalled on 5/4. No data prior to this date.

2. RH data suspected to be poor all month due to bad oscillator, but have been published as indicative of true RH. All RH data invalid after 5/23. Many erratic values have been deleted prior to this date also.

SUSITNA HYDROELECTRIC PROJECT

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING June, 1984

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	1225	85
WIND SPEED	1225	85
WIND DIRECTION	1225	85
PEAK GUST	1225	85
RELATIVE HUMIDITY	564	39
PRECIPITATION	1225	85
SOLAR RADIATION	1225	85
DEW POINT	564	39

THERE ARE 1440 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER. THE DATA RECORDING INTERVAL IS 30 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. RH -25 RH Points
2. Solar -1 mW/CM^2

Additional comments on this month's data:

1. No data after 6/26 due to weather wizard malfunction.
2. Recorded RH data invalid 6/1 - 6/11. RH data suspected to be poor 6/11 - 6/26, but have been published as indicative of true RH. Many eratic values have been deleted during this period.

No Data for July
(See INTERPRETATION OF DATA)

No Data fcr August
(See INTERPRETATION OF DATA)

SUSITNA HYDROELECTRIC PROJECT

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING September, 1984

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	2364	27
WIND SPEED	2364	27
WIND DIRECTION	2362	27
PEAK GUST	2364	27
RELATIVE HUMIDITY	1915	22
PRECIPITATION	2364	27
SOLAR RADIATION	2364	27
DEW POINT	1915	22

THERE ARE 8640 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER. THE DATA RECORDING INTERVAL IS 5 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. RH -2 RH Points
2. Solar -1 mW/CM^2
3. Wind Direction -180 degrees

Additional comments on this month's data:

1. Station reinstalled on 9/22. No data prior to this date.
2. Data recorded at 5 minute intervals.
3. Wind vane tail not attached. All wind direction data off by 180 degrees, but have been adjusted prior to publication.

No precipitation data for October

(See INTERPRETATION OF DATA).

R & M CONSULTANTS, INC.

SUSITNA HYDROELECTRIC PROJECT

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING October, 1984

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	2085	23
WIND SPEED	2085	23
WIND DIRECTION	2001	22
PEAK GUST	2085	23
RELATIVE HUMIDITY	1655	19
PRECIPITATION	0	0
SOLAR RADIATION	2085	23
DEW POINT	1655	19

THERE ARE 8928 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER. THE DATA RECORDING INTERVAL IS 5 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. RH -2 RH Points
2. Solar -1 mW/CM^2
3. Wind Direction -180 degrees

Additional comments on this month's data:

1. No data after 10/8. Data tape ran out due to 5 minute recording intervals.
2. Intermittent wind direction data lost due to frozen wind vane.
3. Wind vane tail not attached. All wind direction data off by 180 degrees, but have been adjusted prior to publication.

No precipitation data for November

(See INTERPRETATION OF DATA).

SUSITNA HYDROELECTRIC PROJECT

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING November, 1984

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	2587	94
WIND SPEED	2523	92
WIND DIRECTION	2405	87
PEAK GUST	2446	89
RELATIVE HUMIDITY	1861	68
PRECIPITATION	0	0
SOLAR RADIATION	2599	94
DEW POINT	1861	68

THERE ARE 2756 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER. THE DATA RECORDING INTERVAL IS 15 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. RH +5 RH Points 11/2 - 11/28
   +7 11/28 - 11/30

2. Solar -1 mW/CM^2

Additional comments on this month's data:

1. No data on day 1 and half of day 2. Data tape ran out due to 5 minute recording intervals.

2. Intermittent wind speed and direction data lost due to frozen anemometer and wind vane.

3. Intermittent data for all parameters lost due to weather wizard malfunction. RH, Temperature, and Solar data estimated where possible.

4. Data recorded at 15 minute time intervals 11/2 - 11/28. Changed to 30 minutes on 11/28.

No precipitation data for December

(See INTERPRETATION OF DATA).

SUSITNA HYDROELECTRIC PROJECT

OBSERVATION SUMMARY FOR GLACIER WEATHER STATION
DATA TAKEN DURING December, 1984

PARAMETER	NUMBER OF USABLE OBSERVATIONS	PERCENT OF TOTAL OBSERVATIONS
TEMPERATURE	1416	95
WIND SPEED	1409	95
WIND DIRECTION	1263	85
PEAK GUST	1385	93
RELATIVE HUMIDITY	1212	81
PRECIPITATION	0	0
SOLAR RADIATION	1481	100
DEW POINT	1189	80

THERE ARE 1488 POSSIBLE OBSERVATIONS THIS MONTH FOR EACH PARAMETER. THE DATA RECORDING INTERVAL IS 30 MINUTES.

THE FOLLOWING ADJUSTMENTS HAVE BEEN MADE TO THIS MONTH'S DATA:

1. RH +7 RH Points
2. Solar -1 mW/CM^2

Additional comments on this month's data:

1. Intermittent data for all parameters lost due to weather wizard malfunction. Temperature, RH, and Solar data estimated where possible.
2. Intermittent wind speed and direction data lost due to frozen anemometer and wind vane.
